The idea of 'L'intervention sociologique' (sociological intervention), introduced by respectful French sociologist, Alain Touraine, has been considered as one of the most innovative approaches to social movements. However, in the different social context out of European society, sociological intervention faced various challenges. My experience in doing sociological intervention to a group of young actors of ‘multicultural movement’ in Indonesia has allowed me to identify the limitation of sociological intervention and furthermore, to build alternative adaptation and innovative, more suitable with Indonesian society. As a consequence of theoretical and methodological reconstructions that I have made, I therefore introduce a concept of 'Pendampingan Sosiologis' or could be translated in France as 'l'accompagnement sociologique' and in English as 'Sociological Accompaniment'. Although pendampingan sosiologis found its origin and inspired principally from larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of “trailer” residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.
multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person’s perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author’s sociological on-line survey of 400 young people at the age of 18-35 years old. I’ll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

Life Expectancy and Retirement Age: Policy Options and Practice

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforce. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy; what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforce (and, hence, social inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)

The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was more based on identities and tribal affiliation than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1'000 people were killed and over 300'000 displaced. It was thus remarkable when the newly aligned major political parties released programmatic manifests for the 2013 elections. They included some claims in the field of education and health converging into a common vision on education. The financial feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalitions’ interest and capacity in implementing them.

However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power resources theories have limitations or explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is an important step to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGS). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

Faces of Uncertain Transitions to Adulthood – in Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its’ manifold fields of education are ideal cases for studying the phenomena in question. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will (a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances); (b) differentiate between situations of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone); (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters), apprentices and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In context of our research project, we link theories of interactionism (e.g., Meads processual concept of “self”, Strauss’ concept of “status passage”) with Bordieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

RC04-80.9

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)

Orientation and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is a part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self. b) It is a decision-process (with evaluations, modifications, revisions), and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific “artistic”, incorporated capital. Mass participation to achieve the social transformation.

**Educational Inequality and Welfare State Patterns**

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the inter-generational transmission of educational opportunities.

The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, where it is possible that this idealized housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

Gender, Work and Family: The Situation in the Philippines

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as "homemakers". Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometowns to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and...
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in this case need to be constantly reasserted. This comparative exploration shows the result of this necessity to reassert “villageness”.

Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organizations in France. The analysis of the Journal official, a registry of all associations created in France, shows the drastic decline of hostland oriented organizations such as civic or socioeconomic associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGOs engaged into development and humanitarian activities.

What are the relationships between this reorientation of Moroccan volunteering and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10 000 people and focusing on both immigrant integration and transnational practices shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

L’action Et Les Politiques Syndicales à L’épreuve De L’aide Et Des Services à Domicile En France. Le Cas De La France

En France, comme pour de nombreux pays européens, l'aide et les services à domicile sont le lieu, depuis plusieurs décennies d'expérimentations, en particulier concernant la jeunesse, mais aussi les foyers fragiles. Depuis l’adoption en 1998 de la loi sur la protection de la jeunesse, les dernières années voient apparaître une série de textes législatifs relatifs à l’aide sociale et à la protection de la jeunesse. Cette étude analyse la mise en place de ces dispositifs, en se focalisant sur la situation des foyers de jeunes en situation de dépendance.

Nationalism and Attitudes Toward Immigrants: Canada and Taiwan Compared

Canada and Taiwan are both developed societies with a full range of class cleavages and “ethnicities” that grew out of waves of settlement from elsewhere. Both have a complex internal ethnic structure, with two large majorities, aboriginal minorities, and waves of more recent immigrants. In recent decades, both societies have experienced important redefinitions of the relationship between the aboriginal segments and the larger society. In Taiwan, the cleavage between the long-established Taiwanese and Mainlanders is an overarching one that has ramifications in many areas of political life. This parallels Canada’s linguistic dualism. In Canada the history of dual European settlement has led to a bilingual society with a full range of separate French-language institutions centered in Quebec, and the language cleavage is an overarching one. Both societies are also immigrant societies with ongoing debates on various aspects of immigrant integration. National identities are complex and evolving in both societies, and relations with a larger neighbor (USA, PRC) play an important role in each setting. This paper will summarize and juxtapose some findings from Canada and Taiwan from the International Social Survey Programme (ISSP) data set on national identities in 34 countries. In both societies, civic and ethnic definitions of nationhood co-exist in tension, and attitudes towards immigration are mixed and contradictory.

Changing Care and Migrations Regimes: New Contrasting Regulations and Their Impacts on Employment and Working Conditions of Care Workers. An Intersectional Perspective

Since the beginning of the 2000, the French care/domestic service sector, like other countries in Europe, has been undergoing considerable reorganisation. These changes in terms of commodification have had consequences on the mobilization of care workers. In this presentation, we will discuss the role of transnational social institutions in providing care but also on formal/informal care, paid/unpaid, public/private care. These transformations have had a strong influence on the employment/workings conditions and training of women care/domestic workers. This, despite professionalization policies and the implementation of new rights, precariousness is still a typical feature of this sector.

However “local indicators” as well as considerations on “who cares?” have to be taken into account. Indeed, this sector constitutes a working universe that is extremely complex to grasp, due to the multiple actors involved, the levels of intervention (local and national)... For example, when the sector comes to professionalization, the progress so far has not been taken place evenly or at the same time across all segments of the sector.

At the same time, these new regulations have taken place against a background of changes in migration policies and the dynamics of migration. In this context, this paper aims at analysing the effects of these trends and contrasts on employers and working conditions of care/domestic workers (elderly and child care), in an intersectional perspective. We will discuss in which ways these consequences are similar or not for migrant and not migrant domestic/care workers and if not, why and how.

A European research project coordinated by the ILO has been instrumental in foregrounding issues relating to the role and working conditions of migrants as caregivers. This paper will present results from the French case as an example of mixed care regimes. Data sources include LFS data, policy reports, interviews with union representatives, government departments, NGOs (16) and migrants working in the sector (50).

The Egypt Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufism in forging the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in Egypt Sufism Movements in the Aftermath of 2011 Revolution.
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi experience has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufts 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed and in what extent the countries of origin matter. How can foreigners cope from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times ‘an ongoing crisis of attentiveness.’ Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be ‘an ethical listening subject.’ He argues this subject will make ‘the choice to listen selectively.’ This does not mean Beard explains to only those points at which we feel “safe” but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Hoffield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Hoffield argue this listening then in turn creates the ‘self.’ The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. counties from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

Back to the Future? How 3D Printing Technology Reassembles Museums’ Materiality with Scenarios Analysis

3D printing or ‘personal fabrication’, as a newly emergent technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon actor-network theory, field theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the wide-spread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum’s aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field. Based on 3D printing’s current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of ‘forms of museum translation’ – firstly, it analyzes current museums’ acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection’s restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing engaged in museums’ interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-maker in the age of immobility. Some scenarios analysis of the 3D printing’s general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

Educational Inequality in China -- Preliminary Findings from Recent High School Graduates in Urban Nanjing

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus on educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious high schools, and students with better self-reported academic performance are more likely than their counterparts to enter key universities. Father’s education and extracurricular activities are screening devices adopted by employers.

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is the result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are always present in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural conditions for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Second, how may participation in extracurricular activities and part-time employment, two major aspects of university life, affect the social network structure? Changes in network size and diversity are measured. Preliminary findings show that transition to key university, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

Producing Knowledge about Post-Separation Stalking from Children's Point of View - Children As Social Actors?

In this presentation, the post-separation stalking is understood as gendered violence from the children's point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children's and their mothers' wellbeing. Stalking is defined as repetitive, non-consensual, multidimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production.

The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alli Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The principle has been to enable safety spaces for children's voices. The children's knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children's narration. The data is collected by children's groups based on action and interviews conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced contexts within which such discourse obscure a regime of institutional reification requiring interrogation. The current technological phenomena of social media, texting, and camera phones brings with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonics relationships is changing and accelerated changes. Research is challenging and requires to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorized in the literature, interferring with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical and moral sensibilities mitigate efforts to nuance, trouble, and frame discourse on this subject, rigifying a project of patriarchal social reproduction.

This paper offers a theoretical framework for engaging issues of sexual coercion and consent, reconciling laws, policies and practices with RealPolitics of
socio-sexual landscapes, belief systems, behaviors and interactions, employing the case of universities and their students as sites of institutional sociological convergences. We will report on a grounded theoretical qualitative study incorporating feminist ethnographic, narrative, phenomenological and phenomenographic methods with a diverse cohort of university students interviewed throughout their first year. This study engages transition and complexities in their developmental lives and social environments. The participants provided courageously candid, detailed and complicated accounts of their experiences. Findings elucidate and detangle previously conflated and/or obscured details of the phenomena, pointing to hopeful opportunities for fostering social and sexual agential capacities.

Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine if the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students. Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointment individuals to the teaching profession were highlighted as resulting in situations of “brutal/inhuman beating” in schools. These views expressed by teachers raise important policy implications.

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgement of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex and changing local and global contexts. Beyond technical debates related to CCT financing and implementation there lays a key interpretative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyze six national programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihoods or capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household surveys, and on programmes assessments and internally available data through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.
Response Latencies and IRT Person Estimates Using CASI

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results. The possible practical consequences of the use of this algorithm for survey research are discussed.

Deferential Surrogates and Professional Others: Recruitment and Training Of Migrant Care Workers In Taiwan and Japan

When outsourcing care to foreign workers, a society must engage in discursive reconstruction and institutional reorganization of intimate labor. Should care be seen as a family duty or professional work? Should care be characterized as a culturally embedded practice or a market form of labor that can be easily outsourced to foreigners? This paper examines the operation of transnational care regimes in Asia by comparing the recruitment and training of migrant care workers in Taiwan and Japan. Although both countries seek migrant workers as a solution to the similar problems in aging population and care deficit, Japan and Taiwan have adopted distinct models which demonstrate varied ways of intersecting migration regime and care regime: Migrant care workers in Taiwan are positioned as “deferential surrogates” while their counterparts in Japan are seen as “professional others.” It is often assumed that East Asian societies share substantial cultural affinity due to their intersecting histories and common tradition of Confucianism. This comparative study not only shows varied institutional parameters of care that organize the family, market and state in distinct patterns, but it also demonstrates that cultural values and social practices such as familialism and gendered division of care are subject to transformation under the influence of state intervention and global market.

Tiger Parents in a Globalized World: Class, Immigration and Transnationalism

The reductive image of “tiger mom” has overshadowed the changing practices of and class differences within Chinese parenting. Based on in-depth interviews with parents in Taiwan and Chinese immigrants in the US, my paper examines how globalization has differential impacts upon the styles of childcare across class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is mediated by class inequality and reconstituted by the experiences of immigration and transnationalism.

Fifty Years after the Social Indicators Movement: Has the Promise Been Fulfilled? an Assessment and an Agenda for the Future

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constitutive distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical experience and a particular mode of production, and specific ways or relating to so-called “nature.”

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and technology. For the majority of the planet’s population and in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern as essential a component of the modern experience as the experience of the North. Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the global modern experience. Eurocentric social sciences have overall erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the “normal,” “modern” universal template that the rest of the world has to replicate.

The Tensions between the Struggles against Inequality and the Defense of the Rights of Mother Earth in South America

In the last decade and a half the struggles of South American popular movements and organizations against the military governments, free trade agreements and neoliberal economic adjustment policies crystallized in the election of many left or “progressive” governments. In these struggles and the constitutional processes that occurred in some countries, there are two central threads of struggles and resistances: first, the popular demand for the “return of the state” and social policies aimed toward social inclusion, access to education, health, food, social security … and a reduction of the profound inequalities that have historically characterized the continent. The other axis refers to the relationship of humans with their natural surroundings, the struggles of indigenous peoples and peasants for the defense of their ancestral territories and rights of Mother Earth. This implies a profound critique of the very idea of development and the search for options to a civilization in crisis that has to confront the fact it have reached the physical limits of the planet. This also relates to a critique of the monocultural character of liberal-colonial South American states in profoundly pluralistic societies. The attempt to achieve these two sets of goals simultaneously has generated deep contradictions. In response to widespread social demands of the most excluded sectors of society and looking to reassert their political and electoral legitimacy, all these governments have prioritized economic growth based on extractive neo-developmentism (economic model based on an increased dependency on the export of non-processed primary goods) in a context of a significant hike in the demand and price of commodities in the world market. The purpose of this presentation is the analysis of some of the socio-environmental impacts of these governmental options and the main social and political conflicts that these have generated.

Work-Life Conflict In The Economic Recession

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to childcare work with reduced working hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the global economic downturn has affected well-being of all employees, the ramifications for individual employees’ remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright’s class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifurfrud, Böhm and Jensenf. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters’ resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego’s social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting larger scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the so-called middle classes. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above- levels of political influence (locally, regionally…) make parts of the new middle classes important players in fostering more sustainable consumption patterns.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into “loft-living” condos, rundown streetscapes were intensely policed then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver’s revitalization while exacerbating the city’s problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public’s field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of “protection against the elements”.

Asample that the camping ban did not eliminate homelessness and interested in how Denver’s homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

WAGEMANN, CLAUDIUS (Goethe-University Frankfurt)
“Because You’re a Migrant, They Tread You Really Tough.” Findings of a Qualitative Study on Young Migrant’s Perception of the Armed Forces in Germany

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of the so-called “ethnics”. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewers allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in producing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewers was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemembers as positive role models for their respective communities.

LANGER, PHIL* (Goethe-University Frankfurt, langer@soz.uni-frankfurt.de)
Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as a part of one’s biography. In general, peer research that is aimed at exploring life worlds as an “insider” is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58
narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of a sexualisation of the researcher occurred that focussed on the researcher's sexuality and his sexual biography.

The paper addresses methodical ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytic concepts of inter-subjectivity and counter-transference it argues for reflexively bringing in to the research process one's own sexuality as a researcher for a deeper understanding of the production of sexual lifecycles in the interview situation. The double-bind of being researcher and perceived peer that may lead to exploitations of the interviewee's fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

 Mobilizing for Dignity: Recognition and Social Movements

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy? How have such movements fared? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in Marxist criticism of alienation, Lukacs critique of reification, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilization.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban finance, and urban rebuilding projects.

Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the « Japanese miracle » which occurred from the 1960s to the 1980s during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.

Two new phenomena are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the edition of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of these elements help to rebuild a world class city in a context of urban maturity.

On the one hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today's workplaces? Does teamwork represent a breakthrough from Taylorism or a strengthening of Taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec manufacturing sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation. Two logics of teamwork adoption are also contrasted. Lean team adoption refers to a logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both Taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.

Résister à La Précarisation Du Travail Dans Une Sidérurgie Brésilienne : Malgré Le Syndicat?

En fonction du principe de l’unicité syndicale, le Syndicat des métallurgistes de Ouro Branco et base (SINDOB) est le seul syndicat à représenter les travailleurs de la métallurgie et de la sidérurgie dans la région de la Vallée du Paraopeba située dans l’État de Minas Gerais au Brésil. Le SINDOB est notamment le syndicat qui représente la moitié des 6.000 travailleurs directs (et un dixième des 4.000 travailleurs sous-traitants) de l’ancienne sidérurgie Açominas, une entreprise étatique privatisée en 1990 et aujourd’hui détenue par le groupe brésilien Gerdau, 14e producteur d’acier dans le monde. Une enquête par entretiens a été menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette sidérurgie dans le cadre d’une thèse de doctorat sur les formes de résistance non institutionnalisée des travailleurs. Les dirigeants syndicaux interviewés – trois directeurs et le président – affichent leur politique auprès du syndicat : « négocier ». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd’hui « tranquille » grâce à ce « partenariat » établi depuis de longues années avec le groupe sidérurgique. Les bouleversements de l’organisation du travail dans cette entreprise – commençés par l’assainissement financier et administratif d’avant la privatisation et suivis par la politique managériale du groupe Gerdau – ont changé le scénario du travail et de l’emploi dans toute la région. Dans un contexte de précarisation sociale du travail, nous souhaitons discuter les relations entre la politique syndicale de la « négociation » et la fragmentation des résistances des travailleurs face aux restructurations du travail.

LAPEGNA, PABLO* (University of Georgia, plapegna@uga.edu)

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank’s recommendations as a result of the deleterious consequences of neoliberal policies. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal politics (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments. Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests contested the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

Teamwork Diversity

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production, which first appeared in Japan’s industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy. On the other hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today’s workplaces? Does teamwork represent a breakthrough from Taylorism or a strengthening of Taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec manufacturing sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation. Two logics of teamwork adoption are also contrasted. Lean team adoption refers to a logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both Taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.
Romanian Youth in Catalonia (Spain). Selfidentification, Languages and Symbolic Capital

The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the acquisition and use of languages. In this sense, the case of migrants, has to be noted that they are facing a necessity to coordinate, build and rebuild their self-identification with the host societies considering the capital linked to languages. In addition, especially in the case of young people, in the process of building their self-identifications and feelings of belonging, family influence and their own life experiences outside of this area may influence the construction of self-identifications in which the symbolic capital of the languages spoken in the residence territories are unequal and highly relevant (Bourdieu, 1985, 1991; Heller, 2000, 2008).

Centered in Catalonia, a bilingual territory of Spain where Catalan and Spanish are co-official languages and where significant Spanish and Catalan nationalist synergies linked to languages have developed, and in the case of young Romanians, the aim of this paper is to analyze the predictive power of parental and non-parental variables related to languages in contact on self-identification with Catalan.

From a quantitative approach, the main results show the importance of variables that refer to the symbolic realm of language – young people's language attitudes toward Catalan and Spanish and their self-identification with Spain, as well as the language attitudes and self-identification of their parents – carrying greater weight than other variables of socio-structural character, as the socio-professional or socio-cultural levels, and even the level of Catalan competence.

This work is a part of a research project funded by the Spanish Ministry of Science and Innovation (EDU2009-08669EDUC). Ianos, Poalelungi and Popa have a Pre-doctoral Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379 / 2013 FIB 00347 respectively).

Undeserved Unhappiness: A Comparison of Philippines and Japan

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

Legitimation Work: A Social Theory

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimating their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provides funding, and the general public provides legitimacy. In satisfying the three publics the actors engage in presenting the relevance and importance of the publicly funded organizations are conducting legitimation work. Legitimation work is a social pro- cess being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization's communication with the various publics and what role they play in the legitimation work.

Regulatory carbon markets are one manifestation of international climate change negotiations. Their implementation requires the state intervention at different levels. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. These standards have ambiguous relations with the state and put at stake the notion of government. As such, they question the ability to govern sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at how the Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in mobilizing offsetters. Building on the analysis of various offsetters, I will show that the understanding of the Peruvian context is very different for them as their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.

Multilevel Analysis of Standard Governance: Voluntary Carbon Certification and the Peruvian Cookstove Sector

Carbon markets are often seen as one of the best success in environmental markets yet they are also subject to many criticism. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. The standards have ambiguous relations with the state and put at stake the notion of non-state governance. As such, they question the ability to govern sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at the capacity for a private led initiative to engage with the state and whether any complementarity, crossover or parallelism can be drawn. The way the initiative led is implemented by a private company, claiming a social business orientation, interrogates the capacity to reach further collective outcomes than the mere interest of the private sector. This consideration will be informed with results of three consecutive verifications for three project packages meaning more than a dozen projects from either public or private institutions. Such an interesting amount of data will enable comparison. Rather than considering the standard as a mere global initiative with local manifestations, this research looks at the national context for informing how standards influence at meso level.

Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population[1], as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

For this presentation I will look at how the Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in mobilizing offsetters. Building on the analysis of various offsetters, I will show that the understanding of the Peruvian context is very different for them as their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.

Financial Inclusion As a Basic Human Right? Redefining Inequalities in > the > South

A new wave of commodification “all the way down” (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-sharing to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of decommmodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) even state that “we need to reframe the wording of ‘universal human rights’ (…) in more basic terms” (“2012:150) to connect all people to finance.

This presentation will compare the extent to which incomplete social protection schemes are being replaced by the provision of minimum income transfers and some basic services for the needy through the social protection floor (ILO, UNESCO, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be used in order to determine the factors that most contribute to explain gender asymmetries in each country.

d'activation, caractérisées par un projet institutionnel d'incitation à l'adaptabilité aux normes d'emploi (Cassiers et al, 2005). Ce mode de gestion spécifique de relation avec les chômeurs comporte en effet des caractéristiques communes avec le paternalisme : personnalisé, il combine coercition, autonomie et vision du bien commun marquée par une logique de contrepartie (Boismenu et al, 2003). En revanche, une différence importante subsiste à travers le poids de la rationalisation gestionnaire, qui s’incarne notamment dans le profilage des chômeurs.

Ces nouvelles formes de paternalisme, qui prennent également pour appui la légitimation de l'asymétrie des rapports entre employeurs et chômeurs au nom d'une rationalisation susposée des entreprises, se situent donc à la croisée de deux visées, la subjectivation et la rationalisation. A partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession is an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized and personalized supervision by the Monitoring Monthly Custom, introduced in 2006) on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

By changing the standards, organization, this industrial rationalization of a new type reorganizes the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment counseling), and strategies of avoidance or neutralization of the most coercive professional acts.

The paper examines also the notion of subjectivity in social policies and the prescriptive strength of standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed recruitability, by the establishment of trusted devices or else by the taking account of a "situated rationality" of the unemployed.

Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination

The category of 'Leisure' as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and making a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work – a call and argument about extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation's commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrellas.

Leisure, Justice and Economic Collapse

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx International collaboration – using common methods to collect and share qualitative narratives on an online platform. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were strikingly similar qualitative narratives in both studies. Participants showed a large interest to help others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in reliving some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent – and nature – of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unre- corded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of ‘financialisation’. In an era of projected food, water and fuel scarcity, financial en- tities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Specialization in land along with opportunities for more secure food produc- tion for oil-rich but land-and-water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorizing the sociological ‘meaning’ of financialisation as it affects the Australian agrifood sector.

Negotiated Revolutions 2.0? The Arab Uprisings In Comparative Perspective

The 2011-12 uprisings in North Africa and the Middle East have helped to re-in- vigorate scholarly interest in revolutions. But what kind of revolutions do these uprisings represent? This article situates the Arab uprisings within the context of post-Cold War revolutions, locating them within a cluster of ‘negotiated revolu- tions’ that have emerged over the past twenty years. ‘Negotiated revolutions’ differ from ‘modern revolutions’ in five main ways: they result from a relative rather than an absolute state crisis; their trajectories are characterized by negoti- ations rather than armed confrontation; their participants reject the utopian commitments of past revolutions; they are welcomed rather than disavowed by leading international actors; and they lead to the development of weak rather than strong states. The article assesses the Arab uprisings within this schema, arguing that those who see the Arab uprisings as offering a new model of revolutionary change, their causes, trajectories, and outcomes are broadly famili- iar. Extending this point, not only do the 2011-12 uprisings sit within a family of revolutions that can be traced back to 1989, their focus on political justice rather than the ‘social question’ means that the uprisings share a family resemblance to previous instances of ‘self-limiting’ revolutions. This comparison illuminates both the strengths and shortcomings of the 2011-12 uprisings.

Socio - Economic and Health Status Of Elder Population: Some Empirical Reflections From Tamilnadu, India

The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, phys- ical, mental and social orders and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the el- derly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their own family mem- bers which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pres- suring problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come form the family members are denied resulting in their deprivation and desertsions. Consequently, the welfare intervention form GO's and NGO's are looked forward to fulfill their basic needs. The health care and support systems promoted through GO's and NGO's provide some solace to their requirements. The condition of the elderly population in ru- ral India is not properly addressed. There is also a growing awareness of the importance of care and support and status in rural community. This paper is outcome and outcome of the field investigations conducted on socio-economic and health status of elder population in selected block in state of Tamilnadu, India. This paper analyses the status of this elderly population in terms of socio economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which re- sult in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

Is There a Medicalization of the Facial Appearance?

A partir d'une recherche au sein d'espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu'où observe-t-on une médicalisation de l'apparence ?

On peut avancer qu'il existe des normes d'apparence que les institutions médi- cales et judiciaires encadrent. La problématique du normal et du pathologique imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne chercheront pas à rendre la beauté mais à rapprocher d'une norme d'humanité. Une posture pouvant aller à l'encontre des associations d'aide aux personnes défigurées, qui militent pour un élargissement des normes d'apparence.

Aussi, sans proposer de typification du rapport entre réponse sociale et réponse chirurgicale, en suivant des personnes touchées par une forme de dé- figuration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d'expérience de l'anormalité faciale fonction des appuis institutionnels disponibles dans chaque pays.

Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today, new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

The Spaces and Times of Youth Culture in the New Century

It is starkly evident in the new century young people's biographical constructions. This is no less so in terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a marked individualised imprint that is closely related to the here-and-now. This contingent identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels:
- corporate level, characterized by an increasing heterogeneity in terms of organization and performance
- institution level, characterized by a decay of previous forms of coordination and a revival
- social compromise level, characterized by a surge of multidimensional inequalities

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitals have underestimated or ignored in-depth analyses of Asian capitalism from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified of "welfare orientalism" (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affected such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new "regulation mode" able to overcome the current contradictions at work. As emphasised by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitals, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalism but also the main source of divergence among them.

LEE, ANNA JUNGEUN* (New York University, ajlj48@nyu.edu)
The NFA Resistance to the KORUS FTA

This paper focuses on the Korean National Farmers Association (NFA)'s failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming be-
came threatened in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the "Nyelani Declaration" from the international movement of food sovereignty, resistance was unsuccessful due to the fact that "larger strides" of globalized resources did not interweave with NFAs' internal strategy and political efficacy. Thus, NFAs' leadership and actions failed to create a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India

Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian Society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affiliation have been carved in Deccan basalt.

From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollution. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government. As first part of this paper presents understanding of Ajanta caves as general description and significance of Ajanta caves. Secondly this paper analyses im-
pacts of cultural heritage tourism on Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. Third part is a part of summary, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to pre-
serve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.

Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses nation-states as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has usually been taken by development scholars. It focuses on stratification among countries. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as individual processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, it situates income earnings of South Koreans within a broader pattern of global inequality. It reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) with achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received as much attention. In this paper, we highlight the role of the relational dimensions of skill assets in explaining native workers’ attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrain skill barrier—by which we mean the weight of one’s social resources and the latter as a pulling factor that attracts skilled or unskilled immigrant work forces. Then, we create a new independent variable, “relational skill specificity,” which is a relative measure of interpersonal skills over instrumental skills in one’s occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over the entire skill spectrum are less likely to develop anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings which do not differ across different levels of anti-immigrant sentiments between skilled manual workers (e.g. craftsmen), and skilled non-manual workers (e.g. professionals), originate not only from different levels of cognitive skills but also from varying levels (or compositions) of relational skills. Overall, the findings of this study provide a novel pathway of causal explanation of how native individual workers develop their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

LEE, CHOONIB* (Stony Brook University, choonib.lee@stonybrook.edu)

This paper will explore how the Black Panther Party (BPP) transformed its chief strategies for the Civil Rights Movement from violent to nonviolent throughout the late 1960s and early 1970s in the United States. The BPP has been infamous for Black Nationalism and armed struggles against racist violence, as opposed to the nonviolent methods for the Movement popularized by Martin Luther King Jr. In contrast to the well-known armed demonstrations of the BPP, there were in fact significant periodic attempts to promote more nonviolent actions. After the FBI’s counter-intelligence activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group’s relatively nonviolent strategies, such as their free breakfast programs, Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP’s violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state’s effort to destroy the BPP, as well as the two men’s personal power struggle.

I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against the BPP’s violent organization, sets the framework for understanding the interreligious between the social movement’s militancy and the state’s oppression.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong intergenerational link in economic disadvantage, documenting the ways in which socio-economic status is transmitted from one generation to the next. Childhood poverty in particular plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. Ample evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper presents an intergenerational analysis that turns around the question of socio-economic mobility: How is childhood poverty experienced by parents passed on to their offspring’s poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper extends our analysis of grandparents’ socioeconomic standing affects parents’ childhood poverty, which in turn affects children’s childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of childbearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

The Alienated Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globalized advanced industrial labor market, which legitimately accelerate universities as corporations. The neo-liberalist conception, to be called ‘the corporatizing culture’, by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by corporate thinking from corporate capitalism. The meaning of university autonomy is replaced gradually by market vocabularies and ideologies. The effect is that professors will be called to public accountability and make their performance accessible to the multiple stakeholders in society. Their freedom for doing research projects is narrowed down and more mediocre. University professors seem to be weakened by the management of teaching quality assessments. The author hence pertains to argue in this paper that the alienated images of professors such as de-subjective, non-ethical, and disposable, distorted by neo-liberal discourses, need to be addressed seriously, if the last Professors as social conscience and the voice of justice could last and fight back in the neo-liberal corporatizing world.

Cultural Policy and Urban Development: Cases in Korea

The urban agenda is shifting in South Korea from a politics of place to one of people. The Korean political agenda has shifted in the direction of welfare provision, but local government has limited flexibility in implementing a welfare agenda outside of the megacity of Seoul. Even so, innovative local efforts continue in the area of cultural policy, where local government has more flexibility to pursue a coherent agenda with broad benefits, including both those that embrace diversity and those that transcend the prior association of cultural policy with place to deliver welfare benefits to people through cultural spending. This study uses pooled data from more than 200 local governments in South Korea across five years to investigate the factors involved in urban development. On the basis of the results in the area of municipal and district-level cultural spending, a number of cities and districts are identified where cultural spending has a clear relationship with local development according to different measures. This study will explain the dynamics of a number of these creative local efforts.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consists of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second finding is that comparing patterns of PIR and the Gini coefficient, affordable housing and affordability of householder are more important factors in Korea than the level of housing wealth, in view of inequality. The third finding is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, and descending order, and unlike HWI, HAI is affected relatively by unsold housing of region, the number of houses, per capita GDP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and in HAP is TM (top-middle) section.

LEE, JYEOON* (Yonsei University, jylee80@yonsei.ac.kr)

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean family law including the family head system was enacted in 1958, the status ‘a head of family’ had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on “why the abolition of the family head system was possible in 2005” and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has orient toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is “what social conditions created a new family discourse and brought about the abolition of family head system?” The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between ‘gender equality vs. tradition.’ However, after the 2000s, the change of the family structure with the economic crisis has involved the risk on the class patriarchical family model and actual decline in marriage ratio, increase in divorce rate, remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one’s family.

LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and labor migration policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorials and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Industrial Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme were so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans’ historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

LEE, MINJIN* (Rikkyo University, leemj@rikkyo.ac.jp)

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’ (‘minjunguipji’ in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2008. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’. This paper has aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – A Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty.” In order to do so, two Japanese indie magazines – Freeter’s Freezer (2007-2008) and Lost Gen (2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experiences. Moreover, these magazines provided (counter-)publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalist society. In this process, the young new poor – not only readers – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing networks as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

Japanese Military ‘comfort Women’: Reconstructing Identities, Shifting Boundaries

This paper explores how Japanese military ‘comfort women’ (Japanese military sexual slaves) have de/reconstructed their own identities as negotiating boundaries of nation, state, gender, and political ideology. Based upon ethnographic field research in various documents, and women’s testimonies, I analyze how women, who suffered both from the Japanese military sexual slave system during Japanese colonization in Korea and from Korean patriarchy system that has continued even after national liberation, have transformed their own identities from victims to transnational activists and from hidden ghost to historical subjects, while having been engaged in transnational women’s movement against imperialism, colonialism, militarism, and patriarchy. Particularly, focusing on the Wednesday Demonstration and the Butterfly Fund led by former Japanese ‘comfort’ women, I will examine what made ‘grandma’(Halmomi in Korean) not a helpless victim but a symbol of peace and women’s rights across time and space.

Can We Hear Subaltern Woman’s Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea

The purpose of this paper is to illuminate the implication of feminist oral history as critically reexamining the relationship between hearer and speaker, resperator and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camps in South Korea (yanggongju), we tried to reveal the experiences of historically excluded and silenced ‘other’ not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijichon (formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/coincidence, the enforced/voluntary, prostitution/intimate relationship, and their identity as subaltern woman, but also redirect the research focus from the object to the subject (hidden) desire to represent others. Therefore, we argue that feminist researchers to represent other’s experiences should inquiry ‘what/how we can hear,’ ‘why we want to know others,’ and ‘who we are,’ instead of asking whether ‘subaltern can speak or not, which shed light on what feminist oral history would be like.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable ‘ancestry’ which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, etc.) and college graduates and college comparators. This paper observes that two socialist political parties (Communist and Socialist) and a movement of intellectuals, the Guild of Socialist Writers and Artists, as well as the student movement against the Vietnam War, contributed to the rise of an alternative voice to the mainstream media. By presenting a critical analysis of these factors, the paper contributes to a more nuanced understanding of media politics in post-war Japan.”

LEE, ROSA* (The University of Tokyo, rosasb.lee@gmail.com)

*Coming Together and Across through Celebration: How Individuals Change their ‘societies’*

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-colonial societies. Using these instruments, more anonymous individuals are becoming ‘playing selves’ who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re) consider how people foster and utilise their ties as social capital to state and advance their objectives. Following this trend, this study scrutinises the emergence of ‘foose’ collective actions based on weak ties and their roles in advanced capitalist societies. It introduces two social and Japanese grassroots organisations, the Old Tokaido Road Shingawaga House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

LEE, SANGI* (Sogang University, ls4482@hanmail.net)

*Religion, Civil Society and Multiculturalism in Korea*

In this study, I examine the role of religion as a socially integrating force in the transition of Korean society toward multiculturalism. In this era of globalization, when most nations are becoming multiethnic or multicultural, arguments and conflicts over multiculturalism are topics of heated debate worldwide. Theoretically, I take into consideration civil religion, as well as the various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Catholic leaders work with civil NGOs for the social integration. Protestant churches have most number of social welfare centers for the migrant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers. As a result, Catholic churches and Protestant churches undertake the most various activities to solve multicultural problems of migrant workers in close relationships with Korean civil society. Catholic leaders work with civil NGOs for the social integration. Protestant churches have most number of social welfare centers for the migrant workers in Korea. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophetic traditions unlike Christianity, put little effort into these issues. However, every religion, at different cultural levels, appears to secure its interest in the expansion of religious influence on a society. What is significant in the public roles of religion should be engaged in the civil ethos of a “good society” (Bellah).

LEE, SIYOON* (Sogang University, 3thshun@gmail.com)

*Contemporary Religious Landscapes in South Korea: From Diversity to Commonality in a Harbormasian Post-Secular Society*

The contemporary religious landscape of South Korea is summarized with three major religions – Buddhism, Protestantism, Catholicism – that monopolize 95% of religious ‘market’ consistently. This paper explains these socio-religious phenomena with historical approach and tries to diagnose its implications through Habermas’ post secular theory. First, Korean religious field had been subordinat- and passively modeled by exogenous socio-political factors such as Japanese colonization, Korean War, and military-dictatorial regimes, and democratization process. The current monopoly of religious market is the result of inter-play between internal dynamics of religion and external social forces. Although a highly competitive religious ecology of religions often causes social conflicts, it also makes positive conditions to reflect on Habermasian post-secular perspectives in the public sphere. In this case, religious/confucianism and Western religions (Protestantism and Catholicism) contribute to its realization of the public common good. In particular, Habermas emphasizes the sophistication of epistemic stance of religions in order to actualize conversation between the religious and the secular. The highly competitive religious situation of South Korea eventually facilitates religious-secular conversation by revising and reinterpreting their own doctrines or social principles. This research includes many case studies focusing on social debates between religions, as well as between religious institutions and secular ones.
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalistic reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

Precarious Work and New Class in Post-Industrial South Korea

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, workforce composition, and sectoral differences. However, we suggest that not only employment insecurity but also insecuity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition we include how individual workers perceive 'precariousness' and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will be also considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave – 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents

Due to South Korea's (Korea hereafter) competitive educational system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationships is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

Canadian Women's Perspectives On Disability, Underemployment and Health

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

The State's Role in Gentrification: Beyond the Co-Optation and Repression Dichotomy

This paper examines the local state's role in the gentrification process. I compare two cases where gentrification pressure is high and the state has a significant stake in gentrification—Downtown Los Angeles and the old neighborhoods within the city of Seoul. On a superficial level, the state seems inclusive in Los Angeles and willing to incorporate voices that rally against gentrification, and the state in Seoul seems to be exclusive, and at times violently repressive. These two cases show to align well with the existing social movement theory that projects a trend towards a “Social Movement Society”, exclusively, in the Western world, where social movements are much more prevalent, yet are contained and co-opted (Meyer and Tarrow, eds., 1998).

However, this literature can not help scholars from taking seriously the double role of the state that simultaneously co-opts and represses. In so doing, it can create a false dichotomy between the role of the Western and the non-Western state in governing gentrification. Contrary to this view, through participant observation in both cities, I come to unveil the underlying similarities of the two states' roles in controlling dissent. I analyze how both states 1) mask their involvement in repression and 2) delegitimize dissenting voices to avoid a legitimacy crisis. Focusing on similarities on the abstract level will help scholars of urban sociology to better articulate the theories of the role of the local state in facilitating gentrification, which has been under-theorized despite the early attempt by Logan and Molotch (1977) to bring the state back in with their ‘growth machine’ thesis. With comparative case study, the point is not to discern the degree of state's involvement in various cases but to identify types of involvement of the state that will further serve as a stepping-stone for elaborating the theory of gentrification.

Erasing the Line Between Work and Leisure in Korea

This paper examines the blurring of the line between work and leisure in Korea, which is now in a highly industrialized, hard-working society prompted by rapid globalization. It also has a well-developed ICT infrastructure with a highly educated and skilled labour force, now evolving into an increasingly older society within a creative, service economy. In these contexts, individuals in Korea, both at work and at leisure, are facing diverse inequalities depending on their social structural conditions. This paper mainly regards leisure as an coerced activity, while

Mobility of Chinese and Korean Marriage Migrants in Japan Rural Areas

In this research report, we are going to look at mobility of South Korean and Chinese female marriage migrants in Japan from the following perspectives: 1) suspicion raised among people in the community by marriage migrants' temporarily returning to their hometown, 2) proportional growth of monolingual in their offspring generation. In rural areas, marriage migrants are still seen as 'escaping brides', and are under significant influence of this old paternalistic belief that “Once married into a family, she belongs to it”. This idea has taken root in the migrants' mobility negatively, and has worked as a mechanism which restricts it. This report will present our perceptions toward female marriage migrants' mobility through cases in Tohoku and Tokai districts.
looking at work and leisure from the angles of time, place, ageing, gender and ac-

First, it examines why and how the once clear dividing line separating time or place between work and leisure has been eroded. Then, it looks at whether the age-segregated life-cycle has been transformed into one that is age-integrated. Next, it considers women's entry into the workplace and whether the convention-
al values of work and leisure have been changed. Finally, the traditional notions of labour and leisure activities are challenged by both positive and negative views on leisure. As conceptual background the concepts of devotee work, which is part of the Serious Leisure Perspective (SLP), and the labour of leisure are introduced and compared. After investigating the complex relationships between work and leisure, related implications are then taken up.

Resistance Up In The Sky: New Forms Of Labor Protest In Neoliberal Korea

The continued rise of Korean economy in the world stage is widely recognized by the presence of global brand-name products such as Samsung Galaxy phones, Hyundai Sonata, and even by the phenomenal world-hit of Psy's "Gangnam style." However, on the other side of this triumphant story of Asian capitalism, there is Jin-sook Kim, a female labor unionist, who protested on top of an industrial crane at the height of a 15-story building for 309 days. In a vibrant economy where automobile exports contribute a lion's share, the massiveloff at Ssangyong Motors pushed 24 auto workers to death either by suicide or by post-traumatic illness. These unparalleled cases of labor resistance, which merit a serious scholarly examination.

This study focuses on the sky struggle (hanuel toojeng in Korean), like the once staged by Jin-sook Kim, which represents a new form of labor resistance in contemporary Korea. In this paper, I first present data on traditional labor disputes and the new sky protest and introduce three major labor struggles - Kim's sky resistance at Hanjin Heavy Industry, the suicidal protest of laid-off workers at Ssangyong Motors, and non-regular workers' struggle at Hyundai Motors. Through these instances of labor contention, I explain how the mode of labor protest has changed in Korea in recent decades. In the second section, I elucidate the structural and political conditions that gave rise to this changed form of labor unrest by focusing on Korean economy's neoliberal transformation, the deepening fracture in the labor market, and democratic institutions devoid of la-

Second, the participants are randomly selected; second, the modalities of opinion

Technology and Citizens: Case of Citizens' Jury on National Pandemic Response System in South Korea

Due to their technical complexity, most public policies in today's technological society are dominated by expert-centrism and technocracy (an institutional form of expert-centrism), based on the belief that they should be the exclusive realm of technical experts. But globally, expert-led and technocratic policy-making culture is faced with challenges in many countries. The same is happening in Korea in many different forms.

Based on such awareness, this paper aims to analyze the democratic implications of the Korean experience of the citizens' jury, a form of citizens' participatory technology assessment activity organized by an NGO called the Center for Democracy in Science and Technology in 2008. In particular, the topic of this paper, the citizens' jury on the National Pandemic Response System in 2008, is a note-

worth case for it represents the first time in Korea that citizens were randomly selected to make up a jury, a method considerably different from existing forms of citizen participation.

In identifying its democratic implications, the citizens' jury will be compared with another form of deliberative participation, the consensus conference. Com-

pared to consensus conference, citizens' jury is different in the following ways: first, the participants are randomly selected; second, the modalities of opinion collection are different; third, the procedures and non-alignment between the participating citizens. The paper concludes that such characteristics of citizens' jury present highly positive implications in realizing genuine democracy in our society.

LEFEBVRE, SOLANGE* (Université de Montréal, solange.lefebvre@umontreal.ca)

Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained sig-

ificant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrivals of immigrants with religious backgrounds other than Christian, disturbed public narratives over minorities' religious requests and the post 9/11 context contrib-
uted to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific "reasonable accommodations" implemented to respond to religious requests of pupils and teachers—ins-increases such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice— with the aim of disclosing the effects that the so-

called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question of what it means to "be sporty." From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population sur-

eyes to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet "training and competing" but to go further so as to include softer and more ephemeral physical activity forms. In fine, a scale of the respondent investment in the sport and physical activities is designed, rep-

resenting a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an enic-and-etic dual approach.

Sociologists aim to discover the sociocultural, cultural, demographical character-

istics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The development of free-points software proposes some modern approaches for dealing with two-way tables (Yule's Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is spe-

cifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher's goals ( Wheaton, 2004) enable to detect and visualize (Ely, 1999) the sociological, cultural, demo-

graphical effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting so-

cial inequality in educational achievement. However, evidence on the short and long-term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from pre-

school than children from better-off socioeconomic background.

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly affected by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1930s and those born in the mid 1950s, but substantially rises for Cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than those born in the 1930s but the difference is not significant. Changes in mobility mostly reflects the evolution of cross-section earnings inequality, rather than variations in positional mobility.

Ce pari se fonde sur des descriptions erronées de ce qui se passe sur la scène des commissions de vérité, et sur des déductions intellectuelles. Une de ces erreurs consiste à croire, d'une part, que les acteurs arrivent à l'audition avec des émotions nées de l'expérience de la violence politique, et stockées depuis lors —des « traumatismes »—. On suppose, en deuxième lieu, que ces émotions, traumatiques, sont suscitées par la souffrance : peine infligée par la violence, ou souffrance de la perte d'un proche. On imagine, en troisième lieu, que l'expression émue de cette souffrance permet le remplacement d'émotions de délaissement, par des émotions d'adhésion : la victime s'identifierait à un collectif qui la reconnaît enfin ; réciproquement, la nation se refond dans la communion émotionnelle, dans l'effusion cathartique. On verra comment ce tribunal des larmes que fut la TRC met à l'épreuve ces convictions.

Leadership Research in Healthcare: A Realist Review

According to Gilmartin and D'Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren't stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collect multiple disciplines. The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role?; 2) How can leadership impact the healthcare sector and what challenges are addressed?; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those?; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professionals' skill, expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level. The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals' and women's differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.).[1] Scientists determine who will practice science in the future: academic scientists act as gatekeepers in terms of the production and training of scientists (admissions, funding, training and apprenticeships), and the design, implementation, certification and evaluation of curricular content. Moreover, access to and understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technical workforce; this reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team.

What strikes about life in the field is the level of danger commonly accepted by members of the organization (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian career. Incidentally, the fantasy of danger flows into our perception of aid workers as modern heroes living a life of adventures and self-sacrifice (Dauvin, Siméant, 2002). In concrete terms, kidnapping, rape, beating and robbery are often their reality. While being in the field with the teams, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone's safety. This dynamic is reinforced by the lack of intimacy and the control over individual autonomy. Every day routine is submitted to rules and constraints, particularly for international staff sharing house, office and meal. To a certain extent, these mechanisms of embodying the other operate as well with the local communities.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

LEGRIS REVEL, MARTINE* (University Lille 2, mарт.revel@gmail.com)
Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues. Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research - to what extent, in which roles, for what purposes and to what effect...

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSO’s in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,950 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists.

Do-It-Yourself Finance! a Participatory Action Research on Community-Based Finance Systems in the Netherlands

The contemporary global financial and economic crisis has led to a shrinking Dutch welfare state, which encourages citizens to help and support each other in the grassroots level. This paper provides insights in a community-based savings and credit mechanism, called CAF-group. The rationale of CAF-groups derives from informal savings and credit associations in developing countries and migrants in the west. Since the early 1990s, international and local development organisations have learned from this phenomenon and have developed a methodology for self-funded financial groups to improve the well-being of vulnerable people.

Lately, CAF-groups have been successfully implemented in Spain, Italy, Portugal, Hungary, Belgium and the Netherlands. Based on practical evidence in Europe we can assume that participation has a positive impact on human needs such as the generation of significant economic benefits and the improvement of financial management skills. Participation creates self-confidence among CAF-members which in turn leads to feelings of ownership and responsibility for the management and maintenance of their group.

The implementation of self-funded financial groups in the Netherlands is supported by a participatory action research program. This paper discusses the results of this program by exploring whether and how participation of members can improve their well-being based on the capability approach of Sen (1993). Therefore, the capability approach is operationalized and applied to three CAF-groups in the Hague, the Netherlands: (1) men, 40 plus, ethnically-mixed; (2) women, 40 plus, ethnically-mixed; (3) mixed sex, below 30, Araban ethnicity. Data is collected through qualitative interviews with members, participatory observations of group meetings and evaluation workshops.

This research provides insights into the operational features of community-based financing mechanisms, here three CAF-group in comparative perspsective, and demonstrates how grassroots solidarity economy processes can contribute to the general well-being of vulnerable people in a time of global crisis.

**Urban Land Encouragement and the Greenbelt in the Greater Toronto Area**

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under attack from several directions. The main rationale for the creation of the Greenbelt was to protect green space from further land encroachment by Toronto's massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. In tandem with this legislation, a second provincial legislations came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the two municipalities – Markham and Barrie – as the “inside” of the greenbelt and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of reports, and newspapers. It is hoped that the general lessons that I will draw discuss questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

**Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”**

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of “unemployment II benefits”. I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 1981) of the young adults. There have been approaches to understand the situations of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to the concept of “micro-context sampling” (Glaser/Strasser 1998). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000). **Governing the Commons in Transforming Economies: The Case of Ukraine**

The situation generally defined as the “tragedy of the commons” acquires its specific features depending on the political and economic settings. Due to the domination of the public domain and the state ownership in the basis of socialist economic systems, the definition of the “commons” in the so-called post-communist countries (the former Soviet Union and its satellites) can be employed to a much more extensive body of the resources. This creates additional challenges to the process of governing the commons in those countries, and it becomes increasingly complicated in their ongoing socio-economic transformation toward capitalism.

On the case of Ukraine, which is surviving through one of the worst scenarios of the failing transformation to capitalism, the disastrous deterioration of the economic infrastructure, and deregulation of the property rights, I investigate the epistemological value of the scholarly work on the governing the commons and the disaster capitalism, particularly writings by Naomi Klein and Eleanor Ostrom, as applied to the countries in transition.

I locate the situation in the post-socialist countries against the background of the global economic and legal (related to the property rights) affairs. I investigate the possibilities and the character of the reciprocal influences of the resources management in those countries and the vulnerabilities peculiar to the Western economies.

**Inclusion and Exclusion Intertwined**

Inclusion and exclusion intertwined – a sociological self-examination of a German-Dutch-Jewish family biography in the context of racism and war.

For over 30 years I have worked as a scholar in the areas of racism-research and education. While, during this time I have studied processes, consequences and causes of negative stereotyping, othering and exclusion I now dare, for the first time to do a “sociological self-examination”, excited and encouraged by the reading of a text by Pierre Bourdieu (published in 2001 under that title). The focus is my German-Dutch biography, which is also about my Jewish grandfather from Rotterdam (Netherlands), whose daughter (my mother) during the occupation by troops from Nazi-dominated Germany fell in love with a German soldier (my father). My analysis shows a form of inclusion in a bi-national family, asserting after the second world war and holocaust a ‘normality’, that almost compulsively is ‘forward looking’, but excludes all the issues that have to do with racism and injuries from the past. That ‘eaden silence’ makes family possible, suggests harmony, and closeness and affection can occur, while key life events of family members remain untouchable.
‘Covering narratives’ are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

Individual and Structural Causes of Neet - a Case Study of Austria

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less well-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of the NEET population be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect (labeled as structural or model-independent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. The presence of the model-inherent interaction is owed to the restricted range of the outcome variable.

However, several scholars have engaged in a discussion whether the model-inherent interaction has a meaningful interpretation. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g. Bowen 2012), others adhere to the interpretation of the total effect (e.g. Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn’t result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

“How People Recount Their Life”: Recording and Analysis of Individual Well-Being over the Life Course

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotypical and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative characteristics for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considered efforts have been put in subsidising clean energy technologies with most of the environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming—leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

561
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1990. Of the basis there was collected an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders’ identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm. Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think in this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analyses in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entangles methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

LENEL, PIERRE* (LISE - CNRS - CNAM, lenelj@yahoo.fr)

Maladies Chroniques, Transitions Professionnelles Et Changement Social

A l’occasion d’une recherche d’une durée de trois ans ayant pour thématique centrale les rapports entre maladie chronique et travail, cette communication s’efforcera de montrer que, à l’occasion d’un dispositif spécifique de recherche action clinique que nous présenterons, la rupture biographique (Bidart 2006, Grossetti 2006) se transmet en une dynamique de transformation sociale. La transformation professionnelle débouche, « naturellement », sur une (dynamique de) transformation collective via la présence d’un groupe, qui sur un temps long, conduit chacun à quitter le récit de sa vie pour soi, pour mettre en commun ce qui dans son parcours individuel fait écho aux autres participants. Le récit de sa vie, de la simple vie, de ce que certains appellent la vie nue (Arendt, 2002 ; Agamben, 1998) ou la vie vivable (Butler, 2010) se transforme peu à peu en une réflexion sur ce qu’il faudrait transformer chez soi, chez les autres et dans la société afin de parvenir à une vie en santé. Ce sont alors les normes sociales du travail entenus comme « la représentation sociale du travail-emploi qui détermine l’accès aux ressources de base requises pour répondre au commandement temporel de l’individu maître d’œuvre de sa propre existence » (Castel 2011) qui sont questionnées. Quel que soit l’âge, le sexe ou le niveau social c’est bien la question de la centralité du travail dans une vie qui est mise en débat. Cette recherche montre bien à quel point les transitions sont des occasions de co-construction du changement individuel et social. Si les façons de penser changent, elles conduisent alors à une volonté de changement social qui se manifeste via différentes stratégies que ce soit dans le milieu familial comme dans celui des organisations et des institutions.

invited tax advantages and allowances in place or even implementing new ones), we might see a more permanent policy transformation towards a property-based welfare model that postulates the availability and utilization of private housing wealth. On the other hand, social policy research has continuously shown that, depending on welfare regime and timing, endogenous pressures are translated differently into reform processes across countries. Hence, with its comparative approach this study also seeks to contribute to the discussion on whether emergencies and crisis situations lead to the convergence of capitalist and social policy models or whether long-standing regime differences persist nonetheless.

