Il est donc nécessaire d'élargir le champ des recherches en étudiant des groupes d'âge et de professionnels qui n'ont pas encore été pris en compte. Nous avons donc interrogé, par un entretien semi-directif, 90 femmes aînées immigrantes dans leurs logements (les aînées immigrantes vivant seules dans leur logement représentent une minorité), les aînées immigrantes pour un âge allant de 70 ans, 75-84 ans, 85 ans et plus), sont originaires de différents pays (Haïti, Cameroun, Japon, Roumanie, Liban, Egypte, Croatie, Colombie, Chine, Portugal, etc.) et ont dans leur parcours migratoire et de vie variés. Dans le cadre de cette étude nous formulions des questions sur l'immigration et genre, nous montrons que la trajectoire migratoire de ces femmes amène des changements et/ou des ajustements dans le sens qu'elles se font de leur place, à la fois dans la société et dans la famille, de même que dans leurs pratiques concrètes. Ainsi, chez certaines, la migration est un facteur de déstabilisation (isolement, repli sur soi, vulnérabilité) alors que pour d'autres, elle est un facteur de « libération » des pressions sociales et familiales vécues dans le pays d'origine, voire d'émancipation.

**Regulation of Private Expenditures in Cross-National Perspective**

Over the past decade, health spending in many developed countries has grown faster than gross domestic product, leading to government and private alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on both population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater government regulation of the private insurance industry.

This paper will examine this hypothesis with the Health Insurance Access Database (HIAD), by demonstrating the variation over time, by health service and...
across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across 100 countries of the OECD (Australia, Canada, Denmark, Finland, France, Germany, Italy, the Netherlands, United Kingdom, and United States). These countries were selected to provide a range of variation (and thus to allow for contrasts) with regards to Esping Andersen’s Welfare Regime classification (Liberal, Social Democratic, Continental, and Liberal-continental type of health system (comprehensive welfare oriented, entrepreneurial) and the OECD’s typology of the role of PHI within that system (primary, primary substitute, supplementary, duplicative or complementary).

This research will inform and feed the current debate on the future of health care in developed countries and on the interoperability between the public and private sectors in these changes.

Quality of Data Collected from a Vulnerable Population: Using the Calendar Method and Third-Party Help

In the field of social sciences, collecting extensive retrospective data such as life histories has been fraught with recall errors compromising the quality of the data. Collection of life histories gets even more challenging when it has to be done among vulnerable groups, such as poor households who are victims of involuntary displacement and resettlement due to disasters or infrastructure projects. Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The substantive focus of this study is to obtain ‘social capital’ histories on the level of neighbourhood, households, and heads of households. In addition to the usual aided recall features the calendar procedure included the option to allow, in certain parts of the interview, the help of ‘third parties’ in the recollection of the requested information. These “third parties” are either household members or friends of the respondent who also reside in the same community. Collaborative recall generally increases accuracy due to disasters or infrastructure projects. Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The Problematic of Gestión in the Soft Industry

The ponencia se orienta a dar respuesta, en base a un estudio de caso en la industria del software, a la pregunta de qué manera las organizaciones, los gerentes y los trabajadores lidian con las tensiones relacionadas con la innovación. La hipótesis es que dadas las características del trabajo en esta industria, otras modalidades de gestión se generan en el cambio de conocimientos y con una fuerte articulación de trabajadores, su gestión no puede apoyarse solo en las estrategias de los empresarios o gerencias de RRHH, teniendo éstas que articularse con el componente “humano”. Estas nuevas modalidades de gestión por ende deben tener como eje central la construcción de relaciones sociales en la organización. Esta conlleva, una fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad.

Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y articulan tres dimensiones problemáticas:

a) normativa: Supone dar cuenta de la construcción de normas internas desde una perspectiva amplia que considere tanto las normas formales como las informales, las reglas autónomas como las de control, las normas jurídicas como las de tipo ético. La dimensión es relevante en un mundo que parece poco estructurado en relación a otros sistemas productivos. b) performativa: Esta dimensión tiene relación con el concepto de eficiencia, de su construcción in situ. En ella cobra relevancia la distinción entre los conceptos de productividad, más acorde al mundo industrial, y el de performance, más acorde a la dinámica del sector. c) Cognitiva: Refiere a la reflexividad que emana de la articulación normativa y la dimensión performativa aportando una mirada dinámica de los procesos de gestión. Importa en esta dimensión la construcción social del conocimiento y las identidades construidas en torno al mismo.
Guidelines for the Creation of Laws and Intuitions in Order to Eradicate Poverty in Mexico

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty.

The situation we try to reuse some transcendental aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the rights that are set forth in the Constitution. What we would like to posit is that actions, both legal and institutional, are required in order resolving this problem: actions that take into account the economic/social context and that contribute to transform it.

Social Discourse about the King of Spain and Freedom of Speech. Pragmalinguistic Analysis of Slander

Discursos sobre el rey y libertad de expresión. Análisis lingüístico pragmático de la injuria

La monarquía sigue siendo hoy por hoy el primer gran tabú informativo en España. Pese a la libertad de expresión que garantiza la Constitución, el artículo 490 del Código Penal singulariza la figura del Rey con especial protección contra calumnias e injurias. No resulta difícil encontrar ejemplos de discursos públicos (tanto periodísticos como políticos), que han sido denunciados como injuriosos contra la Corona, siendo sus autores procesados y sentenciados, algunos con pena de prisión.

Pero qué es exactamente una injuria? Su valor semántico no es estable, y depende del contexto su determinación. La definición de diccionario no nos resuelve mucho en este sentido (según la RAE “agrávio, ultraje de obra o de palabra”, “hecho o dicho contra razón y justicia”, “daño o incomodidad que causa algo”, “delito o falta consistente en la imputación a alguien de un hecho o cualidad en menoscabo de su fama o estimación”). Y la interpretación jurídica no es unívoca frente a los mismos hechos o dichos, como demuestra la existencia de sentencias categóricas que identificaban un discurso como injuria, posteriormente revo- cadas por errores por tribunales de superior rango, con el consiguiente debate judicial en torno al valor del término.

Mediante el análisis del discurso de algunos casos importantes (como el caso Otegi y el caso Martínez-Ingéls) podemos acercarnos al estudio de la injuria como hecho comunicativo y lingüístico. Un método pragmalinguístico que toma como base la teoría de la relevancia de Sperber y Wilson permitirá adentrarse en el pro- ceso inferencial de interpretación de la injuria, con especial atención al contexto en el que se produce y se recibe.

Posibilidades EN La Base De La Pirámide

Los estudios sobre la base de la pirámide se han centrado, de forma tradicion- al, en comprender las causas estructurales de la pobreza, así como sus aspectos psicosociales. México lleva a cabo numerosas campañas para apallar los niveles de pobreza en el país, desde los programas OPORTUNIDADES hasta la “Cruzada contra el hambre“ Ambas auspiciadas desde las instituciones y el gobierno e inte- resadas en los aspecto estructurales de la pobreza y en el impacto comunitario.

Este paper propone una visión alternativa a la percepción dominante en Mé- xico de la situación de la pobreza basado en los estudios realizados por C.K Prah- alad. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionan- do dignidad y empoderamiento a las familias de bajos recursos.

Este paper propone una metodología en tres fases:

- Por un lado una investigación sobre los distintos programas gubernamen- tales y sus efectos reales sobre los individuos y las comunidades.
- Por el otro una inversión en los datos estadísticos como los índices de pobreza del INEGI o el reciente estudio sobre “Pobreza y bienestar subjetivo” realizado por el INEGI y FLACSO México.

Contested Claims over Space: Discourse and Politics Among Fishers and the Oil Industry in Mexico

This paper examines hybrid forms of resource governance and the involved struggles over space and subjectivity among coastal fishers, the Mexican government and the state-owned oil industry in Tabasco, Mexico. The analysis builds on the study of contested claims over rights to off-shore space in an area established as a security measure exclusively for the use of the oil industry by the Mexican government in 2003. The study is based on research material collected during intensive ethnographic fieldwork among coastal fishers, government actors and oil industry representatives in Tabasco in 2011 and 2012.

The study focuses on the “how” of hybrid mechanisms of resource governance, with particular interest in the strategic use of legal measure, corporate social responsibility programmes and political discourse in the claims over resource space. The research takes part in post-Foucauldian theorizations of space as so- cial arena, constructed in political frictions between private capital, state, society and nature.

We argue that fish-oil governance in Mexico operates as a combination of dif- ferent logics and technologies that work towards the displacement of fishers as legal subjects from politics and their subjection to ideologies of entrepreneurship. Simultaneously, the multiplication of transnational actors in the oil industry’s CSR programmes provides a new political venue for the continuance of the fishers’ subjection to clientelist arts of governance while it makes the identification of accountability and responsibility diffuse. In this context, the fishers’ resistance is constructed through individual networks and opposition to mechanisms of self-responsibilisation and through fragmented political resistance which keep the extractive politics volatile. Our study of these less visible struggles over re- source redistribution and political representation seeks to provide new perspec- tives to the prevailing forms of environmental governance and the contestations regarding them.
Participatory environmental governance is framed as contributing to the equity ambitions of sustainable development. The trend of formal delegation of power to decentralized institutions of various kinds has been extensive. It can be questioned, however, if these more pluralistic approaches can adequately deal with and balance uneven power relationships between stakeholders or if existing power relations are reproduced through these processes. As a result of pre-existing inequalities weaker actors may risk getting ignored, neglected, manipulated or even abused. Marine governance has also adopted these democratic ambitions, but empirical examination of practice has been severely neglected by the social sciences and has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

In this paper, I draw on the concept of procedural justice linked to power to examine and compare the establishment of St Anna archipelago and Gräsö archipelago nature reserves in Sweden. The former case has been characterised by authorities as consensus oriented while the latter has been seen to be conflictual. By employing the procedural justice concept over time in this under studied and novel empirical setting the present paper aims to develop new understandings and formulations of justice and thereby contribute to the literature on participatory environmental governance, marine governance, nature protection, and environmental justice. The paper will show that issues related to legitimacy, identity and representation are substantial in both cases, as well as conflicts between public and private interests and that a long-term struggle for ‘independence’ is being played out in the setting up of nature reserves.

The aim of this paper is to give an overview of South African family research and to recommend how family policies can match these realities. The South African national department of social development published their draft White Paper on Families towards the end of 2012. This White Paper is believed to be a precursor of family policies to follow. Historically the apartheid government placed the bulk of family care on the shoulders of the extended family but there have been various indications for decades that this burden cannot be carried by families alone. An analysis of African countries, unlike welfare states from the North, shows a general picture of minimal assistance from the state and a reliance on extended families to take care of individuals. Although there are indications of social security mechanisms in African countries including pensions and family allowances, these may be partly or solely carried by the private sector. However, the current democratically elected South African government developed a multitude of policies and acts in place to support people at risk (e.g. poor or abused people), but these target individuals. In the draft White Paper families at risk are identified, but policy makers are unclear on how to match support to such families with the realities. The Latin American family policy examples, such as Progresa-Mexico (launched in 1997), Oportunidades in Mexico and Chile Solidario (implemented from 2002 in Chile), did not find support with the South African government. This lack of support for these types of policies is not entirely clear but the principle of expected counter performance (such as progressing in school) did not seem to find favour. Instead, idealised notions of nuclear families are put forward in the draft White Paper but here alternative policy directions will be suggested.
to address the question if the need for collective organisation is necessarily subordinated to the capitalisation of cultural production via the valorisation of city quarters in terms of real estate prices, or if shared spaces are an opportunity for enhancing participation in the shaping of urban environments.

“Serious Leisure”: Film Festivals As Techno-Audiovisual Capital
Author: Rosario Radakovich

Film festivals are considered as part of a “serious leisure” for the audiences. Most of them are considered as a “distinct” cultural activity, also an specific “techno-audiovisual” or “techno-cultural” capital (O’Keefe: 2009). Film festivals give audiences the opportunity to be part of an specialized knowledge, a creative and innovative environment –with film-makers, cultural journalists, etc.-, included in premières, and be part of the atmosphere of contemporary global culture. (Stinger, 2001).

As a result, audiences expect festivals provide a certain “quality guarantee” in order to show to the friends and family the value of this prestigious activity. According to De Valck (2006) festival audiences use the experience as evidence of cultural capital in conversations between friends and family. In this context, what are the forms of “serious leisure” associated to audiovisual cultural capital?

This paper will analyze the case of the International Film Festival in Montevideo organized by Cinemateca Uruguaya, in order to explore the consumption of film festivals as a “serious leisure” in Uruguay. The methodology includes personal interviews and focus group study with film festival “selected” audiences. The results are part of a research about uruguyan audience cinema, developed in the Information and Communication Development Program in the Universidad de la República (PRODIC UDELAR), with an interdisciplinary research team between 2013 - 2015.

RADFORD, LORRAINE* (University of Central Lancashire, lradford@uclan.ac.uk)

Domestic Violence, Coercive Control and ‘Risky Parenting’

This paper will consider the concept of risk in relation to parenting in the context of domestic violence. Since the ‘discovery’ of violence in families in the nineteenth century and the ‘re-discovery’ associated with the birth of second wave feminism in the 1960s, definitions of ‘violence’ and ‘child abuse’ have expanded in high income nations. In the UK the official definition of domestic violence has been changed to include the concept of coercive and controlling behaviour defined as ‘an act or a pattern of acts of assault, threats, humiliation and intimidation or other abuse that is used to harm, punish, or frighten their victim’ and ‘a range of acts designed to make a person subordinate and/or dependent by isolating them from sources of support, exploiting their resources and capacities for personal gain, depriving them of the means needed for independence, resistance and escape and regulating their everyday behaviour’. In this paper, the concept of coercive control will be applied to parenting in the context of domestic violence. Child care after separation or divorce has become a gendered political issue. The implications of applying the concept of coercive control to parenting for equality, safety and justice in managing violence and risk in post separation relationships between parents and children will be discussed.

RADFORD, LORRAINE* (University of Central Lancashire, lradford@uclan.ac.uk)

The Victimisation of Childhood – Understanding Children and Violence

The media and campaigning organisations have influenced public perceptions of violence and young people by focusing on rare and sensationalist events such as homicides, extreme cases of child abuse and young people orchestrating riots from smart phones in inner city areas. Representations of children and young people as ‘victims’ or ‘villains’ has consequences for their wellbeing – their experiences of violence are misrepresented and over simplified, fragmented accounts of the causes and consequences hinder progress in policy and practice.

Taking a feminist approach to the sociology of childhood and drawing on recent research findings, this paper will consider what is helpful to know about the risks of abuse, neglect and violence when working with and interacting with children and young people.

Key questions addressed will be:
What is known about the prevalence and impact of abuse, neglect and violence in the lives of children and young people today?

What are the gender and age related risks? Who does what, to whom? What are the risks to children and young people at different ages from different perpetrators? How much abuse and violence is committed by children and young people?

Is the world a more dangerous place where children experience more violence and commit more violent crime than ever before?

Are adults fearful and how do they respond to child abuse and children’s violent part of the problem?

What are the challenges and opportunities we face in putting children’s experiences of abuse, neglect and violence and their rights and agency at the centre of thinking and practice?

Sugar BABY - the System of Medicalization(’s) Around Childhood Obesity

Obesity is considered a pandemic and childhood obesity is considered one of the most serious public health challenges of the 21st century by WHO. The medicalization of childhood obesity is a clear example of the medicalization of risk. It is believed that the obese child is more likely to have high blood pressure, elevated cholesterol or of becoming diabetic already in childhood but also in adulthood.

What is the risk of obesity? Are the risks of obesity based mainly on scientific evidence, on fear or on the daily life experience? How do consumers respond to the marketing of diet products, including sugar? How do consumers perceive obesity and its medicalization?

This paper proposes a critical analysis of the main trends in the system of medicalization of childhood obesity. It will be based on qualitative research, focused on the analysis of the discursive and cultural content of a sugar drink product targeted at children. The study is a part of a wider project investigating the roles of marketing and commercialization in the risk management practices and activities of childhood obesity.

At the beginning of XXI century Europe is subject to the internal integration on a scale having no historical precedent. In the widespread opinion the very important factors facilitating the process of integration should be sought in a historical-cultural reality of a kind of common European identity as well as in a redefinition of the concept of national interest. Therefore, several interesting questions may get our attention: To what extent the countries forming the European community differ, and to what extent are similar in so called national attitudes? What is the nature of European patriotism and a sense of national identity? Are there any divisions here? If so, what is their nature? The author tries to answer these questions by analyzing data from two studies on “National Identity” (1995 and 2003) conducted within the International Social Survey Programme. Description and classification of the European countries on different dimensions of national attitudes leads to the conclusion that Europe is divided into two fundamentally different national-cultural clusters. Their origin results from a huge disparity in the level of collective self-esteem, which is an expression of civic pride in a quality of liberal-democratic state in various aspects of its functioning. It also turns out that the basic division corresponds almost perfectly to the “cultural shift” on a dimension defined by R. Inglehart as survival vs. self-expression culture. What is important and not so obvious, the other central dimension of cultural values, defined as tradition vs. secularization-rationalism, in no way contributes to explanation of the nature of two basic national-cultural European clusters.

Does the Great Recession impact inequality of educational outcomes? Although contributions on the effects of the global crisis on a number of social aspects have started to emerge (e.g., Grusky et al., 2011), little is known about how inequality of educational attainment is affected by macro level trends such as changes in the economic cycle or in unemployment rates. This paper aims to elucidate the interplay of family background, educational expectations (conditional on cognitive skills) and the economic context. Our main research question is, hence: has the impact of family background on offspring’s educational outcomes become stronger because of lacketluster economic growth?
Using pooled data from TIMSS 2003, 2007 and 2011 – an international survey project of competences among 8th grade students – we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variations in the context conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining the expected time to take a look into the future of educational inequalities. Our results confirm the existence of systematic cross-country regularities and suggest that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

RAFAEL, ERWIN* (University of the Philippines, Diliman, okosiapeng@gmail.com)
Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamic, so-called concept even seems ambiguous, conceptualization of CSR stems from its socially constructed nature which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper trains the spotlight on the business side of the discourse on CSR. The paper shows how Filipino companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The paper looked at thematic changes in Philippine business CSR discourse from the 1970s to the present and found an increasingly explicit presentation of a business case for CSR over the past four decades.

Reported Premarital Sex: Explaining India’s Gender Divide

The popular media tell us that the Indian premarital sex rates have risen sharply in recent decades. On closer examination, these reports appear to misrepresent the data. Local surveys have been portrayed as national. Research on one age group has been reported as if it covered multiple decades. The only multi-decade national survey to ask detailed sexual history questions is National Family Health Survey (IIPS, 2006b). Confining the analysis to sexual and marital histories of men and women at the age of 24, it is possible to draw appropriately robust inferences. This shows no clear increase in the level of reported female premarital sex over time. For male respondents the rate rose from 15% in 1975-79 to 30% in 2005-06. This suggests that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

Challenges of a Global Sociology: Centers and Peripheries in the Geo-politics of Sociological Theory

Debate about the possibility of building a global sociology has gained increasing importance in recent years. In dialogue with works that argue in favor of post-national sociologies as well as literature that criticizes the hegemony of the Western-centered framework of the so-called center, this article articulates the idea of global sociology. The main sustained theoretical hypothesis is that the national experiences must be understood as bearing the potential of making important contributions to stimulate the theoretical discussion about sociological theories and concepts formulated in the centers. By mobilizing some sociological concepts such as public sphere and right to the city, originally formulated in centers, we suggest that peripheral sociologies could contribute to broaden theoretical formulations. In this sense, the theoretical construction of sociological theory must involve an equal dialogue between sociologists from the center and the periphery in order to construct a global sociology.

Deviance and Camouflage City: Sexual Deviance and The Construction Of Invisible Urban Spaces In Post-Revolutionary Tehran

This study is an attempt to expand on the relationship between sexual deviance and urban space in the context of post-revolutionary Iranian society. It focuses on Tehran, a major metropolis where gender segregation and heterosexual norms in the form of family institution appear to dominate societal norms. But this study instead offers an ethnographic account on various “sexual deviant” practices including homosexuality, transvestic fetishism, sadism, and necrophilia in diverse city spaces to shed light on a hidden world in post-revolutionary Iranian urban life. The notion of “camouflage city” underscores the complex relationship between embodiment and city space and argues how behaviors deemed “sexually deviant” in Tehran continue to undergo illumination for concealment through heterosexual normative practices sanctioned by the Islamist normative discourses and practices. The study specifically looks at transsexual practices both in terms of everyday and institutional life in the context of changing state official and public perceptions of sexual deviancy. It also looks at how such practices tend to represent a peculiar cultural form of a distinct urban space, where everyday sensibilities become fused with ways sexual deviance is practiced and made (in)visible in shifting daily/nightly life situations. In the final section, the study theoretically examines deviancy as performative act which is always spatial practice and that it involves a de-labeling process to destabilize the societal norms whose infraction institute sexual deviance.

Mobile Media, Digital Divide and Social Movements: The Case Of Iran

This study attempts to offer a theoretical interpretation of the political and social dynamics of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of texting, photographing and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimagine the public in affectively contentious ways. Yet the emotive is not “irrational,” but a distinct mode of being present in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. The mobile media practices, along with its close connection with online social media, during the 2009 demonstrations, I argue, foster embodied engagements through distinct camouflage practices, largely hidden from the official order of state surveillance. However they do so in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances. Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant households. These two-way surveys are complemented by participant observations and focus group discussions.

Industrialisation Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasepuhan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (company/cession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutions is a clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasepuhan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

Cluster Dependency, Social Capital and Social Innovation: Insights from the Engineering and Plastic Clusters in Chennai, South India

In most developing countries a focus on the development of MSME or Micro, Small and Medium Enterprises is evident. Operationalising this goal in the Indian context is a conscious planning has been adopted not only to strengthen existing enterprises, but also to create ‘clusters’ of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters - the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters - engineering and plastic in and around the city of Chennai, South India. The city however is well known for its automobile clusters. Significantly different in size, technology used and labour utilised, these ‘clusters’ have innovative practices to mobilise labour, access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nevertheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of the environment where they are located. As most of their labour is unskilled ’social capital’ in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on an insights obtained from a sample survey of clusters. Questions raised include:
How do they ensure continuity of labour?  
How do they access capital and technology?
How do they sustain production and marketing?

Essentially the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlights the innovative practices at the workplace in a developing country like India in the context of MSME.
non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organising relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved.

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and programs for disaster recovery. Given the process of repeated learning after disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states place on issues of vulnerability. It is therefore important to address issues of development during disaster reconstruction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

**Economic Globalization and Feminization of Labor: The Case of Domestic Servants in India**

This paper discusses the consequences of economic globalization for women in India. It analyses the neoliberal policy frame from a gender perspective to bring out the impact of economic globalization on the women's work. Economic globalization has generated sources of livelihood and opened up new vistas of opportunities for women in the labour market. Market regulations based on the neo-liberal ideology have negative impacts on women such as feminization of labour as well as poverty, low-income, exploitation and health hazards. In India, the number of women has increased most in labour-intensive, informal and unorganized and casual job sectors, besides the huge number of those educated women who are working at low level IT jobs. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle class families have shifted their burden of home management on to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female labour of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex, the lack of education, employment and economic opportunities and inequitable inheritance laws, the cultural and gender norms restricting women's sexuality and prevent them from availing themselves of information on sexual and reproductive health and unwillingness of government to publicly discuss the empowerment of women in gender relations and sexual practices. The negative impacts of neo-liberal economic policies have often failed the large segment constituted by the women in India. There is therefore the need to institutionalize regulations and structures that protect the rights and interests of women in social relations and sexuality practices in a patriarchal and historically male-dominated society of multiple hierarchies like India.

**Examining Child Mobility and Transport: Challenges for Theory and Practice**

The paper provides an outline of the ways in which general theoretical concerns in the Sociology of Childhood relate to child mobility and transport. This paper raises a kind of knowledge and insights that researchers can offer transport experts and decision makers. The argument proposed here is that the study of children and childhood is incomplete unless mobility and transport issues are located in an understanding of the complexities and varying realities of children's everyday life. The paper (1) examines children's social representation, incorporating women within South Africa's transport and intervention, and (2) the extent to which these frameworks incorporate national data on children's daily transport and mobility activity patterns. This paper also contributes to the growing scholarship on the social perspectives on child mobility. This emergent field has occurred alongside the child rights movement and shifts towards evidence-based policy developments and practice interventions. Consequently, contemporary mobility and transport discourses promote the idea of transport as a public good and human right and this implies that all citizens' interests and needs are of equal importance. Yet, within the sector there is still a bias towards studying the impact of child mobility on adults' mobility, their daily lives and schedules with children's voices, experiences and needs remaining obscured. This empirical marginality and invisibility fuels knowledge gaps and generates a passive, univocal and constrained view of children. It certainly impedes the development of child-centred and participatory transport policies and interventions.

**International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India**

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 along with his Holiness, the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore.

After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their Union city education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces.

They are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are a high religious group but their religion is facing a competition from western Influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

This study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to new social spaces. The paper tries to examine the gendered changes.

**Gender Segregation in Hospitality Sector – Extent and Consequences**

Hospitality is one industry in which women are preferred and are found in large numbers. However allocation of responsibilities and privileges in hospitality organisations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process. And disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be occupied their male counterparts. It is the women staffs who are made to face and absorb the idiosyncrasies of the clients, who are mainly strangers, requiring them to work under stress, strain and risk. The findings further indicate that the extent of segregation appears to vary significantly with the size and sector of the establishment and the negative implications of such segregation appear to be more marked in smaller private establishments.

**Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin**

There has been an unprecedented increase in opportunities for migration form India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethno-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of culture conflict, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women's support networks to address issues of gender based violence.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

RAMELLA, FRANCESCO* (University of Turin, ramellaf@tiscali.it)
The «Italian Paradox» in the High-Tech Industries
There is an "Italian Paradox" in the development of the high-tech industries. As it is well known, Italy is under-specialised in the high tech industries and, during the last decade, has recorded disappointing performances in these sectors. In particular, the innovative capacity of Italian firms is quite low. 1) Patenting is below the European average: 7.4 patents per million of inhabitants in Italy vs 19.6 per million of inhabitants in the EU. 2) Furthermore, despite being the fourth largest economy in the EU in terms of GDP, Italy is only sixth for high-tech applications to the European Patent Office.

However, Italy has a potential in these industries, which has not been fully exploited yet. In fact, it ranks third amongst European countries for the number of high tech firms and for added value. Moreover, the percentage of employment in high-tech and medium high-tech sectors on the total of workforce (8.1%) is similar to the European Union average.

On the basis of this data, how can the Italian Paradox be explained? I will try to answer this question focusing on two aspects of the "Italian case": 1) the weakness of its National system of innovation and 2) the territorial unbalances of its economic development. In fact, according to the 2013 European Innovation Scoreboard – which gives a comparative assessment of the strength of EU27 Member States' innovation systems – Italy ranks only fifteenth in Europe in terms of innovative capacity. Furthermore, Italy is characterized by a high degree of internal diversity. So national averages do not render the internal complexity and diversification of the economic development of a "regionalized form of capitalism" as that of the Italian case. To corroborate this thesis, I will present the results of an analysis carried out on the Italian geography of innovation.

RAMIOUL, MONIQUE* (University of Leuven, monique.ramioul@kuleuven.be)
Greening in Construction: What Changes for Workplace Innovation?
This paper investigates how construction companies innovate their organisations in response to the shift to energy-efficient construction. The changes in product and process induced by green construction confront companies with detailed technical instructions, severe accuracy requirements for all operations and no room for improvisation. As a result, construction involves more specialisation, a growing length and complexity of the value chain (with more contractors involved), more standardisation, the modularisation of construction components, a shortening of lead-times, etc. Overall the process becomes highly sensitive for disturbances and requires rigid coordination and logistics. To investigate the impact of these changes, case studies were carried out in two Belgian construction companies. Each included interviews with 6-7 management representatives, 5-6 workers and on-site visits. Two contrasting work organisations were observed. The first can be characterised as an ‘enlightened’ employee-centred organisation model based on participation. The work organisation combines the centralised design and off-site prefabrication of some components with on-site empowered teamwork and investments in skills of the workers. These aim at reinforcing decentralised process coordination and regulation capacities. Subcontractors are included as partners in the on-site construction teams. The need for contextualised knowledge, decentralised problem-solving and high involvement of all dominates in this corporate strategy. The second company, in contrast, opts for high levels of division of labour, standardised and short-cycled off-site preparation of prefabricated components, centralised and bureaucratised process coordination, risk-transfer based subcontracting and a strategy of constant productivity increase and rationalisation. High levels of control and process-orientation are the key-words in this corporate strategy. It appears that the ‘greening’ can as such not be identified as a main driver of workplace innovation in construction. The second corporate strategy may be a reason for concerns for new risks affecting the sustainability of jobs in this industry against the background of an aging workforce.

Microcredit and Poverty Alleviation In The Mexico Contemporary

Microcredit as strategy for poverty alleviation grows stronger in the last decades of the twentieth century, from successful experiences in different parts of the world, both in developing counties and the developed; numerous studies beginning to emerge about microcredit; however these studies are mostly empirical. Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in overcoming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, addition, of creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the governments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called “Opciones Productivas”, which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary Mexico.

Social Changes and Social Responsibility
Responsabilidad social y su impacto en la sociedad
Como bien se conoce la responsabilidad social es un modelo de gestión que está siendo aplicado por las empresas y organizaciones a nivel mundial. En este proceso de incorporación de políticas, acciones y estrategias de responsabilidad social en organizaciones de tipo público, privado y del tercer sector es preciso entender el cambio que estas acciones ocasionan no solo en la propia empresa, sino también en la sociedad y en particular en sus grupos de interés o stakeholders.

Para poder explicar las variables de impacto, presentaremos el caso de estudio realizado en el contexto peruano. Para esto presentaremos resultados de la investigación desarrollada para el IDIC de la Universidad de Lima, sobre los casos de tres organizaciones que tienen presencia en el Perú, como son: BBVA- Continental, Petroleroy Caritas del Perú.

HACIA LA CONSTRUCCIÓN DE UN MODELO ECOLÓGICO DE SALUD DESDE LAS CIENCIAS SOCIALES.

Resumen.

Vivimos en un mundo en donde las relaciones causa y efecto han dejado de ser insignificantes, la capacidad de recencia del planeta ha venido disminuyendo con el tiempo, y las fuerzas productivas a lo largo de estos últimos treinta años que a diferencia de décadas anteriores las consecuencias son cada vez más importantes sobre la calidad de vida y diversidad ecológica del planeta; en la re-unión del club de Roma, se advirtió a los líderes mundiales la necesidad de poner límites al crecimiento debido a las posibles consecuencias irreversibles que su acción traería sobre la vida en el planeta, especialmente sobre los más jóvenes. Fenómenos como el calentamiento global, el escasez de agua, la pérdida acelerada de biodiversidad, el aumento de la violencia e ilegalidad serían realidades presentes de no asumir límites y formas de distribución justas frente al crecimiento. Frente a esta situación las ciencias sociales deben desarrollar currículos sobre salud pública, individual y colectiva, que sin embargo no han logrado una adecuada conceptualización de las relaciones salud/enfermedad, especialmente porque el paradigma mecanicista, newtoniano y el dualismo mente/cuerpo no ha sido suficiente para comprender de manera adecuada estos fenómenos. Ellos no permiten comprender la complejidad de la “trama de la vida” las complejas interrelaciones existentes entre ecosistemas, especies y sociedad. Ante esta situación la pena que se preguntará ¿qué nuevo paradigma, qué nuevos conceptos y maneras de estudiar la realidad son necesitan para solucionar la situación por la que estamos viviendo en el mundo actual?

Palabras clave: Salud/enfermedad, crisis ecológica, mecanicismo, modelo ecológico.

Does Violence Begets Violence? Evidence from Mexico

One familiar argument to explain violence rates is the common sense affirmation that violence begets violence. Imported from the biological sciences, this organic metaphor is well rooted in the discursive explanation of crime. However, the empiric evidence around this supposition is quite scarce. A typical combination of the “violence begets violence” argument with the lack of proper empirical evidence is easy to find in countries dealing with recent outbreaks of criminal violence. This is the case of Mexico where the recent trend of criminal violence has been explained with a wide array of arguments including the spread-contagion argument. This one in particular has gained presence among the media and policy makers. Moreover, this assumption is being increasingly used to justify the design of prevention programs where significant amounts of public resources are being invested. In view of this, this paper presents the results of a study on the empirical validity of the hypothesis behind the “violence begets violence” assumption. For my research purposes I have selected a set of relevant hypotheses on the contagion of violence to verify its empirical validity for the case of Mexico. With a combination of different quantitative techniques I have analyzed homicide rates at the local level for the city of México from 1990 to 2010. The results of this work will throw light on the empirical pertinence of the contagion of violence hypotheses, and it will help to inform public debate and public policy about the characteristics of criminal violence in Mexico.

Placing Food and Nutrition Security: The Co-Production Of Land, Dietary and Livelihood Relations In Four Sites Of Northern India

Patterns of land distribution in association with local agro-ecological conditions play crucial roles in shaping the dynamics of food and nutrition security in the global South. The relevance of this local is highlighted in this paper, which examines the differences existing between four rural communities in northern India. Using evidence from 389 in-depth household interviews, the paper identifies the connections which exist between household assets, nutritional outcomes, and livelihood strategies. The paper argues that the considerable differences found by the study between case study communities underlines the importance of processes of local social embeddedness in determining food and nutrition security outcomes.

Trust Under Conditions of Extreme Risk: Exploring Trust Networks of Clandestine Activities

Trust is important in all types of social relations, but its role is crucial in secret organizations operating under extreme conditions of risk. The paper explores the sources of trust in secret activities of underground publications (so called samizdat) of Soviet Lithuania. Samizdat was one of the most persecuted means of oppositional activity in post-Stalinist Soviet Union. Therefore, building a network of samizdat publication and distribution required extremely high levels of trust among their members. Understanding which of the so-called “law of trust” the Lithuanian samizdat activities were subject to is essential for understanding the samizdat networking structure. The main hypothesis of this study is that the network of samizdat activities, in contrast to open社会 networks, was not formed on a normative basis of social trust but more under conditions of extreme risk. The study used sociological narrative accounts to explore the social aspects of the Lithuanian samizdat (so called samizdat) of Soviet Lithuania. Samizdat was one of the most persecuted means of oppositional activity in post-Stalinist Soviet Union. Abstract

This paper addresses the social scientific construction of the poverty in Chile, whose measurement is coordinated from the State, being of great relevance for the design of social policies and programs, and to monitor government action. The currently used theoretical and methodological construction remained uncontested from 1987 to 2012. Despite that long period in which the measurement was a tightly sealed black box, there were many aspects that could have been questioned; for example: (1) the lack of empirical and political support for the process; (2) the controversy took place regarding this process. As a result, the Chilene government appointed a committee with the task of making changes in it. A first goal of the presentation is to study the factors that led to that great stability of the instrument, in spite of significant socioeconomic changes that long ago made changes advisable. Special attention is given to: (1) the origins of the measurement, in which the Economic Commission for Latin America (ECLAC) participates in an outstanding way and transferred a methodology developed for the whole region of Latin America; (2) the boundary work made by experts involved in the measurement; (3) the calculation of this epistemic construction between academic centers, state institutions and the public sphere, all of which strengthen its character of reality and hinder its questioning. A second objective is to analyze how the 2012 controversy was generated and developed. Attention is given to the intertwining of political and scientific concerns and to the rhetorical handlings associated to the boundary work done by rival factions. A third objective is to analyze the outcome of the controversy, in which the scientific demarcation is still used to hide political dilemmas and complex normative choices. The study gathers information through interviews and document reviews, and by following key players in their participation in the controversy.

Gender Inequality in Higher Education: A Study of Girl Students of Conventional Courses in Nasik, India

Keywords: Gender inequality, Higher education, Girl students, Nasik India

Gender discrimination in developing world is a crucial reality. In modern times women are performing exceptionally well in different spheres of activities. The problem of gender inequality still prevails in all spheres of life. Though Indian constitution has granted equality to women in principle, in reality majority of Indian women are facing the problem of inequality and discrimination. The paper tries to focus on gender discrimination in higher education in India where the situation is paradoxical. On the one hand girls students are performing very well in all faculties of education, many of them are topping the merit lists, the percentage of passing is more than the boys, but at the same time according to 2011 Indian census, 35% women are illiterate. Out of the remaining 65% literate women the percentage of higher education is very low. Again there are educational disparities on the ground of rural-urban, poor-rich, higher-lower caste etc. Government has provided various facilities and concessions to facilitate education to women and decrease the disparities.

The paper tries to highlight the challenges in education before the girl students of the Department of Sociology, their ambitions, career choice and hurdles in their education, their experience about gender discrimination in the family, family back ground, use of facilities or concessions given by the government, etc. The data is collected by the primary techniques like questionnaire and interview. The study will be limited to the students of conventional courses. It will be conducted in one of the leading women's college in Nasik city.

Improvisation Of Destination Awareness Through Festivals and Events: Special Reference To India

As travelers become more sophisticated, destinations need to become more originitave in capturing those tourists. A potential tourist destination needs to create a brand image to compete in the global tourism marketplace. India, a land of vast cultural and regional diversities, has multi-faceted festivals. One can immediately draw a long list of religious festivals associated with various gods and goddesses, regions and traditions like holi, diwali, chrismas, id (ul-fitr; ul-zuha), GurPurab, etc. The study focuses to examine the awareness of Indian festivals and their intent to travel. However, here the purpose is not to discuss the common religious festivals. It is an initiative to scrutinize upon only those festivals which are the main centers of tourist attraction. This study based upon several theories as theory of Reasoned Action, Theory of Planned Behavior, and marketing theories related to Awareness – Interest – Desire – Action (AIDA) sequence. The research is positivistic, quantitative research paradigm in which consumer behavior approaches prevail. The study postulates there is significant relationship between promotions of festivals, events and awareness of destinations. The study reveals some promotional aspects which may help in transforming the attitude of tourist towards festivals and events in India. ‘festivals are the features of cultural diversity’

Globalisation and Indian Media:Certain Policy Implications

Media conglomerates and media corporatisation are phenomenon which have been studied by a number of scholars. The process of liberalisation, deregulation, globalisation and digitisation have transformed the media landscape. In India there has been a proliferation in the type of media. Simultaneously there has been a rise in the new form of communication known as mass-self communication (Manuel Castells). It is mass communication because it reaches potentially a global audience. It is self communication because individ-
The paper seeks to address health care, early marriage practice, reproductive health status, awareness about small family norm, housing conditions and health, role of media in health, awareness, utilization of medical facilities, habits and health etc. The paper explores that health of tribal women is affected by many inter-related socio-economic and cultural factors. The study reveals that women in general and tribal women in particular are the worst sufferers. Despite modernization, medicalization, globalization, marked improvement in global health and other ongoing developmental processes, the exposure of tribes in general and tribal women in particular, to modern system of medicine is not significant. The paper spurs the paradoxes of continuity study and change in the tribal health care practices and interventions. This could also be observed as the contrast between ethnicity and modern-post modern changes. Thus different patterns and levels of health inequalities could be identified among Indian tribal women. The findings will be a contribution to Medical Sociology, Sociology of Gender Studies, Social Anthropology, and to the health of tribal women.

Open Your Own Data - Creating Individual High Value for Little People from Big Data

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas. Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - "know yourself" - you could generate more individual value when approaching the company. With full awareness and ownership of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual's own interest.

Children’s and Preschool Teacher’s Photographs of New Preschool Architecture: Issues of Participation and Interpretation

Children's and preschool teacher's photographs and experiences of new preschool architecture
Kim Rasmussen
In an ongoing project (2013-2014) about children’s and preschool teacher’s interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the preschool and its environment. A numbers of photo-elicited interviews with the preschool teachers had been held over the summer too. These actions have created increased awareness of the relationship between the physical and social environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, (inspired from action research, new childhood sociol-ogy, phenomenology) is to create knowledge (on basis of experiences, narratives, observations/field notes, photos/visual knowledge) about the preschool environment, which might qualitatively discourse of kindergartens and the new architecture.

The architecture in new childcare-institutions breaks on several points with the former idea of "kindergarten" (small environments with an emphasis on domesticity, development and play). The new preschools in Denmark are bulky, contains many children (some more than 200 children), and are highly transparent (widespread glass in both upper and external walls). The new architecture is based on (neoliberal) idea of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another
is how the buildings are "lived" and coded/decoded (Bernstein) and experienced by the participants.

The paper and presentation will focus on issues of interpretation visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the symmetry between children and adults: preschool teachers play a key role in the interpretation of children's photos, while it is difficult to invite and involve children (2-5 years) to interpret their own photos and words.

RATCLIFFE, PETER* (University of Warwick, Peter.Ratcliffe@warwick.ac.uk)

Public Sociology and the Impact Agenda: A Case Study

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying 'impact' (in accord with the current neoliberal agenda demanding accountability and 'value for money'). The concepts 'public sociology' and 'impact' are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalizing impact in a research project that demands the deep, and unwavering, involvement of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the 'messiness' of the demonstrable 'impact' mirrors that of the research process itself, and the pursuit of a 'public sociology' in this context conflicts with dominant characterizations in the literature.

La Strada Network As an Example of Transnational Mobilization Against Trafficking in Women

My presentation will explore mobilization around trafficking in women for the purpose of exploitation in the Central and Eastern Europe (CEE). I will focus especially on the La Strada Network (LS) that is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking policies on the national level as well as internationally. This network because of its roots as a cooperation between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activism networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists form Netherlands and CEE.

Secondly I will give a closer look to the framing of trafficking by the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location to the actor, the views on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way particular LS members manage to reconcile a moderate framing of trafficking with gaining audience and support in local contexts.

Poland will serve as a case study for the analysis of the interplay between framing of trafficking by activists and relations between NGOs and the state agencies.

RAU, HENRIKE* (National University of Ireland Galway, henrike.rau@nuigalway.ie)

Mapping the Consumption of Distance Across the Life-Course: Connecting Individuals' Mobility Milestones to the Histories of Mobility Practices

Life events and life-course transitions can dramatically impact on people's consumption practices. There is ample evidence that key life events (e.g. arrival of first child, relocation, transition from education to work, retirement) coincide with more or less radical changes in consumption patterns (cf. Schafer, Jaeger-erben and Bamberg 2012). Understanding the role and significance of such ' tipping points' in people's consumption biography has the potential to significantly advance our knowledge of current patterns of (uns)ustainable consumption and how to either encourage or transform them.

At the same time, individual consumption biographies reflect wider structural conditions in society, including prevailing 'systems of provision' (Evans 2011) that organise the delivery of goods and services and their subsequent consumption. Linking individual consumption biographies to the histories of particular practices can thus cast new light on the causes and consequences of (uns)ustainable consumption and pave the way for more promising policies that work with rather than against people's established socio-environmental practices.

This paper argues for the development of longitudinal theoretical and empirical approaches to the study of everyday physical mobility and the associated 'consumption of distance'. The ability to adequately capture important mobility mile- stones across the life-course, that is, moments of radical change in how (much) people travel, must be central to these efforts. These milestones must in turn be linked to the history of key mobility practices such as walking, cycling and car use. Drawing on documentary evidence, policy papers and qualitative interview data from the Republic of Ireland, the paper identifies key mobility milestones in individuals' lives and connects them to the development of the modern Irish transport system and its implications for different mobility practices.

Gender Socialization of Youth in the Family

RAVAL, CHANDRIKA K.* (Gujarat University, ckraval@yahoo.co.in)

India is the second most populous country in the world, with over 1.2 billion people (2011 census). According to the provisional figures of the 2011 census, the youth population in the country including adolescents is around 550 million. This phenomenal rise in the youth population has made India the youngest nation in the world. The study reveals that socio-cultural factors are important in gender socialization. The study indicated that there is a significant effect of gender socialization in the family on the young. The study also shows that there is quite a good relation between patriarchal system and inequality of socialization. The study makes a number of recommendations for action.
Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women's safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers transform intimate labor--domestic workers and night nurses--seek to navigate physical and "moral" risks as they move between their homes and their place of work.

To Violate with Impunity: Legal Constructions of Marital Rape

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender-based violence everyday, law has not proved efficient to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. 'The Protection of Women from Domestic Violence Act 2005', does include sexual abuse within the definition of domestic violence, yet it does not clearly criminalize marital sexual assault. On the other hand legislations on "rape" including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of "marital rape". This paper attempts to understand such exemption of "marital rape" from Indian legal lexicon.

Legal constructions of "marital rape" is traced through analysis of legislations on "rape", observation of cases at two Mahila Police Stations (All Women's Police Station) at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women's groups patriarchal notions continue to influence legal understanding of "marital rape". Patriarchal and parochial notions such as "wifely duties", "marriage as inherent consent to sex" "wife as property", "divine ordinance" and others are invoked to justify the exemption of "marital rape". It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far from reality. The paper, therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against "marital rape".

Bulgaria Case Study: The Challenges of the 2013 Social Protests in Bulgaria

The contemporary technologically determined information and communication environment is not only facilitating users’ participation in the process of generation and dissemination of content, but is also creating new opportunities for democratic citizenship. A variety of texts on new communication characteristics (Carpentier, Castells, Deuze, Fidler, Friedman, Jakubowicz, Jensen, Lash, Patriarche, Todorov, etc.) offer multiplex approaches to this phenomenon, elucidating the interrelations between the audiences, the traditional and the social media.

The proposed text will discuss some major political and social implications of the new forms of the audiences viewed through the prism of the media activism in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose -- for sustaining the democratic standards. On June 14, about 10,000 people summoned spontaneously via the social networks to protest against the Parliament for the non-transparent appointment of a controversial media mogul as a head of the State Agency of National Security. Although the Parliament withdrew the appointment immediately, since then (nearly three months) hundreds of activists are every day out in the streets protesting against other controversial measures of the new government. Both events enjoyed extensive mainstream media coverage.

The aim of the proposed research is to answer the question in what ways the ongoing audience transformations challenge the contemporary media mix in Bulgaria.

Democracy, Social Movements and Rights: The Challenge Of Pluralism

In recent years social movements around the world have been more and more explicitly related to the issue of democracy. Since the 90s and the triumph of neoliberalism, transnational movements have struggled for an idea of democracy focused on human rights and inclusive citizenship, and not simply on the freedom from state control and consuming. With the alter-global movement, and more recently with 15-M and Occupy, the focus of collective action has shifted from the search of individual freedom – as in many post-1968 mobilizations – to collective rights as main goal of a democratic project compatible with an idea of global justice. The case study will be the movement for the defense of the Río San Pedro Libre (México).

Procesos de enmarcamiento y diálogo de saberes en el movimiento por la defensa del Río San Pedro Libre (México)

This paper brings forth how despite campaigns and sensitization by women’s groups patriarchal notions continue to influence legal understanding of “marital rape”. Patriarchal and parochial notions such as “wifely duties”, “marriage as inherent consent to sex” “wife as property”, “divine ordinance” and others are invoked to justify the exemption of “marital rape”. It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far from reality. The paper, therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against “marital rape”.

Socioeconomic Status

Cross-National Differences in Early Family Instability By Socioeconomic Status

Extensive research has shown that family instability has negative consequences for children's well-being. At the same time, there is growing evidence that differences in children's experience of family instability by parental socioeconomic status are growing—at least in the U.S. Less well understood is the extent to which variables linked to family instability may be occurring across industrialized countries more broadly. In this paper, we add to the literature by evaluating the extent to which the gap by education in family instability during childhood appears to be growing in cross-national context, using data for 17 industrialized countries with multi-state life tables and country-specific hazard models. To the extent that our preliminary results hold true, this research suggests that inequality in children's family experiences may be an important feature of life across the Western industrialized world, and that protecting child well-being for those born to less advantaged parents may be a growing concern.
Subjectivity and Human Rights: A Theoretical Investigation

In spite of an enduring attention for ethics and morality, the interest of sociology for human rights is recent, although lively and prolific. Power, violence, domination, the idea that “Whoever says ‘humanity’ wants to betray” (Carl Schmitt), have been at the core of critical sociology much more than the analysis of subject’s capability to struggle for human rights through social movements and everyday personal choices. Hence, not only postpositivist tendencies have brought to mistrust towards the issue of rights, but critical and emancipative sociology as well – from Frankfurt School, to Foucault, Bourdieu and others – has been sceptical towards the topic of human rights. Indeed, a sociology of human rights is related not only to ethics, social justice and social inclusion, citizenship rights and critique of discriminations, but also to a sociology of the acting subject. A full sociological understanding of the issue of human rights needs as well a reflection on subjectivity in a pluralistic, multicultural and globalized society. After a philosophical phase during which the concepts of subject and subjectivity have been criticized, deconstructed, reduced to the immanence of situated practices, the rise of the issue of human rights in the international sociological debate and in social movement studies highlights again the centrality of the problem of subjectivity (and humanity) in social theory. The aim of this presentation is to analyse the connections between contemporary sociology of human rights’ movements and sociology of subjectivity.

Post-, Trans-, or De-Nationalization? Fine-Tuning Political Identiﬁcations Above and Beyond Nation-State Allegiances

The literature on emerging global identifications tends to use ‘post-national’, ‘trans-national’ and ‘de-national’ as convenient synonyms. However, these terms are better employed to single out distinct forms of disalignment of political identiﬁcation from historically solid national identities. The paper describes these forms one by one and illustrates ideal-typical contents and conditions of such diverse configurations of detachment from nationhood in practices and attitudes. The empirical part of the paper draws on a 8,500 cases survey and 160 in-depth interviews with EU citizens living in six different countries (Denmark, Germany, Italy, Romania, Spain and the UK) as part of the EUCROSS project (www.eucross.eu).

Upper Classes, Wider Horizons? the Social Stratification of Travelling in Europe

Social stratification research on leisure tends to focus on class differences in cultural consumption patterns. In this literature, seldom is travelling taken into account as a dependent variable, even if international journeys are exponential-ly rising worldwide. But how is the experience of travelling sorted across social strata? Do they increase linearly as we move up the social hierarchy, as a reflex of higher income and cultural capital? Or are they more than proportionally an indicator of detachment from nationhood? The paper addresses both sets of questions – the social stratification of the quantity and quality of mobility experiences – by analysing the distribution of national and international travels across social strata with data from the EUCROSS survey, covering six EU countries: France, Germany, Italy, Romania, Spain and the UK. Preliminary data from the survey, suggesting that SES is an important predictor of mobility experiences; however, there are differences in motives of travels. Higher SES is associated with more travel for both holidays and professional trips. Furthermore, travelling patterns vary significantly depending on the countries from which they originate.

Race and Patriarchy: Gender and Migration in South Africa during and after Apartheid

Apartheid was not only a racial project, but also a patriarchal project that encouraged family separation. By design, black men and women in South Africa had different experiences under the apartheid regime, although many times they did not follow the strict patriarchal and racial laws. There is not much good historical data about gender differences in migration in South Africa, so I use a unique data set (2000 South African Migration and Health Survey) that includes life histories for a nationally representative sample of the black population to investigate the impact of apartheid policies on both men’s and women’s past and present migration patterns. Overall, I find that both women and men became increasingly likely to move over time, both during after the apartheid years and that women were more likely to move with their families, contrary to conventional wisdom and unlike migration patterns in other contexts. Women may not have moved at the same rates as men, but this paper gives evidence that despite apartheid’s intended effects of family separation, both women and men were moving as families. Gender and migration patterns are relatively understood, especially for historical populations, so this paper has the potential to add to our understanding that despite historical and current gendered migration patterns, particularly in South Africa.

Modernity Reconfigured, or, Empire and the End of Habermas Versus Foucault

Central to debates in social theory about the relationship between modernity and critique has been the opposition, variously construed, between Foucauldian and Habermasian perspectives. Particularly in the 1980s and 1990s, and into the 2000s, these iconic figures stood for differing positions on the nature and purpose of human rationality, the workings of power in modern (and perhaps post-modern) capitalist societies, and the meaning and purpose of “critical theory.” As many papers and advanced course syllabi show, the opposition itself became a tool for thinking about democracy, capitalism, violence, and so on. However, this opposition was overwritten by a surprisingly similar theoretical narrative of modernity informed by a comparative-historical sociology of national states and economies, and this narrative is in important ways incorrect and incomplete, for it excludes empire and colonization from its causal stories and cultural interpretations. A reading of the explicit and implicit historical sociologies of Foucault and of Habermas is presented, highlighting these absences. The paper then explores the recurrence of this absence in other theories of modernity or modernities, including Wittrock and Eisenstadt.

What, then, is the alternative? Too often, alternatives are themselves presented in terms informed by “Habermas versus Foucault,” modern versus postmodern, etc. In an effort to resist this tendency, instead of proposing a new all-encompassing position, this paper examines how three concepts that are simultaneously analytically and normative would shift in their meaning and use, if we were to incorporate the sociology of empire into our understanding of modernity and critique. First, the relationship of the concept of power to the concept of instrumentality or instrumental reason is reconsidered. Second, the concept of fantasy, and the possibility of a hermeneutics of modern fantasies, is explored. This leads to a final reflection on the concept of modernity itself.

Overcoming Institutional Barriers: The Relationship Between Basic Human Motivations and Immigrant Integration Across European Societies

Research on the incorporation of immigrants into host societies has paid particular attention to the question of who is most likely to integrate, by distinguishing between individual, country of destination, and country of origin effects. Most of these debates have largely overlooked the question of why some people are more likely to integrate. In this study, we analyze integration at the micro-level by identifying what basic human motivations lead to greater socioeconomic success, cultural adaption and political participation. Social psychological research has identified four higher-order universal human values that are consistent with specific types of motivations: self-transcendence (motivation = social justice), conservation (motivation = social order), self-enhancement (motivation = self-esteem enhancement), and openness-to-change (motivation = creativity and independence of thought). Although each exists in every culture, there is much variation in regards to the distribution of these values within and between countries (Schwartz & Bardi, 2001). In this study, we posit that immigrant integration depends on whether immigrants have the same values and motivations that are dominant among native residents. Moreover, we expect self-enhancement values in particular to be strongly correlated with integration. Yet, because immigrants are more likely than native-born citizens to experience discrimination, we expect this motivation to be more important for immigrant outcomes than for natives. Further, we hypothesize that the relationship between these values and integration will be strongest in societies that have additional institutional features that make immigrant integration more challenging (i.e. weaker welfare states, societies without multicultural policies, and societies without inclusive immigrant integration policies). To test these hypotheses, we analyze the 2002-2012 cumulative file of the European Social Survey, which includes the Schwartz’ Portrait Values Questionnaire in addition to a number of social and political and attitudes and behavior.

Welfare Magnetism within Public Opinion. Evaluating Welfare Opinions Among First and Second Generation Immigrants

Invoking the metaphor of the magnet, an oft-heard concern about the sustainability of the welfare state is that generous social welfare provisions serve as an important pull-factor in immigrants’ consideration of their preferred country of destination. With their accumulated social risks, immigrants are on average more likely to claim welfare benefits, fueling the idea that such generous provisions reverse immigration flows. If this concern would be justified, then an analysis of attitudes towards social welfare programs among immigrants would reflect such magnetism effect, namely that immigrants would exhibit stronger pro-welfare attitudes compared to the non-immigrant population, particularly in countries with higher per capita spending. To evaluate the extent to which immigrants reflect the idea of welfare magnetism, we analyze the 2008 ‘Welfare Attitudes’ module of the European Social Survey, fielded in more than 20 countries. This survey allows us to untangle the extent to which self-interest motivations determine welfare attitudes among immigrants equally as they do among non-immigrants. Further, we evaluate if pro-welfare attitudes are a function of the size of the welfare state immigrants reside in. While our analysis indicates that immigrants are indeed slightly more pro-welfare than the autochthonous population, it also shows that their welfare attitudes are an imprint of the welfare opinions of the majority population of the country they are living in. We conclude our contribution with the implications for the future of the welfare state, the theory of welfare magnetism, and the consequences for public policy.

Subjectivity and Social Change In Social Struggles In Mexico

Mexico is a key country to look at and analyze the forms of struggle and the projects of other sorts of life that are being put into practice in the Global South. The experience of Zapata autonomous communities (since 1994), and the re-structuring of the Action and Dach in 2016, the processes of self-defense of villages in Guerrero and Michoacan, and other numerous indigenous struggles, whether rural or urban that are taking place in Mexican territory have been configured as a point of reference for the development of a new social imaginary in both the Latin American continent and other places around the world. In addition, these experiences have contributed to a path to the development cycle of mobilizations in Mexico and also in Latin America, mainly led by social subjects that have outweighed the North-centered analyses of collective action and also the traditional conception of social movements. In this paper, we will present a proposal of analysis regarding social struggles taking place in current Mexico, from below and from the point of view of the leaders. Our starting point is the Latin American literature on social movements and the ethnographic work carried out by the authors in various social protests in the country in the past decade. Among our purposes, we aim to analyze how in these struggles people reinvent and re-code non-institutional forms of doing politics in relation to collective needs and desires.

With this paper we attempt to contribute to the construction of a dialog between the experiences of struggle in the Global South and the Global North, where the starting point are not the theories far from social subjects nor their geographical location, but instead the everyday political practices of people.

Obesity and Social Inequalities : Public Health Campaigns and Their Implementation

In the context of a French “epidemic” of obesity, the question of social inequalities regarding the development of obesity and the implementation of nutritional recommendations coming from public health campaigns constitutes an important concern. Based on a statistical analysis of obesity prevalence (1), on a corpus of 85 semi-directive interviews (2), and on a wide corpus of texts related to the French obesity debate (3), this contribution will analyze the social inequalities regarding obesity in France related to social classes, gender and generations, and it will examine the several factors explaining this social gap, in particular the integration of recommendation related to diet and body along the social scale and the way objectives taken in account in public health campaigns. First, the analysis will be placed on the ongoing existence of a strong social hierarchy in which well-to-do and low-income categories are at opposite ends of the scale, and the factors that determine the integration of dietary dictates are presented (economic factors; mental representations of diet and body; the symbolic of sickness and its relation to diet; the collective mental representations and identities of each social class). The analysis also shows the social inequalities that exist in the development of norms and the complexity of the intermediate social groups, divided between submission to normative pressure regarding diet and corpulence, and a form of working class rejection.
We will thus highlight that the French public health campaigns, claiming to be universal, seem destined to fail: in order to raise a strong mobilization when it comes to obesity, public health campaign have neglected social disparities. In consequence, they may have deepened social inequality further because they have ignored – at least until recently - the social dimension of dietary consumption.

REGOUD, SERGE* (Université Toulouse Capitole, serge.regoud@ut-capitole.fr)

La Crise Racontée Par La Télévision Française

Cette communication se présente en forme de décryptage et d’analyse, sur une période d’une année, des programmes de la télévision française (grandes chaînes historiques, TF1 et France Télévisions) concernant la représentation de la crise selon deux catégories d’émissions : fictions télévisées d’une part, et émissions de débats politiques, d’autre part, illustrant et légitimant conjointement un discours de l’inégalité.

S’agissant des fictions télévisées (séries et téléfilms), sous réserve de quelques notable exceptions qui donneront lieu à un éclairage spécifique, le modèle régulièrement dupliqué ignore la crise, en ne représentant que des milieux sociaux qui y échappent. Les exclus, lorsqu’ils apparaissent font figure d’accidents individuels. La télévision publique n’apparaît pas, à cet égard, fondamentalement différente de la télévision privée. L’exemple emblématique, de la série quotidienne Plus belle la vie (France 3), alors même qu’elle a la vertu d’illustrer les grandes questions sociales du temps présent (racisme, homophobie, évasion fiscale, problèmes familiaux…) ne comporte parmi ses personnages ni chômeur, ni ouvrier, en claire opposition avec les séries britanniques comparables. Les inégalités de représentation y apparaissent bien comme des inégalités de classe.

Des tendances comparables caractérisent, selon d’autres voies, les émissions de débats politiques, nombreuses sur les chaînes publiques : la première traduction d’inégalités concerne les experts et « intellectuels » invités, quasiment toujours les mêmes, fondant la distinction entre une minorité « visible » et la majorité des « invisibles ». Et ces mêmes experts partagent le même discours néo-libéral d’apréhension de la crise, imputée à l’adaptation des salariés aux nouveaux principes du marché du travail.

RECHLUND, MATHILDE* (Södertörn university, mathilde.rechlund@sh.se)

Public Transport in Times of Individualization

Public transport is recognized by policy makers as a main tool in the combat against greenhouse gas emissions, and a key factor in sustainable urban development. Yet in Stockholm, the European Green Capital of 2010, systems for private transport are given a significant portion of space and funding in policy making and regional development plans. A recent prognosis shows that by 2050 Swedish public transport will be far from reaching its zero-emission climate target for road traffic, given hitherto decided measures. This implies a gap between the rhetoric and set targets, and the physical plans made to reach these targets.

This paper is focused upon transport policy strategies for facing and responding to the ramifications of these developments: digital serfdom or exploitation (managing or controlling technology to control individuals’ access to information). The paper will discuss the implications of digital developments for social inequality in transport, with special reference to the role of public transport in this context.

The Transformations of the Nation State As Challenges to Sociological Theory

The great changes the world experiences in recent decades have had profound consequences for nation states. Yet, the impact of such changes has been under theorized. This theoretical deficit makes it difficult for us to contemplate the prospects of the historical fusion between national solidarity and state authority. Relevant as the criticisms directed to methodological nationalism were, their further implications remain poorly explored, giving margin to misplaced assessments of the future of the nation caught between the global and the local. The paper discusses two issues that bear a direct impact on the changed ways we conceive of the nation-state today: (a) the emergence of the idea of civil society and its impact on the questions of representation; and (b) the idea of a nation-state that is no longer a unitary one but is constituted by different parts with varying degrees of autonomy.

Despite overwhelming print circulation numbers, subscription base and advertising revenues, Japanese newspapers experience a steady decline in profits.

RECHLUND, MATHILDE* (Södertörn university, mathilde.rechlund@sh.se)

Public Transport in Times of Individualization

Public transport is recognized by policy makers as a main tool in the combat against greenhouse gas emissions, and a key factor in sustainable urban development. Yet in Stockholm, the European Green Capital of 2010, systems for private transport are given a significant portion of space and funding in policy making and regional development plans. A recent prognosis shows that by 2050 Swedish public transport will be far from reaching its zero-emission climate target for road traffic, given hitherto decided measures. This implies a gap between the rhetoric and set targets, and the physical plans made to reach these targets.

This paper is focused upon transport policy strategies for facing and responding to the ramifications of these developments: digital serfdom or exploitation (managing or controlling technology to control individuals’ access to information). The paper will discuss the implications of digital developments for social inequality in transport, with special reference to the role of public transport in this context.

Billiomedia: Journalism Ethics and Ideology in the Age of Open Participation

Throughout the world, news is becoming a more open, collaborative project. In “We The Media” (2004), David Gillmor re-imagined journalism’s role in society as a joint conversational process achieved by citizens and professionals. Later, the term “Participatory Journalism” was conceptualized by journalism scholars in order to transcend the citizen vs. professional journalism dichotomy.

“Participatory journalism” has been discussed in recent years in various contexts. First, there’s the cultural change defined as “convergence culture”: the gathering, filtering and editing of news produced by professionals transformed into a participatory culture of news in which the audience became “users” or “producers” , and arguably achieved more control over news content, production and distribution . Second, is the social erosion of journalism as a profession: its boundaries, its gatekeeping function or the ideology and ethics which accounted for journalists authority, legitimacy and autonomy. And lastly is the Marxist view of the ramifications of these developments: digital serfdom or exploitation (manipulated in user generated content), precarious labor patterns (freelance contributors and news aggregation sites) and cultural work.

Despite overwhelming print circulation numbers, subscription base and advertising revenues, Japanese newspapers experience a steady decline in profits. * denotes a presenting author. Abstracts are organized by first presenting author’s last name. 803
Recently, major newspapers began developing participatory platforms such as Asahi Shim bun’s “Billi media”. Newspaper reporters from the Asahi were also encouraged to open official Twitter accounts, converse with the audience and debate with their peers and competitors on-line.

Albeit limited, these actions are transforming the culture of news production, gathering and gatekeeping functions. Based on Japanese reporters interviews, my research focuses on these newly emerging participatory practices and the challenge they present to professional ethics and ideology. Employing concepts as user generated content, social curation or big data manipulation, Japanese reporters attempt to redefine professional in order to reclaim their credibility and jurisdiction at a time of crisis and uncertainty.

Muslims Social Exclusion in Canada and France: Does National Context Matter?

This paper compares the experiences of Muslim minorities in three contexts: France, Quebec, and English Canada, and in so doing helps illuminate a number of issues of significance to current debates on immigration and multiculturalism, including the role of public attitudes, national integration ‘models’ and advantages of transnational ‘nations of immigration’. Recent European experience, and language and culture. The rise of an anti-Muslim sentiment in most of Western European societies, and especially in France, has not reached the same level in Canada, however Quebec's is clearly distinctive in this regard and more like France. How these differences among public opinions and in political discourses affect social integration prospects of Muslim minorities in the three settings? Both qualitative and quantitative data are used. On the quantitative side, for France the new government-mandated “Trajectories and Origins” (Teo) survey conducted in 2009 (over 21000 interviews) overcomes many limitations in existing statistics for identification of ethnic minorities. The comparable Canadian source is the “Ethnic Diversity Survey” conducted in 2002 by Statistics Canada (over 42000 interviews). The paper also draws from structured encounters between Muslims and non-Muslims conducted in Paris, Montreal and Toronto.

REMES, JACOB* (SUNY Empire State College, jacobremes@gmail.com)

Transborder Disaster In The Progressive Era

What disaster can teach us about diaspora? What can diaspora teach us about disaster? This paper explores two early 20th-century disasters in the U.S.-Canada borderland. One, the Halifax Explosion of 1917, took place in a region that sent migrants south to the United States; the other, the Salem Fire of 1914, mostly affected French-Canadian immigrants to the U.S. and their descendants.

Each disaster illuminates experiences of migration and diaspora. The Salem Fire—which started at a rickety patent-leather factory and spread through the tenement district, eventually rendering 18,000 homeless or jobless—shows the relative unimportance of the Franco-American diaspora to the lives of its members. Contrary to what the historiographical literature would have us expect, Franco-American survivors mostly stayed near Salem, going neither to other New England centers of the diaspora nor back to Quebec. Local and regional communal organizations did little fund-raising or relief work. In contrast, the Halifax Explosion—which began as a fire on a munitions ship, killed 2,000, and left about 25,000 homeless or jobless—shows the importance of the Nova Scotia diaspora. Nova Scotian migrants to the “Boston States” donated money for relief and through their donations built a transnational political community that sought to influence relief and recovery efforts.

Likewise, attention to diaspora and migration can help us better explain the experience of disaster. As Erikson (1976) and others have recognized, displacement is a key to mental illness. Prior “displacement”—that is, migration—means that disaster refugees have more access to aid from outside the affected community and have a greater willingness and ability to relocate. These two historical disasters help shed light on the uses of diaspora and migration in disaster’s aftermaths.

Intergenerational Coreidence and Electricity Consumption: Age Effect, Retirement Effect and Scale Economies Effect

Many studies have found that, even in the most modernized urban areas in China, intergenerational coreidence still account for a large proportion. Intergenerational coreidence, low retirement age, high female labor participation rate can make the household activity and the related energy consumption patterns different from western countries. In this paper, we analysis the impact of intergenerational coreidence on energy consumption. Taking electricity as an example, we find that there are significant differences between interregionalational coreidence household and single generation household. Electricity usage of single generation household is much higher than other intergenerational coreidence household.

We decompose the variance in single generation household is much higher than other intergenerational household. electricity usage of single generation household is much higher than others. We pooled data from the Chinese Family Panel Studies (CFPS) and used OLS regression model to decompose “Age effect”, “Retirement effect” and “Scale economies effect”. The decomposition model shows that (1) the presence of “Scale economies effect”, which means that the household per person electricity usage declines not only when household members increase, but also when intergenerational household members live together; (2) “age effect” and “retirement effect” can be found that female over 50 years old live in a household can increase household per person electricity consumption, and all the other age-gender-specific group live in a household can reduce household per person electricity consumption, especially for male at the age of 30-40; male consume less electricity in household than female at all age group, except for age 10-20. Energy policy makers can benefit from better understanding of these effects.

RENARD, LEÀ* (University of Potsdam, lea.renard@etu-iepg.fr)

The Statistical Construction of Alterity: Governing National Population By Numbers in France and Germany (1860-1900)

This paper is aimed to contribute to the history of statistics as science but also as governing tool (Foucault 2004). This abstract explores the role of official statistics in the nation building process in the second part of the 19th century in France and Germany. Following the analyses of Desrosières and Foucault the study asks how science produced “imagined communities” (Anderson 1983) by using and constructing statistical categories on migration. By doing that official statistics constructed to produce differentiation between national and foreign populations, which both aim to be governed differently.

In the first step I will argue that the historical development of official statistics in the 19th century in France and Germany led to its use in both countries as a governing tool to administrate population, but in different national ways. In the second step the paper recontextualizes and deconstructs the statistical categories of foreigners and citizens, to show how official statistics took part in the historical process of nation building.

Scientific journals (Journal de la Société de Statistique de Paris, Zeitschrift des Königlichen Statistischen Bureaus and Algemeines Statistisches Archiv) between 1860 and 1900 form the empirical basis of the study. About 160 articles on migration statistics have been qualitatively analysed in order to sketch the statistical discourse about migration as well as the discursive construction of German and French nations by statisticians.

The author gratefully acknowledges the financial support of the Scientific Commission of the IEP Grenoble, the Doctoral School SHPT of the University of Grenoble and the Potsdam Graduate School.

RENAUD, MARIE-CHRISTINE* (Université Autónoma Chapingo, mcrrenard@gmail.com)

Behind the Label: Always Fairly Traded?

Since Fair Trade entered the mainstream market, a label symbolizing the quality of being "fairly traded" has mediated between the producers and the consumers instead of the more direct relationship existing when fair trade was an alternative trade organizations business. With the lengthening and a larger opacity of the commodity chain, the label is supposed to give information and a guarantee to the consumers about the conditions of trade offered to the producers. A system of standards and certification has been developed to deliver the label.

On the other side, as the literature on Fair Trade demonstrates, the corporations have developed multiple strategies to occupy the promising market niche that fair trade represents, through favoring competing labels that induce consumers’ confusion or being themselves certificated by the fair trade institutions for a small part of their purchases.

Based on a case study in the Sierra Madre de Chiapas, South of México, the papers pretend to demonstrate how a single label, the Fair Trade International label (or FLO), covers (or hides) very different and opposite realities on the side of production and supply: on one side, autonomous cooperatives of coffee peasants, that have sold under Fair Trade conditions to Alternative Trade and Fair Trade organizations in the North for long time; on the other side, producers organized and financed by one of the largest coffee trade corporations, engaged in a multi-label strategy in order to occupy all market niches, that buy up their coffee to be sold under the FLO label.

L’identité Entre Construction Et Renoncement. Réflexions De Ernesto De Martino Et Georges Devereux Sur La Sexualité Dans Une Dimension Transculturelle

L’anthropologue italien Ernesto de Martino (1908-1965), dans sa vision historico-critique du rapport entre psychisme et société, considère le sujet humain comme un produit historique dont les origines plongent dans ce qu’il appelle le “monde magique”. L’existence d’une frontière stable entre l’individu et le reste du monde est, pour de Martino, loin d’être un fait établi mais caractéristique du monde occidental, qui a dépassé le phénomène de la “labilité de la présence” et dont l’an-goisse face à la dissolution (il appelle contornoi ces états psychiques d’“identité indifférenciée” du “monde magique”) est désormais circonscrite à des situations bien précises (“l’acte sexuel, la mort”).

Georges Devereux (1908-1985), élève de Marcel Mauss et fondateur de l’ethnopsychanalyse, étudie de son côté la constitution d’une “identité intégrée” et théorise la possibilité d’une “renoncement à l’identité”, comme un stratagème volontaire d’autodéfense psychique.

Je proposerai une analyse comparative de la notion de construction de l’identité chez de Martino et Devereux, et son corollaire, la perte de l’identité pour le premier, versus la renoncement à l’identité pour le second. J’essaierai d’élucider en particulier le phénomène de l’acte triste à travers l’analyse des situations bien précises (l’acte sexuel, la mort) où s’écrivent les identités.

Elites of São Paulo and Their Varied Relationships with Public Space

The paper examines specific areas in São Paulo where elites cohabit with poorer populations and investigates the different ways they mediate this physical proximity. Our findings indicate that the relationships emerging from these dynamics vary from complete appropriation of public space by the elites to negotiation with other cohabiting social groups.

Until the 1970s, São Paulo’s elites lived in the center of the city. Although they were one of the actors in the metropolitan’s macro-segregation configuration, the local literature traditionally emphasized the formation of urban peripheries inhabited homogeneously by poor populations. Recently, however, both quantitative and qualitative research have eloquently pointed to heterogeneous living spaces in São Paulo, indicating that portions of the elite have scattered throughout the metropolis, while others have stayed in the center.

The elite’s varied choices of housing location since the 1980s led to different impacts on public space: some of the groups have closed streets with gates and walls, others have banned sidewalks, and so forth. At the same time, some of the groups that stayed in the center have not materially sealed off contact with other social groups. Therefore, our aim is to understand how elites view contact with other populations and which role public space plays in the establishment or avoidance of such contact.

We take these three steps: (a) using Geographic Information System, we select areas that are inhabited by the 10% richer extract of the population according to the 2010 Census data, provided that these areas also contain poorer populations; (b) conduct and analyze in-depth interviews with members of the elites and label them into groups according to shared lifestyles, as well as sexualities, which are treated in a perspective transculturelle par ces deux contemporains, mais qui est abordée selon des angles différents. En reconstruisant entre autres la réflexion sur la pudeur et le plaisir sexuel développée par de Martino, celle sur la déviance sexuelle chez Devereux, j’aurais souligné l’originalité et la complémentarité de la contribution de ces deux théoriciens.

Mobility Policies in São Paulo: Redistributive Strategies Towards the Public Transport

The paper focuses on a redistributive strategy that attacks poverty on one of its aspects – the impaired access to urban resources, specifically to mobility. It investigates two locally-designed São Paulo policies aimed at redistributing road space towards the public transport to make bus users travel faster and at lower costs.

While Brazil has been redistributing income towards the poor through a federal Conditional Cash Transfer policy, its poorer metropolitan inhabitants are still submitted to a worse-quality urban services, mobility being one of the most critical. Analyses of the 1987, 1997 and 2007 Origin/Destination survey conducted in the São Paulo Metropolitan Region show a positive and significant correlation between higher incomes and automobile use. According to the same data, travel time for public transport users has been, on average, double the time it takes for car riders to move in the city. Automobiles take up more than 80% of road space in rush hour in São Paulo.

Data indicate that the two policies investigated here have redistributed road space and travel speed towards buses. The Sistema Integrado (2001-2004 adaption) focused on the implementation of a BRT (bus rapid transit) network while introducing an integration system that allowed fixed-fare multiple-bus riding. The Dá Licença para o Onibus (current administration) has implemented more than 200 kilometers of exclusive bus lanes and claims to have reduced travel time on these lanes by half. Both policies suffered from political and institutional setbacks, as the paper will detail.

The role of transportation in accessing other urban-life goods has been eloquently described as crucial by European literature. Research on the subject has been scarce in the Global South, however. With empirical data on mobility in São Paulo, this paper aims to make an appointment to the research agenda on strategies that go beyond the redistribution of income.

The French radical right party “Front National” has proven responsive to new trends adopted by political parties such as the introduction of functional alternatives to party membership and the expansion of intra-party democracy. Our paper proposes to describe this phenomenon and to analyze its effects on the internal party economy.

The choice of an internal election to select a new president in 2011 was an absolutely new development in a party characterized by centralization, verticality and a great degree of control of the president and executive board. It generated visible conflicts at all party levels, from the executive board to the local federations, and a great degree of control of the president and executive board. It generated visible conflicts at all party levels, from the executive board to the local federations, and a great degree of control of the president and executive board. It generated visible conflicts at all party levels, from the executive board to the local federations, and a great degree of control of the president and executive board. It generated visible conflicts at all party levels, from the executive board to the local federations, and a great degree of control of the president and executive board.
The Image of Male Immigrant in Radical Right Parties’ Discourses: A Case Study on the French National Front

Based on a qualitative study (semi-structured interviews with party executives, analysis of public speeches, parties’ programmes) and using iconographical analysis of party posters, this paper describes the construction of the threatening male immigrant in the discourse of the main French radical right party “Front National” in the recent years. Analyzing how the otherwise is constructed offers ways of understanding the symbolic boundaries of the national community drawn.

Comparative Sociology As an Inquiry and As a Teaching Discipline: The Role of Institutional Heritage in Conflictive Contexts

The paper argues that a broad discourse on the role of comparative sociology has given rise to multiple discussions in recent years. The paper is an opportunity to analyze a very old yet really stimulating topic in scholarly production.

Weather Disasters and International Migration: Empirical Model and Worldwide Forecast to 2060 Under Business As Usual

Weather Disasters (WDs) have played a role in promoting internal and international migrations in a number of episodes, but it is unclear if they play a systematic role play in migration by developing statistical models that anticipate the potential for heterogeneous migration responses to disasters and policy levers that might modify these responses. The unit of analysis for our models is the country pair- or dyad-year and we employ panel data for bilateral flows. The output of academia is no longer confined to a pure intellectual/community role. Part of the problem is that the statistical literature on migration has essentially ignored its impacts. This research question is important, for the intensity and frequency of WDs are expect to grow due to global warming, and there are reasons to suspect that large waves of immigration may lead to violence between natives and newcomers in destination areas. We provide a step in solving the role WDs play in migration by developing statistical models that anticipate the potential for heterogeneous migration responses to disasters and policy levers that might modify these responses.

Competitive Edge of Filipino Migrant Teachers in Selected Countries

Recent history tells us that a number of Filipino teachers have extended their territorial milieu in teaching from the Philippines to various countries of Asia, the Middle East, and North America. This paper examined the global movement and experiences of Filipino migrant teachers vis-à-vis their competitive edge in the global labor market. It looked into the standards and requirements for teachers of receiving countries vis-à-vis the qualifications of the Filipino teachers as a result of institutional competencies of Teacher education Institutions (TEIs) in the Philippines. Most importantly, it explored as well the phenomena of gendered migration. As the Philippines looks forward to be more competitive, it is important to analyze the nuances of what makes a Filipino teacher globally competitive. Results of this research could be a good benchmark for improving the quality of teachers that the country produces.

There were four important migration phenomena about Filipino Teachers that were explored in this paper. First, it surveyed the migration and employment profile of teachers who usually worked in abroad as teachers. Demographic and socioeconomic profiles were also dealt with in this paper. Second, it analyzed the experiences of teachers as regards their motivations in working abroad, finding and applying for teaching jobs, teaching experiences, and adaptation and adjustments in a foreign country. This part was highlighted by competitiveness level of teachers and their perceived loses and gains while teaching abroad. Teachers’ competitiveness was indicated by their salaries, promotions, incentives and other benefits received due to their services to the host institutions. Third, the standards and required competencies among teachers from home country and receiving country were analyzed. Lastly, this paper examined as well the competitiveness of Filipino teachers using gender lens.

Macro Conditions of Class and Micro Patterns of Social Interaction: The Problem of Studying Labor Migrants’ Discontent in the Time of Economic Instability

Paper to be presented at the XVIII ISA World Congress, Research Committee on Sociology of Migration, RC 31

The paper aims to focus not only on the limited control over migrants’ external situation in host societies, cultural discrimination or accessibility to legal protection, but to examine the problem of migrants’ everyday life practices in their uncertain condition, specifically in the time of economic instability. We try to conceptualize this emergent experience within the framework of the sociology of emotions. We begin by labelling it as ‘discontent’, which is understood as a long-term action, (a) determined by the structural conditions, (b) created by and transmitted through the everyday social interaction, and (c) capable to result into collective action. This analytical move allows us to study ‘discontent’ at both macro- and micro-levels without losing its specific content.

In terms of theoretical and methodological foundations the research is orientated toward ethnographic institutionalism. We try to provide theoretical groundings and empirical evidence to justify an approach that link the micro experiences with the macro institutional arrangements through the detailed studies of migrants’ everyday life practices.

The data come from the three longitudinal field research Projects jointly supported by Vietnamese state foundation (2008-2010), CARI - Greece (2010-2012), and Russian state foundation - RGNF (2013-2016). The field researches dealt with everyday life practices (including “alternate practices”) of transnational labor migrants in Athens, Greece and St. Petersburg, Russia.

Constructing the Virtual and Material Public Spaces: The Cases of “We Are All Khaled Said” Facebook Page and Tahrir Square during Egypt 2011 Revolution

Social movements use urban spaces for their representation. They demand a spatial setting for their full effectiveness. However, spatiality of social movements has entered into a new phase since the mid-1990s. The prevalence of the Internet as part of the daily lives of people has challenged traditional theories of social movement and political public space. Recent revolutions and social movements in the Middle East and Arab Spring countries, like “We Are All Khaled Said” revolution, have demonstrated the relationship between these spaces and the events of the revolution. It has shown that Arendt’s concepts of action and speech can theorize the virtual and public spaces of the Egyptian revolution.

The Social Clinical Approach and Social Change. /La Clinique Du Social Et Le Changement Social

Analysant différentes formes de recherche et d'intervention en sociologie clinique, le récit de vie de collectivité, la psychodynamique du travail, les pratiques autobiographiques, nous explorons les possibilités et les limites de ces pratiques en regard d’une problématique du changement social. Sont présentées brièvement des recherches en psychodynamique du travail auprès du personnel dans un centre de santé pour personnes âgées dépendantes, auprès du personnel d’une prison; des recherches sur des récits de vie dans des collectifs communautaires; des expériences de formation sur le roman familial et les trajectoires sociales. Le thème central de cette analyse est l'importance de la conscientisation personnelle et collective que permettent ces expériences et la nécessité de prendre en compte des facteurs institutionnels favorisant le changement. Cela conduit à une réflexion du type épistémologique sur l’échange des savoirs entre chercheurs et partenaires et la place du savoir critique dans ces expériences.

De la même façon, nous analysons une variété d’approches de recherche clinique qui s’inscrivent dans la sociologie, comme collective life stories, psychodynamic of work situations, autobiographic practices, we examine the possibilities and limits of those practices regarding social change issues. Are then briefly presented some researches in psychodynamic of work situations, workers in an aging and dependant persons health center, personal ofa jail; researchs using collective life stories in community groups; training experiences using the family novel and social trajectories approach. The central focus is the analysis of the consciousness raising process, personal and collective, as a result of these experiences, and the necessity to take into account structural or institutional factors facilitating change. Then there is need for and epistemological thinking about knowledge exchange between researchers and their partners and the central role of critical thinking in those experiences.

Halal Katsu Wraps and Jerk Chicken Bagels - the Guts of a Postcolonial City

In recent years there been a growing recognition and celebration of culturally hybridised dishes as part of a Northern European and American street food revival. As this paper discusses, this hybrid characteristic is nothing new for a port city such as London, which, for the majority of its history, has cooked up an assortment of transcultural dishes. Through a consideration of everyday lunches such as the halal chicken katsu wrap, jerk chicken bagels and the mince sandwich pakora, this paper examines the relationship between life in the city’s margins, taste, transculturation, adaptation and entrepreneurship. Attracting some of the lowest paid workers and adhering to the same food laws as in other cities, this paper will be concerned in terms of both economic necessity (offering the most calories for the least money) but also as important cultural meeting points, a role that is derived through histories of global exchange. Taking the increasingly ubiquitous chicken katsu curry wrap as its main curry wrap, the paper reveals the connections of the ‘authentic Japanese’ dish amongst early twentieth century dialogue with European and American tatties. The more recent proliferation of the dish through the lunchtimes of working Londoners is related to the affordances delivered by this early moment of intercultural exchange. The paper also considers the importance of this earlier moment of cultural exchange in the light of the recent rise of Asian economic and cultural influence in the city. Through tracing the evolution of this dish and a taste for it the paper demonstrates the transformations local and global culinary cultures undergo as entrepreneurs strive to accommodate the super-diversity of globally embedded cities. Alongside the jerk bagel and deep fried chicken sandwich, the importance of chicken katsu curry wraps will be emphasised for what they lend to an understanding of the complex genealogies of contemporary urban culture.

Spend It As I Tell You, NOT As I Do: Children, Families and Money in Different Socio-Economic Contexts

This article aims at contributing to a body of work about children and inequality, exploring the importance of socioeconomic context and social capital for understanding the ways in which money is perceived, obtained and used by children. Socioeconomic context seems to influence not only the level and structure of household expenditures but also how money and consumption are valued and understood. Social capital conditions the access to economic capital and embeds the practices of consumers and their social networks, concurring to various forms of inequality. Alleged contrasts, especially between middle and working classes, in terms of money management, consumption priorities and postponement of gratification have been debated. It seems thus relevant to investigate if this presumed relation applies to children and why. Do children from different socioeconomic contexts reveal the traits that have been attributed to the socio-economic categories, namely class and income levels, to which their parents and households belong? Authors have considered the importance of socialization for developing notions of money and consumption and their subsequent use in adulthood and theories of consumption have mentioned the importance of social capital, social reproduction and habits in this process. The material and symbolic world of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
children is worth closer analysis as it may fall beyond the categorizations usually applied to adults. To this end, a mixed methods research project with 245 children attending different primary schools in Portugal – one private school targeted at upper class children and one state-sponsored school located in a working class area – was developed. The results revealed significant differences by school and household typology.

**What Makes Low and High Income Families Apportion Their Children's Education and Care to Early Childhood Education?**

Why do families apportion their children's education and care to Early Childhood Education? Are there motivational differences between low and high income families? Prompted by these questions, research was carried out on four families - being 2 low income families and 2 high income families, who enrolled their children in Early Childhood Education in Brasilia, Distrito Federal, Brazil in 2013. Two interviews were held with parents addressing both family and Early Childhood Education topics. Using the concept of family arrangement (FONSECA, 2005) as a basis - which apart from the nuclear family, encompasses several other family structures and the idea that Early Childhood Education in Brazil is not only for parents but the child, one can observe tendencies towards change in the standard of education for children aged 0 to 3. Previously exclusive to the family environment, the tendency now considers environments beyond the domestic parameters without considering the family a bearer of any social pathology (ROSEMÉRBERG, 1995). The care and education process is neither natural nor exclusive to families. Given this scenario, it is possible to highlight some reasons for this change like alterations in peer relationships, modifications in the perception of children aged 0 to 3, universalisation of education in an institutional context - prior to mandatory formal education, co-responsabilisation of the State in care and education as well as socialisation processes beyond the family environment. This research discusses the reasons behind families apportioning their children's education and care to Early Childhood Education and seeks to pinpoint explanatory categories for the changes in the standard of education and care of young children. The final intention is to identify motivational convergences and divergences between low and high income families.

**Religion As an Important Factor in the Composition of Ethnic Identity in Ex Yugoslav Countries**

In many countries religion is one of the most important factors in the composition of ethnic identity. Balkan is one of the regions of the world where ethnic identity was made by religious belonging. That was obvious during 1990-ies breakup of the state when federalization was threatened by religious and national borders. The religious border was especially important in case of relations between Serbia, Croatia and Bosnia and Herzegovina. The fact was obvious given that all three main religious groups speak the same language today and they have the same origin. The most important difference among them was religious. Almost all Croats are Roman Catholics, all of them who declare themselves today as Bosniaks, almost all Muslims and almost all Serbs are Orthodox.

**Music As a Factor of Social Cohesion: At What Conditions?**

Music as a factor of social cohesion: at what conditions? Music is often considered a universal language. As the most abstract of all arts it can easily be listened without considering the language as a boundary to its appreciation. As every artistic expressions is connected with a given social context, but also music has a code belonging to a certain relation to language and its sound. Each social context has a unique relation with imagination and the role of the arts in such context is the outcome of such peculiar relationship. Besides cultural and aesthetic values, every artistic expression has a potential social function: art and music can create a sense of belonging improving social cohesion as well as its contrary; art can also contribute either to the change of cultural taste and appreciation. As every artistic expression is connected with a given social context, it can easily be listened without considering the language as a boundary to its appreciation. The research carried out in a trilingual land: “Music culture and social function of music in Alto Adige”, this paper will go through a possible typology of the social role of the music, as well as the relation between language and music starting from the different repertoires, traditions and pedagogies in the three different languages (Italian, German and Ladin). Is it possible to trace a social relation to music according to the different traditions and values? Is it possible to understand the culture of a place also trough its music choices? Is music a generator factor of cohesion or a culture factor of cohesion? Can music preferences be influenced by the dimension of a society/community and its dominant language?

**Workshop: Stolen Bodies, Reclaimed Bodies**

Project Re-Vision is a Canadian Institute for Health Research funded research project that uses arts-based research methods (digital storytelling and drama workshops) to dismantle stereotypical understandings of disability and difference that create barriers to healthcare. We have completed two years of our project and have generated an impressive archive of over 70 digital stories from people living disabilities and differences and healthcare providers. The project emerges from a representational history of disabled people can largely be characterized as one of being put on display or hidden away. People living with disabilities and differences have been, and continue to be, displayed in freak shows, medical journals, charity campaigns, and as evil or pitiable tropes in novels and films. At the same time, disabled bodies have also been hidden in institutions, hospitals, group homes, and generally removed from the public eye. In his essay from which we borrow our title, El Clare writes, “just as the disabled body has been stolen, it has also been reclaimed” (2001). In our proposed session, we screen and analyze a selection of digital stories on visible and invisible differences made through Project Re-Vision. We examine the ways bodies and experiences of difference are reclaimed in these films, which reveal the complexities—the pride, shame, pains, struggles for rights and wellness, and joys of community—of living with disability and difference. By pairing and sharing stories made by individuals and healthcare providers, we open up other possibilities and deepen appreciation of the uncertainty and ambiguity that is the basis of life.
The results of the wave one data revealed that senior on-liners were very well socially included and had a high level of mental well-being. However, in the longitudinal analyses, Internet and social media related variables did not predict mental well-being and social networks. It was concluded that going on-line and joining on-line communities may, at best, help to maintain quality of life and social networks rather than enhancing seniors' psychosocial conditions.

Verbal Aggression Against Health Care Staff - Mixed Methods Study

Clinical staff in various settings has to cope with aggressive behavior from patients and visitors. In recent years, physical aggression has received a lot of attention and many prevention programs are available throughout Western societies. However, verbal aggression against health care staff is much more prevalent than physical aggression.

This paper reports on a mixed methods study which was conducted in the following settings in Germany: mental hospitals, forensic hospitals, acute care hospitals, nursing homes and residential homes for mentally ill residents. Eight focus group interviews were conducted with a total of 74 staff members (nurses, physicians, psychologists and nursing assistants). The interview guide contained questions about any kind of verbal aggression which had been experienced, about the differences between physical and verbal aggression and about the coping strategies of health care staff. Subsequently, 1,053 staff members from the various participating project sites participated in a survey which focused on the frequency of verbal aggression and on the severity of aggressive acts.

The results revealed that verbal aggression is a very common phenomenon among health care staff. The following types of verbal aggression were identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff. 16 percent of staff reported having experienced verbal aggression on a daily basis during the six months prior to the survey data collection date. Threats were experienced as being the most severe form of verbal aggression, followed by refusal of cooperation. On average, verbal aggression is rated to be more severe than physical aggression.

Currently, prevention programs in healthcare institutions are focusing mainly on physical aggression. This focus needs to be altered by teaching staff how to cope better with verbal aggression.

RIDGEWAY, CECILIA* (Stanford University, ridgeway@stanford.edu)

Cecilia Ridgeway: Framed by Gender: How Gender Persists in the Modern World

In an advanced industrial society like the United States, where an array of processes work against gender inequality, how does this inequality persist? Integrating research from sociology, social cognition and psychology, and organizational behavior, Framed by Gender identifies the general processes through which gender as a principle of inequality rewrites itself into new forms of social and economic organization. The book argues that people confront uncertain circumstances with gender beliefs that are more traditional than those cherished. They implicitly draw on the too-convenient cultural frame of gender to help organize new ways of doing things, thereby re-inscribing trailing gender stereotypes into the new activities, procedures, and forms of organization. This dynamic does not make equality unattainable, but suggests a constant struggle with uneven results. Demonstrating how personal interactions translate into larger structures of inequality, the book offers a distinctive analysis of the troubling endurance of gender inequality. Framed by Gender: How Gender Persists in the Modern World, Oxford, 2011

Structural Coupling of Financial Markets and Media Coverage - the Case of the State Debt Crisis

In our project we focus on interdependent processes between financial markets and media coverage during times of financial turmoil. The main goal is to identify explanations for price movements on financial markets that are beyond the comprehension of crisis as a problem between the state and the market. Thus, it is not the question whether there is too much or too little market regulation, instead we emphasize the importance of information processing on financial markets and the subsequent entanglement of financial markets with mass media. From a systems perspective, these processes are part of the structural coupling of two social systems, which perceive and implement new information, but only through their own systemic logic.

By examining the structural coupling we reveal patterns and causalities that are crucial for the understanding of financial market coordination through mass media products and vice versa. Especially the so-called “state debt crisis” and its media coverage can be empirically viewed as the cause for major changes in the configuration of the financial markets. During that process state bonds get more and more volatile, deviating from the century old long-term investment cycles. No longer are interest payments the only way to gain profits with bonds, instead, short-term speculation becomes possible due to the heavily pending bond prices of crisis states like Greece, Portugal or Spain. The starting point for those fluctuations strongly correlates with the international media coverage about the possibility that states can actually fail financially. As a consequence, traditional evidence of financial stability like macroeconomic indicators or debt ratings have no measurable impact after the crisis on the increasing bond volatility. The process underlying this development is that media publications are much faster and already incorporated in the market prices when the reactions of states or rating agencies get published.

RIEDE, FELIX* (Aarhus University, f.riede@cas.au.dk)

Towards a Science of Past Disasters

Extreme climatic events are forecast to become more frequent in the future. This contribution argues that the past may hold clues to efficient, cost-effective, and culturally sensitive adaptations to and relief measures following such events. It is widely recognised that disasters emerge in the interplay between extreme events and the human communities affected by them. Whilst detailed knowledge of a given event is critical in understanding its impacts, an equally thorough understanding of the affected communities, their economies, ecologies, religious structures, and how all of these have developed over time is as important. Many extreme events leave methodologically convenient traces in the geological and archaeological records. This contribution focuses on two volcanic eruptions that have significantly affected Europe – the eruption of the Laacher See volcano (Germany) in the 13th millennium BCE, the eruption of Thera (Greece) volcano in the early 17th century BCE and the eruption of Vulcán Ilopango (El Salvador) in the 6th century CE – to illustrate the power of a quasi-case-control compara-
ship of the geophysical trigger(s) in question. By drawing together aspects of di-
sasters science, archaeology, volcanology and historical sociology, this contribu-
tion offers a programmatic statement and methodological roadmap for a science of past disasters that can make historically informed, evidence-based statements on general processes of cultural adaptations to climatic processes and events, and on contemporary vulnerability and impact from a deep time (historical and prehistoric) perspective.

RIEDEL, SASCHA* (University of Cologne, riedel@wiso.uni-koeln.de)

Drawing a Line Between Immigrants and Transmigrants

The changes of international mobility are apparently visible in all immigration countries of the world. Today's migratory movements challenge classical concepts of labour- or forced migration theories. The pattern of permanent immigration lost its long lasting predominance in describing individual changes of location between countries. One of the most influential competing concepts in migration literature constitutes the idea of transnationalism. In this approach, individuals engage in lives, cultures, and activities in more than one country to the same extent. Although Germany is one of the main immigration countries of Europe, quantitative studies seizing the relevance of this conceptually new phenomenon are scarce. This is mostly due to the lack of data as the appropriate identification of transnationals requires multi-sited, mixed methods approaches with specific, often non-randomized, sampling procedures. But what can be done if there is no such data at hand? This study tries to answer this question by presenting and discussing strategies of quantitively operationalizing transnationalism with existing, secondary survey data.

In this respect, the primary objective of this paper is to discuss the strengths and limitations of a strict distinction between transmigrants and immigrants in contrast to a more continuous definition of transnational lifestyles. To this end, the research is arranged in three stages:

In a first step a multi-item measurement is developed in order to distinguish between immigrants and transmigrants in the most unambiguous manner possible. In contrast, the second step aims at accounting for gradual differences in the individuals' ways of living. To this end, a transnationalism index is constructed. Finally, results of bi- and multivariate analyses on the adoption of immigrants and transmigrants in Germany are presented. The paper closes with prospects for the future research of transnationalism.

Children: Pleasure or Pain? Effects of Parenthood on Subjective Well-Being

Against the background of numerous public and academic debates on de-
clining birth-rates and problems of reconciling professional work and family life, the present research addresses the association between children and subjective well-being. Most people believe that parenthood should make us happy. Notwith-
standing, happiness research suggests that children are not important for the well-being of people living in contemporary western societies: Children might at most have a slight positive effect on parental well-being. However, a closer look at existing research reveals that some studies report positive effects of parenthood on subjective well-being while other studies report negative effects.

The present research aims at contributing to the explanation of this variation in children's effects. Therefore, in line with social ecological theory, we identify sev-
eral factors on individual level, couple or family level, and societal level that might affect the association between children and subjective well-being. The respective hypotheses are proved by means of multilevel modeling and structural equation modeling using individual data from 30 countries participating in the European Value Study 2008/2009 and couple data from a project covering three countries (Austria, Germany, Switzerland).

Results illustrate that both, factors on individual level as well as factors on societ al level moderate the association between children and subjective well-being. On individual level, among other factors, the stage in one's life (age) proved to be relevant. On societal level, the welfare state based childcare system and dominant family values seem to be most important. In addition, individual level factors and processes on couple level mediate the association between children and subjective well-being. For example, the strain resulting from childcare that women feel indirectly affects men's subjective well-being via relationship conflict perceived by men. Findings are relevant to potential future parents (timing of first birth, divid-
sion of work) and welfare states (childcare policy, existing norms).

RIEDERER, BERNHARD* (University of Vienna, bernhard.riederer@univie.ac.at)

Parenthood and Subjective Well-Being within Couples: The Division of Work, the Relevance of Mutual Appreciation, and the Role of Partner Effects

Sociological and psychological theories point to parenthood as means to per-
sonal development and social embeddedness, discuss its function for societal integration and highlight its meaning in structuring people's lives and providing purposes in life. But the widespread belief that parenthood promotes happiness and satisfaction with life seems to be contradicted by a bulk of research discussing problems of reconciling professional work and family life. Quantitative studies primarily report negative effects of children upon parental well-being and qual-
itative research often highlights that especially women are confronted with an additional burden and the second shift at home.

Current research argues that children have both, positive and negative effects on parental well-being. Analyses conducted by the author with data from the Euro-
pean Value Study 2008/2009 reveal that individual factors (e.g., the stage in one's life) and societal conditions (welfare state policy, dominant norms and val-
ues) contribute to variation in children's effects. But consequences from paren-
thood directly affect the couple and the relationship between spouses. Therefore, effects of children on well-being and life satisfaction should also be dependent on the spouses capability of mutual perspective taking, and their support for each other.

The present research uses data from dual earner couples with young chil-
dren to analyze the mediating role of (a) the division of household work, child-
care tasks, and professional work, (b) positive and negative spillover from work to family and vice versa, (c) the appreciation spouses receive from each other, and (d) relationship conflict. In addition to actor effects, partner effects are also considered. Results are in line with the qualitative research that points to the im-
portance of giving and receiving gratitude. Furthermore, the quantitative findings support what A.R. Hochschild wrote: “If men share the second shift it affects them directly. If they don't share, it affects them through their wives.”

Life Strategies of Families in Marginalised Urban Neighbourhoods: Dealing with Social and Educational Inequalities

Migration families often face challenges in Europe: unemployment issues, low income and the threat of poverty as well as an unequal education system, where children and young people are disadvantaged and consequently, their access to higher education and job perspectives is limited, hindering their chances and op-
portunities with regard to participation in society. These families frequently live in urban areas strongly influenced by migration movements and faced with pro-
cesses of marginalization.

In our research project (within the framework of a larger, European research project), we focus on life strategies of families in marginalized urban neighbour-
hoods in Germany. Migration families frequently live in marginalized urban areas and are confronted with problems of reconciling professional work and family life. Quantitative studies often highlight that especially women are confronted in dealing with educational, job-related and social challenges. In our theoretical approach, family members are seen as actively dealing and negotiat-
ing with societal circumstances and social meanings (Wacquant 2006). Their strat-
egies are analyzed, taking relevant explanation contexts into consideration, which shape each person's scope of possibilities (Holzkamp 1983). Our research project aims to transcend beyond the deficit-oriented perspective without neglecting the social and societal challenges families have to deal with (Riegel/Yildiz 2011).

In this paper we will present analyses from biographical interviews, group dis-
cussions, and ethnographic data, on how family members describe and interpret educational pathways and the coping strategies of which life strategies can be observed. We analyze bi-
ographical meanings and dynamics within a family and with regard to experienc-
es centered on education, an area accentuated by the intersections of migration, class, gender and generation. First findings show that family members develop strategies and creative pathways to deal with challenges posed by everyday rac-
ism and the education system, using unconventional ways to negotiate solutions for structural challenges, demanding participation and inclusion. The ambivalenc-
es of these strategies - dealing with processes of inclusion and exclusion – within circumstances of social inequality will be discussed.

A Reflection on the Main Challenges of Comparative Research on Global Consumption Studies

We face several methodological challenges once we are involved with compar-
itative research. The scope of study to its phenomena demands a dialogue with writers from different nationalities, theoretical and methodological affiliations,
whose interests converge to collaborate in the comparison of different contexts. Specifically, the main discussion when comparing different contexts is whether to discover an underlying grammar to social life which is applicable globally, or to pay attention to the detail of local differences.

The complexity of social research on global consumption studies can be understood by the idea of a complex system that combines both issues related to the idea of a global culture, as well as specific characteristics concerning local contexts. Following Law and Mol (2002) ideas over complexities in social studies, it is necessary to face multiple domains and the complexity related to consumption practices that are research objects for sociology today.

Comparative research on global consumption studies faces a changing significance of empirical research, as it happens with contemporary social studies. This means that traditional methods, and the most conventional ones are increasingly dated research methods, which are unlikely to provide a robust base for empirical sociological theories. In the future, it is vital for sociologists to get involved with a ‘politics of method’, renewing their interests in methodological innovation, mixing methods and renewing critical reflection (Savage and Burrows, 2007).

Following this methodological discussion, the goal of this study is to discuss the main challenges of comparative research on global consumption studies, considering both the hypothesis of a global consumer culture (Ritzer, 2004) and of localization/heterogeneity of consumption practices (Featherstone, 1991). In order to present these challenges, I am going to analyze three different research projects focused on global consumption practices that aim to compare the reality of these practices in different countries.

Global Consumer Culture: A Theoretical Discussion Between The Centrality Of Consumption In The Contemporary Society and Its Possible Localizations As A Result Of Cultural Differences

How can we understand the theoretical discussion concerning global consumer culture? Is it possible to affirm that such culture exists as global representation, central to contemporary society? Or should we consider possible localizations of consumption practices as a result of cultural differences from different individuals? Early in modern social theory, consumption has been object of discussion and, with the advent of post-modernist theory, its centrality has become a tonic in social analysis. Further, contemporary studies presented mainly two different perspectives: the centrality of consumption in society or localizations of this practice according to cultural differences. In order to understand global consumer culture, this paper proposes to discuss theoretical discussion of the two perspectives. In the first perspective, there is a rationale that begins with modern social theorists, and their focus on production systems (Marx, Weber, Smith), and that moves to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or demonizing this practice. Post-modernists have detailed this critique in order to understand the structure of the consumer society (Baudrillard, Bauman, Lipovetsky), with consumption as the central practice of contemporary life. This centrality would also explain earlier studies that demonstrate the capillarity of consumption, not disjointed from the production system, but as a continuum that can be translated as prosumption (Ritzer).

The second perspective, present in most contemporary studies of consumption (Bourdieu, Campbell, Featherstone, Miller) has tried to steer a middle course that reconciles pessimistic classical theories with a recognition of the fact that consumption is not only indispensable, but also a domain in which people can express themselves positively in our society. They develop the notion of a consumer culture that refers to norms, values, and meanings associated with a society dominated by consumption. In this culture, there is possibility to localizations and the development of individuals with their respective differences.

Internet Usage and Socio-Cultural Change in Nairobi/Kenya

Through technical improvements and cheaper access the Internet in Kenya is becoming more and more important. For many years mainly Internet cafes have been the most important source for Internet access. Nowadays there are more and more people who own a private computer/Laptop or use their working place to access the Internet. But the most important change is the rapid spread of mobile use of the Internet in Kenya. The Kenyan Internet- and Mobile phone market is growing fast and it cannot be ignored that thus the Kenyan society is changing. On the streets of Nairobi you can find Internet cafes nearly everywhere and you can pay nearly everywhere with M-Pesa. Mobile phone shops, repair services for computer and mobile phones and private computer colleges are an integral part of the road infrastructure.

Nearly every Kenyan owns a mobile phone; for younger people it is very important to have a Facebook account.

In my research I wanted to find out what people do with on the Internet and how this is changing the life of the users. I visited three different cybercafes in different areas in Nairobi. One cybercafe was in a big shopping mall, the second in the city centre and the third in the so-called slum area Mathare. The inequalities were obvious but it was also very surprising how widespread the Internet already was and how different the people used it.

Another aspect of the presentation will be the function of Facebook before, during and after the elections in March 2013. During the post election violence in 2007/2008 over 1100 people were killed. Everybody was watching the election 2013 with worries and tension. After the results were announced everyday remained more or less peaceful on the streets but on Facebook there started an ethnic war with words.

Social Inequalities in Preventive Care and Healthcare System Organization: The Case of Gynecological Cancers Screening in France

Socioeconomic inequalities in health are high in France compared to other developed countries. This is unexpected considering that the National Health Insurance offers universal access and free care for disadvantaged people. Considering the case of gynecological cancers screening, we intend to analyze the genesis of these health inequalities in relation to the features of the healthcare system.

Socioeconomic status was analyzed according to socioeconomic status among a random sample of 1819 women with logistic mixed models. We observed marked social gradients for cervical cancer, but lower ones for breast cancer for which an organized screening program alongside the individual one exists. However, the last prescriber was socially differentiated; gynecologists for the upper class, organized screening for the lower and GPs for the middle.

The modeling role of the healthcare system in producing inequalities through social norms it contributes to establish can be specified. Organized screening contributes to catch up patients with low social status. Gynecologists often ask for unregulated fees and receive patients with good socioeconomic level, whom they tend to overscreen. GPs are supposed to have a gatekeeper function toward specialists, but direct access to gynecologists is possible without referral. Although GPs involvement would be necessary to improve participation and lower inequalities, they lack legitimacy and tend to divest of these screenings. In addition to this suboptimal task division, information sharing and coordination between professionals are limited. This confusing situation has been settled by socio-historical processes, without any global vision of the interactions and perverse effects it would induce. Few people (patients, physicians or policymakers) are aware of the contribution of such an organization to inequalities. Despite the pressure on health funding and the bad demographic perspectives, it seems difficult to remodel professionals’ routines or to re-regulate the screening of women on a more equal basis.

Abstract

The social hegemonization of the biomedical perspective in the beginning of the 21st century has been heavily criticized. But as pointed out by Kuhn (1962), criticism alone has never brought about major paradigm shifts (Kuhn 1962). Paradigm, this is why it is important to discuss the paradigms, as mentioned by Rokicki (2005). Therefore, one obvious question is, what is the most feasible alternative to the existing neuropsychiatric modes of explanation is, and what challenges must be faced in trying to establish a viable and qualified alternative.

The dominance of certain forms of knowledge does not exist within an institutional and societal vacuum. It is produced and reproduced through political, managerial and economic discourses, institutional solutions and organizations, which should be taken into account to gain a coherent understanding of the cura
digm changes require a realistic, viable, research able alternative - a paradigm shifts, as stated by Rokicki (2005). Therefore, one obvious question is, what is the most feasible alternative to the existing neuropsychiatric modes of explanation is, and what challenges must be faced in trying to establish a viable and qualified alternative.

Housing and Built Environment in Shrinking Cities: The Role of Housing Vacancies

Housing and built environment in shrinking cities: the role of housing vacancies in a shrinking city. The purpose of this paper is to examine the impacts on the affected neighbourhoods and what are strategies to deal with.

Contact: dieter.rink@ufz.de
1 Helmholz Centre for Environmental Research – UFZ, Leipzig (Germany)
2 John-Moores-University, Liverpool (UK)
3 Silesian University, Katowice (Poland)

Across Europe, since the late 20th century, urban shrinkage has become a normal way of urban development for many cities. Shrinkage results in a mismatch between supply and demand of built structures, urban space and infrastructure. Urban shrinkage impacts on almost all areas of urban life, one of them is on housing markets and the built environment. Typical for shrinking cities is a situation of disinvestment, since revenues from investments in housing are uncertain or improbable. The consequences of disinvestment in housing markets are undermaintenance, lacking modernization, housing vacancies and abandonment with subsequent physical decay. Mostly this concerns not the whole territory of a shrinking city, but distinct areas. What areas of a city are affected is dependent from the specificities of the respective local markets, the same is true for the concrete impacts on the built environment. The paper addresses specific problems related to vacancies, how they are perceived, what are typical impacts on the affected neighbourhoods and what are strategies to deal with.

Based on the European project “Shrink Smart”, different shrinking cities in Northern, Central and Eastern Europe will be dealt with related to different housing markets. The paper draws on research undertaken within the EU 7 FP project SHRINK SMART (04/09-04/12; grant agreement no. 225193; www.shinksmart.eu). The paper uses empirical evidence from Liverpool (UK), Leipzig (Germany) and Bytom (Poland).

Rethinking Localism in the Global Risk Society: The Ethics of Care and Co-allocations of Anxiety Confronting Gas Fracking in Lithuania

Rethinking Localism in the Global Risk Society: The Ethics of Care and Co-allocations of Anxiety Confronting Gas Fracking in Lithuania

Focusing on the global dimension of risk society, Ulrich Beck has made a case that earlier social and economic formations are increasingly replaced by the world risk society where risks and uncertainties are no longer bound by particular locales, but are distributed globally. To conceptualize this new political organization, Beck and others have developed the notion of cosmopolitanization that refers to the emergence of new alliances and social movements that challenge and transform the nation state and its institutions. At the same time, scholars have also underscored the growing significance of localist movements that are actively promoting regional and national sovereignty agendas, while working to plug from global economies and political infrastructures. The purpose of this paper is to articulate the connections between these two contradictory processes by employing conceptual tools developed in the scholarship focusing on political ethics and politics. Building on the work by N. Boddings, E. Kytay, and J. Tronto, we argue that care as a justification for political action links particular constellations of actors to coalsitions organized through anxiety concerning particular issues or emerge from particular patterns of discontent" by J. Zinn and "discourse coalitions" by M. Hajer). As a case study, we focus on the case of resistance against gas fracking in Zygaičiai community in western Lithuania, to highlight the ways in which the groups frame their civic and environmental anxiety under conditions of uncertainty “in-between” of calculable risks and intractable social anxiety transited into bioethical care and specific sub-politics pertaining to local, economic, political and environmental context. This case study and theoretical accounts connect local and national sub-politics with similar cases in Europe and elsewhere around the world.

UN-Learned Lessons of Fukushima and Chernobyl: From ANTI-Nuclear Nationalism Towards Nuclear "Renaissance"?

The year of 2011 marks both the Fukushima disaster in Japan, and a one-generation distance from the nuclear disaster in Chernobyl in 1986. Does it also mark any new emergent – perhaps more reflexive, inclusive and participatory modes of nuclear power in CEE countries? Have these expectations of participatory governance materialized in new structures and modes of more inclusive decision-making? This paper examines these questions by addressing the public controversies around new and old nuclear power facilities in divergent post-Soviet societies, particularly Lithuania, Belarus and the Ukraine. What are the lessons (if any) reflected in the public attitudes and public policies in terms of participatory governance of nuclear power in these countries, some of which are the EU newcomers, whereas the others are still characterized by rudiments of totalitarianism? Have they triggered environmental, climate and energy policy change towards more inclusive, participatory mode stemming from possible social trauma? By contrast, this paper concludes on the basis of empirical evidence from Lithuania, Poland and Ukraine, the processes point to the opposite direction. This direction is geared towards privatization of the public domain, towards new forms of state-private oligarchy in the nuclear power sector, epitomized by the establishment of LEO LT nuclear power conglomerate in Lithuania. Instead of any new off-springs of participatory governance, as paper indicates, there are tendencies of the opposite. Inter-twined with the recent nuclear power “initiatives” by Russia and Belarus, these tendencies could be described as leading towards emergence of a nuclear “renaissance” as some observers have termed it. Is this “renaissance” a reflection of public attitudes towards energy security in the period of economic crisis? Or is a more general tendency of societal neglect of the Fukushima and Chernobyl lessons vis-à-vis globalizing uncertainties in the fields of economy, ethnon-centric politics and climate change?

Subjective Time to Retirement in Older Workers: Gender Differences in the Role of Social Networks and the Importance of Reasons to Retire

Research has shown that males’ and females’ life course experiences in relation to work and family usually result in different retirement transitions and timing. Previous research has focused mainly on the effect of childbearing and caring responsibilities on males’ and females’ labour force participation and retirement transitions. However, little is known about the influence of reasons to retire and social network characteristics – particularly social support and engagement – on older workers’ expected retirement timing and how these differ for males and females. Therefore, this paper aims to identify gender differences in the determinants of subjective time to retirement, with a particular focus on social networks and the importance of reasons to retire.

The present analysis used the first wave (2010-2011) of the SNAP survey (Social Networks and Ageing Project, based at ANU), a nationwide survey of 2,122 Australian men and women aged 50 and older. The analytical sample includes 662 older workers aged 50 years and over. Multiple regression was used to identify the factors that have a significant effect on subjective time to retirement. The results show that several variables on the importance of reasons to retire are significant, illustrating the prominence of factors such as health and family responsibilities. In addition, a number of social support and informal engagement indicators had a significant effect on females’ subjective time to retirement. On the contrary, only formal engagement was significant for males. In sum, this study demonstrates that traditional gender roles are still present in the transition to retirement, particularly in relation to subjective time to retirement.

Mandated Breastfeeding: Women’s Bodies As A Solution to Global Poverty

Mandated Breastfeeding: Women’s Bodies As A Solution to Global Poverty

As a means to address high rates of child malnutrition, stunting, and infant mortality, in 2009 Indonesia enacted Health Law No. 36 stating that no child under 2 years of age is to be breastfed. Thus, exclusive breastfeeding is now mandatory until infants are 6 months old. To address this law, in 2011 the Indonesian legislature added stiff fines and potential jail time as penalties for employers, relatives, the general public or others who pose barriers to women’s ability to achieve this goal (Soejarto and Zehner 2011).

In February 2013, the U.K. NGO Save the Children launched their campaign to promote breastfeeding in poor countries with their report “Superfood for Babies: How Overcoming Barriers to Breastfeeding will Save Children’s Lives.” Like a superhero, breastfeeding was touted as one of the most important solutions to the problems facing the most innocent of all victims—infants in developing coun-
tries. Fingers were pointed at formula companies, policy makers, grandparents, fathers, and health care providers for posing barriers to breastfeeding. The report focused on the heroic efforts NGOs and other actors can make to "empower" poor women to make the "right" feeding decisions; however little recognition was given to women as possible heroes. Rather, women were portrayed as either victims of their environments or ignorant villains doing the wrong thing.

In this talk, I will explore the implications of legislating women's bodies as a solution to structural problems, as well as the problematic structural barriers posed to women being able to do what they are told to do. By exploring the Indonesian success and the framing of breastfeeding campaigns, I aim to demonstrate how breastfeeding promotion can be both empowering and detrimental for women. I will conclude with a possible way forward drawing on an ethic of care and a praxis of humility.

Labour Precarity and Other Structural Forces Affecting Migrant Workers’ Health: The Case of the Undocumented Workers in Ontario, Canada

This paper will discuss the ways in which the labour dynamics that have emerged in the agricultural production in Ontario during the last decade have been organizing particular forms of precarity that affect the physical and mental health of the undocumented migrant workers and other workers of precarious status (UMW and MWPS) that are employed in such industry. Likewise, it will analyze how this phenomenon of labour precarity, along with legal and linguistic barriers; fears of deportation; and perceived forms of racial subordination in the local health institutions, have prevented the workers from seeking and receiving medical services. Finally, the paper will discuss some of the ways by which the workers have contested the social forces affecting their health, and will offer some reflections on why such forms of collective action have not been entirely successful.

This paper draws upon the analysis of twenty in-depth interviews with UMW and MWPS, as well as upon field notes generated as part of a sociological, ethnographic research carried out in Ontario, Canada.

Capabilities and Missing Users: Progress In Gender Analysis In Transport

The paper uses a normative framework of transport justice to recognize the link between mobility and "capability enhancement" as articulated in Sen’s writing and empirical evidence for the need of transport (Bezvdy, 2011; Chabal, 2004; Martens, 2012). Transport justice reveals the mode of thinking and institutional mechanisms behind a nation’s transportation planning and delivery systems (Vasconcellos, 2001) (Litman, 2012) to elucidate how and why particular social groups (e.g. low-income women and minority communities) often face the brunt of negative impacts of decision-making to show how concerns of users from low-income groups and how gender differentials in preferences, choice and agency are yet to be taken seriously by planners.

Recognizing methodological pluralism as important in interdisciplinary research, the study uses a combination of methods which have distinctive roles. The survey captured similarities and differences among 360 transport users, mostly of women traders and workers. Focus-group discussions with various sectors, field observations and in-depth interviews with a subsample of 8 brought deeper insights on meanings of "safety" and "security" from the perspectives of women. Textual analyses looked into issues of misrepresentation and invisibility.

Ouvrir La Boîte Noire Des Peurs Féminines : Encadrement Parental Des Pratiques Urbaines Des Enfants Et Dimension De Genre

Interragissant la socialisation urbaine dans le cadre familial, l’approche comprend de l’encadrement parental des pratiques urbaines des enfants permet de mieux saisir la genèse de cette différenciation genre de l’expérience des espaces publics. Menée auprès de parents de 123 enfants âgés de 8 à 14 ans à Paris et Milan, une enquête par entretiens (n=78) montre ainsi que les filles font face à un encadrement différentiel significatif. Par exemple, la forte prégnance de la représentation d’espaces publics à dominante masculine et hétéronormée conduit les parents à mettre en œuvre des précautions spécifiques pour les filles, qui recoupent largement celles prises par les femmes dans les espaces publics : évitement de lieux, recherche d’une escorte, contrôle de l’habillement et de manière plus générale de la préséance de la représentation des lieux.

Pour reprendre la typologie d’Albert Hirschman, les filles sont socialisées à l’évitement (exit) et à la discrétion (loyalty), mais pas à la remise en cause des normes de genre (voice). La transmission de normes générées semble ainsi pouvoir être considérée comme la clé de voûte de la vulnérabilité ressentie et perçue des femmes dans les espaces publics urbains, l’encadrement parental contribuant dans cette perspective à la (re)production d’inégalités d’accès à la ville mais aussi à l’incorporation du genre par les enfants.

Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals’ willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the World Values Survey. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining the role of political attitudes in willingness to participate. Analysis with the 5th wave demonstrates that political beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Road To Revolution and Egyptian Youth: Findings From The Value Surveys

The Arab Spring that began in late 2010 captivated the world’s attention, particularly in Egypt with the uprising that began on January 25, 2011 in Tahrir Square and ended Hosni Mubarak’s reign as president 18 days later. Before December 2010, protesting against repression and injustice was risky and often seen as futile. El-Ghobashy (2011) argued that it was when the main protest sectors of the first decade of the 2000s finally came together, united in their demand for “bread, freedom, social justice”, that Mubarak was forced to resign. Both the media and scholars alike have noted that youth were some of the key players in the uprisings in Egypt and across the Arab world. Because of this recognition, Moaddel and de Jong (forthcoming) argue that it is necessary for scholars to move beyond anecdotal evidence and assume the young age structure of Arab countries to empirical research that documents the role of youth in the Arab spring. This includes shifting sociopolitical and cultural values over the past decade that led to the desire to mobilize for change. In Egypt, while the role of youth as key...
ganizers of the January 25th uprising has been clearly documented, their changing values over the decade preceding the uprisings have not. This paper will examine how sociopolitical and cultural values that reflect the three demands of the January 25th uprising—bread, freedom and social justice—changed among Egyptians in the decade preceding 2011 and whether Egyptian youth exhibited attitudes that were more supportive of these goals than the rest of the population. We will use data from nationally representative value surveys conducted in Egypt in 2001, 2005 and 2008 to address our research questions.

GOEMANS, ADELINE* (HEC-Management school-University of Liege, adapog@hotmail.com)

Multinational Companies, Social Responsibility and Human Resources Manager

This communication analyzes the situation of six multinational companies’ policy of “social responsibility” and of “sustainable development”. The purpose of this communication is to define how these companies, especially the subsidiaries, are socially responsible and take into account environmental issues. This exploratory and qualitative study is based on the analysis of official discourse of six firms and those of human resources managers. We highlight different types of “social responsibility”, the “stakeholders” that are taken into account by companies and the means to achieve the policies of “sustainable development” and of “social responsibility”. Our purpose is to show, beyond the official discourse, which role the subsidiaries play and which autonomy they have in their policies’ implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new “social responsibility” and, conversely, if the new management involves the emergence of a new social responsibility. We will show that the types of responsibility, shown through the web site and in the HR discourses, are “ethical” (stands for the respect of the values, the standards and the requirements that stakeholders find fair) and “economic” (focuses on the production of goods and services). Those classifications depend on the firm’s sector.

The Human Resources can be more regards for the legal aspects or for the political aspects, especially in crisis situation. The human resources play different roles and highlight different priorities: respect of fundamental values, actions of the subsidiary that are presented as models, transparent communication, gather the employees around values and projects.

The Embedded Economy and National Income Inequality

The ubiquitous growth of national income inequality in developed and less-developed countries has raised major concerns amongst academics, policy-makers, and the general public. In response to this trend, researchers have offered a multitude of explanations for the persistence and growth in national income inequality. In this paper, I argue that the cleavage between the polarized global economy and the national economy is fundamental mechanisms of economic inequality. Drawing on insights for world-systems, world politics, and institutional theories of inequality, I develop and empirically evaluate an integrative theory of inequality. According to this perspective, the emergence global production networks indirectly affects income inequality by reshaping national labor laws and practices. This study evaluates this proposition using multi-level structural equation modeling and unbalanced panel data on 70 developed and less-developed countries over the 1985-2002 period. According to preliminary results, economic globalization exerts both direct and indirect effects on income inequality. In developed countries, global economic integration indirectly affects income inequality by inducing processes of de-industrialization and labor market flexibility. In less-developed countries, investment-based global economic integration indirectly reduces inequality by promoting the development of collective labor laws and practices which trade-based integration indirectly increases inequality by hindering the development of these laws. Overall, the study suggests that researchers need to account for the interaction of economic globalization and labor market institutions to explain the recent growth in national income inequality.

ROBERTS, KENNETH* (University of Liverpool, k.roberts@liverpool.ac.uk)

The World Has More Leisure! so What?

The sociology of leisure (and leisure studies more generally) were born amid confidence that leisure would continue to grow and become a larger component of people’s lives. This confidence has proved justified. Leisure has grown in time, spending on leisure goods and services, and hence participation rates in many leisure activities. Meanwhile, researchers have identified and distinguished the various ways in which leisure plays a role in people’s lives. Apart from re-creation – restoring body and mind to states fit to return to other social roles – leisure can enhance well-being (or ill-being), it can be a source of social bonds and belonging, identity, and capabilities that enhance performance in other social roles. However, this paper argues that the sole sense in which its growth has made leisure functionally more important is economic – as an object of investment and consumer spending, and as a source of employment. The paper explores the implications for leisure’s additional functions, and its future in the twenty-first century.
Labor relations have undergone significant changes over the last decades. Job precariousness and work precariousness weaken assured and stable occupational integrations. These changes challenge rigid, continuous and foreseeable conception of occupational career (the choice of a profession, training, labor market integration, promotion and retirement), and question both material and symbolic recognition that are linked to professional activities. Facing this rise of uncertainties, we first analyze how unemployment periods impact job recovery in terms of 1) level of individual and household income 2) job quality (job and work precariousness) 3) social mobility (using social stratification schemas: CAMSIS and CSP-CH) in order to determine if people know stability, improvement or deterioration of their situation. We then identify how particular groups of people are unequally exposed to these three potential forms of changes, and particularly in terms of nationality, sex, education, age and presence of children in the household. The relation between these variables and the observed effects are analyzed with a logistic regression that includes interactions between the dependent variables.

We use longitudinal data from the Swiss Household Panel (SHP) between 1999 and 2012. The SHP is a yearly conducted centralized CATI panel survey which started in 1999 with slightly more than 5,000 households, representative for the Swiss resident population.

ROBINSON, KERRY* (University of Western Sydney, k.robinson@uws.edu.au)

Schooling the ‘Vulnerable’ Child

Based on qualitative research with children (aged 4–11), parents, and educators, as well as historical socio-cultural discourses, this paper explores the relationship between ‘childhood innocence’, children’s highly regulated access to knowledge of sexuality and the constitution of children as ‘vulnerable’ subjects. Incorporating a post-developmental framework and drawing on Foucault’s concepts of governmentality and power/knowledge, this presentation highlights how censorship and moral panic, reinforced through discourses of childhood innocence, operate in communities, families, schooling, and within children’s peer groups, to define and regulate ‘normative’ childhoods and adulthoods. I argue that regulating children’s access to knowledge and knowledge production – associated with sexuality in particular – essentially in the name of protecting childhood innocence, operates to inscribe children as ‘vulnerable’ subjects.

This discussion frames within an examination of children’s sexual subjectivities – how children have been discursively constructed as sexual subjects, how children view and constitute themselves as sexual subjects and how children regulate the sexual subjectivities of their peers. Children actively engage in making meanings about sexuality and relationships from the limited information (often misinformation, stereotypes and myths) that they receive – bits and pieces of information of which they try to make sense. In order to help counteract children’s vulnerabilities and to build strong ethical and respectful relationships early in life, children’s access to knowledge, to open and frank conversations about sexual subjectivity, and the nurturing of children’s agency are critical.

Everyday Life and News Forms of Production Knowledge on Nuclear Power: A Study of Case in Caetité – Bahia

The nuclear issue in Brazil is not a recent problem. Since the first half of the 20th century the country has conducted research related to energy production based on the model of nuclear fission and the location of the first uranium reserves in Brazilian territory date this same period. The construction of reactors for energy production based on this technology was realized with the construction of Angra I, located in the State of Rio de Janeiro. The two nuclear power plants, Angra I and Angra II, started construction even in dictatorial government and its operation only after the process of political liberalization in the country when it was agreed and guaranteed by the Federal Constitution that the country would not produce nuclear weapons. The uranium needed for nuclear power production was withdrawn from prospecting in Minas Gerais, in the city of Pocos de Caldas. In 1995 the Nuclear Industries of Brazil began beta testing and implementation of mine near the city of Caetité, Bahia, being operated for commercial purposes only in late 1999. The District of Lagoa Real is the only operating nuclear power plant of Latin America. In the research phase, this work aims to investigate the ways in which residents living near uranium mining producing knowledge on the uncertainties generated by the presence of the mine. From a perspective of actor-network-theory seeks to understand the heterogeneous networks that make up before the presence of the mine in the region.

Everyday Masculinities and Extreme Sport-Re-Thinking Methodologies

Everyday Masculinities and Extreme Sport: Re-Thinking Methodologies

Victoria Robinson

This paper considers the taken-for-grantedness of everyday masculinity in relation to a UK research project on sporting masculinities (Robinson, 2008 and 2013). In this study of rock climbers some participants found it hard to reflect on their experiences in gendered terms. However, some participants were able to be open about and critically engage with such processes, which can be seen to constitute ‘masculinity’ or ‘masculinities’. This was partially due to the ‘extreme’ nature of many aspects of the embodied and emotional rock climbing experience, as extraordinaire as death of a climbing partner or the need to trust another man, sometimes literally, with their life, entailed that taken-for-granted aspects of masculinity had to be renegotiated or rethought in the aftermath of moments of great sporting intensity or crisis. This paper will reflect upon such patterns and, in so doing, re-visit some general methodological issues, for example, on the insider-outsider status of the researcher. The paper will also be informed by a consideration of the author and her auto-biographical position to the research both during and after the study.

The Impact of Drug Trafficking in the Dynamics of Homicides and Robberies: Causal Relations in 32 Metropolitan Areas in Latin America

This paper presents an empirical verification of the influence of narcotics trafficking in the crimes of murder and robbery in 32 cities in Latin America, through the analysis of crimes reported by newspapers of those cities in the years 2006 and 2011. The aim of this study was to measure the impact at a continental level of illegal drug trade in prevalence to other crimes, taking also into account contextual variables. From the understanding that urban crime has a strong endogenous component, the central hypothesis was that drug trafficking was the main factor of the outbreak of violence experienced in this region of the planet. To measure the weight of this illegal activity on other crimes, we used a quantitative methodology. Through multivariated statistical analysis, the rates of the three offenses were tested with control variables exogenous in relation to these events. These sociological findings are that there is a significant influence of the drug trade in the dynamics of the two crimes. In the case of robberies, the relation between crime rates was positive and strong in both periods studied. Homicides, however, were influenced by the drug trafficking only in the first period of time research. In the second period researched, the rate of robberies (influenced by drug dealing) was the variable that impacted most in the prevalence of murders at a continental level.

Participatory Budgeting: Considerations about the Global Spread of a Local Practice

This article discusses the diffusion of the Participatory Budgeting (PB) as exemplary practice of governance and urban planning. In a context of democratic openness and strong needs of urban infrastructure, the PB was implemented for the first time in 1990 in Porto Alegre, as a local policy to meet demands for a more equitable distribution of public resources. In the following decades, the PB has spread among other major Brazilian cities like Belo Horizonte, Recife and São Paulo. The local democratic innovations linked to such experiences has crossed national borders and reached different social, economic and political contexts such as Montevideo, Buenos Aires, Lisbon and Berlin. Currently it is estimated that there are about 1000 PB’s around the world. Several factors explain this global spread of the PB such as the synergies within the World Social Forum and its legitimacy as a good practice by international organizations. However, after more than twenty years of its setting up, in what extent this practice conceived in the context of the global South has contributed to the establishment of a counter-hegemonic model of urban governance? Focusing on a paradigmatic experience, the BP of Belo Horizonte (Brazil) – one of the most enduring and on two occasions honored as Best Practice by UN-Habitat –, we intend to answer to this question and critically discuss the recognition, promotion and dissemination of the BP as model for urban governance under a general context of neoliberal politics.

ROCHE, MAURICE* (Sheffield University, m.roche@sheffield.ac.uk)

Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events

‘Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events’ Mega-events, including sport mega-events like the Olympics and FIFA World Cup, have been increasingly studied over the past decade (e.g. Girginov ed. 2012, Tomlinson and Sugden 1998). This growth of mega-event studies as an interdisciplinary field has included an area of social scientific and sociological work (Roche 2000, Horne and Manzenreiter eds. 2006, Hayes and Karamchis eds. 2010, Foley et al 2012, Hiller 2012). This paper argues that the further development of the sociology of global mega-events and their implications for social inequalities requires the further development of a ‘contextual’ approach to event analysis. This approach is concerned with what will be referred to as, on the one hand, ‘event-immanent’ or ‘backstage’ contexts, and on the other of ‘trans-event’ contexts (‘legacies’; Moragas et al eds. 2010, Foley et al 2012). The paper is concerned with the heuristic utility of a ‘spectacle’-based perspective on mega-events (Kellner 2010). This perspective is useful as far as it goes. However, the paper will argue that a ‘spectacle’ perspective is, nonetheless, essentially limited and ultimately unhelpful in relation to the sociological exploration of aspects of sport megasevents which are centrally important in understanding their general social nature, their long-term significance, and their implications for social inequality. Rather, drawing on work including my book ‘Mega-Events and Modernity’ (Roche 2000) this paper argues that these aspects require an extended periodisation in which both spectacular and, non-spectacular (e.g. backstage and long-term) features rather than spectacular features of sport mega-events. The paper will illustrate this argument in respect of the case of the London 2012 Olympic mega-event.

Glorified Taboo: Teacher-Student Sexual Relations In The 21st Century

Teacher-student sexual relations, whether consensual or abusive, is a taboo topic of discussion in our culture and one that has seen much media attention in the 21st century. In particular, there has been a surge in reported incidents with a female teacher involved. It leaves one to wonder if sexual relations portrayed in various digital media via news, music, and film, have had a major influence on how normalcy of such relations are perceived. To what extent do the industries glorify this taboo via digital media while punishing through legal means?

After analyzing written works, forty-three popular songs, fifty films, and various tate laws that contain an element of teacher-student misconduct, statutory rape, or a very large gap in age difference, I sent out a questionnaire via SurveyMonkey. Conducted on Facebook that asked people of each group in what extent they thought the aforementioned. The results showed a sincere lack of awareness to laws such as the age-of-consent, statutory rape, or child seduction, but much exposure to popular media condoning taboo actions with a possible correlation between the age of offenders and the amount of digital entertainment produced by decade. After completing the aforementioned preliminary research, I sent an electronic message to each of the “Best Education Schools” as identified by U.S. News in 2012. This was to inquire whether they had courses for teacher candidates that reflect the various viewpoints of sexual misconduct for educators, coaches, and athletes. As a result, there was an overwhelming response. After reviewing the results, I sent out one research conclusion alone, I propose to establish a national requirement for teachers to take one course that introduces them to a well-rounded perspective on this serious social issue with the intent to reduce such professional misconduct.

**Constructing Transnational Polynesian Identities: Soldiers, Sportsmen and Illegitimate Masculinities**

For the small Polynesian island states of Tonga and Independent Samoa, their biggest export is labour – their people. Six out of ten Tongans and Samoans are born outside their home countries. In a climate of transmigration and globalization, Polynesian men are sought out as sportsmen, heavy manual workers and standover men. They also have the highest over-representation of any racial group in the US military. This paper argues that contemporary Polynesian masculinity has been externally constructed through the physicality of Warrior in a colonial and post-colonial context and questions whether internalization of this representation as a “regime of truth” leads to an embodiment of race, class and cultural identity that is inherently informed by the physical. Through this lens of heightened and exaggerated physicality, acceptable expressions of Polynesian masculinity are readily acknowledged through work and sport. However, its illegitimate expression – as gang member - is less understood. Polynesian gangs have an extremely high profile in New Zealand and are now the fastest growing ethnically-identified gang population in the United States. Proportionally, this population group is progressively over-represented in the penal systems of countries. This paper will explore how this narrow range of acceptable masculinities, when combined with increasing socio-economic marginality, contributes to low civic engagement and greater interface with agencies of law and order. As conventional employment opportunities are reduced for unskilled labour, more young Polynesian men are at risk of being drawn into gangs and are likely to engage in other forms of criminal behaviour. This paper will therefore discuss how popular perceptions of Polynesian strength and aggression, so valuable as sporting commodities, are regarded as threatening and violent outside of sporting domains. Interviews were conducted with 48 Polynesian men aged 18-60 in two studies.

**Desafíos De La Adaptación Para La Prevención De Desastres En México**

La vulnerabilidad social se incremen en condiciones de variabilidad climática asociada con el cambio climático antropogénico; los desastres asociados a fenómenos hidrometeorológicos ocurridos durante el siglo XXI en México nos dan la oportunidad de cuestionar teóricamente conceptos tales como “eventos extremos”, “lluvias atípicas”, pero principalmente “desastres naturales”, que defran la realidad desde las ideologías tecnocrata y naturalista.

El fracaso del desarrollo sustentable, dio lugar a la irrupción del cambio climático como uno de los efectos más perjudiciales para la humanidad, sobre todo para los sectores excluidos, sobrevivientes de la pobreza, en los territorios donde la vulnerabilidad social y la democratización de las comunicaciones ha sido escasa.

Con base en los postulados internacionales de adaption y reducción de riesgos de desastres el gobierno mexicano ha asumido formalmente compromisos para diseñar y ejecutar políticas y programas orientados a fortalecer la resiliencia como ciudadana, sin embargo las decisiones privilegian la resiliencia institucional, con énfasis en las políticas de protección civil, orientada a la atencion coyuntural de emergencias, desatendiendo la prevención de desastres como eje de politica pública. Recientemente el Plan Nacional de Desarrollo 2013-2018 define los lineamientos programáticos en materia de cambio climático, sin incluir la adaptación y la crisis de vulnerabilidad nacional.

Los desastres plantean el desafío de reducir la desigualdad social como premisa para también reducir la vulnerabilidad y los riesgos a la población. Se propone trabajar investigaciones futuras con las experiencias populares de autogestión y comunitaria, mismas que requieren apoyos institucionales y académicos para consolidar procesos de planeación popular del territorio, fortaleciendo las capacidades locales para mejorar la calidad de vida y la preparación colectiva frente a los riesgos asociados a cambio climático, con experiencias en comunidades: los estados de Tabasco, Chiapas, Veracruz y Guerrero.

**RODRIGUEZ MORATO, ARTURO** (university of barcelona, rodriguez.morato@ub.edu)

**Assessing the Value of Art in the Culture Society**

Nowadays it is widely recognized that due to the great expansion of the arts sphere during the xixth century and the concomitant increase of the influence that the art paradigm exerts into other fields of practice culture and the arts have taken on a central strategic role in contemporary society. This is particularly visible in big cities today, to the extent that there we can speak of a culture society in the making, a new social configuration structurally dominated by culture (Rodríguez Morato 2012). As a result of these changes, since the late nineties and during the first decade of the new century the idea of creativity, which is closely linked to the arts from its origin, has gained a lot of prominence in the urban discourse, as a new way of thinking about and acting upon contemporary scandals in the NHS.

In this paper I present a dramatic health care system collapse and scandal in the UK, I analyse the story about appalling suffering of a large amount of patients at Mid Staffordshire NHS foundation trust between 2005 and 2008, and the subsequent public inquiry in 2013 of the Stafford hospital and the trust's professional staff and directors. On this background, I discuss present day response to the scandal and show how this response departures from a preoccupation with operational truths, such as world-class management, regulatory transparency and openness, and culture of compassion. I argue that organization studies and work that critically reflect upon the context in which clinical malpractice occurs have been largely absent from this discussion. This is peculiar since the scandal seems to be an open invitation to organization theory and organization concepts to take on a life and role in the discussion. In addition to this, I argue, the scandal invites organization theorists to contribute to a discussion of how we choose to organize treatment and care of vulnerable citizens in our society. To follow this line of thought, I revisit the work of Isabel Menedez Lyth (1959, 1988) and central analyses of The Hawthorne Institute of Human Relations (Jaqus, 1951; Trist and Bamforth, 1951; Rice, 1958; Winnicott, 1958). I scrutinize whether, in light of the hospital scandal and the numerous failures of care, these classical endeavours add something to present day theorizing on organizations and how we think about and approach the activities and relations of organisations. To conclude, I argue that classical organization theory in the early Tavistock tradition provides us with old-new ways of thinking about and acting upon contemporary scandals in the NHS.

**The Insecure Attachment of the Organization Theorist: Present Day and Past Responses to Health Care Scandals in the NHS**

This paper links the UK riots of August 2011 to citizenship and the subject through the lens of risk and resilience. It suggests that the rhetoric of respon-
sibilisation and observational techniques/tactics in response to the riots reveal a moral ordering of the ‘legitimate’ citizen/subject at odds with the rhetoric of inclusive resilience. The visibility of the disorderly citizen was used to objectify the ‘risky subject’; turning the riots from a societal reaction (to the negative impacts of neoliberalization) into wanton criminality inherent to the ‘worst 100,000 families’ in Britain. This paper situates the disorderly and ‘risky’ citizen/subject within a critical reflection on risk, order and surveillance. It is argued that a complex interplay of thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

Protest, Conflict, and Class Struggle in South Korea: Two Cases of Urban Redevelopment in Incheon

South Korea has suffered from major economic dislocations under the pressures of globalization, marketization, and economic restructuring particularly since the Asian Financial Crisis of 1997-98. Labor responded in the last decade with a wave of labor militancy that receded with the decline of the labor movement and a period of labor peace during the recent economic crisis. At the meantime the public has asked for more welfare spending. Throughout the period, however, there has been sustained resistance to capital in the form of protest against urban redevelopment. In recent years, urban protests have even taken a similar form labor protests, with both involving sustained occupations and a common protest culture. This study reviews the recent trends in resistance against domestic (and foreign) capital and then looks at the specific cases of housing protests in the Kaijwa and Dohwa neighborhoods of Incheon. In both cases, a lower-income community was displaced by landlords seeking profit by building more expensive housing in a pattern common throughout Korea despite plenty of housing stock that could be rehabilitated at lower cost. The capital drive to redevelop this area in spite of a collapse in the luxury housing market, and a lack of affordable housing. The course of the occupations and protests are reviewed and linked to broader issues of class conflict in Incheon and South Korea.

**Being a Housewife – Is It a Traditional or Progressive Female Gender Role? Understanding Gender Role Constructions in a Transcultural Russian-German Research Setting**

This paper is based on a PhD project investigating the au pair migration from young Russian women to Germany. Two aspects of this project will be discussed: 1) What kind of biographical research design may be employed in a transcultural research setting? and 2) how does this design help to reconstruct the socio-cultural constrictiveness of social categories such as gender. The methodological design of the research project consisted of data collection with biographical narrative interviews mainly done in German language (to lesser extent in English or Russian with interpretation). Data were analysed by the method of sequential analysis with interpretation. This design helps to reconstruct the socio-cultural constrictiveness of social categories. Concerning the question of gender this project depicts how this category not only in everyday knowledge but also in research is formed by socio-cultural and historically shaped contexts.

The Male Au Pair: Migrant Men Providing Domestic and Care Services In Au Pair Jobs

Research on migrants working in low income jobs show a gender logic according to which female migrants typically work in domestic and care work, while male migrants hold jobs in the industrial sector. The increasing popularity of male au pairs offers a unique opportunity to research a specific case of migrants’ labor market position contradictory to this logic. Since there do not exist any studies and stations on male au pairs yet, I propose an explorative research project on male au pairs in Germany. It is based on 3 in-depth interviews with male au pairs, data from online forums, journalistic articles, advertising materials of au pair agencies as well as interviews with agency staff.

Au pair work is a specific type of reproductive labor because the working relation between au pair and the employing family is only very poorly regulated. Thus, every case shows which specific tasks are delegated to the au pair and which according competencies are expected of the au pair. At the intersection of ethnicity/nationality and masculinity the male au pair is constructed as a suitable worker for families with sons. Alike the broad discussion about the importance of men for socializing male children, male au pairs are hired when the male parent is absent and expected to fulfill the position of the father. The foreignness of the au pair is portrayed as a value of intercultural education. At the same time offering low waged work within the own household is legitimized as providing life chances to a young person from a less developed country. Biographical interviews show that male au pairs often feel emburdened by the expectation to be a male role model and report to feel pressured into adjusting to the families’ cultural/individual routines instead of pursuing their own lifestyle.

**« Je Fais Ce Que Je Peux ». Les Pratiques d'accompagnement Et Assistance Aux Pauvres Au Chili**

Cette contribution porte sur les politiques contemporaines d’assistance au Chili. Plus spécifiquement, sur l’analyse des pratiques d’accompagnement psychosocial à familles vulnérables. Ce travail est le résultat d’une enquête ethnographique réalisée au cours de visites de terrain (1992-2001) et de discours aux forums. J’interroge les enjeux de la pratique assistentielle contemporaine ainsi que les limites d’action tant des intervenants comme des sujets assistés dans un contexte d’intervention précaire et précarisée. Cette politique a été associée à la nouvelle vogue des politiques sociales inspirée dans l’appel de la Banque Mondial : « la gestion du risque social ». Elle aspire à articuler des mécanismes de transferts monétaires conditionnés («Conditional Cash Transfert Programs») avec des pratiques de traitement de type assistentiels et promotionnels. À partir d’un approche de genre, l’analyse va se concentrer sur la gestion et le gouvernement du social au niveau local, notamment, à partir de la configuration sociologique des rapports assistentiels (entre assistants et assistés), je propose discuter les formes de circulation et de transfert des contraintes liées à la gestion assistentiels (bureaucratiques, administratives, financières) entre les familles et les intervenants et voir comment ces mécanismes d’adaptation des uns, mettent en tension les perspectives des autres (au niveau professionnel, éthique, affectif, etc.). Ainsi, je veux remarquer que la nouvelle logique de gestion du social s’appuie sur une intervention à double cible qui traite et qui met sous contrainte tant aux pauvres comme aux intervenants.

**Les Embûches De La Mémoire. “ L’Éternauta” Comme Metaphore Anticipatoire De La Dictature Argentine Et Relecture De Ses Séquences**

Cette communication se propose d’aborder la bande dessinée de science-fiction “L’éternauta”, devenue culte dans plusieurs pays et entendue comme une mise en scène des processus d’appropriation et d’inversion de la mémoire collective observés en Argentine pendant les dernières décennies. Publié dans ce pays, cette bande dessinée a profondément marqué son public, devenant même une sorte d’hymne à la résistance. L’anecdote de l’ouvrier dans des lieux familiers de Buenos Aires renforcera encore son réalisme, tout en faisant écho aux angoisses de la population de l’époque. L’engagement des protagonistes dans une lutte inégal face à un oppresseur cruel et intelligenle, leur sentiment d’insécurité, leurs peurs et leurs espoirs seront alors écho à la lutte du peuple contre la dictature argentine, expliquant au passage l’immense popularité de cette bande dessinée dans plusieurs pays. La “disparition” de l’ouvrier en 1977 du créateur, Hector Gerez, est beaucoup plus qu’une simple bande dessinée de science-fiction, elle a su donner une espèce de forme qui a su s’imposer, tout au long de l’histoire depuis les années 80, de plusieurs autres au niveau professionnel, éthique, affectif, etc.. Ainsi, je veux partager avec vous la nouvelle logique de gestion du social dont s’appuie une intervention à double cible qui traite et qui met sous contrainte tant aux pauvres comme aux intervenants.
This paper explores the writings of G.W.F. Hegel, Friedrich Nietzsche and Frantz Fanon on the dynamics within relationships of domination and subordination. Although the three authors held quite different political perspectives, there are commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the minds of all involved in such relationships. Nietzsche and Fanon also discuss the role of resentment and the importance of physical coercion and repression in maintaining and then undermining domination. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three write to warn that the destruction of the inequality is an inevitability.

The Financialization of Housing and Spatial Segregation: New Frontiers in Brazilian Cities

Urban space plays a crucial role in the contemporary processes of capital accumulation, which is essential to analyse transformations on social housing policies and their impacts on patterns of socio-spatial segregation in the cities. More than mere effects of the financialization of the world economy, changes in the production and consumption of urban space have figured as driving forces of a new economic order, characterized by deep connections between financial markets and real estate. Cities in general and the housing sector in particular have not only become fertile fields for commoditization of social needs and expansion of market relations, but also mobilized as guarantors for financial assets. Social housing was not the sub-sector to be affected firstly by such phenomena, which has gone further where the expected rates of return are higher such as corporate buildings or luxury residences. However, it stands as a terrain of strategic relevance for business due to its large scale.

In this context, rather than ways of providing social rights, housing policies have been progressively conceived as means of opening new frontiers of financialization in low income residential markets. Like in many other countries, this is the case of “Minha Casa Minha Vida” program, the main housing policy implemented in Brazil, which subsidize homeownership to low income households. With the protagonist role of private developers in the formulation of social housing projects, their spatial dimension are conditioned by cost calculations made by economic agents seeking to maximize profits. Without taking into account urban policy goals, the definition of the projects’ location is mainly guided by the criteria of the cheapest land available - generally also the most precarious places. As a consequence, social housing projects are reinforcing historical trends of segregation and ghettoization of the poor in Brazilian cities.

The gendered nature of the struggle to integrate caring, family, and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the capabilities approach, which emphasizes that the options of an individual depend on the minds of all involved in such relationships. Nietzsche and Fanon also explore the subordinate as an object, the importance of the Other, and the effects on the minds of all involved in such relationships. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three write to warn that the destruction of the inequality is an inevitability.

The 100th Session of the International Labour Conference in 2011 concluded with the adoption of the International Convention on Domestic Workers, which recognized the “significant contribution of domestic workers to the global economy” that is “undervalued and invisible, and is mainly carried out by women and girls, many of whom are migrants or members of disadvantaged communities”. The convention serves as an important initiative to develop a broad understanding of the work, care, and household jobs of women and girls, recognizing the “commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the minds of all involved in such relationships. Nietzsche and Fanon also discuss the role of resentment and the importance of physical coercion and repression in maintaining and then undermining domination. Military Careers, Family and Private Dilemmas

Work and family are the two most important areas of life for most people. Although they are traditional areas of sociological study, and have occupied different fields of research. Today, the characteristics of these social institutions in contemporary society reinforce the need to discuss the relationship between work and family in the context of the social sciences, and very particularly in sociology. Interest of study that is even more evident in the field of the military profession, given the specificities associated with her, and also by the changes in society and the military. A significant number of studies have enlighten the impact of military life on families, considering that the circumstances of risk, frequent mobility, long absences, uncertainty etc. products remarkable effects not only in military service personnel, but also in those who are close to them. Family and the military organization have in common the fact of being extraordinarily demanding in ties, energy and total dedication. Using the terms of Segal (1988), the “greediness” of both institutions may lead to conflicts between the family and the military realm, that migrant domestic workers do under restricted conditions or as a means of coping and dealing with the constraints. The aim of this paper is to compare the trajectories of man and women military personnel coming from the same promotion of officers formed at the Portuguese Military Academy. Specially, we will be seeking to map their expectations regarding couplehood and parenthood before and after joining the military, and how these goals are translated to the family and the professional projects. In methodological terms, the main data will be supported on depth interviews in the form of life stories applied to the first promotions of officers that included women.

The gendered nature of the struggle to integrate caring, family, and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. Age, Gender and Migration Status on the Labour Market – A Case for Accumulation of Advantages and Disadvantages

The analysis addressed in the presentation will show the situation of the older workers from the perspective of their minority status, namely belonging to the group of migrants, as well as from the perspective of gender. We will present the problem of the accumulation of certain advantages and disadvantages during the life-course of individuals with regard also to their socio-demographic characteristics. The questions this presentation will answer are the following: Are there significant differences in labour market outcomes between the workers with migration background and the workers without migration background? Do these differences increase with age? What is the impact of those two dimensions – age and migration status – on one of the labour market outcomes, namely the wages? And finally, what is the role of gender in determining the changes in employment status?

The analyses in this paper draw on data from the SOEP (German Socio-Economic Panel) which is a representative, interdisciplinary, and longitudinal survey of the German population. For our analyses we apply the SOEP data from 1991 to 2011, distinguishing between population with and without migration background. To investigate wage differences between individuals we use the methodology developed by Oaxaca and Blinder (1973).

In the empirical analysis we have found that initial disadvantages in education of men with migration background cumulate across the life span resulting in large differences in income between the two groups. Women and men with migration background with the same socio-economic background have a more pronounced negative development. Furthermore, the wage analysis reflects that wage differences between individuals with and without migration background are due to their different endowments and not an effect of direct discrimination.

System Trust and Cooperation: The Case of Recycling Behavior

In this paper, I develop and test the hypothesis that system trust – trust in the reliability, effectiveness, and legitimacy of social institutions – promotes cooperation in social dilemmas and the provision of public goods, focusing here on the example of recycling. I discuss three models that can explain recycling behavior (rational choice, low-cost hypothesis, dual-process theory) and show how they link incentives and attitudes. All three models claim that incentives are an important factor mediating the attitude-behavior link, but they develop contrasting hypotheses about the direction of this effect. I use survey data collected by Safray and Daughbjerg (2011) to advance an empirical test. I find a positive and significant interaction between the attitude of system trust and recycling costs, as well as a negative and significant interaction between system trust and recycling benefits. The data rule out the rational choice and low-cost hypothesis explanation of recycling behavior. Instead, they indicate that attitudes moderate the impact of the incentive structure, increasing cooperation in collective action dilemmas irrespective of the costs associated with compliance.

Trust and Adaptive Rationality: Towards a Causal Explanation of Conditional and Unconditional Trust

This paper provides a theoretical framework to reductively explain conditional and unconditional trust; it also presents an experimental test of the correspondingly integrative model and its predictions. Trust research has neglected the importance of (1) an actor’s context-dependent definition of the situation and (2) individual-level adaptive rationality. The diversity and fragmentation of trust research is rooted in an implicit duality between rational and non-rational approaches. This antagonism has permeated trust research across disciplines, both with respect to phenomenological description and causal explanation. But human cognition is guided by a flexible and dynamic degree of information processing: trust is as “multi-faceted” as there are cognitive routes that take us to the choice of a trusting act. The degree of rationality involved in interpretation and choice is a fundamental aspect of trust. However, adaptive rationality has not been treated as an independent and orthogonal dimension of the typological space of trust. By allowing for both automatic and rational modes of information processing, the model demonstrates the impact of a flexible and dynamic degree of rationality in interpretation and choice on trust. It describes a finite set of parameters that guide the selection of the processing mode and provides a causal link between an act’s definition of the situation, individual-level adaptive rationality, and the behavioral outcome of trust. I predict a closed set of admissible interaction patterns in an experimental context using a measure of chronic norm accessibility (interpersonal trust scale) and two situational parameters. In a 2x2 factorial design, I vary the context and initial endowments in a standard investment game. The data show that negative incentive effects on trust in high-cost situations (5€ vs. 50€ real initial endowments) can be mediated by high norm accessibility or a positive social context. Decision-times analyses reveal a consistent pattern of interactions.

Emerging Patterns of Intergenerational Inequality in the Housing Market: The Shifting Position of Younger People in Cities in Europe and East Asia

Across the developed world, market forms of housing provision and consumption were increasingly promoted towards the end of the last century. While state intervention and de-regulation combined in diverse ways in different contexts, the assumption pervaded that increasing numbers of new households would move into owner-occupied housing, stimulating urban economies and restructuring housing sectors around more marketized and privatized practices. This was expected to make urban housing markets more efficient and reduce the necessity for subsidized rental sectors. In context of the global housing boom and the Global Financial Crisis that followed, however, transformations in urban housing sectors have had a number of unexpected corollaries. One that has become particularly prominent in some cities is the divide between younger and older cohorts in terms of access to, and movement through housing markets. Timing of independent household formation and entry in the housing market, as well as access to wider family housing resources, have become increasingly important in shaping patterns of inequality both across and between different cohorts of urban residents. In this paper we explore intergenerational inequalities in a number of European and East Asian city contexts, with a focus on how housing market structures are reshaping housing careers, family formation and socioeconomic conditions among younger adults. The purpose of the East-West axis of analysis is to illustrate different manifestations of housing sector neo-liberalization as well as the more or less common outcomes in terms of spatial and economic polarization within and across different generations.

The Success of the Populist Message Explained

Populism has become a regular feature of many liberal democracies. As a result, various studies have focused on the upsurge of parties that employ a populist discourse. However, comparative studies of populism mainly focus on one
A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. These methods were oriented towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility, and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes art works and social initiatives, opening events and manifestos in addition to interview transcripts and social mappings, each oriented towards the cultural and socio — political changes groups hoped to enact.

This paper argues that ‘evaluation’ is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. In considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the ‘norms’ and ‘forms’ of evaluation. The histories of and motivations for evaluation include a governmental impulse to culture as a resource that can be used to work as part of a wider global project of managing social change (Yudice 2003, Bennett 1995) and a genuine desire to learn from and improve the effectiveness and possibilities of arts-based social interventions. This paper argues that in the current policy context evaluation has become a technocratic ‘ hoop’ for arts organisations to jump through and well-rehearsed relations through processes of creative exchange. Skills Exchange challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. These methods were oriented towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility, and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes art works and social initiatives, opening events and manifestos in addition to interview transcripts and social mappings, each oriented towards the cultural and socio — political changes groups hoped to enact.

This paper identifies the ethical and methodological significance of this project and discusses the productive blurring of the overlap between arts and visual research practice.

This paper conceives of populism as a set of ideas that can be combined with every political ideology. Moreover, it is assumed that political parties can employ the populist set of ideas to a larger or lesser extent. As such, populism becomes a matter of degree: parties – on both the left and the right – can be more or less populist. This raises the question as to how the success of the populist message can be explained. Why and under which circumstances do citizens vote for parties that employ a populist discourse? In order to answer that question, I focus on both micro-level explanations (socio-demographic characteristics and political attitudes on the individual level), and macro-level variables (corruption, social inequality, party system polarization and the electoral system). The paper combines the results of a computer-based content analysis of election manifestos with the European Social Survey (2002-2010). By means of multi-level analyses carried out in 15 Western European countries, it is assessed how the success of parties that employ a populist discourse can be explained.
immense political challenges from its opponents, many of whom currently constitute ruling governments. Leaders and opposition parties in Switzerland, Germany, the United Kingdom, France and the Netherlands have made strong public statements against multiculturalism and linked this rejection to the presence of Muslim populations. Banning and Kymlicka note that even though multicultural policies remain in place in many of these nations, the delegitimation of the word multiculturalism is not just a change in discourse, but jeopardises the very conditions under which multicultural policies can actually work. It would be easy to consider that in this context, multiculturalism has a dim future.

This paper, based upon extensive research conducted for an Australian Research Council funded study examines the ‘retreat from multiculturalism’ in Australia through the debate about sharia, legal pluralism and Islamic finance. It offers important insights into the dimensions of a new neoliberal multiculturalism in Australia.

Biography
Joshua M. Roose *(Joshua.Roose@uws.edu.au) is a senior research officer of the Religion and Society Research Centre at the University of Western Sydney, Australia working on an Australian Research Council-funded study examining sharia and legal pluralism in Australia and the United States. In 2013, he served as a visiting scholar and researcher on the same project (with Professor Bryan Turner) at the Committee for the Study of Religion at City University of New York. He is also a co-convenor of The Australian Sociological Association (TASA) “Ethnicity, Migration and Multiculturalism” thematic group with a focus on religion and multiculturalism.

Muslim Elites in the Neo-Liberal Sphere: Implications for Citizenship and the Future of Islam in the West

In recent years there has been a vast array of studies examining Muslims in Western contexts at the level of radicalisation, impacts of negative representations and civic engagement. However, little research has examined the emergence of Western-born Muslims into the elite professions that are central to the operation of the neo-liberal free market and that serve as a central location of economic and political power. Less research still has examined how this ‘new Muslim elite’ is shaping citizenship amongst Muslims and the future of Islam in the West (and the tensions this produces with traditional Muslim community leadership). This study aims to reveal important empirical and theoretical insights into these developments. Significantly, this study shifts the focus from the ‘Muslim question’ to how Muslims are actively contributing to a ‘Muslim Solution’.

This paper is based on findings from a three-year project (2012-2014) funded by the Australian Research Council and conducted by a multidisciplinary team (Law, Sociology, Criminology and Political Science) from the University of Western Sydney (UWS) and City University of New York (CUNY). Empirical research was conducted in the global cities of Sydney and New York with Muslim attorneys, Islamic finance specialists, Imams and community leaders. The study aims to explore the intersection of shari’a and the secular legal system, as well as gaining a broader insight into how sharia’s shapes the daily lives of observant Muslims.

ROSA, HARTMUT* (University of Jena, hartmut.rosa@uni-jena.de)

The Temporality of the Good Life: Resonance As a Key-Concept in Critical Theory

The modern reality of ethical pluralism implies that we cannot define the substance or content of a good life. However, perhaps it is possible to identify the temporality, or at least some of the crucial temporal aspects of a good life? The paper sets out to explore just this. In the first part, it identifies three time-levels that have to be brought in ‘resonance’ or coherence within a life: The temporality of everyday life, the temporality of life-time (or biographical time), and the temporality of one’s age or epoch (historical time). In its second part, the paper seeks to establish the argument that the good life is achieved through a mediation between singular ‘moments of resonance’ (as opposed to situations of alienation) and stable ‘axes of resonance’ that allow for such moments. The crucial point here is that this mediation requires that such axes of resonance provide a certain level of security and stability that is potentially threatened or undermined in an era of incessant social acceleration.

While moments of resonance are rare and shortlived, what subjects need are stable and reliable ‘Axes of Resonance’ which give access to such experiences. In modern society, such axes can be love and the family, work, but also nature, art and religion. I will explore these ‘Spheres of Resonance’ by contrasting them to ‘Spheres of Alienation’ which mirror the former and might be on the rise in a late-modern world governed by the imperatives of speed and competition.

Can International Framework Agreements Facilitate Transnational Labor Cooperation?

Marx & Engels predicted that globalization would lead workers of the world to unite. Indeed, the world economy is today “global.” However, globalization seems to have hurt workers’ organization as labor unions have lost membership and influence almost across the board. But in the past decade global unions have even been able to persuade more than 100 multinational corporations employing over 8 million workers to sign so-called international framework agreements (“IFAs”). As a minimum, all IFAs must submit to the “core labor rights” of the International Labor Organization (“ILO”), to wit, the right of freedom of association and effective collective bargaining, the right to be free from discrimination at work, the right against compulsory labor and the right against the worst forms of child labor. Could Marx & Engels have been correct, after all, about an international formation of workers acting in a class-conscious way for fundamental social change around the world? After doing empirical field research for about 6 months in Europe and the U.S.A., I do not think that IFAs yet signal a significant and new labor upsurge. First, I found out that the mostly German, Nordic, and French labor organizations seem to determine the specific meanings of the IFAs. These specific national labor organizations broker the IFAs and the relations that give IFAs meaning and life. In this sense IFAs are not truly “global.” They have important national roots. Second, unions across economic sectors seem to have conflicting interests. No brokerage seems to mend those ruptures, leading some global unions and their IFAs to clash with others. The paper concludes by arguing that the ILO may help to broker these conflicts to propel IFAs forward.

Communicating the Challenges of Climate Change Adaptation in the International Red Cross and Red Crescent Movement

The paradigm of climate change adaptation (CCA) plays an increasingly important role in various types of civil society organizations (Foran/Widdick 2012; Hall 2013). The International Red Cross and Red Crescent Movement discussed the topic of climate change as a humanitarian challenge for the first time in 1999. The foundation of the Red Cross/Red Crescent Climate Centre (RCCC) in Den Haag in 2002 institutionalized this new organizational commitment to address climate change induced challenges in disaster preparedness and the securing of livelihoods. Today, CCA is being discussed as a cross-cutting issue in humanitarian aid.

Innovative Strategies to Cope with Climate Change Across Time and Space - Local Preparedness As a Humanitarian Challenge

This paper addresses an innovative climate change adaptation strategy in the area of disaster preparedness developed by the German Red Cross in cooperation with local partners in Africa such as the Ugandan Red Cross and the Tanzanian Red Cross. Discussing the concept of "early warning/early action" and its practical implementation, this paper addresses organizational learning processes in transnational organizations from an actor-centered perspective. By looking at a new project approach in the area of indicator based disaster preparedness systems, the importance of knowledge creation and transformation across time and space is highlighted. Time is important to respond adequately before a disaster strikes which requires new forms of institutionalized cooperation (for example, with meteorological departments and other stakeholders), while the spatial dimension refers to processes of organizational learning across borders and hierarchies from the local to the regional level, the national and transnational level. The role of both local communities and organizational change agents, meaning key persons within and outside the organizations, is addressed systematically to analyze the possibilities to foster climate change adaptation projects and their successful implementation in the long run.

When 150 Becomes 100: Conversions and Denominations in Grocery Shopping

This paper explores two aspects of expatriate money practices with Russian rubles, focusing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currencies like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing 'sticker shock', a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of value and price for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish krona – talk of curious conversions that shift, so that a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handier conversion to assess prices, but also adjusting to new arithmetic based on

Climate Uptake: An Ethnography of the Climate Movement

In this paper we report on a project analysing the emergence of a grassroots social movement dedicated to direct action against the root causes of climate change. The project investigates the dramatic turn in climate politics that occurred in the mid-2000s. Engendered by mounting evidence of climate change, and by the progressive erosion of international climate negotiations under United Nations Framework Convention on Climate Change, and rejecting the pragmatism of professionalised non-governmental environmental organisations, this grassroots-based political movement launched a radical programme for climate action from below. Through public protests, civil disobedience involving direct actions, counter summits, and deliberative events that created a sense of community, solidarity and personal political agency, climate activists sought to translate climate science into politics. The climate movement sought to build a political vision and the political capacity to challenge the elite politics of climate change, the 'climate pragmatism' that had dominated climate change politics since the 1990s, and the legitimacy of the carbon-intensive economy. The paper explores this significant moment, when a radical climate politics introduced a new dynamic to the landscape. The authors are to publish this work in 2013 as an ethnography of the search for climate agency, based on the authors’ involvement in the climate movement and in-depth interviews with climate activists from 2007 to 2010. Focusing particularly on the climate movement in Australia, a country reaping the economic benefits of the coal and gas boom, the book charts both the possibilities and pitfalls revealed by the upsurge, interpreting it as a pre-figurative moment for an anti-systemic climate agency.

Imperialism In a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

Imperialism in a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

National currencies, especially paper notes, are emblems of the nation-state and its power. This paper builds on these literatures to explore iconic representations of Canada's Aboriginal Peoples in its monies, using examples of colonial and post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada's imperialist, colonialist legacy is a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives. Beginning with an 1870 Dominion of Canada $2 bill, and culminating in the 2004 Canadian journey series $20 bill, this paper asks whether Canada's claim of multi-culturalism vis-a-vis First Nations Peoples is indeed supported by nation-building imagery on its own currency. Hudson's Bay Point Blankets were traded between colonisers and First Nations in 19th century Canada. These wool blankets were repurposed by Aborigional peoples as garments, ceremonial exchange and prestige goods. On the 1870 $2 bill, the blanket draped across an Aboriginal man's body is an imperialist icon of le doux commerce that 'tames' the 'noble savage'. In the 2004 $20 bill, First Nations are represented by a modern sculpture by a Haida artist, Bill Reid, depicting the creation of mankind, Raven and the First Mer. But on this bill is contemporary Aboriginal art and 'traditional culture' – the sculpture depicts a key event in Haida cosmology – presented as truly valuable?

When 150 Becomes 100: Conversions and Denominations In Grocery Shopping

When 150 becomes 100: Conversions and Denominations in Grocery Shopping

This paper explores two aspects of expatriate money practices with Russian rubles, focusing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currencies like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing 'sticker shock', a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of value and price for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish krona – talk of curious conversions that shift, so that a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handier conversion to assess prices, but also adjusting to new arithmetic based on
differently and even when the base unit may be the same. I will argue that conversions are slowly adjusted to better match not official rates of currency conversion, but notions of worth and value that are linked to available denominations of money at ‘home’ and abroad.

**Ethnographic Studies Approaching Violence and the Transaction of Illegal Drugs in Montevideo, Uruguay**

The present work is a result of a process of ethnographic investigation that took place in three different social locations: the downtown area (with a population conforming by homeless teenagers and young adults); a peripheral suburb location in Montevideo (focusing on consumers of cocaine paste base); and, prison (within a system created for people with no criminal records). The focus of this study discusses the social interrelations and the transactions of illegal drugs. Given the general assumption that the foundation of social interrelations is exchange itself, the case of an exchange that occurs within an outlawed background will be debated - an illegal market which is necessarily (re)producing violence; a market that is illegal due to the fact that those merchandises are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the Uruguayan government formulates the regulation of the market of marihuana, it also proposes to implement stricter measures against the traffic and transaction of cocaine paste base. This rationale implies contradictory policies and thus, drug-related social violence is strictly connected to an illegal framework of its transaction than to drug abuse psychological and phisical effects.

**In and out of the Mass Media System: Crisis Microblogging in a Social System Theory Perspective**

The large diffusion of social media platforms, togheter with the diffusion of mobile connectivity, has generated, during the last few years, a growing amount of real time production of user generated content. This broad phenomenon is even more interesting when we come to crisis related communications. During crisis events traditional mass media communications might be slower less efficient and less accurate than user-generated information. This is why, over the last few years, we are seeing a growing number of research projects aiming at using these data for rescue operations or other civil protection activities. We are facing this kind of data from a different perspective. Within this paper we will claim that - within specific circumstances - user generated communication will act surging the traditional Mass Media System in its function of self observation of the Social System (Luhmann 2000) by applying the same operational selection between information and non-information. In addition we will claim that, as soon as the initial conditions disappear, user generated communication will evolve into a new - and still largely unexplored social function.

To support our thesis we will use Twitter data collected during the first five hours after the earthquake that struck Emilia Romagna region in Italy on May 20th 2012 monitoring the #terremoto hashtag. By focusing on the first 5 hours of the Twitter stream we have been able to detect the early user-led phase of the phenomenon, showing which type of users has been the first to fill the information gap and, by then, what happened until the early morning when traditional media came on stage. We will show how in this time span it is possible to observe how specific social network analysis metrics (Bruni, Stiegitz 2012) evolve from a specific mass media like structure toward a more conversational structure.

**Ageing and the Development of Community Care in East Asia – What Way Forward?**

With the ageing of societies, there is growing interest among also East Asian countries to implement new policies of long term care. Home care arrangements now predominate in OECD countries, reflecting older people's preferences for home based help and care but also as an attempt to reduce reliance on expensive institutional care, particularly for recipients with lower levels of disability (OECD, 2005). Countries without extensive formal community-based care systems such as the East Asian countries are in a demographic situation which requires them to consider how to organize and provide adequate, affordable and quality community-based care both in urban and rural settings, and in a financially sustainable and culturally diverse way. They can draw on the lessons learned from other countries in the development of national community-based care models, but new models of community care must develop according to their respective cultural, political and social background and taking into account financial and systemic capabilities. This paper investigates what models of community care have been implemented or is under way in 9 East Asian countries, outlining their characteristics and the challenges forward.

**The Gendering of Internet-Based ICTs in Everyday Life**

Dealing with the implications of ICTs for social inequality requires taking the everyday practices and actual situations into account in which ICTs are used and where participation is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being reproduced. Within the domestication process ICTs are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-oriented, interview-based long-term study “The Mediatized Home” analyzing the integration of the different internet-based ICTs into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that due to a technological framing, inequalities in internet use and skills are especially tied to gender roles and practices. Although the technological framing and thereby these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples, which is evidently affecting the use of internet-based ICTs.

In order to understand the ways in which internet-based ICTs interact with questions of social inequality, it is crucial to ask for its latent implications. Our study shows that looking at everyday life from a domestication perspective allows us to not only identify latent implications of internet-based ICTs, but also to understand how they unfold their effects on social inequality.

**Where Participation is Negotiated: New Media in Everyday Life**

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being reproduced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-oriented, interview-based long-term study “The Mediatized Home” analyzing the integration of the different New Media Technologies into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that inequalities in internet use and skills are especially tied to gender roles and practices. Although these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples involving a gendered construction of New Media expertise, which is evidently affecting the use of New Media.

In order to understand the ways in which New Media can open up possibilities to participation, it is crucial to ask whether people are equally taking part in New Media or not. Our study helps explaining processes of inclusion as well as exclusion showing how participation in New Media is negotiated in everyday life.
One distinguishing trait of Finnish fertility during the last decades is the increase in the proportion of families having three or four children. We study how socio-economic status (SES) and numbers of unions relate to above-average (3+) parities among Finnish men and women across age cohorts. In previous studies of wealthy low-fertility countries, both male SES and number of unions has often been shown to increase fertility, while their effect on women is mixed or negative.

We use the FINNUNION data, a 11% sample of all Finnish-born persons resident in Finland during 1970–2010 and covering the fertility of age cohorts 1930–1960. It includes data on coresidential unions and marriages, childbearing and central sociodemographic indicators of the index persons on an annual basis. It also includes sociodemographic indicators and childbearing history of all partners in marriage or cohabitation of the index person.

Results show that across all male cohorts, higher social status increases the proportions of 3+ children. There is no comparable clear trend among women, although the negative effect of female education on higher parities diminishes over time. Interestingly, the gender differences appear to diminish among younger cohorts. We discuss reasons for the shift towards gender equality in mating patterns in families with many children.

ROULLEAU-BERGER, LAURENCE* (CNRS, Laurence.Roulleau-Berger@ens-lyon.fr)

Plural Modernities and Post-Western Sociologies: Individuation in Europe and in China

In a context of plural modernities we have entered in a period of Post-Western-ization of social science and construction of the construction of situated knowledge. We are in the midst of a “global change” which is distinct from previous changes and their ephemeral nature which appears to be a turning point in the history of the social sciences. In this communication we will consider the diversity of epistemic injustices and reticular dominations, the emergence of Post-Western sociology through the dialogue between European and Chinese sociologies; finally we will be focused on theoretical continuities and discontinuities between Chinese and European sociologies through the analysis of the process of individuation in Europe and in China. The concept of the individual is not very highly developed in Chinese sociology, whereas it has assumed a central position in European sociology. On the other hand, various theories of the ‘individual’ have been developed; some Chinese sociologists advance the ‘we’ is produced, on the one hand, by ‘guanxi’, which delineate the particular boundaries of the ‘self’ in the construction of the individual, and, on the other hand, by categorisations, identifications and social affiliations. Over the past 20 years or more, it has been interesting to observe that in European sociology, and particularly French sociology, the contemporary individual, whether he appears uncertain, reflexive or autonomous, lies at the heart of sociological thinking, whereas he is scarcely visible on the Chinese sociological scene. This phenomenon highlights the affirmation of the process of individuation as a process of civilisation in Norbert Elias’s sense of the term—and shows that, whereas in the past it was social structures that sustained the individual and the level of reflexivity was consistent with the social structure. We would consider discontinuous continuities and continuous discontinuities between Chinese and European sociologies.

WG01-896.3

ROULLEAU-BERGER, LAURENCE* (CNRS, Laurence.Roulleau-Berger@ens-lyon.fr)

Sociologies and Methodological Cosmopolitism

Methodological reflection in sociology is linked to the development of the Western society which saw its birth. If the process of pluralisation of contemporary societies questions even the idea of society as a narrative attached to that of modernity, and in particular that of European modernity, European thinking has continued through methodological nationalism to see itself as universal mediator of the other narratives (Chinese, Indian, African, Brazilian and so on). Certain forms of scientific hegemony have marked the development of sociological thought. The most pressing task, however, is to produce methodological cosmopolitism in which continuities and discontinuities, connections and disjunctions are constructed between different places in the world and potentially capable of bringing to light the multiplicity of ‘regimes of alterity’, the different ways of being with Others. The Others became a major methodological and epistemological scientific issue. Here, a methodological cosmopolitism is based on a multisited ethnography of recognition, in which all Others are regarded and recognised with their experience, their competence, and his fluctuating, reversible and varied identities anchored in a diversity of locations and temporalities. Methodological cosmopolitism is a way to access to the multivocality and the polyphonies of the plurality of narratives. Here methodological cosmopolitism allows for a universal sociology, which means integrating different points of view, which European, Asian, American and South American and Arabic countries. Methodological cosmopolitism is related to a conceptual space based on the articulation between a critical sociology and a pragmatic sociology where structural processes, collective and individual action, interaction orders are thinking together in different places in the world and different temporalities.

ROUND, JOHN* (Higher School of Economics, j.round@me.com)

The Comprised Mobility of Moscow’s Labour Migrants: States of Exception in a Super-Diverse City

While Moscow is a super diverse city with between 4.5 million of its population international labour migrants, the majority from Central Asia, and despite the state recognising their economic importance, levels of integration and tolerance are extremely low. This paper argues that increasing xenophobia and unclear legislation forces many migrants to live and operate within shifting states of exception, ensuring a precarious everyday which impacts greatly on their mobility. While often used to describe migrant camps this paper argues that the state of exception concept applies to Moscow as a whole as even documented migrants are prey to state officials and, increasingly, its citizens due to the uncertain everyday life that imprecise legislation creates. Thus migrants share informal knowledge about the safest places in the city and the routes around it which reduce their chances of interactions with the police. Furthermore, migrants are forced into informality by their employers and landlords refusing to register their documents correctly, increasing their vulnerability and denying welfare access. Compounding this, while it is extremely unclear who can demand a migrant’s documentation they are routinely stopped by the police and increasing the vulnerability of the public, with groups such as ‘Moscow Shield’ proclaiming themselves as the city’s protectors. This ensures that migrants wish to spend as little time as possible in ‘public’ spaces to reduce the risk of confrontation, punishment and violence. For many their spatialities of Moscow are reduced to their work place and accommodation and there are very few places where integration occurs. Through the work of Lefebvre and de Certeau the paper then addresses how migrants develop informal tactics to ‘cope’ with these everyday realities and carve out spaces of the city for themselves.

JS-580.6

ROUND, JOHN* (Higher School of Economics, j.round@me.com)

The Precarized Everyday of Moscow’s Labour Migrants: Rising Xenophobia and the Migrant As a Political Subject of Disgust

Since the collapse of the Soviet Union Moscow has positioned itself as a global city (re)built on the profits of its energy boom and the efforts of, currently, 5–8 million labour migrants, the majority from Central Asia. For too many migrants endure an extremely precarious everyday as they are forced to live in what the paper describes as a city wide state of exception, within which legal frameworks protecting migrants are ignored or misinterpreted to the benefit of the market. Many migrants who desire ‘legality’ are forced into ‘illegality’ by their employers and landlords refusing to register their documents correctly, increasing their vulnerability and denying welfare access. Compounding this, while it is extremely unclear who can demand a migrant’s documentation they are routinely stopped by the police and increasing the vulnerability of the public, with groups such as ‘Moscow Shield’ proclaiming themselves as the city’s protectors. This ensures that migrants wish to spend as little time as possible in ‘public’ spaces to reduce the risk of confrontation, punishment and violence. For many their spatialities of Moscow are reduced to their work place and accommodation and there are very few places where integration occurs. Through the work of Lefebvre and de Certeau the paper then addresses how migrants develop informal tactics to try and negate these problems to ensure their general well being.

Epistemological Standpoints and Steps in Social Sciences. Intersectionality in Gender Studies

Human and social sciences are the subject of a long lasting confrontation be- tween the ideal-type standpoint of the researcher's neutrality and the inevitable subjectivity in everyday life situations, between positivism and subjectivism. As a result of these paradigmatic oppositions, we encounter a cleavage between stat- istical quantitative methods applied to experimental data, "objective methods", and qualitative methods which are considered less rigorous but of the intersectionality of problemat- ics and methods. What makes a quantitative or qualitative approach feminist is dis- covered from the feminist research, the role of experience, memory and intercultur- al transfer .

Since 1980's, in information and communications sciences but also in manage- ment and gender studies, we are talking about the reliability of qualitative methods, the role of experience, memory and standpoint. The objectivity is actu- ally non-achievable, so the subjectivity must be assumed, explored, transferred.

Feminist studies (sociological first, then communicational, discursive, histor- ical) are designed to reveal the women's perspectives, as the feminist approaches had been ignored over the centuries. The main operator for the methodologi- cal change was the women's testimony through methods like life story, narrative analysis, and ethnography. It will be improper to talk about the exclusion of the quantitative methods from the feminist research, but of the intersectionality of problemat- ics and methods. What makes a quantitative or qualitative approach feminist is the focus on the topic of women and their issues. The feminist research prefers the individualization and not the generalization, the correction of the view from nowhere postulated by positivist research.

With this new orientation towards a "situated knowledge" (see D. Haraway), with the triangulation of methods and the intersectionality of sociological parameters, the traditional separation between the subject connoisseur and the object to be known is abolished and the group or community perspective can replace the neutral, individualizing perspective.

La Dimension De Genre Dans Les Organisations

La visée de cette intervention c'est d'en inscrire dans l'histoire des efforts entre- pris pour éradiquer l'arbitraire, l'injustice et la discrimination envers les femmes en utilisant l'arme de l'information. Pour faire avancer la cause de l'égalité, il faut d'abord arrêter de prendre le poul des inégalités, rendre visibles leurs causes et leurs effets, comprendre le degré de leur résistance et les implications de leur persistance.

En dépit des modifications de jure (loi contre la discrimination de gender-2002 pour la Roumanie), de facto les changements arrivent plus lentement. L'inégalité de genre reste une caractéristique majeure de la société globale et par voie de conséquence de la Roumanie postcommuniste aussi.

Dans les sociétés contemporaines marquées par la désindustrialisation, la production et la reproduction, le marché et la famille sont moins séparés ; ils deviennent des espaces où le sexe, la race, la classe se confrontent afin de donner une signification et valeur nouvelle au travail. La crise (de la production , du tra- vail, de la famille etc) entraîne des travaux temporaires , ce que des chercheurs féministes appellent du travail féminisé (moins payé, moins valorisé, etc.);c'est pourquoi on parle de féminisation de la pauvreté (accentuée par la crise).

Même si les femmes ont investi dans presque toutes les professions, la ségré- gation sexuée du travail demeure une réalité qui se traduit notamment par la persistance de l'inégalité salariale et symbolique (ce que l'on va prouver par les vingt entrevues en profondeur avec des femmes appartenant à des professions, catégories d'age et de leadership différentes).

Suffering and Aesthetic Identification in Cosmopolitan Cinema

Looking at specific film examples of cosmopolitan cinema, this paper is con- cerned with both theorizing and probing how different modalities of aesthetic identification with the suffering hero – sympathetic, cathartic and ironic – are consequen- tial for the ways in which the viewer is capable (or not) of detaching herself from the immediacy of the emotions underlying her identification (e.g. compas- sion, sympathetic tears, tragic emotion, estrangement) and rise to moral judg- ment and reflection about what is represented. It is through the fictional exercise of the imagination that audiences are invited to identify and empathize with the fate of individual characters and to consider the moral implications of their suffer- ing in their lives. If fictional characters can become 'real', personalized and tangible as subjects experiencing pain, it is also because the suffering 'other' is perceived not as a distant object of pity but as a fully-fledged subject just like 'us'. We will see that some modalities of aesthetic identification with suffering charac- ters have the potential to trigger cognitive linguistic deliberation- and, therefore, new cultural meanings of suffering - in a discursive ethical space where a range of interlocutors - audiences, filmmakers, creative personnel and critics – enter into conversation with each other about what constitutes human dignity and its violation. It is argued that cosmopolitan cinema challenges the idea that suffering is 'unrepresentable' by personalizing suffering and bringing its visual presence before us in ways that verbal representation cannot.

Changing Society, Changing Sport? Social Diversity, Cultural Citizenship and the Sporting Nation

Sport is routinely evident as a key signifier of nation around the world. But in Australia the unusually elevated place of sport in 'official' and popular national culture means that questions surrounding sport, citizenship and national fealty have an especially deep resonance. For example, sport is more prominent in the information for Australia's citizenship test, and more closely connected to its characterisation of national cultural identity, than in equivalent documenta- tion of comparable countries such as Canada and the United Kingdom. Key na- tional sports events are also protected for free television viewing by the world's most rigorous 'anti-siphoning' regime in the name of safeguarding 'events of national importance and cultural significance' from less accessible subscription television platforms. Affinity with sport, and to the nation through sport, is likely to be less secure as global population mobility alters the demographic composi- tion of Australia's citizenry. It is for this reason that its most dynamically diverse region, Greater Western Sydney (GWS), was selected as the primary research site for a current project addressing sport's relationship to cultural citizenship in Aus- tralia. GWS has an estimated resident population approaching two million, with almost a third born overseas and of non-English speaking background, approxi- mately half of whom arrived in Australia during or after 2001. With almost forty per cent of residents speaking a language other than English at home, over a half aged below thirty five and approximately a fifth in low income households, GWS is a highly appropriate context for exploring the process of 'nationing' through Australia's sporting system and its relationship to socio-cultural inequality and exclusion under conditions of advancing globalisation. The paper reports on this research-in-progress, and analyses the preliminary findings of its qualitative ex- ploration of the sport-nation-culture nexus.

"State-Formation From Below": Social Movement Of The Dam- Evictees’ and ‘Legal Transformation’ Of The State In Maharashtra (India), 1960-1976

Dam-evictees' movements in Maharashtra have a long history. Peasants in Ma- harashtra fought the first struggle against dams in early 1920s, which opposed
the Mulshi dam built by the Tatas. Significantly, this is the first known movement organized by the dam-affected persons in India and throughout the world. However, for various reasons, this movement failed. From 1960 onwards, the dam-evictees’ movements in Maharashtra have been largely fulfilled by the state. Moreover, these movements of the peasants have considerably transformed the structure of the state in Maharashtra. As a result of their mounting resistance, Maharashtra government mooted the first rehabilitation law in India, in the year 1976, which was further amended and replaced in the year 1986 and 1999. Though the movements of the dam displaced still continue to operate, in this paper I argue that, dam-evictees’ movements in Maharashtra, were largely successful in getting their ‘material’ demands fulfilled because of having a long ‘historical legacy’ of movements against hydropower projects and mainly by their strategy of—a) raising purely local ‘ecological concerns’, in strategic disjunction from global environmental issues, b) increasingly rationalizing their demands through legal ‘rights based approach’ and c) orienting their movement towards claim-making on the Maharashtra state resources, through recurring cycles of conflicts and negotiations that ultimately caused the legal transformation.

ROZANOVA, JULIA* (Yale University, julia.rozanova@yale.edu)
Many Shades of Grey: Past, Present, and Future of Age Relations in America

Population aging is considered one of the top three challenges of global development by the United Nations. By 2025 one in every seven Americans, one in five Japanese, and one in four Europeans will be over the age of 65. This presentation reflects on the key sociological question: in the context of this historically unique transition towards aging society, how does age matter to deviance and to social status? It describes how the 21st century cult of the youth is linked to the revolution in age relations circa 1776. It points out recent changes in family structure, status? It describes how the 21st century cult of the youth is linked to the revolution in age relations circa 1776. It points out recent changes in family structure, how the individual worker as a responsible, Christian, and public authorities, the mining companies that came in Katanga during the last 20 years service. Based on ethnographic research among these employees made redundant, this paper aims at reflecting upon the future of paternalism in the Congolesi Copperbelt.

Once the most important mining enterprise of Congo-Zaïre, famed for its outward paternalism, the Gécamines – the former Union minière du Haut-Katanga, nationalized in 1967 – went into a steep decline in the 1990s. To address the situation, the World Bank advocated, in the early 2000s, the sale of company assets to private investors, and the dismissal of 10,000 Gécamines employees with more than 25 years service. Based on ethnographic research among these employees made redundant, this paper aims at reflecting upon the future of paternalism in the Congolesi Copperbelt. It shows that, with the decline of Gécamines and the impoverishment of its workers in the 1990s, the models of relationship once promoted by the company's paternalistic policy (the company as a benevolent father, the workforce as a unified community, the individual worker as a responsible, Christian, pater familias, and so on) came to be more and more put into question. Nevertheless, as several examples will make clear, these models, or norms, continue to influence workers' expectations – and to be used as a reference – in their relationships with public authorities, with their wife and children, with (former) colleagues, and with non-Gécamines workers. At a more general level, the paper suggests that, far from being limited to ex-Gécamines workers, this paternalistic "moral economy" underlies the relationship that most inhabitants of the Congolesi copperbelt have with wage work and institutional employers. To avoid conflicts with workers, local communities and public authorities, the mining companies that came in Katanga during the last decade have but no choice to take such expectations into account. By doing so, they contribute to the emergence of a new form of paternalism, distinct from the one developed by Gécamines in the 20th century.
Markets in Life Itself: Transnational Surrogacy in India As Intimate Labor

Are the babies born through commercial surrogacy commodities or are they gifts? Based on interviews with seventy surrogate mothers and thirty-one egg donors who live in Bangalore, India, and twenty families who reside in various parts the U.S. and Australia and have engaged in surrogacy in Anand, Delhi, and Mumbai, I pose three interrelated questions:

1. What do surrogate mothers make of the commodification of their pregnancies? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?

2. If the newborn baby is a gift to the commissioning family residing in India or elsewhere, then what is the ongoing relationship between surrogate and her baby? Are they as gift-giver and commissioning parents as gift-receivers?

3. Conversely, if pregnancy is wage labor, then how does one make sense of the baby as commodity, a product of market pregnancy?

Beginning with Tittmuss’s seminal The Gift Relationship, where he endorses the virtues of blood donation in the U.K. versus the dements of blood distribution as a commodity in the U.S., the social circulation of bodily fluids, tissues and organs is well examined (Rabinow, 1999; Schepers-Hughes and Wacquant, 2003; Waldby and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1923; Levit-Strauss, 1969; Rubin, 1975; Bourdieu, 1977; Appadurai, 1986; Strathern, 1988), and mother as gift-giver and commissioning parents as gift-receivers?

Social Innovations for Sustainable Consumption – a Typology for Their Political Promotion and Further Development

The current political debate in Europe ascribes importance to social innovations in regard to the transformation toward a sustainable society. Social innovation refers to utterly diverse phenomenon like citizen’s communities, cooperatives, transition towns and intercultural gardens, new forms of participation as well as user- and consumer-driven innovations. In regard to consumption there is the hope that carbon-intensive and non-sustainable patterns will be transformed towards more sustainable practices. However it is often not clear how to understand the term social innovation – most definition-esteems fall short because they do not refer to the diverse nature of social processes.

Before looking at sustainable consumption one has to answer questions about the meaning of social innovations, which are the criteria for the observation and analysis of diverse innovative consumption phenomena.

These questions are currently investigated by the project “Sustainable consumption by social innovation. Concepts and practice” funded by the German Federal Ministry of Environment and the Federal Environment Agency. Hereby 50 cases of social innovations within several consumption fields are closely investigated.

This paper presents considerations on the understanding of social innovation as the base for a typology of social innovations for sustainable consumption, which will be introduced. Social innovations are understood as novel social practices which differ from former routines, constitute solutions for social problems, and entail far reaching structural changes in society. Beside these structural effects of social innovations one has to consider the dynamic of change processes to make up criteria. An essential result of the analysis is the identification of five types of social innovations (do-it-together, strategic consumption, community based consumption, do-it-yourself, new offers for consumption), which are the basis for political intended promotion strategies and strategies for further development of the change agents.

Coping with Discrimination. from Subjective Experience to Social Consequences of Discriminations

To what extent studying discrimination from the subjective experience of discriminated persons throws new light on the sociology of discrimination? Whereas most of the studies aim to measuring discriminations (usually with quantitative methods) or aim to evaluating policies implemented to reduce them, the point of view of those who are discriminated or susceptible to be discriminated is less often analyzed. This last perspective is at the core of the research this communication is based on. Our research has been led in France using 4 sociological interventions and 220 interviews with persons concerned by discriminations due to their origin, their culture, their sexuality or their sex. (Dubet F., Cousin O., Macé E. et Rui S. (2012), Pourquoi Moi ? L’expérience des discriminations, Paris, Seuil.)

Our study emphasizes the gap between the subjective experience and the objective situations people go through. The experience of discrimination is therefore determined by structural and individual factors, by institutional, economic and social discrimination and the way people cope with the discriminations, the way they avoid, resist, adapt or adapt, the way their strategies are successful or entail perverse side effects, in order to understand the effects on individuals as well as the collective consequences of discriminations. Ambivalent and uncertain, the experience of discrimination is all the less adjusted to its definition as a public problem since the links between discrimination and domination, discrimination and stigmatization, discrimination and inequalities are not obvious.

Regarding theoretical and methodological issue, we will insist on the relevance of sociological intervention (Touraine, 1978; Cousin & Rui, 2010) for the study of the discrimination’s effects at the same time on individuals and on society.

Exploring the Less-Educated and Lower-Income Migrant Young People’s Experience of Transition to Adulthood – a Qualitative Research in Shenzhen, China

In recent decades, many researchers have found that young people’s transition to adulthood is greatly prolonged in terms of finishing education, entering job market, getting married and having children. Accordingly, they suggest that contemporary young people’s transition trajectories have become radically different from those of their previous generations. Among researchers on youth transition, Jeffery Arnett even contends to regard this prolonged transition to adulthood as a separate and normative life stage – emerging adulthood – between adolescence and young adulthood. However, other researchers criticize that the prolonged transition is not a universal phenomenon for all the young people. They believe that those who are socially disadvantaged and excluded incline to enter adulthood at an earlier age. On the contrary, local researchers in China find that it is just the increasing life pressure that forces the young, especially those who lack of social resources, delaying their transition to adulthood. The contradictions among existing studies indicate that transition to adulthood does not obey a normative or fixed pattern, individual transition to adulthood is socially constructed. Individuals under different social and cultural contexts may have various transition experiences. This study seeks to explore the transitional experiences of the less-educated and lower-income migrant young people (with age from 18 to 33) in Shenzhen, a migrant city in China's southest coast as well as how their transition experiences are socially constructed. Qualitative in-depth interview is used to collect information as rich as possible from the life stories of the participants. Grounded theory is used to analyze the data and develop new understanding of transition to adulthood. Implications of the findings for social welfare services and policies targeting disadvantaged young people are discussed.

The Influence of Political Inequality in Vulnerability to Natural Hazards: An Analysis of Selected Mexican Municipalities

In this paper, we first review the existing literature on the influence of political inequality in natural hazard vulnerability, focusing on the case of Mexico. The analysis of empirical data from selected Mexican municipalities supports a strong influence of political inequality on the vulnerability. Finally, we consider how this impact could be mitigated by political decentralization and participatory processes.
The susceptibility of different territorial units to be affected by natural hazards has been usually associated with the nature of the hazard itself, together with the socio-economic conditions of the local population. However, the political conditions that underlie planning and emergency response are usually overlooked. We argue that vulnerability varies in relation to the political inequalities regarding law enforcement, effective planning, land use control, environmental knowledge and resources availability among different territories in response to hazards; and that these inequalities would significantly influence vulnerability outcomes of municipalities subject to similar hazards. This paper reviews the debates of political inequalities and their spatial effects. It also discusses the differences in vulnerability outcomes in different territorial units in Mexico, associated with such inequalities, from a qualitative comparative approach.

Participación Social Ciudadana. Reflexiones Desde El Pensamiento Comunitarista De Amitai Etzioni

La participación ciudadana, desde la aparición de las Tecnologías de la Información y la Comunicación (TIC), ha experimentado una radical transformación. Las teorías clásicas sobre participación social y creación y desarrollo de comunidades, se encuentran con el reto de adaptarse y contrastarse con los nuevos fenómenos de desarrollo tecnológico. Internet y las herramientas 2.0 tienen en común la participación colectiva mediante procesos de colaboración e intercambio con otros usuarios. El cambio de mentalidad que supone esta nueva forma de comprender y utilizar Internet desarrolla interacciones peculiares. Los individuos establecen relaciones de roles y las redes personales se convierten en lo más importante, creando comunidades antes insoportables.

Esta comunicación se centra en el estudio del pensamiento de Amitai Etzioni, uno de los principales investigadores sociales sobre la creación y desarrollo de comunidades, y pone en relación sus pensamientos clásico sobre participación y sus aportaciones recientes a la luz de las nuevas posibilidades de participación ciudadana.

Cycles of Contention Post-Apartheid: A Challenge to Current Theory

Since 2004 South Africa has been undergoing a wave of protests predominately led by the unemployed within South Africa’s impoverished townships and informal settlements. This protest wave reached a peak in 2012 where it has been estimated there was an average of three protests a day (IRIS, 2012). Furthermore, there has been a discernible rise in industrial unrest with an increasing number of wildcat strikes occurring as workers choose to take their demands outside organised trade unions and collective bargaining processes. The intensity of this movement and the hostility of the State to it was dramatically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a wider global cycle of contention. This paper uses the South African experience in order to challenge Tarrow’s theory of cycles of contention in order to advance social movement theory from a Southern perspective. It will be argued that Tarrow’s framework, and social movement theory more generally, pays insufficient attention to the specificities of capitalist development. This paper seeks to expand social movement theory and the analysis of popular protest through an examination of the specificities of capitalist neoliberal development and how this has shaped the working classes post-apartheid. The paper will demonstrate how a greater emphasis on the role of capitalism within social movement theory has much to contribute not only to the understanding of protest and social movements in South Africa but also for the analysis of the global cycles of contention.