**La Fabrique De L'Automatie**

In the context of the mise en œuvre volontariste d’un projet utopique, construction d’un nouveau quartier de ville constitué de mixité, (...) de solidarité et d’innovation sociale », à l’initiative d’une université et de collectivités locales, un « groupe-ressource » pilote les « commissions de mutualisation », lieu incontournable des prises de décisions, de positions ou encore de pouvoir des acteurs. On proposera l’analyse de l’agenda de ce groupe-ressource, les thématiques abordées, les situations et postitions, les argumentations, les processus de décision. Les sujets abordés lors de ces commissions vont de la signalisation à l’animation commerciale du site mais sont surtout pour nous l’occasion de questionner les tensions entre les notions de dépendance et d’autonomie. Dernièrement le débat autour de la vente des frites par un « food truck » sur le parking de l’Université, l’interdit de ventre de galerie, l’être « dépendant », celui qui va à l’encontre de la norme, de l’idéal de nos sociétés (GAUCHET, 2004) qu’il soit en fauteuil, fou ou vieillissant, l’occasion de consommer de l’aliments riches en graisse ? Celui-là même que l’one pousse à l’indépendance, à participer à un process de vie, à se prendre main être autonome mais que l’on ne reconnait pas faire de sa propre choix diététique.

Entre une « politique de la pitié » (ARENDT, 1967) et le paternalisme des décideurs, les commissions de mutualisation peinent à s’inscrire dans une conception capacitaire des individus et creusent un fossé avec les intentions originales du projet : penser le quartier par et pour les usagers.

LENZ, ILSE* (Ruhr University Bochum, ilse.lenz@rub.de)  
**Changing Gender Orders and the Variety of Gender Welfare Regimes**

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The difference based gender order developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women's votes, legal reforms for women's own rights of property and decision in the family. The worldwide spread of Fordist/Toyotist mass production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women's educational advancements, by women's movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Postfordist flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

LEONG, SUSAN* (Curtin University, susan.leong@curtin.edu.au)  
**Soft Power, Reciprocity and Guanxi: Temporary Business Migration, New Media and Belonging**

This paper connects two contemporary bodies of literature surrounding the nation that appear to be unrelated. The first is what might broadly be termed, dissonant connections. Although the notion of long-distance nationalism relegates the participation of diaspora in home nations to interference, work on trans-
nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and econo-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be loosely grouped under the banner of soft power research. Perhaps spurred on by China’s adoption of Nye’s notion of soft power in recent times, these focus on the management of how one’s own nations is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy. Both body of works develop in parallel in the sense that they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research’s main goal is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of new forms of identification and belonging. The main goal is to highlight paths, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on every day practices, on the methods of planning for the future, on the interpersonal relationships. The main research’s hypotheses concern the influence of cultural capital on the different personal and family strategies. Cultural capital, gender and ethnicity seems to be the most relevant variables to understand differences and abilities to cope with this very difficult social and economic context. In-depth qualitative analysis has been carried out to enrich available quantitative statistical data, in order to identify possible ways to promote and support best practices able to reduce the negative effects of economic crisis, and to overcome it without weakening the social bonds and, at the same time, promote inclusive, innovative and secure societies. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available quantitative data with in-depth qualitative data.

Young Women Facing The Economic Crisis

The paper presents the intermediate outcomes of a research on the impact of the socio-economic crisis in Italy on young people. More specifically this paper deals with gender differences and inequalities which characterize the condition of young people in Italy. Which are the expectations, the abilities and the competences to cope with difficult economic conditions that characterize young female and male? The relevance of cultural capital will be discussed in order to understand the opportunities or the difficulties faced by young women or men. Besides some data will be presented on young male and female living in Italy but with foreign origins. We argue that gender, ethnic origin and cultural capital are the three most important variables to explain inequalities of opportunities among young people facing the economic crisis.

Duque de Caxias is a city located in Baixada Fluminense, a peripheral area of the Rio de Janeiro state occupied by many poor northeastern migrants attracted by work opportunities in the emerging 1940s and 1970s Brazilian southeast.

Transformed into national security area in 1971 by military coup d’état and administered by mayors chosen by the national government until 1985, the Caxias of today still is visibly experienced through massive images of floods, garbage and violence. Overshadowed by the beauties of the cidade maravilhosa (marvelous city), the neighbor city of Rio de Janeiro, Caxias is, in the words of its youth, “a steamroller crushing all their dreams for generations”[1]. Against the trend we have outlined, a new scene erupts in 2000s Caxias: a youth who perceives the city as absolutely cinematic and responds visually to this finding.

This study aims to approach the intertwining of visual art, politics and everyday life by presenting and discussing the production of cultural activist groups called com-angos. The emergence of radical organizations such as “Cinemas de Baixada” that promotes audiovisual productions and free film screenings that end up in large dance parties, widely advertised by posters displayed throughout the city and also shared on the Internet. Our focus is the visible surface of exchange created between the posters, the movies screened, their film productions and the dancing bodies performing on the floor.

Based on Jacques Rancière’s concept of partage du sensible, we address these graphic art, moving images and performances as a montage, a framing of a controversial world within the given world by the clash of heterogeneous elements that are re-assembled in new forms of collective action aimed at the possible political mode of consensus, or otherwise, on dissensual supplements that displace the territories and borders of art and politics.

signals in these organizational platforms. Habermas’ model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas’ theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world interact to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Determinants of Effective Cross-Border Cooperation

The world over local communities breach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination, and cooperation are a function of these communities’ capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Ivangorod across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study’s outcomes, the paper uses collective-efficacy theory to measure each community’s response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

LEVENSON, ZACHARY* (University of California, Berkeley, Zachary.Levenson@gmail.com)

Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, and the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment. I relate the proliferation of post-apartheid forms – state-provisioned formal housing, rental stock for the working poor, TRAs, and others – to a broader process of dispossession and confinement. Drawing on a year of ethnographic fieldwork in relocation sites across the Cape Flats, I argue that post-apartheid urban relocations can be characterized as dispossession through delivery. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely through formal housing allocation that segments ormilliseconds of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible. A recent increase in manifest and unpredicted climate disasters, which have already struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute ‘substantial but affordable sums on a regular basis’ for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks ‘in the next two years’, ‘during your lifetime’ and ‘in centuries to come’, suggesting no progressive discounting of the future.

LEVER-TRACY, CONSTANCE* (University of South Australia, constance.lever-tracy@flinders.edu.au)

The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the diverse range of forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences.

LEVER-TRACY, CONSTANCE* (University of South Australia, constance.lever-tracy@flinders.edu.au)

For Effective Responses In An Unequal World

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequally urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporary religion, also arouse renewal urban struggle dynamics, renewal place strikes. The neoliberal practical discourses and practices produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims is to add some contributes to discuss the processes that exist in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movements these processes engage and what are fragilities and lines of flight can they offer?

On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a Brazilian urban slum habitation type – placed on Vila Olimpia Neighbourhood, and Es.Col.A da Fontinha, a squat-eviction process of an auto-managed collective transformed in an auto-managed collective space. Immerged on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to oppose that path, almost heroically. Atempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

RODRIGUES, CLAUDIA* (Faculdade de Economia da Universidade de Coimbra, claudiamrodrigues@gmail.com)

Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.A da Fontinha (PORTUGAL – PORTO)

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from ‘bottom up’ has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the present fragmentation. In education, this implied breaking with the ‘old’ divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relationship between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

LEVY, YAGIL* (Open University in Israel, yagil.levy@gmail.com) Conceptualizing The Bereavement Hierarchy

Yagil Levy
The Open University in Israel

Conceptualizing the Bereavement Hierarchy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determines the character of collective actors (such as the extent to which the war is portrayed as successfully attaining its original goals) to challenge the dominant discourse and influence the war’s policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children’s lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subversive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group’s social status and its reliance on the military as a mobility track; (2) the group’s ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies - market-regulated vs. state-sanctioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subversive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

LEVÅNEN, JARKKO* (University of Helsinki, jarkko.levanen@helsinki.fi) Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operational environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achievement of challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collective learning in complex operational environments? Numerous analyses concerning the performance of policy designs have ended up emphasizing the importance of such flexibility that allows steering the regulation based on regulated actors’ experiences. Such an opportunity may be called as a feedback between institutional and operational environments and it seems to be very important element also according to collective learning. Few studies, however, have analyzed the capability of policy designs to strengthen such institutional feedback in practice. Based on a case study of industrial region located in the northern Finland, I argue that institutional feedback is very important in industrial waste management. My preliminary findings point out that optimally institutional feedback allows the continuous learning and the development of industrial systems towards better material efficiency.

LEW, ILAN* (École Hautes Études Sciences Sociales, ilanlew@gmail.com) Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators of Nazi Germany and Operation Condor

In this presentation, we will expose a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristic dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of “moral-concerns” of massmurderers. Conversely, we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interrogators to lead these “veterans” beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the themes of indignation in both contexts and more specifically on the relationships to money and the management of resources that emerge for the perpetrators in the course of their duties.

RC52-839.4

LEWANDOWSKI, ROMAN* (Voivodeship Rehabilitation Hospital for Children, rlewando@wp.pl) Internal Conflicts Vs. Integrity within Medical Professor Under Managerial Encroachment

Poland, like other European post-communistic countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organization access to public money. After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communistic system, costs control were made through a lack of access to expensive medical technologies, which absolved both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

RC28-486.1

LEWIN-EPSTEIN, NOAH* (Tel Aviv University, noah1@post.tau.ac.il) Changing Circumstances in Late Life and the Relationship to Household Debt

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one’s health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two concepts central to social stratification: consumption and risk. With regard the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt. Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-
lated to health status and labor market activity); the association between house-
hold debt and the subjective experience of economic hardship; and cross-country 
variations in the relationship between household dynamics and indebtedness. 
The analysis is carried out using the first and the fourth waves of the Survey of 
Health Aging and Retirement in Europe (SHARE). The panel structure makes it 
possible to study changes in late life (marital status, labor market, and health) 
and their relationship to household debt in 13 European countries and in Israel. 
Preliminary findings reveal that household debt is widespread even in advanced 
ages; it is not limited to households that are asset poor; but it is systematically 
related more frequently determined by changes in health and marital status. Large 
country differences exist in the magnitude of household debt. We also find com-
plex effects of country context on household level relationships.

VANDEKERKHOVE, WIM (University of Greenwich Business School)

Trade Unions and Whistleblowing: Can They Do More Than Protect 
Their Members?

The role of trade unions in relation to whistleblowing is frequently seen as 
reactive and defensive. They often have limited resources and regard their prime 
function as being to advise potential whistleblowers and to represent both those 
who feel they have been victimised for reporting concerns and members who are 
allied to have engaged in wrongdoing. Research conducted by Public Concern 
at Work and the University of Greenwich in the UK suggests that trade unions 
are good at performing these tasks but are not particularly effective in ensuring that 
allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate 
whistleblowing policies and procedures at the workplace where employers were 
willing to do so. Research conducted in several countries consistently shows that 
whistleblowers normally report their concerns internally first and that line man-
egers are often the first port of call. However, if this manager is not appropriate 
for any reason (for example, is the subject of an allegation or is regarded by the 
whistleblower as unsympathetic/antagonistic), the question arises as to whether, 
for trade union members, a lay or full-time official should be regarded as a suit-
able alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in 
relation to the whistleblowing process and will consider the ways in which they 
could use their collective strength to play a more positive role in dealing with 
alleged workplace wrongdoing.

Natural Surveillance: Google Trekker and the End of Wilderness

Natural Surveillance: Google Trekker and the End of Wilderness

For individuals seeking refuge from the increasingly monitored spaces of urban-
ized “control societies,” the idea of untamed wilderness has long held a special 
appeal. Figuring prominently in various strains of ecological writing and literary 
romanticism, wilderness has also been central to various indigenous belief sys-
tems in the Americas, Australia, and New Zealand. In these contexts, wilderness 
has often been valorized as an aesthetic, moral, and national resource of the high-
est order, a sacred place for the regenerative experience of living “off the grid” of 
contemporary techno-culture.

However, new surveillance technologies are rapidly taming the wild, bringing it 
under the watchful eye of the governments, corporations, and private individuals 
who want to minimize risk and uncertainty in any environment—even where an 
element of risk has long been considered a virtue. Indeed, the rapid proliferation 
of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms 
of remote sensing is challenging long-held conceptions of nature as refuge. As the 
awareness assemblage expands into the wild, finding an unobserved, or unob-
servable, spot will become increasingly difficult.

While Facebook’s Mark Zuckerberg dreams of an “Open Planet” of total trans-
parency, Google is bringing its “Streetview” concept to nature with “Google Trek-
ker,” a backpack mounted data collection apparatus that is designed to illuminate 
the hidden realities of the natural landscape. With satellite cameras, drones, and 
now Google Trekker looking over our shoulder even on the highest moun-
tain peak, will we continue to imagine the regenerative power of wilderness in 
opposition to the enervating qualities of post-industrial life? Is desert solitude a 
bygone fantasy? By putting Google’s Trekker into dialogue with concepts of rug-
ged individualism, wilderness, and frontier autonomy, this paper will explore the 
implications of “rural surveillance” phenomenon for national imaginaries and 
eco-consciousness generally.

The Trend of Educational Inequality in China during 1940 - 2011

Because Hukou system has been existing for long time which resulted per-
sistent and severe inequalities between urban and rural residents, including 
educational inequality. In today’s China, urban-rural segmentation is the most
influential factor affecting educational inequality, and educational gap between urban and rural population is much larger than of class, race, gender and nationalities. This paper, based on national survey data of 2006, 2008 and 2010, examines the change of the educational inequality between urban and rural residents over time. It concludes that educational gap between urban and rural children has been continuing to enlarge in spite of rapid educational expansion.

A New Cycle: Understanding the Current Life Course of Rural Families in Western China
Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economical meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a part men. Gender and Power in the Primary Teaching Workplace: Women's Fight Against Male Power in Taiwan
This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power. In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six class teachers, whereas 12 semi-structured interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

Income Inequality, the Welfare State, and Economic Growth Across Time and Space
Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primary focused on the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state. Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-recursive structural equation modeling by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

Is the Preference for Men an Advantage or Gender Inequality?: A Case Study of the School Management in Taiwan
The aims of this paper are to explore whether and how men are preferred and advantaged in attaining managerial positions within the school context by drawing on the experiences and views of the teachers in a primary school. The study was carried out between 2008 and 2009 in a primary school in southwest Taiwan. Non-participant observation and individual semi-structured interviews are the main sources of data collection.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men’s abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men’s advantaged position, women’s domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men’s dissociation may imply that men can also enjoy working with children and the solid teaching profession.
Exploring the Sense of Justice about Grades in Group Projects

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to family characteristics and child wellbeing. We discuss the nuances, strengths, and limitations of the existing studies, and highlight the need for future research.

Exploring the Sense of Justice about Grades in Group Projects

The problem of free rider is ubiquitous in governing the commons. It often leads to injustice in allocating the rewards in any group projects. This paper investigates formal methods in which the instructor may adjust individual students’ grades relative to grades earned on a group project that reflect group members’ sense of justice. Data are collected from 77 college students enrolled in a sociology course. We estimate the just grade function for each and every rewardee student in each group, and show how to use these estimates to in their grade adjustments. We also engage a recent debate (Markovsky and Eriksson 2012; Jasso 2012) about how to measure the just reward.

This paper is motivated by two bodies of literature. The first one concerns the free rider problem ubiquitous in the social world when public goods are involved (Hardin 1968; Marwell and Ames 1979). Specifically, every instructor must have encountered the difficulty of how to determine individual students’ grades when they assign assignments to be completed and evaluated in groups. While many instructors may have treated it as a nuisance in their grading duties and proceed in various eclectic ways as long as the students do not complain, it is indeed an important issue to address if one takes seriously the idea of justice and the authoritative duty an instructor/grader performs. The second one concerns the social psychology of distributive justice (Berger et al. 1972; Deutsch 1975; Jasso 1980; Konow 2003). Specifically, we argue that theoretical and methodological developments in this literature (Jasso 2007) may be applied to the free rider problem of allocating rewards to individuals participating in group projects. In this paper, we demonstrate such a particular application in the classroom context.

The Bureaucracy and the Construction of Risk in China

There were three large-loss fires ignited by exterior-wall insulating materials which marked the fire risk of insulating materials a hot topic in the past three years in China. Anti-fires policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council who set the standard calming the things down. This paper is based on a qualitative research mentioned above, which attempts to elaborates the logics of the bureaucracies in China in the process of construction and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict first and then risk consensus among the three stakeholders mentioned above. From this research, we can get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segmentations of bureaucracy which all try their best or shift their responsibility, and this leads to the “organized irresponsibility” which seems to be a classical feature in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public’s benefit and safety, it’s still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.
bonds, and ethnic relations. I will show that openness/insularity is an idea that I have arrived at by combining Claude Fischer’s (1984, 1995) concept of the institutional completeness of a subculture, Louis Wirth’s (1938, 1956) theory on the cultural heterogeneity of cities, Robert Sampson’s (2012) discussion of neighborhood effects, and the subjective experience of the city in which they live. Continuing, I will list empirical indicators of openness and insularity, such as residential pattern, social/ethnic relation, friendship network, and the perception of local societies.

LI, YIFEI* (University of Wisconsin-Madison, yifeili@ssc.wisc.edu)
Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism. The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Dujjiangang, Hangzhou, and Tianjin. It also draws from archival research in Beijing.

This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities. In places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, however, the literature has moved more on bottom-up, spontaneous, and community-driven forms of urban initiatives. Especially when it comes to urban culture, there is much discussion about the explosion of creativity and entrepreneurialism from below; the state seems to have disappeared from the sociological field of vision.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attempt to contribute to the understanding of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China

China’s class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendship ties across class boundaries. In particular, analysis of strength and diversity of cross-class social ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

Living in the Gray Zone: State’s in/Exclusion of Live-in Migrant Care Workers in Taiwan

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the “graying” of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to Labor Standard Law that defines the rights of workers.

Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.
Behavior
Social Desirability Bias and Mode Effect in the Case of Voting

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious "conglomerate" within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organization's modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun's book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers' participations in the organization's volunteering activities help to consolidate and coordinate lay followers' religious identities.

LIAO, PEI-RU* (Pingtung Univ Technology and Science, r.pei.liao@gmail.com)
Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organizations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious "conglomerate" which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai's prime-time drama (also known as Da-Ai Drama). Airing on both networks from Jan, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher have conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edu-entertainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

LIAO, SHIH-SHANG* (University of Tokyo, r9324009@ntu.edu.tw)
10th Anniversary of Hakka Television: A Study to Examine the Ethnic Broadcasting Policy in Taiwan

It is 2013 that the 10th anniversary of Hakka Television, the first ethnic broadcasting system in Taiwan. Reviewing the past 10-year development, there have been 3 ethnic television stations founded and operated in Public Television System to protect the minority language such as Hakka, Holo, and Indigenous. In this important moment, it is necessary to examine how the ethnic broadcasting worked in the past decade in Taiwan. This research summarized the development of ethnic broadcasting during this decade from 2003 to 2013 in Taiwan by reviewing the literature, especially in Hakka communication. Furthermore, it also interviewed those who participated in either practical or academic field to discuss and give a suggestion for the next era.

The result shows that the population using Hakka is consistently growing owing to the broadcasting; however, it is still stated in an unequal position of language using as a vulnerable one. In addition, this kind of situation is also shown inside Hakka community among different 5 accents; moreover, the gap is even widened in this group. It is obvious that the policy protecting the right of using and reducing the development gap among dialects still needs a great improvement in next decade.

A Mapping of the Current Reality of Regional Inequity

This document will focus on the continuity of a power that emanate toward the provinces of the interior of Argentina and the power relations between the national state and different sub-national states.

It will be shown that there are colonial models from Mexco to Argentina that have their origins in scholastic currents found in the peninsular cloisters of medi-eval Europe. Under this influence, and a century after the conquests carried out in the region of the Rio de la Plata, the first institution of higher education was conceived. The most important philosophical currents in the region could be seen to parallel the political regime introduced there.

Furthermore, the economics and the general development of the Argentine territory were considered from their inception focusing on external trade of primary resources whose main activity consisted in the creation of a handful of precarious port-cities and surrounding areas of the interior with the products being exported to Europe exclusively without balance and with diametrically opposed strategies.

These two main aspects -economic and philosophical-political- imbued Argentina with a distinctive profile in the development of its institutions and in the power dynamics that have persisted for almost five centuries.

This specific distribution led to a particularly non-disruptive path; a path that is highly inequitable with regard to the development of ideas, of power and its institutions and with delayed economic development.

This exploration will give rise to a mapping of the current reality of regional inequity under protection of a biased and caudillista political and economic power.

Democracy and Education: A Strategic Alliance For The Exercise Of Future Freedom. The Case Of Argentina

Argentina today finds itself in the midst of a crisis, with a weakening democracy and an education system in decline. Any solution to the country's current problems must focus on not one or the other of these issues, but on the two together, as inseparable.

The discussion presented here will first focus on the school as a highly planned and compulsory training institution for minors.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and "control". From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented. Next, an analysis of this situation will be given. Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care (“test and treat”), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 65.6% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggested increased stigma and resistance to “test and treat” among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine’s (2007) call for a feminist geography on interactions between social categories and spatial ordering, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women’s foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of ‘women alone’ in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society, not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens’ and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of public policy; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons’ Conception Of Societal Community

On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with Functionalism. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies: Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative community and American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of its legacy. Needless to say, I am aware of disparate and divergent streams in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today.
Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for a so-called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes and productive social context into account, there is a strong correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers’ Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an "adult worker model", aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on individual and labour market participation. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probabilities to take up employment are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection on observable characteristics. In a third step, care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

Collision and Economic Consequences: Comparative Notes on “Going to WAR”

Wars are beneficial some argue. Wars are costly others argue. Some experiences prove that technological development in warring situations (may) have positive spin offs later on. Wars can be simultaneously costly and beneficial others argue. Some suggest that being a victor in one war can create a psychosis or collective social memory that propels the victorious state/nation into long term militarist adventures that eventually leads to its downfall. Against this background we are discussing four case studies.

These paper explores in some detail four economies in terms of preparations and consequences during the Second World War, namely that of Nazi Germany, the UK, the USA and South Africa. A look is taken at the economic state of these countries before the war, preparing for war, economic developments during the waging of the war and the socio-economic and political outcomes. It concludes with some lessons learnt and pointers for the future. In our conclusion the reader may find in his/her own deduction that going to war – even if coming out victorious – may be far costlier on the long term than we tend to think.

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release. To assess the dynamics of age during incarceration and upon release, life-history interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a ‘deep-freeze’, prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to gather greater understanding of subsequent desistance post-release.
against different gendered power relations, prevail. This paper, discusses various resistance strategies in relation to different attempts to reach gender equality.

**Change of Basic Human Values in Europe 2002-2012**

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theory of basic values has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses use data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PQV-21).

ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefore this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

**LILLRANK, PAUL** (Aalto University, paul.lillrank@aalto.fi)

**The New Normal As a System Challenge**

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that the "low hanging fruit" of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Alpert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism. Tyler Cowen argues that due to Internet, globalization and smart machines "average is over" and the middle classes are shrinking. Ian Morris builds a historical argument about "growth ceilings" that can't be penetrated without major systemic changes.

In the international debate Japan is seen as an example of things to come. In spite of economic and demographic decline, social order and reasonable labor force participation have been maintained. Therefore the question is, can Japan again be seen as "number one" in adjustment to the New Normal?

**Rediscovery of Asia - from the Value-Based Orientalism to Strategic Universal Asainism**

The so-called Asian Values debate has long history. In the late 19th and the early 20th century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectification such as a like an orientalism defined by the western, while in basic values have reformed themselves without loss of their own identity, because the process of Asian modernization at that time had lain between Scylla of nationalism and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues had contended with traditional Confucianism and orientalism of linear development especially in Europe, and have attempted to de-objectivation of Japan and the whole Asia in the name of 'Great Asia'. On the contrary, Sun, yat-sen, the father-figure of modern China, has attempted with his famous three principles of the people(so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and liberalism. Despite of brief content, he has tried with these principles to pioneer the strategic universal Asainism unless falling into a trap of 'Great Asia', which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of so-called duality, one engages in the universal professional norm of journalists as a news frame confined to the national boundaries, which assumes the readership is ethnically homogeneous. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as a research interest in Japan. With increasing diversity of residents, however, a demand for minority participation in the media industry slowly emerges; considering effects of minority journalists as members of mainstream media may redeem an absence of approaching minorities as subjects.

Previous studies in America clarify that minority journalists have two natures called ‘duality’, one engages in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as minority in journalism. This study redifnes this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of ‘professional identity’ over ‘ethnic identity’ is observed in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue ‘ethnic identity’ as their foremost mission, however utilizing this "ethnic
identity facilitates accesses to various news sources. This is an advantage frequently expected of the Zainichi journalists by their superiors.

Reframing Citizenship in Contemporary Brazil: The Effectiveness of Democratic Institutions

After the highly enthusiastic expectations raised by the re-democratization of Brazil in the 1980s, contemporary sociologists and political scientists are more likely to analyze the effectiveness of political institutions that were created by the democratic constitution in 1988. This work compares the democratic effectiveness of two of these institutions: the conselhos (councils) and the ouvidorias (ombudsmen). Each of them set a particular way of dealing with patrimonialism, a traditional obstacle to democracy in Brazil. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of conselhos is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the constitutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of conselhos and ouvidorias are also analyzed in the light of the broader debate on the reformulation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian’s NGOs

This work seeks to analyze the longstanding symbolic legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the very notion of NGO by an-
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu's field theories, M. Burawoy's theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks. The conclusions are as follows.

1. In terms of Education Faculty members' perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy's voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and disadvantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students' college life due to cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan's historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American sitet Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conceptual performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It's all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

LIN, MEI-LING* (National Open University, Taiwan, paulina@kcg.gov.tw)

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to present a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: the first one focus on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of mobility and migration that structure labor markets; the third one deals with the temporal dimensions of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants’ adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring at the junction of social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key topical concepts: (a) to seek to determine what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and unintended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to explore the ways in which social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The author would like to debate the results of qualitative and quantitative empirical research, but also focus on the theoretical concepts used in the analysis.

The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions

Rapid economic and social changes coupled with the constant changing policies have had impacts on the way in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China's General Social Survey. This study enhances the literature by exploring and analysing the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypal pathways to adulthood. Clear differences are found in the trajecto-
ries types between four subgroups defined by gender and household registration status, as well as between father’s social status. We also examine the evolution of transition using the typology built to reflect changes in both demographic and occupational spheres.

**Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability**

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2009 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

**Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn**

In this article we describe some special characteristics of the world's greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group's authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business groups (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as the "global fragmented despotism." The organizational structure of world factory may be helpful for explaining Foxconn's poor labor conditions and workers' suicides happened in 2010.

**Mapping the Climate Discourse Networks: Media Coverage of Climate Change in Taiwan**

There is an increasing media coverage and visibility on climate change in Taiwan. Few studies, however, have been done with regard to how issues of climate change have been reported in the newspapers. This paper intends to examine Taiwan's newspapers from 2007 to 2008 as well as semi-structured interviews with climate experts. Through discourse and relational networks methods, the paper examine how and why the climate change media discourses have been framed and represented, and how they interact or reflect national climate change policies and politics. It concludes with a discussion of how these findings help us understand multiple actor and discourse networks that effect national climate policies.

LIN, VIVIAN WENLI* (City University of Hong Kong, vivian@voicesofwomenmedia.org)

**Visualizing Voices of Women**

There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bounded to abandon their families in search of economic opportunity. Migration patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experience using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment and to their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

**The Effects of Family Support and Friend Support on Adolescent Functioning: A Taiwanese Case**

A number of factors affect adolescent functioning. This study investigates the respective contributions of perceived support from family and friends to various adolescent functioning, includingdeviance, depression, and self-esteem. Although previous studies have examined the relationships between family support, peer support, and adolescent functioning, these studies have some limitations, such as using western samples (e.g., U.S.) and cross-sectional data. Using Taiwan Youth Project (TYP), we employed latent growth curve model to explore how these two supports influence adolescent functioning. We expect to see that adolescents who experience high level of family support may have better functioning (e.g., high self-esteem and low depression) than adolescents who have low level of family support. We also expect to see similar results when support from friends is in the model. In addition to the individual effect from the two sources of support, we also investigate the moderating effects of these two supports on adolescent functioning. We expect to see significant interaction between these two supports such that high level of family support may have stronger effect on adolescent outcomes when friends' support is at high level. In contrast, low level of family support may have negative impacts on adolescent functioning even when the level of friends' support is at high level.

LIN, YA-FENG* (Louisiana State University, yilin7@tigers.lsu.edu)

**A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan**

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age is an M-shape in these two countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe that the curve is only due to cohort differences in women's behaviors.

The OLS regression model cannot entangle the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women's participation in the labor force correlates with their family obligations or cohort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment rate and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women's re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.

LIN, YUCHI* (University of Hertfordshire, ninio0731@gmail.com)

**Rigidity, Culture-Related Conflict and Depression**

Since marital law was abolished in 1987 in Taiwan, the rate of depression has dramatically increased. The reason for this remains uncertain. Some researchers think that this phenomenon might be related to the psychological conflict be-
tween 'social orientation' and 'personal orientation' which is generated through the process of acculturation. Although the development of democratization increases personal freedom, it also increases anomy. Hence, being influenced by Chinese culture in which the values of social groups are highly valued, people in Taiwan might feel anxious and uncertain when personal orientation is strengthened. Accordingly, the researchers suggest that the tension between social and personal orientations might trigger the formation of psychological conflict. Depression could also occur when people feel that the psychological conflict is too high to cope with. In this paper, the author attempts to propose that psychological conflict is expressed as depression but the integration of a construct system. In the dynamic process of social change, depression might occur when the individual's construct system is rigid and not flexible enough to adapt to the tension between personal and social orientations, aroused by the changing society. This hypothesis is examined by conducting a survey and an interview. The survey has already been conducted and the interview has not been conducted yet. Repertory Grid Technique (RGT) will be adopted to qualitatively and quantitatively examine the relationship between the levels of the rigidity in terms of the construct system related to personal and social orientations and depression.

This paper explores parallels and dynamic interplays between charismatic Christianity (Pentecostalism and Lutheran charismatic revivalism) and traditional understandings of mysterious power as related to an occult sphere in Iringa, a regional capital of South Central Tanzania. I discuss how notions of mystical power as constructive, defensive and necessary yet also dangerous and potentially destructive are adopted into and partly transformed by charismatic discourses on the realm of darkness and related ritual practices of empowerment, rupture and spiritual struggle. Attempting to move beyond a rigid continuity-discontinuity dichotomy I suggest that the relationship between Pentecostal-charismatic Christianity and traditional religious culture may better be grasped in terms of coevalness, intersections and ongoing mutual influence than temporalising difference.

During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function to a more complex, embedded role towards an integration of technological, market, organizational and institutional dimensions (Tidd, Bessant & Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need for not only all members of organizations but also external partners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burnes, 2009, Weick & Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hazy & Ashley, 2011) in what Stacey, et al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include agents driving innovation and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl & Funke, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hazy & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries’ capacity in maintaining sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors---where the movement is generally from the periphery/semi-periphery to the core area---is understood as emerging through fine-grained human interaction. This phenomenon of migration of nurses and doctors from the periphery of the global care economy comprises the larger portion of the international migration flow of nurses and doctors.

This paper focuses on the Philippines as the top-ranking source country for nonlinear interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl & Funke, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hazy & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex and involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change 1. more flexibility in systems and infrastructure so the public could escape 'path dependency' including flexibilisation of large scale urban drainage and sewage systems and water governance systems including water policies and pricing 2. the development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account at the same time as developing and disseminating water sensitive practices in domestic spaces and with domestic technologies so people are not 'locked in' to water wastage in laundries, bathrooms, kitchens and gardens. Enabling people to access alternative water sources and recycle water themselves 4. Attending to everyday practices and values around water including risk and trust. Enabling the everyday activities of achieving 'cleanliness, comfort and convenience' (Shove 2003) while using less water. I argue that we need to know more about the 'meso' level of the water sensitive practices of diverse communities and households to effectively promote and achieve change.

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one's life. The situation is definitely different when one is born into a religious community. i.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one's belief or practice. Spiritual violence may have different dimensions of socialization which may show up as being problematic for young persons.

The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,872 interviewees aged 20-65 years old.

LINNELL, MIKAEL* (MID Sweden University, mikael.linnell@miun.se)

Managing Social Unrest through Risk: Reinventing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmo during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing the calculation about probable futures in the present followed by interventions in the present in order to control that potential future* (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer ’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is managed using the technology of risk.

Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective

The digital divide is a social side effect of the information age. The technological means makes people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the "second level" digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The study of this paper were: to examine the digital divide between two these groups; to examine the connection between digital uses and economic and symbolic capital; and to characterize the link between the digital divide and social stratification. The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,872 interviewees aged 20-65 years old.

Resisting the Neoliberal Turn in Swedish Housing Provision

"Table of Contents"
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing stock has been lost and low levels of social housing is also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. A turning point at the end of the 1990s in the Swedish housing system has been thoroughly deregulated from the 1990s onwards, to ‘gradually become one of the most liberal market-governed housing markets in the Western world’ (Hedin et al. 2012, p.444). The lack of national government interventions and the absence of a national urban policy have led to an increased debate within private sector, tenants’ associations, NGOs, as well as the growth of new social movements based on housing issues. The social movements articulated around housing provision are fighting against the fear of ‘renovation’; territorial stigmatization and the difficulties for young people to enter the housing market due to the increased housing shortage.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this dysfunctional housing market is implicitly providing socio-spatial, gendered and racial segregation within the Swedish urban landscape.

LITS, GREGOIRE* (Université catholique de Louvain, gregoire.lits@uclouvain.be)

Confidence Building and Stakeholder Involvement in Nuclear Waste Management. the “Glocalization” of Social Acceptability

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decisional processes, leading the different agencies to transform their approaches and integrate what they call the “social aspects” (or the “problem of social acceptability”) of the waste into their research agenda.

In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear and social organizations and aims at facilitating the sharing of experience in order to “ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes”.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2007). This global strategy of multi-level strategy that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

RC23-404.3

LITS, GREGOIRE* (Université catholique de Louvain, gregoire.lits@uclouvain.be)

The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?

In most of the European countries that are confronted with the problem of nuclear waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the “participative or deliberative turn" (Lellock, 4th Colloquium, 2008; Barthes, 2008). While technocratic rationales (based mainly on performance assessment and quantitative risk analysis) prevailed until the early nineties, they have proved to be unsuccessful and reached stalemate, leading to a paralysis of decision-making procedures. Experts identified the “societal aspects” of nuclear waste management (mainly the emergence of local contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this “participatory turn” in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the “societal aspects” of high level waste management: it is claimed that the problem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogical account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.

RC21-377.3

LITTLE, STEPHEN* (The Asia Pacific Technology Network, little@stephenlittle.com)

Social Resilience: Learning From Hanshin and Tohoku

Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context.

In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence forces resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations.

However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to remedial intervention, a continuing institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

LITVIN, DARIYA* (Center for Youth Studies, litvin.darya@mail.ru)

Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists

This paper examines attitudes towards education and explores informal educational structures in the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one part of lifelong learning that implies the process of gaining knowledge and skills while individuals interchange with their social environment. Many anarchists tend to criticize prevailing educational structures for their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them into their daily routine. Their rhetoric, deeds, consumption practices and forms of communication are tightly connected (in dialectical way) with those attainments that are distributed by channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international MIPLACE (Memory, Youth, Political Legacy and Civic Engagement) project.

The new IFA system favors students from higher socio-economic origins at the expense of students from lower socio-economic backgrounds in admission to higher education. Significant associations in Chinese (Ochanomizu University,rc60129@nqu.edu.tw)

Inequality, Government Trust and Election Participation

It is a hot topic that how to promote Social transformation of the trust in government and election participation in China. This pattern in China, this paper examines the relationship of inequality, government trust and election participation and why people take part in conventional political participations. The author argues that government trust plays an important role in conventional political participation, but contrary to more traditional models, there is regional disparity of the conventional political participation. In addition, the authors posit that government trust is strongly affected by perceptions of income inequality and social preferences for income inequality not real economic inequality. Using the data of Chinese General Social Survey (CGSS2006), the paper presents Hierarchical Linear Modeling (HLM) on the effects of inequality and government trust on the conventional political participation, controlling for other related factors. Finding indicates that inequality is the strongest determinant of government trust and that government trust has a great effect on conventional political participations.

Locality and the Moral Inequality of MDMA Users in Taiwan: A Case of a Newly Democratized Country

The 'normalization thesis' has been developed to explain the massive increase of drug consumption in recent years, because of the growing popularity of dance/club culture within the young population. Differences of the social and political context that MDMA is illegal and dangerous, while those living in Pingtung County take a relatively detached view from the moral context. In other words, the closer residents are to the centre, the more likely they take an active way to defy the centre; the farer are they from the centre, the more possibly they take a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratization, and their capacity to challenge the moral core is unequal.
Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also a result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Local Institutions and Historical Contingency: Divergent Paths in Local Economic

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi, China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. Specifically, the passive nature of the local state complemented with the bridging characteristics of local associations and the more independent entrepreneurship of local firms in Wenzhou have contributed to a local transition from a semiliberal capitalism throughout 1980s to a market economy coordinated by locally weak but semiautonomous business associations since the second half of 1990s. By contrast, a strong and omnipresent local state together with important business associations and independent entrepreneurship of the local state at the turn of the century. On the other hand, with a dominant local state intervention and the weakened business associations and entrepreneurship, Chongqing transformed from a typical path of planned economies through economic restructuring towards an independent entrepreneurship.

Social Capital, Resilience and Self-Efficacy in Promoting Psychosocial Development Among Senior Middle School Students in Zhongshan, China

Although social capital theory has been widely applied in western countries to investigate positive factors to children and youth's development outcomes, little attention has been made to test the applicability of social capital theory to adolescents in mainland China, especially for those who are after the compulsory education in medium-sized cities. This research aims at understanding whether and how social capital from the family, school, peer, and community contexts relate to the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.

Gender, Law and Legal Professions in China

Based on surveys, interviews, and archival research, this paper attempts to analyze Chinese women's current status and impact in the legal professions. This paper introduces and compares the Chinese pioneer women lawyers and some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict. In the past, being affected by biological determinism, gender essentialism and dualism hierarchy; some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict.
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students’ interaction to school and teachers display significantly positive relation with adolescents’ mental health, behavior adjustment, clear and positive identity, but not with students’ social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students’ behavioral adjustment. Students with more encouragement and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students’ development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediating effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

LIU, YUEFI* (Chinese Culture University, liurainfly@hotmail.com)

Educational Expansion of the Upper Secondary Schools in Taiwan

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government’s push, the policy is seen by many as more than two years too late. The issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP.

Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

Conflicts Between Artisanal Miners and the Government in Mongolia

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of ‘Gold Program’ in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate without any legal permission. Those 65,000-100,000 people, so-called “micro miners” have been working and living without any legal coordination and official registration for the last decade. The Government made an effort to dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the two sides. Remarkably, nationwide survey was conducted on this newly generated community in Mongolian society. Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operation.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

Leisure in an Unequal World: Gender Differences in Australia

This paper traces the development of leisure in Australia along gender lines. Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and provision. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.
Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the "Wild" Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach ('Accelerated Experience-based Co-design' or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients’ eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from 12 to 6 months and halved costs.

Evaluation: An ethnographic process evaluation was conducted, including observations, interviews, questionnaires, and cost and documentary analysis (including comparison with previous EBCD evaluations).

Results: A total of 96 staff members and 63 patients participated in the four AEBCD projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improvement projects were similar to those in traditional EBCD projects. But the element of the intervention that has left both staff and patients feeling energised and empowered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBCD can reconnect staff with fundamental values of care and compassion. Patients, too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare providers are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses; broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the "Holy Word" of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegetes of these texts. The contention here is that the usual "application" of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutics of these texts are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of "theologians as experts" and its combined with an exonerated self-assessment of theologically conservative "Western" biblicism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-modeled religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, and moral form the core of the paper presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

LOMBARDI, DENISE* (Ecole Pratique Hautes Etudes , lombardi.denise@gmail.com)

Embodying Another Self for Western Shamanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical well-being care the two basic constituents through which the argumentation about health is built up in contemporary Western world. Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanistic praxes.

My analysis is focused on how new-shamanism is being developed and conjugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars with (fee with) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient: both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands. The purpose of this paper is to lay special stress on the modalities used by Western adherents (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so-called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach such a different, transitory and unknown cosmology implies the ability to embody another self. It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I study philanthropy and charitable activity in what world polity scholars have called a ‘global moral order’ that champions virtue and positions voluntary associations, including foundations and charities, as legitimate actors for solving global problems. The first part of the study draws upon survey data to explore why individuals join charitable organizations in 35 countries. The second part of the study turns attention to the growth of philanthropic organizations in more than 100 countries since the 1970s. Results from the study find that models of charitable activity are structured in the culture of world society.
and the boundaries between them gradually fade as far as their social perception. Sociological approaches in this area have been aware of these more structural changes expressed by this type of consumption: (i) the therapeuticalisation of performance; (ii) new dimensions of pharmaceuticalisation; and (iii) commodification and consumer culture in the production of new needs. In this communication, we intend to discuss performance consumptions focusing on the subject contexts - particularly labour and academic contexts. The goal is to shift the focus from the mechanisms of consumer culture to the contextual effects. We aim to discuss how social contexts structure individuals’ investments on performance; how they participate in the construction of social consumption needs; how they generate legitimacy to consume; and how they shape performance expectations. For this purpose, it is intended to compare the performance consumptions between two young population groups – university students and young workers (without university education) – exploring the analytical triangulation between consumption, performance pressure perceived by respondents, and shared expectations.

The empirical support for this questioning is based on extensive as well as qualitative data, collected within a study carried out in Portugal on young population (18 to 29 years old).

Human Rights As Political Imaginary

The language of human rights has become one of the most important normative and productive discourses of our time. Along with the struggle for democracy, this quest for human rights resonates with a striking number of societal and political projects; indeed, for some, it is the uncontested emancipatory project of a globalized world. Due to their ineradicable normative nature, however, normative approaches predominate in the human rights field; this remains the case even in the important emerging sociological scholarship.

This paper draws attention to the fact that human rights do not exist as a ready-made object of sociological analysis; hence their sociological “thingness” needs to be elucidated. The paper addresses the type of conceptual and theoretical work that is required to make human rights an object of sociological analysis in order to avoid normative restatements of the origin of human rights in a sociological register.

A model of human rights as political imaginary is proposed and used to constructively review contemporary sociological accounts of human rights. However rather than a mere review, the conceptual framework provided by the political imaginary model makes possible a cartographical approach to the field. Thus the goal of the paper is not simply to catalogue existing approaches, but to theoretically relate them to one another in order to contribute to the development of a more synthetic sociological framework for analyzing human rights.

La Formación De Profesionales Ante La Inequidad. Desafío ético De La Educación Universitaria

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inquietivo. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendiente a la constitución del ethos de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhumana está predominando en la educación, particularmente en el nivel terciario, cuyos efectos en el desarrollo moral de los educandos son preocupantes, si tomamos en cuenta el desinterés que muestran por contribuir desde sus campos de conocimientos a la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades prioritarias en la universidad mexicana es concebir a la ética profesional no sólo como códigos de buen comportamiento sino, además, como un dispositivo intelectual y moral para hacer la crítica a la ausencia de equidad en la distribución de los bienes que la sociedad ha producido. Al observar lo que acontece en los escenarios institucionales y escuchar las opiniones de los estudiantes, así mismo, al identificar las limitaciones explícitas y simbólicas de los profesores en una universidad del noroeste del país, la cual seleccionamos para nuestro estudio, nos permitió apreciar los rasgos de esta problemática de la educación superior, analizada desde la perspectiva de la ética profesional. Crear conocimiento en este campo, hace posible imaginar alternativas para la intervención educativa con un sentido transformador y progresista.

LÓPEZ-CALVA, MARTÍN* (Universidad Popular Autónoma, juanmartin.lopez@upaep.mx)

Socioética y Antropoética Profesional Para Una Educación Universitaria Contra La Desigualdad

La modernidad que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para terminar los males del mundo (Ugalde, 2013). Por el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apostó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En la vertiente marxista porque la ética era un elemento de la superestructura ideológica que justificaba el statu quo mientras que el modelo socialista construiría la igualdad cambiando la estructura socioeconómica a partir de la eliminación de la explotación que implicaba la propiedad privada de los medios de producción.

En este contexto, la educación universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, lo que produciría profesionales que por su práctica promoverían la sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la imposibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la triangulación entre el statu quo y las desigualdades sociales que las sociedades sostenidas en la razón no pueden eliminar.

A partir del principio fundamental de “exclusión de la exclusión” que sustenta la socioética y la antropoética que conforman la ética planetaria que propone Edgar Morin, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality

In previous works (Fachelli, 2009; Fachelli & López-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2010, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. With in this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called “structural and articulated typology”: we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into “m” factors. Then we apply cluster analysis to classify individuals into “key” groups or “types” on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to “inequality” level. The question that arise is how generate a composite indicator, that we call “social distance”, based in multidimensional measure taking into account the principal factorials components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will show how to calculate the results based on the analysis of the Labor Force Survey of Argentina in 2012.

From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain

For the past ten years, the management and promotion of circular migration flows has been a pivotal element of migration management policy in Spain, particularly of low-skilled workers in sectors such as seasonal agriculture and hospitality. It was commonly considered that this type of international mobility allows migrants to adapt to receiving countries labour market needs without suffering the social costs of permanent settlement. Additionally, circular migration is regarded as a beneficial form of international mobility for migrants themselves and countries of origin. The aim of this paper is to analyse the Spanish policies developed in relation to the seasonal migrant workers for agriculture. We try to answer two key issues: (a) how Spanish policies regarding seasonal workers have been designed (b) and what purposes they responded to. We take into account three dimensions of the policy making: (a) national labour market demands (b) international relations framework (c) and the legitimization and meaning of these policies in the domestic political arena and economic relations between enterprises, trade
Cette communication se propose de présenter cette expérience virtuelle que les adolescents ont relatée et qui nous permet d’expliquer le processus de management des acteurs et des actants de la sécurité. Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970’s, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000’s.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c) actors and multi-level governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to interpret security as complex technology – in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combination of different cause-and-effect effects – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, ever shorter turnaround times and increasing economic competition on different levels, we want to explore how it is possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

(1) Differences in educational background and professional views on security
(2) Differences in organizational backgrounds (bureaucracies, free-lancers, etc.)
(3) Differences in institutional backgrounds (ministries, security services, airport management)
(4) Differences between passengers and participants, staff

Each of these differences presents special challenges, inhabitants various risks and is met by distinct sets of practices that buffer them in a way that the security processes do not collapse. Therefore the aim of our contribution is also to discover how these special forms of managing differences are interconnected and depend on, but also irritate each other.

LORENZ, GEORG* (Otto-Friedrich-University Bamberg, georg.lorenz@uni-bamberg.de)

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

The role of teacher expectations in pupils achievements has been heavily researched during the past 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects on learning opportunities and on the pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

However, despite the fact that there is evidence speaking against discrimination in grading or track assignment against pupils with low socioeconomic background and/or immigrant background on pupils’ academic future. Another line of research strongly indicates that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of “lost decades” stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than those to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created...
regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regular employment. As the latter effect is particularly strong for women, we cannot draw any evidence for potential gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general "adaptation problem" referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations — the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) — have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current "post-Civil Rights era". I begin with an overview of what I call the "civil rights mode" of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a "civil liberties mode," a race-neutral or "colorblind" strategy that has recently gained favor in contemporary American advocacy politics.

My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining "primitive" homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know what cemeteries are far more than sequestered repositories for the deceased. Cemeteries are far more than sequestered repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represent and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove. A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

LOVEMORE, NDILOLU* (Independent researcher, lodizah@yahoo.co.uk)

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The "small house practice" is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of social/official marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

LOW, KELVIN* (National University of Singapore, socaley@nus.edu.sg)

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urban environments regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociality in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.
This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Lubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants’ willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, paradata on time and changes of answers were collected. The responses and experiences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents’ performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.
This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of highly supportive for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood. The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes as consistent socialization perspective. The study also suggests that when the parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that occur along the subsequent effects of school track, academic achievement, class interaction, work experience and participation in community activities. Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literatures have conceptualized women’s involvement in family businesses, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective. Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between patriarchal and egalitarian settings. The women’s active roles and their adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneurs’ entrepreneurial capability, the nature of their specific industry, and family relationships. Wives’ adaptive entrepreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a stronger patriarchal culture, particularly those in an extended-family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions. The observations further reveal that wives’ entrepreneurial identity is shaped by the patriarchal cultural values and work within the context of day-to-day organizational routines, which can increase their self-empowerment and improve women’s agency. However, lack of opportunity to cultivate their entrepreneurship asserts their gendered identity and reinforces marginality.

Communication As a Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. The real contributions of social networks to the organization at the internal level are not clear enough because it is consider that the commercial issues tend to prevail. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization? In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a “brand new” type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others’ sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen for this particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research ethics and safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers). Length of time of researcher’s immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research in this field and in sexual risk-taking behaviour, strengthening ethics in methods and research approaches, and looking for more ways in understanding the AIDS epidemic through a gender perspective.

The Beauty Of Advertisment. Searching For Ultimate and Proximate Causes In Cross-Cultural Study

The presentation summarizes the results of empirical research conducted simultaneously in Poland and in the United States in 2013. The main research questions were related to taste for some aesthetic forms used by the advertisers. 240 subjects in both countries were asked to fill in self-report questionnaires concerning 45 different images. All images were chosen on the basis of a content analysis of five Polish color magazines addressed to various audiences. Theoretical underpinnings of the presented study stem from the works of Pierre Bourdieu, but they are not limited to his perspective. The other important perspective is evolutionary theory informed by modern biology. Thus, presentation focuses on both proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste.

The main research hypothesis states that individuals with folk cultural capital (inhabitants of rural areas with low educational level, and low economic level) exhibit preferences described by sociologists as “low” (i.e. visual expressions drawing on the so-called “Hudson River Biedermeier” style characterized by realistic and emotionally marked landscapes). Such preferences resemble to a large extent the “universal aesthetic predispositions” discussed in the evolutionary theory. These preferences can be also referred to as ‘conservative’ (or ‘collectivist’). However, according to evolutionary theory, these preferences should be found across all social strata. Contrary to this belief, building on Pierre Bourdieu’s class-based understanding of taste diversification, I presume that a natural aesthetic taste is related to folk-type of cultural capital. In other words, my intention is to verify whether the aesthetic universals as described by evolutionists and cognitivists are subject to diversification based on cultural capital.

LUDWIG, SUSANN* (Centre for African Studies Basel, ludwig.susann2@gmail.com)
Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Sama- ko with more than 80,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment.

Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academics cope with a situation characterized by uncertainty and unpredictability?

Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban, migrations, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people migrated within 25 km from their villages. Social mobility through migrations and migration for work was hindered. After the ban was lifted in 1978, hordes of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-elimate from “marrying up.” However, facticing these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

Power without Representation: The Coherence and Closenesses of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain the status of these clusters, they must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such Principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we review the membership of NAS and its executive committee, then the entire NAS, its executive committee, and its three national groups. This analysis shows that even though NAS is highly coherent, it is excessively endogamous: rather than reflecting the diversity of North America, it only reunites a select group of U.S. or pro-US leaders, members of transnational corporations and partisans of free trade. Then, we focus on the agendas of the NAS’ annual regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily influential, it does not represent the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a power founded on opinion, network, very powerful but scarcely representative. Although it is extraordinarily influential, it does not represent the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a power founded on opinion, network, very powerful but scarcely representative.
**The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars**

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of 'boasting' in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

**Social Science and Alienation In School**

School can in many ways be seen as a place distant from life in general: in classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold. Social science class ought to be one occasion where life in school became more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

**Employee Representation in the German Craft Sector – a Neglected Form of Industrial Democracy**

The German Crafts and Trade Code ("Handwerksordnung", HWO) with its strict rules for market access is often regarded as a pure anachronism and is actually put into question by the European Commission who sees it as a barrier to the free movement of goods. However, the German regulation of craft is also an example of industrial democracy as since the enactment of the Crafts and Trade Code in 1953 employee representatives are part of the regulatory bodies, the chambers of craft and in particular the vocational training committees. Since this time employee participation has been further developed and democratized.