Independent Cultural Centres As Amenities in Urban Regeneration

This paper reports results of a research project on 15 independent cultural centres around Europe. These specific sites, promoting culture and arts and related industries, have often acted as “urban pioneers” in their neighbourhoods, converting spaces considered “difficult” in size or because they are listed properties. The centres involve combination of different creative actors and action. They are professionally managed, and agree that visionary leadership is essential to succeed. They are usually organised as independent associations, but require acceptance and partnering of cities, often as owners of the properties. However, not all of them are dependent on subsidies, even in the form of land rent, but illustrate other examples how to organise such activity.

The paper discusses the role of independent cultural centres in urban regeneration. The current literature acknowledges both the supportive role of such activities in place-making and providing spaces that the market otherwise does not, but also highlights the paradox that if a development becomes commercially successful, rising rents may lead to their displacement, which eventually also lessens the character of the whole area. This study argues that instead of transitional activity in a particular property, planners should consider independent cultural centres as new kind of civic activity supporting heterogeneity and mix in changing urban areas. This use of vacant spaces should be conceptualised as amenity—non-profitable venue that has broader significance for area’s atmosphere and liveability.

*Consuming Cuteness: The Visual Code Of Youth In Kawaii (cute) Fashion Subcultures*

The kawaii (cute) fashion subcultural scene of Harajuku, Tokyo, presents a complex visual sphere in which youth produce and circulate images through the consumption and design of clothing products. This paper examines the power that the image can have in bringing together young designers and consumers. Using visual data from Harajuku and qualitative interviews with key cultural producers, it unpacks the idea that aesthetics in fashion subcultures can be used to signify wider themes of the subculture. This paper aims to revive the use of semiotics in the study of fashion subcultures, working under the Birmingham Centre for Contemporary Cultural Studies’ premise that there is resistance within fashion subcultures which is symbolic and counter hegemonic. It also integrates a discussion of cultural industries to map out how these images and their related mythologies are produced and circulated in the subculture. It combines the literature from these three fields to examine the ways in which kawaii fashion subcultures engage with residual and emergent social cultural forms, particularly pop culture. Youth in kawaii fashion subcultures claim images of childhood, and arrange them into a system of signs mediated through fashion styles as a form of symbolic resistance to hegemonic norms of Japanese adulthood. The clothing of kawaii fashion subcultures allows for self-transformation, as prints, motifs and textiles are used to signify individual identities and collective dreams centered around cuteness and passive doll-like archetypes. The streets of Harajuku become a public theatre in which participants act out these identities, utilizing a complex code of cuteness to communicate ‘authenticity’ to other subculturalists. Over the past decade, the subculture has been commercialized, and new codes are mediated through specialist magazines and shop fronts. This raises further questions around the extent to which subcultural resistance is formulated around active image making or consumption.

*Bologna Process in Russia: Common Rules or Inequality Chance?*

Russia joined the Bologna process in 2003. It has to become a full partner of the European system of education, but it has not happened. Europe joined the Bologna process through the objective processes taking place in contemporary European society (the emergence of transnational production and scientific associations, the formation of a single labor market, migration etc). For the Russian education system the accession to the Bologna process is an artificial process. From seven major provisions of the Bologna Declaration, Russia realized only one. A two-tier system of education has established: Bachelor’s and master’s programs.

The research focuses on the problems of convertibility of the Russian master’s degrees with European diplomas. The major research objective was to examine the quality of higher education and the possibility of convertibility of Russian higher education diplomas. The research methodology combines qualitative and quantitative methods (depth interviews with experts and questionnaire).

**Findings and discussion.** Transition to the new system of higher education does not guarantee the majority of domestic graduates of universities the same equal opportunities for employment that graduates of European universities have. It was selected several federal universities that were competitive in the major research objective: economics, law, information technologies. The premises of this study are conditioned on the broader political context, requires us to extend the natural system have found grounding in many empirical-based literature since the environmental discourse became global. Neo-Malthusians predict ecological destruction when there is unregulated population growth coupled with advance- ment in technology and increase in per capita affluence in a society. When industrialization in Calamba legitimized by local and national policies materialized, the Makiling Forest Reserve (MFR) became vulnerable to on-site and off-site environmental pressures. In 1990, the University of the Philippines Los Baños (UPLB) was vested exclusive jurisdiction, control, and administration over MFR and in the following years, adopted a ‘participatory’ approach to management. Chronologically following the implementation of these policies is the abandonment of agricultural claims of state-owned forest land by settlers within and near the MFR buffer zone in Barangay Puting Lupa. Results of this study show that forest land use transition occurred in MFR-Calamba characterized by first, deforestation and forest land conversion to agriculture, then to gradual forest recovery. Spatial analysis of the 1993-2002 Calamba land cover shows that forest decline increased by 18%, agricultural land use decreased by as much as 79% while built-up areas expanded by as much as 79%. Albeit forest land regenerated through time, land cover changed from forest species to agroforestry specifically in Barangay Puting Lupa. While industrialization is associated with increase in population and eventual environmental degradation, this study suggests that there are other socioeconomic elements that interact compatibly with each other to arrive at a different scenario of forest regeneration. Seemingly contradicting but synchronous commitments of policies of the university and of Calamba among other socioeconomic factors have a synergistic effect that amounts to the improved forest land use cover in Barangay Puting Lupa despite increase in population and pressures of industrialization.

*Labor and Populist Politics in Ukraine*

This paper looks at the labor movement in Ukraine by considering two types of workers’ power (as defined by Wright): structural, resulting from their position within the economic system; and associational, contingent on the ability to form collective organizations – unions, parties, workers’ councils or community organizations. Silver’s observation that the role of workers’ associational power is growing in the XXIst century and that therefore perspectives of the labor movement are conditioned on the broader political context, requires us to extend the definition of associational power also the alliances between labor and political movements. This paper discusses consequences of alliances between Ukrainian workers and various political projects since the break-up of the USSR, focusing or programs do not focus on stimulating women's critical consciousness and their capacities to articulate their interests invidually as well as collectively. It’s indicated that women’s roles as economic actors are being positioned as instrumental roles, not substantive/transformative ones. The main root of this issue refers to the weakness of local government commitment and capacity which can not be separated with the national agendas on economic development. And the agendas might be based on economic assumptions (blinkers) that tends to disadvantage women's conditions as well as positions. It’s has been reflected from several regions in Indonesia.

Referring to Chafer (1988), empowerment as structural transformation efforts – which only possible if local (also national) economy policy responsive to women's economic right. In term of relation between state and women, the other crucial issue is to enhance or to empower women's commitment as well as their capacities as a collective/interest group. This paper also raises women's strategies for organizing and enhancing their economic roles at local level.

**Key words:** Women's economic participation, local economic empowerment, institutional or structural transformation, women's collective action.

[1] Dr. Ida Ruwaida is a Lecturer at Department of Sociology, Faculty of Social and Political Sciences, University of Indonesia. She is also a Chairperson of Sociological Studies Center, University of Indonesia.
in particular on the growing support for populist demands of nationalization of key industries and natural resources, voiced in particular by a right-wing populist party “Svoboda” as well as by the Communist party. The paper questions long-term perspectives for the labor movement if populist politics take on a right-wing flavor, and a left-wing populist alternative is lacking. Futhermore, it discusses the role that theory-engaged social scientists can play in evaluating labor movements alliances with various political projects and in strengthening workers’ associational power.

RC11-199.2

RYAN, LYN* (Macquarie University, Australia, lyn.ryan@mq.edu.au)

Ageing, Ageism and Discrimination

In Western society our populations are ageing, and even developing nations are showing increases in elderly populations. This is due to declining fertility, advances in medical care and in food systems leading to greater longevity, immigration rates not keeping up with ageing, and also the Baby Boomer generation began to turn 65 in 2011. Older age is an inevitable part of life but some people use stereotypes of older people to discriminate against them due to their biological age. People hold views about ageing people which are not consistent with their views about other people and this forms the basis of prejudice, discrimination and ageism. While respect for elderly people has been a prominent part of Asian cultures which upheld Confucian principles, respect for the elderly has not been given such a prominent place in the history of Western society or its discourse. Issues around egregious abuse, such as violence and financial abuse have been commanding the attention of most social science researchers studying the maltreatment of older persons since the late 1970s. The more subtle, everyday experiences of disrespect, which arguably is a precursor to more notorious forms of abusive and violent behaviour; or respect which, arguably, can prevent such abuse from occurring, are less researched. Therefore, respect for elders is defined and respected versus respect, ageism, personhood and the quality of life of elderly people are all discussed.

Society categorises older people into socially constructed age groups. It is important to recognise that while age has a biological meaning, income, work and retirement construct groups and meanings about age that may reflect negatively on older people and, therefore, lead to experiences of disrespect amongst our older population.

The Doctor-Patient Relationship and Type 2 Diabetes: What Can We Learn from a Cross-National Comparison of Three Qualitative Datasets?

Background: Evidence suggests that higher levels of patient involvement results in more beneficial care. Patient involvement can be higher in long term conditions, such as type 2 diabetes, where self-management is important. But we need to better understand what happens in the shared decision process and which factors contribute to the inherent inequalities. In this paper, we explore models of doctor-patient relationship in three qualitative datasets from Germany, Spain and the UK. The data were originally collected to explore the experiences of patients with type 2 diabetes. Lay summaries are published at www.krankheitserforuern.de, http://www.dipex.es, www.healthtalkonline.org.

Methods: A secondary analysis of the datasets using a two strand approach. First, a thematic analysis of the individual datasets to identify models of doctor patient relationships, and examine what factors may contribute to these models. Second, a comparison of these findings to identify similarities or differences across the datasets in order to enhance our understanding of shared decision making.

Results: Early analysis suggests the importance of a trust within the doctor-patient relationship and an enduring paternalistic model in the management of diabetes. While UK patients may suggest some partnership working in the way they articulate their self-management, in practice, they do what the doctor tells them. In contrast, German participants emphasize a desire to preserve a certain level of autonomy. This was most obvious with eating and weight management, where patients reported enjoying pleasures that their GPs regarded as unhealthy. Several Spanish interviewees experienced some lack of control from their professionals and felt their treatment was routine rather than an individually tailored process.

Conclusions: While management recommendations of diabetes are largely standardized, patient experience and expectations may differ according to cultural and national peculiarities. Interestingly, a paternalistic model is not necessarily experienced as a contrast to self-management.

Postsekulyarizm of Modern Society: Russian Option

We observe a social request for religion and religious values comeback in the public space today. This can be observed by the example of protests actions in defense of traditional family in France, protests actions in defense of keeping crucifixes in Italian schools, the Christmas tree as a Christian symbol of Christmas in the Benelux countries, etc. etc.

The Russian society lost faith in the communist ideas at the turn of the 80s and 90s and later liberal ideas - which were approved during the epoch of liberal democratic reform of 90s - had become nothing for the vast majority of people. This happened due to the fact that neither one nor the other idea contained the core of cultural and spiritual traditions of Russian society.

At what point and why the 'Orthodox believer' in Russia becomes the dominant form of individualism in modern society? At the time of the Soviet Union collapse, the destruction of Soviet type societies institutional structure, during the state of anomie. At this point, the fabric of social relations becomes loose, able to sense even a small impact as triggers for deep and large-scale social change. At this point, the 'Orthodox believer' is gradually becoming a carrier of dominant Orthodox identity and ceases to be a 'stranger'.

During the 90's and early 2000's the number of carriers Orthodox identity and Orthodox believers, including churched Orthodox believers increased several times. 'Generation in the way' are those who have experienced religion and found a new identity for themselves after 1991. ‘Generation in the way’ is a notion which more or less accurately captures a new social set, which is characterized by varying degrees of perception by this Orthodox identity: from the identity of the Orthodox by self-identification to deeply churched orthodox believer.

Chinese Migrants in the Russian Labor Market Competitors or the Driving Force of Economic Development?

This presentation shows trends in labor migration from China to the Russian Federation for the period 2000-2010, including the regions and industries of employment of Chinese migrant workers. Described economic “niches” that are Chinese migrant workers in the Russian labor market. Chinese migrants adapted to the Russian labor market quite well. Mostly of them working in Chinese companies. Social and economic component of their integration can be considered particularly successful - they have jobs, relatively high level of income for labor migrants in Russia. Chinese are known as great farmers, who know perfectly well the characteristics of agro-climatic conditions, they are much more efficient, professional, and disciplined workers than Russians. The examples of ethnic Chinese business in Russia, including those identified a strong correlation between investment and labor migration from Chinese in Russia. Currently Chinese investors in Russia are represented by investments on the market state-owned companies which purposefully invest their funds in basic projects related to development of transportation system, communications, and exploration of mineral resources in Russia. The type of investments goes through official channels, legally, based on official contracts. The second type of Chinese investments includes private investments in development of business with quick pay off - trade, food service, restaurant and tourist business. In this part of investments Chinese private business is oriented at semi-legal and illegal methods of penetration in the Russian market. The presentation also discusses the features of labor migration and trade between China and Russia in the border regions of the Far East. It also describes features of the regulation of labor migration between China and Russia.
es in the number of Vietnamese in comparison with official statistic data. So in Russia according to 2002 census number of Vietnamese made 26 thousand people, however, study results suggested 100-150 thousand people. Part of Vietnamese is ‘veiled’ by integration process.

Based on the methodology developed by the authors, assessment of extent of integration of the Vietnamese migrants in host countries was given. The technique is based on allocation of integration components of Vietnamese in host countries, namely civil, economic, ecological, social and psychological, religious, cultural integration. Research was conducted in Russia, Ukraine, the Czech Republic, Hungary and Poland by 400 private institutions of higher education, business, they were offered to put points from 1 to 10 to each component.

Results showed that integration proceed differently. Vietnamese are most integrated in the Czech Republic and Hungary. According to experts, total score made 50 points out of 60 possible. State policy in the Czech Republic and Hungary was directed to the need for integration of Vietnamese in society through development of integration programs. In Hungary and the Czech Republic much of the Vietnamese citizens received citizenship in host countries, they became citizens. The success of economic integration is associated with high entrepreneurial activity, professional qualifications and access to the labor market of Vietnamese. Much less successful is integration of Vietnamese in Russia and Ukraine, civic, environmental, and socio-psychological component integration is low there. Evaluation of Russia is 40 points, Ukraine is 34 points.

Over the past few years, neither Russia nor Ukraine has developed mechanisms for integration of Vietnamese. Bureaucracy, absence of standard and legal base strongly complicated integration process.

Higher Education and the Labour Market: A Polish Perspective

The structural conditionality of normal sciences, including state ideologies and financial support, is essential for the structure of higher education. The system’s transformation in Poland, based on the neo-liberal ideology, involved the dependent development model not only to the economy but also to science, with its dramatic decrease of expenditutes. This reinforced a negative selection of the scientific cadres, who, by the inter-generation transmission of values and norms, were unable to adopt the traditional scientific ethos. The official ideology tends to transform the structure of academia in the market-oriented corporate manage-ment model. As a result, institutions of higher education are established, based on the ideology of ‘practical’ knowledge, which changed education in a commodity and the education process in a vocational training. The overproduction of formally well educated young people, hardly able to abstract thinking, resulted in a high unemployment of the youth. The government’s remedy is to apply this model of education/training to public universities, which are expected to teach for the needs of the current market, notwithstanding the fact that thinking, resulted in a high unemployment of the youth. The government’s remedy is to apply this model of education/training to public universities, which are expected to teach for the needs of the current market, notwithstanding the fact that the needs change faster than the education cycle. Instead of teaching students the ability of life-long learning in a flexible labour market, much governmental effort is made to produce formal education by bureaucratisation of universities.

Territorial Identities in Different Spatial Scales

The presentation would be built on a number of contrasts. The European iden-tity would be contrasted to the non-existent Asian identity. Ethnic identities would be contrasted to territorial identities. National minorities would be contrasted to ethnic minorities and the formalism of the differentiation would be indicated. The ‘national’ scale of nationalisms would be questioned by indicating the regional scale of some nationalisms. The strict relation between border communities and current borders would be questioned. National, ethnic, and regional univalence would be contrasted to bi-, poly-, and ambivalence. New nation creation processes in established national contexts would be discussed in terms of the strategy of the transformation of regional in national identities.

Management of Russian Organizations in Terms of Moving to Neoclassical Organization- Management Paradigm

In the article there were considered features of the classical and neoclassical organization-management paradigm. The analysis of the up-to-date Russia’s organizations management state was performed due to criteria of two management paradigms. There were revealed basic features of the management transformation model of Russian organizations from classical to neoclassical management paradigm. There was performed the analysis of functional directions of Russian organization management based on essential features of the above mentioned transformation model. Special attention is focused both on the organizational democracy development and participating methods of taking management decision in Russian organizations. The author of the article revealed main barriers and obstacles on the way of the organizational democracy development and in present day Russian organizations on the basis of managers’ and employees’ sociological polls as well as considering his own consulting practice for many years.

Global Citizenship – New Pedagogical Aim or Market Strategy?

The development of education in the globalization context poses a lot of questions, being quite a challenge for scholars. The analysis of such new trends as integration processes in education, the growth of educational migration, the involvement of international organizations and NGOs, and the education policy of national states leads to referring to the seemingly established concepts of particular features of education.

The urgency to implement educational reforms is stressed by various international organizations. One of the promulgated aims of these new educational projects is bringing up global citizens.

In recent years the concept of “global citizenship” came into a broad use in European and American educational and public discourses. However, its meaning remains blurred, and its content is interpreted very broadly. Analysis of the global education concept takes into account current sociological and political science discourses on the concepts of citizenship, nation and state. Previous understanding of citizenship as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.

The concept of education for global citizenship captures in what way this new understanding of citizenship and identity is interpreted in pedagogical discourse. Global citizenship is treated as a social engagement with the voluntary obligations undertaken, and priority is given to civil rights of the individual. It still stays unclear in what way state educational system as the key element in nation state building process should foster global identity formation.

Besides for many educational institutions and so-called international students the engagement in “global citizen” educational programs is only a pragmatic tool to improve economic chances in the global educational and job markets.

RYUO, TAKAYOSHI* (Yokosuka Nursing School, tak ryuo@gmail.com)

Against the State-Centered Model of Social Policy: The Moment of Schäffle in the Sociology of Durkheim

Emile Durkheim, one of the founders of sociology, started his academic career in an interdisciplinary struggle. He refused Spencer’s self-interest based conception of society in the Division of Labour in Society, and rejected psychological approach for social studies in the Rules of the Sociological Method. But in order to acquire the institutional independence of sociology from neighbouring intellectual fields, he had to fight in another battlefront other than against economics and psychology, that is against the state-centred model of social policy.

In order to reinterpret the sociology of Durkheim in a broader interdisciplinary context, focusing on the moment of Schäffle is a helpful clue. Albert Schäffle was a German Staatswissenschaftler, economist, forerunner of sociology, and staunch opponent of authoritarian socialism. Durkheim reviewed the main work of Schäffle, the Construction and Life of the Social Body in his earliest academic article, and endorsed Schäffle’s attack against state-directed socialism thereafter as in the Suicide and the preface to the second edition of the Division. The protest against the hypertrophic tendency of state bureaucracy is not a mere manifestation of political adherence of Durkheim, but a careful strategy to define sociology as a distinctive science in the light of historical and intellectual circumstances of the epoch.

That was the time Durkheim was contending for sociology when French government embarked on implementing modern social policies. By contrast to free market policy favoured in the 1880s, the turn of the century France welcomed state-led intervention measures originated from Imperial Germany under Bismark. The concern of Durkheim over the state-centered model of social policy and his alarm for the peril of individual liberty under the authoritarian regime is a theoretical response to the ongoing transformation of the state and society and to the state-oriented social thought at the time in France.
In the 2000s, the landscapes of leisure consumption have changed dramatically in the Western societies. Many traditional industries such as tourism, sports, and cultural activities continue to flourish. In addition, the new information and communication technologies (ICTs) have become widely adopted in everyday life. Access to ICTs is often considered as essential while at work, home, and even when spending free-time outdoors. As the alternatives for productive leisure activities have increased, we have also witnessed a trend of narrowing population disparities in the consumption patterns. Against this development, it is possible to argue that engagement in various leisure activities has become more versatile and less connected with individuals’ socio-demographic background. But does this assumption also apply to older consumers, people living outside urban and densely-populated areas, economically well-off people, single parents, and the less educated population segments? Or, is it possible to argue that the expenditure patterns of the many disadvantageous population segments have changed differently from those of the better-off segments during the past decade? The paper examines temporal changes in leisure consumption by examining Finnish household expenditure patterns between 1998 and 2012. The data are derived from nationally representative set of household budget surveys (N=17,412). Empirical analyses will concentrate on money allocation on cultural services, books and magazines, and household media and technology. In particular, structural disparities by educational level, economic background, age and life-stage, gender, and place of residence will be compared.

How Can Decision-Makers Cope with the Heterogeneity of Values in Public Innovations

In the last two decades the concept of innovation has been taken from Schumpeter’s logic of competition at the market to the public sector. In the private sphere the making of profits is essential, and added profit can be seen as added value. For the public sector this is much more complicated, and it has been a large debate about the concept of “public value” since the publication of Moore’s book “Creating Public Value” (1995). Values in the public sector can both be inputs (public ethos) or some sort of outcome (efficiency, improved quality etc.). But both for inputs and outcome there will be a heterogeneity of values. Beck Jørgensen & Bozeman (2007) are mentioning a “universe of public values”. In the invitation heterogeneity is understood as the “coexistence of different rationales”. We will argue that different set of values can be seen as different rationales. Creating new and innovative solutions in the public sector is part of the struggle for power in society. Different actors will use different parts of the “universe of values” to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about “public values”, but especially on the case-studies in our edited volume “Framing innovations in Public Sector Services” (Fuglsang, Rønning, Enquist (eds.) (Routeledge Oct.2013)

RØNNING, ROLF* (Lillehammer university college, rolf.ronning@hil.no)

Innovation in Nordic Elderly Care

Innovations has for some decades now been seen as the engine for success in the competition at the market. Now the concept of innovation has made its way into public sector and even into elderly care.

This paper is about the efforts to innovate elderly care in the Nordic countries. In many European countries there is a worry about the demographic changes in the population, which involves the declining fertility rate and numerous cohorts from the after Second World War baby boom fading out of the labor market, are a challenges both for the pension system and the economy, as well as for the caring system.

The challenges of the caring system are the focus for this chapter, especially the need for labour, or caring hands. The diagnosis is that too few people have to care for too many frail and elderly. Even if the Nordic countries do not have the most challenging rates between the generations, a caring deficit is seen as a growing and upcoming problem. In 2050 20% of the population is expected to be above 70 years, rising from 10% which is the situation today.

Most attention will be paid to the Norwegian situation. Because of the fortunate economic situation in Norway, the country has probably been able to maintain a (Nordic) model with a strong public responsibility to a larger extent than their neighbors. Attention will be given to three of the main paths to innovations of the elderly care in the Nordic countries, we have labeled them privatization, use of caring technology and extended use of voluntary work.

The paper is meant to be a “state of the art” paper, summing up the experiences so far, and reflecting on possible paths into the future.

Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today
Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today By Abdul-Mumin Sa’ad Professor of sociology (Criminology) Provost, Federal College of Education, Yola, Nigeria And Ruth Bulus Ignas Medical Sociologist, Department of Sociology and Anthropology University of Maiduguri, Maiduguri, Nigeria Abstract Health care delivery refers to the work done in providing primary care, secondary care and tertiary care, as well as public health. Health care is delivered by practitioners in medicine, chiropractic, dentistry, nursing, pharmacy, allied health, and other care providers such as medical social workers, clinical sociologists, etc. Constitutionally, health care profession in Nigeria is a concurrent responsibility of the three tiers of government. However, private providers of health play a visible role in the country's health care delivery. The federal government's role is mostly limited to coordinating the affairs of the tertiary health care (university teaching hospitals, Federal Medical Centres) while the state government manages the secondary health care (the various general hospitals) and the local government focuses on primary health care (dispensaries). In spite of this clear constitutional provision there are myriad of challenges regarding healthcare delivery in Nigeria. Of course health issues have always been issues that nations grapple with. Added to this is the fact that natural and manmade disasters are becoming frequent, catastrophic and unpredictable and these are posing great challenges to healthcare delivery. Nigeria, being an underdeveloped nation is even more vulnerable to these challenges. This paper therefore identifies and discusses those challenges and proffer solutions to them from clinical sociological perspective with a focus on the need and strategies for active collaboration of all stakeholders (especially the Clinical sociologists, healthcare professionals, the government, the organized private sectors and the society generally) to effectively surmount the challenges.

SABBAGH, CLARA* (University of Haifa, csabbagh@edu.haifa.ac.il)
The present study identifies major preferences for combinations of rights and duties (henceforth, citizenship orientations), as reflected in the political worldview of Israeli junior-high school students. Two distinct orientations were found, termed here: “liberal” and “ethno-republican.” In order to contextualize the examination of citizenship orientations in the deeply divided Israeli society, the study compares three educational sectors which represent these rifts. Findings suggest that citizenship orientations are context-bound, in the sense that they depend upon the educational sector. As expected, ethno-republican orientations were more salient among religious-Jewish students than among either secular-Israeli or Israeli Arab students. Secular-Jewish and Israeli Arab students tend more strongly to endorse the liberal orientation, a propensity that is especially manifest among Arab adolescents. This trend supports the perception that Israeli Jewish population is bifurcated.

SABBAN, RIMA* (Zayed University, rimasabban@zu.ac.ae)
The Changing UAE Family
Emirati families have been changing since the advent of oil and wealth. However, the recent socio-economic shifts in the society have affected the family on many levels. What the UAE family has endured recently in term of outside and inside pressure due to globalization is probably not comparable in many parts of the world. In no other country has the proportion of foreign nationals in a society been boosted so high in so short a time as in the UAE. As a consequence, Emiratis are not even the largest national group in their own country, and have had a hard time trying to sustain a culture among a continuously growing pool of foreigners. As communities from around the world have mushroomed around national families in both the public and private spheres, UAE households have turned global within. Although one could make comparisons with families in other Gulf States, the UAE’s pioneering economic model and speed of change have had an unprecedented impact on the globalization of families.

This paper focuses particularly on women in the family (mothers and daughters) who are considered the gatekeepers of culture and social wellbeing. It looks for trends in new challenges that women and girls are facing in the UAE, on them from different parts of the society and the state to perform to a role becoming increasingly difficult. The paper looks into such difficulties using a combination of quantitative and qualitative data gathered from National families of Zayed University students.

Mapping Filipinos’ Knowledge, Understanding, and Actions on Climate Change
A recent Climate Change Vulnerability Index identified 16 out of 170 countries as extremely vulnerable to climate change; of this set, the Philippines was ranked sixth (Maplecroft 2010). Despite advancements in technical strategies to adapt to the impact of a changing global climate, understanding the complex socio-behavioral dimensions of climate change remains a challenge.

Using the data from a survey module on climate change commissioned by the World Bank and implemented by the Social Weather Stations (First Quarter 2013 National Survey), the study aims to know: (1) What factors shape Filipinos’ awareness and knowledge on climate change? (2) In a more qualitative sense, how do they conceptualize or understand the effects of this phenomenon? (3) What factors affect citizens’ participation in efforts to address climate change? Do awareness and knowledge actually translate into tangible efforts?

Correlation analyses reveal significant relationships (moderate to strong) between awareness and knowledge on climate change and these variables: locale (higher among urban dwellers), socio-economic class (higher among upper class), and educational attainment (higher among those with greater education). Climate change resonate to average Filipinos as a public health issue. When asked to identify the effects of climate change, half of them cited “increased incidence of illnesses”—significantly greater compared to other responses such as degradation of natural resources, ozone layer depletion, and rise in sea level. Participation in efforts to mitigate climate change is higher among those in rural areas and the youth (with moderate to strong correlations). There exists very weak relationship between awareness on climate change and participation. However, there is moderate evidence to support that those with more extensive knowledge on the impact of climate change also have greater tendency to participate in actions on climate change.

SABOUR, M’HAMMED* (University of Eastern Finland, mhammed.sabour@uef.fi)
Social Inequality, Power Legitimacy, and the Future of Democracy in the MENA Countries
In spite of their relatively similar religious, cultural and linguistic foundations, the MENA (Middle East and North Africa) countries consist of a diverse set of particularities in terms of their geography, socio-economic structures, human capital, and political institutions. As far as their governments and governance are concerned, they have traditionally been authoritarian and autocratic regimes. Such governments have ruled autocratically and suppressed pluralism, limiting or totally denying fundamental societal, economic, and political...
rights. This state of affairs has created widespread social disparities and injustice, a freedom deficit, and stagnation in the area of democratic change. In other words, a policy of social inequality that has come to be taken for granted. The ruling elites have been able to hold on to power ruthlessly by means of various manoeuvres. These have ranged from violent repression and the superficial practic of democratic simulacra to corruption and "enlightened authoritarianism". Global democratic change, and the visibility it has gained through the new media, has given people, especially the rising middle classes, the impetus to give voice to their grievances. In consequence, they have started expressing their disenchantment with the political status quo, in its place, demanding democracy and social equality. This can be seen in the emergence in 2011 of social movements in numerous MENA countries, otherwise known as the "Arab Spring". This paper aims at analyzing some of the main patterns of inequality that prevail in the MENA region and also their socio-cultural and economic origins. In addition, the paper will aim at assessing how and by demanding the process of democratization may be in the context of the social and cultural complexity of the existing structures and their present legitimacy in such societies.

SABRE, CLOTHILDE* (Hokkaido University, c.sabre@hotmail.fr)

From Matsuri to Anime Convention: The Experience of Festivals and Contents Tourism in Japan

For foreign tourists, festivals are mostly associated to cultural events that present a colorful and picturesque image of a different and exotic culture. This work is then an attempt to question new forms of tourism, in order to draw a parallel between festivals and other types of gathering that attract foreign visitors. This study is lying on the idea that tourism is made significant by a specific imaginary of the visited place. The travelers choose and comprehend their destination and its culture through the picture they have before and during the trip, a picture elaborated by their experiences. When enjoying festivals in a foreign country, tourists can see a concretization of their imaginary about the culture they discover, and sometimes, participating to the event, they feel immersed in that exotic universe.

The aim of this presentation is to show that this process is also at work in the case of contents tourism, when the travelers experience media pilgrimage (i.e visiting places with significance in media narratives, Couludry 2005), guided by a fantasy built on pop culture and media references. Taking the case of Japan, this comparative study intends to show the similarity between the experiences of traditional festivals and pop culture events. In addition to data collected among French tourists in Tokyo, fieldwork will be conduct during specific events in 2014. Then, some traditional matsuri will be compared to events like the Comic market in Tokyo or the Toyako Festa in Toyako (Hokkaido). The Sapporo snow festival, that mixes playful aspects of traditional festivals and pop cultural influences, will also be investigated. So, the analysis will question the structural similarity between these tourist experiences, in order to examine to what extent contents tourism renews cultural tourism

RC14-256.3

SABRE, CLOTHILDE* (Hokkaido University, c.sabre@hotmail.fr)

Nature and (pop) Culture Tourism in Hokkaido

For more than a decade now, the worldwide diffusion of Japanese pop culture has been analyzed as a soft power phenomenon, questioning the consequences of this success on the international image of Japan. Many studies have examine whether or not Japan is really gaining positive influence thanks to contents exports, while the Japanese officials acknowledged the idea of coolness associated to the country, consequently launching the "cool Japan" campaign. In the field of tourism, many initiatives have been taken to enhance contents tourism. Foreign travelers can now find information and activities about manga, animation, video games and so on, and some areas have been renewed and rebuilt to attract these tourists, Akihabara (Tokyo) being the main example. The idea of pilgrimage has been used to characterize the trip to these "sacred places", as the Japanese national Tourism Office delivers information about what is called "seichi jinrei" or "pilgrimage to sacred places" (http://www.mto.go.jp/eng/depth/cultural/pilgrimage/index.html; http://otokumode.com/kpvisitjapan/)

In that context, Hokkaido is a specific case, considering the traditional tourist activities in the island. The place is famous for its landscape and its countryside, with tourism linked to nature and outdoor sports (hike, ski). Nevertheless, some locations are considered for other reasons, linked to pop culture. For example, the success of two movies, Love letter and If you are the one, attracted Korean and Chinese tourists in Hokkaido, with many visitors who want to discover the places where the movies were shot. Then, the aim of this presentation is to question the possible shift from nature tourism to pop culture tourism in Hokkaido, through the comparative example of Japanese, Asian and Western tourists. The notion of soft power is also going to be examined as a means to influence image and meaning of sites.

From Facebook to Parliament: Civic Participation through Social Network Organizations Between Success and Failure

Computer Mediated Communication has given access to political participation to a large number of citizens around the world mostly regardless of their ideological, social, ethnic, economic background. People living in different Countries or even who have voted for opposite parties for years may unite for a single issue purpose, for a protest, a petition, for organizing a revolts or a deeper change in government. The No-Global Movement years ago and, more recently, the Arab Spring have opened the possibilities of the Net in terms of political organization and impact. In Egypt and in Italy things have gone even further: Social Networks have become the means and the place for civic organization that later were transformed into political parties running for government. The paper will analyze possibilities and limits offered by the Web-Democracy in relation to these two recent examples.

RC26-457.2

SACCA, FLAMINIA* (Tuscia University, spacca@unitus.it)

Web Democracy and Digital Rhetoric

The relationship between communication and politics has always been a tight one, but information technologies have taken this relationship a step further: in many cases they are no longer just a mean through which political parties or movements disseminate policies, slogans and values processed off line. This process now seem have been reversed: they have become the means and the place where policies, decisions slogans and positions are discussed, elaborated and voted. They have turned into a milieu of political organization as the Tahair Square movement in Egypt and the 5star Movement in Italy have shown us, contributing to a wide spread rhetoric over the democratization power of the Internet. But while it is indisputably true that Computer Mediated Communication allows an easy access to political discussion and participation virtually to anybody, we cannot disregard that it also carries the seeds of disengagement, self-consolation and amusement which could have the counter-effect of enhancing citizens de-democratization levels. The paper will analyze both aspects of information technologies impact on political processes.

RC41-696.5

SACCO, NICOLÁS* (Universidad de Buenos Aires, nsacca@sociales.uba.ar)

Argentina’s population it’s experience irreversible changes in the age composition. These changes must involve the implementation of public policies related to the labor retirement that provide fair living to the retired population. Health systems and social security should be able to absorb a growing number of beneficiaries.

The socioeconomic conditions of life of the elderly depend not only on the mechanisms that provide social security systems, but the role that family and relationships between them. In the past, large families accounted for the greatest protection, however, demographic change will result in a huge change in family composition. Reducing the size of the family will have significant impacts in terms of living arrangements of older people and the relationships among its members.

How did change the older population over time? How are they alike and how they differ over yesterday and today? What are the socio-demographic profile of the cohort members in the coming years who will transit to older ages?

The goal of this communication is to investigate the changes observed in the last thirty years in the demographic profile of the population of 65 old years and over, based on cross-sectional analysis in four points in time, according to census data (1980 2010) and to describe the socioeconomic characteristics of the population over age 65 living in the city of Buenos Aires.

This should take into account current theoretical developments in sociology of population that formulate a new paradigm with significant analytical potential for understanding the phenomenon of aging (Macinnes & Diaz, 2008).

Keeping Elderly Care Nurses through Organizational Commitment: An Inner-Organizational View

The demographic trend influences the geriatric care sector twofold: While the demand for geriatric care increases constantly, the number of work force declines at the same time. For 2025 a shortage of about 125.000 full time nurses in Germa-
ny is estimated (Afentakis, Maior 2010). Additionally, the problem of fluctuation in the geriatric care sector causes a competition about qualified personnel among care-providing organizations.

Other sectors already use the idea of organizational commitment to keep their employees. The basic concept of commitment (Allen, Meyer 1990) distinguishes three components: affective, continuance and normative commitment. These components are not mutually exclusive but rather coexist. So far no specific study has researched the concept of commitment considering the specifics of geriatric care.

This paper is based on preliminary results from a qualitative research project looking at this topic from an inner-organizational perspective. As geriatric care in Germany is provided by non-profit organizations as well as for-profit organizations both types will be looked at.

Results from interviews with elderly-home managers give an overview of problems about keeping qualified employees. The range of instruments, which are already used by organizations to strengthen organizational commitment and problems in everyday work, will be illustrated. In addition determining factors, which restrict human resource management in the geriatric sector, are identified. Besides general factors also organization-linked factors are included.

Furthermore, results from problem-centered interviews with elderly-care nurses provide reasons and conditions for why they work for their current organization. These results will be set into context with the Allen/Meyers organizational commitment model to specify the three commitment components in the context of geriatric care.

Finally a guideline based on the research results is presented. It will help organizations in the geriatric care sector to strengthen the organizational commitment.

SACKMANN, REINHOLD* (University Halle-Wittenberg, reinhold.sackmann@soziologie.uni-halle.de)

Education Inequality Among Shrinking Cities and Regions in East Germany

When birth rates drop the education system is the first social field to be confronted with new challenges. Due to compulsory schooling the size of birth cohorts affects the general school system quasi-automatically with dwindling enrolments. Newspapers in shrinking regions announce regularly school closings, a topic which is highly controversial both among the decision makers in charge and the affected communities. Pupils do not only have to cover larger distances to school but also the affected places fear to lose their attractiveness as a business and housing location. As the number of shrinking cities and rural areas (especially in Europe and East Asia) increases, it becomes crucial to investigate which consequences declining cohort sizes have for the school system. Are declining birth rates increasing inter-regional education inequality?

The basic assumption of the proposed paper presentation is that some cities and rural areas are more resilient than others when their schooling infrastructure has to cope with declining birth rates. Cities and rural areas have different economic bases. This is not only true when cities and rural areas are compared with each other but also within these broad spatial categories. From this point of view it can be suspected that school infrastructures in more affluent regions will be more resilient to declining birth rates than those in economically poorer regions. However, as schools are part of public infrastructure in many countries, this theoretically plausible relationship might also be modified by political decisions.

The analysis is based on school level data from East German regions for the 1990 and 2000 years. This regional focus is especially interesting for East Germany. Finally a guideline based on the research results is presented. It will help organizations in the geriatric care sector to strengthen the organizational commitment.

SAEIDNIA, SAHAR* (École Hautes Études Sciences Sociales, s.saeidnia@gmail.com)
SAIDI SHAROUZ, MINA* (Université Paris Ouest-Nanterre La défense/ Mosaiques-LAVUE, France, minasaidi@yahoo.com)

Since 2006 Tehran municipality has started a pilot environmental and urban development project in Beryanak, an old southern and popular neighbourhood particularly exposed to seismic dangers. This new urban experiment, part of a wider environmental-seismic prevention project, aimed at implementing a participatory urban renewal based on a dialogue with inhabitants, the neighbourhood council, local associations and with a scientific mediation of a research unit of anthropologists and town planners.

This project involving professional and social dialogue was innovative in Tehran, where a centralized and technical approach was traditionally favoured. More broadly, it reflects the participatory shift in urban policies illustrated by the decentralization law of 1997 and the creation of elected neighbourhood councils in Tehran in the 2000’s.

This paper will examine this complex dialogue and the way neighbourhood councils have progressively positioned themselves as key actors of urban development in Tehran. Indeed these collaborative and participatory organizations designed to integrate ordinary citizens to the definition of their city’s public policies, have encountered many difficulties to fit in the local political space. Thus, this paper will focus on the different conditions and modalities of mediation and cooperation in the Beryanak project and how they evolved through time. We will both study the structure of the dialogue, mainly the habitus, backgrounds and representations of the actors (town planners, neighbourhood councils, municipality, etc.), and the tensions, conflicts or the asymmetry between them in terms of positions, knowledge, power and financial resources.

This paper is mainly based on a long-term field study conducted in Beryanak (Tehran) since 2006 (participant observations of deliberative experiences, project’s meetings observations and semi-structured interviews with City advisors, neighbourhood councillors, citizens, researchers, state representatives, religious field actors, etc.).

The Impact of Sentencing Decisions about Similar Cases and Others’ Opinion on Sentencing Decision

In 2009, Lay judge system started in Japan. Under this system, lay judges and professional judges determine guilty of criminals and sentences to the convicted criminals. After the determination of introduction of this system, some scholar have explored how that decision making is done by psychological experiments –mock trial study. However, the research which employed this method focuses on private lay judges’ decision, not outcomes after deliberation. It is due to the difficulty of conducting mock trial study with deliberation.

Of course, the results of this research are useful when thinking about modification of trial procedure. However, the determination of sentences to the convicted criminals is done privately, but is done through deliberation by lay judges and professional judges. In this paper, the impact of information which is given to lay judges is examined. In trials and sentencing deliberation, lay judges look graphs about past similar cases. This is basically shown in the form of graph of distribution, and it has powerful effect on lay judges’ sentencing decision. In a psychological experiment, the impact of that graph and participants’ opinion about how useful that graph is and how respectfully we should treat that graph are explored. In addition, there might be conflicting opinion with regard to sentencing outcomes by other lay judges. In the same experiment, reactions to those different opinions are also examined. This psychological experiment did not include sentencing deliberation itself, but due to that experiment, some important aspects about sentencing deliberation can be explored.

In this paper, the results of the psychological experiment are shown. Then, some practical implication about trial procedure is discussed based on the results. Especially, to incorporate general public opinion into judicial system is one of the goals of Lay Judge System in Japan. Therefore, the results are examined from this perspective.

The Demographic Transition and Subsequent Transitions: The Case of the United States

The United States has experienced major demographic shifts throughout its history. Like many other developed countries around the world, the traditional demographic transition associated with declining mortality and declining fertility has spawned subsequent demographic transitions. These transformations have included the urban transition, the marriage transition, the household transition, the aging transition, and the race/ethnic transition. Of these transitions, the two most prominent at the beginning of the 21st century are the latter two—the aging transition and the race/ethnic transition. In particular, the country is in the process of aging rapidly as the large cohort of baby-boomers start reaching age 65 between 2011 and 2029. In addition, as the white population begins to decline due to low fertility and major aging, the Latino population due to its youthfulness will dominate the nation’s population growth. Indeed, population projections suggest that the Latino population will more than double from 50.5 million in 2010 to 111.7 million in 2050 compared to a 5 percent decline in the white population from 196.8 million to 186.3 million during this period. These major demographic transitions will have major impacts on demographic, social, and economic trends in the coming decades and in many ways is likely to lead to varying experiences between the United States and those of other developed countries. The implications of these trends in the future of the United States will be discussed.

The End(s) of Diversity: the Struggle Between Nationalism and the Hyperdiverse City

In the framework of the FP7-project Diversities, we investigate how urban policymakers deal with the increasing hyperdiversity in European cities (Tasan-Kok, van Kempen, Raco & Bolt, 2013). In reaction to immigration and the intense diversity of its population on the other hand. While extreme right-wing Flemish nationalism has long been relegated to the opposition, a moderate Flemish nationalist party recently came to power in Antwerp. Based on a critical discourse analysis of policy documents and interviews with policymakers, we compare past and present integration policies regarding immigrants in Antwerp. This comparison illustrates how urban integration policies have shifted away from multiculturalism to assimilationist policies. Serving nation-building ideals rather than the pragmatic inclusion of immigrants in the city, the nationalism assimilation policies seem to be ill-equipped to deal with the increasing hyperdiversity in the contemporary Western-European city.

SAFONOVA, MARIA* (National Research University, safonovam@yandex.ru)

Context specificity of stratifying factors is often alleged, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu’s ideas on cultural consumption and leisure practices were fortunate in this respect. Due to their centrality for the late XX century sociology of culture and stratification, and general finding that they have specific French flavour, their applicability has been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low leisure activities find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu’s concept to the Russian context. As Bourdieu’s prevalent aspect of this notion, which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste. Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu’s work, but in largely the same vein, produce results better fitting with Russian context. As Bourdieu’s prevalent aspect of this notion, which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This paper tests the world-society theory by applying it to data on higher education students’ migrations between countries. The expectation derived from WS theory is that (a) the migration flows will demonstrate rapidly diminishing or already minimal levels of clustering (b) that particularistic cultural-institutional variables (e.g. common language, similar institutional structures caused by belonging to common political units) will have minimal or diminishing significance in predicting size of student flows. Volume of international student migration between pairs of countries (UNESCO statistics) in 1998-2012 is used to reconstruct the flows system. Network measures were calculated for each of the years to observe the dynamics of student migration system. For evaluating significance of cultural-institutional variables, negative binomial regression with historical experience of belonging to common political units was run. This paper presents the results of the study and its implications. It also discusses the usefulness of world-society theory.
support to the world-society approach; cultural-institutional divisions retain and, eventually, even increase their influence.

**Becoming Cowardly: Automatic Rifles and the Change of Bodily Experiences in East African Battlefield**

The Daasanach in the border regions of Ethiopia, Kenya, and the South Sudan have fought with neighboring pastoral groups, viewed as “enemies”, for more than a half-century. The Daasanach claim that their primary motive for going to war is the demeansification of masculinity, allowing men to be recognized as “brave” by community members. Various cultural mechanisms praise the “brave man” who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the youth are drawn to the destructive power of the automatic rifle, and their behavior is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to “renounce war”. Two main types of experiences contributed to such decisions. First was the bodily (including “physical” and “mental”) pain of war, such as being grazed by a bullet or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanach during the course of a war. In wartime, the unity of “we Daasanetch” could break down under the violence. Many persons who “renounce wars” said, “I became cowardly” as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.

**Empirical Measurement of Integration & Cohesion**

The empirical measurement of the integration and cohesion impacts of migration throw up key conceptual, practical and sociological challenges. The paper features the findings of a study of such impacts in the UK commissioned to develop evidence-based public policy. Integration and social cohesion are elusive concepts that are defined in different ways. There are impacts on national identity. Measures here refer to perceptions of feeling or belonging to a national society. In the British case, the trend over time is of a move from an ancestral understanding of identity, couched in ethno-cultural fixtures, to one based more on civic values and responsibilities. Secondly, migration impacts on integration, defined as group outcomes set against the societal average. Here migration’s impact assumes a great deal of importance—as migration and policies that modulate migration have impacts on trajectories. Notwithstanding that the choice of measure is critical, it is clear that different immigrant groups perform very differently. Finally, migration’s impact, namely how migration affects neighborhoods, and is defined by people’s perceptions of how people get along with each other in their local area. The paper reports UK empirical measures of this in two ways, first by perceived positive or negative changes in neighborhood and in respect and interaction between social groups; and second by levels of trust in local institutions (such as the police). The findings suggest that new migration does not notably affect cohesion but pre-existing diversity and high levels of poverty are predictors of lower social cohesion. There are important insights for social researchers examining issues around the size of migrant communities and for policymakers in respect of managing the pace of change in neighbourhoods.

**Aimless or Flexible? the Consequences of Uncertainty in Youth Career Plans**

The aspirations of young people have been extensively studied, and were key variables in early status attainment research in the late 1960s. The link between youth ambitions and eventual educational and occupational outcomes has never been doubted, although the ways in which the variables are related has been debated. Throughout this 50-plus years of research, it has always been thought that all young people had ambitions, but that how much, and for what attainments, needed to be explained. Only recently have researchers begun to pay more attention to the significance of youth’s uncertainty about what they want to do later in life. Some researchers have referred to this as aimlessness or role exploration. Yet this uncertainty can be also viewed as flexibility which is typical or even beneficial in a world in which long-career jobs are a thing of the past. In this study, we investigate the consequences of uncertainty shown in youth educational and occupational ambitions. We conduct our study from a longitudinal perspective, and use the 2003 Cohort data of the national Longitudinal Study of Australian Youth (LSAY) which involved over 10,000 students. Following this cohort of youth between ages 15 and 24 we will examine the consequences of uncertainty in educational and occupational ambitions focusing specifically on differences between those with and without aspirations and the possible various reasons behind them. We also discuss the implications of our findings for theories of youth social/psychological development, career development, and occupational attainment.

**5 Pm-10 Pm: Interrogating Domestic Inequality**

William J. Goode proposed rightly that world revolution toward industrialization and urbanization has led to the change in family pattern from extended towards conjugal. Talcott Parsons emphasized that in the absence of extended kinship ties, nuclear family has become important in the respect that it meets two major societal needs: socialization of children and satisfaction of emotional needs of family members namely husband, wife and dependent children. Modern nuclear families and their members i.e. husband and wife are not handicapped by multitude of obligations often conflicting to extended relatives and can take full advantage of occupational opportunities. Demands of modern industrial life and more recently globalization have brought about myriad of changes in the way in which traditional gendered roles and division of labour was constructed. Women today are empowered, independent, working in the public space along with the man. But what we need to interrogate at this juncture is how far the division of labour and responsibilities between spouses inside family space become degen- erated? Do we have a situation of role-reversal for both the genders or do we have a situation of role addition/burden for the female gender. Contemporary educat- ed, urban woman is a career woman working in the office from 10 am to 5 pm like her male counterpart, but after coming back home she has to play the traditional, ascribed role of the mother, wife, care-giver, nurturer and home organizer. Insipite of the women working and earning, there is internal stratification of family life, in which men are in a more advantageous position. Husband-wife relationship can be identified as power relations, in which men dominate over women. Ideological legitimations of gender inequality are more often than not internalized by women themselves. My paper, on the basis of primary data would examine this gendered inegalitarian domestic space in Kolkata.

**Changing Food Consumption Practices Among the Emerging Middle Classes in Metro Manila**

This paper will present preliminary research results from an ongoing research project that considers the dynamics of food consumption among the middle class- es in Bangalore and Metro Manila, including consumption patterns, practices and policies. Asia is often seen as the center of gravity for the “new consumer” phe- nomenon, where a rise in affluence can translate to consumers who enjoy better diets, private transport, throwaway products, and fashionable versus functional clothing (Myers and Kent 2004). The focus of this paper is on Metro Manila and the emerging middle classes, who may not necessarily be experiencing ‘better’ diets, but where there does seem to be a trend towards ‘organic’ and ‘local’ food consumption being more appealing and trendy. This paper wishes to highlight the emergence of organic and/or local food and composting as entry topics for environmental concern, as well as the influence of globalization on environmental initiatives.

One main finding is that changes in food consumption practices are not only related to a rise in affluence, but to changes in other practices, such as changing the location of your home, joining a new workplace, or the employment of a do- mestic worker. Specifically, a change towards organic food consumption seems to be motivated by a different set of reasons, not directly related to environmental concerns, but certain people interviewed as part of this research project and who have chosen this kind of diet claim to do so because of health reasons, proximity to certain markets, as well as the influence of travels abroad. Looking upstream at organic farming and further downstream at composting, people engaged in these new practices had all been ‘elsewhere’ and brought new ways of doing back with them, upon returning to the Philippines. The significance of demonstration projects towards more ‘sustainable’ practices will be discussed.

**Keeping Cool: Air Conditioning Consumption in the Philippines**

Southeast Asia is growing in every possible way. Addressing the electricity needs of the region’s urban households is particularly relevant where cooling is concerned. This paper is about how people go about keeping cool in Metro Ma- nila, the Philippines, focused on air-conditioning in the home. It is part of a grow-
Voluntary Risk Taking and Individual Emancipation

Background: In France, the important proportion of teenagers who develop a repeated consumption of cannabis, tobacco or alcohol consumption worries the security and public health authorities. The consumption practices among young people are not only recognized by public and scientific discourse as a risk behavior. Many scientific researches try to explain why they develop a health, social and penal risk behaviors. However, very little one has analyzed the way that experience of consumption is lived by youth. How do teenagers perceive their consumption behavior, what meanings that they attach to their behavior?

Methods: In order to apprehend the subjective experience of drugs consumption, we have led a qualitative investigation. We carried out 42 biographic interviews with twenty-one girls and twenty-one boys between seventeen and twenty years old. They live in Ille-de-France. These interviews have permitted us to apprehend subgroups about their consumption experience and analyze the dynamic by which the have developed the substances use.

Results: The public health categorization on consumption by youth does not tally with what happen in reality. The perception of the teenagers on their consumption moves away from the epidemiologic categorization. The drugs use means to the participants festivities or conviviality. Moreover, teenagers, who are currently looking for an autonomous identity, develop consumption, not to oppose to their parents or social and penal norms, limits. We observe that if the youth people develop the consumption of cannabis, alcohol and tobacco it is especially to build a personal and individual identity: it is in a context of individual emancipation (Kaufmann, 2004) that we consider voluntary risk taking is part of individualization process.

Conclusion: There is a contrast between the collective and scientific perception and perception of teenagers on drugs consumption. Voluntary risk taking is a subjective and positive experience which responds to his quest for identity.

Civil Society and Development Perspectives

Voluntary action is an age old phenomenon in the Indian social landscape. In the past, say before colonial era it was embedded with cultural view, traditional values, social ethos which commonly atomized as humanistic, idealistic commonly act as bridging the gap of unjust social system. But in recent years, especially with the implementation of liberalisation, globalisation and privatisation, the formal Voluntary Organisation (VO) is emerging as key players in the plan development process initiated by the government. Currently, they have acquired as ‘third sector’ for innovative approach, flexible structure, ability to reach the unrequited, dedicative, committed; capacity to mobilise the local initiatives. In light of such scenario, a study was conducted to comprehend voluntary organisation’s application of own ideology, autonomy and accountability in implementation of various development programs under domain of child development, women empowerment and natural resource management supported by national and international aid agencies in the backward Marathwada region of Maharashtra State, India. The overall findings states that the development programmes are not demand driven rather supply driven through voluntary organisation which mostly exuded own independent vision, values, autonomy in planning and implementation; commonly adhere to financier’s agenda, policy prescription and governance. Similarly, the experience, ideas, views, knowledge, of target groups and specific needs of the region is hardly considered while operating the programs. Such one side approach, in fact, lead to over look inherent raising inequality, regional disparity, abject poverty, rampant casteism, growing exploitation, gender inequality, etc of the region. The VO as a ‘catalytic’ agency is largely lost in addressing these vital social issues and follows sectoral approach which do not encompass the entire fabric of human development system within which they live and survive, thus, fall short of bringing justice and ending unjust social systems.

Moroccan Emigrants, Ethnic Minorities and Development in Morocco: From Marginalization to Driving Force of Social Change

This paper explores the relation between emigration and empowerment of Moroccan indigenous groups from the regions of Sous and Rif. It is based on semi-structured interviews conducted between September 2012 and January 2013 with six migrant community leaders engaged in transnational activities between France and Morocco, participant observation within a French-Moroccan NGO, as well as semi-structured interviews with three government officials and three migration scholars in Morocco. Regions inhabited by indigenous minorities, the Amazigh, in the North (Rif) and in the South (Sous) of Morocco, were essential sources of migration in the 1960s and 1970s. These regions were particularly suspected of political unrest and large-scale emigration offered a safety valve as men left the country in significant numbers and began to send remittances back home (Lacroix, 2005). A few decades later, the engagement of diaspora-led NGOs started to play a role in the reconfiguration of power relationships in the Moroccan political and institutional landscape. As many Moroccan emigrants came from the most economically disadvantaged and politically marginalized regions, their engagement in development initiatives has called into question existing policies and role of the state. This paper makes the point that Moroccan communities abroad have undergone a process of political empowerment, from the marginalisation that characterized indigenous minorities in Morocco to the activism of NGOs in the diaspora. Without necessarily building upon ‘ethnicity’, but simply by supporting their regions of origin, these emigrants brought about social and economic change to their communities and regions. It is therefore argued that diaspora activism needs to be taken into account in the analysis of democratisation processes in Morocco. Research findings are presented in the broader framework of migration and transnationalism studies, and more specifically draw on earlier contributions on the Moroccan diaspora (Belguendouz, 2006; Iskander, 2010; de Haas, 2006; Daoud, 1997, 2011; Khachani, 2008).
Development Induced Protests in Contemporary India: Response from the State and Civil Society

The issue of forced human mobility has been receiving much attention from the government, policy makers, civil society organizations, activists and academia in contemporary India. Social scientists interpret forced human mobility as involuntary, mass, and internal displacement. The desire to take control over a certain territory and its resources becomes a cause of conflict which forces its residents to leave their current homes. The most visible are displacements associated with conflict over resources or antigens based on ethnic background. In the case of development-induced displacement or conservation-induced displacement, territory becomes an arena of specific conflicts between the interests of the public or private sector and the needs of people displaced or affected by particular development decisions. Development-caused displacement is often associated with conflict over resources which have led to landlessness and consequent problems.

The paper attempts to analyze the contemporary Indian society and development-induced displacement from a class-gender perspective. The lower one is on that ladder, the greater the negative impact of changes introduced in their lives without their consent. The marginalised communities especially Dalits and tribals feel it more than the others do and women among them are the worst affected. They are deprived of the resources that were basic to their survival and are denied access to education, health services and nutrition. It forces them to deny their children right to childhood and to a decent adulthood. Women are deprived of the dignity they had. Development cannot be real till such failures are remedied and its benefits reach those who pay its price.

Spousal Violence Among Rural Women: A Sociological Study in North-East India

Spousal violence is a grave challenge to a happy marital life. When proclivity of violence takes place in dyad relationship, it crushes the bond of family. Therefore, spousal violence has been considered as one of the most serious social problems throughout the world. Hence, this issue has a sociological significance. The theoretical arguments regarding spousal violence can be classified into different categories. But in this study specific focus has been laid upon wife-battering only. This paper seeks to know the nature of violence and to find out the causes and consequences of spousal violence in rural areas of North-East India. Apart from these two objectives, awareness and knowledge of the victims towards legislations have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.

Leisure in Spiritualism: Alien to Mole-Folk

The present paper intends to make a comparison between the male and female members of the Marwari community in terms of their participation in socio-religious gatherings. Marwaris are known to have two religious sects: the first comprises idol-worshippers, like the Agawals, Maheshwaris and Oswals, and the second, the non-idol-worshippers, like the Jains. Active involvement in religious gatherings is a commonplace characteristic of the Jains and this particular custom is seen improving social relations both within and outside the community.

The role of Marwari Jain women is noteworthy in this context. For most of the time they are found tied to their apron with little or no association outside the threshold. Obstenseness of husbands also adds to their misery. In such circumstances, religious organizations, mostly named ‘GOSTIS’ prove beneficial in venting their shriveled up emotions to other female peers and building ties with them. These women, irrespective of any predisposition, regularly gather in such meets, where through prayers and incantations (precisely, chanting of ‘Samayak’) some remarkably pleasant time is spent. Often, such assemblages are followed by refreshments at a member’s place, where children of the member families also participate. Inter-generational ties are thus strengthened with such initiatives taken by the members. These women, irrespective of any predisposition, regularly gather in such meets, where through prayers and incantations (precisely, chanting of ‘Samayak’) some remarkably pleasant time is spent. Often, such assemblages are followed by refreshments at a member’s place, where children of the member families also participate. Inter-generational ties are thus strengthened with such initiatives taken by the members.

Men, however, remain aloof from such settings and only partake when their ‘Gurjii’ visits at any juncture. Marwari women thus, enjoy an upper hand in all aspects, religious organizations, mostly named ‘GOSTIS’ prove beneficial in venting their shriveled up emotions to other female peers and building ties with them. These women, irrespective of any predisposition, regularly gather in such meets, where through prayers and incantations (precisely, chanting of ‘Samayak’) some remarkably pleasant time is spent. Often, such assemblages are followed by refreshments at a member’s place, where children of the member families also participate. Inter-generational ties are thus strengthened with such initiatives taken by the members.

Two Visions of Cosmopolitics

This paper explores how Ulrich Beck’s world risk society theory (WRST) and Bruno Latour’s actor-network theory (ANT) can be combined to advance theory of cosmopolitics. On the one hand, WRST is good at illuminating how relevant political actors interact with each other to deal with global risks while negotiating the two logics of politics, cosmopolitanism and nationalism. On the other hand, ANT is good at showing how scientists participate in the construction of global risks and helps to elaborate how science and politics are intertwined in cosmopolitics. By combining the strengths of WRST and ANT, it becomes possible to examine simultaneously the tension between the two logics of politics and the co-constitution of science and politics, both of which, I argue, are crucial for theorization of cosmopolitics. The proposed synthesis of WRST and ANT also force sociologists to critically reflect on their role in cosmopolitics and envision a new form of critical theory.

Nation Consciousness and “Multiracialism” of the Singaporeans: Focusing on the Concept of “Racial Difference” and Their Interactions

Singapore is well-known as a ‘multi-racial’ society, but then, how they form their identity as Singaporean? Considering this problem, ‘multiracialism’ becomes an important concept in making ‘Singaporeans’. However, its purpose is to make ‘racial differences’ obvious and emphasized. Therefore, how do people create Singaporean consciousness in these kind of society?

The aim of this research is to study this problem by using free talking interview and observation data carried out by the speaker. We can say that the government of Singapore reinforces the ‘races’ in order to make differences among ‘races’ highly visible by emphasizing the differences among the ‘races’. In Singapore, differences among ‘races’ are visible even though people from different ‘races’ interact with each other daily. Moreover, a sense of community or even of being a Singaporean begins to grow and maintains; at the same time, differences among ‘races’ are maintained.

SAJRA, SRINIVAS* (BITS PILANI Hyderabad Campus, srinivassajja@hyderabad.bits-pilani.ac.in)

Rainfall Variability, Coping Strategies and Livelihoods: Case Study on from Godavari Basin, India

Natural resource-dependent rural households are likely to ensure a disproportionate burden of the adverse impacts of climate change -- droughts, famines, floods, variability in rainfall, storms, coastal inundation, ecosystem degradation, heat waves, fires, epidemics, and even conflicts. In some parts of the world, these effects may already be in play with potentially disastrous consequences for the poor. Reliance on subsistence agriculture means the impact of stresses and shocks (such as droughts or floods) are felt keenly by rural poor people, who depend directly on food system outcomes for their survival, with profound implications for the security of their livelihoods and welfare. Variability in rainfall had been plaguing the farmers of Andhra Pradesh during the recent past resulting in crop failure and indebtedness. It would be important to find out the coping mechanisms that are being developed by the farmers to deal with variability in rainfall and the support being provided by the government. In some parts of the state, farmers are opting for cultivation of commercial crops instead of food crops as they are finding better returns from these new types of crops which could lead to issues like food security and loss of livelihood for certain communities.

This paper focuses on identifying livelihood adaptation strategies of cultivators in Nizamsagar project, where farmers developed new water sharing mechanisms and brought about changes in farm practices to deal with rainfall variability.

Social Inclusion of Disabled People and Two Models of Risk

In his article “From Dangerousness to Risk”[5], Robert Castel described the contemporary society as a “two-speed society”. It is a society which is divided between hyper-competitive and marginal sectors, and assigns people to either of the two according to their abilities. Castel illustrates this strategy with sheltered employment of disabled people.

Unlike eugenics, according to Castel, confinement and sterilisation is used no more in the “two-speed society”. In addition, social care becomes unnecessary by assigning disabled people to less competitive activities. Thus, Castel argues that the “two-speed society” enables risk prevention which can dispense with both repression and assistance.

Risk in Castel’s argument refers to a combination of factors and is detached from personalism. Once an individual comes to have certain risk factors, however, s/he receives a special treatment like sheltered employment. In this sense, risk here effectively makes specific people the “Other”.

On the other hand, risk in Ulrich Beck’s argument[6] is universal, in that people all over the world more or less share the same risk. For instance, he points out that people who are able-bodied at present can be disabled at any time. Such common risk, once recognised, can engender solidarity.

In the context of disability, interpreting disability as a universal risk is quite popular, though such simplistic understanding of disability as Castel’s certainly exists. This presentation first locates some researches and programs concerning social inclusion of disabled people in reference to these two different approaches to risk and disability. Then the presentation goes on to examine the different consequences of these approaches.

What Drives Growth of Jobs and the Arts? a Chicken and Egg Analysis

In the classical economic view, jobs attract workers to a city. The new workers patronize amenities, such as restaurants, shops, and entertainment, which in turn expand. Thus, in this view, jobs are the main factor for city growth. However, in our study, we add the hypothesis that the arts and related amenities also may attract people to a city. Arts and amenities may serve to attract workers, shifting where they choose to live. This in turn increases the growth of non-arts related industries in the region. Thus, do cities grow primarily due to the jobs created by non-arts industries, or also due to the presence of arts amenities and entertainment? This is the chicken and egg question.

We use zipcode data from the American census to analyze the relationship between the growth of the arts as related to other industries. We use cross-lagged regressions on fifteen years of data in more than 30,000 zip codes in the US. The analysis crosses data from different years and time spans, using the number of arts jobs as a reference to the growth of arts related-industries. Preliminary results show that arts and non-art industries take turns in influencing primarily the growth of cities, thus, providing evidence that both arts and other industries are relevant for the growth of cities. However, analyses are still being done to obtain more subtle results.

Still Facing High Barriers? the Factors Affecting Birth Experience Recognition of Female Workers in Japan

Even though Japanese government implemented a lot of countermeasures, declining birth rate is still a serious problem in Japan. Previous research found that husband's socioeconomic status and housework support have strong impact on fertility behavior of females both with and without work. Over the last two decades, Japanese female workers have been facing a difficult trade-off between career continuity and the first child birth. This study focuses on female workers in Japan and examines empirically the factors affecting the recognition of birth experience.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their daily life and their perception of them. We analyze the mediating effect of domain identification, influence and across-the-border communication. Our findings add value to previous researches and give us a better understanding of how Japanese companies can take specific measures to improve low fertility.

One of the features of ICT use is greater alleviation of time and location restraints in communications. Although positive effects of ICT for improving work-family life have been reported, much of the ICT literature stresses negative effects on work-family life through increased extra work. Sakamoto and Spinks (2011) found that a higher degree of using ICT tools directly related to higher work-family conflict of Japanese workers. This study explores the effective mediating factors that can reduce the negative impact of ICT use, applying work-family border theory to measure the concepts and propose hypotheses. Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their daily life and their perception of them. Our findings add value to previous researches and give us a better understanding of how Japanese companies can take specific measures to improve low fertility.
Broken Promises. Temporary Labour Migrants’ Experiences of Working Conditions and Social Security in Finland

West European countries, including Finland have started to recruit more labour migrants to low-income sectors in hope of a partial solution to the consequence of rapidly aging working population. This paper demonstrates how highly skilled labour migrants from non-EU member countries face social disqualification in their efforts to become part of the Finnish labour market. Particularly, African and South-Asian male workers find mainly cleaning or dish-washer jobs despite their academic background. Our study explored the temporary labour migrants’ experiences of acquiring opportunities to working rights and social security. The results show that the majority of the interviewees had been reluctant to look for information either due to the fact that they were working only temporarily in Finland or due to their week bargaining positions. The information of recruitment, working rights, the Finnish taxation system, and of the Finnish social security rarely reaches the labour migrants. These features can partly be explained by labour and migration policies, and by the natives’ strong creation of ‘otherness’ between the native Finns and the non-white foreigners. In the analysis an intersection of gender, ethnicity and class has been applied to describe the unequal and sometimes precarious position of the labour migrants. The research material consists of documents, memos based on ethnographic observations and of seventy-eight semi-structured interviews, of which forty-nine were conducted among cleaners, bus drivers, and seasonal agricultural workers.

Re-Creating Mutual Belonging: Filipino Labour Migrants’ Local and Transnational Practices Between Finland and the Philippines

This paper demonstrates the unequal embeddedness of transnational Filipino labour migrants in the Finnish and Filipino society. My study of Filipino labour migrants’ working and living conditions in Finland explored the migrants’ adaptation strategies in their efforts to become integrated in the Finnish society and in staying in touch with the ones left behind. The analysis showed how the integration of Filipino labour migrants to their new host society is influenced by their adaptation strategies, such as of the migrants’ local and transnational practices and contacts. The active participation in sociocultural and religious practices helps the Filipinos to find their way of being in Finland without losing their contacts to the Philippines. The migrants’ adaptive strategies strengthens the Filipinos ethnic identity and in turn their ethnic belonging to an ethnic minority community in Finland as well as to a transnational community. These two communities should not be perceived as two opposites but as dual sites of mutual belonging consisting of a hybridity of transnational and ethnic collective identities. At the same time, the migrants’ opportunities to become familiar with the Finnish society and to learn the Finnish language have been vague. There is a risk of segregation from the Finnish society if the Filipinos do not become familiar with the Finnish society and language. The research material consisted of open-ended interviews conducted among twenty Filipino cooks, nurses and cleaners and of memos based on ethnographic observations.

My mysteries of the discourses that encourage cooperation. Ver.2

Mysteries of the discourses that encourage cooperation. Ver.2 - Another important constant number on the human societies added to “Dunbar's Number”:

Yoshio Sakurai
Kagoshima University
yoshiosakurai@gmail.com

[Introduction] We found some phenomena after 3.11 which had almost not been expected earlier. I would like to have attention to a phenomenon of “speeches advocating cooperation”.

[Methods] I use a multi agent simulator. The structure of the pay-off of the game is composed by a kind of ‘social dilemma’ in her neighborhood, and other orientations with their costs. Each agent has a strategy which has two kinds of output values; (act cooperatively / act not cooperatively) and (speak to advocate cooperation / not speak).

[Results/Conclusion] I tried to check whether “speaking to advocate cooperation” or “not speaking to advocate cooperation” has effects on the cooperators rates in the whole universe. The results are in Fig.1. Next, I tried a parameter survey on how values of the ‘neighborhood radius’ have effects on the cooperators rates. I did 100 trails where the ‘neighborhood radius’ were randomized with equal probability from 0 to 130. The result is in Fig.2. As the figure shows, in the cases that the ‘neighborhood radius’ ranges from 10 to 25, the ‘cooperators rate’s seem to be distinctly high. It seems that there is a ‘threshold value’ around 25 by which the ‘cooperators rate’s are discriminated between being high and being nearly zero. I think that these models are interesting in several points. We will discuss some at our conference.

Occupy Gezi: From an Uprising to a Social Movement?

Occupy Gezi started as a small protest to oppose the demolition of a park in Istanbul and quickly transformed into a national grassroots initiative against the government’s authoritarianism and a hybrid democracy, which locks political action into the ballot box. After a month of intense street protests leaving 5 dead, dozens wounded and under arrest, it has shifted to “park forums” as thousands of people from all walks of life have gathered in their neighborhood parks to discuss the future and come up with a game plan. This lecture will look into how the #OccupyGezi experience opened new social and political possibilities, spaces of political action (online and off) and a new kind of political language; what shook the so-called “apolitical” generation out of their comfort zones to the streets; and brought people from all walks of life and political spectrums together. It will also look into the chances of Occupy Gezi becoming a full-fledged social movement and the limitations it faces in the process.

Materials and methods: the variables in the model proposed by the pilot study have been reviewed on the basis of the individual data available in the information systems of the local actors. They have been used for defining evaluation models based on the characteristics of the individuals, with the same techniques used in the pilot study. As a case study the municipality of Genoa, whose population is among the oldest in Europe, has been taken into account.

Results and discussion: The passage from regions to individuals in a large municipality confirms the validity of the model for people 65+ years old. ADL disabilities are the main disability dimension with highest association with the worsening of the SE condition, also due to the effect on the social relations dimension. The public strategies seem to better protect individuals and families, with the help of the informal network of support for the family care. The indicators in the models could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could extended wherever these kind of data are routinely collected.

What's the Impact of Coverage Error to the Study of Social Inequalities?

In some European countries, including Italy, survey organizations use the Directory of Landline Phone Numbers as sampling frame to survey the general population and study social inequalities (Häder and al. 2012). Under certain conditions, the use of this sampling frame may be problematic.

In Italy, with the only exceptions of Callegaro's work (2004 and 2008), there is very little interest in this topic. Little is known, for example, on the extent to which coverage error occurs and its impact on survey estimates, although in 2011 only 50% of households are included in the sampling frame (e.g., the directory of landline phone numbers). We believe a clear understanding of the nature of coverage error is urgently needed (households may be excluded from the sampling frame for different reasons) to develop appropriate strategies to tackle the coverage problem.

The overall aim of the paper is to evaluate the impact of coverage error on the accuracy of the survey estimates for a set of key socio-economic variables and, should evidence of such a bias arise, to discuss possible strategies to correct for it.

We first describe changes over time in the pattern of coverage error by focusing on three groups of Italian households (household included in the sampling frame, households excluded from the sampling frame as they do not have a telephone, households excluded from the sampling frame as they do have a telephone but the telephone number is not listed). We then explore whether there are any differences in these groups in their socio-economic characteristics, including indicators of general trust and, for a selection of survey items (including income, health and social class), investigate the impact of coverage error on bias.

We use the 1997-2012 Multiscopo survey ("Aspetti della vita quotidiana") run by the Italian Statistical Institute (n=20.000 households).

Nahr el-Bared Palestinian refugee camp in Lebanon, home to around 27000 people, was nearly completely destroyed in 2007 by the Lebanese army in a confrontation with Islamist group Fatah al-Islam. Plans for reconstruction started even before the war ended, funded by a first design by the Government of Lebanon.

One of the issues in the rebuilding of the camp is the control of space. The government tried to impose a plan that ignored the spatial practices and configuration of the old camp, prioritizing security issues in a design that allowed total control and surveillance by the army. The Palestinian civil society groups asked for a reconstruction preserving neighborhood relations, main street and identity, similar to the destroyed camp. If literature on the reconstruction of Nahr el-Bared tackles issues of power, law and sovereignty in this enclave, no research explores how the population acts upon the space to infuse its meaning to the space again. My research seeks to find how the population of Nahr el-Bared expresses its everyday resistance that Nahr el-Bared inhabitants take back the control of the camp and rebuild their own space. My research examines these three elements in the way they are expressed in space.

Think-Tank Networks in Mexico and How They Shape Economic and Political Reforms

Think tanks, broadly defined as public policy research organizations, have proliferated in North America. In the case of Mexico they are a relatively new phenomenon associated to the retreat of the state from the economy. However, they have rapidly developed networks which play a key role in coordinating elites in the country in order to influence the public policies and strategies promoted throughout the past two decades, in particular those associated to NAFTA and the reforms this agreement has entailed. This paper analyzes the most important characteristics of Mexican TT, who controls them, the networks they have constructed in the past decade, the strategies they pursue to influence policy-making, the most influential ideological orientations and the extent to which the Mexican TT network is linked to a regional or international network. I argue that the landscape of TT has undergone a profound transformation in the past years leading towards: (1) an increasing presence of independent TT and private consultancy firms that undertake not only research on public policies, but executive and legislative lobbying too; (2) a more challenging advocacy role of academic and business TT that actively participate in the media and multiple forums to build consensus around, and define, policies; (3) the transformation of think tanks in more and more influential “think tanks networks” which are the result of the potential for a broad and diverse range of actors to undertake and influence a large variety of political processes and policies.

Research on preschool education and day-care programs is gaining momentum since the discovery of their potential to reduce social inequalities in education at an early stage. Much of this research relies on case studies to measure mid and long term effects of preschool attendance on academic performance and school transitions. In this paper we adopt a broader focus and a comparative approach by exploring the extent to which early (pre-primary school) child stimulation can reduce background differentials in learning outcomes across 28 countries from the Americas, Asia and Europe.

Particularly we seek to unveil the relative impact of direct parental involvement and preschool education, as different ways of child rearing, on educational disadvantages that stem social origins, and the extent to which this applies to all the countries in our sample. Are the effects of both practices (institutional vs. parental) similar? How do institutional characteristics of the educational system affect performance at this stage?

To answer these questions we use PIRLS 2011, an international data source clustering students of primary education (4th grade) across countries. PIRLS provides a standardized measure of reading literacy among students in 4th grade. We estimate random-intercept and random-slope multilevel models to assess the effect of the type of child care adopted by families on educational outcomes. This approach enables us to decompose the observed variance in reading skills into its constitutive parts at the country and student level. Beyond our substantive findings, we also discuss the potential for a broad and diverse range of actors to undertake and influence a large variety of political processes and policies that result in unequal life chances among children.

Climate Change Discourse and Action in the Philippines: Views, Voices, Vignettes

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In the Philippines, there has been some amount of talk and, fortunately, some amount of action too, about climate change. We ask: What is being said and done about climate change in the country? How is climate change being framed and acted upon? Why are these developments unfolding the way they do? How do these discourses and practices reflect and influence sociocultural dynamics? The paper presents views, voices, and vignettes from the country. It attempts an understanding of these realities by drawing from social constructionism, critical discourse analysis, and social movement theory.

Managing NGOs for Older Persons in East and Southeast Asia: Lessons and Good Practices from the Field

The paper reviews the roles and experiences of non-governmental organizations for older persons (NGOs-OPs) in East and Southeast Asia. It is based on case studies of selected NGOs from Hong Kong, Japan, Korea, Indonesia, the Philippines, Singapore, Thailand and Vietnam. The study finds an increasing number of NGOs-OPs present in the region, working in diverse areas of service delivery, education, research, training, and advocacy. Community-based older persons’ organizations or senior citizens associations are also becoming more active, with some organizing beyond social and recreational activities, and venturing into policy advocacy and other areas traditionally served by non-community-based NGOs. Most NGOs are taking on multiple roles simultaneously, e.g., adding advocacy to their other programs, while a few are beginning to focus on a specific target group, activity, or service. On the organizational and management side, NGOs-OPs are also becoming more accountable and are taking creative and innovative steps in meeting the challenges of management. To be sure, NGOs-OPs need to address important gaps, notably the lack of capability-building at the community level, the lack of follow-through in policy implementation, and the need to solicit critical, hopefully constructive feedback from the older persons they are serving. Nevertheless, like the older persons they are working for and with, NGOs-OPs themselves are getting more active and growing wiser with age.

Genealogía Del Pensamiento Crítico

En América Latina y en castellano se usa mucho la expresión Pensamiento Criti-co, sin que siempre se tenga claro a qué se refiere con ella. Este trabajo pretende aclararlo desde su origen, para ello se piensa revisar los aparatos críticos más originales y reconocidos durante la modernidad, se piensa acudir a la ilustración y al romanticismo, toda vez que, tanto Kant por vía de Weber, como Hegel por vía del marxismo, han estado presentes y son imprescindible para la sociología ac-tual. De tal forma se espera alimentar la vocación crítica del discurso sociológico.

SALDANA, NELSON* (University of Michigan, saldanan@umich.edu)

Integrating Demographic and Visual Approaches in the Measurement of Gentrification

Approaches commonly used to describe neighborhood change such as visual or census-based tipping, and lifecycle models rely on demographic data for measurement and insight into these processes. However, a limited amount of empirical data on microbehavioral factors overlooks other indicators that might precede the more macro-level demographic shifts usually employed to measure change. An assessment of the neighborhood change literature demonstrates two shortcomings: the tendency to focus on individual residents without attention to other neighborhood organizations and institutions such as businesses and the place-based mechanisms underlying changes in race and socioeconomic status. Most models of neighborhood change miss a deeper understanding of the social processes involved in the construction of value. These cultural practices matter because they lead to increasing values (both monetarily and symbolically) that ultimately fuel further demographic transitions.

Using a comparative and mixed methods approach, this project examines neighborhood change in New York, Los Angeles, Chicago, and Detroit. Data from a comprehensive survey and cluster sampling, a total of 300 respondents were selected randomly. A self-administered survey was employed to collect the data. Finally, 286 valid questionnaires were obtained. The research was conducted during February and March 2013. The data was analyzed using SPSS. We examined two types of knowledge: knowledge new programs and knowledge about recycling behavior. We asked if their combination can better assess the contours of neighborhood change. The three central research questions are: 1) Do traditional demographic measures (i.e. race and class) adequately capture the phenomena of change? 2) Why do neighborhoods experiencing gentrification seem to look similar to each other and utilize the same semiotic tropes? 3) What are the physical indicators of neigh-borhood change and how are they involved in symbolic boundary construction between old and new residents?

SALEHI, SADEGH* (The University of Mazandaran, s.salehi.umz@gmail.com)

An Experimental Study Of The Relationship Between Knowledge, Attitudes and Recycling Behavior In Iran

It is often assumed that knowledge and attitude about the recycling will en-gage in recycling behavior. We used data from a survey on Mazandaran prov-ince, Iran in 2013 to investigate this premise. A survey method was utilized to conduct this investigation and by employing cluster sampling, a total of 300 re-spondents were selected randomly. A self-administered survey was employed to collect the data. Finally, 286 valid questionnaires were obtained. The research was conducted during February and March 2013. The data was analyzed using SPSS. We examined two types of knowledge: knowledge new programs and knowledge about recycling behavior. We asked if their combination can better assess the contours of neighborhood change. The three central research questions are: 1) Do traditional demographic measures (i.e. race and class) adequately capture the phenomena of change? 2) Why do neighborhoods experiencing gentrification seem to look similar to each other and utilize the same semiotic tropes? 3) What are the physical indicators of neigh-borhood change and how are they involved in symbolic boundary construction between old and new residents?

Between Market, Art and Politics: The Different Ways of Ressignification of the Old Industrial Spaces in the City of São Paulo

Since the beginning of this century, the old industrial buildings and spaces of the neighborhood of Monca, in the city of São Paulo, have been the subject of eco-nomic, political and social practices guided by a cultural sense with an increasing aesthetic relevance. Photography, painting, advertising, heritage practices, graffiti, have contribut-ed to bring a new sense to these spaces, which goes from their private appropri-ation by real state market to the appreciation of public space by heritage state agencies. This implies in a redefinition of the relations between aesthetics and politics in a “postmodern” logic (Jameson, 2000; Harvey, 2000).

One of the consequences of this process is the construction of “postmodern urban landscapes” characterized by gentrification and disneyfication (Zukin, 2000; Smith, 2000). On the other hand, according to Huyssens (2000), there is no pure space outside the market culture, which leads us to question the limits of these

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
processes, namely to consider the “specific strategies of representation and com-modification and the context in which they are represented” (2000:21), or the crit-ic to the regressive aestheticization of politics (and economy) by the politicization of art (W. Benjamin, 1985).

We will analyze the use of these strategies in the practices of artists, entrepre-neurs, experts, dwellers and their conflictual context - involving real estate boom and heritage practices (Pereira, 2010; 2013); the formation of gated communities (Caldeira, 1997) and the resistance against them (ibid., 2012). How they give new meanings to identities, places, revealing the tensions and complementarities be-tween advertising-driven aestheticization and politicization of art and problematize the construction of a singular public space: a heterogeneous urban landscape and a democratic political sphere, both institutional and non-institutional (Arendt, 1991; Habermas, 1984) in the city of São Paulo. We will use the methodology of visual sociology (Ferro, 2005), problematizing it in an interdisciplinary approach.

Can Outsourced Workers Organize? a Case Study from the Philippines

This presentation will detail an attempt by outsourced workers in the Philippines to form a labor union. These workers are in the “knowledge process outsourcing” sector, meaning that they possess significant human capital and do skilled tasks for firms of the Global North. The case immediately presents two puzzles. First, given the many structural barriers known to impede unionization by outsourced workers in the Global South, how did a union campaign emerge? Second, why did this unionization attempt ultimately fail? My ethnographic re-search inside the outsourcing facility provides answers to these questions. Rep-rentation struggles were initiated by highly-skilled workers and in response to new, driving tactics on the part of local management. The latter were reacting to pressures put upon them by their Western clients. The unionization campaign appeared to have caught local managers by surprise, and throughout it they were very concerned to keep news of it from reaching the government, the press, and Western clients. In short, employees possessed significant structural and work-place power in their attempt to gain recognition. Ultimately, however, it was local management’s ability to harness greater associational power that led to the de-feat of the union. One general implication is that studies of labor in global supply chains should theorize and examine empirically the vendor-client relationship. In these supply chains, vendor firms and client firms have different interests and resources.

SALLAZ, JEFFREY* (University of Arizona, jsslaz@email.arizona.edu)

Foxconning Science: The Globalization of Academic Publishing

This paper presents ethnographic work done inside an outsourcing firm in the Philippines. This firm is part of the emergent knowledge process outsourcing, or KPO, field. It contracts with publishers wishing to outsource such work as copy-editing, typesetting, authorial communications, and more. Most major scientific publishers now contract with such firms. Suppliers lack basic knowledge of the overall field of production (in this case, academic publishing), and so judge themselves against unknown compet-itors. They compete on price, rather than quality, and so continually engage in various “low road” techniques of management. Most notably: wage suppression, the “driving” of workers, and forced overtime. I conclude the paper by discussing at length one incident that provides a prism into the entire labor regime: a union-ization dispute that took place at this facility. Global pressures induced worker resistance which was then channeled into a unionization campaign. But ultimate-ly management was able to defeat this campaign by mobilizing local networks and traditions. In this case, global and local forces collided to control the hidden work-ers in the new global production of science.

Changes in Status, Reconfiguration of Identity, the Case of Educators in the French Youth Justice System

In the aftermath of World War II, the French Youth Judicial Protection Service (YJPS), responsible for the rehabilitation of young offenders, gained its autonomy from the prison administration, and became an autonomous agency of the Min-istry of Justice. The YJPS now employs 8500 people, of which 4500 are educators. The latter, trained in a division of the YJPS, have the exceptional feature of bene-fiting from French civil servant employment status. For a long time, this protective employment status has been interpreted as a sign of distinction and prestige. Represented by the YJPS national union (YJPS-UN), created in 1947, the YJPS ed-ucators have cultivated this prestige by demonstrating their unconditional attach-ment to the political purpose of their administrative agency: the construction of a justice model based on the rejection of youth imprisonment. However, in the 1990s, these educators have been subject to a ideological shift, which requires the implementation of punitive-oriented policies. This has changed the interpretation of their employment status, less perceived as a sign of prestige, than considered as an instrument of subordination to these new policies. The le-gal obligation for them to intervene in new prisons for youths epitomizes this subordination. In this context, the YJPS-UN, remaining firmly wedded to the previous political identity of the profession, is progressively becoming marginal-ized. A growing number of educators are turning to a more conventional trade union, attached to the promotion of working conditions rather than defending the professional identity of the profession. By depicting the differences between these two forms of activism, which we name ‘identitarity’ versus ‘utilitarian’, we will analyze how a “new professionalism” has emerged among YJPS educators, and is symbolic of a general weakening in the symbolic status of this professional group.

RC29-505.3

SALLÉE, NICOLAS* (University of Montreal, nicolas.sallee@umontreal.ca)

Rehabilitation and Punishment, a New Model of Rehabilitation in the French Youth Justice System

According to recent research in policy transfer studies, youth justice systems across Western countries are taking a “punitive turn” (Muncie, 2008), marked by the emergence of a new “culture of control” (Garland, 2001). This process is particularly significant in the United States and Great Britain, however it appears that other European countries are following suite (Bailée [and Cartuyvels, 2007]. A closer look, however, reveals complexities: the level of youth incarceration, a commonly adopted indicator of punitiveness, differs considerably between coun-tries. The French youth justice system, analyzed in this paper, does not escape these complexities: since 2002, the youth incarceration rate is decreasing, while the content of political discourse and legislative changes seems to fuel the in-crease of a new punitiveness (Bailée, 2008). To understand this apparent paradox we will describe how political injunctions aimed to “get tough” on young offenders, are translated and reworked, at a lower level, through the activity of the administrative agency responsible, in France, for the functioning of youth cen-ters: the judicial Protection of Youth (JYP). This analysis will allow us to highlight the crystallization of a new model of rehabilitation under constraint. First, using quantitative data, we will describe the increasing use of semi-closed youth facili-ties as an alternative to prison. Tied to the development of new prisons for youth, supposedly “rehabilitative” (Chantreine & Sallée, 2013), this evolution is changing less the level of confinement than its meaning. Formerly perceived as anti-rehabil-itative, confinement is now legitimised as an inseparable feature of rehabilitative processes. Second, we will analyze knowledge production practices, particularly child psychiatric and psychological knowledge, mobilized by the JYP to support this legitimation process. This paper will defend the idea that this new knowledge underpins old disciplinary practices, and symbolizes the growing concern surrounding, in France, the institutional fabric of socialized individuals.

SALLES MEDEIROS, MARCIO FELIPE* (Student, medeiros.mfs@gmail.com)

The Relationship Between First Principle Production in Brazil and the International Demand

The following research approaches the criticism of the production system of knowledge in Brazil, focusing on a laboratory of Theoretical Physics which works with First Principle Model (FPM), order to analyze the institutional dilemma and the relationship between the laboratory and the central spaces of knowledge production linked to this research area. The production of science, how is the current in Social Studies of Science and Technology, demand an articulated network of elements which sustain and make circulate the knowledge production produced inside the area. In the FPM case, the space of production and circulation is very peculiar, since the production involves upgrades in the computers’ servers when a researcher, the labor does not spend much money; on the other hand, the circulation occurs within the specific circle in physics, because the pro-duction not necessarily will become a product since the experimental relevance does not always happen. And yet we have the relationship with central spaces of central places of knowledge production, understood basically by The US and Europe which influence the content and the decisions of productions inside the laboratory. The methodology of this research consists of an interview which re-searchers and analysis of published material for one label of FPM which is related to a Brazilian University. With the following research, we aim to contribute for the debate about the production process of knowledge, bringing reflexive elements about the role of Brazil in the production of FPM knowledge.
The Notions of Otherness and Critical Construction Sites: Theorizing Professional Boundaries within

This paper is about social and symbolic boundaries (Lamont & Molnar 2002). The aim of this paper is to suggest a theoretical way to understand constructions of ‘Otherness’ within professional boundaries. I draw on the empirical case of the doctors with immigrant backgrounds in the Swedish medical profession and use the notion of critical construction site by Cornell & Hartmann 2007.

In order to bridge the gap between structure and agency the study started with a review of the Swedish research literature in order to see how ethnicity, race and ‘Otherness’ had been received in research. In this review I found that ‘Otherness’ is often something that is ascribed to patients and not doctors. I then went on reviewing the professional debate around the issue of doctors with immigrant backgrounds in Sweden I found something what I theorized as underlying assumptions of ‘the Other’. This ethnic ‘Otherness’ was not about doctors’ ‘ethnicity’ nor about ‘race’ instead it had to do with that the doctors had immigrated and was perceived as something table and predetermined.

This notion of ‘Otherness’ was later also found in interviews with doctors with immigrant backgrounds. In the interviews I expectedly found stories of discrimination, prejudice and even racism but I also found stories of agency, and coping strategies where the ‘Otherness’ they were ascribed with was used a way to construct their role in the Swedish health care system; to take care of patients with immigrant backgrounds.

The paper argue that as doctors with immigrant backgrounds seem to be using a primordial definition of the ‘Other’ in circumstantial ways in order to find their place within the Swedish medical profession which I argue, is a critical construction site.

The Other Doctor: When Professional Boundaries Conflate with Notions of Ethnic ‘otherness’

The paper suggests that field of Sociology of professional groups need to consider social position theory in order to theorize boundaries of ‘Otherness’ within them. The paper is based on some of my concluding remark from my dissertation where I interviewed medical doctor with immigrant backgrounds in Sweden about their feeling of belonging to the Swedish medical profession, among other things. The thesis is that the medical profession in general and the Swedish medical profession in particular have been successful in controlling the number of new doctors that are accepted to Swedish medical schools. Sweden has also experienced and increase in doctors with immigrant backgrounds working in the Swedish health organization. In my interviews with these doctors they often told me about something that could be understood as hierarchies within the profession on the basis of ‘the Other’. I have chosen to theorize this as ethnic ‘Otherness’ as it seem to have to do more with that they are ascribed with ‘non-Swedishness’ than about what ‘ethnicity’ they have. These divisions I argue are linked to ideas that can be found in EU legislation, in the Swedish research on ethnicity and health as well as in The Swedish Medical Association and can therefore be a case of another ‘successful’ boundary making.

Set in the City: Condominiums As Settings of Technological Innovations Toward Sustainable Consumption

One of the tangible signs of growth in Metro Manila, a Philippine mega-city of about 11.7 million people, is the proliferation of condominiums. A condominium is a form of housing tenure whose cost of land is prorated due to multi-story building and which makes it possible for many people to live closer to the workplace and shopping centers. This paper lays out the proposition that the condominium is both medium and outcome of technological innovations that either stimulate or stymie sustainable consumption. Technological innovations embodied in the design of spaces and rules of condominium living provide the material setting that defines interactions and images relating to inhabitants’ consumption of technologies in the home and consequent social constructions of sustainable consumption. The paper focuses on social practices relating to the use of information, communication and entertainment technologies as well as domestic technologies by condominium-household members. The take off point is a body of data and insights from key informant interviews, direct observations, and secondary data analysis.

The normative system of how to plan and live one's life as defined by the institutionalized life course was conceptualized by Kohli (2007) as a distinct tool in understanding how external forces such as social institutions, social structures and cultural elements interact with each other and with society's individual members thereby predicting actions and promoting relative stability. How aging and the aging process along its four given dimensions (chronological, biological, psychological and social) are understood by the older persons themselves given their current situation as a senior citizen, is the problem focused on in this study.

The normative system of how to plan and live one's life as defined by the institutionalized life course is implicated in how the elderly Filipino older persons (60 years old and above, men and women) understand the phenomenon of age...
Building Global Worker Communities: The Case of Filipino Migrant Workers

Building global worker communities: The Case of Filipino Migrant Workers. Filipinos overseas are not wanting of associations or organizations to belong to wherever they may be. Commonplace are social organizations around common professional, religious, or based on geographic regions or ethnolinguistic origins in the Philippines to name a few. These formations are meant to provide support to the members, enhance their profession, religion, faith, ethnolinguistic identities and the like. Rarely do they get in conflict with the laws and policies of the host countries; neither were they inclined to have sustained campaigns critical of policies in the Philippines.

Fastforward, 4 decades later, we see an expanded and varied landscape of migrant communities. In Hongkong, migrant domestic workers are joining and forming their unions and merging into coalitions of different migrant nationalities. In the Gulf, the Gulf Council (GCC) countries where organizing of workers—local or migrants—in whatever form and orientation is almost a taboo, there is no stopping the migrant Filipinos from organizing cyber communities. Their "membership" knows neither boundaries nor time limits.

In other nations such as Taiwan, what is feasible are support groups such as Church/faith-based migrant formations that are spread out around the country. Every Sunday, these formations touch base with more than a thousand Filipino migrants who congregate in the churches for the worship service. Off and on the pulpits, migrant issues are raised, activities and campaigns are undertaken.

Increasingly, the linkages and ways of organizing migrants pave the way for more direct involvement of migrants on issues that impact them; for more consolidated actions and responses and for support and solidarity between migrants of one country and with migrants of other nationalities. Indeed, migrant worker organizing is the future, once that challenges the boundaries of nation-states in more ways than one.

New Configurations of Informal Work in Brazil: Besides the Informal, Short of Rights

This work aims to examine the non-wage based labour relations and understand its implications for the State and Society. These kinds of labour relations have been referred to as "informal" or "non typical". In this sense, they have been viewed academically and politically as lacking or unviable.

However, it is true from the perspective of the traditional labour institutions (Unions, State, and the juridical forms of labour regulation) these labour relations are aliens and cannot be characterized but for absence of the key attributes that traditionally have defined labour, in the context of political and economical changes that took place in the past decades, these labour relations are an important part of the accumulating history and havana with the new Brazilian informal reality and have generated new fields of conflict and have been trying to get politically organized, building identity and pushing forward with their agenda.

The first part of the work focuses on understanding the theoretical and political implications of the non wage based relations for labour relations in general. On the second part, we try to understand the emergence of this new reality and the development of new political subjects with their own agendas and identities. However, although these labour relations and its workers are not informal, they still not recognized in their relation with the State as having rights.

The Solidarity Economy and the Social Struggles in Brazil: The Right to Associated Labor

One of the most important examples of a collective subject rising in the public arena in Brazil is the solidarity economy, which for several years has been sharing itself as an autonomous social movement. In this process, it has been trying to build new social rights for Associated Labor. It is a description and analysis of this process that this work intends to develop.

With this objective, it starts by rebuilding the history of the Solidarity Economy in Brazil, focusing that despite its long history and connection with the Brazilian social struggles for more than a century, it is only in the last thirty years that it

has assumed a new configuration and new meanings as a result of the social and political changes that took place in Brazil after the eighties.

The second part of this work focuses on showing how the Solidarity economy today has become a new social, economical and political reality in the Brazilian society however; the subjects of the Solidarity Economy still lack the institutional recognition of its rights.

Lastly, we analyze how the subjects involved with the Solidarity Economy have been for years mobilizing and requesting the rights to Associated Labor and have achieved some successes in this process such as the creation of the National Secretariat of Solidarity Economy and the approval of laws for the Solidarity Economy.

As a result, the analysis of this movement in Brazil demonstrates that there are no natural rights but rights are political constructions consolidated from processes of social struggles that aim to expand democracy and transform society. It is some of these political agendas that we try to explore in this work focusing on showing the arenas where the struggles and debate around the development the right to Associated Labor take place.
Coffee, Certification Schemes and Standards in the Reshaping of Sustainability Markets, Tracing Global-Local Tensions

In the last fifteen years, certification schemes (and the standards they enact) for producing sustainable products have become one of the most important strategies for enhancing sustainability into commodities (such as coffee) market. Similarly, certification schemes are introducing important changes in the governance of agriculture systems. Such transformations have been the focus on a wide set of works that critically highlight how certification schemes are embedded into a neoliberal world, as well as the city-region function in the context of a moral economy. Although many of these approaches isolate technical and social dimensions as separated realms, less attention have been put on how certification schemes are enacting sustainability in terms of use, a key element in the material shaping of any differentiated market.

Following Busch (2011) contributions on standards, enacted in the Certification schemes (Van Der Kamp, 2012, and trust I explore how certification schemes can produce two version of it in two different locations. First, trust as consistency in the International Coffee Organisation (ICO). Here I describe how certification schemes are designed to produce trust in the market related to the transparency and the consistency of coffee production according to international environmental standardised criteria. This trust, then, is limited to the boundaries of a certificate. Second, I describe the experience of a small coffee roaster and retailer with certification schemes in the UK, J. Atkinson & Co. What emerges there is a concept of trust as trustworthiness. Certification schemes are framed in terms of coffee relationships, these involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

Marriage Selectivity and Stepfamily Formation

Although child outcomes specific to stepfamilies have been well researched, the literature is not resolved on the process by which these families are formed, nor which persons are likely to enter these types of unions. It is well known that stepfathers are likely to significantly impact coresident stepchildren, yet we would not which persons are likely to enter these types of unions. It is well known that stepfathers are likely to significantly impact coresident stepchildren, yet we would not

Caring Responsibilities and Gainful Employment in Middle Age: A New Population Based Study in Sweden

The Swedish welfare model is based on the premises 1) the society, not the family, is the main responsible for care, and 2) all adults are gainfully employed, from the time of employment until retirement. Sweden has a high proportion of women in the work force, also in their 50-60ies. Nonetheless, it is estimated that about 70 percent of all elderly care is performed by relatives. This study is a mixed method study and focus on caring responsibilities for elderly parents of children. An enique was made during spring 2013, of a random sample of 6000 individuals 45-66 years old (61.1% responses) and interviews from 40 carers in various caring situations has been made. It focuses the care responsibility have any impact on paid work, maintenance and everyday life as well as their experience of public care, possibility to leave job and payment for care. The study is connected to feminist welfare research. Of central value is to analyse gender, class, ethnicity and age. Early results show that over 40% of the respondents give help and 30% of women and 27% of men, help and old, disabled or ill family member at least once a week and 15% of women and 12% of men help daily or several times a week. Care affects life in different ways: feeling mentally and physically exhausted, having difficulties to focus on work, less time for leisure. More women than men have made changes in their working life in order to manage the situation. Corresponding to 7% of women and 4% of men 45-66 years in population we can see that 100 000 women and 50 000 men has made changes in their working life: reduced working hours, stopped working, take early retirement as a result of caring.

Work-Life Balance. Welfare State, Family and Caregiving in Japan and Sweden

Japan and Sweden share comparable situations. Both countries have a high and growing part of elderly in the population and high ambitions to handle the needs for care, even if they have different directions when it comes to organization and financing. Still the family is the main care giver for the elderly in both countries. This makes it interesting to compare and highlight the effects of care for family caregivers. Until the early 1990s the Japanese policy on eldercare was based on the family as the main caregiving unit. In 1989 a ten year plan for institutional and home care marked a shift. Though family support was added into the Japanese system, cash reimbursement to family caregivers was not included, a deliberate decision, when the National care insurance was implemented in 2000, to secure that municipalities would not choose to lean on family carers instead of developing formal care services. Japan has a long policy on elder care, in which the formal services constitute the base and family care the supplement. The economic crises, during the 1990ies led to cutbacks in the formal care and since then there is an increased focus on caregiving roles of families, and the Swedish government have support development of carer support. Despite eldercare being a societal responsibility the share of family caregiving has increased while the economic support to next of kin has diminished

Global Cities Making Policy or Policy-Making for Global Cities?

Everyone acknowledges that cities have become increasingly important in the world economy. But there is much confusion about what this means for how they are governed. A natural assumption is that the municipal governments of the central-city are globalization, a global city-region becoming more important for urban policy-making. But, unless the boundaries of such a municipality corre-
The extension of border politics, and specifically, a politico-legal context characterized by increased surveillance of immigrant populations and the hardening of immigration controls, is concomitant with the emergence of new destinations (Massey 2008). In this sense, the border has been “pushed inward” (Coleman, 2007). Additionally, a growing number of state and local governments have proposed and/or enacted a wide range of policies with consequences for the lives of immigrants and their families. Some such policies are aimed at local policing and enforcing of immigration controls while others regulate access to jobs and housing, and more generally, the provision of services. This “variegated landscape” of local policies (Walker and Leitner, 2011) results in contexts of reception that vary significantly across U.S. spaces. From a research standpoint, questions about the interaction between socio-spatial scales (the global, the national, the regional, and the local) in shaping the conditions facing Latin@ immigrants gain centrality. How does the broader context interact with local contexts to shape the conditions facing immigrants? How do policies, social relations (shaped by power, as they are), and institutional arrangements at these various scales interact to produce particular outcomes for immigrants? We investigate these questions by exploring the experiences of Latin@ immigrants in two rural new destinations in Southwest Kansas and Central Iowa.

Youth in Social Transformation Through Education

India, known as a country of youth, with the potential to help build a stronger democracy through social entrepreneurship. There is a need of enthusiastic and pro-active youth for any transformation. They need a balance while addressing country's growth and social issues.

Education is a progressive approach for transforming society. Existing education policies has many shortcomings. There are many discriminatory practices applied at ground level. However, despite this adverse situation the young generation is engaged in creating an atmosphere for change in rural Maharashtra, India.

Idea of bringing changes in the mainstream of education has been established. But, due to distress & seasonal migration of deprived sections of the societies with family, education of students gets affected badly. Some experimental learning centres such as SAKHARSHAALA for sugarcane workers and PASHANSHAALA for stone crusher workers have been started for the education of deprived communities.

In tribal area, language is a big issue which cuts masses from education. In Gadchiroli (Indian Village), youth started translating the formal text books in Gor-di, a colloquial tribal language, which was successful, and tribal students continued in school.

The formal set of the government is fixed, & the decision makers are not in a frame of mind to change the structure. It is observed that even changes done in the realm of style, time, language, location leads to education reaching to the masses and particularly the deprived sections of the society.

The movement for the marginalized & oppressed through facilitating concrete processes. Which is based on collective, reflective & sustainable actions initiated by youth; who explore & criticize the oppressive foundations of the society and possess desire to transform it through education.

Youth Cohort Study of Japan (YCSJ) was a major programme of longitudinal research undertaken to monitor transitions from school to work in Japan from 2005 for the migrants, who are not good at German.

Its object is to enable migrants to be integrated easily and participate in Germany. However does it work well as the government intended, especially to the “mobility people”?

Integration Course is a common language class, which was set up by German government since the year of 2005 for the migrants, who are not good at German. Its object is to enable migrants to be integrated easily and participate in Germany.

But is the idea based on too archaic figure of immigration moving only between origin and host country? It is not unusual today that man has Networks among plural countries? For example, a woman, who was born in Russia, lives now in Germany and whose daughter is in England. What means for her to learn German? Or those people, whom I define “mobility people”, who have Networks among plural countries?

According to Shansul, a Malaysian Anthropologist, identity formation takes place within what he would call a “two social reality” context; first, the “authority-defined” social reality, and second the “everyday-defined” social reality. The former is one which is authoritatively defined by people who are part of the dominant power structure and generally with text recorded. Quoting his hypothesis, “Integration Course” is not only a German course but also the means of transmitting German “authority-defined” social reality and could be of creating German identity.

However does it work well as the government intended, especially to the “mobility people”? Based on my research, the biography interviews to the participants of “Integration Course”, I will consider the meaning of “national language” and “national identity” in the globalization era.
followed up annually for five years. The achieved sample size and response rates of the YCSJ are as follows: 1678, 40.2 % (2007); 1361, 82.0 % (2008); 1141, 86.2 % (2009); 1009, 90.7 % (2010); 891, 88.3% (2011). Based on the datasets of the YCSJ, we explore four main topics in this paper.

First, we analyse youth transitions to work, documenting the increasing precariousness of youth labour markets. Here we have used indices such as low income, irregular jobs, and unemployment, to examine the extent to which vulnerable situations in youth labour markets have expanded. Second, we investigate which cohorts are more likely to become precarious. Against precarity indices, we found key variables of disadvantage in relation to individual attributes, family socio-economic backgrounds, residential area, and current jobs were relevant to risk factors with statistical significance. Third, we consider forms of disparity in working conditions including work content and developmental opportunities. Here we find that there remains a significant structural disparity between genders and amongst transition types in working conditions.

Fourth and finally, we investigate the mechanism of inclusion in the labour market. We find amongst most of the transition types, irrespective of gender, that demands for high commitment to work – such as acceptance of long working hours and heavy responsibility – has increased every year despite an apparent disparity in many aspects. We propose two key factors to enable inclusion in labour work.

High commitment: discretion and participative involvement; and positive human relationships in the workplace.

Economic, Social Change and Son-Preference in Nepal

The purpose of this study is to clarify the promotion factors of son-preference, such as the neglect of female child, trafficking of girls and the interruption of the female fertility in Nepal. According to UNDP (2010), the number of the “missing women” in Nepal is estimated to be about 0.1 million. Republica, local newspaper, on 29 Nov 2012 reported that the female population is 2.3 percent less than male in the 0-10 year age group in the latest census.

In this study, the findings of the ongoing research implemented in seven districts in Nepal, during March 2012 – Mar 2014, will be shown. The questionnaire survey of 1500 men and women both married and unmarried 18-80 year-old were selected based on a multi-staged random sampling technique. The data will be analyzed by modified framework of sustainable livelihood approach. This framework consists of three components such as livelihood assets, policy institution-process and livelihood outcome (Chambers and Conway1992). This leads to analyze consequences among these three components. Livelihood assets, furthermore, consist of financial capital, natural capital, physical capital, human capital and social capital.

Former studies reveals the correlation between the property (financial capital, natural capital), relatively high educational level (human capital) and son preference (Clark2008; Banerjee2012; Republica 2012). In this study, the correlation among social institution such as family structure, 5 capitals and son preference, will be analyzed, in addition to the former studies.

As the result, following three findings have been verified: (1) Even though lack of some of capitals, those who has variety of social roles do not tend to son preference, (2) Even though abundant in capitals, those who live in extended families and social capital tend to be son preference, (3) Those who have female family member who has variety of network does not tend to be son preference.

Unequal Identities: The Attainment of National Identity and Ethnic Identity Among Children of Immigrants in Canada

Despite growing interest in “the new second generation,” quantitative analyses on the psychosocial adjustment among non-white offspring are limited, especially in Canada. This study addresses this gap by assessing the impact of ethno-racial characteristics among children of immigrants on the establishment of self-labeled national and ethnic identities using a nationally representative survey, the 2002 Ethnic Diversity Survey. Results from binary logistic regression suggest that while white children of immigrants are more likely to form national identity, ethnic identity is more likely to be established among their non-white counterparts. While this is consistent with the segmented assimilation theory, the study also reveals that the level of parental education does not explain the results, countering the “assimilation” theory.

As the result, following three findings have been verified: (1) Even though lack of some of capitals, those who has variety of social roles do not tend to son preference, (2) Even though abundant in capitals, those who live in extended families and social capital tend to be son preference, (3) Those who have female family member who has variety of network does not tend to be son preference.

Married and Cohabiting Adults with I1 and Old Parents: Does Intergenerational Solidarity Change According to Family Conditions?

The objective of this paper is to compare the patterns of intergenerational solidarity among children who cohabit or are married, with their own parents and those of their partners. To this aim, I report the results of qualitative research I performed in Italy, based on 50 in-depth interviews of cohabiting and married couples, with an age range between 26 and 56 years. The dimensions of family solidarity investigated, included the financial support provided by parents to their offspring, help in child-minding the grandchildren, the frequency of phone calls and visits and finally, the willingness (also in the past) of the offspring to look after one of their own parents or their partner’s parents when ill and old. The analysis of the interviews has highlighted the varied types of interpersonal relationships established with parents by the cohabiting partners. While those who were married kept closer relationships and appeared to be more willing to help their parents and in-laws when ill and old, among those in cohabitation, only those who had a background of formation of a traditional family model, similar to marriage, adopted the same manner of solidarity. Those who had begun cohabitation, following separation or co-habitation with a partner who was separated, felt less responsible towards their partner’s family members, to the extent that they did not perceive any kinship ties nor obligations. Consequently, they felt that caregiving activities were not their responsibility. Finally, the length of the marriage or cohabitation was seen to have no effect.

SANTOS, HERMILIO* (Universidade Catolica Rio Grande do Sul, hermilio@pucrs.br)

Between Subordination and Protagonism: Violence Experience of Young Women through Biographic Narratives

The involvement of women in violent actions and criminal activities is growing in Canada. Even though, sociologists are not given an adequate attention to this issue. This paper discusses the relation between young women and violence in Brazil, stressing the main interpretations available in Brazilian sociology, which mostly emphasizes, on the one side, the secondary position of women, dominated by their male partners and peers, and, on the other side, the structural conditions of the Brazilian society – for instance, inequalities, uncertainty in work market, drug uses and school evasion – as the main reasons for this phenomenon. Besides this, the literature stresses the position of women as victim in violent actions, almost monopolizing the analysis when violence and women are connected. An opportunity seen in the biographic approach is the approach that stresses the disruption of norms and legal rules, neglecting this way another component of the practice of violence, that means, a subjective interpretation of reality. Biographic narrative approach permits to offer other possible interpretations to the engagement of young female in violent and in criminal activities. Based on preliminary findings of a research that are investigating direct and indirect experience of violence of young females, the paper presents the main antagonist positions founded, that means, between the subordination to dominant males and a more relevant and protagonist role played by women. The results show that using this kind of “insider” approach is possible to obtain new elements for the interpretation of the experience of violence in which the women role as victims and perpetrators are not always well defined.

Narratives on Violence and the Everyday Life of Children and Families Living in Favelas of Rio de Janeiro, Brazil

This paper discusses the everyday life experience of violence of children and families living in favelas - impoverished communities - of Rio de Janeiro, Brazil. This research was conducted during 2012 and 2013 and aimed to understand the different possibilities of biographical construction in social contexts marked by intense violence, perpetrated by the police, by drug dealers and by parents against their own children. For that purpose, it was conducted two different narrative research instruments: biographical narrative interviews with two generations of families, and biographical episodic narratives interviews with groups of school children. Even though this violence is not put directly as a topic to be discussed by children and family members, the two instruments allowed the investigation on how violence is part of their everyday life, as well as the different...
The study of social vulnerability to disasters has generally focused on understanding how social stratification relates to disasters and how social forces can create the possibility of a hazard to become a disaster. Ben Wisner and his colleagues assembled a working definition of social vulnerability as they were studying the famine that unfolded in the Sahel from 1967 to 1973. In the book "At Risk: Natural Hazards, People's Vulnerability and Disasters" (2004), Wisner and his colleagues defined social vulnerability as "the characteristics of a person or group and their situation that influence their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard". Their definition includes the difficulties and chances that people may encounter as they mitigate, prepare for, deal with, respond to, and recover from the impact of a natural hazard. However, there is no firm definition of social vulnerability. Rather, it can be considered as an evolving concept. Despite its focus on process, applications of the concept of social vulnerability in research often fall short in capturing the elements and dynamics of social vulnerability. This research uses Puerto Rico as a case study in which social vulnerability is conceptualized as steaming from evolving structural and behavioral forces. This research presents a dynamic situational approach to social vulnerability and explores how the practice of emergency management may impact, address, or fail to address the needs of impoverished marginal communities and their contrasting perceptions. The findings provide insights that could assist emergency management practitioners and disaster researchers and practitioners working in the areas of marginality, development, emergency management, bureaucratic change, rationalization, decision-making, and policy making.

SANTOS-HERNANDEZ, JENNIFER* (University of Puerto Rico, jennifer.santos@gmail.com)
Social Vulnerability to Disasters in Puerto Rico: An Outlook of Evolving Structural and Behavioral Forces

The Rio+20 conference that took place in June 2012 confirmed the hegemony of green capitalism to address the global environmental crisis. Supporters of the green economy believe that putting a price on ecosystem services will allow to internalize environmental costs into the capitalist process of production. In the case of climate change, this involves the creation of greenhouse gases emissions trading markets. For their part, critics of green capitalism describe this process, including carbon trading, as the commodification of nature and as a new system of accumulation by dispossession that mostly benefits large corporations with little effect on actual greenhouse gas emissions.

Corporato-led policy-planning groups such as the World Business Council for Sustainable Development or the Global Climate Forum have long been active to promote carbon markets and green capitalism. In this paper, I use a purposive sample of eleven such policy groups as an entry point to explore corporate involvement in the field of climate and environmental politics. At the level of organizations, the analysis of board interlocks reveals the structure of the environmental and climate policy network that links the corporate sector, the NGO sector and the transnational state, and emphasizes the mediating role played by policy-planning groups. At the level of individuals, the linkages between members of the global corporate, political, and scientific elites involved in producing and maintaining environmental knowledge suggest the strong influences of the green capitalist class fact. These conclusions are presented in the following section.
SARDJO, SULASTRI* (University of Indonesia, sulastri@ui.ac.id)

Between the Corporate and the Government Responsibility: The Livelihood Issues Experienced by the Local Community in the Surrounding Conservation Forest in West Java, Indonesia

Until about ten years ago forest had ever been the primary source of income for the community living in the surrounding area of the Halimun-Salak mountain, West Java. This situation has been changing since the government launched the new regulation that prohibited people to get anything from the forest because the area was designated as forest conservation. Since that time the community has been experiencing a decline in their standard of living, especially who were only had the forest as their source of income. Besides, for many years, the community has only been provided by inadequate basic infrastructure (i.e. health, education, transportation) that supposed to be the government's responsibility. The situation becomes increasingly critical when the people knew that there was a multinational company that has been exploring geothermal energy within the conservation area which has further caused anxiety and uncertainty in local people livelihood. The latest development seemingly has been overlooked by the local government since it has not been taken any significant action to help the people. Moreover, the conflict between local people and the MNC sometime has been raised as critical issues for the economic or political interests of certain actors in the community. Pressures to the company have been increasing since the government regulation stated that the company should perform the social and environmental responsibilities. Based on the ongoing research in the area of Halimun-Salak mountain, this paper analyzes the relation between state, market and government regulation stated that the company should perform the social and environmental responsibilities.

SARMA, PRANJAL* (Dibrugarh University, sarmapranjal1@yahoo.co.in)

Comparison of Leisure Activities of Children of Tea Garden Community and Other Groups in Assam: A Case Study of Dibrugarh District, Assam, India

Dibrugarh is an easternmost city situated in the banks of the river Brahmaputra. The place has the highest number of tea gardens giving it the status of ‘Tea Capital of Assam’. Though tea is a big industry, the children of the tea garden community do not get adequate facility of good education, health and leisure facilities. There are Anganwadi schools in the tea garden areas which look after the mental, physical, and emotional development of children between the age of 0-6 years. They also provide nutrition and value based education to children in the age group of 3 to 6 year. The conditions of these schools are not satisfactory to provide the preschoolers the pleasure of enjoying their childhood as compared to the Anganwadi centers for children in other parts of the city.

The dropout rate from the schools in tea garden areas is very high, as a large number of the children are engaged in child labour and some help their parents to look after the younger siblings or help in the household work. Some children, who go to school, go there for the food provided as the mid-day meal. The leisure time activities for these children include playing with other children or helping their parents. They play in groups but very few have access to playing equipments. The facilities provided at school are not adequate as compared to other Anganwadi schools and in some cases, the teacher do not come to school regularly. These children are thus deprived of quality education, satisfactory leisure activities etc. as compared to the schools and Anganwadi centres in the city.

The paper attempts to do a comparative study of education and leisure activities provided by Anganwadi schools to tea garden community and other children in Dibrugarh.

SARRIS, NIKOS* (National Centre for Social Research, nsarris@ath.forthnet.gr)

“The Influence of Institutional Framework on Local Community Schemes in the Period of Economic Crisis 2011-2013: The Example of the Municipality of Athens”
The aim of the paper is first to present the institutional framework concerning the role of participative action in Greece. The institutional foundation for cooperatives and unions is primarily set by Article 12 of the Greek Constitution, while specific laws provide the role of Social Cooperatives in Greece. After a short analysis of the legal framework the paper will examine the main sectors of activities of NGO’s and other bodies (organizations) that belong to the civil society, especially those acting in Athens.

More specifically this paper examines the schemes of the municipality of Athens to promote specific policies and volunteerism in order to contribute to the solution of problems that vulnerable social groups, who live in the city of Athens in the period of economic crisis 2011-2013, face. An emphasis is given both to Law 4071/2012, which concerns the possibility of local authorities to set up social supermarkets, and the possibility of collaboration between local authorities and NGO’s. Structural impediments to such policy developments are also elaborated.

Overall, we will attempt to answer the main critical questions of how the top-down and bottom-up models can co-exist in the implementation of public policies at a local level, and of how ways of cooperation concerning everyday problems can emerge from the economic crisis.

*Micro-Motives and Collective Action: Measuring Individuals’ Reasons for Participate in the #YoSoy132 Movement in Mexico*

Individual’s political mobilization has been explained by rational choice theory according to the general tenets of its approach to human behavior (Becker, 1968; Olson 1971). Following the well-known distinction between the narrow theory and the broad theory of rationality (Elster, 1988), this paper presents a more extensive view of political mobilization, considering the individuals’ strategic calculus for their participation in a contentious collective action (Tarrow, 1997). Following the broad theory of rational choice, the work incorporates cognitive, normative and emotive factors to the explanation. So, first we propose that the movement can be treated as a production’s function with two phases, where in each of them there are different mechanisms and games that help to explain the process of collective action. The first phase, which we call accelerative, is triggered by a political opportunity that incorporates elements such as coordination between groups, high expectations, and a focal point equilibrium. The second phase, called not-accelerative, arises once the election finishes and is characterized by a lack of coordination, internal conflicts between groups, and lack of participation. From a set of short interviews to active participants in the movement #YoSoy132 Mexico City (14 women and 16 men), the findings show the variety of reasons present in the interviewees, and that some actors may have a predisposition to behave according to a kind of reason (i.e., instrumental vs. normative). The main conclusion we arrive is that the two versions of rational choice allow a better approximation to the individual and collective action in the movement #YoSoy132 in Mexico.

*Clinicians in Governance: Evidence for Hospital Performance from the Italian NHS*

The study explores the effects of clinicians’ involvement in governance on hospital performance through an empirical investigation in the Italian NHS. By drawing on the *board human capital* literature (Hillman & Delziel, 2003; Kor & Sundaramurthy, 2008; Kroll et al., 2008) and the empirical evidences on clinicians in hospital governance (Dorgan et al., 2010; Goodall, 2011; Molnari et al., 1995; Veronesi et al., 2013), we develop our research hypotheses. More specifically we conjecture that hospital chief executive officer (CEO)’s (i) clinical expertise, (ii) previous governance experiences in the NHS, (iii) public health specialization, and (iv) business/administration specialization, have individually a good effect on the organizational performance.

**We find:**

- Data are collected for 3 years and the sample is composed by 278 observations. CEO’s expertise, experience and specialization are main independent variables. Six indicators in terms of financial/non-financial performance are instead used to measure the hospital performance. We employ a panel data approach and we estimate different empirical fixed/random effect models.

- Main findings report a positive (negative) effect of clinical CEOs on non-financial (financial) performance. By contrast, non-clinical CEOs negatively (positively) influence the non-financial (financial) dimension. Paper argues a differentiation in the provision of skills to the strategic process, as well as in the relationships with the clinical/non-clinical staffs. Findings also report good effects of CEO’s previous governance experiences and public health specialization.

- Paper contributes to research in different ways. First, we corroborate the relevance of *human capital* in governance for the organizational performance. Second, we discuss the dissimilar effects of clinical/non-clinical expertise by arguing their reasons in setting peculiarities. Finally, we investigate never explored effects of clinical/non-clinical *specializations and experiential background.*

- For what concerns the practice, we suggest policy makers to pay more attention to the expertise legal requirements for CEO candidates.

*Cultures, Strategies, and Organizations for Mobilizing Social Movements: Divergence and Convergence Between Social Movements and Labor Movements*

There have been few comparative studies of social movements and labor movements. Social movement studies have examined the conditions, development, and outcomes of social movements using various theoretical frameworks. In contrast, largely driven by Marxist and post-Marxist theories, labor movement studies have often focused on whether and how workers have organized themselves as a coherent force—i.e., as a class. In brief, in labor movement studies, workers’ movements have often constituted a sub-topic of the study of class, and the ways workers have organized as workers. But how exactly do these two movements differ? Or what do these movements share? By examining a Japanese social movement, the protest against the revision of the U.S.-Japan Security Treaty (commonly referred to as the 1960 Anpo protests, named after the acronym of the treaty in Japanese), this paper explores divergence and convergence of movement cultures, ideologies, and strategies, and the organization of social movement and labor movement groups. I compare two groups that participated in the 1960 Anpo protests—the Bund, a new left student movement group that became prominent during the 1960 Anpo protests, and a new left faction of the Osaka Central Telegraph union that became prominent among new left labor unions in the 1960s. This paper argues that despite similarities in ideology between the two groups, external constraints on their organizations shaped different strategies for mobilization. Furthermore, the two groups never merged nor worked together, although they explored possibility, despite their common political goals and similar ideologies. This was due to intergroup culture differences, as well as problems with mutual trust acting as a wedge between them. The empirical data collected from interviews, for instance, show that while knowledge was a key issue for mobilizing student movements, trust was a key issue for organizing the workers’ movements.

*Alternative Art-Production Networks in Lower Manhattan in the 1960s-1970s: An Organizational Account of the SoHo’s Gentrification*

This paper deals with an early period of an artists-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo’s gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolical and institutional boundaries of art districts. These former studies contributed to examined that the artists’ spaces and their aesthetic images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo’s gentrification: alternative arts-production-networks in downtown also critically contributed to construct physical and symbolical bases there.

To explore this issue, I will focus on artists’ activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourish of art museums and commercial galleries in urban areas. These alternative artistic activities created new spaces of field of art productions in downtown. Analyzing the arts-productions-networks in downtown in the 1960s and 1970s, this paper focuses on especially cooperative galleries and alternative spaces. These alternative arts venues were critical aesthetical bases in SoHo.

**SASAKI, ELISA MASSAE** (Rio de Janeiro State University, elisamassae@gmail.com)
The results show that there are clear gender differences in the career paths among Japanese youths. Younger men's career is more likely to be unstable, whereas younger women's career is more likely to be stable. Educational attainment does not predict career paths among men, whereas highly educated women's career is more likely to be stable. Men whose career path was unstable are less likely to make money and get married, and more likely to be unhealthy and unhappy. Women whose career path was stable are more likely to make money but be unhealthy, and less likely to get married. Recent economic recession and the populality of higher education are presumed causes of diversified career paths among Japanese youths.

The Meaning of the International Marriage in Korea

Nowadays in Korea, international marriage has increased since 2000 rapidly. Increase in this international marriage is not the change of the marriage from the influences of globalization. Because Korean people have protected their blood principle rigidly for a long time. It is a big change increasing to international marriage in Korea, and it is shaking now family value from the bottom.

In this report I ask why has international marriages increased in Korea rapidly these days? Also, who and why do people choose an international marriage? I pay attention to the change of the marriage and the family in Korea today and intended to consider the meaning of international marriage.

This study developed the result of the data analysis of the census (1995, 2010) that I analyzed before. In the former analysis, I compared the change that was in the marriage form with the census of 1995 and 2010 according to sex, age, and educational background. The result implies from the rapid increase of international marriage today in Korea that it is due to the increase in high educational background of the woman from the 1990s and the economic power drop of the man from the late 1990s. Based on these findings, I will include variables such as economic activities state, occupation, occupational position and compare and contrast according to the man, woman and combination of couples who chose international marriage using census data. Furthermore, I will use the "dynamics statistics data" and cast the education level between the couples who married a person from a different nationality, the variable such as the nationality of the partner and consider the meaning of the international marriage in Korea these days by clarifying the sociodemographic characteristic of the couple who choose to international marriage.

Expulsions: When Complexity Produces Elementary Brutalities

The past two decades have seen a sharp growth in the number of people, enterprises, and places expelled from the core social and economic orders of our time. This tipping into radical expulsion was enabled by elementary decisions in some cases, but in others by some of our most advanced economic and technical achievements. I use the notion of expulsions to go beyond the more familiar notion of growing inequality, and get at some of the more complex pathologies of today's global capitalism. It brings to the fore the fact that forms of knowledge and intelligence we respect and admire are often at the origin of long transaction chains that can end in simple expulsions.

The talk is based on Saskia Sassen’s forthcoming book Expulsions: Brutality and Complexity in the Global Economy (Harvard University Press 2014)

Food Sovereignty and the Solidarity Economy Alternative

This paper explores the relationship between food sovereignty and the solidarity economy. It brings out the extent to which food sovereignty as an attempt to address corporate control of food systems, engender adaptation to and mitigation of climate change and ensure popular control of food systems embraces and articulates with the solidarity economy. The solidarity economy in this paper is not understood as a codified definition but rather a transformative practice emerging from below with an emancipatory utopian dimension, a new conception of concrete utopia and a commitment to deepening democracy. This exploration is carried out through the prism of two case studies. The CECO-SESOLA worker cooperative movement in Venezuela and its attempts at popular control of a food economy and the emergent food sovereignty movement in South Africa.

Structure of the Issues Surrounding the Nuclear Accident Evacuees: What Has Been Seen While Supporting Town Meetings

Since August 2011, “Tomioka sub group” of the Sociology Study Group of Large-scale evacuation (representative YAMASHITA, Yusuke) has been conducting interviews with Tomioka town residents in Fukushima Prefecture that were forced to evacuate from their home town due to the Fukushima Daiichi nuclear accident. While supporting town meetings organized by stakeholders, we recognized the following issues clearly:
1) Problems that evacuees have faced are complex and very extensive.
2) However, those issues are not correctly recognized by policy makers.
3) Therefore, the present policy does not effectively relieve the affected people.
4) As regional restoration plans were decided hastily, the problems of the affected people deteriorated.
5) The problem of Japanese legal system which surrounds local autonomy is behind such issues.
6) In addition to these issues, it is not possible to deny the existence of public opinion to boost the seriousness of these problems.

We would like to show how shocking events bring about decisive shifts in our risk perception and governance and how specific cultural patterns frame those shifts. In both cases, a minimal risk ceased to be a mere theoretical possibility and turned into a real “threat” which imposed a political “necessity” to act. After 9/11, the hypothetical “ticking bomb scenario” became a matter of national security that justified US-led wars, US detention and interrogation policies as well as extensive global surveillance. The anticipated threat of terrorists in possession of biological or nuclear weapons had to be averted – whatever it took. Similarly, the shocking accident at the Fukushima nuclear plant following the big earthquake and tsunami led to the shutting down of nuclear energy in Germany and changed the government policies. A “residual risk” (Restrisiko) of nuclear energy, which had thus far been regarded as controllable by means of science and technology, became an allegedly life-threatening danger to be eliminated at all costs. But these discursive and political shifts cannot be thought of as a direct consequence of these events. It is rather the specific framing of events in particular national contexts that leads to shifts in risk perception and governance. This is particularly clear in the German case: the recent energy policy change was mediated through a discursive pattern of nuclear resistance, which is deeply rooted in the German political culture. Similarly, the American response to 9/11 was shaped by national memory and popular culture, for example “Pearl Harbor”, the “phantasm of bioterror” and the “law-defying hero”.

Women’s Empowerment Beyond ‘Smart Economics’: A Transnational Feminist Perspective

Since the economic crisis of the last decade, integrating women into development has become the major ‘smart economic’ strategy. UN Women states that “equality means business” and the year 2012’s World Bank report set gender equality as their top priority. Today, in the global South, Northern private corporations, like Coca Cola, aim to empower women in their value chains or at the bottom of the pyramid by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming ‘ethically’. Critical feminist scholars separately argue that each approach may be functional to structural inequalities. However, from a comparative perspective, both approaches involve women in market-oriented activities, see women as caring mothers and responsible consumers and frame investment in women as ‘smart economics’. In order to strengthen existing analyses, ‘ethical’ consumption and southern livelihoods, presented thus far separately by critical feminist scholars, should be studied together. Such a study will, necessarily, be transnational and will draw on the theory and methods of both those who study the Northern consumer society (e.g. lifestyles and marketing) and those who focus on low-income societies (e.g. sustainable livelihoods).

This paper uses a transnational feminist perspective to examine existing feminist literature in a comparative study of the practices through which women generate livelihoods and the lifestyles women produce through their participation in Northern corporation led market-oriented development activities. This paper links inter-related constructions of mothers in the North and South in order to generate and test the foundations necessary to later study empirically if and how market-led corporate sponsored ‘smart economic’ development approaches obscure and/or transform structural inequalities in the name of women’s empowerment.

Atypical Employment in Japan

The aim of this panel session is to outline the changing practice of the Japanese employment system. The Japanese system has been classified as an organization-oriented, the key feature being the security of long-term employment within the same firm. The main feature of the Japanese industrial relations system is the enterprise union, which appears to have reinforced the employment security. The Japanese practice of offering new recruits work straight after completing their education enables students to immediately begin their work-life as ‘regular employees’. The Japanese employment practice, however, is also faced with different employment practices of other countries due to globalization, and it is becoming more difficult to maintain the high level of job security for various types of work in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

SATOH, SHIHO* (The Norwegian School of Sport Sciences, shiho.sato@nih.no)
Health Discourse, Ruling Relations and Work Knowledge

Research in Institutional Ethnography (IE) has increasingly shown how institutional discourse frames the way individuals think and act within their everyday practices. For example, Luken and Vaughan provide compelling evidence that state-affiliated organizations created a discourse about family housing that structured parents talk and actions concerning their living arrangements (2006, 300). This further highlights those ruling relations that served to organize parent’s daily family life.

This presentation will argue that an analogous case can be made in relation to modern discourses involving the use of ‘health’ and ‘physical activity’. It focuses on the case of rural female workers who live outside the mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim
is to explicate some of the ruling relations that organize work activities in relation to women’s health in these different cultural settings. A key resource for this research is the concept ‘work knowledge’. ‘Work’ in IE points to anything that requires time and effort, that is conducted under specific conditions with specific resources and which may need to be thought about. This view helps the institutional ethnographer stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in these rural communities and the kind of contributions that women make in these environments. My aim will be to show how sport is largely absent from these females lives but that physical activity is central for how they conceive of their work and health. A key resource for this research is the concept of ‘work’ found in institutional-ist ethnographic research. In this view of work, anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about. This view of work helps researchers to stay focused on what people are actually doing and what is it that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in such rural settings work, health and physical activity are interconnected and not isolated as in their urban counterparts. The importance of a healthy lifestyle is then a product of the physical activity that is part of their overall work life and is not derived from sporting activities or government policies and recommendations.

**Contesting the Uncertain Promises of Rehabilitation: Struggles and Coping Strategies Among Slum Dwellers in Ahmedabad, India**

The ‘slum-free India’ slogan that came to the fore in urban policy discourses in the mid-2000s has marked the draconian shift from in-situ slum improvement to slum relocation. Accordingly, the burgeoning literature on urban governance in India has portrayed slum dwellers as victims of such new, neoliberal forms of development. Despite its unique focus on the socio-spatial configuration of poor people’s exclusion, it has not paid due attention to their resilience to such pressures. Drawing on qualitative data obtained from two slums in Ahmedabad, an India’s globalising mega city, this paper examines the manner in which some residents collectively negotiated with the local state either in defence of their housing rights and livelihood or in pursuit of personal gains through manipulating the compensation for relocation. This paper has three objectives. Firstly, it gives an overview of the Slum Networking Project (SNP), which was launched in 1996 through a partnership between aid agencies, local government bodies, NGOs and community-based organisations, as an example of in-situ slum improvement. Secondly, it portrays the process by which the SNP was replaced with some rehabilitation schemes as evident in the provision of dwelling units in multi-storied housing blocks, which are typically located in urban fringes. Thirdly, it presents the diverse strategies that slum dwellers took to claim their right to housing and livelihood. Some residents sought redress with an NGO and the opposition party. Some residents sought co-operation from their neighbours through coercive means and attempted to obtain more compensation than would be available to them by claiming fake figures on their households and neighbourhood. This paper concludes by stressing that the powerful in a slum can mobilise an ‘illegitimate’ means of survival when they are at risk of eviction and deprived of access to ‘legitimate’ channels of claim-making such as NGOs.

**Japanese Climate Change Discourse Coalitions**

The presentation shows the Japanese discourse and discourse coalition on climate change based on the content analysis of main newspapers. For the analysis, our Japanese Compon team engaged in the following: (1) To follow historical changes to the discourse, we sampled articles from 1985 to 2006 from one of the largest progressive national newspapers, Asahi Newspaper. (2) To analyze in more detail the structure of the current discourse, we used two other mainstream newspapers in addition to Asahi newspaper for articles published between 2007 and 2009, the Nikkei economic and Yomiuri conservative newspapers. The results of our analysis indicate the characteristic features of the Japanese discourse on climate change. The majority of articles do not cover the views of skeptics with regard to the existence of the climate change problem itself. In addition, there appears to be an overall agreement within Japanese society on the need to save energy. The main flow of the discourse is along the lines of how climate change is framed within the broader context and measures to be taken. One side of the discourse coalition, which is primarily lead by the Ministry of Economy, Trade and Industry, and industrial sectors frames the problem in the context of energy itself. Accordingly, this coalition essentially pursues the improvement of energy use efficiency through voluntary action and the shift to nuclear energy sources. The other coalition, led by the Ministry of Environment, a progressive newspaper, and NGOs—though their coverage in the media is limited—recognizes the need for a more structural change toward a more sustainable market and industry. Historically, this coalition gradually imported policy ideas from other countries, such as green tax, emission trade, and feed-in tariffs, some of which were introduced by the DPJ government between 2009 and 2012.

**Infrastructure for a Post-Nuclear Society: From the Survey on Japanese Civil Society Organizations in Nuclear Energy Policy Domain**

Despite the unearthing of the Japanese government’s attitude towards the future of Japanese energy policy, I will argue in this presentation based on the empirical research results that the condition for the post nuclear society is emerging in the empirical Japanese civil society.

Keiji Takeuchi, a journalist at Asahi newspaper, states in his book that in order to achieve a nuclear society, more support from both institution and public opinion are needed, and he continues, that of importance is the existence of the civil organizations which continually appeal to the public and connect citizens with...
political parties. I will call those civil organizations here as infrastructures for a post-nuclear society. They were, however, rather isolated before the Fukushima Daiichi accident. Whether was the situation changed or not?

To analyze it, Study Group on Infrastructure and Society conducted a survey during February and March in the year 2013 on 904 civil organizations, and got 326 answers from them (the collection rate was 36.6%). We find that firstly organizations which worked in the nuclear energy policy domain increased more than two and half times than before the Fukushima accident. Secondly, those new comer organizations handle new issues such as recovery from the disaster and measuring radiation level. Consequently, they widened the context of the nuclear related issue and broadened the connection between civic life and policy. Thirdly, those organizations discuss the policy based on data and information and sometimes collaborate with public sectors, which are crucial criteria for the post nuclear society. Fourthly, however, a coalition between the organization and citizens when they succeeded to set a clear enemy such as the government and TEPCO, but they do not share the concrete image of post new clear society.

The Changing Profiles Of Inequality and Exclusion In Australia

Despite evidence that income inequality has increased and is of community concern, Australian policy makers have emphasised their commitment to the fair go' but recent features in political debate, relating the fears of a voter backlash in the face of reforms that involve losers as well as winners. Both major parties favour ‘growing the pie’ over ‘dividing up the slices’ yet fail to recognise that even a larger pie must be distributed fairly. Establishing how inequality has changed is complicated by definitional changes that have undermined the comparability of income distribution data, and the confusing picture portrayed by public opinion data on attitudes to inequality provides little guidance about how much actual redistribution (as opposed to how little inequality) the community is prepared to support. The emergence of social inclusion as a policy priority has given new impetus to understanding inequality and social exclusion, although this relationship is poorly understood conceptually and inadequately documented empirically. This paper draws on a range of survey data to examine recent trends in different dimensions of economic inequality and social exclusion in Australia. Attention focuses on how the profile of social exclusion varies across the income distribution, on the extent and nature of exclusion-inequality itself, and on the association between these measures (in isolation and in combination) and the subjective well-being of those affected. The paper will conclude with some reflections on the implications of the emergence of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

Combating Time and Space in Istanbul: Differential Civic Activism in Urban Development

The paper explores the re-appropriation of urban space as a practice of collective contestation against established frames of time and space in urban policy making. Crisis and uncertainty in the governing of urban form have showed the spillovers of a rational model of spatial organization, based on long term future prediction of city growth and supply-oriented urban policy making. Civic society and urban users have been generally regarded as customers or users of urban space, which is sometimes been transformed into choreographed practices of cooptation. We argue that contemporary urban policy making are too much framing urban agency as a ‘governmentally designed object’, through preconstituted notions of space and time despite few attempts to enable self-organization. These three elements are tightly connected and the beneficiaries understand themselves and their space in the political sphere. Image can be positive or negative, affecting the way beneficiaries understand the political and social consequences and motivations behind policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way beneficiaries understand the political and social consequences and motivations behind policies. This framework allows us to understand the political and social consequences and motivations behind policies. The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contentions that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policies design. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, govern and public approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way beneficiaries understand themselves and their space in the political sphere. This paper analyzes the social construction of image between beneficiaries from the national conditional cash-transfer Bolsa Familia Program in Brazil as a dimension of the political identity. It analyses the role of the State, the media and sociability relations. These three elements are tightly connected and the beneficiaries are aware of the constant contention around the program's legitimacy. They react actively to the negative image constructed by the media and that is reproduced inside their sociability relations.

ICT As a Communication Tool for Older People (aged 80) in an Urban Area

While ICT (Information and Communication Technology) has been spreading dramatically in Japan, little is known about how seniors use it as a tool to communicate with non-relatives. The authors conducted interviews with residents (aged 80) of Suginami City, Metropolitan Tokyo, in October and November 2013, regarding communication with non-relatives. A total of 513 people responded. About 60% of the respondents met and spoke with “friends” and “people they have known from childhood”; men were more likely to do so than women. In all types of relationships, a conventional phone was the most popular choice as a usual communication tool, followed by “letter” for “people they have known from childhood”, as well as “face-to-face meeting” and “cell phone” for “friends” and “people in the group they are members of.” In all types of relationships, 10% of the respondents chose “e-mail.” Men were more likely to send e-mails than women. In North American urban sociology, there is great interest in how the faster communication, resulting from the increasing availability of affordable and efficient transportation and ICT, affects interaction among individuals. As the usage of ICT becomes more common among seniors, the ways the very old persons communicate with others are also expected to change.

SAYÃO LOBATO COPPETTI, CAROLINA* (Ministry of Social Development, carolocoppetti@gmail.com)  
Social Policies and Political Identity: Analysis of Bolsa Familia Program in Brazil

There are few studies analyzing how policies impact on political identity construction. Following the cognitive approach in policies, recent studies show that State actions creates new social actors: individuals that become beneficiaries but who didn’t constitute their identities in relation to the State before. Therefore the State is a space of cultural and symbolic production, where new identities are constructed and new political lessons are learned. The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contentions that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policies design. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, government and public approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. Family Structure, Socioeconomic Well-Being and Elderly Chronic Illness in Thailand

Thai culture which is related to caring of the elderly has been named as one of a very strong one in the world. The family, in general, has to look at their elder in every perspectives. This study focuses on Thai elderly ages between 65 and 84 years old quality of life, under the rapid changing of Thai society that moving from agricultural to industrial era. The research examines effect of family structure, household socioeconomic well-being and elderly quality of life that measured from chronic illness. The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Finding shows that the elder who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and loneliness when compare to those who live in extended family. Family support is more likely depending on household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would to receive support and assistance from the government need to have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elder, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.
A New Middle Class? Challenges for Inequality in an Emerging Country

The changes in the contemporary world have been quick and frequent, particularly in countries considered as emerging nations. They have an impact on the living standards and consumption, creating new social groups, resulting from those dynamics. Recently in Brazil, the debate on the emergence of a new class “average” gained relevance and academic crossed the borders, having an enormous impact in the public arena. Some economists define this “new middle class”, from their income. While recognizing the importance of this element in the study of inequality, the concept of class demand more complex analyses that include socio-occupational factors, as well as perceptions, values, expectations and worldviews regarding personal projects and processes of distinction.

As the task of studying multiple and varied dimensions of social life can not be restricted to a specific focus, either theoretical or methodological, we have been working with qualitative and quantitative methodologies. The work we propose to present is based on the fieldwork we carried out in Rio de Janeiro with individuals who fall into the two groups that we are defining “traditional middle class” and “new middle class”. Our goal is to understand their trajectories, as well as, their projects for maintaining or improving their live conditions in the future.

SCHADLER, CORNELIA* (Ludwig Maximilians University, cornelia.schadler@univie.ac.at)

We Have Never Been Individuals – New Materialist Ethnography

In 2011 I finished an ethnographic project on the transition to parenthood from the perspective of new materialism (Schadler 2013a, 2013b) and started another empirical project on definitions of family from this perspective. My talk will summarize the theoretical principles and onto-epistemological foundations of these theories and how they are transformed into an apparatus (Barad) that act as a tool for actual empirical research. I will also discuss how the researcher, research and a research field are established within this process. Theoretically we cannot perceive the researcher as a subject acting on a filed, but the researcher is becoming with and figured with it during research. However, this process is also producing research outcomes, which are therefore not a product created by the actions of the researcher, but a part of the practice of researching. The researcher is formed as the part of the practice that assembles outcomes and provides them in writing and talking to research communities.

In particular I rely on the work of Karen Barad, Rosi Brairotta, Donna Haraway and Stefan Hirschauer. In my talk I also want to provide information how I derived a concrete method of analysis from the principles of new materialism. To collect data I used interviews, observations, documents and self enactments. For analysis I developed a coding process, that reconstructs practices and the establishment of the boundaries, which separate components/participants in order to make them perceivable. The consequence is an ethnographic transcription of the figurations of interest (e.g. becoming parents) and the worlds they are becoming with. The researchers’ tools become an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the “object”, while we study how the object is figured.

Ethnic Inequalities in Educational Returns: Overeducation, Language Skills and Social Capital

According to existing studies, the persistence of ethnic inequalities on Western labour markets is largely due to ethnic differences in educational attainment. Empirically less important, but socially more relevant are differences in educational returns: why is education less beneficial for immigrant minorities in meritocratic societies? Apart from taste based and statistical discrimination, we argue that missing language skills and a lack of social capital could explain why immigrants and their children cannot make full use of their education. For income, we additionally assume “lagged” consequences of lower employment returns to education: Because education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

Using data from the German Socio-Economic Panel 2006-2009, we show lower educational employment and income returns for first and second generation Spätaussiedler as well as persons of Italian, Greek and Turkish origin as compared to native Germans. Results of simultaneous conditional quantile regressions show similarly stark percentile and median differences for first and to a lesser degree also second generation immigrants. Missing language skills and social capital seem unlikely candidates, given the equal pattern of differences for different percentiles. Yet, these differences in educational returns are largely accounted for by the larger degree of overeducation among persons of immigrant origin. The results also show that lower returns to education have two sides of a coin: The returns at upper quantiles for second generation immigrants are less disadvantageous. If education counts less, so does its lack.

YU, PRISCA (University of Vienna)

The Standardized Transition to Parenthood: How Standardized Practices Produce Gendered Subjects at the Transition to Parenthood

The transition to parenthood in Austria is constituted through a set of standardized practices that includes medical care, legal processes, public discourses on women’s health and decisions around public aid affect every pregnant women and most of their partners. In Austria the transition to parenthood leads to more traditional role configurations and to an increase in unequal distribution of labor. However, many women in Austria are highly educated, have full access to the labor market and value and demand gender-equality, it seems crucial that throughout all levels of education women experience a retraditionalization of gender roles during the transition to parenthood. A focus on standardized practices is a sufficient way to show how even highly educated, career oriented and bread winning women engage in non-work roles. The lack of understanding is formed as an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the “object”, while we study how the object is figured.

The All-Pervasiveness of Racism in Germany: Difficulties and Challenges in Addressing Racism

Racism is a societal imbalance relationship which structures social order, with social practices of difference, the construction of social groups and social meanings and inclusions and exclusions. When looking at the mechanisms, attributes and manifestations of racism in Germany, global, European and national “lines of tradition” and histories of racism have a powerful effect, if one speaks about racism in Germany, its specific expressions and effects, the history of racism in Germany needs to be taken into consideration.

Studies show that racism today is institutionalised. For example in state employment agencies with regard to social security allotment or in institutions of education and social work and in the actions of professionals (Melter 2006, Flam 2007, Gomolla/Radke 2007).

The focus of this paper will be on a reconstruction of a racist normality in Germany, constantly present as a societal relationship in the everyday life of people to whom a migration history is attributed, as everyday occurrence and manifested in normalised practices of differentiation, isolation and exclusion. The analytic perspective of this paper will be on the subjective experience and interpretation and consequent strategies of action and negotiation of young people, whose everyday life is negatively impacted by racism.

In the international context of the conference it will be interesting to discuss with other researchers different theoretical visions to normative orders, at how they position themselves in relation to religious actors – thereby navigating through the sometimes narrow path between mere advocacy for a secular state and social justice on the one hand and anti-religious criticism of faith communities on the other –, the socio-political dimension of being nonreligious becomes apparent – a dimension which so far has been hardly scrutinized by social scientists.

The research presented in this paper is based on group discussions, and problem-centred interviews with eight young adults (age 14-20). Part of the data was collected during a 4-day workshop with young adults with a migration background, where reflections and discussion about experiences and strategies among participants took place.

Whether in a highly secular context, as in Sweden, or in countries where religion plays a more influential role in the public sphere: Nonreligious groups, like humanist or atheist organizations, often construe “religion” and/or religious actors as obstacles to different interpretations of justice, equality, and ethics from a sociological perspective. In my paper I use the debate about religious education in Sweden as such an “entry point” for exploring those dynamics and relationships empirically in their cultural specific context. By looking at how humanists engage in such debates, how they link ontological visions to normative orders, at how they position themselves in relation to religious actors – thereby navigating through the sometimes narrow path between mere advocacy for a secular state and social justice on the one hand and anti-religious criticism of faith communities on the other –, the socio-political dimension of being nonreligious becomes apparent – a dimension which so far has been hardly scrutinized by social scientists.

Lack of paid work beyond retirement age is on the rise in many Western countries. Our contribution aims at shedding light on the factors driving post-retirement work in Germany and the UK. Our perspective is cross-sectional, but will nonetheless focus on individual life-course influences on post-retirement work. Regarding these influences, two intertwined areas can be distinguished: influences connected to the employment history, and influences connected to the family and the personal network.

As to employment histories, they shape the ability, the opportunities and the desire to work beyond retirement age in different ways. However, the underlying patterns are not unidirectional: On the one hand, interruptions and non-standard employment are related to lower old-age incomes and a potential higher desire for additional income in old age – a relationship that is at the same time differentiated by the specific institutional setting. On the other hand, a continuous employment career, especially in higher occupational classes, seems to be connected with better employment opportunities in old age and a stronger work identity. The latter relationships are also mediated by family histories. Additionally, family histories and personal networks also constitute important independent influences.

The contribution will first present quantitative evidence on these relationships, based on the English Longitudinal Study of Ageing and the German Ageing Survey. In a second step, evidence from qualitative interviews with working pensioners from the UK and Germany will be presented. This evidence helps to elucidate the (complex) subjective mechanisms behind some of the quantitative relationships. The interviews suggest that the experience of work beyond retirement age is overall positive, with paid work being seen as a way to do something meaningful, to stay in touch with other people, or to structures one’s day. In the final discussion these results will be connected to the country-specific debates around work in old age.

The paper will briefly introduce the role of the sickness funds in Belgian health care. Then, the attention will be focused on the professionalization processes of doctors in medicine, surgery and gynecology. (Original title in 1849.) Specialization processes started already in the 19th century but the coming into prominence of medical specialists started after the second World War, together with the introduction of obligatory health insurance (1944). The already existing rivalry between ‘general practitioners’ and medical specialists became very prominent. A sort of solution was reached at the end of the 20th century. In the meantime the position of general practitioners has improved.

Nato’s Quest for Greater Operational Effectiveness: Concordance Theory and Civilian-Military Personnel Relations

Many defense organizations are comprised of both military and civilian personnel working towards the realization of defense goals. Civilian personnel in defense organizations often work closely with their military counterparts. The issue of civilian-military personnel collaboration within defense organizations is an important issue that affects both operational and organizational effectiveness. Civilian-military personnel collaboration also has significant impact on civil-military relations theory. Civilian and military institutional separations has been the hallmark of the civil-military relations field since the post-World War II era. Focusing on the need for greater collaboration among civilian and military personnel in defense organizations challenges the traditional focus on separation. Objective civilian control does not exist at all levels of the civil-military relationship spectrum. The reality is that civil-military relations may call for broad institutional separations as well as more fluid and collaborative roles within defense establishments. Personnel relationships in defense organizations, often warrant more integrative dynamics and directly affect the development and execution of military strategy as well as operational and organizational effectiveness. Enhancing collaboration between military and civilian personnel points to a theoretical model, such as concordance theory, which embraces broader institutional separations as well as cultural conditions requiring more flexible civilian and military relationships. This presentation is created within the context of a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative.

SCHINDLAUER, SANDRA* (Bauhaus University Weimar, sandra.schindlauer@gmail.com)
The Alienation of Public Spaces by the Homeless

Since the 1970s, German researchers have turned their back on the topic of homelessness. As a result, Germany has neither a universal definition, nor an official statistic on the amount of homeless people living in the country. Today, most German cities are facing a significant lack of affordable housing. Additionally, the borders of the EU have been opened towards Eastern Europe (2004 and 2007). In the hope of jobs and wealth, Eastern Europeans flock to Germany. However, a lot of them fail to fulfill their dreams and end up homeless. As they are not eligible for German welfare. Hence, the number of homeless people being visible on the public spaces of German cities increased constantly in recent years.

As the cities are afraid that the ascending presence of homeless people constrains the consumer climate (especially in pedestrian and representative areas), they are seeing themselves forced to act. In contrast to the USA, where the cities usually focus on maintaining strategy, the method of choice is the displacement and decentralization of the homeless. During my presentation, I would like to focus on one of the most subtle ways to achieve these goals: structural modifications and installations which aim to prevent the “alienation” of public spaces by the homeless and other undesirable groups. I would like to complement my remarks with a discussion on how these actions are being implemented and justified by the cities and why people who do not belong to the target group are not able to decode their function.

People say that public spaces are a reflection of the society. The stepwise exclusion of unwanted persons from public spaces not only creates a distorted picture of the reality; it also calls a fundamental characteristic of modern democracy into question. We are talking about participation.

SCHINDLER, SETH* (Humboldt University of Berlin, schindse@hu-berlin.de)

Governing CO2 Emissions in Delhi, India: The Clean Development Mechanism and the Informal Recycling Sector

There is a consensus among policy makers that climate change must be addressed through global governance frameworks based on the measurement and reduction of CO2 emissions. This ‘carbon control regime’ at the global scale requires cooperation from municipal governments whose task it is to enforce its implementation locally. Scholarly research on metabolises in the global South tends to focus on policies aimed at adopting to climate change, and this paper seeks to contribute to a growing body of scholarship focused on the efforts of municipal governments in the global South to mitigate CO2 emissions. I examine the impact of the UNFCC’s Clean Development Mechanism (CDM) on solid waste management in Delhi, India. The main argument of this paper is that the CDM has contributed to the emergence of an environmental urban governance regime based on calculating and reducing CO2 emissions. This data fetishism obscures the relatively high recycling rates achieved by Delhi’s large informal sector, which is ubiquitous but difficult-to-measure. This has justified a dramatic shift in Delhi’s waste management strategy, as plans to build sanitary landfills have been abandoned in favor of waste-to-energy incinerators, three of which have been approved by the CDM. This policy shift has precipitated conflict over the ownership and control of waste between small-scale informal enterprises and large formal-sector enterprises, and it relocates value from the labor of informal-sector waste collectors to waste matter itself which is required for the operation of waste-to-energy plants. I conclude that the overriding principle of this emergent governance regime is capital accumulation rather than the mitigation of CO2 emissions, and its inability to incorporate extensive informal environmental management systems calls into question its overall effectiveness.

SCHINDLER, SETH* (Humboldt University of Berlin, schindse@hu-berlin.de)

Making Delhi World-Class*: Relations Between Informal Service Sector Workers and the ‘new’ Middle Class

Governments at multiple levels have ambitiously committed to transforming India’s metropolises. In this context formal electoral politics increasingly favor the so-called ‘new middle class.’ While the urban poor are typically excluded from formal politics and the formal economy. While scholarship tends to compartmentalize the politics of the new middle class and the urban poor by focusing on how they interact with the state, little is known about inter-class relations. In this talk I present original research on relations between workers in the informal service sector (i.e. street hawkers and waste pickers) and associations that represent the new middle class (i.e. resident welfare associations and market traders’ associations). I show that in the case of Delhi, conflict between these groups is typically over the terms of use of urban space rather than zero-sum conflicts over space. Furthermore, the analysis shows that these classes are interdependent; the poor depend on demand for services from the new middle class for their livelihoods, and the lifestyles of new middle class are enabled by services provided by the informal service sector. However, both groups also require access to space; it is the most important means of subsistence for the poor working in the informal service sector, while members of the new middle class require the production of ‘world-class’ spaces where they can practice cosmopolitan lifestyles that serve as a basis of class membership. I take the poor’s demand for greater collaboration among civilian and military personnel in defense organizations for greater collaboration among civilian and military personnel in defense organizations. This paper investigates the ways in which ‘climate’ can be considered as social assemblage. It does so by showing how climate facts and factors have often been construed as climate acts and actors. This is illustrated by considering three ways in which climate has historically been construed in relation to the social. The first is to consider climate as a causal factor. This has been prevalent from classical authors such as Hippocrates and Ovid to modern authors such as Montesquieu, and has persisted up until the origins of modern climate science. This is illustrated with historical examples.

The second construes climate as an enrolment assemblage. Here, climate becomes an assemblage of various heterogeneous factors working together within human actors to produce what we now call climate. This is illustrated in this paper using data from an ethnographic field study among paleoclimatologists. The third way to consider climate as a social assemblage is to construe climate as medium of relationality. In this view, inspired by authors ranging from Watsuji Tetsuro to Timothy Ingold, climate is a relational web that is the space in which life unfolds. The paper concludes by illustrating climate as medium in a speculative way, arguing that this conception implies a significantly different social ontology from that which has characterized modernity.

SCHINKEL, WILLEM* (Erasmus University Rotterdam, Schinkel@fsw.eur.nl)

The Art of the Other. the Paradox of Universality in Western Conceptions of ‘Japanese Art’ (1860-1940)

The era of the rise of modernism involved the emergence of art as an autonomous and universal category. This paper argues that, given the universal claims of the notion of art, it is difficult to understand how successive waves of artists, such as Impressionists or Expressionists, came to be viewed as falling outside the purview of modern art. This paper addresses the paradox of how and why, in turn, the modernists were able to claim their work as being just as ‘International’ as that of the ‘Italian primitives’, while at the same time their work was traditionally criticized for its national or provincial character. The paper proposes that this paradox is best explained by a re-appraisal of the different meanings of ‘universal’, which the modernists variously claimed to have achieved.
plausibility for modernist conceptions of art. It universalized the category of art by giving it a global meaning both in spatial and in temporal terms. At the same time, this universalization meant that cultural hierarchies informed by western hegemony were threatened. This paper looks at the ways influential western observers of Japanese art between 1860 and 1940 dealt with this by contributing to the simultaneous universalization of the category of art and the particularization of the concept of ‘Japanese art’. This ‘paradox of universality’ involved a differentiation between on the one hand particular, local, traditional and most often historical realizations of what was nonetheless a universal category of art, and on the other hand its truly modern and advanced contemporary realizations of universality.

At the height of the modernizing movements in the west, Japan proved to be the site of an ‘exemplary expansion’ of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as an autonomous and potentially universal category, bordering on the‘far east’.

SCHMEECKLE, MARIA* (Illinois State University, mshschme@ilstu.edu)
The Worldwide Outlook for Children: A Model for Monitoring and Studying Children's Rights?

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. It may serve as a basis for further research on children's wellbeing, particularly for investigations of structural disadvantages and inequalities. WOC is designed for use by scholars and policy makers to understand consequences of, and identify structural inequalities and disadvantages, and resources devoted to educational success, violence committed against young people, and children's work experiences. WOC will raise awareness as well about indicators of children's wellbeing that are not yet available for many countries. As such, WOC may be instrument for identifying what we do not know about key aspects of young people's wellbeing, rights, and interests. Over time, WOC will work from a global perspective to share information regarding young people's wellbeing, rights, and interests.

RC53-852.4

SCHMEECKLE, MARIA* (Illinois State University, mshschme@ilstu.edu)
The Worldwide Outlook for Children: A Web Resource of Young People's Wellbeing, Rights, and Interests

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. It is available to social scientists who seek to identify, understand consequences of, and identify structural inequalities and disadvantages, as well as to policy makers to understand consequences of, and identify structural inequalities and disadvantages. WOC is a web resource designed for use by everyone, from scholars to policy makers to young people, and is available in multiple languages. Recent innovations in the Sociology of Childhood have focused attention on children as active agents with interests and perspectives worth knowing about. WOC presents evidence of children's physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. As sociologists learn more about children's legal and informal rights, interests and aspirations, psychological wellbeing, social interactions, choices, levels of resilience, and spiritual beliefs, we become aware of much more that we want to know about young people and the range of inequalities they experience from a global perspective. During this presentation, we will discuss methodological challenges and substantive gaps in global knowledge of children's wellbeing, rights, and interests, and how we might move forward to develop more comprehensive and holistic understandings. We will consider how measurement, theoretical, and cross-cultural questions challenge sociology's ability to grasp outlooks for young people worldwide.

The Influence of Real Life and Online Peer Groups on Caring Fathers at the Transition to Parenthood

While the transition to parenthood is still linked to a retraditionalisation of gender roles, a small but growing number of fathers aims at taking up an equal or major share of care-work, and reduce their work hours or take parental leave to do so.

Our analysis of in-depth 20 interviews with fathers-to-be, bulletin boards and website shows how those fathers reflect, organize and perform this work within a structural situation that (in Austria) still favor breadwinning fathers. Our data derive from two different pieces of work: a study on fathers on parental leave and a study on the “gendered transition to parenthood” (within the consortium FamiliesAndSocieties, funded by the European Commission FP-7).

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Contacts to other fathers that are or have been in the same position play an important role for those "new fathers". Some fathers already have access to other caring fathers within their peer group. Some try to find contact to other fathers through the use of new and social media. They attend "new fathers" groups on Facebook, are members of bulletin boards that are crowded mainly by fathers, or use blogs and forums focusing on the fathering process. On these sites, they often share their opinions, the everyday obstacles they encounter being stay-at-home fathers, or happy times and events with their children. In our talk we explore how those communities help fathers to maintain their role as caring fathers, within sometimes hostile or non-encouraging environments. The ability to share their experiences interplays with their wellbeing, their persistence against structural disadvantages and adverse comments, and the quality of the father's relationship to the mother and the child.

Sociotechnics of Economy
Revisiting my sociotechnically informed economic theory on autonomous humans (Göteborg 2010), Onati and Athens (2011), not any longer based on Capital, Market, etc., as done by mainstream economists who failed for several hundred years. Mainstream theories have been spatially based, time only occurred as space-time as well as spatial properties as measurements within space, and humans only as objects like game pieces. - My present paper will enlarge the common Factors of Productivity, traditionally Land, Labor, and Capital, by Time. Autonomous humans are characterized by Time as duration of their life which they have again and again to invest in portions as resource for their reproductive survival. An economic theory ignoring real time must fail, cutting out some holes being sold for inauthentic slavery work. Excesses of present financial markets condemn the inefficiency of traditional economic theories responsible for such perversity. - Sociotechnics as empirical science designs and implements institutions, and these going concerns are dramatically changing; we move out of an age predetermined by analogous Greek ideology focusing on the organization of respective closed spaces, cf. Plato's Parable of the Cage, without Time and movement, becoming manifest in positions, prohibiting time and movement. Greek world: A GIVEN one circling around positions. In opposition to this autonomous humans succeeding to leave Platonic Conventions confronted with a digital reality, and experience themselves as homeless, being asked to construct their >homes< themselves by way of computation. Greek-Western institutions must necessarily be replaced, since nearly all passed down institutions of analogous Greek-Western world prove inadequate in present digital age, including presently still prevailing economic theories. In digital age social life will not any longer turn around positions, but will happen in networks in which being will be replaced by relation.

SCHMIDT, JOACHIM K.H.W.* (SoReGa Ev, jkhws@aol.com)
The Cultural Influence on Social Intuitions

The Cultural Influence on Social Institutions
Joachim K.H.W. Schmidt, Berlin/FRG

Social institutions are culturally predetermined, the going concerns of people express beliefs in way of reality-perception. Cultures are different round the globe. Diversity of cultures contains a gigantic richness of human resources. Cultures actualize in human relations via common actions, and/or communication. Every culture has developed an own language for its communication. Western language (especially Anglo-American languages, have presently become globally dominant, including Western civilization culture which they embody. - The powerfulness of Western languages is subject to Greek ideology, its assumed fiction of identity of thought and being, first expressed by Parmenides 2500 years ago. Greek ideology circles around an absolutely perfect and analogously conceived spatial Being, a fictive replication of an ideal world excluding change by Time and Movement. Greek ideology gets manifest in fictive positions: its operational base. All Western languages share the COPULA as constitutive element, expressing that everything will be defined either as this or that, e.g. either Greek or barbarian, or e.g. Nazis defined Jews as non-human and sent them into the gas chamber, or e.g. formerly Christians victimized heretics on auto-da-fé, and presently victimization of humans labeled terrorists by Obama, are real drones as killing machines. And we should not forget the multiple bio-, culture-, and genocides committed by Western people under the influence of Greek ideology. - As can be not overlooked by everyone, Western analogous civilization and culture is decaying with dramatic speed, getting its deathblow by digitalization of Western societies, and consequently all central institutions have to be redesigned, adapted to starting digital life of Western populations in the Third Millenium. My paper will create awareness of the problems to be faced in near future: A job for sociotechnicians.

Schmidt, Lisa-Marian* (Alice Salomon Hochschule Berlin, schmidt@ash-berlin.eu)
Circulating Ideas and Visualizations in Educational Transition Discourses

Circulating representations of knowledge have been a central concern of Science and Technology Studies (STS). Depending on the conceptual approaches, they highlight either the stabilizing or flexible aspects of distributing and bridging knowledge through social worlds (e.g. Latour, Griesemer/Star).

For conceptualizing the circulation and transformation of ideas and knowledge (Latour), I will focus on commonly used circulating visualizations (maps, lists, graphs, tables, etc.) and related practices that visualize and facilitate the transition from school to work. Visualizations can be conceived as mediators, instruments and symbols of specific social orders and related knowledge formations. They typically serve to stabilize the relationships in which they are embedded. As representations and material artifacts they enable and/or constrain the distribution of knowledge. For a systematic analysis and a deeper understanding of the relationship between ideas, knowledge, and their visualizations I will combine STS concepts (e.g. immutable mobiles and boundary objects) with a discourse perspective from the sociology of knowledge (Keller).

The study of the circulation of ideas, knowledge, and symbols needs to take these aspects into account. In addition, it should focus on the practices of translating and transforming the visualizations between different social worlds or the strategic use of certain communicative forms e.g. in arenas, where the constitution of relevant topics or problems are negotiated.

Schmidt, Lisa-Marian* (Alice Salomon Hochschule Berlin, schmidt@ash-berlin.eu)
Producing Individuality: How Occupational Trajectories Are Embedded in Educational Practices

Referring to the pragmatist process perspective of social order and the constitution of self (Dewey, Mead, Strauss) I’d like to propose a conceptual suggestion and present empirical findings, that combine this perspective with a socio-historical understanding of the subject matter (Foucault). The concept will be presented in interplay of theoretical considerations and empirical results that derive from a current research project about the transition preparations in school and mentoring projects (school to work transition). I will specifically focus on schools because they are major institutions for the organized production of subjects. Mead and Strauss described the different processes, phases and social inter-relations that shape identity/the individual. On this perspective, identity is a constant course of action and interaction between different concerned actors, things and the work of the individual on the integration of the plenty “me’s” to a self. This process can be conceptualized as a trajectory of the subject that helps to study this ongoing transformation. The trajectory concept allows the analysis of two perspectives. On the one hand all the situated and participating actors and (inter-)actions come into focus. On the other hand the perception and experience of the subject in this process can be understood.

Interevenen with these practices of the self are typical historical knowledge formations of the subject itself. In contrast to the pragmatist process perspective Foucault offers such a historical conceptualization about the emergence of the individual. This includes sensitivity towards questions of power and their productive effects in specific institutions. Linking pragmatist concepts with a discourse approach will enable a balanced theoretical conceptualization of individuality in modern societies and elaborate analytical tools for research.

Schmidt, Luisa* (University of Lisbon, schmidt@ics.ul.pt)
Fukushima and Media Discourses on Traditional and Future Nuclear Energy

This paper presents results of a collaborative research funded by the European Fusion Development Agreement, consisting in an international comparison of media coverage of fusion and fission energy in three countries (Germany, Spain and Portugal) and in the English language international print media addressing transnational elite, from 2008 to 2012.
The analysis showed that the accident in Fukushima in March 2010 did not have significant impact on media framing of nuclear fusion in the major part of print media under investigation. In fact, fusion is clearly dissociated from traditional nuclear fission energy and from nuclear accidents. It tends to be portrayed as a safe, clean and unlimited source of energy, although less credited when confronted with research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fission is portrayed as a hazardous source of energy, expensive when compared to research costs of renewables, hardly a long-term energy option, susceptible to contribute to the proliferation of nuclear weapons or rogue military use. Fukushima accident was consistently discussed in the context of safety problems of nuclear power plants and in many cases appeared not as an isolated event but rather as a reminder of previous nuclear disasters such as Three Miles Island and Chernobyl.

The analysis suggests that the public discourse on fusion is constructed, mainly around research challenges, clamping events and scientific and technological achievements, rather than energy policy debate, climate protection or future economic compensations of fusion research.

**Collective Action, Trust and Robust Innovation: The Case of a Regional Network of Research-Groups**

Cooperation between working groups with heterogeneous disciplinary backgrounds is an important phenomenon for modern sciences. It stems on the one hand from the growing complexity in expertise and technology needed to answer fertile research questions, to succeed in scientific competition and on the other hand it is required by many forms of research-funding. The contribution focusses on a special form to deal with both: an enduring network between research-groups, which realizes different lines of research and funded projects in a remarkably successful way. Success hereby not only means that they get funded, they also managed to create highly relevant findings in a robust way (Ferrary/Granovetter 2009). The case study concentrates on the phenomenon of emerging project-networks to enable flexible and also enduring, reliable collaboration between heterogeneous actors (e.g. Windeler/Syddow 2001) but conceptualizes it as one of the actualization of collective action. Within a practice-theoretical perspective (Giddens 1984), we can describe the latter as collective agency, as differences in praxis done collaboratively in a highly bounded way towards an end collectively framed. The first part of the presentation explores different roles collective action between heterogeneous actors play in the episode of robust innovation in the network during 2005-2013. The second part focuses on trust as a specific quality of network-relations that makes it possible to actualize these lines of collective action between research-groups. It shows the importance of trust-relations in different sub-populations of the network for the network as a whole and its robust ability to produce relevant findings. In the end, the study can provide a more detailed picture of the mobilisation of collective action are empirically reconstructed on the basis of two professional associations in the formation process within the cultural sector in Germany.

**Do Tertiary Dropout Students Really Not Succeed in European Labour Markets?**

Tertiary education has been expanding hugely over the last decades, so that tertiary dropout students will constitute a growing distinctive group in future labour markets. University dropout is regularly discussed as a ‘negative’ indicator in terms of reinforcing socio-economic inequalities and being a sign of university inefficiency. However, research on actual career trajectory of dropout students is virtually non-existent. Using data from the 2011 Programme for the International Assessment of Adult Competencies (PIAAC) this study first validates the uncommon self-reported measure of dropout used and compares the percentage of adults with tertiary dropout experience between OECD countries. Second, we examine whether tertiary dropout is a permanent decision as a considerable part of dropout students re-engage in the same or other tertiary degrees. Third, we compare the professional status of adults with dropout experience. Finally, we estimate the effect of dropout in terms of their employment status and success of entering managerial professions comparing results of logistic regressions and propensity score matching taking individuals’ socio-economic and demographic background, work experience and cognitive skills into account. Results indicate that consistently across countries dropout is repeatedly a ‘positive’ indicator in the labour market. This is first due to the fact that the dropout decision is often not a permanent one as well as that for those adults who do not reenroll into tertiary education labour market chances are better than for equally educated adults in about half of the countries examined.

**How the Prison System Affects the Health Care System**

United States incarceration rates have increased fivefold in the past four decades, placing untold pressures on other social institutions. Using state- and individual-level data, this article tests whether the number of former inmates affects the functioning and quality of the health care system. The aggregate-level results show that a within-state increase in the number of former inmates is associated with growth in the uninsured population, more frequent use of emergency rooms per capita, and a decline in the supply of hospital beds. Similarly, states that incarcerate more people also report fewer ambulatory visits per capita, fewer mammograms, and lower levels of essential diagnostic tests among diabetic Medicare enrollees, all indicators of a lower overall quality of care. Similar processes are evident even when examining behavioral outcomes in individual-level data. Results from a nationally representative survey show that individuals residing in states with a large number of former inmates report more unmet need, lower utilization, and lower quality care. These patterns are found even among those far removed from the prison system, including women, the insured, and the well-educated. The implications of broad spillovers from the prison system to the health care system are discussed.

Comparison of legal aid in Belgium, France and the Netherlands: do remuneration systems influence the evolution of contentious mass?
Frédéric Schoenaers, Kathleen Adelaire, Christophe Mincke, Laurent Nisen, Jean-François Reynaert

In Belgium, the current system of remuneration for legal aid causes dissatisfaction both among government authorities and lawyers. In addition, the adoption of the “Salduz law”, which allows any person heard for the first time by the police or a judge to be assisted by a lawyer, is going to weigh on the use of the legal aid. Legal aid has experienced strong growth in recent years in Belgium (+ 229.26% of closed cases between 1998 and 2011). It is useful to observe whether this growth is present in other European countries. We selected France and the Netherlands. This contribution presents a comparison of the modes of organization of legal aid in the three countries as well as of the modalities for financing it. Secondly this contribution aims to compare the evolution of the mass of disputes benefiting from legal aid. We see that beyond the differences between the three countries, the use of legal aid is constantly growing. We will attempt to provide an interpretation of this fact by mobilizing the following explanatory factors: higher income limits allowing more people to access to legal aid with a strengthening effect due to the current economic crisis in northern Europe, a better information of the citizens (by media or advertising by lawyers), a new “grammar of responsibility”, a phenomenon of juridification, the development of new public policies and the development of new “rights.”

Detainee and mother... What is the Situation in Belgium?
Frédéric Schoenaers, Marie-Thérèse Casman, Stéphanie Linchert, Salim Megherbi, Laurent Nisen
University of Liège - Belgium

In recent years, the penitentiary institution seems to be changing. Following constant criticism from all origins (European Parliament, Council of Europe, European Court of Human Rights, International Observatory of Prisons), Belgium has adopted in 2005 a “Principle Law” about the prison administration and the legal status of inmates. The will to limit the negative effects of detention introduces a principle of “normalization” that “involves the creation of a framework of existence closer to the general standards of living (…) closer to the current reality.”

Factors such as changes in contemporary research about prison tend to focus on the situation of incarcerated men, leaving somewhat the theme of female detainees. In Belgium, they represent 4% of the prison population. This contribution aims to study the situation of sentenced women who are mothers of children (0-6 years old) in a twofold perspective. First, we propose to clarify the legal framework around this problematic. The regulations governing the accommodation and access to children but also the conditions of detention of women with a child are coming from various sources. This will provide a detailed inventory of their legal situation and will question the place and effectiveness of the 2005 law. Second, we develop a sociological analysis declined in two stages. A quantitative approach will take into account the number of children whose mothers are all incarcerated in Belgium, the number of incarcerated mothers and socio-demographic data of the study population. Then, in a perspective of multilevel analysis of public policy, we question the role and involvement of the (internal and external) stake holders involved in this problematic.

Labour Market Returns of Higher Education Drop-Outs: Human Capital or Signalling?

In Germany, around one fourth of all first year students leave university without a degree. While reasons for drop out are well examined, the consequences are rather unknown, especially in terms of labour market outcomes. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. We also examine in which way the lack of formal qualifications can be compensated by alternative resources like social capital. In this paper, we study the probability of entering the labour market. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about social capital to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with
vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. The acquired human capital however, can be better translated into labour market returns by those with better social capital. We therefore conclude that social networks are an important compensation strategy for a lack of credentials.

School-to-Work Transitions of Higher Education Drop-Outs: Human Capital or Signalling?

Graduates from tertiary education have good labour market perspectives but it is not well examined yet how the career perspectives of tertiary drop out differ from those of graduates. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. The focus will be on the different returns of different educational levels. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. Especially in economic crises we expect that tertiary education drop outs will have huge difficulties in entering the labour market as jobs are scarce and the competition is hard. In a first step we study the probability of entering the labour market and job search durations of the different educational levels. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about economic crises to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. In times of economic prosperity job search duration of tertiary graduates and non-completers are the same, while tertiary education completers fare better in economic crises.

SCHOLTZ, HANNO* (University of Konstanz, hanno.scholtz@unifr.ch)

Debating Alternative Conventions and Defying False Friends: The Concept of Crisis in the Rational Choice Theory of Institutions and Historical Social Change

Although the term „crisis” seems to be ubiquitous, there are historical phases when it more abound than in others. For the years since 1989, or the 1930s, the term has (in most parts of the worlds) a higher importance than for the 1950s and 1960s. This can be understood from the fact that these times are phases in which institutional change is both going on and being prepared. In rational choice perspective, institutions are added game elements in the game structure of human interaction, and they have both conventional and normative aspects. This perspective allow to study institutional change as characteristically depending on the complexity of organizational interaction: Independent organizations allow for early and smooth institutional change, as in the case of changing family concepts. However, there are cases as economic regulation, where organizations act in strong interdependencies and finding a new institutional setting becomes a question of social debate while the performance of old institutions degrades: These are crises. In crises, many solutions are discussed, including those with biased consequences and ‘false friends’ for which lower adaptation costs go together with a lower long-run adequacy. Hence sociological imagination and the deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and desastrous consequences for solving crises.

For the two-step nature of the economic regulation of industrial society it can be said that unexpected consequences of the disaster (i.e. experiences of modern warfare) did probably the larger part of preparing the Post-War solutions. For the case study of introducing non-smoking policies, that was not the case. The currently greater degree of population access to information may explain the difference, giving rise to the hope that sociological imagination in the general public may add to solving the current transition problems.

RC16-279.12

SCHOLTZ, HANNO* (University of Fribourg, hanno.scholtz@unifr.ch)

The Two-Step Nature of Modernity

Over the last decades, the discourse over the end of industrial society and the coming of a second modernity has found evidence in recent phenomena that resemble parallels between 1860 and 1945, as globalizations, economic crises, democracies, violence, social inequality, and global shifts in resource distribution. An understanding of the mechanisms behind these phases of crisis would be socially helpful since it is rather probable that the current one has not yet ended. The rational choice theory of institutions offers the tools to do so, but has not yet been applied to this question. The proposed paper (part of a larger book project) intends to fill the gap.

The paper develops a model of the two step nature of modernity by concentrating on the following arguments: 1. Modernity increases the availability of resources. 2. This results in changes in information relations, i.e. between positional and situation-specific information. 3. Multi-actor decisionmaking has two focal points of either relying on positional (domination / authority) or on situation-specific modes of deliberation / argument. 4. A rational-choice view on the historical change of tradition and modernity hence equates the two with applying the two focal points. 5. Not all games of human interaction are created equal, since organizations offer a social structure and the transformation of situation-specific in positional information. 6. Hence an intermediate phase arises, with authority within and argument between organizations. This modelled intermediate phase is equated with the historical phase “industrial society”.

Additional arguments analyze the nature of institutional innovations in the transitions between the phases, allowing for the confrontation with empirical evidence and for the prediction of upcoming institutional changes.

SCHORCH, MARÉN* (University of Siegen, maren.schorch@uni-siegen.de)

The Hidden Patients - a Qualitative Study on Informal Caregivers in Germany

Regarding the aged population, we also detect a parallel growth of age related illnesses like dementia, Alzheimer’s disease or the like. In many countries worldwide, the majority of care for people suffering from these illnesses is realised at home by informal caregivers – their spouses, family members or close friends – due to cost or personal reasons. Often, the caregivers themselves are also in an advanced age. Both, elderly and still working-age family carers bear the heavy physical, psychological and emotional burden of taking care of their beloved ones at home. They are then at increased risk for psychical and physical morbidity like depression or burnout and can be described as our society’s “hidden patients” (Schultz & Beach, 1999). The contribution will present first findings from a sociological qualitative study (observation and open interviewing) with this special group of elderly, informal caregivers in a rural area of Germany (Siegen and surroundings). The study is part of a larger, international and interdisciplinary research project called TOPIC (The Online Platform for Informal Caregivers), funded by European Commission and the Federal Ministry of Education and Research with partners in Vienna (Austria) and Troyes (France). First observations focussed on the every-day activities and routines within the households and underline the above-mentioned challenges for the informal caregivers in respect to time, energy and attention. Beyond that, the caring persons expressed the need for help in our talks, and not only in terms of financial assistance as often proposed by social institutions, but also for information and emotional support. This point is especially interesting from our point of view as we observed some people’s difficulties to express their feelings respectively their own needs.

Looking for a Balanced Treatment of Successive Generations: What Can Social Policy Learn from Perspectives on Sustainable Development?

This paper argues that social policy scholars have good reasons to engage with the literature on sustainable development when analysing the challenges of how to treat the needs of different generations and in phased social policies. While many analysts have discussed the need to ensure the sustainability of welfare states and concerns for future generations, they rarely spell out the conditions for achieving welfare sustainability or provide an adequate theory of what such sustainability involves. Attempting to address these shortcomings, the paper asks what the scholarship on social policy can learn from perspectives on sustainable development.

In a European context, current debates on the need to create sustainable welfare states and how to promote sustainable development both raise difficult issues of intergenerational fairness and governance problems including tensions between intergenerational thinking and democratic legitimacy. The mantra is: ‘for a better future, citizens must make sacrifices today!’ Thus, the proposed paper is premised on the view that these areas intersect in important ways. However, they also differ, since generally questions about the welfare state are treated as problems of social/economic policy while debates about sustainable development put both economic and environmental perspectives on the centre. Hence, linking the rich literature on sustainable development and the notion of sustainable welfare states, promises to bring new conceptual and empirical insights into the debate about welfare state futures.
Young migrants unsuccessfully claiming refugee status may be ‘tolerated’ in Germany. This specific legal status positions them in the host society nearly at the end of a vertical model of civic stratification, implying restrictions in accessing central institutions of the society such as the education system or the labour market. Besides, they are constantly facing a high risk of being deported to the country of origin.

However, the impending shortage of the skilled workforce in Germany enforced a new political discourse. As a consequence young tolerated refugees hesitantly have been re-defined as educational subjects and labour market resource. Despite the still persisting inequalities of the access to vocational training of tolerated youths as compared to young citizens or migrants being granted a residence permit, legal changes at the federal level have been introduced since 2009. They are to reduce vocational training boundaries for these residents with the highly precarious toleration status across Germany. But empirical evidence from our own research project reveals that heterogeneous approaches are taken. Especially migration authorities may act as institutional gatekeepers either supporting or constraining their access to vocational training. This results in regionally unequal vocational training chances for tolerated youths that cause new inequalities within this group.

What does the twofold inequality regarding the access to vocational training mean for other spheres of the social life and future prospects of tolerated youths? This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative regional case studies. We aim at deriving avenues for future research.

SCHRECKER, CHERRY* (Université de Lorraine/2L2S, cherry.schrecker@univ-lorraine.fr)

(How) Does “Home Hospitalization” Transform The Relationship Between Patients and Healthcare Professionals?

“Home hospitalization” was officially instituted in France by an act of parliament in 1970. It has been largely developed over the last ten years. Two major arguments are advanced in its favor of this mode of healthcare. The first, is that this form of hospitalization is chosen by patients who prefer to undergo long-term treatment (often with a fatal outcome, as many of those concerned are undergoing palliative care) surrounded by their families. The second is that of cost-effectiveness. This factor is important in a traditionally public-dominated health sector where it is urgently needed to comply with managerial objectives more often found in private enterprise.

Our ongoing empirical study, carried out between 2012 and 2014, in a service of home hospitalization situated in a French province, has revealed the complexity of the situation which, among other things, transforms the domestic environment, exacts pressure on the carers (usually other members of the family) and transfers running costs to the home. As far as professionals are concerned, it is sometimes difficult to conciliate professional practice and the domestic environment. Various pressures on practitioners seem to reinforce prescription of this mode of care.

If home hospitalization does transform the relationship between healthcare staff and patients, this does not necessarily “empower” the latter or otherwise reverse hierarchical relations. As is usual in human relationships, inequality is not a two dimensional phenomenon. On some counts home hospitalization may reinforce structures of inequality, whilst modifying them on others. With reference to interviews with professionals and patients and observations carried out in the home and the work base, I will show the complexity of the adjustments made by all participants whose actions respond to diverse and conflicting pressures; economic, moral and relational, among others.

In The Shadow Of Alfred Schutz: Two “Ordinary” Sociologists In Extraordinary Circumstances

Peter Berger (interviewed at Boston 22nd October 2010) has qualified the three lecturers at the Graduate Faculty who most influenced both him and Thomas Luckmann as the “Holy Trinity”. The triumvirate was composed of Carl Mayer, Albert Salomon and Alfred Schutz. Though the latter has acquired a considerable reputation posthumously, Mayer and Salomon, apart from a short mention in the introduction to The Social Construction of Reality have been very little published and have remained almost entirely unnoticed. It is in this sense that they can be qualified as “ordinary” (that is to say not renowned) sociologists.

Their ordinariness contrasts with the extraordinary circumstances which affected their lives. Both Mayer and Salomon studied and eventually obtained positions in German universities during the first decades of the 20th century and both emigrated to the United-States at the beginning of the 1930s to become members of the Graduate Faculty of the New School for Social Research (Salomon was Jewish and Mayer married to a Jewish woman). Archival material, the few published documents available and my interviews with Berger and Luckmann lead me to suggest that the reasons for the lack of impact differ. Though Mayer headed a research project on religion in Germany he never succeeded in publishing the results of his study. Salomon’s work was largely theoretical and did give rise to some publications; others were rejected as inappropriate for American audiences.

By contextualizing the production of these two men I will try to explain some of the reasons for their academic in-success. Where they really so “ordinary?” This will of course lead me to examine the criteria by which success is established in academia.

SCHREYER, FRANZISKA* (Institute for Employment Research, franziska.schreyer@iab.de)

Legal Status and Inequality: Young Tolerated Refugees and Vocational Training in Germany

This paper focuses on the impunity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem and most prestigious universities have implemented measures to combat this phenomenon, in Spain it is still silenced although first steps have demonstrated the need for researching this phenomenon. The project “Gender-based violence in Spanish universities” funded under the Spanish National RTD Program (Valls, 2006-2008) was pioneer. For the first time in Spain, a questionnaire with 1083 students, 13 in-depth interviews with professors and university staff, and 16 communicative daily life stories with students on this issue were conducted. The results, similar to international numbers, show that a high percentage of the participants knew someone or have suffered some kind of situation of VAW at the university. Besides, it evidenced that people supporting the victims of VAW become “second order victims”. This research was crucial in breaking the silence on VAW in Span-
ish universities and has also suggested evidence-based actions to fight against it. Once the results had been presented on a national level, universities increasingly started implementing actions to address VAW, asking CREA research for support. As a result of this process some faculties have introduced protocols for cases of harassment. This is also due to the political impact of the results since the Law for effective equality between women and men (Spanish Government, 2007) obliges all public offices to establish procedures on cases of harassment. Even if there is still resistance to changing these dynamics, the article in the Spanish law for equality is an important step to challenging the dynamics of gender, power and knowledge at Spanish universities.

Preventive Socialization from Zero Years

In this paper, we present the violence prevention programs implemented in Schools as Learning Communities. These schools have been analyzed under the INCLUD-ED project (FP6 of the European Commission) and are outstanding for the great results in very diverse social areas going beyond positive academic results. Research on violence against women (VAW) highlights that patterns linked to it are included in the socialization processes. The results presented here stem from research on preventive socialization that emphasizes the social character of love and the attraction towards violence (Gómez, 2004; CREA, 2010-2012). According to this research line, the existence of a mainstream socialization that promotes the model of attraction linked to violence implies the need to socialize from early childhood in attraction to relationships that reject any kind of violence. Socialization in accepting violence that can lead to future VAW is prevented. According to a common analysis of violent actions in early childhood such as a bite is considered as an emotional expression and as a consequence the victim is forced to give a kiss from the perpetrator as a sign of excuse and forgiveness. These actions socialize in the acceptance of the violence and set the bases for future gender violence. Zero tolerance of violence from zero years is the premise to socialize into relationships without violence and to ensure the development of childhood free of violence. In this line, in Schools as Learning Communities any kind of violence is rejected and children are socialized in this general rejection of violence and learn to avoid violent behaviors. They also learn the values of respect towards others and to insist themselves in being treated with respect. Consequently Schools as Learning Communities contribute to preventing the mainstream socialization in attraction towards violence.

Globalized Management Practices and Local Cultures

The paper will give an overview of management practices in different world regions based on the existing literature in the social and economic sciences and case studies. One of the main questions will be: What is the future of “management”? The global discourse on management focuses on the principles of the market that have been introduced in all spheres of social life through university programs, training seminars, organizational strategies, government policies, and personal counseling literature. This knowledge is produced, distributed, and consumed by social actors in the South, North, and East. These forms of disciplinary knowledge have contributed to the creation of a world controlled by managers and management technologies. One of the most important societal influences in the last quarter of the 20th century was this growing importance of the management discourse. There was a spread of the idea of management from large firms to the professions, NGOs, the public sector, and the daily lives of social actors. This management discourse consists of a specific language and practices that global players produce in the socioeconomic world. This discourse is so widespread today that it seems difficult to escape its grip.

This paper gives an overview of its increasing propagation in non-western societies. One aspect of this research is: How do groups cope with the global discourse in a globalized world? For the last twenty years, management practices were propagated throughout the globalized world but only few studies on its local acceptance exist even if there are studies on the problematics of market fundamentalism (Albers et al. 2006). Because of the challenges related to globalization and the global financial crisis, it is important to understand this discourse of management and its functioning in global companies in order to better plan future developments of the socioeconomic world.

Social and Civic Dialogue: Confronting The Challenges Of The Post-Neoliberal Economy

This paper will show that social dialogue establishes a balance of bargaining power in the employment relationship. Globalization has changed the labor markets and contributed to a decline in union membership in a number of countries. It seems that the expansion of global production and the increasing mobility of capital has caused a shift of bargaining power in favor of employers. Growing inequality globally and within a number of companies and the growth of insecurity among those excluded from social dialogue are the empirical expression. In this situation, social dialogue remains a mechanism to protect workers and ensure stable labor relations for employers. Several countries have been able to use it to find ways out of the recent financial crisis: they were able to preserve jobs and to facilitate adjustment of companies.

The analysis of social dialogue in the world realized in this paper will reveal new aspects of social dialogue closer to civic dialogue. If we concede that the current democracy cannot be limited to the distribution of resources, but should also include a discussion of the means of production, the dominant idea is that the business world can not be separated from society and that it must therefore participate in the discussion on the objectives of the economic world. The increasing flexibility of the labor market requires what A. Sen and Hirschman called the capability to express oneself so that workers and capital owners together may introduce new thinking about the business world. If social Europe becomes a reality, a new model of prosperity must be built with ideas and actors from civil society. To do this, the organizations of employers and workers and the states should create new initiatives and adapt new strategies to meet the challenges of the 21st century.

Christian Enclaves, Freedom of Education and the Quality of Time: Contested Secularity in the Netherlands

The Netherlands are highly secular – only one third of the population being a church member; euthanasia and same sex marriage are broadly supported – against recurrent religious opposition. In some areas though, one finds an almost reversed religious-secular setup: In the Dutch ‘Bible Belt’ orthodox reformed groups strongly influence the organization of public life. Here it is not about accommodating religious minorities – rather, given the majority relations, Christian legal traditions and the structural pluralism of Dutch secular order, these places can serve as religious counter cultures.

At the same time - due to e.g. population mobility – these places are changing, thereby becoming contact zones (Pratt, 1991) of religious and secular lifestyles. Central sources of conflict are Sunday rest and religious schools. The secular-religious divide becomes more complex with regards to non-western migrant popula- tions and their (socio-economic) integration. These secular-religious conflicts help discussing two central questions regarding the public sphere in religiously diverse countries: 1) what are (competing) notions of the public and how are they related to religious-secular history and 2) in what way can the state allow for multiple publics without failing to maintain social cohesion.

I discuss the conflict around Sunday openings and religious schools with regards to a changing Dutch secular model. Further I sketch how local contexts become arenas for conflict over secularity, and how these conflicts differ according to context. Based on my empirical findings I discuss the relation of secular models with religious/secular majority relations as well as the functioning of contact zones in stiplating secular identity formation.

Transforming Struggles: Organizational Modes, Mobilization Outcomes, and Occupy Wall Street

Encampments at Zuccotti Park and elsewhere have been violently dismantled, the mass media spotlight moved on, the spectacle stopped. Fissures between different tactical and organization approaches widened. Yet, the mobilization continued through manifold spin-offs, ranging from Occupy Sandy, which provided rapid relief in response to a devastating hurricane, to groups such as the Alternative Banking Working Group, which worked on new policy proposals, and Strike Debt, which developed new kinds of direct action. Although Occupy Wall Street inspired public debate and imagination, there are hardly any tangible policy achievements while recent data point to even further increasing socio-economic inequality. Assessments of the leaderless, General Assembly-based organizational form were divided over whether these were the essence of a prefigurative politics for real change and attracting participants or whether the lengthy, consensus-requiring deliberations prevented tactical efficiency, liaisons with large unions and NGOs,
and negotiations with the political establishment to win concrete legislations. What lessons can be drawn from the Occupy experience so far? How can social movement theory help to explain the rise, fall, or metamorphosis of the mobilizations? How do existing theories need to be revised in light of the new empirical experiences and the challenges ahead? Multi-method focus on the experience in select cities shows: not only enormous local variation but also varied modes of connecting sites of struggle. The paper concludes with a discussion of options for future action.

Bothering Pays for Sociologists

Bothering pays.

Segmentary societies bear inequality. All of them. Urbanized even more. Cities have proven to be inequality carved in concrete and stone. The more abundance of material culture, the more inequality. Chiefs in tribes have to bother. They remain chiefs only if they impress bothering and solving conflicts. Bothering glue even the smallest tribe.

Today large scale social units call themselves ‘modern’ to claim their qualitative difference to chieftoms and the like. Here, nobody even considers an end of inequality, it is purely unthinkable as necessarily linked with the total dismissal of the material abundance (which could and should be achieved, plans have been made).

More, bothering has become a specialized task, a branch, a profession. Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother.

This is why we bother about inequality – sometimes. Have a happy conference!

Social Movements and the Political Invention of Future. Considering Recent Argentina

During the 1990’s, neoliberal policies drove Argentina to huge transformations of the state, economy and labour. The process left a large number of poor and unemployed people and concluded with a monster crisis in 2001. During that time, there was a very important change in the field of social movements. As a consequence of the neoliberal policies, labour movement (which has been the most important movement in whole country contemporary history) diminished roughly its statistical presence in social mobilization. This happened in 1993 and in 1996 a kind of movements grew up. That was the case of territorial movements, established in the poor neighbourhoods and small towns in a few provinces. They were composed mostly by unemployed, who asked for elementary rights. Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother.

This is why we bother about inequality – sometimes. Have a happy conference!

Culture and Morality: Intercultural Interactions during Military Deployments

In peacekeeping and training missions foreign soldiers come in close contact with the local population. How do they experience this intercultural contact? To what extend do they experience a conflict between their moral principles and the moral principles of the local population? To what extend are (some of) these principles culture specific or are universal moral principles violated? And what does this imply for military missions in different cultural contexts, such as the Kunduz Police Trainings Missions?

We focus on the close relation between morality and culture in military deployments. The main issue in this paper is twofold, namely theoretical and practical. The first one considers the relation between morality and culture according to leading theories on these concepts. The second one is about the extent to which military personnel experience the relationship between morality and culture (whether or not conflicting) during their deployments as described in literature. We study these issues on the basis of research data collected during and after military deployments.

Global Garlic and Its Labor Consequences

This paper investigates the dynamics of China's integration into global commodity chains and a simultaneous race to the bottom. I explore this globalization-labor topic with a case study of garlic. Even in the garlic kingdom, the race to the bottom is visible. 1) China took off as the global exporter of garlic around 1982 and has been the dominant exporter since then. In 2009, 84 percent of the globally traded garlic came from China. 2) China's 2002 adherence to WTO allowed it to export to previously closed or high-tariff markets such as the United States. In 2002, China surpassed Mexico in capturing the U.S. market. The race to the bottom began with North-South competition. As the U.S. economy continued to contract, firms sought cheaper labor, moving significant parts of the production process to Asia. Such moves threatened to undermine Mexico's payoff from NAFTA. This capital mobility unleashed a race to the bottom in labor standards and working conditions. It is not possible for every nation to be the dominant exporter: one country's gain is another's loss. Although they do not initiate the race, governments become complicit because they, as much as foreign investors, want to hold onto their “competitive advantage” of cheap labor, lax working conditions, and lenient environmental regulations.

The South-South competition is reflected in the shifts in trade and investment flows. China's export and foreign investment gains and Mexico's losses are not simply those of two nations acting independently. Labor conditions are oppressive, but firm owners, processors, exporters, and governments are not alone in their responsibility. ‘Bottoming out’ is a response to global importers who search for better prices.

In this research I investigate the conditions of garlic workers in China and Mexico as they relate to U.S. producers and the import market.

From Statistical Category to Social Category: Organized Politics and Official Categorizations of ‘People with a Migration Background’ in Germany

Social scientists disagree over whether it is acceptable for states to collect statistical data on the racial or ethnic composition of their populations and thus institutionalize these differences. Seeking to reconcile normative concerns with political desires to combat discrimination and reduce social inequality, some countries, like Germany, have chosen the ‘migration paradigm’ (i.e. using phenotypical markers and/or cultural and linguistic links to a particular national group) as a “color-blind” measure of difference. However, while much attention has been paid to categorizations deriving from survey and census variables, debates about whether and how to measure immigrant populations and differences often ignore other processes of categorization operating at the national-state level, such as interactions in the arena of organized politics. In this paper, we expand the terms of the debate by examining the relationship between statistical classifications and their mobilization in political interactions, in order to examine the validity of the distinction between the ‘migration’ and ‘ethnic’ paradigms in population statistics. The category of ‘persons with a migration background’ (Personen mit Migrationshintergrund), which was introduced in the German microcensus in 2005, serves as our case study. Drawing on a qualitative analysis of 60 parliamentary documents originating in the years 2005 to 2013, we show that the way the migration paradigm is deployed by representatives of the state differs from the statistical categorization: it is implicitly ethnic, with strong class associations. Insofar as the social categorizations created by elected representatives out of statistical categorizations facilitate the construction of a stabilizing political image, they may be of personal and material – not just symbolic – consequence to individuals thus categorized.

Educational Policies and Questions of “Inclusion” in the Middle East: The Case of the Palestinian Refugees

Palestinian refugees are the only ethnically defined refugee group worldwide that has an UN organization dedicated exclusively at its needs: the UNRWA (United Nations Relief and Works Agency), whose mandate originally was limited to a three year relief program for the 750,000 original refugees who fled in 1948 from the territory of what is nowadays Israel. By now, UNRWA is said to match Kyrgyz traditions and notions of “collectivistic” culture, this strong middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Far from being an emancipatory power that disembeds whimsical actors from social structure, the ethic of authenticity is embedded in structures of unequal recognition, and may thus encourage actors to participate in their own subjection. Inequalities in recognized authenticity are discursive products of the same symbolic power that naturalize hierarchies, yet they rely on ascriptive categories more than embodied habits. Studying these inequalities as a unique form of symbolic violence necessitates expanding the Bourdieusian framework while sticking to its mission.

SCHWITTEK, JESSICA* (University of Wuppertal, j.schwittek@uni-wuppertal.de)

The Only Constant Thing Is Change: Education, Adolescence, and the Need for Innovation in Late Modernity

Educational policies in many countries increasingly aim at preparing pupils for a globalized world of permanently accelerating social change; the ideal type of subjectivity they produce is a skilled, self-employed entrepreneur, flexible enough to adapt both life plan and identity to the always changing needs of global markets. For a sociology of education which aims to analyze all aspects of these contradictory processes, a socio-psychological concept of adolescence offers an interesting perspective: here, adolescence is considered the life phase most directly associated with individual change as well as social innovation. Educational institutions in the classic modern nation state aimed to contain and channel the dynamics of adolescence by offering youths a “psycho-social moratorium” (Erikson) or “potential space of adolescence” (King). In contrast to rituals of initiation in traditional communities, modern nation states thus made use of the innovative potential of adolescence. Following debates about education in Germany and other European countries it seems that on the one hand adolescents are expected to be “innovative”, while at the same time curricula demand an always increasing workload and integrate working and learning more intimately or anticipate work environments, which makes it more and more difficult to consider high school any kind of “moratorium” – especially as it is a decisive phase for social mobility.

I want to present and discuss several theses regarding the relationship between educational institutions and the dynamics of adolescence, both in Western and (de)colonized societies.

The Symbolic Economy of Authenticity As a Form of Symbolic Violence: The Case of Middle-Class Minorities

In contemporary societies, the language of authenticity has become central to the organization of work, manners, social ties, and most interestingly: social and moral evaluation. The paper explores how the ethic of authenticity informs symbolic economies of worth in Israel and the US. These new symbolic economies differ from Bourdieu’s: mastery of legitimate practices and dispositions may indeed enhance the social worth of some actors, but also devaluate other actors, whose those class habits and identity are considered ‘inauthentic’ independently of their performance. Based on analysis of wide empirical literatures on raced and classed identities in Israel and the US, the paper explores how this symbolic economy of authenticity dominates social minorities. When dominant ethnic groups monopolize the symbolic recognition of authentic middle-classness, middle-class members of dominated ethnic groups are at risk of being accused of mimicry (‘acting white’, ‘Ashkenazization’). This also applies to second-generation middle-class actors: following the racialization of class, their deeply entrenched middle-class tastes and dispositions may be suspected as inauthentic. While dispositions are often acquired in classed contexts and their distribution is hence class-based, the recognition of authenticity often follows race/ethnicity lines. In some cases, middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Far from being an emancipatory power that disembeds whimsical actors from social structure, the ethic of authenticity is embedded in structures of unequal recognition, and may thus encourage actors to participate in their own subjection. Inequalities in recognized authenticity are discursive products of the same symbolic power that naturalize hierarchies, yet they rely on ascriptive categories more than embodied habits. Studying these inequalities as a unique form of symbolic violence necessitates expanding the Bourdieusian framework while sticking to its mission.

Identifying Sensitive Questions with Non-Reactice Methods

Sensitive questions result in misrepresented responses and identifying those questions is crucial to get straight answers to sensitive topics. Using para-
data as non-reactive data should reflect the uncertainty and the perceived social desirability while answering the questionnaire. By tracking response change and page change in addition to item non-response and response latencies, the researcher has a powerful tool to reveal exceptional response patterns in web sur-
veys. In practice these methods can also help to cut costs of further surveys that are usually used to identify sensitive questions and they can also show problems with wording and too high cognitive effort in earlier stages.

Non-reactive methods such as measuring response latencies and event track-
ings adds information to be analyzed without adding load to the respondents.

Therefore we will illustrate the questionnaire by example, changing the page and selecting or changing an answer option. Tracking these events not only by time, but with multiple answers over time per item, view the process of com-
pleting the questionnaire instead of leaving the black box untouched, which is between handing out the form and getting the (final) responses. In this way it is possible to reveal answers of first choice, response change and page change as event types besides response latencies and the order of completion.

The para data from a web survey is compared to data from a questionnaire about the perceived social desirability and threat of disclosure of the questions used in the former one. The response patterns uncovered by the event tracking should correlate with these sensitivity measurements. Sensitive questions should have, in addition to the occurrence of non-response, a) higher response latencies, b) multiple page views, c) more response changes and d) lower intra-item correla-
tion between the first and final answer.

The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across 21 European Countries

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. During the last two decades a whole set of EU and national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While these policies can be seen as separate, the first addressing discrimina-
tion, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

We will address this lacuna by looking at the impact of work, family and gen-
eral equality policies on vertical occupational sex segregation. The study starts with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 21 European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, female concentration at the lower end might be less affected. Since low representation of women at the top is often mirrored by a clustering of women in so called ‘pink collar’ service sector jobs, we will additionally include policies regarding low-wage work to cover their impact on occupational stratification among women. The multilevel model applied uses data from Multilink and the EU-SILC for the year 2010/2011. Concluding remarks will reflect on the complex interaction of welfare state policies, employment systems and women’s labor market integration.

The Tourist Experiences of Fathers

The lack of research into fathers on holiday is a reminder that understandings of masculinities and gender relations in tourism are absent compared to other disciplinary areas such as family studies. Research on family holiday experiences is largely informed by feminist gender representations rather than examinations of femininities and masculinities. Previous studies highlight the never-ending physical and emotional work of motherhood both at home and when travel-
ning with little acknowledgment of any gender-related constraints that fathers might face. True gender scholarship requires a more critical appraisal of gender relations that is inclusive of the male voice in family tourism. There has been whole-family research highlighting the role of fathers in taking on primary respon-
sibilities as entertainer of the children and facilitator of mothers’ own interests (Schanzel and Smith, 2011) which requires further inquiry. However, research into fatherhood also needs to be more inclusive of diverse family forms and a range of fathering experiences, such as, solo-fathers, non-resident fathers and gay fa-
ters. This study extends previous research into nuclear families and focuses on the family holiday experiences of fathers travelling with their children without the mother. It is semi-structured interviews with a range of solo and non-resident fathers in Auckland, New Zealand and conducted after the sum-
mer holidays in January/ February 2014. Because of the explorative nature of this research an interpretative paradigm and in-depth interviewing is chosen. The aim of this study is to understand the experiences and meanings gained by single fa-
ters travelling with their children. The findings of this research and comparisons to earlier research on nuclear families will be presented.

European (Social) Science Policy-Making: Setting the Agenda of the Social Sciences and Humanities in the EU Framework Programmes

The social sciences and humanities (SSH) funding schemes of the European Union (EU) framework programmes are the largest of their kind in Europe (Kastri-
os 2010). The larger EU policy context has had direct impact on EU SSH research policy and indirect impact on national research funding strategies. Setting the agenda of research policy takes place on two levels in the European Union: first, the definition of large thematic priorities, funding instruments, rules of participa-
tion and the overall budget available to the different domains are defined in the multi-annual EU Framework Programmes. Second, the precise topics, research questions and favoured approaches are defined in the regularly updated work-
programmes.

This paper will discuss how the agenda is set in EU SSH research policy and in particular focus on the role of the Treaties (Rome, Amsterdam, Maastricht, Lis-on) in framing SSH research policy since FP4 (1994-1998), when a SSH priority was first introduced. It will be shown that the (geo)political landscape of Europe and the degree of European integration has first limited and later facilitated SSH subjects. It will also consider how changes, first in discourse and later in govern-
ance, affected practices of stakeholders (researchers, research associations, funding bodies) and public participation in setting the agenda for the SSH. The process of setting the agenda is understood on the one hand as a social practice of knowledge production, in the sense that setting research priorities and espe-
cially defining more precise calls for proposals on a political level also influences the approaches and results of SSH research. On the other hand it is understood as a form of political bargaining, where public and stakeholder participation is tak-
ing place in the political sphere. The research relies on existing studies, interviews with Commission officials and national contact points, participant observation and document analysis.

Leaning Towards The Middle? Collective Manifestations Of Normative Beliefs In Developed Countries and Their Implications For Developing Countries

There is a vast and ongoing debate on the middle class in the field of political sociology. Undoubtedly, studies on its role and functions should not be restrict-
ed to developed societies as the global importance of developing countries (with emerging middle classes) will definitely be growing.

We would like to take up this understading by contributing a piece of ground-
work research that focuses on the middle class in comparatively developed coun-
tries because it may serve as some sort of ‘reference frame’ for an improved un-
derstanding of socio-structural driving forces perceptible in developing countries.

With these preliminary reflections in mind, we use data of the International Social Survey Programme (2009; module “social inequality”) in order to compare perceptions and evaluations of stratification realities and aspirations. On the ba-
sis of five distinct types of stratification, respondents of 26 primarily European countries were asked for their assessments regarding the current and the desired distribution of their respective income. By performing multinomial logistic multi-
level regressions we identify individual- and country-level determinants.
Concerning stratification realities gender, age, education and (subjective) socio-economic status prove to be significant predictors. On the country-level, the objective socio-structural shape (income-based percentage of lower, middle, upper class), the GDP per capita and social expenditure (as a percentage of GDP) turn out to be relevant. With regard to stratification aspirations results indicate that respondents in the majority of countries under study opt for a society with a broad middle segment – in fact, irrespective of any stratification realities. Thus, context effects impact solely on perceptions of stratification realities, whereas we observe a universalistic preference for the “middle class society”.

In our study, the choice of the normative leaning towards the middle class in developed countries may improve the comprehension of mental mechanisms and orientations in developing countries.

SCODELLARO, CLAIRE* (Université de Lorraine, claire.scodellaro@univ-lorraine.fr)
Le “Libre Choix Des Patients Dans Une Relation Plurielle Et Diachronique”

Le droit des usagers au « libre choix », tel qu’il est formulé dans la loi du 2 janvier 2002 en France, semble sous-tendre que les patients s’inscrivent dans une relation duale avec les médecins au sein de laquelle ils seraient des sujets singuliers, rationnels et autonomes dans leurs décisions. Les travaux sociologiques ont cependant montré d’une part que la réalisation de ce modèle bute contre des obstacles notamment liés à aux positions de classe, genre et âge des patients et aux situations de crise qu’ils rencontrent ; d’autre part que les malades sont rarements en parcs de soins mais souvent aidés par des membres de l’entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous faisons donc l’hypothèse que les décisions de soins doivent être analysées dans le cadre d’une relation plurielle autour du patient, qui questionne la voix au chapitre de chaque acteur.

Par ailleurs, en répondant révolutoires à tout moment, ce qui invite à les analyser de manière diachronique.

Notre recherche porte, dans ce cadre, sur les décisions de primo-entrée en hospitalisation à domicile (HAD) et de sortie du dispositif. En fort développement en France sous l’impulsion des pouvoirs publics, l’HAD est censée constituer une solution économique pour les finances publiques et répondre au souhait des hospitalisation à domicile (HAD) et de sortie du dispositif. En fort développement.

SCOTT, BERNARD* (Centre for Sociocybernetics Studies, BernC5ES1@gmail.com)
Reflections on the Sociocybernetics of “Cybernation” and the Emerging “Cyber-Nation”

The term “cybernation” refers to the existing and imminent cybernetic technologies of control and communication, data storage and retrieval, social media, user modelling and intelligent support for man-machine conversational interaction. The term “cyber-nation” refers to the emerging internet-based communities that promote social change and, explicitly or implicitly, practice forms of non-hierarchical (heterarchical) democracy. Well-known examples are Wikipedia [1] and Change.org [2]. A less well-known example is the Zeitgeist movement [3], that developed from the Venus Project [4], [5], initiated by the late Jacques Fresco and Roxanne Meadows. Fresco coined the term “sociocybernetics”. There is a Facebook page dedicated to his work [6].

In an article on what questions addressed in the paper include:

- What is the current state of play?
- What does the future hold?
- What influences are at work in terms of checks and balances on privacy and social control?
- Who owns cybernation (hardware, processes, data)?
- How viable is the concept of a cyber-nation in the context of existing dominant belief systems and institutionalised practices?

The Triangular Relations of Society, State, and Market in the Context of the Processes of Contestations Between Globalization and Decentralization: A Sociological Perspective

This paper gives a general description of the triangular relations between Society, State, and Market from a Sociological Perspective. Within the context of this triangular relations, a major challenge facing contemporary Indonesian Society will be explained, which is the social problem of Poverty and Social Exclusion. Before understanding the relations between Society, State, and Market as a conceptual analytical tool for explaining poverty and social exclusion, there are several important caveats to be addressed. These important caveats are related to the relations between Nation-State, and Nationalism within the context of the processes of contestations between globalization and decentralization (democratization on the local level). The discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. The paper is based on primary data using qualitative methodological approach and a specific case study from Indonesia.

RC18-325.13  
SEDA, FRANCISCA S. S. E.* (University of Indonesia, savierio09@yahoo.com)  
When There Is No State

The Decentralization processes in the context of this case study have not yet resulted in a more flexible and decentralized structural relations between the Central Government and the Local Governments (both at the Provincial and at the Regency Levels) generally and also specifically in the Industrialization Strategy in The Oil and Gas Sector (1999-2009). The triangular relations between State, Market, and Society are fluid and internally fragmented within each pillar and externally contested between the three pillars.

Inclusive policies by the local governments have not yet been effective and efficient in targeting the most marginalized and socially excluded members of the local communities. The local governments need to have a clear and more affirmative policies focusing on the local communities welfare, including in-migration policies. The MNC (BP) Programs need to take into reconsideration the categorization of DAV and IAV local communities and the internal fragmentation within these communities.

The relations between the local communities and the local government are not as strong as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, so far only the IAV local communities have done so against the MNC (BP). At present, there is no indication yet of any process of social movement in the making on the local level.

The condition of no real role carried out by the State in the context of decentralization and industrialization strategy in West Papua can be traced back to several factors. These factors are the relations between natural resources and development, the process of decentralization, and the specific nature of the BP Tangguh Project in The Bay of Bintuni regency.

Getting (in the) Sack(ed). Gender Domination and Male Honor

Three years ago an American college girl presented a sort of replica of an academic essay evaluating like a professor would do to his/her students her male sexual partners means and performance (some were commended, others rather not). It got out of hand in no time. With considerable discomfort building up (in the networks she was implicated in), soon she was forced to apologise to everyone involved, namely her sexual partners, and remove her outrageous paper from public sphere. What was so ignominious about her conduct, one might ask. In other words, what contemporary Lebenswelt aspects particularly of manliness where unsettled by miss Owen's daring? Was it simply a matter of a diffuse moral economy? That woman might even overturn male's domination agency. The "mature" woman, who knows the ways of the world through bygone practice, carries a comparative index enabling her to "grade" her lovers manhood. "She can and does tell", (a discursive) condition to halt man's possession and, therefore, a possible tenure-taker of gender relations.

What's in a Dreamed Profession? Training to Become a Football Professional Player

The last few years have witnessed a widespread (with greater impact in side-line countries like Portugal) dissolution of the virtuous relationship between the type and level of education, profession, remuneration and social status. This standstill has favoured young people to look for alternative life pathways. In Portugal, schools of football are playing a relevant part in this shift. Mainly concentrated in the big cities (Lisbon, Oporto), they respond to the training solicitation of an increasing number of young males. At the base of this solicitation is the fact that football has recently been subjected to social reconfiguration and symbolic (re)valorisation, concerning diverse dimensions besides professionalization: curation, idealization and mediatization are also drawn in.

In this paper, we shall be looking into the subjectivities of male youngsters training to be professional football players. By which means do they qualify football? What role those meanings play in the construction of their identities? How is the process of transition to work they face? How is transition to adulthood affected by their football stake? Answering these questions lead us to examine three analytical dimensions: 1) dream production pathways: how is the idealization order of the profession socially produced and experienced; 2) dream accomplishment pathways, namely the social circumstances that involve the transformation of the dream into a project; finally 3) dream professionalization pathways: specially focusing on possible (mis)matching between the dream, the project and the realities of professional performance.

The main hypothesis we'll be discussing is that the choice of football is, at the same time, a strategy to extend and to accomplish a full-time identity that often is not allowed to be expressed within the more conventional professional spheres; and a decision that shows new ways for young people to cope with uncertainty in transition to the labour market and to adulthood.

Understanding How We Learn

Students in South Africa face a series of challenges when making attempts to process information from the teacher and write tests in the classroom. One of the key challenges that has been identified for students is the mismatch between level of education and training methods. Large numbers of learners of all races and socio-economic backgrounds find themselves receiving poor results on exams. This paper seeks to address the reasons why students perform poorly, and how this poor performance can be corrected through a clinical approach. As such I have developed a programme that is currently being trialed in South Africa. This programme seeks to understand; the learners style; the attention span; the memory bank as well as the way in which learners process information. Individual programmes are then designed and the results have been very successful. This paper will present the detailed findings of 10 students that have completed this programme.

Mobilising Migrant Workers in the South African Post-Migrant Labour Regime: Precariousness, Invisibility and Xenophobia

The critical role played by the migrant labour system in allowing formidable levels of accumulation in core sectors of the South African economy (mining, agriculture) has been documented extensively over the past 30 years (First et al. 1972, Burawoy 1976, Legassick & Wolpe 1976, Arrighi et al. 2010, Crush, 2007). The mobilisation of this migrant workforce from within and beyond South African borders and its critical role in the emergence of independent Black unions in the
1980s are also well documented (Webster 1985, Sitkas 1983). However, what most analysts have failed to capture is the shift from this highly formalised and disciplinary migrant labour regime, historically framed through government-to-government agreements, to the current reality of deregulated labour migration to South Africa. Following restructuring in the mining sector and political pressure to recruit locally, the share of contract workers plummeted in the early 2000s while at the same time, emerging sectors such as outsourced construction, hospitality, and domestic work started relying increasingly on foreign labour. This structural shift largely caught South African unions unprepared and very limited organisation has taken place. Drawing on research undertaken within MiWORC (www. miworc.org.za) over the past two years, this paper explores more specifically the mobilisation challenges posed by this regime shift and strategies developed by both unions and migrant workers. While some micro-local experiences of mobilisation point to unions' ability to conceptualise new forms of transnational solidarity, the study shows overall that current fragmentation in the South African union movement is a major obstacle to migrant workers’ organisation, particularly in those critically precarious sub-sectors of the economy. In this context workers develop multiple solidarity networks (ethnic, religious, and at times political) and strategies to circumvent exploitative and discriminatory practices, albeit in a fragmented and mostly underground manner, including through deliberate avoidance of the historical unions.

The Partner’s Role in Immigrants’ Labor Market Outcomes: Explaining the Mechanism

This paper explores why and how partnership impacts labor market outcomes of immigrants over the life course. Drawing on household specialization and social capital theory I first state hypotheses about whether and to what extent a higher educated and/or native spouse has a direct positive effect on occupational outcomes. I then explore the specific resources spouses provide differentiating between instrumental support and emotional support. Instrumental support refers to the provision of labor market information, ability to employ own spouse and help with application writing. Emotional support implies willingness to discuss important matters and encouragement of the spouse’s career. These forms of social capital have been linked to occupational outcomes only theoretically and, mainly due to lack of data, not empirically.

I first hypothesize that partnership with a native and/or higher educated spouse has a direct positive effect on occupational outcomes due to their higher ability to provide those resources. Secondly, I assume that instrumental support has a stronger positive effect on occupational outcomes than emotional support. Lastly, I argue that partnership also has an indirect effect on occupational outcomes by facilitating important immigrant-specific processes such as recognition and more Taiwanese gain English proficiency.

In his seminal work Distinction: A Social Critique of the Judgment of Taste, Pierre Bourdieu demonstrates how the cultivation of taste serves to reproduce class differences. In the present paper I argue that class divisions are similarly being reproduced today based on proficiency in languages of wider communication – particularly English. After discussing the mechanisms by which identities of distinction (or any identities, for that matter) are produced in interaction, I will present interview data from a longitudinal multi-case study illustrating how this process of practices and performance indexing dominant ideologies plays out in Taiwanese society. The study’s multilingual Taiwanese participants repeatedly point out instances in which they have distinguished themselves from those around them through their use of and (relative) proficiency in English (and to a lesser degree, French). For these participants, images of themselves as more worldly and sophisticated than their peers started to be nurtured quite early in life through tuition classes and private tutoring, and from that point on, they continuously struggled to maintain these identities of distinction, often resorting to performative to foreground their linguistic practices. These participants, however, viewed their differentiated statuses as somewhat precarious, for accompanying their repeated reports of attempting to stand out through English use was a frequently expressed anxiety about the fact that their English abilities alone might not continue to adequately differentiate them from others, particularly in the employment arena, as more and more Taiwanese gain English proficiency.

A Paradox of Coercive Power: Institutionally Founded Power Relationship and Rationality of Action

Reviewing the literatures on social power, it is found that so many different kinds of power concept as well as measures of magnitude of power have been proposed. Hence, without an appropriate specification of power concept, no meaningful analysis is possible. This research focuses on the coercive power which is defined as follows: an individual A is wielded a coercive power by B when A is forced to choose an action x which she/he would not choose if B's action A's normal choice is x. In other words, B forces A to choose x by preparing a punishment to A's non-x choice. (Strictly speaking this is “negative” coercive power. There is also “positive” one in which B prepares a positive sanction to A’s choice of x.) This concept of coercive power involves individuals’ rational choices. A is forced to choose x because it is her/his rational choice under a given situation.

It is frequently supposed that a power relationship is asymmetrical in which the power holder and the power subordinate are fixed. If A is the power subordinate in relation to B in one situation, this asymmetrical relationship applies to other situations. Especially, if the relationship is institutional, that is, if it is institutionally stipulated that B is entitled to control A's action by preparing a punishment to A's normatively deviant action, B is identified as the power holder in relation to A.

However, there are paradoxical cases in which the presumed subordinate A can control B's sanction schedule in such a way that B is forced to choose a sanction which does not punish A's deviant action. This happens because B also has to choose the sanction rationally. This study shows the mechanism of this paradox and analyzes mathematically the conditions that this paradox emerges.

Income Disparity Among Elderly People in Japan: Life Course Factors on Retired Life

With societies being increasingly aged, the inequality among the retired population should be more focused in stratification study. My previous study (Seiyama 2009) had analyzed, using 1995 SSJ data, the reason for the larger income disparity among the elderly in Japan to some extent, but there were two serious defects in the data: that is, people aged more than 70 were excluded and the information on income sources including pension were not available. This is a new analysis on the income disparity among the elderly, based on a new nation-wide survey conducted in 2010, headed by Shirahase, with effective 6,442 respondents from unions that have learned to incorporate environmental concerns in their campaigns. This presentation describes some successful red-green alliances in Latin America, exploring the implications for labor strategies more broadly.

Labor Relations, Neoliberal Agri-Food Policies and Disasters in Japan

This paper probes the issue of changes in the agri-food labor structure under neoliberal globalization. Employing two cases from Japan, the paper documents the manner of independent farmers and their replacement by hired labor. This process, it is argued, was accelerated by the implementation of neoliberal policies and by the effects of natural and human-made disasters that affected Japan in recent years. More specifically, this work illustrates: 1) the manner in which neoliberal agri-food policies engendered changes in agri-food labor relations; 2) the characteristics of the new forms of labor relations under neoliberalism; and 3) the specific alterations of labor relations that occurred in the aftermath of recent disasters in Japan. In the first of the two cases presented, labor relations in farms controlled by the transnational corporation, Dole Food Company, are illustrated. The second case analyzes the neoliberal agricultural reforms the single earner family model had been prominent for the cohorts of our survey respondents, a basically similar conclusion is derived for household income.

CEDAW As an Instrument to Foster Women’s Political Equality in Central and Eastern Europe?

All countries of the Central and Eastern European region adopted the Convention for the Elimination of All Forms of Discrimination Against Women. Its implementation in these countries can be seen not only as a fulfillment of international obligations, but also as one of the mechanisms of democratization. Based on the comparative analysis of the official country reports and information delivered by non-governmental organizations the impact of CEDAW on the implementation of gender equality in new European democracies will be assessed. The special attention will be devoted to the problem of the enhancement of women’s political rights in Central and Eastern European democracies. What it means to implement the provisions of the CEDAW concerning political and public life in these countries? Can there be seen progress in their implementation? Is the Convention (and if yes, in what ways) used by women’s organizations in order to demand institutional measures to strengthen women’s representation in political institutions? Is CEDAW a point of reference for those who argue for legal changes – including gender quotas and zipper system – to help increase women’s political representation? Is the Convention a tool used by these actors who engage in supporting women deciding to be politically active both on local and national levels? What are the similarities and differences between the countries of the region in implementing the Convention and its promotion as a tool of effective social change leading to women’s political empowerment?

Trust and the Problem of Boundaries

This paper analyse the boundaries of trust which divide communities of belonging, moral credit and risk, from communities of knowledge, strangeness and security. It will discuss the ambiguous and hence threatening nature of boundaries and the consequences of this on constructing trust and solidarity across communities of difference. It will further query the sufficiency of liberal individualists models of personhood and community to overcome what is one of the most serious social challenges of our time.

Modernity As Tragedy. Adam Ferguson on the Decline of Community

Adam Ferguson was one of the major figures of the Scottish Enlightenment. And has been rightly credited as a precursor of modern sociology. For instance, Ferdinand Tönnies famous distinction between “Gemeinschaft” and “Gesellschaft” strongly resembles passages from Ferguson’s seminal “Essay on the History of Civil Society”. The difference between a German and an Anglo-Saxon semantic of community in mind, it seems paradoxical that especially the romantic German idea of community has been heavily influenced by Ferguson. His conception of an authentic civic life had a high impact in the German tradition of social thought and social criticism, and it is only a slight exaggeration to say that he was one of the inventors of an emphatic idea of political community. Ferguson also anticipated central features of the critique of modernity known by Karl Marx and Max Weber. In contrast to his contemporary friends, most notably David Hume and Adam Smith, he emphasized the political perils and the dangerous dynamics of modern market society. Modern society rests, according to Ferguson, on an increasingly powerful state, the expansion of the division of labor and a weakening of the public sphere, in favor of self-interested behavior. Consequently the public sphere and the sense of political community dissolves. The paper will examine Fergusons concept of community, his conjoined critique of modern society and its semantic of alienation. The tragedy of modern society lies in its dialectical process of liberation. This process leads to individualization and it has an alienating tendency: in the name of individual freedom, people become “gear wheels in the machine”.

SELKE, STEFAN* (Furtwangen University, ses@hs-furtwangen.de)

Foodsharing - A Contemporary Way Of Converting Perishable Food Into a Common Good

The paper discusses foodsharing as an controversial issue and thereby focuses on the role of a smartphone application which has recently been launched in Germany.

Foodsharing seems to fit perfectly into the sharing economy. A debate about food waste in affluent societies has created a new public mood concerning the discussion about the ethics of food thrown away. A foodsharing app has been introduced in 2012. The app is sponsored by the German Federal Ministry of Food, Agriculture and Consumer Protection (BMELV) and promoted by the prominent filmmaker Valentin Thurn („Taste the Waste“). It enables consumers to announce surplus food to be shared with others.

Several paradoxes appear by analysing this idea. Firstly, a foodsharing app is an example of what Guy Debord calls the “Society of the Spectacle”. It is becoming fashionable to receive public approval for symbolic solutions instead of executing sustainable politics (e.g. against food waste). Secondly, a foodsharing app is an example of de-skilling people in modern societies, who have forgotten basic abilities, like asking their own neighbour if they need left over food. This reveals the second paradox of foodsharing. A foodsharing app has been in introduction in 2012. The app is sponsored by the German Federal Ministry of Food, Agriculture and Consumer Protection (BMELV) and promoted by the prominent filmmaker Valentin Thurn („Taste the Waste“). It enables consumers to announce surplus food to be shared with others.

Several paradoxes appear by analysing this idea. Firstly, a foodsharing app is an example of what Guy Debord calls the “Society of the Spectacle”. It is becoming fashionable to receive public approval for symbolic solutions instead of executing sustainable politics (e.g. against food waste). Secondly, a foodsharing app is an example of de-skilling people in modern societies, who have forgotten basic abilities, like asking their own neighbour if they need left over food. This reveals the main social mechanism of the app: It serves to re-skilled people about cooperation and sharing.

Some more questions arise from this perspective. If foodsharing transforms food into a common good a new informal consumer market emerges in which trust is privatised. New solutions for domestic consumer concerns have to be found and requirements and responsibilities have to be balanced out.

The paper discusses the example of foodsharing focussed on its social impact. It is a contribution to the discussion about social sustainability in the form of a (national) case study. However, the findings can be generalised for similar fields of practise.

Lifelogging – Consequences Of Tracking The Self and Transforming It Into a Digital Self

Today life data is archived and presented publicly in networked digital media. The term “lifelogging” subsumes digital media systems that document, as commonly as possible, traces of human behaviour and put them into long-term storage. Four types of lifelogging can be distinguished: 1. Health Monitoring, 2. Human Tracking, 3. Digital Memory and 4. Sousveillance. Lifelogging is a marked attempt to break the boundaries of human existence by means of digital media. According to the most prominent advocates in this field it demonstrates the increasing belief in numbers and data and therefore could be called a neo-empiristic movement.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
However, the complete recording of one's life brings up new questions about personal information management and emerging inequalities. Cases studies of methodological, epistemological and social aspects of lifelogging already show fundamental concerns about the relationship between one's own life and the data set created by liflogs. Critics warn that people using lifelogging and producing large amounts of information become unwitting subjects of surveillance.

The critical discussion of lifelogging refers to the theory of "shifting baselines". Three main shifts have to be considered: 1. From subject to object (loss of individualism); 2. From action to function (loss of autonomy or agency); 3. From privacy to post-privacy.

"Technoapartheit", "over-diagnosis", the standardisation of human behaviour, the emergence of new social norms and the shame punishment of deviant people are examples of new inequalities caused by extensive lifelogging. Against a background of research projects on media of the future and empirical data, this paper discusses lifelogging as a controversial issue, focusing on the role of recently developed digital devices. Even if related developments in the area of lifelogging are not yet in the public domain, important questions about shifting boundaries are emerging and need to be discussed.

Aged Population and Social Disability in Rural South India: The Social Exclusion and Inclusion Perspective

Ageing is a natural process that begins at birth, or to be more precise, at conception, and is one process that pronounces throughout one's life and ends at death. With prolonged human life, reduced mortality and fertility rates due to recent developments in science and technology, ageing has become a global phenomenon in the 21st century. World Health Organisation (WHO) views ageing as a privilege and a societal achievement. This process started in developed countries and slowly shifting to developing countries like India with increase in number of graying population. Elderly life is considered or assumed as a burdened life, full of struggle, illness, depression, exploitation, abuse etc. Traditionally, the joint family took care of the aged but rapid urbanization and the migration of persons from rural to urban areas have created a vicious situation. In the absence of the ability to earn, and within a community support, in the form of kinsmen or the extended family, the aged are rendered destitute. It is also evident from Indian data that 40% of the elderly live below the poverty line and 90% are neither covered by any state pension nor have any family to take care of them. Increased rate of survival beyond 60 years have implications for financial burden from both family as well as state. Social disability is the unproductiveness, redundancy and social maladjustment to the environments. This paper aims to underpin the socio-economic inequality that exists among the elderly population and causes social disability. Also it exposes the determinants of poverty and discrimination among elderly people in the study area. And analyze about the social, economic and psychological problems experienced by old persons and advocate an action plan for effective implementation of welfare, care and support of the aged populations in the study area as part of social intervention.

International Tourists at a Japanese Festival

The paper concerns the experiences of international tourists visiting a traditional festival in Japan. The festival, Tsukuda Ōmatsuri, is a shrine festival held every third year in August in an old neighborhood in Tokyo, and attracts thousands of spectators and tourists. I have had the privilege to observe this festival for three years, and it was an old neighborhood in Tokyo, and it was then that I was asked to write this paper.

At one time during the 1990s, when the local area was threatened by urbanization, tourism was encouraged to boost political support and protection. Once the area avoided demolition, the crowds of tourists were seen as disturbing to festival performances, and the festival was no longer advertised for tourism. In spite of this, tourists continue to visit the festival in great numbers, mostly Japanese, but to some extent also international visitors. Contrary to expectations the festival not to promote the festival or encourage tourism has not diminished its value as a tourist experience. People appreciate the lessened crowds and heightened authenticity of getting closer to local performers and events.

Facing Inequalities: Internal-External Labour Market Interplay

SELENZA, RENATA* (University of Milan, renata.selenza@unimi.it)

From the theoretical perspective the paper aims to revisit the traditional theory of labour market segmentation and its key model based on insiders-outsiders divide. The development of a new paradigm supported by original empirical evidence of
an increased interdependency and competition between external and internal labour markets is proposed.

More than forty years later we reconsider the relevance of Internal labour market theory (Doeringer, Piore 1971) from a contemporary perspective. The strategic use of core-periphery has shifted towards market-mediated employment relationships and affects indifferently high and low-skilled sectors.

This issue is part of the wider socio-economic debate on inequality associated to labour and ranking and sorting process in labour markets (Granovetter, Tilly 1988).

Many European countries have undertaken reforms in order to increase flexibility. From this perspective the framing refined by Varieties of Capitalism (VoC) literature has been evolving, as companies situated in different countries - facing the global competition - seem to be adopting similar employment practices.

Recent studies (Herrmann 2008) showed the ways by which firms can compete circumvent pragmatically their own rigidities though functional equivalent practices, by using different manage employee's skills or implementing the required skills from international labour markets. Firms seem to be doing what their institutional contexts do not encourage.

We consider new forms of division and distribution of labour between firm-based and market-based labour force and their social implications, from the key point that skills and competences are crucial factors of productivity and competitiveness.

Following Streeck's contemporary Durkheimian interpretation that "economic efficiency is to an extent conditional on the effective enforcement of social constraints" (Streeck 1997) we aim to better understand if there is a sort of collective - competitiveness.

Gender Justice in the Global Manufacturing: Where Does It Stand? an Evidence from Garment Industry of Bangladesh

Globalization of production has yielded contradictory consequences to the lives of women workers who question about gender justice. Supporters argue that globalization ensure gender justice because it brings positives changes to lives of women workers in various forms, like, expansion of employment opportunities, leading to income earnings (Barrientoes, 1995; Razavi, 2001; Kabbeer, 2004), breaking patriarchal bond (Lim, 1997), growth of self-awareness about rights and duties and participation in collective bargaining association (Gills, 2002), shifts in gender roles and value structure, reconfiguration of the public-private and production-reproduction dichotomies (Unni, 2002). On the other hand, critics reject the claim of economic benefit of women; rather state that it is pushing women into more vulnerable situation than they were before (Boserup, 1970; Elson and Pearson, 1981, 1997; Nash and Fernandez-Kelly, 1983; Acker, 2004; Caraway, 2007). They argue that working conditions and labour rights in global factories are characterized by unjust labour practices, such as insufficient wages, extremely long working hours with minimum compensation, lack of occupational safety and health, little access to maternity and childcare benefits, arbitrary punishment and workplace harassment, absence of union and low workers' participation, presence of forced and comprehensive labor, persisting workplace discrimination. Based on the evidences from Readymade Garment Industry of Bangladesh, this paper explores that gender justice is yet to achieve at the global factories following the conceptual framework of social justice by Amartya Sen (Sen, 2009). This paper concludes that labour justice can be ensured if all local-global actors (state, employers, employees, corporations, NGOs, consumers' groups) play responsible and ethical role towards unfortunate workers.

A City, Two Neighborhoods, Ten Years: Observing Gentrification before and during the Crisis

In gentrification studies most of the empirical literature draws on in-depth analysis of single case study or on multi-site comparative analysis having time as a fixed variable. This paper aims at introducing and problematizing the time dimension in a multi-site comparative analysis. The paper we propose here is based on a double fieldwork in two neighborhoods of Torino, Italy, known as San Salvario and San Salvario, that have been facing gentrification from the early Nineties up to recent times, following one another as subsequent targets of public interventions and market dynamics. The time-span of more than ten years allows us to draw some main conclusions on the overall regeneration of the city of Torino, the role of gentrification in the remaking of the central city and the effects of the financial crisis on households, commercial activities and the image of the city.

The data are qualitative, mostly fieldwork notes, interviews and observations. The contributions of this paper are both theoretical and methodological. On the one hand, it offers new understandings of fourth-wave gentrification phe-

Do We Stay or Do We Leave?: The Views of UJ Students with Regard to Living in South Africa

This paper focuses on UJ students' views on remaining or leaving South Africa. This is based on the degree of trust students perceive the government of being worthy of and the degree of engagement in the affairs of the country students are prepared to expend in the context of perceived threats to SA citizens. A survey was conducted in 2011 on the basis of a stratified random sample of 1214 undergraduate students on all four UJ campuses. The data is analyzed in terms of a typology that considers the extent to which people either respond to real or perceived threats on the basis of trust in the government's ability and willingness to protect their interests as citizens and the derived trust in the future of the country or from a position of distrust in the regard. On this basis they could furthermore either engage the threatening reality or disengage from it altogether. The paper analyses the extent to which patterns can be identified among different groups of UJ undergraduate students with regard to the four possible responses that emerge: Trusting engagement, trusting disengagement, distrust engagement and distrust disengagement. The paper concludes by briefly considering the possible implications of the four responses for the long term stability and prosperity of South Africa.

Mediating Workplace Bullying

This paper will be exploring the nature and dynamics of workplace bullying with a view to identify important requirements for mediatory interventions to resolve bullying related issues within the workplace. In order to achieve this, an analysis of the characteristics of the workplace bully, the impact of the bullying behaviour on the victim and the organization, as well as the enabling organizational environment will be done. Possible mediatory interventions in this context will be explored in terms of the following dimensions: On a micro-level, requirements for the development of both workplace policies and strategies. On a meso-level, bullying awareness workshops and skills developing workshops to deal with workplace bullying will be explored. On macro level, management participation and policy related interventions will be analysed. Reference will be made to the South African situation.

Future Urbanisms: Technology, Science Fiction and Extrapolated Cities

An unavoidable dilemma of looking into the future is demonstrated by our pondering whether to filter reality through Google glasses (smart phones, tablets etc.) - providing data about location, proximity and resources - or to resist this new temptation to stream information and explore the reality of our environment. Technology has two sides, providing new social possibilities such as digital art and communications, while taking away the need to go shopping in person. The importance of science fiction in our consideration and construction of futures is illustrated through E. M. Forester's short story titled 'The Machine Stops', written in 1920, which describes a future for humanity based upon a complete reliance on technology, and predicts the internet. The story serves as a warning of a future so completely reliant on technology that humanity is disabled. Science fiction utilises several methods to extrapolate possible futures and identifies both the obvious relationship between urbanity and imagined futures, and the distinction between approaches based on extrapolation and fantasy. The process of extrapolation based on existing socio-material realities provides an avenue to work with the city as an open-ended system. This paper will demonstrate how 'systemic diagramming' (Sengupta and Lossiova, 2012) can be used to extrapolate 'potential' futures providing a frame of reference for current actions and future speculations. Just
as in science fiction the methodology is based on empirical socio-spatial findings (knowability), technological projection, epistemological growth and speculation regarding potential tangents and tipping points. The ability to act positively towards desirable futures is deeply embedded in possibilities of change, identifiable trajectories and an acknowledgement of the fact that cities and society continuously transform. Paradoxical urban change in context of resilience (Walker et al., 2004)(Holling, 1996), adaptation and assemblage (DeLanda, 2006), potential urban futures become the space of socio-spatial speculation and resultant action.

“What I Want to Do” As a Form of Strategy to Survive on the Job-Hunting Process: The Case of Japanese University Students

In Japan, university students are facing challenges to get a job today. For example, only 60 percent of university graduates can find a full-time job now. Many quantitative researchers conducted researches on job-hunting for university students to understand how social structure impacts the job-hunting process. These studies pointed out that the labor market requires university students not only to have a better educational background but also to have higher motivation, like “ynaitokoto (what I want to do)”, because the labor market requires them to work for other reasons besides money. However, no one has analyzed how the word “ynaitokoto” has been used by students.

My research aims to describe the job-hunting process for Japanese new graduates by analyzing the use of word, “ynaitokoto.” I conducted interviews with 11 students who were in the middle of job-hunting activities. Each person was interviewed two to four times between February to July in 2012. Using Goffman’s “warm-up” and “cool-down” theory (Goffman, 1952) as an analytical framework, I shall raise the following points. First, they used the word “ynyaitokoto” to warm themselves up to get into job-hunting mode; however, many of them failed in job competitions. Second, they let themselves cool down their “ynaitokoto.” Third, I changed the meaning of “ynaitokoto”, reinterpreted it and warmed their “ynaitokoto” up again for the next competitions. Therefore, students have to continue to change their “ynaitokoto” during the process until they get a job. It is hard for them, however, to deny their “ynaitokoto” and adapt to the job market. Students need the competitiveness only to survive job competition but not in their real lives, which means, interestingly, that they are not able to meet the expectation that the labor market has for them as long as they use the word.

Consolidating Patients’ Rights in South Korea: The Case of the Breast Cancer Patients’ Movement

The promotion of patients’ rights and quality care have been rapidly spreading in South Korean hospitals since the 1990s. The most conspicuous method of spreading these two concepts has been the breast cancer patient’s group. This paper will treat the evolution of the breast cancer patients’ movement since 2011, focusing on an organization that claims to represent female breast cancer patients in South Korea, the Union of Korean Breast Cancer Patients (hereafter UKBCP). Established by Korean women with breast cancer, the distinctive characteristics of the UKBCP will be presented and analyzed; these characteristics derive from the birth of patients’ self-help groups promoted by biomedical professionals in university hospitals.

My theoretical approach is indebted to the present scholarship on the sociology of individuals, particularly Danilo Martuccelli’s work on subjectivity(2002) and the theoretical framework of Health Social Movements (Brown, Zavestoski et al., 2005). In my analysis, I will refer to materials collected from different sources: web information provided by the UKBCP, participant observation and in-depth interviews.

The study will lead to a better understanding of objectives and strategies of the UKBCP. My hypothesis is that the heteronormative femininity has developed with the current regime of breast cancer. In this perspective, I will further examine the impact the regime has had on the biomedical world and the life of patients. I will also explore actions specifically concerning the rights claimed by patients and amendments in legislation. This paper will discuss the regime of breast cancer, which resonates with the cultural and political characteristics of reframing a South Korean welfare state and particular elements constituting the subjectivity of breast cancer patients.

SERCOMBE, HOWARD* (University of Strathclyde, howard.sercombe@strath.ac.uk)

Youth Work in the Context of a Global Sociology of Youth

This paper explores how modern youth work has arisen through the social construction of “youth” as a delineated category of adults through a range of key processes. The youth category is created through the exclusion of this group of (biological) adults from the workforce and their incarceration in age-streamed cohorts in educational institutions. This is systemically supported by a scientific discourse of adolescence that resides clearly within a deficit paradigm with a wide range of associated cultural artifacts to disempower young people. The elimination of relationships with older adults and the exclusion of young people from economic life feeds and maintains youth cultures while simultaneously marking young people out for prejudicial and discriminatory treatment. The resulting economic dependency in young people, their incoherent social role, the emergence of distinct youth cultures and the generation gap provides the grounds for disproportionate public fear rooted in young peoples’ “otherness”, and the “social problem” of youth is created and maintained.

This leads to simultaneous and contradictory pressures for the control and containment of young people and for their social and economic participation and agency. This occurs in a social context already riven by class and other contradictions, the technological and industrial transitions involved in the collapse of ‘heavy’ modernity and the emergence of more ‘liquid’ forms, and by globalization, including global modernisation and the globalisation of capital. Youth work emerges in the flux of those contradictions. The paper explores the responsibility for youth workers to partner with young people to manage and challenge the conditions of their disenfranchisement and to find compensatory processes which facilitate young people’s renewed agency.

The Post on Social Network Sites: The (Dis)Embodiment in the Digital Era

Private archives (the letters and photos of ordinary people) have been an invaluable resource for historians, biographers and researchers of society. Since few people keep these social networking sites will be more and more transformed by correspondents, future researchers will have far fewer writing documents as source materials than in the past. Digital writing and images have no physical substance. To some degree, then, we may be returning to the pattern of oral cultures: much digitally expressed cultural activity will leave no record. As the popularity of online social networking like Facebook sites grows, so do concerns about the impact of such sites on the process of cultural memory construction. Our research has concentrated on the presentation of the past of Russian elderly (60+) through social networking profiles (our subjects are two modern Russian social networks “VKontakte” and “My Former Classmates”). This study has looked at social networking profile pages as a single text including iconic, audio and textual elements.

We analyze two strategies of networking which are characterized of senior users. The first important characteristic of old people sites is the way personal identity is subsumed within the sense of being historical generation. The second strategy shows contradictory intentions of elderly who “play” with time changing the personal contemporary image. Deep interviews with senior users help to re-combine these practices in a situation if the profile owner died.

We discuss inequality problem in terms of “digital divide” and “power over time” between elderly who use new technologies and non-users.

New and Old Path to Economic Power: Social Origins and Recruitment of Managing Elites

The transition to the new century in Latin America display several changes and challenges. Democratization processes had to overcome multiple economic and political crises, left’ turn over and new economic grow cycle. Despite of Uruguay is a small country has high human development and outstanding democratic legacy in Latin America. As well as many countries during the last decades had many political and economic changes.

Economic globalization in the last two decades modifies the structure of economic power and impact into business elite integration. On the one hand, the increasing influence of the transnational companies rose to new managing elites. Corporate elites are based on cultural capital background, their abilities and specialized knowledge, university management professions, social global networks. On the other hand, the traditional entrepreneurs recruited through family prestige and inherited capital, exclusive business membership and local networks linked to political power.

Moreover, the left’ turn over in Uruguay had several consequences on recruitment of management elites based on trade union and political capital background.

The study inquires about recruitment processes and careers of senior managers (CEO, MD). The paper identifies business elites ’ relationships (social origins, family, education, work, leisure time) and political networks. The study researches
100 senior managers’ biographies of the majors companies (private and public sector) in Uruguay. The study is based on biographical and prosopographical methodologies - obituaries, curriculum vitae, social networks. - Miguel Serna Phd. Crisis and Challenges for Families Facing Global Diversity and Inequality - Can Families Still Function As Educators in Multicultural Societies?

The paper presents a research study on the sociological and educational impact of global cultural diversity on the role of families as educators. Specifically, it presents the field work and findings of qualitative research, involving educational settings in which innovative methods have been developed to include families from diverse cultures as educators in their children's educational process.

The study's outcomes include methods of facilitating an authentic dialogue between families and educators, a creative model for the incorporation of family traditions and narratives as enrichment resources for the school curriculum, developing curricula, and conducting educators training sessions. The study's findings demonstrate that an effective partnership forming between the family and the educational framework, which relates to the child's cultural world, improves the learning process. It is enhancing the children's scholastic achievements, building families’ resilience thereby promoting equality among families, helping the family to regain its leadership role and culturally assigning responsibility for strengthening their cultural identity and their self-esteem.

The study’s conclusions show the contribution of families' multiple intelligences to the child's development and to the school's success in achieving its goals and the educational agenda. Therefore, such school-family collaboration has the potential to minimize the risk of crises in the family's structure which commonly include social changes such as the loss of parental authority, the man/father changing status in a democratic society, children acting as the parents' translators, different social norms, conflicting values with society, adaptation of migrating families to new realities etc.

It also encourages acquiring formal education as a vehicle for minimizing inequality and enabling social mobility. The paper will present studies conducted in a widely diverse type of families and schools in Israel along with innovative educational programs developed, tested and implemented during and after the study.

Managerial Doctors: Medical Technocracies Revisited

Across European countries, the relationship between professionalism and managerialism indicate new emergent configurations of hybrid professionals and mixed forms of governance in health care. Studies concerning Portuguese case (Serra, 2010; Carvalho, 2012; Correa, 2012; Kuhlmann, et al. 2012) show a specific situation due to the power the medical profession stills to exert over health regulation. Definitely, doctor's influence on state regulation seems to counter the EU Citizenship. The economic recession and the scarce scientific knowledge about citizens, as well as basic principles of living together and social cohesion. The economic recession and the scarce scientific knowledge about the group have reinforced the stigmatization and infringement of fundamental rights, ignoring their contribution to the societies of origin and destination. From a transnational vision that goes beyond methodological nationalism, this paper aims to present some of the results obtained by this RTD project. Specifically it aims to provide new scientific knowledge on migration processes such as circular migration and transnational spaces of the Romanian Roma, and analyze how they contribute both to origin and host societies and the process of construction a EU from the bottom up where the basic rights and living a reality for all its citizens.

Privileging Postcolonial: Emerging Epistemologies in the Sociology of African Religions

Privileging The Postcolonial: Emerging Epistemologies In The Sociology Of African Religions

(Religious Migrants and Marginality in South Africa)

For more than a decade South Africa has seen an enormous influx of migrants from across the continent. Significantly, these migrant communities have visibly and visibly demonstrated the fabric of South African public culture through language, economy, social, and religion. In the context of South Africa, Ethiopian Orthodox Christians and Nigerian Pentecostals have respectively devised strategies for navigating their distinct national and religious identities. These strategies offer a lens through which to examine how such groups variously mediated their distinct transnational identities through the reconfiguring ritual and liturgical practices. Thus I ask, to what extent do such practices reduce the migrants’ marginality. In particular, I am concerned with how migrants’ religious practices produce new forms of knowledge.

In examining how the embodiment of ritual practice relates to the everyday experience of the migrant, I propose that we turn our gaze and our method to

SERRA, MICHELA* (RC47 Social Classes ab, serramikela@libero.it) 

The Movimento 5 Stelle (M5S) Between Populism and Direct Democracy

This article presents a study on the Movimento 5 Stelle (M5S), founded in Italy in 2009 by the comedian Beppe Grillo. The elections of February 2013, established the success of this movement that with a result of 25.5 per cent, has placed 163 members in Parliament between Deputies and Senators.

The Movimento 5 Stelle promotes initiatives to bring citizens to the center of public life through practices of direct democracy, while underlining the crisis of representation of the traditional political parties.

The study is aimed at understanding the political, social, cultural meanings of this movement and in particular it examines the way in which its members oppose to and are distinguished by the traditional parties, in facing and developing interventions through participation and direct democracy in the fields of interest of the movement, namely energy, water, waste collection, connectivity, social services.

The Movimento 5 Stelle will be analyzed through three dimensions: the space represented by the online Beppe Grillo's blog, the online and offline meet-up tools and the institutional places. The work is also interested in showing the controversial elements of the movement in relation to the presence of a charismatic leadership, the intolerance towards dissenting voices, the emphasis on the democratic nature of the network, as well as some populist features such as the opposition people versus elite, the simplification of the social and political reality.
the reading of the migrant body as site of knowledge production in the African context. Situating my sociological practice in the context of postcolonial theory, I draw on the work of Donna Haraway (body in performance and resistance), Bryan Turner (corporealization) and Frantz Fanon (lived experience of the black body) to analyse the various ways in which bodies are regulated, managed and disciplined. These ways in which migrant bodies also serve as sites of resistance – sites for the production of new epistemologies. Quiet significantly, the case studies of the Ethiopian Orthodox and Nigerian Pentecostal migrant communities, point to the multiple ways in which the religious body in ritual performance also act in resistance to the mutating and governing practices of social exclusion, xenophobia and nationality, while simultaneously forging transnational identities.

Redefining Gender Reform in Indonesia: Oligarchy and Exclusion of Marginalized Women

Gender reform is regarded as a precondition for democratization since it results in women’s empowerment. In Indonesia, gender reform implicated in gender mainstreaming policy and affirmative action policy which assure women across classes, ethnicities and ages as significant beneficiaries of democratization that is currently taking place in the country. This study examines the impacts of gender reform policy toward marginalized women. Using Banten, a province headed by a women governor, as a case, this study employed a qualitative method (i.e. FGD and in-depth interviews) for its data gathering strategy. This study indicates that gender reform policy has improved the elites’ benefits in women. They have captured local discourses on women political participation and gender mainstreaming programs through the practices of oligarchy and control over resources in various domains. Moreover, the elite women have used their access to political power for continuing practices of nepotism, corruption, and the accumulation of the ruler’s wealth. As the consequences, marginalized women, particularly the poor, have been excluded from the access to political and economic resources. Gender reform policy has not yet contributed to the transformation of marginalized women to have a better living. This study contends that women are not a homogenous entity. Their gender identity intersects with class, ethnicities and other identities. Accordingly, women have various interests and regard gender reform as opportunities in different ways. Hence, the practice of oligarchy done by women elites has confirmed the heterogeneity of women based on their intersectional identities. Therefore, gender reform policy promoted by the Indonesian government, does not necessarily benefiting all women citizens in equal basis.

The Limits of Ethnic Politics in Indonesia: A Case Study of Riau Politics

Revitalization of ethnic identity has significance the implementation of Indonesian decentralization and democratization. It is marked by competition over political and economic resources among ethnic groups at the local level (provincial and district levels). The dominant ethnic group utilized ethnic politics to control over political power. This study examines the impacts of ethnic politics in Riau-Sumatra, an Indonesian province, after more than 10 years decentralization. The Malay as the dominant ethnic group exercised ethnic politics through various channels including in the political, economy and socio-cultural domains. The study employed a qualitative approach. The results found that cartel politics, fragmentation of Malayness, and the weak of local activism in Riau has weakened the strategy of ethnic politics that previously promoted by the Malay ethnic group. Thus, local politics dominated by coalition among elites regardless their ethnicity, political party and access to economic resources became the major influential factors in Riau politics. This coalition has caused the gap between elite and non-elite groups. Hence, political activism involved only the elite and excluded non-elite citizens (both Malay and non Malay). Meanwhile, heterogeneity of Malayness has fragmented the ethnic group and caused the lack of solidarity among Malay in employing the ethnic politics strategy in local politics. This study illustrates class as an important dimension in the way the ethnic politics work at the local level. Thus, ethnic politics has benefited elites regardless their ethnic background and been positioning the lower class at the margin. The findings argue that political cartel, fragmentation of Malayness, and the weak of local activism have caused the limit of ethnic politics.

SEVÄNEN, ERKKI* (University of Eastern Finland, erikki.sevanen@uef.fi)

Knowing Society through Literature

It was in the 19th century that novelists such as Honoré de Balzac and Émile Zola, two leading figures in French and European realistic-naturalistic literature, saw their own literary creation as an imaginative or “experimental” way of studying society. At this stage, sociology - literature's competitor in the field of social knowledge - was a dawning discipline whose position in the academic world was insecure. At the beginning of the 20th century it became a legitimate discipline, still it would not gain a monopoly in relation to questions regarding societal knowledge.

In addition, literature offers insights into society. In his Temps et Récit (1983), Paul Ricoeur speaks about triple mimesis. In their social interaction people create institutions, rules, common meanings, myths, and representations of the world (mimesis 1). At the next level (mimesis 2), popular stories, literature and other arts describe the first level and take material from it when creating fictional or alternative worlds. Thus, these cultural products give us representations of society and a more or less critical sense of alternative worlds, whose order differs from the normal societal order. Finally, readers or receivers (mimesis 3) recognize that these products function simultaneously as representations of the real world and as critical deviations from it.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Literature's cognitive function does not, however, limit itself to representation-al knowledge and alternative or utopian world models. Literature is not a mere description of society; it also shows how people experience their lives in society - or how they experience society's economic and political structures that cannot, as such, entirely be an object of literary description.

Consequently, literature is a fruitful research object for the sociology of knowledge and the study of ideologies. Likewise, it can be utilized as a documentary material in social-historical research.

Aspects of successful aging have become common media messages as older adults make up a greater proportion of national populations. These seniors typically know the dangers of smoking, poor diet, obesity, and high blood pressure but often lack motivation to make appropriate lifestyle changes. Motivating and empowering older people to be active and healthy, even with support from family and community, is a challenge. Seniors in Motion (SIM), a non-profit fitness facility, was established in Denton, Texas, U.S.A. to implement an intervention program encompassing physical fitness, education, and family and community support. Building on results of a feasibility study conducted in 2007-2008, SIM participants were given the opportunity to sign up for ongoing research designed to assess individual progress and program effectiveness. Since September 2009, over 300 seniors have completed one or more phases of the intervention. Most reported an increase in the time they devoted to several different types of exercise, activities in and related to the home, while reducing the time devoted to sedentary activities. Most seniors reported a more active and higher quality of life and less sedentary lifestyle than at the initial assessments. Beyond making people stronger and more flexible an anticipated bonus was the spirit of kinship and community that grew out of the seniors continuing participation. The opportunity to engage in meaningful social contact provided many a powerful antidote in the battle against health problems and their frequent companion loneliness.

Impact of Long Distance Commuting on Israeli and United States Couples’ Satisfaction

An important shift has occurred in employment related mobility. Long distance commuting has become an option to permanent migration. Details on voluntary long distance time-extended commuting participants’ practices and consequences for partner relationships were gathered from 2010 to 2012. Quantitative and qualitative data were gathered from a non-probability convenience sample of 434 respondents in Israel and 130 in United States (U.S.). The static-group comparison research design dictated gathering comparable respondents from both commuting and non-commuting couples to better assess the impact of commuting. Deficit and resilience theoretical perspectives guided assessments of commuting’s impact on couple satisfaction. Commuters versus non-commuters characteristics, commuting patterns, and initial assessments of impact of commuting on couples’ satisfaction (Landesman & Seward, Forthcoming) provided the basis for further analyses and findings. Commuting had the greatest negative impact on couples’ satisfaction among women in Israel. Among the indexes constructed, respondents in non-commuting couples in Israel reported significantly higher satisfaction with communication, division of labor, and involvement with children when compared to respondents in commuting couples. Among U.S. respondents only involvement with children index follows this pattern. Israeli and U.S. women plus U.S. men in non-commuting couples had significantly higher satisfaction indexes than those in commuting couples. Frequency of commutes during the year in the U.S. had a negative impact on overall couple satisfaction. Satisfaction with communication and division of labor indexes explained about a third of the variation in the satisfaction index in Israel and U.S. samples. In Israel the time spent in leisure activities index was also a significant predictor. Data limitations identify avenues for further research.
and HITT-CIS - Health in Times of Transition, conducted in 2010. These international research projects were supported by the European Union Programs. Field works were conducted across nine former Soviet Union countries: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine. The objectives of these researches were to study the conditions of lifestyle, satisfaction, health, social well-being, political views, and trust to government and state institutions. A total 18,000 respondents were surveyed by standardized personal interview. Sample represents the population at the age of 18 years and older, also represents distribution by region and type of settlement. The following indicators may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of global and especially regional peace.

SHAIKH, RIAZ* (Institute of Science and Technology, riazshiekh06@yahoo.com)
Changing Nature of Conflict in Post 2014 Situation and Its Implication in South Asia

Pakistan emerged as the frontline state during the Cold War era and especially Afghan conflict (1979 – 1988). Pakistan remained the focus of attention during this time. After the 9/11 and later in war against terror, Pakistan again became part of this new war. But the nature of country’s involvement in both wars was totally different. In the mean time during 1989 to 2001, Pakistan developed its own parallel agenda to play at different fronts simultaneously. But that policy miserably proved faulty, resulting killing of more than 45,000 civilian and 3000 soldiers and police officials. During this decade.

This paper analysis Pakistan’s future policy in the post 2014 scenario and how it plans to move forward. Will this policy be helpful in resolving conflict or it would further sharpen the existing conflicts. Paper also focuses how regional and international factors may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of global and especially regional peace.

War, Conflict and Human Rights Violation: New Debates and Discourses in Pakistan

Eventual aim of human beings is to have a peaceful society where human dignity and human rights are well respected. But during the war and conflict times situation totally rejects the concept of the such values and norms and especially in situation where conflicts persists for decades on asymmetric pattern. Situation becomes more complex in those cases where states provide covert support to the non-state actors to further toe their agenda. Pakistan’s military developed nexus with the jihadist with the financial backing of other countries, but eventually the jihadists are now haunting the patron itself.

Now conflict between militants and state has turned to situation that where the level of violence has reached to new zenith. In this situation, abuse of human rights from both sides becomes a very common issue. But due to protest of civil society bodies and judicial activism at least debate on human rights violation is being taken place in Pakistan. Human rights organizations and judiciary are pursuing the agenda of missing persons and other sensitive situation vigorously.

Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.

SHALEV, MICHAEL* (Hebrew University of Jerusalem, michael.shalevy@gmail.com)
Who Participates in Encompassing Protests and Why Does It Matter? Israel and Spain in 2011

In Spain and Israel in the spring and summer of 2011, multiple demonstrations each mobilized hundreds of thousands of participants in the framework of Occupy-type protests. The Spanish indignados (15M) and Israel’s social justice movement were instances of an unusual variety of protest, labeled “encompassing” because it combines massive mobilizations with high levels of public support. Such encompassingness does not necessarily imply society-wide solidarity, but may instead be based on what are in effect multiple parallel protests in which some social sectors are under-represented or even altogether absent. This paper reports analyses of national sample surveys carried out in both countries, showing the effects of political cleavages and other social divisions on the passive and active engagement of individuals in these instances of encompassing protest. For Israel only, these conventional sources are supplemented by data collected via mobile phone signals, which make it possible to paint a reliable portrait of the social, cultural and political characteristics of demonstrators.

Hoping for More: Renewing and Redeveloping Public Housing without Marginalizing Low-Income Residents

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace troubled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have been redeveloped into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to projects that attempt to preserve a substantial majority of units for low-income households.

The paper also focuses how regional and international factors may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of global and especially regional peace.

‘to Foster the Spirit’ or to Secure One’s Future: Competing Models of Field of Study Choice Among Middle-Class Students

The growing interest in horizontal stratification has led researchers to recognize qualitative differentiation in the choice of academic fields of study (FOS), mainly along the lines of professional and non-professional fields. Still, adopting either rational action theory or Bourdieusian perspective, most researchers still evaluate FOS through their future utility, and accordingly assume a calculative or strategic choice process. This portrayal may reflect the stratifying effect of higher education and its ongoing professionalization. Nevertheless, higher-education and choice are associated with autotelic and expressive cultural ideals, such as the ideal of ‘pure knowledge’, the model of liberal-arts education and models of choice as an expressive action. To date, these ideals and their relationship with FOS choice have been mainly overlooked.

Drawing upon ‘culture as tool-kit’ perspective, I argue that when choosing FOS, students use dominant cultural perception of higher-education, as models through which they make sense and assign value to their choice. Accordingly, I show how the choice of professional or non-professional fields, reflects two distinct cultural models of higher-education and choice.

Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.

One Country Two Realities: Work Values of Jews and Muslims in Israel

This study examines work values of 909 Jews and 219 Arab Muslims, (or Palestinians that have Israeli citizenship). According to Bulgarian author K. Popov, it is a unique study since there are very few studies on cultural values and no studies on work values, which compare between different ethno religious groups who have been living in the same country! the results reveal a significant difference between the two ethno religious groups regarding the importance of all life domains and in most of the preferred work goals and the regression analysis of the main demographic variables cannot explain these differences. The MDS of Jews and Muslims also demonstrate different perceptions and internalization of work values among the two ethno religious groups. The value gaps can be explained by the cultural differences (individualistic Jewish culture vs. collectivistic Arab culture), by high degree of segregation, by the employment discrimination and primarily by the Israeli- Arab/Palestinian conflict.

SHARABI, MOSHE* (Yezreel Valley College, moshes@yvc.ac.il)

One Country Two Realities: Work Values of Jews and Muslims in Israel

This study examines work values of 909 Jews and 219 Arab Muslims, (or Palestinians that have Israeli citizenship). According to Bulgarian author K. Popov, it is a unique study since there are very few studies on cultural values and no studies on work values, which compare between different ethno religious groups who have been living in the same country! the results reveal a significant difference between the two ethno religious groups regarding the importance of all life domains and in most of the preferred work goals and the regression analysis of the main demographic variables cannot explain these differences. The MDS of Jews and Muslims also demonstrate different perceptions and internalization of work values among the two ethno religious groups. The value gaps can be explained by the cultural differences (individualistic Jewish culture vs. collectivistic Arab culture), by high degree of segregation, by the employment discrimination and primarily by the Israeli- Arab/Palestinian conflict.

Categorical Divisions: The Hostilities Between ‘Indigenous’ and ‘Immigrants’ As a ‘State Effect’

Nationalist politics has increasingly become one of the main ways that people constituted as ‘natives’ have attempted to overthrow colonial domination. Together, the state language of “sovereignty” and the national language of “self-determination” have shaped notions of identity and have tended to anchor such identities to particular places. All this has figured into how contemporary ‘indigenous’ nationalisms have staked their claim to a place within a global system of national states. Over time, a stark delineation between ‘Natives’ and “non-Natives” has been asserted. Today, a growing number of scholars who identify as indigenous, as well as those who position themselves as their allies, portray all ‘non-Natives’ as colonizers. In this paper, I examine how a nationalized politics of decolonization has come to mark ‘Natives’ and ‘migrants’ as mutually antagonistic positions. Focusing on such politics of place in the national states of Canada and the United States, I question the conflation of processes of colonization with those of migration. I historicize such politics within their social, political, economic context by looking at the continuation between colonial state practices and contemporary indigenous nationalisms. I also contrast contemporary indigenous nationalisms with other political strategies of decolonization, particularly politics
that have refused the differentiations of "race" and "nation" and the Leviathan of national sovereignty.

Making Housing Affordable for Urban Poor- Approaches Adopted in India

Housing is one of the basic necessities of an individual. However, the dream of having a house remains distinct for than one-third urban population. They remain marginalised in terms of civic services, housing and other socio-economic parameters. The cost of this marginalisation is often very high and many studies have shown that it may be up to 2-3 times of the formal system. By 2030, an estimated 5 billion of the world's 8.1 billion people will live in cities. About 2 billion of them will live in slums, primarily in Africa and Asia, lacking basic services, unsecured tenure, congestion and surrounded by desperation and crime. In India, the urban housing shortage has been estimated as 18.78 million, of which almost 96 percent pertain to urban poor. Affordable housing has been considered as the only option to meet this challenge. A Task Force on "Affordable Housing for All", constitute by the Government of India, Ministry of Housing and Urban Poverty Alleviation, defined affordable housing in terms of (a) multiples of household income; (b) size of the tenement; and (c) percentage of household income, in case of rented accommodation.

3.0 Approach of this Paper

This paper will address the following issues, in the perspective of earlier discussions:

1. The need for a multi-pronged strategy for housing delivery to all sections of the society. This includes housing delivery system, target group and housing typology.
2. Incentives and subsidies to make housing within the reach of target group and mechanisms to retain the ownership. Right policy instruments for subsidy transfer are needed to make people shop for their dream house, without any restraint on size or location.
3. The access of urban poor to sources of institutional lending.

Equal Leisure in an Unequal World

Equal Leisure in an Unequal World Though the globe today is characterized by deep and different layers in in terms of capital accumulation and resource appropriation, the leisure experience may display a different type of demarcation – one that may have the possibility of enriching different social groups if they drew from each other. Societies in which leisure has come to be characterised by the consumption of the fruits of production individuals may appear to be bound by a stimulus-response mode of leisure behaviour. What should be ‘done’ during ‘leisure time’ is fed into the psyche through media pressure and socialisation results in activities that may or may not be self-enhancing even thought they feed into the leisure industry. In conventional understanding of leisure, there continues to be a simplistic dichotomy between work and leisure and ‘free’ and ‘occupied’ time as though these were easily separable categories. In this same layered global society there are groups of people who still live with values that recognize the organic unity of all things, are aware of a sense of continuum, as a movement from matter to spirit and vice versa, and see an interconnectedness of all things. As a result there arises a tendency to respect the environment and other beings. The ‘leisure’ of such societies need not be time abstracted from other day to day activities but a mindset that characterizes the whole. The presentation will look to the possibility of interaction of these segments on each other so as to enable a more holistic attitude to the environment and to other existents on earth.

SHARON NOVA, SVETLANA* (St.Tikhon's Orthodox University, 
s_sharonova@mail.ru)

The National Russian Model of University in the Era of Academic Capitalism

The transformation of the national model of Russian university is under the influence of academic capitalism. The very same academic capitalism born in the depths of the neo-liberal capitalism. The basic principles of the neoliberalization fully implemented within the transformation of national educational systems:

- the creation of conditions of accumulation of capital and power of the economic elite;
- the denial of a nation, and therefore the promotion of the idea of the dangers of government intervention in the economy (in this case is to minimize the interference of the state in education);

- promoting free and stable functioning of the education system is not in general, and of its individual elements (schools, institutes, universities, etc.).

In Russia, and in other countries, this leads to the destruction of national educational systems. Yet Durkheim said that in society there are many cultures of each of them has its own education system. Simmel argued that cultural diversity enriches the world community. However, the implementation of neoliberal policies in the field of education under the slogan of "globalization" ignores the law and seeks to simplify the interaction between the educational systems in order to achieve clarity and transparency of market exchange. Author analyzes the externalities of Russia and the trends that are happening as a result of the modernization of the education system that implements neoliberal principles and creating academic capitalism. Virtually all non-liberal utopian promises of the project, in practice, lead to quite the opposite of the expected results.

The Spiritual Capital As a Fundamental Element Of Cultural Capital

Cultural capital is usually regarded as a mechanism of influence on personal identity. Largely contributed to this study Coleman, although Bourdieu introduced the concept of a theoretical understanding of capital varieties. He was interested in the convergence of social, cultural and economic capital. We propose to focus on the cultural capital of both the qualitative characteristics of the state of society. The problem is that in the presence of cultural capital as a funded system of values enriches the form of works of art and science, society degrades morally. Any cultural capital based on traditional religious values. This does not mean the broadcasting of religious themes in works of art, although it excludes, but rather a philosophical position of artists and researchers, through which the public receives the interpretation of events, their assessment of a certain value-regulatory system of coordination. This element is the attempt to understand the role of the spiritual capital as an element of cultural capital. Qualitative state of society, its morality depends on the amount of spiritual capital, which he occupies in the field of cultural capital. A striking example of how the degradation and spiritual revival of capital in society can serve as the processes that took place during the last century.

Energy and Identity: Women, History, and Anti-Nuclear Social Movements in Japan

Since March 11, 2011 (3/11), some Japanese citizens have responded to the ongoing Fukushima nuclear crisis by staging large protests against the use of nuclear energy in major metropolitan areas. Within this revival of anti-nuclear collective action, scholars and global news media have argued that the prominent role of women, who have been observed leading “tent city” occupations in Tokyo and organizing rallies in other cities, signals an important event with potential implications for the changing status of gender in Japanese public politics.

Applying a historical frame to the contemporary case of women’s leadership in post-3/11 activism, this paper challenges a simplified narrative of feminist emergence, instead arguing that contemporary anti-nuclear politics must be read as part of a larger context of women’s organizing in Japan throughout the twentieth century. Moreover, this history of social movements also reveals important divisions within Japanese women’s movements across lines of race, coloniality, and citizenship. In this paper, I deconstruct the concept of “anti-nuclear” and examine how this politics converges with other histories of post-war women’s collective organizing, particularly examining the roles of Japanese women in the related histories of peace and anti-militarization social movements.

In arguing how gender has politically and rhetorically functioned as a method of organizing Japanese public politics, I challenge notions that Japanese women, in the context of social movements, should be viewed simply as a formation of collective identity. Rather, the different meanings of women’s identities within these cases suggests the importance of reading Japanese women’s social movements in relation to various political contestations at the “local” and transnational levels and moreover, in terms of what they are able to signify about race, coloniality, and citizenship.

Nationalism in the USSR: Historical and Comparative Perspective

The late 1980s and early 1990s were characterized by the sudden rise of nationalist movements in almost all Soviet ethnic regions. It is argued that the rise of political nationalism since the late 1980s can be explained by development of cul-
tural nationalism in the previous decades, as an unintended outcome of commu-
nist nationalities policy. The Soviet political and cultural nationalism is studied in
historical and comparative perspective. All ethnic regions are examined through-
out their entire history of the Soviet Union (49 regions, 1917-91), using a structural
equation modeling approach. This paper aims to make at least three contribu-
tions to this field. Firstly, it is a methodological contribution for studying national-
ism: a ‘quantification of history’ approach. Quantitative values are assigned to
historical trends and events. Having constructed variables from historical data, I
use conventional statistical methods like SEM. Secondly, this paper contributes to
the theoretical debate about the role of cultural autonomy in multiethnic states.
The results challenge the concept of ‘cultural autonomy’ as solution to intereth-
nic conflict. Cultural nationalism matters, it indirectly reinforces political national-
ism. Concessions in the cultural domain failed to stop the growth of political
nationalism in the late 1980s. Finally, the paper statistically proves that the break
between early 1990s Soviet and Stalinist nationalities policy explains the entire Soviet
nationalities policy. In fact, the late Soviet nationalities policy was inherited from
the Stalin’s rule period. This finding revealed in other studies now gets statistical
evidence.

SHEN, JIE* (Chinese University, jie.shen@hotmail.com)
Chinese Youth’s Post-Materialist Values in an Era of Multi-
Modernity

Today’s China’s society is in a compound of multiple dimensions of time and space. China’s modernization are late and discontinuous onset. When the mainstream direction of China’s social development is manifested as the transformation from traditional society to modern one, the developed Western
countries that have completed the modernization goal constitute the envi-
ronmental conditions affecting the development of China’s society. As a conse-
quence, China’s society more clearly than ever in the history is at the same time,
being affected by three dimensions of time, or, put another way, in the present
there are three dimensions of time – traditional, modern, postmodern -- coexist
in the same space.

If so, although the total direction of social psychological changes in the course
of China’s modernization is the transformation from the tradition to modern-
ity, this is not intended to preclude the possibility that the present Chinese social
psychological changes will present a more complex pattern than in any previous
eras and societies.

Just as using Inglehart's two important theoretical tools -- scarcity hypothesis,
socialization hypothesis can attest that when China entered the take-off stage of
its modernization, changing from a society of scarcity to one of prosperity, the
spiritual world of the social members is undergoing rapid and profound changes,
along with gradual improvement of their hierarchy of needs. It is Chinese youth
who first shows these changes. In China, the post-materialist values have begun
to emerge in these people born in the 1980s, and have further manifested by
these groups born in the 1990s.

Occurrence and development of the post-materialist values among Chinese
young people will definitely lead to changes in their activities of daily life and ways
of social participation, and to affect the appearance of China’s society especially
when they enter the society in an all-round way.

SHEN, JING* (University of Toronto, jing.shen@uleth.ca)
The Value Of Mixed Methods: How Does Certifiability Of Job
Requirements Determine The Channels Of Job-Person Matching?

Using qualitative collected in three representative Chinese cities and quantita-
tive data drawn from the 2003 China General Social Survey, in this study I have
built up a theoretical framework to understand the interdependence of formal and
informal employment channels. I argue that a job-person matching process
should be understood from a dual perspective of the employer and the job ap-
plicant. From the employer’s perspective, requirements for certain job positions
are composed of two parts, namely, certifiable and uncertifiable qualifications.
The variation in the relative importance of these two types of qualifications deter-
mines that employers’ recruitment strategies vary from formal channels only, to
formal-informal joint channels, and then to informal channels only. From the job
applicant’s perspective, quantitative analysis shows that an applicant’s pre-hiring
resources—human capital, political capital, and social capital—match up with the
targeted employer’s expectations of both certifiable and uncertifiable qual-
ifications in a successful job-person match. By articulating the three typical sce-
narios of employment activities, I highlight the great importance of joint formal
and informal employment channels. I argue that studies on employment need to
formal-informal joint approach, instead of focusing on formal or informal employment
channels alone.

SHEN, SAN SAN* (National Hsinchu Univ Education, sandy. shen@msa.hinet.net)
Two Decades of Educational Expansion in Taiwan: Social Equity
Concerned

During the past two decades, Taiwan experienced a movement of expansion of
senior secondary education and higher education (the expansion in brief), in the
meantime the entrance system of higher education institutions and senior high
schools has changed accordingly in response to the open enrollments demands
from the public.

One of the causes of the expansion was to achieve social equity in terms of offer-
ing more educational opportunities to those students from the disadvantaged
groups. However, until 2013 even though the gross enrollment ratio of upper
secondary education and tertiary education reached 98.33% and 84.43% separa-
ately, those students with disadvantaged background were still left far behind
with their counterparts from better family background in terms of educational
achievements, such as being admitted into the academic senior high schools and
universities with good reputation.

The central argument here is the increase of senior high schools and higher
education institutions (HEI) actually enrolled more students from the disadvanta-
ged groups. The government, the differentiation and stratification of senior high schools and HEI
in terms of preference and various ability requirements, still made the social eq-
uality an unfulfilled dream.

The paper examines the expansion, first through the reveal of the statistical
data illustrating the extent of the expansion; then through the investigation of the
demographic and economic claims proposed since the 1990s; and finally through the collection of the
issues resulting from the expansion mentioned above.

The Relationships Among Ethical Ideology, Work Stress, and School
Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism,
relativism (two kinds of ethical ideology), work stress, and school life adjustment
of elementary school teachers. The data were collected through questionnaires
from a sample of 565 elementary school teachers in Kaohsiung city. The major
instruments for this study included Teachers Idealism Scale, Teachers Relativism
Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale.
Structural equation modeling (SEM) was applied to make parameter estimations.
Path analysis revealed the following findings: First, idealism could negatively pre-
dict work stress, whereas relativism could positively predict work stress. Second, in
the common estimation, idealism could positively predict school life adjust-
ment, but relativism could not significantly predict school life adjustment. Third,
work stress could negatively predict school life adjustment. Fourth, work stress
was not the mediator among idealism, relativism and school life adjustment.
The implications of this study to elementary school teachers’ human resource
management in Kaohsiung and future studies were discussed.

Managing Authorship in Chinese Research Organizations

Scientists put great stock in authorship as a form of universal recognition for
originality in the profession of science. Yet, despite accounts of various author-
ship practices across disciplines and countries, scholarly literature has had little
to say about how this professional norm emerge in research organizations in the
advent of managerialism. This study, based on in-depth interviews with 26 re-
search teams in two Chinese medical schools, explores into this question in by
looking at the Chinese case. China has been characterized by its recent surge
in scientific publications and an overwhelming “publish-or-perish” orientation in
driving work stress, whereas relativism could positively predict work stress. Second, in
the common estimation, idealism could positively predict school life adjust-
ment, but relativism could not significantly predict school life adjustment. Third,
work stress could negatively predict school life adjustment. Fourth, work stress
was not the mediator among idealism, relativism and school life adjustment.
The implications of this study to elementary school teachers’ human resource
management in Kaohsiung and future studies were discussed.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
“Need-based distribution” and “fairness in the long run” were characterized as innovations by some teams and enacted under certain conditions. Secondly, I examine three organizational factors that contribute to these differences: the incentive system of each organization, the hierarchy of each team, and finally the constraints and opportunities that each team faces inside and outside of the organization. Depending on the organizational circumstances of each team, certain discourses about authorship prevailed while others were impeded, generating systematic differences at the organizational level.

Exploring Reactions to Risk and Uncertainty in the Context of Smoking and Lung Cancer

Research examining the sociology of diagnosis has demonstrated how the provision of a clinical diagnosis from a health professional can promote identification of illness or disease, facilitate behaviour change, and enhance adoption or resistance of illness identities (Jutel and Nettleton, 2011). Further examination of such frameworks could contribute towards achieving a richer understanding of health communication complacency, thus enabling better management or avoidance of ill health and disease.

The current study examines such frameworks within the context of a Stop Smoking Service (FagEnds, Liverpool) and the study has been designed to replicate a recognised model of diagnosis. However, rather than a clinical diagnosis, smokers receive a personalised lung cancer risk assessment – essentially providing them with a diagnosis of uncertainty. The primary aim of this study will be to ascertain whether provision of personalised lung cancer risk information alongside health advice, will enhance smoking cessation.

This mixed-method paper will disseminate the findings of a randomised controlled study consisting of ~300 smokers, in which the control arm receive generalised lung cancer risk information and the intervention arm receive a personalised lung cancer risk assessment, using the Liverpool Lung Project risk model (Cassidy et al., 2008). It is anticipated that provision of personalised lung cancer risk information may encourage behaviour change i.e. smoking cessation and long-term maintenance of this change at six-month follow-up. In support of the aforementioned quantitative survey, qualitative interviews will also be conducted with a selection of participants (N=30), which aims to provide further explanation as to the impact of receipt of a diagnosis of uncertainty and the subsequent behaviour and attitudes of which it may entail. Overall, it is anticipated that the findings will contribute towards our understanding of the sociology of diagnosis and may help to inform the development of future health risk communications.

The Three Triangular Market: Reworking, Reproducing, and Repairing an Online Marketplace

The Internet has revolutionized how consumer goods are bought and sold in the United States. Yet the market for local services – semi-skilled or skilled professionals hired by consumers to perform a service – still operates largely as it did before the emergence of the Internet. I will present preliminary findings gleaned from 19 months of ethnographic research at a firm aiming to do for the local service sector what Amazon has done to retail. The firm planned to create a venue in which buyers and sellers of local services would be connected more efficiently than ever before; in so doing, the company hoped that each party, in pursuing its own self-interest, could create a better world for all involved by making it easier for consumers to hire local service professionals than ever before.

My research reveals that tensions continually arose in the market because, rather than creating a horizontal relationship between buyers and sellers, the firm had created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market’s inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market circulatised across a division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined worfource ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

Maternal Health in Rural India: Consequences For Gender Inequality

Maternal Health in Rural India: Consequences For Gender Inequality

Shakuntala.C.Shettar
Professor, Dept. of Sociology
Karnatak University,
Dharwad – 580 003
shakuntalashettar@gmail.com

Abstract

Maternal health is a critical topic in global development. Maternal ill health and deaths impacts families, communities and societies and has far reaching effect across socio-economic strata. Despite recent data showing a positive turning point in the battle to keep mothers alive through pregnancy and child birth, maternal mortality rates are still high in India and significant gender-based health disparities remain in India. With limited access to education and employment, high illiterates and increasing poverty level in India making health improvements for women exceedingly difficult. Female disability is especially in attributable to maternal causes and maternal deaths. The present paper is an effort in understanding maternal health and care in rural parts of Karnataka.

The objectives of the paper are to know the status of maternal health and consequent problems and also to analyze the socio-economic factors that act as barriers to access good health facilities. The data for this paper are based on the complete birth histories collected from the 200 ever married women age 20-49 years, selected from 4 villages of Dharwad district in Karnataka. The findings suggest that inspite of the Government’s efforts in improving maternal health in rural India, women have been suffering from health problems resulted from complications during pregnancy and child birth and also anemia and malnutrition. Hence the existing health facilities need to be strengthened to improve such health problems of pregnant women.

Key Words: Maternal Mortality, Maternal Health, Autonomy, ANM, Sex and Gender, Gender Inequality.

“Problems and Prospects of Women Police: A Study of Gender Inequality in Indian Society

Revised:

Keywords: Gender inequality, Indian society, Women Police, Hubli-Dharwad. Affiliation: Karnatak University, Dharwad.
tially follow different logics of blame avoidance and credit claiming when it comes to economic and fiscal decentralization, central and local governments essentially understand the devolution of social policy and its impact on welfare politics. Given the framework from the perspective of central-local relations is employed to understand the devolution of social policy from those of Western democracies. To explore this aspect, an explanatory approach is presented in this paper on the politics of social policy in China, an authoritarian state often viewed as capable of implementing policies dictated by the center. They can also claim credit by experimenting with new policy models that may find nationwide application later. Health reforms and social service for migrant workers are used as two examples to illuminate the driving force behind the politics of social policy in China.

Forced Migrants and Their Connection to Their Homeland: A Case Study of Inter-Country Adoptions and Cultural-Discursiveness in Second Modern Transformation in East Asia

The forced migrants, as Castle (2008) noted, have dramatically grown in number in proportion to the changing global order. One of the aspects of forced migration we should take note of is the trafficking of people across international boundaries for the purposes of exploitation, which includes the children expected to fill the “vacancy in a family” through inter-country adoptions. Meanwhile, human security counts on culture as having an initiative role in establishing the stability of permanent peace. The Hague Convention insists that it is in the “best interest of the child” to keep the inter-country adoptees in touch with the culture of their origin. However, some Korean adoptees have found themselves in another situation. Their culture transformation has been such that they perceive themselves as having become “forced to be separated from their biological mothers and to relinquish their Korean nationality.” This had led them into forming a global movement that demands legislation of the Dual Citizenship Act and rights for unwed mothers in Korea.

The objective of this research is to show the process how the forced-migration situations, that here will be referred to as inter-country adoptees from East Asia, came to be the subject in a cultural-discursiveness of “second modern transformation” (Han and Shim 2010), which incorporates global risks, individualizations and cosmopolitanizations. In particular, this paper intends to gather reasons why the adoptees can be counted as forced migrants while referring to the Korean adoptees’ statements in the movements. I will also draw attention to their values and social capitals acquired in the Western countries and their influence on Asian traditional cultural beliefs through the movements, which could be a potential to reform the social structure. Based on this discussion, I will make an implication on their leading roles in the second modern transformation in East Asia.

Power Asymmetry and Resource Use Conflict Between Farmers and Pastoralists in Northern Nigeria

Northern Nigeria can be described as a “zone of instability” in Nigeria. Since the country’s independence in 1960, Nigeria has witnessed a myriad of conflicts ranging from religious, ethnic to political including a brutal three year civil war. Though many of the conflicts are widespread, the northern region appears to have been the epicentre of several interlocking conflicts. The north of Nigeria is characterised by three major types of conflict, which are different but interrelated in nature; namely: inter-ethnic, religious and resource conflicts. This paper focuses on resource conflict between farmers and pastoralists which can be explained by a variety of factors including scarcity of resources, growth in the population of herds and humans, the political economy of land use and asymmetry in power relations between the two resource users. The paper argues that historically the control of political power has vacillated between the two resource users. In the past, pastoralists were politically powerful in many states in the African savannah and Sahel including northern Nigeria; and hence, had access to land and land based resources for their livestock. In the contemporary dispensation, sedentary crop farmers are the politically dominant and “landed” group, and have often made it difficult for the pastoralists, the “landless” group, to access land and land based resources for their livestock. There is thus a fierce contest for environmental resources between the two resource users, mediated by power relations, and often resulting in violent conflict. The paper concludes that though scarcity of resources is often considered as a key explanatory variable in resource use conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in the “unequal world” of farmers and pastoralists in Northern Nigeria.

Blame avoidance and credit claiming are two popular concepts for explaining the politics of welfare retrenchment in the mature welfare state. They indicate the crucial impact of electorates in competitive democracies on the policymaking that renders welfare institutions resilient even under the pressure of permanent austerity. This article modifies these concepts to account for the politics of social policy in China, an authoritarian state often viewed as capable of implementing reforms without difficulties. I argue that this view is far from reality as the government officials also hold accountable for their policies mainly to their superior party supervisors who evaluate their political performances. The specific political institutions in China namely entail different mechanisms that influence the logic of blame avoidance and credit claiming, and accordingly, the politics of social policy from those of Western democracies. To explore this aspect, an explanatory framework from the perspective of central-local relations is employed to understand the evolution of social policy and its impact on welfare politics. Given the economic and fiscal decentralization, central and local governments essentially follow different logics of blame avoidance and credit claiming when it comes to external or dismantling redistributive social policy and social service: Central government tends to claim credit by setting up social policies whose financial responsibilities rest on the shoulders of local governments, or avoid blame in case of dismantlement by passing the buck to local cadres responsible for implementation. Local governments, by contrast, avoid blame by either delaying or selecting implementing policies dictated by the center. They can also claim credit by experimenting with new policy models that may find nationwide application later. Health reforms and social service for migrant workers are used as two examples to illuminate the driving force behind the politics of social policy in China.

Japanese “Solidarity” Experience: A Suggestion for Polish Disaster Preparedness

The paper suggests effective use of the socio-political culture of “Solidarity” as a potential basis for disaster preparedness in Poland from the perspective of Japanese experiences.

Poland holds a cultural tradition known as the Solidarity Movement, whose potential for mobilizing society continues to this day. Through a unique mechanism of self-organization, it unifies individuals with diverse interests and beliefs to concentrate the impact of different regions and local communities; the “subjectivized” activities of Polish citizens attained its primary aim of a change in the country’s political system at the end of the 1980s, while presenting its operative revitalization in the face of prolonged European economic crisis in the 21st century.

Crucially, Japan’s disaster experiences, especially those of the Great Hanshin-Awaji Earthquake (1995) and the Great East-Japan Earthquake (2011), show the rise of its own solidarity. In the two contrasting disaster-hit communities, i.e. Kobe City and the rural Tohoku Area, activists call for the mobilization of the cultural tradition of “bonds (kawari)”. These bonds have been functioning not only in the first phase of collective euphoria, but also in the long-term process of building social subjectivity and community rehabilitation to see the rise of sustainable civil society after disaster situations.

Through the lens of Japanese experiences, the paper suggests a conscious awareness of the socio-political culture of Solidarity in the approaches of disaster policy in Poland, due to its lack of preparedness despite frequent damage from different natural and human-caused catastrophes including flooding. By analyzing cases of cooperation among Japanese citizens, social organizations, and local as well as national governmental institutions, the paper presents the option of transferring Polish Solidarity experiences from the field of polarized politics to that of potential disaster policies to fortify Poland’s future resilience.

"Japanese" Approaches to the Music of Frédéric Chopin

The paper examines the "Japanese" understanding of the music of Frédéric Chopin and appears in the narrative discourse of Japanese pianists who have studied in Poland and France.

The works of Chopin occupy an undoubted position in Japanese music institutions for their accomplished artistry in piano techniques. Musicological studies show that having quickly appeared as crucial in concert repertoires of the first years of the twentieth century, Chopin became an icon of "Western" culture to which the "civilized" Japanese should aspire. Japanese music universities came to emphasize the importance of his technically demanding works, e.g., Etudes, Ballades and Scherzos while mostly neglecting Mazurkas and Waltzes.

The paper sheds light on critical thoughts regarding "Japanese" education held by some of the country's contemporary musicians who have formulated their professional identities vis-à-vis "French," "Polish," or "European" traditions of Chopin's music. Semi-structured interviews with Japanese pianists who underwent studies in France and Poland are put through a method of critical discourse analysis that draws upon structuration theory and allows effective inquiry into an agency's narrative in the face of established institutional discourse.

What is the general view on the teaching of Chopin's music nurtured in Japanese music institutions? How does it affect individuals' approaches to Chopin's works? How do pianists confront or develop the "Japaneseness" of their performance after education in France or Poland? What are the renovated "Japanese" elements in the understanding of Frédéric Chopin's music after study in Europe?

Analysis conducted under the umbrella of such questions attempts to reveal several things including pianists' recognition of "delicate" Japaneseness resonating with Chopin's works, notable critique on the "Japanese" pursuit of sophisticated techniques extracted from the fuller universe of Chopin's music, and the unique refurbishment of a sense of nature through the performance of Mazurkas.

An Exploring Study on Networked Market Disruption and Resilience

The main objective of this study is to explore the core of socially restrained buying trends of the agricultural foods and products made from Tohoku area. Actually these cases mean that many people do feel something unfavorable and they are not going to buy foods made from Tohoku area. And these trends are still often observable anywhere ever since the Fukushima Nuclear Disaster of the Tohoku Quake (11th, Mar. 2011). Certainly, this social phenomenon is rational to understand the social anxiety and unsafe suspicions of naive people for nuclear polluted contaminations within foods. Of course, these safety matters were temporarily, but some consumers still feel unsafe sentiments now.

In this concern, I presume that these social trends are underlying in the information-asymmetry as the market for 'Lemons'. And I define this presumption as an agent-based model on social cascading, social uncertainty, networked market disruptions and percolation process. As results of simulating runs, I clarified my hypotheses and these are possibly actualized in configured conditions. Namely I can conclude that the emerging cascading of socially restrained buying trends of agricultural foods made from Tohoku area can be engendered by information-asymmetry as the market for 'Lemons', and its networked market is also crucially ruled in the percolation principle. Finally, I will show these details and discuss the relatives.

Freedom Markets: The Moral and Political Economies of Human Trafficking in China, Thailand and the U.S.

This project is a global and multi-sited ethnography of the transnational social movement to combat human trafficking through state- and market-based approaches to managing low-wage labor migration and women's work. Empirically, this project compares faith-based and secular approaches to anti-human-trafficking work China and Thailand. From 2008-2013, I completed 40 months of ethnographic participant observation at an evangelical Christian vocational training center in Beijing, China, and pairs this with preliminary analysis into the historical and contemporary practices of re-education through labor in China.

My dissertation argues that despite global justice goals, faith-based and secular factions of the human trafficking movement reproduce women's global subordination at the discursive and labor process levels. American evangelical Christian missionary organizations recruit sex workers in Beijing and Bangkok to work as jewelry-makers and sell this jewelry through the bustling anti-trafficking movement in the U.S. Arguing that jewelry represents a proxy commodity for freedom from enslavement and a virtuous wage, these programs create a transnational moral economy of low wage women's work, where traditional exchanges of wage for labor are replaced with affective commitments between First World rescuers and their purported victims in the Global South. On the other hand, secular governance efforts, like the United Nations Inter-Agency Project on Human Trafficking focuses their attention on holding nation states accountable to transnational norms and treaties. They graft existing state institutions of labor, migration, gender rights onto the framework of human trafficking, thereby inadvertently strengthen nation states ability to control and punish marginalized populations, including migrant workers, marriage migrants and sex workers.

Culture As the Parenting Toolkit: Class and Globalization in East Asian Families

By using ethnographic documents in Taiwan, this paper aims to examine how three different formats of local and global cultural capital are constructed and distributed unequally between the middle and working class families, particularly via their management of afterschool activities for elementary school children. I use interviews with family members (N=72) to examine how parents' cultural capital is transmitted through the popular routines of Taiwanese children: the afterschool activities, such as piano playing, English lessons, or math lessons, or through the fabric of their family life. Lareau and P. DiMaggio both employed Bourdieu's “distinction” approach to childhood inequality: the former derives from Melvin Kohr's theory on child-rearing values and treats art participation as part of the middle class “concerted cultivation” pattern; while the latter pinpoints children's art activities as a form of status culture participation. In this paper I imply culture without national boundaries and present the Taiwanese case to show how global/western culture are adopted and embedded in contemporary Asian parenting, which interplays with the local structure of class reproduction. I find three fields of child-rearing: Educational achievement, talent development and the western cultural capital. These fields are closely related to parental class position in a univore-omnivore spectrum. All families emphasized core-value on academic success; the middle class and upper class families focused on talent development and the upper class families emphasized "being international." This paper further reveals that, in East Asian societies, the local families are adopting western culture in their child-rearing, which further generates "western cultural capital", a rising field of distinction for upper class children in East Asia. With lowest fertility rate in the world at 2009, Taiwan is a unique case to understand class variation of child-rearing.

Current Crimes and Major Issues of Policing in Japan

The number of reported crimes has been decreasing since 2002 in Japan. However, the Japanese society faces to some new crimes, including cybercrime, domestic violence, and stalking. The Japanese Police are now struggling with these new crimes and constructing new rules and practices to deal with them. Current policing and countermeasures against these new crimes in Japan will be illustrated.

«Cellular Globalization» and Communicative Inequality

In view of high speed of development and inculcation of the new informational technologies, growth of consumerism, space globalization in the contemporary societies the high level of social dynamics remains. At present the world community experiences increasing influence of the informational and communicational technologies. At the beginning this changes weren’t very visible, but now we already don’t imagine our life without social networks and connection which is available constantly. Our friends are increasingly not real people, but simulacra. New trends of world development, their orientation on an innovation and modernization create the conditions for new social phenomena formation, one of which is communicative inequality. Communicative space is constantly changing, and with the emergence of advanced communicative technologies new vectors of its formation and development appear. Between those who have the technical capacity and the necessary educational level for using the Internet and those who have no such possibility the border lies. The new mobile communication potential influence the individuals’ behaviour. Communicative inequality develop in the new telephony using and in obtaining information from a variety of sources including the media which price isn’t available for wide range of customers. Recently they gap between rich and poor in the sphere of information has become more and more conditioned by the technological characteristics, when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

A Sociological Approach to Varying Treatment Outcomes of Complementary and Alternative Medicine

Social sciences of medicine have not given much attention to the variations in the real-world treatment outcomes of CAM situated in different social contexts yet. This neglect is surprising, because the wisdom has long existed in social sciences of medicine that the effects of medical interventions are significantly influenced by social and cultural circumstances. Along with this neglect, a problematic view seems to be revived and reproduced among the medical science community that any deficiency or efficacy in the treatment outcomes of acupuncture and herbal medicine is attributable to the characteristics of the treatment in itself detached from its medical and social environments. However, the limitation of this view becomes clear when acupuncture or herbal medicine of the identical quality and design leads to varying treatment outcomes in different trial sites. As a way to consider these puzzling variations and to propose a sociological explanation of the varying effects of acupuncture and herbal medicine, this paper examines systematically how divergent treatment outcomes are in acupuncture and herbal medicine in Japan, U.S. and how they are related with the social environments of these medical interventions. In particular, this paper highlights the significance of coordinating these CAM treatments with the mainstream biomedicine at multiple levels in order to get tangible health care benefits. It concludes with reflections on the limitations of the current discourses on the social determinants of the effects of medicine and the inter-cultural medicine and cultural competency.

Family-Related Risk Perception and Individualization in East Asia

Based on a survey research conducted to citizens of three capital cities of East Asia, Seoul, Beijing, and Tokyo, this paper is aimed at comparing the family-related risk perception in the three cities with a perspective of individualization theory and a typology of risks developed for East Asia. More specifically, it is aimed at revealing how the citizens of the three cities feel about the recent changes in the family such as divorce, low fertility, decrease in the parent’s role in home education, isolation and suicide of the elderly, individualist tendency, decrease in mutual help in the family, and conflict in the property distribution. The research questions are as follows: First, how do the citizens of three cities perceive about the various family-related risks? Second, what influences the family-related risk perception? As to the first question, it turned out that perception of the first modernity-related risks are higher in Beijing, while that of the second modernity-related ones are higher in Seoul and Tokyo. As to the second question, it turned out that not only the family-related macro changes as revealed in law and policy changes and statistical indices in the area of fertility, divorce and marriage, but also individualization turned out to be significant. This suggests that the three cities seem to be in different stages of development and that the three cities have both the first modern and second modern risks.
Estimation of Hedonic Single-Family House Price Function Considering “Scenes”

In this study, hedonic house price functions are formulated using the single-family house market in the 23 wards of Tokyo as the subject. In the formulation of models, the estimation of omitted variable bias is thought to occur in cases when, in addition to locational factors (i.e., factors involved in decision making when buying a property) and building structures which affect the house prices, local environmental variables or “scenes” and the individual characteristics of house buyers, such as their income, are not taken into consideration. However, since it is difficult to obtain such information, I demonstrate that, without considering these variables, non-negligible levels of omitted variable bias are generated in the variables that are major factors in determining house prices, such as ground area, front road width, distance to the nearest station, and the travel time to the central business district. Results showed that, in the model considering neighborhood effect variables or “scenes”, the explanatory power was improved compared with the simple linear model. At the same time, each of the neighborhood effect variables or “scenes”, which served as subjects of urban policies, was adopted with statistical significance.

Medication and Demedicalization of Mild Depression in Japanese Occupational Health

From 1999 to 2008 the number of patients with depression in Japan is thought to have increased by 2.4 times. Overdiagnosis of depression has attracted much attention both from the health professionals and the public. Previously, the concept of mild depression did not even exist until the 1990s in Japanese psychiatry. Some experts argue that the introduction of the DSM and ICD as a diagnostic tool is a possible factor in increasing depression in Japan. In this study I analyze the conflict between the medicalized and demedicalized views of mild depression in Japanese occupational health from the viewpoint of conflicting diagnostic contexts in Japanese psychiatry.

I conducted several interviews with physicians and psychiatrists active in the field of occupational health and attended various conferences and meetings of experts dealing with mild depression in occupational settings. Two findings are especially of significance to understand the current trend of depression epidemic. 1) There are double contexts in which depression diagnosis is made. Whereas the DSM or ICD is used as a tool to diagnose depression, they do not explain any etiology of the disease but just provide the criteria of the symptoms. Thus in those cases for which the explanation of the disease causes is needed, conventional Japanese psychiatry is referred, in which depression is modeled by major depression rather than by mild depression. 2) Major depression model in Japanese psychiatry includes a judgment about the “industrious” personality of the patient. As this aspect does not coincide with the mild depression patients, there is a strong tendency to demedicalize the mild depression on the side of psychiatry. The same tendency is also found in the media coverage of the disease. Thus the status of mild depression patients even in occupational settings is unstable and vulnerable to the moral criticism on them.

Daniel Bell As Post-Cold War Intellectual: The Idea of Triunity Beyond the Cognitive Frameworks of the Cold War

Interpretations of Daniel Bell’s works are typical cases of cognitive bias in Cold War social sciences. Bell has been regarded as an anti-communist ideologue, a conservative sociologist, and a neoconservative intellectual. Today, therefore, his works are not discussed in earnest. This study reevaluates Daniel Bell by clarifying that of anti-communism, and funded The Public Interest with him, they conflicted particularly ideologically after the presidential election of 1972.

In 1977, Bell articulated his three positions: “socialist in economics, liberal in politics and conservative in culture.” He tried to transcend the binary oppositions peculiar to the Cold War through his idea of triunity. This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neoconservatism.

At the end of the Cold War, he indicated that his position was different from that of anti-communism. He insisted that the end of communism should not be admired, and he also suggested that capitalism would extend indefinitely. Although Bell was close friends with Irving Kristol, who was nicknamed “the godfather of neoconservatism,” and funded The Public Interest with him, they conflicted particularly ideologically after the presidential election of 1972.

In 1977, Bell articulated his three positions: “socialist in economics, liberal in politics and conservative in culture.” He tried to transcend the binary oppositions peculiar to the Cold War through his idea of triunity. This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neoconservatism.

About World Championships in Athletics and TV Broadcast

This study examines changes in the nature of Japanese TV broadcasts of the World Athletics Championships from 1997-2013 using a qualitative methodology. Specifically, the study examines the changes in the Tokyo Broadcasting System coverage between the 1997 Athens event and the 2013 Moscow event. The results indicate that TV broadcasts became more professional from the point of the Berlin event in 2009. Up until the 2009 Berlin event, broadcasts featured much screaming-like behaviour from television commentators such as Yuji Oda. However, the screaming-like broadcasts decreased after the Berlin event and the screaming of Yuji Oda was not seen in Moscow in 2013. In addition, the nicknames of the players were not used in the Moscow TV broadcasts. This may be due, in part, to the request of the Japan Association of Athletic Federations to the Tokyo Broadcasting System to eliminate the use of nicknames. The nature of live coverage of sports events varies according to different events. In addition, they are different depending on whether or not there are star “foreign” players involved, and depending on whether or not there are star “foreign” players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

Why Does Inequality Keep Rising In South Korea?

This paper explores the rise of economic inequality in South Korea, focusing on changing income distribution of individuals and families after financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual’s wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. The financial crisis in 1997 has exacerbated the tendency of the rising income inequality as neoliberal economic reforms, policy measures to resolve the financial-cum-economic crisis, were implemented by the Korean government. Another financial crisis in 2008, triggered by the crisis of the subprime mortgage in the USA, made it harder to roll back the rising inequality. In addition to impacts of globalization, under the poor social welfare system, and endogenous social changes such as fast aging of population and family dissolution, partly associated with neoliberal economic reforms, have contributed to the drastic rise of family income inequality in the 2000s.

Labor Movement, Environmental Movement in Regime Change in South Korea

This paper explores the relationship between labor movement and environmental movement in South Korea, showing that the movement dynamics in South Korea have been different from those in the advanced industrial democracy. Both labor movement and environmental movement are new social movements in the sense that new labor movement organizations were emerged during the transition from authoritarian to democracy and environmental movement also began to appear in the post-transition era. Thus the political dynamics has significantly affected the trajectory of both movements, contributing the formation social movement uni

Rethinking "Medicalization of Death and Dying": Explications Through Examining Japanese Case

What does "medicalization of death and dying" precisely and really mean? This paper tries to focus on the medicalization of death and dying, and tries to show 1) the historical processes of the social transformations surrounding death and dying in Japan, and then 2) theoretical reconsiderations concerning the concept of medicalization itself.

Medicalization of death and dying has been customarily and representedively meant to be "hospitalization". The radical change in the place of human death recalled the sense of something familiar being lost, and the medical-hospital environments coupled especially with the high-tech medical treatment in the 1970s have long been viewed as something unfamiliar, unhuman, and even anti-human. Cultural interpretations regarding this process as "denial of death" or "pornography of bodies" have been presented, and prepared for the seemingly backlash movement tentatively called the de-medicalization. However, what does these medicalization and de-medicalization really mean?

Japanese situation could present strategically suggestive one, partly because it is the heaviest aged society and partly because it is also the most densely crowd-ed society with medical facilities. It seems to follow that the medicalization of death and dying would advance most in Japanese society. The situation is complicated. The health policy have tried to de-medicalize/de-hospitalize the aged, and promote nursing home care and community care ever since 1980s. The people in general wish for sudden death, or for natural death in home, and both of them have share in common one element: with lesser medical interventions.

It is both interesting and somewhat paradoxical. Interesting, because the directions aimed seem to be converged/de-medicalization. Paradoxical, because the intentions fundamentally diverge between the two.

This paper aims to contribute to broaden the scope of the discussion of medicalization empirically, and to enrich it theoretically by reexamine the validity of the concept of medicalization.

Human-Billboards: The Commodification of Invisible People

According to Zygmunt Bauman, since mid-20th century modern society has been experiencing a gradual shift toward a "consumer society", whose main characteristic is the transformation of consumers into commodities. In this context, the objective of consuming is to grant social status to individuals, who worth as much as they are able to consume. Bauman posits that people consume to invest in their own social affiliation. By consuming, individuals become a more valuable commodity, recasting themselves as products capable of drawing attention and standing out from the monotony and dull invisibility of ordinary things. Those who do not have enough resources to consume are considered invalids, commodities that will never be noticed or coveted, and that can only resign themselves to their invisibility. However, by analyzing Brazilian human-billboards, this study intends to show that even those individuals are salvageable in the world of consumption.

In the city of São Paulo (Brazil), legislation has established several restrictions on advertising placement in order to avoid visual pollution. The real estate sector has circumvented that legislation by using the so-called "human-billboards": men and women from under-age to elderly who remain standing for periods up to 8 hours without breaks and regardless the weather, in corners of upper middle class neighborhoods with signposts hanging in their necks. For this job they are paid under 10 dollars a day, with payment discount if their supervisor finds them sitting.

In principle these people would be considered "invalids" in the society of consumers. Nevertheless, they end up being "recycled" and become functional to it. The case study intends to reflect on how the society of consumers absorbs the dysfunctions that it produces itself. In this case, people's invisibility is not equiva-lent to death: it is also turned into merchandise.

Healthcare Work and Cross-Cultural Understanding in Globalization: Social Issues and Responses in Indonesia and Japan

The Economic Partnership Agreement (EPA) has initiated healthcare worker migration from Indonesia to Japan since 1999. Issues and challenges concerning regulations and cross-cultural understandings of healthcare have emerged around such EPA healthcare work and workers in both societies. What issues have arisen and been reported in Indonesia and Japan? How do the media, policy makers, healthcare institutions and workers themselves, and individual professionals react and respond to such new issues and challenges? In what way do Indonesian and Japanese social and workers' understandings of healthcare work and worker migration differ? Our paper shows how national contexts affected by globalization shape re-shape social understandings of healthcare migration and their policies in Indonesia and Japan over time. Analyses of the national media reporting, information from the governments, and interviews in Indonesia and Japan reveal a contrast of social responses to healthcare worker migration. In Indonesia where healthcare workers have been sent to Japan and other countries, this tends to be understood positively, overall, as economic benefits and Indonesian professionals' contributions to the care worker shortage in Japan. In contrast, Japanese are more likely to respond negatively to these issues; yet, they intend to face cross-cultural challenges, although slowly, making revisions in the language and license examination policies. We pay particular attention to social issue construction and policy institutionalization processes around EPA healthcare workers in Indonesia and Japan. Our study contributes to our sociological understanding of healthcare worker migration, cross-cultural understandings of healthcare and related concepts, and how national contexts and globalization construct and re-construct social issues and policies toward a new social change.

Discourses in the Magazine "Keisetsu Jidai": The Popularization Process of Higher Education in Postwar Japan

At a time when it was called the "examination hell" in postwar Japan, the magazine KEISETSU JIDAI was popular among students that take the entrance examination in higher education.

It has a history of more than eighty years, but this time, how the magazine has changed?

The purpose of this study is the analysis of magazines in the 1950s-1960s. I would like to declare that KEISETSU JIDAI has a function of career guidance through the late 1950s. The tendency changed subjects, contributors, quantities of the magazine, and their consciousness. It's mean to liberate students from some superstitions. A practical learning and a scientific method was directed to solve problems. In particular, the issue was a difference between urban and rural areas, which have dates and skills of an entrance exam. Some difficulties confronted them, conflicts and barriers surrounding the higher education, such as gender difference and economic issue.

This study may suggest a new history about the severe competition in school entrance exams.

The Effect of Environmental Education at School and Home on How Students Behave Towards the Natural Environment in Japan

Several studies on the factors that promote pro-environmental behavior have found the importance of environmental education. A number of environmental educational programs that aim to nurture ethical behavior towards the environment have been developed worldwide. For example, in Japan, some students in a junior high school take part in diving programs to study marine environments. The aim of this study is to examine the effect of environmental education at school and home on students' pro-environmental behavior. In November 2010, we conducted a quantitative survey of all third-year students and their parents at all the junior high schools located in the city of Minamata, Japan. Pollution has had a severely detrimental effect on the health of the residents of Minamata since the 1950s, and the disease caused by pollution has come to be known as Minamata disease. The negative experiences with pollution have led to the implementation of various interesting environmental education programs in all the junior high schools in the city.

The analysis of the results indicates the important factor that effects on the pro-environmental behaviors of students: It was their perception of the contributions their parents made to address environmental challenges, instead of the actual contributions or behavior of the parents. The pro-environmental behavior that students took had a mediating effect on the way students' perception on their parental contributions to the environment. The results also indicate that experience-based environmental education, such as related volunteering activities at school, promoted students' pro-environmental behavior significantly more than classroom-based environmental education that focused on knowledge creation. However, classroom-based environmental knowledge creation remains critical.
because it provides an opportunity to influence pro-environmental behavior through the discoveries and the surprises by learning.

Career Strategies and Spatial (Im-)Mobility Among Skilled Migrants Between Asia and Europe: The Role of Gender Power Dynamics in the Work-Family Interaction

This paper aims to unravel the gendered career strategies of skilled migrants in Germany’s financial and academic sectors, which are being developed not only in tandem, but also often in negotiation, with gender relations in the family. Much of the current scholarly effort in the field of skilled migration and mobility has concentrated on the principal migrant and work-related context, treating the family as a rather secondary, separate and essentially ‘female’ terrain. Drawing on participant observation and interviews with highly skilled mobile workers from Asia, this paper shows that these two terrains, work and family, are closely inter-related in building skilled migrant workers’ spatial mobilities. Germany has lately joined the “global war for talent” to seek out highly skilled migrant workers, but although the number of skilled women entering Germany through its skilled migrant entry regime may in fact be small, the experiences of migrant, dual career couples show that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. The overall aim of this paper is to show the contrasting – and often gendered – strategies devised by highly skilled couples, which can widen our understanding of the role that the family plays in international skilled mobility.

SHINOZAKI, KYOKO* (Ruhr University Bochum, kyoko, shinozaki@rub.de)

Conceptualizing Spatial Ambivalence Among Migrant Academics: The Dimension of Temporalities in Understanding Career Strategies

Highly skilled migrants are often deemed to have ‘mobility capital’: extend studies have shown that for career advancement they mobilize the capacity to be spatially mobile across borders, on their cultural, social and economic capital. In policy, too, the debate around “gain and retain” has popularized the construction of mobile skilled migrants. In fact, Germany, the country which this paper focuses on, has been widening its channel for skilled and highly skilled migration streams and opened a route for long-term and permanent settlement for migrants entering through its skilled migration regime. This new, skill-/based migration governance radically rewrites the established understanding of German citizenship, based on “Selecting by Origin”.

Recent scholarship has brought about a nuanced understanding about spatial mobility capital and its negotiated nature, by considering the work-family interaction. While these studies put forth ambivalence and gendered power dynamics in realizing career aspirations among highly skilled migrants, I argue that less attention has been paid to the temporal dimension in capturing spatial ambivalence and career strategies. By focusing on migrant academics in three German cities, this paper conceptualizes their temporal ambivalence, which is influenced by three temporal points in their own and family lives: past, present and future. However, rather than treating these three ‘points’ in isolation from one another, I want to make sense of them in a continuum, that would together affect migrant academics’ decision/orientation to stay, move on, or do both. Drawing on a quantitative survey and problem-centered interviews, I aim to demonstrate that the temporariness intersect with, and give meaning to, locally specific experiences along the social division of race/ethnicity, gender, country of origin, and age in the workplace, family, neighborhood and local administration. In addition, I will discuss the strengths and challenges in using these methods.

Between Freedom and Neglect: Community-Based Approaches and Neoliberalism In Policies For Asylum Seekers In Australia

Policies regarding asylum seekers in Australia have changed frequently since the late 2000s. The federal Labor government that came into power in 2007 decided to abolish the notorious policies of the former conservative government, namely, the “Pacific Solution” and Temporary Protection Visa (TPV) scheme, both of which aimed to reduce the numbers of Irregular Maritime Arrivals (IMAs) and violated their human rights. On the other hand, the Labor government maintained the problematic policy of mandatory detention for asylum seekers, and therefore sought to develop “Community-based” approaches for asylum seekers to argue that the government guaranteed their human rights. Thus, the Labor government developed the Community Detention program and expanded of the number of asylum seekers who were issued a Bridging Visa E (BVE) and released into local communities. While human rights lobbies and refugee service providers tended to welcome the policy change because it released asylum seekers from detention centers, the advancement of the Community-based approaches was also a response to the need to bring down the high costs of the existing asylum seekers policy. In other words, the Community-based approaches for asylum seekers can be recognized as a segment of the neoliberal reforms of Australian social policy. In this paper, I will examine the details of the Community-based approach to asylum-seeker policy in Australia from 2007-2013, using policy and discourse analysis from a sociological point of view. I suggest that the policy aimed to promote freedom for ethnic minorities can result in their neglect when the discourse of neoliberalism and spatial management are utilized to justify the policy.

Dynamism Among Japanese Railway Fans: Transition of Taste in the Dimension of Hobby

In this paper, I intend to examine “shumi” (Japanese word for “hobby”) in contemporary Japan, revealing its mechanism and dynamism. “Shumi” is composed of three aspects: “onomuki”, taste, and hobby. “Onomuki” is a Japanese word for a concept of aesthetics in the nature. Taste is a concept of value judgment. Hobby is a concept of enjoyable activities. In sociology, taste and hobby have been researched, far depicting how the concept of taste has been regarded by the concept of hobby in a class society. However, it is necessary to study this matter from the perspective of hobby. Railway fans have been chosen to conduct the survey for the purpose of this study. This is because they participate in activities that are rich in variety, as well as complexity. According to some surveys, there are around 20,000 serious railway fans and roughly from 1.5 to 2 million casual fans. A distinguished characteristic is that although the age distribution is widely covered from under 10 to over 90, at least 80% of them are males. Also, based on my field research related to railways, conducted from July 2009 to October 2012, railway fans have been found to enjoy various kinds of activities, which are not limited to competitions, such as “Agon” that Gallois refers to. Focusing on Bourdieu’s theory of “champ”, or “distinction”, I examine the new framework to analyze the conceptual interaction between taste and hobby. Specifically, I introduce “games” as the sub-concept of hobby, revealing that each fan transitions between values to different realms within the dimension of hobby. Thus, I aim to show the possibility that interaction taste and hobby takes place in a non-class society.

Fundamental Paradoxes of the Theory and Practice of the Criminal Law

The “crisis of punishment” as well as negative phenomena of the modern system of justice determines to the ideological handicap. Let’s focus only on two mainframe ideas. Understanding of the social justice Social justice is a measure of public benefits from laws and other regulators based on an agreement which establish and maintain the life order of individuals and institutions. This order promotes the survival and development of the society, as well as provides integration and decent life of its members. The “decent life” is a compilation of all the benefits proclaiming in modern society: freedom, equality, social security, etc. Therefore the justice system should be aimed primarily at preventing crime, restoration of the rights and rehabilitation of the victims, and only then – on the prosecution, punishment and / or rehabilitation of criminals. Economic pragmatism of the “social protection” concept The concept of punishment stances on the state control based on a quality management underlining efficiency and effectiveness. In this regard, in Western societies are widely discussing concepts of “safety” and “protection”. However, they are discussing without an analysis of what, in fact, should be protected. So “reliability” becomes symbolic notion and goes back to the “retribution”.

In the context, we should still expect the system to be a demand system, it is necessary to decide from which perspective we should evaluate its quality. From producer’s perspective? But what exactly it produces: improvement of criminal, retribution, or citizens’ safety? From consumer’s perspective? But who is consumer: prisoner, society, State? From market’s perspective? But what are the objectives of the government regarding to prisoners, actual and potential victims, or crime policy? These estimates could differ, as well as the answers to the questions. The elimination of these paradoxes could fundamentally change the concept and practice of the law in modern society.
Intergenerational Transfer within Families from the Perspective of Social Inequality in Japan

As in Europe and the US, Japan’s ageing population, and the accompanying generational imbalance, has become one of today’s most pressing social policy issues. My paper principally examines the relationship between social and private intergenerational transfers in Japan. I will discuss how intergenerational transfer within families takes place, and whether this process contributes to expanding inequality between families.

I focus on three kinds of private intergenerational transfer: co-residency, remittance, and asset inheritance. In particular, I intensively discuss different directions of transfer, both from parents to children, and from children to parents. The aim of my research is to identify similarities in determinants of all three types of intergenerational transfer, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People’s Living Conditions (CSLC), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-Age and Elderly People (PSMEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. The survey, with a sample size of 6,442, includes detailed information on financial and care support between parents and children, and on household assets and savings. According to my preliminary results, the meaning of co-residency has changed. The elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic support to younger family members. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

RC19-338.3

Intergenerational Transfer, Social and Private, in Japan

Largely because of generational imbalance, the ageing population of Japan is one of the most urgent topics in social policy. My paper principally examines the relationship of social and private intergenerational transfers in Japan. I analyze two kinds of data. The first is that of the “Comprehensive Survey of People’s Living Conditions,” which was conducted by the Ministry of Health, Labour and Welfare, and the second is that of “National Survey of Living Conditions among Middle-Age and Old-Age People in 2010.”

The public pension system, which produces social transfers from the younger to the older generation, can be regarded as a form of intergenerational re-distribution. I first examine the extent that public pensions limit poverty among the elderly in Japan as a way to gauge the impact of public transfers in improving social equality. The main research question here is the extent to which public pensions reduce the risk of poverty as the generational imbalance worsens.

I study two-fold private transfers, co-residency and remittance. In Japan’s welfare society, the family has played a critical role in providing basic economic security to its members. The elderly have secured their economic well-being through co-residency, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People’s Living Conditions (CSLC), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-Age and Elderly People (PSMEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. Comparative Study on Vocational Education in Japan and in France

In this paper, I will discuss on the vocational education at the level of secondary education in Japan and in France with a comparative point of view. In France, there are mainly three types of high school (lycée): lycée général, lycée technologique and lycée professionnel. When the pupils accomplish their study at high school and pass the final examination (baccalauréat), they receive a diploma which corresponds to their study course (baccalauréat général, baccalauréat technologique and baccalauréat professionnel). Though all these three types institutionally give the right to enter the higher education, the courses of pupils after graduation of each type of high school show a clear difference: continuing to study at higher education or entering employment; types of institution (grandes écoles, university, professional junior college ...). When they continue to study... Historically, ‘technological’ and ‘professional’ courses are introduced for the purpose of vocational education, but the situation of the pupils after graduating is rather different.

In Japan, there are general education course, specialized education course and comprehensive education course in high school. I will discuss the tendency of the way that the pupils of each course take after their graduation as comparing with the situation in France.

With these discussions, I will try to examine concepts of ability, career and so on, in a wider sense. 

RC08-149.3

On Intermediate Groups in Japanese Sociology

Since A. de Tocqueville and E. Durkheim, intermediate group occupies an important position in sociology. In this paper, I will discuss a history of Japanese sociology and Japanese society by focusing on this aspect.

There is a conceptual distinction between community and association in sociology. The former is based on common attributes of the members, whereas the latter is based on the will of the members to unite. It is theoretically said that old communities are diminishing and the importance of the individual is increasing with the process of modernization. Generally speaking, this process can be found in Japan, especially after the World War II.

It is said that the importance of intermediate group is rediscovered in Japan after the Great Hanshin earthquake in 1995. A law which prescribes to give the right of juridical person to a NPO, one of the forms of intermediate group, is founded in 1988. Since then, there are more discussions on NPO than before. I will reconsider these discussions to analyze the significance of intermediate groups, such as neighborhood associations for example, to deepen the discussion.

Family Supports and Insecure Work: The Politics of Household Service Employment in Conservative Gender Regimes

In the late 2000s Austria and Germany introduced policies aimed at expanding the employment of household services in order to support families in their ability to reconcile work and family. Both sets of policies targeted the use of a particular form of marginal part-time work, to make formal employment relations more attractive to households. The effect however, has been to constitute household service work as insecure low-wage work, and to introduce new lines of inequalities between working women. While neither the Austrian or German reforms have succeeded in bringing informal work in private households into registered employment, they have strengthened the traditional path of women’s labour force (re-) entry into part-time work, while creating large differences in the forms of part-time employment taken up by educated and less skilled women. These two worlds of women’s employment meet directly in private households, largely as the result of family support policies, and as one of the ways in which the modernization of conservative welfare contexts with strong male breadwinner models are creating new class-based inequalities between women. The findings suggest the need to pay more attention to the employment conditions and new risks in drive to formalize and expand personal and household service work, now an explicit aim of European employment policy.

RC02-55.6

Gender Dynamics in the Dualisation of Coordinated Market Economies

Recent research about growing inequalities in some of the most protected employment economies has pointed to the dualisation of employment conditions originating in the expansion of non-standard employment and the deregulation of social protection coverage for significant segments of the workforce. This paper will focus on the gendered dynamics of dualisation in Germany and Japan, and show that dualisation is not novel, but rather deeply rooted (1) in the failure in both countries to pursue social and family policy changes in strong male bread-
winner models of employment and (2) well established occupational segregation of work by gender. As a result, class-based inequalities have become more salient, though these were considered less relevant in the coordinated market economies. In Japan, the expansion of permanent and part-time labor over four decades has exposed women and less educated youth to market-based employment systems at a time when the employment conditions of better educated employees and older cohorts of the male core workforce. German policies and practices designed to protect skilled male workers in manufacturing have failed to transfer to occupations performed mainly by women, while sub-forms of part-time and temporary work have deepened the divisions between men and women in non-standard employment.

IWAI, NORIKO (Osaka University of Commerce)

SASAKI, TAKAYUKI (Osaka University of Commerce)

The Japanese General Social Surveys project conducts a nationwide social survey every two years since 2000 to study the attitudes and behavior of Japanese people. As the U.S. GSS, the JGSS questionnaire covers a wide range of topics including family issues.

Working with Korean General Social Survey, Taiwan Social Change Survey, and Chinese General Social Survey, JGSS shares some modules of questions with East Asian Social Surveys (EASS). The theme for the first EASS (EASS 2006) is Family, for the second (EASS 2008) is Culture and Globalization, for the third (EASS 2010) is Health and Society, and for the forth is Network Social Capital, and for the fifth (planned in 2015) is Work and Life. EASS aims to continue valid and reliable cross-national surveys by using repeated research that has already generated robust results.

In this presentation, we will illustrate the change in Japanese family and capture the picture based on the results of cumulative JGSS data. The overall trends between 2000 and 2012 will be described. While swayed by unstable job climate, both individuals and families suppress dissatisfaction and come to grips with reality. The number of unemployment and contingent employment among youths has been enlarged, the percentage of unmarried people has increased, and unmarried children have increasingly been living together with their parents. A growing number of women in all ages entered into labor force and the youths has been enlarged, the percentage of unmarried people has increased, and unmarried children have increasingly been living together with their parents. A growing number of women in all ages entered into labor force and the bottom of the M-shaped employment rates among women have become shallow. Following favorability towards socialization of livelihood security and care of the elderly, it is increasing people favor socialization of childrearing and education. The changes in employment among youths and women should have a strong impact on Japanese family in the future, and thus a whole picture of the reform in tax systems at odds with the employment conditions of better educated segments and older cohorts of the male core workforce. German policies and practices designed to protect skilled male workers in manufacturing have failed to transfer to occupations performed mainly by women, while sub-forms of part-time and temporary work have deepened the divisions between men and women in non-standard employment.

**Investing in the Afterlife: Inequality, Charity, and Hopes for Salvation in the Hizmet Movement**

As Turkey’s economy has liberalized over the last 20 years, economic inequality has intensified and become a major focus of public concern and discussion. A response to this inequality has been an increase in the number of charitable non-governmental organizations, including faith-based benevolent groups spearheaded by upwardly mobile, pious Turks who seek to “do good” for society as a form of religious devotion. One such religiously oriented Turkish philanthropic association, the Hizmet (“service”) movement, is organized by followers of the influential Turkish teacher, Fethullah Gülen. Based on ethnographic research among members of the Hizmet movement in Turkey and the United States, this paper will demonstrate how Gülen’s teachings on economic activity and social responsibility suggest that a path to salvation for the wealthy emerges from the plight of the poor. More specifically, the movement has promoted an idea that individuals and communities may serve as a type of worship, in which the believer gains God’s reward in the afterlife. However, this conversion of economic success into religious merit depends on the believer’s intentions (niyet), in that economic activities are recognized as worship only if the believer maintains the proper spiritual disposition toward God. This includes the acknowledgment that a person’s economic attainment is only partially attributable to the individual’s own efforts, but ultimately it is God’s blessing (ihlas) that is responsible for success. Reciprocally, an affluent individual should repay God’s beneficence with material beneficence to society through zakat (alm-giving) and other charitable activities organized by the Hizmet movement. These charitable acts will potentially earn the believer a place in heaven. Such a notion that the wealthy rely on God’s beneficence to society through zakat and charitable activities to ensure a place in heaven is one that is popular among Muslims, and it suggests that a path to salvation may be found through a religious livelihood.

**Policies That Shape How Australian Patients Navigate the Healthcare Maze: A Critical Discourse Analysis**
Governments around the world are endeavouring to work out how to meet patients’ expectations regarding universal health coverage. Even wealthy nations such as Australia that formally enjoy universal health coverage experience gaps and inequities in access to health care. Not all patients enjoy an equal capacity to choose. Inequities in access to care, long waiting times for surgery and increasing out-of-pocket expenses are creating a divide in healthcare between those who can afford to pay either out-of-pocket or via private health insurance, and those who cannot. The aim of this project is to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

The study is informed by a critical discourse analysis of selected Labor and Coalition Federal policy texts to examine how patient choice is spoken about, shaped and enacted at the federal level in Australia. The content of speeches and statements by key politicians was accessed through database services of the Commonwealth Parliamentary Library. The sample comprises speeches and statements pertaining to health policies made by Prime Ministers, Ministers of Health, and Opposition Leaders and Health spokespersons.

Critical discourse analysis reveals the core policy messages that emerged during the Howard Coalition (1996-2007) and Rudd/Gillard/Rudd Labor (2007-2013) governments. Our study compares and contrasts Labor and Coalition policies in relation to access to health care in order to explicate the underlying assumptions regarding patient participation and choice within the context of universal health coverage.

Education Reform in Lebanon: Nationalism Versus Social Justice As Means for Building Social Cohesion

The paper will examine education policies in Lebanon post the civil war period (1989) up to 2010. This period witnessed two education reforms: 1995 and 2010. The main priority for these two reforms was building a sustainable peace and cohesion amongst the various sectarian groups. A nationalistic citizenship education was proposed as a means for building social cohesion in 1995 reform. The importance of social justice as a means for building social cohesion in Lebanon was overlooked. Twenty years later, this approach proved to be of limited effect as sectarian fractions in Lebanon continued to grow while school drop-out rates soared particularly amongst disadvantaged groups. In 2010, a new education strategy was developed. Promoting Lebanese nationalism again occupied the priority. However, access to education featured too in this strategy. My analysis will focus on the current understanding of equity and equality of education in this new reform plan and its consequences on the disadvantaged and marginalised groups in Lebanon and consequently on the social cohesion of Lebanon. In the paper, I criticise the neo-liberal and distributive notion of social justice which characterises the new education strategy in Lebanon and argues for a recognitive concept of social justice.

SHUCKSMITH, MARK* (Newcastle University, mark.shucksmith@ncl.ac.uk)

Crofting Is the Future: Small Farms after Agricultural Modernisation

This paper discusses crofting reform as an instance of the emergence of locally-rooted alternatives to agricultural modernisation and neoliberalism. Crofting is a distinctive and highly regulated form of land tenure specific to the northern half of Scotland; it is also a cultural heritage of major international significance, under threat from marketisation. In 2007-8 an independent review of crofting (which I chaired) proposed a major reformulation of government policy. Instead of agricultural modernisation, this proposed an approach based on concepts of neo-endogenous rural development and place-shaping, with local mobilisation encouraged by the generative power of the state and other actors, harmonising managerial technologies, addressing the challenges of multi-scalar governance and vertical integration, regulating land occupancy, and releasing new potencies. Using the neo-endogenous approach, this sought to build the capacity of crofting communities to mobilise strategically and collaboratively, empowering communities at various levels. This approach was broadly adopted by the Scottish Government, with new legislation in 2010 leading to tighter regulation of land use and absenteeism, a map-based land register, and local elections for the regulatory body. Finally the paper considers what wider relevance this case might have, given that the Crofting Inquiry report was recently translated into Japanese.

Is There an Emerging Transnational Advocacy Network in Opposition to Weaponized Drones?

The use of unmanned aerial vehicles (UAVs) or drones by the United States for carrying out targeted killings in territories throughout the Middle East, South Asia and Africa has by now become routine, but controversial, American counter-terrorism practice. In recent years, these drone strikes have been regularly denounced by human rights organizations and have also drawn the critical attention of United Nations special rapporteurs on account of the civilian casualties such attacks frequently cause in apparent violation of international norms governing the use of military force. Perhaps just as significant, however, in continuing to resist the normalization of drone warfare, has been the increasing activism of a variety of like-minded norm entrepreneurs involved in the production and dissemination of knowledge about its legal aspects and realities created on the ground. Volunteer lawyers representing victims/survivors of drone attacks have been pursuing litigation in different national jurisdictions, most notably in the United Kingdom and in Pakistan, to identify liable parties and publicize their alleged complicity. Concurrently, the epistemic community of international law scholars and practitioners has been engaged in public intellectual debates concerning the legality and morality of drone warfare, while investigative journalists have (often at their own peril) continued to document attack incidents and play a significant role in bringing these facts to public attention. This paper explores whether, and to what extent, these separate, yet complementary, initiatives may be indicative of an emerging transnational advocacy network opposed to the use and proliferation of weaponized drones.

The Democratic Peace Debate: Theory and Fact

The concept of a Democratic Peace (DP) is a major theoretical strand within International Relations (IR). Depending on precisely how democracy is defined, the number of wars between such states over the last two centuries varies from zero to a handful. Moreover, democratic states have never fought on opposing sides in a general war involving all, or nearly all, the great powers. Such a record cannot be claimed by any other form of government – monarchies, Communist and authoritarian states have all fought against one another. The only zone of peace that is grounded in a shared political system is that of liberal democracies. In a field in which there are relatively few empirical regularities of even modest strength, scholars were energized to validate or invalidate the findings. Thus, DP provides an almost perfect focal point to grapple with contentious issues involving theory in IR. First, DP will be differentiated from the liberal (or Kantian) peace, a concept with which it is often conflated. Second, the main debates about theory within IR that DP helps to illuminate will be discussed. These debates can be categorized as follows: 1) Rationalist vs. Reflexivist (paradigm debate); 2) Quantitative vs. Qualitative (methodology debate); and, 3) Methodological Unity vs. Methodological Pluralism (philosophy of science debate). Hence, concerns about theory-building in IR (as reflected through DP) are delineated: defining variables, confounding of variable effects, and fleshing out causal mechanisms that connect the variables to each other. The position taken here is that methodological pluralism is a pre-requisite and, furthermore, such a flexible and wide-rangining approach should also prove highly beneficial for delineating real-world connections.

Gender Inequalities and Socio-Cultural Themes of Leisure in Contemporary Societies: Illustrations from Pakistan

This paper takes into account the cultural and social themes of leisure that explicate how women’s leisure has been marginalized in a contemporary society. In order to understand and explicate women’s leisure experiences, we need to understand the perspectives of women’s leisure experiences of women and weigh women’s own perceptions and experiences with respect to leisure and social transformations. Reflecting the intersection of social and cultural themes of leisure, and progress towards the Millennium Development Goals, this paper views gender disparity and contradictions within leisure from the gender segregation and disparity is found in hetero-social dimension in Pakistani society. Equal rights to leisure are given in a range of UN declarations even if it is frequently viewed as less important than basic human needs of food and shelter. Its purpose is to suggest how women’s participation and perception has been affected by informal and formal gender dynamics. It may alter and enrich analysis and characterization of contemporary global society. The studies on gender inequalities have given theories and methods; therefore, this paper argues that women have developed different educational and organizational talents and have the capacity to make a distinct and positive contribution to contemporary societies. The paper will try to narrow down to types of theories, methodological and ethical challenges and present a model for more equitable
leisure policies and new resolutions for more leisure opportunities for women that enable leisure to serve as a force for human growth. Finally, in drawing together some themes of leisure and gender equality, the paper will indicate how these realities have the capacity to add to our understanding of the complexity of contemporary global society. Leisure and gender inequality will be seen in a socio-cultural framework.

Inequalities of Gender, Violence and Dehumanization in Multiple Forms in a Conflicting Cultural Values Outlook in Pakistan

This paper provides a theoretical framework of understanding, experience and struggle of gender and pursuit of women rights concerning inequality, violence and dehumanization, and how multiple forms of such disparities overlap and interrelate with social categories and cultural values. The paper's main theme will be a theoretical inquiry into the way violence is conceptualized in relation to the conflicting cultural values in traditional and modern theories. Theoretically and methodologically the paper will be designed so as to allow the interpretation of maltreatment of women with reference to sexual and gender options concerning violence, class, and discrimination in the background of conflicting cultural values. It will focus on Pakistani society since it got its independence in 1947 and build its argument on previous research conducted among indigenous groups in Pakistan. It will be discussed here that an examination of multiple forms of inequalities of gender, violence and dehumanization in the lives of women in Pakistan, the interpretation would be that of a society surrounded with violence. Central to this theory of social violence is accounts of the ways Pakistani women find themselves between being modern women and traditional women to illustrate the limits of the dichotomy of the theories of traditionalism and modernism. This paper will focus on the rights of the women who suffer from violence and dehumanization. These rights will include socio-economic rights of getting jobs, social security, health facilities and shelter. In the end the paper will give a model of gendered approach for rehabilitation of the women who have faced such inequalities considering into view the legal Act against women victimization in Pakistan.

Crisis of Labour: Macro- and Micro-Level of Social Analysis

The report focuses on the phenomenon of labor crisis and its macro- and micro-level analysis.

At the macro-level labor crisis is a transition to a postindustrial society; one of its features is a weakening of the need for hard work for industrial production. Labor in its classic sense is a thing of the past. Due to globalization, the processes of labour mobility across countries and the emergence of the international labor market play an important role in the contemporary world. And at this level the study focuses on the problems of the prospects of labor as an activity, changing the nature of work, etc. Therefore a researcher faces new challenges such as: identification of new labor types that replace labor in its classic sense; changes in the organization of the living space of people; career opportunities; a change of priority in the lifestyle and day-to-day activities.

At the micro-level, labor crisis can be described as a particular person and/or a family living in terms of increasing tension of life and the growth of its pace. With changing strategies in the field of labour and employment on a global scale and due to the prospect of joining the conditions of flexible/part-time/freelance job the real work schedule of large numbers of people is becoming more and more intense. An Individual still, if not more, values their work, willing to work overtime. Labourism is becoming a common disease.

In the center of our attention is the dichotomy of liberation from rigid labour and labour dependence, which more people around the world suffer from.

Students' Educational Achievements or Practicing of Citizenship: Disjunction or Alternative

Countries that are striving to upgrade their education most of the time take part in international educational projects such as PISA (OECD) and TIMSS, PIRLS, or CIVED/ICCS (IEA). Moreover, the participation in educational comparisons of students' achievements is a country's response to the onslaught of new requirements to account for school performance. Usually they have taken up some form of external evaluation and permanent monitoring of students' achievements. The mandatory and regular use of testing tools exerts the pressure on students who are imposed now to much more intense effort than in past decades. Consequently, many activities praised at this stage of individual development, i.e. contacts with peers, community endorsement activities have to be abandoned or reduced. This side effect of new accountability practices of educational institutions can be shown on the aggregate level of countries and on the individual level (students).

Frequently scholars meet either students of good grades but socially passive or students with peers, community endorsement activities have to be abandoned or reduced. This side effect of new accountability practices of educational institutions can be shown on the aggregate level of countries and on the individual level (students). Frequently scholars meet either students of good grades but socially passive or socially active students who have poor educational achievements. IEA Internation Civic and Citizenship Educational Study 2009 provide the empirical foundation for this conclusion and these data will be first of all discussed.

Sociologists look for social consequences of new educational accountability practices. The most visible effect is the widespread and paid by parents supplementary training in post-school hours. The school neuroses and school violence accompanying the educational process despite reforms can be related to the new accountability practices. To compile the full list of these consequences is the task for sociologists. Authors have some additional hypotheses about these consequences. The main question, however, is whether the formal education can be in the same time effective and non-oppressive for students.

L'accompagnement Des Mobilités Résidentielles Des Salariés à L'épreuve De La Crise : La Perte D'efficacité D'Un Dispositif De Conciliation Des Trajectoires Professionnelles Et Personnelles

Les mobilités résidentielles liées à l’emploi posent directement la question de l’efficacité de la vie professionnelle et de la vie privée des salariés. Sous l’impulsion de l’organisation paritaire du « 1 % Logement », des dispositifs ont été mis en place en France au début des années 2000 pour faciliter cette articulation, notamment en favorisant l’accès des salariés à des prestations professionnelles d’accompagnement des mobilités résidentielles. Cette initiative a su séduire les employeurs comme les salariés. Elle aide à mieux concilier les dimensions professionnelle et privée des trajectoires de ces derniers par la prise en compte des enjeux territoriaux liés aux mobilités géographiques et par un réel soutien aux salariés les moins bien dotés pour y faire face.

On verra comment le contexte économique de la fin des années 2000 en France a remis en cause ce dispositif. La fragilisation économique de la construction, mais aussi le changement de comportement des employeurs eux-mêmes qui exercent une forte pression à la baisse sur les prix des prestations. Dans un contexte de ralentissement économique général, et donc de recul des mobilités géographiques liées à l’emploi, les prestataires adoptent eux-mêmes des pratiques commerciales de plus en plus agressives qui mettent progressivement au second plan l’accompagnement des salariés à proprement parler.

L’évolution de l’accompagnement des mobilités géographiques des salariés en période d’austérité se fait donc au détriment des salariés les moins bien dotés, en particulier les travailleurs de l’artisanat, de la petite et vie privée. Elle les resserre sur des choix plus tranchés, par exemple entre l’immobilité et le sacrifice de la vie personnelle et familiale. On verra cependant que le contexte d’austérité est aussi propice aux tentatives d’innovation de la part des salariés mobiles, notamment par le recours à la multi-localité résidentielle.

Building a Hybrid Culture in Multinational Military Operations: The Perceptions of Eufor Peacekeepers on Collaboration and Negotiation for a Better Information Sharing

Information sharing describes the exchange of data between various organizations and people. A hybrid culture based on collaboration and negotiation may pave the way for better information sharing within an organization. In the meantime, the nature of the organizational work is changing with the help of globalization, technological developments, complexity and today's sophisticated social and political problems. To remain competitive and to gain an advantage of these developments by solving conflicts effectively (Hocker and Hocker, 2009), some new “multinational collaborative work arrangements” are being established both in civilian and military multicultural working environments. These working environments are also in place for military multinational military operations (Pedar sen, 2001). In fact, if the cultural diversities are being managed well, organization can use advantages of this situation. In this case, the concepts "collaboration" and "negotiation" have become much more vital to manage the intercultural process effectively, to prevent some misunderstandings and create a better information sharing between the partners.

Police and Excessive Use of Force in Mexico City

In Mexico City, excessive use of force by police officers from different police forces is a problem acknowledged by the public and some political actors. This concern resulted in the enactment of a 2008 law governing the use of force by police forces of the Federal District. However, there is little research and systematic information about situations in which police abuse is concentrated. In developing democratic societies civilian control agencies has been one of the most important efforts to constraints police abuse and achieve a better level of compliance of basic rights. The main mechanism is the assessment of complaints against illegal police behavior. In Mexico City this responsibility lies with the Federal District Human Rights Commission. Since its founding in 1993 around a fifth of all registered complaints involve policemen (either from the Secretary of Public Security or the Attorney General of the Federal District). Based on the analysis of 600 complaints regarding police abuse between 2007-2011, this study describes the main characteristics of abuse in the use of force, and accounts for its severity by looking at social, spatial, situational, and individual factors. Police abuse is concentrated in a limited set of situations linked to the specific functions of each corporation, the motives and interests of police officers, as well as in spatial patterns.

From ‘Absent-from-Home Father’ to ‘Committed Father’: Changes in the Model of Fatherhood in Poland and Role of Mothers-‘gatekeepers’

The current situation of fathers in Poland is an excellent example of the gap between the one hand - the level of social expectations, and on the other hand - everyday practice.

Social expectations have tended to climb as a result of the promotion of a new fatherhood model, extensively discussed by the media and by experts, which has led to the creation of new social patterns and a new model of ‘the father’. The majority of press, radio, and TV programmes present the idea of the committed father, involved in childcare in a very positive way, as an opportunity for men to benefit from developing close relations with their children.

In the same time, Polish fathers rarely get involved in dealing with children, do not spend a lot of time with them, do not decide on matters that are important for children, etc. The question is: why?

There are many reasons for that, one of them is the attitude of some Polish mothers which could be described as ‘Gatekeepers’. Many of mothers admit that the fathers of their children are able to look after children, but they treat them as if they were children themselves. They claim that, men need detailed instruction, and when faced with a task of taking care of a child, the mother has to prepare everything for him. Due to this, many women prefer to have fathers ‘under control’ even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously ‘push men away’ from children, because male commitment threatens their identity as built on being the mother, and thus the sole caregiver and expert in children’s affairs.

The main purpose of my presentation is to describe the situation of fathers in the context of maters’ attitudes and behaviors.

Community Responses to Drug Related Violence in Mexico

The violent conflict that emerged in Mexico – due to drug trafficking and the Government response - has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuernavaca and Juztepec in the state of Morelos, Sallillo and Torreon in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees –men and women- from lower middle class neighborhoods. Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens’ rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens’ linkages to public security and justice institutions. These changes are expressed in different ways, from the social perceptions on the impact of the criminalization and social embeddedness of powerful groups of organized crime have weakened community organization and collective action to face the more violent scenario. As a result, the main strategies to prevent or cope with victimization reported by the interviewees refer to individual behavior, family isolation, and the weakening of community networks.

 sexism in the workplace, and the second part discusses the strategies and tactics used by women to negotiate these contradictory feelings and actions. The third part examines the implications of these findings for policy and practice.

The study concludes with a discussion of the implications of these findings for future research and practice in the area of gender and work. It argues that a more nuanced understanding of the experiences of women in the workplace is needed, one that recognizes the diverse experiences and identities of women, and the ways in which these identities are constructed and negotiated in the workplace. The study also highlights the need for more research on the experiences of women in the workplace, and the ways in which these experiences are shaped by the social and cultural contexts in which they occur.

workers in various parts of the world. I employ a theoretical perspective that sees historical capitalism as a system characterized by ceaseless change—all that is solid melts into air—and therefore as a system that is recurrently making, unmaking and remaking working classes on a world scale. The paper traces how various capitalist "fixes"—spatial, technological, product and financial—reshaped working classes locally and globally in recent decades; strengthened some; undermined others; created challenges and opportunities. The paper develops several arguments that can be found in embryonic form in Forces of Labor. One, the combination of technological and financial fixes has been destroying livelihoods faster than it has been creating new livelihoods, leading to a generalized crisis of subsistence for workers, and a crisis of legitimacy for capitalism. Two, the profitability of the financial fix results almost entirely from the redistribution of income from labor to capital. Redistribution was key to resolving the 1970s crisis of capitalist profitability, but at the cost of an intensifying crisis of legitimacy. Three, financialization, crisis of legitimacy and hegemonic decline go hand-in-hand. We are at the end of the neoliberal era and of the era of US world hegemony. Thus, the geopolitical terrain is critical for understanding 'what is to be done', including the prospects for labor solidarity across borders and status divides in the very unequal world bequeathed to us by centuries of world capitalist development.

New Experiences of Inclusion: Affirmative Action for Blacks and Natives in Brazil

After several decades of black social movement struggles for rights in Brazilian "racial democracy", it was recognized by the nation-state the practice of racial discrimination in the country, as well as affirmative action as a policy to correct inequality. In this scenario, the passage of Law 12.711 on Affirmative Action, in 2012, presupposes a set of substantive changes that alters the access to public high education in Brazil. To understand the social context that has led to the measures which stimulated the education on racial and ethnic relations as well as African and African-Brazilian history and culture for school system requires analysis of the democratization process of the Brazilian State. This paper focuses on three aspects: 1) the change in state policy related to inclusion of blacks, native population, and poor people; 2) the impact of these actions in the academic debate; 3) the role of black social movement in this process. The research fieldwork gathers the legislation that have changed the normative field in relation to the ethnic and racial issues after the Constitution of 1988; collects official data on the expansion of blacks, natives and poor people to public high education; and review the literature on racial affirmative action and black social movements producing a typology of the arguments.

Filial Piety Expectations of Older Adults in Urban and Rural China

Due to declining fertility rates and growing life-expectancy, China will have one of the world’s oldest populations by the middle of the 21st century with more than one in three individuals over the age of 60. Reductions in family size—the result of the one-child policy in urban areas and 1.5-child policy in rural areas—will also lessen the mandatory status of education on racial and ethnic relations among the elderly. This presentation will make use of 2012-13 pilot data from the Chinese General Social Survey of Aging, a national study of older adults (60+) in China that yielded 1,126 individuals about every divided between urban and rural locations. Questions in the survey about filial expectations of older adults should be interviewed if they desire to have their children should live close to their parents, if what children should live with their parents, and the special obligation of sons to ensure the old age security of their parents. Descriptive and multivariate statistics will be presented to determine if aging in urban and rural China is truly a tale of two family types and identify the social, economic, and health factors that may be responsible for any differences detected.

Placing Panethnicity: Performing Arab Space on Sonnenallee

The multicultural Berlin district of Neukölln is home to a large number of very diverse foreign-born and migrant-background residents. Some 140 nationalities make up 40% of the population in 2010. Among the migrants least welcome by the government are refugees from Lebanon, Egypt, Syria, Afghanistan, Iran, and other countries in the region. The multifaceted presence of the Arab community has been both a source of pride and an embarrassment for the city. The paper focuses on the role of public space in the development of Arab identity and community. The public space of Sonnenallee is the location of pan-ethnic performances of Arab identity and community. Beyond common Arabic language, this street offers “safe” public space for Arab political and cultural expression and the businesses do not sell fruits and vegetables, but rather goods and services that look into the ethnic enclave of distinctively Arab businesses and institutions are unprofitable, demonstrates self-sufficiency to the authorities. Ironically, immigration have a precarious foothold in Berlin. Establishing a small business, even if it

Crime Control in São Paulo/Brazil: Military Police and Criminal Justice System

This paper discusses the State actions of crime control in São Paulo State/Brazil in the last decade. We seek to analyze how institutions and State agents engaged to crime control and criminal justice management are affected by the emergence of new “criminal organizations.” An expressive growth of the incarceration rates, as a result of the large number of prisons, is linked to the emergence of the “Primeiro Comando da Capital – PCC”, bringing a new dynamic to the relations inside the ‘world crime’. Research (under data collection) has identified two main strategies of crime control to face the new crime dynamic: i) a militarized combat based on lethal confrontation led by the Military Police against supposed criminals and ii) a classic judicial control producing both imprisonment for specific population and low rates of punishment, especially for homicides and police violence, showing the high selectivity of the penal system. Two empirical cases exemplify each strategy mentioned, and allowed to describe some of their characteristics. First data indicates some affinities between classic crime control and police violence.

Slow Birth and Fast Growth of a World-Class Post-Secondary Education in Singapore

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper examines the background and strategies behind the slow start but fast expansion of a world-class post-secondary education in Singapore and presents an overview of its current trends and future directions.

When Singapore gained its sudden independence with its separation from the Malaysian Federation in 1965, one of the legacies of the British colonial heritage was its low investment in its infrastructure, schools and teacher training. This is reflected by the low literacy rate of 73% in 1970, and a high 83% of population aged 25 years and above having qualifications below secondary level even in the year 1980, based on data released by the Department of Statistics.

However, the rapid expansion of a world-class post-secondary education in Singapore was initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least a secondary education were about 56%, 32% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010. Apart from expanding enrollment at the post-secondary level, Singapore also had to shift its efficiency-driven education to an ability-driven one in the past decade, to respond to growing educational aspirations among the young and the deep impact of the digital knowledge-based era. This paper will conclude with a discussion on the new challenges, opportunities and measures to adapt to the ever-changing landscape of post-secondary education.

The Forbidden Discipline: The Impact of the Pinochet Dictatorship on Chilean Sociology and Sociologists

In 1972, during the height of Allende's presidency, Santiago de Chile hosted the Conference of the Latin American Sociological Association (ALAS). The conference would not return to Chile for 41 years, until September 2013. At the time, Chile was the Latin American center of social scientific exchange and collaboration (Franco, 2007). Besides, Chile's path towards socialism and its changing society attracted many sociologists from Latin America and overseas.

This golden era of Chilean sociology immediately came to a halt with Pinochet's coup d'état on 11thSeptember 1973 and the seventeen years of dictatorship. As in changing society, rapid school construction and large scale teacher development were initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least a secondary education were about 56%, 32% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010. Besides, Chile's path towards socialism and its changing society attracted many sociologists from Latin America and overseas. This golden era of Chilean sociology immediately came to a halt with Pinochet's coup d'état on 11thSeptember 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociologists and sociology as leftist ideology, with many having to migrate to save their lives (Barrios and Brunner, 1988; Brunner, 1988, Garretón, 1997, 2005). At the same time, with the forceful implementation of neoliberalism in all areas of life under the guidance of the Chicago Boys, neoliberal economics became the queen of the social sciences, leaving little space for what seemed to be 'ideology' and thus altering the understanding of accepted knowledge in the social sciences.

This paper studies the fundamental transformations of Chilean sociology and sociologists' lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship altered sociology and sociologists' lives: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

Reflecting on the role markets play in shaping the interests and actions of social life, this paper presents the argument for how institutional ethnography furthers our understanding of the discursive creation and enactment of markets as part of daily life. Drawing on data emerging from an ethnographic study of financial institutions within the City of London, this paper asks how markets are created, maintained and ideologically positioned through the everyday actions of economic actors located within key financial institutions.

Informed by Goffman’s (1961; 1963) work on the body as a site of cultural inscription, it is argued that markets are essentially constructed and managed through the production of dominant cultural sensibilities. This blended approach of cultural economics identifies the market as an enacted phenomenon, bounded socially and spatially within institutions of finance. By focusing on the embedded cultures, enacted through the daily practices within the City’s financial institutions, we can explore how the market operates in terms of its agenda, practices and conflicts with the outside world.

Through exploring the lived experiences of those working within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market actors, seek to utilise existing technologies, architecture and habits to create a more efficient market – one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social costs of escalation and remote management.

Remote Management as Risk Management: Enclavisation in Afghanistan

The paper presents an analysis of ‘state-building’ intervention and civil-military practice in the context of global terrorist-related and conflict-related risk. The paper is based on qualitative field research conducted in Afghanistan, and in particular focuses on the international intervention as ‘risk management’, at two levels. The paper first considers ‘state-building’ intervention as management of the global risk of terrorism, or of conflict-related regional instability as continuous with global terrorism. At the level of everyday practice, the paper considers the intervention operations of both civil and military organisations as in part driven by management of the risks of operating in a high-risk environment. In this the paper brings together Shaw’s concept of risk warfare (2005) on the military side with Duffield’s concept of the fortification of development aid (2010) on the civil side. Practice in both cases converges on a risk-averse model of intervention emphasising ‘state-building’, ‘remote management’, with extensive and expensive devolution of implementation to local and private contractors on the civil side, continuous with use of private contractors and local proxies on the military side. Evidence for egalitarian distribution of risk, a condition central to sociological models of risk such as ‘risk society’, is limited. Risk-averse ‘enclavised’ intervention operates as a way of insulating the risk of local and civil populations, whether as inadvertent civilian casualties of military operations, or as populations excluded from, or marginalised in, urban spaces that have become enclaves for international organisations. This model of intervention is potentially counter-productive, as it increases local concerns of instability and insularity of informal and informal institutions, while increasing the significant expense of the apparatus of ‘enclavisation’ and remote management, notably for infrastructure and private security provision. The paper concludes by considering possibilities for a less risk-averse and more locally owned model of intervention in conflict-prone spaces such as Afghanistan.

Self, Otherness and the Israeli Sociology

The paper concerns the question of identity construction in Israel and offers to regard the early Israeli sociology as a source that articulates and reflects its transformation. By focusing on the late Prof. S. N. Eizenstadt’s sociological language, its use of myths and prevalent national narratives, the paper examines 1. how self and othersness are formulated 2. how the academic study of society had become an advocate of a specific discourse in which Zionism – the main ideological framework of the time - had enjoyed a hegemonic position. The paper therefore underscores how sociological knowledge, built from this ideological ground, projected the ideal image of society and propagated the notion of a collective “we”. To illustrate the centrality of this identity politics in the Israeli sociology, the paper discusses the relation of the early Eizenstadt sociology to the question of the Arab-Jews as its study case. It argues that the sociological view of Arab-Jews of the early 1950’s was crucial in shaping the ideal border of identity. Given that the Arab-Jews (Mizrachi) were not seen, from the hegemonic view, precisely as “Israelis” (a coherent part of the in-group) and not exactly as Arabs (the ultimate “other” in the Zionist discourse), a new barrier-category had been created - that of the

Music As Leisure in the 21st Century: The 'sportisation' of Music Fandom

The term ‘sportisation’ (Elias and Dunning, 2008) is used by figurationalists in a general sense to document the development of rules and regulations for previously chaotic games (e.g. boxing and football) into the commercialised, controlled ‘sports’ that occupy such an important position in modern society. King (1997) focuses on the role that commercial forces, in particular the introduction of modern all-seater football stadiums, have had on the emotional management and masculine identities of sports fans. This paper readdresses the focus on leisure (in this case music fandom) in the figurational sociology of sport and leisure, charting the impact that ‘sportisation’ processes and marketplace influences have had on the live music experience of heavy metal fans.

Drawing from a three year study of heavy metal subculture which incorporated data from participant-observation and interviews, this paper examines how transformations in modern music ‘arenas’ has significantly diminished the quality of the live music experience. This is encapsulated by the problematic issues raised in terms of emotional management and identity projection that that fans have experienced in the context of such transformations. In particular, focus is attributed to the importance of the heavy metal rituals (moshing, crowd-surfing) which have previously been facilitated in controlled environments that allowed for the ‘de-controlling’ of emotions and exaggerated displays of masculinity. Following the changes in such subcultural spaces, particularly the increased seating in large music venues, the strategies used by fans to reconceptualise ‘established’ notions of masculinity within the scene and to demonstrate their heavy metal identity are explored.

Focus Group Interview As Research Method inside the Military

In the proposed paper I would like to focus on the several dimensions, as shape, establishing and duration of relationship between different groups in the military institution perceived in the context of chosen research methods. The starting point of the paper is the reflection on the use of Focus Group Interview as a tool for qualitative research in the Polish Armed Forces. The history of use of FGI starts in military studies in Poland begins in the mid of 90. XX c. FGI as a method was used in the research mainly focused on the issues of women in the service, conscripts and lowest rank professional soldiers. The social process, that is activated as a result of use of FGI includes the re-creation of social relations and identity construction in the group of respondents of given kind. In the case of marginalized target groups, the situation of research creates an friendly environment, where the process of building a positive group definitions appears. The reality of the research and its consequences may form the forum for the subordinated and/or marginalized group in the institution. In this context it influences the social actions and processes inside the institution, finally affecting the organizational culture of the military.

SINDRE STEAN, ALEXANDRA* (University of Vienna, alexandra.sindrestein@univie.ac.at)

Developmental Logics Beyond the Divide

Developmental projects have been the common denominator of the post-1945 global order irrespective of political divides and divergent economic systems. Whether we look at the emerging postcolonial states of the South, state socialist Europe or Latin America, developmental policies directed at industrializing ‘homogenous’ national spaces were adopted across the globe. However, by the 1970s this model showed signs of exhaustion. At the time when ‘Limits to Growth’ came out in 1972, the Romanian state was implementing a new strategy for economic progress: it had negotiated with IMF and EBRD the ‘developing country’ status in order to facilitate foreign-debt financed investments and embark on export-led growth. This paper aims to shed new light on a particular kind of developmental continuum in an effort to question the wide-spread assumptions about the relationship between local variations and global structural constraints, namely the tendency in terms of explanatory frameworks to emphasize only particular local specificities, and to ignore external factors for certain socio-spatial formations. Drawing on extensive fieldwork in a Romanian Danube-riparian port city, I argue that it was the contingency of the 1977 earthquake that turned the city and the surrounding region into a laboratory for a new kind of developmental logic. After the downfall of the socialist regime in 1989, the very same region became yet again part of a new understanding of development. In accordance with pre-accession criteria for EU membership, Less Favored Zones have been established in 1998 in order to attract foreign direct investment through long term tax exemptions.

Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize ‘contingent development’ as a way to look into improvement schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.

Beyond the Stereotype of ‘Slum’: A Sociological Study of a Slum in Amritsar (India)

The slum in a city is considered as a poor area and it is assumed that all slum dwellers are alike. The present paper is an attempt to study the micro level discourse related to the issue of inequality within a slum. Inequality has been studied at various levels: such as national, regional and city, but not within a slum. A slum, like a city, is a heterogeneous entity, in which various categories of poor people share the same space and dwellings. The findings suggest that there are clear-cut inequalities among the slum dwellers in social, economic and political spheres.

SINGH, JAGSIR* (CSSS/SSS, JNU, jagsirbrar1@yahoo.co.in)

Urban Inequality and Health

This paper is a modest attempt to underline the urban inequality and impact on health. It describes the health implications of social inequalities within city. It also describes the health problems from which low-income groups in urban areas suffer more than richer groups including those that are not linked to poor sanitary conditions and the structural inequality in health care but the level of inequality) than to absolute poverty. Study on the health of rich and poor households within cities show the much larger burden of disease, injury, and premature death that low-income groups face. Most of this burden is easily prevented because it is a result of their unequal access to homes which have provision for piped water, sanitation, drainage and garbage collection, and adequate health care. Thus this we can say that health inequality never been an independent phenomenon. By using health and social impacts of urban inequality as a focal point of the discussion, the paper also intends to provoke thought on some of the fundamental issues of human development trajectories.

Role of New Communication Technology Initiatives (NCTI) in Bridging the Digital Divide: The Case of a North Indian State

Communication technology includes the hardware equipment, organizational structure and social values by which individual collect process and exchange information. The new communication technology (NCT), such as satellites, cable, television, wireless telephony, the internet, computers, laptop, iPod, have certain relation to the issue of inequality within a slum. Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize ‘contingent development’ as a way to look into Improvement schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.

SINGH, PARLO* (M. P. P. G. College, Budaun, pankajkumarsociodi@gmail.com)

Role of New Communication Technology Initiatives (NCTI) in Bridging the Digital Divide: The Case of a North Indian State

Communication technology includes the hardware equipment, organizational structure and social values by which individual collect process and exchange information. The new communication technology (NCT), such as satellites, cable, television, wireless telephony, the internet, computers, laptop, iPod, have certain characteristics that are similar in some respect of those of both interpersonal communication as well as of mass communication. This NCT, also called as new media, features the characteristics of both interpersonal and mass communication. Information exchange via the new media is interactive, meaning that the participants in a communication process have control over, and can exchange roles in their mutual discourse. The present paper is aimed to explore the role of NCT in bridging the gap created by the forces of globalization in developing countries and the representation of females. The study indicates that the representation of females is relatively high in all social categories. About half of the respondents were having their own mobile phones. The tendency of keeping mobile phones was low among the students of upper castes. Thus, this NCTI may be helpful not only in bridging the digital divide but also be a powerful instrument of women empowerment in rural and urban areas.

Critical policy studies adopts a discourse analytic approach to policy research, drawing specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panoptic surveillance principles), and subject positions; and the Bourdieusian concepts of field, capital and habitus. A core aim of critical policy studies is to analyse the ways in which supranational organisations, such as the OECD, increasingly regulate official national curriculums given their role in the development, administration and reportage of tests which are ‘closely linked with the debate about national standards’ expressed as comparative performance on basic mathematics, scientific and literacy skills (Tyler, 2010: 145). However, missing from such theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein’s sociological theory of education. This approach, Bernstein (1995: 365) contended, distinguished his ‘particular corpus of work from that of Foucault or Bourdieu’.

This paper undertakes three tasks. Firstly, it critically reviews the literature that has compared and contrasted the sociological approach of Bernstein to Bourdieu (Maton, 2008; Harker and May, 1993, Hasan, 1999) and Foucault (Diaz, 1984; Tyler, 1994). 145).  However, missing from such theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein’s sociological theory of education. This approach, Bernstein (1995: 365) contended, distinguished his ‘particular corpus of work from that of Foucault or Bourdieu’.

Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula, and the potential consequences of such knowledge codes on different groups of students.

Thirdly, it tests the usefulness of Bernstein's theory of knowledge code to analysing policy enactment around standardised national testing drawing on examples from two contexts, namely Queensland, Australia and Newark, New Jersey, USA.

This paper aims to build on this work in two ways. First, we undertake a meta-analysis of the research literature drawing on Bernstein’s concept of the totally pedagogised society, as well as literature forging a new direction for the sociology of education on the basis of Bernstein’s work. Second, we distinguish between (1) knowledge codes – the structuring of curricula and (2) pedagogic codes – the structuring of specialised communication for teaching. In so doing, we propose an alternative intellectual trajectory for the sociology of education. Specifically, we are interested in analysing new modes of global governance through pedagogic communication devices taken up in a range of formal and informal agencies to construct 24/7 spaces of learning, particular modes of learning engagement, and pedagogic identities. Our objective here is to simply lay out the possibilities for developing a sociology to examine new modes of pedagogic governance and the new spatial and temporal configurations of new pedagogic modes (see Tyler, 2001).

Religion and Colonial Encounters in the Straits Settlements: From Self-Governance to Institutional Regulation

The interface between non-Christian religions in the colonies and the British Empire has attracted considerable scholarly interest and produced by now exciting social science and historical literature from all corners of the globe. In comparison to the rich and nuanced African and Indian material, one struggles to find similar works on the former British colonies in Southeast Asia. This paper attempts to redress this imbalance by turning the gaze to the religious landscape of the Straits Settlements, an administrative unit of British colonial initiative under which these rather diverse and scattered geographical entities were united between 1826 and 1945. I demonstrate that the adopted method of dealing with the religious pluralism of colonized populations was an adherence to the broad articulated principles of religious tolerance and non-intervention, but which often could not be followed through in practice. Through the 19th century, the colonial context in the Straits Settlements was not, by and large, detrimental for expressions of non-Christian religiosity. The absence of restraints and control in this arena, undoubtedly, enabled expressions of non-Christian religions and facilitated their early institutionalization in this region.

I thus argue that from the mid-19th Century onwards, the colonial context in the Straits Settlements was enabling for religious communities in the Straits Territories. We see in these times a vigorous sense of religious solidarity and community, witnessed in intense institution building and founding places of worship, cultural and religious organizations across Hindu, Muslim, Christian, Buddhist and indigenous communities. However, by the early decades of the 20th century, this ‘liberal’ attitude was supplanted by a new vocabulary of regulation, supervision and administration of non-Christian religions. With this shift, new institutional structures, laws and mechanisms were established for managing non-Christian religions in the Straits Settlements signaling a move away from self-governance towards greater institutional regulation and supervision.

Institutional Conflict Settlement Field in Brazil: Four Levels of Justice System

The paper proposes an interpretation of the operation of the State conflict settlement field in Brazil. It takes the perspective of disputes among corporations, knowledge and practices that take part of this field. A reflection on the Brazilian case proposes the coexistence of at least four conflict settlement logics or (four interaction levels) to which correspond hierarchies of rituals, proceedings, persons, types of conflict and places. The study is based on eight years of ethnographic approach in courts and State informal services of justice. The observation on ordinary courts proceedings, informal courts, extra-judicial techniques, formal and informal police proceedings (including illegal ones) leads to an analysis of the co-existence and disputes in a field that produces unequal treatment of the citizens.

Intergenerational and Life-Course Determinants of Upward Mobility

Offspring originating from families with fewer socioeconomic resources are in a great generational gap in lower social positions and attaining lower educational qualifications. Also life events in early adulthood may have an effect on socioeconomic attainment. These effects, however, may be weaker among those with higher compared to lower parental background. This study examines the intergenerational and life-course mechanisms of upward mobility. We observe which life-course characteristics in early adulthood (such as educational attainments, unemployment, living arrangements, marital status and health) decrease the risk of entering upper non-manual social class among those who originate from other social classes. Second, the contribution of factors indicating parental resources is analyzed in order to find out whether higher parental background protects from the effect of risky life-course characteristics.

The longitudinal register-based data-set used in this study is a representative 11% sample of the whole Finnish population. We follow a birth cohort born between 1938, 1947 and 1956. The 20-year follow-up from adolescence till the age of 30 offers a chance to estimate the processes of accumulating disadvantages among individuals and households. Analyses will be conducted in event history model framework. Our objective is to broaden the perspective on intergenerational transmission of inequalities by describing the life-course mechanisms of occupational attainment in more detail.

Childhood Inequalities in French Speaking and Anglo-Saxon Sociologies

Childhood inequalities in French speaking and Anglo-Saxon sociologies have been addressed in different ways. The French speaking sociological discussion has been quite specific compared to the Anglo-Saxon. Those differences will be presented and discussed. Paradoxically, it is in putting aside the question of democratization and inequalities of opportunities that the child emerged as an actor in French speaking sociology, on a first step. As in the French context, the “Republican Universalism” has been the main reference, childhood inequalities have been mainly studied in terms of social stratification. On the other side, in the Anglo-Saxon context, diversity has been the main reference, priority being given to problematics of gender and ethnicity. We intend to examine how those differences influence the way childhood inequalities are studied and how these categorizations are transformed, and their intersectionality addressed.

La question des inégalités de l’enfance n’est posée de manière différente suivant les traditions académiques et les contestes socio-politiques. On s’interrogera sur la spécificité du contexte francophone, par rapport aux contextes anglophones. Paradoxalement, c’est dans un premier temps en se dégageant des problématiques de démocratisation et d’égalité des chances qu’est apparu l’enfant comme acteur sur la scène sociologique francophone. Le poids de l’universalisme républicain a amené à reposer la question des inégalités dans un régime d’interprétation différent du contexte anglo-saxon où les questions de la diversité s’imposent pour parler ces inégalités, qu’elles soient posées en termes de classes sociales, de genre ou ethniques. Dans quelle mesure la prise en compte de l’enfance remet-elle en jeu ces problématiques? En quoi penser les inégalités à cet âge de la vie oblige à affronter certaines catégorisations et inversement en quoi penser les inégalités donne une vision différente de l’enfance et des enfants?

Projection of Family in Representation of Intellectual Youth in Russia

Russian demographic health should be based on development of positive trends in fertility, marriage and family relations of young generation of the country. Considering that the generation born in «new» Russia, characterized by new ideas about life strategies, value orientations, enters in reproductive age, it is important to assess similarities and differences between role of families and children in this generation representations regarding previous historical period. This study aims to determine specifics of modern marriage and reproductive behavior of young people receiving professional education in Russia. This group of young people is more demanding to high standards of living, thereby extending these requirements to sphere of marriage and family. This specificity necessitates more detailed study of their attitudes and motivations in marriage and reproductive behavior. Identification of possible limits of marriage and family and reproductive student’s attitudes is scientific problem of this study.

In 2012-2013 Center of Social Demography and Economic Sociology, Institute of Socio-Political Research conducted a survey of students in higher and secondary education full-time in 2013-2014 years. The study was conducted in form of distribution questionnaire prepared by the Center. The survey was conducted in the cities of Central, North Caucasus, Urals and Volga federal districts. The study had a multidimensional nature, and it is focused on identification of general and specific issues of reproductive behavior of most educated part of Russian society to clarify the state family policy for more effective implementation and stabilization of demographic situation in the country. On this basis, were selected areas (subjects) to conduct the survey, which allowed us to identify the specifics of students ideas and their reproductive and matrimonial intentions between metropolis and provinces, between different regions of the country, between subjects of different types of administrative-territorial formations.

SKALS, ANETTE* (Aalborg University, skals@socsci.aau.dk)

Social Work Discretion between Professionalism and Managerialism in Denmark

Professionalism and managerialism are important and conflicting concepts in the study of professionals working in public service organizations. By focusing on street-level social workers and social work discretion, it is possible to see how welfare-to-work policies are practiced as well as how organizational guidelines frame discretionary powers. This paper seeks to account for how management organizes, supervises and seeks control over social work discretion. The paper also addresses how management influences the discretionary powers of social workers in a Danish municipality working with clients who are unfit for work or labour market due to health problems. In Denmark the local municipal Job Centre delivers services related to welfare-to-work. Here values, interests and policies, transformed into rules and regulation, meet the concrete practices of welfare-to-work service inside the specific street-level organization. This is a fundamental democratic process of implementation. It makes discretion inevitable and crucial as professional judgments and decision making, determines the client’s eligibility to benefits and need for special attention or intervention before returning to work. Here professionalism is institutionalized in bureaucractic organizations. Hence the social workers must control clients’ legal access to sick leave programmes and at the same time deliver individualized services to promote the workability of the client in order to help them become self-supporting after sick leave. As well as examining how social work discretion is made possible in the job centre, the research behind the paper discusses the issue of new forms of professionalism emerging in social work. In the light of policy changes and reforms of welfare services a new type of social interventions towards people on sick leave is demanded. This can place pressure on the street-level organization to develop new or more professionalism.

The Rule of Law in the Globalizing World. Polish Investors Abroad

According to the famous argument of Max Weber, emergence and establishment of the rational legal order and formation of law-based political authority present important factors which explain rapid economic growth. These theories of Weberianism, as it is believed, are 1975 and 1977 from 1987 till 2007: a 20-year follow-up from the thesis of embedded European (or broader - Western) legal cultures and mentalities, characterized by the high value of the rule of law. Therefore processes of "new comers" west-
ernization are often conceptualized as “learning” i.e., as formation of pro-legal cultures based on an unquestioned value of the rule of law. Empirical research on the Polish investors abroad put in question such simplistic views. Firstly, in light of this research, the processes of learning are much more complicated, multidimensional and multidirectional. Secondly, the state and its agencies play here an important role - both in form of protection of rights and interests of domestic actors (national markets), and in form of protection of rights an interests of investors abroad (rights and interests of its citizens and companies). Therefore, the rule of law in a globalizing world presents a complicated negotiation game not only of values, but also of interests, between strong and weak agents, private and public.

SKARPELIS, ANNA* (New York University, aks402@nyu.edu)
Risk, Rumour, Radiation: Japan's Nuclear Catastrophe and the Politics of the Apolitical

This paper analyzes the particularities of the Japanese approach to risk communication around radiation after 3/11. Radioactive contamination in Japan was first measured and its results published by the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the Japan Atomic Energy Agency on March 14, 2011, three days after the Great East Japan Earthquake ravaged the coast of Tohoku, thousands died or were made homeless. Official radiation monitoring in the following weeks continued in an haphazard manner, yielding vague and at times misleading data that failed to provide actionable information on the necessities of evacuation to the local population. Within a matter of days, various groups had hacked Geiger counters to enable collective radiation monitoring, resulting in a higher degree of granularity of data available to the affected population. Still, while the provided data was more transparent and comprehensive than that which had previously been made publicly available, the groups made few attempts at interpreting the data for the public. Why should social scientists do anything to help people understand the relationship between value and values? Why should sociologists do likewise?

The speech will be devoted to the motivations of the people who publicly criticize the re/construction process and take part in different protests against it - the opponents of the Committee for the Rebuilding of the Royal Castle. There will be presented strategies with the help of which those people explain their engagement in the protests and their resistance to the re/building process. Conclusions will be presented on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

Architects and Urban Planning

This presentation discusses to what degree the architect profession is able to define what counts as relevant knowledge in urban development and urban planning processes, based on material from Norway. Urban planning is a field constituted by numerous actors/stakeholders representing different knowledge traditions implying that they do not always speak the same language. However, in order to handle environmental problems, transport and other infrastructure and land use, multidisciplinary knowledge and cooperation between different sectors are required. In Norway, the architectural profession has long had a key role in urban planning and positions as heads of urban planning administrations have been a power base for architects. However, architects’ judgments and forms of knowledge are no longer hegemonic and their power base is thus weakening. This is partly caused by an increasing proportion of planning propositions (like zoning plans) prepared by private actors. Moreover, local authorities increasingly seem to depend on private funding to accomplish housing and infrastructure projects.

RC52-833.9
SKOGHEIM, RAGNHLID* (Inst Urban & Regional Research, ragnhild.skogheim@nibir.no)
Architecture As a Hybrid Profession

Hybrid organizations and professions are characterized by conflicting goals, which may cause tensions. For architects, such tensions are typically between art and market, and between ideal ideas and conceptions of design, and preferences and claims from clients/principals and others. Although market dependence is intrinsic in the role and history of the profession, this still calls for a form of judgment, when dealing with this tension, some architects are quite pragmatic and accept and adjust to prevailing conditions. Other architects are more uncompromising and insist that creativity requires freedom from external constraints. Particular architect “heroes” espouse autonomy and distance from the service part of the profession. This may seem like a paradox as architects more than most other professionals depend on, and have to adjust to, the power, wealth, favor and money of their clients.

SKOVAJSA, MAREK* (Charles University Prague, marek, skovajsa@soc.cas.cz)
Rockefeller Foundation’s Role in Promoting Social Sciences in Interwar Czechoslovakia

This paper discusses the place of geopolitical concerns in the policy of the Rockefeller Foundation towards social sciences in Czechoslovakia between the two world wars. The RF provided scholarships for Czechoslovak social scientists (around 35) and sponsored social science work at various Czechoslovak institutions. The scholars supported by the RF were sociologists, lawyers, and economists, both German and Czech-speaking. Their individual fates display wide variation: several perished during WWII, others escaped and became recipients of displaced scholars' grants, still others were exiled after 1948, a handful joined the Nazi and later the Communist structures. Only those who chose emigration produced academic work of some importance. The dominant geopolitical concerns were reflected in the effort of the RF to maintain a balance between German and Czech scholars and institutions supported or in promoting research in areas that were expected to contribute to maintaining the stability of the Czechoslovak state or Central Europe such as unemployment and social welfare, interethnic relations or the so-called Danubian studies. Key among Czechoslovak institutions in social sciences that received support from the RF was the Social Institute, affiliated with the Ministry of social welfare, the incubator of innovative ideas that directly influenced Czechoslovak social welfare legislation and policies. RF also funded a large research project on the urbanization of Prague that became the first major empirical study in Czech sociology while another study on German-Czech relations could not materialize due to the dismemberment of Czechoslovakia. The RF made significant contributions to the development of empirical social research and social policy in Czechoslovakia, but the overall impact of its funding was virtually erased by adverse geopolitical conditions and turbulent political developments in the period 1938-1948.

SKOVAJSA, MAREK* (Charles University Prague, marek.skovajsa@soc.cas.cz)
The Elusive Code: Anomalous Cultures of Civil Society
This paper attempts to add new evidence and theoretical insight to the literature on the discourses of civil society inaugurated within cultural sociology by Jeffrey Alexander and Philip Smith. It argues, first, that unlike the US case, the codes of civil society in ethnically heterogeneous places are the product of multiple external oppositions which can, in certain cases, result in alternative or contrary codings. For instance, some currents in the Czech, Polish and other Slavic nationalisms in the 19th century constructed the Germans, their principal “other”, as rational and efficient, taking pride in being emotional and unpractical. Second, the paper shows that civil societies are fragmented and the general code of civil society is appropriated differentially by different social groups whose interpretation of the basic binaries is dependent on their particular social experience as well as their relative position to other groups. For example, as pointed out by Marada, Buchwolski and other authors, the cultural codings characteristic of the heirs of the anti-Communist dissent in East Central Europe are in some aspects, including the role of formal procedures and professionalism, completely at odds with the codes revered by Western-style social movement organizations. With its roots in a conspirative underground community this dissident culture doesn’t code personal ties and secrecy as counter-democratic. On a general level, the paper argues for a more historically-oriented approach to the study of cultural structures of civil society that recognizes that the generalized codes are embedded in contingent interpretive traditions and, as such, are unstable, contested and often ambiguous.

Medical and Legislative Gatekeeping in ART: Narrow Trajectories in the Realm of Miracles
The techniques of assisted reproduction have the potential to free us from the bodily limitations and open the physical reproduction to people who would not conceive without medical intervention. The access to this type of treatment is regulated by numerous ways, both formally and informally. Reproductive medicine, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients. One of the longest traditions of infertility treatment, wide network of infertility clinics, competitive success rates and liberal regulation of the ART regarding the range of procedures allowed, became one of the most popular forms of the reproduction tourism. On the other hand, there is a strict regulation of the access to the ART based on the characteristics of patients such as their age, sex and marital status. The paper will focus on the process of the legislative and medical gatekeeping as a genuine example of the foucauldian biopower, as a control over bodies, interaction and norms of population performed by the medical professionals and by the administration and regulation of treatment. The paper is based on the two sources of data: interviews with 15 medical professionals working in the field of ART and the analysis of the Czech parliament debate over the new legislative limits of ART (2011). The analysis focused on the following questions: what is the position of various actors in the process, how is nature and normality, in the context of ART, discussed, what kinds of citizens/patients are designated as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

Causes and Consequences of Time Investment in Friendship Networks: A Dynamic Analysis of the Polish Panel Survey Polpan 1988-2013
Time investment in one’s friendship network depends on the utility function U = log^{-1}(1-\alpha log \theta) that people maximize, where \alpha is the social tie parameter (between 0 and 1) measuring the ith actor’s taste for bonding with friends, and \theta refers to the costs associated with leisure time activities. In the theoretical part of the paper, we connect this utility function with time investment in friendship network (i) assuming that the numbers of friends and the density of their contacts are crucial for the amount of time that people actually spend with friends. The Polish Panel Survey POLPAN 1988-2013 contains information on how frequently respondents meet with friends (I), our main leisure-time variable, numbers of friends (N), density of their contacts (\theta), and several socio-demographic characteristics of respondents for the period of measurement (t) and earlier periods (t-1, ..., t-5, where the period-units are 5-year waves of the POLPAN study). In the empirical part of the paper we examine main determinants of time investment in one’s friendship network, focusing on family formation variables. We show that time investment, as well as the change in number of friends and the change in density of contacts among friends, depend on marital status, number of children, and number of people in the household. In addition, we confirm previous findings that having friends with entrepreneurial experience increases people’s chances of establishing their own businesses, independently of the number of potential bridges between friends. The paper concludes with a discussion on meeting friends as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

Hazard Vulnerability and Housing Inequality after the Tuscaloosa, Alabama Tornado: A Critical Analysis of Rebuilding Efforts
The tornadoes that struck Tuscaloosa, AL and surrounding areas on April 27, 2011 caused tremendous destruction to both residences and businesses. The highest levels of damage occurred among low-income residences, both single and multifamily. In this paper, we apply hazard vulnerability theory to the rebuilding of Tuscaloosa. Hazard vulnerability theory focuses on how social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We extend this perspective into the recovery process, particularly on the availability of low-income, multifamily housing approximately two years after the storm. Data from multiple sources, including professional knowledge, including city planning resources, apartment websites, and interviews with city personnel, indicate that multifamily residences that have been constructed to replace destroyed or damaged housing complexes generally demand higher rents and have fewer units available for rent than the complexes that existed before the storm. Additionally, even as a residential construction boom has occurred in Tuscaloosa, there remains a lack of complexes that are affordable and are marketable to the college student population, even though none of the multifamily housing complexes destroyed in the storm solely housed college students. Although low-income populations were more affected than student populations, the economic advantages of building for student populations (i.e. “disaster capitalism”) have outweighed the social responsibility of rebuilding residences for low-income individuals. We conclude that low-income residents of Tuscaloosa were doubly vulnerable to natural disasters; not only were they more likely to be living in structurally flawed housing before the storm, they were also left out of the rebuilding process after the tornado. We discuss some of the potential consequences of the reconstruction of Tuscaloosa, and propose suggestions that can limit social inequality in the rebuilding process for Tuscaloosa and other cities that have been harmed by natural disasters.

Professional Knowledge and Expertise
Professions are according to Abbott the most important way expertise is institutionalised in modern societies. Sociologists have studied the characteristics of professionalism as well as the role of professionals in society. Even though an abstract knowledge is considered a core if not the core characteristics of professions, sociologists have examined the characteristics of professional knowledge used in occupational practice only to a limited extent. In my paper I discuss important contributions within the literature on expertise and argue that some of these perspectives are highly relevant to complement sociologists understanding of professional knowledge. While sociologists have emphasised that abstract knowledge acquired in higher education is an important characteristics of professionalism, practical training and prototypical knowledge is found to be the most important precondition in the literature of expertise. Sociologists do not deny the need for practical training, but tacit knowledge is a somewhat mysterious term often considered as opposed to abstract explicit knowledge. Based on questioning why knowledge is tacit, Harry Collins (2010) distinguishes between three types of tacit knowledge. This distinction opens up for a more nuanced perspective on the relationship between tacit and explicit abstract knowledge. His perspective also imply that explicit knowledge play an important role in the development of expertise and transmission of knowledge.

Professional work is characterised by uncertainty. Inspired by Collins different types of tacit knowledge, I distinguish between three types of uncertainty that have significant importance for the reliability of professional expertise: 1) Explicit uncertainty related to uncertain knowledge; 2) Cognitive uncertainty related to...
We consider democracy as an instrumental value. It appears to be effective and naturally arises when society reaches sufficient consent in regards to basic values (one God for everyone, nation, person, society, etc.). When such agreement does not exist, a dictatorship provides the minimum order in a society. For example, dictatorships of Cromwell, Napoleon, Stalin, Pinochet, etc. There is no consent regarding basic universal values in the modern world. Hardly a man and his rights will be recognized as the highest values by billions of people in the near future. The policy of Western countries aimed at their promotion, leads to anarchy and violence. Therefore it is difficult to expect peaceful expansion of democracy on a global scale. Today's biggest task for social scientists is to reveal basic values in regards to which mankind can come to the consent.

Tap Water and the Public Policy

Water is the source of life on the earth and the driving force of human development. The diamond-water paradox presented by A. Smith shows the understated economic value of water. However, it has its social value that can be viewed from human dimension perspective.

The knowledge of how citizens perceive the drinking water is essential to understanding the political, economic, technological context of the public policy. According to sociotechnical survey, 82% of citizens in Saint-Petersburg are not satisfied with the quality of tap water. These figures demonstrate, that despite the fact the city water is cleansed by ultraviolet and has biomonitoring system to meet the high requirements of international water standards, there are some hidden issues explaining this situation.

SPb water is a nexus of generations inhabiting this place: it keeps the memory of past times, preserves the spiritual fabric of the society and gives an incentive to new generations for further development. However, the industrialization has destroyed this consciousness. The growth of scientific knowledge has enabled experts to make a strict distinction between bad natural water that had adverse effects on people health and good filtered water that had the status of paid public services.

It is believed, SPb water is rusty and dangerous to drink, because city officials take bribes and do not provide the modernization of water infrastructure system in time. Public dissatisfaction takes the form of disagreement with the public policy. It prompts citizens to buy bottled water sold by water transnationalists, although it is the same tap water, in fact. As a result, SPb water market is showing 12% annual growth.

Basing on the citizens’ concerns on the water problem, one can construct the index of tap water as an indicator of the level of public confidence in the public policy.

Daily Practises of Home Making and Belonging Among Owner-Occupiers and Tenants in a Disadvantaged Neighbourhood in the Netherlands

In this period of globalisation daily practises of local home making and feeling at home are considered important. In order to illustrate such practises the focus of this paper is on a street in a disadvantaged neighbourhood in a Southern city in the Netherlands. In this street tenants and owner-occupiers with a different ethnic background – including native born - are interviewed and observed. In this natural laboratory, the street was divided into clusters; those with only tenants, those with only owner-occupiers, and those having a mix of both. This offers insight into the role class and ethnicity play in the homogeneous and mixed micro-settings and its impact on physical and social practises of home making and belonging/feeling at home.

Therefore attention is paid to narratives and the informal organization of different living spaces, territory-making activities, and practises in the different domestic clusters. This shows that the domestic space can be experienced as a vehicle of intimacy and sociability and in other clusters as encouraging alienation. Such practices can also takes place in the same cluster, resulting in mechanisms of inclusion and exclusion which in turn go together with boundaries between public, private and community spaces.

Transnational Family Life from the Perspective of Zimbabwean Male Migrants in South Africa

The early years of the new millennium saw a rise in the influx of Zimbabwean migrants to neighbouring South Africa. Due to the growing economic turmoil, political crisis and human rights violations in Zimbabwe many citizens from this country have crossed the border into South Africa to find employment and/or seek political refuge. Using qualitative data collected from in-depth interviews this paper seeks to gain a better understanding of the reality of transnational family life from the perspective of Zimbabwean men who have migrated to South Africa and live in the inner-city area of Johannesburg. Close family ties both here (the country of destination) and ‘back home’ (the country of origin) were mapped.

The focus fell on how the respondents sustain families across these transnational spaces and what impact their transnational experiences have on their relationship with their wives/partners and children. Moreover, attention was paid to the role high-speed information and communications technology (ITCs) play in maintaining family relationships and acting transnationally in a digital age. In light of the challenges these Zimbabwean men face on a daily basis in South Africa, where there are xenophobic sentiments and a relative high unemployment rate, the attention also fell on how these men view their multiple family commitments and the significance of remittances in maintaining a sense of self within the ambit of the family. The respondents’ reflections on family dynamics across transnational spaces show a variety of experiences and their narratives provide a window into their different lived realities as migrants with family ties across borders.

Emotion Work in the Practice of Medicine: The Case of Physician Assistants of Color

We focus on the concepts of emotional labor or emotion work and white racial framing to describe the experiences of Physician Assistants (PAs) of color as they navigate racialized barriers in the medical field. We first present results from a nationally representative sample of 15,275 PAs and then examine the more detailed personal experiences of PAs of color from an online survey. Finally we use the personal narratives of ten African American PAs. We identify and analyze emotion themes resulting from work-related experiences and stressful encounters that arise from interactions with faculty, staff, nurses, physicians, and patients in the workplace. Odds ratios from the online survey show that African Americans experience more emotion work than other groups. African American PAs were 26 times more likely than white PAs to report patient refusals to treat them. When we examined only Black women PAs, they were 46 times more likely to report patient refusals. Other ethnic groups experience elevated levels of emotionally negative experience, but they were not always statistically significant when other variables were included in the analysis. Women in general experienced a variety of discriminatory behaviors. Narrative accounts exhibit large amounts of emotion as the African American PAs detailed their encounters with patients and medical providers.

The Art of Governing in an Age of Revelation: On the Biopolitics of Biovisuality

This paper examines the transforming value, resolution and vitalism of the social body as it is increasingly informationalized, visualized and animated by multivariant systems of exposure. Multiplex biopolitical interests influence and
incite these practices; wills to discern and direct consumption habits; ambitions to inscribe structured meanings upon somatic territories; and desires to better identify, verify and assess corporal components. An emerging confluence of biovisual imperatives, practices and flows are placing unique demands on embodied subjects, specifically concerning (a) the control, ownership and arrangement of personal information derived from bodily interference, and (b) the types of performative exertions and authentication protocols that are now routinely requested and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshy topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivization effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confinements and revealing subjective states in the form of informatic particles (Foucault 1988).

In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)
Civilizational Discourse and Models Of Modernity In The Meiji Revolution

During the Meiji revolution, Japanese writings on international arena, Western empires and the Western tradition nourished a discourse on civilization. At the same time, Japan's civilizational works also reflected debate on models of modernity. Over the course of consolidation of the Meiji regime, deep engagement with different foreign traditions produced an exceptionally intense phase of inter-civilizational discourses which left a significant legacy. This paper can assess experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivization effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confinements and revealing subjective states in the form of informatic particles (Foucault 1988).

In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

Debating Civilizations: Sociology and The Inter-Disciplinary Field Of Civilizations Analysis

In the early twentieth century, civilizations analysis combined perspectives from anthropology to archaeology through to world history. Founding thinkers in sociology contributed greatly to this inter-disciplinary field. In a phase that stretched from Weber, Durkheim and Mauss to Sorokin and Elias, a ‘classical era’ of civilizations analysis generated a program of research problems that was productive in critical and multidisciplinary ways and limited in scope and vision in others. The field was lost as a suppressed tradition during the postwar institutionalization of disciplines. This paper will examine what was gained for sociology in the early traditions of civilizations analysis as well as what was displaced when it subsided.

Potential paths for renewal of multidisciplinary scholarship involving sociology will be sketched out and the contemporary experiences of new-decolonized revival of civilizations analysis in the work of Benjamin Nelson and S.N. Eisenstat. The paper will also identify intrinsic limitations in latter-day approaches.

Understanding the Impact of Major Life Events on Young People's Academic Achievement and Post-Schooling Careers

Instability and conflict are pervasive features of the transition from adolescence to adulthood, as young people learn to manage an expanding array of academic, social and familial commitments. Recently, theorists of inequality have suggested that young people's exposure to such uncertainty during this time is potentially exacerbated by broader processes of individualization and social change, placing them at heightened risk of marginalisation. In this paper we test this hypothesis with respect to young people's academic achievement at the end of high school. Our results indicate that such events had a negative influence on young people's secondary school exit scores which, at a time when university participation has become the norm in most Western societies, can adversely impact the quality and scope of young people's post-schooling career options. We also find that this cost is distributed unevenly across the student population, with the performance of (typically wealthier) private school students, and students living in urban areas, less affected by such events than the performance of public school students and those living in non-metropolitan and regional areas. Finally, we review the implications of these findings in light of this contemporary debates about individualisation, uncertainty, and inequality in young people's educational and occupational futures.

Sexually Explicit Material, Scripting, Simulacra, and Sexuality - Theorizing the Changing Landscape of Learning about Sex

This paper explores the relationship between the marked increase in availability of sexually explicit material in the United States that accompanied widespread high-speed internet, sexuality, scripting theory, and the concept of a simulacrum. The data are from open-ended interviews with 51 young adults about their experiences as adolescents learning about sexuality in the United States. Participants reported viewing sexually explicit material online as adolescents to learn about sexual behaviors and sexual interaction, often before participating in those behaviors. The ways adolescents referenced sexually explicit material, both amateur and professionally produced, in order to learn about sex behaviors represent a significant departure from historic means of learning about sex. This development is best understood as presenting a new level of sexual scripts, intermediate scripts, within the model developed by Gagnon and Simon (1973). Participants’ descriptions of viewing video examples of sexual behaviors revealed they provided an intermediate script that was more specific and personal to the participants than a cultural scenario, yet did not involve direct interaction as with interpersonal scripts. This learning by viewing sexually explicit material prior to engaging in sexual behaviors approximates the concept of a simulacrum. Adolescents referenced representations of sexuality and then modeled their own behaviors on those representations. These theoretical concepts of an intermediate script and simulacra, are useful for understanding for the shifting landscape of adolescent sexuality. As all aspects of our sexual world continue to be increasingly recorded, viewed, and represented, these concepts may contribute to developing theories of sexuality applicable to other populations.

Cumulative Disadvantage and Gender Differences in Early Career Earnings: Evidence from Canada's National Graduates Survey

Over the last several decades women have entered educational programs in lucrative fields like law and medicine. England (Gender and Society, 2010) has argued that, in the US, the effect of this has been to narrow the gender earnings gap in the upper part of the educational distribution and to reduce the aggregate gap. Women in Canada have also entered the legal and medical professions in large numbers. On average we expect to see a similarly declining gender pay gap between the better educated. In fact, the evidence on this suggests a more complicated evolution of gender pay differences. Statistics Canada's National Graduates Survey has collected data on field of study of successive cohorts of university graduates (at approximately five year intervals) and, then on labour force status, earnings, and family status two and five years after graduation. This makes it possible to determine the raw gender differences in pay both across cohorts (the
first cohort analysed graduated in 1986, the last in 2000) and, within cohorts, the changes in the differences after graduation; ii) to determine the extent to which field of study continues to cause a gender difference in pay; iii) the factors other than field of study that cause a gender difference in pay, including family responsibilities. The paper reports i) analysis of the effect of gender on labour force status, focusing on changes likely to subsequently increase pay; ii) consecutive cross-sectional Oaxaca-Blinder decompositions within and across cohorts; and iii) panel analyses within cohorts. The results suggest that, even within this highly educated sample, in the short period after graduation, women tend to cumulate a number of experiences that contribute to a widening gender pay gap.

SMITH, MICHAEL* (McGill University, michael.smith@mcgill.ca)
Did Rising Inequality Cause the Recent Financial Crisis?
One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (Fault Lines, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, led to the financial crisis; vii) these financial crisis-mortgage holders provide little evidence in support of this interpretation. This paper addresses the following questions. i) Did incomes stagnate or decline in the lower part of the income distribution in the decades leading up to the crisis? ii) Did distributional conflict cause the liberalization of credit in the form of sub prime mortgages? iii) Was it the provision of mortgages to low income house buyers that caused the boom and subsequent bust in house prices. iv) To what degree was increased risk in the financial system caused by policies encouraging the issue of sub prime mortgages? On the whole, the evidence raises doubts about the rising inequality account of the financial crisis.