The paper will analyse the historical background of these developments and carve out the strengths and shortcomings of employee participation in the autonomous regulation of German craft sectors. We will discuss the impact of employee representation on setting standards for the sector in general and vocational training in particular. On the basis of this analyses the paper will draw conclusions regarding the viability of this form of participation in a context that is increasingly shaped by rules of liberal market economy. Finally, it will ask if employee representation in the German craft sector can be a model for other sectors and countries.
Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

**LYTKINA, EKATERINA** (National Research University, ekaterina.lytkina@gmail.com)

**Transformation – Reality or Simulacrum?**

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

**RC36-629.4**

**LYTKINA, EKATERINA** (Higher School of Economics, ekaterina.lytkina@gmail.com)

**Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context**

The paper is aimed at examination of the difference of nature and characteristics of alienation and and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaningfulness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaningfulness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logsics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

**LOFQVIST, LOUISE** (Linnaeus University, louise.lofqvist@lnu.se)

**Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy**

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

Reconsidering the within-Country Digital Divide and the Global Digital Gap: Comparing Students’ Daily Life Experiences with Information and Communication Technologies from 40 Countries

The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies of the role of digital divides. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

MAASS, MARGARITA* (UNAM, mmaass@labcomplex2.net)

Cybercultur @ and Cultural Management For Development

México is a multicultural and mega-diverse country. With this richness and abundance in natural and cultural resources, Why Mexico is a country with a high index of poverty and low social development? How could we work in terms of community development? This paper focuses primarily on a proposal for the development of a thinking culture development as a large system formed by multiple sub-systems. We argue how Sociocybernetics let us understanding and explaining the culture as an ethno-ecosystem. In this proposal, Central System is the culture for development, and each sub-system is related and complemented with each other in building concrete procedures of observation and analysis units, as the elements of a larger system analyzed from a constructivist operational methodology. Specifically each subsystem may have different value and processing degree, and they are part of “culture for development” system. Each subsystem invites communities to making decisions and taking actions with a methodological model by the Sociocybernetics proposal and from a cybercultural perspective.

Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what is called intercultural education in Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, in spite of the organization’s goals, it has failed to scrutinize the idea of “interculturality” in terms related to internal diversity or issues connected to social justice even and Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.

Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle-class and its perception of the socioeconomic elite. The global emergence of the middle class is also contained in conventions (Bourdieu 2010, Klein et al. 2011, Franco et al. 2011, Dobbs et al. 2012, Ferreira et al. 2012, López & Ortiz 2012, Oliveira 2012, Chunling 2012) has created a renewed interest towards “new” middle classes in global sociology due to its rapid growth and the socio-political challenges that this poses. How do those who belong to the middle classes in emergent countries feel and think about one another? In the wake of the more salient expression of world inequalities, the socioeconomic elite – i.e. “the 1%” – does a perception of injustice, discontent or critique emerge towards the elite? How does that happen – or not? Our team conducted a study using an experimental methodology based on games that replicate other exercises applied by social scientists through surveys in different countries: “unknown persons” and “dictator” games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was located in three cities of different sizes in Chile. In each city, six simulation games were conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes, reproducing or challenging inequalities. The paper will contribute on topics that are relevant to stratification in the context of globalization, such as different discourses in middle classes, their feelings, perceptions of justice/injustice, discontent or critique towards the socioeconomic elite.

MACAMO, ELISIO* (University of Basel, elisio.macamo@unibas.ch)
Science and Technology Studies, Africa and the Long Shadow of Unspoken Assumptions

Science and technology studies have injected new blood into social theory over the past 20 years. Their assumption that the workings of science and technology are a good guide into the constitution of (modern) society has played a central role in sharpening sociological thinking over the notion of modernity and its analytical relevance in research. A paradox underlies the importance of science and technology in society. On the one hand, STS seem to refer to a very specific type of society, namely highly technological modern society. This would seem to rule out the possibility that STS might have anything to say about societies which do not fit this description. On the other hand, however, and because STS produces social theory, i.e. a vocabulary designed to make the social world intelligible, it can lay claim to the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a “ceteris paribus” assumption – legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

Is the Concept of Patriarchy Useful to Comparing the Gender Relations through the World?

Is the concept of patriarchy useful to understanding and comparing the gender relations throughout history and the world? To answer this question affirmatively we must first recognize that patriarchy not only functions as a system of male domination that specifies itself upon all human societies but instead, by adapting Erving Goffman’s concept, as a specific form of “gender arrangement”. From this standpoint two things can be shown. First, that gender arrangements such as those that exist within the European Union are not patriarchal arrangements but post-patriarchal: they are the result of the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a “ceteris paribus” assumption – legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

Women Appointments and Political Participation in Brazil

This work aims to study the change identified in the women’s participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be emphasize the kind of change’s patterns followed in what regards women political appointees by two different governments in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This study uses the social-democracy theory to analyse the social sphere as main focus of public politics and reforms, as well as to consider it as a movement of women’s inclusion in politics and a redefinition of their role. Due to cultural history of women’s inferior role in modern politics, this study aims at answering the question: how the effectiveness of these factors might signify a relatively change in the participation patterns.

Longevity, Leisure and Landscape

This work seeks to develop a critical reflection on leisure from the interaction with natural and cultural landscapes, declared patrimony of humanity, in the city of Rio de Janeiro, in the neighborhood of Copacabana. This site has the second highest concentration of seasonal visitors to Brazil, considered by Municipal law “preferred tourist destination of the third age.” The theme will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity.

The methodology presents the translation of perception of 60 to 100 years of elderly residents at the site, by means of semiotics. On the one hand, it will be emphasize the kind of change’s patterns followed in what regards women political appointees by two different governments in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This work aims to study the change identified in the women’s participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be emphasize the kind of change’s patterns followed in what regards women political appointees by two different governments in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This study uses the social-democracy theory to analyse the social sphere as main focus of public politics and reforms, as well as to consider it as a movement of women’s inclusion in politics and a redefinition of their role. Due to cultural history of women’s inferior role in modern politics, this study aims at answering the question: how the effectiveness of these factors might signify a relatively change in the participation patterns.

Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security, climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity – may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, reproductive health and sanitation, smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women’s role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and in the local communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – if at all. Solving this puzzle requires the trajectories of state-movement interaction to be conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation. Existing social movement theories of state-syndicalist interaction differed from the more hierarchical worker organizations putting current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crisis-torn syndicalist unions deferred, coopted or adopted the democratization claims of the syndicalists reveals the trajectories of state-movement interaction to be conditioned by processes of global capitalism and the specific of local structures of dependency and exploitation. Existing social movement theories of democratic movements have been to both enrich and reconfigure the light of this long-term perspective. In addition, this study reveals how the movement’s rights claims to economic democracy (both inside and outside the workplace) un-of this long-term perspective. Life course sociology corresponds to an area of study traditionally interested in the analysis of vulnerability during early and middle adulthood careers. Yet, given an increasing attention over the last occupational period in Western countries, the current article aims to analyze the vulnerability confronted in late careers, focusing specifically in Switzerland. To this end, a new exploratory schema of vulnerability based on seminal life course notions and an inclusion/exclusion theory, is proposed for the analysis of late careers. Moreover, another aim corresponds to analyze how different life course determinants -such as life experiences in different domains and positional factors- impact the likelihood of confronting, or not confronting, social vulnerability during this occupational period. Longitudinal data comes from the Survey of Health, Aging and Retirement in Europe (SHARELIFE). Used methods are cluster, optimal matching, and discrete regression models. Results allow concluding first that the proposed conception of vulnerability based on an inclusion/exclusion schema has an acceptable empirical support. Second, social vulnerability is likely to be conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation during late careers depends mainly on early life experiences in family and occupational domains, as well as the positional status of workers.

MAEDA, TOMOHIKO* (Meijo University, tompeda@meijo-u.ac.jp)
The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, ‘Legal consciousness of Japanese’, in 1967, theories of legal consciousness and legal culture have kept the issues of scholarly controversies in various fields of socio-legal studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints for socio-legal studies on globalization and local adaptation. I would argue that theories of legal consciousness and legal culture serve for studies on globalized law and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep an eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal adaptation to globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, they would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories. I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organisational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulated environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using material from several years of research, this project focusing on sense-making processes at sector and organizational level, we can show not only that there is new discourse related to labour-related issues but also how this discourse is reflected by evolving employment policies. Overall, ‘market accountability’ puts long-established professional concepts under strain. However, the ‘sense-making’ is different between

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegat-
ed to women to sustain its members. Such model had strong influences on women and families and has one of the lowest fertility rates all over Europe, and
will be suffering in the next years from an increasingly higher old age dependency
ratio, thus worsening the female care overload. Nevertheless, Bologna is a best
practice in this worrying scenario. Thanks to a strong social democratic tradition,
local welfare by between public and private has been able to absorb large propor-
tions of women and it has been the first to introduce childcare services in the 60s,
while promoting a wider support for dependency in addition to the national provision.
The result is that Bologna has the highest female participation rate to labour mar-
ket in Italy. However, the financial crisis and the consequent reduction of public
funds have put in question the sustainability of Bologna's model in recent years.
In the present paper, we will show results from a series of 8 focus groups in-
volving 34 working women conducted in Bologna during 2013, which have been
selected because they have care responsibilities. Stemming from an investiga-
tion of both individual and social factors, the analysis will focus on the work-life
balance of women, assessing the role of their partners, their family and the local
welfare system in it. The comparison between women with childcare duties and
women with elderly care will also show how the overload of women in their 50s
will be the real challenge for Bologna in the next years, as long as they combine
the roles of grandmothers, children of dependent elderly and worker.

Possibility of Area Management Organizations for “Bulwark”
Against Neo-liberal Urbanization – Through the Cases of Public
Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have
sprung up to promote urban development in the new contextual situation. In this
presentation, a new structure, “Public Development Authority” (PDA) is treated,
which has mainly developed in west coast of US, and is getting attention in terms
of neo liberal urbanization. PDA is quite unique-style entity that is established by
cities (municipalities) as special purpose government for promoting specific pur-
pose (such as area management, or historical and business management of his-
torical market), equipped with business specialist-staffs, and also it is governed
by volunteer citizen board members. “Half private, half government” entity is run
or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal
urbanization process. But considerable PDAs, for securing neighborhood’s core
and culture, are trying to build the devices for helping local business owners and
individual citizens mentally and physically, as of Seattle Chinatown International-
ad fora ( IDEA Space) project for assisting local small businesses, using visioning
method. These trials are expected to be effective “balkwark” against diverting
impacts of neoliberal developments. This presentation concretely gazes at the
PDAs’ efforts (and the like’s of area management organizations) to keep local
core of cultures, local “life economy” with concrete devices from the stand
point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall
at the PDAs’ efforts (and the like’s of area management organizations) to keep
will be the real challenge for Bologna in the next years, as long as they combine
the roles of grandmothers, children of dependent elderly and worker.

Development, Modernity and Nanotechnology: The Challenges Of
a Time

This paper seeks to extend existing knowledge about gendered transition to
family formation and parenthood by looking at whether and how public policies
influence fertility. Our research is part of a larger international project on gender
equality and low fertility in postindustrial societies. The theoretical framework is
designed to explore the ways in which family- and gender-role norms, institu-
tions, and economic context intertwine with the family formation intentions and
behaviors of young adults. We focus on two sets of social norms (family- and gen-
der-role norms) in influencing individuals’ intended and achieved fertility. The two
sets are viewed as separate constructs, the first dealing with the definition of the
“nuclear” family, and the second dealing with the appropriate roles of men and
women in the family and in the public sphere, especially the labor market. Our
analytical model seeks to attribute equal explanatory power to men’s as well as
women’s opportunities for engaging in positively viewed activities in the spheres
of family and work. In our empirical analyses we rely on a mixed-methods ap-
proach. In this paper, we combine a quantitative analysis based on data extract-
ed from the Swedish Young Adult Panel Study on attitudes to work, family and
gender roles and their possible impact on family formation (intentions) among
Swedish young adults in the first decade of the 21st century, with a qualitative
analysis of narratives in in-depth interviews (N=80), carried out with women and
men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings
for the qualitative part indicate that young adults view Swedish family policies as
good even when having little first-hand knowledge of them. We discuss similari-
ties and differences across gender and family status, as well as the implications
of our findings for research and for policy design.

Instrumental Action and Rhetoric: Framing Rational Action on
Language Field

The paper makes a theoretical reconstruction of a model for instrumental ac-
tion in language, using the notion of rhetoric. It takes persuasive language to be
constitutive of instrumental reason, and analyses the possibility of bring to the
theory of social action some concepts from linguistic field. The first step estab-
ishes an analogy between instrumental rationality and rhetorical movements like
projection of future, or reconstruction of past. In those operations we use rhetoric

In order to create the persuasive frames of reality and use them for self-persua-
sion and for persuade other people to go into a specific course of action. Since
deliberation is a problem of collective action and rationality we can understand
rhetoric in terms of building a new descriptive model of rationality, in other
words, we can describe rationality as a rhetoric operation: it consists in giving
different degrees of truth to the information available and then create conditions
for choosing a specific way. This approach builds a critical view to the notion of
information as objective data collected by rational actors, and points to the delib-
eration as a cognitive way to deal with framed discourses about reality. Based on
this model we can criticize some analytical problems from the theories of rational
choice concerning collective action, here represented by M. Olson’s paradox and,
in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the con-
cept of optimal amount of gathered information. The concepts of rhetoric give to
the theory of rational action a key to understand how in empirical situation words,
and sometimes just words, are enough to create action.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psycho-
logical studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batterers, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculcation, and the role state standards are widened, forming a complex network that involves both the transna-
tional regulation, technical regulation and private self-regulation to replace the state monopoly on the conduct of Law loses
tional sector tend to make room for a complex network of regulation and governance, that involves a plurality of state and non-state actors.
Law goes through a time of transformation in which the influence of transna-
tional regulation, technical regulation and private self-regulation to replace the state standards are widened, forming a complex network that involves both the traditional mandatory state standards, provided of sanction, and the new mani-
festations of Law, composed of non-mandatory rules, the soft law, disconnected from the legislative process. The state monopoly on the conduct of Law loses space to be replaced by new forms of social regulation of social actors (companies, institutions of standardization and certification, NGOs) and to the conduction of decision-making
processes, with new forms of governance.

MAHI, LARA* (Université Paris Ouest Nanterre , laramahi75@gmail.com)
Sentencing : ‘health Determinants’ of Criminal Sanction

Des travaux en sentencing ont mis en avant les inégalités face à la sanction pénale. Que l'on soit une femme ou un homme (Mary-Portas, 1996 ; Cardi, 2007), que l'on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l'on ait un travail ou non (Herpin, 1977), ou encore, que l'on ait un nom à conso-
mant ou à étranger ou non (Jobard, Névanen, 2007), on n'est pas égaux face à la sanction pénale.

En matière de santé, la question de l'impact de l'état de santé somatique des justiciables sur les jugements est systématiquement étudie à profita de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laberge et al., 1995 ; Carturetxe et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l'existence de formes de sur-penalisation des malades. Y a-t-il un lien entre l'état de santé des justiciables et la condamnation à qui laquelle ils sont condamnés ?

Après avoir observé 412 procès correctionnels au tribunal de grande instance de Paris, nous avons analysé statistiquement les liens entre « état de santé du justiciable » et « condamnation ».

Nos résultats font état d’un contrôle particulièrement coercitif, par l’institution judiciaire, des justiciables malades faisant part d’une absence d’engagement dans un processus de soin. Au cours d’un procès pénal, ces derniers sont sur-con-
damnés à de la prison ferme et à de plus longues peines.

Au dela de la chaine pénale, ces résultats nous inviter à repenser la définition que donne Parsons (1951) des rôles du malade et, plus largement, à interroger les formes du contrôle social qui pèse sur les malades.

The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under them individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social con-
struct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and condi-
tions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collective actions and social enter-
preneurial communities. We should better know these collective actions in order to differentiate their actors at the same time social activists and entrepreneurs. My second hypothesis concerns the role of the social fabric of solidarity economic initiatives. In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action de-
vices as developed by social actors in France. These alternative collective devices and their acting and learning devices are developed at the very heart of co working

OLIVEIRA, SAULO BARBARA DE (Federal Rural University of Rio de Janeiro)

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the under privileged neighborhoods, urban sanitation is on par with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants, Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace's standard of living a challenge to manage. Due to this inefficiency, most the city's periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In favelas, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaks out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Given the precarity started in the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

MAHNE, KATHARINA* (German Centre of Gerontology, katharina.mahne@dza.de)

Contemporary Grandparenthood in Germany: A Perspective Of Social Inequality

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociology of ageing, the study aims to demonstrate the usefullness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualised in the form of unequal access to the grandparent role (e.g. the transition to grandparenthood). On the other hand, social inequality is conceptualised in the form of unequal outcomes connected to grandparenthood (e.g. levels of subjective well-being).

Based on data from the German Ageing Survey (DEAS) and applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced as prospective grandparenthood does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grand-children for grandparental subjective well-being are unequally distributed according to educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued societal position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

MAHON, EVELYN* (Trinity College Dublin, emahon@tcd.ie)

Reconciling Work and Motherhood: Class and Access to Childcare in Dublin

The 'motherhood penalty' is invoked to explain the lower labour force participation of Irish women. Mothers with low educational levels have even lower participation rates referred to as an 'education penalty'. This paper will explore the way these penalties are socially constructed in an Irish childcare policy context. Funded by FTP FLOWS, separate focus groups composed of mothers with third level education and those with second level education were conducted in order to compare their respective orientations to work and their reconciliation strategies. Mothers in both groups articulated a strong intrinsic, social and instrumental orientation to their work and a distinct worker identity, separate to motherhood. As working mothers they had all overcome the first penalty.

Mothers with third level education earned incomes that enabled them to commence childcare for children aged (0-3) using private nurseries which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800-1000 euros a month fees. This explains their lower participation rates.

The exceptional mothers in our focus groups with low educational levels were facilitated by getting a childcare place in a local community crèche with fees of 95 euros a week full time and pro-rata reductions for part time. (Only 30,000 parents nationally have access to these). Mothers without a childcare place (if married) relied on their unemployed partner to provide childcare, or both parents worked part time. Grandparents or siblings also provided care. These constitute a mixture of reconciliation strategies not easily replicated. Childcare policies in a neo-liberal society can considerable reduce equality of access to childcare places and offer an explanation for the education penalty. Overall participation rates are unlikely to rise unless this inequality is addressed.

MAHON, RIANNE* (Balsillie School International Affairs, rrmahon@rogers.com)

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

The OECD Working Party on the Role of Women in the Economy (WPRW) provides an example of the ways in which women are constructed as distinct from men and as representing a special role in the economy. While the OECD has a long history of research in the economic field, there has not been a systematic approach to the role of women in the economy. The WPRW was established in 1997 to address this gap in the organization’s research agenda. The purpose of this paper is to examine the construction of gender discourse in the WPRW and its impact on the organization’s research agenda.

The WPRW has focused on three main areas: women’s employment, women’s entrepreneurship, and women’s representation in the workplace. The organization’s research has been guided by a gender perspective, which recognizes the different experiences and needs of women and men. The WPRW has worked to promote gender equality and to address the challenges that women face in the labor market. The organization has also supported the development of policies and programs that promote women’s economic empowerment.

In conclusion, the OECD Working Party on the Role of Women in the Economy is an important example of the ways in which gender is constructed and used in economic research. The organization’s focus on gender perspectives has contributed to a better understanding of the experiences and needs of women in the economy. The WPRW’s work has helped to promote gender equality and to address the challenges that women face in the labor market.
The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1996, in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ aid programs. Although ROWITE was disbanded in 1998, its concerns were, in part, picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes

Annsofie Mahrs Träff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describe physical activity in on paper and asked about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do not realize that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

Global Arenas of Knowledge: Perspectives from the Brazilian Case

This paper aims to present the major guidelines of the project 'Global Arenas of Knowledge' and its first results. The project involves theoretical work to reformulate the Sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished third world, and where knowledge institutions are well established: South Africa, Brazil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic work, interviews, documentary work and quantitative methods of citation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain. I discuss if these are domains that are more closely related to the proposed session: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)

Legislation and Its Discontents: Consequences of the Peruvian Household Workers Law

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fuelling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the capital yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourist industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago, with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital’s growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)

When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fuelling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom. This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Limoño society.

I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar ten years ago, through legislative programs that aimed to implement minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privy to capital’s growth and yet [arguably] further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limaños. My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limaño homes, with serious consequences for a future, more egalitarian, and ‘modern’ Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of Lebanese took to the streets around Beirut to demand the resignation of the government of Prime Minister Siniora. The Sabb癣a movement accused the government of being behind the assassination, or to flag out their alliance with it and accuse the Christian political parties of being behind the assassination, or to flag out their alliance with it and accuse the government of being behind the assassination. Activists from the political opposition outside the country also condemned the government of being behind the assassination, or to flag out their alliance with it and accuse the government of being behind the assassination. Activists from the political opposition outside the country also condemned the government of killing Hariri. In the following research I study how the political protests that followed the assassination of the former Prime Minister Rafic Hariri turned into sectarian violence that has been framed as “Sunni versus Shiites”. More specifically, I look at the shift in the political salience and mobilisation of political, as well as national, identities. I have used official records and newspaper archives in order to compile a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analyse this dataset in order to depict the shift in protest from political to sectarian violence. A messo-level analysis of coalition formations is carried out using social network research techniques. The empirical results show that the Hariri
assassination was a “political earthquake” that shifted the attention of the Leba-
nese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of
the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to
be the main ‘carer’ in these circumstances. A dedicated income support payment
for some Australian carers has been available since the 1980s. Unlike many other
forms of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fio-
nia Williams’ analysis of the claiming and framing of European care policies (2010),
we argue that changes to Australian carers’ income support have developed with-
in competing frames of social justice and social investment. The social investment
frame, which prioritises paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of income support, such as unemployment benefits, to underpin the
supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the conflicting pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people for
whom they care.

MAKI, YOKO* (Hitotsubashi University, maki.yoko@nifty.com)

Middle Class Women’s Work and Childcare in Paris

Today, France draws attention from neighbouring countries because of its high
birth rate. French women are also relatively active in their labour work participa-
 tion. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to
the issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare is the registered childminder, the so-called
“assistants maternels”, and not nurseries as in Sweden.

According to a French national report on childcare, in 2011, 37% of children
under three whose parents worked full time were left with registered childmil-
ders who were approved by the local authorities and received children mainly
for sole parents. However, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Japan’s economy entered a long period of stagnation, known as the ‘Lost Two
Decade,’ after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
about Japanese self-consciousness and its roots of Japanese youth. But we can get another figure of
Japanese youth from the outcome of the research of Japan Youth Study Group,
conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
se1, and feel senses of themselves. They are anything but fragile. By the way, one
merit of comparison of three or more time point is that we can distinguish
guish between temporary trend and long-term trend. For example, the ratio of re-
spendents of feeling sense of oneself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfi-
cially was increased from 2002 to 2012. These means long-term trend of diversi-
ation of the self. On the other hand, the ratio of loving oneself had increased
from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What
causes for these? We can consider two matters. First, the cultural-social change
underpinning long-term trend, for instance, the diffusion of mobile media and
social network service accelerating the diversification of the self. Also, we need
consider what happened in 2002 (about temporary trend). We try to explain
the structure of self-affirmation by comparing the determinant and related item of
self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

MAKITA, HIROMI* (University of Tokyo, hiromimakita@hotmail.com)

A Method to Construct the New Framework for the Equitable
Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory
of “Water War”? “Water War” in 2000 was an anti-privatization movement towards
the public water service and it changed the water law and forced a private company to
withdraw.

The goal of the social activists who had played a main role in “Water War” was
to improve water resource accessibility. However, the success of “Water War” did
not solve the water resource problem in Bolivia. Does it mean that the other issue
was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the
water situation not mentioned. In order to investigate a real driving factor that
had caused the problem, analysis of the Water War should be revisited from dif-
ferent angle. A water shortage is classified into two factors: “Real scarcity” and
“Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of
volumetric quantities, incurred mainly from population growth, industrialization
and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the
exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards manu-
factured scarcity, it prevented its focus from real scarcity, which is also pivotal
in order to solve the water resource problem. This study uses the original data of
fieldwork and local newspapers from three times of fieldwork by the author. I
will use discourse analyses to expose the process of why social activists chose to
focus on “Manufactured scarcity” in order to gain the civilian support. I present
the importance of recognizing the each characteristic of water scarcity to improve
the water resource problem. This research intends to provide a new framework
for equitable water distribution.

Pathways Of Aging: Old Women’s Gendered Narratives and
Cultural-Historical Locations

Pathways of Aging: Old Women’s gendered narratives and cultural-his-
torical location

Sociology of old age has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a
lifetime’s experiences. In this paper I explore the themes that old Mexican women
themselves identified as important in shaping their pathways towards old age. I
do so by employing a thematic-narrative analysis of multiple in-depth interviews
with older women aged 50 to 85.

Throughout their life course the women’s personal biographies, their current
social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My
interest is to stress the importance of structural and personal mechanisms that
underpin the socio-cultural construction of aging and old age; the relation be-
tween the objective reality and subjective experiences of aging. By making refer-
enences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters. The women's -formal and informal- participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

The Complex Adaptive Systems Approach. a Socio-cybernetic Reading  
Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal character, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia. We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Socio-cybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that system and complexity are primarily attributes of an observer, an operator of "punctuation" in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an "invented reality" (von Foerster) and the system that simulates the real system would be doubly so. CAS-epistemic limits become more evident in self-reflexive systems that are able to observe themselves, "self-referential" (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg  
Not No Place is a collage of visual and written fragments on Johannesburg—historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections. Bettina Malcomess and Dorothée Kreuzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg. Not no Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city - it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors' personal narratives and ruminations on their ongoing Fragments of Spaces and Times captures the city well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Mattering Difference Cervical Cancer, HPV Vaccines and Global Health  
Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the "developed" world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the "developing" world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of "anticipated" cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia  
Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even "normal". The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinised in this context taking into account previous experiences of military’s involvement in disaster management.

Transnationalization of Labor Mobility Development Trends and Selected Challenges of Its Regulation

Ever since the early development of the industrial mode of production paid employment has been strongly structured by regional or at least national mobility structures until the end of the 20th Century. Ways to the workplace were primarily daily oscillations; spatially varying work assignments concentrated on relatively small groups of experts and construction workers. With the internationalization of value chains, migration and organizations, this picture changed dramatically. Labor mobility becomes transnational for a constantly growing share of the working population. This concerns inner-European labor migration as a crisis-induced labor migration, as well as contract and subcontract work, but also the growing cross-border mobility within profit and non-profit organizations as well as the increase of locally recruited employees who have the nationality of the “parent organization”. In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and participation conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research foundation (DFG) on cross-border personnel mobility in organizations.