SMITH, PHILIP* (Yale University, philip.smith@yale.edu)
On Dry Othering
Existing theories of Othering can be thought of as 'wet Othering'. They focus in metaphoric and material ways on the slimey and ambivalent. In such theories Othering is associated with intense emotional reactions. Those perceiving the 'Other' feel intense hatred, disgust and dread. This paper introduces the new concept of 'dry othering'. This involves a completely different logic. Those doing the Othering feel - or are believed to feel - nothing at all. The victim of Othering is a mere object to them - one that does not evoke emotional responses. The logic of action is not symbolic as in wet Othering but rather overly-instrumental. Victims of this kind of Othering are traumatized not by an awareness that others think they are disgusting and enjoy their humiliation (an emotional response) but rather by realizing that they are mere objects to the Otherer (who has no emotional response). Social theory on the gaze is used to make sense of this situation. The theory is illustrated with reference to accounts of unethical medical experiments, Alien abduction narratives, animal attacks, torture and serial killing.

The Urban Fabric, Repair and the 'Good Enough' City
This paper considers the work that repair might do in mending and smoothing over matters of social and political life. From the perspective of 'urban repair', small acts of making care can seem inconsequential in the face of the global risks that menace the modern city and the brutal conditions, exclusions and exploitation that some of those cities are home to. Yet a humanist sociology might be sympathetic towards piecemeal and everyday activities which aim to put right, one step at a time, things gone wrong – deviant occurrences, ugly moments when life in the city breaks down or does not play out as we might want it to. Ken Plummer’s recent call for a sociology of hopetakes this line, insisting on the need for ‘a down-to-earth pragmatisms of empathy, justice, kindness and care’ and inviting sociologists to ‘think small in a big way’.
Something similar – thinking small, in a big way – can be found in the writings of human geographer Thrift, though differently inflected. Thrift directs attention to mundane activities of urban care and maintenance – street cleaning, roadside repair, emergency call-out – and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the small to the large – from the physical – palpable, material, mute – fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift’s thesis neglects this history.

The Origin and Diffusion of Comparative Survey Research
Cross-national, survey research emerged out of and developed along with many seminal megatrends of the 20th century including globalization and democratization. It was also shaped by such major historical events as World War II, post-bellum collective multilateralism, and the spread and collapse of Communism.
The development of cross-national, survey research is an example of what Rogers calls the diffusion of innovation. Public opinion polls were created in the United States in the mid-1930s and spread to other countries. Like all diffusions, its development was innovation specific and was both aided and hindered by particular characteristics of survey research.
Its expansion was part of the general process of globalization. For survey research, globalization involved considerable interaction between the global product (survey research) and the local markets and cultures.
Additionally, as Oberschall has noted “the expansion of surveys in general and public opinion polling in particular was part of the general growth of democracy within and across societies.” Surveys in general and public opinion polls in particular typically develop and only thrive in open, democratic societies. Democratization in general and decolonization in particular opened up more countries to surveys.
Besides being shaped by these megatrends, the development of cross-national survey research was influenced by historical events such as World War II, post-war collective multilateralism and the founding of the UN, and the Cold War.
This paper examines 1) the emergence of cross-national, survey research including the role of early adopters (e.g. survey-research organizations), 2) the initial diffusion of survey research, 3) foundational survey-research meetings and associations, 4) the impact of World War II, 5) the role of the UN and other international organizations including the International Sociological Association, 6) initial comparative surveys, 7) the contributions of international exchanges, 8) later developments, and 9) impediments to development and diffusion.

Gap Years, Cosmopolitan Cultural Capital and Transnational Justice

This paper considers if gap years are a cosmopolitan endeavour. It draws on a qualitative study of the online travel narratives of young people from the UK who blog about their year out between school and university. The analysis focuses on the bloggers’ representations of people and places as ‘different’ in their travel stories. Volunteering overseas as part of a gap year is often promoted as a way for young people to become ‘global citizens’, and independent travel as a way to have ‘authentic’ inter-cultural experiences.

Can such gap years build a transnational sense of justice, or are they simply a way for already privileged youth to claim they are doing something ‘worthwhile’? Gap year students gain personal benefits, which I conceptualise as ‘cosmopolitan cultural capital’. This suggests they may be primarily concerned with self-interest rather than a commitment to the other.

While young people may have good intentions, I argue that the way the bloggers frame their gap year stories tends to reproduce dominant meanings and values, and are shaped by historical legacies and structural forces. Their narratives also contain instances of more reflexive engagements with difference and diversity, however. Drawing on these findings, I consider the future prospects for gap years as an agent of positive social change. I suggest how young people might be encouraged to critically engage with wider issues of global justice before, during and after taking time out overseas.

The Role of Assistive Technology for Personal Care Activities of Daily Living to Enable Families to Care for Relatives with Dementia in Their Location of Choice

The UK’s National Dementia Strategy objectives include: i) ensuring that people with dementia live well (whether in their own home or in a care home) and ii) a call for more research on the role of Assistive Technology (AT) to address the social care needs of people with dementia (PwD) and carers. This research focussed specifically on AT for personal care Activities of Living (ADLs); bathing and washing, dressing and grooming, toileting and continence and feeding tasks. Examples included; brightly-coloured raised toilet seats, easy-use tap heads, and easy-grip cutlery. Such AT is now provided by some Local Authority Social Services in the UK. This research aimed to determine the extent to which PwD and their familial carers were provided with AT for personal care ADLs by formal social care services, or sourced by themselves, and utilised whilst they lived at home in the community. The same individuals were also assessed whilst living in a care home for their AT use for personal care ADLs. Furthermore, the study examined the role AT can play in enabling those caring for a relative with dementia to make choices about their location of care (particularly, whether the use of AT could delay an institutionalisation decision).

An in-depth multiple contrasting case study design explored perceptions and experiences of formal (care home keyworkers) and familial carers of care home residents with a clinical diagnosis of dementia on AT use for personal care ADLs. The results pointed to ascendant the difficulties and preferences carers of PwD have when attaining, using and maintaining AT and its contribution to the quality-of-life of such individuals. This method also enabled comparisons and similarities between individuals residing in different geographical locations to be compared and establish whether inequality in AT provision exists in the UK.

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle

Alvin Y. SO and Yin-Wah CHU**

After the collapse of Maoist socialist regime in 1978, China has experienced rising social equality and class conflict. Within a short span of 40 years, China has transformed itself from one of the most egalitarian to one of the most unequal societies in the world. With the rising social inequality, it is only natural that rising social inequality is accompanied by rising class conflict. The number of “mass incidents” has skyrocketed from 8,700 in 1993 to more than 200,000 in 2011.

What is surprising is the fact that despite the explosion of class conflict and civil unrest, the Chinese communist party-state is highly resilient and is not under any threat of regime change. There is no large-scale national labor protest, no violent peasant rebellion, and no robust democracy movement to challenge the legitimacy of the communist party-state.

The aim of this paper is to interpreting this Chinese puzzle of resilient party-state in the midst of rising social conflict from the workers, peasants, and the middle class. Why the rising social conflict and civil unrest did not lead to any political instability and regime change, like it did in other post-socialist societies? This paper argues that the Chinese communist party-state has done an excellent job in managing the class conflict among the workers, the peasants, and the middle class in the Chinese society. Indeed, the Chinese party-state not only wanting to stay in power, but it also was able to formulate and implement all sorts of developmental policies propelling the rise of China at the turn of the 21st century.

‘Housing-Based Welfare? Empirical Perspectives from the UK

Economic crisis, fiscal austerity, conservative policies and the new democracy of ageing societies have given rise to the idea of ‘asset-based welfare’ as a key complement of the UK’s shrinking welfare state. For instance, concerning elderly care, retirement and education, housing wealth has become central to family welfare. Throughout life course and across generations. However, given variations in housing wealth across regional and local markets, between ‘boom-and-bust’ cycles, and across socioeconomic groups and age cohorts, positioning housing at the core of an ‘asset-based welfare’ regime should be questioned. In this paper, we scrutinise people’s views and strategies towards what might be paraphrased as ‘asset-based welfare’. What are the opportunities and challenges for positioning housing wealth as a base for family welfare for different cohorts and socioeconomic groups? By analysing 100 in-depth interviews with homeowners (with or without mortgages) and social and private tenants, we conclude that socioeconomic differences account for the ‘house-based welfare’ system. The affluent have various assets to engage in the provision for their own and their children’s welfare with no need to resort to the wealth embedded in their home. For marginal homeowners, relying on housing wealth might result in spirals of debt and drop them out of homeownership whereas long-term tenants are less able to afford alternative welfare provisions. Yet, numerous participants pursue (re-)active strategies of housing-based welfare by traditional routes – building up housing careers in order to live rent-free and eventually downsize – or increasingly by letting out buy-to-let or inherited property. However, many of these participants are unsure of the potential of ‘housing-based welfare’ in the long term since they have ‘no crystal ball to look into the future’ in order to manage complex personal, familial and societal risks; this, in turn, reinforces social and familial solidarity.

‘Why Should I Trust You?’ an Empirical Investigation of Determinants of Trust and Distrust in Romanian Post-Socialist Urban Society

Trust is a key factor in the development of collective action, and thus in the performance of communities, institutions and society. Seminal scholarship has granted the social virtues of trust and to a lesser degree those of caution. Consequently, scholars have expressed concerns regarding the ‘socialist legacy of distrust’, which have negatively influenced processes of democracy and development in the post-socialist states. While quantitative measurements of trust have become standard in cross-national surveys, in depth qualitative research has been exceptional but helpful. By employing a mixed-methods design of cross-national analysis of secondary data and qualitative examination of 69 in-depth interviews in a post-‘socialist’ city, this paper investigates the determinants of (dis)trust in post-socialist Romania. The analysis draws attention to the entwined social and rational origin of trust and distrust. Findings show that institutional trust has risen from post-communism to a greater degree of confidence and freedom to express opinions. However, institutional trust has remained low due to perceptions of widespread bribery and favouritism – not necessarily experienced but reinforced through social learning and the media – and to a general discontent with some institutions, particularly the police, the political elite and the judiciary. Conversely, interpersonal trust has been rapidly declining though...
it had not entirely vanished and has remained generally confined to families and bounded groups. By growing social distrust, people have reacted to the increasing social inequality during the post-socialist transition and its associated figures of the insular individualist and predatory capitalist. This does not invalidate the thesis of socialist ‘legacy of distrust’, but significantly adds to it. Data quantification suggests that the effect of increasing social inequality during transition is six times stronger than the effect of persistent communist legacies on current levels of social distrust. This has important policy implications, which are outlined in this paper.

Relations Between Individuals at Work in a Contemporary Context: Necessary Changes in Communication in Organizational Context

Companies organize themselves around objectives that seek the maximum return to its shareholders or founders. However, when forming the individuals in a group to which these goals are achieved, dreams as well as desires and ambitions emerge.

Typically, subjects align with organizational interests in the expectation that their own goals are also achieved, existing three important issues in these working relationships. The first question relates to the symbolism of the “notion of work”. The second issue reinforces the role of work in social relations. Despite all the discussions involving the centrality of work (OFFE, 1989; BAUMAN, 2008), it still remains one of the central points of life. The third issue concerns the lack of work, the possibility of unemployment and frustration as reality (BALDISSERA, 2010). The subjects experience these conflicts and tensions of force paradoxically (BALDISSERA, 2010; KUNSCH, 2012).

Some factors explain this movement transformation in communication directed to employees: a new technological context (social networks); new relations between people and organizations; caused, for example, a new employee profile and fewer permanent links with companies, besides the existence of an internal environment of conflict and tension.

Employees need time to develop relationships and coherent narratives in their experiences within the organizations, but in a world where the future is already the day after tomorrow, in a fragmented environment, focused on project execution and flexibility, employees are not allowed to develop strong relationships (SENNET, 2009). Communications directed to employees will be impacted.

The safety at workplace, employment and career in one organization is replaced by employability. The needs of the organizations are more important than the needs of its workers. The imperative of aligning organizational strategies can find counterpart in the desires of the individuals in the organization. As professionals working in this field, communicators must understand those changes and challenges.

Decentralization: From the Constitution’s Dream to Reality

This paper aims to analyze the decentralization of public policies in the state of Ceará, Brazil, as supported in the Federal Constitution of 1988. The decentralization agenda, mobilizing social and institutional players, proposed the partaking of decisions during the elaboration and management of public policies in order to strengthen and expand citizenship bonds. The establishment of structures for the arbitration and recognition of organized sectors within civil society bolstered the public sphere for the discussion and negotiation amongst various social and institutional segments. This allowed in specific circumstances for a communal participation and flexibility, employees are not allowed to develop strong relationships (SENNET, 2009). Communications directed to employees will be impacted.

The safety at workplace, employment and career in one organization is replaced by employability. The needs of the organizations are more important than the needs of its workers. The imperative of aligning organizational strategies can find counterpart in the desires of the individuals in the organization. As professionals working in this field, communicators must understand those changes and challenges.

Ribeirinho Communities: Identity and Social Cohesion in the Brazilian Amazon

This article aims to observe the general processes of identity construction and social cohesion of the ribeirinho communities of Combu Island, an Environmental Protection Area, located on the left bank of the Guamá River, near the city of Belém, in the Brazilian Amazon Forest. These populations are concentrated along the rivers due to the lack of means of rail and road transport, using as a primary means of travel inland waterway vessels. In this sense, they are considered part of the so called ribeirinho communities, descendants of indigenous people and also the region of northeastern migrants coming from the great driest in the Northeast in the late eighteen century and large integration projects in the Amazon from the twentieth century. This indicates that the interaction between ethnicity and multiculturalism is that this migratory movement qualify as social construct, in other words, individuals are not the region's natural, but are adapted to the conditions and integrate historical, social and cultural inheritances with indigenous, colonial and migratory people. Thus, we propose to present some reflections on identity and social cohesion present in this part of the population of the Brazilian Amazon. Ribeirinho Communities are a blend of simplicity and complexity and based on social characteristics and demographic dynamics, we present the way of life of these different communities, through the relationship between territory and identity. The intention of this paper is to open a range of new interpretive possibilities on these communities, with no claim rule out pret-
will be explored, looking at both sending and receiving sides of the organization. A typology will be developed using the following concepts from sociology and administrative science: absorptive capacity, resistance, diffusion (including weak and strong ties) and secrecy. The paper will be mainly theoretical, but illustrations from recent operations and experiences will be included.

Professionalizing Armed Forces in Africa: No Easy Game. Why Not?

In this paper we focus on recent attempts of the international community to help African nations to professionalize their armed forces towards proper and effective capacities in dealing with new security threats all over the continent. One of these programs is the US-led African Partnership Station. In the framework of this program, the Netherlands Navy has launched a project called African Winds 2013, in which seven West-African countries were visited to train themselves and host-national militaries, particularly marine and navy forces, in: diving, hydrographic research, amphibious landing operations, illegal fishery policies, boarding procedures aimed at anti-piracy measures, economic development, etc. In this paper an assessment will be given of those activities, based on field work at sea and evaluations by the participants themselves. There will be a connection with previous research on training and educating young African cadet-officers in Western military academies. Both endeavours will be analyzed on the basis of mixed-methods military sociological research.

Röyama Masamichi's East Asian Cooperative Community Theory

Röyama Masamichi’s East Asian Cooperative Community Theory. While I was conducting the long-term project “Northeast Asia’s Transnational Space”, I was interested in the problem of when and how East Asia became identified as a unit. Soon, I became interested in the way that ‘East Asia’ is called and the world, which is the relationship between particularity and universality. To approach the task, I have been interested in East Asian Cooperative Community Theory (EACC) theorists such as the philosopher Miki Kyoshi, economist Kada Tetsu, and international politics scholar Röyama Masamichi, and I will mainly talk about Röyama Masamichi in the presentation.

The core of Röyama's EACC Theory is a region or regionalism. I would like to talk about the issues related to regionalism in the relationship between East Asia and the world, which is the relationship between particularity and universality speaking in the abstract. I will divide Röyama’s regionalism into three aspects based on universalism.

First, it is the attempt to escape from the international universal order caused by the Multinational issue.

Second, it is the attempt to make ‘East Asia’ into a meaningful region, emphasizing the special identity of East Asia.

Third, it is not that the regionalism of the EACC is a particularization of the world order but that the EACC itself constructs a universal world order.

Lastly I will wrap up my paper by discussing following 3 topics. 1)Japan’s leadership position 2)Horizontal regional order vs. Vertical intra-region order 3)The fact that the vertical intra-region order, which was attempted by Japan through the world order but that the EACC itself constructs a universal world order based on universalism.

Women, Disaster and Challenges: A Case Study from Iran

During the past decades, Iran’s natural disasters such as earthquakes, droughts and floods have caused a considerable loss of human lives and livelihoods, environmental damages and the destruction of economic and social infrastructure. Although 49.6% of Iranian population are female but gender analysis has been ignored in the most national reports and surveys related to different aspects of disaster management. This study aimed to highlight the challenges of women before, during and after natural disasters and to investigate the capacity of Iranian women to reduce the consequences of natural hazards. Data collection was done by the interview with affected women of Varzaghan and Bushehr earthquake (2013, 2012), field observation, and review of related documents as well. The findings indicated that although the investigated women were affected more than men but their needs and problems were not identified sufficiently. On the other hand, women vulnerabilities were highlighted more than their capacities and capabilities in handling the disasters. In conclusion, it is important to consider women’s participation in all phases of disaster management (mitigation, preparedness, response and recovery). Gender analysis with localized/standardized analytical tools can be suggested for future studies.

A Comparative Approach on Migration in Post-Communist Societies: The Case of Albania in East-European Context

The post-communist transformations in Central and Eastern Europe represent an interesting example for comparative studies: a number of countries began this transformation from the same starting point (1989), following more or less the same common goal of moving towards democracy and liberal market economy, and EU. Based on the comparative method Brzezinski predicted twenty years ago (as it was later confirmed with surprising accuracy), the historical calendar of those countries (the article “The Great Transformation” 1993), given an example of ‘thinking comparatively’ and foreseeing the future. This paper is regarded with the hypothesis: Albania is an excellent laboratory for studying comparatively the new migratory process. The collapse of the socialist system was viewed with concern by many policy-makers in Western Europe who expected their affluent countries to be flooded by immigrants. Yet, this fear did not materialize and post-communist East-West migration was rather moderate. The only exception is Albania, whose emigration displayed features of an exodus. No other country has been so affected by migration, in such a short period of time like Albania has. It is confirmed that 34.2 percent of the Albanians have immigrated in more than 30 other countries, while the world migrant average is about 2.7 percent. And including the migrants that have spent a considerable lengths of time abroad, and have made their return back to the country, than we have a country in which more than half the population has experienced migration in the last two decades. This paper is an attempt to give a comparative answer to the question: “Why so many Albanians have migrated in such a short time, quite different from the other ex-communist countries, i.e., the countries with the same historical fortune?” In Albania, quite different from other countries, migration is shaping the society...
The (Im)Possibilities Of The Politics Of Solidarity: Human Rights Defenders Discourse, Humanitarian Aid Dynamics and Transmigrants Experiences In Mexico’s Transit Assistance-Based Places

Mexico has the most transited migratory corridor in the world. The complex migratory flows transiting the country—mainly Mexican, Central and South American—have historically been perceived as economic and male. Scholars have noted as problematic the categorisation of the ‘labour migrant’ as being exclusively voluntary. It has been demonstrated that framing agency through simplified understandings of ‘voluntary’ and ‘involuntary’ movement cannot easily capture the realities of movements along the Mexican corridor. Identification using legal categories such as ‘illegal’ migrant end up demarcating and ‘invisibilising’ individuals eligible for protection. The securitisation of borders and criminalisation of migration throughout the 20th century, led by the global north, has intensified and has added further fuel to the fire. Protection has still not been clearly delineated for the undocumented and seems to be eclipsed through the criminalisation of transmigrants experiences. Incidents such as death, rape, kidnappings and other types of abuse faced by transnit migrants have opened up the debate among key human rights stakeholders on solidarity and protection. Human rights defenders have established shelters, humanitarian aid, led manifestations, caravans and campaigns in solidarity with the migrant among other activities and services. These forms of solidarity have been predominately presented by human rights actors to the Mexican government through human rights and humanitarian visa appeals for migrants to transit the country. These appeals and other forms of emerging humanitarian aid dynamics are occurring outside the refugee protection regime. Also the majority of human rights defenders are non-state actors—albeit there is reliance on states for the implementation of human rights. The purpose of this paper—based on extensive qualitative research in transit-assistance based places—is to explore what kind of contribution the politics of solidarity has in (re)shaping the transmigrant subject; focusing on key human rights defenders discourse, humanitarian aid dynamics and transmigrants experiences.

Involvement in Physical Leisure Activities in Low Income Households

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

The paper will focus on: (1) how parents in low income households conceive, experience and handle their possibilities to participate in physical leisure activities and sports in their local communities, and further 2) what impacts these conditions may have on children's participation in physical leisure activities.

The data material consists of qualitative interview from a strategic sample of poor belonging to low income households. Both Norwegian and non western immigrant households are represented in the sample.

The overall findings showed that the involvement in physical leisure activities was strongly restricted by lack of economic capital both for the parents and the children. Most of the informants were single mothers and they had no resources to give priority to their own wishes for participation in fitness- and leisure activities. The children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

BREDVOLD, RANDI* (Lillehammer University College, randi.bredvold@hil.no)

Women's Work and Reasons for Absence from Work

The equal opportunities for women in the Scandinavian labour market have been improved the last decades. But in terms of caring tasks in domestic life there is still a way to go, and therefore it is a challenge especially for women to combine the two spheres. During the period 1980 to 2009 the sickness absence among men in Norway has been relatively stable while the sickness absence among women has increased 70%. Women's higher sickness absence rate is not exceptional. Comparative studies show that women had a higher rate of sickness absence than men in most countries. But they also show that there is lacking knowledge about the reasons for women's higher sickness absence.

This paper will focus on a) women's self-reported reasons for their sickness absence, and b) the importance of social capital at the workplace and in their domestic life.

The data material is responses from a postal questionnaire sent to Norwegian long term sick listed women with mental illness or musculoskeletal diagnoses, and in-depth interviews with a sample of long term sick listed women with the same diagnosis.

The overall findings showed that women's sickness absence has to be understood as a combination of demand, control and social capital both at the work place and in their private lives. Persons with high social capital both at the work place and in their domestic lives have the best prospects to return to work. Single mothers often have low social capital in both spheres, and they are the most vulnerable group. The political consequences for reducing women's sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women's burdens in the private sphere.

**Abstracts**

**De carácter diacrónico intentará captar, a través del análisis de la memoria, la forma en que se ha modelado la experiencia de la modernidad en Guadalajara.**

Objetivo general del proyecto: llevar a cabo un análisis, entre distintos grupos y sectores sociales, de la forma en que los tapatíos asumen las transformaciones de la vida moderna, se adaptan a ella, o las asimilan, entablando procesos de negociación del orden social. La perspectiva de trabajo para la selección inicial de la muestra no exista una ruta única, ni una forma única, de entender la modernidad, sino múltiples posibilidades para definirla y dotarla de sentido. Cada grupo social tiene distintas opciones a mano y las aprovecha o construye dependiendo de una serie de condiciones de orden material, cultural y político. Aspectos como la religión, la educación, los valores heredados, la clase social, el grupo de edad, la situación de generación, etcétera, son clave para determinar el tipo de adaptación/negociación respecto al proceso de modernización que se vive.

Método, el proyecto pretende utilizar diferentes técnicas analíticas, entre las que destaca el registro diacrónico, que, sin atajarse de la etnografía convencional, se enriquece con registros documentales, como el trabajo de memoria, el registro participativo, las observaciones y entrevistas, entre otros métodos de recopilación de datos. El método propuesto se apoya en procedimientos de análisis documental, la exploración fotográfica, el análisis de fotografías, la perspectiva de trabajo parten de la noción de que no existe una única forma de entender la modernidad, sino múltiples posibilidades para definirla y dotarla de sentido. Cada grupo social tiene distintas opciones a mano y las aprovecha o construye dependiendo de una serie de condiciones de orden material, cultural y político. Aspectos como la religión, la educación, los valores heredados, la clase social, el grupo de edad, la situación de generación, etcétera, son clave para determinar el tipo de adaptación/negociación respecto al proceso de modernización que se viene.

Normalmente, los estudios de valores no logran captar aspectos más profundos de la vida social, como los comportamientos reales y los sentimientos, los cuales son elementos cruciales para una adecuada interpretación de los valores y su significado. Un abordaje como el nuestro es más útil para lograr una comprensión más cabal de este tipo de fenómenos sociales.

Gender Bias in Higher Education- Study on Indian Universities

Owing to higher priority assigned in successive Five Year Plans, Higher education in India has witnessed phenomenal expansion, with establishment of number of State and Central universities, Institutes of advanced studies, and numerous private and deemed universities. Pay scales revised to bring them on par with other prestigious services in public and private sectors, rendering it highly sought after sectors of employment. It encompasses graded disciplines and positions with differential status, recognition and rewards. It is hypothesised that, distribution of academic positions and allocation of disciplines could be determined by the social forces and extraneous considerations among which gender is an important variable. The paper addresses this issue in the context of Indian universities in which the number of women faculty is on the steady rise in the last two decades. Data collected through interview of 362 women faculty members from 23 South Indian Universities reveals that, gender segregation of academic disciplines and positions are discernible with concentration of women academicians in soft disciplines as well as at lower academic positions. The hard core applied disciplines, being where the faculty could be more visible, receive more research grants, claim consultancy and patents have predominantly male faculty. Even in terms of cadre composition, the proportion of women faculty decreases with successive higher academic position. Study further reveals that, even among women academicians religion, caste and rural urban background are pertinent in determining the patterns of segregation subjecting women faculty to double discrimination.

Limitations of ICT in Inducing Inclusive Growth

India has been viewed as a leading player in the field of Information and Communication Technology (ICT) and as an emerging economy wedded to the policy of Welfare State has been adopting and harnessing ICT for inclusive growth through diverse policies and programmes. Education, health, agriculture, transportation, production, government and such other sectors that facilitate empowerment of masses have come to employ ICT for enhancing their efficiency and performance. However, the inherent socio-cultural milieu and demographic constraints that have been the bane of development process in India is assumed to have come in the way of successful implementation of these ameliorative schemes. The so called “digital divide” that gets accentuated by the preponderance of rural masses, the information “haves” and “have nots”, lack of ICT infrastructure in far flung and remote rural areas, hesitation among the masses in adoption of new technology coupled with aspiration deficit, have rendered these schemes exclusive, rather than inclusive in impact and as such its vision of emerging as a vibrant knowledge society appears to be a distant reality. Emphasis on application and adoption of ICT in the process of development appears to have divisive and polarizing implications, leaving the people for whom the process is meant even more excluded. The paper seeks to analyse these developmental efforts in India based on the analysis of evaluation reports on various welfare and amelioration schemes submitted by evaluation and monitoring agencies.

SOCIAL CONTEXT AS MEDIATOR BETWEEN VALUES AND WELL-BEING

Changes in the value systems are usually studied by comparing some values, values types or value orientations and their estimates over time or between generations. With few rare exceptions, there are practically no studies concentrating on the transformation of the value structures or on the changing relations between different values. Associations between values are being seen as stable and universal both between countries/societies and over time. This is an assumption that cannot be been met in a world that is more and more characterized by cultural and social pluralism as well as alteration of traditional cultural templates, communication technologies, economic systems, political ideologies etc. All this necessitates the usage of methodological and theoretical approaches that are enabling to recognize the heterogeneity in the value structures within societies and between different time points. In order to compare value systems, they must be equivalent in their structural formation. If this is not the case, then diverse value structures must be distinguished and structural differences (between societies and over time) that arise, must be explained by the variations in the socio-economic or other settings and by the developmental trajectories of those settings.

Current paper intends to fill this gap. Using value questionnaire developed by Shalom Schwartz (PVQ21) and data from European Social Survey, present study argues that the assumption of homogeneity of value structure does not hold. Using latent class modeling framework, diverse value structures are being distinguished within European societies and in different time points. Those value systems are being compared between societies and over time. Culture-specific aspects of them are being allocated and related to wider socio-economic contexts. Finally, the temporal dynamics of those cultural specificities are explored and further related to the historical settings of their development.

Current Attitudes of Supporting Older Parents in Asia: Korea, Malaysia, Hong Kong, Singapore, and Japan

This paper presents the attitudes change for supporting older parents according to social changes. In Asian countries, it has been said that elderly people are taken care by their families and it is the Asian-cultural tradition. Therefore, this research investigates attitudes change in accordance with social changes such as pensions, social services, guaranteed incomes, etc.

(Methods)
Since caregiving has been heavily considered as women' role, surveys were conducted on female university students in Seoul, Kuala Lumpur, Hong Kong, Singapore, and Tokyo from 2011 to 2013. Around 200 questionnaires were gathered in each area.

(Questions)
1. To investigate changing attitudes toward supporting older parents in each countries.
2. To find out female caregiving roles by generations and countries.
3. To find out interrelations between social changes and attitude changes.

(Findings)
Similarities 1. As for Korean and Japanese students, both female students wish to live with their own parents but not husband's parents. 2. They are willing to live nearby their own parent's houses but not those of husband's. 3. Mothers wish to live with and have supports by daughters in later years. 4. They are willing to live near their own parent's houses but not those of husband's. 3. Mothers wish to live with and have supports by daughters in later years. 2. They are willing to live near their own parent's houses but not those of husband's. 3. Mothers wish to live with and have supports by daughters in later years.

DIFFERENCES 1. The majority of Korean mothers wishes to have financial support and the majority of Japanese mothers wishes nothing. 2. Both mothers expect support from their own daughters more than sons. 3. Employing caregivers at home are not an option in Japan but in Korea, Malaysia, Hong Kong, and Singapore. 4. The majority of grandparents are likely to live with children in Malaysia, Singapore even in Hong Kong but not in Japan and Korea. 5. Attitudes of supporting older parents are highly related to social policies and the financial independency of elderly people.
media can cause responses in segmented public spheres of the World Wide Web. Vice versa, content that is produced in blogs, wikis or social networks can become part of new coverage in the mass media. In addition to the public of mass media, some authors argue for the existence of a ‘personal public’ constituted by the World Wide Web. In the personal public sphere, actors use different rules of production and distribution compared to the public sphere of analog offline media. Both forms of public sphere, however, are connected with one another. It is therefore reasonable to describe today’s public discourses as transmedial discourses. The concept of transmedia requires a change of perspective from single media and their social processes to communicative networks consisting in different media in convergent, networked arrangements. It would be unreasonable to assume that discourses are only constituted through the web; this would not correspond to media practices in everyday life and would give the impression that there is a gap between online and offline media practices. I narrow my focus to online discourses as a way to investigate more thoroughly a highly important part of media practices. In my paper I place my focus on digital network media, first and foremost on the Internet, which can be characterized as a central point of reference for media convergence. I would discuss if and how public spheres are changing through the Internet.

Decline, Crisis or Change? Professional Status and Knowledge Authority Among Danish Doctors and Teachers

A common way to address the poor outcomes of public policy, for instance in areas like health care and education, is to blame policy failures on the loss of respect for professional authorities. No one today respects a primary school teacher as they used to do fifty or sixty years ago, and patients now focus on their own rights and google searches rather than the doctor’s orders. If not more, these are at least common narratives in public debates about professionals and why the decline – or even crisis - of professional authority is at the root of present problems. This paper aims to go beyond the narratives and investigate decline, change and restructuring of professional status and knowledge authority since 1950. Taking the Danish primary school teachers and medical doctors as cases, we explore how the status of professional groups are changing (or not) over a sixty year time span. More precisely, we explore both the development of professional status in a general sense of a societal status hierarchy, and in a more narrow sense, understood as the professional authority vis-à-vis other professional groups, clients and the state.

While notoriously difficult to measure, not least going back in time, we hope to be able to assess possible changes through a combination of various data sources. Besides socioeconomic data about salaries and education, we mainly analyze status and authority through a comparison of professional selfperceptions and narratives as presented in magazines distributed within the professions.

“Rubber Rice Bowls”: Work and Family for Women Entrepreneurs in Post-Socialist Rural China

The three decades of China’s market-oriented reform since 1978 have brought about an increasingly deregulated and privatized rural economy, which posed new opportunities and challenges for women to balance work and family. This study focuses on a unique group—women entrepreneurs—who were neither the Maoist “iron girils” nor the cheap laborers in capitalist workshops. Drawing on interviews from two coastal villages in Jiangsu and Zhejiang provinces collected during 2004-2010, where rural industries and petty entrepreneurship had become an important economic engine, this study finds that women, although underrepresented compared with men, had played an active role as entrepreneurs. Based on life histories of 8 women entrepreneurs, this study finds different ways to balance work and family, whose strategies changed as the reform unfolded. In particular, women entrepreneurs described their employment as “rubber rice bowls”, in contrast with “iron rice bowls” of urban workers and “mud rice bowls” of peasants. Contextualized in the reshuffling of job hierarchies and the restructuring of welfare institutions, women entrepreneurs found their “rubber rice bowls” satisfying due to its flexibility and potential rewards, but also challenging because of the increasing risks and competition. Such entrepreneurial dynamics led to various patterns of work-family balance among women entrepreneurs, which could not be summarized under the traditional gender norms or the socialist egalitarian ideology.

The Korean Webtoon As a Reflection of Society

Since 1990, the technology of digital media has been constantly developed in Korea, and the digital media became popular among the general public. With the emergence of the social network service(SNS), people increasingly expressed themselves with visual images, such as photos, icons, animated characters, etc. The new digital media expanded the scope of communication between people and visual images. Webtoon is the new genre of cartoon as the result of digitalization. Webtoon enables readers to easily access and to even participate in the process of webtoon making. The stories of webtoons show social experience in ordinary people’s daily lives. Webtoon readers become participants who share their own thoughts with webtoon artists and also create amateur works. Thus, the familiarity of webtoon increases. It is a remarkable big change in the history of Korean cartoon; thus, this research will discuss how webtoon influences people’s experience of seeing and interpretation. To do so, this research will study webtoons and the creative process of webtoon by the artist, Pui Kang who is the leading webtoon artist in Korea, and analyze how the artist communicates with readers. Also, this research will show the different responses caused by media switching
from webtoon to film. Today, webtoon makes changes on the ways of storytelling and positioning visual images and of interacting with readers. Also, the Korean webtoons are more broadly spreading overseas, such as France. With its increasing popularity and easiness to reach the public, webtoon is regarded as a driving force to boost the field of Korean cartoon industry.

The Impact of Adult Children's out-Migration on the Elders’ Psychological Well-Being in Rural China: Does Gender Matter?

This study examined the impact of adult children's out-migration on the psychological well-being of older Chinese parents left behind in their rural villages. Using data from two waves of the Longitudinal Study of Older Adults in Anhui Province, China, analyses showed that, controlling for personal characteristics and resources, the out-migration of children reduced the psychological well-being of their parents, particularly among older fathers. However, the transition to coresidence with an adult child buffered the negative impact of children's out-migration on the psychological well-being of older mothers. These results suggest ambivalent feelings on the part of older parents when their adult children migrate out of their home villages for work or marriage. However, there is an important gender difference in the adaptation to the out-migration of children. Mothers benefited from entering into a traditional multi-generational living arrangement when their children migrated; comparable fathers suffered from worse psychological well-being following entry into such an arrangement, presumably because living with children increased their dependence. It is concluded that a complex gender interaction needs to be considered when examining the consequences of dynamic intergenerational family processes in China.

Use It or Lose It? the Impact of Grandchild-Caring on Grandparents’ Cognitive Functioning in Rural China

Using the data from the waves of the survey “Well-being of Elderly in Anhui Province, China” conducted in 2001, 2003, 2006, 2009 and 2012 respectively, this study examines the impact of grandchild-caring on Chinese rural grandparents’ cognitive functioning through constructing multi-level growth curve models. The results show that, comparing to the low intensity care for grandchildren, high intensity care has protective effect for the grandparents' cognitive aging, however, the effects of high intensity care depend on the age and gender of grandparents. The grandfathers’ cognitive aging are protected by the high intensity care for grandchild, intensive cognitive function of grandmothers are suffered from intensive care; and this gender difference tends to be widened as aging. These results support the hypothesis of “use-it-or-lose-it”, and imply the significance of gender roles and norms in the Chinese rural families.

Multiracial Parents and the Intergenerational Transmission of ‘Race’ and Belonging

In both popular culture and academic discourses, being ‘mixed’ is becoming increasingly ordinary in Britain. While there has been growing research on mixed race children and young people, very little is known about how mixed race people racially identify and socialize their own children. Many adult mixed individuals have now become parents - prompting the fascinating question of how they, as parents, think about the racial identification of their own children. Parenthood engenders one’s own race category and the ‘right’ social identity of children. What may such socialization bode for the future and significance of racial categories and boundaries in Britain? Are mixed race parents adopting post-racial attitudes and practices, or is there evidence of intergenerational transmission of racial thinking and identification in these households? How do parents think about the relationships between ‘race’ and racial difference, national and regional forms of belonging, and family lineage/ancestry? These questions are pressing, especially in light of recent research which does not necessarily privilege ‘race’, or which examines the meanings and experiences of ‘race’ in connection with other axes of identification and experience.

Based on a Leverhulme research grant, this exploratory study investigates the ways in which mixed race parents think about and communicate ideas and practices concerning racial identities and racial difference, and is suggestive of how they foster their children's (and their own) sense of belonging in the wider society. This research draws on interviews with 60 multiracial individuals (parents) in both urban and suburban regions in England. A qualitative approach is crucial in critically examining not only racial categories/terms, but also trends reported about multiracial people in large scale data sets, especially those in the US.

Educational Mobility in Three Generations: Single-Parent and Grandparent Effect

This study examines the educational reproduction of American families in multiple generations. The key question is how grandparents’ education contributes to the educational success of grandchildren, and how the grandparent’s effect differs for single- and two-parent families. The grandparent effect works through both demographic and mobility processes, because grandparents’ education first affects whether parents have any children and how many children they have, before grandparents proceed to influence the educational mobility of their grandchildren. Analyses build upon the mobility and demography model used in Mare and Song (2012), and draw on empirical evidence from the Panel Study of Income Dynamics. Recent researchers and policymakers alike have expressed a growing concern that single-parent family is responsible for the growth of an “undereducated class” in America. This study investigates whether or not grandparent effect contributes to the growth of the undereducated class from single-parent families in the grandchild generation.

Through Thick and Thin: Ecological Modernization in Thailand’s Electronics Industry

Electronics manufacturing in Thailand has undergone substantial transformations over the last two decades, including with respect to technological environmental innovation. Business conditions in Thailand have been highly challenged during this period, as the country has weathered multiple changes of government, mass mobilizations, torrential floods, and uncertain institutions. Situated at the lower end of global supply chains, electronics manufacturing in Thailand has persisted through this period, even if not entirely thriving. Driven by growing international regulation of hazardous materials and waste electrons and the greening of global supply chains early in the new millennium, technological environmental innovation in the industry has proceeded. Drawing on field research conducted over two decades in Thailand, as well as on available data, this paper addresses the causes and consequences of those transformations, including such questions as: How have these changes come about? What roles have domestic and international exogenous (market, regulatory, environmental) and endogenous (industry, firm, labor) forces and dynamics played in technological environmental innovation during these two decades? What has changed and not changed in electronics manufacturing in Thailand as a result? In what ways has electronics manufacturing in Thailand become more environmentally friendly since the beginning of the new millennium? The paper concludes with a discussion of the implications of the experiences of Thailand’s electronics industry for social theories of technological and environmental change, including Ecological Modernization Theory.

Is Improvisational Theatre Really Improvised?: The Inherent Structure in Improvised Performances

The purpose of this presentation is to clarify the meaning of “improvisation” in modern society and the function of “formats” in improvised performances, and also to discuss the significance of improvisational theatre in modern society.

Improvisational theatre, often called impro, is a form of theatre that has no scripts or pre-planning. It was systematized in Britain and the United States in the 1950s and used to train actors, and also developed as a performance genre in its own right. Gradually, it spread to various countries and is now used in various other fields such as school education, business, and community development. Today, the concept of “improvisation” in itself attracts considerable attention, and there is a tendency for people to regard it as a panacea for various problems. For example, it is viewed as a way of heightening our ability to live through unpredictable changes and of changing roles of education.

In our research, we first investigated discourses about “improvisation” in books and websites to clarify the meaning of “improvisation” in modern society. This revealed that “improvisation” is explained using highly positive concepts such as...
as “freedom”, “flexibility”, and “resilience”, which are contrasted with the concept of the “structure” of society.

Secondly, we did fieldwork in The Laboratory School of Improvisation, which is an impro group that carries out impro performances and workshops in Japan, and interviewed its members. We found that when improvising on stage, the performers do not express ideas freely in their own separate ways. They embody and share “formats” which constitute the explicit/implicit manners and rules of impro.

In short, “Improvisation” has paradoxical properties. Though “Improvisation” is represented as a concept that frees us from social structures and enables us to create stories with others freely, performers in fact acquire freedom by means of “formats” when practicing impro.

**Is Rise of China a Threat or a Chance? A Comparative Analysis of Determinant of Perception on China in Korea, Japan, and Taiwan**

The rise of China has been discussed in different area of social sciences, but it is still rare for sociologists in East Asia to address this issue. International dimension of social development in East Asia is, however, necessary and indispensable part in sociological argument and the recent rise of China is one of the core parts of such international dimension.

Comparison of Korea, Japan, and Taiwan in terms of their attitudes toward China provides us with a lot of sociological insights. Comparative analysis of expatriates’ guanxi-building in China tells us that Korean expatriates are more aggressively establishing guanxi mechanisms than Japanese and Taiwanese counterparts. Our recent international collaborative research suggests that perception of “political risk of China” is different from Korean businessmen and Japanese/Taiwanese businessmen.

This paper tries to conduct exploratory analysis of Korean, Japanese, and Taiwanese perception of the rise of China in comparative perspectives. More concretely, two research questions will be approached in this paper; namely (1) How people in three societies evaluate influence of China, and (2) Who are most concerned about the influence of China on their society, by using AsiaBarometer 2006, which is the only one dataset that enables us to compare Korean, Japanese, and Taiwanese views on China in connection with other important socio-economic variables.

Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that “perceived” relation is important in discussing the issue of the rise of China.

**The Nexus Between Collaboration, The Internet and Productivity: An Empirical Study Of South African Science**

Prior research has investigated the relationships between collaboration, connectivity and the publication productivity of scientists. Most of this research has been conducted in either the developed or developing countries where internet Faculty has been either well advanced or at the other end of the continuum. Investigations in countries that fall in between these two extremes are rare. Conducted among scientists and academics in South Africa, this study is aimed at filling this gap. Interviewing academics and scientists (n=204) from the sampled institutions, the paper presents details of how the above three variables are interfaced with each other in the South African scientific system which has become a strong contributor to science. The study also, from the policy point of view, brings out the features of scientific collaboration that exists in South Africa with its variations between the two sectors—academic and research.

**Cultural Capital In Movement: On The Dissolution Of Traditional Educational Codes By Educational Policy And Social Movements Among First Generation Academics In Germany**

Barriers to educational advancement are often described in the literature. In this connection, authors mainly refer to Bourdieu’s concept in which a lack of suitable cultural capital is often a barrier to the educational advancement of children from non-academic families. Acquiring such capital, in accordance with this theory, is an essential prerequisite for success in an advanced educational career. Bourdieu paints a rather pessimistic picture of the chances of acquiring such capital. Codes of the milieu of origin survive, mediated through habitus, and continue to hinder educational advancement.

The project comparing educational advancement in three generations in Eastern and Western Germany — that is, first-generation academics in the 1950s, the 1960s and the 1970s — a total of 89 biographical narrative interviews were conducted. Many cases were found to corroborate the Bourdieusian concept. At the same time, however, it was also apparent that there are also many knowledge about the subject which contribute to the dissolution of culturally transmitted codes, and thus modify the “value” of the hereditary cultural capital in a given social stratum. To illustrate this, we will present a hermeneutic case reconstruction after Rosenthal that can be attributed to the type “social movements”. This case study will serve to illustrate the extent to which reforms in society and educational policy have led to a shift in cultural codes, and how such reforms can favor educational advancement.

**The Income Inequality In Mexico: Dynamics At The End Of XX Century**

The purpose of this study is to analyze the evolution of the income inequality in Mexico considering two elements: the dynamic of labor income and wage and the general productivity in the economy. I consider that is important to contrast the level of income inequality and the structural conditions which produce macroeconomic instability, the slumps of economics and the inflation. The income inequality in Mexico is part of the socioeconomic historic unequal. After the reduction in inequality during the 1960s and 1970’s, the exhaustion of the reserve of accumulation by substitution of imports, and the crisis of the bureaucratic-corporative regulation, were reflected in a greater concentration of income, accompanied by structural heterogeneity, technological inequality and...
difference in the degree of economic and social development in the diverse terri-
itories of the country. The market reforms of the 1980’s and early 1990’s worsened
inequality. Start to change the unequal in recent years but the poverty has not
decreased.

*Recovering the Past to Face the Future: Experiences in Latin America*

Recent evaluations of the results of educational reforms imposed after the
eighties on education all over the world, and particularly in Latin America,
reveal decreased ability to learn, and a lack of personal development. The
most significant changes that have occurred in recent decades in
the transformation qualitative and the expansion of these flux
tend to reorient the politics publics in matter of immigration and of em-
ployment. To the international level, the phenomenon migratory has laiszed progressively
place to a the mobility professionnelle temporary, notably to the a
favor of the financiarisation de l’économie and of the externalisation croissante des activités
des entreprises. Au Canada, cette transition, se traduit par la mise en place et le
developpement de programmes de travailleurs étrangers temporaires qui drainent
une main-d’œuvre présente dans plusieurs secteurs, de la transformation indus-
trielle aux services comme l’hôtellerie/restauration et les télécommunications.
Elle provient de divers pays du Sud, dans le cadre d’accords commerciaux ad hoc
déjà à l’État. Ce phénomène soulève plusieurs interrogations. Qui est-il des
impact de ces programmes sur la structure de l’emploi, le rapport salarial et la
régulation du travail? Dans quelle mesure ces programmes, conçus pour gérer
localement les flux du travail migratoire temporaire, mais qui s’inscrivent dans une
dynamique transnationale, redéfinissent-ils certaines figures de la division inter-
nationale du travail? Dans cette étude, l’examen des discours et des pratiques des
entreprises engagées dans ces programmes montre à quel point leurs stratégies de
gestion sont imprégnées par un paternalisme managérial omniprésent dans l’ensemble
des chaines de valeur des secteurs affectés par ces flux (hôtellerie, télécom, industrie notamment). Ce paternalisme se doit de celui qui a
caractérisé l’histoire de la salarialisation en ce qu’il semble relever d’une figure
nouvelle de la division internationale du travail. Cette communication dresse un
bilan critique de ces programmes en s’interrogeant sur la logique de leur gestion
“publique” réalisée en étroite collaboration avec ces entreprises et en exami-
nant leurs retombées en termes de structure de l’emploi, de rapport salarial et
droits sociaux du travail

*Digital Citizenship and Equal Access to Democracy*

Democracy, as says the German philosopher Stephan Kirste, is a fundamental
human right. Every person needs to have space to public manifestation, to get
respect even this person belongs a minority group, to participate in political de-
cisions that regulate and define its own life. Without these guarantees it will be
unviweable develop citizenship in front of majority groups and also State. Albeit this
concern there isn’t new, it became urgent when digital technologies expanded
itselfs in the world. Safety, recognition, privacy, information, all this subjects,
corch there isn’t new, it became urgent when digital technologies expanded
itselfs in the world. Safety, recognition, privacy, information, all this subjects,
cconcern there isn’t new, it became urgent when digital technologies expanded
itselfs in the world. Safety, recognition, privacy, information, all this subjects,
the implementation of the Concentrated Solar Power (CSP) in the Sahara Desert is intended to support our reflection about the potentialities and contradictions of such initiative. Once these solar plant projects are destined to provide not only Middle East and North Africa (MENA) with "clean energy", but also approximately 16% of the European energy demand by 2050, it seems urging to consider the geopolitical transformations that the "desertec" project could unleash. We are inclined to think that such enterprise would indeed change the geopolitical meaning of the Sahara Desert and thus contribute to balance the political relationship between European and MENA countries. Although it is not likely that the marginalized positions of the UMF are going to become "equidistant" to their European counterparts, it is probable that the export of solar energy can diminish the political asymmetries between North and South. It is also crucial to reflect whether the "political instability" of the MENA countries can impose barriers to the accomplishment of the idea, especially because "Desertec" was conceived before the so-called "Arab Spring".

Global Environmental Change: Environmental Policies in China with Reference to Brazil

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proved to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century and called "the greatest challenge of the century". This is because of the challenges that are addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investigate the trajectory by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two social spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research project. Regarding methodological aspects, different methods of investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

Key words: global environmental change, climate change, environmental policy, Brazil, China.

Alliances, Cooperation and Conflicts Between Ecosystem-Men and Fishermen In The Pendjari River Area, Northwest Of Benin

Northern Benin (Dassari area) is crossed from either side by numerous little rivers and catchments that dry up very quickly because of the pronounced shoreface deforestation along other things. The area is severely threatened by environmental changes. The causes are multifaceted: lack of rain (only 70 to 110 rainy days on an average), deforestation (in October), techniques used to destroy adequately the water, land degradation. Migrations of African fishermen from neighbouring countries (Niger, Burkina Faso, Nigeria, and Ghana) towards the protected Pendjari River in the Dassari area remain locally important drivers for environmental changes into new spaces configurations. This paper will open with a description of the methodologies and techniques used to get information and findings. To this end, it will compile a series of statistical data combining qualitative methods and based on original research. Then, the main empirical idea of the paper will be centred in selected main villages of the studied area located near the Pendjari River (LC). It will focus on a case study of the adaptive capacity of the local forest community towards the problem of the pendjari ecosystem (a kind of governance for sustainability) and the prevalent environmental governance regime. The River, located in a protected forest area, physically and politically imagined to be more environmentally secure, is ironically creating new demographic dynamics and trends (migration of fishermen, demands of new natural resources, etc.) that are not often reducing vulnerability and risk. How little scope forest officials have to measure what might actually help to protect the local environment, compared to the options that fishermen might have, to take preventive measures (in some way) to protect the area, if necessary. Afterwards, the paper will analyse the mobility of those African fishermen along the Pendjari River and will focus on the fact that the ironic environmental “risks” that the politically correct environmental “conservation” efforts themselves may create.

Labour Market Experts and Their Professional Practices: Technologies of Self-Control of Job Placement Professionals

In the past 20 years the trend towards New Public Management became prominent in labour market reforms all around Europe and had a deep impact on the transformation of welfare states. In Germany the Public Employment Service (PES) as the central actor was transformed from a traditional bureaucratic institution to a managerial service provider which had an enduring effect on job-orientated placement activities and the placement professionals. The introduction of controlling, management by objectives, computer-supported placement activities, service orientation, customer segmentation, and action programs are typical features of an administrative managerial organization that follows business routines to increase efficiency and formal rationalization in the era of neo-liberalism. Under the New Public Management regime the work of the placement personnel is structured differently: On the one hand the job placement professionals are labour market experts with an extended scope of action. In counselling interviews the job placement officers interact with job seekers and provide advice and monitor the individual behaviour of job seekers. On the other hand all decisions of the placement professionals are checked by a closed meshed accounting system and revised if they contradict the organizational business logic. Today, these professionals emerge as „transparent job placement officers“, and their authority and effectiveness are questioned because of conflicting relations between professional and managerial interests. The placement professionals are exposed to a systematic self-control which assesses the counselling and the placement of job seekers not only by technical and professional criteria, but always by the success of specific strategies along the internal organizational accounting system. The contradictory effects of extensive accounting practices on job-placement officers and the organisation we will show in our paper.

The Articulation of Japanese Culture in the Global Era: The Case of Japanese Small-Type Coastal Whaling

After the whaling moratorium had come into force in 1986, the Japanese government as well as anthropologists and social scientists tried to establish “small-type coastal whaling” (STCW) as a new category within the International Whaling Commission (IWC). Japanese coastal whaling has a long tradition dating back to the 16th century. Even today whaling is socially, culturally and economically important in the whaling towns as Taiji. However, the articulation of whaling as Japanese culture was not successful. A comparison of the Japanese and the Greenlandic articulation strategies show: Despite of many similarities of the coastal whaling, the Greenlandic whaling is still recognized as an indigenous cultural activity. Thus, it is considered a legitimate cultural activity within a subsistence economy of the Greenlandic Inuit. However, all attempts to get Japanese whaling recognized as a cultural activity failed. In this way Japanese coastal whaling is continued as “scientific whaling,” while internationally criticized as being an illegitimate practice with suspected background of commercial interests. The consideration of the regulation of the international whaling as a form of global environmental regimes shows that the decisions within the International Whaling Commission will be determined by global models and categories of the world polity. Japan as an industrial country left the stage of indigenous behind which is reserved for indigenous peoples as the Greenlandic Inuit and is perceived by the world community as being too modern, too enlightened and too developed.

Policing and Crime Control in Contemporary Nigeria: An Agenda for Reform

Crime and insecurity are major challenges of contemporary Nigerian society, with the barrage of various forms of criminal behaviours, including: terrorism, political violence, ethnic-religious and communal violence, unbridled corruption, politically-motivated assassinations, murder, violent crimes, kidnapping for money, and robbery. Efforts by security agents to solve the problems have not yielded the desired results. The inability of the Nigeria Police to effectively tackle the
drawing from recent challenges, issues and experiences with the war against crime and insecurity (including terrorism), this paper discusses the policing and security systems in Nigeria, as well as the relationships between the various security units. Suggestions are made for more effective policing in Nigeria, including greater collaboration/partnership between the formal policing system and the informal policing structures. The paper also advocates greater collaboration between the police and the public for a more successful campaign against crime in Nigeria.

**Transnational Trajectories? Studying Nation and Citizenship in East Asia**

Despite sociology's increasing engagement with global processes, the relationship between global/transnational studies and cross-national, comparative studies remains a question, both conceptually and methodologically. This paper inquires into this relationship through an empirical focus on the transnationalization of nation and citizenship in East Asia. Unlike the common practice, by transnationalization, I do not simply refer to the advance of explicit transborder regimes (e.g., the World Trade Organization and the European Convention on Human Rights), or social formations “spawning borders” (e.g., migrant networks). Rather, I offer transnationalization as an analytical node to capture the diffusion of transnational-specific, universalistic frameworks, models, and standards, and the engagement of nationally located actors’ states, social movements, professional organizations, and individuals) with such frameworks to orient their actions and strategies. This view locates the nation-state and a variety of national actors within their broader transnational environment—in an analytical sense these two levels are inseparable.

Densely organized at the national level and beyond, education policy is highly susceptible to transnational isomorphism. The analysis of the post–World War II school curricular reforms and content (particular focus on Japan and China, in comparison with European developments) shows that national educational systems in East Asia increasingly assume a globalized society, and the role of active and able citizens and nations in making this society. In so doing, they systematically insist upon the “distinct” contributions of the nation and its citizens to the good of the wider world. Yet, as the nation (and its uniqueness) is expressed fiercely, the policy reforms that affirm transnationally shared, common models of social order. Nations as “imagined communities” and individuals as citizen acquire commonalities across societies. The assertiveness of the nation (divergence), as well as its progressively common imaginary (convergence), is linked to its transnationalization.

**Environmental Agency and Power in the Global Network Society**

Over the past two decades, practice theories as developed by Anthony Giddens, Theodore Schatzki and Elizabeth Shove amongst others, moved center stage in the sociology of sustainable consumption and everyday life. Practice theories offer an attractive third way in between individualist (value driven) and determinist (technology driven) models of environmental social change. In this paper, we explore in more detail the two modalities for analyzing the reproduction of social practices as put forward by Giddens (1984) and Shove (2012) in particular. First, when discussing practices as performances or as strategic action, we explore how specific lifestyle groups with particular ‘green’ portfolios or competences participate in the practice in order to make the practice and their lifestyles more sustainable. We show that the environmental dimension of (consumption) practices can be crucial for attracting new practitioners to the practice since they expect gaining emotional energy (Randall Collins, 2004) from participating in the practice. Secondly, when discussing practices as entities and as part of an institutionalized set or nexus of practices, we focus on the process of strengthening or weakening the connections between different practices. We argue that the concepts of power as put forward by Manuel Castells (2009) can be used to illustrate the interrelationships between practices and thereby some of the key dynamics of environmental changes in the global network society.
which physicians

intersection with the "narrative" approach in medicine: to make a proper

understand the profession through biographical tales reveals more than a point of

created by the fantasy of great writer - doctors (Bulgakov, Čechov, Celine, Conan

boxed" of medical identity . He does so using 40 qualitative, in depth interviews with

makers' Narratives" . As illness narration is a means to gain direct access to the sub-

medical model' as the prominent paradigm in managing maternity care, fuelling

-ternity department . Litigation and subsequent increasing regulation has fuelled

reducing litigation, inevitably associate childbirth with risk, and the control of pro-

essional behaviour in managing such risk. The growth of this 'risk culture' within

ateness services poses significant threat to professional status claims.

This paper presents findings of a Doctoral ethnographic study observing the

real time impact of the 'risk culture' within an English National Health Service ma-

tenity department. Litigation and subsequent increasing regulation has fuelled the

social construction of a 'risk discourse' surrounding maternity care. Aligned with the

assertion that modern society has become increasingly risk averse (Beck,

1992), professional anxiety regarding risk has provoked socialisation amongst

doctors and midwives that control over the childbirth process promotes risk

minimisation. The stereotypical medical interpretation of risk, based upon fear of

uncertainty and pathophysiology, has consequently permeated all aspects of

pregnancy and childbirth. This in turn has led to the subscription of the 'bio-

medical model' as the prominent paradigm in managing maternity care, fuelling

control, intervention and the 'medicalisation' of childbirth. Such 'medicalisation'

cemented doctor-led, intervention-laden management firmly within modern

childbirth, with midwifery-led, naturalistic childbirth becoming an ever-decreasing

occurrence. A professional identity crisis has ensued amongst midwives in that the

role of the midwife in the 21st century is in a state of flux, raising concerns for the

professional status of midwives within future childbirth provision.

The 'risk culture' in the UK has provoked significant inequalities between the

professional status of doctors and midwives within modern maternity care. The

role of midwives as autonomous practitioners in normal childbirth is eroding, therefore it is the 'risk culture' in the UK placing the midwifery profession at risk of

deprofessionalisation?

1992), professional anxiety regarding risk has provoked socialisation amongst

Wagner, Brooke

Portraits of Juvenile Prostitutes: Reconsidering the Mainstream

Trafficking Victim Narrative

The dominant narrative of prostitution in public media and even much schol-
arship equates sex work with trafficking – giving rise to the ubiquitous expres-

sion "sex trafficking" – and portrays sex workers as women and girls who are kid-
napped, sold, and violently coerced into a life of slavery from which they need to

be rescued. This narrative has been much sensationalized and set as the basis for

rigorous criminal legislation against alleged traffickers (i.e., pimps) and clients,

as well as reflecting the hegemonic media attention and policy influence of "new

abolitionist" feminist scholars and activists who oppose pornography and pros-
titution as exploitative degradations of women. A bitter divide exists between

these abolitionists and "sex worker advocate" feminists, who maintain that sexual

commerce is not simply a story of victimization, that sex work can and often is,

consensual and empowering, and that sweeping anti-trafficking policies are mis-

infomed by exaggerated, sensationalized statistics. The ensuing "Sex Wars" have

suffered from a lack of empirical evidence about the nature of sex work among

those who engage in it, and the paucity of data is especially prevalent among

juveniles, presumably the most vulnerable (and likely victimized) population.

This study examines the experiences of 19 juvenile street prostitutes – twelve girls

and seven boys – working in Las Vegas, Nevada, using in-depth interviews conducted

between February and March 2012. We investigate the circumstances of these

adolescents' sex work, including age, gender, race, and pathways to prostitution, in-

volvement with pimps, and abuse. In addition to using entry narratives to explore

the pathways to sex work, we go beyond simply describing why juveniles become

prostitutes and examine the ways that their lives contrast with other traditional

narratives about gender and sexuality, race, social arrangements, and economic

consumption, all of which speak to harm reduction needs for all street prostitutes.

The Challenges for Alternatives in the Brazilian Energy Matrix: The Sustainability of Family Farming in Biodiesel Production

The paper presents results from an experience of castor beans production to obtain biofuels from small farmers in south Brazil. This research provides some reflection about the family farm crisis, which has been accentuated in recent decades, because the rural aging population, as well as the lack of successors. The social responsibility to settlement people on lands is the government’s role, in this way; the agrarian policies would propose strategies to modify the productive logic inherited from monoculture production, in the southern of Rio Grande do Sul. It is essential to rethink the viability of family farming beyond funding programs of the federal government. As a result, experiences articulated with different areas of knowledge could bring innovations in the ways of generating household income to the sustainability of rural activity.

Ethnic Differences in Premature Mortality over Three Decades - the Intersection Between Indigeneity, Social Class and Preventability

This study uses national-level mortality data to investigate the changing social class and ethnic patterns in premature mortality in New Zealand men from 1975 to 2006. During this period there was a political struggle for recognition of indigeneous rights, a social policy focus on inequality, and major macro-economic reform. We used information from national death registrations and national census data from the five yearly national population censuses from 1976 to 2006 to examine changing patterns in social class differences in all cause, preventable, and non-preventable mortality for Maori and non-Maori men under the age of 65. Our results show that social class differences in male mortality have increased since 1975. Maori male mortality was significantly higher than non-Maori mortality in each social class for preventable, non-preventable and all causes of mortality. The social class mortality differences within Maori were markedly greater than those within non-Maori.

Despite focused efforts to improve Maori health, the inequality between Maori and non-Maori in premature mortality appears to be increasing, even when social class differences are taken into account. The persistently higher Maori rate of potentially preventable deaths indicates that the health sector is still not meeting the serious health needs of many Maori. It also appears that there is increasing social stratification developing within the Maori population such that the social class differences in mortality within Maori are now larger than the inter-ethnic differences between Maori and non-Maori. We present several reasons why decades of indigenous development have not overcome ethnic differences in a fundamental marker of population health such as premature mortality but have resulted in increased inequality within the indigenous population.

The Internet Is Not The Answer To The Problem Of Leisure Identities, But The Internet Is Interesting For Leisure Studies: Against Postructuralist Theory and For Empirical Leisure Research

As people’s leisure lives have become mediated through the global networks of the internet, leisure scholars such as Tony Blackshaw (2010) see a digital world of liquid leisure. Drawing on the work of Castells, Beck and Bauman, Blackshaw and others such as Rojek (2010) who have advocated the post-structural turn in leisure studies welcome the dissolution of boundaries, the reduction of inequalities of power, and the individualization of leisure choices and leisure identities that the internet supposedly brings. In this paper, I provide a strong critique of the post-structural turn in leisure studies by showing that the theoretical foundations of such claims are weak, and the evidence base for such claims demonstrates only that some people in some countries have some freedoms to play at leisure identities. I will show that the internet in the work of post-structuralist leisure scholars has become a chimera that has little resemblance to the internet that actually exists. I will end by using some of my own research to demonstrate the limits of leisure on the internet and the structures that still shape human interactions, human leisure and human culture.

Party on the Ground and Candidate Selection in France (1969-2013): The Story of a Difficult Inclusion

Political parties are still today the main actors in the political recruitment in France. Most of the French parties use a mixed system, which involves the local members and the national organization. In general, the final decision is taken at the national level by a national selection committee, an organization that is not known for its transparency. The selection procedures have thus always been considered as the «black box» of the political parties. But, today, the political parties are confronted with the challenge of democratization for these procedures. The expansion of democracy goes mainly through direct participation from the party members. So, an increase of the party members’ power within the party is a typical response for democratization. But, if the party members are more and more included in the decision-making of the selection, the problem is that the decision of the party leaders does not always match with their choice. This paper looks at how political parties have responded to the demands of more democracy, using France as a case study, with an empirical study of the evolution of intra-party democracy in the candidate selection. The aim is to identify the impact of the introduction of more intra-party democracy and the difficulties for the different party strata to deal with it. Therefore, we have systematically reviewed contemporary and historic party statutes and internal rules document from the left-wing party and the PRG (right-wing party) since their creation from 1969 to 2013. The analysis from political parties through their internal formal rules allows to understand how the party on the ground is, at least formally, included in the selection procedure. This will be illustrated by semi-structured interviews. Current party leaders, members of parliament, party secretaries were among those interviewed.

Motherhood Fatal Illness Narratives: Death Awareness and Biographical Reinforcement to Restore Continuity

Within a broader context of medicalisation, dying and death in Thailand remains a distressing and taboo topic, let alone being studied sociologically outside the medical realm. However, there seems to have an increasing demand to comprehensively understand various dimensions of dying and death as the institution of medicine is moving towards excellence. Illness narratives, reflecting patients’ experiences, could plausibly open new approaches in medical education, practices, and management.

This study illicits illness narratives from mothers of dependent (very young age) children who have recently been diagnosed with cancer. The social identity of motherhood, widely perceived to be self-sacrifice and a sole responsibility of the women themselves, makes the situation of sick mothers extra ordinary. Illness narratives of these dying mothers should be capable of revealing processes and mechanisms in which motherhood as a personal and social identity interacts with the fatal illness in a personalised context and hence produces (1) experiences and conceptualisation of illness in terms of causes, treatment, prognosis, and especially awareness of their death based on gender and moral discourses of being a mother in Thai society and (2) accounts of embodiment and suffering and its implications on daily management of this disruptive event. An initial round of talks regarding life history with 5 participants (aiming at least 10) tends to suggest that motherhood is an ultimate source of inspiration which helps reconstructing meanings of fatal illness through an unconventional pattern of death awareness rather than vice versa. Death awareness of these mothers is unfolding through a complex relationship between information and knowledge of care as a fatal but common illness disclosed formally through their interactions with physicians and informally through lay perspectives and the emotions of being ill and feeling ill. This kind of awareness stimulates their determination to survive and thereafter an adherence to treatment.

Disentangling Disease Stigma: Conceptual Counters and Methodological Challenges

This paper briefly examines the core social science literature surrounding stigma in general and disease stigma in particular to explore the social matrix that stigmatises and excludes the People Living with HIV/AIDS. The multiplicity of social science approaches for understanding the correlation between social stigma and exclusion, either resort to the trap of functionalism or in the individualization of
the problem or argue for a unidirectional cause and effect relation. The conceptual
inflation in the field of stigma research also confused the strategies to counter
the stigma within the vicious circle of exclusion limiting the scope for out of the box
social engineering. This paper argues for a multidimensional understanding of the
stigmatisation process that addresses the functionality without functionalism and
without resorting to excessive individualization. It is vital to distinguish between
what we can call HIV/AIDS stigma, and what we should call HIV/AIDS related social
exclusion. How the linkages operate; uni/multi- dimensional? It is also important
not to unravel the social process operating at different levels of reality and how
the old inequalities play a significant role in producing and reproducing the new
forms of social exclusion where the Right to Live is under threat. The paper calls
for an integrated paradigm for understanding the social process of stigma and
exclusion and try to explain the dynamics of stigma within and outside the matrix
of micro-macro versus subjective-objective axes of social reality. The empirical
exploration with this framework requires a re-examination of the existing meth-
odological practices in stigma research.

Inequality and Inclusion in Primary Health Care System in India:
An Interstate Analysis
The trajectory of primary health care system in India is at crossroad with the
gradual withdrawal of state from health sector. However, there are efforts to re-
 vamp the organisation and delivery of health care in rural areas with the intro-
duction of National Rural Health Mission (NRHM) in 2005. Within this context the
present study tries to analyse the internal differences in health care outcome in
India and its relation to the social determinants of health. Secondary data analy-
sis showed that there are wide inequalities existing between different states in
terms of various indicators of health development. The state of Kerala stands
out in terms of its achievements on major indicators and often hailed as a ker-
la model of health development, whereas the state of Assam performs lowest in
most of these indicators. However the state of Assam is the only state in India,
which included health as one of the basic right to its citizen. A secondary analysis
combined with an ethnographic field work in these two states revealed that the
inequalities between these states and within the states are complex and a unitary
model of inequality determinants fails to answer the complexity. Thus the social
health determinants models needs to be re-looked from the vantage points of
most of these indicators . However the state of Assam is the only state in India,
assumptions of the statistical framework .

Ideology of Courtroom
After 90s, when Francis Fukuyama announced the end of history and the
neo-liberal democracy was the only solution for eastern-european countries lib-
erated from the domination of the Soviet Union, it appeard that the problem
of ideology was gone forever. It soon turned out, thanks to the growing consumer-
ism, postmodern terrorism and unpredictable economy, that we can't interpret
the modern world without reference to some concept of ideology. At the same
time the theory of the law is still running away from this concept. Perhaps legal
division is afraid that any critical theory ultimately reduces law to the economic
base (inspired by Marx) or the flow of libido (inspired by Freud). But according to
Slavoj Zizek ideology is the specter that lurks everywhere. Even in the toilet. Even
in the courtroom.

This paper is a attempt to show the structural elements of this courtroom-spec-
ter. Using lacanian-zikzenian tools I will try to examine the Imaginary, Symbolic
and Real levels of courtroom, that escapes everyday consciousness and at the
same time are the conditions of possibility of that consciousness. This approach
raises some important questions. If trial is a theater, who is the spectator – the
Great Other ? What is its object of desire – the object small a ? Finally, psycho-
analysis in the courtroom is only a therapy or it immediately becomes a politic ?

STAMER, NAJÀ* (University of Copenhagen, nbs@ifro.ku.dk)
Social Dining As a New Urban Food Community
A new form of communal meal where total strangers eat together, often in
intimate or homely settings, has become increasingly popular in urban environ-
ments. This phenomenon has been dubbed ‘social dining’ and encompasses meal-events where the social aspect of dining is paramount. In a time where the
communal meal par excellence – the family meal – is under threat social dining
might be a new way of creating commensality. This paper seeks to develop an
understanding of social dining and examine its cultural and economic implica-
tions and discusses reasons for its apparent popularity. Examples of social dining
include weekly communal meals at regular restaurants; arrangements where un-
familiar people cook and eat together; or the now global ‘Restaurant Day’ where
people set up 1-day restaurants in their own home. To understand the phenom-
enon of social dining we outline different cultural and economic characteristics of
the meal-events, such as whether it is arranged by professional or amateurs, and
whether money is transacted, whether it is a shared everyday meal or a special
event. We argue that its popularity relies on four different factors: 1) The dining
events are arranged through new social media or the internet that easily facil-
organizing institution also means there is room for active individuals to guide it. 2) Social dining can help overcome financial problems in a time of economic crisis, through sharing the costs of meals or events as an income source for the host. 3) Social dining caters to a search for 'authenticity' in cultural consumption as the social experience can never be copied or repeated. 4) Social dining fits in a society where food has become both individualised and formalized, where 'neo-tribal' groups based on momentary, aesthetic experiences increasingly substitute more static social groups, e.g. based on family, class and geography.

STANDING, GUY* (University of London, GuyStanding@standingnet.com)

The Precariat: From New Dangerous Class to Class-for-Itself

Neoliberalism, stemming from the musings of the Mont Pelerin Society after the Second World War, meant a model of liberalization, commodification, individualism, the privatization of social policy as well as production, and – least appreciated – the systematic dismantling of institutions and mechanisms of social solidarity. From the late 1970s onwards, it meant the painful construction of a global market system, in which the globalization era was the disembodied phase of the Global Transformation, analogous to a similar phase in Karl Polanyi's Great Transformation. In both cases, the disembodied phase was dominated by financial capital, generating chronic insecurities and inequalities. But whereas Polanyi was analysing the construction of national markets, the Global Transformation is about the painful construction of a global market system.

One consequence has been the emergence of a global class structure superimposed on national structures. In order to move towards a re-embedded phase, it is essential to understand the character of the class fragmentation, and to conceptualize the emerging mass class-in-the-making, the precariat. This is a controversial concept, largely because traditional Marxists dispute its class character. However, it is analytically valuable to differentiate it, since it has distinctive relations of production, relations of distribution and relations to the state. It is still a class-in-the-making rather than a class-for-itself. But it is the new dangerous class because it is a force for transformation, rejecting both labourist social democracy and neoliberalism. It has a distinctive consciousness, although it is this that holds it back from being sufficiently a class-for-itself. It is still divided, being at war with itself. However, it has moved out of its primitive rebel phase, and in the city squares around the world it is setting a new progressive agenda based on its insecurities and aspirations.

Inequalities in Social Capital and Socio-Economic Status in the Post-Industrial Cities of Central and Eastern Europe

Paweł Starosta
Kamil Brzeziński
Institute of Sociology
University of Lodz, Poland
starosta@uni.lodz.pl
kbrzezinski@gmail.com

In accordance with the sociological literature, two components of social capital will be considered: trust and social networks. Socio-economic status will be analyzed by level of education, monthly income, and job situation.

The main thesis of the paper is the assumption that in the post-industrial cities of Central and Eastern Europe access to social capital is not highly associated with the socio-economic status of inhabitants.

The empirical basis for the paper is a database from surveys carried out in selected post-industrial cities of Poland, Russia, Hungary and Lithuania. In each of the above countries one city was selected in order to conduct a survey of representative samples of inhabitants between the ages of eighteen and seventy.

The empirical investigation was carried out in the year 2012 with the financial support of National Centre of Science in Poland.

A Precariat Charter: From Denizens to Citizens

This paper discusses my new book, A Precariat Charter: From Denizens to Citizens (2014), which builds on key arguments from my 2011 book which introduced the Precariat as an emerging mass class, characterized by inequality and insecurity. A Precariat Charter discusses how rights - political, civil, social and economic - have been denied to the Precariat, and the importance of redefining our social contract around notions of associational freedom, agency and the commons. The ecological imperative is also discussed - something that was only hinted at in my 2011 book but has been widely discussed in relation to the Precariat by theorists and activists alike. By taking debates about the Precariat a step further, I further examine the kind of progressive politics that might form the vision of a Good Society in which such inequality, and the instability it produces is reduced.

STARK, LAURA* (University of Jyväskylä, laura.stark@jyu.fi)

Public Access to the Unorthodox Sacred Via Portuguese Urban Spaces

Drawing on numerous interviews carried out in 2010, this paper focuses on the popular cult surrounding a medical doctor famous for helping the poor, Dr. Sousa Martins, who died over a century ago in Lisbon. Because of contested rumours of Sousa Martins' having been Freemason and having committed suicide, he is unlikely to ever be canonized within the Catholic Church, and the cult of devotion surrounding him exists completely outside of the church's authority. The popular devotion toward Sousa Martins involves thousands of Portuguese of all ages whose numbers appear to be growing. Devotees believe that Dr. Sousa Martins can cure their illnesses, find jobs and homes for them, and even conduct 'spirits' communicating with Dr. Sousa Martins to ask for his help (especially medical cure), bring him offerings, and leave gifts of thanks for miracles performed. The fact that this devotion has no organizing institution also means there is room for active individuals to guide it in particular directions. Such individuals include a charismatic female medium, a seer-turned-writer who has written numerous popular books on Dr. Sousa Martins, and the owner of a kiosk selling cult objects, who has invented rituals for communicating with the doctor which she tells to her customers. This paper will explore the importance of the public spaces through which devotees 'communicate' with Dr. Sousa Martins, how this communication takes place, and how these public spaces connect to charismatic Christianity and other, more private spaces such as sessions with spiritual mediums who claim to be able to communicate with Dr. Sousa Martins.

New Cognitive Perspective in Survey Research Methodology. Comparative Results from Georgia, Russia and Poland

Applicants of the cognitive psychology theories analyze the bias in survey research limiting the meaning of the term “cognitive” to cognitive functioning of peoples’ minds. Cognition should be understood in a broader sense because it is determined not only by intellectual capabilities of people but also by their social background as well as by their values and attitudes. Although it is obvious that achieved education is an inferential indicator of intellectual capabilities of a person, thus his or her cognitive abilities, it is not that obvious that intellectual capabilities are determined by social background and social experience of the people and that their perception of survey situation depends not only on the abilities buy also on the attitudes. If respondent has never experienced democratic form of government and, in addition, does not have a theoretical knowledge about what democracy is, he/she cannot really express his/her attitudes to democracy. And, of course, his/her intellectual capabilities have something to do with the ability to express attitudes toward democracy but their effect on quality of response cannot be limited to strictly cognitive processes that are involved in answering the survey questions because this depends on the attitudes as well. Our approach assumes that social background, political knowledge and experience as well as political attitudes of people affect how they understand public opinion polling and, finally, affect the quality of answers. The comparative data were gathered in Poland (2010), Georgia (2013) and Russia (2012). The aim of analysis was to find to what extend political attitudes and experience determine the perception of public opinion polls and quality of answers. Significant differences have been found between attitudes and survey behaviors of Georgians, Poles and Russians.

And, of course, his/her intellectual capabilities have something to do with the ability to express attitudes toward democracy but their effect on quality of response cannot be limited to strictly cognitive processes that are involved in answering the survey questions because this depends on the attitudes as well. Our approach assumes that social background, political knowledge and experience as well as political attitudes of people affect how they understand public opinion polling and, finally, affect the quality of answers. The comparative data were gathered in Poland (2010), Georgia (2013) and Russia (2012). The aim of analysis was to find to what extend political attitudes and experience determine the perception of public opinion polls and quality of answers. Significant differences have been found between attitudes and survey behaviors of Georgians, Poles and Russians.
The subject matter of the paper is a comparison of political trust (that consist the fundament of political stability) and democratic attitudes in three very different post-communist countries: Poland, Georgia and Russia. Poland is exceptionally different from the two others because of a very strong democratic tradition while neither Russia nor Georgia have such a tradition and experience but they differ in terms of their political culture and present political aspirations. Differences of political trust are analyzed in their relations to attitudes towards democracy. We are particularly interested in analyzing social differentiation of trust in political system and in particular political institutions in the three countries. We would like to answer the question what are the segments of their societies that might be considered fundaments of social stability and development towards legitimized democratic system. We would like to find out what are the determinants of democratic attitudes, especially their relation to political trust in the system as a whole and theirs’ institutions in countries with different traditions and different pace as well as direction of transformation.

The main question is, what are the differences between those three countries in terms of the level of political trust and democratic attitudes, what are the differences in relations between the two, and what are the differences in social composition of those who trust the political system and support the democracy and those who do not. That is especially important because of the differences in existing systems. The attempt to answer these questions is made by analyzing the results of survey research conducted on nationwide random representative samples in Poland in September 2010, in Russia in March 2012, in Georgia in August 2013.

Across the developed world, population ageing has coincided with rising living standards and expectations in retirement. Since the 1980s this has led to growing concern about the sustainability of public pension systems. Australia has been held up as an example of prudent financial management, as it looked to fund retirement income through compulsory private savings. This supplemented Australia’s flat-rate and means-tested public pension system, also supported by widespread home ownership. The shift to private pensions has made individual workers more reliant on lifetime savings and on benefits accrued through the tax system rather than direct benefits. We examine the intergenerational implications of this trend towards greater financialisation of retirement incomes by analysing cross sectional data from the Australian Bureau of Statistics. Given the significance of the Australian model to international debates, we discuss the potential long run international implications for inequality in retirement of this experience.

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across the centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation for scores of leisure activities, which are preferred by one sex or the other, are coordinated with the Islamic calendar, appeal to particular standards and expectations in life. Leisure activities accounts for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized “developmental sequence” linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across the centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation for scores of leisure activities, which are preferred by one sex or the other, are coordinated with the Islamic calendar, appeal to particular standards and expectations in life. Leisure activities accounts for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized “developmental sequence” linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

It’s Hard out There for a Girl: Online Surveillance of the Female Body on Social Media

In 2013, we interviewed 50 Canadian girls and young women between the ages of 15 and 22 about their experiences as girls on social media. They described a complicated, often playful but often difficult relationship, with online surveillance that magnified the need for them to comply with mainstream expectations of beauty and the bodily performance of girhood. Although they relied on social media to keep in touch with friends and family, many of them experienced a high level of discipline from these groups when they stepped outside the narrow bounds of stereotypical performances of femininity, reducing their opportunities to experience a lived equality in online spaces. Most of them also internalized and then acted out a narrow, stereotypical performance of the female body online in order to protect themselves from criticism. Girls who were unsuccessful in doing so suffered from harassment and self-criticism; girls who were successful articulated ongoing concerns about the precariousness of this success. Rather than enjoying their social relationships with peers through increased online interaction, many of them relied on a series of mutual agreements to mobilize online when the reputation of a member of the group was attacked. Perhaps most disturbingly, the online surveillant gaze encouraged many of them to rely on external validation of their physical appearance to manifest a performance of “confidence,” both deepening the effect on mainstream stereotypes and discouraging them from developing an internal sense of validation and worth. Our findings underline the need for policy and educational initiatives to support girls online and open up spaces for them to confront online stereotypes, push back against the gendered constraints they encounter online and participate equally in online society.

Shaping the Romanian Identity. the Nationalist Discourse of the Orthodox Romanian Church

In a Europe increasingly secularized, Romanians trust the church is high and growing. According to the World Values Survey 1999-2000, 47.9% of the Romanian has high trust in this institution while only 2.7% is the opposite. Also, except Malta, the highest percentage of Europeans who believe that religion is very important in the stability of democracy and their interplay with fear of crime is recorded in Romania (51.3%). We can say that we are witnessing, in the XXI century’s Romania, a true re-enactment of God (Le revenant de Dieu, G. Kepel, and Samuel Huntington).
We will try to prove that in Romania, as well as in other Eastern European countries, religious nationalism was a constant, regardless of whether it was generated by political repression during the communist and nationalist discourse of the Orthodox Church.

The purpose of this paper is to identify—in a longitudinal and transversal discourse analysis—the proximity between Orthodox Church and national ideas. We will try to prove that in Romania, as well as in other Eastern European countries, religious nationalism was a constant, regardless of whether it was generated by political repression during the communist and nationalist discourse of the Orthodox Church.

Analyzing the academic literature (Bryan Wilson, 1998, Steve Bruce, 2002, Rob Warner, 2010, Pippa Norris and Ronald Inglehart 2011, etc.) one can note the following explanatory factors of this phenomenon: the degree of modernization and economic development, human security and the feeling of vulnerability to risks, political repression during the communist and nationalist discourse of the Orthodox Church.

The purpose of this paper is to identify—in a longitudinal and transversal discourse analysis—the proximity between Orthodox Church and national ideas. We will try to prove that in Romania, as well as in other Eastern European countries, religious nationalism was a constant, regardless of whether it was generated by political repression during the communist and nationalist discourse of the Orthodox Church.

Viral proxemic social spacings of the Occupation (from Occupy Wall Street to Occupy Gezi Park and Occupy Brazil) and of Gangam Style lend evidence to the next first cut proposition. It is that sensory experiences of practiced iconic irony (of violent, misfit living) in viral contexts and their rise in popularity are able to capture attention to be listened to and joined in at distance for outperforming obstructive actors, actions and actants in human spatial behavior. Configurational comparative analysis of viral proxemic processes from transitions to or initiation of interactions at near and away, and in swaying with initiating interactions real-time emergence of related joint actions of affiliated iconic ironists, not only in vicinity but far afield, and both in geo and vireal (digital) spaces begs explaining. It is possible by collected data to infer whether they are consequential following of reactive politics of hope or stem of proactive trust of belonging to humanity resilient to despair through crowding-sourcing ligatures as being change-maker of global society legitimately enacting locally its constitution and performances.

teenage girls narrate their consumer practices. I argue that transgender videos play a double role as personal and collective identity work, affording individuals the possibility of enacting a transgender self, and also participating in the act of community-building via new media, in the context of post-feminism, the medicalization of gender, blurred public/private boundaries, and late capitalism. Turner (1996) suggested that economic transformations characteristic of postindustrial capitalism have changed the meanings of the body for individual social actors. Once the site of ascetic control and discipline, the body is now the locus of pleasure, leisure, and consumption. Not a fixed biological given, “the body can indeed be restructured and refashioned to bring about profound changes of identity, including changes of gender” (21). While these transgender video autobiographies do in fact exemplify the malleability of the body, I suggest that they also display the enduring importance of ascetic control and discipline.

STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

Auguste Comte, Altruism and the Critique to Political Economy

Altruism is now a current concept among economists and sociologists. When Comte coined that word in he wished to oppose a new spring of action to the selfish one that was, according to him and many other social observers, flourishing in the industrial society. While focusing his attention on the opposition between egoism and altruism, an opposition deemed to be the “great human issue”, Comte was not merely pursuing the elaboration of his own system of thought with the so-called “positive” or “the approach” and the development of the religion of humanity at the heart of his Catechisme positiviste (1852) and his Système de politique positive (1851-54). He was also pushing further the critique to political economy that he had exposed in the 4th lecture of his Cours de philosophie positive (1830-42).

Comte's theory of altruism is a central point of his religious credo but it is also a critique to the political consequences of the spreading of political economy altruism that gave birth to a large debate. The topic is thus perfectly fitted to a history of the relations between sociology and economics.

The first considers how selfish behavior or egoism came to be considered as a major threat endangering the functioning of the industrial society, by Comte and those who were worried by the diffusion of egoism. Then, the second part summarizes the methodological critiques set forth in the Cours before connecting this critique to the economic content of the Système and the concept of altruism. The last part contrasts Spencer's view of altruism to the one held by Comte and, how French political economists reacted, defending the moral value of their science.

STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

The Great Performance: Economic Design Versus Social Design

There are now a significant number of studies done on the performativity of economics — to use Michel Callon's words — according to which economics as a science is actually not describing the state of economic affairs, but performing its own principles about the functioning of the economy.

The topic of this communication is to suggest a larger view of the performative thesis in combining Callon's and Polanyi's approaches. In his Great Transformation (1944), Polanyi examined how much political economy contributed to the creation of the market system; however, he added that there existed as well counterforces protecting the society from such market system. Accordingly, the communication claims that there is a “Great Performance” at work. With the development of design economics, matching markets, economists are able to create market institutions that perform economics; but, on the other, alternative principles of exchange are as well designed in order to perform gift-giving behaviors. This side of the performance of social sciences through the creation of institutions of exchange should be taken into account.

The communication will first explain how Callon's and Polanyi's views can be combined to understand the role of played by social sciences, whether economics or sociology, in the functioning of this “Great performance”. Then, the communication will explain how the two different forces are actually at work, first in the domain of financial transactions, second in the domain of social interactions of human body parts. This part of the communication will be based on the current studies done on financial markets (notably by Donald McKenzie) and on my own work on organ transplantation.

STEINHOF, PATRICIA* (University of Hawaii, steinhof@hawaii.edu)

Whatever Happened to Japan's Radical Left?

In the early postwar period Japan developed two major parliamentary left political parties, the Japan Communist Party (JCP) and the Japan Socialist Party (JSP). Each was supported by labor union federations and other affiliated organizations, which mobilized for social movement activities on many issues. By the late 1950s, an extra-parliamentary New Left emerged among university students. The first group broke from the JCP-dominated national student federation to form an independent Communist League, and a second independent student group developed out of Trotsky study groups on various campuses. For over a decade, the student-based New Left played a major role in social protests alongside Old Left parties, labor unions, and other civil society organizations.

During the late 1960s and early 1970s, Japan experienced a New Left protest cycle that paralleled those in Europe and the United States. It concerned very similar issues and had a similar trajectory of escalation of violence followed by strong state repression, which ended the protest cycle and drove the most radical elements underground or into exile. However, unlike the radical left in many European countries and the United States, the radical left in Japan has been largely invisible since the 1970s and is only now becoming somewhat more visible.

Based on long-term fieldwork, this paper will trace the Japanese radical left's evolution into an “invisible civil society” that continues to engage in social movement activity, but has had little impact on mainstream Japanese political agendas and action repertoires. The analysis will examine internal conditions within the movement and its interaction with the larger Japanese social and political context, including public fear engendered by the escalation of violence, the rigid employment structure that permanently marginalized radical activists, continuing state counter-measures against the radical left, and the gradual dismantling of the support base for left political parties.

Relational Art and Managing Emotions

One of many intentions in art is to examine and portray emotional processes and experiences of the artist and other peoples’ emotions in different situations. The “traditional” artist carried a need to explore personal relationships or to portray emotions in social interaction at a distance. The relational aesthetics that has been of great significance since mid 1990 is oriented towards peoples’ social and emotional experiences in different contexts (Bourriaud). The relational artists’ ambition is to intervene in social situations and to find ways to visualize, communicate and reflect on the social exchanges that occur in these situations. The artist wants to problematize the existing emotional rules that occurs (Hochschild) and explore and process emotions such as hidden shame in Thomas Sheffs sence and the contribute to the relational social emotional.

The purpose of this paper is to examine how the relational artist uses his/her artistic skills to intervene in and influence social communities and to understand what happens to the emotions expressed in these coherences. The aim is also to investigate what happens to the artist’s creativity and artist-ry in an outward relational artistic work. How can the artist establish a constructive relation between his/her artistic identity and the social and emotional involvement in others doing emotional work? The paper also aims to explore how theories of emotion can contribute to an understanding of creativity as a dialectical relationship between individual and collective motivations for art based on symbolic interactionism and micro sociology. The empirical material for the study is interviews with artists involved in artistic projects in workplaces in Sweden but also the study of non-institutionalized forms of relational aesthetics.

Dignity and Capabilities: An Approach to Human Development CANCELLED

To promote the full exercise of Human Rights it is necessary to have a comprehensive view of dignity with an emphasis on the recognition of the full human development without losing sight of the notion of respect to personal identity, local context and cultural identity, all of these contemplating the importance of allowing social actors to become, by themselves, the ones who develop a capacity to construct quality of life, sustainable development and the overcoming of the most social problems. By explaining the situation in this way, it seems that the Theory of Capabilities gives the best solution, specifically the contribution made by philosopher Martha Nussbaum in which a capabilities list proposes that individuals with a full flourishment of capabilities would be able to become key factors in guaranteeing the fulfillment of Human Rights focusing on human development. By recalling what has not been described above, it is not surprising that the UN (United Nations) has given such attention to the Theory of Capabilities as a promising strategy to achieve the Millennium Development Goals (eradicating extreme poverty, achieving universal primary education, promoting gender equality and empowering of women, reducing child and maternal mortality, ensuring environmental sustainability, etc.). However, and this is the main goal of this paper’s analysis, it seems like the implementation of Nussbaum's Theory of Capabilities would make the UN's action for social assistance, promoting Human Rights and
Sterrett, Susan* (University of Denver, ssterrett@nsf.gov) Care, Surveillance and Legal Mobilization

Legal institutions must be mobilized by people and institutions in response to disaster. One way this has happened is through projects in two different ways as victims and as people who have been rescuers. In studying assistance after disaster, we often treat programs as though they are distinct and experienced separately. Yet people encounter the law in disaster after having encountered other law in their lives, and interpret how to make legal claims through what they know about other programs. Similarly, state responses to disaster or efforts to mitigate or respond often work in ways that are characteristic across social programs. Although care might well be the goal of disaster assistance, for example, in the United States it is one program in a welfare state with goal of getting people off assistance and ensuring that poor people take responsibility for themselves. The people who need assistance the most can experience it as hard, confusing and frightening when it ends before anyone can find a job or get resettled, whatever the goal. This project draws on assistance for people who fled the Gulf Coast after Hurricane Katrina.

Sterritt, Lance* (University of Toronto, lance.stewart@mail.utoronto.ca) Beyond Piracy: The Materiality of Digital Objects and the Consumption of Copyright

With the growing use of digital technologies in media consumption, companies around the world have experienced a new frontier in providing goods and services to a wider range of consumers. Despite the elevated success of digital distribution of cultural objects like music, film, video games, and books, the issue of illegal access and distribution of copyrighted materials has become a widely identified social problem. Economical, legal and criminological penalties have already greatly dominated research on the topic of digital piracy, identifying and analyzing it in legal terms. Issues with these approaches arise as assumptions are carried forward in exploring and explaining these practices, resulting in their failure to identify this activity as the development of online consumption. In identifying this limitation in the literature, this paper sets out to create a conceptual model in approaching the study of digital piracy. Bridging the perspectives of cultural sociology with science and technology studies, my approach identifies the root of consumption practices in the properties of digital objects. Integrating the theoretical approach of cultural materiality, I explore how the conceptualization of digital objects as “demeaterialized” dismises important sociocultural dynamics of both the attributes of digital objects and the architecture of online services.

In identifying the importance for a ‘digital materiality’ perspective in research on digital piracy, I explain how the form and structure of services and goods results in a development of expectations and desires leading to the consumption of copyrighted material. The resulting conceptual approach speaks to a number of possible consequences regarding how we define and understand Internet technologies. The inclusion of cultural materiality to digital content also provides a new perspective on how previous sociological definitions of materiality have been limited to a particular conceptualization of physicality.

A Spitting Image of Reality? Analyzing Stories of Meaningful in-out Group Incidents As a Tool for Understanding Students’ in-out Group Relationships in a Divided Community

This article explores the usefulness of analyzing narratives of particular incidents that are meaningful to and involve members of different ethnic groups in a situation of conflict. Narrative analysis of the content and structure of stories told by 15 Greek and 15 Turkish Cypriot students about a particular ‘spitting incident’ and the micro- and macro context in which these students, selected from two secondary schools in the Republic of Cyprus develop their narratives, shows that the analysis of such stories can enhance our understanding of: a) the different ways in which actors represent this incident and the factors and processes that inform these representations and b) the more general representations actors make of their own in-group and perceived out-group. More specifically, TCs portrayal of the TC protagonist as a vulnerable but likable and brave hero who is the victim of deliberate and hostile actions of a powerful and untrustworthy villain (the GC protagonist) and particularly the GC community, who uses his bad treatment as an excuse for when it hero unfairly and excessively corresponds to their views of how GCs treat TCs in the Republic of Cyprus more generally and TCs passive, more defensive response to such treatment. Similarly, GCs portrayal of the GC protagonist as a pious hero and the TC protagonist as the disrespectful anti-Orthodox villain corresponds with their views of TCs as dominant, aggressive religious (Muslim) extremists who cannot be trusted. In addition, while TCs narrate this story primarily as an isolated incident, and seek to excuse, deny and/or downplay the accusations directed to the TC student, GCs often tell this story in relationship to a more general, critical discussion of existing school policies which they define as biased as well as against them. The conclusions discuss the implications of this study for future research and social policy on in-out group relationships.
Breaking the Ignorance Contract: White South Africans’ Recollections of Complicity and Collusion with Apartheid

It has become a commonplace joke in South Africa that one cannot find any white South African who admits to have voted for the Apartheid government. White South Africans tend to produce accounts of their past that present innocence, or at the least, ignorance of how their privilege was premised upon the disadvantaging and oppression of black South Africans. Focus groups were conducted with white South Africans who lived in South Africa during the apartheid years, and their willingness to engage in conversations about their racialisation into whiteness. They were invited to reflect on a) what they in fact did know, b) what they chose/preferred not to know, and c) what they now feel they legitimately can claim they did not know about the system and how it impacted the lives of black South Africans while holding their racial privilege in place. Drawing on the emergent field of epistemologies of ignorance, the paper investigates the costs and rewards of breaking faith with “the ignorance contract” that holds white collusion with racial privilege in place. I explore some of the complexities of dealing with the shame and continued self-interest that inhibits the admission of complicity.

Cheating Among American University Students: A 30-Year Follow-up Study and a Comparative Study with Chinese University Students

Cheating is an increasing problem on college campuses, made even easier by the advancement in technology which has increased access to information. Furthermore, we are seeing a shift in attitudes toward cheating as well as a change in the definition. Faculty are reporting changes in cheating behavior. This current study reports the results of a 30-year follow-up study on cheating at an American university (Vandehey, Diekhoff, and LaBeff, 2007), as well as comparisons with a comparable sample of Chinese university students. Our findings indicate both a comparable sample of Chinese university students. Our findings indicate both

Parental educational aspirations for their children’s educational careers have been found to be affected by the students’ school performance. Some available evidence suggests that parents with lower status background are more susceptible to these detrimental effects of poor school achievement. However, explanations for this phenomenon have not been empirically tested yet. We hypothesize that the aspirations of parents with lower social status are more reactive to constraints because of being embedded in less ambitious social contexts and are, thus, less endowed with social capital. These hypotheses are tested with data from the Mannheim Educational Panel Study (MEPS), where participants are primary-school parents in Germany.

In the late 1960s, George Gerbner developed cultivation theory to understand how exposure to television shapes individuals’ perceptions, particularly violence in the real world. Research using cultivation theory consistently showed that heavy television viewers were more likely to perceive the world as more violent, even after controlling for negative experiences involving violent situations. Gerbner later extended cultivation research to sex-role stereotypes and sexuality (Morgan and Shanahan, 2010). Using cultivation theory, the current study explores how different types of media influence individuals’ body perception and sexual attitudes. The media studied are television, magazines, video games, and internet. The sexual attitudes studies are acceptance to hooking-up (casual sexual encounter) and rape myths. For the current study, we collected data from undergraduate students at an American university, using an online survey. The data indicate that body perception and sexual attitudes differ by media type consumed. More specifically, we find that (1) controlling for gender and self-esteem, exposure to television, magazines, video games, and internet is negatively associated with individuals’ evaluation of self body image and that (2) high exposure to television, magazines, video games, and internet correlates to more mythical sexual attitudes and sex-role stereotypes. We will discuss the implications of the results and provide suggestions for improving self body perception and eliminating sexual myths.

Cheating Among American University Students: A 30-Year Follow-up Study and the Addition of an Honor Code

This current study reports the results of a 30-year follow-up study on cheating at an American university (Vandehey, Diekhoff, and LaBeff, 2007) and the addition of an honor code. "College cheating: A twenty-year follow-up and the addition of an honor code. Journal of College Student Development 48(4): 468-480."
and routines. Therefore, a broad concept of nationalism and antisemitism is de-
liberately chosen and the analysis gives priority to everyday modes of inclusion and exclusion. By focusing on discourses around the Self and the Other in the context of the global economic crisis, everyday social communicative practices are problematized in order to trace the role of nationalism and antisemitism within them. This approach draws on the working hypothesis that in contemporary Western societies, extreme right open nationalism and antisemitism are not the only force that stands in the way of a society of world citizens, but also unnoticed but well-practiced routines of exclusionary identification in everyday life. These routines subtly refer to a horizon of understanding, an archive of ideological hab-
itudes which by tradition includes nationalism and antisemitism.

How to Avoid “Normal” Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process

This communication aims to describe how two high-risk organizations are op-
erated, i.e. nuclear power plants and railway operation system. These technol-
ologies are so complex that ambiguous situations often arise. Organizations’ re-
Sponses to uncertainty usually relies on procedures. Despite a huge amount of
technical documents, applying a procedure is not such an easy task to perform. The processes must fit the different phases of the problem and how to measure the risk (Leveson et al., 2009, 2040). Rather than focusing on major failures, the communication zooms on day-to-day activities, on how operators make technical decisions that try to en-
compass all the demanding issues of high-risk systems (safety, system availability, workers’ safety, environmental protection, etc.)

Both organizations studied are characterized by a strong technical and social division of work: high-risk systems operators turn to be specialists in their field (production, safety, maintenance, etc.). Yet, these specialists are interdependent regarding the organizations functioning: organizational reliability thus relies on vertical coordination between humans and techniques (Perrow, 1984). Our empirical results describe in depth the nature of arrangements and negotiations made within and between occupational groups to articulate the work. To increase decision-making rationality, professionals communicate with each other. They develop argumentation and explicative practices to make their point visible and to contribute to the collective bargain about technical decisions that have to be made. In sum, a major way to cope with complexity relies on com-
munications performed in situation, especially during technical points-of-view confrontations.

Future Visions in Social Milieus Among the Middle-Class of Nairobi and Mombasa – Empirical Results and Theoretization of Future Concepts

In this paper I will focus on own research on future visions in the middle classes of Nairobi and Mombasa. These results will be the basis for a theoretical interpre-
tation of these views on future. The various future visions among the different social groups (=milieus) in the middle classes of these two Kenyan cities point at certain social developments and can thus be interpreted as paradigmatic tenden-
cies in the present society. While the social context of the milieus and their future visions might reflect global tendencies like forms of urbanisation they are at the same time higly local as they are adaptations to specific conditions - as the term ‘glocalization’ (Robertson) suggests.

Different social milieus in the middle classes of Nairobi and Mombasa have certain lifestyles and related future visions which reflect different tendencies of the contemporary social world. Kenya is a very interesting case study as the coun-
try has undergone considerable change and an increased integration into glob-
al structures in the last 20 years while it is still a developing country. Especially the differences in future orientations of East Africa’s dynamic economic center Nairobi and the old multicultural coastal town Mombasa can reveal a variety of future references. Thus I will demonstrate by paradigmatic examples how future orientations of milieus in urban Kenya reflect specific social developments and how they can contribute to the theoretical interpretation of sociological future concepts. This way the paper even tries to (re)construct social theory from a spe-
cific perspective of the Global South.

STOLL, FLORIAN* (University of Bayreuth, Germany, stollflorian@gmail.com)

Social Milieus in the Middle-Class of Nairobi – Lifestyles, Attitudes and Future Visions Beyond Homogenity

One of the key questions in the debate on (political) orientations of middle-class households is how these groups develop their attitudes. To answer this it helps to consider political positions in their heterogeneous sociocultural contexts among the different groups of the middle classes. As an example I will take a look at some social milieus, their lifestyles and their future visions in the middle-class of Nairobi – with a look at milieus in Mombasa as a contrast.

The reconstruction of milieus in the specific context of Kenya’s capital aims to demonstrate how a variety of factors influences the lifestyles of Nairobians and that there are heterogenous groups with different lifestyles in the middle income strata.

Future visions are an excellent indicator for lifestyles and corresponding orientations of milieus to see how they integrate these visions into their daily practices. E.g. in Nairobi developed over the last decade a milieu of Young Urban Professionals between 20 and 35 years who have a consumer oriented lifestyle and who are bound to the city. They are usually not driven by religious or traditional values. Their oriental consumers and future visions differ a lot from groups who are strongly led by religious affiliations, (neo-)tribal values or by connections to the country side.

So this paper will provide a sketch of exemplary milieus, their life styles, their living conditions and their future visions. Another relevant question might be how different milieus look for solutions or demand different actions concerning the threat of the Al-Shabaab terrorist group Al-Shabaab whose last attack shook Nairobi in September 2013. All aspects mentioned will contribute to draw a complex picture of the different social milieus in the Nairobi middle class and their divergent lifestyles.

Morality in Context: A Multilevel Analysis of the Relationship Between Religion, Governance and Values in Europe

The exact relationship between religiosity and moral values is understudied, and it is so far unclear what the process of secularisation means for the morality of Europeans. Attitudes to religiosity and the visibility of religion, must be seen in light of whether religion’s presence in the public sphere strengthens moral communities and identities, or merely highlight moral differences.

From Haidt’s (2012) moral foundations theory and Norris and Inglehart’s (2004) existential Cathedral theory, we know that religion is associated with traditional and conservative values as well as low levels of political and economic development. One question is whether religion can act as a substitute for well-functioning secular authorities where these are absent, or if it simply has an additional effect on morality that is independent of the quality of governance. Another question is whether the relationship between religiosity and morality changes as the average citizen becomes less religious, and as religious diversity increases.

Using data from four waves of the European Values Study (EVS) 1981-2008, we analyze attitudes to personal autonomy and self interest in a multilevel model of 48 European countries. Results show that religiosity is most associated with moral values that concern personal and sexual autonomy, that individual religiosity is more associated with morality in countries with high levels of religiosity and that religious context is only negatively associated with self-interest in countries with low quality of governance.

Included But Still Not Equal? Board Interaction and Gender Segregation

Abstract
Included but still not equal? Board interaction and gender segregation Norway was the first country in the world to pass legislation specifying gender representation on company boards of directors. The Norwegian Parliament passed a new regulation in December 2003 that required at least 40% per cent of each gender on company boards. Before the reform, law opponents claimed that the new women directors would not be able to, or allowed to, participate fully in board decision-making; instead their role would only be window dressing. Based on a questionnaire sent to all directors in public limited companies in 2009, the article studies this allegation.

Results show that women directors report less ability to influence board decision-making than men directors. Moreover, women to a lesser extent feel they are part of the inner circle on boards, where such phenomena are perceived to exist. These tendencies also hold when we control for a lot of other independent variables such as board role, ownership interest, number of directorships and occupation. Hence, the he quo regulated boards show tendencies of hierarchical gender re-segregation.

Wearing the Veil: Hijab, Islam and Job Qualifications As Determinants of Social Attitudes Toward Immigrant Women in Norway

Immigrant women are a particularly vulnerable part of immigrant population. In this paper we analyse negative attitudes toward immigrant women in Norway. We focus on immigrant women’s formal job qualifications, their religious background and wearing of Hijab. The results show that natives have more negative views of Muslim women that wear a Hijab, but that the negative effects of Hijab are reduced when a woman wearing it has higher education. With a single exception, the results also show that Muslim background in itself (i.e., without Hijab) does not have any strong effects on attitudes of natives toward immigrant women. The results are discussed with a point of departure in cultural threat theories and current socio-economic situation in Norway.

Provincializing Postsecularism: Critical Reflections On New Western Civil Religion

This paper aims to denounce the provincialism of the European postsecularism, considering that an insufficient pluralism was often invoked by European Union in order to justify the cultural failure of her integration’s process. The Postsecularist orientation risks, if applied without an adequate sociological and intercultural reflection, to become a new civil religion. In the first part I will bring up the consequences of this critical reflection on the actually relation between State and religion in the specific context of Italian society, lacerated between a public secularism and a private Christianity. In the second part, I will try to apply to the European postsecularism, as discursive regime of the European identity, two critical hypothesis emerged from the Post-colonial Studies: the suggestion to “Provincialize Europe” and the critic to her “Cultural Hegemony”. Provincializing Postsecularism does not mean, of course, repudiate or abandon secularism, but thinking about how to renew it. In Italy the transition to post-secularism can not be seen as a simple historical transition, but also as a case of translation: translation of plural memories, religious tradition, desires of believers. In the third part, I appeal to the hermeneutic tradition of Paul Ricoeur, trying to connect a new translation of postsecularism to a new phenomenology of the Italian believer, hoping that the recognition of the religious pluralism can contribute to the constitution of a lay European political community.

How Market Economy Did Away with Violence: A Liberal Story and The Ugly Truth of Contemporary Slavery

The history of power and violence in modernity has traditionally been conceptualized within a nation state-framework and along notions of centralization: While socially dispersed in pre-modern times, power and violence had later been...
come increasingly concentrated in the political realm. In the course of functional differentiation, the core feature of modern societies, a state apparatus developed which organized positions of power and ultimately monopolized the legitimate use of violence. Violence, thereby, more or less disappeared from all other social spheres which turned into arenas of predominantly peaceful cooperation. With regard to the production of value, this process was facilitated by the alleged irrevocable functions of market transactions: Contractual relations and trade are premised on trust and, thus, do not allow for manifest violence in the economic realm. Accordingly, it has been claimed that capitalism was the driving force behind the abolition of slavery. However, violent labour relations have not ceded to exist. In fact, contemporary slavery is a pervasive phenomenon subjecting millions of people to privatized violence. This papers aims at making sense of this situation by discussing the relative merits of the claim about capitalism's civilizing effects on labour and relating it to contemporary slavery from the perspective of a world society shaped by economic globalization and the transformation of state authority.

The Transition from School to University: Pressure and Coping in Catalonia (Spain)

In this paper I present results from a study about university transitions in Spain. Young people face uncertainty, precariousness and discourses that individualize structural problems currently in most Western societies. Spain suffers, moreover, from the severe effects of economic crisis and high unemployement, accompanied by severe cutbacks in the education system and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplyflying the sample with first-year students from underrepresented groups. I selected and analyzed several of the focus groups and interviews with the documentary method including elements of intersectional analysis.

The end of school is characterized by uncertainties and pressures, especially related to being admitted to the chosen studies, the study choice itself and fears not to be successful in university – both, academically and socially. Students experience these pressures differently and show varying strategies to handle them, whereas their personal characteristics, structural dimensions and representations interact. I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

Creating a Gift-Based Sphere of Exchange in Greece

Background:
A large number of groups all over the world are creating alternative, utopian visions of a world governed by non-monetary economies based on barter and gift-exchange. Both the perceived lack of solidarity in market economies as well as the daunting existential situations people are facing in terms of poverty provide the ground on which such visions of solidarity economies are exploding today.

The TEM scheme in Volos:
The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war; 2011) and the economic crisis, violent labour relations caused by severe cutbacks in the education system, and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplyflying the sample with first-year students from underrepresented groups. I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war; 2011) and the economic crisis, violent labour relations caused by severe cutbacks in the education system, and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplyflying the sample with first-year students from underrepresented groups. I selected and analyzed several of the focus groups and interviews with the documentary method including elements of intersectional analysis.

The end of school is characterized by uncertainties and pressures, especially related to being admitted to the chosen studies, the study choice itself and fears not to be successful in university – both, academically and socially. Students experience these pressures differently and show varying strategies to handle them, whereas their personal characteristics, structural dimensions and representations interact. I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

Creating a Gift-Based Sphere of Exchange in Greece

Background:
A large number of groups all over the world are creating alternative, utopian visions of a world governed by non-monetary economies based on barter and gift-exchange. Both the perceived lack of solidarity in market economies as well as the daunting existential situations people are facing in terms of poverty provide the ground on which such visions of solidarity economies are exploding today.

The TEM scheme in Volos:
The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war; 2011) and the economic crisis, violent labour relations caused by severe cutbacks in the education system, and an increase of university fees. Emergence of the Interns’ Collective Actions

This paper looks at the protests at both collective and individual levels taken by student interns in Chongqing in the summer of 2013. Drawing on a 5-month participant observation of the protesters’ school life and their internships in the electronic manufacturer IYD, this article examines the favourable factors, features and outcomes of the interns’ collective actions. The author first argues that the favourable factors, features and outcomes of the interns’ collective actions were largely determined by the students’ own efforts and strategies. Apart from discussing the role of student interns as agents of change, the paper thus addresses the fragmented character of the Indian middle class and questions the equation of Modern India = Hindu India, i.e. questions the homogeneous character of the Indian middle class.

Emergence of the Interns’ Collective Actions

This paper examines the cultural warfare over national languages through investigating the rise and fall of Taiwanese-dialect cinema, which was identified as a counter-hegemonic project against the monolingual ideology in Taiwan. How did Taiwanese-dialect cinema manage to rise in the 1950s while the émigré regime of the KMT officially banned the use of Taiwanese-dialect? Even more curious, why did the dialect cinema suddenly die out ten years later? In this paper, I will argue that the KMT’s ideological anxiety towards the “other” in Taiwan had driven the KMT to make a conscious effort to promote the use of Mandarin Chinese, and managed to use Mandarin Chinese to control the dominant sense of solidarity. I will also argue that the KMT’s use of Mandarin Chinese as a solution to its ideological anxiety towards the “other” in Taiwan was instrumental in maintaining the class in power. I will argue that the KMT’s manipulation of Mandarin Chinese and Mandarin Chinese language policy played a crucial role in maintaining the class in power.

The Representations of Disabled People in Elementary School Textbooks in Post-War Taiwan

Existing literature has primarily investigated the representations of class, gender, ethnicity, and sexuality in textbooks. However, few studies focus on the representation of disability in the education system. This paper uses content analysis to explore the frequencies, categories, naming and portrayal of disabled people in elementary school textbooks in Taiwan, from 1952 to 2003. From a disability studies’ viewpoint, we explore the ableism ideology in the textbooks. First, disabled people are underrepresented in the textbook. The disabled people represented in the textbooks were mostly people with physical disabilities; people with mental illnesses were ignored. Second, the naming of people with disabilities change from “the disabled people” (cán fèi) to “the disabled people” (zhàng ài zhì). Third, people with disabilities were usually viewed as “the other,” who needed to be helped or who inspired “normal” people. Fourth, disability was defined as an individual problem instead of a social problem. Finally, disabled people represented in textbooks were mostly voiceless. There was no discussion on the world view of disabled people or disability, and there were very few discussions addressing the diversity and multiculturalism of disabled people.

The Commodification of Education and Labor in China

This article reveals the mechanism involved in the mutually complementary commodification of education and labor, and the results of this commodification. Emphasizing institutional factors, this article argues that the state plays a dominant role in the combination of the two types of commodification. It also scrutinizes the impact of this dual commodification on student workers—deskilling, alienation, fragmented social lives, and industrial injury—as well as their response.

Vicissitudes of Taiwanese-Dialect Cinema

This paradoxically consolidated their sense of solidarity, sowing the seeds of future resistance against capitalist exploitation. The representations of disability in the education system. These two factors contributed to the injured self-esteem among the protesting students and the culture of solidarity emerged from their lives in school. Regarding the first reason, those student interns from the occupational school had higher self-respect and expectations for the future than their counterparts of previous generations. Meanwhile, the student interns have encountered “coercive discipline” which aimed at eliminating students’ humanity during their internship. This form of violent fighting rather than strike due to their previous school experiences. The students usually resorted to violence such as fighting to resolve individual and collective disputes in their school. Third, the author suggests that school violence not only determined their action repertoire, but also help to nurture a sense of solidarity and brotherhood, which in turn provided a supporting network to students, particularly to those who lacked support from their family and teachers, flavouring their workplace resistance. Fourth, the student interns’ collective actions tend to be generally scattered and transient. Last but not least, most students who participated in the collective actions were later expelled from factories and schools, negatively affecting their prospects after the internships. This paradoxically consolidated their sense of solidarity, sowing the seeds of future resistance against capitalist exploitation.
The Complicated Relationship Between Generalized Trust and Democracy

In Japan, the number of people moving to rural areas (or the countryside) from urban areas (or metropolitan area) is currently increasing. In this presentation, I will examine this phenomenon by using the idea of “lifestyle migration”, and then discuss the relationship between the decision to migrate and enhanced quality of life.

In foreign countries, “lifestyle migration” means moving to elsewhere in search for a better way of life (Benson & O'Reilly 2009). This idea is associated with a new form of international migration, unlike the case of internal migration in Japan. However, “lifestyle migration” occurs as result of self-reflection among these migrants, and consequently, this idea can be adopted to describe Japanese who move to rural areas from urban areas in Japan.

Searching for a better way of life by moving to the countryside relates to quality of life. For example, in my research at Chichibu area in Saitama Prefecture, I found that some migrants engaged in farming, but they often visited the nearby urban area where they engaged in consumption activities. Meanwhile, some people chose to keep working in Tokyo. That is, a sense of “the better way of life” differs according to each migrant. However, moving to rural areas had a positive impact on the health and mindset of migrants; in the countryside, they could achieve balance between work and leisure. Notably, they do not move for the sake of work or leisure alone, but aim to control both. In my presentation, I will attempt to consider the relationship between “lifestyle migration” and quality of life through a case study of migrants who moved to the countryside in Japan.

Abstracts are organized by first presenting author’s last name.

Mosque Associations and the Expansion of Socio-Religious Infrastructure

Mosque associations represent the social and organisational core of Muslim religious life in Germany. Their primary goal is both the practice of religion and the transfer of religious knowledge to its members, irrespective of their specific shape (e.g. organisation affiliation, ethnic composition, etc.). More recently, sociologists draw attention to the increasing multifunctionality of the mosque associations, which also offer leisure activities and courses with an orientation towards the German society, like e.g. German language courses. Previous studies and my own research suggest that this development is a result from both internal changes (demographic change, unemployment among members) and changing expectations of their environment, which are closely linked to the widespread integration debate.

A closer look on the expectations of the environment reveals a paradoxical situation. On the one hand Muslims are expected to open up for the German society by offering services which go beyond religious activities and support the socio-economic advancement of their members. On the other hand authorities and other urban actors are sceptical about additional services within the mosques as they fear that the infrastructure might increase segregation of the Muslim population and thereby endanger integration.

The present paper examines how mosque associations deal with the conflict between their own plans and the contradictory expectations of their urban environment. I have conducted case studies about mosque building conflicts in several cities of North-Rhine-Westphalia. The empirical findings are based on expert-interviews with representatives of Muslim communities and churches, neighbourhood associations, administrations and politicians. Furthermore, I have analysed newspapers and different documents (statutes, city council records, declarations) and I did participant observation in council meetings and neighbourhood assemblies. A case comparison shows, from the bottom-up-perspective, how different actor-constellations and local systems of relevance affect the development of the local Muslim organisations.

The Complicated Relationship Between Generalized Trust and Democracy

R. Putnam (2001) insists that social capital is made up out of generalized trust, reciprocal norms, and social activities. Social capital, he points out, has a strong and positive impact on democracy. An analysis of the 2005 World Values Survey Data, however, does not show us such a relationship between generalized trust and democracy. This fact seems to imply that Putnam’s thesis can be applied to only advanced democracies. In this presentation, I will discuss why there is such a phenomenon and the prediction of Putnam’s social capital theory, and show that the social capital theory does not need to be rejected, but needs to be complemented by new theoretical assumptions. In order to explain the weak correlation between generalized trust and democracy, I distinguish between trust based on democratic values and trust based on authoritarian values, and demonstrate a simple mathematical model assuming individual’s rational choice and different network effects of the two types of generalized trust. This model enables us to explain a non-linear relationship between generalized trust and democracy, as it allows us to see that generalized trust has both positive and negative influences on democratic values because it intermediates with other values. Moreover, some people chose to keep working in Tokyo. That is, a sense of “the better way of life” differs according to each migrant. However, moving to rural areas had a positive impact on the health and mindset of migrants; in the countryside, they could achieve balance between work and leisure. Notably, they do not move for the sake of work or leisure alone, but aim to control both. In my presentation, I will attempt to consider the relationship between “lifestyle migration” and quality of life through a case study of migrants who moved to the countryside in Japan.

Changes in the Family Relations were also notorious. The family model characteristic of the 1950 decade lost importance, substituted by a new model, whose members are not only defined by sex and age criteria. This change was not, however, linear. It summed up the coexistence of traditional and patriarchal values with nowadays-individual values. Some of these changes can be seen in the declining marriage and fertility rates and increases in co-habitation and non-marital unions. Parallel to this, there was an increase in the number of divorces and a decrease in the only male breadwinner family model. There was also an increase in the number of families with a female head, not restricted to low income groups. It is important to mention the impact of the new female role in the society in these family changes. Increase in the women’s schooling, decrease in fertility rates and the female participation in the labor market influenced in a significant way the family relations.

In spite of the changes in the family arrangements, it is worth mentioning the maintenance of the family ties in the Brazilian society. These changes in the Brazilian families are though more complex than the changes in the developed countries due to the strength of patriarchal values that might be a deep-seated characteristic of the Brazilian culture.

Consequences of Delayed Evacuation in Iitate-Mura Village

Residents of Iitate-mura in Fukushima prefecture, located within 30 to 50 km radius of TEPCO’s Fukushima Daiichi nuclear power plant, got their first instruction to evacuate 42 days after the earthquake, and they began to evacuate in mid May. In the evening of March 15, just 4 days after the accident, the radiation level measured in front of the town hall of the village showed 44.7 μSv/h. So the majority of villagers stayed in the village where the radiation was level was high, for over 2 months. Why was their evacuation delayed? There are two reasons behind this delay. First, although the Japanese government enlarged the evacuation zone from 10 km radius to 30 km radius shortly after the accident, most of Iitate village is within the 30 km radius. Second, village authorities set priority on protecting and sustaining the major industries and jobs in the village. Whether this decision was appropriate should be put to review. Now the villagers are in an even more difficult situation, being unable to draw a plan to rebuild their lives while the government is taking decisions that may directly impact and pose a risk to the village. Focusing on Iitate-mura, this paper addresses the issues regarding the political measures to cope with the nuclear disaster, with comparison with municipalities in the neighboring region.
The Role of Family Caregivers and Their Working Lives: Convergences and Divergences Between France and Japan

This paper presents the method and results of a comparative research on family caregivers and their professional trajectories in France (Ile de France) and Japan (Osaka).

The aim of the research is to chart two kinds of trajectories in a person’s life: professional and of caregiving, and to examine their interdependence. In the current context of the prolongation of life expectancy, a person can provide care several times in different periods of life, or care for more than one person in parallel at the same time. The care provided may be for different causes of frailty. We should therefore look into the temporality and the global view of the caregiver’s life without limiting the study to a certain type of frailty.

We rely upon a sequential analysis of data on caregiver’s trajectories. We also collected on care networks developed around the caregiver by individuals participating in the care, including care for the caregiver. The typologies of professional trajectories are analyzed in relation with variables such as socio-demographic characteristics of the caregiver and care-receiver, types of care networks, etc.

We try to study the different configurations that come out for Ile de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

The Islamization of Leisure in Indonesia (A Comparative Analysis of Aceh and West Java)

In this culturally unequal world, Islam is perceived as a minority civilization which is acted upon by the dominant "western" civilization. The influence is allegedly reflected in various spheres such as leisure where a "division of labor" between leisure and work come forth. The recent revitalization of Islam portrays a more assertive Islam in society with the development of Islamic leisure in addition to Islamic economy. The case of Indonesia indicates that there is a process of Islamization of leisure with the application of Islamic values such as the prohibition of "haram" or non-"halal" food and liquor, "khalwat" (close proximity between men and women), gambling as well as the obligation to comply with Islamic dress code. The implementation of this process can be seen as a colonization of life-world along with economy and state in which society emerges as a new arena of sociological inquiry. Later in the 20th century, the post-war social research was almost forgotten and only now is being rediscovered by social historians.

Housing Estates As Experimental Fields of Social Research

In this presentation, I discuss researchers’ relationships with the research object and its transformation in empirical sociology by examining “danchi” (housing estates) studies conducted by Japanese sociologists.

The Japanese housing policy system was quickly established in the early 1950s, and the reinforced concrete housing complexes stimulated journalistic interest. Most influential researchers in postwar Japanese sociology began studying these housing estates during the mid-1950s and 1960s. One reason was that social surveys involving random distribution of standardized questionnaires to individual respondents were compatible with the new housing form. Housing estates became experimental fields of social policy and social research.

Urban sociologists attempted to comprehensively grasp the lifestyles and social consciousness of housing estate residents. Social psychologists introduced sociometry to describe social relations evident in these housing estates. Researchers often used the terminological text “Organization Man” by William Whyte (1956), with a Japanese translation published in 1959. According to Whyte, white-collar residents in the newly developed suburban residential areas formed active neighbor relationships. Kokichi Masuda, a family sociologist, emphasized the contrast of the rarity of neighbor relationships in Japanese housing estates with what was the norm in the United States.

The image of housing estates as pictured by social researchers transformed around 1960. Studies of residents’ associations showed that housing estate communities were being formed through cooperative solutions found for residents’ common problems. Whether or not a housing estate was formed as a "community" depended on how the residents related to the space. This change was also reflected in the relationships between the researchers and the respondents in that the distance between them when using the standardized attitude and opinion survey was lost. The change in the image of housing estates in the 1960s can be said to overlap with a turning point in social research.

Between the War and Consolidation of Communist Power: The Forgotten Social Research in Poland in the Second Half of the 1940s

Opinion commonly held has it that empirical social research in Communist Europe resurfaced only as late as in the second half of the 1950s, during the post-Stalinism ‘thaw’. However, in some countries like Poland, Czechoslovakia and Hungary, social research was possible immediately following the WWII. It did not last long though. Consolidation of Communist power delivered blow to this research in the late 1940s.

In this paper I discuss how in the years 1946 – ca. 1950 sociologists in Poland took an advantage of opportunity to study the society in which they lived. Polish society has just come out from the war and was about to enter a process of political ‘reconstruction’ under the leadership of the Soviet-style Communist party. Following the war, sociologists immediately started to investigate social and psychological effects of the war, post-war migrations, new communities in the former German territories, ethnic relations (especially Polish-Jewish), and social mobility as a result of the war and the political changes. Fieldwork and questionnaire were methods of these studies. However, politically sensitive issues, e.g. mechanisms of political power and public opinion were banned by the authorities as topics of sociological inquiry. Later in the 20th century, the post-war social research was almost forgotten and only now is being rediscovered by social historians.

Housing’s Contribution to Poor Health Among Aging Residents in Informal Peri-Urban Communities in Texas: A Mixed-Method Geospatial and Case Study Approach

The data analyzed in this paper were collected through a two-part mail and in-person survey of 630 households in two peri-urban, low-income, informal settlements in central Texas. The survey documents housing conditions and needs in these communities where a significant portion of the population is Hispanic, elderly, and low-income. Analysis of the survey data interrogates the links between chronic illness and poor dwelling conditions in an aging population. To better understand the intersections between aging, health and low-income, self-built housing we analyze detailed data on reported problems with the dwellings and incidences of illness and disability. We present descriptive findings in the following three topic areas: 1) specifics of dwelling structure; 2) perceived problems with the house design and structure; and 3) resident morbidity problems, physical disabilities, and how these intersect with the fabric and design of the dwelling unit. In addition, we use Geographic Information Systems (GIS) analysis of the location and geospatial characteristics of the communities to map how residents’ access to health and social services varies relative to those residents not living in the urban periphery. This analysis allows us to identify appropriate rehabilitation initiatives that will lead to home and health improvements in informal, peri-urban communities.

The Power of Women’s Representation in Local Government in Combating Women’s Underrepresentation at Local Politics

The importance of local politics is on the rise particularly concerning the discussions of gender inequality in and relations with power, democracy, economy, and social norms. This is due to the fact that the central authority is no longer the locus of power in politics in combating global problems. Particularly women’s involvement in local politics had been invisible in the discussions of women’s underrepresentation for a long time both in academic literature and political life. In
the last two decades, the academic interests about the relation of local politics and gender have been on rise and policy-makers who are aware of this fact have been paying serious efforts to bring local actors to the front to increase women's political involvement. Since the 2000s, Turkish government has charged the various branches of politics, including the municipalities and mayors in the scope of this research, in enhancing women's participation particularly in local politics. However, recent studies and statistics reveal that neither the number of women at local level politics have been increased either these responsibilities have been fully acknowledged by the local actors in Turkey.

It is assumed that, as women representatives, female mayors would contribute to increase women's political participation in local politics and be more assertive to fulfill the related responsibilities to support women's involvement into local political relations. Thus, in the case of 2009 local elections in Turkey, this study aims to find out to what extent female mayors can contribute in enhancing women's political involvement at local level. In this study, this research will try to analyze the related discourse and activities of female mayors who were selected in 2009 local elections in Turkey by in-depth interviews.

The Controversy: Family Separation and the Immigration Law in the U.S.a

This study examines whether the Courts in the United States are recognizing the provisions of the UN Convention on the Rights of the Child as an international customary law even though it is not ratified by the U.S.A. Drawing on multiple primary sources, including the work of scholars and legal professionals the article explains the deportation of parents and discusses the family separation through immigration procedures and human rights approaches. The article then presents the results of recent court opinions, and compares court decisions. It concludes that some courts have made significant progress toward family integrity and for the best interest of the child, however some court decisions rejected to recognize the Convention and gave priority to the State interest and deported numerous parents even though their children are citizen of the U.S.A. On the other hand, this article also identifies a need for further improvement, which can be accomplished through the contributions of national and international organizations.

Care Migration in Asia: A Comparative Study

As some countries in Asia develop economically and experience major demographic challenges such as persistent below-replacement fertility, the issue of immigration and care provisions emerges. It is particularly important in the Asian context where people have to rely on the market in the absence of effective welfare state. This Asian situation is called “liberal familialism.” In this paper, we try to answer the following questions relating to care migration by drawing on data from China, Japan, South Korea, Taiwan, Singapore, Thailand, and Vietnam: Whether and how care provision is mediated by international migration or internal migration? What are the working conditions – are the migrant care workers documented or undocumented? Are they protected or covered under the local employment laws? To what extent are they allowed to immigrate to the host countries? What are their ethnicities and nationalities? What is the history of employing care workers in different countries – for childcare and/ or for elderly care? What are the primary sites at which care is provided (for example, in the households via marriage migration or in institutional settings via healthcare migration)? What are the challenges faced by sending countries and receiving countries? Finally, what are the ways in which care migration relates to various forms of social stratifications in Asia – in particular, gender, class, ethnicity, and urban-rural inequalities?

Lateral Networks of Homeowner Associations and Civil Society Building in Urban China

Civil society organizations are crucial for the development of civil society, because these organizations teach citizens democratic practices on the one hand, and constrain the power of the state on the other. Recently, lateral networks of homeowner associations are being formed in many Chinese cities. While not being recognized by the authoritarian state or even faced with potential political risks, these networks are playing an ever more important role in facilitating homeowners’ collective actions to defend their private property rights. Existing literature tends to understand homeowners’ collective action as a reactive response to counteract the powerful real estate developers and their management agencies in a very mature housing market. But based on interviews, participant observations, and online discussions of the lateral networks of homeowner associations in Beijing, Shanghai, and Guangzhou, this study argues that these networks are proactively adopted as important infrastructures for the development of civil society in urban China. Driven by the ambitions of promoting the development of civic organizations in China, the activists use homeowner associations as the most practical way to make such attempts. They not only deal with immediate material interests concerning housing and neighborhood management, but also strive for the participation of member associations on a regular basis and for the protection of their material and immaterial interests. The activists develop their own strategies and tactics to establish and run such lateral networks. It has profound implications for state-society interactions and civil society building in contemporary urban China.

Pro-Growth Coalitions and Homeowner Activism – A Comparative Study in Shanghai and Taipei

Middle-class homeowners, whom one would expect to be the gainers of China’s urban development, have formed one of the most organized social groups as other social groups such as relocated households or migrant workers. The study identifies a variety of collective actions – petition, litigation, sit-in demonstration – to uphold their private property rights. Existing literature tends to understand homeowners’ discontent as a result of the immature housing market, the deceitful real estate developers and their management agencies, and the non-independent legal system. While focusing on immediate causes, existing studies neglect more important structural factors that contribute to homeowner activism. By adopting a comparative study – based on documents and interviews – in Shanghai and Taipei, the author argues that different levels of state intervention in housing-related disputes lead to different dynamics of homeowner activism. In Shanghai, the state actively counts on landowners and play a dominant role in planning, relocating, and leasing the land to the developers. They build close relationships with the developers. When housing disputes emerge, the local states are motivated to intervene and ally with the developers considering the fact that they have substantial interests involved. This explains why more often than not homeowner activism in Shanghai directly targets the government and proceeds in a non-institutional manner. But in Taipei, the local states are mere regulators in land development processes. Individual landowners initiate the redevelopment projects and negotiate with the developers. Housing disputes in Taipei are usually dealt with through negotiation or courts. This study offers a new perspective to understand increasing homeowner activism in Chinese cities. It also has profound implications for state-society interactions and urban governance in contemporary China.

International Migration of Nurses from India: A Case Study of Delhi Nursing Colleges

This paper examines the extent of potential nurse migration from India and their causes, types and nature. Methods: Apart from empirical study, the research also relies on secondary sources. The study is based on the response of 48 potential migrant nurses from Delhi. Discussion: India has been and will continue to be an important source country of nurses for the developed countries in the light of emerging shortfall of nurses in the major destination countries in the future. Under the current scenario, it may be presumed an annual out-flow of 8-10 thousand nurses from India. However, in spite of the fact that the country has a stock of 1.6 million registered nurses, there is an additional requirement of 10 lakh nurses to fulfill nurse-population ratio of 1.5:1. The current nurse-population ratio stand at 1:1100 compared to the developed country averages of 1:150. Therefore, India needs to make double effort to produce nurses for meeting both domestic and international demand by creating a vast and sustainable infrastructure for the production and training of nurses.

Policy suggestions: First, improving the availability of data on migratory flows of nurses from the country. Second, a detailed analysis of alternatives available for procuring and filling up the vacant posts in the shortage areas on the one hand, and identifying and targeting the surplus areas for international recruitment of nurses on the other. Three, twinning programmes between organizations of both source and destination countries to undertake programmes of research, staff exchange, staff training and support, and flow of resources to source countries. Four, preferential treatment for migrant nurses for immigration in the destination

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
country and facilitate return as per the willingness of migrant nurses, and finally, signing of nurse-mobility partnership agreements with the important destination countries, such as, UK, USA, Middle Eastern countries, Ireland and Australia.

Public-Private Partnerships and Micro Health Insurance Schemes in India: A Sociological Perspective

This paper is an attempt to look at the socio-economic features, and health seeking behaviours of the lower income group and their involvement in the functioning of the micro health insurance schemes. The model micro health insurance as a mechanism of social capital is examined its strength to create a good "health for all". In other words, it focuses on the importance of public (government) intervention to create a feasible health care systems with the partnership of private both for-profit and non-for-profit sector, so that, the micro health insurance schemes profitable for the vulnerable sections of society. More precisely, practicable schemes for better health can be created by the intensive involvement of public and private, by which willingness-to-pay for health can be possible by the lower income groups.

Despite increasing acknowledgement that social capital is an important determinant of health and overall well-being, empirical evidence regarding the direction and strength of public-private linkages in the developing world is limited and inconclusive. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of experiences with different health financing methods.

Currently, the health sector is unable to meet the growing needs of the population and is severely financially constrained. The study estimates the impact of the program on trust and cooperation in rural communities. Rashtriya Swasthya Bima Yojana (National Health Insurance Programme) is the government initiative to provide quality health facility to the lower income groups. It is important to emphasize that the study does not separate the direction of causality between trust and cooperation. The analysis treats both aspects of social capital equally in the impact study public and private inter-linkages for better health facilities of the Indian society.

Ordinary Sociologists

Until the 1990s the sociology department of a public university in Indonesia strengthened their college teaching staff by recruiting college seniors with good academic achievements as part-time teaching assistants. After obtaining their bachelor’s degrees in sociology some of these sociologists would continue to teach on a part-time basis while waiting for an opportunity to be recruited as a full-time faculty member. For most of them, however, the wait was in vain, among other things because there were very few vacancies available, and also because the eligibility standards for becoming a full-time faculty members were gradually raised. After teaching part-time for a number of years – while, in some cases, working towards a master’s degree – most of them finally obtained a full-time employment at other public or private higher education institutions, where they continue to teach sociology.

The practice of recruiting college students as teaching assistants was eventually discontinued, Factors such as centralization and bureaucratization within the university, the tightening of recruitment criteria for teaching staff at colleges in compliance with national standards, and the application of efficiency criteria forced the department to abandon its policy.

This paper, a case study of sociology teaching, describes the biographies of a selected sample of former teaching assistants in sociology – their social backgrounds, present social statuses, academic performances and careers. The life history data are based on depth interviews with informants who were part-time teaching assistants recruited in the 1990s, are still working as academics at institutions of higher education outside their alma mater, and are still teaching sociology. Data for the study are also based on interviews with on-campus resource persons, and on the examination of relevant documents.

less couples, indicating that the meaning of parenthood and the norm of child-
birth have changed in the post-Confucian agrarian era. The burden of child care
and education has exacerbated couples’ motivations to become parents, partic-
ularly among dual-income families. However, childless Koreans may not be a ho-
menous group. Some couples remain involuntarily childless due to infertility, and
others simply delay having children. In this study, we categorized childless
married Koreans into three groups, voluntary, involuntary, and delayed, and ex-
named the factors associated with each group.

Data came from 553 childless married Koreans who had been married at least
for three years using quota sampling in metropolitan Seoul. We conducted
multinomial logistic regression to identify the individual, attitudinal, and marital
factors associated with participants’ membership in each of the three childless
groups using involuntary childlessness as a reference group. Both the voluntary
and delayed groups were more likely to perceive advantages of childlessness, to
put less importance on religion, and to have less intention to adopt a child. How-
ever, other factors were differently related to the voluntary and the delayed groups.
Specifically, attitudinal characteristics were significant among the voluntary group
while marital characteristics were significant among the delayed group. The vol-
untary group was more likely to have negative attitudes toward parenthood and
to report a lower ideal number of children compared to the involuntary group.
The delayed group was more likely to be dual-incomers and to report a shorter
length of marriage compared to the involuntary group. Our findings suggest that
childless couples may not be a homogenous group in Korea. It is worth noting that
there are differences in attitudes towards parenthood and marital characteristics
depending upon the childless group.

US Retirement Migration to the Philippines: Reasons and
Explanations for Later-Life Migration

Studies of retirement migration in the United States often focus at the national
level, and there is comparatively little information about the retirees who cross
international borders in their search for new homes. Retirement migration flows
are unusual in that the late-life migrants select destinations in less-developed
countries, in contrast to the general pattern of migration from poor to rich coun-
tries in search of jobs, higher incomes and a better standard of life. This study
has examined the reasons for retirement migration from the United States (US) to
The Philippines using data collected from different locations in The Philippines.
A non-random sample of 141 US retirees was surveyed. The findings identify
four major reasons for migrating to Mexico: financial circumstances, the natu-
ral environment, a sense of community and friendship, and finding life/sexual
partners. While these relocation contradict much taken-for-granted and popular
knowledge about migration patterns around the world, they have important implic-
ations for later-life, social relationships and welfare of the migrants.

More in-depth multidisciplinary studies are needed to increase understanding of
this evolving phenomenon.

Becoming Father, Doing Fathering: How Gay Men’s Practising of Relatedness, Intimacy and Care Disrupts Normative Constructions of Families

Fatherhood is frequently conflated with parenthood for any man who begets
children. Fathers are typically assumed to be involved parents as ‘natural’ out-
comes of biogenetic relationships with children. Drawing from the findings of a qualitative
study of gay men in New Zealand, this paper examines the ways in which the gay men conceived
and distinguished between biogenetic relationships and the doing of fathering and
parenting through reflexive negotiation of expected or actual roles and involve-
ment with the lesbian mothers of their planned or current donor-conceived chil-
dren. The paper highlights three ways in which multiple parenting models based on
cooperative nonsexual reproductive relationships between men and women, and
intimate same-gender relationships, disrupt normative constructions of fam-
ily. Firstly, such disruption occurred through the men’s deliberate separation of
biogenetic fatherhood, motherhood and parenthood from the doing of parenting in
ways that cannot be flexibly, negotiable and centred on practices of involvement rather than biogenetic relatedness. Second-
ly, disruption occurred through the men’s separation of the doing of father and
mother from gendered assumptions about parenting roles; they performed both
fathering and mothering. Thirdly, the men disrupted the assumption connecting
fathering and parenting by providing joint residence through the de-centering of ‘home’; neither fixed nor static, ‘home’ was attached to relationships, not plac-
es. Troubling the taken-for-granted primacy of heterosexual two-parent family
forms, legal relationships between parents, legal and biogenetic relationships
between parents and children and co-residence as benchmarks operating to reg-
ulate families, the men’s stories open (discursive) spaces for reconceptualising
possibilities for queer fathering, mothering and parenting beyond heterosexual
understandings of ‘proper’ families. Within a context of escalating family
transformations in an increasingly complex society, thinking and talking about
new forms of practising relatedness, intimacy and care in ways that are expansive
and generative will open up rather than shut down possibilities for all families.

A Longitudinal Perspective on Quality of Life in Times of Crisis: Switzerland from the 1990s to Nowadays

During the past twenty years Switzerland experienced three major recessions and periods of economic slowdown: the prolonged and deep economic stagna-
tion of 1992-95 – the country’s most pronounced recession of the post-war pe-
riod – and the comparatively mild two recessions of 2002-03 and in the wake of
the global financial economic crisis of 2008-09. During these periods of economic
crisis, unemployment and poverty increased, particularly during the crisis of the
1990s, when unemployment soared from its previously extremely low level. The
proposed paper aims to explore the consequences of recessions and economic
downturns on various dimensions of quality of life by comparing the three histor-
ic periods of economic stagnation.

In order to analyse how quality of life has evolved since the early 1990s, we
use various longitudinal databases, notably the Swiss Labour Force Survey (SLFS, available from 1991 onwards), the Swiss Household Panel (SHP, available from
1999 onwards), and the Swiss Statistics on Income and Living Conditions (CH-SILC,
available from 2008 onwards). Various indicators of quality of life, poverty, depriva-
tion and inequality, as well as of subjective well-being will be calculated in order
to measure and compare quality of life during different recession periods. Our
empirical analysis will explore the impact of economic crises for different popula-
tion groups as well as for various quality of life domains (objective and subjective
indicators). First results suggest negative crisis impacts on quality of life and sub-
jective well-being particularly for specific vulnerable population groups.

Being Dad or Mum? about Traditional Parental Roles from the
Perspective of Polish and Swedish Fathers

Parenthood must be concerned as one of areas within which reproduction of
gendered practices occurs. In my paper I will try to show how Polish and Swedish
fathers understand traditional parental roles, how they perceive biological and
cultural differences between motherhood and fatherhood and whether they think
about gender equality within the household. My paper is based on 52 in-depth
interviews conducted with Polish and Swedish fathers in 2012 and at the begin-
ing of 2013. It is a part of broader research project on fatherhood in Poland and
Sweden. Interviews concerned men’s experience of parenting and are analysed
in the institutional and social contexts of both societies. In my opinion these con-
texts are extremely important here. Stereotypical roles of fathers and mothers
are strongly connected to cultural patterns of masculinity and femininity. Beside
that Polish and Swedish societies provide, through family policies, completely
different conditions for having children and differently approach the problem of
work-home balance. Unsurprisingly, these have an impact on how men define
father’s and mother’s roles. Among Polish fathers there is a tendency to look at
it with more conservative and traditional approach. They are convinced that it is
impossible to cross biological differences between motherhood and fatherhood
and that father is rather regarded as mother’s helper or additional carer.

Whereas Swedish fathers are more eager to question imposed by society patterns
of behaviour. Sometimes they really struggle with stereotypical gender roles to be
more involved in family sphere and try to redefine traditional fatherhood. Obvi-
ously these attitudes have an impact on everyday fathering and the way family
product. Fathers’ perspective is important here, since without their bigger invol-
vement in family life, gender equality cannot be achieved in other areas of
social life.
The objective of this academic paper is to present students’ perspective on methods of attaining happiness. After realizing that this age group is leaders and possesses the potential to lead, it is helpful to bring their perspective and expand it into a philosophical study to analyze and adapt to the livelihood of the general society as a whole.

The results revealed 4 methods of attaining happiness in the perspective of students. They include 1) Living under moral and ethical conduct and live with the intent of eradicating defilements 2) Setting a constructive intelligence and mindset; human beings have the ability to comprehend logic and causes of phenomena as well as resolve issues 3) Human beings should place importance on spiritual and interpersonal relation aspects over materialistic aspects 4) Body of knowledge passed on or accumulated by ancestors or knowledgeable people

If ultimate happiness and collective social happiness are the goals of human beings, it is reasonable to follow the path that leads to a good management of life and society by understanding the principles or the valuable rules and apply them in all levels and forms of society.

The Rise of Community in Asian Care Provision

Theories of civil society sometimes assume or praise a civil society as being independent from the state, in which citizens, by communicating their opinions freely, cultivate their power to claim oppositions and/or propose alternatives to governments. However, in Asian countries, governments themselves have intervened in cultivating civil societies in the modernization processes. For example, in Japan, the Meiji, Taisho and Showa governments tried to bring up a civil society in order to catch up with western modern nation-states (Garon 1998). The neighborhood association, chōnai, originates in such a government's effort to organize a cooperative civil society.

Recently, even in many countries including advanced welfare states in the west, the governments have become more relied on the voluntary/community sector to deliver care to the elderly and/or children. Partly because of the financial constraints combined with changes of demographic structures, the role of volunteer/community is more important to sustain lives of vulnerable people. The introduction of the social model of care (as opposed to the medical model) seems to have legitimized this trend.

This paper tries to grasp the weight of voluntary/community sector in care diamonds in Asian societies. It outlines common features as well as differences among Asian societies in the structures of community care provision, and it also investigates how governments promote community care through regulations and incentives. Through these inquiries, it tries to explore whether and to what extent the community sectors contribute to de-familiarization of care in Asian societies.

Why Did the “Blue-Green Coalition” Develop in the Case of Minamata? an Analysis of the Struggles of the Union and Social Movements Against Chisso

From the late 1960s to the mid-1970s, there was an upsurge of social movements against industrial pollution. Victims of pollution diseases as well as local residents organized anti-pollution movements and opposed the construction of pollution-prone plants in their neighborhoods. Reactions of labor unions to these social movements were indifferent or even hostile. Some enterprise unions supported activities of residents against pollution in principle but withdrew their support when the latter’s actions, such as filing lawsuits against polluters, came in direct conflict with the interests of unions and their firms. Other unions at firms that caused industrial pollution stood on the management side and took confrontational attitudes toward local resident social movements.

The earlier case of the present case is the case of Minamata (the absence of “blue-green coalitions”), by focusing on the relationship between the enterprise union of Chisso (the SNU) and social movements of pollution victims and their supporters. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively involved in supporting Minamata disease patients and formed cooperative relations with social movement groups concerned with Minamata disease. The paper explores the factors contributing to the formation and development of this “blue-green coalition” and what concrete results the coalition achieved from the perspective of “strategic capacity” of union leaders. The paper argues that the SNU developed its strategic capacity as it coped with challenges posed by hard-line management policy toward the union and management plans to drastically downsize Minamata plant. Union leaders developed the strategic capacity to frame the mutual interests of union members and Minamata disease victims by identifying the management of Chisso as their common opponent in their respective struggles and to mobilize the union’s resources effectively in cooperation with social movement organizations in the struggles against the company.

Re-Reading “The Loss Of Meaning In Death” By Shun Inoue

In this presentation, we will reconsider the English translation possibility of death’s “The Loss of Meaning in Death” of Mr. Inoue Shun. What is the “post-war(Sen-go) japanese society” for Mr. Inoue? We would like to discuss the description “can be understood in the cognitive level” or “feeling”. Because, the question to the “Meaning in Death”, was written while clearly reflected the feeling and experience of Mr. Inoue himself to the “post-war(Sen-go) japanese society”. In another word, “post-war japanese society” could show us many possibilities.

In addition, as for the “normative level”, developing interdisciplinarity sociology between literature, Mr. Inoue is the only one scholar who manage the subject of analysis sociological knowledge itself “feef it, because can contribute to the “accumulation of results beyond the generation of sociological research”.

Sociology of knowledge, Inoue advocates, social consciousness theory, or cultural sociology we do not have to limit the domain of Mr. Inoue’s theory. We believe in the wake of this presentation, we would like to appeal widely, the contribution of Inoue for the world aging society.

Do Older Women without Work Experience Participate Less? Life Course Analysis Using the Jages Data

Background

Social participation, such as being a part of community groups, is key to healthy, active aging. Although social participation in older age may be defined by cumulative experience throughout one’s life course, many older Japanese women today have never worked outside the home. As work experience can help expand social interaction and social networks, it is possible that women who have never worked do not participate in social groups as actively as those who have.

Methods

The Japan Gerontological Evaluation Study (JAGES) is a social epidemiological survey of a community-representative sample of functionally-independent individuals aged 65 and older. In 2010-11, responses were received by face-to-face interview from 1223 people in 31 municipalities across Japan (66.3% response rate). Social participation was measured by monthly or more frequent participation in any one of six types of social groups (business, volunteer, senior, sport, community, and hobby). Using logistic regression, four models were tested on 41,966 to 44,272 women with a valid response for each outcome variable: whether lack of work experience in older Japanese women is associated with (1) less social participation, (2) less social interaction, (3) less frequent interaction with friends, and (4) fewer friends.

Results

Controlling for age, equivalent income, family structure, years of education, and health conditions, lack of work experience throughout life was associated with a 21 percent lower likelihood of participating in groups, 25 percent higher likelihood of having less social interaction, and 12 percent higher likelihood of having few friends. The association between lack of work experience and lack of group participation held for all income levels and age groups.

Lacking work experience appeared to lead to less social participation later in life. Work experience can develop better social skills and more extensive social networks, contributing to more active social participation in older age.

Beyond Duality and Heteronormativity: Gender Display and Manipulation in Japanese Yaoi/BL Narratives

Boys Love (BL) in Japan refers to commercial fiction and fictional media by and for heterosexual women that focuses on male–male erotic/romantic relations. These works are more generally known in other countries as Yaoi, a Japanese term often used as an umbrella category that can encompass various Japanese subgenres of male–male erotic/romantic fiction by and for women. The past decade has seen the emergence of studies of Yaoi/BL that have focused on gender and sex as analytical categories. Such scholarship is important in understanding fan-based cultures, production and consumption. However, a confusion of gender, sex, and sexuality at the analytical level in Yaoi/BL impedes further theoretical development. By making a clear conceptual distinction between these intertwined notions as distinctive analytical categories, this paper attempts to clarify Yaoi’s achievement in the (un)conscious feminist agenda among Japanese women. The study examines nearly 800 commercial Yaoi/BL novels written in Japanese, which were chosen based on a certain sampling method. Through descriptive statistics based on and textual analysis of the samples, as well as interviews

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
with professional Japanese female writers, the paper first identifies some important features in the contemporary Yoji/BL texts such as transgression of sexual norms, subversion of gender fixity, renewed definitions of masculinity and femininity, and highly context-dependent sexual orientation of protagonists. By doing so, I argue that Yoji/BL has made it possible for Japanese heterosexual women 1) to transform normative gender dualism, sexual acts and sexuality at least at the level of discourse; 2) to use men's images not only for their empowerment but also for their own gratification as agent of desire. This is a significant step forward from early Yoji works that focused upon getting affirmation from others and fleeing from patriarchy.

To be or Not to be, That is the Question: The Bifurcation Approach of the Japanese State and Identity Formation of Koreans in Japan

Koreans in Japan present an important case for understanding the nature of the interconnections between race, nationalism, and ethnic relations. All too often, studies of these phenomena center on Western cases or on cases where non-Western racial minorities move to Western states. In this paper, however, I examine these inter-relations within Northeast Asia. The Zainichi Koreans or old-timer migrants in Japan (who are already in the fourth generation) must face what I call a 'bifurcation approach,' which makes a strict distinction between the Japanese and the non-Japanese based on nationality in the management of ethnic/racial diversity instituted by the Japanese state and society. In Japanese, the concepts of 'race,' 'ethnicity,' and 'nation' are virtually indistinguishable. The formulation race = ethnicity = nationality + culture is essential to the Japanese conceptualization of what makes one Japanese. Moreover, under the Japanese sense of nationhood defined along exclusively ethno-geographical lines and nationalistic multiculturalism, minority cultures have become fossilized owing to state sponsor-ship of the dominant Japanese culture. As a result, Zainichi Koreans—who have significantly become acculturated to and share a similar phenotype to 'impersonate' being Japanese.

SUZUKI, MAYA* (Tokyo University of Foreign Studies, mayasuksuki.edu@gmail.com)

Challenging Law and Justice from below: The Public Interest Litigation (PIL) Movement in the Dalit Community

In this paper, I examine protest movements of the marginalized Dalit community (formerly known as Untouchables) in contemporary India from a case study of Balmiki (a sweeper caste). In particular, I explore the political aspects of caste by focusing on the caste-based quota system, known as "reservation," which is a part of India's affirmative actions.

This paper is organized around two significant issues. The first is the formation of a "new" identity among the Dalits through saint worship, which poses the follow- ing question: Why has the community embraced saint worship? The answer to the question lies in their religious choice to worship a saint, which gives them a sense of dignity and empowerment, and helps in the construction of a collective identity among members.

The second issue is the implications of caste-based identity politics. Since the late 1980s, an important factor Indian politics is the shift to a multiparty system and the rise of identity politics. With an increase in equality and social justice, mar- ginalized castes have risen to challenge existing policies and demand an equal share in state resources.

I found that the success rate for the implementation of the reservation policy for the benefit of the lowest castes was significantly low. The distribution has been uneven among the targeted groups. Moreover, the results of my fieldwork revealed that most people tried to hide their caste. However, a number of them also affirmed their devotion in order to obtain the benefits of welfare schemes and protect their rights by challenging the judicial system through Public Interest Lit- igations (PIL). This paradoxical response explains why caste identity has become more positive and assertive, which has led to the politics of difference in contem- porary India.

SUZUKI, MIKAKO* (Keio University, mikako0308@gmail.com)

The State of Neoliberalism Criticisms in Japan: Why the Discussion on Cosmopolitanism Does Not Gain Steam in Japan

As economic globalisation progresses, a wave of neoliberalism is sweeping across the world, demanding states and societies to render a variety of modifi- cations. Such a phenomenon has been analysed, described, and criticised exten-sively worldwide. Japan is no exception; criticisms toward neoliberalism are said to be forming a major trend in Japan.

However, such critiques are slightly different from those toward neoliberalism in other parts of the world. Worldwide criticisms toward neoliberalism often lead to discussions on global transformation and cosmopolitanism, whereas such a connection is almost never made in Japan. For example, David Harvey, the author who dissects neoliberalism in his worldwide bestseller A Brief History of Neo- liberalism, expresses in Cosmopolitanism and the Geographies of Freedom published in 2005 his empathy with De Sousa Santos’ (2005) idea of ‘subaltern cosmopolit-anism’ – Harvey finds hope in the movement to form a cosmopolitan solidarity by amplifying the voices of the victims of neoliberalist globalisation that exists worldwide. Urich Beck (2006) also criticises the trend, stating that state politics are reduced when the state neoliberalistically prioritises adaptation to global market competitions; he argues that becoming cosmopolitan is the realistic fu-ture for states.

As seen from the above, a global trend is seen in the inclination to progress from criticising neoliberalism to promoting a cosmopolitan transformation. How- ever, neoliberalism criticisms in Japan rarely lead to the discussion of cosmopo-litan transformation. One of the reasons for such a difference is that neoliberalism criticisms in Japan are rarely discussed solely in a global context because they have historically evolved as arguments of inequality which often focus on chang-es in the socioeconomic structure in Japan. Therefore, this report will provide an overview of neoliberalism criticisms in Japan, describe their characteristics, and explain why the criticisms have strong national characteristics without having been placed in the context of cosmopolitanism.

The Formation Process for Civil Society in Northeast Thailand: From the Social Research of Two Villages

This paper on village civil society (prachakhom) as the basis for the emergence of civil society and development in Thailand’s northeastern region is the result of the social research supported by Grant-in-Aid for Scientific Research by the Min-istry of Education, Culture, Sports, Science and Technology(MEXT) of Japan from 2005 - 2007 and 2008 - 2010.

In the twenty-first century, the discussion of the idea of civil society (pra- chasangkhom) and people’s participation began to develop in Thailand. In many forums, Thai scholars proposed a range of ideas and opinions that directly link development with civil society. Furthermore, there has been various research on the development and possibilities for shaping the civil society movement.

This paper aims to discuss the development of civil society in the northeastern region of Thailand.

The Effects on Self-Consciousness of Junior High School Students in Japan Depending on the Fact That They Have Boyfriend/Girlfriend or Not

The purpose of this study is to make clear the significance of a boyfriend or girlfriend for junior high school students in Japan. For this purpose, I firstly inves- tigated the determining factors of having a boyfriend/girlfriend, and then clarified the factual truth that one has a boyfriend/girlfriend on their self-conscious-ness. As a result of this analysis, I got following two findings. First, there are vari- ous factors which determine whether junior high school students have a boy- friend/girlfriend or not, and the factors differ according to each student’s gender. Furthermore, the levels of academic accomplishment of the school also make a difference. Second, when I analyze the effects of that fact on their self-conscious-ness, it is necessary to consider not only the very thing that one has a boyfriend/ girlfriend or not, but also if she or he is likely to have a boyfriend/girlfriend. This analysis suggests that a success in love for girls in junior high has a more complex meaning compared with that for boys.

Divorce Studies in America and Japan

This paper aims to suggest ‘Good Divorce’ comparing divorce studies in America with divorce studies in Japan. The divorce rate in the United States has continued rising since the end of World War II, and one out of every two marriages ended in divorce. The divorce rate in Japan has continued rising as well as the United States. Consequently, people are almost caught up with the “divorce society.” In this paper, we will introduce divorce studies and works developed in America since 1980s and in Japan since 1990s. First, we will discuss the history of divorce studies in America and Japan. ‘Nuclear family’ advocated by Talcott Parsons is certainly universal, but not absolute at all. Second, introducing the discussions in “The Good Divorce” and “We’re Still Family” by Constance Ahrons, we will describe divorces in America. On behalf of ‘nuclear family, it is found how the concept called ‘binuclear family’ became to come up. Third, introducing Atsuko Okano’s various discussions on divorces, we will describe divorces in Japan. About divorce circumstances of America and Japan, some common points and differences will become clear. Finally, through both divorce studies, we will suggest what should be done to be ‘good divorce’. ‘Good divorce’ means to “keep your family together when your marriage comes apart.” We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

Sociological Theory after September 11, 2001 and March 11, 2011

This paper aims to rethink theoretical foundations in sociology comparing American sociology after September 11, 2001 with Japanese sociology after March 11, 2011. Although some ‘empirical’ sociologists in America described and analyzed attacks by terrorists on September 11, 2001 and American society after 911, almost ‘theoretical’ sociologists kept silence. However, Jeffrey Alexander, a leading American theoretical and cultural sociologist, has interpreted sociological theory and American society of and after ‘911’ from a post-Parsian point of view. On the other hand, although some ‘empirical’ sociologists in Japan have described Japan Now after the Japan earthquake and Tsunami on March 11, 2011, almost ‘theoretical’ sociologists within the Parsonian and Post-Parsonian tradition in Japan have kept silence.

In this paper, I will suggest that theoretical foundations for the sociology after 911 and 311 should be established on Jeffrey Alexander’s theoretical logic, cultural sociology, and civil society. First, I will discuss that new sociological theorizing including the utilization of 911 and 311 should be multidimensionally reconstructed on the metathorizing by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Munch. Second, I will argue that new solidarities could be founded on cultural sociology and civil society advocated by Jeffrey Alexander keeping a philosophical foundation of multidimensional sociological theorizing. Finally, it will present what should be done to reconstruct Japanese sociology multidimensionally after March 11, 2011.

Constructing Identities Across Borders: Case of the Istrin-Italian Diaspora in Trieste

In the last two decades, the accelerating speed of globalization has challenged the modern notion of state borders. Rather than the fixed line of a sovereign state, state borders are viewed as a dynamic interplay between territorial organizations and local societies. On this basis, people living in borderlands have new resources and opportunities to construct or safeguard their identities. This study examines the construction of a “We” consciousness by the Istrin-Italian diaspora, who suffered from national conflicts and mass exile after World War II, and emigrated from their native homeland Istria (formally Yugoslav-Italian diaspora, who suffered from national conflicts and mass exile after World War II) to settle in Trieste, a border city in Italy close to the Slovene and Croatian borders. The research analyzes the identity construction of this diaspora by specifically using the case of national celebrations when cross-border interaction collides with national manifestation. Our data is based on fieldwork conducted in Trieste on the procedure of how commemorative events are organized by local authorities and emigrants. The co-occurrence network of words derived from the text data reveals ‘shared concerns and the social networks in the SNS.’

Visualization of SNS Communications Concerning Radiation Risk from the Fukushima Daiichi Power Plant

In this presentation, I visualize people’s communications on a Social Networking Service (SNS) concerning the risks of radioactive pollution stemming from the Fukushima Daiichi power plant accident. The data consists of the communication log from a regional SNS that was launched by the residents of Iwaki City, Fukushima Prefecture, after the accident. It contains text from diaries and comments written by the SNS members and information about who made comments to whom. The co-occurrence network of words derived from the text data reveals the members’ concerns about radiation risks. Comment relations are expressed as a form of social network that shows the structure of the human relationships on the SNS. The co-occurrence network of comments on the SNS can be integrated and analyzed concurrently to show the development and interaction of the members’ concerns and the social networks in the SNS.

The SNS members expressed various concerns, including radiation measurement, influence on health, food safety, and so on. Based on their concerns, they created sub-communities in the comments: e.g. “conscious organisms” to “technical artifacts,” or even to “organisms being merely alive” as their experiment progresses (Linde-
Japanese way of honoring the animals killed for scientific research has been known for “offering a ceremony” for dead animals (Kuyoo). This paper pays attention to not only to the ceremony but also everyday caring practice in the laboratory. Therefore, I discuss how scientists and technicians affectively commit to experimental animals. Inspired by Science Studies scholar Casper Bruun Jensen and the sociologist Anders Blok (Jensen and Blok 2013), who developed Actor Network Theory through Japanese techno-aminism, I explore new dimensions of contemporary Japanese techno science.
Interconnected 21st Century and the Decline of Traditional National Security System

Traditional national security system has been definitely one of the crucial pillars for Western statecraft paradigm since Westphalia Peace agreement in 1648. Especially in last two centuries the main task of sovereign state was how to protect own citizens and territory from foreign (military) threats with strategic concepts like deterrence and retaliation are. It was very clear the national power was based on physical and natural resources, industrial production as well military capabilities. The national state was practically the only reputable actor in international relations for many scholars like Fukuyama this historic development was ended with the end of Cold War, I think the crucial revolution began with modern information and communication technology already mid of former century. Consequently till the end of millennium we got interconnected society with borderless, lightly regulated and largely anonymous online environment which has been rising to new strategic domain. At the same time security as a concept was changed by possible interconnection and new non-state actors like individuals, corporations, (cyber) terrorists, organized crime and autonomous actors appeared as important international players. That makes traditional national-based security system incapable to prevent all security incidents occurring in cyber as well physical space. In spite of the merits of measures to protect society against new kinds of security threats, national security policy makers therefore have to accept a certain level of vulnerability and redirect their focus to recovery and resilience, the ability to restore a state of normalcy after disruption. The primary security objective is effectively mitigating the impact and quickly restoring the original situation. For that purpose traditional very rigid national security should be redesigned into more flexible crisis management and knowledge integrating system with capability to collect all societal skills and potential convenient for ensuring security in interconnected semi-transparent world.

Contractual Gift-Giving As a Functional Hybrid: The Case of Gift-For-Sex Exchanges in Russia

Ideal typical forms of capitalism (‘cold’ profit orientations) and gift-giving (the ‘pure gift’) can be found to illustrate the crucial aspects we assign to these concepts. Yet these two concepts blend together extensively, especially in practices of instrumental gift-giving. In particular, ‘contractual gift-giving’ is a particularly ‘pure’ hybrid form of exchange, as it is more formalized, and thus more rationalized and more to the point of risk equals or no risk equals gift exchange. Strong evidence of this hybrid practice can be found within compensated dating practices.

Using the case of contractual gift-for-sex exchanges in Russia, the empirical basis of this paper is a rich body of recently collected (2010-12) data, including online content analysis of dating websites and discussion fora, face to face interviews, and a quantitative survey. Multi-method results demonstrate that the two sides of the contractual gift hybrid exchange form interact so that both maintain key aspects of their conceptual purity, yet in a way that allows translation between them. In particular, the gift form is unique in its ability to bring symbolic relationships (such as love and romance) into market exchange as commodities through involving them in contracts. While the ‘purity’ (altruism) of such gifts is indeed removed/unveiled through their availability on the marketplace of ‘sponsorship’ and compensated dating, the gift nonetheless maintains its valence of care, generalizing and universal love for practitioners. The features of this contractual gift form are analyzed in the context of the post-socialist economic transformation in Russia, focusing especially on the subjective incorporation of market logics for ensuring security in interconnected semi-transparent world.

The Loneliness of Many? Investigating the Roots of Urban Russian Loneliness

Much early sociological work on cities has focused and the connection between city life and urban estrangement. A host of modern maladies are proposed to have higher concentrations within cities: to include alienation, anomie, and the ‘blasé’ attitude. As a result of these and shifting forms of social cohesion in urban spaces, we should also expect to find a higher prevalence of loneliness within urban environments. Cross-country data analyses (the ESS) shows loneliness rates to be much higher in Eastern than in Western Europe. Russia is therefore an ideal place to investigate loneliness.

Using Russian WVS data from 2012 on the question of loneliness, I attempt to find the mechanisms through which the urban loneliness effect occurs by also controlling for other relevant factors, such as social engagement, alienation, and values such as individualism/collectivism. In particular, I am interested in the way that individualist values mediate loneliness, either by catalyzing or mitigating its effect, and I expect that this mediation effect is different in cities, with ‘urban values,’ compared to rural areas. I compare four samples: one metropolitan (Moscow), one city (Tambov), a non-urban sample (Russians living in settlements of 100,000 or less), and Tatarstan (city and non-city). Results confirm several important hypotheses. Notably, nearly all loneliness effects in cities are mediated by individualism, collectivism, in stark contrast to loneliness in non-urban areas. In particular, I find that individualists in Moscow are more lonely if they have children, likely because family isolates them from the types of ties they would prefer (with friends, associations, and wider networks). For collectivists, this effect is reversed. Likewise, collectivists in a smaller city (Tambov) are more lonely if they are involved in more civic organizations, likely because this involvement is compensating for a lack of the ties they idealize (family).

Locating the Media Discourse of Climate Change Policy Network in India 2007-2010

This paper explains the framing of climate change in Indian newspapers. With its economic growth, India has become a major contributor of greenhouse gas emissions and has a major role to play in any global cooperation to reduce emissions. Yet India's rhetoric and concerns about climate change differ from other developing and developed countries. India is the world's largest democracy, but it has a weak state that lacks levers of control over its society and economy. Consequently, the distinct framing that India's newspapers give to climate change concerns, not the need for new government policies, but the need to convince and mobilize civil society.

Trust Me If you Can: Trust As Strategic Tool for Decision Making to Deal with Ignorance and Uncertainty in Contaminated Sites of Germany and India

In this paper we will investigate the role of trust in decision making process under ignorance and uncertainty. Classical approaches to risk analysis are based on statistical calculations dependent on hitherto known variables. This research suggests that knowledge for risk calculation is limited then the decision making of experts as well as lay persons are dependent on their individual and intuitionist trust. Based on newly emerging sociological theories of ignorance, this paper involves two field studies: redevelopment of contaminated sites in Germany and mitigation of groundwater arsenic contamination in India. Interestingly, in both the cases knowledge of underground processes is limited. Processes of cleaning-up in Germany usually are confronted with contaminations that had not been identified in investigation activities. Unexpected surprises by the actors are often taken as normality. In the Eastern Indian region, concentration of arsenic in groundwater increases due to geological processes in succession of a decreasing groundwater level, caused by human activities. So, today's clean water may be poisonous by arsenic tomorrow. This creates a situation of ambiguity and confusion. Stakeholders (from policy makers to local inhabitants) have to take various pertinent decisions based on trust in individual, group or system. From the existing sociological literature the paper explores various dimensions of trust involved in decision making for both experts and non-experts.

Physical Activity and Quality of Life Among Chinese Cancer Survivors

Cancer is the leading cause of death among Asian American populations in the United States (CDC, 2013). Asian Americans are actually reported to have lower cancer deaths compared to non-Hispanic Whites. Consequently, more Asian Americans will survive cancer diagnosis and live a longer life after treatment. It has been shown that physical activity at modest intensity can significantly im-
prove the side effects of cancer treatment, quality of life among cancer patients, and breast cancer mortality. Although research on exercise has grown in quantity and quality (i.e., moreRCTs) during last decade, most available studies recruited primarily Caucasian samples and were based on smaller sample sizes (Pekmez & Demark-Wahnefried, 2011). Thus, these findings are not able to be generalized to non-Caucasian subgroups, such as AAAs. Furthermore, exercise patterns vary with different cultural traditions. Intervention strategies such as aerobic exercises, resistance training, and Yoga which have demonstrated positive impacts might not be applicable to AA cancer survivors because most Asians will be more inclined to use Tai Chi or Yoga for their exercise routine. Thus, more research is needed to study the unique cancer experience of various racial/ethnic groups.

This paper examines the linkage between physical activity and quality of life among Chinese American cancer patients and survivors. It is hypothesized that more physically active cancer patients and survivors are reported to have higher quality of life (QoL). Data, collected from self-report surveys of 55 Chinese cancer patients and survivors. In addition to basic demographic characteristics, weight status, medical history, two standardized scales are used to measure quality of life (SF-36) and physical activity (CHAMPS). Currently, we are conducting the data analysis and a manuscript based on the results of the data analysis that will be completed in the spring of 2014.

SWIDER, SARAH* (Wayne State University, sswider@gmail.com)

Constructing Asia: An Emerging Model of Migrant Labor Exportation

This article explores how global forces are reshaping the form of labor migration in the region. China has become an important influence reshaping the Asian region through increased foreign direct investment (FDI) in public construction projects such as roads, railways, and ports. As Chinese companies expand operations overseas they often bring their own workforce, exporting hundreds of thousands of Chinese migrant workers. These workers migrate under the umbrella of Chinese multinational companies and represent a fast-growing form of labor export migration called “project contract migration.” This expansion of project contract migration represents an important form of temporary migrant worker programs which are generally governed by either labor brokers and/or bi-lateral agreements among states, and are characterized by receiving countries only accepting immigrants under “strict functional and temporal limits” (Castles, 2004: 23). In contrast, China’s emerging labor export model is an example of multinational corporation-led migration with a new twist. Historically, multinational corporation-led migration has taken the form of high-skilled professionals being relocated from developed nations into developing countries (Findlay, 1990; Stahl, 1991) while China’s multinational companies are exporting both high and low skilled workers.

According to China’s Ministry of Commerce the number of Chinese workers sent abroad has risen from about 2,000 in 1979 to around 6.5 million in 2013. Roughly 812,000 of these overseas Chinese workers are now employed by Chinese companies in the form of project contract workers, and if we include illegal or undocumented migrants, these numbers would double. This article focuses understanding why Chinese multinationals are importing their own laborers instead of using local labor. I argue that this emerging model of labor exportation creates a kind of extraterritoriality that allows Chinese multinationals to evade national and international regulations designed to protect worker and migrant rights and increasing worker control.

SWIDER, SARAH* (Wayne State University, sswider@gmail.com)

Engaging the State: Informal Worker Protests in China

In China, the rise of precarious and informal work is closely linked to the processes of migration and urbanization. There are roughly 150-200 million migrant workers, representing between 15-17 percent of the total Chinese population (Chen 2010). By 2009, sixty percent of all urban employment in China was informal (Huang 2009); most of this is precarious work and a majority of these jobs are filled by migrants. Formal work is performed outside the purview of the state, and it is labeled precarious because these jobs do not provide employment stability, are low-wage and lack social protection.

This paper explores informal worker protests in China. I look at two different groups of informal workers; construction workers and street vendors and find that the salient issues for each group are different. The most salient issue for informal construction workers is non-payment of wages and among street vendors it is the unfair treatment by local urban para-police called chengguan. I explore these two issues and the resulting protests by analyzing the ways that their relationships with the state, the organization of their work, and different integration into urban spaces shape their organizing and protests efforts. I detail the major characteristics of these protests and argue that that these informal workers (and their protests) represent more of a threat to the government and the Communist Party’s goals of stability and harmony than do protests by formal workers.

The Developmental Hierarchy Cultural Schema

In everyday conversation, popular media, and scholarly work, terms like the “Third World” or “developing countries” are often contrasted with the “First World” and “developed countries.” This cultural schema of a developmental hierarchy of societies. How prevalent has this schema been throughout history? Drawing from cognitive anthropology, I argue that in general the terms people use are indicative of specific cultural schemas. This is especially the case with terms that refer to societies’ position on a developmental hierarchy, such as “developed versus “developing countries); or “advanced” versus “primitive societies,” etc.). Using the Google Books N-gram Database, I analyze the usage of over 80 such terms by year, measuring their relative frequencies in all books written in English from 1700-2008. I then combine this quantitative analysis with historical data and other work, constructing a narrative historical of the developmental hierarchy cultural schema over the last three hundred years. The terminology of the developmental hierarchy has been prominent throughout the time period examined, though it has experienced significant changes. During the eighteenth century, developmental hierarchy terms gained popularity as the ideas of social evolutionism expanded. Notions of sovereignty and capability eventually challenged social evolutionary ideas in the beginning of the twentieth century, leading to their demise. In their wake, modernization theory quickly became prominent, bringing a new set of developmental hierarchy terms, institutionalized by the founding of various international organizations in the mid-twentieth century, modernization theory reproduced the developmental hierarchy cultural schema by shifting the object of development from societies and peoples to that of the nation-state. The developmental hierarchy cultural schema has exercised considerable power in organizing the way people classify societies.

SYKORA, LUDEK* (Charles University, sykora@natur.cuni.cz)

From Chicago to Los Angeles: Western Concepts and the Study of Post-Socialist Cities

Post-socialist countries have been omitted from debates on global urbanization. However, the insights gained from the study of their dramatic transformations can provide important suggestions for the international urban studies. The paper first introduces the key features of post-socialist urban transformations placing them within the context of contemporary global urbanism. The paper specifically discusses the development of cities, which developed during periods with different political regimes and socio-economic conditions. Their urban landscapes reflect multiplicity of socioeconomic logics and are characterized with a high level of socio-spatial hybridity. The western models that assume relatively stable relations between the principles of urban development and selecting socio-spatial patterns are not capable to capture the nature of cities in radical transformations. The paper then discusses the relevance of “western” concepts for the study of post-socialist cities. It is framed within the paradigmatic evolution from Chicago to Los Angeles schools of urban studies. The paper argues for the recognition of a multifaceted mix of urban logics and urban structures intertwined within urban landscapes of transforming cities. Relating long term development paths and contemporary path-shaping practices, paper documents that concepts from both schools are relevant for the understanding of post-socialist cities. Finally, despite the present urban landscapes of post-socialist cities can be seen as different from cities in other world regions, there are striking similarities. The paper argues that despite historic and cultural specificities in local contexts, contemporary urban development is conditioned by the universalistic driving forces of urbanization embedded in a globally spreading capitalism. The hybrid coexistence of different socio-spatial landscapes can thus be only temporary as the most dynamically developing urban areas related to global capitalism gradually displace the original urban patterns. The theories and concepts developed in the social context of capitalism thus have high relevance for contemporary global urbanism.

SYLVESTER, KATE* (Victoria University, katherine.sylvester@live.vu.edu.au)

Gambatte ikō: Negotiating Identity and Belonging at a Japanese University Women’s Kendo Club

This paper draws on an 18-month ethnography at a Japanese university women’s kendo club and examines the concept of seishin (spirit), and how it is embodied through the process of doing one’s best for the group. Gambatte ikō (Let’s do our best together) expresses the personal commitment to endure hardship in order to achieve a group goal. The strengthening of seishin can be attained through enduring physical, mental and emotional hardship alongside others, where the hardships are embedded in the club’s demanding training, work obligations, and hierarchical relationships. As such, seishin training takes place on all levels, in a variety of situations, encouraging the holistic development of club members. Seishin development can be goal of membership and its embodiment can be advantageous as it promises to equip members with the resilience necessary to fulfill their gendered roles as capable, exemplar models of society. Arguably, for female club members developing significant relationships takes precedence over the development of seishin. In time significant relationships with other members became my reason for being and the primary source of motivation to engage in seishin training.

SYMKOVYCH, ANTON* (National University of Kyiv-Mohyla, a.symphyc@gmail.com)

Safety in the ‘House of Certainty’: The Question of Violence in a Ukrainian Prison

Prisons are potentially volatile places. This paper draws on ethnographic research in a medium-security men’s training prison to discuss the nature of a relatively low level of physical violence in a Ukrainian prison despite the low staff-to-prisoner ratio. It attributes this phenomenon primarily to the informal structure of prisoner society, and the central role of its illicit normative code of prison life. I explore how the legitimacy deficit of the Ukrainian State and its legal system, together with often anachronistic and unreal official prison rules and limited staff presence render the unofficial prisoners’ behavioural code the guarantor of the peaceful co-habitation. I demonstrate that despite discriminat- ing against certain prisoners and instigating mutual and self-surveillance, these informal arrangements were deemed by most prisoners more just and legitimate than the official ones. Whilst this informal structure was inescapable and entailed harsh punishments for violations, it, to some degree, controlled and limited arbitrariness and established a ‘house of certainty’ (Foucault, 1975). Furthermore, I argue that despite the official antagonistic stare towards the ‘inmate code’, prison authorities heavily depended on the prisoner-controlled informal structure to both keep the prison orderly and safe and maintain uninterrupted industrial production. I then discuss the implications of the recent and current changes in Ukrainian society and prisoner profile to the maintenance of safety and order in national prisons. I posit that the intricate power-balance present in the prison has relevance beyond Ukraine because it represents a microcosm of the interaction between powerful legitimate and illegitimate interests, where the vested interest of both is profit (industry) and order (status quo).

SZAFLASKI, MAGDALENA* (University of Alabama at Birmingham, szaflam@uab.edu)

HIV Stigma in U.S. Faith Communities

Stigma remains a significant barrier to HIV prevention/treatment in African American communities. Religious congregations, especially black churches, have been called to address HIV stigma. Social forces such as religion may create reinforcing stigmatized conditions that predispose individuals to HIV infection and limit their ability to access HIV testing and treatment. However, scientific evidence examining the concept of HIV stigma and its effects in religious communities is limited. Our work is guided by the concept of stigma as “a social and cultural phenomenon linked to actions of whole groups of people.” This approach emphasizes the need to examine social structures and processes and enable communities to move from individual-level perceptions to collectively identify and act upon negative stereotypes and discrimination against the stigmatized. Our multi-method study examines HIV-stigma in faith communities from the perspectives of congregations, community members, and people living with HIV. We collected and analyzed data from interviews with faith leaders representing a theologically diverse sample of congregations; interviews with HIV-infected individuals; and, town-hall meeting generated ideas about faith-based strategies to address HIV. We used predictive modeling of factors linked to welcoming/alienating attitudes on the part of congregations, as well as content analysis and concept mapping to qualitatively assess the concept and extent of HIV stigma present in faith communities. In congregations, stigma was often attached to the perception of individual risk of infection. Homosexual orientations were most stigmatized, followed by injection drug use, heterosexual relations, and mother-to-child/healthcare-related situation. Some HIV-infected individuals reported feeling alienated in congregations because of stigma/discrimination. Finally, community stakeholders identified reducing stigma as the most important strategy to address HIV in their faith community; however, the feasibility of this strategy was questioned. In the analysis, we triangulate/discuss the findings to explore the concept of stigma, its consequences, and potential stigma-reduction strategies in faith-based settings.

SZAFLASKI, MAGDALENA* (University of Alabama at Birmingham, szaflam@uab.edu)

CUBBINS, LISA (Battelle Memorial Institute)

Nativity, Religiosity, and Mental Health in the United States
Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using a representative sample of U.S. adults. Dysthymia was assessed per DSM-IV criteria. Religious activity was a scale based on how often respondents attended religious services, how important were religious or spiritual beliefs to respondents, and how many members of their religious group they saw socially at least every two weeks. Acculturative stress, stress, sociodemographic and other factors were also assessed. Prevalence and 3-year incidence of dysthymia were modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments: higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood) of developing dysthymia over time in the total sample. Further analyses will address the differences in the effect of religiosity between the foreign-born and the US-native populations and discuss the findings in the light of acculturative stress and religious coping perspectives. Public health implications will also be addressed.

What Shapes Attitudes Towards Fertility Treatments in Present Day Europe?

The issue of medical treatment of fertility has social relevance today for most of the European societies which are characterized by very low levels of fertility, and an increasing number of people not having children at all. Biotechnology makes parenthood available for those who used to be excluded from that earlier (medical problems, single women and same sex couples).

The aim of this research is to examine the attitudes of European society on in-vitro fertilization: Do they think that it is a stigma to become a parent without sexual intercourse or do they consider it as a possibility to help people to experience parenthood. The previous studies have already indicated that respondents' gender, age, educational level and religious background determined whether they supported 'fertility treatments': women, younger people, those with higher educational level and non-religious background tended to be more supportive than others (Kailasam 2001, Scheneker 2005). This research would exceed that earlier studies by focusing on how traditional gender roles, family beliefs and attitudes towards homosexuality can influence the acceptance of fertility treatments. The paper also seeks to answer the practical question whether the institutionalisation level of assisted reproductive technologies can affect the social acceptance of fertility treatments in Europe.

Our data come from the last wave (2008) of the European Value Study (EVS). The EVS provides insights into the ideas, beliefs, preferences, attitudes, values and opinions of citizens all over Europe by applying standardized questionnaires. In the fourth wave of EVS an artificial reproduction-related variable was introduced, which we chose as our dependent variable, measuring the acceptance level of the artificial insemination or in-vitro fertilization. As both individual and country level factors are taken into account the most appropriate statistical technique to be used are multilevel techniques.

SZWAIT, TADEUSZ* (University of Warsaw, szawie@uw.edu.pl)

Far-Right Voter: The Efficiency of Social Bases As a Discriminating Factor in Voting for Far-Right Parties

The paper will address two problems: the social characteristics of voters who identify themselves as “far-right”, and secondly what are the additional factors which are conducive to identifying with, and voting for either radical (far-) right parties or mainstream right (or conservative) parties. Beginning with H. Kitchell’s (1997) and H. Norris (2003) seminal works we know that social bases, i.e. changes in social structure and economy are not sufficient conditions for the appearance and stability of radical right parties. Kitchell and Norris identified the party system and the electoral rules as two decisive factors for far-right parties’ electoral successes. However it is argued that the conductive factor is “convergence of moderately left and right parties toward a median voter* and Norris emphasizes the role of institutional context (e.g. electoral rules). It will be shown, using the left-right self-placement scale as a measure of far-right identities, how far-right voters distribute their votes among political parties and what are the social and ideological factors which discriminate against mainstream right parties, apart from the type of party system and broader institutional context. The analysis will be based on recent ESS surveys and a more detailed analysis of the Polish case based on general election studies.

SZCZEPAKIOVA, ALICE* (Université Libre de Bruxelles, alice.szczepekiova@gmail.com)

Young Chechen Refugees in Europe: The Role of Gender and Religion

The presentation focuses on two intertwined factors that shape immigrant incorporation in today's Europe: religion and gender. It draws on an empirical study of young refugee women from Chechnya (Russian Federation) residing in Germany, Austria, Poland and Belgium. It aims to explain the relationship between women’s religious identities and gender practices while considering the significance of their pre-migration childhood experiences of life in a war-torn society and refugees' living conditions in the receiving societies. The study examines two topics, which have dominated debates about incorporation of Muslim immigrants and their children in European societies: 1) new forms of religiosity among Muslim immigrants, and 2) transformations of women's roles in immigrant families and communities. It focuses on Muslim immigrants from Eastern Europe who have received little scholarly attention as opposed to communities originating from Maghreb or Turkey. That is despite having gained a considerable presence in Europe since the early 2000s. Russian citizens, most of them from Chechnya, have been among the most numerous groups of asylum seekers in Poland, Austria and Belgium for almost a decade now. The numbers of Chechens applying for asylum in Germany in 2012 and 2013 have also risen sharply. The data collected in Germany, Austria, and Poland reveal remarkable intergenerational differences in adaptation strategies of Chechen women. A significant number of young women in these countries are adopting more conservative gender practices and embracing new religious identities that are perceived as alien by the women of the older generation. The study in Belgium examines the validity of these findings in a different institutional environment. Compared to the other three countries, Belgium offers recognized refugees an easier access to citizenship and provides more inclusive educational environment for young immigrants.

Satisfaction of Former Employees of the Swiss Armed Forces with Their New Work Situation

Two years after the latest reform of 2004 in the Swiss Armed Forces (SAF) a higher number of resignations by the professional members was registered. A qualitative and a quantitative study were conducted to analyze the current turnover situation. The present contribution focuses on the qualitative data of 77 former employees and describes the present work situation of them. The majority of former employees of the armed forces works in the federal or cantonal administration, one third is employed in the private sector. Most of them are successful in their jobs, have managerial positions with more than two subordinates and they did not need further education for their present jobs. The former employees are significantly more satisfied in their new positions, have lower levels of resignation, have more autonomy, are more satisfied with their compensation and perceive more job alternatives available to them than the currently employed military professionals of the SAF. Their attitude towards work is more oriented towards work-life-balance as most of them believe that every employee should have an opportunity to work part-time. In all, the data suggests that a military education is attractive on the civil labor market, but that it could be difficult for the SAF to win back former employees.

SZYMANSKA, AGNIESZKA* (Adam Mickiewicz University, agnieszka.szymanska@vp.pl)

Art Against Racism. Works By Santiago Sierra As a Voice Against Racism

In my paper I would like to present an artist who is socially engaged and whose works refers to very important social issue – exploitation of workers and cheap work force. Santiago Sierra, born in 1966 in Madrid, is the best known contemporary Spanish artist, who lives and works in Mexico City. Main topics of his works are: critic of capitalism, underpaid labourer completing menial tasks and immigration. It is said that he get involved in social engaged art when he realised how little money get Mexican workers for performing gruelling work. His social background also has a big influence on his work, because he comes from a working-class family.

In my presentation I will discuss some of Santiago Sierra works, which can be understood as statement about (or rather against) racism. As we consider racism as invention of modernism we can also see some direct link between racism and capitalism, cheap labour force and illegal immigrants. We can also easily match those factors: being subjected by racism is often connected with being illegal immigrant who delivers low paid menial work. Furthermore, as we can learn from Loic Wacquant that racism has always been a convenient excuse to justify exploitation of some groups of people. Almost every economic system needs some resources to exploit to exist. Especially capitalism. In capitalism racism has its economic function: it lowers cost of production and stabilizes hierarchy. Similar functions also have illegal immigrants, who are necessary in the system, because capitalism still needs people to complete menial tasks for small salaries. Employing illegal immigrant for lower wages may be justified by racism – they are no us, they are foreigners, they not equal to us.

SZYMANSKA, AGNIESZKA* (Adam Mickiewicz University, agnieszka.szymanska@vp.pl)

Concept of Artistic Brand As a Tool for Analysing Art World

Social construction of artistic reputation and artistic success have been an important issues in sociological research from many years now. In my paper I am going to present the idea of artistic brand as a tool for analysing art world and construction of artistic career – mainly the careers of contemporary visual artists.

Artistic brand can be a person (artist, gallery owner, collector, curator, critic) or an institution (gallery, museum, art fair). The most important criterion for distinguishing the artistic brand from non-branded artist or institution is its recognition by the representatives of the various spheres of social life. I separate three spheres of social life in which artistic brands can be present: art world, media and ordinary social life. In every of those three spheres could exists different artistic brands, which are also constructed and sustained in different ways.

Phenomena that have recently occurred in the art world (development of conceptual art, separating the artist from the art work, the lack of clear criteria for evaluation works of art, professionalization of the art market) made that artistic brand have gain an importance in the art world. Artistic brand simplify the complexity of the art world, improve the decision making process, add value to the art world product. Artistic brand is a guarantee of quality, a mean of communication with customers and agents. Brand is also a tool of negotiating rules in the artistic field, a tool for building hierarchy in the art world and a tool for building artistic field autonomy towards other fields.

As the exemplification of my conception of artistic brand I am going to present the outline of my research project concerning the in-depth analysis of the presence of artistic brand (contemporary visual artists and institutions dealing with contemporary art) in Poland.
The Conditions for Sustainability. Complexity, Social Learning and Integrated Climate Governance in a Warming World

This paper introduces the concept of the ‘Conditions for Sustainability’ and reviews some of the main conceptual approaches dealing with the relationships between complexity, social learning and global environmental change. The aim is to produce fresh theoretical insights and to outline an operational synthesis to better understand the types of interactions, ways of knowing, and required feedbacks that influence the production of socio-ecological complexity and affect our structural conditions and learning capacities to cope with accelerating global change. Social learning is understood as the only possible means to overcome current cultural constraints for a rapid societal transformation, and to provide the kinds of fair and quality of life development pathways that may allow humanity a dignified way out of the present unsustainability predicament.

In particular, my approach uses an ecological sociology perspective based on a further operationalisation of the SEIC conceptual model (Tábbara & Pahl-Wostl, 2008) and focuses on the case of the integrated governance of climate change. From a non-dualistic standpoint, I look at the agents’ interactions and social-ecological systems dynamics in complexity production and their implications for social learning and transformation. Such analysis is carried out in a relational mode within and between the following social-ecological components and systems: 1. Structures, rules and institutions (S) 2. Energy and resources (E) 3. Information and knowledge (I) and 4. Cumulated socio-ecological change (C). It is argued that such a framework can provide a more robust theoretical understanding of the required conditions for a global sustainability transformation and support Integrated Climate Governance (ICG) policies and options.

Hijab Blogs As Explorative Media-Based Spaces of Social Recognition

Hijab blogs as explorative media-based spaces of social recognition as studies have shown, women with headscarves are faced with discrimination and prejudice in their everyday lives. This becomes clear in professional settings and when job hunting in particular, as the Senate Administration for Integration and the Anti-Discrimination Office in Berlin have demonstrated. (Senatsverwal- tung für Integration, Arbeit und Soziales (Hrsg.), Mit Kopftuch außen vor? Berlin, 2008). Some explanatory approaches in the literature trace this back to a strong stereotyping in the media. Veiled women are thus perceived as less attractive, less intelligent and less educated, as suggested in the study by Yusur Mahmud and Viren Swami. (Mahmud Yusr/Swami, Viren (2010), The influence of the hijab (Islamic head-cover) on perceptions of women’s attractiveness and intelligence, in: Body Image, p. 30-93).

In Western culture in particular, the hijab is seen as a symbol of traditionalism, a lack of individuality (uniformity) and religious fundamentalism. On this basis, my study deals with “hijab-style” blogs as areas of recognition/ areas of exploration. In these platforms, recognition is realised strongly via technical-media and aesthetic exploration. Using selected examples of “Islamic blogs”, which young Muslim women use as a platform to present and document “Islam stylings”, the meaning of such media platforms for aesthetic and social recognition is examined. As part of this, the presentation focuses in particular on the role of body/ dress/image for the constituting of ‘the self’ as aesthetic configurations of social visibility.

Renegotiating the Definition of GMOs: Stakeholders’ Viewpoints on “New Breeding Techniques”

We are witnessing development of various new breeding techniques which cannot be regarded simply as genetically modified. For example, genome editing techniques, such as ZFN and TALEN, are techniques which delete some sequences of DNA without leaving any trace of the gene modification. In this case it is very difficult to identify whether this modification is made in an artificial way or just naturally occurred. As of the techniques called as reverse breeding, novel genes are inserted to induce certain genomic transformation at an initial stage, but the novel genes are removed from the final product (null segregant). Here it is open question whether the final product should be regarded as GM or non-GM. These techniques are actively being developed by venture business companies and universities. If the products created using these techniques are regarded as non-GM by regulatory agencies, seed companies, such as in the area of vegetable and flower, would willingly adopt these techniques to develop new varieties. In contrast, once their products is categorized as transgenic, regulatory cost and financial burden would be large and give a great incentive for small and medium scale seed companies. Many countries now start to think over this question and re-negotiation has started regarding what should be regarded as GM, and therefore should be under regulatory oversight.

In this paper I would like to analyze how various actors, such as government, industry, producer organization, are proposing the way in which these NBTs need to be managed based on their own reasoning. Semi-structured interviews to various stakeholders are analyzed to find what is determining factors behind their views on these NBTs. In short, I would like to show how boundary work on the definition of GMOs is being done again through negotiation among various stakeholders.

Language As a Zombie Category of Sociological Theory

The aim of this presentation is to discuss how sociological theories have dealt with language.

Many theories in sociology regard language as the most fundamental institution of social life. These theories suggest that the same language is shared intersubjectively by people, which in turn enables them to understand subjective meanings. This idea has become a marker trend since the 1960s in relation to Max Weber's interpretation of language, and is found, for instance, in Peter Berger and Thomas Luckmann's phenomenological sociology, Harold Garfinkel's ethnography, and Jürgen Habermas's theory of communicative action.

However, Weber himself, who lived during the formative period of the German nation-state, had consciously avoided the hypostatization of speech community linked to his view on the rational calculability. The idea of an intersubjectively shared language cannot be axiomatic, because intersubjectivity, as pointed out by Niklas Luhmann, is incompatible with subjectivity. Even when the same language is shared by people, the language of the majority that creates a macro-association amongst people is based on its standardization by a nation-state. A linguistic sociology that presupposes the sharing of language is possible only in the assumption of a "nation-society" by methodological nationalism. Hence, it is debatable whether a nationally constructed language can be given the status of a natural language of the life-world. Historically, the theoretical idea of sharing a language was in prevalence during the cold war period, when nation-states were relatively stable. In sociological theories, language is one of the zombie categories that carry the residue of such "nation-societies."

Complexity and Simplification. a Framework for the Analysis of the Visual Representation and Constitution of Suffering

Since the evolving global interest in them, children are constituted as especially vulnerable group. Based on an analysis of visual representations of children in flagship reports of International Organisations, I propose a framework for theorising and analysing the visual constitution and representation of suffering in two forms.

The first form of images of suffering is based on visual media such as photography and paintings, which represent specific individual and collective cases in aesthetic and documentary logics. A second form of representing suffering is based on numerical data and indicators and takes the form of lists (e.g. statistical tables with country-specific data in alphabetical order), rank-ordered lists (e.g. the Under-5-Mortality-Ranking), and graphical forms (e.g. world maps). Especially this second form deserves closer attention and theorisation, as it not only integrates numerical and graphical elements but moreover two distinct logics: simplification and complexity in transforming social phenomena into data and data into images representing social phenomena. I will discuss firstly the line of complexity running from simple listings to positioning to visually transforming data; and secondly, the line of simplification by which all three forms transform the complexity of social phenomena into visual clarity; a process in which diverging interpretations are hidden behind the visual representation, and ambiguity and interpretative openness is transformed into graphical decidedness.

I will conclude by linking the visual analysis back to semantic representations, as images of suffering are embedded in discursive frames through which their meaning is shaped, enacted, and specified. I will present the change of discursive frames with regard to the constitution of children from objects of humanitarian action to bearers of human rights, to human capital, and human potential; and the consequences of these shifts in meaning for the representation of suffering in visual forms.

Westernization or Hybridization? Restructuring Japanese Hegemonic Masculinity in Globalization

During the economic growth period, a form of masculinity attained a hegemonic position in global society. This is, salaryman. The Japanese can easily build up a mental image of a typical salaryman as, a man who works for the same company for life, being protected by career-long employment and a seniority system, and throws himself into the role of the breadwinner leaving domestic duties to his wife. Until the 1990s, majority of Japanese people approved the idea of gender division of household labor and Japan's economic conditions at the time could afford to provide a large part of people with such lifestyles. Hence, male-domin-
Perhaps the most undetermined influence on the latest generation of Canadians is the impact of technology on Millennials' intellect and interaction. While some scholars advocate for increased integration of technology into personnel training and communication, others warn against the potential for the dissemination of privileged CF information. This tension is not easily allayed by statistical evidence on Millennials' use of technology either: studies reveal that Millennials are nearly as likely to abuse technology as they are to use it effectively. Like other epochal transformations, the advance of technology is ineluctable. The Canadian Forces must prepare for the integration of a generation who has fully integrated modern technology into their day-to-day operations. Not only has technology re-shaped the methods that Millennials use to execute tasks and communicate, but it has profoundly reshaped their cognitive abilities, their expectations of experience and their access to information. The trouble arises when the ambitions of the programs exceed the awareness of the users; prompting crises in privacy and security. This review examines available literature on Millennials' use of technology to disaggregate the implications of integrating the so-called digital natives into the Canadian Forces. It looks to highlight promising areas where technology can alleviate challenges in organization and communication, and suggests areas where technology poses a threat to privacy and security.