MALICK, MIRA* (Waseda University, lequin@ruri.waseda.jp)

Leisure based youth subcultures are often depicted and best remembered in the common imagination as the material manifestations that they occupy at the height of their popularity. The styles, behaviors and symbols of these subcultures are often thought to reflect how participants feel, what they value and the lifestyles they desire. Oftentimes dismissed as mere ‘fashion fads’ or instances of deviance, subcultural participation is characterized and reduced to a passing period of youth to be outgrown or resolved as one moves into adulthood. Visual Kei refers to an aesthetic movement in Japanese rock music as well as the subculture surrounding the consumption, production and practices of these subcultures.

To this end, this paper will compare the difference between each generation of the subculture by focusing on subcultural symbols and how the meaning attached to these symbols in the form of dress, discourse and performance transforms over time. It is suggested that these symbols form both the basis of a common shared history that links the members of different generations and at the same time functions as a resource for new members to utilize creatively, allowing for the continuation of the subculture, albeit not without contestation according to their socio-demographic characteristics. Findings show that socio-politically constructed social vulnerability index (SVI) is constructed and then the respondents are classified according to their socio-demographic characteristics. The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration-decision by the disaster victims is not really independent; it is a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and if yes, which factors contribute to larger consequences – exclusion of some regions, communities in the region and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities.

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and particip-action conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research Foundation (DFG) on cross-border personnel mobility in organizations.

Contested Proprietary Technology: In Search Of a Non-Proprietary Technology in Agriculture In India

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improvement in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development. Exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems in raising questions of equity, sustainability, justice - distributed as well as cognitive. Further, productivity based on green revolution strategy has...
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflict of interest, ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

**Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan**

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area; listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

MAMADA, ROBERT* (University of California, Irvine, himamada@hotmail.com)

**A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring**

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

**The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel**

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendent to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo financius”. In the last years, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in Israel, analyzing the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

**Social Housing in Sustainable City**

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income, by the use of the instrument of regularization involving, in the Brazilian case, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the research on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program’s goal was to serve 364,000 homes, but reached in fact 46 000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregularity, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey proved a level of socio-ecological tension in this region of explosion even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adopted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conception of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

• establishment of unified federal unified information system on nature conservation and protection;
• introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
• provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
• organization and implementation of the environmental education of population.

New Ethics of Russian Ecologists: Myth or Reality?

New professional ethics is becoming important in the conditions of unequal societies, especially during the socio-ecological crisis. The present study is examined for assessing the new professional group in contemporary Russia and other Post-Soviet countries which are societies of anony. The ecological ethics and morality are latent and only a part of bigger system of values. It can be seen as a historical phenomenon which evolves and exists as a number of developing and interchanging moral systems. While economics sounds during the globalization process, the ecological morality often keeps silent. Modern ecological ethics and morality are degraded, mostly its regulating influence is evident in emergency situations only. Furthermore, the prominent social orders and levels (including social-professional group of ecologists) have their own specific “ecological moralities”. The findings of the expert survey present the social attitudes and system of values of these professionals and the views of the lay public about their social role. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. The competency of ecologists is higher comparing with others professional groups of this field, they have conducted in Post-Soviet area since 2006 till the present. The competency of ecologists) have their own specific “ecological moralities”.

Paradigms Of The Social: Current Vis à Vis An Alternative

The idea of the “social” is the foundational paradigm of sociology, one which has been stated, understood and restated several times through its story. In the realm of Sociocybernetics Niklas Luhmann’s social systems theory defines them as based on communication, with society being the most encompassing form. To the author human beings don’t and can’t communicate, only communication can do so, which means that society has to be described on the basis of events. Social systems are autopoietic because they produce their own components and their growth can be explained on terms with second order cybernetics; unlike living systems, which are closed, social systems are cognitively open and operationally closed. Posthuman theory of social systems has been widely discussed and some of its criticisms are that it ignores the law of requisite variety (as it only understands the reduction of complexity), empirical evidence that social systems are indeed open, and the fact that it does not comprehend human behavior in micro scale.

The purpose of my participation is to expound the merits of Luhmann’s theory, to criticize it and to propose a new approach to social systems.
As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

**Role Of ICT In Mitigating Social Problems**

In India children from poor families get enrolled in free government primary schools. However, due to poor quality of schooling majority of them drop out without completing primary education. To address this challenge the following study attempts to evaluate the impact of m-learning on socio economic aspects of leisure activities such as work and play. The study also aims to identify potential teachers from among the aged who can be employed to provide online educational services.

**Youth Labor Trajectories and Social Changes: Transitions and Occupational Mobility in Three Generations of Mexican Workers**

The aim of this paper is to analyze, from a life course perspective, changes in certain transitions related to occupational mobility during labor trajectories of young men and women of three generations, in Mexico. Data come from EDER 2012, a national longitudinal survey. The analysis is based on the study of:

1. The first entry to the labor market and the number and duration of occupational transitions between 20 and 30 years old.
2. Mobility tables at the same ages between five specific occupational transitions:
   a. Between “formal” and “informal” jobs.
   b. Between salaried and non-salaried position at work.
   d. Between full time and part time jobs.
   e. Between jobs in industrial and service sector.
3. Discrete time regression models associated with these same transitions.

Through the analysis of mobility tables for each of these transitions and the study of the weights associated to their constraints, the objective is to test a hypothesis of social change related with the precariousness, outsourcing and de-salarization processes of work force at early ages in this country, coupled with increased “heterogeneous” labor trajectories in younger cohorts (where the “determinants” factors are more diffuse).

Under this hypothesis, we admit that the processes of globalization and internationalization of the economy enable greater heterogeneity in certain occupational transitions and an increase in the diversity of youth work trajectories.
the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as being originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

MANDIC, DANilo* (Harvard University, mandic@fas.harvard.edu)

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia. From 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfullness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

Cultures of the Future: Habit, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2001), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mische 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technologies, media, institutions). Strongly connected with the concepts of reflexivity and creativity the “capacity to aspire” has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

Social Justice and Energy Consumption: The Problem of Fuel Poverty

The social discourse on sustainable development not only focuses questions of intergenerational and global justice, but also increasingly questions of social ecological inequalities in industrialized countries (keyword: environmental jus-
teice). Within this framework, a society’s consumption of resources is associated with inequalities. When it comes to climate change, the focus is on questions of responsibilities and persons concerned, inevitably bringing up the issue of social inequalities and thus a central field of sociology. Likewise, when management tools towards sustainability are discussed, social inequalities are addressed (e.g. in competition with environmental justice). However, social sciences in the context of environmenatal and sustainability research on consumption of resources and social inequalities is still at its beginning regarding both, theoretical conceptualisation and empirical research.

In the proposed presentation, one dimension of this topic will be stressed, namely the relationship between energy consumption and social inequality in general and the issue of fuel poverty in particular. Insights will be given into an Austrian fuel poverty project (funded by the Austrian Climate and Energy Fund, 2012-2014) which has the aims of implementing tailor-made measures of energy efficiency against fuel poverty. Three different projects (two of them on a local and one on a nationwide basis) covering fuel poor households from urban as well as rural regions serve as examples of implementation. The programmes and measures are evaluated regarding their effectiveness and their improvement of advice services. Benefits (e.g. mitigation of burdens related to fuel poverty, reduction of CO2-emissions) and costs calculated. First empirical results of the evaluation will be presented at the conference and discussed in the light of social-ecological inequalities.

Reflections on a Rural Community Traversed By the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, agriculture is related to local and regional trade and since 2009, it features a resort – an uprooted space geared towards international luxury tourism. In this context, specific elements of the globalization process are involved, such as financial (global and regional), touristic and political interests. The Tupé Reserve appears as an arena of interaction among several actors, being a boundary region as a production process of consumer demands and new lifestyles in which imageries, values and worldviews are shared. Thus, the social relations there are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as phenomena that are seized as part of a dialectical process of socialization of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances of the network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wm264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—, it is the second world producer of copper and silver, and multinational corporations control 85% of the country’s mineral resources.

In this context, miners have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state’s interventions in the mining industry constructed between 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies.

This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries—; mining is the most important economic activity; and more than 70% of this industry's workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted in-movers organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers’ mobilizations and labor law’s trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers’ mobilizations produced divergent outcomes. In Chile, by recognizing workers as part of their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers’ struggles, making them unable to fulfill their demands in a national scale. I suggest that the networks and structures of the subcontracted workers’ organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

MANNING, NICK* (University of Nottingham, nick.manning@nottingham.ac.uk)

DSM V, a Sociological View

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analysing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, how do the DSM function that produced the DSM? What are their sources of income and power? how do they change? and how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into DSM V in which the DSM is developed. This has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

MANOHAR, NAMITA* (City University of New York, NManohar@brooklyn.cuny.edu)

Highly-Skilled Immigrant Women's Labor Market Access: A Comparison of Indians in the United States and North Americans in France

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration—student migrants, single women, and French-styled North African educational qualifications—North African women experience barriers in accessing skilled work—difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore stratify by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women’s immigration is marked by early disadvantages—their legal status as “dependent” wives, the non-transfer of Indian credentials and responsibilities for care work—that contribute to their de-skilling. In response, they strategize through the pathway of gradual ascent—moving from low-wage to high-wage work; (re)education and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes—education-work experience nexus, interactive effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these advantages their early disadvantages to “contingent advantage” resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their “categorical disadvantage”- long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the
downward mobility associated with skilled immigrant women is not universal, as is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

**Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt**

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in contrasting and controlling the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimating the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of Egypt, the state is comprised of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand, Mubarak’s National Democratic Party (NDP) of Egypt was more closely characterized by Patrimonial bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

Patterns of ICTs Using and Information Flow: A Study of Rural India

Manushi and Prakash Chandra Dilare, PhD Scholars, Center for the Study of Social Systems, School of Social Sciences, Jawaharlal Nehru University, New Delhi, India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain un/reached by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include “all” (Chiumbu 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exist in the country and now with the emergent of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

**Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities**

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of these offspring’s emigration from Japan is considered a significant milestone. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have the ideas of ethnic or political loyalty, national and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei among Latins America? The Nikkeis’ return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the sensation of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

MANZO, LIDIA K.C.* (University of Trento, lidia.manzo@gmail.com)

**Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope**

The transformation of New York City into a global corporate city and the consequences of the effects on small firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lees et al, 2000), as well as the influences of housing abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

MANZO, LIDIA K.C.* (University of Trento, lidia.manzo@gmail.com)

**Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn**

Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘coolness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

In using the concept of tool – as a framework – understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the ways gentrification interconnects with the development of an individual inhabitus as a...
Spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae.

This exploratory paper describes the relationship between aesthetics, symbiotic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed as sites of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York's wealthy and educated people. As we have observed, their street practices are often overlapping with working class people, superheroes and sometimes do not. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are 'no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class' (Ossman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

**South Africa within Brics: Emerging Society and Sociological Discourse**

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant influence on regional and global affairs. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among skilled black African migrants, we argue in this paper that experiences of racism and racial discrimination are entwined with acceptions of ‘otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ (invited) into Australia to fulfill an identified ‘need’ in the labour market co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

MARA, LIVIU CATALIN* (University of Barcelona, maraliviacatalin@yahoo.es)

**Social Innovation in the Housing Policy in Spain**

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to analyze the impact of social innovation on the institutionalization of successful actions, in public housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, it contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

**Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation**

Greece has turned in recent years into an immigration region. While immigration started in the early 1980s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment. With regard to the integration problem of migrant women many studies indicate that, while women have benefited from the social security and health system use, especially in relation to the exclusion of women from social goods and welfare national system and the non-active participation in social and political life in the countries of residence are of paramount importance. Thus, access to welfare goods is associated with citizenship, while social security and health system use are only in the early 1990s that significantly to measure the degree of social integration of transnational migrants. At the same time, active political participation highlights the level of their integration.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrants in our country based on the results of the above survey. More concretely we will analyze the access of migrant women to social welfare services, investigating issues related to social security coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

MARCHADOUR, GUÉNOLÉ* (University Lyon 2, marchadog@gmail.com)

Depuis la fin des années 1980, les syndicats dits « minoritaires » (Jobin, 2006) ont émergé dans le contexte japonais où les syndicats d’entreprise sont dominants et recrutent parmi les employé-e-s à régulier-e-s (Kawanishi, Moyer, 2005). L’accroissement des emplois atypiques au cours des années 1990 a ce-
pendant affected a part plus grande of the population active qui échappe à ces syndicats “traditionalistes”.

Les travailleur-e-s migrant-e-s sont recruté-e-s sur un “marché du travail secondaire” (Hyguchi, Naoto) en expansion et il-le-s constituent une des fractions of this population active précaire. La grande majorité of the migrant-e-s brésilien-e-s accède à des emplois d’ouvrier-e spécialisé-e du secteur manufacturier par le biais de ce marché (Köseirddõshõ, 2009). Leur emploi is fortement corréllé with des contrats temporaires délivrés by des agences of placement (empreiteiras) and l’occupation of postes de travail as la chaine physique and pénibles (Ökubo, 2005).

Three sites of syndicats minoritaires investis by les travailleur-e-s migrant-e-s entre 2000 et 2010 ont été explorés by the biais of the observation ethnographique and de récits of vie. La syndicalisation individuelle of the brésilien-e-s prend l’ampleur in the deuxième moitié of the décennie. Elle s’accompagne of the augmentation of the recours in justice (Rõdd shipan seido, 2011). Ce modèle de l’expérience inspiré of nouveaux modèles of organisation (Béroud, 2009) a certes permis d’ouvrir l’espace syndical nippon à des populations margi- nalisées sur le marché du travail (Uranu, Stewart, 2007). Elle a cependant contri-bué to reproduire les rapports of domination sexués and racialisés of the organisation of the travail industriel in l’organisation of the syndicats minoritaires.

Is There a Unified Recipe to Predict Civic Engagement? Comparisons of 47 European Countries

This presentation is focused on comparative framework of civic engagement in contemporary Europe. The database of the European Values Study (2008) is used as a main set of information, though some indexes (e.g., World Bank’s, Fre- dom House’ indicators) are used as a supplementary source. The scope of the research takes into account 47 countries. Civic engagement is conceptualized in three aspects: cognition-motus-actum of (1) content and actors of civic engagement in Europe and (2) factors that shape civic engagement in its two parts, namely Post-Socialist and developed Europe. In such a way, the main idea of the paper is to clarify whether in the latter prevail contextual, external factors, while individual factors of civic engagement remain determinate in the former. Thus, the levels of analysis include both individual and country, main methods are correlational and regres-sional analysis. The research is implemented individually under the guidance of Laboratory for Comparative Social Research in the National Research University “Higher School of Economics”, Russia.

Hasidic Pilgrimage As a Cultural Performance: Challenges and Opportunities

This presentation deals with the research of Hasidic pilgrimage in nowadays Ukraine. The examples of two settlements, Uman and Medzhibozh, the re-search is aimed to shed light upon the Hasidic pilgrimage through the lens of cultural sociology and the theory of “cultural performance elaborated by Jeffrey Alexander as the most suitable theoretical and methodological tools in the analy-sis of this issue. Despite long standing historical prerequisites, Hasidic pilgrimage is still a new issue in Post-Soviet Ukraine which has become a special “core” in the world context. The understanding of performativity in the issue helps unveil its stable and emerging elements, as well as show the most problematic areas and possible consequences. It is shown that the Hasidic pilgrimage in Ukraine does possess all characteristic features of different elements of a successful cul-tural performance: collective representations (as well as background symbols and scripts), actors, means of symbolic production, mise-en-scene, power and audiences. Research methods (which included visual observation, media docu-ments analysis and interviewing) help outline and analyze typical resources, lines of communication and possible conflict areas both in time (2009-2012) and space (two mentioned settlements) perspectives. The author pays attention that the Ha-sidic pilgrimage is far from becoming an established phenomenon with defined areas of sacred and profane in the contemporary Ukrainian society, though it is constantly bringing new challenges and opportunities.

MARCELLO-SERVOS, CHAIME* (Universidad de Zaragoza, chaime@unizar.es)

Openness, Transparency and Traceability of Public Policies

The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more “the condition of being transparent”. It arises in opposition to corruption, secrecy and lack of clarity in the management of orga-nizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the pos-sibilities for openness produced by the microelectronics revolution. This has mod-ified the technological, social and political scenarios. It is more than the Internet; it is the redefining of the global ICTs system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies accord-ing to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors of its life cycle. Second, imitating food processing traceability tools, it is possible to propose a “policies processing software” for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a “barcode” to reveal who proposed an action and how it was designed, implemented and evaluated.

Against All Odds – First Generation Immigrants in Upper Secondary Education

The paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of “late arrived students” enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and foreign-born residents. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students.

An initial survey study in Malmoe, Sweden’s third largest city, showed that a majority of late arrived students had entered the same upper secondary school. The additional material consists of interviews with school personnel as well as interviews with ten students at this school who arrived to Sweden between the ages of 15 and 16 years old. The student group is heterogeneous, different nationalities, different reasons for immigrating to Sweden and different family contexts. The material reveals that in order to get a better understanding of the aspects contrib-uting to school achievement, school culture as well as the individual migratory experiences and social capital need to be considered, and in particular how they interlink. The paper also discusses the obstacles that students, especially concerning language acquisition, and the strategies involved in overcoming them.

MARENT, JOHANNES* (Technische Universität Darmstadt, marent@ifs.tu-darmstadt.de)

Openness, Transparency and Traceability of Public Policies
The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is a profession, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers and journalists have been interviewed. Thereby an insider’s perspective of how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are discussed in the local media. Lastly, the picture analysis displays what and how local peculiarities are condensed to a coherent image and what stays unaccounted.

Cities around the world try to attract almost the same audience. Within their image production they carefully observe other cities, which are perceived as role models and competitors. This paper presents a comparative in-depth analysis of the image production of Glasgow and Frankfurt, and shows how globally communicated ‘self-representations’ refer to the ‘cumulative texture’ (Suttles 1984) of the local urban culture.

MARIANO, DANICAR* (National University of Singapore, danicar.mariano@gmail.com)

The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs –one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also denies donor and recipient access to certain people, gay and lesbians, women over 40s, single, and women who cannot gestate. The BAC’s ban on payments reveal a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting “weaker classes” and “not importing Singapore’s fertility issues to other nations.

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place by relying on hospitals outside Singapore. Singaporean hospitals are also lobbying to the government to revise some of the stricter regulations or else “lose out” to neighbouring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and most importantly, loose regulations and “bioavailable” citizens are their major advantage and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

Rethinking Environmental Movements In Developing Nations: The Case of Cameroon

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the “mainstream” environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon’s ten regions. We conclude that the relative absence of large scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, have mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizen’s groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although they lack a mass support base, they enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important questions about how environmental movements are to be defined, which we explore in the conclusion.

MARKIN, MAXIM* (National Research University, mmmarkin@hse.ru)

The Problem of Opportunism in the Changing Conditions (A Case of the Relationships between Retailers and Suppliers in Contemporary Russia)

The rules of market exchange do not only distribute the value added (Gereffi, 1994) but also reduce uncertainty and control opportunism in business partners relationships (Kelly, 1991). In Russia in the 2000s retailer-supplier contracts included different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for retailers’ services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners generally reduce uncertainty and control opportunism in their relationships even in the new conditions. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of all requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other’s behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

MARKLUND, CARL* (Södertörn University, carl.marklund@sh.se)

Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular. Despite this assumed retreat of politics, politics is still, at least mediially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunnsson (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s notion of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-
between neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

**MARKLUND, CARL*** (Södertörn University, carl.marklund@sh.se)

*Shaping the Things to Come: Concepts of Planning and European Modernity*

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse. This classic analysis of scientific social and political planning speaks of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis. Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

*Foundational Political Myths in Divided Societies: The Case of Montenegro*

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial politicological investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explains their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of “constructive foundational mythology” and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

**MARKOVIC, PETAR*** (University of Donja Gorica, Montenegro, petar.markovic@udg.edu.me)

*Post-Nationalism in Practice: European Citizens’ Initiative*

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

*When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies*

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incomprehensible) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservationists to adopt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformations, and seek insights about ways to preserve the integrity of the work that respect its symbolic and cultural significance. These efforts by art conservators to draw on sociological insights provide a compelling example of the relevance and uses of sociological research in contemporary art worlds, however they also raise questions about decision-making, in particular how to use social scientific theory as an affordance for practical action.
nowadays, in western societies, youth transitions into adulthood are, usually, considered an ongoing, diverse, complex, nonlinear, and reversible process. however, some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. although the family context tends to be recognized as important to young people's trajectories, sexuality is often forgotten or, even, insignificant to their position into adulthood. thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children's play. based on 60 in-depth interviews conducted in central portugal, with 60 white young adults, aged between 18 and 28 years old, i intend to look for possible articulations between family control over young people's leisure times, sociability and sexuality, young people's representations and experiences of sexuality, and their transitions into adulthood. i will argue that the family context and the domain of sexuality are not meaningless for young people's trajectories into adulthood. instead aspects related with family control, as, meaningful in the analysis of gender relations and sexualities. young people go from young to adults, especially in what concerns educational paths, leaving home, conjugal life and parenthood. this happens especially in two main ways. first, the maintenance of some control concerning young women's leisure time, sociability and sexuality can be associated with a smaller period of sexual experimentation for these young women and with some of them leaving home; entering into conjugal life and/or parenthood earlier than the others. second, the problem of "coming out" and/or assuming a non-heterosexual identity can be related with the need to lie, being (or being afraid of being) kicked out from home, the search for autonomy and the difficulty of becoming a parent.

is heterosexuality that bad? questioning some presuppositions and asking for a sociological analyses of sexuality"

"is heterosexuality all negative? why is heterosexuality so dangerous or bad? are heterosexual women all submissive, victims and passive subjects? should people be ashamed of being heterosexual? these are some of the questions that come through my mind as i was working on my phd dissertation and attending conferences about sexuality. giving credit and importance to the work of feminist, as pionney in the analysis of gender relations and sexualities, we have to pay attention to problems related with gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, i still felt that something was missing in those discourses. notwithstanding, simultaneously i was reading the work of some social scientist that problematized "my concerns". i felt more reassured. i have to say then that this presentation is also personal. but from a personal unease i wanted to insist on the sociological problematization of sexuality and gender, following the analytical tools given by authors like gagnon and simon, weeks, thorne, connell, richardson, jackson or bozon, as well as some other sociological authors like archer, mouzelis or lahire, and using a critical realism perspective. the idea here is not to deny all the problems with living in a hetero-normative world, dominated by ideals of masculine supremacy, but to ask for a sociological approach into gender and sexuality, where categories, identities, norms and values are not taken for granted, but subjected to scrutiny, taking into consideration the multilevel and interconnected social world where they are constructed and enacted, and where individuals should be thought of as social positionned, action as conditioned and categories critically analysed as relational and contextualized.

returns, knowledge spillovers and the family's role in international migration - the case of brazilian families returned from paraguay

the complexity of family arrangements that constitute the return migration of brazilians from paraguay can be identified as an important element in maintaining the circularity between the two countries and the consolidation of transnational space brasiiliano. the return plays an important role in migrants' direction and in the daily interpersonal relationships between migrants and non-migrants, either in brazil or paraguay, forming a web of friendship and solidarity that sustains this intense cross-border transit of people, goods and information. thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and / or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. this paper describes the changes in volume and composition of family arrangements of brazilian returnees from paraguay in the five-year periods 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. information from the brazilian demographic censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

h1: it is expected that in the period 2005/2010, there is greater diversification of family participation in the migration projected for brazil, both of returnees, as well as international. these changes will seem significant to their transition into adulthood.

h2: although a structural pattern persists, given the nature of family ties, we expect a change in the roles of families in the return to brazil and in the entry of foreigners from paraguay, given changes in economic and political contexts of the two countries.

is heterosexuality all negative? why is heterosexuality so dangerous or bad? these are some of the questions that come through my mind as i was working on my phd dissertation and attending conferences about sexuality. giving credit and importance to the work of feminist, as pionney in the analysis of gender relations and sexualities, we have to pay attention to problems related with gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, i still felt that something was missing in those discourses. notwithstanding, simultaneously i was reading the work of some social scientist that problematized "my concerns". i felt more reassured. i have to say then that this presentation is also personal. but from a personal unease i wanted to insist on the sociological problematization of sexuality and gender, following the analytical tools given by authors like gagnon and simon, weeks, thorne, connell, richardson, jackson or bozon, as well as some other sociological authors like archer, mouzelis or lahire, and using a critical realism perspective. the idea here is not to deny all the problems with living in a hetero-normative world, dominated by ideals of masculine supremacy, but to ask for a sociological approach into gender and sexuality, where categories, identities, norms and values are not taken for granted, but subjected to scrutiny, taking into consideration the multilevel and interconnected social world where they are constructed and enacted, and where individuals should be thought of as social positionned, action as conditioned and categories critically analysed as relational and contextualized.

returns, knowledge spillovers and the family's role in international migration - the case of brazilian families returned from paraguay

the complexity of family arrangements that constitute the return migration of brazilians from paraguay can be identified as an important element in maintaining the circularity between the two countries and the consolidation of transnational space brasiiliano. the return plays an important role in migrants' direction and in the daily interpersonal relationships between migrants and non-migrants, either in brazil or paraguay, forming a web of friendship and solidarity that sustains this intense cross-border transit of people, goods and information. thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and / or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. this paper describes the changes in volume and composition of family arrangements of brazilian returnees from paraguay in the five-year periods 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. information from the brazilian demographic censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological or neuro-emotional expression, theoretical disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating in-tedicions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize the filmography of disgust for their attention towards the mutilated, and raped transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hybrids of the brilliant but mad scientist that aspires to play a demigurc role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronen-berg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a moral boundary of the artificial-natural divide or the human-animal partition. Cronenberg’s filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or exploitation.

Researching Young People and Sensitive Information

This paper analyses an ethical dilemma experienced during fieldwork in a youth centre in Portugal. It argues that the revelation of particular kinds of information by some participants within qualitative research can present particular challen-
ges, which in some cases could cause harm to participants or researchers. Consent and confidentiality are key principles of ethical research. Researchers tend to formulate studies to ensure that informed consent is obtained and confidentiality is protected. Less attention has been paid to the impact that ethical decisions and research processes can have on people’s lives, or the ways in which participant disclosure can impact upon researchers. Attention will be paid to what should we do with particularly sensitive information given by participants.