The Meaning of Urban River Pollution and Sense of Place: An Ethnographic Study of the Klang River, Malaysia

This paper is based on a PhD research, which investigates values, beliefs and practices associated with two polluted rivers in urban settings – the Klang River in Kuala Lumpur, Malaysia, and the Torrens River, South Australia. However, this paper focuses on the findings from the Klang River ethnographic data. Theoretically, the concept of place is central to this paper. Findings suggest that in the urban setting where rivers have increasingly been polluted and modified, and as a consequence whose water is not suitable for direct contact, the visual faculty plays a prominent role in determining the state of the river. From the perspective of everyday users, what constitutes pollution depends significantly on what can and what cannot be seen with naked eyes. In particular, objects (such as rubbish) interacting with river water, the colour and texture of water, the dead or abundant of aquatic species in the river are some of the common visual experiences described by the locals as indicative of pollution. What emerges is that local people have a broad conceptualization of river pollution. The values of a healthy river for local people also the physical environment surrounding it. Specifically, the concrete grey walls and straightening of the Klang River for flood mitigation schemes and transportation routes were viewed by the local people as a form of pollution. They expressed a deep concern regarding the physical transformation and modifications of the surrounding riverscape from ‘natural’ to ‘unnatural’, which consequently affect their visual experiences and overall sense of place. In conclusion, the concept of place is central to this paper. It is a useful means to understand and analyse the manner in which people comprehend environmental degradation and more specifically river pollution.

Betting with the Enemy: Changes in Sports’ Attitude Towards Sports Betting

Match-fixing in sport has emerged as a serious and widespread global problem. However, international sports organisations have tended to adopt an ambivalent approach towards the issue. One the one hand, they deal sternly with match-fixing itself as seen in their common ‘zero-tolerance’ policy. On the other hand, the sports betting industry that brings about match-fixing has now been accepted as a reliable business partner. These conflicting approaches to match-fixing and sports betting industry frame match-fixing as a matter of individuals’ morality and ethics, instead of structural aspects that drive individual players to becoming involved in match-fixing. Interestingly, this dramatic shift in sports organisations’ attitude from vigilance to trust towards the sports betting industry appears to have been driven by monetary motivations. As FIFA President Sepp Blatter putting the industry ‘in the ‘lucky box’ because “there is a lot of money in the game”. This presentation briefly discusses various measures that international sports organisations are currently adopting to tackle sports betting along with the limitations of these measures. While in the early 19th century the football association in England struggled to protect their sport and players from dangers of the betting industry, this presentation raises a question whether today international sports organisations try to protect their business partners including licensed bookmakers from non-partners such as players in danger.

On the Function of “Symbolic Media” in the Process of Functional Differentiation

It is one of the most important contributions which Niklas Luhmann has made toward the thesis of functionally differentiated society to indicate the roles of “symbolic media” in concrete temporal events of congerent change. Medium/Form-distinction is the theoretical device introduced by Luhmann for the purpose of analysis of Form-functioning in autopoietic and information processing systems (including meaning-processing communicative ones). In short, it is necessary for meaning-processing systems in general, communication systems in particular, because they constitute any appropriate distinction between Medium and Form and symbolize objects in the environment as Forms through Medium to operate and observe them.

We focus on this distinction of Medium/Form. This presentation shows how Forms in Luhmann’s terms, which mean distinctions with asymmetry between the inside and the outside, are used symbolically as symbols in the self-reproduction of the communication in which they are adopted. And we deal with “health as symbolic media” for an instance so as to elucidate the significance of this theoretical device for empirical researches. In concrete terms, we will take up a case study about care work for people with physical disabilities in Japan in order to scrutinize the validity and the applicability of the thesis of functional differentiation in Luhmann’s theory. It shall be confirmed that various kinds of Forms employed as symbols are so connected with “health as symbolic media” as to allow the emergence and the self-reproduction of the functionally specific communication of care work.

A Shortage of Medical Doctors Due to Uneven-Distribution in Location and Specialty Needs Interprofessional Collaborative Practice in Health and Social Care in Japan

A shortage of medical doctors has been pointed out in last 20 years in Japan, but it has been more apparent after 2009, when two more years of a new compulsory clinical training added, after six years of medical education and successfully passed the medical licensure examination in Japan. A number of practising doctors per 1,000 population in 2009 was as follows: Norway 4.0, Germany 3.6, OECD 3.1, UK 2.7, USA 2.4, Japan 2.2, Turkey 1.6 and Chile 1.0. The highest number per 100,000 was 286.2 in Kyoto and the lowest 142.6 in Saitama, in 2009. Causes of the shortage in Japan were as follows: advancement of medical science, specialization of health and social care professionals, increase to participate in private practice, increase of woman doctors, longer time to talk with patients, change of patients’ consciousness to right, concentration of doctors to cities, decrease of practicing doctors in pediatrics, and obstetrics.

Meanwhile, average life expectancy has extended as follows: 1921-1925: m 42.06, f 43.20; 1947: m 50.06, f 53.96; 1960: m 63.32, f 70.16 and 2012: m 79.94, f 86.41 (years).
Various needs of elderly people in health and social care could not be solved by a single profession, such as medical doctors. Many symptoms in health care occurred in the elderly, such as senile dementia, metabolic syndrome, hemiplegia, dysphagia, fragility fracture and dysuria, could be better treated by a team of professionals. Health care outcome such as average and/or healthy life expectancies may not be always correlated with a number of doctors.

In order to improve QOL of service users, a paradigm shift is needed in strengthening competencies of health and social care professionals for interprofessional collaborative practice, to develop a comprehensive health care network for a community, consisting of three community-based powers on health care, welfare and education.

Women's Reversion-to-Japan Movement in Okinawa

This paper considers women's reversion-to-Japan Movement in Okinawa in the era of U.S. military occupation from 1945 to 1972. The fact that women supported that "all Okinawa movement" with the number of mobilization is seldom known. In Okinawa, the movement towards the peace and after the battlefield, how tackled the movement, and how lived after the reversion? Are there experiences, the feature, and a meaning unique to women? I think the viewpoint of gender is indispensable to consider overall structures of the movement and the community in Okinawa, although it has not been paid enough attention.

For that purpose, I have conducted document analyses and interviews about female teachers. I paid attention to relations between the United States, Japan, and Okinawa, and also to those between men and women.

Rise of Renewed Mobilization Strategies Beyond Imperialism in the NGO World

Conventional paradigm in the arena of international development has been challenged along with the growth of civil society in the third world. In the pre-dominant model, the balance of power among non-governmental organizations (NGOs) is typically prescribed by traditional North-South relations. Northern entities, which possess an abundant supply of resources, hold hegemony over their southern counterparts in the decision-making processes. Even in the NGO world where people strive to ensure social equity and political equality across borders, the formation of hierarchy has been justified under the name of aid assistance. In other words, the legacy of colonial imperialism still persists due to continuing influences of international NGOs in the Global North. However, a recent phenomenon has substantially proved that southern NGOs attempt to overcome such a subordinate socio-political positioning, becoming an alternative node of mobilizing financial as well as human resources. In addition, those emerging organizations are getting further eager to develop their global operations, which contribute to opening up a renewed horizon of south-south cooperation at the grassroots level. This tendency indicates that what is called as international NGOs is no longer defined simply by geopolitical conditions in the history. In order to strengthen fiscal foundations toward global expansion, NGOs in developing countries are required to seek methods different from traditional ones: raising the amounts of donations/grants. To name, innovative schemes pursued by these NGOs are fostering and utilizing social entrepreneurs to increase operation profits through program implementation. Based on an empirical research of NGOs in the Asia-Pacific region, this study investigates resource mobilization strategies of southern NGOs aiming for transnationalization and indentify ongoing structural shifts that would undermine the assumption of North-South relations.

Despite that work family balance (WFB) has been addressed as an important policy issue in Japan for over a decade, Japanese employees, especially those with children, appear to have more difficulty in reconciling work and family life compared to their counterparts in advanced European welfare states. In fact, there seems to be in Japan a wide agency and capabilities gap between policies and practices, and between entitlements and a sense of entitlement to make claims for WFB. From our empirical study of working parents in Japan, we have witnessed that barriers in workplace organization and the socially endorsed working time regimes have made it difficult for the vast majority of workers, especially men with small children, to exercise their rights for WFB (Takahashi et al. Forthcoming).

Based upon the above finding, we turn to Japanese employees working in EU countries where WFB is considered to have been better achieved. The main aim of this study is to explore whether these men's perceptions and attitudes towards WFB have been transformed by living and working in a different country, viz, a context constituted by a different social system, work environment, organizational culture, and the like.

Face-to-face interviews with Japanese men with children under 13 years old, mainly working for Japanese enterprises in Netherlands (13 persons), Germany (13 persons) and Sweden (10 persons) were held in August-September 2013. The preliminary analysis shows that the different social institutional settings seem to have enhanced their WFB; the majority of the interviewees report that they have more time to spend with their family and with themselves than they did in Japan.

Re-Discovering Children As Social Actor in Conflicting Close Relationships in Contemporary Japan

This research aims to explore possibilities of children to be re-discovered as social actor particularly in advert circumstances caused by conflicting family relationships. The Japanese family law as part of Civil Code has recently been modified, and since April 2012 post-divorce life of children has also been influenced by this family law reform. Even though contact to child by non-resident parent is regarded as one of the children's rights, children's wishes and will are not always sufficiently considered when the question is a high conflict case so that family court is asked to make a decision either by judge's decision or court mediation. Bearing in mind such court practice in Japan, it will be studied how children have been recognized in Japanese legal debate by analyzing relevant research literature. This legal aspect on child will further be analyzed through contrast to discourse on childhood among Japanese sociologists of childhood. The second part of this paper will address the discrepancy between normative views and realities of gender equality concerning parental responsibilities for child rearing in contemporary Japan. In a sense, family policy in Japan holds strong tension between promotion of gender equality and recognition of children as social actor - rather than passive object under parental authority. It would be argued that children as social actor need urgently be re-discovered in order to improve safety of children's life and development regardless of their relationship with parents.

Social Quality in Cross-Cultural Media and Public Debates: Implications for Public Policy for Social Empowerment

This research begins a discussion by examining distinctive features with Japanese discourse on quality of life addressed by decision-makers of public policy. It will be questioned how the media and public debates have addressed the safety and quality of life in post-3.11 Japan. The main focus of this research is on various ways of manifesting citizens’ well-being, including freedom from violence in private life, as a point of start of social empowerment. In the post 3.11 world it seems more important to take into consideration the intersectionality of various factors concerning social quality, whenever we attempt to seek proper public policy response for nurturing social empowerment. It will be studied which social indicators have been referred to and/or ignored by Japanese media, and in which manners non-Japanese media has been approaching the issues on well-being. In domestic debates Japanese media and governments tend to be selective with data sources and indicators, excluding substantial among of information on those risks and issues such as radiation risks, well-being of vulnerable citizens as well as transparency in decision-making, i.e. governance risk. In brief, this research will ultimately attempt to enhance our understanding on scientific relevance of comparative studies of social quality and empowerment.

Peter Singer and the "Why be Moral" Problem

The aim of this presentation is to point out the fatal flaw in Peter Singer’s thinking by analyzing his discussion about the “Why be moral” problem. Peter Singer is one of the most influential ethicists today. He studies theoretical ethics and also engages in social practices in order to address moral issues like animal rights, bioethics, environment problems, etc. The “Why be moral” problem has been one of the topics he is passionate about since his master’s thesis. “Why be moral?” has two meanings: “Why should we be moral?” and “Why should I be moral?” The former means, “Why do societies need moralities?” The latter means, “If societies need moralities, why should I accept them?” This problem is connected with the discussions about civil societies because it also asks us whether civil societies are necessary.

Ethicists submit some valid answers to the former question but no ethicists have submitted answers to the latter. Peter Singer tries to answer the latter. In his opinion, the ethical life is better than the unethical life because ethical people can realize the consistent meaning of their life but unethical people can’t. In other words, ethical people are happier than unethical people. So we, individuals, should be moral. This answer is invalid. For example, there are people who are satisfied with being egotistic. Therefore he fails to solve the problem. This is the fatal flaw in his argument.

Some say trying to solve the “Why be moral” problem is nonsense, worthless or useless. In fact, even though we don’t solve the problem, we can do many social practices. Nevertheless, solving it is important for Singer because his opinion is too radical to accept for ordinary people. That Singer doesn’t solve the problem becomes an excuse for people not to act morally.

Increased Involvement of the Disabled in Welfare Policymaking

There is increasing emphasis on participation by disabled people themselves in the process of formulating policies for the disabled, both in Japan and abroad. One of the most recent examples of this trend took place in Japan; in 2010 the government set up the “Committee for Disability Policy Reform”, forming it in such a way that more than half of the members were directly concerned with the issue (people with disabilities and/or their family members), to discuss reformation of policies for the disabled, and to develop dialogue and cooperation with them.

The aim of this report is to identify the conditions for successful advocacy that promotes the participation of disabled people in the field of welfare policymaking. I will review and compare the advocacy of organizations consisting of disabled people in reference to Esping-Andersen’s welfare regime typology. The discussion covers the organizations’ history, fundraising strategies, ways of participating in the policymaking process, relationship to the government, as well as their role and influence.

My research results are as follows; disability organizations are actively participating in policymaking both in the Scandinavian countries, classified into the social-democratic regime, and in the United States, the liberal regime. However, there is a difference between the two cooperative relationships with the government: in Scandinavia, welfare policymaking is carried out with strong support from the government, and thus always runs smoothly. In the United States, on the other hand, it is often carried out amid a tense relationship with the federal or state government, and because of this, there are cases in which it is not smooth. I will add analyses of Japanese cases classified into the conservative regime, and examine the universal conditions and problems requiring distinctive solutions that can be found through the participation of the disabled in every country.

Vulnerability of Functional Systems in Societal Transformation: On the Case of Political System

Populist political movements indicate the weakening of formal political processes. Today’s advanced information society provides influential channels to get popularity and political momentum. The theory of functional differentiation predicates the autonomy and unity of each functional system. But, through mass media and the internet, populists can stimulate a societal emotion and mobilize it. We can observe, at least in Japan, a bifurcation of two political processes. On the one hand, there are formal and traditional political processes. Various interest groups support political parties as their representatives (or agents) in the political arena which adjust their interests. On the other hand, there is an arena of political communication in which various political groups are contesting to get societal resonance. Now, political system becomes increasingly vulnerable (or sensitive) to opinions in this second arena. This arena of political communication could bring a risk (e.g. of political extremism). But, it could also bring a chance (e.g. to achieve an ambitious consensus on social reform for sustainable society). One way or another, we can describe this situation from the point of view of social systems theory. Niklas Luhmann defined a resonance of social system as a reaction of social system to its environment in accordance with its structure. I will slightly redefine the concept of resonance to describe a societal resonance. That is, a resonance of social system is a reactive reproduction of communication in accordance with its structure (e.g. of gauzu). So, we may regard agendas in the second arena as societal structures which categorize societal resonances (communications). And, the problem is how societal communications affect trajectories of functional systems. The case of politics will be suggestive for this problem.
Policy makers such as European Commission, UK, and Japan are now interested in happiness as a policy tool. Happiness is normally measured by a likert scale. The comparison of happiness scale needs common understanding of happiness. However, happiness distribution can be classified into three types: normal, skewed and twin-peak. For example, the distributions in Japan and Hungary are twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply question about ideal happiness. Some may refer to 100% happiness, but the other may refer to 50% happiness and 50% unhappiness.

Quantitative survey was conducted in Japan, Thailand and Philippines. It included questions about their current happiness on a 0-10 scale and ideal happiness. Adjusted by ideal happiness, the distribution was skewed distribution similar to Nordic countries. The survey's result confirmed that distribution of happiness embodied the difference of ideal happiness.

Others' Happiness: New Evidence from Four Asian Countries

If individual pursuit of happiness forced others' happiness to lower, happiness would not be a good concept to evaluate the progress of a society. We can call the society a "selfish happiness society". However, if happiness is more interpersonal, the balance between pursuit of individual happiness and other person's happiness may make society lead good direction. In particular, we now face many issues related to sustainability. Balance between economy, society, and environment and balance between current generation and future generations are keys for our survival. We can call the society a "social happiness society". Thus, the concept of "social happiness" is much more important in our society. However, effect of a person's perception about her own happiness and others' happiness on her happiness is clear. Therefore, it is worthwhile for us to explore if a person who takes care of or pays attention to others' happiness is happier. I analyzed the relationship by using a survey in Japan and confirmed that other person's happiness makes us happy (Takahashi, 2012).

Similar to the survey in Japan, surveys conducted in Thailand and Philippines in 2013 included questions about general happiness and interpersonal happiness. Using these dataset, the author can test this interrelationship between individual happiness and other person's happiness.

Even after controlling other important factors such as age, income, job and marital status, persons who reported that those around her were happy and she made those who were most important to her happy are happier than others. From the result, the author can conclude that other person's happiness makes us happy at least in Asian countries.

Identifying and Reducing The Anti-Japanese Prejudice By Koreans In Job Hiring Decisions

We investigated the level of prejudice that contemporary Koreans hold toward contemporary Japanese because of the Japanese military's victimization of Koreans during the Korean War and social psychological mechanisms that might alleviate the negative feelings and attitudes held by the contemporary Koreans toward the contemporary Japanese. The Korean participants were asked to evaluate a pseudo-job candidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of the candidate were manipulated to see if these manipulations would affect the participants' responses. Based on theories of intergroup conflict, social identity, and the collective guilt assignment, we hypothesized that: 1) the Korean participants would endorse the Japanese candidate more when he is portrayed as a trilingual (speak Japanese, English, and Korean) than when he is portrayed as a bilingual (speak only Japanese and English) and 2) the more collective guilt the Korean participants assign to the Japanese candidate, the more negatively the candidate would be perceived in terms of his personality, which would result in less endorsement to hire the candidate. The results confirmed the hypotheses. Possible implications and suggestions for future studies are discussed.

TAKALA, MERVI* (Finnish Centre for Pensions, mervi.takala@etk.fi)

Loss of a Spouse As a Poverty Risk

The death of a spouse is one of the most stressful changes in one's life. Spouse's death increases the morbidity as well as mortality of widows and widowers. The explanation is the lack of social support because the family is generally regarded as a primary source of support. One important aspect is also what happens to the income after the death of a family breadwinner. All these three factors - physical, psycho-social and financial - have a substantial impact in widows and widowers wellbeing.

In Finland after the death of a family breadwinner the income of the surviving family members consists of widow's and orphan's pension. The initial pension and the basic amount of the orphan's pension paid from the national pension scheme are paid regardless of income. The survivors' pension paid from the earnings-related pension scheme comprises the surviving spouse's pension and the orphan's pension. A child of the deceased will receive an orphan's pension until the age of 18. The survivor's pension act came into force in 1967 in earnings related pension system and in national pension in 1969. Both were reformed last in 1999.

In this study we use register data of statutory pensions. Roughly 282,000 people were paid survivors' pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men's share of the pensions is 17 percent. Most of the surviving spouse's pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 per cent live under poverty line whereas of all pensioners under poverty line live 22 per cent. Right after spousal loss the income in family decreases about 20 per cent compared to pre-loss income.

Social Networks and Conjugal Interaction in Japanese Expatriate Families

International assignment of Japanese businessmen has been expanding in corporate career management system most during the 1980s by reason of the rapidly-expanding economy in Japan. That career management system was only for men's status position until the Equal Employment Opportunity Law in 1999. Therefore from back then there are the norms of the expatriate housewife as caretaker of the family, not only she provides a comfortable home environment so that husband can concentrate on his job, but also entertains the corporate clients at Japanese style party.

The characteristic of Expatriate Family is the family who transferred abroad by assignment of the company, that is their social networks change radically every few years. Thus in the new and cross-culture land, the foreign conjugal have no choice but to rely on spouse each other.

In Japanese Expatriate Family research, much attention has paid on gender perspective and wives' career development, even though there are few studies focusing on conjugal interaction. This research investigates how expatriate conjugal forms social networks in overseas focusing their relationship, cognition of belonging to the corporation and family resource effects.

A questionnaire survey was conducted in advance to expatriate housewives, based on which semi-structured interviews were conducted. The data used to a case-code matrix through constant comparison.

This study found that Japanese Expatriate Housewives experience three phases as the process of the friendship network formation. At the first phase, wives need husband's company tie to adjust new-life, and from the second phase to third phase, wives share their partner with the association which creates themselves networks.

In the presentation, I will report the interviews data which carry out the expatriate couples every 3 to 4 months.

A Comparative Study of the Effects of English Language Proficiency on Wages in Japan and France

The purpose of this study is to compare the effects of English language proficiency on wages in Japan and France. Many Japanese women have been learning English in the hope of finding jobs which require communicating in English. Such women have abandoned the idea of careers with Japanese firms, where women are entrusted only with jobs that carry little esteem. These women also have strong affinity for Western culture. However, to date, there have been few jobs requiring the use of English in Japanese society and their dreams have remained unfulfilled.

However, given the strong impact of globalization, the value of English proficiency in the market place is changing. English has now become an important common language for global communication. Does this mean that these women are now prized in the market place?

I examined data from Japan and expanded it with data from France, a Western nation where women are employed in highly esteemed jobs, using a 2010 Internet survey conducted by Doshisha University, Japan, and a 2012 French survey. The results show that English proficiency of women was not related to wages in France but positively affected wages in Japan. The high value placed on English language proficiency has been helpful in raising women's wages in Japan; however, the results also suggest that women have been unable to take full advantage of the English language proficiency that they possess.

**Association As a Tool or As a Principle?: The Reception and Usage of the Concept of the Association in Postwar Japanese Modernization Theory**

How the association could be legitimized was a key question for French Sociology, because the French Revolution prohibited not only old corporations but also new voluntary associations in order to establish a Modern Society. For some sociologists, "Association" was theorized as an alternative to market society, for some legal scholars, the state was defined as a contract of association, in order to submit State Power to Civil Society's control. In either case, the basic principle of association was the union of different peoples to accomplish their common purpose.

Comparing the French case, this paper focuses on the place of the association in Japanese Modernization Theory. This theory stressed the liberation of individuals from traditional ties, rather than Civil Society’s independence from the State.

In particular, a specific foreign temporary worker program, known as the Live-In Caregiver Program (LCP), are females from the Philippines. Furthermore, the LCP grants these female workers uncovers the social process of inclusion and exclusion of migrant workers through examining everyday experience of Filipina live-in caregivers in Canada.

With the rapid growth of the Tagalog (Filipino) speaking population, recent demographic changes have affected the pattern of global female migration and the subsequent arrival of these women’s family members. In particular, a specific foreign temporary worker program, known as the Live-In Caregiver Program or LCP, explains the current population growth of this visible minority. More than 80 percent of the migrant workers registered under the LCP are females from the Philippines. Furthermore, the LCP grants these female migrant workers the opportunity to apply for permanent residency and to bring their families to Canada after fulfilling a 24 months live-in working requirement. The LCP is the only temporary foreign worker program that has this legal pathway toward permanent residency in Canada.

This study aims to understand the social constraints on female migrant workers through examining everyday experience of Filipina live-in caregivers in Canada. The paper particularly focuses on the transitional legal pathway from temporary to permanent residency. The study of the transitional pathway of migrant workers uncovers the social process of inclusion and exclusion of migrant workers and their family members by states. Furthermore, this social process is highly gendered and racialized experience because vast majority of the applicants under the LCP are females from the Philippines.

TAKAO, MASAYUKI* (Tokyo University of Science, mt1212b@gmail.com)  

**The Nagano Olympics: Impacts on Local Community**

This study aims at demonstrating the impacts of Sport Mega-Events (SMEs). In Japan, some studies on environmental or fiscal impacts caused by SMEs have been studied. However, few studies address the concrete impacts in a specific area and local community, nor try to investigate the long-lasting effects.

In recent years, the International Olympic Committee (IOC) has attached a high value to ‘Olympic legacies’. However, there are two main concerns regarding the IOC’s Olympic legacies. First, these legacies are mostly based on positive effects for the host city/nation, the National Olympic Committee (NOC), other sport-related organizations, and for the IOC itself. Secondly, the ‘Olympic Games Global Impact’ project, launched by the IOC in order to improve the evaluation of the overall impacts is completed within 2 years of the event, and is much too soon to measure the legacy. This study argues that it is important to conduct research for a prolonged period of time in order to capture not only the positive aftermaths of actions but also to address negative aspects thereby ensuring a more complete understanding.

This study evaluates different aspects of SME impacts through a case study of Hakuba village (Japan) which hosted the Nagano Olympic Games in 1998, and the impact on the local community, the tangible/intangible; the positive/negative; and planned/unplanned impacts. Especially, the impacts on the tourism industry of Hakuba are discussed in detail. The analysis in this study is based on the questionnaires and interviews conducted with people from the community itself and on a variety of statistical data.

Making Irregular Migrants Vulnerable: A Tangle of Biopolitics and Morals in Japan

This paper examines the changes in the irregular migrants’ situation in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

Giorgio Agamben (1998) theorized that biopolitics, as a function of sovereignty, operates to define the included and the excluded, the latter of which is called “bare life.” Some studies regard irregular migrants who are legally excluded as living a contemporary “bare life.” However, other studies have criticized Agamben’s argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms beyond the labor shortage and Japan’s self-recognition as a major power at the time.

However, since around the turn of the century, reactions to irregular migrants have dramatically changed. Their presence has been linked to security issues, and they have come to be regarded as “criminals.” Immigration authorities collaborated with the police in launching a large-scale crackdown, which endangered the daily lives of irregular migrants. At the same time, however, the legalization of irregular migrants was promoted based on moral values. At present, sovereignty, connected with moral values, mainly defines the included and the excluded among irregular migrants.

Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

The Governance of Reproduction in Japan: How Can Reproduction Be Located within the Capitalist Economic System?

As Karl Polanyi pointed out, the reproduction of human-beings and society is external to the liberal capitalist economic system. At the same time, the multi-dimensional reproductive activities (biological reproduction, economic reproduction and socio-political reproduction) are vital to the maintenance and development of the capitalist economy. The dilemma posed by the contradictory relationship between reproduction and capitalist economy had long been dealt with by mobilizing families and local communities, officially or unofficially, within each national economy. States have often played a vital role in the institutionalization of the link between reproduction and capitalist economy by locating families/communities within the national economy, in other words, governing reproductive activities, as exemplified by the setting-up of the welfare state system. Economic restructuring influenced by neoliberal principles in recent years, however, has eroded the foundation on which families and local communities can function as a unit of reproduction. This setting can be seen in the case of Kurdish migrants from Turkey. As some scholars suggested, the Kurdish music production has been done mainly outside of the local community through different theoretical concepts and shed light on the political unity as Kurds, provided that musicians succeed in managing contact German institutions, and “proper” distance from Kurdish political parties.

Mobility, Diaspora & Contact Zones of Australians in Japan

TAKEDA, ATSUSHI* (Reitaku University, starallianceunited@gmail.com)

Niseko, Hokkaido, a famous ski resort, has become a popular ski destination for Australians since 2001. It is located in the northern part of Japan serving both domestic as well as international ski tourists. Among foreign travellers to Niseko, Australians are one of predominant groups of visitors. With the large number of Australian visitors, the area has been transformed into “Little Australia” where Australian pubs, shops and English signs are becoming elements of the city landscapes. This paper will consider this flow of Australians to Niseko and its impacts in the local community through different theoretical concepts and shed light on nature as well as significance of such community under nexus of Australia and Japan.

A Moment of Recognition and Unity in Diaspora: Multi-Spatial Formations of Kurdish Music in Germany

TAKEDA, AYUMI* (Hitotsubashi University, ayumi.takeda@gmail.com)

Immigration from developing countries to Europe is often experienced not only as a social downward mobility but also as a cultural deprivation. In the context of Turkish migrant in European countries, their musical activities have drawn attention as struggles in discrimination: effort for transmitting cultures to the next generation. However, other studies have criticized Agamben’s argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms beyond the labor shortage and Japan’s self-recognition as a major power at the time.

However, since around the turn of the century, reactions to irregular migrants have dramatically changed. Their presence has been linked to security issues, and they have come to be regarded as “criminals.” Immigration authorities collaborated with the police in launching a large-scale crackdown, which endangered the daily lives of irregular migrants. At the same time, however, the legalization of irregular migrants was promoted based on moral values. At present, sovereignty, connected with moral values, mainly defines the included and the excluded among irregular migrants.

Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

This paper examines how Kurdish musicians have utilized the opportunities in German host societies for their cultural production in the form of music. Based on interviews with musicians and one-year participant observations in regular music activities and events, I will show that such practices not only promote musical circulations among Kurds, but also could contribute to recognition as distinguished group from “Turkish migrants” in the host society, and eventually present symbolical unity as Kurds, provided that musicians succeed in managing contact German institutions, and “proper” distance from Kurdish political parties.

How to Tackle the Vacant-House Problem in Shrinking Cities: The Cases of Japanese Local Governments

Japanese society, with the progress of depopulation and rapid aging, is faced with the vacant-house problem in both urban and rural areas. It is being recognized that vacant houses are an urgent issue to be tackled by Japanese local governments. How to reduce risks associated with vacant houses (accidents caused by building collapse and risks in fire and crime) to promote residential population and local resilience. The purpose of this research is to clarify the characteristics of local governments’ actions against the vacant-house problem in urban areas into the following two types:

(1) Enforcement of “municipal regulations for controlling vacant houses”

In 2010, Japan’s first municipal regulation against vacant houses was enforced in a city of suburban area of Metropolitan Tokyo. This action was a response to an increase in the number of destroyed houses. More than 40 cities have enforced similar regulations since then, and the number is further increasing. This tendency is especially prominent in local governments facing severe economic conditions, suggesting that how to control vacant houses has been a potential and serious problem. Main actors are local governments and the house owners. More specifically, who bears the demolition costs of aging houses is the point.

(2) Management of “vacant-house banks”

It is a challenge to local governments to introduce vacant houses, which have not been valued in private housing markets, to public information networks to promote their effective use. There are various types in the management of “vacant-house banks” by local authorities. Diverse actors including NPO are involved in this type. Because renovation of vacant houses costs a large amount of money, those actors are seeking to form a partnership with each other and to explore effective methods. Generally, not only reducing vacant house-associated risks but increasing values of local resources is aimed.

Re-Urbanization and the Local Food Culture: The Case Study of Central Tokyo

This research focuses on the developing process of the local food culture in central Tokyo. Regeneration of the central district promoted to develop the local food street and a local food identity. The purpose of this research is to analyze how the urban regeneration deepened the local food culture.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This research area called ‘Tukishima’ is located in the water-front area adjacent to the urban center. The Water-front mega-projects in the 1990’s opened new large business/commercial district on the reclaimed island which attracts international and domestic tourists. The new subway lines were constructed through Tukishima, the number of tourists come to Tukishima increased. The traditional local shop owners in Tukishima changed their business, they opened special local food restaurants. This special local food called ‘Monja’ used to be a common afternoon snack for working-class children here. About 60 Monja restaurants make the distinctive street of local food. Many tourists come to eat it at lunch time. After lunch they go sightseeing and shopping at the water-front. Tukishima became a popular tourist spot. This is the first impact of urban regeneration on Tukishima.

The second impact of regeneration is the boom of building super high-rise condominium towers. Tukishima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Tukishima is gentrified, and new residents enjoy to eat Monja as a traditional local taste.

The third stage of regeneration is about to begin. Tokyo has been chosen to the host the 2020 Summer Olympic Games. The venue is very close to Tukishima, high-rise tower residential can be seen from their windows. The price of condominium goes up. Local food will be popular to visitors. The new era of Monja is about to start.

Challenges for Healthy Eating: A Cross-Cultural Study of Conceptions of Eating Among Young Adults in Urban Australia and Japan

In the early 21st century when bio-medical view on health and medicine dominates global discussion on “healthy eating”, most guidelines and recommendations are primarily concerned with fulfilling nutritional requirements and avoiding or limiting the intake of undesirable substances. They are motivated by the prevalence of chronic diseases such as cancer, cardiovascular diseases and obesity in modern society. Consequently, cultural ideologies around “healthy eating” are being constructed around these rationales. Beyond food intake, some studies and public health policies assert further that commensal eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

I argue that the bio-medical approach mentioned above is often individualistic and overlooks unique socio-cultural aspects of eating and living in a local community such as commensal eating, culinary culture, history, lifestyle, and food supply chain. I explore the construction of “healthy eating” among young adults in urban cities of Australia and Japan through 71 in-depth interviews conducted during 2012-2013. I examine holistic aspects of eating by including contextual aspects of commensal eating. I find that the majority of participants see commensal eating as a good cultural practice and may associate it with mental health benefits, but that this practice is not necessarily associated with the healthy intake of food (portion size, pace and food content). This is due to the fact that commensal eating is rather complex and sensitive to socio-cultural circumstances.

In conclusion, this study identifies dynamics of eating contexts in different cultures as challenges for healthy eating promotion in the modern society.

How Japanese Male Narratives Are Made up?

We have recently researched Japanese university students’ sexual lives for a few years and published as a book in Nov. 2011: “talking about sex with college students” by myself through interviews for gay students’ sexual reality at the research and described how much they suffer from their lives. After the book published, I used that as a textbook in some universities. Then I happened to meet some gay students. The more I collected their narratives as a gay, the more I questioned why they so suffered from their sexuality are. I noticed a paradox of the narratives as a gay or that of ‘gender identity narratives as a gay’, the more I questioned why they so suffered from their sexuality.

The traditional local shop owners in Tukishima changed their business, they opened special local food restaurants. This special local food called ‘Monja’ used to be a common afternoon snack for working-class children here. About 60 Monja restaurants made the distinctive street of local food. Many tourists come to eat it at lunch time. After lunch they go sightseeing and shopping at the water-front. Tukishima became a popular tourist spot. This is the first impact of urban regeneration on Tukishima.

The second impact of regeneration is the boom of building super high-rise condominium towers. Tukishima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Who Makes the Stories, Medical Professionals or Patients?

I am really interested in the arguments which should save patients more ‘narrative based medicine’ or ‘narratives in Medicine’? In my point of view, carers including medical professions should more focus on patients stories about their illness and life. When patients’ narratives are controlled by medical professionals, even if it had been for ‘medical treatments’, patients are controlled by others. That might means one's life is possibly controlled by medical stuffs which are strongly connected medical governance in their country. For instance, ones narratives about “How to die” or “how to give birth” should easily connected to economical point of view in one's country through the conversation with medical stuffs that should be carried out by local systematic medical standards. I may contribute to young session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illnesses in Hokkaido, Japan. Patient’s narratives are strongly controlled by medical stuff in Japan. This should be the result of ‘Narrative Medicine’ had been done in one’s own country. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self-help group. I will supply a small material for the argument who is to draw patient’s narratives.

The Great Recession and Unemployment Among Brazilian Immigrants in Japan

The economic recession which occurred during the period from 2007 to 2010 led to a massive growth in unemployment among workers in many countries. Conversely, it is important to note that the gap in unemployment between immigrants and native-born population differ markedly across nations. In particular, in Spain and Portugal, unemployment rates among the foreign-born increased much more than those among the native-born whereas in several other countries, there were few divergences between these two groups with respect to unemployment growth over time. This cross-national variation appears to depend on institutional arrangements of the labour market structure, industrial relations and employment policies.

Japanese labour market has been characterised by a higher level of employment security for regular workers. However, increasing global economic competition has forced the labour market to become more flexible and has thus led to rapid growth in the number of non-standard workers. During this period, immigrant workers who came from Asia and Latin America have been incorporated into the sector of non-standard employment. They can be easily dismissed during the time of economic slowdown because of their nature of employment contract. In fact, many immigrants became unemployed during the recent financial crisis.

This study focuses primarily on Brazilian immigrants in Japan because Brazilian workers represent typical cases of the precarity of employment status among immigrants in Japan. Approximately 80 per cent of Brazilian workers have been employed as temporary workers by temporary help agencies. Because of that, the growth of unemployment after economic crisis was considerably greater among Brazilian workers than among Japanese workers. This study addresses the question of how protection in one’s own country through the conversation with medical stuffs that should be carried out by local systematic medical standards. I may contribute to young session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illnesses in Hokkaido, Japan. Patient’s narratives are strongly controlled by medical stuff in Japan. This should be the result of ‘Narrative Medicine’ had been done in one’s own country. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self-help group. I will supply a small material for the argument who is to draw patient’s narratives.

This paper examines the intellectual biography of the Japanese-born sociologist Hiroshi Saito (1919-1983) by considering the dilemmas and impasses lived by him. Our goal is to explore the relationships between his personal trajectory and his academic work, mostly devoted to the subject of Japanese Immigration in Brazil. As well as the majority of Japanese people who emigrated to this country in the first half of the twentieth century, he worked as a farmer in the cotton fields at the State of São Paulo. In search of better opportunities, Saito moved to the capital taken up by the hands of the already well-known professor Donald Pierson, he became the first Japanese immigrant to build a successful academic career in Brazilian sociology. The analysis focuses on the strategies he developed and the political positions he defended between the 1940s and the 1950s in order to confront both the political repression of Brazilian State, on one hand, and the Japanese ultranationalist groups, on the other. Moreover, we seek to demonstrate that the author played a crucial role for the institutionalization of the studies on the Japanese immigrants in Brazilian social sciences, being himself one of the pioneer researchers on this subject.
Do the Small Firms Give Advantages to Female Employees?: Firm Size Effects on Taiwanese Women’s Career Choice

This study examines whether the difference of firm size influences job career of female workers using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. Well-known explanation for this is that the industrial structure composed of large number of small- and medium-sized enterprises (SMEs) and family business provide women with flexible working conditions. However, existing studies testing firm size effects on a woman’s career, have failed to reach a consistent result. To eliminate possible problems providing the inconsistencies, this study limit the objects of analysis to female employees with regular salary, excluding self-employed workers and workers of family business without payment. Also, previous studies usually treat job change and job turn over separately, but in this study those two actions are simultaneously analyzed in a discrete-time multinomial logit model. This study tests mainly two hypotheses: female workers in small sized firm are able to (1) enjoy flexible working conditions by negotiating with their employees and (2) accumulate better skills which are useful for a labor market than their counterparts in large firms are. Dependent variable is employment choice, which have 4 categories; “continue the same job,” “change job in SMEs firm,” “change job in large firm” and “leave from working”. Main independent variable is a dummy variable indicating working experience in SMEs and interaction terms SMEs dummy and event dummies standing for marriage and childbirth. The result indicates that women who have working experiences in SMEs are more likely to have uninterrupted working careers than those who have experiences in large-sized firms.

Food Regimes and Food Import Dependency: An Analysis of Jamaica’s Food Imports, 1950-2000

This paper uses food regime theory to analyze the changes in Jamaica’s food imports in order to explain how it became so heavily dependent on imported food. It argues that food regime theory has a bias toward production and food exports; it tends to focus on the drivers of the food regimes: First World states and transnational corporations, along with the New Agricultural Countries, the few developing countries that have become major players in the global food system (e.g., Brazil, South Africa, Thailand). To correct for this bias, we need to examine how small Third World countries are connected to the global food system through consumption and food imports. As food regimes evolve, their characteristic commodity complexes change. In turn, the types of foods imported by Third World countries also change. However, once a country becomes import dependent for a particular type of food commodity, it is very difficult to go back to self-sufficiency. Thus the evolution of food regimes creates a cumulative food import dependency for even more kinds of food. One element of food regime theory which does not focus on consumption and food imports into the Third World is the analysis of how the US PL480 “food aid” program changed Third World diets, undercut Third World agriculture, and created food import dependency. This paper expands on that analysis and uncovers additional mechanisms through which food regimes tend to create food import dependency in small Third World nations.

Remembering and Resilience after Traumatic Social Loss: A Multicultural Perspective

A challenging realm for Global Sociology is the cross-cultural thinking and processing of the experiences of collective remembering after mass social trauma and post-traumatic resilience across cultures and generations. In this presentation we will develop a theoretical and applied multi-cultural framework for working on the intersubjectivity of memory, with a focus on the unprocessed dimension of social experiences of traumatic loss, building on the latent, private, intimate individual and cultural aspects of experiences of collective memory and transmission. We will also work on the concept -building on Hallwachswian work of “undercurrents of memory,” incorporating the more recent concept of “moral injury,” a contemporary development out of the post-traumatic stress literature.

This line of grounded theoretical research, developed by collaborative efforts by the authors over the last decade, explores the underlying conflicts of the unresolved past as they are woven into the fabric of contemporary cultures, the effects of unprocessed experience lying in the undercurrents of collective memory, often excluded or absent from the public narratives of memory, but which paradoxically retain a profound intersubjective and cultural presence, until they finally push their way into the public realm. Social studies of collective memory need to include this realm of the unprocessed (latent but present) experiences and trajectories of the undercurrents of memory.

The authors will develop a joint conceptual approach to look at individual/community and cultural traumatic remembering, and the resilience of certain memories, over time. Applied research cases will include Southern Cone political authoritarianism, the Japanese American incarceration experience in the US as well as the Japanese memories of the 3.11. Great Tohoku Earthquake.

TALBURT, SUSAN* (Georgia State University, stalbur@gsu.edu)

Chilean Universities, Crisis Ordinariness, and Respatializing Knowledge

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years Gould proposed a groundbreaking theory of status hierarchy. Using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould’s model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players must pay in executing their attachment strategies. Here we extend Gould’s model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould’s model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. Our main result is to show what is called “the relationality of social status”. Specifically, we show that an individual’s status is entirely determined by the individual’s relative quality in the social system. This observation contrasts with that of Gould’s model in which an individual’s status is dyadically determined. Our model can be considered as a type of network formation model having broad applicability.
University competition for international excellence centers faculty research productivity (measured by indexed publications, research citations, etc.), global rankings, and international recognition. This presentation analyzes internationalization and research development in Chilean universities as a spatial reorientation of faculty work, knowledge, and subjectivity. Since Pinochet’s dictatorship, Chile’s neoliberalization intensified everyday competition in a free market and declining welfare state. Following the regime’s political repression, universities’ knowledge alignment with popular subjects changed to creating practical, neutral knowledge through technocrats. More recently, Chilean university policy older men conform to World Bank and OECD logics to increase research productivity and rankings. I theorize globalization as a “spatial rationality” that attributes causal powers to space to create efficiency, utility, and normative ideas of “the good” that catalyze particular actions and subjectivities. Rhetorics of globalization’s economic demands and commodification “nationalities” now shape the rationality of space for national, institutional, and individual well-being. Technologies of visualization (e.g., rankings) and cosmopolitanism incite faculty to compete as entrepreneurs, a spatial reorientation that secures theory, methods, and research networks of the Global North as norms for knowledge production for faculty from “peripheral nations.” I present themes from interviews with twenty faculty across fields at two top Chilean universities: (1) Faculty describe becoming self-managers, securing grants, publishing in ISI journals, and participating in international networks, creating new privileges and social capital. (2) Male faculty, especially, has become more likely to be described: research regulation through funding agency and journal standards, abandoning local projects of social change, and diminishing space to participate in national debates; (3) These constraints produce alternative knowledge projects, such as using grant funds to create digital platforms for public exchange or indexing long-existing Chilean journals to legitimize “expressions that expand our social imaginary.” This is not a simple narrative of research homogenization, domination, or resistance, but how crisis ordinaries create new spaces, subjectivities, and knowledges.

I Miss My Mum and Dad: Children’s Well-Being and Parents’ Job Migration In Estonia

Estonia is fastly developing country, which has experienced many societal and economic changes after regaining independence in 1991. Although there has been many positive developments, the global crises has influenced the lives of many people in Estonia. One of the most recent developments is a growing job migration out from Estonia. According to Statistics Estonia since 2010 the number of people leaving Estonia is more than the number of people arriving. In 2012 it has been doubled compared with previous years. Negative net migration together with negative reproduction rate has been the main indicator influencing drop in population of such a small country. Another tendency that is poorly studied is the well-being of children whose parents have gone abroad. In some cases they are left behind with one parent or if mother and father both leave, other relatives take care of the children. There have been also cases where children are left just by themselves without any proper care, in some cases just older children taking care of their younger siblings. Aim of the current study is to analyze social and psychological well-being (life satisfaction, personal well-being and relationships in school and at home) in group of children who are left behind by one or more parents and to compare the findings with control group – children who are living together with their parents in Estonia. For the analysis most recent data is used from the Jacob’s Foundation survey Children’s World (data collected in autumn 2013). Altogether 3000 children from Estonia are studied, covering the ages 8, 10 and 12, around which is the most vulnerable age in sense of psychological and social attachment and challenges of growing up.

The Gender Gap in STEM Majors: Evidence on the Gender Belief Hypothesis from Taiwan

Why are women underrepresented in science, technology, engineering, and math (STEM) fields in college and work? Drawing on an unprecedented range of survey data, we join a long tradition of work by, among others, Shauman (2003) rejected many common explanations (such as gender difference in math ability and the pipeline hypothesis) for the gender difference in college majors. Survey-based research has yet to explain much of the gender gap. Drawing on experimental studies, Ridgeway and Smith-Lovin (1999) develop a concept called cultural beliefs in gender (gender beliefs). Using survey data to corroborate the experimental results, Correll (2001) argues that gender beliefs result in biased math self-assessment (MSA) and MSA explains why females are underrepresented in quantitative majors. Yet, upon close scrutiny, her results actually show that MSA is at best a minor source of the gender gap. Interestingly, Cech (2011) shows that professional role confidence, as a form of gender beliefs, can explain the gender gap in persistence through engineering majors in college. This seems to indicate the causal importance of some gendered cultural and psychological mechanisms may well be at play.

This study re-examines whether gender beliefs can explain why more men choose the science track: senior high school and STEM majors in college. We draw on the core panel of the Taiwan Education Panel Survey (TEPS), a large and representative sample of first year junior high school students in 2001. In general, students’ gender beliefs early in high school explain a minor portion of the gender differences but parents’ gender beliefs when children were early in high school explain substantially more—about a half of the gender gaps. Taken together, the two beliefs explain most of the gender differences and the residual gender gaps become insignificant. For the first time, then, survey-based results can provide a simple and direct confirmation of the gender belief hypothesis.

Pregnancy: Supporting Networks and Families in Disaster

The aim of this research is to analyze pregnancy in its social contexts: privatization and familialism. In post-WWII Japan, pregnancy has become privatized as a family issue. The disaster in 1995 and 2011 revealed us that there was much limitation of supporting system in these social contexts. My research is based on data as follows: (1) statistics on pregnancy, (2) relevant laws, (3) articles in professional journals, and (4) 10 interviews of women who were pregnant in disaster. My presentation is as follows: (1) To review development of laws for pregnant women in disaster as well as in peacetime for these twenty years in Japan, (2) To show what happened to pregnant women and their families in disaster, (3) To figure out a chain of caring support and women’s power to change disaster into opportunities, (4) To point out further issues left to us, especially in Fukushima. In more concrete terms, I show invisibility of pregnant women in 1995, and then development of networks to support pregnant women and their families by the third sector since 2011. We can find a great deal of change in Eastern Japan Disaster in 2011, in comparison with Hanshin-Awaji Earthquake in 1995. The voices of women and babies in the disaster show us that disaster has become a turning point to support pregnancy beyond privatization and familialism. On the other hand, Fukushima remains as a harsh reality for families and mothers especially with babies. The facts tell us the way we construct families and supportive networking as well as their limitations after disaster.

When Are Interviews Good Enough? A Reflection on Threats to Retrospective Methods Posed By Automaticity and Performativity

Research on respondent performance in the research setting and on automaticity in human cognition directly challenge the validity of interviews. Interviews, however, efficiently produce what looks like rich, relevant data and they are particularly appealing when studying complex work in difficult to research environments. This paper looks for evidence of the practical relevance of performativity and automaticity in transcripts of interviews with civilian and military staff just returned from their rotations in a reconstruction mission in a (post?)conflict environment. Re-analysis of these interviews suggests that the validity of retrospective methods may degrade rapidly as complexity increases.
Therefore, the United States' State Children's Health Insurance Program (SCHIP) their insurance premiums. The number of uninsured children is a crucial issue.

In Search of a New Framework: Collective Actions in Non-

Metropolitan Cities of the South

Following Castells some scholars analysed urban conflicts in the framework of

‘Urban Social movements’. Both urbanists and Social movements scholars in the

South except a few, however completely neglected this framework, where the discussions are focused on different sets of issues.

In the last two decades cities in the South are experiencing explosion of col-

lective action. Actors old and new are participating in the campaigns and move-

ments around issues of access to livelihood, food and employment. Mostly these

collective actions are woven around ‘identity issues’ and are therefore seen as

‘aberration’ from the given theoretical frameworks.

Research on non-metropolitan cities shows that there is urgent need to go to

beyond binary understanding of collective action in terms of material and symbolic,

old and new, urban and rural to capture the complex interplay of socio-economic and
cultural factors and to encompass the scalar complexity that we have un-
derstood so far. Race, gender, caste and religion are not just general categories

underlying these collective actions, but these are historically and spatially inter-
twined to express new combinations, alliances and contradictions. Collective ac-

tion arguing for citizenship rights is also articulated in very different ways. The

diversity and the creativity of the actors from the South has to be seen not as

‘pathological’, but as an alternate way of engaging with modernity and neo-lib-

eralism.

There is an urgent need to reformulate the theoretical tenets of urban studies to

incorporate the dynamics of collective action in the urban arena and the frame-

works in Sociology of Social movements warrant reformulation so as to address

new forms of urban collective actions which redefine social movements.

One Health Concept and the Uninsured in Japan

Objectives. The purposes of this research are to provide a general overview of

Japan's universal health insurance coverage system, to examine the social factors

that explain the rise in the number of uninsured individuals using Geographic

Information System (GIS) mapping, and to discuss the future universal health in-

surance agenda. Background. Due to its universal health insurance coverage system, Japan's

health and medical services are among the world's highest quality. Japan's sys-

tem requires that all residents belong to either the national insurance system

or an employer-based insurance system. However, total population coverage is

not the reality. In Japan, 18.8% of households with national insurance fail to pay

their premiums, and those who fail to pay their premiums for 12 months become

uninsured. In fact, the children in those households. In fact, a Japanese government

survey (2008) revealed that more than 30,000 children under the age of 16

are uninsured.

Analysis and Discussion. One key social factor that explains the rise in the num-

ber of uninsured individuals is the increase in labor mobility, which was expand-

ed by the 1985 Worker Dispatch Law and its legal amendment. In addition, the

2008 economic crisis increased unemployment and the numbers of unstable and

low-income workers. Currently, one in three workers is a non-regular, non-

regular worker.

GIS analysis indicates that the uninsured rate by prefecture is related to the

unemployment and urbanization rates of those prefectures. Big cities, such as

Tokyo, offer a range of job opportunities; however, the cost of living is high and

upward economic mobility is difficult, so many low-wage workers forego paying

their insurance premiums. The number of uninsured children is a crucial issue.

Therefore, the United States' State Children's Health Insurance Program (SCHIP)

should be evaluated for its use in Japan.

pline under the nation-state building period. In order to illustrate the kaleidoscop-
ic intelligence landscape, my paper divides into three parts:

Firstly, I will depict the general history of Chinese anthropology and the logic to facilitate the sociological and anthropological knowledge as a discipline “seeing like a state” before 1949. The Chinese anthropologists and state had to face up with two different problems: the evolution of nation-state under the first round of na-
tion-state building in China (1911-1949): the one is to construct a stable Chinese Nation (Zhonghua Minzu) community by which the modern state can identify itself and stand up to the external Others; the other is to mentally and physically devel-
oped and retained the country. Second, I will interpret how the academic circles and intellectuals of sociology and anthropology co-relate with the nation-state building projects from 1911 to 1949. Huang Xianfan (1899-1982), Wu Wencao (1901-
1985) and Lin Chunsheng (1902-1981)’s academic lives can vividly signify how and why different intellectual trajectories jointly push forward the Chinese sociologi-
cal and anthropological knowledge. And I will close read their academic writings to show how the geopolitics impact their choice to produce the sociological and anthropological knowledge about understanding Chinese nation-state, and ask the questions how Huang’s learning from Tokyo Imperial University combined with the understanding of Chinese social realities made him a scholar of sociology and anthropology different from the nationalists, how Wu and Lin went to differ-
ent discipline-formation track and settled their knowledge in China and Taiwan.

At last, I will give opening conclusion on dealing with the relationship between the geopolitical gain/production of the knowledge and the practice of the knowledge in modern China.

TANABE, SHUNSUKE* (Waseda University, tanabe.sh@waseda.jp)

An Intertemporal Comparative Analysis of Japanese Xenophobia Between 2009 and 2013

Japan is one of the most ethnic homogeneous countries in the world; however, Japan is also in the midst of rapid globalization with increasing numbers of foreign nationals living in Japan. Therefore the grassroots right-wing movements have spread and radicalized in recent years. But the causes and mechanisms of rapid growth of xenophobia in Japan remain unclarified.

The aim of this presentation is to reveal factors of xenophobic attitudes in Ja-
pain, especially the effect of social events. I analyze two survey datasets which were collected in 2009 and 2013 all over Japan. Between 2009 and 2013, Japan has experienced terrible diplomatic problems like Senkaku/Diaoyutai Islands dispute against China and also economic recovery seems to be caused by “Abenomics.” The hypotheses on relationship between social events and xenophobia are as below. The first one is the influence of “East Asian geopolitics” (Higuchi 2012) on Japanese xenophobia especially toward Chinese and Koreans. Japan has ter-
torial disputes against China and Korea. There are also political debates on the understanding of history in the period of Second World War. This hypothesis as-
sumes that those conflicts have negative effect on Japanese attitudes toward Chi-
na and Korea. The second hypothesis is the realistic conflict theory (Sherif 1966 etc.). From this perspective, in the time of economic depression, competition between immigrants and native citizens over limited resources are intensified, therefore negative feelings toward foreign residents are also escalated. If this the-
ory is correct, the relations between respondents’ socio-economic status and xe-
nophobia can be weaken from 2009 to 2013. Because in 2009 Japanese economic suffered in economic downturn precipitated by the Lehman Brothers bankruptcy, but “Abenomics” seems to show signs of economic recovery in 2013. I will confirm these hypotheses by using Multi-group Structural Equation Modeling.

Post-Colonial Immigration Memory: Social and Academic Resilience to Epistemic Violence

Since the end of the 1980s, French Immigration Memory (mémoire de l’immigra-
tion) has gradually become visible in France. As a result of this process, the first immigration museum in France, Cité Nationale de l’Histoire de l’Immigration(CNHI), was inaugurated in late 2007. Immigration Memory, once an almost exclusive topic to the Nepalese community born in a migrant family for a long period of na-
tion, then rapidly became one of the important objects of study and of public policies through the late 2000s. However, if certain dimensions of Immigration Memory have become visible, the other dimensions, that I would call post-colonial dimen-
sions, have become invisible within the same process.

This paper, therefore, argues the exclusion of Post-colonial Immigration Mem-
ory in social and academic spheres as epistemic violence and aims to explore individual and collective resistance against it. The resistance against epistemic vi-
olence is practiced by activists and artists with post-colonial backgrounds through Memory Work. Memory Work is a cultural and artistic practice of reconstructing certain past stories that they directly experienced or not and they find themselves inherited from. Their positionality and proximity to the past story, depending on their gender, life-course and/or ethno-racial identity, gives a different signification to each Memory Work. Through the analysis of several exemplary Memory Works about “memory of struggles” based on my fieldwork in Lyon, Toulouse and Paris since 2009, I aim to empirically study epistemic violence in order to resist it as a researcher. Post-colonial Immigration Memory, in this sense, is not only an object of study but also a social and academic project to bring normative construction of knowledge and its violence into question.

A Biographical Analysis of Women’s Political Participation: The Importance of Politicalization in Female Legislators’ Biographies

Politics as a social institution remains highly gendered in many societies both quantitatively (few politically active women such as legislators) and qualitatively (androcentric political culture). It has been a major area of concern in both the-
other side, feminist cultural anthropologists have long argued that women’s curiosity to change this gendered world of politics. Despite their efforts women are still minorities among those who are in the decision-making positions. This paper ap-
plies a biographical approach to a study of women’s political participation and explores what promotes their participation in decision-making. Data were used collected in 2010 through qualitative interviews with female legislators in the local Tokyo assemblies. An analysis of the data revealed that women who used to be politically inactive, even uninterested, could be ‘politiced’ in middle adulthood or at a later phase of life. It is argued that this process of politicization can play an important role in women’s decision to run for office. In Japanese society such politicization rarely occurs in women’s lives. Women are traditionally ascribed to the private sphere of domestic work, being excluded from – or discouraging women from being engaged in – public life. Scholars of women’s political partici-
pation have stressed the androcentricity of institutional politics and identified in-
stitutions and psychological obstacles to women’s political participation, ranging from a lack of money, party support, publicity in running an election to women’s reluctance of engaging herself in institutional politics. Our study looks at opport-
uties rather than obstacles for women’s political engagement and focuses on how female legislators experienced the process of politicization and transcended the private-pubic divide.

First Land: Creating a Farm for the Future

According to the 2007 US Census of Agriculture, less than two percent of labor force in the nation is in agriculture; the average age of principal farm operators was 57 years in 2007, and more than a quarter of all US farmers were 65 years or older. In order to support the emergence of the next generation of farmers, we, as agricultural researchers and educators, need to provide them with pathways to economic as well as environmental and social sustainability. Based on the data collected from our multi-state, multidisciplinary research project on beginning farmers, funded by the Southern Sustainable Agricultural Research and Educa-
tion (SARE), this paper examines the critical role that “land” plays in paving these pathways. We will first present multiple narratives used by beginning farmers that illustrate their understanding of the dynamics of finance capital in agriculture. Using the “economic map” as both a methodological and theoretical tool, we will then discuss the key patterns of how these beginning farmers position diverse financial/economic actors as critical resources for, or hindrances in, shaping their farming practices. We will also explore in these narratives how the concepts of “sustainable farming” and “economic viability” are articulated to guide their practic-
s.

An International Comparative Study on the Sport Development for People with Mental Health Problems in 5 Nations

Aims: The aim of this study is to explore how sports for people with mental health problems have been promoted in 5 nations, which are Italy, England, Den-
mark, Germany and Japan. Those countries have developed sport for people with mental health problems, according to Tanaka et al. (2013). This study attempts to id-
entify each support system in order to contribute to international sport move-
ment for people with mental health problems.

Backgrounds: People with physical and intellectual disabilities in many nations have come to enjoy sport not only for rehabilitation but also as a normal part of everyday life. On the other hand, sport for people with mental health prob-
lems is quite primitive. Although the values of sport for people with mental health problems have been recognized, the support systems for people with mental health problems in terms of sports activities have yet to be well explained. Nevertheless, Tanaka et al (2013) found that those 5 nations have developed sport for people with mental health problems over the last two decades.

Methodology: Meta-analysis, a questionnaire and semi-structured interview methods were employed. To deeply understand, this study utilises the policy frameworks such as advocacy coalition framework to describe characteristics, and similarities/differences of sport systems in those nations.

Conclusions: This study has found a crucial point. That is, there are two types of sport development backgrounds, which are medical based (Italy and Japan) or sport based (England, Denmark and Germany). This point led to three important aspects. First, this point is related to awareness of targeted illness by key actors. Second, it links to the types of national governing bodies. Third, nations whose ideas are supported tend to focus more on national or regional championships, while nations whose ideas are based on the medical treatment organise sport promotion event.

The Role of Tourism Companies in Forming Ethical Tourists: Case Studies of Tourists from China to Japan

The increase in Chinese tourists overseas and its socio-cultural and economical influence are of interest worldwide as well as in Japan. While many agents in the tourism industry act, it is the Chinese tourists, the conditions of tourism between China and Japan are unstable, especially under the influence of political the relationship between the two countries. Further, media outfits tend to create a negative image of Chinese tourists.

This article focuses on the social and cultural interaction of tourists from China to Japan. Particularly, the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in Japan, particularly, the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in Japan. The role of tourism companies in forming ethical tourists is also of interest from an ethical point of view.

Two case studies are examined. First is the case in which tourism companies teach their clients tourist ethics. In China, the government has recognized the importance of "tourist civilization," and in relation to this, I present a practice of "moral education" in tourism companies. I point out how they teach social and cultural order effectively in accordance with appropriate practices in Japan. The second case involves visits for inspection or training, which is a dimension of social tourism. In China, mobility for tourism is relatively strictly restricted, and consequently, many people with experiences of touring abroad support the inspection or training of visits under business visas, which tends to include sightseeing. I point out a type of development of social tourism that is not an alternative form of mass tourism.

TANG, ELIZABETH* (International Domestic Workers Network, elizabeth.tang@idwn.info)

Building a Global Domestic Workers’ Movement: The History, Strategies and Activities of the International Domestic Workers Federation (IDWF)

Formally launched in 2009, the International Domestic Workers Network aims to develop an effective global network of domestic workers. In the past campaign for the ILO Convention 189 for domestic workers, the IDWN coordinated and actively supported campaigns and activities of domestic workers at various levels, to enable them to speak for themselves and take leadership. Now that the ILO C189 has been achieved, we need to build a strong organization of domestic workers to ensure that countries around the world ratify the convention and national policies and laws are put in place to deliver real gains to domestic workers on the ground. In October 2013 the IDWF will hold its inaugural congress in Uruguay. In this paper we will discuss the history, strategies and activities aimed at building a strong democratic organization that can effectively protect domestic workers rights and change power relations in society to promote gender equality and human rights.

TANG, LYNN* (University of Warwick, tanglynn@graduate.hku.hk)

Recovery and Social Inequalities: The Use of Capabilities Approach and Intersectionality Analysis in Exploring the Social Conditions for Recovery

"Recovery" has become a dominant discursive feature in the UK mental health policies. Under the neo-liberal context, the mainstream recovery services tends to promote individualistic recovery strategies. Such policies and services fail to address the structural inequalities that give rise to distress and mental ill-health or place sufficient emphasis on the diversity of inter-sectional inequalities among service users that shape recovery journeys. This paper critically engages with the concepts of recovery, based on a case study of Chinese mental health service users in the UK which explores how structural factors, such as class, gender and ethnicity, contribute to their diverse recovery journeys.

To shed light on the complex interplay of structure and agency in shaping recovery journeys, a synthesis of the Capabilities Approach (Sen, 1999, Nussbaum, 2001 and Hopper, 2007) and Intersectionality Analysis (Walter, 2007 and Anthias, 2006) was developed as an alternative framework. Repeat-in-depth life history interviews were carried out with twenty two Chinese people with mental health problems who received a psychiatric diagnosis, recruited from three cities in the England. Findings showed that participants strove, sometimes cautiously, to retain and exercise agency to move from patienthood to personhood. Their journeys were shaped by social inequalities demonstrating that targeting social inequalities is essential for facilitating and nurturing meaningful recovery.

Drawn on the findings in the case study, this paper will illustrate in what ways the medicalisation process enhances or hinders the (re) development of capabilities. It will also discuss about the use of the Capabilities Approach and Intersectionality Analysis in exploring the social conditions for meaningful recovery.

TANG, SHAWNA* (National University of Singapore, shawna.tang@nus.edu.sg)

Non-Normative Female Sexualities in Asia, and Singapore?

In the literature concerned with the globalisation of gay identities, same-sex desiring women in Asia have come under increasing attention for two reasons. Firstly, as evidence questioning universalising Western assumptions of what it means to be a global gay or lesbian. Secondly, as a response to the tendency to lump lesbians and gay men together under the generalised rubric ‘queer’, which is dominated by research on gay men both in Western and non-Western contexts.

Ethnographic monographs on female non-normative sexualities have therefore appeared in many parts of Asia, including Japan, India, Thailand and Indonesia. But the case of Singapore has been significantly missing in the literature. Why has Singapore been left out of an important queer Asian critique? This paper discusses the missing case of Singaporean women who love women. First, I explore the ways in which a queer Asian scholarship runs the risk of being constructed and produced through an Orientalist area studies approach, which inevitably leads to the omission of ‘modern’ Singaporean and Singaporean lesbians, Second, I suggest that taken-for-granted images of local middle-class lesbians can appear, in the eyes of an Orientalist, as ‘just like’ the hegemonic Western queer, a thoroughly globalised version alienated from her indigenous region. Are ‘modern’, middle-class Singaporean lesbians merely another instantiation of the homogenising global gay identity, and hence ineffective as material for an Asian queer critique? Finally, the paper gestures towards a ‘postcolonial LGQ’ approach to comprehend the complex, contradictory and contingent sexual subjectivities of lesbians in Singapore. Using empirical material on lesbians in Singapore, I demonstrate the ways in which Singaporean lesbians‘ re-queer hegemonic concepts of homosociality and argue that their sexual lives and practices are crucial moments of reconfiguration and transformation, and not mere reception, of what it means to be ‘modern’ global lesbians.

Navigating Domestic Violence Protection Law By Immigrant Wives in Taiwan

This paper seeks to explore the question: why do abused Vietnamese immigrant wives married to Taiwanese men find it difficult to escape from violence even though the Domestic Violence Prevention Law has been in place for more than 15 years and the government claims a supportive system has been established? By applying the institutional ethnography approach (Smith 2005) we contend that, even though there are laws, institutions (police, hospital, social workers, courts etc), and professional people that constitute a support system for abused immigrant wives, the structural forces of class, ethnicity and gender discrimination intersectively influence them as they seek to find a way out of the abuse they face.

Intercultural Training Program as a Mechanism of Raising the Individual Level of Competition

Seventy people representing five regions, and 32 countries were involved in the research. 25 expert interviews and 6 focus-groups were conducted by the researchers. Most of the participants of the focus groups observed the interaction between citizens of St. Petersburg and the representatives of western and eastern cultures. The strategies of acculturation of the people with diverse origin are very different. The representatives of Western Europe and the USA tend to believe that their difficulties in adaptation result from low standards of local people and Russian social environment. Newcomers from far eastern countries make enormous efforts to understand the motives guiding the local people's behavior, and try to adjust to the context of local culture. Africans tend to conceal their problems. The main problem of their adaptation is the lack of local people's tolerance resulting from physical and cultural differences. Weighing pros and cons of living in St. Petersburg, they often try to focus on positive aspects and hush up negative sides. As for the citizens of the CIS and former Baltic republics (Estonia, Lithuania, Latvia), the process of their adaptation is the easiest one, because they speak fluent Russian, have been visiting St. Petersburg since childhood and do not feel enormous cultural differences. However, the lack of notable differences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants from the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

Sociological Study of the Cultural Differences in Korean-Russian Mixed Marriages

According to Korean statistics in South Korea 90489 marriages between Koreans and foreigners were registered. The share of marriages with Russians was 835, among them 523 marriages between Russian women and Korean men. For the present study of the cultural differences in Korean-Russian mixed marriages the method of semi-structural interview was selected. This method gives a good opportunity to gather the necessary information and to interpret the object of research. The empirical research was conducted in Seoul, South Korea in 2010. Ten Russian women in the age from 19 to 31 years old, married the citizens of the Republic of Korea, participated in the study. Following the opinions of the respondents, the most difficult thing in family life in mixed Korean-Russian marriages is the difference in mentality with their husbands, communication with husband’s relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival “Chusok”) when crowds of relatives gather in parents’ home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenarios of children’s socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participated in the research were in their so called “honeymoon” period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

Social Cleavages Caused By Radioactive Contamination of Food and the Environment: The Case of Fukushima

The nuclear disaster in Fukushima has inflicted devastating damage to agriculture and food of Japan in many respects. I will give an overview of the social cleavages caused by the disaster. First of all, the social estimation of organic agriculture was tremendously damaged because the regional circulation of organic matters, one of the most important characteristics of organic farming, was broadly contaminated by radioactive substances. Many consumers particularly concerned about food safety have stopped buying organic foods not only grown in Fukushima but in surrounding areas. The empirical research was conducted in Seoul, South Korea in 2010. Despite the fact that radioactive substances remaining in soil were not transferred to agricultural products, most of the consumers have not yet come back to the farmers. The fall of the reputation of organic agriculture is more serious because it is deeply connected with the growing distrust of Japanese food in general. Radioactive contamination of food has become a serious threat to the national food security. Second, a deep cleavage occurred between the farmers who are willing to live and farm in Fukushima at the risk of exposure of radiation and many anti nuclear activists who criticize these farmers insisting that they quickly leave the contaminated hometowns. The recognition gap concerning the risk of being exposed is so wide between them that it is difficult to establish the solidarity movement between farmers and anti nuclear movement.

Third, there appeared a great gap between Fukushima and the rest of Japan, or between Tohoku District, northeast part of Japan consisting 6 prefectures including Fukushima, and the rest of Japan. The nuclear disaster has reproduced the unequal development patterns that were often observed during the modernization history of Japan: taking the goods to the center and bringing the bads to the periphery.

“Strength through Joy” in Japan

During the second half of the 1930s and into the 1940s, the National Socialist leisure organization “Strength through Joy” (Kraft durch Freude, shortly KdF) had a great influence on the development of Japanese leisure movement (Kōsei movement), and played a crucial role in the establishment of relations between the two countries. Since the World Recreation Congress in Hamburg 1936, the activities of the KdF, which should regenerate the “strength” of workers through “joy” in leisure, attracted public attention in Japan, where the general interest in the subject of leisure had been slight. The Kdf gave the Japanese movement many suggestions and became its model. After the foundation of the Japanese Recreation Association (JRA, Nihon kōsei kaikai) in 1938, the Japanese leisure movement made a rapid growth into the holding of the Recreation Congress for Asian Development (Kōa kōsei taikai) in Osaka 1940. At this congress, to which also representatives from Germany were invited, the slogan “Strength through Joy” was adopted and the Japanese-German cooperation in the field of social policy was proclaimed. However, the actual discussions between the two countries on issues relating to leisure were not deepened by the congress, and also the mutual perceptions of Germany and Japan contained contradictions in many respects. This report therefore examines the image of the KdF in Japan and that of the Kōsei movement in Germany, and also investigates the relationship between the two countries, in order to clarify the features of the mutual perception and its significance.

Mapping out the Educational and Future Trajectories of the Children of Internationally Mobile Families

Children’s education and future career trajectories are of paramount concern for many transnational families. Educational concerns impact upon whether and when families decide to move internationally or stay at home. This paper focuses on teenage and young adult children of Asian and African backgrounds and explores the difference in mentality with their husbands, communication with husband’s relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival “Chusok”) when crowds of relatives gather in parents’ home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenarios of children’s socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participated in the research were in their so called “honeymoon” period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

HIV/ Aids Among Adolescents in Brazil and France: Similarities and Differences

In order to analyze the Aids epidemic in France and Brazil, particularly among adolescents, a critical review of literature, official documents and on-site verification of services for sexual and reproductive health for adolescents was held. The concept of vulnerability and its categories were used as theoretical basis of the research. A comparison to France demonstrates the number of Aids cases in proportion to its population. In France there was a continuous decline in the incidence of this disease from 1998 onwards; in Brazil, the decline started in 2002,
but there was a rise in cases in 2008. Both countries offer universal access to ARV treatment and the epidemic shows a trend of impoverishment, feminization and heterossexualization. Among Brazilian adolescents, the number of cases is proportionally 3.5 times higher; they have an earlier sexual initiation, use condoms less frequently and schooling is shorter. In France schools are obliged by law to offer regular educational activities on sexuality, the notification of AIDS and HIV are mandatory; the access of adolescents to health services with confidentiality is facilitated, there is availability of tests for STDs and of voluntary interruption of pregnancy, which offer conditions for prevention and treatment of sexual disorders.

Anti-Nuclear Movement Discourse in the Countries of so Called “Nuclear Renaissance”

Since the first half of 2000s the world society has been observing the expansion of national nuclear energy programs in a number of countries, also called by nuclear power industry as ‘Nuclear Renaissance’. This development has been accompanied by the contemporary trend in public opinion showing positive attitude towards nuclear energy. The striking is, however, that this situation occurs in the countries with the history of significant anti-nuclear movements, e.g. Sweden. The revival of nuclear energy programs, public opinion favouring the expansion of nuclear energy and the experience of anti-nuclear movements in the past are the points of departure for this study. The constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, the national nuclear power strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Daiichi. This paper explores what extent and how these turning points become part of the anti-nuclear movement discourse.

In terms of methodology this study is based on discourse analysis.

Multiple Discrimination: Personal and Institutional Perceptions, Impacts, and Actions

This paper investigates the phenomenon of Multiple Discrimination in Hungary, with special attention paid to cases of intersectionality based on ethnic origin. The research unfolds those mechanisms that lead to multiple discrimination in the field of job seeking, hiring, and employment. The phenomenon of multiple discrimination is studied, on the one hand, from the perspective of decision-makers representing public and private employment agencies; on the other hand, from those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, in particular of multiple discrimination, among victims, and a high inertia and inaction on behalf of decision-makers lead to the reproduction of social mechanisms responsible for discrimination.

Education for Lifestyle (Leisure) Counselling in an Unequal World (Szeged, Hungary)

Max Weber’s lifestyle model emphasizes the role of life opportunities, life chances and choices. Life opportunities provide the conditions for choosing one’s lifestyle. Life chances are the chances of actually realizing the given values. For realization it is the social environment that ensures the structural prerequisites. Opportunities, chances and choices in everyday life mean that people have a free choice within the wider or tighter boundaries provided by their social environment and related social pressure. At the same time, lifestyle is not only a dependent of one’s social position, but it also plays a considerable role in designating one’s position in the social structure.

To make healthy lifestyle choices from among a set of given possibilities is not always easy. One needs proper background knowledge ensured by education or provided by professionals trained for lifestyle counselling. The Health Promoter qualification within the Recreation Organisation and Health Promotion Bachelor education offered by the University of Szeged, Juhász Gyula Faculty of Education, Institute of Health Sciences and Health Promotion (Institute) makes professionals competent in creating a “health map” for individuals – in the family, in the workplace - including physical and mental status and lifestyle elements (leisure, nutrition, time management, environment) and build personalized (individual and community level) counselling activity, health promoting actions, campaigns and projects on identified needs. With his/her knowledge in the socio-demographic determinants of unequal opportunities and the means and “language” of addressing and approaching different social groups this professional can bring the best out of life opportunities and life chances to promote healthy choices. The presentation will introduce the audience into the unique skills, knowledge and competencies the above professionals possess and the ways they can be the most effective promoters of lifestyle – with useful leisure highlighted – in an unequal world.

Does Local Level Policy Making Hinder Women to Participate in the Labour Market and Support the Gender Inequality?

Eurostat projections reveal that over the next 50 years, population aging is likely to proceed. By 2060, the number of people of working age in many of the countries, the labour force will decrease. Therefore, maintaining the national social-protection systems, it is essential that the majority of the working age population stay gainfully employed. However, political frameworks ignoring the gender mainstreaming ideas may contrarily discourage women with informal care responsibilities by hindering their possibilities to participate in the labour market. The aim of this presentation is to discuss policy frameworks and local policy makers’ mindsets supporting (or restraining?) the women with informal care load to participate in the labour market. The presentation will also make insights into women’s own interpretations and examine, what restrains their (re)entrance to the labour market. Presentation is based on theoretical approach of gender mainstreaming that through the European Open Method of Coordination is affecting the national and local policy making. The methodological starting point of the presentation is multi-level governance theory focusing particularly on the local level policy-making. The findings indicate that informal care of older people is not seen as a gender specific problem. Therefore, ignoring the ideas of gender mainstreaming the policy frameworks may hinder women to participate in the labour market and promote social inequality. The presentation will base on findings from the research project FLOWS funded by the EU 7FP, by drawing data from policy documents, interviews with local level policy makers and women with informal care responsibilities.

**Considering Looking: Political Spectatorship Distinct from Action**

From museums commemorating genocide to human rights organizations issuing fundraising pleas, photographs of violence are a frequent call to political action. Representations of suffering as a result of political violence invoke a theoretical trajectory that connects looking at images of suffering to actions undertaken in response to what is seen, culminating in a broader political change. This trajectory is also taken up in the models of spectatorship developed by contemporary visual theory, such as that of Ariella Azoulay.attending to the assumptions and fantasies embodied in this broader trajectory, this paper reveals difficulties with Azoulay’s argument for the political uses of photography and brings the possibility of such a politics into question. Alternatively, Jacques Rancière’s theory of spectatorship provides a starting point for conceptualizing looking as an activity distinct from direct involvement in the looked upon scene. This paper will argue for a modest approach to looking, as a space for political and ethical imagination, rather than as the first step in enacting a response or mounting a campaign for change. If spectatorship is unmoored from the trajectory to which Azoulay and others confine it, then the political potential of photography requires reconsideration. I ask: If spectatorship does not necessarily lead to action, what is left of looking as a political practice? If given space distinct from action, how might practices of looking open up possibilities for appreciating the political dimensions of suffering?

**TASCHEREAU MAMERS, DANIELLE** (University of Western Ontario, dtascher@uwo.ca)  

**Tools of Violence, Traces of Memory: Photographic Identity Cards and the Visual Narration of the Rwandan Genocide**

Photo identity cards played a crucial role in the politics leading to and the perpetration of the 1994 Rwandan genocide. The identity cards and their portraits now figure prominently in Rwanda’s national memorial sites as both evidence of the racist politics that culminated in genocide and as commemorative images. Attending to the interpretive shift prompted by the material transformation of bureaucratic portraits into memorial images, this paper will examine the complexities of using portraiture to memorialize mass violence. To critically examine the politics of transforming bureaucratic portraits into commemorative images, this paper draws on Ariella Azoulay’s ontology of photography, which presents the politics of transforming bureaucratic portraits into commemorative images, that presents photography as an ongoing event capable of continually deriving alternative interpretations from the unfixed meaning of the photograph. By approaching photography as an ongoing event capable of continually deriving alternative interpretations from the unfixed meaning of the photograph, this paper will argue for a modest approach to looking, as a space for political and ethical imagination, rather than as the first step in enacting a response or mounting a campaign for change. If spectatorship is unmoored from the trajectory to which Azoulay and others confine it, then the political potential of photography requires reconsideration. I ask: If spectatorship does not necessarily lead to action, what is left of looking as a political practice? If given space distinct from action, how might practices of looking open up possibilities for appreciating the political dimensions of suffering?
scientists to maintain an objective distance and conduct academic research with possible critical implications for the existing policy.

On the basis of a document analysis of historical materials and in-depth interviews with the people involved, we found a remarkable difference between scientific fields regarding research resources available for outsider scientists. In the field of dosimetry, many citizen groups measured doses of radiation using their own dosimeter, which enabled them to urge the government to adjust their policy of decontamination. However, in epidemiology, it is difficult for critical scientists to conduct large-scale surveys; therefore, they have concentrated on assessing and criticizing Fukushima Prefectures’s “Health Management Survey.”

We also found a complex relationship between academic research diversity and political mechanisms for constructing a unified view. Occasionally, articles in international journals express different views; for example, one uncovers the possibility of health effects caused by very low-level radiation and another denies it. Even though the academic discussion has not yet been completed, the International Commission on Radiological Protection (ICRP) has taken the position of creating a systematic regulation; consequently, the diversity of academic research has diminished. To maintain diversity in the circulation of scientific knowledge, we need alternative ways to organize critical scientists and the results of their research.

Television As a Global Kaleidoscope: Multiple Socio-Cultural Realities within a Paramount Political Reality

In recent years, due to a number of factors like the severe global socio-crisis, the citizens of countries like Greece search for information through foreign media. Thus, globally broadcasting corporate or state television channels, (i.e. BBC, CNN, France 24, Al Jazeera, Russia Today, CCTV News), became very popular. This paper attempts to discuss these channels' (representations as alternate sources, focusing on three levels. First, the formative one: They all (a) use English for oral and written discourse ; (b) follow standardized forms of Western broadcasting ; (c) utilize the media cosmogony of our epoch. Second, the substantive one: (a) Operating within a 'global village' framework, they function in their 'public sphere' without barriers and (b) They manage to create 'mediated events', authenticated and explained by participating actors and professional experts ; (c) Cultivating a sense of immediate interconnect, they connect individual life-worlds with project-ed 'world views'. Third, the conclusive one: (a) While documenting issues from 'multiple socio-environmental' realities (i.e. economy and business), with a presumable undisputed factuality, they express a 'paramount (political) reality'. (b) This 'reality' is a 'noematic construction' which reflects core values from a channel's ethnocentric perspective with a long historical tradition. Any interpretative scheme they provide derives from this perspective. (c) Thus, foreign channels offer planned images, which hide the impact of political ideology in (un)official "translations", becoming improvisations with inauthentic color schemes on the screen canvas. The critical question remains: Are those media nothing but a kaleidoscope for the world audiences to (re)live with fictional innocence our modern epic, or do they provide unintentionally another "agora" for the democratic forum of "a global civil world audiences to (re)live with fictional innocence our modern epic, or do they provide unintentionally another "agora" for the democratic forum of "a global civil world audiences to..."

A Study of Women's Roles in Rural Livelihood Improvement: A Case Study of Yamaguchi Prefecture in Japan

This study aims to identify links between internal and external factors, where women farmers developed an important role in rural life improvement. In a sparsely populated and aging society in Yamaguchi Prefecture, western Japan.

In Japan the rural livelihood improvement program was started in 1949 in response to the enactment of the Agricultural Improvement Promotion Law of 1948, by the Ministry of Agriculture and Forestry. The program was introduced in order to create self-reliant farmers, particularly women farmers. Livelihood extension workers (all women) were hired as prefectural government officers to encourage rural development.

They made up groups of women to encourage extension activities. The groups carried out intensive rural life improvement activities.

There were three phases of rural life improvement as follows. The first phase, from 1948 to 1965 aimed to alleviate poverty in rural areas. The second phase, from 1965 to 1988 focused on the betterment of daily life in times of rapid economic growth. The third phase, from 1989 to present day, created employment opportunities through grass root activities.

As a result, the women's self-confidence improved and they became self-reliant farmers. The prefecture employees were the driving force behind this progress. The project was officially ended because of an amendment to the Agricultural Improvement Promotion Law in 2004. However rural life improvement has continued at grass roots level by the women, who still work in the farming communities.

Now women in the older generations carry on creating employment opportunities through agriculture business and tourism so that younger generations can live in rural areas in the future. What's more, they maintain close relationships with retired prefectural workers who helped them in the past.

This study focuses on this development model, as a positive strategy which could be implemented in other rural areas.

Media Coverage and Stakeholders on Climate Change in Japan

Climate change has become a serious problem facing from global society in the 1980s and the 1990s. It is a wide range subjects domain over science, economy, politics. Although numerous attempts focused on consequences of climate change or effectiveness of policies. However, there are few reports on social acceptance of climate change. In Japan, What kind of frames is used in climate change? Which political stakeholders are mainly joined and how connected? For this purpose, as a part of international comparative study of Comparing Climate Change Policy Network (COMPON Project), this project media analysis for articles of Japanese newspapers by using common methods among society cases of the project. In this project, we created climate change article database by searching for keywords of “Climate Change” or “Global Warming”. Then we counted articles and extracted issues and stakeholders on climate change from the database.

In conclusion, this data suggest that (1) Coverage amount is linked international agreements (like Kyoto Protocol) and political international events (G8 and COP), (2) Issues have shifted to “domestic - economy” policies in 2000s from international contributions or sciences in the 1990s. (3) The corporate sector and government come up a lot, but civil society actors were found to be less. (4) After the Great East Japan Earthquake of 2011, interest in climate change has fallen sharply.

The Relationship Between “Global Meanings” and “Local Meanings”: A Case Study of Protests Against the Construction of the “Kaminoseki Nuclear Plant” in Iwai-shima, Yamaguchi Prefecture

How do global social movements relate to local social movements, and in what way does the former influence the latter? This presentation examines the relationship between “Global meanings” and “Local meanings” considering two analytic frameworks on social movements: cultural theories of social movements and the new social movement theories.

Cultural theories of social movements pursue the “construction process and the source of meanings” (Nomiya 2002). On the other hand, the new social movement theory pursues the construction process of “collective identities” (Melucci 1988). In other words, this perspective highlights the fact that movement groups and participants construct ideas through the various interactions between them.
In the present work, we provide a case study of a protest against construction of a “Kaminoseki nuclear plant” at Iwashima located in Yamaguchi Prefecture. Attention is given to two groups. The first one is the “Iwashima no shonen wo mamarukai,” a group that specializes in the environmental aspects of biological diversity. The second one is “Kaminoseki genpatsu wo tateasenai Iwashima taisyu,” a group that specializes in the environmental aspects against construction of Kaminoseki nuclear plant. Using the investigation data of the voice of the participant in that two groups, we analyze the motive of participation, the resource of motive, and cultural factors (e.g., collective memories, local histories, and so on) in order to find out the construction process of “global/local meanings” and “collective identities.”

Lastly, we attempt to clarify that the “global meanings” was related to the significance of the “local meanings,” and highlight the resource of the “global/local meanings” and construction process.

Sociological Study of E-Dating and E-Prostitution in Iran

Sociological Study of E-dating and E-prostitution in Iran

Abstract

Iran has provided the possibilities for virtual networks by facilitating internet access to the public. But the open nature and lack of “enough” control over the virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution.

As a result of strict rules imposed by the government, dating, “illegal” relationships, as well as prostitution, has been looking for new opportunities in virtual environment. In particular, online social networks such as Facebook have provided a new market for sex trade. There has been a surge in Facebook subscriptions, as well as prostitution, has been looking for new opportunities in virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution.

There has been a surge in Facebook subscriptions, as well as prostitution, has been looking for new opportunities in virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution.

Data collected from Facebook pages of Iranian users concerned have indicated that the following key points have led to the growth and popularization of this phenomenon.

• evasion of law
• freedom from the restrictions of family,
• passing the limits of time and space,
• achieving social identity in digital social stratum of prostitution,
• anonymous identities,
• ease of socializing,
• desiring setting the conditions/price for services,
• avoiding loss of earnings to pimps,
• screening and vetting the persons of interest
• sociological (e.g. economic, cultural, religious) reasons, implications, and lowering the risk of embarrassment,
• possibility of freely expressing hidden sexual fantasies and leisure,
• combating social exclusion and finding the strength to oppose popular culture.

The trend of e-prostitution in Iran is on growth and our study attempts to discuss the consequences of this phenomenon.

Women Go Shopping: Discussing the Behaviour of Generation Y and “Green Consumption” in Rio De Janeiro

This paper aims to discuss the buying behavior of the female segment with respect to the consumption of products with ecological appeals (“green products”), in the post-modernity, through the subject area of green consumption. The sample includes 100 surveyed women of Generation Y. For this study, we conducted a qualitative, exploratory research, with field survey using structured questionnaires. The interviews were held in January 2013, at the exit door of malls in Rio de Janeiro. The theoretical basis of this study are the concepts proposed by Bauman, Cancini and Lipovetsky. The data discussion reveals a women of Generation Y with a consumer behavior paradoxical, showing that the influence of fashion, media and academic information makes young people oscillate between following fashion trends and practices resulting of a deeper understanding of environmental issues, according glances of environmental responsibilities and conscious citizen seized through education and through the Internet. The results also reveal the idea of consumption as a process of a hybrid culture (through the influence of global culture produced and widespread by the socio-technical networks) and local culture, with traces of belonging, social recognition, especially from the perspective of the consumer–citizen relationship. This ambivalent condition of this generation relies both from the perspective discussed by Bauman (dialogic relationship between the spectacle and the vacuum of consumption as a moral/social duty and the critical reflection of the consumption, through spaces as schools and universities), and by the vision of Cancini which emphasizes the logic of cultural hybridity and the idea that to be a citizen is required to carry a consumer identity. Complemented by Lipovetsky, both thoughts emphasize the consumption behavior of the social actor of female sex in the Generation Y as a reflection of a society that expresses the concept of a individualistic and consumerist ethic.

Cultural Artifacts in the Mexican Social Movement Sector: The Artifactualization of Performances and the Performativity of Artifacts in a Digital Age

Where resides of a less democratic past persist, as is the case in Mexico and several other Latin American states, challenges to the state often take more subtle and creative forms, which means that cultural inscriptions and mobilization processes can be especially instructive. Drawing on several mobilization sites and moments from contemporary Mexican social movement sector the paper aims at exploring whether the tools of cultural analysis—performances, ideations and especially cultural artifacts—are used in the production of oppositional meanings and whether the unfolding events and actions around them can become central to the identity and to the genesis of social movements. The social construction of these cultural artifacts, their social embeddedness, and the diverse ways that audiences respond to them, mean that artifacts themselves can play key roles in mobilization trajectories, as social actors encounter them, appropriate them, develop them, modify them, and mobilize around them. By focusing on the artifactualization of performances through digital technologies and vice versa on how artifacts can take on qualities of performances being digitized and posted on a facebook page or blog, the paper also explores whether online social media have transformed the cultural analysis of performances and artifacts

Collective Action Between the Street and the Court: Public Hearings in India

Public hearings, in the contemporary Indian context, are public meetings organized around the implementation of a given public policy (for instance the right to education). These meetings take the form of a confrontation between the administration and the people, moderated by a panel of “experts”. This peculiar form of collective action, characterized by a deeply ambiguous relationship to the judicature, has become increasingly visible in India in the past decade.

This paper will attempt, firstly, to trace the genealogy of public hearings, back to the people’s tribunals of the 1960s; it will show how the public hearing has since then been reinvented and interpreted, and how it has met with a new população that was used by very different types of actors and struggles. Secondly, the paper will describe and analyze the dynamics of public hearings in order to highlight their hybrid nature, in between the community meeting and the lawsuit. Finally it will try to understand the sources and the limitations of the efficiency of public hearings as a mode of mobilization.

TAYLOR, EMMELINE* (Australian National University, emmeline.taylor@anu.edu.au)

Punitve Pedagogy and the Political Economy of the Surveillance School

Surveillance Schools are emerging around the globe characterised by new technologies and practices that identify, verify, categorize and track pupils in ways never before thought possible. The school gates have been opened to a variety of surveillance technologies including CCTV, metal detectors, fingerprinting, online monitoring, facial recognition and palm vein scanners, to name just a few. Of course, Surveillance Schools are not just comprised of technological apparatus, many have full time uniformed police officers, armed in some countries, patrolling the corridors and classrooms, they subscribe to random drug testing and use sniffer dogs to search students and their possessions stored in transparent lockers and bags. Taking schools as microcosms of society, they can provide us insight into how surveillance technologiesincluding information on how the unfolding events and actions around them can become central to the identity and to the genesis of social movements. The social construction of these cultural artifacts, their social embeddedness, and the diverse ways that audiences respond to them, mean that artifacts themselves can play key roles in mobilization trajectories, as social actors encounter them, appropriate them, develop them, modify them, and mobilize around them. By focusing on the artifactualization of performances through digital technologies and vice versa on how artifacts can take on qualities of performances being digitized and posted on a facebook page or blog, the paper also explores whether online social media have transformed the cultural analysis of performances and artifacts.

as 'human capital' (Apple, 1998) they are sorted into two ideal types; compliant 'worker-consumers' and 'market rejects'; those that are disposed to poverty, or in the most extreme cases face a direct and expedited channel from the school to prison. The paper debunkers the meritocratic myth to argue that the school-to-workplace pipeline has bottle-necked as neoliberalism desiccates jobs. The school production line is no longer only routed to the industrial workplace, but rather prisons have become the relief valve, filtering off the already marginalised poor into carceral warehouses.

**Mental Health and Illness and Workplace Harassment**

Even though every person is protected against harassment and discrimination in areas defined by Alberta’s Human Rights Citizenship and Multiculturalism Act, The Canadian Charter of Rights and Freedoms and the Canadian Human Rights Act, general types of harassment or bullying are not prohibited in Alberta, so this qualitative analysis examines the avenues to resolve harassment issues within the context of Alberta Public Service in Canada. The goal is to achieve a healthy workplace for every person. The ‘harassed worker’ has been explored within a psychiatric framework, so the paper searches for an appropriate framework namely labour code, union grievance, legal remedy or medicalization of deviant behaviours in the workplace.

**Imagining Futures in Paper Homes. Ambivalence, the ‘Politics of Becoming’ and the Everyday Life of Temporary Immigrants**

This paper asks whether changes in the patterns of migrant mobility have been accompanied by, or indeed have generated, the affective register of ambivalence as a way of coping with life as temporary, nomadic and often unwanted peoples. Migration is increasingly temporary in nature, with an attendant loss of access to the channels of full incorporation to formal citizenship and belonging. As a result, immigrant insecurity is reflected in the domestication of those norms in particular states, the paper proceeds with a view to the realm of affect; sympathy and love as well as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporary and unauthorized migrants? Through examining the perspectives of ‘rooted cosmopolitanism’ (or cosmopolitanism from below) and the ‘politics of becoming’, the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

**Inequalities and Similarities Between Dutch Families: Holiday Making By the End of the 20th Century**

In many studies on recreation and leisure as a social phenomenon, leisure is regarded as the opposite of work, or as compensation for work. Leisure is also seen as being complementary to an individual’s line of work. However, a number of scholars question whether this is the most fruitful way of gaining insight into recreation and leisure. Philipson (1963), Roberts (1981), Kelly (1983) and Te Kloese (1985a) believe a family or household approach to be more productive, which means that the theory should be directed at the social context of leisure on a micro- and a macro level. The social context of people refers to the primary life domains of leisure and family life – which are embedded in the wider context of society, both institutionally and socio-spatially. The question is how far the above is valid for tourist behaviour being an important part of (family) leisure life. The tourist market is arguably more important now than it has ever been (Southall 2010).

An empirical study on family and leisure was conducted in the mid-nineteen nineties (Te Kloese 1996).

Part of the data of that study haven’t been analysed before. Those data were focused on tourism behaviour, the holiday(s) chosen, if any; the activities undertaken during the holiday; the organisation of the holiday; task sharing between husband and wife. Traditional and modern-individualistic families were distinguished.

The content of the problem statement is as follows: how do (partners from) families behave in time and space with regard to holiday making, and are there inequalities related to their origin? (urban – rural; low versus high status; caring role; and gender?) We used data from diaries and from extensive interviews with husbands and wives.

In this paper the main findings of that analysis will be presented.

**Conundrums for Policy and Practice Regarding Vulnerable Youth**

Many youth related policies and institutions are aimed at supporting vulnerable young people to prevent problems from arising, to catch problems early, and to assist young people who are experiencing problems. Identifying some young people as vulnerable (or ‘troubled’, or ‘at risk’ – the terminology varies) rather than providing such services for everyone enables limited resources to be targeted at those who need them most.

This poses several conundrums. First, selecting some young people for special attention creates the dual risk of stigmatising some and excluding others. However, not singling them out may lead to further disadvantage. This creates a dilemma for the provision of services for young people. Secondly, determining which young people warrant what kinds of support and when is a fraught issue. The criteria for such ‘triage’ are rarely clear-cut. At the policy level, this challenge focuses on which priorities to highlight in public announcements and through funding. At the practice level, enactment of policies may affect how and why certain young people are identified as vulnerable in relevant policy, funding. At the practice level, enactment of policies may affect how and why certain young people are targeted (or not) and also impacts on their community and wider society. Getting this ‘right’ is important in terms of equity, social cohesion, cost-effectiveness and the quality of life of young Australians.

The presentation will engage with these conundrums by not only exploring how and why certain young people are identified as vulnerable in relevant policy, but also the policy-practice nexus and the potential impacts of such challenges.

**When Food Aid Supports Local Farming: Towards a Sustainable Solution? Case Study in France**

In Europe an increasing number of people require the assistance of food aid organizations. Food aid is now recognized and funded. Access to fresh quality goods gets difficult, impacting people health. This contribution is an original on-going case study assessing the impact of an innovative food aid supplying mode supporting small local farmers. Besides developing links between urban consumers and local producers, it reveals the current conditions shaping the creation of fair and sustainable markets. This case study is based on the pluridisciplinary intervention research ECOALES in partnership with the ANDES (national association for food aid) which has set up in 2012 an innovative short supply channel for fruit and vegetable for solidarity grocery network western regions of France. Objectives are to increase fresh fruit and vegetable consumption among food aid recipients and support local farmers by buying their products at sustainable price via a pre-order system. The intervention also includes cooking workshops and visits to farms. The network of local farmers is organised by a coordinator in charge of deliveries to food aid outlets.

We will focus on the diverse constraints: creating links between shops and farmers who are spread over a large territory; the articulation between support to farmers in a difficult situation and regular supply in quality fruit and vegetable; meeting consumers’ expectations... We will also assess necessary adaptations and the sustainability of the system.

Fieldwork (including participant observation) follows the lines of global approach, including the diverse protagonists involved: farmers, solidarity food outlet staff, recipients as well as financial and political partners, representing institutions involved. The original methodology, combining interdisciplinary perspectives (anthropology, epidemiology and economy), offers finer understanding of what is at stake. The analysis should highlight the favourable conditions for the viability of such a project.

**Intergenerational Coresidence, Support Transfers, and Psychological Wellbeing Among Older Persons in Myanmar, Thailand, and Vietnam**

We analyze data from 2011-2012 nationally representative aging surveys from Myanmar, Thailand, and Vietnam to examine the associations between coresidence with adult child, intergenerational transfers, and psychological health among older persons in developing and rapidly aging Southeast Asia. Specifically, we ask: 1) How does coresidence with adult child and proximity of children influence the psychological wellbeing of older persons? 2) To what extent are support transfers from children associated with elderly mental health? 3) Do support transfers from children fully account for the relationships between parent-child coresidence and older persons' psychological health? 4) How do the associations between intergenerational coresidence, support transfers, and elderly mental wellbeing vary across the three societies? The mixture of commonalities and differences in political systems, cultural underpinnings, kinship systems, levels of development and degrees of population aging that characterize Myanmar, Thailand, and Vietnam render the comparative analysis particularly interesting. While differences in the body of literature that suggest that living arrangements of older adults are related to their psychological outcomes, most research focuses on the effect of living alone versus living with others, which may or may not include an adult child. Less is known about the effects of coresidence with an adult child and how factors such as coresidence age relate to psychological wellbeing.

The second part of the presentation reflects on my experience teaching a modified module on 'professional ethics' in a pre-service teacher education course in Australia. Rather than pre-determining codes or principles for students to adopt, I started with a Smorgasbord approach, offering various ethical theories and materials. These were resources for students in order to construct their own 'professional ethical toolkit'. I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics for equity, we need to carefully weigh up the potential impacts of formal, procedural approaches and more informal pedagogical approaches.

TEISSEYRE, PIOTR* (University of Warsaw, pteisseyre@gmail.com)

This paper discusses the relationships between social representations (Moscovici 1961) of fatherhood, social policies and social practices in the period 1989-2013 in Poland. It investigates how shifts and continuities of social policies affect configurations of fatherhood. The analysis considers cultural, institutional (laws, regulations, organizations) and societal dimensions of fatherhood. The main hypothesis states that the institutional order shapes the social representations of fatherhood and simultaneously the cultural images of fatherhood define the patterns of social policy reforms and block radical changes as well as create the realities of fatherhood.

The institutional context of the welfare regime in Poland is often characterized through the strong familiarism and maternalism. The poor access to institutional care, 2-4% of children 0-3 y/o in institutional care) and the commodification of labor “strengthen” care function of families. This promotes male or dual breadwinner family model with a limited involvement of fathers in childcare and domestic work.

The leave entitlement reform in Poland can be considered as a historical transition from familiarism implicit to familiarism explicit (Leitner 2003). An entitlement to 26 weeks of parental leave was introduced as a supplement to 26 weeks of maternity leave. However, the recent reform confirmed a strong link between the cultural images of fatherhood, the political agenda and the results of reforms. The rejection of father’s quota also revealed durability of the regulations that reproduce gender inequalities in care-giving and domestic work. Basing on evidence from other countries with similar constructions of leave entitlements it can be assumed that in Poland parental leaves will be used almost entirely by women. This assumption is further confirmed by a limited take-up level of 2-week paternity leaves.

Legal acts, media and parliamentary debates, existing literature and qualitative data (IDI with fathers) serve as empirical material for this paper.

**The Place of Art in Social Theory: A Possible Approach to Max Weber and Michel Foucault**

Max Weber dedicates his work to the delimitation of the historical specificity of the West taken in terms of culture. His study on the rational and social foundations of Western music is his only formulation of that cultural specificity within the aesthetic sphere. This unique trial presents a precious articulation between the formal analysis of an aesthetic language and the definition of the specificity of Western culture through a method of historical sociology that settles the singularity of its objects by comparing them with similar expressions located in different historical contexts. In turn, Michel Foucault conceives the literature, understood as a specific happening that emerges in the eighteenth century, as a privileged locus for defining the knowledge and practices, double dimension of his conception of experience that takes place outside of a discourse systematically ordered. Therefore, it is up to investigate it in order to define the present as historical unique. The purpose of this communication is to examine the possible similarities between methodological arrangements proposed by both authors to undertake the analysis of aesthetic expressions in order to formulate the historical specificity of the modern world.
Persistent Invisible Inequality in Education: Sociology of Education and Gender Studies in Japan

Japanese sociology of education has a long history. Women and education and gender issues in education have become some of the main topics in the sociology of education since the 1980s. This presentation traces the transformation of feminist discourses in education in Japan, focusing especially on the hidden curriculum and the process of socialization, and gender order penetrated in Japanese society deeply, while following the main issues of sociology of education since the 1980s to the present.

TEJERINA, BENJAMIN* (Universidad del País Vasco, b.tejerina@ehu.es)
Democratic Upset and the 15-M Movement. the Social Basis of the Political Crisis in Spain

Recent years have witnessed a great diversity of mobilizations in authoritarian political regimes (Arab Spring, Colours Revolution) and consolidated democratic societies (Europe, North and South America). Driven by the consequences of the economic crisis, the implementation of liberal economic programs in different social sectors, and the perseverance of significant democratic deficits, serious popular revolts have emerged in variegated local and international levels. It is evident from the study how migration, poverty and risk involved, are actively engaged in combating variegated interventions and aftercare services for the victims fueled by their religious convictions and values. The study shows that the study however that migration, whether it is legal or not, is a mechanism of organized syndicates to deceive and betray victims of human trafficking. Also, it resonates to the study that combating human trafficking in local and international level requires concerted work and engagement of faith-based organizations to non-government organizations and government agencies such as legal and justice experts. This study suggests a theoretical framework in which faith-based organizations adopt and suggests ways on how to mobilize Christian churches to combat human trafficking in the local and international context.

Religion, Migration, and Human Trafficking: Experimental Evidence From Grassroots Practitioners

This study investigates whether faith-based organizations are making an impact in preventing and caring for the victims of human trafficking and prostituted women. This study assumes that human trafficking is closely linked with migration which often causes prostituted women to be trapped into sexual slavery. This study critically suspects that because human trafficking is closely linked with organized syndicate and criminal organizations, faith based organizations remain on the sideline of society and are not represented in the public sphere. This study executed an in-depth interview with particular faith-based organizations working among prostituted women to probe whether these organizations are actively engaged in combating human trafficking in their own respective area of ministry. This study utilizes critical questions to test whether there are indications of participatory engagement of these organizations in partnering with government agencies or the civil society. This study finds out that faith based organizations are driven by their passion to see victims and prostituted women transformed by the power of the gospel. This observation is based from the following evidences that faith-based organizations, despite the danger and risk involved, are actively engaged in providing various interventions and aftercare services for the victims fueled by their religious convictions and values. It is evident from the study however that migration, whether it is legal or not, is a mechanism of organized syndicates to deceive and betray victims of human trafficking. Also, it resonates to the study that combating human trafficking in local and international level requires concerted work and engagement of faith-based organizations to non-government organizations and government agencies such as legal and justice experts. This study suggests a theoretical framework in which faith-based organizations adopt and suggests ways on how to mobilize Christian churches to combat human trafficking in the local and international context.

Gender is an important lens through which we can interpret the role of education in society and the ways in which it contributed to social change in late modernity. In this presentation, I will focus on the following three points: first, to understand gendered schooling and education in Japan, empirical data of Japanese education such as gender tracking, faculty components, the ratio of female teachers and principals, and female researchers in academic fields examined from a comparative perspective. Secondly, based on the analysis of the trends of articles related to gender issues in the journal of JSES, the reality of persistent inequality in education will be discussed. Thirdly, I consider the issues of inequality of gender and other disparities in Japan, knowledge transmission, power relations and reproduction within the era of Neo-liberalism.

European and Latin American Higher Education Between Mirrors

Higher Education systems all over the world have gone through deep transformation and extraordinarily expansion. In Europe, major transformations in higher education and in place during the first decade of the 21st century and resulted mainly from the implementation of the so-called Bologna process. The main goal was to establish a European Higher Education Area which allowed an increase in international competitiveness, attractiveness and comparability between European higher education systems. Evaluation of results and consequences of the Bologna process has largely depended upon the evaluators’ perspective. At the political level, it is easy to conclude that the Bologna process has been successful since it allowed greater integration and harmonization between the various education systems of the 46 participating countries. However, at the institutional and local level, the response is more cautious due to the great variety of contexts involved.

In Latin America, timing was different since this was the first region were neoliberal policies were put in place, after Pinochet’s military coup in Chile in 1973. Several authors described the end of the 20th century in LA as the “last decades” The beginning of the 21st century brought with it important changes to the scene. The election of progressive governments in some LA countries gave way to policies which favored redistribution of wealth. At the same time, in some countries, with robust indigenous communities, their cultures were granted political and social recognition and intercultural policies were developed. It is not meaningless that it is precisely in LA, where the first neoliberal experiment was carried out, that the search for alternative policies and the construction of other rationalities were undertaken. This paper presents the results of a research project developed by the Network RIAPE, comprehending 31 universities from 21 countries of EU and LA, funded by the ALFA Programme through 2010-2013.

Institutional and Peoples’ Response to Cope with Growing Urban Challenges: A Case of Women’s Participation and Leadership in Poverty Alleviation in Chandigarh

Chandigarh has distinctly implemented urban poverty alleviation (UPA) scheme called SJRSY unlike other towns in the region. The women as ‘change agents’ are leading various UPA activities in the city. The self help groups have been formed ‘by and for the women’ who not only catalyse new members but other women in the poor clusters to join the skill training programs for setting up self employment ventures to earn the livelihood and also to strengthen urban community development networks etc. Three major women based activities i.e., ‘Learning on Wheels’, ‘Eco-friendly Handbags manufacturing by HIV+’. The women SHG ‘Chandigarh Leadership and changing in their Community’ have recently won the prestigious ‘HUDCO Best Practice Award to Improve The Living Environment’. The new pattern of community leadership is emerging among the poor women. There is a positive impact on the response to the UPA activities in the city which seems to empower the poor women. The Municipal Corporation has formed a dedicated Cell with adequate staff to implement SJRSY and other UPA schemes. There seems to be democratic strengthening through enhanced participation and leadership of poor women in local decision making in implementing UPA program. They are able to critically evaluate the variety of programs which have been implemented in order to protect them from the exploitative agencies. They are also coping with growing challenges. There are many success stories of emerging trend of women participation and leadership in UPA in Chandigarh which have been documented by the author for the paper.

TERACHI, MIKITO* (ibaraki University, mikitot@ipg8.so-net.ne.jp)

The Transformation of Youth Attitudes to Economic Success in Japan

The purposes of this study are to reveal the transformation of youth attitudes to economic success in 2000s in Japan, and to consider the youth under unequalizing in the society which has a legacy of equality. Though the Japanese society is not seen as an egalitarian society among Western societies, it has been transformed to an unstable society with liquidity and disparity since the end of the 20th century. Particularly the situation of youth employment was becoming worse and has not recover after the bubble economy from mid-and-long term perspective.

In this situation, the social challenge is how to recover people’s motivation not just economic gap.

In this study, we analyze the quantitative data which was collected in Suginami (Tokyo) and Kobe in 2002 and 2012 by the Japan Youth Study Group. Respondents aged from 16 to 29 were randomly sampled.

Our findings of our first analysis are summarized as follows: First, the percentage of young people who think of “individual effort” as the most important factor of economic success is little different between 2002 and 2012. Second, in 2012 the percentage of young people who think of “individual talent” as the most important factor of economic success is about 10% less than that in 2002. In contrast, in 2012 the percentage of young people who think of “family environment”
as the most important factor of economic success is about 10% more than that in 2002.
This difference can be contemplated that economic success for the youth are transformed from the individual matter to the social matter. This may mean the penetration both of the sense of inequality and the awareness that this matter should be treated publicly, not personally. In the presentation, we will discuss the impact of this transformation on the Japanese society and youth.

The Pragmatic Social Theory of Sign in Shunsuke Tsurumi

While most critics may agree in applauding Shunsuke Tsurumi (1922-) as one of the most influential intellectuals of post-war Japan, no one has recognized him as an eminent sociologist. The aim of this presentation is to show some sociological implications of his thought and methodology. His works should be categorized as sociology of culture and cultural studies. Shuneuke Tsurumi’s interest is in the life of ordinary people and in “pragmatism in Japan”. He focused on a lot of cultural things, especially writing practices of elementary school children (TSUZURIKATA), comics and KARUTA (a Japanese alphabet card game). His notions on the so-called “research on people” aim not only to find the roots of the resistance to the government and bureaucrats, but also to criticize the conventional, scientific, or professional intellectuals and sociologists. Sociology can’t read and find the potential hidden behind the unspoken words and thoughts of ordinary people, people who express themselves through work, games, talking, rhymes and poems, and art. He named such practices as “marginal art”(Tsurumi [1960]1991). The influence of these implications are widespread in contemporary Japan, but sociologists such as Keichi Sakuta (1922-) and Shun Inoue (1938-) are the first to share and acknowledge the methodology and importance of Tsurumi’s work.

In my presentation, I’ll reconstruct Tsurumi’s practices and works into “The Pragmatic Social Theory of Sign” through the reconsideration of his studies regarding the development of pragmatism in the US and Japan and his analysis of Japanese popular culture.

TERADA, RYOICHI* (Meiji University, teradary@kisc.meiji.ac.jp)

The Pragmatic Social Theory of Sign in Shunsuke Tsurumi

Research on Environmental risk perception has been accumulated focusing, for example, on “irrationality” or “emotionally” biased perception of lay citizens. These researches have treated risk for the individual and other risks can be calculated by the formula: Risk = Hazard x Probability (or Degree of Exposure). Recently, however, risks from environmental hormone disruptors, genetically engineered organisms, and radioactive contaminants are those that the formula is not directly applicable to estimate the gravity of impact. The level of hazard or exact probability cannot be decided by the present level of scientific analyses. In addition, we experienced the catastrophic and irreversible impact from the Fukushima nuclear disaster. Thus, the new criteria to evaluate risks, other than risk/cost/benefit analysis, environmental justice, risk information disclosure, and participatory decision-making have become more significant.

After the Fukushima disaster, the public have become more skeptical about the scientists/experts-centered risk assessment and more citizens have demanded for “risk democracy” in which wider range of stakeholders can participate in environmental decision-making based on the equal “risk literacy”.

However, the degree to which respondents claim “risk democracy” or pay the cost for “risk literacy” varies according to their socio-economic status. Those in the upper-middle strata, in general, have more resources to access new information on risks with scientific uncertainty and risks with catastrophic results such as GMOs and radioactive residues. Those in the lower strata, on the other hand, tend to be concerned about well-known risks such as air pollution and waste incineration. However, they are even more seriously concerned about “environmental justice” issues because they are more vulnerable to disproportionate risk burdens in general.

Thus, the effect of socio-economic variables is ambivalent. However, there is consistent interrelationship among “zero” nuclear option, serious risk perception, environmentalist consciousness, “environmental democracy”, participatory and transparent decision-making orientation.

TERRIER, JEAN* (University of Münster, jterr_01@uni-muenster.de)
The Nation As Greek Gift? Marcel Mauss on the Ambiguities of the Nation Form

In 2013, Marcel Fournier and Jean Terrier published posthumously a book by Marcel Mauss, entitled The Nation. An article bearing the same name, collected in Mauss’s Œuvres at Editions de Minuit, had long been known to scholars. That article, in fact, is only the first part of a much longer book covering three topics: 1) a historical sociology of the national phenomenon, 2) a presentation of what a so-called “binary” sociological approach to national relations may look like, 3) a reflection on the relationship between socialism and nationhood. Mauss started working on this book project during the war. To it, he devoted most of his research time in the subsequent years, until approximately 1924. The book was never brought to completion, but its huge manuscript can still be consulted in Mauss’s archive.

It is this manuscript that Fournier and Terrier, after many years of archival work, have entirely transcribed and made public. This book sheds a new light on Marcel Mauss. It gives us a much better sense of his political thinking. It provides a new background against which to re-read and re-interpret his celebrated Essay on the Gift. In my presentation, I will present and explain Mauss’s position on the nation and provide an assessment of the historical significance of this work.

TEWARI, BABITA* (CSJM University, babita.tewari@yahoo.co.in)

Women, More Roles, Less Personal Leisure: A Case of Kanpur City

Women need to understand leisure in the context of everyday life along with obligations and social structures. As women occupy more roles than men (e.g., Housekeeper, mother, caregiver etc.) they may have less time available for their own autonomous or personal leisure. For anyone who is in a caregiver’s role, leisure as free time may be irrelevant. Within the role of being a mother, for example, some women have many expectations that must be addressed for leisure to happen either personally for women or within the family (Hunter & Whitson, 1991).

The underlying hypotheses of this analysis is that the more roles undertaken by the woman, the more likely that the individual is to have less personal leisure. The present study takes the case of fifty household women of Kanpur City, through an interview questionnaire wherein leisure time vis-à-vis the roles were examined. A contradiction seems to exist between addressing the relationships and roles that are central to women’s life and needing time for one. Establishing the findings of Wearing (1991), the present case finds leisure as a place where many traditional roles and where traditional feminine identities and roles often are associated with putting men’s wishes and serving men’s leisure before most women claim their own personal leisure. The value of this research is in the theory that is leading to the broader understandings of how gender and roles affect the leisure possibilities of women.

Lessons From Uttar Pradesh and Bihar: Sport Development Initiatives and The Potential For India’s Sociologies Of Sport

Despite the potential of sport development to highlight broader social complexities, sociologists in India remain disinterested in the area (and sport generally) as avenues of legitimate study. Yet, sport development programs provide sociologists opportunities to know and engage with body politics, questions of structure & agency, and social transformation. Accordingly, in this paper I draw on Bourdieu (1992; 1993) & Giddens (1990; 2009) to understand the construction and consequences thereof, sport development projects and the broader processes to which they are a part. I discuss my research with youth in two Indian states, and consider how sport development agendas are often confined by tensions, negotiations, and resistances contours of the local context.

The factors influencing sports participation has emerged as a point of interest among many academics (Wheeler, Sharon; 2011). In order to detect determinants of sports participation, a constructive and exploratory research methodology has been adopted. The data drawn upon in this study has a sample size of 500 interviews, spread over two States of India.

The inclination pattern among socio-economic background putting their children in sports shows a declining trend. Involvement and attainment in a ‘field’ are based on a combination of one’s habitus and cultural capital. With rise of income level, inclination towards sports does increase. In many ways sport represents a social ‘field’ (Bourdieu, 1990), a structured space of positions that impose specific determinations on those who enter it and this has been tested positive.

Rather than simply enhancing individual freedom and opportunity, sport-based programs serve as social control and regulation. Basic education is important for gaining foothold in sports in order to think of social neoliberalism. Social environment, geographical conditions, educational arrangements and the regional economic determine to a large extent if personal development and ambition are able to flourish.
Reactions to the shooting death of unarmed seventeen-year-old Trayvon Martin in February 2012 and the not guilty verdict in the trial of George Zimmerman in July 2013 could be heard throughout the United States and around the world. In Al Jazeera, Susan Abulhawa, a Palestinian writer, wrote, “The contempt, the disregard, and the disrespect for the black body runs through this whole case. It runs through this country and transforms itself to adapt to the times.”

On August 12, 2013, U.S. Attorney General Eric Holder announced that the Justice Department would work with the Department of Education, “to confront the ‘school-to-prison pipeline’ and those zero-tolerance school discipline policies that do not promote safety...” but instead lead to the criminal justice system. Reactions to the death of Martin and the announcement of a new approach to the disciplining of youth are acknowledgements of the systemic use of violence to control people of color in the United States.

While many accounts of the Martin/Zimmerman case have focused on race as a central theme, some have pointed to race as it intersects with gender and/or age. A narration resonates with an audience, thereby providing a kind of truth. Intersectional analysis complicates a narrative, but it also provides a nuanced view of societal violence/power as well as a vantage point from which to exercise agency and bridge the research/practice gap. Using content analysis of media from around the world, we identify multiple ways in which the Martin/Zimmerman case has been narrated, focusing on intersectionally-framed accounts that along with race point to gender–masculinities deployed—and/or age—youth/adult to make sense of the violence. Statistical data on incarceration in the United States will be used to show the relevance of the narrations to the school-to-prison pipeline.

"Just Like Everyone Else?" South Asians In U.S. Media and Society

In the 21st century, representations of South Asians in U.S. popular media have grown exponentially. This is a particularly interesting phenomenon when considering the status that South Asians occupy in the American racial hierarchy. In my research, I examine audience perceptions of South Asian/Indian characters and actors in American popular media. Using data from 50 in-depth interviews, I argue that South Asian media representations today no longer embody the overtly non-whites who achieve top positions in STEM fields. Despite vast infusions of money by the federal government to address this issue, little has changed in the last 50 years. Additionally, while it is assumed that Asians are the one non-white group to dominate these positions, they are in fact still outnumbered by whites in comparison. In this paper, I examine a sample of 22 Asian students who are pursuing careers in STEM to better understand intersections of race and gender for this sample, and larger implications regarding the assumptions around racial and gender "equality" in these fields.
rupt our humanity and sociality. While, simultaneously, we are being presented with a modality of equipmentality (Heidegger, 1962; Dreyfus, 1991, 1992; Verbeek, 2005) from within the frenzy of technological activity, which paradoxically inures us in our sociality and sociability. This contention is carried through to its articulation in Castell’s (2000, 2001) theoretical substantiation of the Network Society in the Information and Internet Age with a view to opening up and tracking into specific transformational dynamics of the new modalities of the social, economic, technological and the global. The aim behind which is to consider in which ways the Internet-based transformations offer themselves up as nodal points that gather or reduplicate and sociability in the ‘virtual’ world. And by contrast consider the ways in which the latter dimensions of social being as predicated upon individualism are scattered throughout the labyrinthine ‘cyber world’. Taken together the paper seeks to think through how both moments of gathering and scattering are recast in the new global informational-intellectual division of labour as mirrored in the ‘Digital Divide’. We close this line of thinking by reflecting on South Africa as engaged in this Internet-based New Global Network, with its ambivalences and consider the incorporation of Developing Countries into the new global order as a function of new social inequalities and subject positions that are emergent and made manifest in one of its forms as ‘Scatterlings’ of the ‘Digital Divide’.

THELEN, LIONEL* (European Research Council, lionel.thelen@ec.europa.eu)

The European Research Council... An Open Door For The Sociology Of 21st Century?

The European Research Council is the most recent and most successful Funding Body created by the European Union. Why successful? Because it allows the funding of single research teams in all fields of Science (up to 2.5 million EUR for a 5 years project) and it is the sole EU funding body directed by a Council of top-notch Scientists.

The author is for now more than 5 years the Scientific Coordinator of the so-called SH2 Panel, bringing together 15 panelists – from Sociology but also from Anthropology, STS, Political Science, Religious Studies, Law and Communication Studies – in charge of evaluating between 120 to 200 proposals.

The way the ERC assesses proposals - singularly in Sociology – is quite peculiar and tends to blur boundaries between disciplines.

The evaluation procedure is done in 2 steps and, at step 1, each proposal is given to 4 reviewers. The latter are, frequently, not specialists from the main proposal’s discipline. It follows, that from, debates among them not only about the excellence of the proposal but also about its relevance in confront with its subject, hypotheses or methods.

This fruitful interdisciplinary debate 1) helps panelists understanding each other point of view while bringing them, in most cases, to a consensual decision about any given proposal; 2) gives interesting hints about the various paradigms in use in disciplines apparently close from each other; 3) raises a lot of questions about the fact that some disciplines seem more “successful” than others and 4) allows to grasp at best that having reviewers from different disciplines can have paradoxical effects for interdisciplinary proposals.

Such a debate is undoubtedly helping outlining the main features of Sociology as a discipline increasingly aware of the so-called ‘porosity’ of its own boundaries, and, by extension, of the other social sciences’ ones.

Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany

Since the 1990s, two distinct processes of marketization in long-term care provision can be found in Sweden and Germany. First, professional long-term care services were restructured inspired by ideas oriented towards New Public Management. Second, tax deduction policies were established to create a new mix of (ir)regular domestic and professional care services. Despite the international character of the development, the existing structure of professional and (ir)regular domestic services at the beginning and the approaches selected, their effects on the infrastructure and on the situation of care (and domestic) workers differ significantly between both countries. In both countries, research findings indicate – however country-specific - patterns of a worsening of working- and employment conditions of care workers embedded in distinct processes of hierarchisation among care workers. The paper aims to compare pre-existing service structures, policy approaches, their effects on service restructurings and the situation of care workers.

Conceptually, the paper combines international comparative research on care policies and marketization and intersectional approaches developed within sociology to relate the effects of marketization to the emerging patterns of inequalities within the care work force based on gender, social class (training levels and positions) and ethnicity. Empirically, it will include documents and laws, literature review and representative statistics to analyze policy changes and existing- and changing infrastructure. Findings of a German-Swedish research project on the situation of professional carers with approx. 600 care workers in each country, will be used to reveal the country-specific restructurings and processes of hierarchisation within formal care provision, which is complemented by research on the developments within domestic service provision.

THERBORN, GÖRAN* (University of Cambridge, gt274@cam.ac.uk)

Göran Therborn: The Killing Fields of Inequality

This is a theoretical as well as an empirical book. Theoretically, it sorts out the differences between difference and inequality, it sets out a moral argumentation for why inequality matters, it presents a multidimensional analysis of inequality, and it lays bare the mechanisms of equalization as well as of inequalization. Empirically, the book is global in scope, historical in depth and multidimensional in range, analyzing life expectancy, health and body measures, and existential recognition, rights, and respect, as well as income.

It also tries to answer three puzzles: Why have the Northern welfare states failed on vital inequality? Why has existential egalitarianism been so (relatively) successful in the past fifty years? What is the connection between the concurrent inter-national convergence of income and rising intra-national inequality?

THERBORN, GÖRAN* (University of Cambridge, gt274@cam.ac.uk)

Stunting and Deadly – Effects of Inequality

Inequality has to be understood and analyzed as a multidimensional phenomenon, and so have its effects. Drawing upon my new book The Killing Fields of Inequality this presentation will focus on the stunting effects on human bodies and personalities, and on consequences of early and premature death, set in a global perspective of class, gender, and territory.

**Simultaneity of Seeing and Doing in Wayfinding from an Ego-Perspective. Eye-Tracking and Video Analysis As Tools of Visual Sociology**

We examine eye-tracking data that stem from an interdisciplinary user study that aims at evaluating different cartographic methods for indoor navigation maps (cartography) and at exploring social practices of orientation (sociology). In order to collect data we have been conducting social field experiments every year since 2009. Participants' task is to find their way from the ground floor of the university's main building (starting point) to the rooftop (goal) as fast as possible. To accomplish this challenge, they are asked to use specially designed maps that they should rate afterwards.

Each year, we broaden the range of our methodological instruments and test their usefulness for analyzing spatial practices. Among the instruments we are currently mixing are: different cartographic methods, surveys, ethnography (both participant and non-participant observation), photography and eye-tracking.

To use eye-tracking devices for data collection gives us the opportunities (1) to visually discover an ego-perspective of participants' experiences during the wayfinding process and their use of the maps, (2) to capture the focus of their gaze and (3) to record simultaneously what they said and heard during the way-finding task. To combine all of that is not possible with any other data collection technique.

To analyze the data we used the video analysis method (Tuma et al. 2013). It includes the selection of relevant scenes, transcription (visually and in written form), their interpretation and the presentation of results.

In this paper we want to present some of our results, show how we got there and discuss what worked out well and what problems we had in applying this approach.

**THIJSSSEN, PETER** (University of Antwerp, peter.thijsssen@ua.ac.be)

**The Potlatch of the Young, the Paradox of Excessive Intergenerational Solidarity in Aging Welfare States**

In this paper a new theoretical model is applied to a research field that is somewhat fragmented, namely that of intergenerational solidarity in aging societies. Inspired by utilitarian considerations many scholars tend to problematize the lack of commonality and reciprocity characterizing intergenerational exchanges. As some generations are longer old and more numerous they may receive excessive support of the younger generations, especially in a democratic setting. However, in reality there is limited empirical evidence of intergenerational conflict and theoretical explanations of this paradox are dim.

Therefore, in the book "The Paradox of Excessive Intergenerational Solidarity in Aging Welfare States" (Kluwer, 2011), we introduce a new theoretical model that incorporates Durkheim's solidarity theory, Hoffth's intersubjective recognition theory, and the current work on reciprocal exchange is necessary in order to understand the survival of intergenerational solidarity in aging welfare states. Our integrated approach is inspired by a cyclical model of solidarity (Thijssen, 2012). According to this integrated model in a prefigurative culture where the status of the young has risen dramatically, the empathization of exchanges is the driving force of intergenerational solidarity. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing excessive transfers might be counterproductive because they may erode the empathic underpinnings.

**Intra-EU Mobility: Posting As Permanent Organization Of Poor Labour**

An employee is legally considered as “posted” when working temporarily in a member state of the European Union other than its usual workplace. However, the temporary, neutral and legal status of posting tends to conceal the very nature of the process: organizing permanent mobility from south and east-European countries to the richer states, exerting of pressure on local bargaining standards (social dumping), giving legal appearances to illegal practices, understimating the massive character of the phenomena. These are at least the first results of a transnational French-Portuguese research programme in the construction sector. For sociological perspective more questions occur about how the legal rule of “posting is challenged. We distinguish here three different ways.

1. The first challenge is the existence of differences between legal and social rules. In fact the legal component is not opposed to the social component of the rule. It would rather be two sides of the same rule. There is not a peaceful legal side of posting and another conflicting social side.

2. The second extension of the legal rule we want to deploy in our research concerns the social regulations of conflict, agreements and collective action. They combine legal initiative, jurisprudence, the actions of the Labour inspection, the tribunal but also the initiatives of the workers themselves, the unions and employer organizations.

3. The third shifting from the legal rule is related to networks. The first element concerns the Portuguese community in France. Posting that is based in large part on channels mounted on the initiative or with the help of employers who are former Portuguese employees. The second element of networks relate here to interpersonal relationships. Indeed, recruitment in Portugal is often effective because a friend or a colleague did already work for the same company.

**Understanding The UK Graduate Labour Market: An Occupational Approach**

The UK graduate labour market has in recent times received a lot of interest within policy, media and academic circles. With relative high levels of under- and unemployment and growing differences in labour market outcomes for graduates, there seem to be a changing relationship between degrees, skills, jobs, careers and rewards.

Our current understanding of the graduate labour market is currently lacking. We need to understand the graduate labour market in a wider framework rather than solely as supply and demand forces. There is a need to interpretate as well as integrate how and where skills possessed by graduates are formed, what skills graduates offer employers, what skills employers want from graduates, how graduate skills are used and what impact graduates have on the workplace. Also, the majority of existing studies on the graduate labour market link labour market outcomes with aggregate educational categories and do not explore the role of skills and credentials within occupations or professions.

This paper explores the meaning of graduate skills within three graduate occupations and draws on qualitative in-depth case studies with software engineers, financial analysts and laboratory scientist in biotechnology and pharmaceutical companies. For each occupation it will show how and where skills are used, what impact graduates have on the workplace. Also, the play of existing studies on the graduate labour market and link labour market outcomes with aggregate educational categories and do not explore the role of skills and credentials within occupations or professions.

THOMAS, GARETH (Cardiff University, thomasg23@cf.ac.uk)

**Expectant Parents, Expecting Perfection: Constructing Down's Syndrome in UK Antenatal Care**

In the UK, expectant parents are offered screening for Down's syndrome, an incurable chromosomal condition, as part of routine antenatal care. Drawing on an ethnography of two antenatal clinics, I explore how the prospect of Down's syndrome is interpreted and negotiated by healthcare professionals and expectant parents during screening consultations. The potential diagnosis of Down's syndrome, despite the condition being recognised by professionals as "compatible with life", is confined within universalising discourses such as "risk", "problem", or "abnormality" which not only construct Down's syndrome as a detrimental pregnancy outcome (the common vernacular of risk, in particular, becomes "problematic" and is further embroiled in, cultural ideologies around perfection/imperfection and normality/abnormality. This creates a range of affects including producing self-blame among expectant parents, though particularly expectant mothers, who are enacted - within a neoliberal era
of “total motherhood” (Wolf 2013) - as individually responsible for their unborn child’s welfare and who may have their maternal identities disrupted and shifted should they not produce a “perfect child”. Nonetheless, I ultimately reveal how a diagnosis of Down’s syndrome, before being fully established or even suspected, is demarcated as an emotional tragedy and future family disruption in the early stages of antenatal care. I conclude by reflecting on what this focus on one aspect of the reproductive process can contribute to the sociology of diagnosis and, at a general level, to exploring the tensions which develop once medical technologies intersect with the complicated world of Down’s syndrome.

Naked Protest, Vulnerability and Power: Gendered Scenarios of Visibility and Protest

“Allah made me visible’. This is what some young German women shouted while they were protesting IKEA’s decision to remove all the women from the furniture catalogue for the Saudi Arabian market. Protestimg toplless was meant to raise media attention and to get publicity; additionally it was unequivocally inspired by the Ukrainian feminist group ‘Femen’, some which have called one of the most successful campaigns of feminism in recent times.

In this paper I’d like to invite the participants to consider diverse examples of naked protests – e.g. fighting for peace and human rights in Liberia and Nigeria – from a transcultural perspective. In enacting nakedness as a performance of vulnerability and precariousness these examples draw our attention to particular corporeal actions, activities, practices, and events and they also clearly illustrate that the body signifies more than a site of cultural insiration. At the same time one can realize that such protest performances and their depictions in the media in particular have been criticized as self-commodification, as pornography reinforcing power structures of heteronormativity, and as the idea of the (post) colonial Others. I would argue, that these examples make us well aware of the ambiguities and dilemmas of visibilities and that they point to the challenges that those in the public sphere are confronted with by transcultural media.

THOMAS, TANJA* (University of Bremen, thomas@uni-bremen.de)

On Cosmopolitan Solidarity for Women’s Rights

1,127 is the number of dead people mentioned in the last reports on the disas- ter in the garment factory in Sabah, Bangladesh, 2013. The mostly female work- ers, who sew clothes for Western consumers were among the lowest paid in the industry worldwide. They died as a result of an accident that, according to critical voices, could have been avoided. Our research about Western’ media coverage of this catastrophe is based on a concept of critical cosmopolitanism that strongly reflects the idea of recognition and solidarity. This means that on the one hand, we will discuss the media coverage of this disaster and how the portrayal of the victims as vulnerable could have evoked empathy. On the other hand, we will discuss different ways of making use of media to emphasize interdependencies among included populations and to demand social justice. This way we want to contribute to a renewal of cosmopolitanism as a concept of competence and practice and that may help us to elaborate the media’s potentials to promote solidarity.

Laboratorios Sociales De Turismo Experiencial. Exploración Colectiva De Un Paradigma Decrecentista Para El Turismo En Áreas Rurales

La presente ponencia estudia el caso de los laboratorios sociales de turismo experiencial, un espacio de exploración colectiva para el desarrollo de un par- adigma de turismo decrecentista en la comunidad indígena matazacina de San Francisco Oaxaca en el Estado de México. Esta propuesta vincula a las comunidades, la academia y la sociedad civil a través de una experiencia de viaje, orien- tada por los principios de respeto a la naturaleza, la dignidad humana, los valores locales, la cooperación social y la simplicidad voluntaria. En este sentido, cobra un especial valor el aprendizaje colectivo en el que los anfitriones descubren oportunidades alternativas para complementar sus necesidades materiales; y los turistas construyen una experiencia de viaje creativa, auténtica y enriquecedora. Estos laboratorios funcionan desde la articulación que la academia realiza entre las comunidades y los visitantes, y orienta sus acciones desde la búsqueda de alternativas para incrementar la calidad de vida y el derecho a disfrutar el tiempo libre. En estos términos tiene un especial interés la capacidad de reconceptualizar el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; reevaluar los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; reestructurar la actividad turística a partir una nueva escala de valores basada en la equidad, la eficiencia y la simplicidad; relocalizar la actividad turística abierto la posibilidad de redescribir los espacios de proximidad y así ayudar a una redistribución de los recursos mediante una actitud de cooperación; reducir los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo explora las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se beneficien inmutuamente sin incentivar el crecimiento y la acumulación.

THOMPSON, MICHAEL J.*, (William Paterson University, thompsonmi@wpunj.edu)

Reification: Reconstruction and Extension Of A Concept

This paper will seek to reconstruct the concept of reification and extend it along three different social-theoretic lines. I argue that reification needs to be seen not simply as a the reduction of human relations to relations between things, but that it also constitutes a deep pathology in the capacity of individuals to conceive of the pathological nature of the social relations themselves. Reification consti- tutes, on my reading, a cognitive defect within the thinking subject and therefore as a pathology of epistemic, cognitive, and evaluative capacities of subjects. This renders them unable to perceive and understand the true nature of their social being and, as a result, they come to distort the social and material world of na- ture around them. The depth of reification therefore leads us to an explanatory model of why individuals are susceptible to accepting forms of social power and domination that do not serve common public ends. There is, I suggest, a social on- tology that is barred from their world-view due to the defective nature of reified thought. I take this theory to move against contemporary forms of Critical Theory such as Habermas and Honneth to bring us back to the more radical impulse of the Critical Theory tradition through a reworking of reification.

THORPE, RACHEL* (La Trobe University, r.thorpe@latrobe.edu.au)

Women and Aging: Appearance and Age Appropriateness

Evidence suggests that Baby Boomer women may ‘do’ ageing differently to previous generations (Calasanti and Slevin, 2001). To date, there has been only minimal research considering Australian Baby Boomer women’s embodied expe- riences of ageing. Drawing on data from semi-structured interviews and personal journals from 28 Australian women aged between 55 and 81, this paper explores the ways in which women’s presentation of self was strongly informed by no- tions of appropriate dress, grooming and even behaviour for older women. Often these ‘rules’ were taken for granted, and connected to broader ideas of ‘doing’ normative femininity and presentation of self.

This paper will consider the women’s motivations for doing this ‘appearance work’, and the impacts this had on their sense of self. While their endeavours were largely informed by established norms of female beauty and ‘appropriate’ dress, there was also considerable resistance to these norms and acceptance of the ageing process. Competing discourses, such as ‘resisting age’ and ‘being yourself’, were also apparent, and these processes of contesting and disrupting appearance norms will also be considered.

THORSEN, LINE MARIE* (University of Copenhagen, lm.thorsen@gmail.com)

Art As Acute Action: Art and Articulations of Public Concerns in the Wake of 3.11

In the wake of the immense earthquake disaster that struck Japan on the 11th of March 2011, a myriad of art-based projects were conceived and shaped instanta- neously as a response to the issues and concerns faced by people in affected areas. Responding to the acute- ness of the situation, artists and art professionals – alongside various other social actors – turned their practices towards aiding the disaster-zones. In doing so, artists started shaping their artistic practices accord- ing to the realities faced by North-Eastern Japan, in close cooperation with those affected and other actors involved in disaster support. I suggest that such disas- ter-driven art projects can be fruitfully viewed through Bruno Latour’s concept of matters of concern, and the wider theoretical context of Actor-Network Theory (ANT). With the notion of matters of concern, Latour allows for the analysis of new forms of knowledge formation, which are prompted by public concerns and cross-cutting the spheres of art, activism and disaster relief. Analyzing specific artistic projects, I argue that this approach enables one to follow the practices and movements at stake as hybrid undertakings, which serve to publicly articulate, and thus give cultural shape to, the multiple concerns triggered by the disaster.

Figurative Methods: Towards 'Bridge the Gap' Between 'Transition' and 'Cultures' Research

The study of 'youth transitions' has consistently highlighted the persistence of class influence on life chances and opportunity. The study of youth cultures’ has had a more troublesome and fluctuating relationship with class. The foundational subcultural studies and more recent work continuing that tradition has been criti- cized for (among other things) over-romanticising working class practice; finding ‘resistance’ everywhere; and having an unhealthy focus on the ‘spectacular’ while disregarding ‘mundane’ aspects. Work done on ‘post-sub-cultural’ studies (including ‘scenes’ and ‘neo-tribes’) has been critiqued for giving too much heed to fluid notions of identity; ignoring structural constraints; and over-romanticising ‘choice’ in consumer culture. In general, youth researchers have tended to focus on ‘people like us’ or young people for whom we have em- pathy. There has not been a lot of work on what I would call the ‘more mundane’ end of youth cultural practice. By utilising Tyler’s ‘figurative method’, this paper proposes that tracing the use of terms such as ‘bogan’ or ‘hipster’ can en- able an understanding of the ways symbolic violence is disseminated at the same time ‘class’ tends to equate with middle class envy. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant sym- bolic and moral struggles. This can help bridge the gap between ‘transitions’ and ‘cultures’ research and work towards ensuring that youth researchers do not un- knowingly reinforce the awful stereotypes. Further, figurative methods can en- hance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justice, symbolic and material inequalities and moral economies.

Global Reflexive Hipsters Vs. Local Abject Bogens: Towards Understanding Affective Inequalities in Youth Cultures

This paper looks at terms like ‘hipster’ and ‘bogan’. Using ‘figurative methods’, analysing the ways these terms are operationalised towards young people in soci- ety and popular culture can enliven global comparative youth sociology. These floating signifiers enable distinction to be performed while eschewing the very notion of class. Both terms are mostly used as a pejorative towards various youth taste cultures. The ‘hipster’ is a global figure used in many English speaking coun- tries. It tends to be associated with ‘people like us’ or young people for whom we have em- pathy. There has not been a lot of work on what I would call the ‘more mundane’ or ‘vulgar’ end of youth cultural practice. By utilising Tyler’s ‘figurative method’, this paper proposes that tracing the use of terms such as ‘bogan’ or ‘hipster’ can en- able an understanding of the ways symbolic violence is disseminated at the same time ‘class’ tends to equate with middle class envy. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant sym- bolic and moral struggles. This can help bridge the gap between ‘transitions’ and ‘cultures’ research and work towards ensuring that youth researchers do not un- knowingly reinforce the awful stereotypes. Further, figurative methods can en- hance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justice, symbolic and material inequalities and moral economies.

Segmented Social Capital and Ethnic Diversity in the Work Place

Work places employing many highly skilled and low skilled migrant workers and members of ethnic minorities are interesting focal points for investigations of the potential build-up of social capital along and across ethnic and national lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure, interaction and formation of social relations between different employees depending on the composition of the work force, the work tasks, working conditions etc. Therefore these social spaces represent sites in which workers may build-up social capital encompassing members of other social and ethnic groups in their networks. However, so far research has paid insufficient attention to the way in which social capital formation among immigrants, ethnic minorities and locals in the work place is influenced by issues such as race and class. Nevertheless, we may expect differences in relation to social capital forma- tion depending on the composition of the work force (highly skilled vs. low skilled workers), working conditions (permanent vs. temporary jobs), ethnic origin (west- ern vs. non-western background) etc. This paper addresses research questions such as: Which is the impact of increasing ethnic diversity among the employees on social capital in the work space? In which ways does social capital formation differ depending on whether the employees at the work place are highly skilled or low skilled as well as on racial and ethnic origin? The analysis will be based on interviews with 49 employees from three highly ethically and nationally diverse Danish work places. One of these sites employs many highly skilled migrant workers while the two others primarily employ low skilled workers, including low skilled immigrants and ethnic minorities.

Men, Masculinity, Travel and Tourism: Emerging Themes and Future Directions

While the implicit masculine position of the tourist gaze has been identified and problematised, understandings of specific male tourists has often failed to engage with the gendered notions of independence, adventure, embodiment and ‘risk’ which underpin much tourism experience and practice. Drawing on the author’s own ethnographic study of British stag party tourism in a Polish city, the paper will draw out key themes emerging from recent debates about the positioning of masculinity in the complex social interactions fostered by tourism mobility and the creation of new and developing tourist spaces. Through observ- ing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into the complex social interactions fostered by tourism mobility and the creation of new and developing tourist spaces. Through observ- ing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into the complex social interactions fostered by tourism mobility and the creation of new and developing tourist spaces. Through observ- ing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into the complex social interactions fostered by tourism mobility and the creation of new and developing tourist spaces.
What is the recent development of environmental movements (EM) in the North in response to the institutionalization and globalization of environmental issues and the speeding up of climate change? How and to what extent do activists link EM issues with those of global social justice? This article will present preliminary results from a 4-year research project titled Environmental movements in a globalized world: transformation and/or institutionalization? In a pioneering study of the EM in Sweden, Denmark and the Netherlands from 1990, Jamison et al. showed how the development of the EM linked to national political traditions and to different strategies adopted by each state in dealing with social movements. 20 years later, we analyze and compare the current development of the EM in Sweden, Denmark and Japan. In all three countries, the EM face the challenge of global politics as parts of relatively strong national political consensus cultures. In Scandinavia, the EM is increasingly focusing on climate change, while parts of the traditional movement seem to be in decline. Local mobilization has given way to new networking and interaction on the global level via internet forums, websites and social media, a development that actualizes and articulates the idea of climate justice. The Japanese EM is comparatively weaker, but since Fukushima, the issue of nuclear power is giving rise to new movements and to heated debates regarding its pros and cons in fighting climate change. While the nuclear accident has pushed the climate issue to the background, it has also stimulated interest in energy and public debate regarding democracy and the fair distribution of risks in relation to energy.

**Changes in Social Interactions in Reform-Era Urban China**

The pattern of social interactions represents social divides and inequality. The homophily principle suggests that people are likely to interact with others of the similar sociodemographic, behavioral and intrapersonal characteristics (McPherson, Smith-Lovin and Cook 2001). As resources are differentially embedded within networks, social interactions represent the hierarchical structures of the society (Lin 2001).

Tonnies (1887) argues that the industrialization changes the pattern of social interaction from Gemeinschaft (community), interactions based on kinships, to Gesellschaft (society), interactions based on education and work. It was confirmed by much empirical work documenting a decline of intergenerational interactions (Cheerlin 2012) and an increase of marriage patterns based on education and work (Kalmin 1999).

We examine the changes in the general pattern of social interactions in the reform-era urban China – a nation with strong cultural traditions regarding kinship ties and one that has experienced rapid economic and industrial development over the past several decades. Using the position generator from two social networks surveys collected in 1998 and 2005, we aim to answer two questions: First, is economic reform associated with interactions less based on kinships and more on occupations? Second, does the pattern differ by gender?

**TIAN, FELICIA FENG** (Fudan University, felicia.tian@outlook.com)

**Changing Pathways To Adulthood In China: Urban-Rural Divides, 1982-2005**

Pathways to adulthood have been increasingly diversified in the United States and Western Europe in the economic globalization (Burckm and Kriesi 2011; Shanhan 2000). The standard, tight, sequential pathway to adulthood (Seyers 1990) has been questioned, or even abandoned (Burckm and Mayer 2003). These patterns are divided across the socioeconomic line: while most middle-class youths postpone the transitions, an increasingly proportion of working-class youths no longer follows the sequence of education, full-time employment, marriage and parenthood (Kalmijn 2010).

Little is known, however, about how economic change affects the life experiences of the youths in the developing world. This analysis aims to fill the gap, using reform-era China as a case study to examine how the pathways to adulthood have changed from 1982 to 2005. It will focus on the urban-rural difference. In these twenty-three years, China has experienced a noticeable income increase within the urban-rural income gap (Zicul et al. 2007). The urban-rural divide arguably contributes substantially to the increasing income inequality in China (Die and Zhou 2013). Therefore, it is both theoretical and substantial interesting to compare the pathways to adulthood between urban and rural youths, and explore the relative contributions of each institutional factor (i.e., school, labor market, and family) to the difference.

To answer these questions, this analysis uses three censuses (1982, 1990 and 2000) and 2005 inter-censal survey. Instead of examining one transition at a time (Zicul and Die 2007), this analysis incorporates education, work and family transitions simultaneously. Methodologically, it will treat each census as a synthetic cohort, and will use the entropy index to measure the level of heterogeneity in these pathways (Russell 2005) and the bootstrap to test the statistical significance. It will also use de-composition method to examine the institutional contribution to these changes. (References available upon request.)

**TIAN, YANG** (Bukkyo University, s13-0034@bukkyo-u.ac.jp)

Media, as a communication tool, has a great impact on society. From the traditional simplex communication tools such as T.V., radio, newspapers, and magazines, to the most current bidirectional communication tool, the internet, media has a great amount of influence on society. Media is a powerful tool that can influence a country's policies, shape public opinion, and even set the standard for societal norms. Consequently, research has shown that media outlets use propaganda within advertising. Advertising agencies skillfully manipulate female emotions, in order to create and bolster a perpetual culture of consumption. As a result, this directly contributes to gender inequality.

The primary purpose of this paper is to analyze how media propaganda influences females in Japanese society and the impact it has on their lives. Additionally, this paper will detail how media outlets use propaganda techniques, which have proven to be an effective way to speak to different segments of female identities. This greatly affects how females view themselves and their roles within society.

Social problems including, excessive consumption, identity, and gender inequality, are viewed as generalized social problems. These social problems are often ignored or downplayed by the mainstream media. This paper will engage in a historical analysis, to include the studies that have been conducted, concerning media propaganda on women in Japan.

Although, the news media is supposed to report objectively, studies have shown that notion to be false. The news is often skewed to serve the interest of the power elite. As a result, the news media often reinforces the dominant social ideology. In Japan, the dominant ideology is largely male-oriented. Similarly, this paper argues that the propaganda techniques used by advertising agencies, even as a byproduct, serve that same purpose: to maintain a male-dominated power structure in society.

**Gender Segregation in the German Vocational Training System**

Transitions from education to work are known to be particularly smooth in Germany. This is mostly attributed to the “dual system”, which combines firm-based training and vocational schooling (Müller/Gangl, 2003). In the dual system trainees spend 2-3 years in a company as apprentices and acquire firm specific skills. Both firm and apprentice thus invest in the training which leads to a mutual commitment and a high probability that the apprentice is taken over by the company after training.

However, the German vocational training system does not only consist of the dual system but also of school-based vocational training. In these schools, the contact to potential employers is limited and the curriculum is not firm-specific. We therefore expect that the transition from education to work is less smooth for trainees from school based vocational training. They should face a longer transition period and/or more job mobility.

As gender specific occupations coincide with the type of vocational training, training types are highly gendered in Germany. Women are more likely to enter school based vocational training. We therefore expect that their pathways into employment are less straightforward. The lower firm-specificity of their skills and the lower commitment of employer and employee also should lead to higher job mobility.

We use the German National Educational Panel Study (NEPS). This dataset consists of detailed retrospective lifecourse information about educational and occupational biographies of approximately 11,000 individuals. We examine transition patterns of German women and men after completion of their vocational training and assess how much of the gender differences in the duration of the job placement process and early career mobility can be attributed to the type of training.

**Political Participation and Procedural Utility from a Gender Perspective: Activities in Neighborhood Associations in Japan**
Political participation and participation in the community is often associated with higher levels of reported subjective happiness, but in the case of Japan a negative correlation between activities in neighborhood associations among female members was found by Tiefenbach and Kohlbacher (2013). The current study uses data gained from an online monitor survey (n=1600) conducted in September 2013 to get a better understanding of the relationship between happiness and participation in the community. A special emphasis is put on the sources of procedural utility (competence, autonomy and relatedness) as well as on voluntariness and loneliness as moderators and mediators of the effects of participation on happiness. Preliminary results suggest that participation in the community leads to higher or lower levels of happiness depending whether it is conducted voluntarily or not. In either case, participation leads to lower levels of loneliness, which in return has a positive effect on happiness. Finally, the sources of procedural utility can be linked to higher levels of happiness, but significant gender differences can be observed.

**Historic Preservation of Significant Cultural Sites in Taipei: Comparing 2 Case Studies in the Aspect of Cultural Heritage Management**

Cultural heritage management has traditionally been concerned with the identification, interpretation, maintenance, and preservation of significant cultural sites. The public face of CHM, and a significant source of income to support continued management of heritage, is the interpretation and presentation to the public, with a particular focus on conveying the knowledge of the process that is communicating with government and the public is therefore a key competence.

The thesis focuses on 2 sites in the city of Taipei, Taiwan. Both targeted case studies are defined as art spaces of cultural property organized by Taipei City Government. Spot-Taipei Film House, built in 1926 with a southern colonial architectural style in the colonial period, was originally the residence of the U.S. Ambassador. Once closed due to Pacific war and reopened for the residency of the U.S. Ambassador under the rule of Republic of China. It had faced another closed due to U.S. changed its diplomatic recognition to PRC. Tsai Jui-Yueh Dance Research Institute, built in 1920, was a Japanese style house for the residency of the Japanese Governor. The later owner, Mr. Tsai Jui-Yueh, a dancer who was educated in Japan during the Japanese colonial period, had settled her dance studio in the dwelling, held a 24-hour-long creative activism to save it from demolition by the later ruling government of KMT. This paper will look at Taipei city government’s action toward the two historical buildings. How did the two dwellings process their way to become cultural heritage? The difference movements represent the interpretation and preservation of the space. Additionally, the thesis will review how the two culture heritage presents themselves to the public as well as the spatial reinterpretation of Taipei citizen.

**‘standpoints’: Attitudes to Global Justice Among Young People and Youth Workers in Ireland**

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues.

Young people’s views ranged from the very knowledgeable, critically aware and insightful to the uninformed and apathetic, with the majority in between these two positions, showing some limited knowledge of global issues or relationships but an appreciation of their relevance and a willingness to explore them further. Youth workers (particularly but not only those with direct development experience) for the most part showed a high level of knowledge and awareness of global issues and concerns, and of the links between the global and the local. There were however considerable divergences of opinion among them as to the interpretation of certain key concepts, including ‘global justice’ itself.

Some young people gave examples of actions they had taken themselves in response to global issues and concerns (for example decisions about where or what to buy) but respondents on balance felt relatively inertial with regard to such issues. While the youth workers were much more likely than the young people to say that they thought they could make a personal difference to how the world works, there were very different views of how this could be done; and the researchers noted that workers commonly spoke in terms of what they could or should do in response to development and global justice issues rather than describing what they had done or were currently doing. Overall the research suggests that there is a high degree of ambivalence regarding the nature of global justice, the operation of key, related concepts such as power and agency and the relevance of these to youth work practice.

**Cuando La Participación Ciudadana Argentina Tomó La Palabra**

La adopción en 2009 de la Ley de Servicios de Comunicación Audiovisuales constituye un paso muy importante en el proceso de democratización de los medios audiovisuales argentinos. Frente a un sector audiovisual fracañado (construi- do sobre el decreto-ley n° 22 285/80 -adoptado por el gobierno de facto de 1976-), esta ley se presenta como el punto de partida de la tentativa de reconstrucción del sistema audiovisual e instaura un nuevo modelo audiovisual democrático,
multicultural, pluralist, inclusive and respetuoso of the misiones de servicio público (los pueblos originarios, ocupan un lugar privilegiado en este nuevo sistema audiovisual).

Por primera vez el debate legislativo argentino implicó una participación ciudadana digital sin precedentes. Más de 300 organizaciones sociales, sindicales y comunitarias y más de 12,000 personas (inconformes con el modelo audiovisual en vigor) participaron, desde el 2004, a esta discusión a través de foros y debates con el objetivo de lograr un consenso institucional y social. Como resultado de esta iniciativa ciudadana llamada “Coalición por una radiodiffusión democrática”, se elaboró en julio 2008 un texto de 21 puntos que fue tomado en consideración por los legisladores argentinos. En este contexto, el activismo de las movilizaciones sociales orientado a participar al proceso de transformación del sistema audiovisual se vehiculó a través de la utilización de las redes sociales.

Esta ley debió afrontar una fuerte resistencia del sector privado y que pa- dece hoy en día las consecuencias de un sistema político-jurídico anómalo (frente a su eficacia como consecuencia de su judicialización) sigue siendo el centro de movilizaciones sociales generadas a través de la red. El objetivo de esta comunicación es de presentar esta experiencia argentina, de entender esta participación en la esfera pública, de analizar la fuerte expansión del uso de las TIC en diversos sectores de la sociedad (en especial: los pueblos originarios).

Identidades Políticas y Culturales. Entre La Crisis Económica, Mediatizaciones y Tecnologías

Esta ponencia tiene como objetivo presentar los avances de una investigación que estudia los procesos constitutivos de las identidades políticas y culturales en relación con las actuales formas de implicación y participación de los sujetos en la esfera pública.

Al mismo tiempo, se propone presentar reflexiones sobre las prácticas culturales con el fin de analizar las características más sobresalientes de la interacción de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Los resultados aquí presentados contribuyen al conocimiento de la constitución de la ciudad de Toulouse (Francia) y la ciudad de Rosario (Argentina), en el marco de sus respectivas regiones. Dos sociedades pertenecientes a dos países que también han sido diseñadas como ciudades potenciales comunes hermanamiento entre sus respectivas autoridades en 2008. Existen dos corrientes de investigación que encuadrarán de manera diferente el objeto de estudio que nos ocupa. Por un lado, todo lo relacionado con la llamada videopolítica y sus derivados en el desarrollo actual de las tecnologías digitales. Por otro lado, la tradición de la participación social, que se centra hoy en la emergencia de nuevos actores.

La cuestión que aquí se presenta es heredera de las dos tradiciones, priorizando la existencia de un nuevo orden político sesgado por la mediatización y la comunicación digital en un contexto de creciente crisis económica.

Workers Who Organize in the Public Square: A Comparison of Mexican and U.S. Informal Worker Organizing Models

The growth of informal employment in Mexico and the United States cries out for solutions. For informal workers, unprotected by existing laws, this requires developing new and distinct organizing strategies, and building alliances. Our study uses case studies of organizing of informal workers who contest over the use of public space in the two countries to understand this process in comparative perspective.

Our central questions are:

- What forms does this organizing take in the two countries? How and why are these forms different between the two?
- How do informal worker organizations formulate and implement their strategies, and how do they target and develop alliances, in the two countries?

- What is the role of worker identity in these organizing processes?
- Our analysis undertakes two case studies grounded in interviews and participant observation: day laborers in the US, and street vendors in Mexico. It is a bit unconventional to carry out such a non-parallel comparison of different sectors in the two countries, but we have chosen to examine these two informal groups because of how material resources, personal agency and the nature of informal worker organizing in each country. We will need to take the sectoral differences into account in explaining differences in strategic direction and degree of success, but choosing the two most advanced cases should give us leverage on our central questions.

In our case studies, we will examine national-level organizations, but our main focus will be on day labor organizations in Los Angeles California and street vendors in Mexico City, Mexico. These respective cities not only house the greatest concentration of these groups of workers, but are also the home base of the leading national organizations representing these trades.

TIMMONS, STEPHEN* (University of Nottingham, stephen.timmons@nottingham.ac.uk)

Re-Imagining The UK National Health Service Patient In a Neo-Liberal Policy Context

Historically, the UK National Health Service (NHS) has been taxpayer funded, and largely free to patients. Though some private sector service has always been part of the NHS, this has increased substantially in the last 15 years. Hospitals are important sites for biomedical research, with many patients participating in studies.

In this paper, I will analyse an initiative that represents a new configuration between public and private, and a re-imagining of the patient’s role in the UK NHS. This initiative is an NHS Biobank. A biobank is a repository of biological specimens combined with data about the donors of those specimens, stored for the purposes of medical research. In this instance, the trail is that samples will be collected routinely from NHS hospital patients (with consent), but, rather than patients consented for a specific study, they will be given an enduring and general consent for these samples to be used. At the same time, their samples will be linked to the data that is collected about them for clinical (rather than research) purposes.

Biomedical researchers are excited about the possibilities that such a biobank may offer, and there is a significant private sector involvement in the funding of this initiative, though it remains part of the NHS.

I will argue that this initiative represents a re-ordering of the moral contract between the UK NHS and its patients. Rather than receiving NHS services as a right of citizens and taxpayers, there is now an increased expectation that NHS patients will donate samples and data to be used in (commercial) biomedical research.

Beyond Mannheim: Conceptualising How People ‘See’ and ‘Do’ Generations in Contemporary Society

It is sometimes argued that generation has been hollowed out as a sociological concept outside the family context, yet it continues to feature prominently in policy debates, media discussion and everyday talk. The solidarity, conflict and ambivalence frameworks continue to be widely and usefully applied, but are unable to capture the complex ways in which we perceive and enact generation within and across the family and societal spheres. This paper seeks to develop a more grounded conceptual framework for both characterising and explaining the evolving notion of generation. We view generations as dynamic and varied reflections of how people relate to family members, their own cohort, and groups in wider society. The paper draws on qualitative primary data collected in the course of several recent projects pertaining to intergenerational relationships and the life course; it also draws on learning from the application of this data with final-year undergraduate sociology students who were engaged as an interpretive community to examine ways of ‘seeing’ and ‘doing’ generation. Far from outdated, generation emerges as a still-relevant concept that encapsulates the meaning of family relations but also perceptions of how material resources, period effects and the welfare state context shape lives in contemporary societies.

Social Networks and Environmentalism: Structural Embeddedness and Ongoing Participation in the Canadian Environmental Movement

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
“Common sense” arguments for participation in movements like the environmental movement often refer to grievances, or beliefs, as key factors that give rise to participation. However, structural analysts have demonstrated that neither discontent nor ideology are sufficient conditions to explain social movement participation. Rather, while discontent and beliefs might help to define those who might potentially be mobilized, individuals need to be connected to other movement participants in order to become active. We explore the relationship between social network ties and participation in the Canadian environmental movement. Data are from a self-administered questionnaire, collected from nation-wide probability sample of environmental organization members. We find that ongoing participation is positively associated with ties to individuals in a range of environmental organizations. This effect is net of positive effects for identification with the movement, and the respondent’s NEP score, on participation. Past participation is the strongest statistical predictor of network embeddedness. Thus we argue that both “social selection” and “social influence” effects are at play. People develop ties through their participation, and are more likely to participate in new activities because of their ties. We further examine the mechanisms underlying these patterns, and discuss practical implications of these insights.

Social Media Use for Contentious Politics: Facebook-Activism Against Imposed National Education Curriculum in Hong Kong

This paper examines the use of social media for the protest against the “Moral and National Education” curriculum in Hong Kong. Employing media content analysis and archival research, it explores how social media use facilitated grassroots movement organizations and stimulated cyber-activism among atomized users in practice. On 30 August 2012, a local student organization – Scholarism – went on a hunger strike. Occupying the public area in front of the Headquarters of the Hong Kong Government, members of Scholarism protested against the controversial curriculum imposed by the Education Bureau. In the subsequent days, tens of thousands of people joined the protest. Nine days later, the government succumbed to the pressure and retracted its plans. While new information and communication technologies provide the technical infrastructures for organizing movement campaigns and protests, various uses of new media configurations offer flexible mechanisms for people to take part in contentious activities. During the occupation protest, Scholarism eagerly employed Facebook technologies to coordinate collective actions and mobilize participants. At the same time, numerous users made active use of Facebook to communicate about the movement, forge social networks, produce alternative knowledge, and create innovative protest techniques. As diverse actors simultaneously undertook online activism, the patterns of their computer-mediated communication facilitated the emergence of counter-publics and the development of movement practices and culture. Borrowing insights from the growing theory on computer-mediated social movements that challenges the assumption about requirements for formal leadership and organizational hierarchies, this paper argues that new media use modified the relationship between social movement organizations and individual users, and permitted alternative forms of civic engagement for democratic participation.

Blood Sacrifice, Instant Celebrity, Organization and Mobilization

The paper deals with cases in which almost unknown persons, because of a tragedy, suddenly jump from anonymity to the civil sphere converted in personalities with great capacity for civil intervention. These celebrities owe their instant fame to the fact that they are closely related to the victim of a bloody tragedy: the kidnap and murder of a child, a wife or a husband.

The paper will concentrate in these aspects:
1) The casual birth of a new (involuntary) celebrity, because of a bloody tragedy.
2) Scandal, annoyance, desperation, and new tragic stars in the media.
3) The re-edition and impact of the old myth of sacrifice, blood spill and redemption.
4) The effectiveness of the myth that tragic death of an innocent victim is a sacrifice and sacrifice should be useful and deserve compensation.
5) The great impact of bloody sacrifice symbol. Bloody sacrifice and “conscience crisis” (Habermas).
6) The great possibilities of social action and intervention of some of these people.
7) The different strategies, goals and routes of social action.
8) The discovery of the possession of an unknown new great “magic” like power.
9) Amazement and improvisation of the action of the new celebrity
10) Why some of the co-victims can develop social leadership and others don’t?
11) Resources for the mobilization of this mythical power.

Secondary Education in South America: Analyzing Expansion Dynamics in Argentina, Brazil, Chile, and Uruguay

This investigation examines the secondary school expansion process in four South American countries (Argentina, Brazil, Chile, and Uruguay) from its origins at the end of the nineteenth century to present day. The objective is to compare the processes of growth that these countries share while contrasting their specific characteristics in order to identify patterns in secondary schooling in national contexts of late modernization. This study begins by conducting a statistical analysis that allows for a subsequent description of how varying factors specifically influence each national context.

Secondary education expansion systems emerged in these countries due to a combination of modern educational models and distinct cultural “figuration” within each national context. These consolidated “national education matrices” derived from the particular blending of four elements: society, state, market, and education. Chile, Argentina, and Uruguay have had highly centralized educational systems typified by mass primary education, whose aim was to culturally homogenize the population, and an elitist and selective secondary education. On the other hand, educational expansion in Brazil has been much slower, characterized by development of productive forces and industrial advancement.

Secondary education expansion began to intensify in the 60s and has undergone strong transformations in recent decades. Chile and Argentina decentralized their educational systems. The former converted into an unequal market directly correlated with students’ socioeconomic levels, while the latter is clearly a fragmented system in terms of the population’s economic and cultural characteristics. Uruguay maintains a centralized, public, and secular model, which, at the secondary level, has expanded at a slower rate over the last several years. In Brazil, secondary education has experienced a strong democratization process due to a political order pushing them to reach standards consistent with the leadership role that it has acquired at both the regional and international level.

TODEVA, EMANUELA* (University of Surrey, e.todeva@surrey.ac.uk)

Business Network Theory and the Role of Country of Origin

Business networks are recognised as the new organisational form of doing business, where cooperation and competition take place simultaneously, where the interdependencies between firms co-evolve through complementarity of skills, assets and capabilities, and inter-firm relationships thrive in the form of long-term repetitive exchanges and alliance membership. The theoretical and empirical literature is very rich in assertions about the benefits from networking and the positive impact of alliances and cooperation on firm performance, on supply chain integration, on dissemination of innovation and on learning and development of individual firms. Business Network Theory represents an eclectic body of theorising that focus at three distinctive levels – the level of actors’ attributes, the level of dyadic and multilateral inter-firm relationships, and the level of overall configurations of multinational business networks, or multinational business operations trespassing firms’ boundaries and countries’ borders.

Traditional concepts of International business theory, such as ‘country of origin’ could hardly explain the complexity of resource flows that take place on a global scale. While research on Asian multinational firms demonstrates clear evidence of distinctive patterns of governance and investment strategies, ‘country-of-operations’ has become a more dominant concept that can explain global collaborative strategies.

The paper presents a new argument that global supply chains and commodity chains, or multinational business networks in a number of industries exhibit a common characteristic, where the regulatory environment in countries-of-operation induces similar strategic behaviour.

Mothers’ Use of Terms Referring to Their Child in Japanese Conversations: A Conversation Analytic Perspective

This study examines ways mothers refer to their child in conversations in Japanese from a conversation analytic perspective. Conversation analysis is a method-ology to examine real time interactions from the perspective of the participants themselves (Sacks, Schegloff, and Jefferson, 1974). Person reference has been among the major topics of conversation analysis since the seminal work by Sacks and Schegloff (1979). Studies have shown that forms of reference can do a special interactional work other than referring to (a) person(s) (Schegloff, 1997; Stivers, 2007). For instance, Oh (2010) shows that Korean speakers use a quasi-pronoun based on the distal demonstrative ce (‘that over there’) in referring to a co-present third person in order to distance themselves from the referent. In this study, I focus on the kind of interactional work mothers are doing when they use different expressions to refer to their child in conversations. My data were collected at two Kosodate Hiroba in Osaka, Japan. Kosodate Hiroba is a place where mothers of a very young child spend time watching their child and enjoy conversations with other mothers and staff members, often sharing their problems in child-raising and getting advice from them. I found that the unmarked form of a mother’s ref-erence to her child is either the child’s name or kono ko (‘this child’), neither of which does anything more than refer to the child. By contrast, the mother’s use of kono hito (‘this person’) to refer to her child can do a special interactional work. For instance, mothers recurrently make reference to their child with kono hito when they explain or comment on the child’s actions. In the present study, I also make a complaint more easily recognizable because the word hito (‘person’) conveys that the referent has independent thought and is difficult to control even for her/mother.

Investigating Response Quality in Mobile and Desktop Surveys: A Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales

Mobile devices have smaller displays, touch screens and different methods of navigation compared to desktop computers. This may limit the amount of informa-tion that could be placed on a mobile phone screen and it can also affect how a survey is comprehended and completed. The most traditional rating scales in Web surveys are made from radio but-ton. Radio buttons require quite a lot of space, which is scarce on mobile devices like smartphones. Less space is available for the number of response options. Hence, a limited number of response options can be presented simultaneously. Otherwise, respondents have to scroll to see all response options which may bias ratings. Visual Analogue Scales (VAS) are operated by point and click: respondents move the mouse arrow to any position on the line and after clicking the mouse button a marker (e.g., a cross) appears at the very position. In contrast, slider scales have a handle visible directly on load of the Web page. Ratings are done by drag and drop. Both scales can either be implemented as continuous rating scales, or as discrete rating scales where only a limited number of different responses can be given. A continuous implementation is especially valuable if respondents use mobile devices like smart phone where an efficient use of space is required. A comparison is needed of radio buttons, VAS, and slider bars to see how they affect data quality on mobile phones compared to regular desktop completion. Finger navigation on mobile phones is less precise than mouse navigation on desktops. This could result in selecting the wrong (not intended) answer option in radio buttons. Slider bars or VAS might be more efficient in selecting the intended response option. The usability of question formats is conjectured to be related to the number of scale points.

Alien Money: A Cultural Sociology Of The Ecuadorian Dollarization

Over the past two decades scholars have extensively addressed the influence of money on the formation and consolidation of national space. After the launch of the European Monetary Union (EMU), though, their interest has increasingly focused on the struggles over the definition of who should belong in a currency community and what cultural credentials countries should exhibit in order to gain their ticket in. What happens, though, when countries surrender their own cur-rencies, severing the link between national identity and the currencies circulating in its jurisdiction? How do they manage to hold onto such alien currencies? The literature has not fully addressed the social struggles and the cultural mediations that take place under such circumstances. By focusing on the full dollarization Ec-uador has experienced since 2000, and therefore by addressing a case that comes close to an ethnomethodological breach of our expectations about what curren-cies should be about and how they should relate to their own societies, I hope to shed new light on the relationship between money and national space. The study of societies that take up foreign currencies as their own, even when these belong to countries they might not necessarily sympathize with, may shed some light on the factors and processes that sustain the legitimacy of currencies, especially in situations where the money becomes alien to the national identity. This case has implications for how we understand alien monies, national spaces, and legitimacy in such situations as the current Eurozone crisis.

Undrinkable Coke? Corporate Scandals, Civil Society and Cultural Difference

Over the past two decades corporate (mis)behaviour, scandals and accidents have stirred passionate debates around the world over the limits of corporate practices. By shaping public opinion over this issue, civil societies have sustained the action of those agents of civil repair, both outside and inside corporations, who have sought to resist and correct corporate malpractices. So far, social move-ment scholars have explored the cultural resources that social actors tap into for the purpose of mobilizing public opinion over these issues. Impression management scholars, on their part, have looked into the verbal accounts by which corporations seek to defend their legitimacy in public. Very seldom, though, have analysts accounted for the deep cultural metrics of legitimacy on which actors on both sides draw in public debates to win the support of their fellow-citizens and, when they have, they have mostly focused on the discursive structures that un-derscore the workings of civil society. In this paper I will focus on a scandal that had a far-reaching impact on international public opinion and that hit Coca-Cola as a result of the accusation against its local bottlers in Colombia for using illegal paramilitary groups to intimidate, threat-en and eliminate some vocal trade-unionists. I will show that the participants to the public debate in Colombia over the role and responsibility of Coca-Cola drew from two alternative discursive structures that contributed to orient local public opinion: the liberal discourse of civil society and the corporatist discourse of the hacienda.

Energy Regime Change and Institutionalization: Understanding Developments in Carbon Capture and Storage

Many analyses of energy technology development disregard the importance of institutions and the interdependence of economic, technological, political and so-cietal concerns and events. I propose a dynamic institutional systems framework to integrate the various concerns into a simultaneous analysis and demonstrate the framework with case analyses on the budding developments of Carbon Capture and Storage (CCS) technologies in Europe.

The framework integrates cognitive institutionalism, Socio-Ecological Systems (SES) and socio-technical transitions theory. Institutions are the rules of the game and shape human interactions; both formal rules, such as laws and reg-u-lations, but also informal institutions through traditions, practices and beliefs. Individual but shared beliefs about energy regimes shape how the systems develop, leading to issues of technology lock-ins, incremental change, institutional inertia and path dependency.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper focuses on self-referentiality in the mental models of stakeholders as a factor that shapes these issues. The institutions held by the actors are seen to organize in a nested mental model; the three levels of socio-technical landscapes, socio-technical regimes and the innovative niche (Geels 2002) are seen nested holons or SEEs. This paper is based on case studies in Finland. The case studies are focused along two projects: one cancelled retrofit of a coal power plant and one case of technology in development, mineral carbonation. These two projects are deeply embedded in a national and international context, and the aim of this paper is to establish how stakeholder’s institutional self-referentiality affects the developments in the projects and what these project issues tell us about CCS and energy regime change in general.

Measuring Path Dependency in Politics through Text Mining

This paper demonstrates novel methodology to measure path dependency in policy-making. The method takes large text corpuses of policy documents, plans, scenarios, roadmaps, preparatory text and the like, and analyzes the flow of concepts, phrases and blocks of text as later documents inherit bits of earlier documents. The analysis proceeds by looking at relative frequencies of words and phrases in documents through a measure called term frequency-inverse document frequency, and translates this into two networks: the document-document network and the concept-concept network. The method describes how conceptual usage is inherited between documents and the concept-concept network describes courses or network areas of concepts that are used together and start to institutionalize in the political language.

The paper demonstrates the method through an analysis of energy policies in Finland, and how various technologies, policy tools, and conceptual processes rose and fell over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.

“Belonging” in the Study of Younger Generations of Migrant Background

This study analyzes the practical purchase of the concept of “belonging” to study identity formation among younger generations of migrant background. It is argued that “identity” has more usage as an empirical concept, whereas “belonging” provides more analytic purchase to grasp the underlying mechanisms of inclusion and exclusion that inform young people’s identity formation.

The theoretical discussion will be informed by an empirical study on young Kurds’ negotiations of belonging in Finland. The qualitative study looks at how young Kurds narrate their belonging in terms of various mechanisms of inclusion and exclusion, including institutional arrangements and (racialized) discursive categorizations. The broader theoretical premises of the empirical study lie on transnational identity, fluidity and narrativity, and the theoretical discussion leads to question the analytical edge of “belonging” and how it addresses the questions of who gets to belong and who does not. The case study shows that young Kurds construct a sense of belonging in terms of the discursive construction of national belonging and “otherness” in the Finnish context. The racialized boundaries of “Finnishness” echo in their narrations and position them as the “other”, namely the “immigrant”, “refugee” or “foreigner” on the basis of their darker embodied signifiers.

Floya Anthias argues that belonging, in contrast to identity, assumes access and participation, and becomes activated in situations of denied membership and experiences of difference. In this sense, it is suggested that “belonging” better captures the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences captures the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences. This study employs the intersectional frame to analyse the intersecting attributes of gender, age and ethnicity impacting researcher positionality and the interaction situations with the interviewees. Hence, the theoretical and methodological challenges of employing “belonging” in junc- ture with the intersectional frame will be explored.

The Impact of Community Size and Characteristics on the Articulation of a Doubled Security and Social Dimension: The Case of Urban Mediators in France

In France, an increasing number of local authorities have developed programs focusing on “urban mediators”, which aim to reduce insecurity within districts referred to as deprived areas. These individuals make the rounds in such districts to ensure a calming presence for inhabitants as well as to speak with them. This street intervention allows mediators to meet with various persons distant from public services, such as drug addicts, juvenile delinquents, victims of domestic violence, or immigrants facing integration problems. This demonstrates that such interventions include security and social dimensions at the same time: The mediators intervene not only with persons who “cause” insecurity but also with those who suffer as a result of it. Therefore, they differ, on one hand, from the police, whose actions consist mainly of repression (Roché 2004) and, on the other hand, from social workers, who intervene mainly in the long term as a result of requests.

These features led us to question the way the characteristics of different districts can influence the respective importance given to both dimensions (security and social dimension). This paper will specifically study the fieldwork and the analysis of archetypes and the political language since the year 2010 show that this action can be classified not only according to the degree of the municipal coordination but also to the community size (larger or smaller), the networks which the municipality has with other actors, and the social status and cultural background of mediators. This communication will reveal the impact of the political coordination on the articulation of these two dimensions, the process of construction of partner networks around the question of the insecurity, and the interaction between urban mediators and inhabitants.

By Whom Do You Want Your Wallet to be Found in Ethnically Diverse Neighbourhoods?

The claim that ethnically diverse living environments drive down social cohesion between and within ethnic groups, remains disputed, despite abundant empirical tests performed all over the globe. The Netherlands, where it was proven to be an intriguing test site for this so-called ‘constric proposition’, as numerous studies – using different operationalizations of ethnic diversity and social cohesion, different data, performed in different time era and defining macro-level geographical units differently – reached rather similar conclusions: in general, eth- nic diversity does not erode social cohesion. This study asks to what extent diverse neighbourhoods, trust in neighbours is indeed hampered. Yet, various questions remain. First, does ethnic diversity only drive down trust in neighbours of ethnic outgroups or also trust in coethnic neighbours? Second, is the neighbourhood the crucial geographical unit of which one would expect (negative) diversity effects? And related to the second question how should we define the neighbourhood and consequently operationalize neighbour- hood diversity? In this contribution we an- swer these questions through analyses of the Religion in Dutch Society 2011-2012 dataset, supplemented with unique GIS-data. Our dependent variables are so-called ‘wallet-toss’ in which we systematically varied the ethnicity of the target of trust (co-ethnics versus outgroup members) and the location of the target of trust (neighbours versus non-neighbours). We introduced spatial thinking into the diversity-cohesion discussion and investigated to what extent the impact of ethnic diversity depends on the definition of the neighbourhood (administrative units and street level) and on the composition (racial) scale of the outgroup. We ap- plied spatial regression techniques and multi-level models to test our hypotheses.

TOMA, KOTA* (Keio University, k_toma222@hotmail.com)

Isolation of Children Who Leave Social Care Facilities

On the basis of the results of a qualitative study in a children’s self-reliance support facility, this presentation will discuss the reason why children, who leave social care facilities, become isolated. In Japan, the social exclusion of children who are, or were, placed in these facilities has been a pressing topic. However, the relationship between the purpose of social care and the lives of the children who leave these facilities has not been sufficiently discussed.

The study was conducted in a children’s self-reliance support facility (called “Z” in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: First, even children who overcome a particular issue while living in the facility may regress to their previous behaviors depending on the environment in which they live after leaving the facility. Second, children, particularly those who serve their time and leave the facility, are often compelled to choose between returning to their families and living independently. This problem is caused by a severe shortage of institutions that provide aftercare to chil- dren who leave such a self-reliance support facility. Third, although all staff mem- bers want children to depend on them when they confront difficulties after they leave the facility, in some cases, the children are sometimes reluctant to do so.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
On the basis of the above results, I will discuss the dysfunction of self-reliance as a social norm. 

RC53-854.5

TOMA, KOTA* (Keio University, ktoma222@hotmail.com)
The Process of Children's Socialization in a Group

This presentation will discuss the process of children's socialization in a group. Although the socialization of children has been one of the most important research topics in sociology, the concrete aspect of it is still uncertain. The study was conducted in a children's self-reliance support facility (called Z in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: (1) In Z, living with a group is optimally used to treat, care for, and socialize the children. In particular, their rank in their relationship, which is based on age or phase of treatment, plays a very significant role. (2) It is important to note that such a rank is not permanent. As the upper-class children leave the facility, or when a new child enters the facility, the rank shifts. (3) Moreover, the children do not uniformly experience the reconstruction of these ranks. Rather, it is an individual experience.

As indicated above, living in a group and experiencing the construction and reconstruction of ranks in their relationship take very important role in children's socialization. This process can be interpreted as the process of "role-taking" in group dynamics. Moreover, such "role-taking" can be regarded as a type of anticipatory socialization that occurs after children leave the facility. I will conclude by discussing the implications of these findings for the field of sociology.

TOMALIN, EMMA* (University of Leeds, etomalin@leeds.ac.uk)
Gender, Development and the 'De-Privatization' of Religion

'Poverty has a female face' in many contexts, which has been exacerbated by the recent global economic crisis. Amongst the range of actors that have responded to declining levels of welfare support by the state are 'faith-based organizations', and international donors and agencies increasingly recognize these as significant 'development' partners. This 'turn to religion' within mainstream development policy and practice has taken place against the backdrop of a perceived 'religious resurgence' or 'de-privatization' of religion, which casts doubts upon earlier predictions that secularization and modernization are two sides of the same coin.

From a 'gender and development' (GAD) perspective, the 'rise of religion' coupled with declining levels of state welfare provision presents a threat to gender equality and women's rights. The preference for 'secularism' amongst numerous women's rights activists and GAD practitioners is no secret, and has been promoted as the best route for securing equality, freedom and security for women globally. Therefore, it is crucial to view the recent 'turn to religion' by mainstream development actors through a gender lens. This is not only because women are more vulnerable to poverty, but also because 'religions have a male face' (see also Tadros 2010; Tomalin 2011).

This paper examines the future of the 'secular' in the light of theories about the 'de-privatization' of religion and the implications this has for gender equality and women's rights, which are central to GAD. Currently, understandings of religion that influence mainstream development policy and practice rely upon frameworks for analysis that are outdated and unhelpful for addressing the above concerns. Focusing upon examples from South Asia, I will demonstrate that distinctions between the religious and secular, the private and public, and the idea of a clearly defined 'domain of religion' are unhelpful in addressing contemporary questions around 'gender, development and the de-privatization of religion'.

TOME, EUALALIA* (Sogang University, eualalia.12@yahoo.com)
Albularyo Ritual Healing: A Construction of Ethnicity of Filipino Immigrants in South Korea

The transnational movement of people around the globe has challenged migrants' belief systems and their quest for well-being. The movement of people in itself is a form of ritual performance, a journey towards a dream and the aspiration to acquire a new sense of self and identity. The goal of this research is to illumine how Filipino immigrants reconstruct their ethnicity through access to the albularyo ritual healing of their homeland. In this paper, migrants are viewed as secular pilgrims who experience the manifold stages of liminality as they continue to seek well-being. Among the journey they suffer from pneumopsychosomatic illness, which has a certain connection with "home." They romanticize the memories of their homeland. They access shamanic ritual healing, which brings into the real "here and now" the interplay of memory and the self's narrative that defines their identity. The research is based on the ethnographic data collected April to June 2013 in South Korea. It focuses on the story of Filipino immigrants who experienced shamanic healing in their homeland and continue wearing the amulets given to them by shamans to prevent illness and protect them from evil while in a foreign land. The migrants' definition of their "new selves" is shaped by the core institution of modernity.

Findings indicate that the root cause of disease from pre-industrial society to the age of globalization is emotion. Negative emotion breaks one's social ties with the self, significant others, and the divine. Physical illness often stems from one's spiritual sensibilities in his/her religious worldview. Also, migrants' state of identity consciousness is "in between" - that is, "neither here nor there" - and they must undergo different stages of liminality in restoring selfhood. Thus, healing is an outcome of rebuilding relationships - practicing one's spirituality and reconstructing one's ethnic identity.

Development, Inequality, and Discrimination in Europe: A Comparison of Post-Socialist and West European Democracies

This paper uses the European Social Survey 2002-2012 to examine trends in discrimination, taking into account two different groups: those who feel discriminated against because of their ethnicity, and those who espouse xenophobic attitudes. The country-level relationship between feelings of discrimination and xenophobic attitudes calls for explanations that consider economic development and social inequality. A complimentary research question is: To what extent does social inequality influence feelings of discrimination and intolerant attitudes, beyond economic development factors, individual socio-demographics and various personal outlooks? Our analysis covers post-socialist and West European countries (N>16) in the period 2002-2012. Multilevel regression analysis on the ESS data provides the statistical means to examine the effects of country-level and individual-level determinants and their interactions on feeling discriminated and on xenophobic attitudes. Economic variables at the country level include national income per capita and Gini index of income inequality. At the individual level, we focus on social stratification – education, occupational status, and income – subjective evaluations of standard of living, as well as a range of attitude measures. Results demonstrate how these variables are related to ethnic discrimination and xenophobic attitudes, controlling for political views and national orientations. We show that in post-socialist countries ethnic discrimination became more salient as society embraced party pluralism and freedom of speech. At the same time, in both post-socialist countries and Western democracies right-wing and nationalistic attitudes are strongly fuelling discrimination. At the end of the paper, we discuss theoretical implications of our findings for analyses of development, inequality, and democracy.

Peruvian Immigration to Chile: Racism and the Deskilling of Female Transnational Workers

Historically Chile has been a country of emigrants rather than a country of immigration. There are around one million Chileans living abroad. However, in the last decades immigration to Chile has accelerated. Immigrants from Peru, Ecuador, Bolivia, Colombia, China and Korea confront a hostile and racist society. The largest of these groups is formed by Peruvian migrants. About 130000 Peruvians live today in Chile. Of these, 60% are women, many of whom end up working as domestic servants. Peruvians have become a large group among domestic laborers, in particular as live-in domestics. Although the levels of education of Peruvians are higher than those of Chileans, they are consistently pressed into low paid work with little protection. By using a nnetographic methodology I investigate how racism, that has historically casted mestizo Chilean women in the role of 'masa', today streams Peruvian women into the homes of wealthier families and households, regardless of the levels of education and skills they bring with them at the time of immigration.

A Study of Policing the Protest in Japan: Effects for Social Movement Organizations and Arrested Activists

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This study investigates the policing for social movements in Japan. Compared with other countries, a few studies empirically examined the policing in Japan. In 60s/70s movements, over 5,000 activists were captured by police. Though arrested activists had dramatically decreased since 1970s, policing still have an impact on social movement organizations (SMOs) and participants in Japanese political activism. In this study, the author conducted the research regarding the effect of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: Interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing became a barrier for participating and continuing the social movements. Once the participants are arrested, some activists avoid taking part in and continuing the social movements. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person. On the other hand, seized participants face to the crisis collapsing their careers as a student, businessman, housewife, and other roles in their usual life. Participants have a wound in not only their bodies, but their minds. From the interview and network data, the author cleared that policing becomes a barrier for participating and continuing the social movements. SMOs have to spend their money and time to release the arrested one from police, thus their resource are decreased and it is difficult to continue the movements as they used to be. Moreover, arrested participants sometimes break off with external relationship from the social movements: his/her offices, friends, and families.

ALACEVICH, FRANCA MARIA (University of Florence) "Looking at Invisible Woman. the experience of Housewifery in Contemporary Italy"

The contribution presents the outcomes of a research promoted by the Department of Political Science and Sociology, University of Florence. The aim of the research was to design an updated picture of nowadays housewives, as well as to investigate why so many Italian women still remain out of the labor market. In Italy we find a huge number of women going out to work, but the research were only a barrier. Therefore, some characteristics, as multiple profession, reaching more than 500 women through online questionnaires, in deep interviews, meeting outside the malls and the schools, newspapers, blogs, etc. Outcomes show that the traditional label "housewife" is no more appropriate to describe a population more and more differentiated, with variable identities, professional histories, motivations, values, and personal choices.

The research investigate a high number of dimensions, nevertheless some of them (motivations, domestic life's organization, role identification) allow to identify at least four different types: grateful housewives, aged women, who choose domestic life according to their traditional image of the family and blindly claim the value of their choice as well as a major social appreciation of the role of housewives; tailored housewives, aged women, who share a less traditional picture of the genders' roles, has been employed and "adapted" to domestic life without represent themselves as only "housewives"; forced housewives, mainly women expelled by labor market, inactive because of stigmas who experience domestic life as a sort of punishment and do not represent themselves as "housewives; temporary housewives, generally younger and highly educated women who, considering the uncertainty of their professional life, invest in their family and consider their role of wives and mothers as moratorium, waiting for more favorable times in the labor market.

The Coordination Mechanisms of Organizational Routines: A Case Study on a Free/Open Source Software Project

How might distributed, peer-production organizations that rely on the Open Innovation paradigm sustain task specialization and achieve effective coordination in the absence of formal hierarchical control? This question is increasingly relevant because a number of production processes are being shifted from the physical to the virtual domain. Traditionally, scholars identified in organizational routines the building blocks of coordinated action in organizations. In this paper, we draw on the evolutionary perspective of organizational change (Nelson and Winter, 1982) to investigate the emergence and change of organizational routines in the context of distributed, peer-production communities. We argue that change emerges endogenously from the interaction of individuals (or "problem-solvers") and sequences of actions linking problem-solvers and problems within organizations. More specifically, we investigate how routines emerge dynamically from the dual association between individuals (or "problem-solvers") and tasks (or "problems") in organizations. In particular, we ask: How do organizational routines (structured sequences of actions) emerge, evolve and persist despite the demographic turnover of participants and the ever changing character of organizational problems? To answer this question we run newly developed class of Relational Event Models on the entire sequence of actions undertaken by software contributors on source code repositories using the entire timeline of the Apache HTTP server, a very large Free/Open Source Software (F/OSS) project. By examining directly the micro-level, socio-temporal interdependencies generated by individual actions performed by problem-solvers, we find that self-reinforcing processes underpin the endogenous coordination of a decentralized production community, by fostering task specialization, learning mechanisms. Different types of activities can exist and be coordinated over time in a decentralized decision environment. Our analytical goal is to show how sequences of interdependent problem-solving actions become embedded in temporal sequences of relational events, which then trigger...
specific self-reinforcing mechanisms that provide the social infrastructure sustaining the production of F/OSS.

Age of Transition to Parenthood Among Married Adults: Social Determinants and Gender Difference

Using retrospective life history data from the 2008 Chinese General Social Survey (GSS) and event history analysis, this study investigated the timing of transition to parenthood for both adult males and females for marriage cohorts spanning from 1965 to 2008. Within the neoclassical economic and second demographic transition frameworks, we expect that there will be a trend toward delayed childbearing and a lengthening of the duration between marriage and first child bearing across the cohorts. However, we found that a shortening trend of marriage-first child interval across cohorts, and the more recent cohorts are more likely to transit into parenthood net of other effects. We also found that higher educated people are more likely to transit into parenthood earlier than those who have primary or no education. We speculate that the trend in China contradicts the tendency for delayed parenthood in Western countries due to the resistance to change the traditional childbearing norm of "earlier parenthood after marriage." This is because child rearing is an issue involving extended families, rather than couples' own independent decision. Under the one-child policy, extended families can pool more human and financial resources that they utilize for childbearing. We also speculate that increasing intimacy between newly married couples in the more recent cohorts contributed to this trend.

An Institutional Approach to Autonomous and Connected Cities: Ostrom's Distributed Metropolitan Governance

Global cities are the economic and cultural centres in the world. They compete with each other for a number one status on various lists. International accessibility is essential for a city's ranking and for its 'supply' of people, goods and resources, putting a city's position in the international network of airports and harbours and in the international economy high on the political agendas of national and local governments.

Cities are constantly searching to improve their performance. Specialized planning models support city governments to deliver the various public goods and public services that are expected from them. More integrated models, such as the airport region and urban metabolism models, emphasize the tensions between international connectivity and local liveability. The extent to which current institutions are capable of managing these tensions is questioned by stakeholders. They search for institutional structures supporting the delivery of the public goods promised, with a prominent position for questions of scale. Technological developments have made these questions more urgent. The fast developments in the field of renewable energy technology, smart grids and electric vehicles call for redefinitions of rules and roles of consumers, producers, citizens, local, provincial and national authorities and of the public goods delivered to them.

In this paper, we address the search for institutions that match today's challenges by using the theoretical framework of distributed metropolitan governance as developed by Vincent and Elinor Ostrom. With this institutional approach, we explore current urban governance challenges in the Netherlands. To sustain their competitive position in the global network, Dutch cities strive to become resilient, self-organising and self-governing. We will explore how institutional mechanisms as consociationalism and pillarization, as identified by Lipshart, which have proven to be able to bridge conflicting values, are still relevant for a renewed conception of distributed metropolitan governance.

Possibilities for New Forms of Resistance in the Neoliberal Era: Unification of All Rights Movements During Tekel Workers' Resistance in Turkey

The working class has become overwhelmingly disorganized in the neoliberal era partly due to the attacks on legal and institutional grounds of trade unions and partly due to the transformation of working class itself. Dialectically enough, the current phase of capitalism is pregnant with new crises and forms of resistance. This result of increasing precarious jobs, jobless growth, insecurity and extreme commodification. Under these conditions, unions are faced with altering their strategies. A possible formula is to organize unemployed and precarious workers as well as workers around counter-hegemonic united front on a non-neoliberal defence of collective rights (right to water, rights to transportation, right to shelter, right to decent work etc.). This study provides an historical account of a working class protest which took place in 2009-2010 in Turkey. It argues that this protest foretells the possibility of unifying all rights movements under an expansive struggle for collective social rights. June 2013 mass protests in Turkey also show that the sense of injustice is becoming stronger and felt increasingly by those who are subordinated to all sorts of unequal power relations.

TOPALOV, CHRISTIAN* (École Hautes Études Sciences Sociales, topalov@ehess.fr)
A Scientific Controversy Across the Channel: Unemployment Theories, Sociology and the Rise of Mathematical Statistics in the Early 20th Century

In the early years of the 20th century, on both sides of the Channel, social reformers were struggling to define what « unemployment » could be. Political economy, sociology and social statistics were mobilized in the process of shaping the novel category. Defining unemployment scientifically seemed to imply that the unemployed should be enumerated or otherwise transformed in solid figures. Various statistical devices were imagined in both countries for trying to solve that same puzzle, but quite different scientific languages were mobilized: William Beveridge used the language of political economy (1909), Max Lazard that of Durkheimian sociology (1909), and Arthur Bowley the new tools provided by mathematical statistics (1912).

An argument developed in professional journals between Lazard and Bowley, who doubted of the statistical techniques the other one was using: Lazard had calculated an occupational unemployment rate, Bowley an index-number of the variations in the volume of unemployment. In order to describe this controversy, one can use the notion of « national scientific styles » and observe how tools circulate between British statisticians and French ones, through the International Statistical Association and an intense exchange of literature. The limited reception of the correlation coefficient among French statisticians raises an interesting general issue of the conditions of the circulation of knowledge.

Accounting for the difference between Lazard's and Bowley's formalisations implies analyzing sociologically what they were designed for and the relations that were being established between scientists and the users of their knowledge in the respective labour administrations. In both countries, a close relationship between scientists and administrators conditioned the development of abstract statistical forms that could be applied to formalizing a new social issue and contemplated public policies: in France unemployment insurance by industries, in Britain public works providing jobs when an unemployment crisis would be looming.

TOPALOV, CHRISTIAN* (École Hautes Études Sciences Sociales, topalov@ehess.fr)
Network Analysis and Spatial Analysis Combined: The Case of Reform and Philanthropy in 1900 Paris

Historical monographs on specific spheres of social reform are many when it comes to the late 19th and early 20th c. in the largest industrialised countries of the time – it was a « progressive era » for all of them. Every monograph points out that a good deal of the characters involved were simultaneously present in many other fields of reformist action – e.g. public health, housing reform, work relief, « protection » of women and children, prison reform, social science, etc. This invites scholars to cross the boundaries of specialisation and study reform and philanthropy as a possible unified field of action, interaction and sociability. This can be done through network analysis: voluntary associations used to-pub-
lish reports and lists of leaders, members and supporters – by making the names of their followers public they increased the legitimacy of the cause. This circumstance made it possible to collect complete lists of members of 106 reform associations, totaling 17663 people in 1900 Paris. Two directories of Paris charities have been added to the data base, i.e. 1346 charities and 2060 people. Sources permit us to analyse the address of the charities and most of the individuals. A GIS was set up that allows it to locate every address on the street plan of Paris (as of 1888). This material is exceptional by its quantity and systematic character. Using the data base, we can separately and simultaneously consider both social and spatial links : the affiliation of people to the same institution, the residence of people in the same building or neighbourhood, the co-presence of two institutions at the same address.

The paper presents the most interesting results and discuss the methodological solutions that had been developed for combining social and spatial analysis, and facing the problems related to the bulky character of the data.

Negotiating Normalcy – Self-Narratives of Troubled Young People

Young people's risk-taking is in most contemporary societies a matter of concern. Research on troubled young people who have been placed in out-of-home care shows that these young people more often than other young people are involved in risk-taking behavior such as excessive drug use. What is rarely investigated, however, is troubled young people's own ways of understanding their risk-taking behavior in the context of their everyday lives. This paper analyses the role of excessive drug use and its influence on young people's self-narratives about their everyday lives. The young people's drug use experiences continuously inform their perceptions of what they consider a 'normal' youth life and thus how they negotiate their self-narratives accordingly. This paper is based on 15 in-depth interviews with young people at age 18 who in their childhood have been placed in out-of-home care and have experiences with extensive drug use. Drawing on theories of stigmatization and normalization the paper demonstrates that what the young people conceive as a normal youth life is influenced by their drug use experiences and troubled childhoods. Their risk-taking behavior thus challenges their wish to create meaningful and coherent self-narratives and the result is often the creation of fragile self-narratives based on subtle negotiations of what they perceive as normal.

Historic Environment as an Opposing Element to Inequalities

Taketomi Island in Okinawa Prefecture is one of the outer islands near the southwest border of Japan. Its islanders have suffered two-fold inequalities for years. The area of Okinawa Prefecture was a small independent nation until 1879. This nation was defeated by Japan and subsequently annexed by the national government. Afterward, mainland Japanese, especially uneducated ones, began to regard these islanders with contempt as defeated people. Another source of inequality is the area of the island, which was peripheral, even during its era as a small nation; the people of this small nation considered Taketomi islanders as non-cultural people. This tendency continued even after Taketomi's incorporation into Japan. However, the "historic environment" that Taketomi islanders have preserved and created through an active movement in the last 30 years has changed their dismal situation dramatically. Preserving historic sites did not affect the situational changes per se, but it elicited widespread discussion of common shared values and examination of the daily lives of islanders. As such, Taketomi residents have created peculiar historic environments, which attract many visitors and tourists.

Critics of Time in Modernity By Yusuке Maki

This presentation thematizes the series of works of Yusuке Maki, which is the pen name of Munenesu Mita. He is one of the most prominent sociologists in Japan. In this presentation, I would like to focus on the works of Yusuке Maki, and to define their significance and limitations. For the abovementioned purpose, first of all, I will try to consider Yusuке Maki's series of works as a unified process and in which his project of criticism about "time in modernity (characterized as irreversibility and linearity; Newton's abso-
lute time)" has been gradually deepening. Maki's critics of his initial works were based on Marxism, or strictly speaking, on theory of reification. For example, in Gendaijizai no Sonnetosu-Kouzou (Existential Structures of Contemporary Society) (1977), Maki carefully examined Marx, and in Ninngen-Kaikou no Noro-Nameni (Toward The Theory of Human Liberation) (1971), he criticized the difficulties of an-
Social Capital in Late Life: The Case of Chilean Older People

Chile is experiencing an accelerated process of population aging. People aged 60 and older currently constitute 13% of the population. This proportion is projected to reach 28% by 2050. In this context, questions have raised about the quantity and quality of older people’s social capital due to the decrease in family size and changes at the value level related to more individualized societies. The theory of individualization proposed by Beck and Beck-Gernsheim states that in today’s society people are less bounded by traditional forms of representation and control. At the level of personal ties, this means that family members would relate to and help one another because they ‘want’ and not because they ‘must’ do so. However, the latter does not necessarily imply negative consequences on older people’s social capital, but rather it may produce a change of scenario. That personal ties can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing or complementing family resources with other types of ties (e.g., friend, neighbors and/or state).

Gender and Education: Differences and Similarities in the Trajectories of Young Men and Women

The preliminary results of a longitudinal study, which has surveyed the same individuals at 13, 17 and 21 years old, indicate that there are convergences and divergences in the practices and attitudes of young women and men. Young women do better in school but, at the age of 13, they also report more depressive symptoms. On the other hand, at the age of 17 and 21, the trajectories of young men of both sexes are reshaped showing divergences in some respects and similarities in others. Accordingly, young women’s initial educational advantages may not have a prominent impact in later life, culminating, sometimes, in early interruptions or corresponding, afterwards, to precarious experiences in the labor market. Drawing on a theoretical framework which combines an intersectional gender approach with sociology of education, this presentation seeks to explain young men and women’s trajectories and the differences and similarities found. In order to do so, we will analyze the ways in which the trajectories of young people are influenced by factors, such as social background and class, parenting styles, networks of social capital and risk behaviours. These relationships will be analyzed with descriptive and multivariate analysis.

EPIteen, the study on which this presentation is based, was launched in 2003-2004 by the Institute of Public Health of the University of Oporto (ISPUP) and collects data from individuals who were born in 1990, in a total of 2 943 research participants. When the study began, respondents were 13 years old and attended primary schools in Oporto, which is the second largest city in Portugal. With the collaboration of the Institute for Social and Political Science of the University of Lisbon (ISCSP), a new wave will be carried out in 2014 when the youngsters will be at the age of 24.

New Perspectives of Economic and Institutional Sociology. Local Agri-Food Systems and Territorial Development

This paper adds to the debate of Marshallian economic-industrial sociology and the reintroduction of Becattini’s Industrial Districts theory. It aims to situat – within the context of territorial development - A Local Agri-Food Systems (LAFS) perspective, which highlights the profound relationship between food and territory, as well as the importance of collective action, rural agri-food industry, local know how, the environment and food quality, among other issues. The paper is divided in three parts: the first part addresses the theoretical-methodological development from a sociological perspective, but one that incorporates other disciplines such as new human geography, anthropology, complexity sciences and agronomy, all of which enable and form part of a LAFS perspective. The second part of the paper contrasts case studies from Mexico and other Latin America countries that were undertaken as part of a research project funded by the Mexican National Council of Science and Technology (Conacyt), the National Autonomous University of Mexico (UNAM) and the European Union (EU). The final part of the paper concludes that LAFS can potentially contribute solid arguments to implement public policies for territorial development that would enable rural peasant families to earn higher incomes and help overcome rural poverty.

Resistance to New Technologies: The Information and Communication Technologies Case in Spain

This paper summarises a study that analyses the surveys of different data bank containing data about social representations on science and technology in Spain, and the level of personal contact with new trends. The study specifically focuses on Information and Communication Technologies (ICTs). Based on these previous studies we conclude that, contrary to traditional theories of a uniform, positive image, there is significant ambivalence towards technoscience among citizens in advanced contemporary societies. This theory was confirmed for both social representations of technoscience in general and for ICTs in particular. In these results, our paper will show the precise mechanism that these technophobic or ambivalent social representations intervene in processes of individual appropriation of Information and Communication Technologies and its and its implications for the creation of the digital divide. Without denying the relevance of sociodemographic and psychological usual variables, the paper will highlight the importance of such social images about the technoscience and ICTs in the genesis and development of digital divide. In addition to the surveys of different

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
data bank, we will also provide empirical evidence from a study about Spanish citizenship which have used both qualitative methods (with in-depth interviews and focus groups) and quantitative methods (using a representative survey). Finally, we will consider the consequences of this new explanatory approach to the use of ICT and the digital divide has for the processes of social exclusion in contemporary information and knowledge societies.

Trust As Indicator of Social Consciousness in Russia

Social consciousness has always included many indicators: results of activity, needs, motives, values, interests and other indicatives. Among them the significative place takes up the trust, which always reflects one of the main forms of comprehending existing social relations, and at the same time, level of knowledge, awareness and evaluation of the ongoing changes in the socioeconomics.

Role and place of trust in this sphere were studied in process of All-Russian comparative research of 1989 and 2012. The main goal was the comparison between the situation in the last period of Soviet time, when the market relations were beginning, and situation in Russia after 25-year realization of these reforms.

Data of this study showed, that there are the different tendencies in the development of trust. In connection with the division of levels of social organizations - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.

This study showed that on the level of Russian society the trust to political, social, economic institutes to a great extent decreased. On the regional level the trust has the contradictory character in depending in situation in region: the reach - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.

Party Membership in Turkey and Members’ Participation during Local Elections in 2014

Local Elections in 2014

We will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. We also plan to discuss the results of the survey and see whether there is a decrease in member's level of activism. Some issues guide our survey: Firstly socio-economic and demographic characteristics members have. Secondly why citizens enroll in parties and the third how they participate in party activities and to what extent they use new information technologies as participation methods during local elections in 2014.

Screening the 2001 G8 Summit in Genoa: An Italian Cultural Trauma

The paper is based on some results of a research project started in 2012 on the attack of the Diaz school in Genoa by the Italian police during the 2001 G8 summit. The school building was the temporary headquarter of the Genoa Social Forum. On July 21, 2001, shortly before midnight, mobile divisions of the State Police attacked the buildings. The police indiscriminately attacked the building's occupants, resulting in the arrest of 93 protesters. During the raid the police violently attacked those who were in the school, injuring 82 people out of a total of 93 arrested. 63 arrested were taken to hospital and 19 were taken to the police station of Bolzaneto, where they were tortured. According to Amnesty Internation the events represent: “The most serious suspension of democratic rights in a Western country since the Second World War”.

This study is intended to present an overview of party membership levels and of participation in party activities during the local elections which will take part in March 2014 in Turkey. In this presentation we will evaluate “Party and membership decline” thesis and observe the current situation in Turkish case since 1980s. We will compare the number of party membership by using the official data which are registered in the Supreme Court of the Republican Attorney Generalship and observe the fluctuations or decline in each 5 years period between 1983-2013.

According to the scholars, there is a decline not only in numbers of the members, but also in members' levels of activism in long established democracies. In order to see and understand the current levels of activism of the members, we will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. We also plan to discuss the results of the survey and see whether there is a decrease in member's level of participation, and to what extent they use new information technologies as participation methods during local elections in 2014.
expression of respect, humility and tolerance for decision makers, particularly expressed in the male population. Family relationships are characterized by respectful and caring relationships between family members: husband and wife, children, close relatives, respect for elders, tolerance and civility.

One of the leading trends in the experimental work in social psychology: it is - the organization and conduct of scientific research projects, scientific field trips, "Categorical perception of facial expressions of racial characteristics", "The specifics of communicative and cognitive processes of the Tuva Todzha people", Congress "Steppe Civilization - 2004, 2009, and in 2012," Human consciousness: traditional forms of life and patterns of life in the modern world, holding of international and regional scientific conferences, research projects, seminars, meetings with prominent researchers and practitioners exchange experiences, and workshops, have now become a tradition in the region and identify the problems of society, groups and personalities. Search, comparison, meditation, scholars, practitioners in the modern period of development of society and groups, with the position of the cultural and historical context, research approaches enrich the process of social cognition personality image of the world in a globalized world, the design and interpretation of environmental social reality of Tuva ethnic.

Medical tourism as national economic development in Asia: comparative case study of Singapore and Thailand, versus Japan and Taiwan

Medical tourism development has been put on the national economic development agenda by a number of Asian countries in the last fifteen years. Beginning with the forerunners of Singapore, Thailand and Malaysia, subsequently other countries, notably India, the Philippines and South Korea, joined the fray. Most recently, Japan and Taiwan also declared that they would promote medical tourism. The governments of these countries seem to share a common policy goal in developing medical tourism, i.e. to increase foreign exchange earnings, expand medical and other ancillary services, and generate employment opportunities. However, each country has developed different strategies in targeting specific niches in the international healthcare markets. In this paper we compare state strategies. The market formation of two “early wave” countries, namely Thailand and Singapore, with the two most recent “later wave” countries, Japan and Taiwan. In their marketing strategies, Thailand and Singapore target diverse countries across the globe. In contrast, Japan and Taiwan have focused their strategies to solely the emerging market in China. We explore the roots of these differences in the character of the states and the nature of domestic health policy. While Thailand and Singapore can be characterised as developmental states (or have come from such a historical background) with strong mandates to pursue aggressive economic development and growth strategies, Japan and Taiwan, being East Asian welfare states, have to be more cautious in balancing citizens’ rights and private interest. By teasing out the differences in the medical tourism development policies of these countries and tracing their linkages to the characteristics of the states, we aim to contribute to deepening our understanding of changing public health policies in the context of globalization.

Intergenerational Dependencies: Retirement and Old Age in the Prism of Family Geography

If the family is a determining element at every age in life, it is even more at old age. At the same time retirement and old age are more and more dissociated. What form does the family take for retired and ageing persons? How does the social constraint in family apply on its members?

The research undertaken until today has focused mainly on the one hand on the structural modifications affecting the households rather than the family and on the other hand on the residential mobility of the persons themselves rather than in the evolution of their environment. The aim of this research is to try to observe the spatial configurations and thus the places, not the individual or his household, but of his non co-resident family. When retiring, do individuals change their place of residence? Do they take advantage to move closer to their family? What about the following years when the individuals are ageing?

Based on a transversal approach we will choose three life periods (the active individuals aged over 55, the retired aged under 65 and the retired aged over 75) to identify categories of life after 55 years of age. This work obliges us to take into account social and demographic characteristics of individuals and their families as their mobility and family geography depends on it.

This work builds on the survey « Famille et Logement 2011 », which collected data from more than 6000 households of both sexes aged 25 years and over. The survey gives information on the different places of residence of the children and parents of the individual questioned and thus allows for a mapping of the families of individuals at different age.

Revisiting the Boy Who Cried Wolf: Tornadoes and the False Alarm Effect

While the origin of the story is not clear, the 1867 publication of Aesops Fables brought "The Boy Who Cried Wolf" into the homes and hearts of many families. The story is simple and the message clear. It tells of a shepherd boy who lies to his community about a dangerous wolf to make people run to his assistance for its entertainment. The moral of the story is “if you don’t tell the truth people won’t believe you when you need them to.” It’s appeal is massive and cultures around the globe use it to extol the moral virtues of truth, honesty, and honor. It is somewhat unsurprising then that building on the very same logic, academicians and practitioners have long debated the “cry wolf” or more often the false alarm effects of warnings. The question is simple: Are we somehow acting like that little boy and “crying (insert some weather phenomenon)” too often. Using a playful reference to the original fable, this analysis breaks down the key moral elements of the classic story and reinterpret their connection to current tornado prediction and patterns of risk perception as a way to help illustrate the range of complexities in need of targeted scientific research. We go on to provide some additional qualitative analysis on how this story relates to the phenomenon of a false alarm, and behavioral response to a series of tornadoes that occurred between 2007 and 2010. Contrary to most existing research, we do find a statistically significant false alarm effect among other important predictors. Conclusions discuss the importance and limits of these results and suggest further research needs.

The Impact of Social Segregation on Educational Achievement in France

Social and spatial segregation is increasingly present in debates on urban policy and in the analysis of the phenomena of violence among young people. In recent years the extent of social segregation among French secondary schools is mainly due to a greater social polarization in some urban areas. There have been little studies about social segregation mainly because of the difficulties to build a set of relevant methods and measures.

The aim of this paper is to provide various measures of social and spatial segregation in order to assess the links between segregation, competitiveness and educational achievement.

TRANOW, ULF* (Heinrich-Heine-University of Düsseldorf, tranow@phil.uni-duesseldorf.de)

Internet-Mediated Cooperative Norm Setting: In Search of Institutional and Organizational Success Factors

Norms are an essential mean of any social group, organization or society to solve the problems of social life and to accomplish common goals. In a lot of social contexts norms are the results of formal processes, in which representatives, authorities or experts develop and impose norms on their recipients (e.g. parliamentary legislation or acts of authoritative imposing of norms in organizations). Current developments show an increasing demand for direct involvement in the process of collective decision making. The demand for direct participation is mostly justified with reference to democratic ideals, but there are also empirical evidences that the “quality” of norms increase if affected individuals take part in their development (Ostrom 1990, 2009). With the term “internet-mediated cooperative norm setting” we (a research group located at the University of Düsseldorf /Germany) define a process of drafting, discussing and deciding on norms that are decided by a group and in which all members of this group can participate in.

For a successful implementation of an internet-mediated cooperative norm setting two challenges are to be met: First, the individual contributions must be aggregated to an outcome. Second, people need to be motivated to take part in a process that is not justified with reference to democratic ideals, but that is essentially an event of decision making, because it offers a playful reference to the original fable. This analysis breaks down the key moral elements of the classic story and reinterpret their connection to current tornado prediction and patterns of risk perception as a way to help illustrate the range of complexities in need of targeted scientific research. We go on to provide some additional qualitative analysis on how this story relates to the phenomenon of a false alarm, and behavioral response to a series of tornadoes that occurred between 2007 and 2010. Contrary to most existing research, we do find a statistically significant false alarm effect among other important predictors. Conclusions discuss the importance and limits of these results and suggest further research needs.
Concern Over Climate Change Among Young Australians

A large survey of young people in Queensland, Australia, indicates the majority believe that climate change is occurring, that the planet is warming because of greenhouse gas emissions and that anthropogenic global warming poses a serious risk to Australia. Parental education has an important influence upon the development of environmental attitudes among young people, with the children of tertiary educated parents much more likely than others to be concerned about planetary warming. A strong gender divide is also apparent, with young women consistently more concerned about the environment than young men are. Political party identification has an important influence upon environmental concerns even among these 15-17 year olds, with young conservative party identifiers far less likely than Greens or Labor identifiers to believe that global warming will pose a serious risk in their lifetime, after controlling for beliefs in human induced climate change. The party identification findings point to an emerging support base of young Australians for parties that adopt a progressive stance on climate change among.

Loose Ties? Determinants of Father-Child Contact after Separation in Germany

Growing separation and divorce rates have shaped the image of the family in the new century. As a consequence of this development, parents are increasingly at risk of becoming single parents or of living separated from their children at some point in their life courses. Despite the fact that the share of lone fatherhood has increased in some countries, the overwhelming majority of children co-reside with their mothers after separation. Thus, non-resident fathers have become a growing group in all European countries. This raises the question of how the relationship between the child and the non-resident father develops after separation. The contact that these fathers keep with their children is a policy relevant issue which has been intensively addressed in prior studies for English-speaking countries mainly. We add to this research by investigating the determinants of father-child contact after separation in Germany.

The starting point of this study is the adoption by the European Union in 2000 of numerical indicators and benchmarks to compare and stimulate the performance of the education systems of Member States. It looks closely at the processing of this statistical information during both fabrication and diffusion. These tools for government have been developed within the international institutions created around the Second World War (UNESCO, OECD) in an attempt to combine the material well being and social harmony by shaping education to meet the challenges of the industrial world. This policy of reliance on numbers has created an increasingly voluminous structure, in permanent expansion as it generates new data. Its growth has been fuelled by new technologies that facilitate the direct collection of data from schools and classrooms. Because they increase the traceability of school careers and allow for more regular evaluation of schools and students, these tools are used by both management and social science researchers to improve education and administration. Presented as teaching aids, they are designed to improve teachers’ performance by allowing them to evaluate, classify and grade both their students and their difficulties. The phenomenon of quantification, by which we mean the activity of giving numerical expression to realities not previously expressed in this way, is considered here from three points of view - administrative, scientific and industrial - in order to provide an understanding of the origins and the effects of the avalanche of numbers on the vitality of our democracies and their inhabitants.

The Relationship Between Social Status and Health: A Conceptual Review

Although “health disparities” have been a long standing interest of public health researchers, the complex relationship between social status and health has only recently captured the attention of sociological students of social inequality. Indeed, the first appearance of a session on health at an RC 28 meeting was in 2003 in Tokyo. However, interest in this topic is expanding rapidly and it clearly is an important direction for future research by our community. The current paper reviews what is known about the relationships between indicators of inequality (primarily social origins, education, occupational status, and income) and health outcomes and also about the effect of health on subsequent socioeconomic status. The evidence regarding many of these relationships is equivocal. But, more important even when empirical relationships are well established, the social processes that generate them are often under-theorized. In this paper I attempt to lay out the theoretical basis for expecting particular relationships with the intent of encouraging new research.

Research topics I will focus on include the following:

- The effect of trauma experienced in pregnancy on education, adult socioeconomic outcomes, and adult health.
- The effect of childhood illness and injury on education, adult socioeconomic outcomes, and adult health.
- The role of education in affecting health behaviors and health outcomes.
- The effect of social rank on health behaviors and health outcomes.
held in the West provoked fierce street protests, the summits held in Russia are widely and critically discussed online. Some intellectuals actively resist being complicit in the entrepreneurial discourse in their work and alternative discourses emerge. These discourses emerge by way of petitioning authorities. The lack of regulations regarding the predicament of evicted citizens; the absence of a program for the preservation of the cultural heritage of the city; an urgent remapping of the so-called “guarded zones” to accommodate the summits-related pressure to have enough vacant lots; and “a mess” (the metaphor of one of the interviewees) instead of systematic and logical administrative law-making—all these factors contribute to an increased “client-patron mentality” among active citizens. By “client-patron mentality” I mean the active citizens’ and political activists’ reliance on petitioning as the way for themselves to be heard and to get things done. Whether it is the only effective means to prompt the patrons to share a piece of the state budget pie or a quite efficient way to engage more public into discussions, petitioning prompts us to more closely look at the ambiguities behind genuine citizen participation.

TRUBINA, ELENA* (Ural Federal University, elena.trubina@gmail.com)

The Dialectic of Rationality and Irrationality of Urban Growth in Post-Socialist Urban Development and the “Classic” Capitalist One

It was during the 1970s that urban studies scholars began to analytically investigate the dialectic of rationality and irrationality related to urban growth. These pioneering analyses were a response to the early stage of the post-Fordist transition of Eastern economies and the emergence of consumption-based economic development. Having admitted “the general irrationality of the present urban system” (1978: 329), Molotch described the American urban system of the second half of the twentieth century, in which cities retained relative autonomy from the central government. For his part, David Harvey called cities “the irrational rationalizers” within the capitalist mode of production (1976: 112) and demonstrated why “the capitalist laws of accumulation” remain, for the time being, the only known laws of history. While both scholars emphasize a recurrent reconfiguration of urban alliances in order to cope with difficulties in financing the development of cities, Harvey, in his later work, described how neoliberal urban policies found a strong friend in the central state via neoliberalization of the state itself.

Drawing on these path-breaking scholars, I argue that it is an irrational rationality which unites postsocialist urban development and the “classic” capitalist one. Today it is neoliberalism that figures as the global political rationality. It promotes market logic across all spheres of life. Part of this rationality is the expansion of state institutions. These act to broaden their administration into the practices of all societal spheres. Urban growth machines in Russia and elsewhere have embraced neoliberal policies and promoted global, market-led urban development. Since these processes have recently unfolded in the context of the global financial crisis, the growth machines often go awry. Yet this does not impede authorities at any level from investing, symbolically and economically, in the new iconic projects—by continually putting forward the rhetoric of efficiency and growth.

Education and Future Well Being of Latin American Adolescents

Latin America has shown great progress in average education attainments during the past few decades. An increased participation of women in the education system occurred together with this education expansion. On average and in most countries, there are more girls attending school at all educational levels than boys. Women’s participation in post secondary education is also higher than men’s.

In spite of this regional panorama favorable for women, there still are educational challenges to be confronted. This higher education level achieved by women is not being reflected later in their labor market insertion. Young women have a lower labor participation rate than men, higher unemployment levels, and a labor insertion in less protected sectors (with higher levels of informality, less productive, and with worse income trajectories).

Although this paradox is probably associated with labor markets’ historic discrimination factors, this paper seeks to identify elements from the education system that help to explain this fact. It concludes that although access barriers to the education system have been overcome by women, there is still a lot to be done in relation to the mechanisms that perpetuate the traditional socialization forms. That is, the process by which unequal and discriminatory gender stereotypes are still formed within the teaching-learning process, interfering with the prospects of equal labor opportunities. The paper also takes into account the gender differences within the reasons for aborting school early and how that impacts the design of appropriate social policies.

RC04-94.1
TRUCCO, DANIELA* (United Nations ECLAC, daniela.trucco@cepal.org)

Education and Inequality in Latin America

Latin America has shown great progress in average education attainments during the past few decades. Most countries are close to achieving universal access to primary education and some of them have the majority of the younger generations entering the secondary level. However, these same developments in education coverage and access have driven to an important stratification of learning achievements and attainments within the education systems. In spite of the enormous expectations associated with education as the principal mean for social mobility, this region of the world has not been able to transform the education system in a strong mechanism to equalize opportunities. This is partly related to the importance that household social and economic conditions have in determining educational achievements. Most of the time, this inequality is also reflected in a gendered segmentation of inequality and efficiency of the education offer.

This paper examines the development of the main education indicators in the past decade among Latin American countries. Data from the countries’ household surveys is used to describe the main attainment indicators (coverage and conclusion by education levels and social groups); and data from some international standardized tests (such as PISA and ICCS) is used to discuss learning achievement inequalities. The document identifies the main challenges Latin American countries have in terms of education development and the reduction of inequality.

Cyclical Migrants: Canadian Hockey and Chilean Fútbol Players in the Twenty-First Century

This paper compares the temporary international migration of Canadian hockey players and Chilean football players under the logics of the globalization of neoliberal sports businesses and the increasing importance of temporary migration. By comparing these seemingly widely different cases we aim at showing the growing similarities in the structuring of the business of sports in both “developed” and “underdeveloped” countries. We also aim to show through the lens of sports how, in these two countries construed as magnets for immigration, temporary emigration has become part of the strategies of increasingly skilled labour forces faced with precarious employment at home, even when workers have different mobility capitals.

Disaster Capitalism and the Chilean Earthquake and Tsunami of 27 February 2010

This paper addresses the earthquake and tsunami that hit Chile in the early morning of 27 February 2010. It is not the rationality of the neoliberal state, the private and public press, and the large economic conglomerates to discursively, politically and economically profit from the catastrophe despite the weakness that appeared in the neoliberal state’s ability to prepare for the earthquake and for mitigating its consequences. It shows that a discourse of anomic and chaos fuelled by the press allowed for criminalizing the population, in particular the poor, and for occupying militarily vast regions of the country. It also discusses the deployment of charity as a means for the large monopolistic companies that dominate the Chilean economy to advertise their products and clean their images tainted by their practices during decades of neoliberalism. It finally addresses the resilience, solidarity and resistance of the population.

Reconfiguring Outer Space Policy: Vulnerabilities and Responsibilities in Humanizing the Universe

Space exploration programs launched by emergent spacefaring countries such as China and India, together with private attempts to democratize space for the
masse (e.g., space tourism offered by Virgin Galactic) are growing quickly despite
difficult economic times. These processes together with the increasing techno-
llogical apparatus at the geostationary orbit are deemed as examples of the ‘hu-
manization of the universe’ (Dickens and Ormrod, 2007). That is, the many ways
humans may affect non-human cosmic bodies (e.g. potential environmental im-
pacts of space exploration). Space and its exploration are subjects with ‘contem-
porary resonances in popular culture, frontier capitalism, and the restructuring of
superpower status in the coming century’ (Parker and Bell, 2009: 4). In this paper
we aim at critically reflecting about some of the future consequences of space
exploration by unpacking and extending the concept of planetary protection. This
concept, located in space policy literature, is mainly confined to risks of biological
contamination when transporting objects and people to outer space. We iden-
tify its primary limitations such as the damage caused to non-biological features
and address some of its shortcomings through a multidisciplinary approach with
a sociological view on the current unsustainable development process.

in a very limited sense to enable the mobility of the potential population of the countries who opened their economy for global trade in last few decades. This requires the standardization of the education system in terms of content and quality of education throughout the world. In India, the system of higher education is highly fragmented and stratified and produces students of different qualities. A large number of students having different social background and different type of schooling up to secondary level also vary in their educational attainments as well as in their career graph. They usually fall short to the national and international standards. Only few institutions of higher learning have the capacity to produce the students who have potential to compete in the global job market. Thus, globalization poses a new challenge to make necessary structural and qualitative changes in the institutions of higher learning in order to cope with the changes taking place in the globalized economy of the country. The present paper analyses various dimensions of the intricate relationship between globalization and higher education in a developing society like India.

Exchange and Life Satisfaction: Intergenerational Reciprocations in East Asia

Exchange plays a key role in affecting level of well-being. This study aims to develop a fundamental typology of exchanges across generations. By focusing on exchange of finance and household services between adult children and their parents (and parents-in-law), four types of exchanges can be identified: balanced, credit, debited, and self-reliance. We then investigate if different types of exchange affect life satisfaction and marital satisfaction. Empirical data are drawn from the East Asian Social Survey, which allows a comparative study of Japan, South Korea, Taiwan, and China.

Land Grabbing in Taiwan: The Crisis of Food Security and Land Justice

Since the 1980s Taiwan had adopted liberalism economic policy and given up the principle of food self-sufficiency. The importance of agriculture had decreased and the land had been seen as valuable asset rather than the means of production. These changes together contribute an over-dependence on imported food in the local market and the loss of food sovereignty of the consumers and farmers. As a result, the food self-sufficiency rate has been extremely low in Taiwan (33%), far lower than China (95%), France (122%), the U.S. (128%), and even Japan (40%). In recent years, the implementation of neo-liberalism in agricultural policy has further worsened the practices of farming and the ways of land use in the rural areas. Since several local governments aim to promote rapid development in the high-tech industry, many farmers and rural residents have been forced to leave their farmland and assets. Over the past decade, Taiwan has consequently lost 4,000 hectares of farmland per year and totally lost 109,652 hectares in the last 30 years equated around 12% of farmland. In reality, the legalized land exploitation which in the name of scientific and industrial park and various developmental projects could be seen as a new form of land grabbing. In this paper, we present two case studies and explore how the recent land exploitation has changed the agricultural practices and social context in the rural areas and the long-term effect on the food security of the whole society. The two cases cover the events and outcomes which have happened in Dapu District of Miaoli County and Siangsihliao of Changhua County, the former representing the form of anti-land-grabbing and the latter of anti-water-grabbing one. Finally, we will attempt to discuss the impact of land grabbing on the food security and the possible citizenship aspires to food sovereignty.

Genetic Science in Identity Making: The Rediscovery of Taiwanese Origin and Ancestry

The global development of genetic science and technology has it's various manifestations in different local political and cultural contexts. The government of Taiwan began to support the development of biotechnology by funding projects during the 1980s, when this country underwent dramatic transition from authoritarian rule to democracy, emergence of ethnic politics, and conflict of national identity. After the rule by martial law ended, scientific research on the origin and the genetic background of Taiwanese began to emerge in the 1990s. Taking for example the research findings and scientific discourse of the team led by Professor Marie Lin, M.D., widely known as “the mother of the research of Taiwanese blood,” my article aims to explore the particular process of co-production between genetic research and identity politics in Taiwan. Since the 1990s, she has devoted herself to unveiling the mystery of the origins of the ethnic groups in Taiwan by finding scientific evidences of blood attributes and genes. Based on the research findings of her team over the recent two decades, Lin argues that 1) 85 percent of Taiwanese have aboriginal genes; 2) the Han Taiwanese people (Hoklo and Hakka ethnic groups) are mainly the descendants of the Yue people from southern China; 3) a major part of blood attributes of the Han Taiwanese people is derived from plain aboriginal people and 4) aboriginal peoples in Taiwan have multiple origins. These arguments pose a radical challenge to the dominant Chinese nationalist ideology of the period of the authoritarian rule, which is still lingering today.

Efficiency of Information Influence: Features of Measurement

Moscow is overloaded with outdoor advertisement that's why analysis of advertising campaigns efficiency becomes an extremely actual matter. We use tracking to solve a lot of research tasks, such as determination of the population percentage attracted by any advertisement, correlation between advertising images kept in mind and number of brands or company names recognized, poster attractiveness for target groups of any products or services, etc. In spite of considerable measurements, regular sociological surveys in this sphere were only conducted in England and Australia. 

Espaş Analyst Research Agency has conducted the first monthly tracking surveys in the outdoor advertising market in Russia. The objects of its research are advertising posters within the territory of Moscow and the matters are brands and companies.

The goal of the research is to determine an efficiency rate of an outdoor advertising campaign. Efficiency means here the rate of poster penetration and brand recognition. This goal may be achieved in case if the main task of measuring general parameter for evaluation of each outdoor advertising campaign's efficiency is resolved.

The following factors shall be considered in the analysis of the data obtained:
- number, type and location of advertising media;
- duration;
- other media used for advertising the brand;
- creative solution;
- advertised product category.

One of the most important results of tracking campaigns is an opportunity to form a limited indicator basis for each group of products and services, which would allow to compare the campaigns and bring their characteristics into correlation with average indicators for different product categories or formats used.

The following factors shall be considered in the analysis of the data obtained:
- number, type and location of advertising media;

One of the most important results of tracking campaigns is an opportunity to form a limited indicator basis for each group of products and services, which would allow to compare the campaigns and bring their characteristics into correlation with average indicators for different product categories or formats used.

Such surveys are aimed at renewal the empirical basis of social sciences, which study the influence of different format advertising images of human consciousness that is extremely important when the so called visual culture is developed.

Quality of Life As Local-Global Reflection

The changing world exacerbates so many contradictions of economic, social and environmental issues what affects the quality of life of the inhabitants of modern cities and villages. This kind of problem is especially perceptible for the most vulnerable socio-economically disadvantaged groups such as young people and the elderly.

Following this approach, according to which a QoL refers to a comprehensive well-being, that takes into account the various aspects of human life, the Department of Sociology of Russian State University for the Humanities conducted research using questionnaires in October 2012 and September 2013. It represented the adult population and distinguished four main studying groups: youth, senior citizens, urban and rural population.

In the result, we obtained not only an idea of the self-perception of different socio-demographic groups representatives in relation to the assessment of individual aspects of life (personal economic status, social status, personal security, availability of education, social welfare and medical services, maternal and child welfare, employment, leisure etc.), but also identified mechanisms to increase self-perception of QoL.

The first one (objective) defines QoL as a result of combinations of different statistics. The second model is based on affirmation that the real sense of QoL is reflected in subjective feelings of individuals, which are formed on the basis
of system developments level of individual, his life experience, emotional status, etc. The objective indicators (measures) include following main groups: natural, economic and social. Subjective ones are represented by life satisfaction, the feeling of happiness and depression, social support, personal competence, anxiety, stress, etc. This non-linear relation between the objective and subjective indicators allows to find a paradoxical effect of public consciousness and offers an original mechanisms to overcome the negative trend in QoL. All these aspects will be considered as Local-GLOBAL reflection.

Regional Development and Social Inequality in the Age of Globalization: The Case of Taiwan

Modern societies all face a fast-developing and fast-changing global world. Recent development of tighter connection among Asian countries, especially with Chinese economy has brought significant impacts on the regional development and local life of these countries. It is expected that the emergence of the Pan Asian economy might have changed the class structure and social distributions in Taiwan. The paper proposes to study the changes of Taiwan's social class as well as occupational structures during the last twenty years. Further analysis might show the extent of the restructuring of Taiwan's occupational structure. In addition to occupational structure changes, this paper will also focus on the trend of economic development. To compete with other economies, Taiwan government has pursued a series of large-scale urban development and regional reorganization, during the years of fast globalization, which might have caused an unbalanced development among regions and skyrockets the housing price in urban areas and thus further exacerbates the income inequality. I will analyze both macro and micro data to test the hypotheses whether the regional development either in a national scale or within the national territory has affected the degree of social stratification in terms of social classes and the inequality of distribution.

Inclusion Or Illusion: The Romance and Reality Of Integrating Students With Special Education Needs In Hong Kong

Integrating students with special education needs (SEN) into ordinary schools is a widespread movement towards “Education for All” in many developed countries. In principle, a shift from allowing students with disabilities to be educated in segregated special schools to providing them with opportunities to be educated in ordinary schools is justified on educational and normative grounds. Following the proclamation of the Salamanca Statement as advocated by the United Nations, the Hong Kong Government initiated a pilot project in 1997, and promoted a whole series of integrated education in full scale starting from 2004. Despite its goodwill on the part of the Government, many difficulties and problems have arisen along the moves towards greater inclusion in the Hong Kong education system. For example, the practices of integration education are under criticism as many students with SEN are not properly cared or taught, and some are even bullied by fellow students. Provision of sufficient resources and support to ordinary schools or teachers is another matter of grave concern. Teachers also face with problems in maintaining classroom discipline and ambivalence in meeting the competing demands of academic excellence on the one hand and equality and inclusion on the other. Inclusive education is one of the most controversial education policies in Hong Kong. The progress of inclusion will be examined in the dimensions of access (the extent to which students with SEN attending mainstream classes); acceptance (the extent to which all students are treated as full school members); participation (the extent to which all students contribute actively in schools and achieve in terms of academic, social-emotional development. Values dilemmas and paradoxes resulted from the integrated education measures will be examined with a focus on accommodating diversity, quality, equity and fairness, as well as reducing or enhancing social inequality.

Silenced Controversies: The Professionalization of Psychiatry and the Biomedicalization of ADHD in Taiwan

ADHD (Attention Deficit/Hyperactivity Disorder), the most common mental disorder among children and adolescents in Taiwan, does not seem to be as controversial in terms of its entity, diagnosis and medical safety among local professional groups as it is in some Western countries such as the United States. This is not to say that Taiwanese psychiatrists uniformly embrace the biomedical model of ADHD. However, alternative paradigms and practices of psychiatry are excluded from the public sphere and discouraged by the National Health Insurance. Besides, the strategic alliance among psychiatrists, teachers and parents for dealing with various learning difficulties effectively justifies the medical framework of children's deviant behaviors. By analyzing the archives of the professionalization of Taiwanese psychiatry, and by conducting interviews with psychiatrists, relevant mental professionals, teachers, and the main parents organization, I unravel the interrelated processes of the development of the medical subspecialty, the publicization of health services and the medicalization of education, in order to elaborate that the biomedicalization of ADHD in Taiwan is not a necessary achievement of advancement in psychiatry, but a co-production with various social and political conditions. In particular, the "biomedical evidences" and "gearing to the international norms" constitute the driving rationality and emotion of the professionalization of Taiwanese psychiatry in a latecomer context; moreover, as a late-developing medical specialty, Taiwanese psychiatry lacks a sufficiently powerful legacy of the psycho-dynamic approach, which dominated Euro-American psychiatry before the 1980s and has thus far provided competition for the biomedical approach. Furthermore, Taiwanese child and adolescent psychiatrists are too few in number to encourage multi-paradigms. Therefore, although controversies and alternative practices concerning ADHD exist, they do not originate from the psychiatric in-group and thus find it difficult to shake the mainstream practices. Consequently, the biomedical discourses and treatment of ADHD have been stabilized and reproduced in Taiwanese psychiatry.

Digital Inclusion or Digital Exclusion? The Second Order Divide in Taiwan

The study of digital divide has shifted its focuses from unequal access to ICTs to the second digital divide that addresses the inequality resulting from the different ways in which ICT technologies are used. The second digital divide is caused because of its implication for social inclusion that ICTs play a critical role in all aspects of the new economy and information society. By including online activities in their measurement of digital exclusion, the studies of Oxford Internet Institute distinguished three levels of digital activities and found that individuals with specific disadvantages appear to be excluded from the digital activities that could help them most. This study, by examining secondary and longitudinal data of national Individual and Household Digital Divide Survey in Taiwan, aims at examining the barriers of second order digital divide and understanding the social implications of digital inequality in the information society. The results suggest that despite of the closing gaps of ICTs access across groups and declining usage gaps in basic internet activities (e.g. information searching, communication, entertainment), persistent or widening gaps are found across groups in intermediate and advanced internet activities, such as usages of online finance, e-government and civic engagement. These results imply that social inequality might accelerate in the information society for those well privileged groups take uneven advantages and benefits from effectively use of online activities in the social, economic, and political spheres, while lack of usage in needed digital resources will make groups that are already socially disadvantaged fall further behind. Without proper intervention, the wider array of ICT usages in information society becomes the potential tools to deepen social divides.

Vavilicious Scandal: The Politics of Sexual Harassment in Post-Apartheid South African Trade Unions

Vavilicious Scandal: The Politics of Sexual Harassment in Post-Apartheid South African trade unions

In July 2013 the General Secretary of the Congress of South African Trade Unions (COSATU) (the largest trade union federation in South Africa), Zwelinzima Vavi was accused of rape and sexual harassment of a junior female colleague. While the rape allegations were later withdrawn by the accused, Vavi was subsequently suspended and investigations into the allegations of sexual harassment are being conducted by the federation. Much focus from the South African media is on the parallels with COSATU and attempts by Vavi to capitalize on the scandal to remove him from his position. However, the significance of the incident for this paper is that it highlighted the patriarchal, unequal and hierarchical gender relations dominant in the South African trade union movement (Scott, 1986). Unions are organizations of power, which is often defined in masculine terms. The incident also reminded us of the need to publicly acknowledge the importance of sexuality in organizations (Acker 1990:139), where women and men are perceived differently and assigned roles according to how they are perceived. The scandal has brought to the forefront the subversiveness of sexual harassment within the masculine organizational culture of the federation and its affiliated unions. The paper aims to discuss the politics of sexual harassment in the

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
post-apartheid South African unions, where women continue to be marginalized from leadership positions in spite of constituting almost half (48 per cent) of the union membership (COSATU 2011). The paper seeks to understand the significance of women’s composition in COSATU unions in terms of raising their voices and challenging dominant patriarchal practices. What is the significance of the increase in women’s membership in terms of their struggles to reconfigure the dominant masculine culture of trade unions?

Women Academics Under Crisis: A New Field for Reflexivity

Research data show that the present economic crisis has worsened women’s position in society. New categories of women become vulnerable to the impact of this crisis. To the traditional categories of vulnerable women (migrants, single-parent families, women victims of domestic violence, unemployed young women etc.) are now added women coming from middle and upper-middle class ladders of society (women entrepreneurs, women of high educational and employment credentials, women owners of big properties etc.). Women belonging to these new categories seem to be threatened by the risk of status degradation and the risk of impoverishment.

This paper focuses on the impact of crisis on women of high credentials. Such is the case of women academics that work in universities and research centers in Greece, a category of women of hitherto recognized social status and established high position in social hierarchy.

Our presentation is based on qualitative data coming out of the living experiences of women academics facing the impact of crisis in their professional and personal life. Initial results indicate the gravity of the present economic crisis as it expands also to include women holding highly privileged academic positions in the social hierarchy. Authority measures have not only diminished the income of academic women but also have enormously affected their living standards and worsened their working conditions. Moreover it is to be noted that the economic crisis seems to have brought into surface latent aspects of social crisis resulting from pre-existing social transformations which in turn also affect academic women’s lives.

Thus our attempt is to develop a reflexive account on the living experiences of women academics as well as to discuss the impact of the present economic crisis on processes of women’s downward social mobility.

Young People in Social Disadvantage: Opportunities and Threats in Local Environments

The arguments advanced in the proposed paper are based on the analysis of data concerning the means and ways of combating social exclusion of young people in social disadvantage at local communities by means of suitable educational and training programs.

In fact, in an era of globalization of economic and social relations, the employment structures may not be understandable on the basis neither of the model of “technocratic advancement” nor of the model of “specialization”. If such is the case, there is an urgent need for the employment of other forms of “capital” in order to combat marginalization of those young people that suffer multiple social disadvantages. The question is how detached are modern societies from traditional forms of education, training and employment especially under conditions of austerity. Another issue for serious consideration is whether local environments possess new capacities for training and job opportunities for young people in social disadvantage. It is to be discussed also whether the local versus the global (i.e. in the sector of enterprises) may possess more opportunities than threats in combating unemployment and exclusion.

The Systemic Crisis of Greek Labor

Abstract
The current crisis in Greece has brought to the surface the employment security aspect of the Greek “labour system”. The employment relationship seems to be embedded upon a bifurcated system whereby labour is separated institutionally in a) a secured salaried public sector and b) a private sector defined by precarious labour conditions that are characterised by the technical separation of work from its social security (mainly pensions) relationship. The two systems have been coupled with separate health care systems developing separately (recent attempts to unify are in process). The paper explores this hidden reality by defining the organisation of the labour system in Greece, its politico-administrative controls that formulate a binary legal system (public/private) that does not allow for the emergence of the not-for-profit-law institutions.

The “social” reproduction of private labour is based upon the formally established private and “commercialised” interests that practice “trade” in basic needs (health, education). As a result, communities rely on the family, the church, self-help and ... out-migration. By focusing on this anaarchistic and discriminatory system of political order for private labour we may be able to unlock the reasons for the weakness of labour social economy organisations in Greece and the acute unemployment rates (the highest in the Eurozone). This approach will aid our understanding of the Greek crisis as a failure of Euro-Zone’s public policy.

Key words
Greek institutional crisis; labour fragmentation; Euro-Zone, social development

TSOLIDIS, GEORGINA* (University of Ballarat, g.tsolidis@federation.edu.au)

Octopus Man and Tiger Woman - Why the Chinese Are Bad for Australian Nationhood

Historically Australia has considered itself a white, Christian and British bastion in the South Pacific region. The main threat to this status was conceived of as coming from the east, particularly from the ‘hordes’ of Chinese who would sweep down and overrun the nation. These discourses were prominent during the Gold Rushes when Chinese men were constructed as a threat and represented as an octopus of evil. Immigration policies were instigated to stop the ‘yellow peril’. While the so-called White Australia Policy was formally rescinded in the 1970s those from Asia are still constructed as a threat.

Most recently it is Chinese students who are ‘taking over’ the most desirable government schools. Because of their hard work and diligence they are excelling at entry exams and providing little incentive for mainstream Australian students to compete or be schooled in environments dominated by Asian students. Tiger mothers are represented as standing over their children, ensuring they work hard enough to achieve well. The work ethic associated with the Chinese is a form of racism. In contemporary discourses this is associated with rote learning for exams rather than independent thought.

In this paper historical depictions of Chinese men represented as an octopus ready to seduce Australian women, including through the provision of heroin, will be contrasted to depictions of Chinese women as Tiger mothers who stand behind their children ready to wield ‘tough love’ towards success. What does the promulgation of such representations in the media tell us about Australian nationhood and its reliance on gendered forms of racism for meaning?

TSOMO, KARMA LEKSH* (University of San Diego, tsomo@sandiego.edu)

Sakhyadita and the International Movement for Gender Equity in Buddhism

During the 1980s, the glaring discrepancies between opportunities for women and men in Buddhist institutions and societies caught the attention of a small group of women living in different countries and practicing in different Buddhist traditions. Communicating by post, they decided to gather to discuss what could be done to address these inequalities. In 1987, at the conclusion of this first gathering in Bodhgaya, India, an international association of Buddhist women called Sakhyadita was founded. Since then, Sakhyadita has received scant attention from the academic community, but the consequences for women in Buddhist societies have resounded around the world. For twenty-five years, Sakhyadita has organized a series of biennial conferences and issued numerous publications that have educated Buddhists in the new global ethic of gender justice. The path to gender equity in Buddhist monasteries and institutions has not always been smooth, however. Consciously or unconsciously, entrenched interest groups continue their efforts to maintain the imbalance of power that disenfranchises women.

This paper explores how a small grassroots movement to improve conditions for neglected and undereducated women, especially nuns, has grown into a global movement to challenge inequalities on a structural and institutional level, recontouring landmarks in the history and development of Sakhyadita and the international Buddhist women’s movement from its inception until the present. In the first section, I describe the objectives of Sakhyadita and the key personalities who have helped propel the global movement for gender equity in Buddhist societies. Second, I explore the setbacks and obstacles that Buddhist women have faced over the years and continue to face in their struggle for gender justice today. Third, I trace the major achievements of the international Buddhist women’s movement precipitated and explore potential directions and strategies that Sakhyadita has mapped out for the future.
A Study on the Costs and Demand for Foreign Nurses/Care Workers in Japan – from the Angle of Hospitals and Care Facilities –

Many consider that the international migration of nurses and care workers is driven by economic factors. Wage and cost differentials should works as a ‘push factor’ in sending countries and a ‘pull factor’ in receiving countries, though rules and regulations may partly hinder it. Japan opened the gate for foreign nurses and care givers under the Economic Partnership Agreements for the first time in 2009. It was anticipated that application and entry would rise sharply because wage gaps with other Asian countries remained high and the rapid aging of Japan’s society badly needed more nurses and care workers. However, the actual entry of such personnel has been on a declining trend in recent years, despite government efforts for reducing entry barriers. This study has attempted to analyze the pull factor, i.e. the economic costs that accrued in the hospitals and care facilities based on surveys conducted. The analysis revealed no statistically significant correlation between the economic considerations and the willingness to hire nurse candidates, implying the existence of non-economic reasons for the reduced entry of such workers. For the care givers, economic considerations seem to have had some impact on the willingness of care facilities to receive additional foreign workers. It would be imperative for the government to address institutional impediments for the nurses and pay more attention to the economic incentives for the care facilities in order to increase the number of foreign nurses and care givers in Japan.

Organizing Immigrants in Rural Areas in Japan: Case Studies of the Tsunami-Devastated Areas

This study examines the process of organizing immigrant groups in rural areas in Tohoku, Japan, especially the 3.11 tsunami-devastated areas. In recent decades, Japan has witnessed the entrance of many more immigrants. Along with this influx of newcomers, their relationships with Japanese society and their social mobility have drawn attentions. Although previous studies tend to focus on the cases of labor immigrants in urbanized areas, few studies have been conducted with a focus on the immigrants in rural areas that lack a concentration of immigrant populations, such as the Tohoku region.

Many of immigrants in the Tohoku region are female immigrants as spouses of Japanese nationals, who are mostly dispersed throughout small towns and villages. They tended to be marginalized from their local society and given the limited understandings and supports from the local government.

The Great East Japan earthquake that devastated many areas of the Tohoku region seriously affected these immigrants as well as Japanese nationals. The disaster and its aftermath consequently led them to form groups to help support each other and to change their social surroundings. How did they attempt to grapple with the difficulties after the disaster? To what extent did their organizational efforts contribute to changing their relationships with their local society? With a focus on these questions, this study analyzes the process of organizing immigrants in the Tohoku region. The findings from my interviews with the actors and participatory observations suggest how they obtain resources inside and outside their community on the recovering process after the disaster, and the social issues they face to continue living in rural society. This study contributes to considering the possibilities and issues of “bottom-up” approach for immigrants to change their social surroundings in rural society in Japan.

Changes in Friendship Relations of Japanese Youth

This study aims at revealing the changes in friendship relations of Japanese youth. In their everyday life, friendship relations are becoming more and more important.

According to a recent report, “In response to questioning about when they feel their life is fulfilling, the largest percentage of Japanese youth answered “When I am with friends or companions” (74.6%)”. This is also the largest percentage among the other five countries (South Korea: 58.1%, U.S.A.: 64.7%, U.K.: 45.1%, France: 68.2%), and that have basically increased from past years (1977~78: 50.1%, 1983: 59.2%, 1988: 62.0%, 1993: 70.8%, 1998: 74.0%, 2003: 72.5%, 2007: 74.6%). But in recent years, there are some interesting changes.

Changes in Friendship Relations of Japanese Youth

This is so complex situation that is difficult to be understood, and our recent research also shows the same situation.

In this study, there are two ways of approach. Firstly, I would like to review the hypotheses about the changes in friendship relations (e.g. the dilution hypothesis, the selective hypothesis and the homogenization hypothesis). Secondly, I would like to analyze the quantitative data, and reveal the present situation and the changes. The data was collected in Tokyo and Kobe in 2002 and 2012. Respondents were randomly sampled. Their age ranges from 16 to 25.

In conclusion, it is revealed that the number of friends are increased but the diversity of that is reduced. It suggests that the friendship relations of Japanese youth have been homogenized.
Examsing the Chain Relationship from Initial Contact to Classical Music to Socio-Economic Status Via Music Preference

This paper examines the effect of the initial contact to classical music on the music preference, and the effect of the music preference on the socio-economic status, in Japan. Especially, as in Bourdieu’s reproduction theory, whether people’s “orthodox” music preference from family affects their income is examined.

A questionnaire was handed to 2,000 audiences of Saito Kinen Festival in 2012. 594 audiences answered. The questionnaire included the questions of initial contact to classical music, preferences to 20 composers, and household income. By latent class analysis of the initial contact, four types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences.

By latent class analysis of the composer preferences, five types were found: (a) shallow listeners, who do not know many composers, (b) orthodox maestro devotees, (c) hardheaded devotees, who love orthodox maestros but dislike contemporary composers, (d) overarching lovers, and (e) contemporary music lovers. Crossing the types of initial contact and the types of music preference, the following was found.

1. Those with vague initial music experience tend to be shallow listeners.
2. Those who are affected by family do not have a particular preference.
3. Those who had eye-opening experience are not shallow listeners.
4. Those who received various effects are not shallow listeners, not hardheaded, but overarching lovers.

OLS on the equivalent household income reveals the following. Those whose preferences were affected by family tend to have higher income than those with eye-opening experience. The orthodox maestro devotees have higher income than those with vague preference or hardheaded. However, as seen above, there is not an effect of family on orthodox preference. Therefore, we should conclude that there is no clear evidence for the chain relationship in Japan.

Food Aesthetics and the Unintended Construction of Civility in Peru

Peruvian food had always had important elements that connected it to national identity. However, in the last 10 years, food has acquired new meanings that pertained to a strong sense of national pride, and new understandings of what it means to Peruvian food, which are reflected particularly in media and politics. In Peru, the biggest city, Lima (where 35% of its population live), culture and cuisine reflect the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony. In this paper I argue that, in great part, the “aesthetization” of food in Peru—a focus on aesthetics rather than just on flavor—was pivotal to the transformation of its social meanings during the mid-2000s. In the early 2000s, chefs and tourism operators considered this process of “aesthetization” essential for the promotion of Peruvian food and, consequently, for the promotion of tourism and the increase of economic revenue to Peru. An unintended consequence of the success of this process was that the newly named “novo Andean” cuisine became a central element of an invigorated Peruvian pride. Additionally, this pride in Peruvian cuisine, in great part, allowed for emergence of new spaces of social “civility” based on weak links in a society that historically has been strongly divided by differences of class, socioeconomic status, race, etc. The “aesthetization” of food took place almost exclusively in the biggest urban centers of Peru, mostly because of the intrinsic characteristics of Peruvian media, the economic configurations of the country, and the importance of spaces of social communication in cities. These publics allow different people to discuss and experience food in big cities directly or indirectly (through conversations or food television shows, for instance), as opposed to the “immediacy” of food outside of these urban spaces.

Indirect Reciprocity in Intergenerational Support in Japan

Intergenerational familial support is a fundamental aspect of family relationships. It has critical effects on the welfare of family members and reflects the distribution of social capital in the family. This study focuses on the elderly over 50 years old as providers of non-monetary support to their adult children, and assesses how their own parents’ support has affected their propensity to provide caregiving to their grown children. While directly reciprocal relationships in intergenerational support between parents and their children have been reported in the U.S. and Japan, we tested for the presence of indirect reciprocity from parents to children to grandchildren in Japan.

The main research question is: Do the elderly who received more support from their parents tend to give more non-financial support to their adult children?

Models are examined with data from the National Survey of Middle- and Old-aged People’s Life conducted in August 2010. The sample consists of 5,648 elderly people who were 50-84 years old with at least one child over 18 years old. To detect the indirect reciprocal association between from-parent-to-respondent support and from-respondent-to-children caregiving, some regression models are applied. The outcome variable is the number of types of non-monetary support that respondents gave to their first child within the year prior to the interview. The controls are socioeconomic status of the respondents and their first children, and the support exchanged between them.

We found that receiving greater non-financial support from parents raised the propensity to offer caregiving to children, after controlling for other relevant factors. This result offers some rationale for the indirect reciprocity model of intergenerational support.

The Current Situation and Future Tasks of Community Service Actions Conducted By Local Sport Clubs - a Case Study of Local Football Clubs in Shikoku, JAPAN -

In recent years there’s been impressive growth in sport team volunteering to local community service. The purpose of this study was to examine the current situation and future tasks of community service actions conducted by local football clubs in Shikoku, JAPAN. A survey was conducted using interviews, questionnaire and fieldwork from July in 2011 to July in 2013. Data of the questionnaire were collected from a sample of 104 clubs, while the return rate was 49.8%. The main findings were as follows: 1) About twenty percent of local football clubs conducted local community service actions, 2) human communication related to unity of sport competition and promoting mutual friendship was important to local football clubs. It was facilitated for local football clubs to have human network closely related to local community. 3) sixty percent of local football clubs intended to continue or start the local community service actions. There were discouraged factors of the local community service actions, while members of local football clubs didn’t know what to do. Moreover they didn’t have enough methods to conduct the local community service actions. This indicated that the share information and financial aid could seed potential local community service actions and 4) local community service actions deeply related to proper leader and frequency of practice. It was quite important to have good connections with outside the club like sponsor or football school. It is necessary to examine the assessment of people living in local community and differences of income between local football clubs.

TSUTSUI, JUNYA* (Ritsumeikan University, junya_tsts@nifty.com)

Constructing Social Cleavage Indicators Using the Mixed-Effects Model

This study examines how we can construct national indicators by analyzing comparative surveys using mixed-effects (ME) model. ME model, also known as multilevel analysis, is usually understood as a method to analyze nested data. Few studies pay attention to its unique ability to estimate individual (or random) effects.

Estimating individual effects, country-specific effects in the case of national comparison, using ME model has two distinct advantages that existing methods do not have.

One is that we can “estimate” indicators with statistical confidence, not just “compose” them by adding up or averaging relevant figures. This merit addresses the problem of composing indicators using unbalanced comparative data. A comparison of attitudes between a country with sample size of 1,000 and one with sample size of 10 would be questionable if we just calculate means of several attitudes for both countries, because the value of a country with small sample size lack reliability. Estimating individual effects using ME method can avoid this problem by introducing “shrinkage estimator”.

Another merit of ME estimation is that we can eliminate the effects derived from differential composition among countries. An indicator value of attitudes or happiness could be different because of different distributions of social groups such as gender, age, and classes. Also, simple averaging of different level of attitude among social groups can suffer from bias, because one social attribute (such as educational background) correlates with others (such as age or gender). ME method can deal with this problem because it uses linear regression technique.

This study applies ME method to compose “Attitudinal Divide Indicator” (ADI). ADI can be interpreted as indicating how an attitude toward government roles differs by social groups. A country with high ADI can be understood as a country where there is a sharp divide of opinion among people.
Rebuild a Trust Relationship Between Doctors and Patients--
Informal Exchange in Chinese Health Sector

Trust lies at the heart of effective patient-doctor relationship. Chinese health sector is facing a trust crisis between patients and doctors as shown in the rising numbers of conflicts and dissensions. In seeking an accountable health care, patients widely employ informal exchange by giving gifts and red-packets to doctors, seeking connections and acquaintance relationship (guanxi) to get health care. The gift exchange and guanxi network involve the cultivation of emotion (renqing, gengqing, the emotional feelings of indebtedness and obligation), through which a trustworthy relationship is emergent and negotiated. However, in the changing moral context of China today, trust is very fragile amidst the inherent uncertainties of medical care. The individual efforts of gift-exchange and guanxi networking sometimes could not secure a trustworthy relationship, and patients frequently become the targets of defrauding, extortion and abuse of power. The paper, setting the context in the post-socialist China, shows how people's rising uncertainty in daily life and to secure a trustworthy doctor-patient relationship, it is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more work to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

Gendered ‘living Like The Other’ In Turkey

Some tourists, those who decide to stay a longer while than other tourists in a place they like, might ‘fetishise the idea of ‘living like the locals’’ (Davidson 2005: 46). One of the way’s Davidson suggests they might do this is through ‘integrating themselves within and among local, indigenous communities, learning from them forms of experience and knowledge rejected and repressed by the West’ (2005:51). Some might even enunciate their sense of belonging by becoming tourism entrepreneurs and playing the role of host to tourist guests.

Related to this, Soares (1998) talks about globalization as increasing the opportunities for copyng which may be related to a desire to perform one’s own fantasies about the ‘other’. Soares adds that, therefore, ‘mimicry can be a weapon against the political reification of identities’ because the experience of circulating, shifting, and changing to the forefront of social and cultural life’ (1998: 295). Such mimicry is riddled with paradox and contradiction, however, because it is never possible to fully become the other.

This paper considers the gendered dimensions of such tourist attempts at ‘living like the other’, at belonging and at becoming ‘other’. Drawing on my long-term ethnographic study of tourism relationships in Göreme, Turkey, the paper discusses the different ways in which foreign (yabanci) women and men experience belonging within and among local, indigenous communities, learning from them forms of experience and knowledge rejected and repressed by the West. The paper argues that contagion theory is useful to understand the gendered experience of tourists attempting to ‘live like the other’ here. It is about how trust is practiced, dismantled, and rebuilt in daily medical encounters. The paper recognizes the limits of informal exchange in building trust, and suggests more work to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

Taking Medicines: Expanding Routines, Disruption and Management in Daily Life

The Triple Role of Social Media: A Case Study

The Arab Spring’s ‘Facebook dimension’ has already received unprecedented attention. New technology was presented as an instrument used by protesters to build extensive networks, create social capital, organize political action locally and nationally, and put in place transnational links. A debate ensued between the views of ‘cyber-enthusiasts’ and those of ‘cyber-skeptics’ (or ‘digital evangelists’ and ‘techno-realists’). A common element, however, is that very little of this research incorporates or incorporates variables into its analysis. Moreover, try to counter the try to counter the view a rather fragmented picture of this complex phenomenon, with many scholars focusing on relatively narrow social-media-related sub-fields. The present paper tries to overcome this division. Its goal is twofold. First, it argues that the full understanding of the impact of social media on Arab Spring regime change processes is possible only through the analysis of the key role played by this media at three interrelated levels that, until now, seldom have been studied together: as a tactical tool of mobilization, communication, and coordination; as an instrument of domestic and international revolutionary contagion; and, critically, as a means of enhancing pan-Arab consciousness which, in turn, was fertile soil for that contagion. The paper’s second goal is to strongly anchor the analysis of social media in the political - and, more specifically, revolutionary - dimension of the Arab Spring. Social media may have been highly influential from many points of view. Still, one should not forget that the Middle Eastern process it influenced was fundamentally a revolutionary wave. As such, the role of social media needs to be addressed within the analytical framework of revolutionary contagion, which until now rarely has been done explicitly.

TUMA, RENÉ* (Technische Universität Berlin, rené.tuma@tu-berlin.de)

Comparing Different Styles of (Vernacular) Video Analysis

The paper presents the outcomes of a project that focuses on activities of interpretation of video recordings. The interpretation and analysis of visual data is not only performed within sociology but in a growing number of professional fields and everyday situations (“Vernacular video analysis” [1]). My presentation draws on a focused ethnographic study of interpretation practices. I have done ethnographic fieldwork in three fields and recorded practitioners at their interpretation work. The three fields each highlight different aspects of interpretation work.

In 1) Police Work the identification of actors and their (“criminal”) actions is the police officials’ main concern, in 2) Football Training the aspect of instruction is most important and in 3) Market Research the interpretation of eye tracking video is distributed and organized via means of information technology.

By itself reflexively applying Videography [2] onto the practices of video analysis I am able not only to study those three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography that allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

Gender and Socialization of Knowledge

The purpose of this paper is geared towards analyzing how gender is an indicator that impacts scientific production in the administrative sciences perpetuating the differences between genders which affect the science. Particularly, significant differences that exist in the scientific visibility of men and women in Latin America are observed, as mentioned in the Latin American Quotes in Social Sciences and Humanities website (clase based on its Spanish initials) and the Network of Scientific Magazines of Latina America, the Caribbean, Spain and Portugal (redalys based on its Spanish initials) for year 2012. The analysis is made as evidence that in scientific research, as in any other human activity, there is a gender related division in work, which should be considered in the science and technology agenda at all levels of government.

Sociological Approach on the ART of Using Drugs By Patients Suffering of Oncological and Psychiatric Diseases

This study aims to analyze the strategies and tactics used by patients suffering of oncological and psychiatric diseases on the scale of social classes. This study would help to analyze and discuss the most comprehensive questions about the subject at hand.

• Which are the factors that determine the choice of the patient when he takes a medicine?
Which are the motivations that characterize the behavior of the patients when they take a medicine?

How the norms established by the public health instances influence the perception of the patients when they take a medicine?

Basing my assumptions on how the patients take the medicine, I will investigate how the way of taking medicine is influenced by their belonging to a specific social class and which are the cultural factors that determine the way they take their medicine?

Pretti-Wettel and Moatti[1] uphold that the patient is not only the subject of his illness but also an active social role with his illness. They legitimated it and by taking part in his healing process. In that context I will investigate the factors which determine the way the patients take the medicines taking into consideration the influence of the media on them, their belonging to a social class, their dwelling environment, their gender, their profession, their educational background, their religious beliefs and their physician. With this study I hope to be able to assert that there is a similarity in the tactics of taking medicine by patients belonging to different socio-economic and cultural classes and that the practices of public health in Turkey play a unifying role between the various social classes in question.

TURKUN, ASUMAN* (Yildiz Technical University, osu.turkun@gmail.com)

Stigmatizing Discourses in the Legitimization of Renewal Projects in Informal Housing Areas and the Historic Urban Center in Istanbul, Turkey

This paper aims to evaluate how discourses and accompanying interventions on the housing areas of the urban poor have evolved since the 1950s in Turkey, exemplified in the case of Istanbul. After 1950s, the import-substitution industrialization necessitated low-paid labor force in industrial establishments located in a few cities, including Istanbul. The governments directly or indirectly supported the development of informal housing areas, which served to decrease the cost of reproduction and as a solution for housing on ground. Those housing areas also helped building survival strategies for the urban poor through embedded social networks and mutual help mechanisms.

Since the mid 1990s, the vision of Istanbul as a center of international finance and tourism has guided the new urban policies, based on the development of real-estate and construction sectors. Therefore, urban regeneration/renewal practices have become the major tool of urban policies, leading to an intensified pressure on the housing areas of low-income population in central locations. In the last decades, this pressure was coupled with disinformation and stigmatizing discourses, prevalent among the members of a hegemonic urban coalition, consisting of central and local governments, state institutions as well as developers, land owners, professionals, and the leading media. These discourses try to legitimize the clearance of those informal housing areas by stigmatizing the inhabitants as “invaders” or “criminals”.

In this paper, the findings of the research made in six urban regeneration/renewal areas will be utilized together with a comprehensive study of the leading media to analyze the changing discourses of prominent actors on the housing problem of the urban poor. This analysis will also cover the accompanying laws, regulations and implementations, which have led to the displacement or eviction of disadvantaged segments of population in most cases, as well as social movements for the right to housing and the city.

Post-Westphalian America? Religious Conservatism and American Exceptionalism

In the sociology of globalization there has been much talk of porous borders, the effects of the international flow of labour, legal pluralism, the fragmentation of civil society by multiculturalism, and the decline of state sovereignty. America however appears as ever to be an exception to the norm. After 9/11 and the Patriot Act, there has been considerable emphasis on the securitization of society as a whole. The focus of national security is echoed in the agenda of the Republican Party which has opposed the naturalization of illegal migrants, supported a hawkish foreign policy, warned against the dangers of creeping Sharia, and rejected cuts to the Pentagon budget. Despite its ideological opposition to big government, the Tea Party has driven the GOP further to the right over national security and defence expenditure. While the rightward drift of Republican Christians is consistent with traditional millenarianism and Christian Zionism in America, it is reinforced by fears of American decline. Confronted by economic weakness foreign policy now faces a dilemma: isolationism versus confrontation. The foreign policy of Christian conservatism in the United States was famously captured by Sarah Palin in her recommendation ‘Let Allah sort it out’. Despite the cultural divisions, there is however little evidence of any post-Westphalian erosion of American state sovereignty.

Incarceration and Household Wealth

A large literature documents the deleterious economic consequences of incarceration. But little is known about the consequences of incarceration for household wealth, an indicator of economic wellbeing that may be especially important to the survival of low-income families for whom incarceration is common. In this article, we use individual-level data (from the Fragile Families and Child Wellbeing Study) and state-level panel data (from 1985 to 2005) to examine how incarceration is associated with asset accumulation and asset loss among formerly incarcerated men, their romantic partners, and their communities. Results from the individual-level data, which pay careful attention to the social forces that select individuals into incarceration, document that incarceration is negatively associated with vehicle and bank account ownership among men and that these associations are concentrated among men who were repeatedly incarcerated. In addition to the economic consequences of incarceration spill over to the romantic partners of these men, especially those living with men prior to their incarceration, who report a lower likelihood of home and vehicle ownership. Results from the state-level data document that incarceration rates diminish homeownership rates among Blacks and, in doing so, widen Black-white inequalities in homeownership. Taken together, the results show that the considerable collateral consequences of incarceration may increase inequality in household wealth.

Online Environments in Children's Everyday Life: Children's, Parents' and Teachers' Points of View

Online environments, which cover broadly all websites, are a pervasive part of many children's lives today. More than 90 percent of children and young people in America and Europe use the online environment (Madden et al. 2013; Livingstone et al. 2011). This has led to a public debate about the role of online environments in children's everyday life and about the ways childhood is being transformed by virtual worlds (Plowman et al. 2010). On the one hand, children are seen as experts of the online environments. On the other hand, the online environments are often regarded as a threat for children, because the opportunity to act anonymously causes misbehavior (Livingstone et al. 2011). The paper explores the role of online environments in children's everyday life. By analyzing 27 interviews with Finnish children aged 11-13, parents and teachers, we compare the viewpoints of both children and adults. We analyse the self-perceived effect of online environments on children's everyday life and particularly focus on the opportunities and risks of the online environments. As a result of our study, we found five types of perceived effects that represent opportunities and risks: learning and socialization, sense of community and empowerment, antisocial behavior, overuse, and threat to security.

To our informants, the online environments represent a new form of community and friendship, which helps children to maintain their social relationships. There are positive effects of the online environments, such as enhancing the users' sense of community, social capital and learning (e.g. Wellman et al. 2001). On the other hand, the online environments may be considered as an escape from social interaction between people in the “real” life. Another reverse side of this “online community” is social privacy: in order to avoid being bullied, some children used Facebook before they were old enough.

University and Its Societal Environment: Reflections on the Triple Helix Model and Ways Forward

Universities are central institutions in the current knowledge society. Their role is an increasing complex: as a scientific and technological knowledge producer, they need to serve the society and to alleviate societal problems of various kinds. To these ends universities have been streamlined to perform more efficiently. Simultaneously, the separate institutional spheres of science, university, government,
industry and the civil society have intermingled giving rise to many theoretical interpretations that underline the professed radical change of universities and sciences. Of these theories, the current article focuses on the triple-helix of university-industry-government relations. The model claims that intensified interaction between university, industry and government has given rise to a new kind of research, which not only seeks to advance knowledge but also tries to attain commercially viable products. As a normative policy model, triple helix might be transporting into analysis current understanding of the developmental role of scientific research. The present paper summarizes the major viewpoints of this theory and reflects on the commentary given to it. To better understand the varied purposes of the model, it also analyses the model’s distinct theoretical status and claims that it is ambiguous, as it combines three types of sociological theory, i.e., diagnosis of an era, general sociological theory and research theory. After assessing the status of triple helix, the paper contributes to the discussion about the model by probing different theoretical avenues that research associated with the concept might proceed. Of central importance here is systems theory by Niklas Luhmann, as major protagonists of triple helix have frequently used his ideas in discussing the model. The current paper draws concepts from Luhmann’s theory to specify ways in which empirical research associated with triple helix could be made more responsive to the multi-functional and internally contradictory character of the contemporary research university.

Dress and the Embodiment of Age in Everyday Life

Clothes lie on the interface between the body and its social presentation. Getting dressed is an everyday body practice, one of the ways in which bodies are made social, given identity and meaning. When we get dressed, however, we do so within the bounds of a culture and its norms; and these include ones in relation to age – as they do gender also. The presentation which draws on an ESRC project published as Fashion and Age: Dress, the Body and Later Life, Bloomsbury, explores the role of dress in the day to day performance of aged - and gendered - identities.

New Approaches to Inequality Patterns in Education Science and Childhood Sociology

New approaches to inequality patterns in education science and childhood sociology

From a perspective that considers children as social agents we analyze how socialization- and learning environments are designed, processed and have an influence on children's self-orientation and autonomous learning. By using an interdisciplinary approach that combines sociological and pedagogical theories, different dimensions of the 'self' are put into the center of attention. Thereby we aspire to gain new insights into causes of inequalities.

This article uses data provided by the (longitudinal) study "SEBI – Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environments of Primary School Children". First quantitative results of the ongoing study assessed the importance of parenting for children’s self-confidence in primary school. A perceived parental interest in the own personality – associated with parental interest in the child's specific hobbies, activities and interests - can be seen as central for the academic self-concept. However, a perceived parental emphasis on efforts for the child's academic success does not have such a significant effect. Further, these findings could not be related to social class or ethnicity, which makes a difference to common findings of the majority of socialization studies. Thus, this study contributes to an extended view on inequalities in education by focusing on different socialization practices in families and institutions and how these interrelate to the child's academic self-concept and performance. The perspective gained by these findings can be supplemented by qualitative interviews concerning aspirations, parental practices and children's perspectives on school and family life with parents and children across various social backgrounds.

Based on this multi-method way of proceeding we aim to identify different patterns of inequity in socialization related to the self as a central variable. In how far this is a track worth following will be shown by presenting relevant data.

Consolidation of Russia and Characteristics of Russians' Identities

Under conditions of globalization the national identities take on special significance. Globalization creates unprecedented opportunities for the cultural convergence, expansion of the communicative space, lifestyle enrichment. However, it causes many challenges and destructive tendencies, including a trend which is defined as «identity crisis». Ambivalence and ambiguity of globalization practices affecting not only the outer structure of social relations, but also individuals’ inner reinforcement the need to define their own national and cultural identity. This need is global. However in every society it has its specific manifestations and gives rise to different social consequences. Russia isn’t unique in the fact that it experiences the problem of post-Soviet geopolitics. Four categories of thinking, comparing themselves and the world, trying to understand the general and the particular in their identification characteristics. Problems of transformation of Russian identity assume ever greater importance. They mediate the future of the country, its ability to face the challenges of modern world as well as to carry out cultural, economic, social and political modernization. The images which will dominate in mass consciousness will affect the prospects for civil society in Russia, the functioning of political institutions, the social climate of the society. At the same time the Russians' perception of themselves, of their own place in the world and of the others affects the formation of political, social and cultural orientation, which mediates the mass sense of place and role of Russia in the modern world, people's attitude to the Western countries, institutions and values.

Geopolitics, Identity Politics and Sociology in Taiwan, Hong Kong and Singapore

The paper compares the traditions of sociology in Taiwan, Hong Kong and Singapore based on a systemic bibliographic review, and relates the findings with the identity politics of the three places which reflect their respective roles within the present system of world politics. The paper first introduces the three areas and their nation building processes, historical development, and political institutions, the social climate of the society. At the same time, it considers the constraints of the current international situation and their impact on the aspects compared. It concludes that the current system of global politics reinforces the need for a re-definition of 'national identity', making the case for a reconsideration of the 'imposed Chinese nationalism' in Cold-War Taiwan, and its challenge from the rising indigenous identity after the 1980s; the ‘colonial denationalisation’ policies in Hong Kong and the ambivalence toward the union with China in 1997; the ‘multi-racial nation making’ project in Singapore following its unexpected independence in 1965.

ZHANG, JING-WEN (National Tsing-Hua University)
Internet-Facilitated Social Activism in Taiwan: Modes and Constraints

On 3th Aug 2013, a group of 39 anonymous ‘netizens’ mobilised, largely via the internet, to communicate a crowd of estimated 250,000 people in front of Taiwan’s President Office to mourn for the man-made death of a military corporal, Mr Hung Chung-Chiu, and to protest against how the government responded to the case. The pressure forced the government to concede, agreeing to abolish the distrusted military judicial system during peace time. The 803 protest marked a new mode of ambiguity of globalization practices in Taiwan. Its sudden surge and the much-acclaimed ‘success’ drove many veter-
an social activists and oppositional politicians into self-questioning why they had failed to stage a rally at a comparable scale in recent years—even with the help of internet. The question calls for a comparative analysis of this incident and other internet-facilitated social movements.

Drawing from literature review, interviews and some participant observations, this paper surveyed the existing practices of internet-facilitated social movement in Taiwan—a young democracy known for its strength in computing and communication technologies. Four ideal-typical categories are identified and discussed: (1) online activism of conventional advocacy/concern groups, (2) communication platform and pre-political social movement, (3) issue-specific protest initiated in a decentralised, less consolidated fashion among concerned ‘netizens’ and (4) various ‘open access’ projects initiated within an IT-savvy community (e.g. the ‘go’; zero time government project).

A model will be theorized from the comparative analysis to account for the varying socialization strategies among institutions: emotional, epistemological factors, cognitive entry barrier and technological entry barrier. At last, a normative ethic on managing the scale of activism will be developed with the ‘public attention’ considered as a scarce public resource. The various modes of internet-facilitated activism will be critically evaluated with the ethics in mind.

A Comparative Study on the Inter-Professional Collaboration Among Actors Involved in Active Ageing Programmes: Lessons from Denmark and Taiwan

This research aims to investigate the inter-professional collaboration among actors involved in the collective actions of Active Ageing campaigns, from NPOs to the state, the media, political parties, and commercial companies. It asks how do actors interact with each other and to what extent can inequality be eliminated? Denmark and Taiwan, with their differences in welfare regime, population ageing patterns, development of democracy and union movement, can be good cases to be compared. With the theoretical framework developed by Nahapiet and Ghoshal (1998), this study examines the relational dimension of inter-organizational social capital. Strikingly, three patterns of perceived relational social capital can be concluded in both the Danish and Taiwanese organizational fields, and each has its implication of obstacles to collaboration.

In Pattern 1 where actors continuously measure who needs whom more and for what, an unequal power relation can be noticed. Actors at a more disadvantageous position are more vulnerable to collaboration availability and they identify with their partners in exchange of their trust. Moreover, when a collaboration project is accepted, actors’ identification of being in the same community is formed. However, with numerous back-and-forth circumambulations, actors keep asking if they should trust their partners. This is the Pattern 2 in this study and its kinetics can be categorized as follows: a) toward mutual trust because of compliancy; b) toward distrust with problems of obligations and expectations as the crucial reason; c) toward distrust of complementary needs and ideal type of identification; b) toward distrust with its kinetics can be categorized as follows: a) toward mutual trust because of compliancy; b) toward distrust with problems of obligations and expectations as the crucial reason; c) toward distrust of complementary needs and ideal type of identification; d) toward distrust with its kinetics can be categorized as follows: a) toward mutual trust because of compliancy; b) toward distrust with problems of obligations and expectations as the crucial reason; c) toward distrust of complementary needs and ideal type of identification; d) toward distrust with problems of obligations and expectations as the crucial reason; e) toward distrust with problems of obligations and expectations as the crucial reason.

In Pattern 3, which features in harmony and stabilization, differentiates itself from other two patterns by harmonized conflict of interests among actors and a shared enemy—overall, embedded trust, which is weighted with identification functions as the key mechanism in shaping such inter-professional collaboration.

It’s Time to Change: How Does Kid-Focused Business Survive and Benefit from Population Ageing?

Ageing is a dynamic process involving responses at both individual and societal levels. Theoretically, the existence of an organization is a consequence of temporal societal demands. This study asks why and how kid-focused business can survive and benefit from ours ageing society. Particular emphasis is on their strategy in terms of legitimacy and organizational social capital. Japan and Taiwan, with their similarities in filial piety and inter-generational solidarity, can be good cases to study this issue. Various methods, such as in-depth interviews and content analysis of publications and government statistics, are applied to identify the underlying mechanisms of processes.

Social innovation across institutional boundaries can be recognized. Charities for the elderly and cramp schools both recruit senior volunteers to teach children after school hours. Institutional re-design can also facilitate social innovation. Examples include kindergarten and nursing homes to be set in the same building, and public school campus turning into tourism resort. Vague vision is another strategy for actors to find legitimacy and incorporate as many projects as possible. Moreover, institutional reframing based on institutional reproduction but with actors’ minor modification due to institutional leaks and personal interests, can create alternatives for those whose jurisdiction is territorially defined. A good example is public schools in the cities with students changing their household registration from the countryside but in reality commute everyday.

To sum up, actors’ agency and conditioning of institutions can both pave the way for kid-focused business. The concept of New Institutionalism can explain actions within a given institutional environment while the notions of organization and their dynamics can help to understand why Active Ageing campaigns are widely utilized. This study ends with suggestions for re-thinking the meaning of Active Ageing campaigns and if the elderly are hence empowered or exploited.

Women’s Responsibilities, Freedoms, and Pleasures: An Analysis of Italian, Finnish and Swedish Women’s Magazines’ Alcohol-Related Advertisements from the 1960s to the 2000s

Since the 1960s, feminist movements have emphasized that men and women should be seen as equal in their roles as parents, breadwinners, and citizens. This conception is not confirmed by the images produced by advertising. The article presents an analysis of alcohol-related advertisements published in Finnish, Italian and Swedish women’s magazines from the 1960s to the 2000s. The advertisements are approached as representations of gendered performances in which gender is made visible “here and now” by placing women in particular subject positions (identities, gender roles) that are related to private or public spheres and associated with specific kinds of gender expectations and norms reflecting women’s shifting responsibilities, freedoms, and pleasures. The article asks what kind of drinking-related subject positions have been portrayed as desirable in women’s magazine advertisements over the past few decades and how those positions have changed as we move closer to the present day. The analysis reveals both continuity and variability in alcohol-related subject positions in Finnish, Italian and Swedish women’s magazine advertisements. It shows how women’s responsibilities, freedoms, and pleasures have expanded from the traditional domain of the private sphere to multiple new areas as Finland, Italy and Sweden have developed from modern societies to late-modern societies. However, the expansion of women’s identities has occurred differently in each geographical area. Furthermore, the analysis shows that the expansion of women’s identities does not mean that the traditional gender norms have disintegrated and been replaced by equal gen-
rather it seems that traditional gender norms continue to be reproduced in alcohol-related advertising.

**Changing Consuming Behaviors By Designing Eco-Efficient Green Products**

People continue to create and consume more innovative technology products in order to make life more convenience and comfortable than the past. However, huge industrial processes bring significant changes in the Earth. Natural resources are getting to dry up; ozonosphere has been destroyed; environment has been contaminated and so on. These environmental changes cause serious threats to the survival of the Earth's species.

Therefore, in recent years, environmental awareness began to be respected, and researchers explore green issues hoping to make living things can be survival sustainable. Many countries have implemented environmental protection laws to reduce the environmental impacts of industrialized society. For instance, WEEE (Waste Electrical and Electronic Equipment Directive), RoHS (Restriction of Hazardous Substances Directive) and EuP (Energy Using Product) organizations under the auspices of the European Union try to limit the environmental pollution caused by products. Laws and regulations seem to be a "pushing" force on changing consuming behaviors.

On the contrary, this research examines the possibility of a “pulling” force on changing consuming behaviors by designing eco-efficient green products. The present study attempts to integrate 39 engineering parameters of TRIZ (Theory of Inventive Problem Solving, developed by Genrich Altshuller) with 7 eco-efficient elements (Reduce material intensity; Energy intensity minimized; Dispersion of toxic substances is reduced; Undertake recycling; Capitalize on use of renewable resources; Extend product durability; Service intensity is increased. REDUCES, in short) proposed by WBCSD (World Business Council for Sustainable Development) to construct a green product design matrix, and use patents to verify the validity of this innovative green product design process. The green product design process of this research may allow designers to generate green products by improving eco-efficient elements as well as resolving conflict design issues. Hopefully, eco-efficient products may attract consumers' attention and thus unconsciously change consuming behavior, and approach sustainable goals.

**Industrial Food Pollution: A New Perspective on Food Safety Risks Beyond the Current Legal Definition**

This study proposes a new perspective on food safety risks, with reference to the 1968 Kanemi rice bran oil poisoning in Japan. This poisoning was brought on by Polychlorinated Biphenyls and dioxins, which are hormone-disrupting chemicals. As a result, the victims had chronic illnesses and passed on the poisoning to their children. Despite the victims' ongoing need for compensation and relief, no adequate policies as yet exist.

Similar to the Kanemi case, East Asian society has experienced many other food contamination, e.g. the 1955 Morinaga arsenic milk poisoning in Japan, the 1979 Taiwan rice bran oil disease, and the contamination of food with melamine in China and Korea in the 2000s. These cases show that salient issues regarding food in East Asia have changed from security to safety. Furthermore, they indicate that this study can be applied to other contamination cases.

In contrast to neglected those cases, environmental pollution incidents such as Minamata disease - caused by the methylmercury contamination of Minamata Bay in the 1950s - were officially recognized as 'public nuisance'. The victims of them therefore received public compensation in accordance with the law. However, the government denies that serious food poisonings are ‘public nuisance’, leaving victims without compensation.

From the sociological perspective, the social damage structure of the Kanemi was not similar to typical cases of food poisoning. Rather, with regard to the victims' possibility of recovery, the negative effects on daily life and community, and the cause of the contamination, it was similar to 'public nuisance'.

In conclusion, I propose a new perspective of 'Industrial Food Pollution', beyond the Japanese legal definition of 'Food poisoning' and 'Environmental pollution as public nuisance'. Based on this perspective, I recommend the establishment of 'Relief Fund for Industrial Food Pollution', which institutionalize compensation systems for victims.

Rights and Responsibility - Investigation of the Emergence of Entitled Children and the Amendment of Juvenile Law in Japan from the 1990s into the Next Century

In Japan during the 1990s, concepts of childhood changed, both within the domestic and international contexts. The emerging notions of self-determination, freedom, and responsibility, being debated on several fronts, were applied to children. The extension of these notions extended into the functionality of juvenile law. The questions to be raised are: Is the child considered as an object in need of protection and guidance? Should the child be viewed, similar to the adult, as an independent being who has an innate ability for self-determination? How has Japanese society perceived the child? These questions form the core for investigating social, political, and legal transitions within Japanese culture in regards to its entitled children who newly emerged in the 1990s and started emphasizing their rights as they thought they were rightfully theirs. In this research, entitled children are defined as those who consider themselves as an independent adult holding the rights concerning the choice of their actions. This research aims at reconsidering and reconstructing Japanese society during this time concerning the topic of entitled children and their degree of self-determination as conceptually developed by their observers, such as educators, psychologists, sociologists, legal professionals, and others. This research also enables the production of interdisciplinary discussions between areas of law, sociology, cultural studies, media studies, and qualitative fieldwork. Investigating the developed observations of multiple disciplines is beneficial for formulating a broader context in order to analyze and comprehend the topic (235 words).

Power in Classical Sociology

Power in Classical Sociology
Lars Udehn, Stockholm University

This paper is an attempt to synthesize the various ideas of power that we find in classical sociology. By “classical” sociology is understood sociology from its emergence in the nineteenth century until the beginning of the 1960s. This means that it covers the writings, not only of Marx, Weber and Simmel, but also the structural-functionalism of Parsons and the exchange theories of Emerson and Blau. The paper takes the form of answers, found in classical sociology, to a number of questions, including: “What is power? What gives power?, and How is power exercised? In answer to the first question, a distinction is made between power in a broad sense, as a capacity to influence other people, and power, in a narrow sense, as an asymmetric relation of domination. The answer to the second question is that there are two sources of power; resources and rights – the first highlighted by Marx and the second by Weber - which are analytically distinct, but usually intertwined in reality. The answer to the third question is that power is exercised in three ways: (1) by the promise and/or use of rewards, or inducement, (2) by the threat and/or use of punishments, or coercion, (3) by trying to make people change their minds, or persuasion and (4) by an appeal to their duties, or in the words of Parsons, by an activation of commitments.

Online Disinhibition As a Predictor of Cyberbullying Among Adolescents

Bullying in schools is a serious problem that has commanded attention from scholars in the past few decades. However, with the ongoing changes and developments in technology a new dimension to the problem has emerged: cyberbullying. Research has shown that cyberbullying can lead to depression, suicidal thoughts, decreased self-esteem and academic problems among others. This presentation addresses the issue of cyberbullying based on the results from a sample of nine-hundred and ten high school students (mean age 16.31). Various theories and approaches have been used to explain cyberbullying. One possible factor that could lead to cyberbullying is online disinhibition. Up to now there have been no studies that specifically examined the link between online disinhibition and cyberbullying. The questionnaire included the Online Disinhibition Scale (ODS), a new instrument developed to assess online disinhibition levels. Results from logistic regression analyses revealed that those students who were more disinhibited in online environments were consequently more likely to have cyberbullied someone. Examination of individual items of the Online Disinhibition Scale showed varied results.

The Coming of the New Class Society: Gender Matters

Back in the 1960s, Daniel Bell predicted the coming of the new class society based on the knowledge and information capitalism. Assuming that gender would not matter in the knowledge society, women expected that this society would change in a more gender-equal direction. In reality social change has promoted neo-liberal reforms that have resulted in a widening class gap and decreased social mobility, wherein gender matters a great deal. Women are cast into the labor market in the name of the “equal opportunity,” which handicaps by virtue of their care burden. In addition, the rapidly ageing society added further burdens to the care-takers, mainly women. The result was extremely low fertility. Males and females as well as the family, society, and the state have responded to the problem by different means. The recent disaster of the Fukushima nuclear power plant following the giant tsunami has sent out a warning that we must change our over-competitive society that places such a high value on wealth and growth. Nevertheless, the Japanese nation does not want to learn the lesson of history, despite paying an enormous price. I will argue that there is much to be learnt, both positive and negative, from the Japanese experience.

Facebook Activism By Foreign Domestic Workers in Singapore

Studies of foreign domestic workers are now numerous in the social science literature, with much attention paid to left behind families. Since new research is required to contemplate the latest change, this paper uses authentic accounts related to the current explosive growth of social networking by live-in domestic workers in Southeast Asia. Evidence was gathered through 54,000 posts on a Facebook group, most from Filipino domestic workers in Singapore. Interviews were held with Facebook group members, including a founder of the NGO responsible for starting the social network group. Findings confirm that internet technology is an integral in the lives of foreign domestic workers, enhancing their social interactions and mobilizing their self-expression. There is evidence that Facebook reduces psychological and physical costs for live-in workers, making it relatively easy for them to participate in activist social networking. Evidence suggests that, in addition to providing entertainment for foreign workers, Facebook motivates an increasing number of distantly scattered individual workers to engage in social activism.

How Japan Imports Social Problems from the West: Child Abuse from Early 20th Century to the Present

For more than a century, Japan’s approach to the child abuse problem has been stimulated and shaped by developments in western countries, particularly in the US. Early in the 20th century, a national discussion of child abuse was initiated by influential Japanese who had been exposed to Western philanthropy. In the 1970s, Japanese medical professionals raised awareness of battered child syndrome proposed by a leading American pediatrician. Starting in the 1990’s, a massive discourse on child abuse problem emerged from various professional groups who admired prevention and treatment measures from the US. Official data show that child abuse cases in Japan are most common for people of lower economic class. However, social policy on child abuse problem downplays the importance of economic stability and attributes the problem to individual families. Thus, government policy prioritizes identifying settings where there is a risk of child abuse and counseling parents instead of focusing on bringing families out of poverty. A child abuse risk assessment tool from the US is applied to every Japanese family in which there is an infant. The present study shows evidence of increased social panopticism and shows that risk technology morally penalizes mothers, leading to social exclusion.

Moral Identity in Friendships Between GLB and Straight College Students

People make moral claims about sympathizing with and providing support for stigmatized individuals, but past studies tended to focus on this type of moral identity construction within formal organizations. The present study seeks to extend the literature by identifying the process of moral identity construction in a personal setting—friendships between gay, lesbian, and bisexual (GLB) people and straight people. Analyzing data from in-depth interviews with college stu-
dents in the southeastern US, we show that straight students claimed their moral worth by emphasizing their deliberate decisions to develop and sustain friendships with GLB people and by highlighting how the friendships led them to personal enlightenment and political actions. GLB students, as a stigmatized group, also claimed moral worth by emphasizing their ability to cross the community boundary and to be accepted in the larger society. Organizational and life course contexts strongly shaped students' strategies to construct moral identity as these contexts specified constraints and resources available in their friendships.

Socio-Economic Background/Women Empowerment and Maternal Health In Cross River State, Nigeria: Using Data from the ndhs 2008

Gender equality and women's empowerment are important indicators in development strategies that focus on poverty reduction and improved maternal health. Despite the full wellbeing of women and the nation, research in this area is neglected. Besides the condition of women in relation to women empowerment, indicators have remained poor. The study used data from the latest national Demographic and Health Survey (nDHS, 2008) to examine the socio-economic condition of women in relation to their level of empowerment and as a correlate of maternal health outcome in Cross River State. The study utilized data of a representative sample of 735 women of age 15-49. A majority of respondents reported Poor/low socio-economic status ranging from low educational status, unskilled occupation, low income per month, seasonal employment etc and this affected the level of empowerment in all the indicators. These are women's participation in household decision making, their attitude towards wife beating and their attitude towards a wife's right to refuse sexual intercourse with her husband or partner. This condition is manifested in high maternal morbidity, mortality, inability to determine number of children, spacing and antenatal care options available to them. This is in line with the prevalent scenario in the entire country. There is therefore an urgent need for improving and enhancing women socio-economic condition as it will improve their level of empowerment and will bring about better maternal health status.

Colonialism, Land Use Planning, and Indigenous Rights: Using Institutional Ethnography to Understand the Colonial Rationalities of Planning in 21st Century Chile

This paper shares some initial findings of a theoretical and methodological exploration, in which I use institutional ethnography (IE) to examine the role played by planning in the dispossession of Indigenous peoples in Chile. Over the past fifteen years, the planning literature started to recognize the complicity of the discipline with colonial domination and imperial aspirations of territorial expansion, in particular how land use planning has been one of the main mechanisms used by European settlers to appropriate Indigenous lands. Starting from the premise that planning processes are embedded in complex and broader institutional structures, I further argue that planning has contributed to the reproduction and perpetuation of colonial injustices until this day, in part through the existence of institutional, legal, and decision-making frameworks that are colonial legacies. Although IE has been widely used by planning scholars, I claim that to understand how colonial rationalities are reproduced through everyday planning practice it is critical to look at how written texts – especially plans, legal documents, regulations, and policies – shape planning action and help reveal colonial ruling relations. To answer this empirical question, I draw on in-depth interviews and document reviews, discussing how the daily actions of government planners in Chile bring to life colonial visions and understandings, although in subtler and more invisible ways than in the past. I use as an example the planning and implementation of the first Consultation on Indigenous Institutions, led by the Chilean Government in 2011, which was developed in the context of the recent endorsement of ILO Convention 169 and the UN Declaration on the Rights of Indigenous Peoples. This exploration shows how the recognition of Indigenous rights challenges Indigenous/State relations and simultaneously reinforces colonial notions of state sovereignty, Lockean ideas of land use and property rights, and liberal understandings of human rights.

Facing An Unequal World: The 1967-70 Civil War In Nigeria, Its Causes, Consequences and Implications On The Biafran Side Of The War In Contemporary Nigeria

SHORT ABSTRACT: The paper examines the causes and effects of the 1967-70 Civil War on the Biafran side of the country, even decades after the actual war. LONG ABSTRACT: Violent conflicts of inter and intra state wars of myriad con- ceptualizations have become an embedded state in Africa. The Nigerian-Biafra war of 1967-70 took a genocidal dimension in which the killing of people on the Biafran side of the war became a state industry. These decima- tions took the form of a pogrom against the “Biafrans” which resulted in millions of people of that side of the country examined in the war. This paper, therefore, analyses the causative factors of the war, the con- sequences of the war in terms of the massive human deaths, the refugees' pro- blems and the expropriating economic and social aftermath of the war on the then citizens of Biafra and Nigerians in general. The paper argues that even in the con- temporary globalization world order, the situation has not changed and that the victims of the secessionist war still suffers from unequal treatment in the present Nigerian socio-political context, being a hangover of the Nigerian-Biafra civil war of post-independence Nigeria.

The Social Meaning of Racial Humour Among the Police

This paper explores a controversial side of police culture: the use of ethnicized humour among the police. The empirical material consists of twenty-two inter- views made in context of an assessment on the work environment for ethnic mi- nority officers and civilians within a major Swedish police force. The qualitative analysis illustrates how officers and civilians with an ethnic minority background talk about the widespread use of racial humour within the police. On the one hand, they see their colleagues using racist jokes, as it reproduces ethnic stereotypes and tends to position minority officers as ‘outsiders’, but, on the other hand, they contribute to the reproduction of racial jokes and consider it to be an unavoidable, quite unproblematic, part of daily police jargon. Finally, the difficulties of walking the thin line between police jargon and ethnic bullying and the problems that racial humour implies for diversity work within the police are discussed.

China’s Involvement in Africa: New Approaches of Solidarity in Economic and Development Policies or Just South-South Rhetoric?

The increasing Chinese activities in African countries are often stated as differ- ent or competing against Western approaches of development aid and economic relations. Not only regarding quantity but also quality, the Chinese involvement seems to develop specific patterns of a development model, for example the prin- ciple of non-interference. This paper analyses Chinese conceptions of economic and development policies towards African states. By putting these policies and their implications in the context of historical structures and social relations of forces, the asymmetrical power relations, the counter-hegemonic potentials as well as the interests and strategies of the stakeholders involved within this “third way” between (Post)Washington Consensus and South-South-Cooperation can be identified. However, there has not been much research on African perspectives on character-istics and patterns of Chinese involvement. Therefore, in its second part, the paper focuses on the perception of Chinese activities in Ghana and the impact on local developing role models. Being the “darling” of Western donors and simulta- neously experiencing a rapidly increasing Chinese involvement on different levels of its society, Ghana presents a crucial case study with conflicting constellations of relations. According to (neo)concepts of hegemony, a sustainable impact on the local development model, manifested in reciprocally combined el- ements of institutions, ideas and material capabilities, must include aspects of consent (considering the specific background of the Ghanaian society by including theoretical perspectives of peripheral statehood and postcolonial approaches). Do Chinese stakeholders accomplish a broadly-based consent on their activities and therefore establish patterns of a “different” development model in Ghana? Does the Ghanaian civil society perceive them as an alternative to the dominant (Post)Washington Consensus? Following a qualitative mixed-methods design, combining expert interviews, media analysis, and secondary analysis, the findings of three core areas of the Chinese economic and social activities will be presented and compared: construction, mining and trade.
Gender Representations in Occupational Descriptions

The Swedish labour market is to a vast degree segregated by gender, likewise as in many other nations. Women and men work in different occupations, branch- es and even sectors and a majority (73 percent) work in occupations where 60 percent or more of the employees are of the same sex. Women are engaged in oc- cupations such as nurse, social worker, teacher, assistant nurse and child minder, while men primarily work in manufacturing or with diverse technical occupations. The separation of men and women in the labour market can be explained by the structural mechanisms which result from the sex-segregation and it contributes to stereotyped gen- dered images of occupations. Both tasks and occupations tend to be sex-typed and we associate them with being either female or male. “Female” occupations include different aspects of caring for other persons and thereby correspond with de-positions assumed to be held by women. “Male occupations” are associated with physical strength, technical skills and logic – dispositions traditionally asso- ciated with men. Sex-typing is an ongoing process, part of the overall gender sys- tem in society, and is related to hegemonic cultural beliefs about gender.

This paper draws on empirical data consisting of occupational descriptions produced by the Swedish Public Employment Service (Arbetsförmedlingen). It presents the results from the on-going research project that studies whether descriptions of occupations are a mechanism for social reproduction of gender, class and social ethnicity. The paper focuses on how gender is represented in the 30 most common occupations for women and men respectively. The aim is to find out whether these occupational descriptions reproduce stereotyped images of gender, and how. The study was conducted through a qualitative content analy- sis. Preliminary results reveal that they both reproduce and break stereotypes by emphasizing that nurses need to be technical and that a janitor must have social skills.

Umeda, Naomi* (Osaka Prefecture University, cnu21419@osakafu-u.ac.jp) Information and Communication Technology (ICT) and “Isolated Child-Rearing” in Japan

This paper explores how ICT affects social movements for dealing with “isolat- ed child-rearing” through analysis of political documents and qualitative interview data, especially focusing on the relation between ICT and neighborhood relation- ships or regional networks for families. In Japan today, these social movements for dealing with “isolated child-rearing” have been active. They problematizes “isolat- ed child-rearing” from the urbanization, the increasing number of nuclear families and the dilution of neighborhood and family relationships, mainly on the assumption that the isolation relates to “child abuse” and “child-rearing anxiety.” For this reason, they try to strengthen supports for parents by neighbor- hood or special local agencies. On the other hand, recently some governmental ICT projects for preventing “isolated child-rearing” have been promoted, such as building a social networking service site for parents and developing e-learning environments to foster advisors on child-rearing. These projects enable parents to seek advice or to talk with other parents on their smartphone or personal computer without leaving home regardless of their regional contacts. So, how does the promotion of these ICT projects affect the need for developing a sense of community and building regional networks for preventing “isolated child-rearing”? In conclusion, the governmental ICT projects in Japan are rigidly focusing on “local community”, so in the name of “community informatization,” many local govern- ments are engaged in developing ICT to strengthen neighborhood relationships and regional networks. Similarly in a real-life situation, most of the parents who replied this investigation prefer to ask for help and talk with someone they know by sight rather than only online. For these parents, the primary objective of using ICT in their child-rearing lives is to communicate with their family or neighbors. Thus, in Japan the utilization of ICT for preventing “isolated child-rearing” is direct- ed to strengthening neighborhood relationships or regional networks.

Undurraga, Tomas* (Research Associate University of Cambridge, tomas.undurraga@gmail.com) Producing Economic Knowledge: An Ethnography of Newsrooms in Brazil

Producing economic knowledge: an ethnography of newsrooms in Brazil

In line with recent ethnographic research concerned to shed light on knowledge production in advertising agencies (Arztia, 2013), trade floors (Beunza & Stark, 2010) and news agencies (Boyer 2011), this presentation considers the newsroom as site of economic knowledge production in Brazil. In particular, this paper pres- ents the early results of a multi-site ethnography of economic news production in the mass media in Rio de Janeiro and Sao Paulo in 2013. It draws from more than fifty interviews with economic journalists, media commentators and economists, as well as from participatory observations of journalistic practices within news- rooms. The paper looks at how relationships – both competitive and collaborative – between the following four entities help create economic knowledge, and how this knowledge interacts with the generation of news: The entities in question are: 1) individual actors and groups, e.g. journalists, economists, comment-ators, editors, etc.; 2) non-human instruments (devices, models, rankings); 3) structures (classes, professions) and 4) networks (relationships among actors, instruments, structures). The paper pays special attention to how news about the economy is constructed and circulated, and how this news in turn draws upon, contests, and helps to produce economic knowledge. This research forms part of the ERC funded ECONPUBLIC project, which study how the ideas about the econ- omy have been produced in the mass media in the UK, US, France, Argentina and Brazil in the post-war period. http://www.econpublic.hps.cam.ac.uk

URANO, SHIGERU* (Mie Prefectural College of Nursing, shigeruu@blue.ocn.ne.jp) AYAYA, Satsuki (The University of Tokyo) KUMAGAYA, Shinichiro (The University of Tokyo) An Ethnomethodological Explication of the Usage of Diagnostic Categories: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (2)

Through the lens of medicalization in sociology, the relations that people have with medical categories are considered subordinate to medical professions. Therefore, how individuals with autism spectrum disorder (ASD) come to terms with the category of “ASD” is considered a manifestation of that subordination (Conrad, 2007). However, this perspective prevents us from understanding ac- tual situations in which those individuals come to terms with the diagnosis of ASD. Many studies have investigated the various relations people actually have with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these prec- edent studies, this presentation examines the sessions of tojihisa-kenkyu (which roughly translates as “sufferers’ first-person study”) and explains the interactions of the setting in which participants refer to their own diagnostic categories. The Japanese word tojihisa-kenkyu refers to a collaborative activity in which the indi-
viduals suffering from social isolation due to their impairments talk about their troubled experiences and study the structures of these experiences in their own words. Tohjisha-kenkyu began in a mental patients' group in the town of Hokkaido, Japan and has since been utilized in many other groups of individuals with various impairments (Ayaya and Kumagaya, 2008; Ishihara, 2013). The sessions of tohjisha-kenkyu this presentation examined were for individuals with ASD and conducted by these individuals. Using ethnomet hodology and analyzing audio recordings of the sessions, we focused on the following questions: (1) What is the significance and what are the roles of the participants' self-reference to diagnostic categories? (2) What relationships do these usages of diagnostic categories reveal possible between participants? (3) What consequences do these usages give to the meanings of these diagnostic categories?

**How Diagnostic Categories Influence the Self-Description of Person with a Diagnosis: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (1)**

Previous studies have revealed that there is a mutual relationship between the self-description and social cognition/interaction (Spreng and Mar, 2012; Nelson and Fivush, 2004). These studies have found that to infer the intentions, feelings and beliefs of others from their behaviors requires the structured self-description which serves as a reference frame. On the other hand, self-description is structured through the social interaction.

The persons with Autism Spectrum Disorders (ASD), the medical definition of which is qualitative deficits of social cognition/interaction, are suggested to have difficulties in semanticizing their own autobiographical memories through social interaction, which gives atypical structure of self-description (Crane et al., 2010; 2011; Bon et al., 2013; Lind et al., 2010; Williams et al., 2010; Uddin et al., 2011). However, performance of social cognition/interaction and self-description depends on how to interact 'with whom', and may not be reduced to individual characteristics (Crane and Goddard, 2008; Bruck et al, 2007; Crane et al., 2012).

As a practice in which alternative self-description and social recognition/interaction are generated simultaneously, we focus on Tohjisha-kenkyu. Tojisha' means first-person in Japanese, and 'Kenkyu' means research. In a nutshell, Tohjisha-kenkyu is studying oneself through communication with others who share similar experiences. Tohjisha-kenkyu is a novel method of self-help and intellectual exploration born in Japan, which neither accepts without question nor rejects completely existing technical terms and diagnosis, but rather uses and customizes them to make more suitable descriptions for each experience.

In this presentation, the speaker, who is diagnosed with ASD and is a facilitator of Tohjisha-kenkyu meetings for ASD, will introduce 7-year experiences of Tohjisha-kenkyu. She also talks about how she has utilized technical terms to change her own self-description, which ranges from implicit body schema to explicit self-narratives, and the relationship with others (Ayaya, 2013).

**Social Policy in the Context of New Global Actors: How Far Is China's Developmental Model in Africa Impacting Traditional Donors?**

China's role as an emerging donor and its conceptualization of social policy in Africa has generated polarized reactions in the West. Many argue its 'productivist' approach is driven less by notions of citizenship and social rights, and more in terms of accumulation functions. Social investment is justified for broader economic and social dimensions of welfare will be explored.

**The Transfer of Public School's Management for the “Public Non-State Sector” in São Paulo, Brazil: Challenges When Education Becomes “a Care Service to the Consumer”**

An overview of the author's master's research (in progress), which discusses participation and social control specificity in ‘public non-state’ educational services in Brazil during the last decades, after a major structural change in the country's public educational services. It investigates how the funding architecture of state services take place after 1998, when the transition form ‘full public’ to ‘public non-state’ took place. It attempts to explain how the as called ‘financialization’ and internationalization - key features in capital globalization - interfere on participation and social control in public education sector. The case study analyses a legal entity created to this end - the OSCIP - specifically the branch of education that began to operate in the first schools with public non-state management in São Paulo. Marked by incise participation of the business community in partnership with the higher authorities of planning education (Education Departments of State and Municipality), their intention is to draw a OSCIPS school management model that copies central countries' school structure. This experience in São Paulo is crucial: it's a pilot project for all public education in Brazil. If successful, all municipalities and States should also adopt this new model and all public schools shall be run by non-state entities.

The intention is to unfold and underline the mechanisms of production of a specific kind of participation and social control over public services, which is based on the logic of 'care service to the consumer'. As a result, the strategies for a non-state organization, which presents itself as a nonprofit one, obtain profit arises. And, therefore, it can be said that there are private intentions supporting entrepreneurship in these supposed non-profit sectors.

**Social Narratives For Noble Art Collecting (Spain, 1750-1850)**

The main purpose of this paper is to study the role that collections of art works and other artifacts played in the definition and exhibition of social discourses of legitimacy and differentiation of the estates. Since noble collections embodied social theory and social legitimacy, old noble houses transformed their artistic policies in the transition between Early Modern and Modern and Contemporary Europe, as a response to the competition environment due to the new nobility policies in the transition between Early Modern and Modern and Contemporary Europe, as a response to the competition environment due to the new nobility. Focussing on the logical and methodological change in the interaction between public interpretation .

An overview of the author's master's research (in progress), which discusses participation and social control specificity in ‘public non-state’ educational services in Brazil during the last decades, after a major structural change in the country's public educational services.
Between Europe and Asia; Cross-National Marriages in Japan (Russian Case)

The paper focuses on modern Russian diaspora in Japan and based on research conducted in 2012 in Kyoto (Japan). Although Russians in Japan have more than 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. There were only 322 Russian (Soviet) citizens in 1985, but in 2004 the Russian community in Japan has counted more than 7,000 members. It is understandable how many Russian-speaking foreigners in Japan now - about 10,000. All population of the Russian community in Japan could be divided into two groups: labor migrants and members of cross-national marriages. I pay attention to the second, larger group of the Russian community in Japan, because it is still studied a little. It is a marginal community, still not Diaspora in due its small and dispersed numbers. Having many problems of identification, they want to keep their transnational identity, influence on cultural environment of host country and to be a root between it and homeland, between two cultures - European and Asian. This study (interview with Russian women married Japanese men) shows us an impact on Japan of many new ethnic communities and how Japan is becoming the society of multi-cultural coexistence. So, under influence of the small Russian community, Japan will take a new identity as a multicultural state, but not homogenous one. To prevent depopulation, Japan has to accept 17 million immigrants between 1995 and 2050, immigrants and their descendents would total from 18 up 30 percent of the total population of the country by 2050. There are two main state's coalesce policies – assimilation (melting pot) and multiculturalism (the saladin bowl). In case of Russians, they don't want to assimilate and prefer the multiculturalism (diasporic) model.

Japanese Teenagers' Perception of Their Mothers' Employment and What They Do in After School

Japanese junior high school students and high school students (age 13 to 18) are rarely reported internationally regarding their behaviors after school and attitudes towards their mothers' employment. I interviewed approximately 40 these teenagers, 20 each from relatively wealthy area, Setagaya and the down town, Taito in Tokyo. The result showed that most of their mothers were working part-time and their family suffers. Some of these mothers were suffering from neglect or somewhat of neglect by mothers particularly concerning supper. The difference was teenagers in Setagaya are more likely to complain to their mothers and by their families and by their friends. They are seen as the “people in charge” of the religious affairs by their families and by their friends.

Public Religious Activities of Muslim Women in Turkey

This paper aims to analyze the effects of Sunni Muslim women's increasing public religious activities on their everyday lives and social status within their close relationship circles such as family and neighborhood. The analysis is an account of a two-year-long ethnographic field study in two state Quran courses and one informal Quran course in Ankara and twenty six interviews with the participant pious women. Muslim women's public visibility has been increasing in the world as well as in Turkey. This is firstly due to the increasing rates of public participation of women in Turkey (there is positive development in women's employment and education rates). Since working women spend most of their time outside their homes, pious women choose to fulfill their religious obligation of daily prayer (salat) in the mosques and mesjids which are public spaces. Secondly, more and more pious women claim their right to the public religious places such as mosques which have traditionally been male spaces and public religious activities such as Friday prayer which have been dominated by men as male religious activities. As a result, more women attend public religious activities at public religious places. This paper argues that pious women reorganize their everyday lives according to their public religious activities and that pious women's public visibility elevates their social status within their families and among their neighbors and friends. They are seen as the “people in charge” of the religious affairs by their families and by their friends.

Building “Ethnic Ghettos” or “Intercultural Bridges”? the Use of ICTs in Migrant Organizations in Spain

The use of the Information and Communication Technologies (ICTs) by migrant organizations is a relevant factor for the enhancement of social cohesion. Migrant associations develop in-group solidarity, associates are likely to deceive or defraud their counterparts in the group membership. There is a general consensus regarding the value of ICTs in maintaining both strong and weak ties, but there is not any consensus on whether ICTs are
useful in forming new ties and whether those are strong or weak. This study aims at explaining the impact of ICTs use in the migrant associations’ social capital. Are migrant associations using ICTs to expand bridging social capital or to reinforce homogeneous networks? In depth interviews to the representatives of 25 immigrant associations in Spain, from five different origins, namely Romania, Morocco, Equador, Colombia and Bolivia, have shown that the use of ICTs is increasingly essential for their organizations. Furthermore, ICTs are used to access to information on both the origin and the host country. However, the organizations’ communications, both online and offline are mainly addressing their local communities. On the other hand, there can be no doubt that the associations that use more diverse ICT tools are those who are more oriented to social cohesion. The study shows that, indeed, bonding social capital is essential for migrant associations and that the use of ICTs helps maintaining strong ties, while fostering the creation of new weak ties and political participation of their communities in the host society. In sum, ICTs come up as an opportunity for migrant associations to improve their public image, collaborate with other public, private and non-profit organizations and thus to enhance social cohesion, in general. Therefore, an effort should be done from public and private initiatives to facilitate this digitalization. This paper is part of a larger research financed by the Spanish Ministry of Economy.

**UZZELL, DAVID** (University of Surrey, d.uzzell@surrey.ac.uk)

**Workplaces In Tncs: Can Green Practices Be Transported Across The Home-Workplace Border?**

Just under 50% of the world’s GHG emissions in 2004 were attributable to energy supplies and industrial production (IPCC, 2007). The demand for manufactured goods is expected to rise by at least 100% by 2050 (from 2006 levels), with a consequence that industrial emissions, if unarrested will lead to a 90% increase in CO2 emissions by 2050 compared to 2007. Following new EU regulations, national governments have created policy instruments designed to reduce or compensate the level of emissions of specific organizations. However, these regulations have not proved to be effective, neither in terms of production nor consumption. The research project: *Low Carbon at Work*, attempts to understand the drivers for and barriers to environmentally sustainable practices at work and at home, and recognizes not only the crucial contribution of industrial production to GHG emissions, but also that consumption is an inseparable driver of production. Investigating two TNCs (vehicle production and oil industry) in Sweden and the UK, we have asked under what conditions workers and managers are encouraged to transfer “green practices” from work to home and vice versa. We have also investigated how relationships between managers, employees and trade unions might encourage or prevent the adoption of ‘greener’ production processes. Both case studies include informational and life-history interviews to understand changes at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw a gap between generations? Are there signs of proportionally more pro-elderly spending as the median voter’s age increases? The topic is politically even more relevant in the midst of the current economic crisis when social budgets are being cut, welfare state policies recalibrated and intergenerational justice is emerging as a significant policy issue.

The preliminary analyses with the Finnish register data indicate that the distribution of old age in-kind benefits has a remarkably pro-poor pattern. The final article will investigate further if this is explained by the greater morbidity of the elderly in lower income classes or if the result is connected to other socioeconomic factors, such as living alone or older age.

**VAALAVUO, MARIA** (National Institute Health & Welfare, Maria.Vaalavuo@thl.fi)

**Welfare Dependency, Accumulation of Social Problems and Marginalization**

9.2 per cent of the population in Helsinki claimed social assistance in 2011. Media often portrays these people as a homogeneous group while the evidence tells otherwise. This presentation contributes to the development of a typology of social assistance recipients and focuses on those worst-off. Is there a new group with multiple needs that should be targeted with specific policy measures? But also, are there new claimants recruited from middle classes? 40 per cent of recipients claim social assistance for less than 3 months. These short-term recipients can hardly be called the core of destitution – especially if we consider long-term deprivation as a characteristic of destitution.

An entirely different type of subgroup includes those who receive the benefit long-time or recurrently. Indeed, long-term social assistance receipt has increased and a growing share of claimants faces many problems simultaneously. Health problems, substance abuse, long-term unemployment and housing problems often accumulate and make these people more vulnerable to marginalization.

In order to develop better policies and actions by social workers, information on the heterogeneity of clients and the depth of the various problems they face is of profound importance. Should we improve the accessibility and content of health services, to whom should the rehabilitative work be targeted and who still have the potential to re-enter the labour markets?

The presentation analyses social assistance clients in Helsinki with register data from 2006–2011. The data is complemented with information on the use of health and social services and pharmaceuticals. Using factor, latent class and descriptive analyses, the objective is to locate the core of destitution and classify clients on the basis of their background, benefit dependency and welfare problems. This categorization can facilitate the design of actions, setting of realistic objectives of policies for different subgroups, and analysing social assistance data in general.

**Educational Inequality and Social Mobility: A Two-City Study in India**

Patterns of intergenerational mobility provide an indication of the equality of opportunity and “openness” of a society. This paper studies the impact of educational attainment on social mobility chances in India for both women and...
men. India presents a novel case to test theories of inequality and to examine social change given its diversity and the pace of recent growth that has excluded a significant proportion of the population, and due to persisting educational and gender inequalities. Specifically, large cities in India that have expanded both in terms of population and economic growth are ideal contexts for such a study of social mobility. This paper analyzes primary data collected through a survey of over 1800 respondents in two cities, Delhi and Patna. In-depth interviews with some of the surveyed respondents provide the much needed context to this study of persisting inequalities.

VAIL, JOHN* (Newcastle University, john.vail@ncl.ac.uk)

**Bearing Witness to Social Suffering: The Emotional and Social Complexity of Social Documentary Photography**

There is a highly contested debate in the social sciences and the humanities about the artistic bearing of witness to social suffering. If we take the paradigmatic case of social documentary photography, does prolonged exposure of individuals to images of social suffering have de-politicizing effects, dulling empathy and leading to compassion fatigue or does it spark an empathetic imagination and ethical reflection, and thereby stimulate an active solidarity and sense of shared responsibility that constitutes a cultural pathway to an active citizenship. Although we sympathize with the latter judgment, we admit this is based more on wilful optimism than persuasive evidence because, in actual fact, there has been very little rigorous social science research investigating this debate. We empirically redress this oversight through an ongoing research project with the Side Gallery in Newcastle, UK. For over 35 years, the Side has hosted exhibitions of social documentary photography, many of which have been dedicated to exploring large scale social and political transformations with a special focus on social suffering and hidden injuries. For each exhibition, the gallery has kept a comprehensive book and we have coded and analyzed a sample of 25 exhibitions across three decades featuring diverse forms of social suffering and distinct subjects. We use these contemporaneous comments to trace how the images impacted on individual emotional states (what kind of emotions were triggered, whether particularly images generated specific responses). We also explore whether these exhibitions acted as a force for social learning: increasing people’s understanding of social complexity and power; recovering people in the photos as proper subjects, worthy of dignity in their own right; and enhancing knowledge of possible alternatives. Finally, we are interested in whether we can observe how individuals employ distinct ethical, emotional and critical judgments when encountering these kinds of images.

VALARINO, ISABEL* (University of Lausanne, isabel.valarino@unil.ch)

**Fatherhood and Doing Gender. How Challenging Can Institutional Changes be?**

Transition to parenthood in Switzerland takes place in a particularly gendered welfare state. It is the only European country where men do not have access to any kind of statutory paternal or paternity leaves. Following a conceptualization of gender as a social structure, we consider that parenthood is shaped by social mechanisms producing difference and inequality between fathers and mothers at the institutional, interactional and individual levels. This paper investigates empirically the extent to which institutional change - such as the introduction of a paternity leave - can challenge the construction of gendered fatherhoods. It is based on a case study conducted in a public sector organization which implemented in 2010 a one-month paid paternity leave. Sequence and cluster analyses are performed on register data about the patterns of employees’ leave uptake (N=95). Interpretative analysis of interviews with fathers who took paternity leave (n=22) and with married couple leave uptake in their team (n=8) is conducted. Results indicate a limited challenge of the gender structure. At the interactional level, although paternity leave enables fathers to spend more family time, a gendered division of childcare tasks is observed: fathers still have a secondary role with the newborn child. The majority of interviewees adopt a modified male model, similar to the dominant norm in Switzerland. As regards interactions in the workplace, paternity leave contributes to make fatherhood more visible, but informal norms about the legitimate leave pattern are observed. On the individual level, paternity leave uptake contributes to men’s appropriation of their fatherhood identity and to increase their sense of competence and duty as fathers. However, their conception of fatherhood is structured according to contradictory discourses which highlight change in gender relations and persisting differences between motherhood and fatherhood.

**Highly Skilled Migration As a Structuration: What Is New?**

This paper examines the role of interaction between social structure and human agency in the process of international migration of the highly skilled professionals. The discussion draws from Giddens’s structuration theory and Bourdieu’s forms of capital. It revisits Giddens’s analysis of duality of structure and relocates this in a migration field. This presentation is devoted to explore second questions: Why do highly skilled professionals migrate even they are financially satisfied? Why others do not consider migration? What kinds of forces in migration decision process do participate? This paper is based on results from twenty in-depth open ended interviews with highly skilled professionals of Lithuania in the fields of natural and technological sciences. Migration and social status is seen as endless process constructed from set of events passed on micro, mezzo, and macro level.

In the view of structuration theory migration is seen as recursive process formed and transformed by active agents and itself shaping and structuring subsequent social behaviour of agents. Both structural determinants in the countries of emigration and immigration and acknowledgment of migration as efficient strategy for life betterment creates new cultural element in the social structure that influences migration decision making of other peoples. International migration is a continuous interaction between migrants and economical, political, social, and cultural contexts on macro level in the sending and receiving countries. New insights shed light on deeper than just economic considerations layers involved in forming attitudes towards international migration. The structural ant socio-cultural context where individual is acting, migration experience in parent family, seek for higher social status, personal freedom, and need for professional recognition are just several pieces of the puzzle, the outcome of which is decision to (not) migrate.

**All Mixed up: Defining Mixed-Income in Public Housing Redevelopment**

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace trou-
bled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have moved into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of mixed-income housing (less than 1/3 of total units), to ones that attempt to preserve a substantial majority of units for low-income households.

In addition, we develop a new way of identifying and categorizing mixed-income developments in terms of how income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together two or more income proportions of low-income and high-income residents into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace finally all low-income communities.

**Domestic Violence As Eigenvalue in Contemporary Society: A Sociocybernetic Approach to the Construction of a Form of Gender Based Violence in Chile**

Domestic violence, including several types of gender based violence, does not exist independently from an observer, neither is this observer limited to a domestic realm. In contemporary society, domestic violence is constructed as such in a network of operations that encompasses both private and public realms. This network involves a diversity of human and non-human agents – questionnairenaires, photographs, medical instruments, etc. – and coordinates public policy, legal, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Heinz von Foerster), a referential correlate of this complex network of operations.

This paper, which is based on field observations made in Santiago, Chile, describes a section of this network: the section that goes from the moment a report is made to the moment it enters a courtroom transformed into a case of domestic violence. It is stated that three problems of reference (Niklas Luhmann) give meaning to the diverse operations that are involved in this network: a) the attribution of cases of violence to the environment of the system; b) their observation as forms against a medium; c) and the constitution of chains of transformations (Bruno Latour) through which references to the lived experiences of violence are mobilized. Specific mechanisms that contribute to solve these problems are presented and analyzed.

Finally, two main consequences are explored. At the same time that the constructed reality of domestic violence becomes inscribed in the lives of victims and their relatives, shaping their experiences and descriptions of the world, it is shaped as a stream of facts that feed state mechanisms of population control.

**The Circulation of Two Epistemic Objects That Carry Social Science Knowledge: Domestic Violence and Bullying**

This presentation follows the circulation of two epistemic objects, namely domestic violence and bullying, in Chile, from their appearance in this country in the decades of 1990 and 2000, respectively. Social science knowledge plays a major role in the configuration of both epistemic objects. Also, both objects have important normative and emotional contents, making them relevant for the orientation of actors. In this manner, domestic violence and bullying are part of performative processes through which social science knowledge shapes reality.

The definitive positioning of domestic violence and bullying as part of everyday reality in Chile resulted largely from State-led processes of measurement, diffusion and regulation. Their arrival and diffusion was induced by several social processes. In the case of domestic violence, the feminist movement, with its claims during the 1980s, was a crucial lever. Bullying, instead, has a more diffuse arrival, being mass media, particularly television, its fundamental driver. International organizations such as the World Health Organizations and UNESCO played a key role in the circulation of both constructs. They have provided conceptual and methodological tools, as well as facilitated and disseminated research and provided funding. Moreover, international organizations have incorporated in these constructions a decisive normative framing that is associated with developments in Human Rights.

Some repercussions of these processes are analyzed regarding the globalization or universalization of these realities or cognitive objects and to the respective effect of perceptual and normative shaping. The empirical study is based on interviews to relevant agents (state functionaries, policemen, educators, psychologists, physicians, etc.), ethnographic work regarding measurement and classification practices, and revision of documents related to processes of constitution of these constructs.

**The Atmospheres of Chilean Copper Morality**

From ancient times copper mining has been a key element for the materialisation of the civilisation processes. From the weapons and ornaments of the Western Asian settlements 1,000 BC to the bracelets and wirings of contemporary hybrid cars, copper has had a privileged position advancing human capacities with its versatility. However, intensive pollution derived from copper mining has also been a prevalent issue that can be traced back twenty centuries into the smelters of Roman Empire times, as some recent sediments analysis in Greenland have recently shown (Hong et al, 1996). Additionally, copper has been relevant in international disputes over natural resources, as can be seen in Chile in the middle of the Cold War, with a process that sought to recover national sovereignty over copper and ended up with the imposition of a dictatorship. Following an actor-network perspective, this presentation is focused on the role of copper shaping the institutional settings of Chile. The analysis is mainly based on the negotiation of anti-pollution standards and emissions caps that lasted for more than twelve years (between the late 1990’s until 2012), and explores the different copper ontologies related to health, pollution, energy, and globalisation among others, mobilised during that process. Reviewing the proceedings of the expert panels and public statements made by the bodies involved in these negotiations, the agencies of copper are rendered visible as flexible and engrained into the institutions of Chil- ean society and to the needs of the currently in place copper production schemes.

This paper is not just to the local schemes, but to its intimate connections with the global copper dynamics, which are currently dominated to a great extent by Chi- na. It is argued that a way out of this entanglement should be designed, cutting across the cause-effect relations that compose current Chilean copper moralties.

**Contemporary Family and Human Development**

Human development is the expansion of people's opportunities live long, healthy and creative lives; to advance other goals that are valuable for themselves and the entire society. Human development implies that people engage actively in expanding equity and respect for human rights.

Family is not only an institutional cell but also is a micro-social basis of human development and its reproduction. It is a family where the key elements of human development (health, education, well-being etc.) originate from. The potential of these elements determine perspectives of socio-economic, scientific and cultural development of the country and ultimately of the person himself.

It is a family where a person should be brought up to respect fundamental principles of equity, recognize human rights, interests and needs of other family members and people around. Family is the only social institution providing for retranslation of values and norms to the following generations; ensuring success- tional stability and sustainability of human development.

At present in many countries the family institution experience crisis, which is intensified by dissonance and often negative demographic processes. These tendencies affected Russia as well. Along with decrease in birth rates, there have been negative changes in marriage and family structure; in the number of incom- plete families and illegitimacy. The most common reason of the russian families is poverty, which is deepen with every subsequent child.

Responding to contemporary challenges in marriage and family processes the governments of developed countries realize explicit family polices. In Russia family-oriented measures were always regarded as a part of social and demo- graphic policies. But nowadays National family policy, its statements, principles and priorities are being conceptualized. This is reflected in the work of experts' and scientists' communities; in broad public discussions of the draft project of the National Family Policy Concept.

A New Global Approach to Pursue Global Justice and Development

The liberalization of economy and global economy formation have fundamentally changed the model of interaction between government, employers and employees; have greatly affected the employment structure, labor markets and socio-labor relations. Uncontrolled world capital markets, and as a consequence, risen instability, uncertainty and inequality in society have led to a weakened sense of common purpose of social partners in labor sphere.

At the same time, understanding that stability and considerable culture in socio-labor relations guarantee social and economic well-being, determined the need in a new base for consensus between tripartite partners in global scale. This role is performed by Decent Work (DW) concept, presented by Director General of The International labor organization (ILO) in 1999. In accordance with definition, DW involves contradictions: in contextual it is implemented through the cooperation program between ILO and Russian Federation. The timeliness and urgency of DW concept is proved also by The European Union's Post Lisbon Strategy. The European network of 53 NGOs “SOLIDAR”, working to advance social justice in Europe and on the international level, has proved also by The European Union’s Post Lisbon Strategy. The European network of 53 NGOs “SOLIDAR”, working to advance social justice in Europe and worldwide wrote: «We would like to see the quality jobs and decent work agenda translated into European legislation, policies and programs, with its key components and objectives reflected in the Post-Lisbon Strategy».

Contesting Stigma: Afro-Descendant Migrants in Santiago, Chile

The purpose of this exploratory study is to provide a qualitative empirical account of the experiences of Afro-descendants presently living in Santiago, Chile, and contribute to the debate on the migratory realities of people to Latin America from the perspective an understudied and often marginalized and excluded population. While this study can only provide a snapshot into the lives of some 5000 Afro-descendant immigrants presently living in Chile, preliminary findings suggest that this population is experiencing racism and xenophobia with which they must regularly contend. It seeks to understand the justification process by which marginalized groups contextualize and how they disavow perspectives that suggest their identities have been devalued. Forty-eight semi-structured interviews were conducted with adult immigrants of visible of African descent (27 female, 22 male), from 4 countries and 15 countries, between April and May 2013. They lasted between 10 and 25 minutes and were conducted in either Spanish or English. All but 11 were audio-recorded.

The Resistance of Bare Life: Media Narratives on Mapuche Hunger Strikes in Chile

The current Mapuche movement emerges in the context of processes of globalization and modernization affecting Latin America. Since the 1990s conflicts have arisen between Mapuche communities and private companies, due to the development of economic mega-projects in Mapuche territory. The government role has been contradictory: while they promote politics of recognition in education, religion, and politics of repression are used to sufcate Mapuche protests regarding those mega-projects.

The mainstream media narratives have constructed a particular framing of the conflict. Due to the lack of plurality of Chilean mainstream media, a critical discourse analysis of media discourses is fundamental to deconstruct how a particular narrative is imposed as the unique regime of truth. An alternative discourse has been developed by the ethnic media, which emphasizes an historical and contextualized reading of these confrontations and its consequences for Mapuche communities.

The paper compares the discursive formations underlying ethnic and media narratives regarding the Mapuche hunger strikes of 2008 and 2010. The media coverage of those hunger strikes provided a space for contestation of notions of ethnic and national identity. The analysis of these narratives brings to the forefront the concept of bare life (Agamben, 1998). The management of the bare life of the Mapuche is at the core of the modern politics. The hunger strike becomes the only mechanism of resistance of those subjects reduced to the category of bare life. The application of the anti-terrorist legislation locates the Mapuche body outside the realm of law by creating this state of exception (Agamben, 2005) where bare life can be scrutinized and managed.

The comparison of the mainstream and ethnic media narratives shows how the Mapuche hunger strike has been constructed in contradictory terms. A critical discourse analysis problematizes notions of power, legitimacy, ethnic and national identity, involved in those media narratives.

La Violencia Invisible: Acoso Sexual Callejero a Mujeres En Lima Metropolitana

El acoso sexual callejero comprende un conjunto de prácticas cotidianas como frases, gestos, sibilidos, sonidos de besos, tocamientos, masturbción pública, exhibicionismo, seguidos, entre otras, con un manifiesto carácter sexual. Estas prácticas revelan relaciones de poder entre géneros, pues son realizadas sobre todo por hombres y recaen fundamentalmente sobre mujeres, en la mayoría de casos desconocidos para ellos. Las realizan hombres solos o en grupo. No se trata de una relación consentida, sino de la imposición de los deseos de uno (s) por sobre los de la(s) otra(s). Se realizan en la vía pública o en (desde) el transporte público o privado, de manera rápida e intempesiva. Pese a tener impactos en la libertad sexual y el derecho al libre tránsito, estas prácticas han sido normalizadas y hasta justificadas en nuestra sociedad.

Esta ponencia mostrará los resultados preliminares de una investigación en curso sobre el tema, realizada gracias al financiamiento de la Pontificia Universidad Católica del Perú (PUCP). Los resultados de la Encuesta Nacional de Género 2012 realizada por la PUCP muestran una mayor incidencia en Lima y Callao que en otros ámbitos del país, lo cual revela su carácter fundamentalmente urbano. Asimismo, el segundo más joven de mujeres (18-29 años) es el más afectado, lo que revela que estas relaciones de poder entre géneros tienen un componente de edad: a mayor juventud, mayor probabilidad de ser afectada. A nivel cualitativo hemos podido recoger también discursos que justifican estas prácticas.

La ponencia presentará también la experiencia del proyecto que dirijo: “Paremos el acoso callejero”, que desde el 2012 ha colocado el tema en la agenda pública peruana, logrando que medios de comunicación, municipios e, inclusive el Ministerio de la Mujer, se hayan pronunciado y estén realizando acciones para combatir el problema.

Territorial Politics and the Emergence of Sub-National Welfare Models in Italy, Spain and Great Britain: Regionalist Mobilization, Institutional Asymmetries and Left-Right Partisanship

This paper investigates the relationship between sub-national politics and the emergence of region-specific models of welfare governance in Italy, Spain and Great Britain. Data on spending, legislation and implementation of social policies in all the regions of these countries have been collected and analyzed. The main finding is that in all three countries territorial mobilization – through the creation of regionalist parties – has been an important factor in the development of well-structured and distinctive welfare models at the sub-national level. In countries with relatively flexible constitutional arrangements (Spain and, especially, Great Britain), regionalist parties have promoted distinctive models of welfare governance by engaging in bilateral bargaining with central authorities and obtaining special formal powers for the regions they represent. In the absence of formal powers for the regions, how much the central state can promote distinctive social policies. In 19th century, in Spain, the main party of the Left, the PSOE, has been a dominant force in central government and has therefore mainly focused on the promotion of state-wide, standardized social policies. In Great Britain, left-wing mobilization and ‘sub-state nationalism’ have been closely linked in recent decades, thus having a combined effect on welfare development in Scotland and Wales.

E-Justice in the Lowlands

It seems rather odd that in today’s network society, with its increasing penetration of information technology, online administration of justice and online dispute resolution (ODR) mechanisms appear to be fairly absent in Belgium and the Netherlands. Drawing on empirical exploration, the pervasiveness and forms of existence of so-called e-justice initiatives are mapped. Next, an attempt is made to explain the current situation. The contribution will be rounded off with an in-depth investigation into the opportunities and limits of e-justice in the context of contemporary rules of Law regimes. More specifically, we ask ourselves to which degree such online initiatives could improve various aspects of access to justice, while at the same time safeguarding deeply rooted procedural and democratic principles such as due process and equality of parties. From this exploration of opportunities and limits flows a set of principles that might inform policy making in the cutting edge field of the online administration of justice and ODR.

Religion That Heals or Harms? an Examination of the Association Between Religion and Gender Differences in Depression

Gender differences exist in religious involvement and depression, with women reporting significantly higher levels in both. Most research finds that women benefit more from religion than men, as they are more involved than men in many facets of religious life. Research has for example shown that prayer offsets the nocuous effects of stress on well-being for women, but not men. Other research showed that women are more likely than men to make use of supportive religious networks through church attendance and other religious activities, and are therefore more likely to reap the instrumental and psychological benefits with those relationships. However, in contrast a small number of studies suggest that women may face unique challenges in the church that diminish or offset the benefits of religion to mental health. Compared to men, women are more often prescribed to traditional role patterns and a subordinate role in the worship service. In addition, in secular settings, women may be confronted with the “cost of caring” by trying to maintain both extensive church-related ties while also remaining active in more secular networks.

Unfortunately, the vast majority of current research is conducted in Anglo-Saxon and non-secular settings. In the current study, we aim to examine the association between religion in depression and religion from a cross-national comparative perspective. First results based on the European Social Survey (2006-2007) showed that religion, as measured by subjective religiosity and frequency of praying, is associated with higher levels of depression, in both men and women, but more pronounced in women. These findings contradict the most frequent finding that religiosity is related to fewer depressive complaints, especially among women. We intend to further investigate our results by incorporating both individual indicators such as church attendance, as well as contextual moderators, such as religious context into our model.

Ces Rumeurs Qui Racontent Les Crises Politiques

SourceURL/file://localhost/Users/auang/Documents/PropositionISA2014.doc

L’avenir des nouvelles technologies de l’information et de la communicaton a contribué à la diffusion internationale et à l’accessibilité de discours informels divers, à l’éclatement et à la déhiérarchisation des pôles d’énunciation et de productions de textes et au journalisme influencé par l’utopie de l’information en direct. Dans ce cadre, de nombreuses informations non vérifiées (rumeurs, hoaxes, ragots et légendes urbaines) circulent, font ou interprètent l’actualité et, plus particulièrement, les crises.

Depuis quelques années, le mot « crise » revient quotidiennement dans les médias pour désigner une situation économique, politique, sanitaire, socioculturelle ou organisationnelle. La crise intervient dans des situations d’insécurité, d’incertitude et d’ambiguité. Face à elle, les individus vont alors développer des techniques, des procédés pour la prévoir, l’absorber, la comprendre, lui donner un sens ou les aider à la traverser.

Les rumeurs et autres énoncés rumoraux font partie de ces procédés qui permettent le maintien de discours de légitimité et de légitimité de les écouter collectivement. En tant que discours officieux, ce sont des informations non confirmées qui révèlent soit des informations véridiques mais non encore officialisées, soit des informations fausses, postulant une réalité ou et/ou une explication du monde alternative. Ils permettent aux individus d’évaluer leurs causes, leurs conséquences potentielles et les changements qu’elles amorceront.

VAN DER BRACHT, KOEN* (Ghent University, koen.vanderbracht@ugent.be)

The Social Transmission of Religiosity to Second Generation Migrants: An Interactive Model

In this paper, we examine the social transmission of religiosity to second generation migrants in cross-national perspective. We apply theories on cultural transmission and assess the influence of vertical interactions (i.e. through parents), horizontal interactions (i.e. through peers) and oblique interactions (i.e. through social institutions) and the religious context on the transmission of first generation religiosity to second generation co-ethnics. We use data from four waves (2-5; 2004-2010) of the European Social Survey (ESS) comprising 8,123 second generation migrants coming from 102 origin countries and living in 26 European destination countries. We apply cross-classified multilevel analyses to examine subjective religiosity and the frequency of praying. Results indicate that the social transmission of religiosity is successful when second generation migrants tend to be more religious the higher the religiosity among first generation co-ethnics. The transmission is more successful when interactions are favorable for this transmission process, however: when second generation migrants grew up in traditional families, are less socially integrated, have spent less time in educational institutions and in countries where religiosity is lower. Our research also shows important divergences between the transmission of subjective religiosity, which is more universal, and the frequency of praying, which is more susceptible to the influence of interactions. This could indicate a trend towards the privatization of religiosity among migrants in Europe in the long term.

Engendering Corporate Social Histories: Reflections of White, Afrikaans-Speaking Businesswomen in Gauteng, South Africa

Using a qualitative, gender-sensitive approach, this particular case study explores the narratives of a group of white, Afrikaans-speaking, women employed in the financial sector of Gauteng in South Africa. Based on semi-structured interviews this study has aimed to explore corporate women’s political and personal experiences and how this affects their career choices and ideals on how to ‘balance’ work and home life.

This paper shows how women struggle to balance work and home when they attempt to challenge out-dated but ‘embedded’ patriarchal norms and values. The study also illustrates how working women try to manage spending the little free time they have with family and their children and how most of them still have to assume the bulk of the responsibilities at home. This particular group’s position is fairly ambiguous within the contemporary South African society, since they have been known to have enjoyed certain privileges in the past relative to other groups, but they have also suffered and still suffer gender discrimination and gender inequality under patriarchy. Recently some have come to question whether white women should also benefit from Affirmative Action policies. This is not an easy question to answer since it has been widely acknowledged that women experienced discrimination and gender inequality during the apartheid era differently (Kongo & Bojuwoye 2006: 364). Thus, it is important to understand their accounts of the past, as well as, the future.

Dilemmas of Combatting Corruption: Afghan and Dutch Perspectives

Dutch troops in Afghanistan are confronted with situations in which the local population violates values and norms, that the soldiers themselves take for granted and/or deem essential. As a consequence they regularly have to decide whether or not to intervene and try to stop and change undesirable behavior. This is not only a matter of operational feasibility, but also and especially of cultural and moral desirability. In Afghanistan corruption is one such ingrained practice that brings with it difficult dilemmas for soldiers.

Corruption weakens the trust in and the legitimacy of public offices and the government. Therefore, corruption has been identified as a major stumbling block to successful peace-building. As Afghanistan ranks among the most corrupt countries in the world, the abolition of its widespread corruption has grown into a main concern of the international community.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In principle ISAF is part and parcel of these efforts, but in practice it is not always self-evident how soldiers should act. Should fighting corruption be a priority in peacekeeping and training missions as well? Or should soldiers, in order to achieve their primary mission targets, sometimes tolerate it? How do Dutch soldiers solve culturally and morally critical situations in this particular area? What’s more, what about their Afghan counterparts? How do they view the cultural and moral dilemmas of the foreigners? Based on recent fieldwork in Kunduz, this presentation depicts and analyzes answers and opinions from both sides.

On Inequality and Physical Health: A Bio-Markers Based Test Of The Neo-Materialistic Argument In Low and Middle Income Countries

This paper re-examines the relationship between wealth inequality and two measures of physical health: anemia status of women and of their children and the experience of women with child mortality. We test the role of individual resources (i.e., wealth) and of the country’s resources relevant to health (i.e., the level of wealth of the country, the private financing of health and the efficiency of health services) for explaining the empirical association between inequality and physical health. We use data collected between 2000 and 2011 by the Demographic and Health Survey in as much as 52 low and middle income countries. Our binary logistic multilevel models reveal that higher wealth inequality is significantly associated with worse physical health, but this relationship is weaker and ultimately statistically not significant when individual and countries’ resources relevant for health are taken into account. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly explained by compositional effects while the health institutions have a limited role for improving physical health. Based on our results we cannot endorse the idea of a true contextual effect of inequality on health, at least not in the low and middle income countries or in relation to physical health measures.

Are the Chinese Saving for Old Age? the Precautionary Motives of High Household Savings

The one-child policy in China, put in force in 1979, converged with the macro-economic developments over the last two decades. The Chinese GDP increased at an annual rate of 9% between 1995 and 2010. Poverty had declined from 65 percent of the population in 1981 to about 13 percent in 2010, lifting hundreds of millions out of poverty at an unprecedented rate. The share of household savings more than doubled to about 25% of disposable income, the highest saving rate in the world after India.

As the parents of one-child generations grow older, the steep demographic changes pose increasing insecurity. The old-age dependency ratio - number of people over 65 for every person of working age – is expected to double over the next two decades. What kind of policies the Chinese central government initiated to prevent old-age poverty and the overburdening of the middle generation? And, is the high household saving quota an indicator that the Chinese are aware of the financial risks of longevity? Though the Chinese government launched various pension programs, these payments are not yet adequate for older Chinese to make a decent living. Therefore, we assume the high household saving quota has been an indicator of the awareness of the risk of longevity, though many other theories are proposed. We analyse the correlation between pensions and savings whereby those entitled to pensions are expected to save significantly less and hypthesize that these two are more or less communicating vessels.

First we analyze China’s transforming economy and household income from the perspective of the growing dependency rate. Because we are interested in the question if the Chinese are preparing for old age, we analyze the data from the China Health and Retirement Longitudinal Study (CHARLS).

Active Aging in East and West Germany. Life-Course Influences in a Formerly Divided Country

When it comes to life courses of older people in Germany it has to be taken into account that they had been living in different countries and political systems for decades. Next to highly different experiences of life in youth and midlife, people aged 60 plus nowadays have been socialized within very different cultures of old age. Material living conditions of retirees, employment rates in later life, social images as well as social expectations towards older people were quite different in the former GDR and FRG. Whereas older people in the Western part were pictured as retirees, enjoying leisure and earned repose, elderly in the GDR were seen as veterans, who had fought against fascism and capitalism. They were consequently addressed as productive parts of the socialist society, while the living conditions were rather precarious at the same time. However, it is not just the different settings before 1989 that make a difference in people’s life stories, but also the experiences following the re-unification, namely the wide-spread unemployment in the new federal states. At the same time, the Western model of early retirement and deserved disengagement has been challenging since the early 1990s, too, giving way to a re-negotiation of old age as an productive phase of life. The presentation asks, in how far the different experiences of life before and after re-unification influence how older people think of and cope with this development. Are we witnessing a change in East-West differences or even profoundly different age cultures? The presentation is based on empirical findings from the research project “From retirement to active aging? Images and practices of old age in the transformation of the German welfare state after re-unification” – drawing on biographical interviews with elderly from the Eastern and Western part.

VAN DYK, SILKE* (University of Jena, silke.vandyk@uni-jena.de)

Ageism in Times of Population Aging. Rising Awareness and New Forms of Discrimination

Age and aging have become highly popular issues in industrialized countries recently – namely in a twofold manner: Next to doom scenarios on population aging and increasing costs, older people have been discovered as active, productive and successful citizens, which is particularly true for the non-frail and healthy elderly. Each of the notions, no matter if it comes to activity, productivity or success, revolve around the idea that older people are capable, relevant, being able to contribute productively to the public good, serving for themselves and others. Though often instrumental with regard to elderly’s resources in times of population aging, negative age stereotypes are challenged in new ways: We establish a rising awareness towards discriminatory effects of age stereotypes as well as various political and academic endeavors to foster positive images of aging and old age. However, this attempt turns out to be at least ambivalent when it comes to ageism: Since the rising awareness is mostly about the supposed “unjustified” negative stereotyping of capable “young retirees” and older workers, discriminational images of aging are rather deferred to dependent and deep old age than fundamentally challenged. Moreover, the strong focus on achievement, productivity and success in old age generates new constraints for those who do not fulfill these criteria and who are indeed frail or demented and dependent on care. Against this backdrop it is the aim of the presentation to debate on whether and in how far the new appreciation of capable so-called “young-old” finally produces new age inequalities. Since awareness of ageism as age-based discrimination is much more advanced in liberal Anglo-Saxon countries than in continental Europe, the presentation opens up comparative insights to this ambivalent configuration from Germany and the US.

Normalizing Displacement: Cinematic Representations of Gentrifying Amsterdam

Focusing on recent cinematic depictions of Amsterdam, this paper discusses the relation between the sociospatial processes of gentrification and their popular culture representations. Formerly taken as an exemplar of inclusive, democratic urbanism, in recent years Amsterdam has been characterized by increased socio-spatial polarization. Gentrification is evident in the rapidly growing middle-class residential presence in the historical city center and in the associated affirmation of consumptive and cultural middle-class practices. Drawing on popular Dutch films in which Amsterdam's city life is a central feature, we argue that these representations not only document or reflect the recent social transformations. In addition, they serve to normalize and even glamorize urban gentrification. This normalization of a classed and ethnocentric urban order is partly through narrate structure and – even more forcefully – through visual techniques. In the recent productions on which this paper focuses, the city of Amsterdam plays an important role, not so much in terms of plot and decor, but as a spatial imaginary in which urban inequalities are mapped onto symbolic sites and landscapes. While the spaces and agents of gentrification are glamourized, peripheral, non-gentrifying neighborhoods and their inhabitants are visualized and stigmatized as underworld spaces of vice and squalor. The films portray middle-class, White protagonists, while Urban Others in terms of class and ethnicity serve mainly as a foil to the normal Amsterdamers. Parallel to the forms of physical and social displacement that gentrification causes in Amsterdam, these cinematic representations can be understood as effecting the cultural displacement of racialized
Workplace innovation increases the quality of working life and the organizational performance (Oejj e.a., 2012; Kramer e.a., 2008). Moreover, the European Economic and Social Committee (2011) underlines that workplace innovation is essential for the future of Europe. The sociotechnical theory stresses that workplace innovation need to take place by an intervention in the technical system and in the social system (De Sitter e.a., 1997). In the social system, workplace characteristics (e.g. job complexity and job autonomy) influence the quality of working life and the organizational performance (Kramer e.a., 2008). Consequently, workplace innovation needs to stimulate an optimal balance between workplace characteristics. Smith e.a. (2008) show that European countries differ in workplace characteristics.

This research examines, inductively, the conditions which cause different workplace characteristics in European countries. In addition, country level conditions such as welfare regime, union density, participation rate and varieties of capitalism will be used in the analyses. The European Working and Condition Survey will outline the aggregated workplace characteristics in the different European countries.

VAN KOPPEN, KRIS* ( Wageningen University, kris.vankoppen@wur.nl)

Humans, Animals, and Morality in a Nature-Inclusive Sociology

Disruption of natural systems and depletion of natural resources have become major concerns in society, both in their global reach and in their local impacts. Natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of the social world. Sociology has to embrace these insights in its analysis, not by abandoning its hermeneutic method. Starting from these tenets, this paper sketches principles of a nature-inclusive sociology, building on studies of Moscovici and Foucault, and on earlier work of the author. In applying and elaborating these principles it explores the social implications of the commonalities of human and animal bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper then sets out to describe a social practices approach to human-nature relationships that gives due attention to natural science findings and natural system dynamics while leaving intact the role of human agency and responsibility in protecting our natural world.

The Celebrity Logic of the Global Financial Elite

This paper examines a particular aspect of the development of a global financial elite, its organizing around the production of particular kinds of celebrity. It argues that the emergence of such elites is a result of the increasing demand for a new kind of authority that is not derived from political or economic power. The paper draws on the work of Robert Merton to analyze the role of celebrity in the global financial system, and how it has evolved over time. It examines the ways in which celebrity is used to legitimize power and to create a sense of legitimacy that is independent of traditional political and economic structures. It argues that the production of celebrity is a key aspect of the functioning of the global financial system, and that it is essential to understanding the dynamics of power in the global economy.

Epistemics, Practices, Logics of Visualization: Migrants, Asylum-Seekers, and Deviant Subjects

In its study of ‘epistemic practices’ (Lynch 1993), the field of Science and Technology Studies has displayed a sensitivity towards the local articulation of objectivity and (scientific) truths, and the deployment of optical devices and inscriptions in these practices. In this presentation, we wish to take this sensitivity with the situated ‘fabrication’ of truths (Lauter 1999) into the study of three practices other than those of natural scientists: those of immigration officials deciding over the
acceptability of asylum applications, those of social scientists measuring immigration and integration, and those of criminal law judges deciding on verdicts. Based on ethnographic research into these sites, we explore these practices in the following ways. First, we will focus on the precise ways differences are made and remade, focusing in particular on the taken-for-granted classifications that are not ‘looked at’ but ‘seen through’, i.e. the figure of the immigrant, that of the asylum-seeker, and that of the devout subject (Bowker and Star 1999; Mitchell 2012). Second, we will pay attention to the techniques, instruments, and inscriptions that allow for such difference-making. In particular, we focus on the visual materials (graphs, charts, etc.) social scientists produce in their work practices, and on the visualizing technologies (case files) and truth-finding procedures (interrogations, court hearings) both judges and immigration officials deploy in their practices. Seeing and visualization, we argue here, are capacities concentrated in specific centers of expertise and are enabled by and produced in a knowledgeable engagement with the instruments and optical devices of the ‘trade’ (Cf. Goodwin 1994; Haraway 1988). As such, they exhibit logics of visualization.

Varieties of Visual ‘Europe’ in Images of Illegalized Mobility

The governmental management of mobility is a crucial way in which contemporaneous European mobility is being made. Images are part and parcel of the increasingly elaborated network of organizations, expertise, legal codes and material infrastructures set up to make the ‘desirable’ and ‘undesirable’ mobility across EU-borders. Visualizations of registered data, routes, maps, risks, opportunities and uncertainties are implicated in governmental attempts to gain overview, anticipate the future and authorize control. However, these images of governmental surveillances and security exist and become visible in a wider field of image production and dissemination. State institutions are far from alone in their attempts to see and disclose what’s going on at the border. This paper will analyze the relations between images implicated in border management and alternate visualizations of cross-border identity. The latter concern the work being done by NGOs, ad- vocacy groups, political actors and activists. More specifically, illegalized migrants themselves work to make themselves visible in circumscribed ways, often to claim rights and gain political agency in highly precarious circumstances. How are images and the craft of making them copied, translated, disfigured and redeployed within this field of images? How can we conceptualize affinities and contradictions between different visualizations in order to assess multiple ways in which ‘Europe’ and ‘not-Europe’ can become visually enacted? Images and their interrelations may both confirm, contest and confuse existing imaginaries of ‘Europe’ and its ‘outside’.

Inequality in Tertiary Education: The Case of Hungry Students in South Africa

Education is seen by many people, especially in the global south, as the route out of poverty, towards development and social mobility in society. However it has become apparent that many students at South African universities do not have enough food to eat on a daily basis. Much research, mostly in North America and Europe, has focused on the role of nutrition in learning capability and learning behaviour, and it is generally acknowledged that a healthy diet contributes to successful learning and performance. On the other hand, little seems to be known about food consumption patterns and the extent of hunger among students in developing countries. Research has been conducted, within a quantitative and qualitative framework, on the phenomenon of “hungry students” at the University of Johannesburg over the past few years. Since becoming aware of the problem in 2010, the University management has launched interventions of various kinds to assist students in need, in having at least one balanced meal per day. This paper will trace certain demographic and other characteristics of “hungry” students at the University of Johannesburg campus, as well as outline the institutional interventions undertaken to alleviate the problem. At a national level, the government, while cognisant of the problems experienced by tertiary students, particularly given South Africa’s apartheid history, has appointed a committee in 2010 to review the provision and conditions of student housing at South African universities. Their report included a section on a budget meal plan for students.

Global Vocabularies, National Outcomes: Latin American Youth Activist Strategies For Bringing Transnational Social Justice Rhetorics Home

This paper explores how youth in Latin America draw from global vocabularies of social justice to imagine and advocate for social change at home. The globalized circulation of media, interpersonal communication, and commodities has, we argue, shifted the cultural repertoires youth use to imagine citizenship. This is a heterogeneous phenomenon, but many examples point to a cosmopolitan sense of justice and ethics among youth. Youth draw on social media to engage with transnational publics to demand rights and new definitions of citizenship. They
hybridize non-Latin and Latin musical genres to argue for pro-indigenous equality and student rights. Finally, they obtain information from global sources to argue for policy changes on issues pertaining to the environment, same-sex rights, and Latin American sovereignty.

Amidst this turn to what can be seen as globalized ethics, we draw from Latin American youth studies to argue that the outcome of this transformation requires scholars to pose young people's relationship to politics as a question in need of research rather than assuming a pre-defined relationship. As youth from Latin America imagine the future from global vocabularies, they seek to transform the configurations of the local, the personal, and the historical. Rather than localities serving as a barrier to cosmopolitan outlooks, Latin American literatures on youth political activism indicate that an awareness of an unequal world is embedded in trans- forming the immediate spaces in which they live.

Life Course Pathways to Later Life Wellbeing: A Comparative Study of the Role of Socio-Economic Position in England and the U.S

A main paradox in comparative social epidemiology is that subjective well-being in the U.S. tends to be higher than in England in later life, although physical health is the same. The reason is due to all social inequalities (Banks, Marmot, Oldfield, & Smith, 2010). One proposed mechanism, the differential distribution of education and wealth in both countries, is at the core of this paper and will be extensively tested. Multiple measures of wellbeing, such as depressive symptoms (Radloff, 1977), satisfaction with life (Diener, 1984), and more eudemonic approaches to wellbeing such as CASP (Hyde, Wiggins, Higgs, & Blane, 2003) and psychological wellbeing (Ryff & Keyes, 1995), will be considered. Using a growth curve approach that investigates not only differences between people, but also within people over time, we will investigate what extent life course approaches to socio-economic position, such as accumulation, social mobility or latent period, explain baseline differences and rates of change in wellbeing in later life. This analysis will be conducted using multiple waves (2002-2012) of two sister studies of ageing, the U.S. Health and Retirement Study (HRS) and the English Longitudinal Study of Ageing (ELSA). Both panel studies have a large, representative sample (N=20000 for HRS and N=10000 for ELSA) of the community residing population aged 50 or more and contain comparable information on a wide array of life circumstances, among which gender, marital status, health, and both current and childhood socio-economic circumstances will be the most important for this analysis.

TAGGART, JONATHAN (University of British Columbia)

In Love with Place: Off-Grid Living and Place-Making

Why do residents of Western world live off the grid? This presentation provides answers as to why the expression “off-the-grid,” refers to the living condition of a household or a community lying outside the electricity and natural gas infrastructure, but often also denotes disconnection from other infrastructures such as municipal water conduits, natural gas pipelines, road networks, garbage and waste collection, food supply chains, and telecommunications. Drawing from and contributing to the literatures on sense of place, rural studies, and voluntary simplicity we argue that while off-gridders embrace values typical of the voluntary simplicity philosophy, their biographical and geographical trajectories reveal that living off-grid is not a clear and free choice. The performance of the mundane complexities typical of the lifestyle renders off-grid living a uniquely radical, but also contradictory and even paradoxical, constellation of practices through which new marginal spatialities are constituted. Drawing from ethnographic fragments culled from a multi-sited ethnographic project unfolding across Canada we present a thickly descriptive look into the motifs and lifestyles of off-gridders.

Controlling the Social Cost of Local School Markets?

Education policy is evidently in a state of change across industrialised coun-
tries. The fragmentation of the education system has manifested in a local government reforms, privatisation and agencification, whilst the core executive's capacity to steer has eroded. In totuo, a wide variety of endeavours to move away from the firm idea of state-funded, state-controlled and state-provided compulsory education have emerged. Along that trajectory the Finnish compulsory education system shifted during the 1990's from one of the most centralised to one of the most decentralised. Consequently, segregation between municipalities, residential ar- eas and families has emerged also in Finland, and the variation between schools, measured by PISA scores, has recently increased.

Our aim is to elaborate the Finnish local spaces for school choice, and the ways in which the negative outcomes of school choice and overall diversification are governed by contrasting three distinctive local contexts. By analysing administrative statistical and documentary data, we aim to model how local authorities respond to novel, local inequalities, and the demands of freedom to choose and equality of opportunity, simultaneously.

Our analysis models three different sets of policies in the municipalities in Metro-
region of Helsinki (1 million inhabitants). First (the municipality of Espoo), the local institutional space for school choice is constructed in favour of school choice, without any current policies for positive discrimination. Second (Vantaa), school choice is more restricted, the policy is to prevent segregation by emphasising the uniformity of schools. Third model is ‘very pro-choice’ (Helsinki), where the policy to prevent segregation have included actions in regional policy and direct positive discrimination to schools located in sub-standard socioeconomic status neighbourhoods. By revealing the diversified policies concerning positive discrimination and other forms of control of negative externalities, we discuss about the formations and estimations of social cost for school choice.

*The Management of Public Spaces in Naples: An Essay in Urban Legal Geography*

The main red thread crossing the debate about the disparity between Italy’s northern regions and their southern counterparts is the polarity between the categories of “modern” and “pre-modern”. This polarity has been used to portray the two regions as intrinsically different in their economies, politics and cultures. Although the use of this dichotomy has proved useful for emphasizing the gap between the two, this has been achieved, I argue, at the cost of exaggerating their differences: the South has been described with the categories of pre-modernity, community, informality. Symmetrically, the North has been associated to modernity, society and formality. The attributes of “developed” and “under-developed” have been assigned accordingly. I argue that a study of formality and informality can be helpful to understand how these territorial imbalances are reproduced, provided that the former are understood as simultaneous, not mutually exclusive systems of rules. To do so, I analyse how three significant public spaces in Naples, southern Italy’s biggest city today and its capital in the past, are regulated via formal and informal rules. With personal observation and interviews with local authorities, planners, local activists and users, I seek to understand how the interaction of formality and informality produces these spaces. Both formal and informal regulation, it is posited, exist in the city, and neither is intrinsically desirable or conducive to development. Rather, well-functioning public spaces are posited to result from a distinct mix formality and informality, whereby the two are both present and complementing each other. An explorative case study will be carried out in January 2014. There, the two sets of indicators (measuring the relative and the absolute strength of formal and informal rules) will be tested. At the RC21 conference I wish to present that case study and an assessment of the methodology adopted.

*Knowledge Production, Learning and Cognition in International Relations Theory: A Case Study in Brazil*

This paper investigates the learning and the sociological production of theoretical thinking in International Relations (IR) undergraduate courses in Brazil. One of the greatest problems faced by professors in Brazil is students’ inability to read and write academic texts, especially in understanding the relations between arguments and their importance to the development of scientific theories. This situation is further aggravated by the character of IR theoretical disciplines whose traditional theories – realism and liberalism – still permeate most of the curricula. However, it is assumed that these theories do not provide knowledge that is related to the context of developing country in which Brazilian students are inserted. As a result, they fail to stimulate a critical cognition among students, who tend to simply repeat concepts when producing academic texts about international politics. Thus, it is important to combine critical theories and pedagogies in the expansion of thinking spaces. The theoretical basis comprehends principles from critical pedagogy, sociology and cognitive sciences, mainly linguistics and psychology.

*Consecration and Reputation Among the Independents: Reflections on the Case of Contemporary Independent Cinema in Brazil*

The communication brings some findings of the author’s ongoing PhD research to discuss consecration and legitimation among those who play “independent” roles in fields of symbolic production. The research focuses on the social organization of contemporary independent cinema in Brazil. Mobilizing mainly elements of Bourdieuian theory but also contributions of authors such as Raymond Williams, David James and Sarah Thornton, the study analyses the main independent filmmakers’ groups in Brazil, their main instances of legitimation and the principal social arrangements that make independent production possible.

Independent film production, characterized mainly by its low budgets and by the absence of a hierarchical division of labor, acquires increasing recognition by consecration instances of traditional Brazilian cinema. It is also notable a proliferation of specific instances – such as independent film festivals or distribution companies focused on independent production –, which may indicate the beginning of an autonomization process.

Here we bring empirical data to situate the contemporary independent production in the large Brazilian cinema field and especially to show how reputation and consecration here are constructed in opposition to the values/practices of industrial cinema. And it means not only the adoption of certain aesthetic positions, but also the adoption of some practices in terms of social organization of production. We also call attention to the fact that, among the independents, consecration sometimes brings the “reverse effect” of threatening the representation of independence – which is a subject of dispute.

How to understand independent agents, for which categories as dominant or dominated, established or newcomers, are all unsuitable in some extent? How to analyse the construction of consecration in a context where the many forms of institutionalization (including some kinds of recognition) may threaten the very condition of “independent”?

**VASEY, HuW** (University of Manchester, huw.vasey@manchester.ac.uk)

*Diversity and Inter-Ethnic Marriage – An Agent-Based Approach*

Inter-ethnic marriage, both a cause and a consequence of immigrant integration, is generally used to imply that the social distance between groups is low and, by extension, that community cohesion is high. The decision to marry out-side (or even within) one's group is often regarded as stemming from individual preferences and opportunities for contact. However, many anthropologists and sociologists have noted that culture-specific norms of kinship and reciprocity have a profound effect on who may be seen as eligible partners (Ballard 2008; Gardner 2006), echoing segmented assimilation theory's focus on the importance of community and family influences in shaping assimilation processes.

Using a descriptive agent-based modelling approach, we seek to investigate the processes of partner selection in diverse communities, focussing on individual preferences, opportunities for contact, and group norms to uncover how these may lead to differential rates of inter-ethnic marriage. Agent-based approaches provide an ability to study global phenomena simultaneously with their causal 'local' processes (and vice-versa) in a dynamic setting. They allow us to investigate the development of population-level phenomena from a simulated 'local' social space of norms and values populated by acculturated agents familiar to sociologists, potentially providing insights into community cohesion and inter-ethnic marriage which would not be available from other sources. Whilst agent-based models of inter-ethnic marriage have been developed previously, they have overestimated rates of inter-ethnic marriage and largely ignored the group-level processes necessary for a global understanding of inter-ethnic marriage. Utilising research and evidence from quantitative and qualitative sources from across the social sciences, we thus seek to develop a complex model of emergent processes of differentiation and change in the marriage patterns and social cohesion of migrant communities.

**VASILIEVA, LESSYA** (docent, lessya-vasilieva@ya.ru)

*The Quality of Political Elite and the World Crisis*

The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. The representatives of elite have such mental qualities as sophisticated cognitive intellect, diverse range of behavior and social attitudes and aims allowing them to bring maximum benefit to the society. The ersatz-elite have some common qualities with elite. But its representatives haven’t diverse range of behavior and their ideas of values are mainly targeted at satisfaction of personal interests not regarding public interests. The representatives of elite and ersatz-elite are presented on all levels of social hierarchal pyramid. The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. Ersatz-elite introduce or develop social mechanisms depriving people of any control over political machinery. It turns out that in political and economic spheres of society deficient motivation and deficient satisfaction of basic needs are expressed through political indifference, social and economic frustration. The present crisis does not have only economical but mainly social roots and cultural effects. It needs to specify the term Social Rent with new scientific definition. An equivalent formulation may be given in terms of the social parasitism when given such a status by government. Social rent is a form of uneconomic compulsion. It is necessary that such status must be admitted by productive, market and state forces. The power and economical monopolies are the social factors which are converted into settled rent factors. Institutionalization of social rental relationships destroys economic and social competition.
The main subject of social rentiers is the ersatz-elite. As they develop and become the ruling class, the economic and political systems either arise with seizure of new resources or destroy themselves.

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

The paper problematizes the literary text that becomes a subject of the sociological analysis when representing social processes and phenomena as well as social practices of certain groups. The narrative analysis reveals a deep structure of the text reflecting values, norms and social attitudes used for describing social groups and social processes. The analysis correlates with structural hermeneutics of G. Alexander implying sociocultural research of semantic structures of the modern mass literature where social myths and archetypes are updated, serving as interpretative models to explain and organize (construct) the social world.

The paper aims to show the results of the empirical research while proposing an original method of the narrative analysis of 18 American female novels, top rated in the largest specialized websites. The method synthesizes various courses in narrative analysis (event-structure analysis by D. Heise and L. Griffin), structural approach (R. Barthes, V. Propp, T. van Dijk) and K.Yung's theory. It consists in constructing a causal sequence of narrative events interpreting it in the context of the social myth. The method's steps include:

- studying the life course of the heroines;
- selecting significant events (based on structural indicators);
- narrative of the chosen events using the grammatical approach (verbs as action highlighters);
- forming causal sequence of the events;
- detecting the general narrative structure interpreted in the context of the social myth.

The resulting narrative schemes form 3 basic archetypical female role-models within the cosmogonist myth and can be considered as interpretative patterns for describing gender role transformation in modern American society. The results of this empirical research can be verified in the context of feminist and post-feminist theories.

Vasserman, Yuriy* (Perm State Technical University, imv@psttu.ru)

Modernization of Values and Its Implications

This work is based on the understanding of culture following the lines laid out in the works of L. White, P. Bohannan, A. Montague etc. and defined, loosely, as a system of non-biological regulators of human behavior (such as values, norms, attitudes, etc.). Just a few generations ago the majority of Russian population was rural, lived in the countryside environment and was engaged in natural-subsistence economy. Their culture corresponded to the low-level technological environment. The process of modernization has changed the environment in just a few dozen years, leaving the some cultural adaptors far behind. Some people experience conflict with impacts and challenges of modernization such as new women status, political democracy, market economy etc. We can see cultural differentiation on culture modernization continuation. Two poles of the continuation axes can be found. One of them is pole of modern culture acceptation, another one is pole of modern culture rejection. The both poles are Weber ideal types. The Likert scale was used for culture modernization measurement in our survey. The scale was validated by R. Indelhart's index and S. Schwartz's scale.

Socio-cultural types often differ according to the condition of socialization also corresponding to the generalional differences. More modernized type of culture is adapted to more modernized type of social environment. New generation has an opportunity to enjoy a more modernized culture than the old one. In this work, we attempted to evaluate the cultural changes between generations and polar socio-cultural types quantitatively. This longitudinal study was mostly based on a survey response data among university students in the city of Perm (Russian Ural) since 1991 till 2013. All samples covered more than 500 students. We can compare values of modernization between last Soviet generation and first Post-Soviet generation. The study also discovers the implications of these value changes.

Bringing History In: The Management Of Ethnic Diversity In The Shadow Of German Nazi-Past

Diversity and equality concerns and patterns of disadvantage in the labour market are historically constructed, and they draw the framework of diversity agenda at the national and organizational levels. Therefore, attempting to understand the notion of managing ethnic diversity in Germany requires the acknowledgment of the importance of history in diversity management research. Drawing on data from a company case study and thirty stakeholder interviews, this article revealed the generative influence of history on the diversity management agenda. We demonstrated that the Nazi-past, and particularly the treatment of this past, casts a shadow on contemporary diversity management efforts in Germany, generating several points of resistance and blind spots in dealing with ethnic diversity of the workforce in a creative, resourceful and fair way. It is the ongoing and current treatment of history, rather than the history itself as an essential reality, which shapes how we generate meaning and frame life. We illustrated that the post-holocaust collective guilt, which must be seen as the treatment of the German Nazi-past, can not be used as source of guilt and shame in the contemporary diversity management agenda in such a way that race related issues are excluded from it. For instance, the discrimination topic is marked by a collective silence, which affects the field of diversity management as well as the organisational adoption of the diversity management concept in Germany.

RC05-112.5

Vassilopoulosou, Joana* (University of Sussex, j.vassilopoulosou@gmail.com)

Integracism At Work. The Case Of Germany

This paper further explores the notion of integracism, which has been introduced by the author briefly in a previous paper. The notion of integracism refers to a specific interpretation of the notion of integration with implicitly racist assumptions. This racially biased and ethnocentric notion of integration frames the meanings of managing ethnic diversity in Germany. Integration policies and measures are deployed to 'aid the better integration' of ethnic minorities, who are widely seen as deficient and difficult to integrate, rather than adopting diversity management measures to foster equality, fairness and inclusion at work. In that frame, ethnic diversity is depicted as a source of potential problems.

There is a surge in the use of the concept of integration in management of immigration, not only in Germany, but also in France and in the UK in recent years. The notion of integration is the dominant concept in the management of ethnic diversity in Germany. The aim of this paper is to examine the corrosion of the notion of integration with racial bias, which undermines the overuse proposal of equal opportunities at work. Arrangements of integration for immigrants include requirements of extensive documentation, training, point based calculations based on qualifications, economic wealth and experience, citizenship rituals. Most of these requirements are highly variable, based often on racial profiling. It could be argued that these politics and practices of managing ethnic minorities are not as innocuous as they may seem at first sight. This paper shows how ethnocentrism and racial bias influence employment practices, leading to the exclusion of highly skilled ethnic minority workers.

The paper operationalises Bourdieu's key concepts, field, habitus and symbolic violence and draws on a large qualitative study based on more than 40 interviews, a case-study, focus group as well as visual material and a research diary.

La Adopción De Un Modelo Organizacional Como Estrategia De Comunicación Para La Transferencia Del Conocimiento y Tecnología En Centros Públicos De Investigación

This paper focuses on the identities’ problems of participants of big sportive events: researchers in scientific institutes, centres and universities in Post-Communist Europe. This topic hasn’t yet received enough attention, especially in sociological researches of these countries. After the crash of the USSR it was seen decreasing of scientific study especially in future it was broken down of science but also in humanitarian knowledge. This process was accompanied by cuts of wages of researchers, their social exclusion from decision-making process and growing alienation. From the other side many researchers went abroad from the countries of their residence and some of them began to participate in different projects and programs of foreign countries. They didn’t identify results of their researches with former homeland but linked their achievements with the place of present residence. This situation provoked appearance of the new forms of alienation. The paper analyzes manifestations and consequences of such alienation in scientific practices. I’ll try to give certain contribution to the discussion about alienation in Post-Communist Europe. How did dramatic social changes that had taken place in these countries stimulate growing alienation of scientific researchers in different Post-Communist countries? From the other side scientific cooperation contains reserved possibilities to help scientific researchers’ overcoming self-estrangement. How the changes of political life in the region of big sportive events could influence the choice of identities? Thus the paper focuses attention on this background of people’s identification. My analysis builds on media accounts, interviews with officials from the Organizing Committees of big sportive events and data’s of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

RC55-877.1
VEENHOVEN, RUUT* (Erasmus University Rotterdam, veenhoven@ese.eur.nl)
Why Sociological Theory of Happiness Falls Short

Happiness in the sense of life satisfaction is a psychological phenomenon in the first place. Consequently most sociological explanations draw on psychological theory, often implicitly and with little view on its limitations. A dominant perspective in sociology is that happiness results from comparison between perceptions of life-as-it-is and standard of how-life-should-be, which view fits with the notion that happiness is a social construct and as such culturally variable. Explanations in terms of universal effective appraisals and needs are marginal in sociology, as well biological sociology.

Though not suited for explaining happiness as such, sociological theory is apt for explaining conditions for happiness, societal conditions in particular. Empirical research shows that conditions for happiness are quite good in modern society, where its inhabitants live now longer and happier than ever in human history. Yet most sociological theorizing is about the miseries of modern society. Some sociological explanations for this sociological short-sightedness are discussed.

Violencia, Armas De Fuego Y Mortalidad Juvenil EN Mexico

La violencia en México ha ocasionado un alto número de víctimas -sobre todo entre los jóvenes-, muchas de ellas provocadas por el uso de armas de fuego. Objetivos: Analizar el comportamiento de la mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México en los últimos 20 años e identificar factores socioeconómicos asociados a sus variaciones interesetales en el trienio 2009-2011. Material y Métodos: Con la información oficial sobre defunciones y de mortalidad se calcularon tasas de mortalidad por armas de fuego entre 1990 y 2010, por género, edad y estado; mediante un análisis de regresión múltiple se identificaron las variables asociadas a las variaciones interesetales de la tasa en el trienio 2009-2011. Resultados: En 2011 se produjeron más de 5,000 defunciones por armas de fuego, de lo que sería la primera causa de muerte más importante del país entre los 15 y 24 años. La tasa de mortalidad por armas de fuego se incrementó en 62% entre 2000 y 2010. Las tasas más elevadas se encuentran en hombres entre 20 y 24 años. Variables relativas al narcotráfico y el consumo de alcohol están asociadas a las variaciones de la mortalidad por armas de fuego entre estos estados. Conclusiones: El aumento de la mortalidad por armas de fuego, especialmente entre los jóvenes, es un obstáculo para el incremento de la esperanza de vida en México. Este es un problema social y de salud pública que debe ser abordado de forma interdisciplinaria.

Identity Through Big Sportive Events

This paper focuses on the identities’ problems of participants of big sportive events: Olympic Games, international championships and competitions. This topic hasn’t yet received enough attention, especially in sociological research. In real practice last years it was seen increasing of athletes who participate in different competitions as representatives of foreign countries. From the other side many fans go to the games identifying their self with sportive clubs and fan-movements and with their states. Thus the new forms of identities appeared. The paper analyzes the sources and manifestations of such new forms of identities in real sportive practices. I’ll try to give certain contribution that looks into the role of national factors and local cross-national relations in the region of the residence of big sportive events in formation of different identities. Many local places of international championships are characterized by multinational population with very long and complex history (London, Sochi, Rio de Janeiro, Tokyo and so on). Haw big sportive events impact on local, regional and national identities in different countries? From the other side sport contains reserved possibilities of cooperation and solidarity not only on the local and regional but also on the global levels. Haw the Olympic spirit and changes of political life in the Region of the residence of big sportive events could influence the choice of identities? Thus the paper focuses attention on this background of people’s identification. My analysis builds on media accounts, interviews with officials from the Organizing Committees of big sportive events and data’s of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

Social Norms of Morbidity As Specific Factors in the Demand for Health Services

Seeking professional medical help is caused not only by medical criteria health pathology. There is a complex system of social factors of the transition from the physical sensations of discomfort or psychological distress to get help from a professional medicine, i.e. make it socially relevant fact. This is the most important cause why the accounting treatment for medical help and he true morbidity can not match. The different access to health care for different social groups is the most visible by the current discrepancies of the social factors and in countries and cities where the network of medical institutions sufficiently developed they are more important. This result was obtained in representative survey in St. Petersburg (2007-2011). The most part of them are the social attitudes / norms which give rise to refusal treatment in medical institutions and relates to the culture of health behaviors. This culture is very contradictorily. Improving education increases the tendency of self-medication. Massive short duration diseases (e.g ARDS) are treated within the family without recourse to occupational medicine in 75% of cases. Social attitudes of non-professional care are supported by the widespread corporate informal norms to continue work in diseases with partial loss of ability to work. Such practice is supported by other informal social contract employees with employers: rejection of the fixing of cases of the disease in the social insurance company. This and other identified dependencies suggest that the indices of morbidity are subject to change without unambiguous connection with the actual number of patients and the duration of their illness.

Methodological conclusion: for the considered social and medical conditions the survey are necessary for the correction usual morbidity data. Conclusions on the basis of registration of patients who seek health care may reflect the actual changes of many factors.

The Indication of External Validity As Aggregate Criterion Quality of Survey

The external validity criteria in sociological survey methodology and practice are used rarely. The exceptions are electoral polls. The well known Gallup and others polls obtained the trust of public and professionals due to external (predictive) validity, although the term had not yet been coined. The predictive validity is the simplest and most convincing proof of the high quality of all elements and stages of research, as it is based on the basis of the population under study. The application of the criteria of the predictive validity is limited. Methods for assessing the external validity developed in psychology, medicine and experimental economics where in many research single target parameter and one external parameter analogue of an unbiased independent source are used. Therefore, in the most sociological survey criteria are used for evaluation of survey quality. These methods allow to evaluate the common error for all variables of a survey under the condition that the sample is random. However the last few decades a number of difficulties with probability sampling have been cropping up in the expanding range of survey topics. The basis of application of the internal validity methodology has been shrinking too. The paper offers a few steps expand the application of criteria of external validity: - install for surveys on specific topics limit application of the criteria of internal validity - unamendable nonresponse rate (nonresponse is the main factor that makes a non-random sample), - develop and apply external validity indicators for assessing the quality of a survey on selected topics - item external validity, - include ancillary questions in the questionnaire, which will compare the survey data with data from independent external sources. In our surveys of social settings in Saint-Petersburg (2007-11) we used as a measure of external validity and simple distribution, and complex calculated indicator of latent social phenomena.

The Disadvantaged Position of Muslim Women in the UK Labour market and the Formation of Religious Identity

Among ethnic minority groups in the UK, Muslims are generally in a disadvantaged position, experiencing many social and economic inequalities. Muslim women suffer from high unemployment rates and inactivity levels compared to their male counterparts and other ethnic minority women. This is despite policies to reduce the diversity gap in the UK labour market based on gender and religious affiliations. The disadvantaged position of Muslim women can be seen as Muslim penalty and failure of integration and social cohesion. Many of my young educated informants, belonging to second and third generations of immigrants, resonated "ontological insecurity" leading to the formation of Islamic identity. This can often be manifested by embracing visible Islamic dress, which is a conscious decision, despite the disproportionate discrimination and negative attitude towards veiled women as a result of displaying their faith in public.

Applying feminist theory and questioning Muslim women's place as a marginalized group at the centre of social inquiry, this paper explores Muslim women's experiences in the workplace. Muslim women are grossly under-represented in the professional career fields, such as accounting and accounting-related occupations, especially among those who are supported as "their due" and what they consider to be normal. Third, we suggest a more critical understanding of the role of gender in professional careers, especially among those who are working in professional fields.

The Occupational Challenges of Female Architects in Iran

The Occupational Challenges of Female Architects in Iran

In the recent decades, Iranian women's access to educational opportunities in professional fields, such as architecture and engineering, has been broadened. However, despite the considerable number of professional women with qualified success and technical expertise, patterns of gender inequalities have been sustained through traditional social and cultural systems.

Some of the patterns of gender inequality are related to monopolisation of managerial roles by men at senior level and job polarisation in career-related experiences and authority issues in terms of practicing the profession. Traditionally architecture, building industry and construction management have been considered as male domain. When professional women enter these fields as engineers, surveyors, or officials and hold the positions of power, their authority is challenged not only by untrained male workforce, but also by educated men under their management.

Having said that in the educational institutions, particularly private institutions, they receive positive discrimination compared to their male counterparts, as they demand high financial demands.

Research on the challenges of female architects in Iran is scarce. Based on interviews, this paper aims to reflect the social, structural, and cultural challenges that young professional women in Iran experience. The paper will also shed light on women's agency in overcoming the barriers and claiming their authority within the male-dominated social structures.

Hierarchies of Middling Transnationals: Indian It Workers in Singapore -- CANCELLED

This paper builds on emerging literature around 'middling transnationals' (cf Ho 2011). Drawing on empirical research among Indian IT workers in Singapore, the paper advances two propositions. It argues that there has been insufficient consideration of skilled migration in terms of national and racial hierarchies of opportunity, rights and conditions; and that so far, literature on skilled transnationals has too often been receiving country-centric. It is an interesting example of a highly transnational skilled occupation that has become associated with workers from India. It is argued that it has become associated with India in ways that naturalise precarious forms of employment and attracts less favourable conditions than occupational categories more associated with Western professionals. Using the example of Singapore, we argue that conditioning occurs via four intersecting factors. First, Singapore has a long-standing tradition of visa hierarchies which situate White, European transnational elites at the apex of the occupational hierarchy, and dark skinned workers from the Indian sub-continent at the bottom. Although 'transnational workers' share similar skills among these social factors. But there are many differences. Workers accept as 'their due' and what they consider to be normal. Third, we suggest a more global circulation of colonial era ideas of racial hierarchy continue to cast a long shadow even to the most modern of occupations like IT. Finally, IT as an industry has emerged as a quintessential post-industrial service industry characterised by highly precarious sub-contracting forms of transnational labour supply.
The Politics of Social Policy Expansion in Latin America

Welfare systems in Latin American countries have been significantly expanded during the twentieth century. After decades of a social policy based on social insurance programmes which tended to cover formal sector workers and their families, new social programmes have been introduced and coverage of existing ones has been extended to reach population groups previously excluded throughout the region. This expansion processes have been explained as an outcome of the consolidation of multi-party electoral systems, since parties in government now compete for the sympathy of the electorate by introducing policies that favour the majority, notably social policies. However, even if this perspective clearly demonstrates the effects of democracy on welfare policy, it falls short of explaining the variations in the expansion models adopted in different countries. This paper aims to contribute to the existing literature on Latin American social policy by attempting to explain such differences, combining institutionalist and interpretivist approaches. The chosen case studies are Argentina, Brazil and Mexico, the three largest countries in the region, where different expansion models have been adopted. The paper examines and compares the socio-political arrangements that enabled and triggered the changes in each country. Findings show that the variations can be explained in terms of the effects of democratic transitions and the party systems that emerged from them, the degree of social mobilisation around social policy issues and the capacity of social movements to break with the neo-liberal hegemony established in the region during the last two decades of the last century. Social welfare expansion, as a consequence, contributed to temper gross inequalities as well as to displace and redefine the fault lines governing social conflict. The article concludes with an outline of the main features dominating post-liberal/corporativist social policy hegemony in the region today.

Construcción De Una Secuencia Didáctica Universitaria En Modalidad Presencial Integrando Aplicaciones Para Ipad y Smartphones

La necesidad de innovar la práctica docente en el aula se hace cada vez más evidente ante la falta de interés de los jóvenes universitarios por el modelo tradicional de clase en donde predomina la presentación unidireccional de información. Con base a la reflexión de Díaz-Barriga (2013) sobre la importancia de construir secuencias didácticas diferentes que despierten en los alumnos el interés y la motivación de su aprendizaje, se presenta el resultado de analizar y construir secuencias didácticas innovadoras mediante el uso de aplicaciones y software para Ipad, Tabletas digitales y Smartphones de los alumnos. Esta investigación se inserta en el paradigma de la investigación-acción, para lo cual se ha conformado un grupo de profesores no especialistas en tecnologías de la información y proveedores de diversas disciplinas que se enfocan en analizar y probar diversas alternativas tecnológicas para adaptarlas a las necesidades de educación y formación en el contexto de la Educación Superior en México. El resultado ha sido la selección y elaboración de una guía de uso de 3 herramientas de software diseñadas para el tipo de dispositivo señalado, que han permitido construir secuencias didácticas innovadoras presenciales enfatizando la relación profesor-alumno y del alumno-alumno, permitiendo instrumentar una primera fase del Modelo Educativo de la Universidad de Guanajuato enfocado en el aprendizaje significativo y el desarrollo de las competencias deseables del alumno.

Professional Interests, Organizational Goals and the Mobility of Football Players in Europe

The mobility of professionals has important repercussions for organizational performance and to the subjective career success of the professionals involved. Within professional football, team quality is directly affected by the movements of players to and from the club. Transfers have a big impact on player careers as well, as footballers changing clubs increase their income or revalue their career with a renewed chance on first team football. Whereas previous research examines these movements from the perspective of individual players, this study analyzes to what extent player transfers are shaped by the interaction between institutionally embedded organizational goals and the interests of footballers. Using event history analysis to estimate the probability that a player moves to a different team, I argue that player transfers are a function of the location of an organization in the field and the position of a footballer in his team. In general, fringe players are more likely to move. This is especially so for high status teams, where such players move to pursue their interest of first team football. Moreover, players of underachieving high status teams are bound to be transferred, as the club lets go of the players it blames for its relatively low performance.

This contrasts with the transfer probabilities of players in low status teams. The key players of these teams have a higher probability to move, as they are looking to increase their career rewards by moving to a higher placed team. Moreover, key players in overachieving low status teams are particularly likely to be transferred, as such teams sell their best players to cash in on their hard earned success.

In sum, this study highlights how professional labor mobility is shaped by the interaction between the institutionally defined interests of professionals and the goals of the organizations they work for.

Gender Asymmetry As the Barrier of Political Modernization in Russia

Considering activity of the women organization in the context of Russian political life we establish the fact of gender asymmetry in Russian politics. Representatives of women in Parliament (State Duma) vary from 10% to 14%.

The main features of social context determining gender asymmetry are the following: feminization of poverty, latent labor discrimination; Social and cultural inertia accompanied with gender stereotypes; Ignoring gender interests in political sphere. As the result one can see marginalization of women in the political and economic spheres.

We consider Globalization as the factor inspiring political activity of women in Russia and analyze role of more than 1500 thousands women organization and pay attention to the positive dynamic of their activity. Most of them act in social sphere (Maternity and childhood protection (39%), The help to socially deprived groups (29%), Providing of public services and amenities to city environment (29%), Healthcare (21%) and Education (22%), Protection of social interests (13%), Human rights (10%).

Main reasons of low representative of women in Politics can be described in different terms: Peculiarities of political socialization; structural factors (unequal distribution of resources owned by men and women; situational and biographical factors. For many years even the very consideration of the Law “On guarantees of equal rights and equal opportunities for men and women” was blocking. The Law about quotas for women in the party lists also was not adopted, despite the extensive discussion in the information and the public sphere. The trend of gradual increase in the proportion of women MPs in the federal and regional legislatures is very low still.

Hidden discrimination in the political sphere restricting activity of women leads to the different problems of social sphere.

Parliamentary Debates on Ritual Slaughter. a Contextual Discourse Analysis

Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis

During the last three decades the visibility of religion has increased in the public sphere of many European societies. This has not only to do with the arrival and settling of large numbers of Muslims and other non-western immigrants in these countries, government policies for managing religious and ethnic diversity, but also with political agenda setting of powerful secular forces. Illustrative for this is the political debate on ritual slaughter in the Second Chamber and the Senate of Dutch parliament in 2011, initiated by the Party for the Animals. In this presentation, the argumentation used in this debate will be analysed from the perspective of contextual discourse analysis. The arguments will be related to features of the main participants in this debate as well as to the wider context of Dutch politics in the wake of ‘9/11’ and ‘the Fortuyn revolt’ in 2001. These events have contributed to a reframing of Dutch identity in cultural and secular terms. Within the new created frame religious topics such as Jewish and Islamic ritual slaughter are defined in opposition to secular Dutch identity.

Criminalizing Inequality: The Narratives of Women Formerly on Death Row in the Philippines

This paper delves into the pathways to prison of women who once received the death penalty in the Philippines. Drawing upon extensive participant observation at the only two existing women's prisons in the country and in-depth interviews with 27 former death row inmates, I examine how the women framed the circumstances that brought them to death row, based on their understanding of their identities, relationships, and social worlds. I analyze the link between the women's histories of victimization, social and economic marginalization, and substance abuse problems and their crimes. I also consider how the experience of deception and betrayal in close relationships, compounded by corruption in the criminal justice system, constituted a pathway to death row for the majority of the respondents. I discuss the implications of their narratives for the discourse on women and crime.

The women in my study were largely in marginalized positions in their families and relationships, at work, and in society in general. Their crimes resulted from their efforts to survive on a day-to-day basis and cope with their circumstances. Their narratives reflect many facets and social realities of low-income and working class culture in Philippine society. Their accounts of victimization, violence against specific men and even women and children, drug abuse and/or drug dealing in response to social and economic marginalization, cooperation with illegal activity as a result of relational responsibilities, corruption on the part of government and law enforcement agencies, and fatalism and passivity in the face of injustice, illuminate the contours and dynamics of their conflict-ridden world. My paper exposes the challenges to the dominant discourse on women's crime, as illustrated by their narratives—as predominantly low-income women in a postcolonial, low-income nation enmeshed in poverty and institutional corruption.

Microblogging and Macro Weather: Climate Change Risk Discourse on Twitter

The social web represents a new arena for local, national and global conversations and will play an increasing role in the public understanding of science and the creation of risk discourses. This paper presents an analysis of climate change social representations on Twitter, analysing over 60,000 tweets collected using a random walk method. The analysis includes a combination of web metrics, latent semantic analysis and semantic network analysis. Results indicate that most active users on climate change are distributed according to a power law distribution and that web metric indicators suggest a moderate conversation on the topic. In terms of content, there is a remarkable complex network of topics that hints to a rather multi-dimensional and complex risk discourse accounting for complex causal links between climate change and natural, social and economic consequences. Most of the tweets cluster around the domains of the effects of climate change, the measures that are proposed to adapt to it, the policy debate between policymakers and energy industry and call for actions for offline events. Moreover, the media economy of the tweets, the web links shared in them, are from a wide set of sources with a major role played by traditional media but with a substantial presence also of scientific journals and NGOs websites.

Psychology and Learning Difficulties

In the context of a sociological thesis conducted in France in primary schools, the focus has been on the issue of the diagnostics and devices used to help children with learning difficulties. The purpose of this paper is to analyse the role of psychological approach in the management of academic difficulties. In the attempt to understand how the family, the mother figure in particular, are blamed for the learning difficulties of their children. It will be seen that the lifestyle and educational habits of families are analysed by teams of professionals, and that when considered as deviant, they suggest help to the family. Indeed, from the professionals perspective, these learning difficulties are due to family dysfunctions, and educational deficiencies of the parents. This would damage the mental functioning of the child and lead to difficulties in their learning. In schools where children are mainly or exclusively of modest background, it seems that these psychological methods are nearly exclusively the methods being used. Thus, children going to these schools are more likely to be diagnosed with mental illness than in a school with students from the upper-class. This psychologising tends to put the responsibility on the family or the child for his failure, while ignoring the issue of the gap between the culture of the school and the one of children from modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that the psychological approach used by teachers allow them to suggest reasons for the difficulties faced by children and to put in place solutions. Indeed from a psychological perspective, the parents are seen as ‘actors’ of the success or failure of their children. The challenge for schools is then to accompany parents to transform their habits and their way of parenting.

VERDUZCO, GUSTAVO* (El Colegio de Mexico, gverduz@colmex.mx)

Changing Trends In Migration Flows From Mexico To The United States

Although some observers tend to view Mexican migrations to the United States as a common socio demographic phenomenon due to the vicinity of the two countries in the context of unequal economies, late drastic reduction in migration flows from Mexico to the United States pose several questions. In the views of some analysts this is mostly associated to the security measures practiced by the U.S. government on its southern border after September 11, however there are other indications that point out in a different direction suggesting that these changes might be associated with a set of several factors in which demographic variables along with economic, labor market and political ones are closely interconnected, or if not is the case they coexist and interact in the same political arena.

One other variations of Mexican migration flows have to do with the repatriation to Mexico of huge numbers of irregular or undocumented migrants most of whom were previously residing with their families in the U.S. On another dimension there have also been some changing characteristics in the flows of Central American migrants crossing Mexican territory on their way to the United States. This new trend has been offering a challenge to Mexican authorities with new implications to the legal Mexican political framework.

One objective of this presentation is to offer data and information related to the kind of changes that have taken place lately not only in terms of Mexican migrations to the U.S., but with respect to the different political actions in the U.S. as well as in Mexico with reference to Central American migrants crossing the country and staying in the country.

A second objective is to interpret these new modifications at the light of other general changes especially those concerning the “management” of migration flows by other governments.
Learning from Informality? A Case Study to Rethink the Misfit Between Formal Policy Strategies and Informal Tactics of Citizenship

Dutch disadvantaged city neighbourhoods face a wide variety of policy strategies to regenerate housing and public spaces, integrate migrants, support families, and make these urban areas safer and more attractive to the middle class. Residents here see their immediate environment more equipped for their lives. They perform tacit and informal practices to deal with experiences of threat and develop community activities from the bottom-up. Informal practices – like everyday routines, tacit use of public spaces, and interactions at a square – tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the public sphere as governments hold on to formal repertoires. Recent needs for welfare care for violent adult escapers make local governments eager to rethink citizen’s involvement. How could sociologist but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in the unhandy mismatch between well-intended strategies and everyday practices. Could local governments use tacit knowledge without ‘taking over’ or ‘disrupting’ the tacit fabric of the neighbourhood?

VERMA, DEEPAK KUMAR* (National Institute Social Sciences, dkvmhov@rediffmail.com)

Relative Deprivation, Affective Status Generalization and Social Identities

The paper is based on caste-based graded inequalities and social identities emerging from the perceived relative deprivation by the socio-economically and educationally backward castes and affirmative actions taken based on identification of backwardness by the State agencies in India. The emerging social identities are discussed under a new concept ‘Affective Status’, besides, Achieved and Ascribed, as explained by Ralph Lynter. The affected status characteristics generalization are empirically verified to reconstruct the social structure, in modern Indian context. The processes of such generalization and thereby emerging identities are explained with the help of a theoretical assumption, ‘Social Devolution’. Affirmed status is explained as the social identity of an individual or group (s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative deprivation. The paper analyses if the state’s affirmative action policies have been possible without such support from the state. Thus, the social identities of the affirmed status group(s) are resultant of aspirations and achievements of individuals belonging to a group(s) but due to support of the state. The status and mobility among affirmed status group(s) required to be higher could only increase with the depletion of the policy of positive discrimination, as more and more opportunities and benefits would become available and could be redirected to them. “Social Devolution” is construed as a process of elevating social power, prestige and dignity to relatively deprived, socio-economically and educationally lower status groups by way of positively discriminating them to provide opportunities by a central agency (state in the case of India) without redistributing supremacym and awkwardness of so-perceived higher-status groups which also now, aspire to achieve the affirmed status for perceived fairness given by that agency.

CHILD Abuse in India: Navigating the ZONES of Silence

A growing body of text have begun to furnish information and data on the widespread pervasiveness of child abuse in India. The paradox is that the perpetrator or the offender are often someone known to the child and more often someone from the extended family. Though in some situations it is beyond their control, but many times the family fails to protect the child from sexual abuse given to the cultural tradition of ‘family being a private space’ where no interference of public into criticizing is implicit. Moreover social stigma make it difficult to talk about child incest in public. However, there is still a absence of in depth understanding and empirical evidence to support general observations because of the lack of the sensitivity to the issue and the failure to acknowledge it in the first place. This paper assess the perception of child abuse among young college students in the age group of 17-20. The focus of the paper is the in-depth case studies of 10 victims of child sexual abuse and incest. The purpose is not only to get quantitative data on the issue as understood by young girls but also gain an insight into the manifold dimensions and meaning of abuse to the victims through case studies which is mostly anecdotal. It reflects on the excessive influence of normative standards of families also into the long term consequences of this in the lives of the victims.

YOUTH, Social MEDIA and Emerging Alternative Spaces for Socio-Political Movements: Analysis of ‘nirbhaya’ IMPACT

With the swelling proportion of youth population, India today is becoming one of the biggest Social Media market. The emergence of youth as new actors empowered with the technology - mobiles, Facebook twitters and the like have resulted in organized demonstrations/protests developing an intercultural platform to build solidarity. This new ‘youth brigade’ by engaging in political conversations for collective action has not only ignited mass social movements but also challenged the academia to reposition itself on the role of youth and social media as active partners of social change. This paper analyzes the role of social media as perceived by the youth in the age group of 18-30 years in the city of Lucknow. The case in study is the December 2012 New Delhi Gang Rape case - ‘NIRBHAYA’. Movement. This paper attempts to gain in depth understanding of youth activism at the intersection of multidimensional identities and their unified perception towards transformative socio-political change through social media campaigns. It also focuses on why and how the youth organise in to online solidarity networks and bring in a faceless movement for collective political action by actively engaging in dialogue and building public opinion thereof creating strong youth pressure. The paper examines how far such campaigns have been successful not only on focussing on punishment but challenge the cultural assumptions which creates space for violence against women.

VERONESI, GIANLUCA* (University of Leeds, G.Veronesi@leeds.ac.uk)

VALLASCAS, FRANCESCO (University of Leeds)

KIRKPATRICK, IAN (University of Leeds)

Hospital Management and the Contribution of Non-Sector Expertise

A belief in the value and superiority of private sector management expertise has been central to NPM reforms (Ferlie et al., 1995; Hood, 1991; Politt & Bouckaert, 2000), leading to concerted efforts to re-structure public organisations and recruit senior managers from the commercial sector, including accountants (Clatworthy et al., 2000; Ferlie et al., 1995). It is assumed that such expertise will have a transformative impact on public organisations, moving them away from models of professionally dominated ‘custodial’ or ‘consensus administration’. Commercial managers will emphasise the importance of resources, the need to meet performance targets, and have the ability to implement changes. However, while these assumptions and expectations lie at the heart of policy making worldwide, there is little research that has tested them directly. Some work has been done on the impact of senior leaders in local government (Boyne, 2005; Boyne et al., 2011) and school districts (Meier & O’Toole Jr, 2002; Moynihan & Pandey, 2005). As yet however, there continues to be a dearth of evidence supporting the assumption that diversifying the skill mix of senior managers in public organisations will lead to enhanced performance.

To address this deficiency, we focus on the impact of this non-sector specific commercial expertise on the boards of acute hospital trusts in the English NHS. Drawing on the governance literature focusing on the human (and social) capital of board members (Haynes & Hillman, 2010; Karr & Sonderegger, 2009), we first investigate whether a more diverse skill mix of senior executives makes a difference and if so, under what conditions. Given the dominance of clinical logic in the fields of health care (Reay & Hingens, 2005), we, then, look at the nature of performance outcomes and whether other factors, such as tenure and autonomy, mediate the impact of commercial and accounting expertise.

Discours De Crise, Périodisation économique Et Quotidienneté

L’objet de l’intervention est de croiser la périodisation des discours de crise, des quotidiennetés et des discours politiques (climat, crise économiques et finances) en se concentrant sur les discours de crise économiques et financiers produits par les médias de la période 2007-2012. L’approche est systémique et interdisciplinaire (sociologie, sociologie des médias et des techniques). Les discours de crise sont analysés en fonction de leurs spécificités, de leurs quotidiennetés et sur le terrain de la médiation interdisciplinaire entre sociologie et communication.