Drawing upon an ethnographic research project undertaken in a context of social and material deprivation this paper attempts to explore a particular issue concerning ‘uncomfortable’ information disclosed during fieldwork. I was confronted by the information that a 16 year old girl, Diana, was working illegally and being exploited in a textile factory. To report this situation to the authorities was ethically in juxtaposition with confidentiality, which is related to data and information and with respect of personal privacy. Above all, emerged conflicting positions associated with the values and different types of good, which means that we are dealing with what is referred to as a ‘grey matter’ (Kennedy 2005). This does not mean that ethical decisions are taken based only on researcher’s own positions associated with the values and different types of

Changing landscapes of homelessness and marginality in global Tokyo

The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than abstract words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No. 1142510.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alex- ander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature’s patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns.

The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. An Integrative Model for Analyzing Strategic Corporate Social Responsibility in Portugal

Capital increasingly takes the integration of corporate social responsibility (CSR) into account in the development of business strategy. Nowhere has this been more the case than in the European Union, where commissions on CSR have reported and made policy recommendations to the European Parliament.

Different firms adopt different CSR perspectives, with denial of any interest to commit to a long-term CSR strategy for sustainability. The paper identifies levels of the argument that we place on the continuum we call CSR maturity. Previous studies have neglected the relationship between different business strategies and the firm’s degree of CSR maturity. The research considers the variables underlying commitment to strategic CSR by looking at major compa-
examined (a) given the high competitiveness of the selection process, how is the association between social origins and chances of obtaining a place at this elite institution; and (b) if this association varies depending on which undergraduate course option the student applied for. Research has already shown how students from private schools have more chances of progression in all educational levels (Ribeiro, 2010; Montalvão, 2011) in the country, but the IEO between different tracks in public higher educational institutions in Brazil has never been analyzed before. Also this proposal relies on the use of data collected in the moment that the application is made, and it contains information on the entire universe of candidates. The selection process of this specific institution, which is another contribution to the empirical literature on the theme in Brazil, based mainly on cross-sectional household surveys.

Effects of Keepin It REAL in Guadalajara, Mexico

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Generación, a Culturally-Specific Mexican American Parenting Intervention, designed to increase the effects of prevention programs for youth participating in substance use. OLS regressions showed significant relative reductions in use of alcohol and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS term post-test 12 months later. Substance use measures were 30-day amount prior to implementation, a short-term post-test after the last lesson, and a long-term (N=226) and control (N=206) condition. Students completed a pre-test, a substance prevention program developed in the US for Mexican-American students, and a cross-sectional household surveys. The discussion over types and forms of care will be tested introducing financial criteria. The elaboration will focus on the financial situation of caregivers in different social systems. It will compare legal solutions across selected counties, the impact of the financial advantages and disadvantages for the family of dependent person, connections between public and private sources dedicated for care delivery. The discussion over types and forms of care will be tested introducing financial aspects as one of the recommendations.

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin' REAL (Mar-tênte REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation, a short-term post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in keepin' REAL compared to youth in the control group. Growth curve models indicated that over time the effects of keepin' REAL are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group, however, showed a relative reduction over time in the amount of marijuana used. This pilot study provides support for the global applicability of efficacious substance use prevention programs originally developed in one country, but also the importance of assessing for cultural fit and adapting the programs to achieve maximum efficacy. The results indicate that keepin' REAL can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

Examing the Long-Term Effects Families: Preparing La Nueva Generacion, a Culturally-Specific Mexican American Parenting Intervention

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Families: Preparing La Nueva Generacion (FPNG), designed to increase the effects of keepin' REAL (kiR), an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition -receiving only kiR, and (3) parent + youth condition -receiving FPNG and kiR. Youth and parents completed a wave 1 pre-test prior to implementation, a wave 2 short-term post-test after the last lesson, and a wave 3 long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and kiR had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only kiR. These effects, however, were completely mediated by anti-substance use norms - youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthening the efficacy of youth-only classroom based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin’ REAL (Mar-têté REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation, a short-term post-test after the last lesson, and a long-term post-test 12 months later. From the Family to the Market – The Complexity of the Care Finance

From the family to the market – the complexity of the care finance

The problem of paying for the care delivered to old or disabled persons, because of its complexity, is rather difficult and not very popular. Simultaneously, it creates the significant element of the state’s social policy, sometimes being shaped in the previous political regime and strongly connected with the constitutional guarantee of the special rights given to the dependent persons. Dependency, despite the development of anti-discrimination legislation and the public perception of disabled, is still one of the main factors of poverty, the stigma and exclusion. Moreover, it affects not only directly a dependent person, but indirectly this persons friends and family, who (in many countries) are legally expected to deliver the care and become fully dependent on the system of public care services. Along the change of economic regime, we can observe the strengthening of the care recognized as a commodity. This care, no matter the source of finance (public or private) has to be bought on the market. This paper presents the initial effects of the research grant focused on the theoretical model of financing the care delivered to dependent persons, especially in the situation of social structures evolution and resources limitation. This project finalizes the few-year studies on the original theory of the costs of disability, which systematizes the expenses on disability policy and called for transparency and concentration. The elaboration will focus on the financial situation of caregivers in different social systems. It will compare legal solutions across selected counties, the impact of the financial advantages and disadvantages for the family of dependent person, connections between public and private sources dedicated for care delivery. The discussion over types and forms of care will be tested introducing financial aspects as one of the recommendations.

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

Global social governance is increasingly characterized by complex and fragmented institutional arrangements. In this paper, we study the role of NGOs in these governance arrangements. In particular, we are interested in the question whether NGOs have the potential to be drivers of policy synergy or policy conflict. We understand policy synergy as a situation in which the interaction of different policies leads to more favorable outcomes than would have been achieved independently. Policy conflict describes then a situation in which the interaction of different policies results in more negative outcomes than if these

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these "living together apart" situations in the Netherlands with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children's sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

Black Ethnicity and Rethinking Assimilation Theories: A Multilevel Analysis of Housing Values Among and Between Whites and Native- and Foreign-Born Blacks in the U.S

Black-white residential segregation is still a reality in America. Research shows black homeowners are more segregated from white homeowners than black renters are from white renters. The findings have been interpreted to mean blacks do not benefit as much from home ownership as because home ownership does not lead to greater access to white space. Implicit in this interpretation is the mistaken belief blacks ultimately desire residency in white neighborhoods and home ownership in said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Are there social disparities in housing values for blacks and whites and how have they changed over time? 2. Are the racial disparities larger or smaller between whites and foreign-born blacks or between whites and native-born blacks? 3. What social and demographic variables account for the variations in housing values by race and by ethnicity? 4. What are the theoretical and methodological implications of the study findings?

Gender Inequalities in Health and Socioeconomic Status: Analysis through Healthy Expectancies in the Basque Country (Spain)

In the Basque Country, like in most societies, women survive longer than men but are less healthy. However, several authors have criticized this fact as being too simplistic and not taking into account that men and women are heterogeneous groups. It is necessary that the study of gender inequalities in health consider other variables such as educational level, social class or age that can explain this gender gap.

The aim of the present paper is to examine gender inequalities in health and their change in the Basque Country considering two variables of socioeconomic status, and healthy expectancy as the main result variable, which integrates health and mortality. This measure also allows separating life expectancy into terms of social inequalities and their effect on living conditions. It is based on said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices, participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential contradictions, bodily betrayals, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual domain.

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life course. Cultural gerontologists promote further enquiry outside mainstream sources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, with structuring ‘social gerontologies’ in the present interaction benefits alongside mainstream social media, contact begins more anonymously (visiting websites, reading blogs) or highly publicly (creating a website, authoring a blog, filming an online video) and then may lead to interactions and connections beyond one’s local community – through widow conferences and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public ‘wearing’ of one’s widowhood (widow’s weeds) and other aspects of dress and appearance) – that ended by the 1930s; to the subsequent ‘visibility’ and denying of widowhood and bereavement for some decades; to use of social media as a declaration or even reifying of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.

Indigenous Female Farmworkers in Northern Mexico: Workers’ Rights Violation Under the Veil of Better Jobs

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, workers’ rights and the health of indig-
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions and precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women's living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complexify this research around that thoro-ness. In a first moment, we will analyse women as a precarious group as a whole by using other recent researches done in Spain around the main work and labor conditions of women (Borderías, Carrasco y Torns, 2011; Torns, 2012) and the exploitation of statistical data, but we will try to look into differences among women in their dependence on the provision of employment, maternity, metropolitanization, and the like. It is an attempt to show empirically the feminist theoretical proposals around the diversity of women by examining which variables explain more about those differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precarity (employment, income and education differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precarity (employment, income and education differences among women.

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women's situations in a time of crisis, we need a longitudinal analysis that show us the weaknesses of women within the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women's living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complexify this research around that thoro-ness. In a first moment, we will analyse women as a precarious group as a whole by using other recent researches done in Spain around the main work and labor conditions of women (Borderías, Carrasco y Torns, 2011; Torns, 2012) and the exploitation of statistical data, but we will try to look into differences among women in their dependence on the provision of employment, maternity, metropolitanization, and the like. It is an attempt to show empirically the feminist theoretical proposals around the diversity of women by examining which variables explain more about those differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precarity (employment, income and education levels) to analyse the paradoxes of a high level of precariousness among women in spite of the increase of women acceding the work place. This paradox deraces that the incorporation of women to the work place is always done in conditions of precarization of jobs (temporality, partial jobs...); and that this process might not be separated from an analyse of major changes in the work place (politics of flexibility) that also affects those who were until now considered as "stables".

Contemporary Japanese Migration Process in Spain: Cultural Boundaries and Social Networks

The relationship between flow and fixity in globalization literature, leads to questions about how a sense of belonging is achieved, especially when given concepts such as home, family and nation are becoming detached from physical boundaries. In adding to the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

In the history of Japanese migration belonging and identity have been managed in different ways. From the voluntary migration system (1970s and 1980s) to the voluntary migrants (1990s, nowadays), migration reasons, interests and lifestyle have changed a lot. However, voluntary migrants are underrepresented in the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVA analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language etc., the peer group, the family and the neighborhood provide the basis from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations, the immigrants. Prejudices and stereotypes are easily learned, and in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the 1960’s, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrated men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that sons’ and brother’s migration along with other structural changes on sending societies has broken down the traditional system of protection based on son’s inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improve their situation, without establishing direct causality relations as women’s paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men’s migration to USA and finally uses y costumbres (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPFAR

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver’s metaphor on communication as exchange of information and develops Buber’s and Peter’s ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness. Communication is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyond preachment. Extreme cases of annihilation of others can be categorized as deterioration in social relations with others, and have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implantations, involvement of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention, topic shift, emotions such as fear, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

Science without Borders: An Academic Mobility Program from the Brazilian Government

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a post-graduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/ technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented analyzes the results of the program as well as the possible difficulties it faces in achieving its goals.

Collective Rights to Life and New Social Justice: Lessons from Latin America

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is closely connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic relations react to the question of general rights of privatization. Additionally, they suggest a new social justice hierarchy that underlie the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia’s, are interesting ones to reflect about this change of development paradigms.

Intellecutals and Development: Reflection from Diverse Latin America Statements

Intellecutals and development: reflection from divers Latin America statements

Paulo Henrique Martins

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of productive statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic relations react to the question of general rights of privatization. Additionally, it is impossible to generalize this understanding of development to others continents but it is very important to try to compare some different processes. The second point is that the idea of development in the region is linked to the idea of power system, because what is developed is the country but the power. Then, in this sense, it is possible to define some different development patterns in Latin America that reflect some possibilities of alliances between social and political forces that contribute to organize national power systems in the last decades. To demonstrate our papers we will try to show the differences and similarities between Brazilian and Bolivian cases. It is important to show the relationship and
Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional support. Their financial aid at critical junctures is not uncommon. In the absence of one or several of their children, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interview method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparents than with maternal grandparents. Likewise grandchildren have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private-ness/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies practice regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promoting interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: a building hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Pakistani Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social displacement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The diffused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economic structure, political and cultural tradition. International migration has become relevant here since the early ’90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the higher concentration of Pakistani citizens in Italy. Immigrants found employment as both unskilled and specialized workers in the small local industries which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistan Punjab. The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place trough ethnic and non-ethnic forms of incorporation. The paper will explore the emerging picture of the contexts, causes and motivations that underlie these processes, with special attention to forms of secondary mobilities, either in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants’ hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizenship, the situation in the UK has been fraught with initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precarious workers in the UK.

"El E-Government Como Recurso Para La Construcción y Consolidación De Liderazgos Presidenciales. Perspectivas Actuales y Tendencias Futuras En América Latina"

La problemática de los liderazgos presidenciales (LP) constituye un eje de estudio relevante para la Sociología y la Ciencia Política, situado en la abundante producción bibliográfica referida. Empero, la relación entre construcción de LP y E-Government (EG) ha sido trabajada en forma insuficiente, ad vitam un vacío en el análisis del impacto de la tecnología sobre los sistemas políticos en general y la construcción de liderazgos en particular. La función presidencial es un pulso central en la sociedad contemporánea, e indicador de la disponibilidad de recursos de poder (institucionales, sociales, financieros, de estrategia política y apoyo ciudadano) que un presidente posee o es capaz de generar, pero no han aportado categorías analíticas innovadoras que aborden el impacto del EG en la construcción, consolidación y debate dinamizado de sus LP. Esta investigación apunta a corroborar que el EG supone no solamente un cambio de paradigma en la teoría existente sobre liderazgo, sino también el surgimiento de un nuevo recurso de poder (RP) al que apelan los presidentes latinoamericanos con el propósito de obtener legitimidad en sus iniciativas políticas. En esta dirección, el EG deviene un mecanismo que supone toda una renovación de los canales de comunicación política, permitiendo a los Jefes de Estado el acceso...
because they do not rely for their effect on economic self-interest alone. In the case of Afghans, com- with the Taliban, however these ambitious plans have now been deemed as be- ing too unrealistic to achieve by 2014. To promote reconciliation and unity the socio-cultural factors that enable communication among conflicting parties is important. Communication is also a decisive factor in social integration as well as the structural solidarity in society. In the case of Afghans, com- munication in conflict resolution is central to the concept of jirga and is deeply embedded in Afghan history, practice and people. Jirga refers to the gathering of people for the purpose of consultation. Its integration into national politics is a reflection of its role and success as a mechanism, and it often emerges among most Afghan ethnic/tribal groups; “it has national currency.” Although the Karzai administration made use of this “national currency” in 2002, the Emergency Loya Jirga, it is evident that it failed in its attempts at national reconciliation due to a multitude of factors. This paper will investigate those factors while examining peacemaking/peacebuilding initiatives in Afghanistan, the use of Afghan indigenism and methods of local dispute-resolution for reconciliatory purposes. While there is a continuing need for jirga in resolving local, tribal and national conflict, the socio-cultural significance and political potential of jirga is ignored as it has only minimally been adapted to the current efforts in Afghanistan. This paper will investigate the feasibility of a national jirga process and how it can be made more inclusive and widely used, representing both men and women, initially from a grass-roots level and ultimately to a national level. * denotes a presenting author. It can be contended that the purpose of surveillance technologies and the militarization of Canadian society post-9/11, is a precursor to greater government control; constructing ideal citizens that are ‘governable’ and can benefit the government by giving up certain freedoms, sup- porting government initiatives aimed ostensibly at securing citizen safety. This logic fits in nicely with narratives that argue there is no end to the ‘war on terror’ and therefore countries like Canada will continue indefinitely to militarize and rely on surveillance technologies. This proposed paper will examine sociologically the relationships between on the one hand, popular discourses and practices of mili- tarization, and on the other, the adoption of surveillance systems whose software and hardware have become routine aspects of negotiating everyday life for all cit- izens. While government uses such risk management knowledge to seek security, decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pse- nment selection is driven by economic rationalities, or focused upon insul- ated aspects of governance or regulation or the role of actors involved in decision-making. Within the latter, I aim to adopt a holistic approach in order to deconstruct the way in which actors interpret regulations and proceed to pension funds investment decisions, along with their implications for pension systems obj- ectives. | TG04-946.8 | MASSALA, THOMAIS* (University of Bath, T.Massala@bath.ac.uk) | Governance of Pension Funds Investment Decisions Between Financial and Social Returns Funded mode of pension financing has been a common ingredient of pension reform agenda in the context of international efforts to cope with demograph- ic and economic challenges that pension systems face. However, a central con- cern involves the consideration of additional risks in funding and how these are addressed in order to maintain core pension system objectives, like adequacy, security and intergenerational equity. Governance, including regulation of invest- ment decisions around pension resources is a crucial variable to these concerns, given that related decisions carry risks and implications for pension system ob- jectives. Despite an increasing interest in the governance shaping pension funds decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. MAST, JASON* (University of Warwick, j.i.mast@warwick.ac.uk)  
The Ick Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlins’s analysis of Western industrial food production, and Judith Butler’s performativity of gender. Marshall Sahlins (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. “Edibility is inversely related to humanness,” he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlins was right that edibility is related to understandings of humanity. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into objects connected to wholeness, pleasurable enjoyment, and even edibility. An insect on an American dinner plate, except in rare and select places, represents “an absence of place” and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming “the ick factor – the eyes, the wings, the legs… people won’t accept it beyond novelty,” one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into “mini-live-stocks,” ones that are interpreted as not merely edible but as desirable.

MASULLO, JUAN* (European University Institute, juan.masullo@eui.eu)  
Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation and/or build local zones of peace in the middle of war, the two strategies are not identical. The ATCC declared itself neutral without any bargaining with armed groups, the ATCC negated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to chose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The determinants of variation in the form of noncooperation are spelled-out. The challenge is overcoming “the ick factor – the eyes, the wings, the legs… people won’t accept it beyond novelty,” one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into “mini-live-stocks,” ones that are interpreted as not merely edible but as desirable.

Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: “love all other nations as you love your own”. We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives of different religious communities follow one faith (almost no exception each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are ethnic Macedonians who are Muslims. Typical examples for this are: Torbeshi who are ethnic Macedonians who follow the Islam religion. But most of them on the last census declared themselves as ethnic Albanians, even though they don’t know the Albanian language. This proves the fact that the religious identity is a key factor in forming an ethnic identity. The appearance of such strong ethnic emotions can be expressed only if the religious feelings are weakened. That is what’s happening in the Macedonian state, despite the influence of its basic religious institutions (Macedonian Orthodox Church). The Orthodox Church has the main role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult times and circumstances that in 1991 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.
Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons and functional: level of satisfaction of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness (r = .291, p<0.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = .427, p<0.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with functional social support (r = .516, p<0.01) for retired persons. However subjective happiness is unrelated with both the dimensions of social support in case of pre-retired and post retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionship; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

The Interplay Between CEDAW, the Brazilian Women’s Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women’s participation in transnational feminist networks and the UN Conferences on Women and Brazil’s ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: first wave of the 1980’s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women’s movements. The third wave of the Brazilian feminist and women’s movements encompasses the civic participation of Brazilian women internationalization of Feminist networks through social structural support. The socio-structural factors that promote social participation, such as education, economic status, and gender roles, can significantly impact women’s empowerment. This paper examines women’s participation in transnational networks and their role in shaping the Brazilian women’s movement. The findings suggest that women’s participation in transnational networks has been crucial in shaping the movement’s goals and strategies. Hence, understanding the role of transnational networks is essential in understanding the development of the Brazilian women’s movement.

Informal Support Networks and Female Career Continuity

Female Japanese workers who have chosen to play multiple roles, such as those of wife, mother, and paid professional, often experience difficulty in career continuity. Some research and theory suggest that public policies that promote gender equality, childcare, and nursing leaves have positive effects on the career continuity of working women. Nevertheless, the impact of informal support has not been empirically evaluated.

In this exploratory study, I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies and associations. The major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering

625
emotional support in times of trouble, and providing role models for working women. Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?
Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bar-gaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan
The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group-

MATSUI: Yuka
Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male. Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems.

Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem, etc.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

MATSUMOTO, MIWAO* (The University of Tokyo, ghc03207@nifty.ne.jp)
Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanisms of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of HLW (high-level radioactive waste). Firstly, the social mechanism by which so-called “structural disasters” to secrecy causes serious damage to third parties without breaking laws or moral ethics is revealed. Secondly, the paper illustrates the way in which the organizational structure made up of both investigators and stakeholders tends to carry over structurally originated problems and reproduce them. Thirdly, the paper highlights the possibility that social decision-making, with a very long history and a high degree of pressure, might bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

A Cross-National Comparative Study of Trust in Nonprofit Organizations

The emergence of nonprofit sector has been shown in many countries since 1990s (Salamon & Anheier, 1994). In addition, trust and nonprofit organizations can be considered basic elements of the so-called social capital which Putnam (1993) discussed. So, examining the cross-national comparison of trust in nonprofit organizations in the present social situation, the paper discusses the results of surveys concerning “trust in nonprofit organizations” in the Asia-Pacific Values Survey (APVS, 2010-ongoing) and Public Opinion Survey on Political Participation and Social Contribution (Civil Society Survey, CSS, 2007-2009). The former survey was conducted in Japan and USA in 2010, and the latter in 2011, and data were obtained from respondents. Nonprofit organization study focuses on the rate of the item nonresponses, “Don’t Know,” the degrees of correlation structures, and correlation structures of them. For the analysis of correlation structure, multivariate analysis was used.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, the paper argues for the importance of examining the relationship between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

The Past of Others: Korean Memorials in a New York Suburb

Since the first decade of the twenty-first century, memorials to an aspect of the Korean past, that of the “comfort” women, forced into sexual slavery by the Japanese Imperial Army during the 1939-45 war, have been founded in the U.S. by members of the Korean diaspora. The issue of “san’hu” (Jap. “comfort women”) remains contested political and moral terrain between the two countries. The fundamental narrative of the victimization of women and the aim of concretizing their memory, coupled with Japan’s official reluctance to acknowledge the role of colonial aggressor—has produced tension between the Korean and Japanese communities in the U.S. At the local level, such monuments have encountered resistance from native-born residents on the basis of lack of pertinence of memory of incidents in East Asia to the American land. The Korean American initiative towards inscription of a passage from their national history into the American context may be considered symptomatic of wider cognitive and social shifts in immigrant adaptation. Memorials-building is a political act par excellence. The present paper analyzes recent polemic and resolutions regarding the erection of a memorial in a particular metropolitan suburban community in the New York area. The location has been the subject of rapid immigration from Korea since the 1990s, with Koreans now constituting some forty percent of the local population. Despite the presence of local opposition, activists’ demands for the right to found a memorial to the memory of comfort women have been upheld by the municipal government. The case touches on many of the intricate relationships contingent on contemporary immigrant integration. Boundary drawing, the changing significances attached to race and ethnicity, and an increasing sense of entitlement in contemporary immigrant integration. Boundary drawing, the changing significances attached to race and ethnicity, and an increasing sense of entitlement in contemporary immigrant integration.

Use of Paradata in Non-Response Bias Adjustment: Application of Sequential Propensity Weighting on Dutch Reluctant Respondent Sample in the European Social Survey

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxies for all types of non-respondents - this paper obtains calibrated propensity weights in sequential steps. Two types of propensity scores (i.e. focus is on ‘contactability’ and ‘survey cooperation’) are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on attitudinal variables tested between unweighted and weighted samples. These evaluative items are also compared with the effects of post-stratification weights to assess the plausibility (eg. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.

Deciding ‘Quality’ Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al, 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they ‘know’ what constitutes a ‘quality’ cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish ‘clinical expertise’ around cord blood treatments would impact upon perceptions of ‘quality’ cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived ‘transplant quality’ of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed ‘best practice tariff’ to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive ‘quality’ in cord blood in a global context, and what factors influence their perceptions, will be presented.

Identification for Career: Contemporary Young Japanese Diaspora in Asia

Most literature on contemporary Japanese diaspora has been focused on male expatriates and their families following the offshore transfer of Japanese companies. Under the popularization of international migration, however, the flow, period or style of migration and the social background of migrants are getting increasingly diverse. This paper focuses on a new type of young Japanese migrant workers in Shanghai, Hong Kong and Singapore.

They move individually and are locally hired, usually through staffing agencies. In most cases, they find positions under expatriates in Japanese companies and the Japanese government has asked for the abolishment of a contract-based system. Therefore their identification becomes more complicated when compared with expatriates, who are strongly embedded in Japanese companies and communities. In addition, their identification influence is influenced and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working/living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to 3 directions: localized, globalized and national under their working conditions and future plans. Localized and globalized identities are necessary for daily working and career building in abroad.

Japaneseess has to be preserved for re-entering Japan labor market after return as well as for business communication with Japanese companies abroad. These identities coexist, conflict or are combined in each context.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora’s identification.
This paper presents analysis of interview data from a study of 'knowledge mobilization' as a social process. In doing so it contrasts concepts of 'knowledge transfer' with those of 'knowledge mobilization' which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease. Alzheimer's Disease, ALS, Parkinson's Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China

This paper examines the Yunnan Great River Project (YGPR) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S.-based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China's fragmented bureaucracy. Despite TNC's race to save one of the World's ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC's rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC's inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its "Growth Machine" (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC's wish to emphasize community participation.

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday use of new media technologies. In an era of rapid technological change, everyday individuals use these new media technologies to access, discuss, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news? And how may the various affordances of differing and fragmented web and mobile apps impact the discourses of everyday users?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affording or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

Knowledge in the Wild - from Mad Cows to Alzheimer's: How Knowledge Mobilization Works

This paper presents analysis of interview data from a study of 'knowledge mobilization' as a social process. In doing so it contrasts concepts of 'knowledge transfer' with those of 'knowledge mobilization' which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease. Alzheimer's Disease, ALS, Parkinson's Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.
The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concept of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignment of research topics with institutional research priorities and a tightening of candidate time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

Digital Technologies and Work-Family Boundaries: A Posthumanist, Performativistic Approach to Family Research

Our paper presents an ethnographic project funded by the UK’s Engineering and Physical Sciences Research Council that explores how boundaries are being made in work and family in everyday practices, and how technologies are implicated in constituting these boundaries.

Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to study and treat social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this approach.