Discours De Crise, Périodisation économique Et Quotidienneté

L’objet de l’intervention est de croiser la périodisation des discours économiques, (- hauts salaires, crise bancaire, crise de la dette publique, compression salariale) avec les discours de quotidienneté en France, recueilli dans le discours sociologiques (selon les groupes sociaux et les générations).

Deux thèmes importants de la mythologie politique apparaissent dans ce corpus de crise (2007/2012) : le sentiment d’inégalité sociale et la peur de perdre son emploi. Les discours de crise sont en effet plus largement diffusés que les discours de politique publique. Les discours de crise sont pourtant davantage étudiés par les sociologues que les discours de politiques publiques. La périodisation de ces discours est très instable, voire irrégulière. La périodisation de ces discours est très instable, voire irrégulière. La périodisation de ces discours est très instable, voire irrégulière. La périodisation de ces discours est très instable, voire irrégulière.
contraintes économiques globales (finances, capitalistiques, restructuration économique.
Nous nous interrogerons sur le rôle des interactions médiatiques pour véhiculer ou masquer ces deux mythologies de base. Il s'agit de conjuguer les effets de trois types de médias (local, national, global).}

Multilevel Approach of Professional Fields: Differentiation of Professional Status inside Governance

Multilevel approach of professional groups set up a large differentiation of issues, practices and status inside the same professional groups. This approach will be developed for planners and secondary teachers in France. Local surveys frame the observation on a rich diversity of practices and capabilities. National surveys focus on the normative requirements of professional integration (certification, regulation). European survey focus on the governance models inside the convergence of professional standards (Swensson). The notion of profession can be framed inside three repertoires of issues. We recognize a differentiation of perceptions and of professional claims within the relations between qualification and autonomy for teacher, between status and recognition for knowledge workers (Larson, Abott).

The sociological question comes to specify the place of professional groups inside the networks of globalization. The convergence of expert knowledge standards at the global level do not mask the intense differentiation inside each professional group (Freidson), between the level of practices and the definition of professional responsibility, between meritocracy and salaried types. The professional fields frame a tensive reorganization between these different levels and different status.

Human Rights As a Social Institution

Human rights as a social institution

Contrary to legal-postpositivist approaches to human rights, sociologists often argue that human rights need not be restricted to legal norms. Rights have to be seen as more than legal norms discerned by judges trained in legal reasoning. For human rights to have social meaning, they must become institutionalised socially and become embedded in people's mindsets as well as in the day-to-day workings of societal institutions such as the judiciary, the schooling system, healthcare and the family. The aim of this paper is to develop such a sociological-institutional approach to human rights, which provides an important contrast to standard legal-postpositivist approach of human rights. Based on the work of a.o. Meyer and Luhmann I will argue that fundamental rights can be seen as a social institution playing a crucial role in the protection of individual agency in a modern, horizontal and heterogeneous society.

Real Fantasy

Real fantasy

As new format of the cultural industry, reality shows are usually approached from two opposite and irreconcilable views. Sometimes they are taken as a sham, other academic institutions, as well as a strong professionalization of the activity. Thus, we observe different ways of dealing with the same management measure by two different professions, and even more, we can ask if physicians hold greater bargaining power than teachers to protect the profession interests. Do these differences have been an effort of trade unions and professional associations to maintain the status and interests of the professions, resisting to NPM policies. Kindia and Randall (2008) call it a postprofessionalization process (instead of deprofessionalization). Moreover, the management measures, although opposing to the interests of these professions, seem also to contribute to reinforce professionalism.

Free Software Workers and The Myth Of A Deterrioralized Knowledge Production

Software and Information Technologies of Communication have an important place in the development of globalization (Castells, 1998). Since the mid 1990's, in opposition to capitalist globalization based in intellectual property, we have seen the rising of Free Software (Linux, Firefox...). This new way of producing software, though is often seen as a community development model, gives the image of an happy deterrioralization of production. This social model of knowledge production is presented as having many virtues that potentially eliminate geographic and social determinants related to a territorialization. From a critical perspective, we propose first to describe the main discourse features of the actors of Free Software and then from an empirical study, we will compare these theses to the quantitative study of data that we have collected. Using social network analysis on a large sample (N = 10,494) of free software developers, belonging to hundreds of different free software projects, we therefore chose to study the coupling between coordination and territoriality, including investigating the homophilies (Lazarsfeld and Merton, 1954).

While we might expect a territorial decoupling, we analyze quasi systematically homophily phenomena: territorial ones, but also in terms of skills. This setting light of homophily phenomena allows us to question the perspective and deterrioralization present in discourses.

Also, we can realize a strong embedding of these communities in the elitist academic institutions, as well as a strong professionalization of the activity.

VICERRA, PAOLO MIGUEL* (Chulalongkorn University, pmvicerra@gmail.com)

Adherence to Preventive Illness Control Among Filipino Women through an Autonomy Perspective

The focus of this study is the capacity of women to assert themselves within the household and how it may affect the sufficiency of their utilisation of antenatal care and which practitioner to visit. This behaviour regarding choice may well be influenced, albeit affected, with relations with their partners and be the demonstration of their household autonomy. Autonomy here is inclusive of education and employment status and also considers other facets as attitude toward intimate partner violence and mobility and economic dependency within the household.

Using regression models, it is found that the usual education and employment for cash indeed affect health-related behaviour, as well as Philippine context, number of children ever born affect it as well, but at differing degrees. All these mentioned have particular thresholds that may be positive or negative in effects. What is central is socioeconomic status of the household which is positive in effect.
Food Security, Rural Livelihoods and Agricultural Change: Evidence from a Case Study of Potato Contract Farming in Maharashtra, India

Despite decades of sustained economic growth, food insecurity remains a seemingly intractable problem for many households in rural India. In recent years, food security has been elevated to pre-eminence in the political discourse of India with the passage of the much-debated National Food Security Bill (2013). At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al., 2013).

Concurrently, the majority of rural Indian households continue to rely on smallholder agriculture as their primary livelihood activity. The nature of agriculture, however, is changing in India, as liberalisation policies open up the sector to domestic and foreign capital. One such change has been the spread of contract-farming schemes. Where they operate, contract-farming schemes are changing the dynamics of smallholder agricultural production, as land-tening households are increasingly exposed to modern inputs, technology and markets. These schemes present new opportunities for some households, yet it is unclear how these changes will influence patterns of social differentiation at various scales.

This paper discusses the nexus between household livelihoods, food security and modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra. The paper argues that understanding agricultural change through a rural livelihoods lens, we can reveal the nuances of how rural households negotiate change specific to time and place, and who is in a position to benefit from such change. If we understand food security as primarily a livelihoods issue, then understanding how modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra, is influencing patterns of social differentiation will be critical to the long-term food security (Pritchard et al, 2013).

At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al., 2013). En las últimas dos décadas América Latina presentó importantes resultados en la reducción de la pobreza, aumento de la esperanza de vida y reducción de la mortalidad infantil. Sin embargo, el incremento de la incidencia de muertes violentas, sobretodo, entre los jóvenes en este mismo período sigue siendo un desafío pendiente. Así como ocurre con la mortalidad infantil o el embarazo adolecen- tes, las tasas de homicidio inciden diferentemente sobre los individuos de acuerdo con su posición en la estructura social. Los estudio sociodemográficos evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/ etnia y clase social. Irónicamente, las vidas ahorradas en los primeros años de vida en los países más avanzados por medio de políticas de aseo y cuidado en la niñez continúan siendo interrumpidas prematuramente en la adolescencia o juventud por causa de la violencia. En los países latino ameri- canos, la sobremortalidad masculina alcanza considerable magnitud. En muchos de nuestros países los chicos mueren de 4 hasta 6 veces más que las chicas de misma edad. Estos datos solo pueden ser comprendidos dentro del marco de una cultura que aun sostiene fuertes rasgos machistas y una visión muy arraigada de valorización de la virilidad. Este trabajo discute las relaciones existentes entre las elevadas tasas de mortalidad violenta entre los jóvenes, especialmente los homi- cidos, e indicadores de condición de vida. Nuestra línea investigativa enfatiza el rol de la educación. Los avances cuantitativos alcanzados en la educación no son suficientes para revertir la tendencia de mortalidad por homicidio que evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/etnia y clase social.

VIEIRA, MARIA MANUEL* (University of Lisbon, mmvieira@ics.ul.pt) Trajectories of Risk and Uncertainty? Medical School Students and Their Vocational Choices

In Portugal, the imposition of a numeros clausus system at the HE entrance has contributed to the strengthening of a hierarchy of excellence in the school system. At the same time, it has introduced an increased uncertainty regarding the possibility to accomplish future projects and ambitions.

The case of medical courses has been paradigmatic in this regard. Its high demand has fixed permanently, academic excellence as an entry requirement. The access to a medical school implies some effort and sacrifices that not every young student is willing to take. Namely, because it implies a tension between the need to invest in studying on a highly competitive basis (thus focusing on future projects) and the desire to invest in youth sociability practices, under a high peer pressure (which are rooted on the present).

Obtaining and maintaining high grades along the secondary education is a long-term process (built during the three years of secondary education), but highly uncertain and risky: a single moment (an exam, an assessment) can ruin everything.

This presentation aims to analyze the processes involving Medical School en- trance in Portugal. In particular, we intend to confront students’ investment on a highly competitive vocational pathway (Medicine) with their awareness of risks that may emerge along with their option.

The analysis is drawn upon data collected within the project “Failure and drop- out at the University of Lisbon: scenarios and trajectories”, a recently completed research project sponsored by the Portuguese Science and Technology Founda- tion (Project: SFRH/BPD/6795/2006). In particular, it will explore data from in-depth interviews conducted in the academic year 2009/2010 to the students that in the previous academic year had entered the 1st year of medical school at the University of Lisbon.

VITEN, Ulrike* (University of Sheffield, u.viten@sheffield.ac.uk) Did Someone Say Cosmopolitanism? A Critical Feminist View on Cosmopolitan Citizenship, Post-Nationalism and Trans- Nationalism in Europe

By Dr Ulrike M. Viten (University of Sheffield, UK) Since the early 1990s cosmopolitan visions evolved as an endeavour to trans- gress 20th century understanding of state boundaries. It has been recognized that global issues, such as terrorism, pandemics and climate change, impact the well being of people all over the world. The rise of cosmopolitanism represents a reaction against a globalized world that contains increasingly self-interested and nationalistic states. Cosmopolitanism is often described as a new form of global political community that is not bound by national borders.

Nonetheless, I will argue from a feminist perspective that transnational belong- ing and cultural hybridity are equally on the rise. The concept of subaltern cosmopolitanism has become widespread in the last decade, and offers a possible way to conceptualize new forms of belonging in globalized societies.

The paper will focus on the part of autonomy and heteronomy of professional groups and political actors who either decided, implemented or had to cope with those managerial changes. Ambivalence prevails regarding their promoters and impacts.

Managerialism was partly promoted by other national or international institu- tions (the Ministry of Finance, the Parliament...). But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain effi- ciency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession’s definition of relevant managerial criteria and procedures.

The role of autonomy varies according to the professions and hierarchical posi- tions they occupied hierarchically by increased responsibilities and values (in priorities definition, budget allocation...). Yet, professional identities of ordinary magis- trates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...). Finally, we observe a hybridism between legal and managerial values rein- forced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bu- reaucrats, lawyers and clerks.

VIGNER, CéCILE* (CNRS, c.vignon@sciencespobordeaux.fr) Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the “modernization of the State” (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level on lean system? How was it re-appropriated by the Ministry of Justice, where other tools (such as ISO standards) had just been experimented... So, much so that lean management is about to be generalized in the civil judiciary system?

My hypothesis is that lean system was a means for transversal ministries such as the Ministry of Finance (to which the DGME reported) to reaffirm their power on specialized ministries and impulse reforms otherwise than by budget cuts.

Moreover lean production was implemented in the judiciary by emphasizing its “soft side” (considering a court ruling as a collective work) and by presenting the efficiency goal in a positive way (reducing the wastes of time to focus on the core business of clerks and lawyers). This selective transfer was facilitated by the fact that the DGME supported its cost and that there were no staff cutbacks in the Ministry of Justice.

The paper will show how the success of lean production relies on its adaptabili- ty (the selection of some characteristics), its capacity to be compatible with values of diverse professions (even though it may generate jurisdictional conflicts with consultants or between professions when the division of labor is modified), and on strategic uses made by professional groups and political actors.

Studying lean system in public services requires therefore to associate sociol- ogy of work and a political sociology perspective. This empirical study at national
and local levels is based on observations and interviews with bureaucrats, lawyers and clerks.

Intimate Unions: Sex Workers’ Labor Activism in Karnataka, India

Recent scholarship has de-exceptionalized sex work and positioned it within the theoretical framework of intimate labor (Boris and Parreñas 2010). However, academic studies of sex workers’ activism as laborers remain scarce (Jeness 1990; Kemptado and Doezema 1998; Hardy 2010). What tensions emerge when a labor framework for sex work serves not only as an analytic, but also as a basis for collective action?

This presentation, a scholar-activist collaboration, examines the trajectory of the Karnataka Sex Workers’ Union (KSWU) in India, drawing on 8 focus group discussions, 50 in-depth interviews, and our experiences. KSWU organizes sex workers using a trade union model. Rejecting state practices that either criminalize or pathologize sex workers, especially after large-scale HIV prevention programs directed at sex workers in India, KSWU has attempted to articulate an alternative claim on the state, positioning sex workers as citizens and workers.

We argue that KSWU has provided a meaningful alternative to existing relations between sex workers and the state. It has built alliances with other informal laborers and feminist and Dalit rights groups, and developed an independent trade-union-like funding approach. However, traditional trade union models have not always been adequate in the face of stigma; dispersed spatial patterns of work; no fixed “employer”; fluid identities of those who move between sex work and other informal work; systematic violence; and differences among women, men and transgender sex workers in their relationships to sex work. Many sex workers in Karnataka prefer the safety of invisibility, but KSWU’s politics pull toward greater public visibility. KSWU’s experiences highlight the inseparability of claims for recognition and redistribution, and suggest the need for strategies of organizing that respond specifically to intimate labor spheres—strategies that draw on the insights of Southern labor and feminist movements and develop creative, safe spaces for solidarity.

On the Work Itself: Task and Organizational Reality

In classic organization theory, ‘purpose’ and ‘task’ were key concepts. In order to understand the situation of a particular organization and to assess the form and necessity of managerial action it was considered crucial to address the organization’s basic purpose or core task. Without this, an organization could not realistically assess the strengths and weaknesses of its inner arrangements and the threats and opportunities posed by its ‘environment’. In contemporary organization theory, there is no longer a natural point of departure and figures only as one among many ‘aspects’ of organizational life. A widespread argument for this decreased significance holds that it is no longer relevant to speak in terms of overarching purposes as organizations manoeuvre in rapidly changing environments where tasks and purposes are multiple, ambiguous and in flux. Another is that the definition of ‘tasks’ by management is ultimately a ‘political’ or ‘instrumental’ reduction of the creativity and multiplicity of an organization. Thus it has been suggested that organizations are no longer relevant to understand as total entities, but only as ‘partial organizations’ (Barnard, 1938). In the paper, I revisit Barnard’s concept of ‘organizational purpose’, and Miller and Rice’s concept of ‘the primary task’, which share a number of family resemblances. I forward the argument that purpose is indispensable to the formation of the body conception of undergraduate students, this is the first step to consolidate how to think and act in different fields. We aim to discuss the conception of body from teachers of a philanthropic University of Goiás. The research is a cross-sectional study with a descriptive nature. Made sure a case study with a questionnaire developed and validated specifically for this study. Was distributed approximately 20 questionnaires and one teacher refused to answer. The study was approved by the Ethics Committee of the PUC Goiás under No. 1256/09, identifies the fact that 26.7% of teachers working with large-scale activities, 40% with the humanities, and 33.3% with the area of biology. About the body conceptions that prevail among teachers, nine replied the question, 66.67% consider the body as a machine, or as an organism, comprising separately from other components. Was also questioned whether teachers read authors, 88.9% read the issue, 88.9% read. Was also asked if teachers talk about the body in their classes and again 88.9% said yes. The completion marks the fact that teachers’ conceptions of body can be considered traditional, since there was no overcoming the dualism of body and soul, or the condition of a body ‘thing’ (machine or organism). This conception among university teachers can affect the thinking about the subject among academics, fact that is shown by other researches.

ALVARENGA, JOSÉ PEDRO (Federal University of Goiás)
The Discussion about the Body Between University Teachers: A Case Study

The debate about the concepts of the body is justified by the fact that the noviciate is a key element for the formation of the body conception of undergraduate students, this is the first step to consolidate how to think and act in different fields. We aim to discuss the conception of body from teachers of a philanthropic University of Goiás. The research is a cross-sectional study with a descriptive nature. Made sure a case study with a questionnaire developed and validated specifically for this study. Was distributed approximately 20 questionnaires and one teacher refused to answer. The study was approved by the Ethics Committee of the PUC Goiás under No. 1256/09, identifies the fact that 26.7% of teachers working with large-scale activities, 40% with the humanities, and 33.3% with the area of biology. Mental Health in Public Universities: A Comparison Between Brazilian and Canadian Professors

Mental health, an important object of research in Psychology as well as Social Psychology, can be determined by the relationship between psychological well-being and psychological distress. In this context, we search to understand: How do compare mental health of professors working in public universities in an emerging country like Brazil with the one of professors working in a developed country like Canada? What are the main differences in the indicators of mental health in work domain? How Mental Health affects Work-Life Balance? To answer these questions, this paper assesses Mental Health and Work-Life Balance for professors working in these two countries and test for their differences. The sample consists of 354 Brazilian professors and 317 Canadian professors. Data were collected through an on-line questionnaire assessing the following Mental Health indicators: anxiety, depression, loss of control, general positive effectiveness and emotion ties. We compared the components of Psychological Distress and Psychological Well-Being with the indicator of Work-Life Balance to analyse their relations. Reliability analyses demonstrated that all tested components are consistent to evaluate Mental Health and Work-Life Balance. Correlation analyses showed the components of Psychological Distress are negatively related to Work-Life Balance, whereas the components of Psychological Well-Being are positively related to Work-Life Balance. There are some small mean differences between Brazilians and Canadians professors in all five components of Mental Health, but these differences are not statistically significant. Mean differences for Work-Life Balance, gender, age, and Bias of Conformity are statistically different, although the size effects are small. Linear regression analysis, step by step, controlled for Life Events, showed that General Positive Effectiveness, Anxiety and Emotion Ties predict 31.5% of the scores of Work-Life Balance. Additionally, we observed that Brazilian professors find more balance between professional and private life than do their Canadian colleagues.

Higher Education: Inequalities and Globalization in Some Emergent Countries Using the Mexican Examples

Higher education: inequalities and globalization in some emergent countries using the Mexican examples

This paper refers to the last question suggested in the proposal of the symposium: Since data and methods to investigate inequalities mostly refer to national units, how to produce quantitative evidences of global inequalities?

I try to explain the implications of the process of globalization of the national higher education system in Mexico, having as a background the Bologna process as one of the best examples of the intense globalization of national education systems.

The paper has three parts:

1. The first one focuses in a comparison of the imbalance regarding economic and material resources among students, in order to gain access
to higher education in some selected countries, based on international statistics.

2. The second one is based on an empirical research undertaken in six universities in Mexico City, that are classified by academic characteristics, and by the implications that these have in the process of globalization of knowledge, and will examine the material and symbolic inequalities of the students that obtain their professional degrees.

3. The third one, will consist on a reflection that, based on empirical national data versus international data, allows the design of some elements of comparison regarding the inequities experienced by the young students that succeed in finishing their degrees, in some selected emergent countries.

In this paper, I analyze the contentious and long-lasting collective process to document, understand and reach justice for victims of Argentina's Dirty War, based on fundamental texts produced after the end of the last military dictatorship. By looking into a transnational archive (Never Again) report prepared by the National Commission on the Disappearance of People (CONADEP), which included hundreds of testimonies by survivors of torture and acquaintances, reading scholarly analyses on this matter, and finding testimonies published in other venues, I discuss how this report became a master narrative from which subsequent interpretations of the Dirty War emerged. I apply Goffman's (1986) frame analysis theory to understand the complexities and nuances of processes of collective memory-making, and identify how hegemonic and counter-hegemonic frames were created to create meanings and organize experiences of the Dirty War. Then, I propose alternative frames (an “intersectional frame” and an “emotions-conscious frame”) with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

Economic Crisis, Politics and The Menace To Battered Immigrants’ Rights

The anti-immigration measures and xenophobic sentiments that have spread since the eruption of the financial crisis in 2008 have been significantly detrimental for immigrant survivors of intimate partner violence in the United States. In common times, this group is particularly vulnerable to abuse because of the intersection of members’ gender, sexuality, nationality, race, ethnicity, language, religion, immigration status, isolation, cross-national frames of cultural and legal reference, and socioeconomic standing. All of these factors influence the way in which aggression is inflicted and endured, and affect the availability of resources for immigrants to escape and overcome abusive relationships. The economic recession, anti-immigration policies and a rising xenophobic environment have all created additional hurdles for battered immigrants given that employment opportunities have declined, exploitative work conditions have worsened, and immigration controls have increased. In this pressing context, immigrant survivors of intimate partner violence have been faced with empowered abusers whose threats of deportation became real; ambivalent law enforcement officers who instead of protecting battered immigrants may be forced to collaborate with immigration officers; and a widespread sense of fear with its paralyzing and isolating effects. At the same time, most nonprofit organizations providing services for battered immigrants have met serious budget cuts that curtailed their ability to serve the increasing number of survivors approaching them. Based on interviews with service providers across the nation, participant observation of networks of battered immigrants’ advocates, and a close reading of debates around the re-authorization of the Violence Against Women Act (VAWA), I analyze how these dire circumstances have been critical for not only immigrant survivors of gender violence, but also the battered immigrants’ and battered women’s movements.

Then, I propose alternative frames (an “intersectional frame” and an “emotions-conscious frame”) with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

Economic Crisis, Politics and The Menace To Battered Immigrants’ Rights

The anti-immigration measures and xenophobic sentiments that have spread since the eruption of the financial crisis in 2008 have been significantly detrimental for immigrant survivors of intimate partner violence in the United States. In common times, this group is particularly vulnerable to abuse because of the intersection of members’ gender, sexuality, nationality, race, ethnicity, language, religion, immigration status, isolation, cross-national frames of cultural and legal reference, and socioeconomic standing. All of these factors influence the way in which aggression is inflicted and endured, and affect the availability of resources for immigrants to escape and overcome abusive relationships. The economic recession, anti-immigration policies and a rising xenophobic environment have all created additional hurdles for battered immigrants given that employment opportunities have declined, exploitative work conditions have worsened, and immigration controls have increased. In this pressing context, immigrant survivors of intimate partner violence have been faced with empowered abusers whose threats of deportation became real; ambivalent law enforcement officers who instead of protecting battered immigrants may be forced to collaborate with immigration officers; and a widespread sense of fear with its paralyzing and isolating effects. At the same time, most nonprofit organizations providing services for battered immigrants have met serious budget cuts that curtailed their ability to serve the increasing number of survivors approaching them. Based on interviews with service providers across the nation, participant observation of networks of battered immigrants’ advocates, and a close reading of debates around the re-authorization of the Violence Against Women Act (VAWA), I analyze how these dire circumstances have been critical for not only immigrant survivors of gender violence, but also the battered immigrants’ and battered women’s movements.

A large proportion of the best quality farmland is within the vicinity of the coun-
tries of Russia and (ii) appropriate economic resources to implement the rights .

At present, the Russian government has a duty to provide orphans with hous-
ing regardless of their age, which is made at the expense of both the federal bud-
get and the resources of local authorities. At the same time, orphans are un-
equally allocated in regions with various levels of economy, which collides with
the principle of equal rights to access to housing. Orphans are sometimes not pro-
vided with the necessary economic resources to acquire housing. For example,
during the period of professional studies orphans are provided with a room in the
university's dormitory, thus their housing need is partly met by the funds of their
educational establishment. However, after graduation orphans are required to
take a permanent registration, i.e. living space of their own, in order to
have a job and for other purposes.

In general, the paper combines the case study methodology with legal analysis
of effective housing rights for orphans and young care leavers who are in need of
housing. The study leads to the following key point: equally guaranteed rights to
housing for orphans and young care leavers who are in need of
housing. The study leads to the following key point: equally guaranteed rights to
housing for orphans and young care leavers who are in need of

The principle of food security is in recent agricultural policy documents in Nor-
way being used to re-legitimize increasingly neoproductivist farming policies and
systems. Thus conservation of agricultural land is once again prominently posi-
tioned on the political agenda. With only very limited availability of farmland, only
3% of Norway's land area is in productive agricultural use, the issues of agricul-
tural land conservation and food security have become more or less inseparable
from rural areas. This, combined with increasing in-migration from abroad,
is placing considerable pressure on the remaining farmland – particularly fertile
land on the outskirts of major cities. Conflict between agricultural policy objec-
tives for conserving farmland and an increasing financial interest following the
demand for housing, roads and infrastructure is thus becoming a major issue in
the public and political arenas. Based on a Norwegian case study, this paper
will show how food provisioning and food security as collective goals is framed
and positioned in discursive struggles on land between financialization, climate
concerns and urban growth.

VINCENT, FANNY* (université paris dauphine, fanny.vincent73@yahoo.fr)
Travailler « En 12h » à L'Hôpital Public : Quand Les Politiques
D'austérité De L'Hôpital Public Rencontrent « L'accélération Sociale
Du Temps »

Dans nos sociétés prises dans ce que le philosophe allemand Hermut Rosa
appelle l’« accélération sociale du temps », et face à la dégradation des conditions
de travail qui l’accompagne, maîtriser son temps de travail est un en-
jeu. Et ce d’autant plus dans le milieu hospitalier où temps de travail est souvent
synonyme de don de soin de sa personne.

Depuis une dizaine d’années une forme de travail atypique se développe, à la
limite de la légalité, dans les équipes soignantes des hôpitaux français : le travail
en 12 heures d’affilée. Présenté par les directions des hôpitaux comme une solu-
tion pour pourvoir les postes vacants, le travail en 12h permet aussi à court terme
economiser des postes en supprimant les temps de chevauchement entre les équi-
dues.

Mais pour les soignants eux-mêmes, ne travaillant « plus que » 12 jours sur
28, les 12h permettent d'avoir plus de temps pour sa vie privée. En effet, à la
différence des plannings traditionnels en 8h, travailler en 12h permet d’obtenir
un roulement fixe et de dégager mécaniquement du temps pour cumuler une
deuxième activité face à au gel des salaires.

Notre exposé s’appuiera sur les premières conclusions d’une enquête ethnograp-
ique de plusieurs mois menée dans divers services d’hôpitaux parisiens, ainsi que d'entretiens avec les soignants, dans le cadre d'une thèse engagée depuis octobre 2012. Nous montrerons que ce qui apparaît comme un consen-
sus inédit entre les directions et les soignants autour d'un meilleur équilibre entre
travail et famille, est en fait un moyen pour les soignants de fuir un travail qui s’est
intensifié depuis que les politiques de restriction des dépenses et de maximisa-
tion de la productivité se sont imposées ces dernières années à l’hôpital : « au
moins on ne revient pas travailler tous les jours ! ».

Russian Housing Care for Orphans: Equal Rights in Unequal Opportunities

A great number of decrees, regulating various aspects of social security for
orphans (including housing), have been adopted by the Russian government in
2013, which put Russian Orphan Care among the paramount issues of social pol-
icy.

This paper analyzes the housing care laws in relation to orphans in Russia,
including federal laws, regional statutory documents and case law protecting the
housing rights of orphans.

At present, the Russian government has a duty to provide orphans with hous-
ing regardless of their age, which is made at the expense of both the federal bud-
get and the resources of local authorities. At the same time, orphans are un-
equally allocated in regions with various levels of economy, which collides with
the principle of equal housing needs for orphans.

For example, during the period of professional studies orphans are provided with a
room in the university’s dormitory, thus their housing need is partly met by the
funds of their educational establishment. However, after graduation orphans are
required to have a permanent registration, i.e. living space of their own, in order to
have a job and for other purposes.

In general, the paper combines the case study methodology with legal analysis
of effective housing rights for orphans and young care leavers who are in need of

From Right-Wing Violence to Racist Terror – Exploring Factors of
Radicalisation

In November 2011 a racist terror group in Germany that claimed responsibil-
ity for the murder of nine migrants and one police-woman was discovered by
chance. For more than thirteen years security forces had no real idea of the ac-
tivities of the group, assuming that the killings were caused by criminal motives.

After the existence and activities of the racist group has become known several
high-ranking security and secret service officers resigned and the security appa-
ratus is still under reconstruction.

The paper addresses the attempts by researchers to locate the factors why a
terrorist group developed from a much broader racist violence-prone movement
and tries to weigh up the role and actions (as well as non-actions) taken by state
actors towards the extreme right in Germany in general and against the regional
right-wing movement in Thuringia from which the terror cell emerged in partic-
ular. In doing so, the investigation tries to find out if in the first phase restraint
by the state might have encouraged right-wing violence while in a later phase
admirable decisions by public prosecutors may have contributed to a radicalisation
processes resulting in racist homicide.

The Identitarian’ Movement

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In autumn 2012, the Génération Identitaire, a French group, launched a video message on Youtube declaring war on multi-culturalism. In order to gain a maximum of public attention and as an example of how the movement’s performance would look like the group occupied a mosque in Poitiers, chosen for the final victory of Karl Martell against the invading Moors in 732 AD.

While, in France, the group’s roots date back into the early 2000s, the occupation of the mosque quickly inspired imitators in neighboring countries like Austria and Germany. Although presenting themselves as being non-racist its ethno-pluralist approach and public statements on several issues clearly indicate that the movement belongs to the spectrum of right-wing racist populism.

The paper will outline the emergence and the development of the ‘Identitarian’ Movement taking the variations in several countries into account. A focus will be given on the analysis of the movement’s claim of not being racist on the one hand and the de facto involvement of known right-wing protagonists on the other hand. First, the public performance of the movement that is web-based to a large extent is investigated. In sum, the paper offers an analysis of a new political phenomenon and situates this into a broader understanding of more recent developments of right-wing populism as a whole.

*Gendering Responsibility: Work Practices and Institutional Responses to Intimate Partner Violence in Finland and in Russia*

This paper examines how the highly gendered phenomenon of intimate partner violence (IPV) is encountered in various institutional settings of social and health care services in Finland and in Russia. The empirical data comprise (1) 16 focus group interviews with staff members (n=73) in various social and health care units in Finland and (2) 74 interviews with staff members (n=56) and service users (n=14) in three public crisis departments and one NGO crisis center in Russia. Based on the analysis of this data corpus, it seems that one of the dominant institutional discourses is that of making the female victims responsible for dealing with the problem of IPV. According to the interviewed professionals, it is difficult or even impossible to address the topic of the responsibility of male perpetrators due to various reasons, e.g. inadequacy of existing work practices or insufficient legislation. This paper takes a closer look at the ways in which the above-mentioned discourse operates to organize work practices that result in “gendering responsibility” at the level of local activities. Following the ideas of institutional ethnography (Smith 2005), the basic assumption of this paper is that institutional discourses organize the ways of “seeing” and “knowing” the solution to the problem of IPV in institutionally actionable ways. Of special interest here are the interconnections between the institutional processes carried out locally and those organized at state, national and even international level. In addition, this paper addresses some cultural differences between Russia and Finland in the ways in which the female victims are made responsible for dealing with the problem of IPV in the everyday work of the institutional settings under investigation.

*Testing the Effectiveness of HRM Practices Among Expatriate Humanitarian Aid Workers*

Abstract: Staff turnover has become a major concern for humanitarian organizations. On the one hand this can be seen as something humanitarian organizations have to live with, but on the other hand it has also been blamed for reducing effectiveness and efficiency due to discontinuity in staffing and loss of institutional memory. The general public pressured for greater efficiency and accountability. Professionalization, and especially adopting for-profit management practices, for example regarding human resource management (HRM) was deemed to be key to achieve enhanced efficiency and accountability. In short, no sector is dependent on the employees and their loyalty and at the same time is experiencing a very high risk of turnover. Therefore, this is the perfect setting to study the effectiveness of HRM practices. Yet, while much discussed, in-depth research on the consequences of human resources practices on individual outcomes (job satisfaction and turnover intentions) and that trust in management is an important factor mediating this relation, HRM practices are conducive to building trust in management, which in turn is positively related to job satisfaction and intention to remain with the organization.

*Les Droits Pédagogiques Chez Bernstein : La Normativité Sociologique En Questions*

Cette communication vise à questionner ce qui apparaît comme le modèle normatif explicité dans la théorie de Basil Bernstein : le modèle des « droits pédagogiques » par lequel il introduit son dernier ouvrage et qui semble fonctionner comme une nouvelle théorie de la gestion de l’éducation. Outre le fait que, pour Bernstein, les dispositifs pédagogiques, au sens il affirme que c’est là les droits pédagogiques notamment au regard des institutions et des individus, et normatif au sens où il déclare que devrait être le dispositif pédagogique, et singularité du dispositif scolaire en rapport à son ambition démocratique. Ces deux dimensions associées permettent de poser l’un des objectifs normatifs en question. En relation avec plusieurs hypothèses simples permettant de penser les conditions de possibilité d’une démocratie minimale, l’auteur en vient ainsi à poser la nécessité pour les dispositifs pédagogiques d’instituer trois droits reçus entre eux : le Droit à l’Amélioration (DA), le Droit à l’Intégration (DI) et le Droit à la Participation (DP). Il est cependant possible que ce modèle ne joue pas encore totalement le rôle qu’il est appelé à jouer, et que Bernstein entend lui faire jouer dès l’introduction de son ouvrage : « un modèle auquel je pourrai comparer tout ce qui se passe dans les différents systèmes éducatifs » . Y compris dans les analyses de Bernstein lui-même, en témoignage d’ailleurs fait le fait que les droits ne sont jamais par la suite mentionnés tout au long de l’ouvrage. Ils semblent peu repris explicitement aussi par la communauté contemporaine des bernsteinien.

*How Courts Must Act To Provide Democratic Access To Justice On Civil Disputes? The Experience Of Brazilian Federal Court In Slams Of Rio De Janeiro*

The aim of this communication is to discuss how could brazilian federal court act in marginal urban communities with peacekeeping police forces units (UPPs) to promote democratic access to justice in civil disputes. A federal court in Brazil has the competence to judge the conflicts involving the Brazilian federal state, as well as their federal organs, as the mail office, the social security institute, federal banks, the national regulatory agencies and others. The field of research is the implementation of programs and projects of the federal justice in underserved communities, implemented by the federal court of Rio de Janeiro. These programs began in 2010 and last until 2013. The implementation of such policies was extremely heterogeneous and plural. Initiative began with a realization of hearings, production of expert evidence and offering agreements by the social security institute approved at the same time by the Federal Judges (judgment), and then began a Tinier initiatives, events to provide legal advice and assistance, and legal education for citizenship, without rendering jurisdiction in strict sense. Presented through the analysis of Boaventura de Sousa Santos on the relationship between law and community and the tension between regulation and emancipation, I report the experience in Cidade de Deus, Rio de Janeiro. I conclude that pedagogical access to justice, which means, legal education for citizenship can offer a third way to rethink the relation between courts and communities for dispute resolution in civil conflicts.

*Art Works and the Production of Knowledge on Cities*

Artists work on the built environment mainly through the production of art works in the public realm. This implication has recently taken a new orientation where artists work in some cities, on issues related to urban projects along with the project team. They contribute to the early stages of urban projects and take part in field studies. Besides the use of urban planners’ and architects’ know-how, they collect data in various forms -sound, images, objects, words, impressions- to transform this data into art works which are qualified as territorial. They produce through this work and their actions, knowledge on the city, the project site and the local community.
This paper presents the results of a research project based on five case studies where artists are invited by urban professionals to work and produce knowledge on cities and project sites in France. They are digital artists, sound artists, choreographers, visual artists, actors. They work mainly through intensive field work. Site immersion and (informal) interviews are singled out as the key elements that are used. We will first discuss in which way and to what extend artists produce knowledge that is different from that produced and used by city professionals. What kind of knowledge do artists produce? In which aspects is this knowledge different? Are these differences due to artists' specific skills? To their methods? To their unique gaze? To their capacity to represent the reality? Then we will discuss, how can urban professionals use and work with this new kind of knowledge. How do they analyse it? What are the epistemological, methodological and analytical problems encountered in their understanding and their transposition in urban studies?

Young Graduates Self Entrepreneur: Searching for Job or Creating a Company?

Precariosity is a rising condition of high skilled and knowledge work. The implementation of new kind of work contracts is supporting this movement. In France, a new fiscal regime for self-entrepreneur had been created in 2009. This consists of lower tax rate and simplified administrative procedure for small companies (turnover under 33 000 euros).

This paper presents the results of a research on graduates (master or PhD in social sciences) who enter the labour market by creating this kind of self-entrepreneur. It appears that they didn't choose this scheme of work: it had been required by employers to lower their labor cost, flexibly the working relationship and externalise administrative procedures. While graduates are administratively independent, their conditions of work are mainly those of salaried: in the firm, with fix schedule, prescription from the superior, etc.

In these situation that fuzzed and hybridised working regime and working conditions of independents and salaried, how are these graduates (as specific population of knowledge workers) adapted ? Their working conditions, activities, projects and discourses reveal different feelings about that situation. This paper will explore these three idea-types of young self entrepreneur: subordinated, independent, or in inclusion. To what extend does this situation trained them to become entrepreneurial worker?

Masculinities, Violence and Multiculturalism in Latin America

Male violence has occupied a foundational place in Latin American history. Latin America's past has been marked by men's violent acts, such as the Spanish Conquest and Colonization in which not only colonized “women” were powerless within their communities, but also colonized “men” were subordinately placed within a hierarchy of masculinities. This societal structure was based on mechanisms of racial inferiority and gender subordination, which established relationships of domination and of complicity between the people and their colonizers. The postcolonial period manifested the consequences of such brutality and its difficult to speak about Latin-American social history where violence hasn't been present, not as a Latin-American cultural trait but as a social fact.

While I'll reference the Latin-American context generally, I'll particularly focus on the situation in Colombia, an area on which I have extensively worked. Due to the old and painful reality of the Colombian armed conflict, exceeded only by the Israeli-Palestinian and Indian-Pakistani conflicts, the need has become apparent to promote initiatives, which introduce discussion and action into the public and academic field. The two following issues: first, the conflict continues to differentially affect the lives of Colombian women and men because of their social place in the gender order; and second, the difficulty of dissociating the violence of masculinity, as it has been designed and constructed socially in the Colombian context.

This paper will first reflect on the relevance of social intervention programs developed with men oriented towards violence prevention. It will then address male resistance to change and the attempt to trivialize violence against women and reaffirm masculinity based on domination, in which some geopolitical and internal social hierarchical considerations are present. Finally, this paper will discuss the forceful effects that multiculturalism in the region may or may not have on gender violence and its eradication.

La Invisibilidad o La Falsa Visibilización Del Maíz Nativo En La Cruzada Nacional Contra El Hambre

As fisheries have a vital role in maintaining the social and economic cohesion in insular areas, where the majority of the population is employed within the fishing sector, regulation and control of the activity affect directly the fishing communities. Self-regulation has a significant impact on managing effectively Fisheries Cooperatives. Areas by gaining access to local expertise, resources and developing working relationships between the fisheries professionals and the local control and regulation authorities. In Greece, 18.8% of the territory consists of insular areas, enhancing thus the significance of fisheries communities for social cohesion. However, the notion of participation in regulation and control is still not widely spread in the fishing communities as it is only practiced sporadically. Insufficient statutory control of illegal fishing heightens the need for promotion of self-regulation as a means to protect the marine resources, as well as promote local development, local employment and economic growth. Thus, creating incentives for fisheries professionals' participation in regulation and control of the fishery is crucial for the realisation of self-regulation. However, providing the fishermen with incentives has its drawbacks, as they do not always guarantee the expected outcome, namely productivity coupled with sustainability. One of the most common issues with incentives is the enforcement of the legislation and the decisions. This research focuses on the potential of fisheries cooperative as solution to the problem of legislation and decision enforcement and, thus, as promoters of self-regulation in the fish stock management sector. Through the examination of international case studies, the study gives suggestions for the promotion of fisheries cooperatives in the Greek national waters that greatly lack such organisation and the after effects that the adoption of such a policy would have in the area under examination.

VLACHOPOULO, EIRINI IOANNA* (University of the Aegean, socd12054@soc.aegean.gr)

Fishing Cooperatives: The Solution to Fisheries Mismanagement?

Living with the Sea: The Satoumi Concept

The importance of sustainable marine resource management through the Eco-system and the Participatory approaches is widely accepted and supported by contemporary science. Fisheries management based on the internal knowledge of the local artisanal communities, which operate with traditional techniques and traditions, has conserved the key resource a key component of the marine and coastal ecosystems. In Japan, the participation of fishermen in the decision-making process as well as the enforcement and realisation of conservation plans is being researched and promoted widely. The most promising conservation framework, the satoumi, is based upon the interaction between traditional human activity in fishing communities and ecosystem management. These ecosystems
still maintain high productivity and biodiversity, coupled with human activity. The satoumi is based upon traditional resource management techniques which aim at the protection of the targeted ecosystem. As the depletion of fish stocks and the degradation of marine habitats expand around the globe, the provisioning, regulating and cultural services that the marine ecosystems provide for the fishing communities that have adapted to them are disappearing. Through extensive literature review, this paper explores the capacity of the satoumi concept for the sustainable use of marine resources. The most important aspect of the research is the exploration of the significance of the implementation of the satoumi for the survival of the communities that have adopted it. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

The Fukushima Daiichi nuclear disaster revealed the dangers of nuclear power and might have changed people’s attitudes towards this energy source. Therefore this paper examines whether a nuclear accident like the Fukushima accident has a long-term effect on attitudes towards nuclear energy. After we describe the overall impact and trend before and after the accident for different countries we test hypotheses about the structure of the effect. On the one hand, whether the effect is temporary or persistent; on the other, whether the average treatment effect depends on individual characteristics, like age, gender, education or nationality. According to availability heuristics (Tversky and Kahneman, 1974) we would assume a temporary effect (declining media coverage, memories fading away), classical rational choice theory (Coleman, 1990) might expect a long-term effect which is caused by an updated risk evaluation due to new information we got from the Fukushima accident (e.g. how tedious it is to stop nuclear chain-reaction or a lack of trust in authorities because of bad disaster management). Using data from the latest ISSP 2010/2011 environmental module that allows us to study the Fukushima accident as a natural experiment as we have both people surveyed before and after the accident. Within the causal framework of a Regression Discontinuity Design (RDD) and a Difference-in-Difference Estimator (DiD) we assume heterogeneous treatment effects so that some individuals change their attitudes more drastically than others. Our results indicate that young people are more likely to be influenced by the accident while gender does not matter. Moreover we find different patterns between countries that need further research.

Perceptions of Rising Powers: Are Russia and China Still Brothers Forever?

Russia and China are brothers forever was a popular slogan in the Soviet Union time, that perfectly shows how important it is for political science to understand differences in perceptions. While in Russian culture a brotherhood can be relationships of the equal, in mind of Chinese people an hierarchy is always formed and one of the brothers has to be elder, has to be a leader. Even though China had developed for a new political system and a new type of superpower, that relays more on soft power than on hard, it is struggling with the China Threat theory and problems of misinterpretations of the Harmony World concept. In order to predict the role of China in the future many specialists turn to its imperial past, the tribute system and roots of the strategic culture, so processes of a political and cultural paradigm develops into a starting point of social inequality rather than being its consequence. We find here that different countries engage different interest in different fields. This is clearly observed. The majority of these countries depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

Unequal Social Participation in Later Life

The concept of active ageing comprises the maintenance of societal participation throughout the life span into old age. ‘Good’ ageing in line with this activity paradigm develops into a starting point of social inequality rather than being its result. Based on the German Ageing Survey (DEAS) and on the German Survey on Volunteering (FWS) we investigate the access to volunteering and to educational activities depending on social and spatial aspects of inequality. The DEAS is a nationwide representative cross-sectional and longitudinal survey of the German population aged 50 and above, so far data was collected in four waves in the years 1996, 2002, 2008 and 2011. The FWS is a representative cross-sectional survey on voluntary work, honorary office and civic engagement of the population living in Germany aged 14 and older. Data is currently available for the years 1999, 2004 and 2009.

Societal participation is socially and spatially structured: individuals from a lower social class are less often involved in educational activities or in volunteering. The results of our multi-level-analyses clearly support these inequalities in societal participation known from the literature among individuals in both, middle and later life. The results indicate that individuals living in economically disadvantaged regions are less likely to participate than in economically strong regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate participation should be taken on the local level to enhance opportunities for volunteering and educational activities throughout the life course and especially in later life. This should help to increase the participation of individuals from lower social classes sustainably.

Researching Youth Ethnicities in East London and in Paris banlieues: Methodological Challenges and Explorations

This contribution explores the methodological challenges I faced while carrying a qualitative study on ethnicity among young people (aged 15 to 25) in the London Borough of Newham in East London and in the city of Bondy in Paris northeast banlieues. The research aimed at investigating the impact of French republicanism and British multiculturalism on everyday life and identities of these young inhabitants. But how to study ethnicity, a deeply relational phenomenon, socially and symbolically violent, and often – especially in France – considered taboo?

The paper starts with positionality and how I dealt methodologically, ethnically and personally with the power relationships involved in the research. As a middle-class white female researcher I was perceived in opposite ways during fieldwork: a white rich middle class Parisian in Bondy; a strange, lost, and possibly East European young woman in Newham.

It then shows how both the willing to reduce symbolic violence and the choice for a constructionist approach defined my research design and the structure of my interviews. Two methods especially helped me investigate intersectionality while decreasing symbolic violence: self-portrait and mental maps. This fed a reflection over the use of categories.

At last, I discuss how each method involved specific power relationships and how I handled them. It focused different aspects of ethnicity: individual semi-structured interviews fostered the presentation of particular yet universal selves who rejected categorization and stressed a distinctiveness based on intimate experiences; focus groups (carried out every other week in secondary schools with the same participants for one or two semesters) politicized discourses and built collective actors defending group identities based on UtThem dichotomies. At last, observations disclosed autonomous, playful, situational and instrumental aspects of ethnicity and discrepancies between attitudes and practices.

Creativity & Creative Class in the Transformation of Russian Society

Russia is a country of creative minds, rich in talents. Creativity - is a fundamentally new state of Russian society, associated with the formation of the creative class, the integrated group, which unites representatives of various professions on the basis of a demand of self-realization and service to the public good. Investigation of the conditions, the vector of development and activity of the creative class shows that despite the spontaneity of social initiatives steady trend of actualization of potential creative class occurs, which gives us hope for a successful modernization of Russia, the qualitative renewal of all aspects of public life.

Today Russian society gets its second wind, gets rid of “post-reform fatigue syndromes and skepticism”. It requires the formation of the creative person, creative education, creative management of all aspects of Russian society. It is with the growth of creative trends and shaping the creative society, a society of social creativity the future of Russia is linked. What responsibility has society and what a social dialogue should be to implement a real historical breakthrough depends on the creative class.

Discourse of the Integration of Society in Latvian Sociology

If sociological theory considers social integration as a universal process which involves the whole society and all types of its diversity, the public consciousness in Latvia, as well as the scientific discourse, persistently relate this term to just one dimension – ethnic. The findings presented in the article demonstrate that the scientific research on the integration processes in Latvia has become more critical towards the methodological assumptions which appeared in the 1990s, but in their entirety there is a reconsideration of the values of those ideological approaches to the understanding of society integration which first were formulated in T. Parsons’ conception. At the same time, the ideas of J. Habermas who considered it necessary to recognize a collective identity of ethnic minorities in the multicultural society and become a significant ideological resource for the research on society integration in Latvia. The article presents some data from the sociological research carried out in the largest city of Eastern Latvia – Daugavpils, the city with an ethnically diverse population. The data obtained in the run of the research demonstrate the possibility to reconcile the liberal conception of society integration in Latvia with the recognition of the value of a collective identity of ethnic minorities.

The Formation Of Political Subjects

The Formation of Political Subjects. Tenant Protest in Berlin and New York

A crucial point in the development of urban social movements is their ability to form coalitions to overcome the deep entrenched structural and discursive fragmentation and particularization of neoliberal societies. The urban seems to be the context in which this can be achieved. In current tenant protest in Berlin and New York, though highly specific in their issues and demands, we can see such an abstraction from personal interests making affiliations of broader political possibilities possible. In the process of legitimizing their right to stay put some of the protest groups go as far as to make universal claims to (represent) the common good.

But social movement research lacks concepts to fully grasp this process. To counter these shortcomings of social movement research I propose a re-thinking of social protest through the lenses of the formation of political subjects. Such an approach would offer the opportunity to overcome social movement research’s one-sided focus on the actors of protest as merely strategically acting, identity-based and self-interested activists by shifting the focus to the impact of the interchange between structure and discourse on peoples subjectivity, the subject positions they shape in the process of protest and the possible links they thereby offer to others.

The Poor As Drivers of Development – How Global Discourses Legitimised Social Cash Transfers

Since 2005, social cash transfers (SCT) have become a legitimate and widely used instrument of global development policy. This is surprising, because development organisations have long rejected direct cash transfers, citing concerns of dependency and lacking capacity for implementation in the Global South. In this paper I attempt to explain how and why development organisations changed their position on social cash transfers. Previous research indicates that a shift in global discourses may have caused development organisations to reconsider SCT as a policy option. Therefore, using an approach of sociological discourse analysis, I check in how far changes in global discourses prior to the 1990s have had an impact on the legitimisation of SCT as development policy. Indeed, I find that three global discourses have played a role in the rise of social cash transfers: One on poverty, one on development and one on human rights. Since the late 1980s, each of these discourses has shifted in specific ways which have facilitated the legitimisation of SCT in development policy. Even though the shifts in the three discourses do not seem to be causally connected, they had a joint effect: I argue that the shifts in global discourses fundamentally changed the perception of the poor in development policy. While the poor were long regarded as passive beneficiaries of development, discursive shifts during the 1990s led to their perception as potential drivers of development due to untapped economic potential. This shift in the perceptions of global actors legitimised social cash transfers, because they were successfully portrayed as a direct investment into the poor which can help to fulfil their untapped potential.

Area Characteristics and Admission Rates of People with Schizophrenia and Affective Disorders in a German Rural Catchment Area

Background Research on environmental risk factors for mental illness in rural areas is sparse, although the same risk factors as identified in urban areas may be present. Especially municipality characteristics reflecting economic uncertainties may have an impact on mental health.

Methods From 174 rural municipalities in the catchment area of the state psychiatric hospital in Gönzburg (Bavaria – Germany), hospital admission rates from the years 2006 through 2009 were computed and combined with structural and socio-economic data. Relationship of admission rates with municipality characteristics were analysed by means of negative binomial regression models.

Results Admission rates of patients with a diagnosis of schizophrenia and affective disorder combined decreased with increasing population growth, population density, average income and percentage of green areas, while admission rates are positively correlated with commuter balance, income inequality, unemployment rate and percentage of traffic areas. Admission rates for schizophrenia are negatively related to population growth, average income and percentage of agricultural areas, but positively related to mobility index, income inequality and unemployment rate. Admission rates for affective disorders are negatively related to population growth, population density, average income and (percentage of green areas, while higher admission rates are correlated with commuter balance, high income inequality, unemployment rate and percentage of traffic-related areas.

Conclusions Previously reported effects of wealth and economic inequality on psychiatric admission rates form urban areas also seem to apply to rural areas. This study once more shows that lack of financial security is a major risk factor for the occurrence of mental disorders. In contrast to findings in urban areas, the present study suggests that population density may have a ameliorating effect on mental health.

Multiple Migrations: Who Moves On and Why? – Answers From a Biographical Informed Perspective

Even though multiple migrations have and continue to gain in importance due to contemporary internationalization processes, to date they have hardly been subject of systematical examinations in migration research. Not only are the dimension and significance of their repeated migratory movements in the society as a whole underestimated, but also bring them out a methodological challenge for social research, especially quantitative methods. The multiple transnational paths of those onward migrants usually don’t appear respectively go missing in survey statistics. Nevertheless, according to certain targeted quantitative studies a notable part of international migration can be characterized as repeated migration. Based on them limited data are available on their demographic characteristics.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
such as age, income, employment, educational background and country of origin. However, even less is known about their individual motivations, decision-making and experiences. In order to contribute to an understanding of who is moving on and why, results of a qualitative, biographical oriented study on serial migrants from different national and social backgrounds are presented. Therein the underlying structures of meaning and patterns of orientation given their multiple migration movements are reconstructed and analyzed as constitutive elements of their transnational trajectories and social contexts.

Prostitution and The “Law-In-Action” – A Study Of Public Administration In Germany, Poland and Czech Republic
The paper presents the results of a qualitative-empirical research project on public administration of prostitution in Germany, Poland and Czech Republic. Therein administrative practices of both governmental institutions and civil society organizations (e.g. police force; public order, public health and tax authorities as well as social work) will be described and analysed. Using semi-structured expert interviews with organisational frontline-actors government of prostitution is approached and investigated from a bottom-up perspective. Germany with the Regulation model on the one hand and Poland and Czech Republic with the Abolitionism type on the other hand follow different laws and policies regarding prostitution. However, concerning their “law-in-action” the role of social actors professional habitus formations revealed to be highly significant. Moreover, it can be shown that the actors’ patterns of perception, thoughts and feelings a crucial impact on legal changes and its implementation. Given the circumstances the study took place after an explicit legal and political paradigm shift of governing prostitution in Germany. Based on case reconstructions and contrastive comparisons a theoretical model on prostitution governance has been developed. It en-folds the conceptualization of administrative actors’ professional habitus consist- ing of three general dimensions: their definition of subject, definition of self and definition of environment. Furthermore, empirically emerged challenges and ambivalences of governing prostitution in terms of an everyday practice attempt to explain the relevance of professional habitus formations affecting “law-in-action”.

Challenging New Governance: Evaluating New Approaches To Employment Standards Enforcement In Common Law Contexts
A mounting crisis in employment standards enforcement is prompting experimentation in common law contexts with new instruments aiming to improve workplace regulation. This experimentation across all stages of the enforcement process indicates the increasing influence of “new governance”. Focusing on reforms in five jurisdictions, this paper raises serious cautions around “new governance” styled enforcement mechanisms, demonstrating that, put into practice, enforcement models envisioning the new governance literature fail to account for the power dynamics of the employment relationship. Furthermore, assumptions about the inevitable collapse of state enforcement capacity are premature and can impede strategies for more effective ES regulation.

What’s the Best Way Forward for Immigrant Workers? the Dynamics & Efficacy of Building Unions and Building Social Movements
In 2000, the peak association of the U.S. labor movement, the AFL-CIO, reversed its long-standing opposition to the legalization of undocumented immi-grants and committed itself to organizing immigrant workers. Only a handful of its 57 affiliated unions actually heeded the call, but those that did successfully unionized immigrant workers in some key cities and states.

Yet, the number of immigrant workers involved in these unionization drives pale in comparison to the millions of immigrant workers involved in a very different kind of action: the massive nation-wide rallies for immigrant rights that took place in the United States in the spring of 2006. Here, too, a couple of labor unions played a critical role, both in the immediate lead-up to the rallies and 3 years earlier in the campaign to help build a national movement for immigrant rights. Two unions (SEIU and UNITE HERE) sponsored the Immigrant Worker Freedom Rides (IWF). Bus rides of immigrant workers and activists were used to bring publicity to the plight of undocumented workers in the U.S. and also to foster relationships among local labor unions, community-based organizations, and reli-gious, student and immigrant-right groups in the cities and towns where the bussestopped. Recent research shows that the IWF laid much of the institutional foundations for the 2006 rallies, especially in new destination communities (Voss and Bloemraad 2011).

In this paper, I examine these very different types of campaigns—those fo-cused on unionization and those focused on building alliances and a social move-ment—comparing their dynamics and effectiveness. This assessment is far from straightforward; as one has to take into account not only immediate impacts but also longer term effects, including the backlash against them rallies in some of the new-destination communities that had rallies in 2006. Moreover, this backlash continues to be conditioned on state and local political climates.

How Does Class Affiliation of Sociologists Impact Their Choice of Theoretical-Methodological Research Paradigm for Study of Social Structuration and Inequality and of Corresponding Practical Political Strategies?
The paper proposes self-reflexive examination of the impact of the class affil-iation of sociologists on their choice of theoretical-methodological and practi-cal-political research paradigm starting from which sociologists attempt to explain and understand discontinuities in social structuration and propose corresponding strategies for conservation, mitigation or elimination of socially structured inequality.

The main hypothesis of the paper is that sociologists like other highly educat-ed experts are affiliates of the new small bourgeoisie, incarnating contradictory class affiliation. Sociologists like other professionals, possess formal certificate of acquired specialist knowledge. Diploma makes available to them salaried employment and work place privileges of performing planning and commands’ mediating work functions, but does not relieve from permanent worries not to lose them and fall into the ranks of the manual wage laborers in times of high unemployment. This contradictory place in the class division of labor of direct producers of legitimizing ideologies, leaves sociologists greater margin for the choice of the world view and social standpoint than to the affiliates of the main antagonistic classes.

The core finding of the paper is that from the time of institutionalization of the sociology as the academic discipline, the majority of sociologists tend to retain/improve the standpoint/interest of exploiting class of commanding managers to conserve or only to reform the existing relations of reproduction of civil society’s social life and inequality, articulating simultaneously the corresponding mainstream consensus or conflict version of the positivist “old-materialistic” and/or phenomenological-hermeneutical “idealistic” research paradigm of eternal hierarch-ical social structure/stratification. The minority chooses to attempt to come over to the standpoint/interest of the class of exploited executors, to overcome class division of labor which reproduces social inequality and to establish the relations of self-managed “socialized humanis”, articulating simultaneously the corresponding critical “new-materialistically inverted dialectic” research paradigm of liberating potential of self-organized class struggle.

Social Media Collaborative Storytelling: The Occupy Movement and the Narratives Constructing It
Social Media developed in the 21st century have become tools for people to transmit and express their opinions for the global political scene. At the same time, worldwide recession and financial crisis has led the people to make use of these technologies in means that were never intended to when they were launched. Looking specifically at the Occupy movement and the role of social me-dia, this paper will argue that Twitter cultivated the ideal conditions for this social movement to bring together online and offline activist communities that shared common values. Considering the use of Twitter during a number of protests that adapted the ‘Occupy’ name, slogans or rationales, incubated in New York, London, Madrid and Athens, this paper will be premised upon the following advances. First, that this platform is increasingly evolving into means for collaborative stories-telling by the social movement activists, endowing them with a collective identity and a sense of belonging. Twitter’s discursive identity appoints an interactive role to the activists who use the medium as a tool to synergistically construct the movement’s story. Second, that this Occupy collective identity is now traceable in an one-time system where the realization of the Occupy movement is portrayed simultaneously in the world and inside its networks of production, online and of- line. Presenting the story of Occupy, Twitter becomes the score and the machine by the same token: the digital container of the story. A story that begins with solid common values, and experiences . In order to contribute to an understanding of who is moving on and why, results of a qualitative-empirical research project on public administration of prostitution in Germany, Poland and Czech Republic. Therein administrative practices of both governmental institutions and civil society organizations (e.g. police force; public order, public health and tax authorities as well as social work) will be described and analysed. Presenting the story of Occupy, Twitter becomes the score and the machine by the same token: the digital container of the story. A story that begins with solid social conventions, evolves through stages of dispute and crisis, and ends with a rather permanent openess or lack of resolution.
The Effects of School-to-Work Transition Pathways on Economic Outcomes through the Great Recession

Whereas the term “school-to-work transition” (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional and typically includes involvements in both school and work. Destandardization in the STW transition makes it difficult to assess the extent to which young people today “flounder” during this period. Using longitudinal data from the US Youth Development Study and hierarchical latent class analysis, this paper examines the interplay of educational and career attainment and its longer-term economic consequences. Four STW pathways were observed from age 18 to age 30: two groups that attain careers through postsecondary education (via Bachelor’s or Associates/Vocational degrees) and two floundering groups that do not (those with some college and those with no postsecondary experience).

Regression models demonstrate the negative effects of floundering pathways on economic outcomes and the heightened difficulties of those pursuing these pathways during a recession. While the High School Flounders were consistent-1 the worst off, the Some College Flounders (SCF) also experienced relatively poor economic outcomes. Both pre-recession (2005) and in 2009, respondents in the SCF pathway were less likely to have a savings account and own a home, and had more financial problems and lower job satisfaction than those who moved into the labor force with Bachelors’ degrees. Even starker were their circumstances in turbulent economic times, with the SCF pathway now more likely to be unemployed, receive financial help from parents, and to have recently lost a job. The data also show that it is most difficult for those who transition straight into a career and the Bachelors into Career group were non-significant, despite their unequal educational attainments, suggests that the pathway from an Associates or Vocational degree to a career is a viable alternative. We discuss implications of these findings both for the U.S. context, as well as for transition dynamics in other countries.
Predicting Future Action Patterns Based on the Cultural Hypothesis about Repertoires of Contention

Contentious events—such as the collapses of socialist regimes around 1990, the Seattle anti-globalization protests in 1999, and the Arab Spring since 2010—often catch many by surprise. It appears that future contentious events are totally unpredictable. However, for several years before the outbreak of each event, there were signs that something was happening. This paper presents an original analysis of national contexts, actor characteristics, and actor-target interactive dynamics.
porary sociological writings go back to the concept of swarms to describe internet collectivities. The notion of society does hardly appear within the sociology of the internet. Instead of simply taking that as a sociological blind spot, this paper argues for an empirical perspective. Discussing different supplements (Derrida) of the notion of society within internet culture it thus addresses internet practices as societal practices. Internet practices are social practices – and within modern society there has always been a typical figuration of proximity and distance, fluidity and diversity. But at the same time the different supplements for the notion of society could indicate that societal forms are changing (through the influence of new media practices), e.g. the figuration of proximity and distance or the figuration of privacy and publicity. For the special case of the internet, this might be an instance of “writing (society) into being” (boyd). The paper discusses the sociological discourse on internet collectivities from an empirical point of view. It emphasizes that internet practices take place within society. And it works out how the new supplements to the notion of society could be indicators for social transformations.

**WAGNER, ELKE** *(JGU Mainz, wagner@uni-mainz.de)*

**Internet Communities As Intimate Publics**

The culture of the internet has long been described as community culture (Rheingold, Wellman, Thiedeke). But what does community here actually mean? On the one hand there is a sort of community feeling and support in online social groups (Bittner, Schnick). On the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the Friend-ing-Practices don’t often mean true friendship but simply contacts between different addresses. Therefore Danah Boyd (2006) has suggested to describe community-building on the Internet as “writing community into being”: communities don’t exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community meaning here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list emerge. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. That is why indeterminate writing practices emerge.

**WAHLBECK, Osten** *(University of Helsinki, osten.wahlbeck@helsinki.fi)*

**True Finns and Non-True Finns: The Minority Rights Discourse of Populist Politics in Finland**

This paper analyses the minority rights discourse found in political statements of the populist party called the True Finns. The party won a historic electoral result in the Finnish Parliamentary Election in 2011, increasing its share of the votes from 4 to 19 per cent. A theoretical framework for this paper is provided by research about populism as a political approach to multiculturalism in western democracies. Will Kymlicka (1995) distinguishes between the minority rights of two different types of minorities in modern nation states: on the one hand, old national minorities, and on the other hand, new minorities that have emerged as a consequence of immigration. Kymlicka (1995) argues that the international so-called backlash and retreat from multiculturalism has mainly occurred in relation to the acceptance of ethnic-cultural diversity among immigrant groups. In this paper, the support for a backlash against multicultural policies is found in the minority rights statements of the political party called the True Finns. The paper argues that Kymlicka’s assessment is not completely accurate in this particular case. The statements of the party are not only about policies relating to immigrants. In the political rhetoric of the party the basic principles of group-specific rights for minorities are disputed. Thus, any real or imagined minority who is not considered truly Finnish, or not considered sufficiently representing ‘Finnishness’, can become a target of the rhetoric.

**Variations and Continuities of Motives for Climate Protest: A Comparison of Cop-15 Protesters in Copenhagen 2009 with Cop-19 Protesters in Warsaw 2013**

In connection with the Fifteenth Conference of the Parties to the United Nations Framework Convention on Climate Change (COP-15) in Copenhagen 2009, many activists had (at least reasonably) high hopes about successfully pushing for a new international climate agreement. After the complete stalemate between different country positions in Copenhagen, many climate activists lost their faith in the possibilities of achieving substantially changed international climate policies through the COP meetings. Four years later, facing the COP-19 meeting in Warsaw 2013, the climate movement mobilizes protest in a political situation with ostensibly more limited political opportunities. How do participants’ motives for protest and sense of efficacy vary between two equivalent climate protests when political opportunities change over time? The paper also explores shifts between the two points in time regarding what political strategies the participants in transnational climate demonstrations claim to prioritize. This is analysed based on two surveys of protest participants, one collected at the largest demonstration during the COP-15 meeting in Copenhagen 2009, and the other one at the main climate demonstration during the COP-19 meeting in Warsaw 2013. The data collection is based on a strict standardized methodology established in the international research programme CCC (Caught in the act of protest, Contextualizing Contestation) which ensures reliability as well as comparability across protest events. Inevitably, the research design not only involves comparison of cross-sections of climate protest participants over time, it is simultaneously a comparison of two national mobilizing contexts. However, these two aspects can be sufficiently disentangled by controlling for demonstrators’ country of origin in the highly transnational demonstrations. The study aims to contribute to current scientific discussions about protest mobilization, as well as to tap into the contemporary developments of the (European) climate movement, from the perspective of individual climate protestors.

**Variations of Stressful Work and Effects on Health after Labour Market Exit. Results from Share and ELSA**

Recent research has highlighted the importance of former life stages in explaining social inequalities in health at older age. In this paper, we describe working conditions during adulthood and analyse their influence on health after labour market exit. Analyses are based on two longitudinal studies with comparable information across 14 European countries: the English Longitudinal Study on Ageing (ELSA) and the Survey of Health, Ageing and Retirement in Europe (SHARE). We measure working conditions in terms of psychosocial stress at work (as defined by the demand-control and the effort-reward imbalance models), as well as working careers are regrouped using sequences analyses. Moreover - given cross-national dataset – we explore the relationship between specific indicators of social and labour market policies (e.g. expenditure on active labour market policy) and working conditions. Results show important variations of working conditions according to gender, socioeconomic position and countries. In addition, results illustrate the importance of work and employment for health among older adults, where effects of stressful work and unstable careers on later health were more consistent for men.

**Disaster Preparedness Among Older People with Long-Term Care Needs and Family Caregivers: Who Is Vulnerable and What Do They Need for Preparedness in Communities?**
Background: Hurricane Katrina in the U.S. highlighted the potentially fatal effects of a natural disaster on older individuals. This experience was reinforced by the Great East Japan Earthquake, where community-dwelling elderly were again at the greatest risk of mortality. Understanding the needs for and concerns of older persons with long-term care needs and their caregivers is vital to the development of public health programs for community level disaster planning.

Purpose: The preparedness of community-dwelling older people with long-term care needs were examined to identify characteristics of care-recipients and caregivers that are associated with worse preparedness and greater concern.

Methods: A self-administered survey among family caregivers of older Japanese with long-term care needs (n=952) were conducted in 2011. Logistic regression analysis was used to identify the predictors of disaster preparedness, including evacuation plans and caregiver's concern about preparation. Data were analyzed in 2013.

Results: Most older people had no concrete evacuation plans, and those with dementia were 40% less likely to be prepared. Caregivers who were responsible for older persons with worse mobility, as well as those in worse health or poor financial situations, reported higher levels of anxiety about their disaster preparation. However, more experienced, wealthier, and better socially integrated caregivers in the community were more prepared.

Conclusions. Older people with long-term care needs are at heightened risk in disasters, and rely upon caregivers who may be ill-prepared to respond in emergencies. Education of caregivers and development of community support programs could provide important sources of assistance to this vulnerable group.

WALBY, SYLVIA* (Lancaster University, S.Walby@lancaster.ac.uk)

Equality is key to justice. Debates on gender relations have challenged simple concepts of equality. Going beyond the static notions of equality as either equal opportunities or as equal valuation of different contributions, emergent concepts of equality depend upon visions of transformed gender relations. The paper critically engages with the limitations of Fraser's account of the cunning of history, to produce an analysis of the varieties of gender regimes, not only domestic but also public, not only neoliberal but also social democratic, not only in the economy, but also in violence, politics, and civil society. The paper goes beyond the limited Sociological engagement with violence, drawing on Gramsci to offer a stronger basis for debates with the debates on democracy, in the tensions between statist and horizontal conceptions, offering resolutions drawn from feminist politics. The paper offers a gender lens to develop debates on justice from Harvey and Wallerstein to Esping-Andersen and Sen.

WALBY, SYLVIA* (Lancaster University, S.Walby@lancaster.ac.uk)

Gendered Neoliberalism and the Crisis

Much historical materialist analysis of the crisis leaves gender out of focus; while much feminist analysis focuses on culture or experience, although there are exceptions. This paper offers a re-engagement of feminist theory and historical materialism; it genders neoliberalism and materialises gender. The inequalities on which the financial crisis draws and exacerbates are not only those of class, but also of gender. The paper analyses the intersection of gender with: the deregulation of finance; the ongoing recessions (gendered changes in job loss); government expenditure cuts (tax is a feminist issue); and emergent economic growth.

WALKER, GORDON* (University of Alberta, gordon.walker@ualberta.ca)

Social Class, and Leisure and Paid Work Need Satisfaction, in Hong Kong

The purpose of this study was to examine how need satisfaction during leisure and paid work varied, by class, among Hong Kong Chinese.

A Chinese-language telephone survey was conducted in Hong Kong. Potential participants had to work at least 20 hours per week in one job. Those who qualified reported: (a) their occupation and total working hours; and (b) how well their needs for autonomy, competence, and relatedness (Deci & Ryan, 2000) were satisfied during leisure and paid work

Class was determined using Florida's (2012) scheme; specifically: “super-creative” (n=99), creative professional (n=110), working (n=83), and service and sales (n=281). ANOVA indicated that working class participants were employed significantly more hours (M=52.1) than super-creative (M=46.7), creative professional (M=47.5), or service and sales (M=45.7), employees. Dependent t-tests examined the discrepancy between the three needs during leisure, and during work, by class. Results indicated that autonomy was significantly greater during leisure regardless of class; competence was significantly greater during work regardless of class; and belongingness did not differ by class. A second series of dependent t-tests examined differences between the three needs during leisure, and during work, by class. Results indicated that: (a) during leisure, autonomy was significantly greater than belonging except for working class Chinese, and belonging was greater than competence for creative professionals and sales and service workers; and (b) during work, belonging and competence were both greater than autonomy, regardless of class.

These results are noteworthy because they: (a) do not support Florida's (2012) contention that the super-creative class's leisure and work overlap; (b) suggest that while autonomy is the primary need satisfied during leisure, it is tertiary to competence and belongingness satisfaction during work, regardless of class; and (c) are not always congruent with findings from a comparable study conducted in Canada (Walker, & Glover, 2013).
Forgotten Estates: The Precarity of Neighbourhood Restructuring in Salford, UK

Since the 1980s, the Northern English city of Salford has undergone intense deindustrialisation and been subject to systematic waves of urban regeneration. A key aspect of these regeneration efforts has been to rebrand and reconstitute the city and its districts from ‘grimy’ and ‘old Salford’, to dynamic and cosmopolitan. Under the aegis of the ‘New Deal for Communities’ policy, one specific district in the mid 2000s was earmarked for a distinct process of redevelopment entailing the demolition of public housing stock and the construction of private housing developments within newly enclosed estates and along the profitable local riverside.

Ten years on and amid a challenging fiscal climate, this redevelopment vision has largely stalled resulting in an amalgam of complex neighbourhood impacts and processes encompassing partially demolished public housing estates, threats of further eviction for housing tenants, the arrival of new private owners and a severely disinvested community infrastructure. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established resident experiences of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic gone awry in an already severely unequal city. The findings of the research invite us to consider how spatial injustice is compounded not only by rational, unstoppable forces of eviction, erasure and gentrification, but by the limbos, uncertainties and abandonment wrought by entwined market-led dismantling and renewal agendas.

The regional infrastructure is a crucial training determinant. Age and vocational degree do not directly affect training decisions. Yet, persons in specific occupational settings do exhibit a lower training tendency. Also, training behavior of these persons appears to be more rigid and less likely to react to changes in their cognitive training attitudes.

Encountering the ‘Other’: Interpreting Student Experiences of a Multi-Sensory Museum Exhibition

The Immigration Museum in Melbourne, Australia launched the Identity: Yours, Mine, Ours (IYMO) exhibition in 2011. Aimed primarily at young adults and secondary school students, this major long-term installation seeks to foster reflection on identity and belonging as well as dialogue about racism through a reflexive, empathetic and interactive museum experience. Drawing on findings from three secondary schools, this paper reflects on a multi-method approach that included narrative interviews, video diaries and focus groups with Year 11-12 students as well as key informant interviews with principals and teachers.

While focus groups were a catalyst for dialogue about everyday experiences with cultural diversity and racism, the immersive experience offered by the IYMO exhibition could not account for the complexity of embodied experiences of belonging that were, to at least some extent, captured in narrative interviews and video diaries. For example, the narrative interviews allowed students to talk about themselves in relation to aspects of the exhibition rather than directing and framing their experience a priori, thus capturing a complex understanding of the students’ IYMO experience through an entanglement of their life worlds, at home and school.

Overall, the combination of qualitative methods revealed the ways in which an interactive immersive museum space can support students to encounter and engage with individual stories and faces, move beyond the narrative barriers experienced in multilingual contexts, in order to provide a rich empirical perspective on multi-sensory exhibitions.

Internet Public Sphere Under Construction: A Grounded Theory Analysis to Sina Netizens’ Comments on “Toilets Standard”

The dilemma for China to construct its internet public sphere does not result from the lacking of the same physical foundation as the western world has. On the contrary, the structural constrains such as no clear boundaries between public and private, the inner-circle communication oriented caused by “Chau Guji”, as well as the non-stand against as the “weapons of the weak” do matter, that finally prevent from the opinions transforming from personal to public.

The recent development in East Asia has witnessed two contradicting trends: on the one hand, there have been reviving interests in Asianism (especially inspired by Takeuchi Yoshimi) and/or the so-called “East Asian Community” in both official and intellectual discourses; on the other hand, there has been an escalation of nationalist politics in the region, manifested as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German social thinker Max Scheler, this paper provides a preliminary examination of what can be called “structures of feeling” in East Asia. Three dimensions of these structures are outlined for analysis: (1) grievances and the politics of memory; (2) resentment (or resentiment in Scheler’s terms) and value systems; and (3) power relations and the multi-layered structures of resentiment in East Asia. It is argued that the true reconciliation among different people in this region can only be reached when any of Asianism or East Asian Community can be carried out. Toward the end of the paper, the implications for the reconciliation in the region will be further explored.

The Quest to “Overcome Modernity”: War, State-Building and Nationalism in Japan and China

Drawing on Japan and China as two illustrative cases, this paper intends to shed new light on our theoretical understanding of modernity by articulating the relations between war, state-building and nationalist discourse in the non-Western context. From its very burgeoning, the historical formation of modernity in East Asia has been intertwined with the experience of the defeat of war (or war threat) that, in turn, gives rise to nationalism. Moreover, understood as originating from the West, modernity to the East has been regarded as something to be achieved and overthrown at once. On the one hand, it is considered that the East has to catch up with the West in terms of material achievements (particularly economic performance and military power); on the other hand, it is also contended

1. How Indigenous People Are Excluded from Caring Their Children?

The “residential school” symbolizes the ultimate form of cultural violence by the state toward indigenous peoples in the Western history of child welfare, with the victims of residential school named as ‘the stolen generation’ by indigenous scholars. Although residential school has never been adopted in Taiwan, I argue that similar effects of residential school policy are replicated through the social organization of child care. The case of the aboriginal community-based child care program in 2008 will be analyzed to illustrate how indigenous peoples are excluded from caring their own children and how indigenous ways of care disqualified in the bureaucratic discourses of ‘safety’ and ‘quality’ in child welfare. Choosing the experiences of community workers for indigenous communities as the standpoint of my study, the analysis shows how the definitions of safety and quality reflect the worlds of urban Taiwanese people and indigenous perspectives are excluded as ‘unsafe’ and ‘inferior’. It is adopted to give voices to front-line child care workers and validate indigenous perspectives in the coalition-building process among indigenous communities. Alternative discourses on safety and quality will be presented as a way to interrupt the circle of colonial relations in the context of the child welfare system.

that Western modernity has intrinsic contradictions that will eventually lead to self-destruction, of which the only redemption is through the alternative path provided by the East. Such a dichotomous view of modernity has been dominating nationalist discourses in many instances in East Asia. Thus, nationalist projects in East Asia often have a double task: to pursue modernization through state-building, on the one hand, and to “overcome (Western) modernity”, on the other. However, due to the legacies of war, which leads to a lack of reflection on state ideology and violence, such nationalist projects often fall into the trap of modernity itself without being able to become the genuine critique of the latter. This paper will use the attempt to “overcome modernity” in wartime Japan and the search for “anti-modern modernity” in contemporary China as two examples to examine such a paradoxical situation. It is concluded that, to better theorize (and critique) modernity, the intertwined relationships between state, war-building, nationalism and global inequality have to be taken into account.

Feeling Good about the Iron Rice Bowl: Economic Sectors and Happiness in Post-Reform Urban China

Situated in China’s market transition, this study examines the relationship between economic sectors and individuals’ happiness in post-reform urban China. Based on pooled data analysis of restricted urban samples from the China General Social Survey (CGSS) 2003, 2006 and 2008, the subjective premium enjoyed by workers in the state sector is noteworthy: individuals working in the state sector have significantly higher levels of happiness compared to counterparts in the private sector, other things being equal. After controlling for selectivity in mobility into the private sector, differences between those remaining in the state sector and those moving from the state to the private sector are highlighted: those remaining in the state sector are significantly happier than former state sector workers who moved into the private sector, whether the move was voluntary or involuntary. Possible underlying causes of these psychological costs are further explored: institutional segmentation in the allocation of social welfare benefits rather than psychological factors serves as the primary nexus linking state-to-private mobility and happiness. On the one hand, those who moved voluntarily experienced a trade-off in enjoying higher paid-offs while losing a sense of security. On the other hand, involuntary, downward mobility leaves long-term psychological scars to those who experienced layoffs or unemployment after controlling for social welfare benefits. People who experienced sectoral mobility, whether voluntary or involuntary, suffer from loss of the iron rice bowl. Results from robustness checks indicate that neither observed nor unobserved confounding factors, if any, would bias our conclusions. This study emphasizes the role of social security as an important dimension in determining individuals’ happiness that should be explored in future research.

Re-Territorialization and Social Resistance in the Remaking of Dafen Village, Shenzhen, China

After exhibited in Shanghai EXPO2010, Dafen Oil Painting Village has been advocated as an innovative “best practice” of governing that has transformed urban villages with low-skilled labors and chaotic landscape into a cultural cluster. Many scholars have noted that, in China, couples of famous cultural clusters have emerged and prospered in places with a near vacuum of governance, such as villages or remote suburbs, only to drastically change upon the extension of state governance. Nevertheless, there seems to be a marginalization of scholarly attention to the trade-painting community of Dafen Village, perhaps due to the common critiques on authenticity of trade-painting industry and thus, negligence of everyday life of trade-painting workers and their struggles. What is changing the landscape of social relations when a particular area is demarcated as a special cluster subject to the state’s regulation in name of objectifying the imagined economy. Instead of debating the nature of everyday life of trade-painting workers and their struggles.

Gender Differences in Social Quality in Taiwan

This paper will try to explore the social quality through gender lances. Taiwan is in a transitional period in terms of gender equality and social progress. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in perception of social quality.

The data is derived from 2nd wave SQSQ survey done by National Taiwan University. This questionnaire has been designed by the Social Science Research Program of the National Taiwan University and modified by ACSQ network and Taiwanese SQ team member. Here are about 1200 sample are collected and CATI system has been utilized during data collection. Stratified random sampling has been used for sample representation purpose.

The data will address that here is gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

Effects of Social Capital on the Psychosocial Development of Children in Middle Childhood in China

In this analysis, the effects of social capital (including family, school, and community social capital) on the psychosocial development of children from two types of families in China have been investigated. Five dimensions of psychosocial development are analyzed, including social competence, emotional competence, self-esteem, resilience and pro-social behavior. In total, 140 children studying in grades 4 to 6 from two primary schools in Tianjin have involved. And all of the participants are selected randomly. The outcomes suggest different effects of social capital on the five dimensions of psychosocial development. The interaction effect between family and community social capital significantly affects children's social competence, emotional competence and resilience at the same time. School social capital and peer social capital are interacted, and influence emotional competence. Meanwhile, school and community social capital has significant effect on resilience. However, except for the direct effect of family social capital on social competence, no other direct significant effects of social capital have been found surprisingly. It is also surprising to find no significant effects of social capital on self-esteem or pro-social behavior, which is conflict with the current literature from Western culture. The outcomes from empirical analysis suggest that, simple social capital can not promote the psychosocial development of children in middle childhood in Chinese context. To strengthen the interaction between family and school, school and community, and family and community, will be very important to improve children's psychosocial development level. Furthermore, more potential predictors are supposed to function to promote self-esteem and pro-social behavior in Chinese context, such as cultural capital.

WANG, SHUXIONG* (Renmin University of China, xiongshui@ruc.edu.cn)

The Guanxi Hierarchy - Family Ties and Finance in China's SMEs

In his seminal work, From the Soil, Xiao-tong Fei found that solidarity in social ties fades with distance from primary group relations. Thus the power of guanxi (i.e., connections or relationships) would differ according to its source. Most powerful would be guanxi based on kinship, with the power of such connections fading as one moved down the scale from kinship, to regional location, thirdly to school ties, and finally to business ties.

Fei’s early work has returned to prominence in analyses of group ties in private enterprise, following market reforms over the past four decades. For instance, Yu-sheng Peng (2004) highlighted the economic benefit of kinship networks in China’s rural industrialization programs. He found that kin solidarity played an important role in recruiting local government affiliation as well as small and medium-sized enterprises. Furthermore, more potential predictors are supposed to function to promote self-esteem and pro-social behavior in Chinese context, such as cultural capital.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
the financial support provided for private rural enterprise. At least regards investment, the original hierarchy dominated by kinship-based guanxi appears to remain at the center of most enterprise.

The Influence of Early Trauma on the Quality of Life in Taiwan: The Moderating Impacts of Religiousity?

A growing body of life course research based on the Western societies has displayed the long-term negative effects of childhood and teenage trauma on life conditions in later life stages and has pointed out that religion plays an essential role in moderating or buffering the critical impact of early trauma. However, whether similar patterns appear in Asian societies remains largely unexamined. It is especially ambiguous whether the effectiveness of religion's coping impacts applies to Asian societies where religious compositions are more diversified with non-Christian religions. As a result, this research regards Taiwan as an ideal setting to elaborate the associations among early trauma, religiosity and two indicators of adulthood life quality: happiness and self-reported health.

With the utilization of the data drawn from two nationwide representative samples: the 2009 Religion Module of the Taiwan Social Change Survey (TSCS) and the Survey of Religious Experience in Taiwan (REST), three sets of questions are investigated. The first sets of analyses enable this research to ascertain the impacts of diverse dimensions of early trauma on the life quality, including quantity views (as indicated by the number of early traumatic events), category views (as classified as parental-related, sibling-related, self-related, and economic early trauma), and juncture views (as sorted into childhood traumas and teenage traumas). Furthermore, this research discusses whether the Taiwanese with higher level of childhood and teenage traumas tend to display higher level of various types of religiosity during adulthood, including belonging aspect (as grouped into no-religion, diffused-religion, and institutional-religion), belief aspect (as measured by attitudes toward supreme god and spirituality), and behaviors aspect (as determined by public religious attendance, private observance, and religious techniques). Last but not least, this research gauges whether the negative influence of early trauma on adulthood life quality is moderated and buffered by religiosity during adulthood.

Immigrant Wives As Volunteers in Taiwan: Their Characteristics and Experiences

The prevalence of transnational marriage can be witnessed in Taiwan in the late twentieth century where Chinese and Southeast Asian women, mainly from Vietnam, dominate numerically. Most of the women got married to Taiwanese men through the operation of profit-pursuing marriage agents. These immigrant wives, contracting “commodified transnational marriage”, are labeled in Taiwan as “foreign brides”, a derogatory term that implies exclusion and discrimination. It has been recognized that immigrants can improve their economic, social and emotional well-being, civic participation and integration in the host society by undertaking volunteering activities. Nevertheless a variety of factors can prevent them from voluntary work. In other words, it is significant to disclose immigrant wives’ experiences of being volunteers in Taiwan. However, the studies to date on the issue of these women have largely concentrated on adaption; little attention is paid to their participation in volunteering. Thus this paper aims to learn about the characteristics and experiences of immigrant wives who participating in volunteering in Taiwan by conducting qualitative research. The major questions raised for this paper are: 1) What are their factors for volunteering? 2) What are reasons keeping them from volunteering? 3) What types of volunteering work do they do and why? 4) What does volunteering work mean for them? The research results can put forward recommendation to policy-makers and mainstream organizations with a hope of promoting volunteering participation of immigrant wives in order to improve their well-being in Taiwan.

Cooperative Marriage: Queer Politics of Chinese Lolas and Gay Men

Being a new and under-researched phenomenon since 2005, cooperative marriage attracts attention and generates debate in and out of the mainland Chinese LGBT community. Cooperative marriage is a heterosexual marriage performed and negotiated by two non-heterosexual parties, a lola (lesbian, bisexual and transgender woman) and a gay man.

Being a popular coping strategy of lolas and gay men in contemporary China, in facing the institution of family, marriage and heteronormativity, cooperative marriage offers great insights into Chinese families, tongzhi kinship and alternative forms of intimacy and queer alliances. Filial piety, compulsory heterosexual marriage and potential housing, legal and financial benefits in heterosexual marriages are major momentum for this type of highly ritualized marriage. In cooperative marriage, both parties are fully aware of the obligations and nature of the marriage, however many of them struggle to make a balance between the conjugal family, natal family and their same-sex desire.

Various strategies are developed in finding and sustaining the (superficial) harmony of such families: different family practices, new family arrangement, the performance of masculinity and femininity in their conjugal houses and relevant public spaces. Friendship and even family bonds are thus developed and strengthened, forming new sexual alliances in the society.

Like all heterosexual marriages, cooperative marriage is also a gendered experience; therefore the study is especially interested in lolas’ experiences and narratives, their definition of love, family and intimacy. This research studies cooperative marriage from multiple aspects of family practices including domestic, consumption, kinship, marriage, emotion and parental practices, in order to understand their lived experiences and how they do gender and families. Feminist, interpretivist qualitative approach is adopted in the research. Semi-structured interviews were conducted and participant observation as well to gain insights of such marriages, 13 lolas and 7 gay men were interviewed, as well as activists from the LGBT community.

The Embeddedness of Corruption in Contemporary China: The Bo Xilai and Lai Changxing Cases

Economic corruption cases are a window into networks linking state office holding with wealth accumulation. This paper draws on the concept of embeddedness (Granovetter 1985) to examine two prominent cases in contemporary China. The cases are, I claim, ideal typical of agents and their networks coming together on the basis of wealth accumulation. One is “corruption from below”. Its agent was a high-level official born into the political elite, Bo Xilai, who accumulated great wealth through networks in his social circles that were revealed in 2013. This paper’s analysis centers on how the agents select, monitor, and sanction others in their networks. There are two key findings. One is that the networks are organized through third-parties (proxies). The other is that the networks’ institutional basis is constituted not only by trust, but also by coercion. The paper’s subsequence discussion considers some mirrored differences reflected in the humble and elite positions of the agents, and how their two kinds of networks can interact. In the conclusion, I use the paper’s argument to stress the need to develop an economic sociology of corruption.

Cool Towns for the Elderly - Protecting the Health of Elderly Urban Residents Against Heat Stress

Background: The 2003 heat wave in Europe resulted in 70,000 deaths. Particularly vulnerable are persons with lower SES living in socially deprived urban areas.

Methods: Using a standardised questionnaire, a telephone survey was conducted in summer 2001. 400 subjects (>65y) living in four different residential areas in Vienna were interviewed. In addition, face-to-face interviews with residents of retirement homes (n=200) and 15 in-depth interviews with stakeholders were carried out.

Results: Heat primarily affects the elderly's energy balance. Most frequently mentioned conditions are fatigue (58%) and sleeping problems (48%). Older people adjust their behavior during a heat wave mainly by wearing lighter clothes, increasing liquid intake and staying indoors during daytime. High-risk groups are persons with a lower socio-economic status and activity level as well as poor health condition. This group is also more likely to withdraw from the public for the duration of the hot periods. Those who don’t withdraw suffer from fewer heat-related ailments. Factors that increase the likelihood to stay at home are a disadvantaged neighborhood, dissatisfaction with and lack of neighborhood networks

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
and age discrimination in the residential area. Whether older socially deprived individuals go out during a heat wave period is not so much a result of available green spaces, but rather of existing socio-spatial conditions.

Conclusion: The elderly are particularly vulnerable towards heat stress. With urban populations ageing, and urban temperatures rising, design of urban areas must increasingly consider the interaction of social and climatic factors to increase age-friendliness. Vulnerability towards heat is not natural, but produced by socio-spatial conditions and can be counteracted by community-building initiatives.

WANKA, ANNA* (University of Vienna, anna.wanka@univie.ac.at)

Older People in Public Space(s) – Engagement or Disengagement?

Background: Public spaces are in transition, and it doesn’t head towards age-friendly cities. Instead, spaces are turned into functions of mobility – lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

Methods: The main research question is how older people cope with the deprivation of public places and what role the specific localities play in their strategies. A comparative case study of contrasting residential areas in Vienna, Austria, will be presented. A mixed-methods design combining both quantitative and qualitative methods is deployed.

Preliminary Results: The quality of the residential area significantly correlates to older people’s outdoor behavior. Factors that reduce the likelihood of spatial engagement are a disadvantaged neighborhood and age discrimination in the residential area. Who owns little resources is even more affected. However, older people also own specific resources that can contribute to the revitalization of public spaces, increasing not only their own quality of life but the quality of city life in general.

Conclusion: The intersectionality of old and new dimensions of inequality – like age intersecting with education and gender - poses new challenges for environmental justice. Hence, environmental justice can be discussed under the keywords of age-friendliness. Without counteraction, environmental deprivation and the corresponding withdrawal of older people from public space will increase large age – both in regards to health and significance. Who withdraws from public space becomes invisible in society. However, older people are also a highly competent group that is yet hardly targeted by urban revitalization initiatives. Here lies potential for inclusive ‘gentrification’ of urban areas.

WARD, PETER* (University of Texas at Austin, peter.ward@austin.utexas.edu)

The Reproduction of Informality Among Low Income Self-Help Settlements in Texas

Insights from a major cross-national study of low income consolidated irregular settlements in Latin America (www.lohn.utexas.org) reveals a reversion to informality as previously regularized (legal) property titles become clouded by householder, state, and market forces. Theorizing that such settlements are as contentious and contentious now as they have always been, the paper draws upon findings from two major periods of research in low income self-help settlements in the USA reveals similar and parallel contemporary processes of informality and reversion to informality. Home building in ex-urban colonias and associated informal subdivisions, as well as home improvement and urban regeneration in inner-city (first suburb) neighborhoods demonstrate informality in a number of ways: land title insecurity as land tenure increases, lack of proper planning and construction improvement, non-code compliance, and dwelling subdivisions and infilling, and inheritance practices – all conceived as highly rational responses to poverty and poor market performance. Data come primarily from Mexican and Mexican American communities in South and Central Texas and draw upon three major datasets compiled by the author. The realms of informality discussed are: forms of land acquisition; types of title and proof of ownership; financing of home building and improvements; compliance with codes; lot subdivision among kin or petty landlord-tenant arrangements; practices of servicing and solid waste disposal; health practices to deal with chronic morbidity and mobility problems and aging; inheritance and disposition of property to heirs.

WARING, JUSTIN* (University of Nottingham, justin.waring@nottingham.ac.uk)

The Contingent Legitimacy of Professional-Managerial Hybrids: Towards a Relational Sociology of Hybridisation

Despite increased interest in professional-managerial hybrids, the unit of analysis for most research remains on the hybrids themselves, i.e. practices, interests and identities, or the processes of hybridisation, i.e. moving into the role. There is limited consideration to the experiences or influences of other professional or managerial actors with whom these hybrids must relate and achieve a sense of legitimacy. This highlights a relatively neglected aspect of professional-managerial hybrids and requires a shift in analysis from the hybrid to the wider constellation of relationships and stakeholders. Drawing on theories within relational sociology, especially the work of Bourdieu and Crossley, the paper examines the relational ties of 36 medical-managerial hybrids working in different areas of service organisation, including executive management, clinical leadership and clinical governance. Each of these hybrids exhibits different relational networks and points of ‘professional-organisational intersection’, which are drawn up, developed or dissolved when the actor seeks to legitimise their new hybrid roles. This examines the relationships of co-workers, from both medical and managerial communities, to these new hybrid roles, where co-workers are often found to question hybrids in terms of their expertise, inter-occupational strategies, strategic alignment, and reputation with colleagues. The study shows how hybrid managerial roles are contingent upon the relationships and sanctioning powers of both other doctors and managers, and in fulfilling their hybrid roles and this involves drawing upon different forms of social, symbolic, cultural and, increasingly, economic capital. The paper concludes by calling for greater attention to the relational dimensions of professional work in organisational contexts and the relevance of Bourdieusian social theory within the sociology of professions.

New Approaches to Sociospatial Network Analysis: Understanding and Responding to Neighbourhood-Level Poverty and Disadvantage

While socio-economic-spatial divisions within cities and towns have long been evident, it is only more recently that they are generally considered to be growing sharper and differentiating at the scale of suburbs and neighbourhoods. This produces effects in which the poor and non-poor increasingly live apart from each other and is referred to as ‘sociospatial polarisation’. These socio-economic-spatial processes have significant implications for the ways in which poverty and socio-economic disadvantage is being reproduced through converging socio-economic and spatialised processes. Drawing on a series of studies conducted in Victoria, Australia, and exploring social network structures and experiences of community in disadvantaged and non-disadvantaged neighbourhoods, this paper explores the implications of converging socio-economic and spatialised processes with particular focus on settings of place-based neighbourhood disadvantage. Issues addressed are: 1) discussion of findings from network analyses that show contrasting patterning of social networks between residents of poor and non-poor neighbourhoods; 2) consideration of the implications of divergent network patterning experiences and potential of community in place-based settings for poverty reduction strategies. Network analyses use a range of methods to collect network data on residents’ networks including contact diaries, CATI surveys and ethnography and, more recently, mobile phone and Global Positioning System (GPS) technology. Evidence from these and other studies suggests that residents of socio-economically disadvantaged neighbourhoods are likely to have more local networks and fewer extra-local networks, than residents living in other kinds of neighbourhoods. These findings have significant implications for poverty reduction strategies that assume neighbourhood ‘community’ to be potentially transformative mechanisms for driving socioeconomic change at local levels. Rather, efforts should focus on understanding macro processes that are contributing to socio-spatial disconnections among vulnerable populations and developing poverty alleviation strategies that include efforts to connect residents into extra-local and socioeconomically diverse networks.

Unpaid Domestic Work and the Economic Crisis: Reinforcing or Diluting Gender Inequalities in Britain?

The recession of 2008-9 and the prolonged economic downturn have brought to the fore fundamental questions about the ramifications of the crisis for the working lives of diverse social groups. In Britain, a marked absence in the plethora of research projects exploring the work and employment outcomes of the crisis is explicit attention to ‘housework’. Whilst campaigning women’s organizations have made multiple predictions about the impact of crisis on the gendering of work inside and not just outside the home, there has been little empirical attention paid to domestic work and the crisis. The evidence that does exist is patchy, often anecdotal, and hints at diverse ramifications of the crisis. This is a key gap in our current knowledge. It is significant because domestic work talks powerfully to change, and continuity, in the work roles of women and men. Crises can offer valuable opportunities to re-evaluate, re-think, challenge and change everyday work practices. Attention to domestic work within the home is also pertinent in times of economic crisis because the domestic sphere can carry a very heavy burden, absorbing the fallout of crisis in multiple ways. The domestic sphere might support family members who have lost jobs or are economically insecure, both financially and emotionally. In previous periods of economic crisis in Britain, the hardship caused by economic crisis was not equally distributed by gender within the home. Rather, women bore the heavier burden of increasing domestic and caring work as they sought to support their families in troubled times. The paper draws upon large-scale survey data from contemporary Britain to consider the ramifications of the current economic crisis for gender inequalities in domestic work.
the tendency to have informal social interactions (e.g., discuss personal matters, share free time) with departmental colleagues who share parental status (parents or non-parents). We use social network data on about 380 faculty within the natural and social sciences at a large research-intensive Midwestern university. For the preliminary analyses, we ran OLS with permutation tests and did not find a significant gender difference in parent homophily, which was measured using the point bi-serial correlation (PBSC). The next step is to run Exponential Random Graph Models (ERGMs) and test the gender difference controlling for dyadic dependence.

Why Do Organizations Form Groups?: Complex Structure and Behavior of Japanese Groups from 1977 to 1998

Although it has been a well-known fact that Japanese business groups have consisted of two types of network, the structural difference between them has not been paid enough attention to by researchers. Applying the techniques of network analysis and regression analysis to data on a total of 2,972 large Japanese firms over a 22-year period, this paper demonstrates the correspondence between network structures and the three different goal-pursuing behaviors of firms.

Corporate Complexes (i.e., the largest six cross-industrial corporate networks with a circle pattern of bilateral equity ties) had a significantly positive effect on member firms’ status-oriented behavior as well as on firms’ technology-orient ed behavior. However, the effect on firms’ efficiency-oriented behavior was not confirmed with the same dataset. Meanwhile, Corporate Groups (i.e., the seven corporate networks in the automobile industry with a tree or star pattern of unilateral equity ties) had a positive effect on member firms’ economic behavior as well as a negative effect on member firm’s technological behavior. In the case of the economic effect, however, only superordinate firms benefited from corporate groups. The effect of corporate groups on member firms’ social behavior was not confirmed. The patterns of group structures and member firms’ behaviors did not change throughout the observation period despite the fluctuation of the macro economic environment.

From the analyses, these findings suggest that Corporate Complexes were a system of resource-acquiring by means of firms’ high social status, while Corporate Groups were a system of making profits to sustain the costly system for superordinate firms. (For subordinate firms, corporate groups were the system for bare survival.) Both structures were thus complementary to each other. Shielding the member firms against environmental fluctuation and technological uncertainty, Japanese business groups, by virtue of their complex structure, simultaneously pursued multiple goals as a united body.

Worlds of Nurses in the Care at Home, a Comparison France-Japan

Most of the Japanese nurses in the care at home in the regions Fukushima and Nagano are married, having children, but they had an interruption in their careers, longer than the French nurses. So we observe it in difference between length of having D.E. (Diploma of State) and experiences as nurse in the care at home. In France, the nurses in the care at home stress the activity and more exactly on their condition of exercise, at the levels of motivation and difficulty, unlike the nurses in hospitals, who like working in team, emphasize the cooperation with other professionals. The French nurses mention practically never the relations with patients’ families. So, the professional world of the first ones focuses on the market competition, while that of the second on the industrial agreement. In Japan, the nurses in the care at home, quite as the hospitable, suggest the relations with patients in terms of motivation and difficulty, which one organization the relations with the family of the patient. The professional world of the nurses in the care at home is characterized by the proximity or domestic convention. However, the nurses in the care at home in Fukushima differ from those in Nagano. The second criticize care managers in the point of view of cooperation. The first ones suffer from the difficult situation after the disasters to improve the quality of life of the patient, but they think of the role of the professional associations in terms of civic convention. This requirement of collective organization comes along with a bigger autonomy and, doubtless, with a grip of more important responsibility. This will have important and positive consequences on the image of the profession.

Communicating the Discrepancy: Operational Outcomes of the Activation Policy in the Field of Local Support Activities for Migrant Residents in Germany

This paper addresses the question of how migrant residents and local welfare organizations experience the recent political changes to the “activation” welfare policy in Germany.

Because of a radical transformation of the political landscape in the last decade in Germany, people with migrant backgrounds are subjected to activation policies in two ways. Since there are twice as many jobless migrants compared to Germans, the migrants are necessarily the addressees in the new job placement measures, which may be well compared to the workforce policies in the United Kingdom. Furthermore, migrants are involved in the activation scheme through the formation of an integration policy in Germany that strongly reflects the concept of activation by requiring total engagement, self-responsibility, and willingness to get involved in the life and norms of the host country.

To assess the practical outcomes of such a political arrangement in the direct surroundings of the involved actors, the author conducted narrarive interviews with migrants and local actors who are either in charge of job placement measures, or the job centers or employment offices in migrant-dense city areas in Munich. A wide range of administrative documents were also referred to.

On the basis of these sources, this paper demonstrates the cognitive discrepancies among the actors and discusses that one of the most significant outcomes of migration measures may be achieved by promoting a reflexive and relational mindset among local institutions and migrant residents. The discussion is concluded by indicating that the operational interest of local welfare organizations is paid increasingly to enhance their communicational sensitivity so that they could deal with the highly complex demands of their individual clients; i.e., the sensitivity that relativizes the predominant distinction between Germans/non-Germans in the traditional welfare community.

The ongoing discussions about social inclusion and exclusion can be recast in the light of Luhmann’s systems theory by referring to narrative interviews with local actors from migrant support organizations.
How can the Impairment and Disability be accomplished in the sports games? Answering this question, I apply interaction analysis and game analysis to the Wheelchair Basketball games.

The social model of disability is very important in the way that “disability” is “the Social”. But this model is rarely used for the studies of the sports sociology. The social model of disability is simply used as a factor to block personal sports participation. However, from a viewpoint of the Ethnomethodology, we can consider the severity of the impairments and the disability as the cooperative accomplishment in / by the interactions of people. The purpose of this study is to illustrate “the sociality of disabilities” that occur from experiences in the sports practice. In this study, I classify games of wheelchair basketball, the top-level, middle-level, low-level and examined the play in each game.

The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game “achieved” something.

In the wheelchair basketball, it is empirically-known that a competition power of the team is closely concerned with the skill of the low-point player (a player with severe impairments). In the team having high competition power, the implication of a player with severe impairments may be different from a low team. In the logic of the wheelchair basketball rules, “impairments” is indispensable. The game performance shows it. While, “impairments” is experienced as difficulty in the game when the low-point player does not function effectively by the team. The negative “impairments” is achieved and maintained as a result of play interactions. “Impairments and disability” are accomplished as a part of interactions in a game.

**WATSON, DENNIS** (Indiana University Richard M. Fairbanks School of Public Health, dpwatson@iu.edu)

**Reducing Uncertainty and Improving Recovery through the Provision of Flexible Services**

For many individuals living with mental health and substance abuse problems, it is difficult to obtain the safety and security that are necessary components of recovery. This is because they do not have access to resources such as food, housing, transportation, and employment that are needed to begin the process of stabilizing their lives. When these resources are available, they are often are attached to a variety of caveats that make it difficult to exercise personal agency, another important component of recovery. Recognizing this, new approaches to mental and behavioral health care have begun to emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them. This presentation will focus on this emerging paradigm and the effect it is having within the mental and behavioral health fields. Housing First (HF) and Access to Recovery (ATR) are two services approaches that will be highlighted as examples. HF is an intervention developed in the United States—and spreading internationally— that provides immediate housing with low service demands to chronically homeless individuals with co-occurring mental health and substance use disorders. ATR is a program funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) that engages individuals with substance use disorders to develop their own recovery goals. ATR also provides individuals with stipends that can be used to access a number of services that are not provided by traditional programs. Discussion of both service approaches will emphasize findings from the author's own research, which demonstrate how these models assist individuals in their recovery processes by reducing uncertainties related to the lack of resources and by increasing personal agency.

**WATSON, JULIET** (Victoria University, Juliet.Watson@vu.edu.au)

**Gender, Homelessness and Social Capital: Young Women’s Management of Disrupted Housing Transitions**

Mainstream understandings of young people’s housing transitions inadequately reflect the diversity of experiences and social processes that shape the course to independent living. By only recognising normative pathways for young people leaving the family home significant experiences are either being misrepresented or lost. In Australia, a largely hidden aspect of youth housing transitions is the presence of homelessness. Many young people in need of accommodation are faced with a difficult housing market where there is a short supply of safe and affordable properties. For young people, to be without a home is not only to be homeless but also to be removed from all the subjective meanings a home carries. In addition, increasingly globalised economies and deindustrialisation have had serious implications for young people’s transitions to secure accommodation due to employment insecurity and financial instability. I argue that the complex relationship between disrupted housing transitions and youth homelessness needs to take into account structural factors relating to gender, race/ethnicity, class, location, sexuality and disability. Accordingly, the variety of young people experiencing homelessness in Australia demands new ways of conceptualising the phenomenon. The application of a gendered lens to homelessness research is one possible way to challenge dominant discourses of youth housing transitions. In this paper I explore young women’s experiences of homelessness and the utilisation of intimate relationships as a form of context-specific capital for accessing material support, particularly access to stable accommodation. To this end, I draw on the ethnographic experiences of a young woman developed by Pierre Bourdieu. These concepts are examined from a feminist standpoint to explain how Bourdieu’s work may be appropriately to advance knowledge of how gender impacts on both the management of homelessness as well as transitions to stable accommodation.

**WATT, PAUL** (University of London, p.watt@bbk.ac.uk)

**Housing Market Restructuring and Inequalities in London and the UK**

This paper aims to do two main things. Firstly it provides an overview of UK housing market restructuring which has occurred as a result of longer-term shifts in tenure patterns, and shorter-term impacts of the 2008 credit crunch aftermath and the Coalition Government’s welfare and housing policies. The impact of this restructuring is that the tenure boundary between social and private renting, in terms of rents and security, is becoming increasingly blurred, while homeownership is being transformed via shifts in mortgage finance availability. The result of these trends is the ‘end’ of both social renting and home ownership as we know it. Secondly, the paper focuses on London and it demonstrates how the national trends are exaggerated in the capital, partly as a result of the central London housing market providing a ‘safe haven’ in relation to global capital flows, and partly as a consequence of urban regeneration schemes which have had the net effect of reducing the proportion of social housing throughout much of London. The paper uses Census and other data to examine the dramatic rise private renting in London since 2001, a rise which is predicated on the buoyancy of the buy-to-let mortgage markets, foreign capital inflows which generate build-to-let developments, and also the increasing outflows of ex-public housing into the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London since 2001 is a rise in private renting that parallels and arguably reinforces the labour-market based ‘precariat’ identified by Guy Standing (2011) and Loic Wacquant (2008).

**WAWRZYNIAK, JOANNA** (FSU Jena, wawrzyniak@is.uw.edu.pl)

**Are There Only Detours and Dead Ends? Durkheimian Routes to the Suburb of Europe**

The paper aims at extrapolating several qualitative hypotheses concerning detours and dead ends in social science from a case study of three generations of Polish scholars influenced by a Durkheimian school in sociology. By this, it attempts to contribute to a larger and seemingly paradoxical question: whether a foreign reception of a school of thought might lead it into a dead end? In the narrative of the history of sociology, the origins of a Durkheimian approach in Poland are associated with Stefan Czarnowski (1879–1953), a student of Henri Hubert and Marcel Mauss, the author of Le culte des héros (1919) and the founder of the first chair in sociology in Warsaw in the 1930s. On the basis of the analysis of his unpublished letters to Mauss and Hubert (rediscovered by the author)
of the paper), the paper shows the initial organizational and cultural obstacles to the institutionalization of the discipline and to the transnational exchange of ideas. Then, it moves to the case of Czarowski's student Nina Assorodbraj-Kula (1908-1999), showing how she combined the Durkheimian thought with Marxism. Although the results of this unusual merge were interesting, the question arises whether she could be considered Durkheimian anymore. Finally, the works of a third generation (represented by Assorodbraj's students) show that what was still left from the Durkheimian core was more and more undermined by a reception of American sociology. Several tentative conclusions are drawn from this overview.

1. Although relatively influential in Poland, the Polish Durkheimians were internationally unknown, which already forms one of the dead ends of the school; 2. The way Durkheimian thought was reinterpreted, provokes the question whether it was still Durkheimian; 3. There has not been a conceptual innovation starting with the third generation. These observations can be extrapolated for the sake of future comparisons.

**Interrogating Female Household Headship from Women Heads of Household Perspective: Findings from a Qualitative Study in Ouagadougou**

Background and Objective

Despite its extensive use, the notion of female headship is a matter of constant controversial debate among scholars. This study analyzes how women household heads in Ouagadougou perceive themselves, versus the ways in which female household headship is conceptualized by researchers. Studies on female headed households are scarce in Burkina Faso, and it is our expectation that this study will contribute to fill the gap.

**Methods**

Semi-structural in-depth interviews were conducted to explore women's view of and experience on household headship, in relation with domestic power and decision-making. A sample of 20 female household heads was derived from a previous quantitative survey by using a purposive sampling method, in order to have women of different marital status and educational levels. Data were analyzed using a manual grid.

**Findings**

Findings show that all respondents acknowledged themselves as the current head of their respective households, even though all women mentioned the absence of a male partner as the reason why they defined themselves as the ‘head’. In terms of authority on family matters, the respondents made no spontaneous association between their being head and having domestic power nor making decisions in the household. It emerges from the responses that for female heads mothers of young children, the consistency of authority on household matters was mediated through women’s relationship with in-laws, mostly men. Conclusión:

The study reveals that women’s experience of household headship differ significantly with the conceptualization of female household headship by researchers, in terms of control over family matters. While the husband/wife transition in the occupancy of household headship seems quite ‘natural’, the authority tied to this position seems to be when held by a woman. The study challenges key conceptual understanding of female headship and current debate around the dynamics of domestic power in their household.

**WEAKLIEM, DAVID*** (University of Connecticut, weakliem@uconn.edu)

**Explaining the Rise in Top Incomes**

Since the 1970s, the concentration of income at the top has grown in most advanced capitalist nations. The standard economic explanation is that the development of technology has increased the productivity of managers and professionals and reduced the demand for blue-collar and white-collar workers. However, the extent of growth in top incomes varies widely among countries, suggesting that it is necessary to go beyond the common technological factor. This paper suggests three factors that seem to have the potential to explain the national differences. The first is changes in the power of labor and capital. A decline in the strength of labor may have led to a decline in the wages of ordinary workers and an increase in profits and the wages of top management. The second is a combination of deregulation, especially in financial markets, and the degree to which the political system facilitates “rent-seeking”. Where the “rent-seeking” possibilities for financiers and top managers may have been able to shape the regulations in ways that worked to their advantage. The third is changes in social norms. There has been a good deal of discussion of the influence of social norms on pay, but most of this has focused on lower-level workers. However, it seems possible that the same factors also influence top earnings. On the other hand, a concern for reputation might put some restraint on top earnings. On the other hand, social comparison might lead to a “race” for relative position among top earners. It is possible that the increase in top earnings reflects the degree to which the forces that produced stability were weakened or disrupted.

The paper will discuss the implications of these three hypotheses and offer a preliminary test using data for OECD nations.

**WEBER, ARND*** (KIT, arnd.weber@kit.edu)

**Policy Actions for Securing Computers**

Societies rely on information technology, be it for business operations, private life, or for crucial infrastructures. However, IT systems are not reliably protected against attacks on data integrity or confidentiality, as the debates around the Stuxnet worm and the NSA have shown. It is expected that powerful organizations, such as foreign competitors or secret services, will launch significant attacks on businesses or infrastructures in the future.

Industry cannot invest large sums to create highly secure systems, as users who did not yet suffer large damages will not be willing to pay for their development costs. Therefore, only a slow migration takes place towards, e.g., the use of virtualization to isolate sensitive or risky applications. Moreover, the paths to highly secure systems are not clear. One path would be to have careful specification, implementation and evaluation. This path is known to be expensive but would provide a level of protection so far unknown. However, even such implementations might be hacked. Therefore, a path towards provably secure systems might be preferable. Though significant progress has been made, the development of provably secure computing systems faces three challenges: first, a large open source software base needs to be created. Second, matching hardware needs to be designed and ultimately an entire secure system. Third, means need to be explored to make sure that actual implementations match the system design, without insiders planting Trojan horses, and without having any implementation errors.

In either case, a policy push is needed which must take place in at least some economically significant countries. It is needed (1) to make the problems and solutions better known, (2) to explore the costs and benefits of the paths, and (3) to make some path mandatory. The latter could be done in a gradual way, starting with some devices and applications.

**Lessons Learned about Different Experimented Researcher Positions within Military Organization**

This paper will focus on ethnographic methods used to analyze military organizations and groups and, more precisely about immersion which has been – and still his – a privileged tool used during my research within military universe during the last twenty years.

First, positions will be questioned. A first one, as member of the Army when I was drafted and when I realised my very first research in order to complete my master's degree (study about incorporation and instruction of a draftee). A second one, one year later when I was a researcher completely outside the institution. A third one, as PhD student financially supported by the French MOD but also in a technical way to realise my immersions in the Army, in the Navy, in the Air Force and in the French Gendarmerie. At least, my current position as a researcher and a teacher on secondment from the French University within the French Military Academy of Saint-Cyr where I conducted a research on the socialisation processes of the French Army officers through a class of cadets. Each one of those positions presents its own advantages or disadvantages, inevitably associate to the intelligible dimension of each study produced. The presentation will consequently stick to consider aspects which appear to me as most important: those relating to the posture of the researcher and his statute; those of the delicate question of distance and the differences between the « participating observation » and the « observing participation »; those correlated with the challenge of restitution and the significant stage of the writing with a possible self-censorship; those still of the tricky question of the researcher's identity in a male dominant universe; etc.

**Elderly Suicide - A Question Of Social Standing?**

The growing social inequality in Germany features a strong spatial component, which is why attention to the concentration of poverty in specific urban areas triggers so much attention, beyond just the social sciences. Subsequent we argue...
that the reported suicide statistics in the Berlin Health Report require a closer in-
spection because the zones used in reporting are not sensitive enough to provide a
robust picture of the articulation of social status and suicide. For example, in
2009 the Berlin health report suggested that there was no relationship between el-
derly suicide (individuals over 60) and social status.

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who
are on the periphery, those who are socially and economically disadvantaged,
experience less of this good health and extended life. Often these people are
clustered together geographically.

The identification of these zones or socially weak areas is based on the re-
search of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They
aim to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. The very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. Then, by ranking the districts with the highest
suicide statistics and comparing them to the Berlin health report, we detected a
strong correlation between social status and elderly suicide. This suggests that
incorporating the legal and medical records from the coroner and altering the
definition of a municipal district to capture this fine level of detail establishes a
real and concerning trend.

Is Suicide a Question of Social Standing? Elderly Suicide Rates in
Cosmopolitan Berlin

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who
are on the periphery, those who are socially and economically disadvantaged,
experience less of this good health. International studies have shown that these
people are often clustered together geographically.

We argue that the reported suicide statistics in the Berlin Health Report require a
closer inspection because the age groups and zones used in reporting are not
sensitive enough to provide a robust picture of the articulation of social status
and suicide. For example, in 2009 the Berlin health report suggested that there
was no relationship between elderly suicide and social status. We will introduce
our comparative study which aims to test whether there is indeed no correlation
between elderly suicide and districts when (a.) more comprehensive data from
coroner statistics is being deployed and whether there is indeed no correlation
between elderly suicide and specific spatial areas when (b.) more comprehensive
data from smaller heterogeneous urban zones beneath the district level are being
accounted for.

The identification of these zones or socially weak areas is based on the re-
search of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They
aim to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. Their very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. We detected a strong correlation between social
status and elderly suicide. This suggests that incorporating the legal and medical
records from the coroner and altering the definition of a municipal district to
capture this fine level of detail establishes a real and concerning trend.

The White Building: Integration or Commodification of East-
London Culture?

A key aim of the London 2012 'Regeneration Games' was the integration of de-
prived and marginal working-class areas of East London into the global city Lon-
don. Urban regeneration in Hackney Wick, a neighbourhood directly adjacent to
the Olympic Site, embodied this goal of direct intervention into everyday cultures.
The neighbourhood was re-defined as a 'cultural quarter' and is now experiencing
the Olympic Site, embodied this goal of direct intervention into everyday cultures.

The White Building in Hackney Wick provides a lens through which these ten-
sions can be analysed. It is a valuable case study for scrutinising the complex
processes of urban transformation, specifically the relationship between a surge
of Olympic-led investment and existing structures, cultures and communities. The
White Building - located at the heart of local urban regeneration - once provided
local residents with factory employment, but has recently been renovated and
now houses a gallery space, artist studios, micro-brewery and restaurant.

This paper argues that despite planners' attempts to integrate existing local
residents (The Bingo Ladies, The Rowing Club, The Trowbridge Estate) into the
regeneration plans, the commodification of industrial heritage for the mobile
and transient 'creative classes' has served as an instrument to sharpen the neigh-
bourhood's inequalities: polarising those who can and cannot afford to consume
in its space. The paper draws on research conducted in Hackney Wick over the
past 3 years. It has a strong empirical grounding, with over 40 interviews with
residents, planners, politicians and activists. Additionally, visual methodologies
(photographs and mapping), walk-along interviews and oral histories are used to
provide rich narrative basis to complement formal planning documents.

A New Global Labour Studies?

The rapid growth of a new labour studies presents us with a paradox: in a
context where the traditional labour movement is in decline, labour studies is
thriving. What this new labour studies is identifying are the initiatives, organisa-
tions, forms and sources of power that are emerging at the periphery of tradi-
tional labour. There is a "growing interest in a new political subject of labour...
women, immigrants, people of colour, low-paid service workers, precarious work-
ers... Groups that have been historically excluded from the moral and material
borders of union membership... Rather than traditional scholarship on indus-
trial relations, new labour scholars are exploring transformations occurring at
the periphery of mainstream labour movements" (Jennifer Chun, 'The Power of
the Powerless', 2012: 40).

In this paper we analyze the content, methodology and authors who contribute
to this new global labour studies through an examination of the Global Labour
Journal (GLJ). The GLJ was launched in 2010 as a scholarly response to the new
forms of labour action, organization and ideas emerging in the age of globaliza-
tion. It grew out of the activities of the International Sociological Association Re-
search Committee on Labour Movements (RC 44) which has been transformed
over the past fifteen years into a truly global forum for the study of labour. Over
the past four years the GLJ has begun to record and analyze the forms of action
and organization that fall outside the traditional focus of labour studies to include
labour linked organisations such as NGOs and community organizations. What
emerges from our analysis is the growing focus of submissions on labour in India
and China. An emerging theme is the growing informalisation of labour and its
implications for traditional trade unionism.
Home Away at Home: Tourism Narratives of the German Village in South Korea

Where do you come from? is a question that haunts tourists. Here, places are conceived as fixed spaces in the same way destinations are considered an end in tourism. In the context of multi-strata mobilities, places are increasingly being reproduced through embodied relationships in a world that is never quite finished. They are performed on unstable stages as they are being reimagined. It becomes apparent that spaces are emergent and need to be considered alongside the sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of memories and narratives through the experiences of people engaged in embodied social practices. They are not only packaged for touristic consumption, but are also constantly redefined especially in terms of spatial identities located through everyday tourist practice. This paper focuses on the German Village on the island of Namhah in South Korea, which was built over a decade ago as a tribute to the Korean workers who lived in Germany as Gastarbeiter. It explores the question of identity of the locals as portrayed in the film, ‘Endstation der Sehnsüchte’ by Cho Sunghyung and juxtaposes this alongside the huge influx of ‘tourists’ indulging in photographing experience on the film set of Korean TV drama ‘Couple or Trouble’.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of ‘place’ is reproduced through spatialities in which embodied performances and practices are facilitated within complex infrastructure, networks and mobilities. This paper incorporates reflexive and visual methodology to explore how identities are being configured through local narratives and practice, and questions how we identify the ‘tourist’ in this era of transformative change as exemplified by the German Village in Korea.

Las Tendencias De Polarización Social En El Conurbano Bonaerense De La República Argentina. Su Impacto En El Trabajo De Los Jóvenes

En la República Argentina desde fines del siglo XX han surgido nuevas formas de desigualdad social. Una de sus consecuencias es la polarización social y su relación con el trabajo. A pesar de que, en el año 2008, disminuyó la incidencia de trabajadores insertos en empleos precarios o indigentes en un 12.7%, el problema persiste e impacta preocupantemente en el trabajo de los jóvenes.

En este trabajo presentamos un ejemplo paradigmático de la polarización social y su repercusión en el trabajo de la juventud. Del universo de jóvenes hemos seleccionado como objeto de estudio los jóvenes de zonas suburbanas que bordean la ciudad de Buenos Aires. Tomando en cuenta este universo se realizaron encuestas semi-estructuradas sobre una muestra no aleatoria de individuos de entre 18 y 25 años del partido de Pilar y sus zonas aledañas (Campana, Exaltación de la Cruz, Luján, Gran Rosario, Moreno, José C. Paz, Malvinas Argentinas y Escobar) y del Partido de Lomas de Zamora (Barrío Santa Marta y El Ceibo). La brecha social que se observa dentro del mismo partido de Pilar se exacerbaba entre Pilar y las villas de emergencia de Lomas de Zamora. El resultado de las encuestas muestra claramente esta brecha social en el conurbano bonaerense de la República Argentina, así como su impacto en el trabajo de los jóvenes que sigue sin lograr una solución. La juventud que se desempeñaba en empleos precarios continúa sufriendo las consecuencias de las políticas sociales de los años 90.

Frente a este contexto de desigualdades planteamos el debate en torno a la aplicabilidad del desarrollo de las capacidades en el sentido de la política social de Amartya Sen. Brevemente, se trata del desarrollo de las libertades positivas, voluntad política mediante.

Curricular Alienation: Multiculturalism, Tolerance, and Immigrants in Dutch Primary School History Textbooks

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The stories found in a nation's history textbooks are profound statements about the way the nation sees itself. Textbooks that exclude certain groups alienate these children and may lead to disengagement from education and lower levels of educational attainment. The Netherlands is known internationally for its tolerance and multiculturalism, particularly towards immigrants, and sees these elements as crucial to their national identity. However, historical and contemporaneous policies and social attitudes towards immigrants reveal levels of racism not unlike their European peers who, like The Netherlands, have experienced increased immigration and xenophobia in the last decades. In the educational domain, multicultural policies of the 1990s have shifted to those emphasizing assimilation, with immigrants often blamed for low educational attainment. This paper examines how immigrants, multiculturalism, and tolerance are represented in all Dutch primary school history textbooks published since 1980 to identify trends to determine whether or not they reflect larger political discourses and speculate as to the potential effects of these depictions on the children who read them. Preliminary analysis suggests that immigrant groups are depicted as culturally different outsiders from underdeveloped, poor, and violence nations who cause problems for the Dutch society that benevolently allows them entry. Textbooks fail to meaningfully address discrimination in The Netherlands suggesting that immigrants' failure to integrate is due to cultural differences, which likely enhances social alienation among the many immigrant students encountering these texts. Findings are of relevance to multiple nations with large immigrant populations.

The Role of Preferences and Attitudes in Film Consumption

The sociological analysis of cultural consumption is usually situated in the field of social stratification research, identifying the way how cultural consumption is related to social stratification. The weighing of aesthetic preferences and situational possibilities in contrast represents the importance of how cultural consumption plays in social boundary formation. Much less attention has been given to the theory of action underlying cultural consumption. Broadly speaking, there are two major perspectives that come into consideration here: The first conceives cultural consumption as the result of a deliberate (rational) decision making process based on the weighing of aesthetic preferences and situational opportunities. In contrast, the second perspective points to the importance of culturally and aesthetically shaped attitudes and dispositions guiding cultural consumption in a rather automatic way, given relevant situational cues. Since either of these perspectives bring about both theoretical and empirical problems, it seems reasonable to conceptualise cultural consumption as a joint process of conscious preference weighing and automatic attitude following. This in turn asks for a “dual-process”-model of action which is assumed here to offer a more accurate picture of the individual foundations of cultural consumption. Drawing on recent survey data from Switzerland (conducted in February 2013), this assumption will be tested in the domain of film consumption. This dataset includes measures of the frequency of attendance to various types of films, and measures of the respondent’s preferences for as well as attitudes towards these types of films. This allows for (1) comparisons between the effects of film preferences and film attitudes on film consumption, (2) the identification of the relationship between film preferences and film attitudes, and (3) the examination of the interplay of film preferences and film attitudes in the process of film consumption.

From School to Work and Back – Inequality in Late Postsecondary Education As Part of the School to Work Transition in the US, Germany and Sweden

Varieties in the school-to-work-transition are often discussed against the background of the structure of the education and labor market systems. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openness and institutional flexibility for non-traditional students of the postsecondary education system. Non-traditional patterns, such as late re-enrollment after an initial phase of work, vocational training or motherhood differ by country in their relevance for educational attainment. The dataset analyzed is the US National Center for Education Statistics (NCES) and the German Federal Institute for Education Research and Development (BIBB) for the years 2001 and 2011. The analysis allows for comparative insights into the educational careers of varying type and duration and their impact on employment outcomes upon labor market entry. The situation of graduates and college-goers never completing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance and the already-realized wage and occupational outcomes measured as Hauser and Warrens 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational pattern. For incomplete college, the timing matters more. While there are small penalties for interruptions in general, small bonuses can be gained if the time out of the education system was spent with full time work. The dataset analyzed is the US National Longitudinal Study of Youth 79 (NLSY79).

Third Culture Kids and Intergenerational Challenges in Migrant Communities: Korean Christians and Tamil Hindus in Germany

After several decades of coexistence, the research fields migration studies and the sociology of religion have built a strong theoretical and empirical exchange. The impetus was a sociological conceptualization of migration as a decisive factor of religious dynamics in modern societies. This idea, in turn, triggered interesting religious dynamics within migrant communities as they transmit religious knowledge to second generations and their way of adapting religion (doing religious culture). We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations. The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany: Korean Christians and Tamil Hindus. The parental generations of both communities were highly engaged with re-establishing a religious life in a foreign land. They created a “home away from home”, not least to transmit religious knowledge to their children in an authentic setting. Linked to the migration experience and education for labor market returns. Since educational detours are more often taken by minorities and young adults from lower social origins, this question also has implications for social inequality in postsecondary education. The research question is whether delayed entries into and interruptions of educational careers of varying type and duration affect employment outcomes upon labor market entry. The situation of graduates and college-goers never complet- ing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance and the already-realized wage and occupational outcomes measured as Hauser and Warrens 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational pattern. For incomplete college, the timing matters more. The Concept of Nation in Max Weber: Back to Gemeinschaft?

The Concept of Nation in Max Weber: Back to Gemeinschaft?

The paper will be centered in Max Weber’s concept of Nation and, more specifically, it will try to focus on it through the categories posed by Tonnies and, in his own way, used by Weber: Gemeinschaft and Gesellschaft. The different uses of these concepts by Weber in both parts of Wirtschaft und Gesellschaft have been
sufficiently explained, as well as the turn to Gemeinschaft while referring to the relations established in the battlefield, as it is mainly developed in the famous “Zwischenbetrachtung” of his sociology of religion. While in the historical frame of the First World War there are deep coincidences between Weber and Tönnies on the national issues, many differences can be found in the way the latter’s referred to the relation of Nation and modern societies in his most famous work of 1887.

Our aim will be to depart from these differences to develop in which senses Weber’s much more deeper and longstanding commitment to the German Nation –in comparison with Tönnies- can be read in terms of Gemeinschaft (the national Gemeinschaft is one of the examples provided by Weber’s “Soziologische Grundbegriffe”), as well as to put forward a relationship between his emphasis in the Nation and his desperate intention to sustain a communitarian feeling against the historical-universal tendency -in an ideal-typical sense- towards the bureaucratization of societies.

That will lead us to analyse Weber’s use of Tönnies’ categories, in order to be able to tackle from this standpoint his political positions in relation with the Nation, which are boldly stated from his early studies on East-Prussia onwards. The tensions between Gemeinschaft und Gesellschaft will be confronted with this author’s prospective on the rationalization process, and his positions on the Nation looked through this prism.

Social Layers in a World of Territorial Containers, Political Closure, and Socially Differentiated Functionings

The sociology of social stratification is caught in a dead-lock: Data and concepts remain bound by the nation-state while recent theorizing as well as popular debate focus on the global level.

Based on a theoretical book project, but illustrated by results from two internationally comparative research projects on skilled migration, the paper suggests a novel approach to the challenge. Building on individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities I take a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons are placed in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

WEISS, ANJA* (University of Duisburg-Essen, anja.weiss@uni-due.de)

The Glocalization of Professional Knowledge and Practice

Current debates about migration and high skilled labor markets are characterized by an ambiguity: On the one hand knowledge, especially in the natural and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is inhibited by many factors, including national systems of higher education and licensing as well as migration regulation claiming that the knowledge of migrant professionals may be “different” or “less reliable”. Put shortly: professional knowledge is viewed as basically glocalized while practice is not.

In an attempt to overcome prevailing universal/local and theory/practice dichotomies in globalization research the paper suggests a diversity of ways in which professional knowledge and practice can universalize and/or remain bound to specific locations and in which the mobility of people and the spatial extension of bodies of knowledge co-constitute each other.

A review of newer theories in global studies (neo-institutionalism, migratory transnationalism, field theory, cosmopolitanism and social studies of science) firstly shows that their concepts of knowledge diverge: Knowledge is seen as (a) codified and explicit or as (b) comprising tacit and incorporated components. The latter perspective implies that knowledge (c) must be recognized in order to function. Also, knowledge should be able to solve socio-material problems (d) embedded in situations (e). The review secondly identifies a diversity of ways in which knowledge may globalize, namely: the setting and emulation of standards, the migration of professionals, transnational homologies in habitus, the formation of transnational communities, field specific struggle, and the “local universality” (Timmermans/Berg) of solving socio-material problems embedded in specific situations. By reviewing diverse but mutually complimentary theories the paper expands on Robertson’s notion that cultural forms can be part of universalizing and localizing processes simultaneously.

Contempt. Dealing with Disrespect and Misrecognition Among Berlin Hauptschüler

The issue of disrespect and misrecognition will be discussed both on a conceptual and an empirical level and shown to be part of a neoliberal logic.

1) According to Honneth, people experience misrecognition as a deprivation of the requirements for a positive development of the self. In general, misrecognition is a form of disrespect and only if I prefer the slightly different term Verachtung, which better captures the emotional dynamics of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actually harmed. The most appropriate English translation of ‘Verachtung’ is ‘contempt’. The social production of contempt defines forms of exclusion via processes of social ascription in which low socio-economic status is linked with disregard, in turn producing a disrespectful or contemptuous treatment of others.

2) In an ethnographic study of “Hauptschüler” in Berlin, Germany, I have shown that the problem of misrecognition is a pervasive experience among this status group. The main problem for the students proved to be misrecognition on emotional, legal, and social levels – the frequent coupling of social stigmatization with the deprivation of citizenship rights and precarious family situations. In this context, the social practices of “Hauptschüler” can be considered mechanisms of coping with contempt and as struggles for recognition. This can take the form of searching for respect within peer groups based on ideas of mutual support, it can take the form of emotional reactions (shame, anger, envy) and it can take forms of playing with stigmatizations through jokes and irony. What unifies these various reactions is the active approach of dealing with and reacting to the social contempt with which the students are confronted.

WELLGRAF, STEFAN* (European University Viadrina, stefan.wellgraf@gmx.de)

Disputed Ambivalence. Berlin Hauptschüler As Strangers

Disputed Ambivalence. Berlin Hauptschüler As Strangers

The multifaceted problem of the ambivalence of the stranger – how it is produced, how it can be researched and how it is lived – will be the focus of my paper, dealing specifically with “Hauptschüler” (secondary students, often migrants) in Berlin, Germany. These students are faced with a variety of exclusionary mechanisms – besides discrimination on the job-market also media stigmatization and the denial of full citizenship.

I will treat the morally loaded processes of constructing, reproducing and deconstructing ambivalence as problems of ethnicity and religion. In the second part, I will describe the structural problems of the school system in which “Hauptschüler” made into strangers? How could one describe the ambivalent positions and positioning of the students? And how do the students themselves deal with their situation? In the first part, based on a media analysis of a public debate about the “Hauptschüler”, I will show how structural problems of the school system are constructed as problems of ethnicity and religion. In the second part, I will describe the actual intermingling of class, ethnicity and gender in school. In the third part, I will turn the view on the question how the students themselves deal with negative stereotypes and racial or social classifications of being inferior.

The ambivalence of the „Hauptschüler“ as a stranger appears in all three perspectives in a different light: In the media debates ambivalence appears as a problem, in the ethnographic section ambivalences and intersections are treated as a challenge for sociological analysis and in the subversive practices of the students ambivalence is used to resist negative ascriptions and processes of self-victimization. The morally loaded processes of constructing, reproducing and deconstructing ambivalence are thus at the core of understanding the Berlin „Hauptschüler“ as a stranger. The task of sociology is to show these processes are functioning and what kind of subjectivities they produce.

The Social and Institutional Context of Decision-Making in the Case of Sickness

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Illness has a major influence on people’s lives. Studying healthcare-seeking is therefore of vital importance. Patients’ decisions about healthcare fundamentally influence the performance of the overall healthcare system in terms of a population’s health, the quality of healthcare services, and the level of expenditures. Even though illness behaviour has been an intensively studied research topic over the past five decades, previous work has largely overlooked the embeddedness of these decisions in social and institutional contexts. We will present first insights from a project that aims at theoretically, methodologically, and empirically examining the causes of healthcare-seeking. It contributes to the development of an integrative theoretical framework which reflects the embeddedness of illness behaviour and provides an important test case for institutional theories and the theory of frame selection.

For analyzing healthcare decision-making, a new survey is constructed to collect data on the basis of 2,000 face-to-face interviews in Germany that will provide a unique data source covering the healthcare needs and the way these needs are managed. At the conference, we will present first results from the survey. We will analyze people’s decision-making when having a medical condition with a particular emphasis on the interpretation of symptoms and the utilization of healthcare, and generate information about the extent and variety of self-care strategies. Our paper covers how social networks and institutional features of the healthcare system influence the decision-making of healthcare seeking.

Capital-Labour Relations in China’s Car Industry – What is “Chinese” about Them?

Facing shrinking profit margins, and driven by a quest for cost-efficiency and market access, manufacturing enterprises intensified their expansion into the global South since the mid-1970s. It was especially the automotive industry that was eager to venture into promising markets, first and foremost China. Though global car manufacturers have been present in China since the 1980s, research on their operations is still limited – especially when dealing with sensitive issues such as labour relations and unrest.

The presentation thus sets out to shed light on workers’ reactive and pro-active agency in relation to enterprise strategies, trade union culture and developmental policy in a global car manufacturer operating in China. Based on intensive fieldwork in Mexico and China multiple factors determining the specific patterns of workers’ agency in China’s car industry shall be mapped out and questioned for whether they are rightly attributed to local “Chinese” specificities – or aspects that are better explained by reference to the qualities of the industrial sector and a capitalist global economy, respectively its current stage. On the one hand this will concern the enterprise orchestrating its established strategy with local conditions – of which labour issues are merely one factor amongst others – thus producing boundaries, potentials and vehicles for workers’ political-economic agency on the shop floor. On the other, it will focus on workers’ subjective concerns, rooting their agency in their more complex social conditions of existence. Relating these findings to a functional examination of certain political and institutional patterns in China, the uniqueness of Chinese capital-labour relations will be raised to question.

Comparison and Topicality of Three Classical European Concepts of Community

Without any doubt, community is one of the most central sociological terms and concepts – particularly in the German/European sociological tradition, where Ferdinand Tönnies might be seen as the forerunner of this concept. Taking relevant sociological literature regarding this issue in consideration, one may come to the conclusion that there are two traditional main ideal types of community: in one tradition, community is theorized as a collective with specific relationships; in the other tradition, community is conceptualized as a collective with a shared consciousness of kind, a collective identity (this questions the section of the so-called collective consciousness of kind, a collective identity (this questions the section of the so-called consciousness of kind, a collective identity (this questions the section of the so-called community: new forms of collectivization, presented by the example of so-called brand communities, will be discussed.

Western Tourism and Dialogical Remembering Of The American War in Vietnam

The history/tourism nexus has typically been theorised in relation to either parochialism or simplification. However, this binary neglects the diversity of tourist forms and the different social actors involved in their production. This paper ex-
amines international tourism at the Cu Chi Tunnels in South Vietnam by focusing on the narration of the war by Vietnamese tour guides and its interpretation by young American, Australian, British and European tourists. While the oversight of tourism in Vietnam by the state sees tourists at Cu Chi presented with some strong anti-American rhetoric, this is offset by a strong dialogical narrative of the war presented by local guides. It is argued that guides are important reputational entrepreneurs who in order to account for post-Fordist tourists privilege the local while also drawing together different national traditions. For Western tourists this typically results in a greater recognition of Vietnamese suffering and a questioning of the anti-authoritarian and post-heroic narratives that have dominated Western projections of the war. However, the dialogical dimensions of the tour and their experience of everyday life in Vietnam also commonly provides tourists with greater agency to mourn the death of Western soldiers. It is argued that through media portrayals and word of mouth such ‘dark’ tourist experiences have a broader influence on understanding of history and in shaping debate within the cultural public sphere.

Social Networks and Subjective Wellbeing in Australia

Previous research into social networks and social wellbeing has tended to examine objective aspects of well-being such as employment and socioeconomic attainment, physical security, and political participation. Fewer studies have examined social networks and subjective wellbeing, and those that have tended to emphasise limited aspects of social connectedness, such as social support. This paper develops a comprehensive theory of the relationship between social networks and subjective well-being, with the latter concept defined in terms of cognitive (life satisfaction) and affective (happiness) evaluations of one's own life. The theoretical framework defines social networks more precisely, specifies different mechanisms for positive and negative network effects and also attempts to account for mechanisms and selection processes whose omission some critics argue undermines much previous social networks research. We examine this theoretical model empirically using data from a new national Australian survey currently being undertaken that is specifically designed to investigate social networks and subjective well-being. In this paper we describe our theoretical framework and the cross-national comparative project we are undertaking on the relationship between social networks and subjective well-being in Australia, China and the United Kingdom. We then present early results from the Australian survey, including measurement models of key scales and constructs, and substantive models examining some of the central relationships posited by the theory.

Alternative Lifestyles in Growth-Critical Societies – Conceptual Reflections on Social Movements

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-) growth (e.g. Décroissance), concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the redefinition of growth as the dominant social imaginary (Castoriadis 1990, Latoche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented:

(1) Social-theoretical focus: From the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies.

(2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandel 1995, Nussbaum 2010).

Higher Response Rates - at What Price? Effects of Different Strategies to Increase Participation By Motivating (Un)Motivated Participants

Different approaches – e.g. normative explanations, rational choice models or social exchange frameworks – have been used to explain motives on survey participation. This paper deals with one of them, the rational choice theory. However, both commitment (e.g. triggered by appeals to attend to social norms (Misra et al, 2011)) and consideration of benefit/cost ratio (e.g. positively influenced by incentives) are regarded as decisive for survey participation – at least for the initial items. These strategies may result in higher response rates but also in satisfying “Instead of generating the most accurate answer, respondents settle for merely satisfactory ones” (Krosnick, 1999). Consequently, the longer a survey takes to finish “Non-Opinion-Responses” (ibid) but also “Non-Responses” are expected to be more likely and both may affect data quality.

The central issue of this paper is to examine the effect of different motivating strategies on refusals to answer. For this reason experimental arrangements were included in a survey dealing with student participation at university. The survey population was randomly divided into several groups. The information provided to each group differed concerning the presence and combination of the following triggers:

i) the possibility to make profits (incentives),
ii) appeals to social conscience (commitment) and
iii) information on duration and progress (related to effort/burden).

Additionally the answer categories of several questions varied with regard to including a “No-Opinion-Option” to control for satisfying. Finally, pros and cons of the presented “manipulations” in order to gain higher response rates will be discussed.

“I Haven’t Got a Clue!”? Do Clueless Respondents Affect Data Quality through Response Behaviour?

Several papers are dealing with the effect of different numbers of response categories (e.g. Preston & Colman: 2000; Lai et al: 2010). However, irrespective

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
of the number of categories it can be assumed that respondents are facing difficulties in answering questions if they do not already have an opinion for the topic. If a “don’t-know-option” is offered the participant might tend to choose it even if it were possible for him or her to form an opinion. This is “making survey researchers reluctant to offer this option unless absolutely necessary” (DeLongvary & Coaper: 2002).

However, if the “DK-option” is missing, respondents may skip the question and increase items missing. Offering a middle category in rating scales may even enlarge biases if perceived as “neither-nor-option”. In this connection personal characteristics and the type of question (e.g. opinion, attitude or behaviour) are expected to influence corresponding ad hoc decisions.

According to these consideration, the paper focuses on the effect of different numbers of categories in combination with “don’t-know-options” on missing values. It also considers effects of personal characteristics on scale quality. The results are based on methodical experiments included in three online surveys in Austria and Germany.

**The Racial Divide? African American College Students: Mitigating Digital Visual Culture**

The most important development in terms of Internet users between 2000 and 2005 was the radical increase in the number of women, ethnic and racial minorities online. In the early years of the Internet's massification, cyberculture scholars discussed online with only marginal references to online media produced by African Americans, Asians and Latinos, instead focusing on representations of racial and ethnic minorities produced for consumption by white users and audiences (Nakamura, 2002).

Notably, social media, such as Facebook and Twitter, are platforms of web and mobile-based technology that enable consumers to turn communication into interactive conversation, much of which is widely consumed by college students today. Demographic studies on Internet use emphasize African American’s position as consumers. But surveys of access, race and the “digital divide” that fail to measure digital production in favor of measuring access or consumption, cannot tell the whole story. This suggests that minorities are more or less successful consumers of a commodity, rather than producers or active audiences. But how might African American college students use the Internet and mobile technology as sites of resistance?

This study will visually document the level of internet/social media usage, the propensity and style of Internet user-created content, as well as its effect on cultural and social capital for African American college students. The project will gather visual data (videotaped interviews, focus groups and cyberspace photo mapping) on students who are engaging in content creation (e.g., developing Web sites, posting music, images and videos, managing and contributing to Listserves, or adding content to other textual sites). The study will demonstrate how these students are not only active consumers of the Internet, but also Internet content producers and creators.

**Australian Fathers’ Use of Leave for Parenting: Changing Patterns and Policy Implications**

In the absence of policy measures widely-recognized as conducive to fathers’ parental leave-taking, such as well-remunerated and non-transferable leave arrangements, a relatively low proportion of Australian fathers (around 30%) use paternity leave or parental leave, although around half take some paid annual leave in association with the birth of a child. These figures suggest persistent barriers to more gender egalitarian divisions of parenting and raise questions over the pace of change in Australia. Using survey and interview data collected over the past three years we examine fathers’ leave usage in detail, analyzing the factors that influence leave uptake and duration and seeking evidence of changes in patterns of use. Change might be expected in part as a reflection of evolving expectations and behaviors associated with increases in the labour force engagement of mothers and/or as a result of a greater awareness and legitimacy of parental leave stimulated by recent policy initiatives. Our surveys suggest a complex picture in which the overall duration of leave taken by fathers increased somewhat in recent years, although the duration of leave specifically designated as ‘paid paternity leave’ decreased. We test these results for consistency when controlling for sample differences. The data also illustrate different patterns of leave usage among fathers, with a significant group taking leave for parenting purposes after their child was six months old. We use interview data with mothers and fathers to present a more nuanced view of fathers’ use of leave in the context of the birth of a child. Overall our analysis provides an assessment of changing patterns of leave usage by Australian fathers over a period of policy innovation, as well as a more nuanced picture of fathers’ leave usage to inform future policy development in the interests of more gender egalitarian family outcomes.

**Parenthood and Career Mobility: Implications of Transitions to Part-Time Work Among Australian Mothers**

One of the main strategies adopted by Australian mothers to minimise work-life interference is to work part-time hours. The prevalence of this working pattern in Australia underlines contradictions between gender equality and care and raises questions about the contrasting possibilities for career retention and advancement associated with the transition to part-time work, particularly in the context of austerity pressures. In this study we examine the employment patterns of Australian mothers and assess the career implications of transitions made on return to work. Our analysis draws on data from the first two waves of a longitudinal survey of Australian mothers who had given birth to a child in 2010 (Wave 1, n=4,201;Wave 2, n=3,487).

As a basis for our analysis we map employment trajectories among these women, illustrating the prevalence of transitions from full-time to part-time work: 77% of those who had returned to work in Wave 2 of the survey were working part-time, and among those who had been working full-time prior to the birth of their child, 75% returned part-time. We use multivariate models to examine the impact of these and other transitions on indicators of career mobility, utilising changes in hourly earnings and occupational mobility as objective measures and responses to a question on perceptions of career prospects as a subjective measure.

Our analysis identifies some risks associated with the transition to part-time: for example, around 40% of mothers making this transitional attempt believed that their career opportunities had declined compared with only around 20% of those who maintained their pre-birth working-time status. Our models explore the complex relationships between these and other potential influences on career mobility, including the type and duration of parental leave taken. The analysis establishes a basis from which longer-term effects may be examined and the contradictions of the Australian context explored.

From intimate industry to rotten trade: reproductive travel in Southeast Asia

Intimate processes of conception and reproduction have become increasingly global in expectation and practice. They have become the focus of a new form of global commercialized reproductive trade, often termed ‘reproductive tourism’ whereby people travel to seek reproductive health services in other countries. This can involve the movement of patients, but also of service personnel, ova donors and surrogates, as well as ova or embryos across the region. In this paper I concentrate upon the intimate industry of cross border IVF involving the movement and in some cases trafficking of women for reproductive services. The social and medical benefits in many parts of the region compromise attempts to regulate the trade. Examples of the internet advertising for Thai surrogates and testimonials of commissioning parents illustrate the ways in which Thai surrogates are marketed and constructed as willing and available to service the needs of foreigners. Implicit presumptions of race privilege are woven through exchanges between foreign and Thai often glossed within the discourse of ‘Asian service values’. In parallel to the legal circulation of these bodily commodities has arisen an unregulated market, a ‘rotten trade’, in which ‘bioavailable’ women and their body parts are trafficked to feed the demand for their reproductive capacities.

Income and Wealth Inequality during the Life Course. - a Study Based on Sibling Correlations

How should intergenerational inequality be explained? A common idea is that parents transfer their children's life chances, and that parental investments influence their children's attainments. Most studies have emphasized the effects of parental investments in education. It is easier for parents to directly influence their children's attainment of education than their success in the labor market. Therefore early parental investments are considered to have the largest impact on their children's life chances. This is not the case for wealth transfer between generations. Wealth may be easily transferred during the whole life course, and in many cases transferred quite late in life.

In this paper, we measure intergenerational inequality through the life course using sibling correlations. A sibling correlation provides an omnibus measure of family background and neighborhood influences, a measure that includes both observable and unobservable characteristics. There are no prior studies to our knowledge that assess life course changes in sibling correlations using wealth as measurement.

Following recent theoretical developments, we explore the consequences of different parental investment strategies. Put simply, one strategy is that parents make equal investments in their children, something that leads to the expectation that sibling correlations in wealth should decrease over the life course. If, however, the parents seek to compensate for initial differences in talents and attainments among siblings, by transferring most to the least successful sibling, we expect an opposite trend. We discuss how these patterns may be influenced by children's labor market success and savings, and by variations in parental strategies in different socioeconomic layers.

We use register data from Norway for brothers and sisters born 1955-1960, tracked annually 1993-2010. Our measures include earnings and capital income, as well as two measures of wealth (net and gross wealth). We also take into account sibling differences in education.

Increasing immigration poses a serious challenge for many countries. Empirical studies from around the world indicate that immigration and increasing diversity lead to decreases in social cohesion and increases in social withdrawal, particularly in disadvantaged areas. Less understood, however, are the mechanisms that explain these relationships. We contend that these associations are at least in part due to two key factors: how residents’ perceive the neighborhood composition and how these perceptions influence residents’ own social identity. Further we suggest that these relationships will differ in cities with different immigration histories. In this paper we integrate census data and the Australian Community Capacity Study survey data from approximately 10,000 residents living across 298 neighborhoods in Melbourne and Brisbane, Australia. Using a multiple linear regression model, we first consider the cues that lead individuals to distort the presence of non-whites in neighborhoods. Here we focus on recent immigration increases, ancestry, language and religion as important cues of difference. We then employ multi-level models to test if these distortions influence residents’ subordinate or subordinate identities. Finally, we consider the independent effects of these distortions and social identity orientations on residents’ reports of social cohesion and interactions with fellow neighbors.

Intra-European Labor Mobility from Post-Socialist Countries: The Example of Hungarians, Slovaks and Czechs in Austria

This paper deals with job-search strategies and related labor market outcomes of cross-border commuters residing in the regions of the Czech Republic, Slovakia and Hungary bordering on Austria. This European core region has a long history of cross-border mobility and social exchange, from Habsburg Monarchy to post-war period and after 1989. Several years after the fall of the Iron Curtain a process of European re-integration began which led to the accession of post-socialist countries into the EU. However, substantial social inequalities between Central European countries still exist in terms of wages and unemployment. Cross-border mobility on an emerging transnational labor market therefore can be seen as an “individual response” to massive transformations in this region.

So far the given circumstances for participants in this transnational labor market have not been investigated in depth. Our paper aims to close this research gap by pursuing the following research questions: What job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)? Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a longitudinal survey on employment careers of cross-border commuters conduct-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
ed in 2012 (N=2,550). Our results show that human and social capital resources serve as key factors for job finding strategies and successful labor market integration. There are also substantial gender differences and differences related to previous occupational status and migration experience within the group under study. Overall, our results reflect cross-border commuting as a renewed form of social practice in this European core region, which may reduce structural inequalities between Central European countries in the mid-run.

WIEVIORKA, MICHEL* (Fond Maison des Sciences de l’Homme, wiev@msh-paris.fr)
The Limits Of Multiculturalism

1. Multiculturalism and transnationalism are concepts that belong to the present historical era. They have been produced in western countries, and are used often, with a deep unconscious ethnocentrism. Aren’t they part of the intellectual hegemony of the west, and in the same time, maybe, of its decline?

2. There is in some parts of the world at least a feeling that multiculturalism, if not a failure, is at least in a difficult situation, and there are important criticisms of the idea of transnationalism.

3. The political concrete limits of multiculturalism are connected with the rising importance of globalization, including transnational phenomena. But globalization does not necessarily mean the decline or the crisis of the Nation and/or the State, which is the natural framework for multiculturalist policies and institutions. And the limits of transnationalism are given by States that still control borders, deliver passports, authorisation for transit, visas, etc. If societies are not entering in an era where multiculturalism and transnationalism are stronger and stronger, how will they deal with cultural differences, on the one hand, and with identities and practises that are not limited to one national state?

Methods (Alexander & Zeibland, 2006) - This involved narrative interviews recorded in a documentary style format on film, thematic analysis, and findings presented via video clips on the website. This was the first DIPEx project to include the experiences of Australia’s first people in their own language. Findings - Using these methods had benefits for individuals, communities, and the research project. On an individual level participants’ personal stories were documented, leaving a record for future generations. They could express their personal agendas and have their voices heard via a public internet platform. Video narratives recorded in the Indigenous language provided an ethnographic record in a rapidly changing culture, thus benefiting the community by making the narratives more widely accessible to other speakers of the language. These methods benefited the research project as they provided more information about participants and their environment. Visual narratives are also a powerful educational tool for healthcare providers and students. Challenges of this approach included additional equipment and technical expertise; gaining community permission; interviewing and translating across languages; and negotiating cultural processes around the use of images after a participant dies. These were mitigated by working closely with Aboriginal researchers from the beginning, and building additional time and funding into the project budget.

Implications: Video and the internet are more engaging for a lay audience than academic writing and provide a more reciprocal way of involving traditionally marginalised people in qualitative research.

WILKESMANN, UAE* (TU Dortmund University, uwe.wilkesmann@tu-dortmund.de)
Which Form of Organizational Governance Supports Freedom of Teaching and Increases Their Perception of Relevance? Empirical Evidence from Two Types of Higher Education Institutions

New Public Management caused an “economic turn” in universities to managerial governance. The leadership literature distinguishes two modes of governance, which can also be applied to the governance of universities: transactional and transformational modes of governance. Transformational governance encompasses all forms of managerial governance, which includes motivational and management incentives and monitoring capacity. The theoretical underpinning of this mode can be found in Principal-Agent Theory which is the theoretical underpinning of New Public Management. Whereas transformational governance covers, on the one hand, the means of restructuring the roles of principals and agents in the interaction situation in the organization, on the other hand, it also addresses all the means of restructuring the relationship between perceived environment and motivation, as it can be seen in Self-Determination Theory. Other elements of transformational governance are social norms such as those that inform the quality of research or approaches to teaching. As a result, the main research question is: What has more impact on professors’ perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance are developed. The research is based on two quantitative surveys, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

WILKINSON, LORI* (University of Manitoba, lori.wilkinson@ad.umanitoba.ca)
A Longitudinal Examination of the Intersections of Ethnicity and Sex and Their Influence on Perceived Racism Among Newcomer Youth in Canada

Perceptions of racism and discrimination are powerful forces influencing social cohesion of members of any society. Real or not, those holding a perception that they are victimized by discrimination feel marginalized and ostracized socially and may experience the instrumental forms of discrimination in various aspects of their lives, e.g., access to education and health care and others. The consequences of the belief that racism affects life chances mean that many people are unable to achieve their potential in employment, school, and health. This has a significant impact on their feeling of belonging. This paper uses data from a longitudinal national study of newcomer youth in Canada to examine the extent and factors influencing perceptions of discrimination. We follow nearly 4200 11 to 17 year old newcomer youth over 8 years on a variety of different topics. The data analysis technique involves a multivariate analysis of the changes in perceptions of discrimination over time. The factors influencing perceived racism and changes in this perception over the eight year study period. The main control variables are sex and place of birth. Findings indicate that female newcomer youth are significantly more likely to feel marginalized than their male counterparts regardless of their place of birth. Other factors influencing perceived discrimination include economic factors, parental income, and the extent of the language barrier between parents’ pre-arrival education and post-arrival employment. These findings have significant influence over the sense of belonging in Canadian society among immigrant and refugee born youth and are interpreted through a lens of intersectionality and identity theories. The presentation concludes with a discussion of policy and practical implications.
Economic Democracy in South Africa: Women at the Grassroots

In this paper we explore the ways in which women are creating spaces for economic and political participation in South Africa. The post-apartheid South African Constitution has been hailed as one of the most progressive constitutions in the world with its entrenchment of socio-economic rights and recognition of equality among various cleavages such as gender, race, and sexual orientation. There are myriad policies and legislation entrenching women’s rights. Despite the conducive policy environment, the state has not created spaces for women’s participation at local levels. Nevertheless, women are creating their own spaces of political and economic participation, linking up with the state when and where it is possible, and forging ahead when it is not possible to link with the state. In this paper, we look at a township north of Johannesburg and a rural area in the Eastern Cape to see the ways in which are creating and engaging economic production within their communities. Are these simply survivalist strategies or do they represent an emergent alternative that is rooted in economic equality and social justice? Are they practicing economic democracy? What role has the state played in this process?

Rescaled Citizenships and Vernacular Cosmopolitanism in Sydney, Australia

In the Australian context, notions of cosmopolitanism have had less airmine than the nationally sponsored program of multiculturalism. Cosmopolitanism has emerged in academic theories of living together with difference in Australian society, and are usually synonymous with notions of ‘everyday multiculturality’ (Velayutham and Wise, 2009). However, these theories have been less explicit about how such everyday, intercultural exchange might be part of a rescaling of belonging for migrant residents, and how this might impact on the nation-state (Kay, 2000). In this regard, I suggest drawing on notions of urban citizenship (Holston and Appadurai, 1996) as a form of post-national or sub-national belonging to scale up the potential implicit in quotidian modes of cosmopolitanism. Urban citizenship – as a set of substantive rights relating to citizenship in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The paper draws on qualitative research in two multi-ethnic neighbourhoods in Sydney, Australia to explore localized belonging amongst migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship as a form of post-nationalism can complement and augment the potential of everyday cosmopolitanism – which is easily appropriated by the state and commercial interests. Also, arguments about emergent urban citizenship should draw on ethnographic understanding of ordinary cosmopolitanism to better understand the multiple ways migrants negotiate identity and socio-spatial belonging in urban settings.

Cosmopolitan Spaces in Non-Cosmopolitan Places

Encounters are an important part of the texture and form of social life, in a global world where opportunities for people to foster positive cosmopolitan outcomes are increasingly visible and accessible. The concept of cosmopolitan encounters offers a grounded way to understand the everyday dimensions of cosmopolitanism through considering certain practices and performances that people draw upon to negotiate situations of diversity. Questions of the spatiality, configurations and locations of where encounters take place, both likely and unlikely places, are also central to understanding how cosmopolitanism may emerge and flourish, or fail, fade and fail. But while places can serve as a vector of cosmopolitan possibility, the distinction between ‘place’ and ‘space’ is also important.

Drawing on empirical, qualitative research as part of a three-year project into cosmopolitan encounters, our paper argues that both cosmopolitan and ‘unlikely’, non-cosmopolitan spaces of everyday cosmopolitanism exist. The majority of research sites include urban, regional and rural locations across Australia. Across these sites, our research employs observation and interviews with a broad range of clinicians delivering treatment to cancer patients, partly because it is believed that ethnic minorities are more likely to find a tissue match in umbilical cord stem cell biobanks than in extant bone marrow registries (Anthony Nolan Trust 2013). In response, clinical experts, third-sector charities and policy makers have sought to develop an infrastructure to increase the public collection of immunologically diverse umbilical cord stem cells (Brown et al 2011). As such, we are witnessing the novel intersection of clinicians, charitable bodies, patient advocacy organisations and private enterprise. These stakeholders come together in parliamentary meetings to discuss barriers to development, produce policy documentation (APPSSCT 2012, UKCSF 2010) and foster further discussion.

As has been noted by Emerson et al (2012), such a model of collaborative governance facilitates discussion between parties seemingly separated by impossibly boundaries of profession and politics. This paper explores the means through which expertise and interest are brought together toward opening policy discussion to a wider field of stakeholders. In this way, it is a case study of an emerging collaborative governance model that holds to add to this burgeoning and theoretical development of collaborative governance.

The presented data, including interviews with stakeholders and observation of parliamentary meetings, also investigates the manner through which a recognized ethnicity-based health inequity can be strategically deployed for specifically professional, political or civic interests; that is, how socially charged notions of race and ethnicity can be mobilized toward potentially beneficial ends (St Louis 2010; Benjamin 2013). Finally, the paper also brings into relief the tenuous position of the “expert” within a widening forum of stakeholders.
of Australians to shed light on various ‘spaces’ of cosmopolitanism that provide the opportunity for cosmopolitan encounters. Rather than revealing a linear pathway to a final, utopian cosmopolitan destination, we highlight various gradations of the relationality between space, place and performance into what constitutes cosmopolitan encounters. We then propose particular research strategies for uncovering cosmopolitan encounters, and highlight unlikely contexts worthy of investigation in future research.

Fitness As Leisure - Exploring Physical Activity through Consumption and Lifestyle

Drawing on the discussion on the commercialization of the fitness culture, this study examines fitness as a leisure activity. Fitness is prominent both in media and consumer culture, and it plays an important role in individuals’ everyday life as everyone is surrounded by the social world of the fitness culture, its meanings and signals. Fitness activities are practiced in numerous ways and due to various reasons. Also the fundamental aims of the activities have changed: they have become commodities of the leisure industry.

The core of leisure is in the production of value, and it can thus be associated either with freedom from work and responsibility, or as freedom for self-production. Fitness is understood in relation to both health and appearance, which have become central not only to the social order, but also to individuals’ occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body’s physical capital.

This study takes a qualitative approach to examining how consumption and lifestyle are related to the motives for physical activity. The data is derived from The National Student Health Survey (n=4403) conducted in Finland in 2012. The results revealed three consumption styles/lifestyles: hedonistic, healthy and sustainable. Moreover, four main motives for physical activity were found: sociability, health, target-orientation and appearance, which all correlate with the appreciation of well-being and the mediating and psychological effects of fitness. Fitness appears to be central to the social order, but also to individuals’ occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body’s physical capital.

Glorious Mission: Social Media, Video Games, and Propaganda

Governments and social movements have long used information technology to promote their causes. In the past books, songs, radio, and television where used to persuade people that political and social actions were necessary. With the growth of information and communication technologies there are now new media that can be used for propaganda and persuasion. Technology such as Twitter, Facebook, and Video Games have emerged in the past decade as growing forces in protest movements and government propaganda.

This paper will discuss how new technologies have been used for purposes of propaganda around a number of political issues in Asia. Analysis is based on content review of Twitter archives, online newspapers, blogs, and Video Games associated with political issues in East Asia. The issues to be addressed will include territorial disputes such as the Dokdo/Takeshima Islands, North and South Korea, and Japanese internet censorship. Results suggest that governments in East Asia have been quick to recognize the propaganda power of new media and have quickly organized to provide a government perspective on ongoing disputes. Protest movements may have had an initial advantage in recognizing the power of new technologies and new media, but government quickly responded to remove or reduce political advantage they had. Even though new information technologies have become common the issues of public discourse and propaganda remain fundamentally the same. Propaganda through Twitter and Video Games has the same motivation as in the past, but presented using current and emerging technology.

Managing Risk in a Complex Food System: The Importance of Inter-Personal, Professional and Organisational Trust

A challenge of managing food safety risk is the multi-sectoral nature of the complex system set out to do, with responsibilities lying with expert actors from both food industry and food regulation. Amidst this complexity, a unified message must be conveyed to consumers so that food risks are managed. This paper presents research conducted to navigate this complex system. We investigated the role of expert actors from the food regulatory and food industry settings in developing/breaking/repairing/maintaining trust with consumers about food. Qualitative interviews were undertaken in Australia (n=30), the United Kingdom (n=15) and New Zealand (n=5). Respondents identified that risk management, including increased consumer trust, could only be established if trust existed within and across the expert actors. As with the nature of the trust between actors became central to the research, inter-personal, professional, and organisational trust between these actors was observed. Interpersonal trust and relationships were developed between actors through transparency, good communication and regular phone and face to face informal meetings. Organisational trust was built and maintained through documents such as memorandums of understanding and regular, formal meetings. Professional trust was particularly apparent between actors within the regulatory and industry systems who both had responsibilities for managing food risk. Some actors indicated that they did not understand the perspective of the other system, because of the different processes and systems in which they worked. Despite this, each system had a common goal (to avoid foodborne illness). When this common goal was recognised by industry and regulatory actors, stronger trust was formed which enabled a unified message to be communicated to consumers. Therefore one way to manage the complexity of the food regulatory system, and ultimately better manage food risks, is to develop inter-personal, professional and organisational trust between expert actors in the food system.

A Walk through Memory: Urban Interventions and the Sensual Battle Against Oblivion

In the years following the Latin American military dictatorships of the 1970s and 1980s, historians and activists noticed a disappearance of documentary evidence that paralleled the disappearances of human beings. Decades of activism by the Mothers and Grandmothers of the Plaza de Mayo, human rights groups, and political institutions that value human rights, has fueled an archive of memory: an ongoing city-wide network of projects and museums dedicated to remembering the Dirty War years throughout Buenos Aires.

This paper explores the roles of mural art and street flagstones in the production and reception of two post-conflict memory projects in Buenos Aires. The Olímpico mural project (memorial to a torture factory) and the Barrios x Memoria y justicia collective flagstones project (traversing upper and lower-class neighborhoods, to form a city-wide visual map of disappearance) both represent attempts to inscribe memory onto public spaces.

The Olímpico project began in 1995 in the City Council of Buenos Aires. The building housed the automobile registration office of the Federal Police before being converted into a torture facility. Many Argentines wanted the facility razed to the ground once democracy returned. The museum owes its existence to an ongoing local community struggle to manifest the identities and experiences of individuals made absent and invisible by the military dictatorship. The Flagstones project, created by the Barrios x Memoria y justicia collective began as an ongoing endeavor to replace parts of sidewalks with small, colorful plaques, in front of places where victims of state terrorism were born, lived or were kidnapped.

We consider two-decades of historical data reflecting the struggles to establish memory projects that bring into conflict state authorities, human rights organizations, neighborhood groups and university students. These concrete visual reminders of state-sponsored violence are both memorials and fuel for the battle against forgetting and/or rewriting history.

A Walk through Memory: Urban Interventions and the Sensual Battle Against Oblivion

Trends in Wealth Inequality

Nico Wilterdink: Trends in Wealth Inequality

This paper will present new estimates of inequality in household wealth in the Netherlands 1993-2011. Changes in this recent period will be connected with long-term trends in Dutch wealth inequality (from around 1900), which will be compared to trends in other Western countries. Preliminary findings are: there has been an overall tendency of partial collectivisation (a shift from personal to collective wealth) and diminishing wealth inequality in the Netherlands and other Western countries during the greater part of the twentieth century, followed by a tendency of decollectivisation and growing inequality since the 1980s. The latter trend will be explained by connecting it with processes of deindustrialization, globalization and politico-institutional change. The paper will give special attention to recent changes under the impact of the financial crisis, and discuss the question to what extent national government policy can be used to modify wealth inequality.

Legal Costs Insurance (LCI) – an Attempt at Comparative Analysis

Legal aid systems are best conceptualised as complex entities, comprising different institutional and non-institutional mechanisms enabling the individual to obtain legal advice. In this perspective, commercial, public-subsidized, pro bono or prepaid legal services are all one method of providing access to legal advice, just capitalising on different resources. The same can be said about private/informal mechanisms of dispute resolution, self-help, and unbundled legal services. Yet another widely-recognized mechanism for providing legal aid is legal costs insurance (LCI). Despite relative prevalence of this channel of access to legal advice in some countries (such as Germany, Netherlands or Austria), legal aid literature (with some notable exceptions) does not devote much attention to LCI. In particular, it has largely neglected the interactions between the LCI as a channel of access to legal aid and other types of provisioning such services. Not much is also known about the institutional and cultural conditions of establishment of LCI systems.

The paper aims to contribute to filling this gap. It undertakes an attempt to answer the question of the factors driving emergence, prevalence and stability of legal costs insurance and the interaction it enters with other channels of provisioning of legal aid. To this end, the paper does two things. First, it analyses the heterogeneity in the literature in the search for theoretical explanations of said phenomena. Second, it juxtaposes theoretical explanations with the outcomes of an comparative study of LCI in Europe, utilising existing data on LCI, legal systems, disputing behaviour as well as values and culture.

Why Do Procedures Have Unexpected Outcomes?

According to a famous statement by Adam Przeworski, the difference between democracy and dictatorship lies in the fact that in a democracy the content of a political decision cannot be known in advance: democracy, not dictatorship, institutionalizes uncertainty. Sociology has largely ignored the institutionalized uncertainty thesis that follows from this observation. In particular, one has to be careful not to confuse Przeworski's argument with that of Robert Merton, which has animated the sociological discussion about unintended consequences for decades. Merton argued, famously, that important factors exist, which may keep the outcomes of action from the sight of the acting party, yet he perceived unintended consequences of action as largely undesirable and non-institutional.

This paper attempts to contribute to both the discussion of Mertonian unintended consequences and to the developing of a legal sociology of institutionalised uncertainty. It aims to do this by translating the intuitions of both authors into the lang of Niklas Luhmann's systems theory. The particular field under investigation is akin to what Przeworski found remarkable: procedures and their outcomes. Yet, against Przeworski's theses and some theories of procedural law and democracy, it is argued that procedures are not necessarily outcome-neutral and that they do contribute to certain outcomes of political and legal processes. Against Merton's observations, but in accord with these of Przeworski, it is demonstrated that macro-sociological and indeed deeply institutional factors exist, which contribute to the production of unintended consequences of individual actions. Finally, against theories of procedural justice in sociology and psychology of law, it is argued that procedures do not provide individuals with a sense of ontological security, but to the contrary, are but one form of "institutionalised uncertainty."

The paper has been published in Mica, Peisert, Winczorek (eds), Sociology and the Unintended. Robert Merton Revisited, Peter Lang 2012.

In(Visible and (im)Mobile : Lesbians, Exile and Global LGBT and Womens Rights Movements

In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firmly on the UN and many national agendas, lesbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of political asylum.
On one hand, social movements campaigning nationally, transnationally and internationally for both women’s and LGBT human rights have facilitated access to asylum, mostly in Western countries, for lesbians from the many countries where homosexuality remains illegal (76 countries), or where the state fails to protect homosexuals from abuse, despite decriminalisation (another 60-70 countries). The European Union, for example, now explicitly includes references to the specificities of LGBT experience and needs in its new standardised asylum procedure.

On the other hand, continued cultural taboos and in some cases political backlash have, in many countries, maintained or even exacerbated the isolation of lesbians, depriving them of easy access to global LGBT rights networks (including the very important online networks that have proliferated over the last decade, but which frequently continue to privilege gay men). Moreover, the significantly lower levels of financial and cultural autonomy for women in many countries have meant that access to escape routes is much more limited than for men—a problem that lesbians share with heterosexual women but can be even worse in their case. Yet, access of lesbians to asylum presents as one of the world’s most urgent human rights issues, as almost without exception, lesbians seeking asylum have suffered multiple forms of physical and psychological torture.

The paper will discuss the above issues with reference to the importance of transnational social movement activism and support that specifically addresses the situation of lesbians, as well as to case studies from France in particular.

Beyond Generic Urban Theory? Grand Narratives, Assemblages, and Urban Critique

In the late 1970s, in his well-known proclamation, Lyotard announced the end of grand narratives. Nonetheless, thirty years later, urban studies research remains strongly structured by a selection of generic storylines. Developed in specific—mostly Anglo-Saxon—settings, these narratives are used to interpret and critique urban developments in cities around the world. This paper questions the implicit relationship between the narratives of urban theory and urban realities. It argues that these storylines can play an important role as ‘sensitising devices’, but that they should be critically confronted in urban research. The paper underlines this argument with an analysis of the relevance of two grand narratives in two Asian cities: the ‘end of public space’ in Mumbai, and ‘splintering urbanism’ in Bangkok. The analysis shows that both storylines are relevant, but in ways other than the theory suggests. A direct translation of theory to specific urban settings will therefore lead to mistaken interpretations and inadequate critique. Unfortunately, urban studies research rarely incorporates such a critical confrontation of urban theory. From this observation, the paper draws conclusions on the practice of urban research, the value of urban theory, and the possibility of urban critique.

“My Boss Is Like Family” – a Singaporean Case Study of Race Relations at Work – CANCELLED

A growing literature on race relations foregrounds cultural ‘contact’ in developing stronger intercultural understanding and forms of community that bridge difference (Amin 2002). The body of this literature takes the actual site and social field of ‘contact’ as important in mediating difference. The workplace is a special kind of micro-public, where the rules and codes of contemporary working cultures interplay with collegial and hierarchical relationships, which in turn mediate inter-ethnic relationships. In addition media cultures and wider national discourses and discussions influence the way these micro-publics are encoun-

tered and experienced.

This paper focuses on a case study of low and ‘middling’ workers in a multi-national firm based in Singapore. The case study is drawn from a larger comparative study of inter-ethnic relations in workplaces in Singapore and Sydney. Drawing on the work of Lamont & Akhtar (2002) and others, the paper explores the discourses, scripts, rituals and practices (Noble 2009) workers engage to create or overcome boundaries of difference.

Employees in the case study multiracial framed experiences of belonging and collegiality in familial terms, drawing on ideas of reciprocity, care, friendship and intimacy to describe positive feelings towards co-workers of same and different backgrounds. Race and cultural difference was described by most as having little salience in everyday working life. Yet we argue that the quality of collegial intercultural relations at work does not necessarily translate into shifts in racialised hierarchies nor views about cultural and racial ‘Others’ more generally. Indeed, the use of ideas of familial and informal modes of recognition and care actually reinforces and legitimised certain forms of vulnerability and discrimination. This is so especially in a context like Singapore which is a highly racialised society with a variegated system of temporary work visas where opportunities, rights, and conditions differentially distributed according to national origin and race.

Alva Myrdal, Unesco, and Cold War International Social Science, 1951-1955

The paper is concerned with the international organizing of the social sciences during the early Cold War era. Empirically it is focused on UNESCO’s Social Science Department (SSD) during Alva Myrdal’s directorship, 1951-1955. The SSD was set up in 1946, as part of the wide family of intergovernmental organisations that emerged with the United Nations in the aftermath of the Second World War. When Alva Myrdal (1901-1986) became the Director of SSD, it has been suggested that she “set the department on its feet”. But what difference did she actually make? What ideas, visions and hopes did Myrdal have regarding the SSD? How did she try to realise them? Which projects did she initiate during her time as director? Which issues lay closest to her heart? What did she oppose? How did she view her role as Director of the SSD? With which people and organisations did she collaborate? By employing a STS-perspective and analyzing the everyday practices at the SSD during these five years, the paper intends to discuss the above mentioned questions in relation to the contemporary geopolitical setting.

Lean between Practices and Ideology: the diffusion of a “World-Changing Management Concept”

In my international review of quantitative studies of lean diffusion, surveys indicate recurrent problems with the implementation of lean: managers report that a “lean culture” is difficult to attain. Furthermore, positive outcomes are scientifically unsubstantiated (Freitag & Arlbjerg 2011). Lean is an example of what I call a “World-Changing Management Concept,” characterized by holding ideological ambitions to create a better world, while claiming that practices work regardless of context. I then use the seminal texts of Womack et al (2007 [1990]) and Womack & Jones (2003 [1996]) to show how lean is in part a theoretical construct, inspired by “Japanese management”, but ideologically aimed at creating a sustainable management practice in a global economy.

I draw attention to the distinction between the adoption of a management idea as a practice and as an ideology (Guillén 1994). I then use Guillén’s neo-institutional
l'al framework to show how lean draws heavily on practices and ideologies that do have a long standing in Japanese history, including ideologies of co-prosperity (Goto-jones 2005). I show how institutional factors in the organization adopting lean will be decisive for whether lean will come across as Taylorism in disguise or something closer to the original ideological intentions. In keeping with my arguments, recent research on work environment issues in lean projects gives a mixed picture of consequences for employees (Edwards et al. eds.) 2010.

Information Et Participation Politiques En Ligne: Inégalités Ou Fracture ?

Dans les recherches interrogeant les rapports entre politique et numérique, l'une des thèses les plus discutées porte sur l'existence d'une "fracture civique" entre citoyens à l'aise dans la maîtrise des outils numériques et ceux qui n'ont pas les compétences nécessaires pour accéder à l'information pertinente, dans un contexte de profusion, de flux informationnels démultipliés par les réseaux numériques. Autrement dit, les individus qui seraient déjà motivés et intéressés par les questions politiques bénéficieraient pleinement de la multiplication d'offres thématiques numériques ou câblées et la personnalisation des informations. Cette fracture civique reposait sur l'inégalé répartition des compétences d'individus disposant de manière variable de capitaux culturels et cognitifs. A cette fracture, viennent s'ajouter d'autres thèses portant sur l'existence de fractures encore plus nombreuses de ne pas être exposés à l'actualité politique et sociale. Le débat a été d'ailleurs aigu lors de la crise des médias traditionnels et de la complexité d'approcher les citoyens qui sortent de l'univers des médias traditionnels.

Cette fracture civique réversible sur un niveau même basique de connaissances politiques. Le caractère alarmiste de cette proposition a été récemment contrebalancé par plusieurs auteurs qui citent une large littérature empirique qui montre que les accès à l'information ne se réduisent pas à l'extension de l'information disponible sur le web comme ressource d'information, mais ceux qui seraient peu motivés n'en tireraient pas réellement profit, ce gain informationnel serait donc marginal. Ce gain informationnel serait donc marginal. Cette fracture civique reposait sur l'inégalé répartition des compétences d'individus disposant de manière variable de capitaux culturels et cognitifs. A cette fracture, viennent s’ajouter d’autres thèses portant sur l’existence de fractures encore plus nombreuses de ne pas être exposés à l’actualité politique et sociale. Le débat a été d'ailleurs aigu lors de la crise des médias traditionnels et de la complexité d'approcher les citoyens qui sortent de l’univers des médias traditionnels. Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case

"Data without Boundaries" – a project funded under the 7th European Framework Programme – aims at improving access to microdata from official statistics in Europe. This overarching goal is reached through several tasks, among them: compiling information on available data and access conditions, proposals for harmonization of access conditions, building a remote access network and offering web-based, structured and searchable codebooks for Eurostat data. Among the data sources that Eurostat produces and disseminates and that "Data without Boundaries" is creating a service for is the European Union Labour Force Survey, the largest household survey of the continent. EU-LFS is a continuous household survey currently carried out in 33 countries. In many of these countries EU-LFS is mandatory leading to very high response rates. Because of its size and the high quality of its sampling this survey is often used as benchmark to measure nonresponse bias in social surveys.

After introducing "Data without Boundaries" the presentation will demonstrate how EU-LFS can be exploited to assess nonresponse bias in surveys conducted in Europe. The empirical analysis focusses on the European Social Survey, the European Values Study and the European part of the International Social Survey Programme. Nonresponse bias will be assessed relative to the variables sex, age, education, employment status, household size and where available region or size of place.

The analysis demonstrates how not only those directly interested in micro data from official statistics but also survey researches benefit from the efforts of "Data without Boundaries" and the improved access to Eurostat's data.

Problems of Survey Measures of Social Networks

Since Fischers (1982) and Burts (1984) seminal contributions to collecting egocentric network data in social surveys the method has been employed in numerous studies and can be regarded as standard in this field. Recently this approach has been severely criticized. Several authors have pointed out that the standard approach to measuring egocentric network data suffers from strong interviewer effects which may lead to misleading conclusions (Paik/Sanchagrin 2013; Bruderl et al. 2013).

The presentation will discuss the methodological problems with the standard approach to collecting egocentric network data. Several adjustments to the standard approach will be discussed and alternative methods to capture aspects of "social capital" will be presented. The presentation ends with a plea to use a combination of several independent measures of social embeddedness thereby overcoming some of the shortcomings of the standard approach to measuring egocentric network data.
pline to teach the ideas of communism and social action, thus banned teaching sociology at universities in Korea. K. D. Har was not able to teach sociology, and eventually kicked out from the university. After liberation from Japan, he pursued the career in journalism, but his newspaper was not allowed to publish due to its critical report on post-Colonial South Korean government. Using K.D. Har as a case study, this paper discusses the potentials and limits of public sociology in (post) colonial context, and explores the challenges of global sociology in (post) colonial context.

Passing and Crossing: A Study of Transgender Embodiment in Hong Kong

Issues of transgender and transsexuality provide a new impetus and a practical need to problematize assumptions about bodies and identities and to rethink the categories of women and men. While transgender studies have exposed the artificiality and mutability of sex/gender/sexuality categories, a tension exists between the transgender/transsexual discourses which are oriented toward a search for a gendered home and the queer emphasis on creating trouble for the gender order through non-normative, unintelligible embodiments. This paper seeks to address the debates through an examination of the embodied practices of passing and crossing in the transgender community in Hong Kong.

For many gays and lesbians, passing or acting straight is a strategy for coping with stigmatization in a hetero-normative society. For many transgender people, passing, that is, to blend into society both socially and visually in accordance with their preferred gender, is a goal rather than a means. They want the society to see them in their desired gender. The emphasis on passing is reinforced by the ‘Real Life Test’, which requires trans to dress and live in their gender identity successfully for a period of time in order to be eligible for hormonal treatment or surgery. Questions will be raised as to whether a hierarchy based on the ability to pass has been created in Hong Kong’s transgender community; to what extent the practices of passing entail compliance with dominant standards of dress and behavior which are grounded in the class privilege and compulsory heterosexuality. Similarly, questions will also be raised with regard to incoherent embodiment. Who can afford incoherent or unintelligible embodiment? Whose incoherence is strategic, and whose incoherence is necessary or unlivable? This paper argues for the importance to subvert dominant codes, yet without losing sight of the materiality, complexity and ambiguity of the lived experiences of transgender people.

Biographical Experience, Desires, and Interests: A Case Study of Individual Hong Kong Fans of Japanese Boy Love Comics

This paper is an ethnographic attempt to understand the relationship between individual Hong Kong fans of Japanese Boy Love (BL) comics and the general image of modern societies of class, gender, and age of male characters in BL through the fans’ derivative creative production of BL. The key concept here is the desire. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, each of them tends to maintain a unique interest in it. We further argue that the unique interest in the general image of male characters in BL through the fans’ derivative creation of BL is closely related to the biographical experience of each individual Hong Kong fan. The biographical experience itself is a product of many social factors, among which family is the most important one. Following Sangren (2000), we argue that in order to understand how biographical experience shapes unique interest of each individual fan, we should understand how family as a social institution underlies the desire of individual fans toward BL comics in general and the general image of male character in BL comics in particular. The desires instituted by family in turn will be shown to motivate the unique behavior of individual fans toward BL comics. Through this ethnographic attempt, we shall try to transcend the classic dichotomy of individual and society, sociology and psychology, and culture and personality lingering in social sciences in general and sociology in particular.

A Spectral Existence: Living in a Chinese Ghost City

With more than half of the Chinese population now urbanized and 75% expected to be in the next two decades, the proliferation of new, ‘instant’ cities in China can be understood as the efforts of the Chinese government to house and provide employment for the fast expanding urban population, inducing them into ‘modern’ forms of production and consumption, thus fueling the wheels of global capital and China’s own rapid ascendance as an economic power house. However, of late, an emerging phenomenon that arises from this ceaseless urbanization is the sprouting of ghost cities and towns across the country. These are defined as cities and towns which lie largely under-populated and under-utilized, and where housing projects serve mostly as vehicles of real estate speculation rather than domestic accommodation. Ordos City (or Kangbashi) in Inner Mongolia is such a product of Chinese hyper-urbanization gone wrong. Contrary to the local government’s ambitions to build a global, modernized city in the midst of the desert, residents in this new city are living in the mirage of a future which is promised but has yet to arrive. With the collapse of the local coal industry and China’s own impending economic slowdown, this future of Ordos’s modern morphosis into a global city looks even more bleak. Discussing the ethnographic data collected from my fieldwork in Ordos City, I will attempt to show how residents manage this dissonance between the promised and the realities of life in a ghost city through their production and consumption activities—informal or otherwise; and the way inhabitant’s embedded personalities, gender, status and professional which have been simultaneously overcome or exacerbated in this rapid process of urbanization.

From ‘Reds’ to Riches: Contemporary Changes of Educational Assortative Mating in China from 1949 to 2000

Ever since the Chinese Communist Party took full control of the country in 1949, massive institutional transformations shattered and reshuffled traditional norms and structures, including individuals’ mate selection by depreciating the value of education, valorizing the importance of political loyalty (“red”), and thereby reducing the extent of educational homogamy and overall association. Between 1949 and 1979, political capital and class origins are paramount in determining individual’s position in the society. However, with the advent of economic and market reforms since the late 1970s, the tide has changed again. Under the new environment, de-collectivization, industrialization, and the rise of market economy all point to the rise of human capital and economic success as major determinants of one’s socioeconomic position.

Through the use of 1982, 1990, and 2000 China Population Census and 2005 Chinese mini-census, our results indicate that (1) massive political upheavals between 1950s and 1970s generally decrease the strength of educational association (φ) and increase the propensity of hypogamy; (2) the downward trend was abruptly halted since market reform and the strength of association has reversed its direction to sharply rising trend instead; and (3) assortative mating patterns in rural and urban areas are distinctly different from each other.

To further investigate whether sent-down experiences may have differential impacts on mate selection, additional analyses based on the 1995 and 2002 Chinese Household Income Project are included. Indeed, we find that the impact of sent-down experiences varies by gender, educational levels, and couples joint experiences.

Gender-Oriented Statistical Discrimination Theory: Empirical Evidence from the Hong Kong Labor Market

This paper proposes a simple search model to shed light on the role of aggregate fertility as a form of statistical discrimination against young working women in the labor market. Our proposed theory assumes that workers generate identical production value that does not differ by gender. When matched with a female worker, the firm bargains over the wage rates. Since a prominent female workers receive wages during maternity leave and generate no production value, a matched pair with a female worker may generate lower expected profit to the firm. Rent-sharing ensures a male worker to be paid more than a female worker even with the absence of overt discrimination, thus resulting in statistical discrimination against female workers. Using the 5% random subsamples of census and by-census data in Hong Kong in 1996, 2001, and 2006, the study provides unequivocal evidence that age-specific fertility rates exert negative impact on female wages, after controlling for other observable characteristics. More importantly, the negative effects of fertility on women’s earnings are notably greater in female dominated occupations whereas similarly situated men are unaffected. Since fertility rates tend to be increasing with age during the early stage of women’s work career, our theory partially explains why the gender gap tends to rise with age. One important implication from our model is that employers would similarly expect female workers to have lower fertility than their heterosexual counterparts and thereby resolves the puzzle of the existence of the lesbian earnings premium found in the economic literature.

Can the Industrial Relations in Japan be Reconstructed in the Long-Term Perspective?

More than ten years have already passed since it was first proposed that Japan’s corporate management and labor relations should be reformed to keep pace with globalization. After the financial crisis of 1997, especially, corporate governance changed, and management began to shift emphasis to short term rather than long term profits and shareholders’ rather than employees’ concerns. In addition to the general reduction in labor costs, replacement of regular employees with non-permanent employees rapidly proceeded. The wage system became more performance-based as well in accordance with emerging HR policies that sought the immediate competence of employees. However, some scholars argue that, in the long term, such changes in business strategy and HR policies have negatively affected Japanese industries’ productivity and quality. Moreover, Japanese industrial relations have been affected as well. Labourers have failed to cope with problems such as wage reductions, growing numbers of non-regular workers, and the decrease of collective bargaining power. These problems exist against a backdrop of increasing wealth disparity. This paper aims to elucidate the possibility whether the Japan’s industrial relations could be reconstructed or not in the long-term perspective, focusing on the mechanisms by which globalization and changes in corporate governance are influencing industrial relations at the micro level.

Welfare Support Attitudes in Korea, Taiwan, Germany, and Italy: Focusing on the Influence of Institutional and Political Factors

Previous studies have shown that welfare attitudes are determined by various demographic, economic, and social factors in Western countries. Class is found to be one of the most influential factors in explaining individual welfare attitudes in Western countries. On the contrary, no clear factors have been found to be significant in differentiating individual welfare attitudes in Asian countries, particularly in South Korea so far. To understand welfare attitudes in comparative perspective, we will analyze the “Life and Society” survey data collected from Korea, Taiwan, Germany, and Italy in 2012. Two Asian countries are small emerging welfare states, whereas Germany and Italy are already mature welfare states. However, these countries have some commonalities in that their welfare systems were constructed by the principle of Bismarckian insurance system. It would be very interesting to check changes in welfare attitudes in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The first purpose of this article is to explore whether there are different sociocultural cleavages in welfare attitudes in Western and Asian countries. The second purpose is the main part of this study. The study focuses on the issue addressed by institutionalists in the analysis of welfare attitudes. That is the importance of institutional and political factors. We expand the concept of “political trust” to measure individual evaluations of the political system as well as political parties. We argue that institutional and political factors that measure individual evaluations of the political system are important in explaining welfare attitudes such as individual support for welfare states. At the same time, we will show that there are variations among four countries, and particularly differences between Western and Asian countries in the direction and significance of institutional and political factors.

‘Presentism’ and Youth Research: Methodological and Historical Oversights

A key incentive for why many young researchers undertake research is the hope we can make a ‘difference’ for the young people. No more so than in community participatory research when we are invited to participate in ‘transformative’ change for marginalised young people in particular. However, while we know that social change takes time, we are constrained in such research by timeframes imposed by neoliberal institutes that compel quick research turn-arounds and rapid outputs. Moreover, such constraints also encourage a very ‘presentist’ view of the young people at the focus of our research, thus overlooking historical legacies, continuities and discontinuities that are embedded in communities and how these shape their social worlds. In this paper I examine a participatory community youth research project that ‘failed’, forcing me to confront my own presentist and short-sited views, as well as those imbued in methodological choices. Drawing on Hannah Arendt (1986, I re-examine the ‘web of relations’ (p. 150) which these narratives of ‘failure’ are situated in, thus highlighting the complex and intertwined historical and contemporary factors at play when we conduct research. The paper critiques ‘presentist’ tendencies in youth research and raises questions about collective ethical responsibilities toward sustainable actions of change through youth research.

WOODCOCK, JAMIE* (Goldsmiths, jamie.woodcock@googlemail.com)

Precarious Labour In The UK: The Impact Of Neoliberalism and The Possibilities For Resistance and Organisation

This paper seeks to examine resistance to precarious employment in the UK. It has been the focus of recent debate in the UK both in academia and in the labour movement. In academia there have been debates between Guy Standing (2011) and Kevin Doogan (2009) amongst others about the extent and implications of precarious employment. The use of statistical evidence is a particular point of contention; ranging from some arguments relying on very little of it to others claiming it negates the concept. However statistics alone provide only a partial picture, as the category of precarious employment is heterogeneous: it is not simply about being on a specific kind of temporary contract. The experience of precarity is an important component of work today, and an understanding that draws on Bourdieu’s (1998) notion of ‘précarité’ as a ‘mode of domination’ is useful for developing this further. The paper will attempt to historicise precarity in the UK as part of the broader process of the rise to the crisis of 1970s and the rise of Neoliberalism. These processes were enforced with a series of defeats for the trade union movement, which have left low levels of membership concentrated mainly in the public sector and large sections of the private sector without traditional forms of working class organisation. There has been resistance to precarious employment. The examples of university teaching staff, call centre workers, and the campaigns against zero-hour contracts will be examined to understand how new forms of struggle can lay the basis for the renewal of workers’ organisation. The paper will argue how the historical examples of new unionisation in the 1880s and 1930s can inform contemporary debates on overcoming precarity.
used a range of terms to capture the ‘grey zone’ that falls between worklessness on the one hand, and relatively secure full-time employment on the other. This ‘grey zone’ varies significantly in size across first world countries and is likely to expand under the current turbulent economic conditions. Although sociologists have both introduced and critiqued various terms used to represent insecure and fragmented work, there have been few attempts at a theoretically driven conceptualisation that ties the new conditions to broader processes of change in advanced capitalist societies and links structural change to new forms of consciousness. While the idea of a framing the experiences of fragmented and casualised work in the new economy as a new class, for example the precariat, has some attraction, there are also difficulties with the conceptualisation. One of the core problems relate to the fact that not all young people who are structurally located in the precariat by virtue of their employment in casual or insecure forms of employment represent a disadvantaged or marginalised group. For some the experience of precarious employment is alleviated by access to other resources, such as family support, and they escape some or all of these precarious work conditions as they get older. Drawing on evidence from a number of countries, and primary data from an ongoing mixed-methods study of youth in Australia, in this paper we describe some of the ways in which changes in the labour market are affecting young people, consider the adequacy of representations of precarious and fragmented positions as the basis of a new ‘class’ and propose an alternative way of conceptualising ‘individualised’ structured inequalities in the new economy.

Balanced Advice? Appointments to Advisory Boards and Gender Quota’s in the European Union

Advisory councils and boards play an important role in countries with corporatist democratic systems. Appointments to these boards are often controlled by political actors but regulated in a bureaucratic framework. Feminist movements identified these decision-making bodies as both crucial gatekeepers and easily malleable venues for a quick fix of gender balance. Given that many of the bodies are appointed by the state, boards and public committees seemed to offer the opportunity to quickly change the gender balance in decision-making, even as electoral sectors were changing slowly. Countries such as Belgium and Norway adapted legal gender composition rules for appointed bodies by 2005. Later quota’s in electoral politics became more widespread. Today many European countries have also started proceedings to implement gender quotas in advisory bodies and corporate business boards with state participation. To what extent has the increasing integration of Europe led to adaption of gender regulations of appointed boards in EU member states? How does this interact with political appointment processes? What are the results and how does the bureaucratic capacity of the state interact with implementation of gender-balence rules? This paper will report on comparative data and measures in the 27 European Union countries. Who has adopted quota for these bodies, and what are the arguments? How do gender equality considerations relate to debates about de-politicization of appointments? Further the paper will review available results on the composition of these boards and offer the opportunity to identify potential pitfalls for adaption in other political and cultural contexts.

Between Ambition and Reality: The Role of Gender Representation Rules in European Scientific Advisory Councils

Research Councils are crucial gatekeepers to academic power. Substantial research indicates that gender skewed scientific advisory and review boards play a role in the underrepresentation of women receiving scientific grants. Since the mid-nineties, scientific advisory boards have adapted guidelines about the gender composition of their panels, either compelled by national legislation and European directives or voluntarily. European Union scientific review boards are supposed to be composed at the 40%/60% level, for example. How the adaption of guidelines and the implementation and monitoring of guidelines are not always linked. Quota’s are often generated by institutions that generate controversy, even among female scholars. Further, the re-adjustment of the European Research Area may mean that ambitions of representation become lost thanks to neo-liberal arguments about an unambiguously economically beneficial concept of ‘efficiency.’ This paper documents the current state of affairs in terms of regulation, the resistance to quota regulations and the extent to which there is compliance with regulatory demands on the composition of panels and management. The implications for research councils and gender equity in decision-making will be discussed. Contextual and structural factors of legislation, leadership, peer pressure, Europeanization, monitoring and bureaucratic capacity are identified as contributing to differing outcomes. Concretely, the paper treats the major European players in transnational funding and management: European Science Foundation, the nascent Science Europe, the European Research Council and the Commission of the European Union.

Re-materialising the Commodity in Social Theory: Performativity, Iconicity and Object Transitioning

The frontiers of social theory and cultural inquiry have been advanced by the affordances of object-oriented analyses and, more critically, a material ontology. Objects, things and materials are the stuff of new ecologies of meaning and practice, whereby social structures, global networks, cultural ideals, social values and the human body are both materialized and constructed. Studies of object ecologies, material culture and things have challenged how we think about the nature of mundane experiences, modes of social communication and performance, and networks of social affiliation. In all of these fields, the material basis of social life has been uncovered and emphasised. As it has matured, material analysis has tended to bifurcate into interpretivist and materialist approaches, leaving approaches to materiality at something of a crossroads. One the one hand, strongly materialist approaches tend to fetishise material dimensions and relational, systemic patterns of exchange, while interpretivist approaches focus on the social construction of objects. This paper explores available results on the central sociological category of the commodity, this paper explores opportunities for integrating these approaches with special focus on the relatively new cultural sociological resources of performance theory and theories of iconicity.

WORTH, OWEN* (University of Limerick, owen.worth@ul.ie)

Neoliberalism on the Defensive: Austerity As a New Form of Common-Sense

Since the global financial crisis, the extent of resistance to global forms of neoliberalism has been marked, with economists being at the forefront in demonstrating how austerity is unsustainable as a means of production. Both radical and Keynesian economists, alongside a wide variety of political and social movements, which were already prevalence during the preceding decades since the end of the cold war became more prominent in their attacks and criticisms of neoliberalism. These have included social movements such as the Occupy campaign, regional political movements such as those in Latin America, reactionary nationalist groups and religious-based organisations, which have all been explicit in their attacks on the hegemony of neoliberalism. In response, the notion of austerity has flourished as a concept in order to keep such criticisms at bay. This paper will argue that the notion of austerity has developed into a defensive ideology, geared around the rejection of comprehensive alternatives to the crisis. Instead, it is geared upon the idea of presenting austerity as a compulsory painful measure, required in order to re-stimulate growth and confidence in the economy. It will also suggest that this narrative has been strengthened by the failure of its criticisms to adequately construct a viable hegemonic alternative that might replace the status-quo. As a result, austerity has assumed a character that can be understood as a form of ‘common-sense’ in the wider Gramscian tradition. It serves as providing a set of norms and conditions which are understood as being both ‘natural’ and ‘permanent’ across a wide range of policy settings. This paper will conclude that it is through this articulation of common-sense that neoliberalism has (as least to date) managed to survive and to go on the defensive. Such a position that was not seen possible merely five years ago.

Gender Equality in Progressive Muslim Movements: Social Implications in the United States

The varied forms of progressive Islam all endeavour to realise social justice and equality through a critical engagement with Islamic sources and an inquiry into progressive practices. An important feature of more progressive Islamic movements in North America is the focus on social equality and ultimately on gender parity. This paper seeks to investigate the ways in which social justice is achieved and enacted in target progressive Muslim communities and organisations. Subsequently the possibility of the stigmatisation of social processes for ensuring human rights stemming from progressive ideologies will be examined. The research will be focused on two organisations: Muslims for Progressive Values and the New York Community of Progressives. Fieldwork will be carried out through online focus groups, observation and in-depth interviews in the United States. The paper draws on the intention to investigate representation in progressive Muslim movements and within other alternative Islamic practices/communities. The findings from this study will be used to evaluate the broader
concerns of social justice, human rights and pluralism in these two progressive Muslim movements.

Neoliberal metropolitization and the remaking of welfare systems: The rise of professional projects in the government of the biopolitics of the metropolis

European research on the linkages between professionalization and political systems has focused either on the role of the state in professional projects or, more recently, on the relevance of transnational developments for a globalization of professions. This paper extends the analysis of political systems to a new scale, that of the metropolis. It identifies the recent discourses of metropolises as ‘landscapes of power’ in global economy as a meta-level turn to ‘neoliberal metropolitization’ in public policy. The paper further argues that the new discourse has helped to constitute metropolises also as important landscapes for professional projects.

The analysis examines urban planning focusing on the Greater Helsinki region as a ‘world-class centre for business and innovation’, focusing on the professional projects that rise in the intersection of government and scientific expertise. I employ Patrick Carroll’s ideas about how the role of expertise for ‘material design’ accounts for conducted movement. Carroll highlights how the key boundary objects of land, people and built environment are transformed into ‘techno-territoriality’, ‘bio-population’, and ‘infrastructural jurisdiction’. Employing Carroll’s framework to my analysis of role of expertise for the biopolitics of the metropolis, I argue that expert professionals are key agents of this transformation work, forging expert knowledge into institutional practice.

The findings show that like the old liberal state that gave rise to new sciences such as public health the market-conscious metropolis also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four existing professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

A Sociology of Real Utopias

On Marx’s tomb in Highgate cemetery is one of his most quoted passages: “Philosophers have only interpreted the world in various ways; the point is to change it.” Usually this is taken as a call to action. But it is also a call to produce a certain kind of knowledge, knowledge that is relevant to the task of social transformation. Such knowledge needs to grapple with four broad problems: specifying the values that drive our search for a better world; developing a rigorous diagnosis and critique of existing social structures and institutions in terms of those values; elaborating models of emancipatory alternatives that better realize those values; and understanding the conditions and strategies for transformations that move us towards those alternatives. Sociology, in its various critical traditions, has focused mainly on the second of these – the diagnosis and critique of the way existing social structures generate harms in the world. It is now especially imperative that we engage the rest of this agenda. The idea of “real utopias” is one way of doing this. It is a way of connecting ideas about emancipatory destinations beyond the existing world to practical transformations that prefigure such alternatives. The “utopia” in real utopias insists on developing visions of alternatives that embody our deepest aspirations for a world in which all people have access to the conditions to live flourishing lives; the “real” in real utopia means taking very seriously the problem of the viability of institutions that could effectively move us in the direction of that world.

Digital Contention: Anonymous and the Freedom of Information Movement

The main task of this paper is to analyze the online collective known as “Anonymous” as a case study using the theoretical framework of traditional social movement analysis. I outline this framework in the literature review section of this paper as nine distinct characteristics, each pertaining to a different aspect of social movement research. My purpose in doing so is to argue that Anonymous is part of a larger, loosely-connected new social movement, which I call the Freedom of Information Movement, as well as to show how its unique characteristics which have developed out of new digital technologies are making it necessary for sociologists to update and expand upon our existing theories and concepts of social movements. Some of this work has already begun. There have been several, though not many, studies of cyber-activism, hacktivism, digital repertoires of contention, cyber diffusion, online activist networks, and decentralized organizational forms of online movements. Through a combination of historical and qualitative content analyses of news articles, websites, operational fliers, and other written materials associated with Anonymous, I am attempting to build upon and expand this new and growing paradigm concerning online social movements and digital forms of contention.

Child Abuse and Public Inquiries: Historicizing the Imperative for Openness and Disclosure

By the late twentieth century, an imperative for openness and transparency - what might fruitfully be called a ‘culture of disclosure’ - was increasingly evident across all spheres of social, political and personal life in the West. While this can be identified in disparate domains, it has been particularly striking in relation to discourses of child abuse. This paper explores the imperative for openness and disclosure about the abuse and neglect of children against the backdrop of emergent constructions of childhood vulnerability since the 1970s. It takes as its focal point a key instantiation of societal openness over the last several decades: public inquiries into childhood maltreatment. While official inquiries have a number of functions, a key purpose is acknowledged as ‘learning lessons’ from the past in order to prevent future recurrence. Given it is now widely accepted that people who have suffered abuse and neglect as children often face lifelong challenges, including poverty, social isolation and poor mental health, there is a strong warrant for investigations that throw light on cases of past abuse. This paper first considers the rise of public inquiries in a number of countries, including the United Kingdom, Ireland and Australia, as exemplars of increasing societal concern about childhood vulnerability and abuse. Second, it examines inquiries against the backdrop of emerging theories of human development and psychological research that re-shaped how childhood experience, and the effects of ill-treatment, came to be understood. Finally, it explores the public pedagogical function of inquiries, and makes a case for the use of official inquiries in understanding broader processes of social change; in this case, changing concepts of childhood vulnerability and the emergence of social and educational policies aimed at safeguarding children and promoting their wellbeing.

The Role of Official Inquiries in Understanding and Preventing Childhood Maltreatment

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The 1970s saw both the emergence of child abuse as a recognised social problem and the rise of public inquiries to investigate issues of major social concern, including childhood maltreatment, in a number of Western countries. In the United Kingdom there have been more than 80 inquiries into various aspects of childhood abuse and neglect over the last four decades. In Ireland, 14 reports published since the 1990s have examined abuse in schools and institutions. Similarly, in Australia, growing concern about the welfare of children in out-of-home care has prompted a number of official investigations, the most recent being the current Royal Commission into Institutional Responses to Child Sexual Abuse. It is one of the largest public inquiries in Australia's history and like the Irish Ryan Commission before it, is likely to be one of the most significant inquiries into historical instances of child abuse internationally. Through examination of a number of prominent inquiries, this paper first explores the role of official inquiries in social and educational policy reform, and in shaping public understandings of the problems of child abuse more broadly. It then considers the cathartic function of inquiries for victims and for societies more broadly, through exploration of the notion that inquiries reflect an open and transparent society in which ‘the voices of the powerless are heard’ and the powerful are held accountable. Finally, the paper analyses the fraught social justice issues at play in the investigation of past instances of abuse, and the promise of social and institutional change aimed at better protecting young people today.

Choreographing Risk: Multiple Sociotechnical Networks of Multiple Pregnancy

This paper creates the concept of “choreographing risk” to explore the socio-technical networks of multiple pregnancy, mostly caused by assisted reproductive technology. I argue that during the processes of assisted conception and multiple pregnancy, elements of technological, legal, financial, emotional, and political and gender, are coordinated around risk. Data includes in-depth interviews of women and medical professionals, and archival data. I find that in the stage of getting pregnant with assisted reproductive technology, doctors tend to use multiple embryo transfer and ovarian stimulation medication to increase the pregnancy rate. Both doctors and women perceive failure of conception as the major risk, and tend to disregard the risk of multiple pregnancy. In the case of multifetal conception, fetal reduction becomes a technical model to reduce the risk of multiple pregnancy. However, some women and doctors refuse this technique for reasons other than health risk; network of fetal reduction often collapses. High prevalence of multiple pregnancy in Taiwan exists. Pregnant women of twins and triplets take embodied responsibility to avoid risk of premature birth, including diverse bodily work, and negotiation between productive and reproductive labor. This paper shows that as women vis-à-vis medical professionals become more diverse bodily work, and negotiation between productive and reproductive labor.

How Scenes Drive Housing Prices in Beijing

Wu (2011) proves that Scenes heavily influence the urban residential choices in China. In that paper, an analytical framework is constructed to study 375 counties of 25 largest cities in China. The objective of this paper is to improve on the previous analytical framework and delve into an examination of neighborhood level housing markets. Specifically, we focus on the city of Beijing in this paper and collect a dataset which includes three-year housing prices data and 85 types of amenities from 220 neighborhood areas in Beijing. In addition, we develop a novel technique to overcome the drawbacks of the original theory in spatial data analysis due to strong spatial autocorrelations among housing prices. We also employ geographically weighted regression and Kriging mapping to support our analyses. Our conclusions are the following: (1) the distribution of local culture and amenities is polarized in Beijing; (2) housing prices in Beijing are significantly influenced by neighborhood level culture and amenities; (3) the distribution of housing prices in Beijing has the shape of a comet, corresponding to the distribution of local culture and amenities, and with tails spreading towards the northwest.

The Research of Cost Performance of Urban Housing in China: Base on the Theory of Scenes

In the last decade, the rising real estate price in Mainland China has become a worldwide issue. All walks of life paid close attention to the urbanization process stood by flourishing Real Estate Market in China. Moreover, some scholars have more emphasis on crisis and bubble hidden by the fast-rising real estate price. Research and analysis on commercial housing vacancy ratio, relationship with housing price land value and Housing Price-to-Income Ratio have occupied the mainstream. These researches either stressed the influence on housing price by the cost of residential land from the perspective of supply or underlined the mismatch of housing price and per capita income from the perspective of demand. However the latter argues that whether there exist bubbles in commodity residential market is a dynamic equilibrium process, it is difficult to judge only by one-side factors. Hence according the Theory of Equilibrium Price posed by New Classical Economics, this paper re-examine the residential market bubble issue in China from a totally new perspective: cost performance of commodity housing based on Principle of Supply-demand equilibrium. Using ideological system of the latest achievements of Scenes Theory from Chicago School, this paper selected Panel data from 2001 to 2012 in 147 main cities in China, built urban residential Scenario index to measure cost performance of commodity housing in different regions in China and empirically proved the rationality and validity of the index. Finally this paper points out that urban cost performance of commodity housing ruled low in general, Second-tier cities had a low commodity residential market bubble level rather than first- and second-tier cities had a high level and offer targeted policy recommendations for macro-control of real estate market of the government of China.

Micro and Macro Conditions for Happiness in Urban China

Despite the large literature on happiness research, sociological studies on the social determinants of happiness in China remain rare. This study examines not only micro conditions for happiness but also the potential interplay of micro and macro conditions in urban China. Specifically, we focus on some wide-studied and much overlooked micro conditions, socioeconomic achievements (what you get) and non-cognitive skills (who you are), respectively. However, the happiness effects of micro conditions may well differ across macro contexts. We thus investigate how the happiness effects socioeconomic achievements and non-cognitive skills depend on the level of economic development in urban China.

Our data are drawn from the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey. Socioeconomic achievements refer to years of education and annual total income. Non-cognitive skills refer to conscientiousness, operationalized by indicators of consistency, dependability, and deferral of gratification in performing the student role. Macro condition refers to urban areas in their development contexts, socioeconomic achievements (what you get) and non-cognitive skills (who you are), respectively. However, the happiness effects of micro conditions may well differ across macro contexts. We thus investigate how the happiness effects socioeconomic achievements and non-cognitive skills depend on the level of economic development in urban China.

There is a penalty on happiness for high achievers of education and income in the most developed urban areas, but the happiness effect of adolescent conscientiousness is uniform across development contexts.

Personality Traits, Socioeconomic Inequality and Subjective Well-Being in Urban China

This paper brings together two literatures: a large literature of health inequality that has long documented the robust health benefits of socioeconomic status (SES) and a new human capital theory that emphasizes the health benefits of certain personality traits. We examine the potential dynamics between psychological functioning (personality traits and competitive pressure) and socioeconomic inequality in the context of subjective well-being (SWB). Specifically, (1) does adolescent conscientiousness (one of the "Big Five" personality traits) affect socioeconomic status (measured by education and income) in the transitional economy of
urban China? (2) Does adolescent conscientiousness also modify (interact with) the SWB effect of SES? (3) Are the SWB effects of conscientiousness and SES contingent on the degree of socioeconomic competition of an urban area?

Drawing on the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey, we measure SWB with multiple indicators of positive and negative affect and conscientiousness with consistency, dependability, and deferral of gratification in performing the student role. We obtain three main findings: (1) Adolescent conscientiousness enhances education and income. (2) There is no interaction between adolescent conscientiousness and SES in predicting SWB. Each has independent effect on SWB. (3) However, psychological functioning and structural inequality interplay in a more complex way. We use level of economic development as an indicator of the degree of socioeconomic competition. While the SWB benefit of conscientiousness on SWB is robust across urban areas of high and low economic development, the SWB effects of education and income are highly contingent on the level of development. The evidence suggests that there is a penalty on SWB for high achievers of education and income in the most developed urban areas. Thus psychological functioning does not only affect socioeconomic achievement, it also critically determines the SWB benefits of socioeconomic achievement.

Perceptions on Hurricane Information and Protective Action Decisions

Tropical storms and hurricanes have caused extensive casualties and damage in past decades. Population and economic growth in the vulnerable coastal areas have made hurricanes a serious problem and created the potential for a catastrophic loss of life. The existing research literature lacks a sufficient scientific understanding dynamic protective action decision making during events in which additional behavioral and cognitive factors at different stages of hurricane. Emergency managers and residents in the risk areas are most likely to make decisions on their protective actions based on National Hurricane Center's hurricane forecast advisories. This study uses the DynaSearch program to conduct a computer-based experiment that the understanding of hurricane strike probabilities and their choices of protective action recommendations during four different hurricane scenarios by having students playing the roles of county emergency managers. This study simulates the approach of a hurricane by providing experiment participants a sequence of hurricane forecast advisories and examining their threat perceptions and implement protective actions over time. The results show that (1) people's hurricane strike probability judgments and protective action recommendations escalated as hurricanes approached to their counties; (2) people realized that hurricane could make turns and might not always follow the forecast track; (3) risk assessment variables are correlated with people's disaster responses; (4) hurricane experience has a significant effect on protective action recommendations; (5) participants failed to evacuate appropriate risk areas in timely manner; and (6) participants had difficulty interpreting strike probabilities. The results suggest that participants were able to utilize the available hurricane information to make reasonable judgments about each city's relative strike probability. However, their failure to be left-behind does not change the rule of either migrant children or left-behind children, no previous study had ever tried to distinguish the various experiences of being migrant or left-behind, or both, that might contribute to children's well-being. This study was aimed to investigate how the left-behind experiences of children living in the rural context of China influence their mental health status, with their potential migration experiences being taken into account. Moreover, it investigated how the effects of left-behind experiences on mental health might be mediated by the stock of social capital in their family and neighborhood.

Data of this study came from a questionnaire survey with 701 children ages 11-18 living in the rural counties of Guizhou province, China. The structural equation modeling results suggested that, compared to those rural children who lived with both parents and never had any experience of being migrant or left-behind, children who were currently left-behind and had some previous experience of being a migrant appeared to exhibit higher levels of depression. Children who used to be left-behind but lived with both parents at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in the family. Implications of these research findings were further discussed.

Ethnic Autonomous Policy and Ethnic Inequality in China: An Evaluation

China's 55 ethnic minorities constitute about 9 percent of the national population, and most are concentrated in remote areas and disadvantaged in social and economic development compared to the Han majority. To promote ethnic inequality, Chinese government has instituted the ethnic autonomous jurisdictions at different levels: 5 autonomous regions, 30 autonomous prefectures and 120 autonomous counties/banners, covering 71 percent of ethnic minorities and 64 percent of the territory as of 2005. This paper aims to employ China's census (from 1982 to 2010) and the mini-census data in 2005 to evaluate the effectiveness of such a policy on ethnic disparities in educational, occupational attainment and income. Specifically, we will employ the causal inference methods to investigate the experience of ethnic minority (relative to Han) living under their own autonomous jurisdiction and their counterparts otherwise. The findings will have important implications for China's policy towards ethnic minorities.

Trends in Intergenerational Social Mobility in China

This paper studies the intergenerational social mobility pattern in the People's Republic of China over half six decades, based on an analysis of 5 cohorts (born between 1932 and 1988) from a series of national representative surveys conducted in 1996, 2005, 2006, 2008, 2010, 2012, respectively. In the context of rapid economic industrialization since 1949, the absolute mobility rates in China increased over time, but the level is much lower than other countries. The relative mobility patterns were largely stable for both men and women except for the youngest cohort. Education played an important role in intergenerational social reproduction: the effect of origin on educational attainment does not change over time, and but the effect of education on destination does. The household registration (hukou) system that the Chinese government installed to curb the rural-urban migration in the course of socialist industrialization created a unique pattern of social mobility in China that deviates from core models of social mobility found in other countries. The market reform has altered the pattern of social mobility: the effect of origin on education increased and the market-oriented reform seems to enhance the inter-generational transmission.

Between the Individualism and the Collectivism: Dilemma in the Socialization of Today's Chinese Adolescents

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
About one hundred years ago, William Bagley put forward several controversial issues on different trends of education concepts. One of them concerns the debate between two opposite values in pedagogy: the individualism and the collectivism. If these two values represent and distinguish two different notions in diverse civilizations, especially during this transitional stage and the context of globalization, China’s youth are the first generation whom simultaneously contact with various cultures from the Western world and from their own tradition, thus directly confronting this dilemma during their socialization.

On one hand, Chinese social convention attaches importance to the strategies needed in maintaining a collective life, in which individuals should adhere to the Confucian family tradition used to emphasize that an individual submits to the collective, this phenomenon is particularly accentuated in China, where the civil society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today’s Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships? How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still having an impact on those Chinese, the adolescents who hold traditional values. The concept of “food security”. has been enshrined in official ASEAN including Thailand’s government documents. It is argued that there are increasing evidence of nutrient and, some urban-based social movements related to food could be more readily conceptualized under the food sovereignty concept. Situated in the tropics, Thailand like other Mekong and ASEAN countries are rich in agrobiodiversity. Modern agriculture, diverse cash crops have been promoted as sources of foreign currency for the country, with much less recognized negative impact. The nature-based social movements related to food sovereignty movements have been observed, from ethnic tribal highland rice farming, new organic and sustainable agriculture including traditional mixed ones, peasant-to-peasant seeds sharing, struggle to defend local produced food, be it marine and coasts against mega-energy, deep sea gas, oil drilling and industrial projects of either national or multinational enterprises. Despite somewhat shared concerns for food security, improving livelihoods livelihoods and sustainable agriculture between the farmers, the state and civil society groups, tensions are evident in power imbalances embedded in these and actions in the policy spheres.

This paper aims at substantiating the transformative potentials and significance of these movements in transcending the present productivist and growth-centric discourse.

**Discrimination Facing Immigrant Job Applicants in Poland - Results of a Field Experiment**

In the 'global race for talent,' many factors can affect the attractiveness of a particular country for migrants, including the likelihood of securing employment commensurate with their qualifications. Empirical data, however, show that immigrant status and/or ethnicity act as stratifying mechanisms, and can contribute to inequality in the chances of migrants’ securing adequate employment versus those of native workers. Whether this inequality is affected by factors related to the labor supply side (e.g., differences in skills) or by the labor demand side (e.g., discrimination by employers) often remains unclear. It is also an open question whether migrant status plays a similar role in homogenous nations where there are no established foreign-born ethnic or immigrant groups as it does in nations with a long history of immigration. In order to investigate whether and to what extent there is an ‘immigrant and ethnic hiring penalty’ in the primary labor market of one of these ‘new immigration’ countries -- Poland -- we conducted a natural experiment. Ostensibly on behalf of potential employees, we sent over 3,500 applications in response to job advertisements. The candidates were equivalent in their human capital, but differed in their ethnic and national backgrounds. The results show a statistically significant net discrimination against immigrants. However, contrary to our predictions, discrimination against ‘white immigrants’ is stronger than that against ‘ethnic immigrants’. We also observed different levels of discrimination against immigrant men and women, depending on the type of the job and size of the company. Specifically, there is greater discrimination against immigrant females applying for typical female-type jobs, whereas the likelihood of discrimination is higher among immigrant males applying to large companies. We discuss possible explanations of the observed effects, with particular focus on predictions from economic theories. Of statistical discrimination and from the status characteristics theory of double standards.
The image of state education, together with visions of its main functions, priorities and expected results are constantly being reshaped under the impact of various social, economic, political and cultural changes. Being a powerful tool of influence, education is often becoming the battlefield of different interests, the most powerful of which have their reflection in educational policies and practice. This paper concentrates on the case of Poland, which faced several important transformational processes during last decade, among most important of which is joining the European Union (2004). What impact on educational system and its actors did it have? This paper investigates how EU’s directives and recommendations influenced Polish educational system, using the example of foreign language proficiency. In 1995 the European Commission published a White Paper on Education and Training, which states that each citizen of European Union must speak at least two foreign languages, which would enable mobility and competitiveness on the labor market. This is the starting point of the analysis of the paper, which will present the insight to EU recommendations concerning foreign languages and relate this data with the actual educational reforms in Poland in 2004-2013. Further on, the paper will concentrate on the analysis of the foreign language skills characteristics of Polish citizens in 2013, using the data gathered in Polish Panel Survey POLPAN and European Survey on Language Competences (2011). Interpreting the results, the paper confronts the dominating idea that Poland should “catch up” in learning foreign languages (Poland National Summery ESLC, 2011) and opens the questions of whether foreign language proficiency is an unavoidable condition of modern world and to which extent the multilingual pressure creates the new marginalization, unequal relationships and uneven chances.

Contested Control: Irregular Transit Migrants in Europe

This presentation is about young migrants’ journeys with low chances of receiving asylum or any other type of residence in Europe. These migrants exhibit a highly complex migration pattern. First, these migrants are frequently in durable “transit” across Europe, moving back and forth between different states. Second, transit migrants must exhibit a high degree of flexibility, as they have to respond to suddenly changing conditions, such as work opportunities, rejection of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty and psychological distress. The experience of these young adults shows a deep ambivalence between a sense of autonomy, on the one hand, and of profound hopelessness, on the other. This presentation explores the “fragmented journeys” of these migrants, by way of a multi-sited ethnographic approach and biographical interviews. It focuses on the lived experiences and the strategies of irregular migrants to find a way to reside in Europe in the context of an increasingly restrictive migration management.

Is Another Economy Possible? the Prospects of Social Entrepreneurship from the Business Viewpoint

The dynamics of the economy goes through three strands: the State, the market and civil society. The State, in principle, is characterized by the logic of intervention, by the regulation and entrepreneurship; the market prefers the competitive logic; and the third sector step by associative pathways. Currently, the economy of many countries goes through times of turbulence. The State no longer meets the diverse needs of its population; private companies are increasingly profitability. Social “companies”, in principle, have many weaknesses in their management and, in this regard, we realize that there is a disruption of economic and social order in society, like: increasing poverty, violence, environmental degradation and so on. We need an alternative to the productive process. In this way, the social entrepreneurship enables new forms of economic activity management with a logic contrary to market economies. In this paper, we describe an entity of third sector with the solidarity economy approach, through social entrepreneurship postulates. Our research is descriptive, qualitative, being a case study on a social entity. We use observation and documentary work for data collection and the analysis of the content reflected the catalogued information. The results suggest that there is a new economic order and that other alternatives practices of economic production are viable. Cooperating companies can be managed by the competitive logic, but with emphasis on the collective human needs. The entities have vision of solidarity and aim financial and social profit as well. The local market is valued and the cooperative process is viable. On the other hand, it is not easy to maintain an organization of this type in the market, with associative goals. Predatory and unfair competition of traditional companies undermines the survival of social entities. Finally, the success achieved by the Organization studied shows that another economic production is possible.
University, analyzing two key factors of variable quantity, marketing and word of mouth, we research China's audience of animated film and try to discover facts about it. We find that marketing is the weakest competence for China's Animated Film(CAF), university students is the strategic audience of CAF and middle-aged group with higher education is the target market of CAF.

Chinese Animated Film and its Audience; An Empirical Research on Chinese Cultural Wave
In this presentation I will take up the case of Chinese animated film and its audience as one of those examples of new cultural waves from Asia. Institute for Cultural Industries at Peking University has been conducting a survey research on the issue as a part of the survey program called Cultural Consumption Program. The program (survey project) has been one of the rare attempts of such kind in China and we are now analyzing the data gathered by the project. In the presentation of this session, I will show the results and the facts of the survey and I will try to connect the outcomes to the other cultural 'waves' from Asia in locating it in the broader picture in Asian settings in the whole. In doing so I shall commit the dialogues with other presenters who deal with the findings from other areas of Asia.

Who Becomes Registered Urban Resident during China’s Massive Urbanization: Assessing the Roles of Human, Political and Social Capital
Background
Over the last half-century, registered urban residents persistently occupy an advantageous position over rural residents or rural-urban migrants in obtaining good jobs, health care, housing and even education for their children. Therefore, transforming one’s household registration (hukou) status from rural to urban is a very effective path to upward social mobility. Prior research shows that education, Party membership and military service are the three most significant predictors of hukou conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion.

Question
We re-examine the roles of three types of predictors in hukou conversion: human, political and social capital.

Data and Analysis
We draw on the 2008 Chinese General Social Survey that provides crucial timing data for life events, including the timing of hukou conversion for both the respondents and their spouses, first marriage and joining in the Communist Party.

Empirical Findings
(1) Education is a far more powerful credential than expected, facilitating the use of not only educational channels, but also a wide range of state sponsored conversion channels, such as military, employment in state sector or cadre; (2) when reverse causation is thoroughly eliminated, we show that Party membership and military service are the three most significant predictors of hukou conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion.

Legacies of the Sichuan Earthquake: Disasters As Past and Present Political Events
This paper examines legacies of the 2008 Sichuan earthquake in China in politics of subsequent disasters, particularly Yushu and Ya'an earthquakes. The legacies are manifested in three political realms: state leaders' compassionate performance, the state's cooperation with the civil society, and mourning rituals for disaster victims. While the Sichuan earthquake provided a cognitive template for people to interpret subsequent disasters as well as a political action patterns for political actors to follow, its legacies' features and effectiveness varied across events and realms. First, while leaders' compassionate performance in subsequent disasters resembled Premier Wen Jiabao's in Sichuan, it was much less effective. Second, the state's cooperation with the civil society organizations was politically selective and biased. Third, the mourning ritual for disaster victims was institutionalized but deprived of its substantive meaning, and the spontaneous mourning for student victims of the collapsed schools was suppressed. This paper explains the variations by examining both situational and structural dimensions of state-society relations. I argue that structural tensions between the state's moral legitimation and its other political interests as well as contextual factors alter the shaping power of the Sichuan earthquake's legacies. More broadly, I propose a state-society relations perspective to theorize political legacy.

Hermeneutics and Cultural Sociology

Hermeneutics and Cultural Sociology: A Discussion between Alexander’s “Strong Program” and the “Cultural self-awareness” of Chinese Sociology

Bing Xu, Shanghai University, China

Jeffery Alexander’s concept of cultural sociology is closely related to hermeneutics, and hermeneutics has been built continuously as well as cultural sociology. He and Philip Smith’s “strong program” takes Dilthey’s hermeneutics as its philosophical resource and late Durkheim as its classic sociological resource (Alexander and Smith, 2003). What is the relationship between the two resources? My viewpoint is that both of them are inspired by Wilhelm von Humboldt’s metaphor of “the web of language” in German Romantic Philosophy, which plants the seed of modern hermeneutics (cf. Taylor, 1985: 231). “The web of language” is expanded from text to text-like actions by Dilthey, and from text-like action to social structure by Durkheim. Durkheim articulates his approach to reach beneath the symbol to grasp the social reality around 1920, which has hermeneutical implications (cf. Durkheim, 1995: 2). This approach has been transformed into structuralism in the French tradition in early 20 century, and has been extended by Alexander between French structuralism and American pragmatics as “cultural pragmatics” in the turn of 21 century.

Chinese sociologist Xiaotong Fei (2003) argues that hermeneutics is a powerful approach for the “cultural self-awareness” of Chinese sociology, because the profound thoughts on mind in Neo-Confucianism of Song and Ming Dynasties has hermeneutical implications. I would argue that hermeneutics can be developed in this exploration, and in return, the exploration can be pushed forward by the expanded hermeneutics. The hermeneutics in this context is different from that of Alexander but can be inspired by the latter.

Aspirations, Motivations and Immigrant Children's Unexpected Success in Education

Evidences have shown that despite their undesirable family background, immigrant children are doing unexpectedly well in education when compared to their native counterparts. Previous studies have failed to prove that strong motivation towards better life and high aspiration for upward mobility may contribute to their academic success. To fill this gap, I use Hong Kong PISA data to identify four types of incentives that theoretically would cause immigrants’ outstanding performance, and use mediation analysis to measure how much of the effect of immigrant status on academic achievement is mediated through these factors. The results confirm that aspirations and motivations do mediate a part of the immigrant effect on mathematics achievement, and educational aspiration seems to be the relatively more important one. For immigrant students from families with low socioeconomic status, although their academic advantage is especially large, but that does not mean they have stronger motivations and higher aspirations.

Factors Associated with Subjective Well-Being in Chinese Elderly People

This paper used the data from China General Social Survey to examine factors related to Subjective Well-Being (SWB) in Chinese elderly people. I constructed a conceptual model adapted from Anderson’s health behavioral model and probed the associations between SWB and predisposing, enabling, need and health behavior factors. I discovered that higher SWB is more likely to be found in elderly people who have spouses accompanied, maintain good quality of relationship with family relatives and friends, have stronger need for recreational activities, have better health status, exercise more, perceive an increase in their current socio-economic status compared to previous situation, and remain optimistic about their future socio-economic status. Results also suggested that enabling factors (socio-economic status and quality of social connections) can impose more influence on elderly people’s SWB. Thus, policies that maintain or boost the perception of upward socio-economic mobility and that enhance harmony between older people and their relatives and friends should be given special consideration in future.

Socio-Political Crisis and the Language of the Media: The Case Study of Russian “Snow Revolution”

This paper is devoted to the analysis of the Russian Media during the “Snow Revolution”: the period of a political crisis in Russia between December 2011 and March 2012. The falsification during the parliamentary elections caused numerous demonstrations and street actions, which continued till the presidential elections.

The social networks played undoubtedly important role at that time: as a source of information, as a mean of mobilization and as an environment for the discussion and reflection. As a consequence, several recent studies of the “Snow Revolution” have been focused on social networks, such as Twitter or Facebook. Unlike previous studies, this paper focuses on more traditional sources, such as newspapers, information agencies and news feeds on the Web. We address two interrelated research questions: first, how the socio-political crisis affects the content and language of the Media, and, second, to what extent their view of the events represents the public opinion.

To answer these questions we use various types of evidence. First, we collect large corpus (52 millions tokens) of Russian news, published both during the “Snow Revolution” and before this period; we automatically extract the statistically significant keywords that characterize the investigated period. Second, we conduct the experiment among 104 informants who were asked to recall words and phrases that they associate with the “Snow Revolution”.

We compare the results of these experiments and discover the correspondence between the news and the survey responses; this demonstrates that the traditional news still have an impact in mind-shaping of certain strata of people.

An Emerging Energy-Focused Community in France: A Local and Social Innovation

Can we talk about “communities” in the field of energy in France? Local and citizen-led initiatives relating to energy are developing strongly in Anglo-Saxon countries and a growing body of research is examining the innovative potential of these grassroots initiatives, known as “community energy”. In France, similar initiatives – albeit with certain specificities – only began to emerge recently (in parallel of and related to the Degrowth Movement and the Transition Towns), and so far, very few studies have dealt with them. The purpose of this contribution is therefore to propose an exploratory and in-depth analysis of one advanced French case, that of Le Mené, a pioneer in local energy autonomy.

We examine the conditions under which the initiative emerged, and the processes through which a grassroots innovation is formed and developed. In studying this case (interviews with key actors and inhabitants, analysis of documents), comparing it with other sources of data (interviews with experts, comparative observation of other on-going initiatives) and taking stock of various social sciences studies, we show that a social innovation was produced in Le Mené through the hybridisation of actors, sociotechniques and discourses. This local initiative was innovative not only in terms of the scope of the implemented equipment, but also in terms of the social organisation behind the development of the projects and the capacity to use energy production as a social resource. Finally, the case study highlights the emergence of a new form of collective action and reflects on its possible diffusion in France.

Why so Weak? : The Social Conditions of Labor Insurgency in Malaysia

Many Asian countries have experienced rapid industrialization and developed manufacturing for the past several decades. Given that manufacturing was traditionally one of the bases of labor activism in many countries, the growth of manufacturing can activate the labor movement. In fact, as a result, some newly industrialized countries including South Korea and China have also experienced labor upsurge in a large scale. However, in Malaysia, which has also been remarkably industrialized since the 1970s, there does not necessarily exist a strong labor movement. This paper seeks to explore the reason why the labor movement in Malaysia is so weak even though manufacturing has clustered. Firstly, the brief history of Malaysian labor movement is reviewed and the labor movement in Malaysia used to be very active in the past. Secondly, taking into account various social factors such as class relations, organizations, institutions, networks, and the state, the causes of the weak labor movement in Malaysia is clarified. Thirdly, examining the recent process of the enactment of minimum wage law in Malaysia, this paper clarifies that the labor movement did not necessarily affect the enforcement of minimum wage law but the government primarily took the initiative to decide its enactment. Lastly, this paper tries to examine the possibilities to support the minimum wage law but the government primarily took the initiative to decide its enactment. Japanese Challenges Towards the Sustainable Society – the Recovering Process from the Earthquake and Tsunami, and Establishing New Industrial Relations --

After the serious earthquakes and tsunami in 2011, Japanese society, mostly in Tohoku area, had been damaged horribly and the accidents of Fukushima nuclear power plant are still on-going. Japanese central government had established “Reconstruction Agency (http://www.reconstruction.go.jp/english/)” for reacting to them. The task is “leading and managing the reconstruction process”, and the role is “to accelerate structural reconstruction and revitalization in the affected areas, by securing the implementation of government policies and managing the coordination of reconstruction strategy and initiatives between various branches of government at a national level and with local municipalities”. However, the reconstruction process is not sufficient for the local communities.

Following this situation, at a municipality and a community level, we could consider two distinctive changes as hints for new Japanese working features. This presentation tries to examine whether these changes will shed their skin and become new industrial relations or conditions.

The first case would be an excellent collaboration between fishermen and NPOs in Iwate prefecture. Traditionally, the cleavage between fishermen and leisure divers was deep, because of their miscommunication. Currently, a NPO is proposing a cooperation aiming at recovering the sea both for fishery and divers and make worker exhausted, so he/she injures his/her mental health, in the worst case he/she kills him/herself. That is called “karo-jisatsu”. But I point out there is a logical leap between overworking and committing suicide. I clarify how they have been connected in the discourse of “karo-jisatsu” as a result of reconsidering of “medicalization” (Conrad & Schnider,1981) of suicide. My empirical analysis shows that suicide is regarded as one of the symptoms of depression today, while “harakiri”, “seppuku” and “kamikaze” have been traditionally regarded as heroic suicide in Japan. Medical terms constitute a major “vocabulary of motives” (Geth&Millis,1953) of worker’s suicide. That’s why bereaved families decide on the significance of their member’s suicide, they tend to use these types of vocabularies.

RC33-581.6 YAMAGUCHI, KAZUO* (The University of Chicago, kyamagu@uchicago.edu)
Decomposition of Inequality By an Extension of the Dinardo-Fortin-Lemieux Method: An Application to an Analysis of Gender Inequality in the Proportion of Managers in Japan

As a method for analyzing how inequality in one dimension is explained by inequalities in other dimensions, this paper introduces a method for the decomposition of a group difference in the outcome into several components, explained by differences in the covariate values among groups and a component unexplained by them. The method is an extension of the decomposition method introduced by Dinardo, Fortin and Lemieux (DFL) based on propensity-score weighting. An application of this method focuses on the amount by which gender inequality in the proportion of managers is explained by sex differences in human-capital variables. The regression-based Blinder-Oaxaca decomposition cannot be employed for a decomposition of the difference in proportion because the linear probability model cannot be specified as a regression model. Unlike the BO method, the DFL method can be applied to decompose a difference in proportion, but the latter does not permit a simple further decomposition of the explained component into elements explained by each covariate. The method introduced in this paper enables alternative sequential decompositions to assess the contribution of each variable to the explained component.

Suppose we denote by C, birth cohorts, by E, the educational attainment, and by D, the employment duration, and the causal order, C→E→D. The decomposition in gender inequality in the proportion of managers by the forward order of equating the conditional distributions of C, E, and D between sexes leads to a sequential application of the DFL method and identifies the effects of C, E, and D including each variable’s indirect effects through causally posterior variables. The decomposition in the backward order (D→C→E) assesses the unique contribution of each covariate’s effect on gender inequality requires an extension of the DFL method, however. This paper demonstrates the usefulness of this extension.
This paper analyzes linked data of employer and employee surveys from the International Comparatives Surveys on Work-Life Balance conducted by the Research Institute of Economy, Trade, and Industry to find the determinants of gender inequality in the proportion of managers among workers in Japan. The high job quit rate among women is a common reason given in employee surveys conducted by the Ministry of Health, Labor and Welfare for “having few or no male colleagues.” This cannot be the true cause underlying gender disparity. The proportion of managers among female college graduates is far below that among male high school graduates even when the female employees have worked the same number of years as the male employees at their current companies. The fundamental problem is the institutionalized managerial practices of Japanese firms through which sex is given greater weight than educational attainment in evaluation for managerial potential.

Using the decomposition method of DiNardo, Fortin and Lemieux, this article shows that the difference in human capital between men and women only explains 21% of the gender disparity in the proportion of managers. It also shows that in order to become a manager, long hours of work are required even for women than for men and that the proportion of managers increases for men and decreases for women depending on the age of their last child in a way suggestive of the reinforcement of traditional gender roles by employers. The analysis also shows that firms with 1,000 or more regular employees and firms with headquarters dedicated to the promotion of work-life balance have smaller gender inequality, and that gender inequality in those firms decreases more rapidly than other firms as the quit rate of female employees decreases. Policy measures to eliminate gender inequality in attaining managerial positions are also discussed.

This article explores the impact of the East Japan Great Earthquake on the sociocultural aspects of community based on 40 in-depth life history interviews and a survey administered to more than 1,200 villagers in a small seaside village. Noda village, which is located in northern Japan and has a population of 4,500, is characterized by close interpersonal ties, a traditional patriarchal system, and an ethic of mutual aid. During times of economic prosperity, many male villagers moved to the Tokyo metropolitan area to work as carpenters due to the lack of jobs in the village. When a 37-m-high tsunami hit this village, 37 people were killed and almost 30% of the houses were damaged. The tsunami caused not only material damage and life-threatening situations, but also changed the sociocultural character of the community. For instance, people were initially reluctant to accept support from outsiders, such as volunteers, and talking about the tsunami experience has become almost taboo among villagers. We explore the processes by which sociocultural changes occurred and discuss the goals of post-earthquake community reconstruction in the context of data from small village.

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster in March 2011, the Japanese public has experienced an increasing diminishment of trust in the government’s ability to ensure the safety of the food supply. Consumers are not convinced that “the experts” (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find “individualistic approaches” to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared belief in sympathy and empathy. This paper is going to argue that these phenomena—in which individuals seek and create “societal approaches” to deal with the contradictions created by the emergence of this new set of risks and the perceived failure of experts to fulfill their roles and ensure safety—is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.

This presentation discusses the impact of natural disasters on foreign nationals in Japan and the process of recovery that they undergo. The data were collected through interviews. The Great Hanshin-Awaji earthquake of 1995 had a major impact on both newcomers as well as early immigrants in our society. Most of the affected people were family units who shared the same heritage, and aids were accordingly designed to support these families. In the area affected by the Great East Japan Earthquake, foreign brides of Asian origin in Japanese families posed a major problem. Although they belonged to a different culture, they expected to be treated like their Japanese counterparts as they believed they played an important role in passing down traditional Japanese family culture just as a Japanese family member would. However, circumstances have changed their lives after the disaster; they have started using their mother tongue, and find many ways of giving expression to their culture. The experience of the disaster and the recovery process has created a bond among these foreign brides—many of them have taken vocational training, enrolled in Japanese language programs, served as caregivers, and some of them have been employed as professionals in various organizations. Such empowerment programs have enhanced their self-esteem, which has changed their family lives and the local community. Participating in various social activities is crucial to being equal members in a society.
The labor demand for day-laborers decreased since the early 1990s. As a result, the number of homeless in major Japanese cities increased. After the establishment of a new law to help homeless people become financially independent in 2002, many people who were homeless or considered unable to work because of age or disability received welfare and took up residence in urban underclass areas.

Kotobuki, Yokohama’s urban underclass area, currently houses the highest rate of welfare recipients—approximately 80%—of underclass areas in Japan. The number of welfare recipients in the area has especially increased this decade. As a result, the area has become the center of the socially vulnerable.

In light of this social change, the local government, the social welfare council, and nursing care business offices developed a community welfare system in 2011. This system mostly focuses on officially recognized residents, not on those who are homeless. In 2006, Yokohama City reduced its special temporary welfare support for homeless people, and then cut it entirely in 2012. This caused greater difficulties for the homeless in the neighborhood, creating a highly concentrated district of welfare recipients.

So far, urban underclass areas are important for the homeless with regard to providing access to social resources—for example, through forging relations with supportive groups and getting free meals. As urban underclass areas have gradually changed into places of concentrated welfare recipients, those who do not receive welfare support and are homeless now face even greater pressure.

A Half-Open Door to Africa: Chinese and Japanese Migrants in the Twentieth Century South Africa

Over recent years, amid the increased presence of China and residents of Chinese descent in African countries, growing attention has been paid to experiences of Asian migrants in the interdisciplinary studies of South Africa. What has been revealed by exploring their histories is that, despite their small numbers, the existence of Chinese and Japanese migrants had a considerable impact on ‘white’ South African racial policies. By focusing on those who migrated from East Asia at the beginning of the twentieth century, this paper seeks to examine how they confronted the technologies of exclusion that South Africa introduced in order to maintain the colour bar of the country. While several countries and colonies had restricted Asian migration associated with the ‘Yellow Peril’ panic and a threat to the ‘white’ labour at that time, the British government and Chinese labourers just after the Second South Africa War to compensate for the absence of labour in gold mines. Lake and Raynolds (2008) emphasizes that introduction of the Chinese strengthened ‘white’ labour unions and encouraged legislations which restricted skilled work to white men. As for the Japanese, they were listed as prohibited migrants under the 1913 Immigration Act and later removed from the list because the Union government needed to allow Japanese business persons into the country in order to expand the wool exportation. This can be considered as a precedent for the ‘eminent visitors’ status under apartheid, or the privileged status granted to non-white inhabitants staying in the country for business or diplomatic purposes.

The paper seeks to contribute to wider discussions on South Africa’s history of immigration policies, some of which have not been adequately addressed due to Atlantic-centrism of academic research.

YAMAMOTO, MEYU* (Kyoto University, meyu.yamamoto@gmail.com)

In the end of and just after the Second World War, mass rape by Soviet troops against Japanese women took place in Manchuria and Korean Peninsular. Many of them were uncowed upon arrival of groups of repatriates of the Soviet Union. And, the compulsory pregnancy, forcing abortion and hundreds of abortions were carried out in the area or near the harbors between 1946 and 1947 as part of an official support. Parliamentary papers and related documents indicate that identification of unborn babies to the Russian perpetrators encouraged the Japanese medical doctors and nurses to implement the abortion, illustrating the experiences of Japanese women in the post-war period. This paper aims to examine how the ‘child of the Other’ or children born / unborn as a result of wartime sexual violence have been excluded from their peers, community, and the states. Previous studies on children born from wartime sexual violence have revealed that they frequently suffer discrimination from mother’s communities. One of the examples of this is that they are often attributed pejorative names. Regarding the case of rape committed by German soldiers against French women during the First World War, the children were called ‘children of the barbarian’. In other contexts such as East Timor, the children born to Timorese women were called ‘children of the enemy’, in Rwanda, ‘children of bad memories’ (Seto 2013). Close observation of the case studies above and the case of Japanese victims indicates that the children are unwelcomed due to identification not with their mothers but with their ‘enemy’ fathers. This paper suggests that investigation on children should be addressed from feminist and humanitarian perspectives as well.

Displacement and Politics of ‘Transitory Space’ for Resilience: A Case of the Great East Japan Earthquake

Forced displacement induced by disaster makes various types of ‘transitory spaces’ in the process of reconstruction. The aim of this presentation is to discuss about functions and politics of ‘transitory spaces’ for disaster assistance in the age of population-shrinking/aging society based on a case study of the Great East Japan Earthquake and Tsunami in Iwate Sanriku coast. The first point is to rethink about ‘temporary housing’ system established in the 20th century. In the history of disaster in Japan conventional relief act defines ‘sufferers’ by the standard whether they lost their own ‘houses’ or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and community weakens more and more having ‘house’ do not necessarily mean that residents do not have ‘social vulnerability’. Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi-scaled resources as making possible and constructing on condition of sufferers according to the case. This second point. This presentation will focus on a temporary “base point” of assistance which was constructed by individual affiliate labor union in Tono area, one of the inland cities in Iwate prefecture. On the background of urban precarity and de-localisation of provincial city this “base point” emerged as a nodal space for re-organising collective infrastructure of life. Considering such politics of “transitory spaces” will offer a valuable hint to invent future system of social resilience.

Party Membership during Post-War Party realignment in Japan

This paper investigates whether an abrupt and drastic realignment trend (i.e. a revitalisation of political support) in Japan since 2000 has changed patterns of political membership, even though Japan had a quite similar political realignment compared to the Western advanced industrial democracies in the West until 2000.

Political scientists have pointed out that party membership has constantly declined in contemporary Western democracies. This substantial downward trend has been caused by the widespread political detachment from conventional party members throughout the post-war period. In Japan, scholars have rarely examined the association between realignment and political membership, although a long-term realignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the realignment trend inverted into realignment since 2000.

The data analyses using Japanese data in the World Values Survey indicated that party membership witnessed an increase of inactive members from 1981 to 1995 and the percentage of these had remained through 1995 to 2005, while the ratio of active members remained stable from 1981 to 2005, while the ratio of active members remained stable from 1981 to 2005. In addition, logistic regression models suggested that political interest was a significant predictor throughout 1981 to 2005, however, its explanatory power had been weakening through the periods. Even though Japan entered into a realignment phase since 2000, the growth of partisanship has not led to an increase of party membership, although this has a great theoretical potential for contributing both the Western and Asian political membership studies. This is because it has not only a Confucian style political culture, which is based on strong social ties in a local community, but also political norms highly valued in advanced industrial democracies, such as citizenship, independent individuals, and basic human rights.

Medicating the Male Obesity through Metabolic Syndrome – Some Social Aspects of the Japanese National Chronic Disease Prevention Program

The Japanese mandatory National Chronic Disease Prevention Program started in 2008. Although some experts in public health and medicine have questioned the efficacy and feasibility of the program, it cannot be denied that it spread the term “metabolic syndrome” among the public and contributed much to the medicalization of obesity in Japan. We interviewed scientists, experts, doctors and public health nurses about the intention of the program and the difficulties in its implementation. Currently, we found the following points: 1) In spite of the fact that the program designates the whole population aged 40 to 74 as its target, the real target of the program is middle-aged men, especially working for small companies or self-employed. In that sense, the medicalization of obesity is gender-biased. 2) The program used the newly developed diagnostic concept, “metabolic syndrome,” as its key concept to prevent cardiovascular diseases and type 2 diabetes. The concept played the central role in medicalizing obesity in Japan, where men’s obesity has always been the focus of health professionals. 3) The program faced with serious difficulties and resistance in its implementation. Some of the difficulties are viewed as originating from the unreasonable expectations of one’s health and its care. 4) There is also a marked contrast in the understanding of the program between public health nurses and general practitioners. Whether the reason for this lies in the professional interests of the two or in the gender biased concept of health for the two is not yet clear.

We like to place all of these issues in the context of medicalization of men’s health in the post-industrial society where several traditional masculinity-related behaviors are viewed as problems and medicalized.

3.11 Crisis and Okinawa’s Demilitarization Movements
Okinawa has a long history of resistance against the U.S. imperialism and Japan’s power over its islands and have been engaging in various forms of resistance to protect their ancestral lands, dignity and human rights. This paper looks at delegitimation processes of Okinawa, and examines the impact of Japan’s post 3.11 crisis have brought to the movements and how Okinawans have responded to it. One of the common frameworks used to describe a connection between Okinawa and 3.11 survivors is that they both are “sacrificed” for the larger “national agenda.” Some of the anti-nuclear protesters and Japanese settlers in Okinawa suggest that it is a coalition opportunity between people of Okinawa and the survivors. However, some Okinawan activists criticize such framework because it overlooks complicated power struggles between Okinawa and the national government. Another common misconception is that Okinawa is a safer place to be. Various types of Japanese organizations have planned getaway programs for the survivors of 3.11 in Okinawa. Okinawa is marketed to be a “safer place” since it is the farthest location from the “affected region” in Japan. These programs upset some activists for its false and disrespectful claims. Due to the largely concentrated and long lasting U.S. military presence, Okinawa’s land and water has been contaminated by many toxic chemicals such as PCB, dioxin, depleted uranium and so on that the military had stored. Lastly, some of the post 3.11 Japanese settlers in Okinawa declare themselves “refugees” and participate in the demilitarization activism threat the ownership of the movement and attempt to shift the focus of the movement to fulfill their agenda.

Social Perceptions and Environmental Communication on the ‘Benefits’ and ‘Risks’ of Tidal Flat Restorations
This paper looks at how the ‘risks’ and ‘benefits’ of tidal flat restoration projects are communicated, perceived and negotiated by different stakeholders in case studies from Japan, the UK, Netherlands and Malaysia.

Various tidal flat restoration projects have been conducted in Japan and elsewhere in recent years in an attempt to revitalise fish stocks or preparing sea level rise. Coastal wetland restoration projects, such as coastal realignments or re-flooding farmland, still represent a new concept. Due to the need for long-term social support and investment in such schemes, it will become increasingly important to take into account the various perceptions that exist in the community from now on. Yet, at the moment it is often not clear 1) what kinds of environment changes tidal flat restoration projects are aiming at; 2) how the projects will be funded and who will finance it; 3) what kind of benefits the projects will bring; 4) who will be affected by the projects and whether they will support the projects or not; 5) what kind of competing perceptions exist among the stakeholders in the community; and 6) in what ways different stakeholders perceive the ‘benefits’ and ‘risks’ of their local restoration projects; 7) what the commonalities and differences among these discourses are, within and across different case studies, and 4) how the findings could make a contribution to future decision making and support for coastal wetland restorations in Japan and beyond.

This paper explores the above four points to examine the improvement conditions of participatory sustainability initiatives. This paper is based on data collected during a three-year government-funded research project (2011-2013) from stakeholder interviews and through document analysis of the environmental information provided to citizens and decision makers via various media.

Double Responsibilities of Care: Emerging New Social Risks of Women Providing Both Elderly Care and Childcare in Japan

This paper is based on a both international and comparative research project exploring how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in East Asia. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their elderly relatives and young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions as facing with acute demographic and social changes. Through the comparative analysis of data from questionnaire surveys and semi-structured interviews, this paper investigate the new structure of social risk involved in the double responsibilities of care, work and generational relations with a specific focus on Japan. We will discuss both theoretical and practical implications of our research on double responsibilities of care, to wider social theory, care policy and practice.

Changing Determinants of Women’s Continuous Employment at the Time of Family Formation: A Comparison Between Japan and Taiwan

[Background] Women’s work-family experience differs across countries. This study analyzes how different employment systems (including firms’ employment customs and public policies) lead to different work-family experiences for Japanese and Taiwanese women. The post-war employment system in Japan segregates workers according to gender and marital status, assuming that women quit employment at marriage, and this system is more prevalent in large-scale firms and for clerical workers. Under this system, women employed in large firms or clerical occupations are more likely than others to retire at the time of marriage or childbirth in Japan. In Taiwan, the situation is more on the basis of non-standard employment at marriage and marital status. Women with higher human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competitions and low birth rates in Japan, the post-war employment system has qualitatively changed: non-standard employment has expanded while measures for balancing work and family for standard employees developed. Taiwanese women may be intensifying under economic competitions but not qualitatively transformed. [Research question] This study analyzes how employment systems since the 1990s affect women’s work-family experience for Japanese and Taiwanese women. [Results] Analysis of data obtained from the 2005 Social Stratification and Mobility Survey reveals that the determinants of women’s continuous employment have changed in Japan: women in standard employment are more likely than those in non-standard employment to continue employment at marriage or childbirth while firm sizes and occupations no longer have large effects. In contrast in Taiwan, the situation that women with higher human capital are more likely to retire at marriage or childbirth prevails, and the determinants of continuous employment have not changed in this period. [Conclusions] Employment systems differ and historically change among East Asian societies, which produce different work-family experiences for women. Policy implications will be discussed.

Gender Differences in Caregiver祺s Risk of Double Responsibilities: A Comparison Between Japan and Taiwan

[Background] In East Asian societies, being influenced by Confucian values, the intergenerational coresidence (i.e., older parents live with, are provided for and cared for by their adult children) has been thought to be desirable. Recently, however, the coresidence rates are decreasing even in East Asia. Moreover, there are differences in the manners of the coresidence between societies there. The coresidence rates are relatively low in Japan but high in Taiwan. Gender distributions of living arrangements also differ between the two societies: older mothers are more likely than older fathers to live alone in Japan while there is no large gender difference in Taiwan. [Research question] Analyzing the process and determinants of coresidence across countries, this study explores why mothers are more likely than fathers to live alone in Japan and why there is no large gender difference in Taiwan. This study analyzes how the intergenerational coresidence (the coresidence after a parent become widowed) prevails, and the determinants of coresidence differ between widowed mothers and widowed fathers: the factors that promote widowed mothers祺 coresidence with their children do not necessarily promote the widowed mother祺 coresidence with their children. In contrast in Taiwan, “life-time” coresidence (the continuous coresidence before and after a child祺s marriage) prevails, and there is no difference in the likelihood of coresidence between widowed fathers and mothers. [Conclusions] First, with different public pension systems in the backdrop, older Japanese祺s independent living is more expected in Japan than in Taiwan. Second, in Japan with different gender expectations (men are the economically powerful and the rest), the coresidence after a parent祺 death prevails, and the determinants of coresidence differ between widowed mothers and widowed fathers: the factors that promote widowed mothers祺 coresidence with their children do not necessarily promote the widowed mother祺 coresidence with their children. In contrast in Taiwan, “life-time” coresidence (the continuous coresidence before and after a child祺s marriage) prevails, and there is no difference in the likelihood of coresidence between widowed fathers and mothers. [Conclusions] First, with different public pension systems in the backdrops, older Japanese祺s independent living is more expected in Japan than in Taiwan. Second, in Japan with different gender expectations (men as the care-receiver, women as the care-giver) in the independent living, independent living is more expected for widowed mothers than for widowed fathers. Implications of older mothers祺 risk in the availability of family care will be discussed. (296 words)
Japanese Jewelry Market

Though jewelry market size in Japan in 1991 was three trillion yen (around thirty billion USD at current rate), its size is less than one trillion yen (around less than ten billion USD at current rate) in 2013. The jewelry market size in Japan grew up with bubble economy in Japan. After collapse of bubble economy in 1991, the market size continues to shrink up to the present date. Japan had not had western style of jewelry market because Japanese wore “kimono” and western style of jewelry does not fit with kimono. Japanese does not wear western style of jewelry. After restoration of Imperial power in 1868, western style of clothes was getting popular in Japan and western style of jewelries started to be manufactured and sold in Japan. Along with western style of clothes population, western style of jewelry market continued growth. It means western style of jewelry market in Japan has only one hundred and fifty years’ history. In addition to that, generally the value of jewelry is difficult to judge for consumers. This is true not only for Japanese but also western people. In the process of new market of western style of jewelry growing, I will investigate how the knowledge of western style of jewelry was implemented and diffused or Not implemented and diffused to Japanese. I also will analyze how western style of jewelry market was formed in Japan during these one hundred and several decades and how the relationship among seller, purchaser and institution was transformed and affected each other from view of institution of jewelry and its contribution. As researches on jewelry from sociology points of view is very rare in Japan, I would like to make contribution by stating historical background of Japanese jewelry market and relationship of players and institutions.

Reconstructing Biopower: From an Analysis of Television Programs about Conducting Surrogacy

How does performance affect the human body in terms of biopower? This research analyzes a process where discourse about reproductive technology leads to its implementation to change actual bodies. From an examination of television programs in Japan, I show how culture impacts the materialistic sphere, which is mediated by performance regarding “America,” an icon of modernization for the Japanese. The Japanese national public broad casting organization, NHK (Nippon Hoso Kyokai), has aired programs about reproductive technology since the emergence of In Vitro Fertilization. At the beginning, they portrayed the technology as a realization of scientific progressivism, but regarded the ethical aspects as unrealistic. In the discourse, the image of Europe was that of an agent of intelligence; on the other hand, the image of the U.S. is that of savageness.

However, after a Japanese celebrity couple conducted surrogacy in the U.S., “America” changed from the undeveloped Japanese and the developed American in terms of modernization. The television programs implied surrogacy stands for emancipation from the traditional Japanese convention to oppress women to construct a modern family. Moreover, they constructed a solemn image of the children taken from the U.S. by utilizing imaginary which evolves memories of the imperial corporations.

These images raised a positive public opinion toward surrogacy, which led the government to rush to legalize it. However, after foreign mass media revealed that a Japanese male had conducted surrogacy in India with a purchased egg (known as Manji’s case), NHK stopped discussing surrogacy and the Japanese government postponed the legalization of surrogacy. The Manji’s case showed the Japanese had already gone beyond the savage and modernized “America.” Therefore the Japanese lost their frame of reference.

The above examination indicates the decision to apply reproductive technology depends on culture.

Cultural Consumption, Class Mismatch, and Gender As a Determinant Factor

Studies of cultural consumption have a distinctive academic tradition after Bourdieu’s book “Distinction”(1984) where each class has their own cultural tastes and high class people are considered as high culture, giving them the authority of class distinction. A major question currently subject to debate is whether we can identify these hierarchy matches between class and culture. This paper examines this question, collecting and analyzing the results of cross-national empirical research. Research has shown there is considerable evidence contradicting the results of Bourdieu, even in France where Bourdieu conducted his own research (Lamont). This may be due to the fact that existing class-based approaches put too much emphasis on the class, rather than focusing on diverse social groups and the meaning behind a person’s preferences for certain culture.
of income and social security, where gender segregation and gender parity coex- ist. Compared with 10 years ago, the proportion of employed women in farming, forestry, animal husbandry, fishery and water conservation shows a substantial decline, while the increased ratio in wholesales and retail, and in public adminis-
tration and social organizations are the two highest. The proportion of women in industries with higher degrees of monopoly is low, and the declining tendency reflects the intensified gender discrimination and gender differentiation in monop-
opoly industries; the proportion of females in the modern service industry as well as the degree of gender parity in the industry have been increasing, making it possible for more and more women to obtain higher incomes.

From Green Energy Governance to Green Economy: A Case Study of a County in Southern Taiwan, 2009-2013

After a lot of negotiations, conducted by Ping-Tung Government in Southern Taiwan, among solar PV companies, Tai-power Company, Central Government and local farmers, 25MW solar farms were installed on the damaged lands of orchards and fish farms in Lin-Bian and Jia-Dong, two towns in central Ping-
Tung, in which the government carried on post-disaster reconstruction in the wake of Typhoon Morakot on 8th August 2009. Meanwhile, under these highly ground-mounted solar panels, there were organic vegetable farming and ecolog-
ical fish farming set up. Inspired by the example of agricultural/solar farms in Lin-Bian and Jia-Dong, companies of various green energies came to Ping-Tung in search of different socio-technical experiments.

Since April 2013, a hydrogen fuel cell company has allied itself with local B&Bs, gas stations and convenience stores, offering 80 hydrogen-powered scooters to promote a “low-carbon tour.” Now, this company is preparing to get fuel cell scooters into mass production. Meanwhile, small-scale wind turbines are planned to be installed in central Ping-Tung, together with the existent solar farms and hydrogen fuel cell systems, to conduct a ‘smart grid’ experiment, which has been listed in the ‘Smarter Cities Challenge, 2013’ by IBM Company. Also, in northern Ping-Tung, there is another ‘smart grid’ plan to connect solar farms, wind farms, bio-gas plants, pig farms, and micro hydropower systems.

The author of this paper has investigated and analyzed the performance of green energy in Ping-Tung by means of participative-observations and in-depth interviews. More specifically, adopting the concepts of green energy governance, social innovation, green economy and STS, this paper describes and explains the socio-technical mechanisms and meanings of green energy in Ping-Tung, with a focus on a variety of human and non-human actors such as the green-energy team in Ping-Tung Government, green-energy companies, local entrepreneurs, NGOs, and local communities.

Gambling Behavior As a Masculinity and Violence Using Japanese General Social Survey 2000 and 2001

As gambling population is expanding, many studies have started to clarify the relationship between gambling behavior and masculinity. It is claimed that gambling behavior is closely related to violence, since gambling is thought to be a type of masculine behavior. However, few empirical studies have examined the relationships among gambling behavior, masculine attitudes and violence. In Japan, gambling industry such as casino is now planned to introduce by govern-
ment. People might be anxious about the possibility of increasing violent inci-
dents. Examining whether gambling causes violence through masculine orienta-
tion is a very important research topic. The JGSS-2000/2001 integrated data are very suitable for us to explore such a research question, since the data include the following variables.

Firstly, gender, age, marital status, occupation and educational background are used as demographic variables. Secondly, a degree of reaction (4points-scale) to physical punishment by parent and teachers is used as a variable for masculi-

nity. This variable particularly explains that as part of masculine culture, phys-
ic punishment influences children and studying gambling away and justifies their misdeeds. Lastly a series of frequencies (4points-scale) on different gambles (pachinko, horse-racing, lottery, soccer-toto, numbers or mini-lotto) are chosen as variables to the quantitative analysis.

Consequently, this empirical analysis could examine whether the relationship between gambling and masculine behavior as a form of force exist or not. If not, Japanese gambling would not generate friction in Japanese social life.
because this is the only way they can get authorized eligibility as first or second class national sportsmanship.

Others argue that since its functions of attacking and defending have been in degradation as modern weapons developed, Chinese traditional martial arts still can attract many people of different countries, ages, and backgrounds, not because of its athletic features, but because it contribute immensely to one's physical fitness and self-moral cultivation, and the cultivation of both physical and moral health is the power source of its sustainable development in the context of sport globalization.

The author think that as to the development of Chinese traditional martial arts, a regular authorized eligibility certification system as the athletic sport has will standardize its technical requirements, and the focus on the physical and moral health promotion will keep its diversified national features in its globalization in the world.

Asian Migration to the United States and within Asia in Comparative Perspective

More than one million Asians had migrated to America before 1965. Since 1965, Asia has been a major source of migration to the USA and more than 10 million Asians have arrived on U.S. soil. Most recently, Asia has surpassed Latin America as the largest source of immigration to the USA. Up to the mid-19th century, Asians mainly migrated to other Asian countries, and in contemporary time Asians have migrated to within Asian countries. Within the trends in Asian migration to the USA and within Asia? How do sending countries of Asian migration to the USA and within Asia resemble and differ? Do the same or different types of Asians migrate to the USA and within Asia? What are the similarities and differences in causes of migration to the USA and within Asia? Are there similarities and differences in Asian immigrant transnationalism between the USA and Asian countries? How are Asian migrants to the USA and within Asia similar and different in patterns of adaptation to host societies? How do the impacts on host societies of Asian migration to the USA and in Asia resemble and differ? What is likely to happen to Asian migration to the USA and within Asia in the near future? Using a variety of data from the USA and international organizations and focusing on the post-1965 period, this paper seeks to answer these questions through comparison and to address the implications of the findings.

Mechanisms of Trust Formation Under Different Conditions of Political Identity

Individual political behavior is a manifestation of social behavior, and individual voting behavior indicated his/her political choices and political identity. After democratization in Taiwan, presidential elections show bipartisan polarization and reinforce general distrust of social phenomena. Therefore, this study intends to explore how people format their trust behavior when they interact with others of the same or different political identity groups. In stage 1, the computer randomly assigns trustees and trustees and does not show political identity of 2012 presidential candidates (Ma Ying-jeou and Tsai Ing-wen). In stage 2, the computer displays political identity logo by random arrangement. In stage 3, the subjects can choose their preferred objects of the same or different political identity logo by themselves. There are three mechanisms of trust behavior formation under different identity condition. (1) Win-win mechanism: Win-win strategy is that both trustee and trustee attempt to maximize their provendence and return through exchanging with the targets of the same or different political identity groups from the beginning round. (2) Identity mechanism: Under the condition of political identity choice by subjects, identity effect becomes strongly significant at the beginning of the first round on the third stage of the experiment, especially for that of Ma-Ma group. Identity mechanism: Mutuality effect is very significant in all three stages of trust experiment, especially in the second and third rounds of each stage. When people exchange with the same political identity groups, it will produce the phenomenon of polarization. When the trustee return high proportion profits to the trustee in the first round, the trustee will feedback more in the second round. However, if the trustee return low proportion profits to the trustee, the trustee will feedback less and less, even lower than exchanging with different political identity groups.

Saemaul Undong and Beyond: Upgrading the Opportunities and Capacities of Women in 1970s’ South Korea and Kenya Today

Capabilities and empowerment are no longer new concepts: they are well understood and widely seen as necessities for individual as well as community development. Practices in today's developing world, however, are not always successful. Nor have the successful practices of the past been much elaborated so as to provide practical lessons for today. This study attempts to fill this gap with the case of Saemaul Undong, a New Village Movement in South Korea in the 1970s, in combination with discussions of its applicability to Kenya, one of today's developing countries.

Saemaul Undong has recently become an inspiring development model for many developing countries. It is known for its strong and committed leadership both at central and local levels, as well as the high rate of local participation. The rise of women as equally capable agents of change as men has been noted as one of its distinctive features. Indeed, Saemaul Undong is understood as a remarkable turning point for women in rural areas, which made them visible and active in formal activities beyond their own family and household. This newly explored social phenomenon is known to have effectively served rural and national development during the high growth periods of Korea.

The objectives and the structure of this paper are as follows. First, it explains the mechanism and processes of Saemaul Undong, which made women's involvement, or empowerment, possible within a society that had a strong Confucian character at that time. Second, it elaborates the strengths and weaknesses of the Movement in terms of women's capabilities and empowerment. Finally, the paper discusses the applicability of the findings to today's developing world. Our selected case country is Kenya, but discussing the applicability of the case is expected to provide practical lessons the developing world in general.

A Tale of Two Suburbs: Earthquake Recovery and Civil Society in Christchurch, New Zealand

This study followed two similarly affected, but socio-economically disparate suburbs as residents recovered from the devastating 6.3 magnitude earthquake that struck Christchurch, New Zealand, on February 22, 2011. More specifically, it focuses on the role of local churches, community-based organisations (CBOs) and non-governmental organizations (NGOs), here referred to broadly as civil society, in providing the immediate needs of local residents and assisting with the longer-term recovery of each neighbourhood. Analysis of sixteen qualitative interviews with residents as well as key informants from local civil society in each suburb found that despite considerable socioeconomic differences, civil society in both suburbs has been vital in addressing the needs of locals in the short and long term. Following the earthquake, institutions were able to utilise local knowledge of residents and damage in the area to a) provide a swifter local response than government or civil defence and then help direct the relief these agencies provided locally; b) set up central points for distribution of supplies and information where locals would naturally gather; c) take action on what were perceived to be unmet needs; and d) act as a way of bridging locals to a variety of valuable resources. However, the findings also support literature which indicates that other factors are also important in understanding neighbourhood recovery and the role of civil society, including: local leadership, a shared, place-based identity, the type and form of civil society, social capital, and neighbourhood- and household-level indicators of relative vulnerability and inequality. The intertwining of these various factors has influenced how these neighbourhoods have coped with and taken steps in recovering from this disaster. It is suggested that a model that takes a multi-factorial approach in understanding community vulnerability and capacity within the Christchurch context be designed to more effectively explore further research in this area.

Culture As “Agon”: Agonological Features of Weberian Sociology

Culture as Agon: Agonological Features of Weberian Sociology

Max Weber treated the Greek concept of “agon” with great interest, in the final parts of his treatise of the “City”. However, if we focus on his interest on “agones” in general, the social fields of competition and social selection, we should rather say that this interest can be considered as his premier Leitmotive, which permeates his comparative study of cultures.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper explores the advantages and the limits of this methodology on the cultural comparison of ogones (that will be coined “agonology”). Starting from Weber’s concrete historical depiction of Asian competitions (especially, in his “Hinduism and Buddhism”), this paper moves in to the theoretical concerns. It argues that, it is much fruitful to point out the agonological features of Weberian methodology than just to stick the idea of “cultural determinism”, “idealism”, “methodological individualism”, or “conflict theory”. Finally, briefly contrasting this Weberian agonological features with modern sociological theories of competition, such as Bourdieu’s theory of symbolic violence, etc., we will like to outline the future possibilities of this comparative agonological perspective.

International Political Support For Endangered Languages (The Uralic Languages of Russia as an example)

International political support for endangered languages (the Uralic languages of Russia as an example)[1]

According to the UNESCO Atlas of the World’s Languages in danger there are 131 such languages in Russia: 20 vulnerable ones, 49 definitely endangered, 29 severely endangered, 22 critically endangered and 15 extinct languages. Uralic languages are among them. Along with traditional measures the World Congress of Finno-Ugrian peoples (the institutional form of the Finno-Ugrian language community) are forms to attract attention to the situation of these languages.

The beginnings of construction of the Finno-Ugrian community were laid in the eighteenth century. At that time, Gabriel Porthan, professor of rhetoric who popularized the idea of Finno-Ugrian brotherhood in Finland and urged Finnish scholars to investigate the kindred Finno-Ugrian languages. Spheres of cooperation expanded in the 19th century. This trend culminated in the Finno-Ugrian cultural congresses organized by Finnish, Estonian, and Hungarian scholars, teachers, and students. The first was held in Helsinki in 1921. The ideas of rebuilding began in the early 1990s. The Finno-Ugrian world was conceived as a broad cultural identity based on linguistic affinity, and attempt to integrate various Finno-Ugrian peoples in the social and cultural integrity. In 1992 the First World Congress of Finno-Ugrian Peoples was held in Sykytvykar where it was tasked to “achieve the status of non-governmental organization United Nations”, further in 1996 (Budapest), in 2000 (Helsinki), in 2004 (Tallinn) in 2008 (Khanty-Mansiysk) and in 2012 (Sofok).

Over the past two decades, World Congresses did not grow into a non-governmental organization or analogue of the International Organization of la Franco-phonie. However, they have become forums where the problem of endangered languages is actualized. World Congresses are the guidelines for the implementation of language policies at the regional level.

Residents Life Satisfaction in the Perspective of Social Empowerment

Social quality is composed by socio-economic security, social cohesion, social inclusion and empowerment/autonomy. In various degrees, these four components affect life satisfaction of residents in China. This article carries out an investigation of the data obtained from six cities in China, it analyzes the degree of empowerment and the impact on life satisfaction. Large, social anomy reduces people’s life satisfaction.

Feasibility and Possible Fields for Application of Clinical Sociology in Iran

According to some Iranian sociologists, the absence of sociology, and sociologists themselves, in relation with the society in one of the most important negative aspects that has had a major impact on weakness of sociology in Iran. There are so many social problems in Iran for which we need social solutions. But the absence of sociology in obvious not only to recommend sociological theories that match these problems but also to intervene in the process of solving them.

Clinical sociology can play an important role in filling this gap as a mediator between sociology and society. This study, first of all, assesses the practicability, and possible obstacles, of utilizing this particular type of sociology and then determines and introduces the fields in which it can be applied and intervene more effectively to improve the quality of lives in Iranian society.

By making use of documentary method, any attempt, if exist, for applying clinical sociology is considered and by interviewing some sociologists and social activists, different fields, and also major obstacles, for application of clinical sociology in Iran are proposed.

Social Justice, A Key Concept in the Social Movements of the Last Hundred Years in Iran

Social justice is a very important and widely used concept in the political and social history of many nations. As well as many countries, it has had a significant role at least in mobilizing people for social movements and in protesting against the existing political system in Iran.

In analyzing the causes of many social and political processes and also the Constitutional and Islamic Revolutions in Iran, the realization of social justice is cited as one of the major and prominent indicators. It can be found in different kinds of resources and documents such as poems, speeches, political debates, rhetoric of social groups and so forth. Therefore a form of emphasis on the concept of social justice has existed in every single social movement in Iran based on its special arrangements and aspects which were shaped socially and politically.

This study aims to narrate the history of social justice in the social movements of the last hundred years in Iran to provide a better understanding of it during this very important period of time and to theorize this concept and its changes over this timeframe.

By making use of documentary method and interviewing some sociologists and social activists, a classification of usages of this concept and their differences, in the history of social movements in Iran, is presented.

Modern State of a Home Education in Russia

Over the last 20 years, an education system in Russia has undergone significant changes. The changes led to the organization of new forms of training, for example, a home education, which at the same time has its own long enough history in Russian traditions.

Home education takes on special significance in a modern life, giving new opportunities of training and reflecting challenges in both Russian educational system and the society in whole.

For example such as:
- Dissatisfaction with: a quality of education at different levels; an established system of relations inside of pre- and comprehensive institutions;
- Difficulty with realization of constitutional right of choice of training form, because of imperfection of legislative base;
- Challenges of combination of family culture and religious principles with those of formal education and so on.

However, for all obvious advantages, a home education is not means of solving all the problems as gives rise to new questions. In Russia these are: efficiency and completeness of children and adolescents (who received a family education) socialization and adaptation in adulthood; compliance of the level of education of upperclassmen, graduated home education, to the requirements of the state educational standard; the lack of the system of diagnostic, methodological and consulting help assistance.

They begin to raise like questions at the legislative level today. Since September 1, 2013, a new Federal law «On education» entered into force, where they pay more attention to this form of training. Legislators reflected growing tendency to an increase in the number of families, who resort to the help of this form of education.

Under the ciries the development of a home education in Russia and an increase in the number of families, practiced this method, become not only a private affair but also a social phenomenon, needed social analyze and comprehension.
ments in the stratification process. Mexico is a highly stratified and rigid society in which children born in poor households have a high probability of experimenting intergenerational transmission of poverty. Using path analysis models, this paper provides empirical evidence on some of the factors that shape occupational allocation of the rural youth that belong to poor households in Mexico. This contributes to the understanding of the process of intergenerational reproduction of inequality and poverty.

Recreational Hunting in Africa: “Meat” or “Poison” for Local Community

Recreational hunting is one of the oldest known tourism activities using wildlife. Leader-Williams (2009) defined recreational hunting as the hunting where the hunter or hunters pursue their quarry for recreation or pleasure. Same as in colonial period, hunters, mainly from Europe and U.S.A., range over hill and dale in developing country to obtain trophy of big game and their pleasure. Some researchers have suggested that controlled recreational hunting can benefit the development of local communities, thereby promoting the protection of wildlife resources as well as both ecological and economic sustainability. However, important debates remain regarding the social impacts of conservation and tourism on local communities.

This presentation aimed to introduce a social impact of recreational hunting on local community in Cameroon. Approximately two years of fieldwork, mainly based on interviews and observations, showed that recreational hunting in North Province, Cameroon generated tax revenues of approximately 0.9 million US dollars in 2009/2010, that is, 200 times as large as than safari in National parks did in the same year. A part of economical benefits shared with local communities as profit sharing and employment opportunities. However, the local inhabitants were affected by regulations of their rights to use natural resources. Moreover, some villages experienced forced migration because of the beginning of hunting tourism in this area.

Recreational hunting brings to local community not only positive impacts such as profit sharing and employment opportunity, but also negative one as control of livelihood of local people and forced migration. Even if recreational hunting can play an important role in community conservation and wildlife conservation with its great economic benefit, the independence of local people and their connection with wildlife should be considered to re-conceptualize “Sustainability”.

Ethnic Food As Tourism Resources

This paper aims to examine ethnic food as one of the tourism resources, based on field research conducted in ethnic town in Yokohama city. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multiethnic. I conducted participant observations to some ethnic groups (Okinawa, Chinese and Nikkei Latin American) in Tsurumi ward, Yokohama city. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multiethnic. I conducted participant observations to some ethnic groups (Okinawa, Chinese and Nikkei Latin American) in Tsurumi ward, Yokohama city.

Taking a tour through these multiethnic migrants and their business, this paper charts an exploratory excursion through arguments that address ‘ethnicity’, ‘identity’, ‘memory’, ‘authenticity’, ‘invention of tradition’ and cross-cultural encounters within the ‘mixed’ spaces and contradictory imperatives of postcolonial migrant in Japan urban area.

An Analysis of Recent Internationalization of Education in Japan: A Case Study of Nepalese Students

In this paper, we discuss the experiences of Japanese language school students from Nepal, as a case study, to understand the emerging trends and issues surrounding the internationalization of education system in Japan. In 2008, the Japanese government proposed the goal to recruit 300,000 international students by 2020. Due to the effect of the Japanese government and school systems, the number of international students has been increasing; however, the patterns of international students have been changing simultaneously. For example, Chinese and Korean students, who used to be the most popular group of international students, are now less likely to choose Japan as their destination country to pursue their education in Japan. Instead, the number of students from Nepal, Vietnam and Myanmar has been increasing in the last five years.

To explain the new trends, we discuss the push-pull factors for the changes. Also, the international students need to acquire Japanese language skills to be enrolled in the Japanese university system, the Japanese language school system often serves as the first school for many international students. For this reason, we focus the role of Japanese language schools to discuss students’ perspectives on life in Japan. Based on the case study of Nepalese students, we found that the most of them are “self-funding” students. Although they hope to pursue higher education and better career prospects, providing financial support to their families in Nepal has become the top priority. Nepalese students have to work double or even triple jobs to manage the heavy debt from study abroad, high living cost in Japan and support families in Nepal; consequently, many students face challenges to pursue their dreams. In addition, some of them expressed cultural differences and isolation from the society. Based on the analysis, we propose social implications of the emerging trend of international students.

A Systemic Approach to the Construction of Urban Places

This paper reports on research undertaken across three markets in the centre if London, England. The research adopts an ethnographic approach that focuses on the ongoing process construction. By using in-depth/iterative interviews the work highlights both the changing narrative that people constructs ‘in the moment’ while also highlighting the role of researcher in place construction. This projects works on the premise that it is beneficial to understand places as complex adaptive systems that are constituted by an array of heterogeneous parts. Projects works on the premise that it is beneficial to understand places as complex adaptive systems that are constituted by an array of heterogeneous parts. Places have physical locations and material forms but they are also in part, made up of the very people who experience the place. Understanding such complexity leads the researcher to focus on the ‘how’ of place, rather than the ‘what’, ‘where’, or ‘who’. Rather than attempting to understand place as unique, stable, concepts, this work builds on systems-theoretical approaches towards an understanding of places that facilitates both change and permanency so important to architecture and community building theories.
The authors will examine the following points. (1) East Asia in Civilizational Analysis from Durkheim, Mauss to S.N. Eisenstadt. (2) Asiamism in the Japanese Civilization. (3) Is there any difference between (1) and (2). (3) New Civilization and value change. Finally, the authors will examine the present situation of East Asianism in East Asia.

Study Choice, Gender and Ethnicity

This study aims to explore ethnic differences in gender specific study choice patterns. The central research question is: to what extent do ethnic minorities present different gender-specific choice patterns in mathematics, science and technology (MST) and what are the reasons for such differences?

The study is based on the premise that pupils with non-western ethnic backgrounds differ in their evaluation of MST-studies from pupils with native ethnic backgrounds as a result of the difference in cultural values. To explore this premise, we first examined the effects of gender, ethnicity and grade averages on school profile choices of 265 pupils in higher secondary education in two schools in the Netherlands. This was followed by semi-structured interviews with 45 individual pupils about their choices.

In our sample 59% of male and 42% of female pupils have chosen a MST-profile, of which 39% of both male and female pupils have chosen this profile in combination with a Health-profile. Moreover, the combined grade average for mathematics, physics and chemistry is shown to have the strongest impact on a positive choice for a MST-profile. Gender also has a significant effect, even after controlling for the combined grade average. Ethnicity however does not.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils and in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.

Class Differences in Women's Work-Care Reconciliation in Contemporary Leeds

This paper focuses on women's working lives in Leeds, England, where some of the UK's most affluent and most deprived localities are found. The authors compare the work-care reconciliation practices and attitudes of lower and higher educated women, and consider how differences and similarities in these are shaped by local welfare state arrangements and conditions in the local labour market.

The analysis, conducted within the EU-funded FLOWS project, is based on data from a survey of local women and focus group interviews with women who combine paid work with raising young children or looking after old, disabled or sick family members.

While working-class women in the UK have 'always worked', the second part of the 20th century brought middle-class women's mass entry into the labour force. In some other countries, this process was actively encouraged by state provision of publicly funded care services and other policies to support women's attachment to the labour force while raising young children and/or looking after older family members. In the UK's liberal welfare state, childcare and caring for older, sick or disabled adults have primarily been conceptualised as individual/familial responsibilities and care services are currently provided primarily by market actors, rather than the state.

The authors explore the relative importance of the national/local state, cultural preferences and market conditions on women's working lives, and consider how these shape social inequalities between women in different socio-economic circumstances.

Gender Disparities in How Older Workers Reconcile Work and Care in England

Carers in England and across the UK have been a focus of policy debate on work and care for several decades. In the 2000s, modest new employment rights (including the right to request flexible work) were introduced to support them to reconcile work and care, and municipalities received new funding from central government to help develop local services to address carers' needs. In national population censuses in 2001 and 2011, the Office for National Statistics collected data about caring responsibilities and these permit examination of the relationship between the (unpaid) care individuals give to their older, sick or disabled family members, friends or neighbours and paid work, age, gender and health.

Based on analysis of these data, and supported by insights from two surveys of carers (the 2009/10 Survey of Carers in Households and the Carers, Employment and Services survey undertaken in 2006-7 at the University of Leeds), this contribution examines data on the intensity of caring responsibilities (hours of weekly care provided as a measure of intensity) and participation in the labour market for men and women aged 45-64. The paper highlights gender differences in patterns of care and paid work, with a particular focus on the extent to which men and women in this age group appear to use part-time work and early retirement as ways of combining work and caring responsibilities.

In interpreting these data, the authors also draw on qualitative and policy evaluation studies undertaken by the CIRCLE research group at the University of Leeds. These provide insights into older workers' motivations, preferences and behaviour in relation to work and care, and indicate the complex cultural, moral and institutional contexts which shape patterns of caregiving in later life.

Forming Counter-Hegemonic Identity through Narration: Personal Stories, Historical Narrative, and the Transformation of National Identity in Taiwan

Over the past four decades, Taiwan has undergone a dramatic political transition from authoritarian rule to democracy. Accompanying this transition is a major change of the sense of national identification when hegemonic Chinese nationalism has increasingly given way to local Taiwanese consciousness. A series of survey data show that the percentage of people who identify themselves as being Taiwanese has risen from 17% in 1992 to 57.5% in 2013, while the percentage of people who identify themselves as being Chinese drops from 25.5% to 3.6% in this period. Yet few researches have been made on how common people formed a counter-hegemonic national identity on the personal level during the period.

To investigate this transformative dynamics, we draw on the theoretical perspective of "narrative identity" to analyze a large number of "letters to the editor" describing personal experiences of identity transformation which were published in two major Taiwanese newspapers during the period from 1994 to 2004, when the change accelerated sharply. We find that a special historical narrative which consisted of a distinctive historical outlook and story line and displayed unique values and emotions served as a common framework of reference for those who began to discredit Chinese nationalism to reassess their individual life history and make sense of their connections with the destiny of Taiwan. It was critical to the formation of the counter-hegemonic Taiwanese identity. We argue that counter-hegemonic identity is typically effectively created and sustained when an elite-derived historical narrative had popular resonance in the sense that it demonstrates a remarkable ability to explain the marginalized and suppressed life experience of ordinary people.

Indigenous Mobility: Experiences and Narratives of Mobility and Immobility of Yami Indigenous Youth on Lanyu (Orchid Island), Taiwan

Travel, mobility and diaspora are facts of contemporary societies across the globe and their implications are profoundly important. This paper attempts to articulate the significant connections between travel, mobility and diaspora in Taiwanese indigenous Yami society. It argues that the Yami youth from Orchid Island across the strait to urban Taiwan for diverse reasons relating to both mobile physical bodies and emotional displacement. The paper offers a range of mobility narratives as reflective accounts cultural diasporic encounters toward a deeper understanding of travel and mobilities in contemporary indigenous society. Engaging with multi-sited fieldwork between Taiwan and Orchid Island, in-depth interviews with Yami youth, this paper explores the complexities of the forced 'migration' phenomena of indigenous young people and their experiences and narratives of travel and mobility. It addresses issues that arise when they are 'on the move' and feel a loss due to their emotional attachment to place whether interpreted as home or homeland. Focusing on aspects of everyday life, this study illustrates the tensions and dynamics of travel, mobility and diaspora. It aims to open a dialogue among tourism studies, indigenous studies and mobility studies in which issues of diaspora and people being 'on the move' are investigated.
L'économie solidaire au Brésil regroupe des travailleurs (informels, chômeurs, pauvres des périphéries urbaines, travailleurs ruraux) ainsi que des organismes communautaires, des mouvements de foi et des syndicats de la CUT (la Centrale unique des travailleurs, principale confédération syndicale au Brésil). Elle a impulsé des formes de développement local reposant sur la notion de circuits courts de production et de souveraineté alimentaire. Ces formes appuient sur l'organisation en coopératives autogérées d'agriculteurs familiaux et sur la mobilisation des Communautés traditionnelles (Quilombas, etc.) qui réinvestissent leur savoir faire en matière d'exploitation écologique des ressources naturelles. Elles associant les Catadores, personnes qui ramassent et trient les matériaux recyclables. L'économie solidaire consiste aussi dans des « chaînes de valeur » qui regroupent, par exemple, des coopératives assurant la production du coton écologique jusqu'à la fabrication des vêtements, et leur commercialisation selon une politique de prix accessibles aux familles à faible revenus.

Ces initiatives collectives montrent que la redistribution de richesses s'opère en amont même de leur production, dans les choix de filière d'activité en relation avec les communautés locales. Ces initiatives donnent aussi un contenu concret à ce que peut être la citoyenneté au travail, qui consiste à remettre en cause les divisions traditionnelles entre concepteur et exécutant / intellectuel et manuel, et aussi entre travail marchand et travail de reproduction sociale. Ces réalisations questionnent les divisions de l'individu et de représentations collectives. L'étude de cas menée au Brésil auprès de syndicats et du Forum brésilien de l'économie solidaire indique que les initiatives se constituent comme des modèles alternatifs quand elles font appel à des formes participatives et délibératives de démocratie et non au processus habituel d'agrégation des intérêts par des syndicats, qui ont tendance à reproduire les pratiques dominantes.

Reproduction Ou Transformation Des Organisations Du Travail Dans Les Coopératives De L’Économie Solidaire Au Brésil

Cette communication propose un éclairage sur la façon dont des syndicats de la CUT (Centrale unique des travailleurs, principale confédération syndicale au Brésil) sont amenés à prendre en compte le rapport au travail des personnes considérées peu qualifiées, en s'appuyant sur l'observation des pratiques sociales et des identités collectives dans le mouvement de l'économie solidaire au Brésil. Celui-ci rassemble des coopératives et associations de production d'horizons divers (anciennes entreprises industrielles récupérées par les travailleurs, création d'activités de faible valeur ajoutée en couture, alimentation, collecte et tri des matériaux recyclables, coopératives d'agriculteurs familiaux), qui ont en commun de revendiquer les droits de l'homme et de représentations collectives, notamment sous l'angle de l'organisation du travail, qui peut reproduire ou au contraire remettre en cause les divisions hiérarchisées du travail entre qualifiés et non qualifiés et entre sexe.

Si des syndicats peuvent appuyer des pratiques transformatrices de rapports sociaux au travail, ils n'en sont pas le plus souvent à l'initiative. Ils justifient plutôt de perpétuer les divisions hiérarchisées du travail au nom de la compétitivité des coopératives et de l'amélioration des conditions d'emploi et de salaire, maintenant les personnes peu qualifiées dans un rapport instrumental et hiérarchisé au travail.

L'étude de cas indique par ailleurs que les femmes tiennent, collectivement, un rôle de premier plan dans la subversion des rapports traditionnels au travail et dans la ré-articulation des identités au travail et hors travail. En prenant appui sur les notions d'identité collective de Melucci et de transaction identitaire de Dubar, l'étude permet d'envisager comment s'effectue cette ré-articulation et pourquoi elle est portée de pratiques autogestionnaires réelles et non pas seulement formelles (au sens où l'autogestion se réduit à la tenue d'assemblées générales). Ces résultats participent des questionnements sur la notion de travail.
Struggling to Climb the Organizational Ladder in Turkey

Depending on twenty in-depth interviews with men and women who graduated from top universities of Turkey and who have been working in corporate jobs for more than ten years, this paper reflects on the impact of gender in prestigious white-collar jobs. It aims to answer the questions of to what extent gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues related to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper demonstrates that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women’s responsibility. Women who have struggled to reach senior management positions give up, as they get haunted by the double shift of paid work and child care. Although these women have above average family incomes and can afford to hire domestic help, because of the traditional ideology that emphasizes the crucial role of mothers for socialization of kids, they give up their careers and shift to jobs that have regular work hours but no future prospects. Educated in the same way with their male colleagues to be successful and to have achievements, these women end up being unsatisfied with not only their jobs but also their lives.

Research on Public Attitude Towards Social Impact Assessment of Chang E Lunar Probe Program

For a long time, China evaluates engineering’s or project’s impacts mainly by economic impact factor, psycho-social impact factor and educational impact factor. The results suggest that public’s attitude towards high-tech and non-direct-interest engineering’s social impact consists of military impact factor, political and economic impact factor, psycho-social impact factor and educational impact factor. Furthermore, public’s attitude towards Chang E’s social impact is related to age, and it is obvious that gender is significant in the public’s attitude towards Chang E’s social impact as the result of the statistical test, whereas gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues related to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper demonstrates that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women’s responsibility. Women who have struggled to reach senior management positions give up, as they get haunted by the double shift of paid work and child care. The Business of Housing God: A Case of Singapore Megachurches

Religion and business are often seen as inhabiting separate social spheres but in this paper I explore how they are combined and reconciled in the activities of megachurches. Through two case studies of Singapore’s largest megachurches, I examine how they combine religion and business, focusing on how these churches strategically use resources and techniques of marketing and management to manage growth and multiply financial rewards through church building projects. This explicit engagement in business practices not only raise the question of profiteering in ‘non-business’ context. In doing so, they reflect the values of neoliberal effects, but demonstrates the form and dynamics of marketing management in a specific ‘non-business’ context. In doing so, they reflect the values of economic neo-liberalism which has been a driving force in global economies such as Singapore. Therefore this research is interested in questioning how neo-liberalism privileges business and the market to become the principal factor in shaping religious practices in contemporary churches such as the megachurch in the ‘intelligent island’ state of Singapore. Singapore is “famous for being run like a giant corporation”[1] and is an affluent country characterised as ‘neoliberal-development’. This is reflected in the religious organisations operating within it, especially-megachurches that have pressing space issues in containing its burgeoning congregation in a highly urbanised and compact city.

Urban Transformation in a Transitional Economy: Is “Gentrification” an Analytically Useful Concept for Vietnam?

Despite the rapid transformation in the urban landscape of Vietnam, a simple and uncritical application of the “gentrification” concept out of the specific spatial and temporal context of the country is problematic. Not only does the phenomenon progress in a highly compressed temporal scale compared to similar processes in cities in the “global north”, it is also embedded within a paradigmatic shift of the entire socio-economic system. This paper attempts to explore the process of urban redevelopment in Vietnam and to critically examine whether this concept, with its origin from the “global north”, is capable of offering a conceptually robust lens through which the phenomena can be consistently analysed. This paper attempts to contribute to such discussion and explore the process of urban redevelopment in Vietnam and offer a critical examination on the applicability of the concept in cities of the global south, particularly within the context of a city in a transitional economy. To enhance coherence of the empirical data being compared, the city of Hanoi is used as the case study city. As the capital and a “political” city of Vietnam, Hanoi is undoubtedly commendable to the typical socio-political scene that are at work in the country. With case examples of redevelopment projects in Hanoi against the context of the specificity of the socio-economic and political transformation of the country, this paper will offer a conceptually robust lens through which the phenomena of gentrification can be critically analysed in the specific context of Vietnam.

Populism As Politics of Personal Experience: The Case of Suvivirsi

In this paper, I will present one possible sociological interpretation of conserva-
tive populism, recently of rising popularity all over Europe. I will base my analysis on
Laurent Thévenot's sociology of engagements and use texts from candidates from the
conservative populist Finns party in the 2011 Finnish parliamentary elections as
empirical examples. In the texts, the candidates appeal to the shared national
experience of singing a traditional Christian spring hymn, Suvivirsi, as schoolchildren. I
will argue that populism can be interpreted as an attempt to expand the gamut of
acceptable political claims to include claims based on personal experiences, where
the physical and emotional proximity to significant persons and objects is of crucial
importance.

This is in contrast to a typical requirement in mainstream politics: to distance
one's self from one's demands. It is customary to present political claims as based on
universally accepted and abstractly communicated principles of justice such as
democracy, the market mechanism or technical efficiency, instead of mere
personal preference. The populist mode of argumentation is in stark contrast partic-
ularly to typical Finnish expectations of politics, focused on efficiency.

To make this argument, I need to present four elements: first, Boltanski &
Thévenot's theory of public justification; second, a brief overview of Finnish polit-
ic practices; third, Thévenot's sociology of engagements; and fourth, the case of
Suvivirsi and the populist and non-populist practices in which it is used in na-
tionalist political argumentation. I conclude with a discussion of the implications
of this interpretation, pointing out that nationalist politics made with reference to
personal affiliations can be even more exclusionary than ones based on public
justifications. On the other hand, however, an acceptance of personal affinities
into politics is also a possibility for political movements of other types, not just
reactionary conservative nationalism.

LEVINSSEN, KLAUS* (University of Southern Denmark, khl@sam.dtu.dk)

Youth, Political Socialisation and Everyday Life

This paper aims to explore the social processes that shape political socialisation
of European youth. The theoretical point of departure is the literature of polit-
ic socialization that sees family and close friends as principal actors in young
people's political socialization process (e.g. Hyman 1959, Jennings et al. 2009). A
key question is to what extent parents pass on political values and habits to their
offspring, and how upcoming generations differ politically from their predeces-
sors. However, there seems to be a lack of knowledge concerning social dynamics
and interaction in the everyday experience of young people's political life. Espe-
cially, whether the development of modern family patterns and increased gender
equality might change the classic roles of the parents in the political socialisation
process.

While we recognize the importance of parental socialisation, we challenge the
typical assumption of a "one-directional" intergenerational transmission of polit-
tical values from parent to child. Therefore, we believe it is essential to scrutinize
how young people engage in daily conversations and discussions about politics
and society, because young people who engage in political discussions with family
and friends tend to be more engaged in political participation than other youth,
such as voting at elections, petitions and participation in demonstrations (Gun-
delach and Levinsen 2011).

Besides outlining relative contributions by different agents of political social-
isation, we aim to explore the contexts of political socialisation by asking how
political issues are raised and what kind of political issues are discussed? Thereby,
it is possible to make a coherent analysis at different levels, which both maps the
networks of political socialisation and explores how young people gain and devel-
op information and knowledge.

Methodologically, the paper adopts a mixed methods research model. The
paper triangulates survey data (n=936) and in-depth interviews (n=60) of young
Danes. Data has been gathered for the MYPLACE project.

YLONEN, MARJA* (University of Jyväskylä, marja.k.ylonen@jyu.fi)

Nuclear Energy and Safety: International and National Isomorphic Pressures

Nuclear safety has often been an accident driven topic as the Three Mile Is-
land, Chernobyl and Fukushima disasters show. In addition to accidents, severe
economic and environmental challenges related to the construction of new nu-
clear power units and management of ageing plants and new technology, not to
mention decommissioning of existing older units keep nuclear energy and safety
among the relevant topics. Furthermore, the recent upgrading of safety require-
ments at the national and international level and harmonization attempts of nu-
clear safety regulation by the Western European Nuclear Regulators' Association,
raise questions about the cultural features of nuclear safety regulation.

The aim of the paper is to explore how nuclear safety (that is an important
component of human and environmental health) has been dealt with in the inter-
national and national level in Finland and the UK after Fukushima and what kinds
of factors constrain learning. The data consists of the International Atomic Energy
Agency's Safety Standards, Western European Nuclear Regulators' Association's
reports and the OECD Nuclear Energy Agency's reports, the national final reports
of the Stress tests of Finland and the UK, national nuclear energy act and safety
guides. The method of analysis is content analysis.

The conceptual frame draws on the isomorphic pressures, which refer to the
phenomenon by which organisations become structurally or strategically homo-
geneous. Isomorphic pressures, stemming from national institutional patterns or
preferences, whether the nature of sectors may play a role in the nuclear sector, since
they affect the what, how and who of safety-related action. Isomorphism is im-
portant to the extent that it may strengthen and spread effective understandings
of, and approaches to, safety, but it may also engender inability to detect specific
needs and requirements or it may lead to contrasting understandings and
approaches among bodies involved in nuclear safety that are exposed to different
isomorphic pressures.

How Social Class and Education Affect Youth Transition in Japan?: Youth Cohort Study of Japan

The purpose of this report is to clarify how social class and education influence
younger transition in Japan from Youth Cohort Study of Japan (YCSJ). In the late 90's,
the life course after secondary school graduation have significantly changed. The
connection between upper secondary schools and employers to smoothly transit the
graduates into work in Japan had been once highly praised, but the system
became less functional due to several factors (Mary C.Brinton, 2011, Lost in
Transition). Many young people cannot get permanent and secure jobs, some of
them become 'Freeters' who only get temporal and insecure jobs to make a living.
Many empirical studies have taken place to find who are the most disadvantaged
among Japanese youth, trying to find what causes the dysfunctional transition
between school and labor market in the 2000's. However, most of these studies
focused on the youth transition during only a certain period of time, and they are
not sufficient to clarify the complexity of youth transition. YCSJ has conducted a
panel survey of a group of youth for five years from their age of 20, so that YCSJ is
able to capture the dynamic young people's transition in consideration of various
factors. Above all, we aim at unraveling how youth transition differentiated with
social class and educational opportunities.

A New Attempt At Organizing Irregular Workers In Korea :Examining The Activities Of The Korean Women's Trade Union

It is difficult to organize irregular workers, especially female irregular workers
in Korea, as many of them are employed by small enterprises, change their jobs
frequently and enter and leave the labor market according to economic fluctua-
tions. Therefore the Korean Women's Trade Union (KWTU) has tried to build a new
model of a trade union and a new idea of a labor movement which are different
from the enterprise unions for male regular workers in order to organize female
irregular workers who have been entirely excluded from the protection of labor
laws, the welfare system and the trade union. While the enterprise unions have
concentrated on protecting employment and improving working conditions of the
union members, each worker of the KWTU has been an independent women's
trade union which any working woman can join by herself without distinction of
industry, occupation or region, or whether she is unemployed or not beyond the
enterprise, and performed various activities. In this presentation, we consider the
activities of the KWTU as well as its implications.
The Rise of 'Reflexive University Governance' in the Risk Societies: Japan, the United Kingdom and the United States

Socio-economic upheavals after the Lehman Shock, and in European countries, the introduction of austerity measures have financially overshadowed the university sectors cross-nationally. The purpose of the paper is to identify how uncertainty and insecurity in the post-2008 period have reshaped university governance relating to risk management. The study examines university governance at the system and institutional levels in Japan, the United Kingdom and the United States.

The paper is both theoretical and empirical driven. The study takes the theoretical approach by utilising two conceptions of peer reflexivity and 'risk' in the context of university governance. The former refers to the 'cycle of peer feedback, self-monitoring, self-analysis and action. Higher education institutions are treated as learning organisations' (Clark 1998; Dill 1999). The latter explores Becks' (1992) and Giddens' (1990, 1999) risk society. The study then proposes a new concept, 'peer reflexive governance', which is compared with Foucault's neo-liberal 'governmental' (1988, 1991) to capture the characteristics of 'peer reflexive governance'.

Regarding empirical analysis, the study takes documentation for data collection in order to identify the extent to which the institutions in three country settings are autonomous (not in direct state control modes), making the peer reflexive mechanisms feasible. The collected document includes acts, government White Papers, circulars and other official documents.

The paper argues that 'peer reflexive governance' has become significant in the insecure and uncertain environment in the post-credit crunch period because the universities have become increasingly more self-aware, reflective, and reflexive than ever before. The universities have strengthened their self-monitoring mechanisms in order to respond to uncertainty and risks, shaping them into learning organizations. The practices of peer reflexive governance, however, differ between Japan, the United Kingdom and the United States. The study is significant because few literatures so far connect the conception of 'risk' to university governance.

University Governance and the Academic Profession in "Rising" East Asia

The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salmi (2008) suggests that "world-class" universities and higher education systems require favorable governance with autonomy and academic freedom. Terms such as "entrepreneurial universities" (Clark, 1998) and "academic capitalism" (Slaughter and Leslie, 1999), however, imply that traditional "collegium" governance is at risk. Most East Asian higher education systems have been established and developed through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these "Post-Confucian States" (Marginson, 2011) are now achieving "world-class" status without experiencing the strong "collegium" governance pattern of the past. Japan could be an exception, having democratically established academic freedom and autonomy led by the faculties since World War II. However, now, top Japanese universities are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?
Food Sovereignty and the Politics of Food Insecurity in South Korea

The collapse of agriculture has been accelerated by the global agricultural policies. Between 1970 and 2011, the share of agriculture in GDP dropped sharply from 25.4% to 2.3%. The collapse of agriculture has been accelerated by the global agricultural policies. As a result, the strong guidance of national governments. Lastly, the authors conduct a de-identify the characteristics of these patterns in Japan and other East Asian countries.

The New ICTs and Gender Inequality in Korea

This presentation aims to explore the implications for gender inequality of the increased access to and usage of mobile ICTs, based on the data collected in Korea. Korea used to be no exception to the conventional digital divide in which women, compared to men, are disadvantaged in the use of ICTs. In recent years, however, there has been a remarkable increase in Korean women's access to internet and, specifically, mobile internet technology. Women have surpassed men in the number and proportion of 'smart' mobile phone users. Among young generations, in particular, girls, compared to boys, tend to have access to the mobile phone earlier and use it more frequently and longer in duration of time. In 2011, Korean children are reported to own their first mobile phone at the average age of 10.4 years (fifth grade at elementary school), and 80% of the third graders at elementary school owned it.

What would be consequences in terms of gender inequality of this earlier and increased exposure to mobile internet technology represented by the 'smart' phone? On the one hand, the user friendliness of the new technology has the potential of narrowing or eliminating the gender gap in its professional and financially lucrative utilization, and its mobility in time and space potentially brings the liberating effect for women both in employment and domestic labor. On the other hand, however, there are concerns that the easy availability and access to the mobile technology would lead to continued gender inequality, in which women remained mere consumers, and increased vulnerability to the new problems brought by the new technology, such as digital/mobile addiction. This presentation investigates the consequences of the new ICTs in gender inequality and their implications to cope with the gender inequality at present and in the future.

Cultivating Ethnic Solidarity in the Transnational Enclave: Co-Ethnic Relations Between South Korean "Newcomers" and Korean-Japanese/ Korean-Chinese "Oldcomers" in the Korean Enclaves in Osaka and Beijing

Recently, scholars have noted that migrants exhibit distinct patterns of adaptation characterized by frequent movement to their countries of origin. This influx of transnational migration has in turn, altered the structure of historically established minority communities. My research investigates how changes in the ethnic community brought on by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and community survey data conducted in the Korean enclaves in Tokyo, Osaka and Beijing.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean Chinese minorities. As a result of the growing number of South Korean newcomers since the 1990s, the Koreatowns in Beijing and Osaka today have become increasingly connected—both on the institutional and grassroots level—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has led to the growth of formidable barriers in constructing a collective ethnic consciousness within the Korean community. Damaged co-ethnic relations between the two waves of Korean migrants have significantly hindered their ability to mobilize the rich transnational resources in the enclave for upward mobility. This paper brings to light the structural barriers Korean migrants encounter in cultivating ethnic solidarity in the transnational enclave. In doing so, I offer suggestions for social welfare policies that may aid transnational migrants in more effectively cooperating together to mobilize the resources of the enclave to better their life chances.

Effects of Child Involvement in Housework on Future Gender Role Expectations

Housework allocation has been studied extensively, particularly in its relation to women's employment. Despite the richness and abundance of literature on this subject, most research has focused on housework allocation between couples, and children's participation in housework has been understudied. These few studies, however, indicate that children participate in household tasks to varying degrees. The present study utilizes writing assignments submitted by approximately 120 undergraduate students enrolled in family sociology courses at a Midwestern U.S. university, and qualitatively analyzes patterns of housework participation in students' familial, and of their experiences with specialization to describe this participation. Preliminary data analysis shows that most college students expect to marry, and for both spouses to earn an income, even when students grew up in households with stay-at-home mothers. While this consensus continues to gender-normative expectations in provisions of childhood experiences, expectations regarding domestic tasks varied more, and childhood experiences appear to have important impacts on perceptions and expectations with regard to household work. Students who "helped" their employed mothers with the second shift were more likely to perceive indoor housework as "men's work," and expect their husbands and/or children in their future households to be "helpers." Other students stated that all family members "contributed" to domestic tasks in their childhood households. These students tended to view housework as the responsibility of the entire family, and to hold less gendered expectations. The types of housework done by children were often gendered (e.g., sons doing yard work and daughters helping with cooking), and this also shaped students' perceptions and expectations. By analyzing childhood experiences, this study aims to fill a hole in the literature, shedding light on how parents include their children in negotiating housework allocation, and how childhood experiences shape gender role perceptions and future expectations.

Lessons Learned from Great East Japan Earthquake - Birth Outcomes in the Catastrophe of Highly Aged Country

The Great East Japan Earthquake and Tsunami occurred in 2011/3/11 and this disaster revealed health care issues that Japan already had. One is the lack of attention for maternal health care in the highly aged society and the other is decreasing OB/GYN providers in the Tohoku area. It was hard to see pregnant people and babies in the highly aged country like Japan, however, there were a few expecting mothers left in the cold, hungry and anxious shelter with another people. They were not prioritized as a vulnerable population. Continuing research of 11 hospitals and 37 clinics in one prefecture in the devastated area showed that most of pregnant mothers stayed more than 3 evacuation shelters to find a safer place to live and half of the pregnant patients could not find a way to go out from the Tsunami area to have birth. With more than 200 patients who could succeed to transport to another prefecture, their average delivery time (weeks of gestation), weight of baby, preterm birth rate, low birth weight rate, amount of blood loss and another birth outcomes of this catastrophic area tells us the importance of the pre-hospital OB/GYN care team in disaster response and safety confirmation system for mothers and babies. We should strengthen the perinatal care in highly aged society where mothers are "minority". There is a generation inequality in health care of highly aging society like Japan - perinatal health care is less concern than elder care. 10 obstetricians set up a project specialized for pre- and postnatal care, and carried out medical activities in these disaster-stricken areas by taking care of pregnant and postpartum patients from April 1st until September 3rd, 2011. With dispatched specialist after natural disaster and built the visiting system and correct birth outcomes and neonatal health outcomes.

Who Takes Part in Anti-Nuclear Actions? a Case Study of the Organizations of Evacuated People from Fukushima Plant Area and Their Attitudes Concerning Nuclear Energy

It is often assumed that the people of Fukushima, especially those who lived near the nuclear plants, are increasingly aware of the impracticality of Japan's nuclear energy policy as they have witnessed the consequences of the nuclear disaster of March 2011 on their lives. This paper will examine some of the reactions to the nuclear disaster and the nuclear energy policy based on the areas bordering the Fukushima prefecture and other prefectures in the more distant areas.

First it is shown that, as long as each organization represents the people who lived in the same municipality before the devastating event of March 2011, the extremes of both now passionate "anti-" or "pro-" opinions concerning the nuclear energy policy have been embraced by some of these organizations.

Second, it is demonstrated why these people have taken either "pro-" or "anti-" stances in the process of the disaster followed by the nuclear accident, and the author points out that these attitudes are affected not only by their experiences

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
after the beginning of the disaster, but also by their life-styles before the disaster and their memories of these life-styles.

Third, the question of whether these organizations have simply endorsed or excluded some of these “anti-” attitudes or the “pro-” attitudes is discussed; rather, here we see the unexpected effect of the “anti-nuclear” discourse on the formation of these very people’s doubts about the discourse; but even this adverse effect has not resulted in showing anti-“anti-nuclear” discourse.

Hence scholars may expect that time would ease the unfortunate misunderstanding about the anti-nuclear opinions; however, this could take a generation, which may be too long a time for some witnesses.

Aging Problems in Suburban Neighborhoods: A Case of Hiroshima Region

The Japanese suburban neighborhoods that were developed in the 1960s to 1970s are standing at a crossing roads; one path leads to sustainable communities to which young people move, while the other leads to “ghost towns” in which both young generations move out when they grew up and old people leave their houses because of residing in a nursing home. Regarding the demographic characteristics and housing conditions of Japanese suburbs, a large number of housing estates are at risk of heading towards the second road. Aging and the increase in vacant houses is one of the most serious and urgent topics to be surveyed by scholars in a variety of academic backgrounds. This paper examine (1) aging problems in Japanese suburban neighborhoods with GIS methods, and (2) relationship between aging and increasing vacant houses in Hiroshima region; and (3) finally, we discuss generative process of vacant houses in local cities.

A Sense of Absence: A Reflection on Ethnography of Walking in Yokohama and Vancouver

This paper reflects on our ethnography of walking, part of our larger cross-Pacific project on the formation and regulation of communities of sex-workers, which we have been conducting since the summer of 2012 in former-brothel-dist- tricts of Yokohama, Japan and Vancouver, Canada, places that are commonly marked by absences of material and discursive traces and documentation of communities of sex workers. We discuss how we came to make sense of and engage with the places through our sense of the material absences but “ghostly” presence (Gordon 2008) of sex workers’ bodies and brothels. We also discuss how our af- lective responses such as frustration, numbness, boredom and anger, which we experienced when encountered the production of those absences, enabled us, emplaced ethnographers, to make the absences visible and envision an ethical way to engage with the spaces whose communities were uprooted and memories have been marginalized, erased or forgotten.

Women's Hair Loss from the Perspectives of Body and Gender

This research aims to pursue the social cognition on women's hair loss (women's baldness) due to alopecia, and to clarify the structure of oppression on which they were placed from the perspectives of body and gender. Through this study, I want to point out that women's hair loss should be argued as a sociological objects rather than just a medical disease.

Until recently, hair loss was mainly identified as alopecia in a medical or psychological research. By the previous studies, mental difficulties of women with alopecia are clarified(Eckert: F1976, Van der Donc et al.: F1994), and the usefulness of wearing wigs as the ways of coping is shown (Nakajima, Nakayama:2002). However, in these researches, it isn't clarified about the problem experience after wearing wigs. So, this research uses Goffman's passing theory (Goffman: 1968) and analyzes the navigation of 14 bald women with alopecia area who wear wigs.

This study draws the following discussions. Firstly, the point of view of the concerned individual, wearing a wig is itself a disability for bald woman and it's based on the cultural norm which considers hair as the symbol of femininity. Secondly, one reason behind the production of the disability as being the existence of “close others” (family), who force or encourage the individual concerned to wear wigs. As the encouragement by society and the intimate sphere to wear the disability fits with the gendered body's accepted norm, it is one reason why the individual continues to wear the wig.

Organic Farming, Consumers and "Teikei" in Japan: Focusing on the Influence By the Nuclear Plant Accident

The nuclear power plant explosion in March, 2011 caused severe damage to the people in Fukushima and surrounding areas. Present paper examines its influence on organic farming, focusing on the behavior of consumers - general consumers and teikei (direct co-partnership between farmers and consumers) consumers.

After the accident, farmers were restricted to sell contaminated products, and even if not contaminated, the fear restrained consumers from purchase. The heavier organic customers one is, the more sensitive was her/his reaction to products from affected area, and the economic damage of organic farmers was severe. It was irrational that the food industry and local people supported affected farmers at the critical stage.

Consumers and farmers of teikei groups held study meetings jointly to understand the situation, and such meetings were opened to general consumers too. Among un-affected consumer groups, the number of members increased, which shows the reliability of Teikei was reevaluated.

Many consumer groups did some kinds of special supports, but continuing the relationship was also the support. Consumers went to farmers' fields to help farming works since 2011 and a group sued nearby nuclear plant to stop the operation. Feelings of mutual help and solidarity encourage the affected farmers, and also give deep consuming to consumers.

Teikei is shrinking in Japan while “Community Supported Agriculture” is growing worldwide. Conventionally, teikei relied on voluntary work of women (especially for consumer side). Such style become difficult to maintain, and Teikei is now shiftinging to individual-based one using parcel delivery service. Serious diver- gence between farmers (rural) and consumers (urban) in the consuming society is the cause and the result of the accident. Social consensus and broad struggle to get out of such divergence, learning from the experiences of teikei, need to be sought seriously and not to reopen the nuclear plant.

Cultural Manifold Analysis (CULMAN) for Cross-National Comparative Survey

The objective of this presentation is to show our paradigm called Cultural Manifold Analysis (CULMAN) for the comparability of cross-national surveys. This paradigm has been developed in the longitudinal and cross-national surveys on na- tional character by the Institute of Statistical Mathematics (ISM) over the past six decades since 1953. First, I summarize our paradigm of cross-national and longi- tudinal surveys. Second, I summarize some Japanese social values and, among others, aspects of people's sense of interpersonal trust shown in our longitudinal survey of Japanese national character. (See http://www.ism.ac.jp/ism_info_e/ko- ki_e.html)

Thirdly, I present cross-national comparisons of interpersonal and institutional trust as well as some basic social values based on our past surveys, including the Seven Country Survey (surveys of seven-countries (Japan, USA and five European countries)); the East Asia Values Survey (EAVS) (2002-2005), the Pacific-Rim Values Survey (PRVS) (2004-2008) and the Asia-Pacific Values Survey (APVS) (2010-2014). (See http://www.jsps.go.jp/grantsinaid/12_kiban/ichiran_22/e-data/e33_yoshino.pdf) The results show that East Asian countries have already departed from traditional Confucianism and that people share more common social values be- yond the distinction of East and West. Fourthly, I present an overview of data on Japanese immigrants in Brazil, Hawaii and the U.S. West Coast in order to study the interaction between the environment and ethnicity. Finally, some comments are provided for our future research.

The Representation of Wedding News in Taiwan: Critical Thinking about Romantic Love, Capitalist Ideology and Gender Politics

This research explores the representation of weddings news in mass media in Taiwan. Focusing on the gender/sexual politics, the researcher examines how wedding events are reported on mass media. In terms of textual analysis, the researcher discusses the gap between the wedding news representation and the
The Power of Religious Objects in Transnational Migration

Since the economic crisis in Spain hit most migrant households as the most vulnerable, religious institutions such as the Catholic Church, are becoming increasingly important. Their houses act as reference points by which the migrant community is kept together. Tangible assistance is often provided, and transnational communication structures and family bonds are sustained. Being assisted by local Saints, the Catholic Church serves as a place of remembrance to produce and reproduce senses of belongings that date back to the early colonial era. Social relations of migrants are manifested in a space which symbolizes the power and glory of the former Colonial regime.

Giving the example of the congregation of San Lorenzo in an immigration neighborhood in Madrid, it is shown, which role and agency religious artifacts play in re-producing collective identities and allocating social and financial resources. By focusing on the object itself (not necessarily its symbolic representation) the functions and cultural meanings of the figure in different historic contexts become apparent. The religious staging around the object of the Saint show spatially and chronologically comprehensive chains of interaction which reflect deep seated power relations between the immigrant and the host communities.

Economic Crisis: Toward the Erosion or Stability in Individual Welfare State Preferences?

Understanding voter preferences for the welfare state and how they are formed has become an important basis for making claims about both the erosion or continued stability of the welfare state. In the past decade evidence has mounted to point towards a relationship between individual measures of economic hardship, risk and support for the welfare state. However, most of the research has been constrained to limited time-series data that evaluates this relationship under relatively stable business cycles which seldom affects individuals belonging to more secure economic groups (high skill, high income). In light of the increasing global economic instability that places these individuals at greater risk, it becomes important to determine how they will respond differently and change the direction of aggregate support for the welfare state.

This paper will examine in detail how different class groups respond to increasing risk, in particular more economically secure groups, and identify if recent findings of increased aggregate support as well as class convergence in Sweden hold or if they resemble a recent study that demonstrated a decline in welfare state support in the United States following the 2008 economic crisis.

The leverage of this study is based on the use of (1) exogenous properties of the 2008 economic crisis, (2) a Swedish survey that reflects respondents' welfare state preferences and socio-economic attributes that spans seven consecutive years sampling approximately 3000 respondents per round, and (3) a design which employs a difference-in-differences method to compare individuals across municipalities. Municipalities are sorted according to those that experienced an immediate substantive spike in unemployment and those that experienced little change, which resembles a treatment and control group respectively. This design reduces endogeneity to make stronger claims for causality, improves estimation of increased economic risk on more economically secure groups, and consequently overall changes in public preferences.

Weibo and Inequality in Disaster Coverage

The disasters today have the characters of uncertainty and inequality. This article focuses on the two big earthquakes happened in the last five years in Sichuan province, China. It explores the way to reduce the inequality in disaster coverage by researching the changes of the form of news report.

In the disaster coverage, especially in the early stage, the traditional media started to use its webo account which formed a new mode of news report. This is different with their works in the Wenchuan earthquake five years ago. By interviewing 15 journalists who partic-
ulated in reporting the Wenchuan and Lushan earthquake, this article finds out the
discrepancy in using the traditional media and new media. It also elaborates
that a new form of inequality emerged due to the digital divide, while weibo is
eliminating traditional inequality.
(Weibo is a SNS like Twitter)

*Is Religion an Alternative Source of Help for Immigrants to
Maintain Their Mental Well-Being?*

A number of studies have shown that religious participation is positively
related to immigrants’ mental well-being in the West, thus making religious venues
“places of refuge” for immigrants and religion their “balm for the soul.” A study in
Canada in 2007 found that immigrant status is associated with lower rates of
use of mental health services, which is likely caused by cultural and linguistic bar-
criers to care. In this paper, I attempt to find if religion is an alternative source of
help for immigrants when they suffer from psychological distress and whether
religious participation is associated with lower rates of use of mental health facili-
ties among immigrants. The goal of my research is to help policy makers better
understand how immigrants adapt in their host countries when facing barriers
to access to certain important resources, in this case, culturally and linguistically
appropriate mental health services.

I will conduct my analysis within the Canadian context, where there is universal
health insurance. My analysis will be based on data provided by the Canadian
Community Health Survey: Mental Health and Well-being. The variable mental
well-being is defined by the “psychological well-being manifestation scale” in
the survey. Consisting of 25 questions ranging from “self-confidence” to “pace of
living” on five scales, these measurements are combined into one continuous vari-
able. Religious participation can be defined by the two questions on how religious
respondents spend time with their families, and their frequency of attending religious
activities. The survey also contains a section on health care utilization, thus mak-
ing it possible for me to analyze the relationship between religious participation
and the use of mental health services.

*Declining Marriage Rates Under Globalization: Homogeneity Or
Heterogeneity?*

Around the world, marriage is undergoing massive changes. The United States
has called on “saving marriage” (Popone, 1993; Furstenberg, 2005), the Middle
East is experiencing a marriage crisis (Rashad, Osman, and Roudi-Fahimi, 2005),
Latin America is seeing the rising substitution of cohabitation and single
motherhood in place of marriage (Esteve, Garcia-Roman, and Lesthaeghe, 2012),
and China is seeing more “sheng nu” meaning “leftover women”, a group of single
women who have a high qualification and high income. A series of questions arise from
these changing trends of marriage: Does globalization affect marriage the same
way in the developing countries as it does in the developed countries? What caus-
es declining marriage rates under globalization? Do these changing trends mean
marriage as an institution is weakening or even disappearing? What does a mar-
rriage mean in different regions under globalization? Previous research focuses on
either the declining marriage rates in the developed countries (Cherlin, 2004 and
2010) or the “flight from marriage” in the developing countries (Jones, 2005).
What is missing in the current literature is a comparative perspective on this
phenomenon, which can help us better understand marriage as an institution
characterized by a heterogeneity (its complexities) not a homogeneity (an individ-
ually driven phenomenon). This paper explores the declining marriage trends oc-
curring in different regions (i.e. the United States, Latin America, the Middle East,
and the Southeast Asia), compare and contrast their similarities and differences,
and analyses the implications for the significance of marriage as an institution.
I argue that delayed marriages and declining marriage rates in the developing
countries do not indicate marriage as a traditional institution is eroding, replaced
by other modern alternative living arrangements. Instead, marriage is still viewed
as a significant institution and its traditional characteristics are reinforced by fam-
ily and economic contexts under globalization.

*Effects of Social Capital on the Developmental Outcomes of
College Adolescents: Evidence from Shanghai, China*

It has been suggested that individuals are faced with more transitions and
life-decisions in adolescence and young adulthood than at any other stage of life.
Overseas studies have also suggested that during these time periods social ties
might change. However, domestic research has spared disparate efforts in the
investigation into college students’ psychosocial development undergirded by
the deficit-based model. Drawing upon a sample of 1153 university students in
Shanghai, China, this study investigated how family social capital, friendship qual-
ities, associational social capital, linking social capital, and adolescents’ agentic
personality influenced multiple developmental outcomes of college students in
mainland China. The results of a structural equation modeling analysis provided
a good fit for the sample as a whole. The overall findings support the hypothesis
that higher levels of agentic personality were associated with better developmen-
tal outcomes of college students, including higher levels of resilience, self-efficacy,
and self-esteem. Agentic personality also mediated the effects of family social
capital, friendship qualities, associational social capital, and linking social capital
on developmental outcomes.

The study advances the theory of social capital by incorporating its various di-
ensions into one conceptual framework, thus unraveling the mechanism of how
family social capital, friendship qualities, associational social capital, and linking
social capital influence the college students. It also advances the theory by testing
it in a non-western socio-cultural context, thus potentially fortifying its universal
applicability. Moreover, it is desirable that more programs for enhancement of
agency building could be devised to foster emerging adults’ agentic personality.
Family education, positive peers groups, associational participation, and linking
mentoring are also anticipated to promote their optimal development.

*A Sociological Analysis of Linking Renewable Energy with Rural
Regeneration*

A feed in tariff system that was introduced after Fukushima nuclear accident has
let people think that there are big business chances in the renewable energy’s
market. Then, a lot of companies have tried to join to the market as electricity
generator. In this presentation, we will examine the way of linking this market
with rural areas as the effect of local economy. For promoting this finance, an
analysis from sociological concepts is used to link installs of renewable energy
facility with spontaneous developments of rural areas. Based on this scheme, our
group has researched and supported several projects that people living in rural
area install renewable energy facilities.

In the research, we have found that small entrepreneurs encounter a lot of
barriers to install renewable facilities. Typical one is the negative attitude of local
banks to financing them.

Financing local companies by local banks is essential to the vitalization of re-
gegional economy. For promoting this finance, an analysis from sociological con-
cepts of social networks is used to link installs of renewable energy
facility with spontaneous developments of rural areas. For promoting this scheme,
our group has researched and supported several projects that people living in rural
area install renewable energy facilities.

In the research, we have found that small entrepreneurs encounter a lot of
barriers to install renewable facilities. Typical one is the negative attitude of local
banks to financing them.

*Disregards to Principles on the Distribution of Risk and Bads*

Geological disposal is the primary option for most countries where have
high-level radioactive waste. All countries except for Finland, however, have not
found any sites for geological disposal facilities due to objections from the pop-
ulation. Japanese government is facing same problem. We must dispose nuclear
wastes regardless of continuation/stop of nuclear electricity. How can or should we
tackle this problem?

The essential sociological perspective is the distribution of risk/bads. This per-
spective was suggested by Ulrich Beck in his Risk Society (1986). He has insisted
that the concept of class is not effective for understanding the logic of this dis-
tribution anymore. To his argument, lots of works have asked whether it is true or
not. The logic of the distribution of risk/bads has been a focus of sociological
studies.

In this presentation, we will show two disregarded principles on the distribu-
tion of high-level radioactive waste. These principles are deduced from an analy-
sis of conflicts on general wastes in Japan. Based on these principles, we will anal-
yze a site finding scheme and its result of geological disposal facilities in Japan.

Japanese government is looking for communities where spontaneously accept
the facility now. For getting a spontaneous candidacy, the government established
a governmental body called NUMO (Nuclear Waste Management Organization of
* denotes a presenting author. Abstracts are organized by first presenting author’s last name. 1097
In Japan in 2000 and has offered lots of benefits such as subsidies, tax revenues and job creation. Local communities and councils could get those benefits if they accept a facility. However, no principles mentioned above are found in this scheme.

To date, no local community or council has officially put up for it. This result shows that the scheme of Japan has an important fault that is caused by a disregard to the principles. We will elucidate how these two principles function in the process of the distribution of risk/bads.

Japanese Wave of Sub Cultures

The aim of the paper is to use methodological viewpoint of the visual turn of sociology to understand the visual turn of Japanese Animation and Manga and the phase of their ‘globality.’ The data that will be dealt with is the one from the extended survey research on Manga and Anime conducted by Association of Japan Sub-Culture Studies at Kobe University (headed by the author).

Comparing the research results that have already been conducted by European and American researchers in the areas such as in Hangzhou (CUIB) in China, Hong Kong, Tokyo and the survey research has been done using questionnaires as well as interviews with the participants / fans in the events of Manga / Anime festival in those cities / areas.

Observing those processes of acceptance/ rejections, and the ways of penetrating into people’s daily life paper suggests the transformed nature of our contemporary way of life in terms of the visual and the social are constructed simultaneously in localized ‘cosmopolitan’ consciousness from below.

Same Blood or Cultural Other?: The Paradoxical Racialisation of Korean Chinese Migrants amid South Korea’s Multicultural Turn

This paper addresses the fusion, rupture and transformations in the notions of race, nation, and culture by attending to the contradictory but reciprocal relationship between racial nationalism and the ‘cultural’ deployment of multicultural rhetorics. Focusing on the South Korean context, the contemporary racialisation of Chosonjon (Korean Chinese) migrants in tandem with the rise of autochthonous far-right is examined as an illuminating case study. South Korea, a country that considered itself to be racially homogeneous, has begun to experience the influx of labour migrants from less developed countries since the 1990s. More than half of these migrants come from China and among them, the majority is Korean Chinese who have been rhetorically constructed as part of the Korean nation by the state and the Chosonjon rights movement, under the rubric of the tongpio (blood kinship of overseas Koreans) discourse. Yet Chosonjon migrants are created as a distinctive group both discursively and legally (through a discriminatory immigration system) and concurrently situated somewhere in between autochthonous Koreans and racially non-Korean others. Against this background, anti-Chosonjon sentiment has become prevalent as autochthonous far-right movements and media have increasingly criminalised and racialised the Chosonjon as a cultural Other whose potential damage must be controlled by stricter state regulation and, if possible, through complete assimilation. Ironically, the language of cultural difference and incompatibility employed to otherise the Chosonjon derives from the very cultural rhetoric of multiculturalism, only proving its limitations in managing the racialisation of this group. Combining discourse analytic and in-depth interviewing techniques, this paper investigates intersecting racial, cultural, ideological and economic rationales that aim at excluding Chosonjon and how the boundary of nation is debated and redrawn amid South Korea’s multicultural turn.

How Do Students View Their Mentor-Student Relationship?: A Cross-Case Analysis of Narratives of Academic Harassment in Japanese Graduate Education

This paper examines academic harassment of graduate students in Japan by their mentors. Using cross-case analysis of student narratives, this paper examines how students view their relationships with their mentors. In Japan, a variety of non-sexual types of harassment distinct to higher education, collectively known as academic harassment, has recently begun to attract public attention as a social problem. Academic harassment includes acts such as constant criticism, neglect, and distorted authorship credit in joint publications. Many universities now publicize measures against this type of harassment, and several quantitative surveys have shown that serious subcultural damage is a possible result of harassment. However, such surveys have focused on the ultimate outcome of the harassment; few sociological analyses have explored the actual process of harassment. This paper describes how students view this process and the variety of problems they experience in mentor-student relationships recognized to involve harassment. Interview data was obtained from 17 graduate students and young researchers collected between 2009 and 2012, and this paper focuses on the narratives of six key informants from different disciplines. First, the interactive construction approach was applied to interpret narratives to reconstruct literatures and the cross-case analysis of these life stories was then conducted.

The results revealed three commonalities in students’ experiences of the relationship, regardless of their gender, academic discipline, and type of harassment experienced: 1) non-sexual, yet uncomfortable, closeness or distance with their mentor; 2) recognizing exploitation in the relationship; and 3) viewing their mentor as lacking integrity as a researcher, not as an educator. By elaborating on the interplay among these points, this paper describes the issue of academic harassment as relational, not as the specific attack behaviors described in previous works.

YUN, AELIM* (Korea National Open University, gelimyun@hotmail.com)

Reversing a Cost-and-Risks Transfer Chain for Workers’ Rights

In many countries the basis of labour law protections is an employment relation that has been identified as a ‘subordinate’ relation to a single employer in an inidividual corporation. However, the emerging pattern of precarious work is often done in relation to multiple ‘users’ beyond corporate boundaries. Among triangular employment relationships or dependent self-employment, for example, different type of dependence – frequently referred to ‘economic dependence’ or ‘quasi-subordination’ - is more dominant.

In case that labour law protections have been extended to these precarious workers, the grounds and the effectiveness of labour protections are still questioned. On one hand, the degree of similarity to employment relationship is not the elements for labour protections, as capital seeks to evade that type of relation. Therefore, the strategy for adjusting criteria of employment relationship (i.e. The ILO Employment Relationship Recommendation) is not enough. On the other hand, the need of social protections for precarious workers cannot fully explain why capital should take the burden of labour protections.

This paper explores an alternative basis and method of employment standards enforcement with cases of construction and personal care service industry in Korea. In both cases, trade unions have developed new strategy for organizing precarious workers and for closing the enforcement gap since 2000s. In particular, unions have focused on the liability of ‘user-enterprises’ in industries where other precarious work such as ‘externalized dependence’ becomes the norm.

Furthermore, this paper analyzes the nature of dependence of precarious work and suggests that it can be understood as ‘externalized dependence’ which comes from the cost-and-risks transfer from capital to labour and society. In conclusion, this paper shows reversing the cost-and-risks transfer chain is the better approach for expanding labour protections for all kinds of workers regardless of contract types.

Prevalence of Abortion in South Australia, 1970-2009

The main objective of this paper is to review the first 40 years’ experience of legalised abortion in South Australia and its demographic implications. Data sources included the official abortion statistics and demographic data from the Australian Bureau of Statistics. Standard demographic and statistical techniques of analysis were used.

After an initial rise during the 1970s, abortion rates remained fairly constant for the next decade but have increased since 1990. The Pregnancy Advisory Centre was opened in 1992, to reduce waiting times and to cater for late abortions. Consequently this has resulted in an increase in abortion earlier in pregnancy and also an increase in late abortions. With the adoption of vacuum aspiration techniques and improved services, abortion is now a day only procedure, performed by specially trained GP (general practitioners) doctors. Morbidity and mortality have been greatly reduced. Concurrent sterilisation is no longer declined. The increase in abortion has affected all age groups, but particularly women under 30, consistent with the national trend towards the postponement of births. After an initial rapid decline, the total pregnancy rate has risen slightly since 1990, reflecting changes in patterns of contraceptive use. However, this is not reflected in an increase in the total confinement rate. Overall, contraception has had a greater

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
effect than abortion in reducing births in South Australia. The abortion rate is still lower than in the rest of Australia as calculated from Medicare data, even though this is an underestimate because it includes only fee-paying patients. There remains a need for continuing emphasis on better contraceptive use, including better emergency contraception.

An international comparison of the recent abortions data for South Australia, UK and USA revealed that the prevalence of abortion in South Australia was marginally lower than that in the UK and USA.

YUSUPOVA, SEDA* (senior lecturer, Grozny State Oil Technical University, seda_linguist@mail.ru)

Object of research - the Chechen and Japanese values in conditions of globalization.

Methods: cultural and action approaches, methods of the sociological, comparative analysis.

Results. In Caucasus, as well as in Asia, Japan in the hierarchy of values the key place take the values of family, collectivism, respect for seniors, mutual aid, solidarity, group unity. The Chechen values, despite religious and language distinctions in Caucasus, are considered as a part or a segment of the Caucasian and Russian values. During the post conflict period in the Chechen Republic, as well as during the post-war period in Japan, high interest to social and cultural values and norms is observed, responsibility for preservation and revival of traditions and customs is shown. In the Chechen and Japanese society there is a similarity and distinction in the ratio of collectivism and individualism, display of paternalism, reflections on globalization calls. Transformative changes in Russia cause social activity, among young and persons of middle age enterprise, initiative, requirement for a competition is more often observed. The Internet, mobile communication, other information means make changes to functioning of traditional norms. In this context interesting is the aspiration in Japan to adapt traditions for new conditions.

Conclusion. Caucasus is on crossing of the European and Asian cultures. Japanese social practice of combination of traditions and the modernity serves as a model for others in carrying out transformations in social and cultural spheres of life. However in each region and country it is necessary to develop a strategy of modernization taking into account social and cultural specificity.

JS-37.2

YUSUPOV, MUSA* (Associate Professor, muso_y17@hotmail.com)

Methods. The comparative, semantic, corpus, sociolinguistic analysis of idioms, poll of the Chechen language speakers is carried out.

Results. In the basis of work values there are the material values focused on income, profit; spiritual and psychological values - self-realization in work, pleasure from work, understanding and feeling of the meaning of life, spiritual growth through work, creativity, social and career values - education, status in society. In an internal form of idioms the cultural values describing work traditions, customs, and the historical events forming work cultures of different countries were also reflected. So, in the English and German languages the value of official regulated work was accentuated, in German the value of an official duty was also specified. In the Russian contexts very similar social experience is fixed. According to the poll of Chechen language speakers at the present stage important are the values of income and success that can be connected with a post-war situation of revival, construction of work culture. In the frame of a language situation in Chechnya the idioms with the opaque internal form which fixed the facts and subjects of culture not taking place in the modern reality are less familiar and seldom used.

Conclusion. Thus, the study of contexts is necessary for revealing the influence of social factors on idioms and evaluation of the language situation in society.
El concepto de individualización en la sociología clásica y contemporánea

El concepto de individualización en la sociedad clásica y contemporánea y su aplicación en la sociedad mexicana...

Por Gina Zabludovsky Kuper

La ponencia vincula el desarrollo de la individualización con el proceso histórico de diferenciación social que caracteriza a la modernidad y que se expresa en un conjunto de creencias, prácticas y normas sociales que han sido propias de las sociedades industrializadas. Este punto de partida, eminentemente sociológico, se distingue de las polémicas de corte político que contraponen al individuo con la sociedad o el Estado, y de los debates teóricos –epistemológicos– que privilegian ya sea al individuo o la estructura social como método de aproximarse a la realidad social.

Desde esta perspectiva el término “individualismo” responde a los procesos que se manifiestan de forma más evidente a partir del S XIX. En la cultura democrática moderna, el concepto adquiriría un peso decisivo con Alexis de Tocqueville, quien lo introduce en el tratamiento de la esfera pública y logra diferenciar entre el mero egoísmo y el individualismo de corte democrático.

A partir de estos antecedentes, la ponencia explica los fundamentos de esta terminología en la obra de sociólogos clásicos y contemporáneos como Émile Durkheim, George Simmel, Norbert Elias, Zygmunt Bauman, Ulrich Beck, Gilles Lipovetsky y Robert Wuthnow. En los últimos apartados, se muestra los vínculos que esta temática puede tener con el pensamiento de algunos autores mexicanos como Manuel Ramos y Octavio Paz.

La aplicabilidad para analizar algunas conductas y actitudes del México contemporáneo.

A lo largo del trabajo, se destacará la importancia que tiene la precisión conceptual para lograr la claridad necesaria en la producción y comunicación académica en la sociología.

ZABLUDOVSKY, GINA* (UNAM, ginaza@unam.mx)

En mi paper I’ll aim to show the possibility of postcolonial ideas in exploring of emerging new Kazakh capital and evaluate how this new Kazakh elite has succeeded? 15 years ago the capital of Kazakhstan had moved from the Soviet Alma-Ata to unrenowned, provincial small town Akmola.

At the very beginning of independence the new national Kazakh state should handle with some issues. The most important issue was question of nation building and stabilization of the national state. For balancing and strengthening the new national state the new capital was required which would become the strongest object of identity with new national state. Ethnic composition, ethnic demographic disproportion in distribution of population was one of the strongest challenges for new Kazakh state. Therefore new nation state faced with question: how to balance the national state without violent exile of Russian-speaking population? How to bring here Kazakhs? How to stimulate southern Kazakhs to move, to migrate to very Russian and Russian-speaking North? It is important to remember that historically population's density in Kazakh Steppe always was low.

Secondly new Kazakh state needed for the new centers of modernization; here it is important to notice that new Kazakh state chose strategy typical for the postcolonial state. I mean the enclave type of modernization, strategy of creation of new enclave of Kazakhstan on the North in addition to already existing enclave on the South created by Empire. Here I argue that soviet Almaty was not Kazakh city, during Soviet time Kazakhs never defined Almaty as a cradle of the Kazakh nation.

Finally it seems to be obvious that modernization was understood by Kazakh elite as urban modernization in parallel with kazakhization of North and then the whole society.

Renegociating Communal Identity in a Globalized World: The Case of Greek “Communal Associationss”

As a follow-up research on “communal associations” in Greece, this case study of 16 internal immigrants’ hometown associations from the island of Lefkas, aims to examine their struggle to survive the intergenerational gap amidst the present conditions at the turn of the millennium. Established primarily during the post-war period, the country’s unique, thousands of “communal associations”, acting as “mediating stuctures”, undertook initiatives for the implementation of public projects in the villages; played an active role in maintaining “local cultures”; and reinforced collective identity and belonging to an “imagined community” away from home. Although their noble mission was initially very successful, during the last two decades these associations were confronted with a number of problems, the most important being the declining membership and participation of the second and third generation. This paper intends to understand the recent organizational challenges and institutionalization dilemmas, which impede their operation and threaten their continuity, in the light of three major changes that impact communal life: (a) The dissolvent extreme individualization with multiple identity trajectories that characterize postmodem societies; (b) the eroded sense of “topo-logical” conception and “self-placement” due to globalization and (c) the...

Private Provision, Public Care? Community Based Postnatal Care in Neoliberal Times

As with many other high-income welfare states, maternity care in Australia is available through a system of universal health coverage available to all citizens. However, Australia is distinctive in its parallel private health insurance sector, which operates alongside and in competition with the public sector. The private health insurance sector has been heavily subsidised through a range of government policies. Until recently, which have been criticised as costly and inequitable insofar as they favour the most affluent segments of the Australian population and those in metropolitan regions. In addition, concerns about the impact of this stratified system of care on maternal outcomes have been increasing. For example, women birthing in the private sector are at substantially higher risk of instrumental delivery, caesarean birth, induction of labour, episiotomy and epidural anaesthesia; their stay in hospital following birth is, on average, twice as long as women birthing in public facilities (Australian Institute for Health and Welfare, 2011). What do these differences mean for how women experience post-birth care following discharge from hospital? In this paper, we report on analyses from two Queensland studies of women's experiences of care in the community following childbirth, with a particular focus on the impact of public and private care provision. We report findings from a Queensland survey of new mothers (N=6,433) in terms of their experiences of care in the community, and their confidence and satisfaction with their experiences. In addition, we report the findings of qualitative interviews with 70 new mothers and 49 health care professionals providing post-birth care in public and private health care sectors in Queensland. Together, these analyses demonstrate inequities in health care provision resulting from the current stratification between public and private systems of maternity care.

Tempelhof: A Battle for the Green Heart of Berlin

Tempelhof Airport, an iconic building with rich history in the middle of Berlin, was closed for traffic in 2008 and the airfield turned into a huge park, much loved by inhabitants from the adjacent neighbourhoods as well as by Berliners from further afield. However, after the Berlin Senate, as a governing body of the metropolis, announced its much-trumpeted “Masterplan” to re-develop the airfield, a wave of activism emerged. What was in stake was not only a loss of a unique place of biodiversity, positively mitigating the urban climate, but also an irreversible transformation of a site with special atmosphere: green lungs of Berlin and one of the largest open green spaces within an urban landscape in the whole of Europe. Moreover, Tempelhof is a witness of 20th century history: Nazism, Berlin Airlift, Cold War and the 1989 Wende. Therefore, various kinds of creative activism appeared in order to save the park, consisting mostly of engaged volunteers and enthusiasts, yet of different educational and income backgrounds and age: from garden colony (established in the 1920s), fighting against the loss of social learning to public initiatives campaigning through facilitation and rocketing rents. Thus, it is obvious that the perception of “urban renaissance” is dissimilar amongst different strata of society: it is not only the conflict of the power elites and citizens, but also of people who believe they belong to Tempelhof (and keep its memory) vs. those who do not.

This paper looks at how the topics of urban renaissance and public initiatives are related to themes of memory and collective place-making activities (developed by Karen Till) and how their momentum reflects on Pierre Nora's concept of lieux de mémoire. What is the role of collective cultural and social memory in public engagement? What could be learnt from the case of Tempelhof?

Kozinski University Index of Balanced Economic and Social Development ("IBESD") for Poland

The paper presents a new Index of Balanced Economic and Social Development ("IBESD"), designed to evaluate Polish economy and society, with an emphasis on human conditions. "IBESD" is constructed in “beyond GDP” paradigm, on widely accepted assumption that traditional measures, such as GDP, are insufficient to evaluate socio-economic development. "IBESD" covers four domains: internal (national) economic, external (international) economic, internal ("micro" or subjective) social, and external ("macro" or objective) social. Each of them is measured as an aggregation of several simple indicators. All four medium level indexes of four domains show almost parallel changes, so they can be aggregated into a general "IBESD" index. All of them, "IBESD" included, describe very well changes in Polish economy and society during 2000-2011. Their trends may be explained by general knowledge of economic cycles in Poland and they are surprisingly highly correlated with the ultimate measure of human conditions, operationalized as an aggregation of psychological well-being (state of mind and emotions) and suicide indicators. Economic and social components of "IBESD" show the same pattern of changes, with a slight delay and greater amplitude of social changes. That indicates “leading” role of economic aspects in relation to social ones and great sensitivity of social indicators to economic ones. As far as social aspects are concerned, the trend of subjective evaluations of current conditions repeats, with small delay, the “leading” trend of expectations for future social conditions. This delay does not appear, however, during the present economic crisis, when predictions and evaluations similarly react to dramatized economic news. “IBESD” was designed in a theoretical context of balanced development. Its application confirms the theory that rapid development is associated with diminishing balance between its different domains.

Discourse on Youth’ Sexual and Reproductive Health-Stigmatized in Lahore Pakistan

INTRODUCTION: Pakistan is facing various challenges to deal with issue of youth’ Sexual and Reproductive Health (SRH). Although youth represent large number of population, yet are deprived to seek proper education and treatment to cope with their SRH needs. Subject of human sexuality is associated with strong ideology, moral views and traditions. Being Muslim country where, to discuss the topic of SRH is a societal taboo, less research is done. Moreover, poor infrastructure coupled with non-cooperative behaviour of family/community and healthcare providers discourages youth’ practices to access particular services. Thus need for this study has arisen to understand youth development, enabling to provide appropriate information about sexuality and reproductive health to youth of Pakistan.

METHODS/APPRAOCH: Research on “Assessment of awareness of youth living in Lahore regarding Reproductive health” was conducted in 2009, funded by Small Scale Research Grant under Bill and Melinda Gates Foundation at John Hopkins University and organized by Population Council. Potential participants for study were youth (males and female of 15-24 years), parents, teachers, representatives of youth organizations, service-providers and Govt. officials/policy-makers. Qualitative research technique was adopted through 40 In-depth interviews and 12 Focus-Group Discussions alongwith combining two techniques (Dynamic Contextual-Analysis and Formative-Research).

RESULTS: Research provided a deep insight into lives and thinking of youth. Results show that youth are quite aware about subject although there are still some concerns about access and understanding of correct/authentic knowledge. It highlighted gaps in access to information from reliable sources and non-cooperative behaviour of family and community.

CONCLUSION: Research concluded that there is major difference of perceptions and awareness level amongst females and males. Lack of reliable knowledge about sexuality/reproduction, unpreparedness for physical/emotional changes, over-exposure of information via internet, scarcity of youth-based interventions and ambiguity of key-stakeholders’ roles are major constraints.

Racialization of Labour Migrants in Russia - Taking Social Movements into Consideration

The anti-immigration movement is one of the most important actors in the Russian social movement network. The goal of this paper is to isolate the key elements of the movement’s frame, the ways in which it is applied in building the discourse around “illegal immigration”. It is shown that the social movement against immigration may be treated both as epiphenomena accompanying global processes of racialization but also as the producer and transformer of societal patterns, discourses and political constellations which has its own morphogenetic, structure-transforming potential. By revealing the relatively autonomous character of many of the key themes of racial discourses in Russia, I argue that although the processes of forming class, nations and ethnicity are intimately intertwined with the biologization of cultural differences, the latter cannot simply be reduced to the former. Racial discourse concerning labor migrants in Russia has evolved and been shaped by economic processes and the realization of a nationhood project. Construction of the “migration issue” as a social problem in Russia is in many ways embedded in the tensions obtaining between the demands of the state for social cohesion and the demands of enterprises for socially disunited labor. The study has demonstrated that the operation of these factors results in the racializing of visually recognizable groups of labor migrants, the social relations in which they are involved, and, more recently, the category of “migrant” itself. Since groups and individuals develop strategies for negotiating their place in the racial order, they are also involved in the process of negotiating access to material and discursive resources. We thus need to identify and examine trends in the shifting logic underlying the construction of the racial other through the migration regime and also take a closer look at individual and group responses and negotiations in respect to this process.

The Politicized Schooling: Institutionalizing Educational Decentralization in Indonesia's New Democracy

The paper discusses the effect of new democratic environment on the implementation of a globalizing policy of educational decentralization in Indonesian provinces. It identifies the new policy has created a new organizational arena in which different governance arrangements are brought under the policy’s original will.

The Indonesian education decentralization policy was enacted in the early 2000s following one of the world’s most radical political decentralization projects. The central Education Ministry has transferred most of its authorities to municipal administrations whose leadership is established through a democratic election. This new policy also offers greater school autonomy as well as invites wider civil society participation. While much research on education policy heavily emphasizes the role of formal institutions, this paper highlights the involvement of non-formal sectors that nonetheless play more dominant function. Analyses are done through developing two neo-institutionalist’s concepts: “organizational field” and “governance and exchange relations.”

Using the former, this paper proposes that the new democratic field has left the reformulated education system trapped in a democratic network of constraints, involving numerous organized interests like political parties, teacher unions, education corporates, and rent seeking entrepreneurs. New alliances between autonomous schools and private suppliers do enable schools to attain their immediate outputs. However, school principals cannot simply enjoy such autonomy for they have to maintain a patron-client relationship with the municipal officers who appoint them.

Furthermore, employing the latter concept, the researcher goes beyond the boundaries between institutional and technical environments in analyzing the effect of educational decentralization. Such relations do to some extent reflect the technical aspect of mandated civil society participation and help educational organizations avoid a loosely coupled management. As they become routine, however, new institutionalized practices are established. And as a result, the effort for their fulfillments tends to overlook the substantive changes originally intended from the policy.

ZAMORA, GERARDO* (Universidad Pública de Navarra, g.zamora.monge@gmail.com)

Addressing Social Justice Issues Around the Economic Crisis in Spain

Against the backdrop of a deep economic and financial crisis worldwide, welfare regimes in countries of the European Union are undergoing drastic changes driven by austerity policies. In the case of Spain, such changes affect an already weak welfare state and the large support networks woven around the family. Extreme unemployment rates, weaker job security conditions or rising poverty rates coincide with recent, dramatic changes in values around the family, gender roles or individuals’ rights.

Given its length, it is feasible to expect that the crises may be influencing changes in the country’s demographic dynamics and its value system. This presentation focuses on three aspects of this process: the extent to which the economic crisis affects births. Recent research in other countries suggests a reversal in the traditional pattern of childlessness in women: now less educated women are more likely to stay...
childfree/childless than the more educated (studies on men and childlessness keep being less abundant, though). Moreover, research findings from European countries suggest low fertility may be correlated to unemployment risk and job insecurity. How are births being affected in Spain? Secondly, an inquiry on how older never-married women and men, regardless of their sexual behaviour or identity, are facing difficulties due to the crisis. Within a familial welfare regime, never-married older individuals (and some childfree ones) build support networks in a slightly different fashion than do parents/married older adults. Such networks tend to be more diverse, but also more vulnerable to health/independence challenges. Thirdly, a question on whether salient social justice issues are being dealt with or not when looking at the two previous points: is becoming a parent a choice increasingly being reserved for the more educated and privileged individuals? Are childfree/childless and never-married individuals suffering cumulative inequalities just for the still prevailing stigma of such conditions?

Childfree/Childless Individuals, Population Ageing and Sexual Identities

In many societies, either as a single person or as a couple, individuals who choose not to have children are increasing in number and as a share of the population. Also, many individuals and couples do not have children not because it is their choice, but because of other social and individual factors. Both situations confront normative sexualities, and question the normative links between sexuality and reproduction. In parallel, a large group of individuals have been denied social (and thus legal) recognition concerning the access to parenthood; therefore, a great part of these individuals have remained childless/childfree, whether voluntarily or not. This is the case, for instance, of many lesbian, gay, bisexual, transgender, intersexual or queer (LGBTIQ) individuals aged 60 and older, or even younger. Both LGBTIQ parents and non-parents confront and question, too, normative sexualities and the links with normative reproductive expectations. How are these social processes affecting demographic changes, such as population ageing? Have they been affecting such changes? Does the study of childless/childfree individuals in their fifties and sixties shed some light on how to address the challenges faced by societies in the future decades, when family structure will have changed so much and childlessness will become more visible? Will the increasing choice of a childless/childfree life blur the boundaries between certain features of the so called sexual identities? Can there be an identity based on childlessness/childfree choices? Will this affect sociological research perspectives on demographic changes? Is this relevant for policies addressing population ageing?

This paper analyses waves 1, 2 and 3 from the Survey of Health, Ageing and Retirement in Europe (SHARE). It compares parents and childless/childfree individuals in terms of health, social expectations, and other variables. The paper analyses, too, results from 10 in-depth interviews with LGB individuals aged 50 and older, most of them non-parents.

When Exclusion Replaces Exploitation: Structural Unemployment and the Retreat of Class Politics

The rise of mass unemployment in Europe in the late 70s and early 80s changed the conditions of the political struggle and debate in the west industrialized societies, producing a strong economic and political inequality within the working class. While the conflict between capital and labour had structured the analysis of the post-War years (with strong unions and labour parties), the 70s and 80s witnessed a shift of attention to the unemployment crisis and in particular its unequal effects (as evidenced by the centrality of debates around exclusion, urban marginality, and unorganized struggles). This simultaneously political, sociological, semantic and ideological turn is deeply rooted in the changes that have taken place within labour markets in the last forty years. The increase in unemployment, which is itself increasingly concentrated on parts of the population (both socially and geographically) resulting in the emergence of a vast stratum of (what Marx called) "surplus population", is a key elements in understanding this evolution. This evolution also created the conditions of possibility for both the conservative political strategies aimed at limiting access to the Welfare State as well as the de-clined centrality of “the working class question” among authors and critics on the left like André Gorz or Herbert Marcuse. In this new ideological framework, the “exploited” is defined by its exclusion and its increasingly precarious relationship to work. Making use of new statistical data on unemployment in Europe, our paper will explore how the political struggle and debate was progressively framed around the question of the “excluded” and the underclass in a way that

made less relevant the question of exploitation and changed the political agenda. This evolution is of fundamental importance – theoretically and practically – for the advancement of critical theory and for understanding inequality under neoliberalism.

Sociological Dilema of Iranian Sociology: Critical of Critics

The purpose of this paper is to study the situation of sociology in Iran focusing especially on examining the lack of sociological theorizing. For thirty years the development of positivism and experimentalism has dominated, emphasizing quantitative methodology. The impact of this is that theorizing about Iranian society has been forgotten. To understand the reason for this the paper has performed a meta-analysis of discourses of social actors in social sciences. Findings indicate that this can be explained by social choices and not social chances, individualism, or a lack of cooperation or creativity. Findings also suggest that what is important is the manner in which they spoke, perhaps even more than what they actually said.

The Early Employment Inequalities of Disabled Postsecondary Graduates in Canada

Disabled youth have become an increasingly important at risk group for educators and policymakers in Canada. Youth with disabilities are more likely to drop out of high school and are significantly less likely to pursue higher education. Yet, many universities are now reporting that nearly 10 percent of their graduating students self-identify as having a disability, and educational achievement-based programs designed to accommodate students’ needs are growing across campuses. While accessibility within postsecondary education may be improving, existing studies suggest that youth with disabilities still face inaccessible workplaces and hiring discrimination. In fact, perceptions of disability by employers and colleagues have been shown to have stronger effects on workplace outcomes than lack of accommodations in the workplace. Drawing on Statistics Canada’s 2005 National Graduates Survey, we explore three major research questions. First, do students' increased access to disability supports at the postsecondary level, how do disabled individuals with postsecondary credentials fair in the labour market relative to their non-disabled counterparts? Second, what types of credentials appear to moderate the effects of disability on workplace outcomes? That is, how do the transition outcomes of disadvantaged groups compare across fields, faculties, and types of programs? Do these relationships vary across levels of education (college, trades, undergraduate degrees, graduate degrees)? Finally, do disabled graduates experience similar inequalities across economic and non-economic transition outcomes (earnings, education-job match, job satisfaction, employment, full-time employment)?

The Communist Legacy As a Self-Transforming Social and Semiotic Structure

This paper will focus on the problem of the contested meanings of the legacy of communism in Central and Eastern Europe and the relationship between moral and political assessment of the communist past and the modes of its interpretation in academic debates. Post-communist societies are commonly perceived in terms of the legacy of the communist period, which is seen as a crucial factor defining both their general path of development and shaping their internal social hierarchies. At the same time, elements of the communist legacy are imbued with strong moral and emotional judgments. In the majority of cases, this legacy’s connotation is clearly negative and is used to color most of the past and current outcomes of the socio-economic development in countries of the region. Moreover, contemporary social actors, for a variety of reasons, are often viewed as being

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
tainted by the communist legacy; as products of the communist institutions and path-dependent effects. Analogically, diverse discourses that may be perceived as harmful are seen as direct outcomes and/or new forms of communist "new-speak". This highly moral and political nature of the communist legacy, which is an important component of the reservoir of moral metaphors of public discourses in the countries of the region, makes debates on the nature and scope of the "real" or structural impacts of the communist past extremely difficult. The paper will demonstrate how constantly re-negotiated meanings of communism, and the boundary between "negative" and "positive" (if any) aspects of the communist leg-acy, impact the way in which the role of the past is interpreted in academic de-bates. Examples will be taken from discussions of regional inequalities and from sources that examine the roots of economic and social backwardness of Poland and other countries in the region.

ZDRAVOMYSLOVA, ELENA* (European University at St. Petersburg, zdrav3@yandex.ru)

Gender's Crooked Path: Feminism Confronts Russian Patriarchy

This contribution discusses the uneasy development of gender studies in Rus-sia as one example of public sociology, on the basis mainly of our own experience in the Gender Studies Program at the European University in St. Petersburg. It observes how the political and academic context of the 1990s created opportuni-ties for academic innovations that ideologically challenged Soviet patriotism and invoked gendered criticisms of post-Soviet changes. I discuss the effects of the rapid but partial institutionalization of gender studies in the Russian academic context and how gender became the umbrella term for both feminist and an-ti-feminist standpoints. Since international support for the gender studies dimin-ished in the 2000s, the fashion and economic benefit of doing gender studies has declined, with only a small group of researchers maintaining their commitment to a feministic approach to gender. I focus on the politicization of gender in the last decade of Putin's Russia and the role of feminist researchers in the analysis of the new conservatism, expressed in gender ideology. The problems of combining public expertise and academic work in the particular realm of gender politics are examined.

Gender Socialization Of Children Through Toys: Between Stereotypes From a Globalized Market In Expansion and Daily Interactions With Family and Peers

The globalization and expansion of toy market in the 1980s and 1990s caused development of gender stereotypes. In order to be exported to many countries and to address to children increasingly prescribing purchases within the family, the commercial communication of toys' manufacturers and distributors is indeed highly segmented and leads to the hegemony of explicitly gendered categories "boys toys" and "girls toys". This categorization, both written (name of sections, sales pitch) and icons (colors, photographs of children), is normative because it shows to children the "gender" of objects, activities and values depicted (like household toys that are in sections and departments called "girls" in catalogs and stores). The toy's industry and trade appear more and more as an instance of children's gender socialization, teaching them since their earliest childhood to distinguish masculinity and femininity. But children do not learn passively these gender categories: this initiation comes through interactions with other children (peer group, siblings) and adults (especially parents) that may strengthen as well the boundaries between "negative" and "positive" (if any) aspects of the soviet past, and so distinguish masculinity and femininity.

ZEGHICHE, SABRINA* (University of Ottawa, sabrina.zeghiche@gmail.com)

Apport De La Socio-Analyse à L'étude Du Processus De Construction Identitaire

L'objectif de ma communication consiste à explorer le lien entre l'expérience de l'immigration et la construction de l'identité ethnique, à partir d'un cas concret (une famille d'origine nigérienne émigrée/immigrée au Canada). Les théories de l'identité, qui ont connu un boom depuis les années 1970, ont certes rompu avec l'essentialisme des premières approches, mais perpétuent souvent (à leur insu) une perspective substantialiste des identités ethniques (Brubaker, 2000; Jenkins, 2010). On reconnaît volontiers ces dernières comme étant mouvantes et dyna-miques, mais on s'attarde très rarement sur leurs incôhérences, leurs ruptures, leurs contradictions (Bajot, 2009; Collovold, 2007). Par ailleurs, l'identité (comme l'immigration) a souvent été traitée sous l'angle soit de l'intégration (le fameux concept du vivre-ensemble), soit du déracinement (crise d'identité), soit encore du rapport intergénérationnel (crispation ou dissolution de l'identité; ethnicité sym-bolique). La socioanalyse (Sayad, 1991; Bajot, 2009), en remettant l'individu au centre de la recherche et en privilégiant la méthode de la biographie reconstituée, permet de contester cette approche et d'analysé dans ses contradictions les plus profondes, ses ambivalences, ses évolutions (au cours d'une vie), ses mécanismes de dissimulation, etc.

Pour ce faire, il faut nécessairement saisir l'expérience de l'immigration dans toute sa complexité, autrement dit, dans les rapports qu'elle implique avec le pays d'origine: souvenirs, fantasmes, nostalgie, désillusion (du retour); avec la famille élargie : entre culpabilité et sentiment de devoir s'accorder d'une dent; avec la so-ciété d'accueil : promesses (réelles ou décues) d'une nouvelle vie ou de nouvelles possibilités, discriminations (raciales, sociales, économiques, etc.), sentiment de ne pas être à la hauteur de l'espérance ou de la réalité. Il s'agit de comprendre la dynamique de ce processus (comme disait Brubaker, 2002), l'identification, plutôt que l'identité, permet d'éviter le piège du substantialisim et de penser l'identité en termes dyna-miques, relationnels et processuels.

Successful Aging: Cross-National Analysis of Subjective Well-Being in the Late Life Period

This paper aims to identify and analyze the life course and contextual factors that influence the level of subjective well-being (SWB) of 60+ aged people. Our research is based on the results of 5-waves of World Value Survey. We have investigated the level of SWB of older people on individual and country level. The results of research demonstrate that the strongest predictors of SWB in late life period are satisfaction of financial state, health state and sense of control, i.e. the belief of individuals that they control their life, control what happens to them. Besides, the important factors of SWB of older people is an ability of older people to establish and maintain friendly relations with other people (members of family, friends and etc), i.e. to invest their own recourses to positive emotions and im-portant relationships for themselves. Older people from ex-communist countries have the lowest level of SWB. Older people from English-speaking countries such as USA, Canada, New Zealand and United Kingdom have, by contrast, the highest level of SWB. These results allow suggesting that the degree of modernization influences the level of SWB very strongly. For older people the country in which they live, the level of democracy, GDP per capita, freedom and tolerance are very important. In contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as "successful aging".
The Reverse Panopticon Metaphor: The Autocratic State's Fear of Being Recorded

In the aftermath of the catastrophic earthquake that occurred in the Chinese province of Sichuan in 2008, the artist and activist Ai Weiwei launched an independent citizen investigation movement that challenged the government's failure to gather accurate data on the number of deaths, especially the deaths of schoolchildren who had fallen victim to shoddy school building construction. Through this case study of the movement and its suppression by the Chinese State, this paper aims to analyze how new media facilitate the power dynamics between the autocratic state and social movement actors.

To analyze this campaign, the paper uses David Whiteman's coalition model, developed to evaluate the impact of documentary film in social movement actors, and redefines this model. First, activist documentary film is disseminated via the internet and makes use of the internet at various stages of the creative process does not merely influence the dominant public sphere, but, rather, creates new public spheres, including a local grievance community, as well as an activist community. It creates new internet spaces to discuss issues addressed by the documentary. Second, the documentary film production and distribution become key processes of movement mobilization in this context. Third, various state agencies' responses to social movement actors illustrate a pattern of the autocratic state's fear of being recorded. The prison Panopticon metaphor is therefore reversed in the process: the governor who is monitoring all members of the autocratic society, becomes the subject of all-pervasive observation by its prisoners in the new public spaces created by new media technologies.

This study signifies discursive social movements in the digital century in a party-state with multiple strict controls and heavy censorship on expression and association.

Asian Values Revisited after 20 Years: Value Shift in China, Japan, South Korea, and Taiwan

This paper focuses on the value shift occurring in four East Asian societies resulting from socioeconomic modernization and political democratization. Proposed in the first half of the 1990s, the notion of “Asian values” describes the socio-cultural characteristics of East Asia (i.e., conformity, hierarchy, harmony, and the priority of collective interests). In reexamining Asian values in China, Japan, South Korea, and Taiwan against the background of overwhelming social transformation in this region, this paper addresses two issues: (1) the differences of Asian values in the public and private spheres in four East Asian societies and (2) whether citizens in these four societies detach from the Asian traditional culture and thus Asian values.

1 Introduction

This introduction includes an examination of the empirical evidence provided by the Asian Barometer Survey. Three waves of surveys administered over the past 10 years in four East Asian societies have offered an abundance of information to test the value shift in this region.

2 Results

Revisiting Asian values 20 years after its initial proposal has revealed two major findings. First, no remarkable gap exists between the Chinese and other East Asian societies’ citizens in terms of Asian values in the private sphere. Second, although citizens in Japan, South Korea, and Taiwan have abandoned authoritarian political values, this value shift has not been observed in China.

4 Conclusion

The value shift is more significant in the public/political sector in East Asia. Even though Asian values in the private sphere are popular in all four East Asian societies, modernization and political democratization have facilitated declining Asian values in the public sphere in Japan, South Korea, and Taiwan. Not only do the Chinese cherish traditional family and social values, as do the citizens in other East Asian societies, but they also uphold authoritarian political values.

Tourism As Ritual: A Space-Time Model

Tourism is considered as secular ritual and important topic of the anthropological study due to its symbolizing of individual life, and its indicating of the sacred-profane shift of away-home and at-home status. Based on the spatial study of tourism system and the temporal analysis of tourism ritual, the paper tries to develop a space-time model of tourism, and finds that tourism is the complex of space and time and secular ritual in modern society, and the space-time presentation of rites of passage in modern mobile world. For tourism, spatial movement is more distinctive than time elapsing, therefore, space is primary while time is secondary; the spatial characteristics of tourism is far beyond the micro-spatial territory of non-religion rites of passage, thus tourism can be the complement rites of passage in a world on a move.
the possibilities of resolving civil disputes from bottom up. Using a national survey dataset (CGSS2005) from China's 410 villages, this study aims to test the impact of social capital on rural residents' preference and actual choice of resolution in virtual and actual civil disputes, respectively. The social capital in the village refers to the features of social organization, such as trust, norms and networks that can improve the quality of political and economic conditions by facilitating the coordination. The author argues that increase in social capital can significantly increase the probability of mediation. First, the abundant associations provide more platform and agency for the residents to resolve their civil disputes. Second, the networks on the community level could give rural residents more choices when they face disputes. Considering the high cost of administrative and legal ways of resolution, the macro networks are cheaper and more available for ordinary villagers. Third, the social trust increases the interaction and dependence with each other so that villagers may be more willing to resolve their disputes by resorting to the informal parts. This research is of great importance for discovering the informal institutions individuates resolution and provides insightful evidence for rethinking the state-society relationship in authoritarian China.

ZHANG, JUNDAN (JASMINE)* (University of Otago, jasmine.zhang@otago.ac.nz)

"No Gods, No Shangri-La": Rethinking Tourism In An Environmental Discourse

Currently, environmentalism and the conservation movement still largely are situated within a positivist epistemological paradigm that is built on a tradition of Western scientific knowledge production. Consequently, the value of the current concepts of 'the green economy' and 'sustainable development' often are not challenged from non-Western political and ethical perspectives. Drawn from a study in a remote Tibetan village called Nizu, in Shangri-la County of northwest Yunnan province, China, I pose the question: "what role does tourism play in the formulation and development of power and reshaping knowledge in terms of how humans relate to 'nature' ?" From a political ecology perspective, I will identify an environmental discourse within which tourism is embedded. By describing how tourism acts as a medium for mediating the material needs and cosmological beliefs in the village, I will challenge the idea that tourism is an imported product with the power to bring people and their living environment to modernity, in a more "ecological" way than would otherwise be the case. I argue that the describers "premodern", "modern" and "postmodern" are performed by the villagers in one way or another, through tourism. Such performances can be contextualized in the environmental discourses that constantly is shaping and reshaping ecologically knowledge that has been taken for granted. Finally, I suggest we look further into the subjectivities that determine such performances of tourism, and the power relations involved, to better understand the complex and fluid nature of concepts such as "nature", "culture" and "tourism" in this setting.

Tourism, Politics and Beliefs in Nizu Village in Shangri-La, Southwest China

While most of the literature in tourism studies focuses on the problems relating to tourism development at World Heritage Sites, little attention is paid to places that somehow failed to be included in the list of World Heritage Sites. This paper will talk about tourism, politics and beliefs in a Tibetan village called Nizu, with a reputation as the back yard of Shangri-La in relation to the famous tourism destination Shangri-La County, Southwest China. Geographically located within the Three Parallel Rivers Region, which is a natural World Heritage Site, the 2003 application of Nizu village to be included in the Three Parallel Rivers WHS failed due to the governmental plan for a copper mine north of the village. Pudacuo National Park's establishment in 2007 brought hope to the villagers of Nizu for promoting to develop the village and region around its ecotourism products. Such hope hasn't realized. Currently, the village attracts approximately 1500 visitors each year. One significant issue in the village, brought about by the underdeveloped tourism dream, is the diversity of ideas held about environment/nature. Traditionally, the villagers believed in the ancient Bon Religion, a belief that treats mountains and rivers as gods and then bonds people's everyday life to these gods. In such a belief, the tangible (mountains and rivers) and the intangible (spirits and gods) are intertwined and inseparable. With the existing ambivalent attitudes to developing (ecotourism in the village, various ideas of dealing natural resources become tangled with other socio-political issues among villagers. By contextualizing and theorizing from a political ecology perspective, I question what role does the notion of world heritage site play in a complicated situation such as in Nizu village? Also, I ask how far can the idea of 'protecting heritage' progress without close scrutiny on the power issues involving the different players?
Social Integration of New-Generation Migrants in Urban China: A Case Study of Suzhou

Associated with the rapid urbanisation, there is a gigantic issue of social change in China. Part of that change is caused by the millions of rural-urban migrants. As a consequence, their integration into China's urban society has drawn extensive attention in recent years. This paper stems from the perspective of new-generation migrants who have been exposed to the experience of their predecessors, the old-generation migrants. Based on the concept of lifeworld (Habermas), the character of the new-generation migrants is investigated from the perspective of their social interactions at the neighborhood level. The study uses qualitative and quantitative data derived from a survey of a large resettlement neighborhood (new ‘urban village’) in Suzhou. In the survey, we examine the socio-spatial sphere of migrants' social interaction and the role of the receiving neighborhood in facilitating such interaction.

Our sample shows that new-generation migrants are more willing and have more potential to integrate into urban society and become permanent urban citizens. Although new-generation migrants have weak neighborhood interactions, they have relatively high attachment and sense of belonging to the neighborhood. The findings also show that the quality of open space is important for a more flourishing neighborhood life which could support better social integration of migrants.

China's Aging Population and Challenges It Is Facing

According to Chinese population projections, the paper analyzes future aging process of different historical periods. Findings indicate that unless the family planning policy reforms in future decades, the bottom of population pyramid will shrink dramatically, and growing life expectancy will progressively expand its top. By the year 2050, the aging population over 65 will account for 25% of the society. Considering the reduction of children population, the population in the labor force between 15-64 years old will also decrease.

This population transition will bring some very serious problems in the near future. Firstly, China will face the shortage of labor force if automatic standards of production process can't be improved, especially in the low-end industries. It means migrant workers' income will keep increasing and the labor cost in the production process will be getting higher. It will produce some negative effect on China's international competitiveness. Whereas aging process will accelerate, the adult population will save money for their future aging, restricting the consumption rate. It will affect the domestic spending policy. On the one hand, the decreasing of children population will lower family's expenditure rate, on the other hand, the lower level social security will prevent the people in the labor force from contributing more to savings in their productive years.

With the population transition and the changing Chinese family structure, the aging people will face the shortage of social support network, especially due to lack of family members' support. The linkage between mother and children's family will weaken because of population migration. Thus Chinese aging population will have to depend on their spouses for their care. If they lose their spouse, the aging people will have to send to a personal care home. But up to now, China has not prepared enough nursery homes for their aging population.

China's Class Structure and Future Trend

According to a series of nationwide sample data, the paper analyzes the changed trend of Chinese class structure, finds that the population of middle class is becoming more and more, the population of working class is surpassing the counterpart of farmer class. With the expansion of higher education, the population of middle class will be the first biggest class in the near future, but the new middle class is still smaller. However, farmer class will be shrunk dramatically when urbanization is speed up. This kind of social transformation will affect the distribution of most Chinese society's social policy.
What is the boundary between formalization and informalization? Why does the state attempt to formalize the informal space and how does it do so? Will the effort of formalization produce new forms of social, spatial, and political order amid the expansion of informality in the Global South? This paper tackles these issues by examining the current effort of favela “pacification” in Rio de Janeiro. As one of the most visible manifestations of urban informality, favelas of Rio de Janeiro have gone through several regulatory and upgrading programs but none have succeeded. Starting in late 2008, Rio de Janeiro’s State Government has been placing a special police unit called Pacifying Police Unit (Unidades de Polícia Pacificadora, UPP) inside some favelas and providing public services to the residents in order to regain control over territories long lost to drug traffic and reiterate the economically challenged communities into society. As of September 2013, thirty-three favelas were “pacified” in Rio. Despite the official discourse of crime control and public goods provision, the “pacification” program is highly controversial in the local context and also undermine the political and social stability of cities. This paper tackles the issue of urban inequality by comparing the practices and consequences of low-income housing provision in France, China, and Brazil. Whereas France launched the low-income housing construction through a system called HLM (Habitation à Loyer Modéré, French for “housing at moderated rents”) in the 1950s, similar practice is at the early stage and lacks systematic operation in China and Brazil. In China, many low-income housing projects have produced a concentration of poverty where residents suffer from a long commute to work and the lack of public facilities. In Brazil, a growing number of social movements have intensified their claim to create alternatives for the inclusion of low-income housing in the city centers, some of them employing more drastic actions such as the squatting of empty buildings. The cross-national comparison reveals the intricate relations between the state, market, and civil society organizations in low-income housing provision. It shows that a state with internal social problems and institutionalized connections with private and civic actors is critical for the successful provision of low-income housing. Besides the method of financing, the design of the projects including the locations and densities of the low-income housing is important in shaping the economic and social wellbeing of the local communities and the entire cities.
the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain informal and wait for better opportunities; some will take a clear stand to resist the rise of formalization; and some will dissolve or break into different organizations. Government policy only starts to influence GPOs once they decide to seek registration.

The Rise of Income Inequality in Urban China, 1996-2010: Increasing Returns to Education, State Sector Shrinkage, and Composition Effects

Income inequality in urban China has experienced a rapid growth over the past two decades. To account for the rise in income inequality, previous studies have provided three major explanations: widening regional gaps, increasing returns to education, and growing residual inequality. Since the mid-1990s, however, the composition of the urban labor force has been considerably reshaped by three large-scale structural changes: (1) the expansion of higher education, (2) the shrinkage of state sector employment, and (3) a surge in rural-to-urban migration. In this article, I discuss how the recent rise in income inequality can be driven by these institutional and demographic shifts. Based on data from two nationally representative surveys, I use variance function regressions to decompose the growth in income inequality from 1996 to 2010 into four components: changes in between-group income gaps, changes in within-group income variation, and two types of composition effects (distribution effect and transfer effect). The decomposition results indicate that changes in between-group income gaps explain around 40% of the rise in inequality, while more than half of the total growth can be attributed to composition effects. Using counterfactual analysis, I find that changes in between-group income gaps are almost entirely driven by increases in human capital distribution and the shrinkage of state sector employment.

Participation and Cooperation: An Approach to Productive Aging for Institutional Care Service in F Resident

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in F Social Welfare Institution, the “functioning” of the elderly residents is determined by the care-givers, who fail to reflect their identity pursuit of self-integrity, namely the elderly’s agency, constituting the impetus of their involvement in institutional service. In the service field, care-givers and care-receivers, as the actors in contact, gather to build the “life world” during care service with the subjective recognition of the elderly and the organizational workers. Accordingly by way of self-care and participating in service the elderly construct the Participation and Cooperation in Context with the care-givers together, which contributes to both the old persons themselves and the resident, and to reaching the elderly’s “productive” identity. The elderly’s participation and their cooperation with care-givers are meant to be an approach to Productive Aging in Institutional Care service.

How Home Ownership Becomes a Measurement of Inequalities: Analysis of Home Ownership of the Young Generation

Since the beginning of the 21st century in contemporary China, house prices have been increasing rapidly especially in metropolitan cities like Beijing and Shanghai. The problems of ‘unaffordable houses’ are most significant among young people who need to buy their first houses in this period, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues to be four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as views about marriage and work. The main arguments are people without home ownership are in a relatively disadvantageous position in life quality and even the marriage and labor market, so in the metropolitan cities in China, home ownership has become an important index of socio-economic status or to measure social inequalities.

Contesting Imaginaries: New Urban Spaces of Xian

The development of heritage tourism in historical cities of China is regarded as a vital ingredient of urban regeneration by state and local governments. In Xian, the imperial capital of thirteen dynasties of Chinese history, the construction of a modern landscape catapulted the city from an isolated entity to the globalized world system. Guided by a fifty-year governmental city plan, the densely populated inner city of Xian is currently being transformed into a functioning replica of the Tang-era Imperial City to reconstruct the glorious past of Chinese civilization. Under the city’s master plan, a large number of buildings were demolished and local residents were relocated to other districts of the city. Meanwhile, historic monuments were transformed to cultural theme parks. Antique markets and high-end residential buildings were built to attract middle-class immigrants from other cities of China.

This study will examine the multiplicity of imaginaries that are produced and negotiated by actors involved in urbanization, and the way these imaginaries shape new urban spaces of Xian. I will analyze the role of the main actors in this dynamic process: how the municipal government implements urban regeneration policies with their own entrepreneurial agendas; how real estate investors, empowered by local administrations, utilize cultural resources and real estate property for commercialization and consumption; how immigrants inhabit newly created urban spaces to search for leisure lifestyles and cosmopolitan identities; and how the traditional residents negotiate, resist and manifest their identity through daily practices. The complex associations of these actors co-construct new urban spaces through contention and meaning-making.

Moving beyond the macro-perspectives of political economy and economic geography, the research will engage with Xian as an important ground for testing urban transition of social and spatial landscape, and examining social inequality in the rapid development of modern China.

How the Internet Is Transforming Health Experiences: Reflections from a Decade of Qualitative Research on Experiences of Cancer, Chronic Illness, Infertility and Bereavement

This study explores how people talk about the internet and how attitudes and caution differ about types of websites have changed over the last decade, drawing on comparative qualitative analysis of narrative interview studies, conducted during the years 2002-2012.

In the early 2000s patients’ narratives suggested that only particularly engaged, expert and activated patients sought health information online. By 2010 the web had become an almost unremarked, routine part of people’s experience (eg ‘of course we all looked it up straight away’). The internet has transformed how people make sense of and respond to symptoms, decide whether to consult, make treatment choices, cope with the diagnosis and be cared for.

Increasingly doctors are aware of this and recommend useful sites to their patients yet, even in 2012, respondents express reluctance to talk to their doctors about what they find online, fearing that such revelations might damage the relationship. GPs have reported feeling threatened (having a heartbeat moment) when faced with a patient who uses the internet.

People want more than information online, they also want to find reflections, insights and practical advice from other patients. UK doctors may want more evidence about the health effects of using the internet but patients and the public are routinely online, even if they do not mention it in the consultation. In this paper we consider why it is not yet routine to discuss websites in primary care consultations and the consequences for inequalities in health.

ZIELINSKI, ALEKSANDER* (UPD Waldau, milosz13@gmx.ch)

Drawing a Picture of the Changing Global Elite after World War II

One of the primary methods of analysing elite cohesion is the analysis of corporate networks, focusing on interlocking directorates. However, there are some network qualities, especially the intersection between economy and politics, which cannot be adequately analysed this way. I propose that in order to do this it is necessary to take into account informal organisations, like the Bilderberg Group, in which influential people from both fields interact with each other.

Using previously unresearched archive material, which provides a list of all participants of Bilderberg meetings in the years 1954-1958, I draw the social network
of what can be labelled the „conservative“ block of the Western elite. „Conserva-
tive“ means that its primary interest is the conservation of the status quo: the role
of a small elite through a democratic capitalist system. Attempting to achieve this
goal in a dynamic environment with major challenges (the spreading of the com-
umunist ideology, the breaking up of the colonial system etc.), it needs to adapt inno-
vative methods, like the creation of supranational institutions.

In the descriptive part I focus on nationality, age, gender and occupation of
the participants. In the second, analytic part, I present the connections between
different sectors of the industry as well as positions of political power that the
participants held. In a further step I attempt to describe the shift in this network
between the 1950s and today. The official lists of current participants of the Bil-
derberg meetings allow researchers to draw an adequate picture of this network
in its current form. From previous research on the topic of the change in the elite
it can be expected that the major changes have occurred regarding the dominant
industries. Little changes are to be expected regarding the nationality, the
age and the gender of the participants.

Between Voicelessness and Empowerment – A Biographical
Approach to Life Stories of Complex Traumatised Mothers

Regarding currency and scope of sexualised violence against children my re-
search takes a look at the long-term consequences for victim-survivors of these
human rights abuses. With this perspective the social positioning of highly men-
tally burdened survivors comes into consideration. This paper is based on a bi-
ographical-sociological approach of the life stories of women, who are all patients
of a traumapsychiatric psychiatric hospital and who were abused in their childhood.
I would like to contribute first empirical results of my PhD project. Due to the fact
that all the women I interviewed have children my results point to the major dif-
ficulties of being diagnosed, treated and seeing oneself as mentally ill and at the
same time being a mother who is not supposed to be mentally tainted in any way.
In my presentation I would like to illustrate that there is a strong self devaluation
regarding the women's motherhood that leads to a form of voicelessness of the
interviewees towards actors, e.g. in medicine or social work. Based on further
empirical results I will also take a closer look at ways of empowerment due to
traumapsychic approaches the women have appropriated to themselves. I would
like to discuss on the one hand to what extent a traumapsychic approach might
overcome women's voicelessness concerning issues of motherhood and on the
other hand to what extent these women are somehow limited to pathologising
labels of mental illness that detach their present mental symptoms from their
biographical background.

ZIMENKOVA, TATJANA* (University of Bielefeld, tzimenkova@uni-bielefeld.de)
Reducing or Re-Producing Inequalities? Grand Narrative of
Diversity and Its Influence on the Minority Learner

European societies increasingly implement diversity education as part of a civic
education curriculum in order to provide young people with competences in deal-
ing with different forms of diversity. The presentation analyzes policies and praxis
approaches pertaining to education for diversity at both the supranational level
of European Union and Council of Europe as well as at the level of member states
(Germany, Estonia, Russia, and Sweden). The presentation shows that in Europe
school education for diversity simultaneously pursues two separate goals: while
generating a grand narrative of celebrating European diversity those same mate-
rials and policies stipulate that issues of inequality are to be dealt with separately.

Based on the conceptualization of diversity with reference to heterogeneities
and inequalities, the presentation shows how inequalities tend to be covered
over in positively connoted conceptions of diversity. Comparing educational pol-
licies, school curricula, and teaching materials, the presentation reveals the ways
in which diversity and inequalities are decoupled in curriculum and educational
practice, and poses following questions: What happens if diversity is only treated
as a matter of celebration? Turning to the minority learners, experiencing exclu-
sion, the presentation demonstrates how diversity celebration narrative disem-
powers the minority learners, contributes to more uncertainty, social closure and
(self-)exclusion of those learners, who do not find themselves within diversity cel-
bration.

ZIMMERMANN, BÉNÉDICTE* (École Hautes Etudes Sciences
Sociales, bzim@ehess.fr)
Capabilities, Critique and Sociology

This paper discusses the implications of the double dimension of capability, a
normative and descriptive concept, for sociology and its relationship to critique.

Using a capability approach means endorsing a critical stance. But the resulting
critical standpoint is as much a matter of concept, as of theoretical and methodol-
ogical implementation. Therefore different ways of bringing together capabili-
ties, critique and social sciences are at hand.

The conceptualization of capabilities along freedom and power of achievement
offers a common normative background. Beyond equal distribution of resources,
it makes out of equal freedom to choose and achieve, i.e. to convert resources
into valuable realizations, a yardstick for assessing social inequalities.

Once settled this common background, conversion factors bring into play the
second dimension of capabilities, namely the descriptive one, which is diversely
taken up. Economists have worked a lot on measures and descriptions of capa-
bilities. Sociologists should contribute to this debate with their own means. The
paper argues that the sociological design of inquiry may offer an as important
source for critical social sciences. Along the lines opened by J. Dewey's logic
of inquiry, it is about how the capability concept may fuel a critique, which is
based on the confrontation of different levels of analysis: institutional semantics
(the public policy level), which designs how things should be, its implementation
(organizational level) and the outcomes it actually produces in people’s lives (the
biographical level).

Finally, the paper gives an insight into the analytical and critical perspectives
opened up by a capability approach focusing on the interactions between insti-
tutions, organizations, and individuals on issues such as freedom, responsibility,
empowerment and employability, core-concepts in the reforms of European Wel-
fare states.

ZIMMERMANN, OKKA* (Technische Universität Braunschweig,
O.zimmermann@tu-bs.de)
Comparative Analysis of Changing Family Formation – Different
Life Course Regimes and Developmental Paths Identified in
European Countries

The paper contributes to the comparative analysis of life course dynamics and
cohort changes in Europe. Varying forms of data collection and preparation often
hinder quantitative comparative analyses; therefore, international survey pro-
grams like the Generations and Gender Survey (GGS) have been initiated. I added
data from the National Educational Panel Survey (NEPS, research methodology
very similar) for West Germany to compare developmental paths with regard to
family related life courses between four European countries (Germany (NEPS),
Italy, France and Norway (GGS)). I use sequence analysis to examine life course
patterns of nearly 40,000 respondents and identify life course regimes and chang-
es between them. The empirical patterns are finally related to classifications of
cycle changes and developmental paths as provided by concepts of welfare regimes
e.g. Esping-Andersen).

Findings show, that Northern and Western European countries follow a similar
sequence of regimes, starting from a traditional life course regime, marked by a
second generation of cohabitation and marriage and subsequent fertility among
the majority of respondents. Afterwards, they pass through a ‘semi-traditional’
regime with unmarried cohabitation preceding traditional family formation. Fi-
nally, they reach a ‘post-modern’ life course regime, in which life courses with
first birth(s) to unmarried, cohabiting couples are more frequent than other life
Course patterns. The process of change is to be expected to in Norway and France, while in West
Germany the transformation from the second to the third regime is retarded. Italy
follows a different developmental path: The change towards a ‘semi-traditional’
regime is much slower and the regime is characterized by a postponement of
the traditional process of family formation.

Overall, the concept of family related life course regimes is helpful to under-
stand, compare and classify life course dynamics. The sequence of the regimes
can be interpreted as developmental paths; developments are not determined,
differing speeds and changes in directions are possible.
The Aesthetics of Banality

Be it Breton’s fascination for an adorned wooden spoon or Valéry’s ambiguous affection for an indefinable fragment of a sea shell and not to mention the captur- ing experience of cracking the crust of Crème Brulée described by the mov- ie character Amélie Poulain, all these seemingly ordinary objects are said to be surrounded by a sacred aura offering the possibility to sense the (assumed actual) mysterious depth hidden behind the surface of banality. Whilst the avantgards at the beginning of the 20th century conjured the magic of the overlooked in terms of a countercultural model, we are positing that the epiphany of the unimposing has to be regarded as a prevalent model of popular culture symbolizing a nostalgic search for the utmost real.

According to sociological approaches referring to material culture and with re- spect to coeval cultural theorists we will first reconstruct the emergence and the changing cultural valuation of the discourse about the cultural significance of the insignificant, claiming that the contemporary search for the meaningfulness of banal artifacts serves as a prime example for the reenchanted conquest of the quotidian. In particular the new aesthetics continuously stress the fact that the aesthetics of the marginal are laying at the core of the condition postmoderne: on the one side with regard to the construction of the banal as a category of sensu- ality and on the other side with respect to diverse strategies of aestheticism creat- ing the auraic effects of trivial things. Hereon we will secondly shed light on the consequences of this discourse on the study of material culture suggesting that we won’t be able to expose the cultural significance of mundane objects properly, if we don’t account for the factor that these “actual significatory structures” are themselves part of a prevalent model of the aesthetics of banality.

Multi-Level Governance in the Adaptation to Climate Change in Australia - the Latrobe Valley

The planning and political negotiation processes of sustainable energy produc- tion in Australia are contradictory processes. A number of different players from Commonwealth, State Government and regional level got involved to transform the Latrobe Valley region that has the dirtiest coal fired power stations in Aus- tralia.

We examined the intertwined processes of strategic planning and governance, the set-up of the Latrobe Valley Transition Committee and the development of a Roadmap to transform the region as well as the funding of concrete projects to provide new jobs within the region. What has been seen by many as a smooth and successful process came to a halt when the political conditions changed.

At the same time it became clear that allegedly smooth process had some weak- nesses. Collected process had been driven by funding promises of Commonwealth and State Government the region did not develop an independent vision of the transformation of the region. With the loss of funding it became obvious that there is a need to develop such a vision to further drive the process. How- ever, good networks have been developed that might be strong enough to push forward where major funding resources are no longer available.

This paper will discuss the conditions of climate change adaptation and the advantages and challenges multi-level governance structures provide for regional planning and governance.

A Multiple Imputation Approach To Address The Problem Of Nonignorable Nonresponse and Misreporting Patterns In Income Data

When people are asked to report their monthly income they are likely to refuse to answer. If they answer, they tend to round their income to the nearest fifty, hundred or thousand, or they even completely misreport the value of income. It is well known that the propensity to misreport or to refuse to answer income questions depends on individual characteristics. For example, people with migra- tion background are normally more likely to refuse to answer. Thus, commonly income data collected by personal interviews show nonignorable nonresponse and abnormal concentrations of reported values at certain “heaping points”. Us- ing such data to compute, e.g., distribution characteristics like sample quantiles or proportions usually causes severe bias. In order to allow to adequately modeling such kind of incomplete and heaped data, we introduce a general method that allows addressing both, the issue of incomplete data and the problem of round- ing. To impute missing values, we suggest using the proven method of multiple imputation by chained equations. The method requires determining a univariate imputation model for each variable with missing values. We suggest specifying the imputation model for the income variable such that it describes the true dis- tribution of the income variable simultaneously with the heaping pattern present in a dataset. Monte Carlo simulations are used to validate the novel approach. To illustrate the capacity of the approach we conduct a case study using income data from the adult cohort of the German National Educational Panel Study.
and the social and economic consequences have been encountered. The 2010 Haitian earthquake occurred within a country with a history of poor child health indicators and outcomes. The indicators include child nutritional status, immunization status, and diarrhoeal disease treatment. Despite the low performance on many child health indicators, data from Demographic and Health Surveys (DHS) have shown national-level improvements in key child health indicators in the three surveys conducted prior to the earthquake. These improvements continued in the 2012 DHS despite the 2010 earthquake and cholera outbreak. The purpose of this study is to determine national and regional differences in child health indicators in and out of the influence of the disaster for national and regional child health indicators. Simple extrapolation method was employed to calculate the estimates. The results show a difference between expected and observed values, with observed values indicating poor health outcomes for children compared to what was predicted based on the previous three time points. Further, regional variations were apparent and linked to proximity to the earthquake area, country, and family composition. The results provide evidence of the effects of the disaster on child health in Haiti.

Is Georg Lukacs’ Critique Of Neo-Kantianism Justified?

A recurrent theme in the work of Georg Lukacs is a critique of the prevailing currents of sociological theory and method of his time. For Lukacs, Marxism provided a sociological theory that surpassed social theory modeled on the neo-Kantian distinction between facts and value. Several scholars have argued that Lukacs’ commitment to Marxism blinded him to the contributions made by other social scientific approaches. In effect, Lukacs is charged with dismissing all other social scientific approaches on the basis of his alleged dogmatic Marxism. Moreover, Lukacs is accused of identifying any non-Marxist approach to the social science as reactionary. This paper revisits Lukacs’ critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs’ critique has been misinterpreted and warrants renewed consideration. Reexamining Lukacs’ critique of neo-Kantianism reopens debates over claims that Lukacs’ notion that prevailing currents of social theory overlook the problems of alienation and reification.

RC36-619.2

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)

Reification and Racism

Both historians of social theory and practicing social theorists have drawn attention to the prevalence of racist thinking in nineteenth and early twentieth century social theory. They have been increasingly aware of the ways such thought is embedded in social theory and development and questioned the extent to which the vestibues of such thought still informs contemporary social theory. This paper examines an overlooked chapter in the critique of racialist social theory. In particular, it focuses on the seldom-studied work of Georg Lukacs, The Destruction of Reason. In that work, Lukacs develops a critique of racialist social theory. He aims to identify any non-Marxist approach to the social science as reactionary. This paper revisits Lukacs’ critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs’ critique has been misinterpreted and warrants renewed consideration. Reexamining Lukacs’ critique of neo-Kantianism reopens debates over claims that Lukacs’ notion that prevailing currents of social theory overlook the problems of alienation and reification.

In and Beyond the Visual Gaze of the Tourists: Humanizing Antarctic Wilderness

The objective of this study was to unwrap the Antarctic tourism imaginary and go beyond the oral-visual narratives of tourists in order to understand which other senses and how are activated when touring in Antarctica. What is the grand master plot at the core of the Antarctic tourism imaginary? To summarize, most of the visualization of Antarctica and Antarctic experience rotates around the theme of “humanized nature”; the penguins are seen as human-like creatures, the icebergs are spoken about as the perfect examples of abstract art and whalebones are static reminders of once prolific whale-hunting industry. Antarctica is the only land that has no myths of origin but compensates this with the heroic stories of its first explorers. In contrast to the “gaze” centered approach to tourism, Antarcti c tourism presents an example of multisensuous, non-ocularcentric geography. Deepest affectional encounters of tourists come from engaging various senses: interviewees talked about the powerful sounds of calving glaciers and meditating on child health in Haiti.
Okinawan and Beyond: Okinawan Women and The Re/Creation Of Diasporic Identities

Studies on Okinawan women migrating to the Philippines during the postwar years are scant and not accorded much attention by scholars looking at Japanese/Okinawan migration. Furthermore, the role of women in the maintenance and re/creation of diasporic identities have been significantly overlooked. These Okinawan women married Filipino men who worked on U.S. bases in Okinawa during the early years of the Occupation Period (1945-1972). Many of these women went with their husbands to the Philippines and settled there, raising families and living new lives. Upon migration, many of these women consciously assimilated into Philippine society. Despite this, they still acknowledge their Okinawan selves by passing on aspects of Okinawan culture to their offspring, creating in the process, a diasporic Okinawan identity that contains both Philippine and Okinawan characteristics.

I argue that these migrant women are active agents in the transmission of Okinawan culture, at the same time promoting the culture of their husbands and their adopted land, thus creating a distinct "Philippine Uchinānchu" identity. This particular identity is continuously being maintained and re/created not only within familial and contiguous boundaries, but also across space and time, through various activities these women engage in. I also argue that these women engage in this process of re/creating as they fashion out their sense of a "home" away from home. The creation and re/creation of an Okinawan diasporic identity also relates to a re-definition of Japanese identity, which tends to conflate nationality, ethnicity, and race, and continues to leave Okinawans in an ambivalent position vis-à-vis a Japanese identity.

This study analyzes data gathered from interviews with these women, as well as from participation in meetings/gatherings of the Philippine-Okinawan Society in Manila. Interview data from their children are also pertinent sources of information about their mothers and thus will be utilized in the analyses.

Anti Doping Code and Controls: Social Sorting For Fair Play?

Viewing doping controls in the lights of social sorting, puts a new perspective on the subject. Besides touching on issues such as data protection, citizens’ rights of informational self-determination, privacy and the right to be let alone, those controls foster forms of social sorting, albeit ones that claims to sort out particular subjects in the name of fairness. As much as doping practices are a problem to a culture of fairness and good sportsmanship, so are the controls.

From existing research, it is apparent that the athletes' perspective is missing in the discussion. The athletes are the object of the public debate, rather than the subject. Athletes that are convicted (or even only suspected) of doping practices are blamed and condemned - often by the same people that were generating the pressure under which the decision to take illegal performance enhancing substances was made. Doping and its controls therefore operate in a twofold field of social sorting: one that sorts out the guilty - and one that sorts out the losers, which may turn to illegal measures to improve their situations.

From interviews with athletes, officials and doping controllers on doping control practices, I will highlight what forms of social sorting are generated through doping controls, how they are perceived and what discourses are being formed.

I want to draw the attention to other issues within the debate on doping, such as have not received wide attention and are not likely to, as athletes more and more are put under a general suspicion within the system that is generating a massive pressure and puts athletes at risk. Social sorting is by no means an intended consequence, but a „collateral” effect that does play a major role on how these controls are perceived and hence legitimised.