Our empirical study uses sensory, visual and participatory ethnographic methods (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013). Our overall approach is to invite family members to take part in the project as collaborators rather than researchers by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants. The study involves in-depth work with 5 households in North-East Scotland, with at least one child under the age of 18.

Technology and the (re)Making of Work and Family: Towards a Performativistic Approach to Visual Practices

Our paper draws on a research project funded by UK’s Engineering and Physical Sciences Research Council that explores technology use in work and family practices in the home. Our study seeks to address a number of theoretical, methodological and substantive aims:

1. To develop a conceptual framework for studying work/family/technology practices and boundaries in the home, drawing on material-semiotic, posthumanist, and performativistic approaches (Barad 2007; Haraway 1997; Law 2004; Suchman 2007)

2. To explore how work/family/technology practices are figured – made and remade – through everyday social and technological practices (where social and technological are not treated as separate);

3. To develop and test a portfolio of methods, drawing on visual, senso-

ry, mobile and participatory ethnographic approaches (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013; Watts and Urry 2008). An important element of this process is to explore the performativity of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004).

Families (with at least one child under the age of 18) are invited to partake in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants.

Our paper will address emerging questions and challenges including: Whether and how visual methods can help us grasp sociomaterial practices; how we can use visual methods in participatory, collaborative and cooperative ways with our families.

Social Science Knowledge and Welfare Expertise – A Closely Intertwined Development

The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and political life. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900. In this paper, I will analyze a twofold translation of knowledge: The first is how academic social science knowledge diffuses into politics: I will examine how the idea that society was a structured entity, that was put forward by early sociologists such as the Historical School of Economics in Germany, informed social policy experts. Social science knowledge contributed to the insight that the Social Question was induced by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens between countries: Social policies that had proved useful could be translated to other countries, but the standing of the newly developing social sciences within these countries had a strong influence on how successful these translations were.

I will illustrate my theoretical considerations with examples about how different welfare knowledge propositions influenced the early set-up of state-administered social policies in Germany, Great Britain and the Netherlands (ca. 1870-1920). Thus I choose to compare two pioneers of public social policies and one "welfare laggard". I will analyse historical sources in order to analyse how text-based academic knowledge can be translated into policy expertise both within and between countries.
The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerable threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was “Social Hygiene”, as the new field of expertise soon was to be called, successful in exactly this period of time? In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or “Volkskörper”. Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. Nevertheless, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi-polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangoes, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Who Negotiates The Relationship Between Leisure and Quality Of Life?

Increasing user’s quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user’s quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship to accommodate and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user’s outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative sociological investigation and their spillover effects on the theoretical development of the discipline.
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power? This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are “implemented” locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshal Ganz calls “strategic capacity.” This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US. The process of transnational collaboration promotes grassroots mobilization in South Africa, India, and Brazil, while the latter seeks to shield light on how the union in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal global process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

Policies Travel Uneasily: The Comparative, Relational and Translative Work Of Making Urban Policy In a Global Context

This paper intervenes in a conversation between two emerging literatures in urban studies: that which questions the generalizability of urban theory and methods developed in, and with reference to, a small number of Global North cities and the literature on ‘urban policy mobilities’ that conceptualizes the circulation of ‘best practice’ policy models. Both literatures focus on forms of theory-development, associated method-making, and questions of comparison, learning, mobility, translation, and travel. The former seeks to push academic urban studies to more fully account for the provincial (mostly Global North) character of urban legal changes in India; socio-cultural transfers of the uneven travels of the union in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal global process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework for Japan, the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and policy interventions in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity found in small and rural America is expected to change the character of the landscape, focusing on increased cultural diversity. The trend is also altering rural structural characteristics and driving changes in rural communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory suggests that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant social networks for inclusion of newcomers and long-timers to determine if differences in their quality of life. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

Institutional Ethnography and the “New Materialism”

Abstracts are organized by first presenting author's last name.
In the introduction to their 2010 collection, New Materialisms: Ontology, Agency, and Politics, Diana Coole and Samantha Frost write of an increase in “scattered but insistent demands for more materialist analysis” (p. 2). While not seeking to “deny [the] rich materialist heritage” (p. 4) that informs their work and the work of others taking part in this scholarly conversation, Coole and Frost call for the development of “rewound materialisms” up to the job of grasping and analyzing our “materially and discursively fast-changing world” (p. 4). This paper examines these theoretical and analytic trends from the perspective of institutional ethnography. I approach this literature with a friendly curiosity and share my discoveries in terms of what it’s all about and what new materialists and IE materialists might have to say to each other.

Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller's patter, square dance encodes an idealized version of heteronormative, “old time” gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, flowy skirts and puff-sleeved blouses for the women. In the present day, these “invented traditions” coexist amidst a range of self-presentational options, as well as frequent urgings from within the square dance community to “update the image” of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors’ club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Duel of the Dualisms: Production and Reproduction Reconfiguring

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family, has led to another stage of the dualism. The separate spheres of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author’s current research programs, on care migration and on life course effects of the Great Recession of 2008+, the duel and dance of the dualisms of production and reproduction in comparative contexts are explored.

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Global Ageing in Precarious Times

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour ageing as a macro, meso and micro process. As the coup d’état in slow motion, as population ageing has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of potential paid caregivers. In this proposed talk, McDaniel draws on her extensive research on the policy implication of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.

Green Consumption, Equity and Climate Change

The purpose of this paper is to explore how the mechanisms of the risk society and reflexive modernity (Beck et al. 1994) produce inequality in respect to green consumption. The research was implemented by an empirical approach. The research data was collected by interviewing people on how they make energy decisions when buying electricity, their relationships with nature, and what they see as being important in life overall. Interviews were completed in four cities in Finland: Helsinki, Espoo, Imatra and Joensuu. The people interviewed ranged from the laymen to the executive, i.e. different social classes. During the research it became clearer that the characteristics of the risk society and reflexive modernity and equity seem to be significant when solving issues of the risk society and climate change.

It seems that the ownership or the lack thereof of cultural, educational and financial capital makes a difference - people made their energy purchase decisions based on what had value to them which was influenced by their cultural, educational and financial background. The abstract and insecure nature of the risk society and reflexive modernity makes it difficult for people to be green consumers because of the lack of stability that seems to be a requirement for green consumption. Individuals will not act on altruistic motives without personal stability in life which would seem to lead to the possibility and understanding to take part in green consumerism. Cultural and educational capital makes it easier to grasp abstract issues like climate change or altruistic motives. It seems that green consumption can be increased by equal opportunities in employment, education and equality in income division.

SMITH, GAVIN (The Australian National University)

Excavating Risk Dialectics: On the Multidimensional of Disaster Prevention

An extensive research literature now examines both the prevalence and causality of disasters within complex socio-technical systems (Vaughan, 1996; Snoek, 2000; Hopkins, 2010; Hayes, 2012). These studies evince that disasters are as much an outcome of social relations as they are a result of technical failings. With this framework in mind, we explore empirically alternate definitions of risk amongst a range of stakeholders with primary and secondary responsibilities for ensuring the security – and integrity – of natural gas supply in Australia. This involves tracing how risk perceptions are contingent on social positioning in politico-industrial ‘fields of practice’ and differ markedly according to factors like identity, expertise, resource capital and organisational role. We focus attention initially on how pipeline design engineers perceive risk vis-à-vis industry concerns that revolve principally around asset protection, public safety, legal obligation, insurance burden and reputational management. We then critically compare this risk burden with a variant borne by a different set of actors, those whose mundane activities pose a constant threat to gas pipeline stability. Although the actual harms that ‘excavation workers’ confront – i.e. operators of excavation equipment who might be either utility company and local council contractors or landowners - are similar to those visualized by pipeline maintainers (loss of life, loss of supply, loss of contract, loss of material resources) the former group bear a differing set of values, interests and ambitions in terms of how they formulate risk imaginaries. Moreover, they face divergent external pressures and accommodate contrasting internal desires, a situation shedding light on the pluralised, but socially conditional, nature of risk perception and the multivalent elements influencing disaster prevention procedures. In particular, the paper reveals risk perceptions to be dialectical in essence: orientated to a similar perception of envisaged harm but shaped by discrete contexts and circumstances.

Punishing Coaching: Japanese Educational Sports Clubs and the Normalisation of Coach Violence

At the beginning of 2013 two independent cases made the headlines of Japanese newspapers. The first case involved the suicide of a high school student who was allegedly triggered after he received several beatings from his basketball coach for failing to perform well enough. The second case involved fifteen female judoka, including competitors in the London Olympics, who filed a letter with the
Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women’s team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which corporeal punishment is justified by coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a competitive form of athlete. The combination of sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

‘If It Weren’t for Rugby I’d be in Prison Now’: Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific Islanders’ identity and the demonstration of successful integration into the 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders’ enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such sports, instead positing them as exemplars of individualism and self-governance.

MCDONALD, KEVIN* (Middlesex University, k.mcdonald@mdx.ac.uk)

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodiment of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective may be a way to an ethical grammar of displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident in experiences of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evidenced in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective may be a way to an ethical grammar of displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

MCDONALD, RUTH* (University of Warwick, ruth.mcdonald@wbs.ac.uk)

Organising Celebrity – Social Mobility and Symbolic Violence In England’s Green and Pleasant Land

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and ‘noble’ is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of mental breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper drawing on Bourdieu’s Distinction and Giddens’ writings on ‘distanciated instances’ suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

MCDONNELL, ERIN* (University of Notre Dame, erin.mcdonnell@nd.edu)

Charisma and Subcultural Bureaucracy: Challenging Weber’s Ideal Typical Distinction

What role does charismatic authority play in the incultation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and imbuing transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence. My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enable them to attract high quality personnel even in the context of human capital scarcity. Such charismatic leaders strategically offer subordinates “high profile” work that connects them to “big men” who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos. They leverage high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber’s ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

*X denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is such as the trend toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-person interactions because objects can't engage in "impression management." As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resounding meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns (McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, displacement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the growing field of materiality by specifying how material qualities of objects have independent effects, beyond failing back on the symbol-driven work of material culture studies.

MCFALL, ELIZABETH* (Open University, liz.mcfall@open.ac.uk)

Charisma on the Doorstep: The Role of Agents in the Industrial Assurance and Home Credit Markets

In Weber's typology, charismatic authority is distinguished from bureaucratic and traditional forms of authority because it derives from the exceptional, extraordinary notion that an individual personality is thought to possess. Being ideal typed in opposition, charisma may seem to have nothing to with bureaucracy but, ideal type generalisation does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organizational forms encouraged differentiation with eg large bureaucratic organisations incorporating charismatic forms of leadership in adapted forms. These developments haven't made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to "qualify" products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endowing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceeded this role. Through agents, insurance and home credit companies acquired an operant, adaptive "grooviness" by virtue of the channel they established between company and customers. In both sectors, the exchange payment collection but as important was the exchange of information since information was the key to product persistency. The challenge was that agents' capacity to get and transmit useful information was closely related to their personal qualities, their personal charisma.

Territoriality and Roma Nationalism in Europe

The Roma community is one of the most marginalized and persecuted minority groups in Europe. Facing hostile policies at home, the rise of right-wing populism, and widespread neglect and an individual personality is thought to possess. Being ideal typed in opposition, charisma may seem to have nothing to with bureaucracy but, ideal type generalisation does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organizational forms encouraged differentiation with eg large bureaucratic organisations incorporating charismatic forms of leadership in adapted forms. These developments haven't made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to 'qualify' products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endowing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceeded this role. Through agents, insurance and home credit companies acquired an operant, adaptive 'grooviness' by virtue of the channel they established between company and customers. In both sectors, the exchange payment collection but as important was the exchange of information since information was the key to product persistency. The challenge was that agents' capacity to get and transmit useful information was closely related to their personal qualities, their personal charisma.

MCGOVERN, PAULINE* (University of Manchester, pauline.mcgovern@manchester.ac.uk)

An Unequal World: Class, Leisure and Health Outcomes in Older People

In this presentation, we look beyond the direct physical and social effects of leisure activities on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of social class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieusian terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement than the specific occupational capitals that marked their work during working life. It is in their former lifestyles (tastes and leisure activities) but may also develop new activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their ‘space of possibilities’ for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, leisure activities and health status, conceptualised within a Bourdieusian framework. This study used panel data from the English Longitudinal Study of Ageing (2002-2010) with variables lagged at different time points to maintain temporal/causal order. The findings show the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status.

In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that cultural activities such as museum-going life, attending the theatre can make older people feel better about themselves and, as a result, be good for their health.

Fighting Complacency and Retropgression: Re-Awakening Gender Equity Activism in New Zealand

Fighting complacency and retrogression: re-awakening gender equality activism.

New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women's suffrage in 1893 and scores highly in international indexes such as the World Economic Forum's Global Gender Gap at sixth out of 135 countries. In recent political history women held the top four constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman(2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the State party accountable for the implementation of women's human rights and their retrogression. The paper explores and analyses the re-awakening of women's civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party's response to concluding observations and recommendations as Roma are not an ethnic group by territory within a state and are geographically dispersed across Europe. Roma nationalism signifies an attempt to make new types of spaces that cut across traditional interstate borders and has created the belief that Roma are a true European minority. However, Roma nationalism is exclusively a transnational enterprise promoted by ethnic entrepreneurs and lacks legitimacy as well as resources, in terms of local actors and networks, which support the construction of Roma as a European minority. As Roma become figuratively and symbolically removed from the local and national socio-political space they reside in it leads to claims by the majority that Roma do not belong or do not 'fit' in the dominant nation, be that Italy, France, Hungary or Czech Republic. This in turn could lead to further marginalization and persecution.

MCINTYRE, JANET* (Flinders University, janet.mcintyre@flinders.edu.au)

The Challenges For Social and Environmental Justice Posed By The Global Panoptican, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next.

The paper makes a plea for a different form of governance that weighs up the social, economic and environmental indicators of wellbeing. It is important to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The study is set to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;
ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not undermined.
iii) Strengthening self-determination of people based on participatory democracy and the ‘absence of domination’ over others

iv) Monitoring based on democracy and governance;
v) Participatory management of the global commons as the fabric of life.

Currently the role of the state in Western democracies acts as protector of residual welfare rights in terms of the social contract applied to citizens within the boundaries of a state or federation. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

MCKETTY, CAROL* (University of Aberdeen, ccm63@cornell.edu)

When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging

After a change was made in Germany's census categories in the year 2005, who are the Germans? The category ‘Germans’—as used in the 1991 census—included men of German origin who had been born in Germany. This group was divided into ‘Germans’ and ‘persons with a migration background’. The latter category comprises, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher’s person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I — a dark-skinned, native English-speaking woman living in Germany — interviewed Germans (German citizens) in a mid-sized city in Germany to participate in the Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom

The United Kingdom has seen dramatic changes in the nature of work and family roles and related gender divisions of labour over the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality both within households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course patterns and the potential emergence of new typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health risk in the two...
older cohorts. One of the objective health markers considered in this study in-
flammation, a significant predictor of chronic diseases such as coronary heart
disease and type II diabetes. Early results suggest that gender differences in em-
ployment histories remain fairly entrenched across cohorts, and that educational
attainment has a stronger relationship with inflammation in mid-life than the sub-
sequent life course work and family trajectories it sets people on.

Asian Developmental States: Innovation, Industry, and Investment in China and Japan

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson's seminal study of Japan as a "plan-rational" polity initially challenged the neo-liberal assumptions of develop-
ment in the West. State intervention to discipline companies where necessary to
achieve national goals of development proved similarly successful in the Asia's
newly industrializing countries (NICs), leading to a mid-range theory of state/mar-
tket ties termed the "developmental state."

- China followed a far different trajectory, but again with a prominent state role
I look here to the current status of the developmental state in China and Japan, to
assess capitalism, I focus the study to the coordination of beautiful women and
innovation policies in China and Japan . Chalmers Johnson's seminal study of Japan
in China's NIS, in contrast to Japan where outward FDI links them to innovation
state continues to evolve, with curious discrepancies between central and region-
al governments. We find more continuity in central government policy in Japan,
those who favor expansion with Japan participation. Thirdly, inward FDI plays a major role
in China's NIS, in contrast to Japan where outward FDI links them to innovation
network in the U.S. and Europe.

MCORLEY, KEVIN* (University of Portsmouth, kevin.mcorsley@port.ac.uk)

Visceral Militarism: Embodiment, Intensity and Experience

This paper provides a critical reconstruction of the notion of militarism that is
particularly attentive to how militarism is specifically embodied in specific corpore-
al dispositions, structures of feeling, bodily performances, and sensory practices
that are located both within militaries and beyond. As such, it attempts to move
beyond a cognitivist understanding of militarism in terms of an explicit system of
militaristic attitudes, values and beliefs to trace a more embodied and affective
genealogy of militarism that emphasizes the often unconscious, corporeal and
sensory practice of 'war-making'. Embodied war-practices of late modernity can be felt
to be normal and desirable, through which militarism becomes assumed, and un-
examined, as an 'abstract social norm' that may inhere within the deepest fibres of
our bodily being (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from
the growth of 'British Military Fitness' as a popular leisure pursuit in the UK, the
technologies of affective captivating of immersive military video-gaming, and the
intimacies and intensities of helmetcam footage recorded by soldiers in the on-
going conflict in Afghanistan, the paper highlights multiple practices of corpore-
al and sensory militarization that travel beyond traditional sequestered sites of
classical military discipline, reshaping the wider sensorium and bodily pedagogics
and projects in numerous domains of everyday social life. As such, the analysis
emphasizes how desires for neoliberal self-actualization, thrill and bodily trans-
formation increasingly articulate with wider military imperatives and corporeal
practices of inclusion and exclusion in this context. Adorno's concept of aesthetic
individuation and individualized militarism. The paper concludes by discussing the importance of
locating these particular visceral militarisms with reference to shifts in the modes of
embodiment, somatic apprehension of the world, and deterritorialized flows of
affective experience associated with contemporary transformations in war-
fighting.

MEARS, ASHLEY* (Boston University, mears@bu.edu)

The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP

As income and wealth concentration reach historic highs, sociological research
on inequality has begun to focus on the social and cultural lives of the world's
"one percent." This article presents rare ethnographic data on spending behav-
iors among the increasingly global elite and documents how the *nouveau riche*
convert their economic capital into symbolic and social capital. Central to such
conversions are the gift giving rituals and exchanges of women. Based on two years
of observations at high-end nightclubs in the global VIP leisure circuit, as well as
70 interviews with club organizers and guests, I document how gift giving is a
central condition of conspicuous consumption among nightclub patrons, who
distinguish amongst themselves through the display of beautiful women and the
display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatch-
es. I develop the concept of *girl capital* to describe women as a resource for sta-
tus-seeking men. Club promoters work to accumulate and mobilize *girl capital*
through the circulation of gifts, perks, favors and intimacies to establish reciproc-
ally free, generous, and intimate relationships between paid brokers (men) and unpaid
women, thus masking the labor behind conspicuous leisure and framing econom-
ic relationships as friendships. Additionally, women are themselves circulated as
gifts among men, largely through their symbolic presence on display. Thus this
article documents two levels through which gifting practices sustain structural
gender inequalities and uphold a traffic in women system: gifts to recruit women
and women as gifts. This article also demonstrates how gifting practices are fun-
damental to stratification among elites. Lastly, this article gives elite space by
revealing the logics of gendered worth within a contemporary high-society arena,
one which recognizes and rewards economic capital for men but bodily capital for
women.

The Effects Of Divorce On Children Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey

Divorce has negative socio-economic and interpersonal consequences on
adults/children consist of behavioral and emotional problems. They are more like-
ly to divorce, more likely to marry at young ages, to report problems, perceived
instability, lack of trust in their marriages. Many two-parent families don't offer a happy environment for children. Parental divorce may disrupt the
life course, with lifelong consequences for children well-being;lowered socio-econo-
mic status and problems in interpersonal relationships. Compared with indi-
viduals who grew up with both parents, children of divorce have lower levels of
education, occupational status, and income, higher levels of economic hardships
more often marry young, divorce and remarry several times, find themselves in
unhappy relationships, and mistrust people in general. However they do not have
lower levels of social support in their life. These relations may vary according to age,
minority status, sex, parental education, parental death and socio-economic
status.

In our research, we indicate the effects of divorce on adults children who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult's age, gen-
der, parental conflict, post-divorce family stability, parent-child relationships, ed-
ucation, occupation, status and problems in interpersonal relationships. Variables are significant to understand the effects of divorce on children. We examine the association between child depres-
sion and childhood parental divorce using a representative sample of 354in Deni-
zi (177 male and 177 female). Firstly, in our research, methodological issues area
important in this context. Secondly, the findings are discussed within a the-
otoretical framework using family systems concepts and life-course theory's argu-
ments. Results strongly support the our research hypothesis. Cultural differences
and implications of the study are also discussed. Our research is supported by
TUBITAK (The Scientific and Technological Research Council of Turkey). We thank
to TUBITAK for supporting to our research project.

Indigenous Religion, the State and Civil Society in Bukidnon,
Philippines

The paper describes the religion of an indigenous case community in Bukid-
on, Philippines from participant observation, interviews, focused group dis-
cussions and content analysis of documents from government and civil society
organizations and other secondary materials. It analyzes the diversifying role of
indigenous religion in the public sphere amid social change in the uplands with
the entrance of migrants, logging companies, the state and civil society organiza-
tions. The paper also intends to shed light on how indigenous religion contributes
to communal adaptation and sustainable development as well as efforts to pro-
tect ancestral domain in the face of increasing commercialization of the economy,
as well as address gender and environmental conflict. The increased visibility of religion
and the strategies of religious leaders to position themselves in the changing con-
text has implications as well for the relations between religion and the state and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it exceeds Costa Rica, which some have considered the Switzerland of America, for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations. This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

Povety and Unequal Development in Central America

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it exceeds Costa Rica, which some have considered the Switzerland of America, for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

Globalization and Human Rights

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in the different forms of immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human rights was laid down by the United Nations General Assembly on December 10th, 1948.

The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated.

The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the human rights in their respective constitution.

Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society. Despite human rights becoming the subject of concern to the legal fraternity, the Asian countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

Transformation of Leisure and Lifestyle Activities of Tribals in Rajasthan (India)

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions.

The study focuses on a significant social change and transformation of leisure activities and lifestyle of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere.

Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their impact on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and lifestyle of tribals.

Keywords: leisure and lifestyle, Chaupal, Traditional games, family-oriented activities

Social Investment at Sub-National Level in Mexico: The Role of Actors and Institutions

Sub-national governments have been largely considered to be better equipped to respond to local preferences and needs more effectively than central governments. While this capacity has been mainly associated with the role of sub-national governments in delivering social services, their role in social policy innovations has been scarcely studied, especially in the Latin America context. Nonetheless, as the case of Mexico shows, in the context of increasing political and financial decentralization, sub-national governments have been more active in implementing their own social policy initiatives. This paper explores the most important factors that may explain the increasing activism of sub-national governments in the social policy realm, measured by the size and type of social investment, apart from their spending in health and education services. To do so, we produce a qualitative comparative analysis that comprises three different states in Mexico; state-level is the second tier of local government in the Mexican union. This comparative analysis looks at the relationship between social policy and different political and institutional variables, including the actual capacity of the government to get financial resources, as well as the type of actors in charge of social policy in each state.

The Impact of Social Structures on Adolescents’ Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran’s society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals’ behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents’ deviant behaviors. The paper is drawn upon theories of Durkheim, Giddens, Putnam and also the findings referred to the situations of social anomic and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors’ behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition demand to a renewable system. The German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid (“smart grid”) has started. In this smart grid private households should play a role as adaptive consumers who shift their electricity consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members everyday routines? To what extend are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

MEISSNER, MIRIAM* (University of Amsterdam, m.m.meissner@uva.nl)

Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

My objects of analysis range from filmic and documentary crisis portrayals such as Inside Job (2010, Charles Ferguson), Wall Street: Money Never Sleeps (2010, Oliver Stone) and Margin Call (2011, J.C. Chandor) to fictional and non-fictional crisis literature such as A Week in December (2009, Sebastian Faulks) and The Big Short (2010, Michael Lewis).

This paper forms part of a research project that applies anthropological and socio-semiotic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.

ORTAR, NATHALIE (ENTPE)

Dans Un Contexte De Crise économique : Tensions Sur L’emploi Et Sur Le Marché Immobilier. Quelles Conséquences Spatiales ?

Dans le cadre de la recherche ANR Transénergie, six sociologues ont entrepris deux enquêtes par entretiens semi-directifs dans les métropoles françaises de Lille et Lyon sur la classe populaire salariée stable (Bihir, Pfefferkorn, 2004) potentiellement affectée par les évolutions économiques des marchés de l’emploi et de l’immobilier.

La première enquête (40 entretiens) s’intéresse aux candidats à l’accès à la propriété. La seconde (30 entretiens) s’intéresse aux salariés travaillant dans des zones d’activités périphériques.

Notre contribution traite des conséquences spatiales de tensions combinées sur les marchés de l’emploi et immobilier et s’articule autour de quatre parties :

– En situation de crise économique, l’attitude la plus répandue est de s’agripper à l’emploi. Au nom de cette sécurité professionnelle, des projets familiaux sont mis en désordre, et même abandonnés, y compris des divorces. Traiter des conséquences spatiales des évolutions récentes des marchés passe d’abord par en considérer les conséquences en terme d’immobilier.

– Les marges de manœuvre que contrôlent les salariés sont différentes selon qu’ils rapprochent l’emploi ou se rapprochent de l’emploi. Si la proximité domiciliaire travail détermine largement le choix résidentiel, elle n’est plus garantie. D’évidence, la proximité domiciliaire-travail devient privilégiée.

– Les difficultés que rencontrent certains ménages en période de crise pour accéder à la propriété ou à la location (dépôt de garantie) étant donné l’instabilité de leurs emplois, rendent plus complexe l’ajustement des localisations. L’instabilité professionnelle ou les fréquentes délocalisations d’entreprises aboutissent à ce sentiment que, du point de vue des navettes domicile-travail, tous les lieux se valent.

– Si la ville n’est plus cohérente (Korsu alii 2012) cela ne tient-il pas d’à la ville urbaine ? Dans une ville multipolaire comme Lille si la possibilité de trouver un logement à distance raisonnable de l’emploi parait satisfaisante, dans une métropole unipolaire comme Lyon, les difficultés à trouver une localisation satisfaisante sont plus grandes.

Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability becomes necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module in Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project gives a unique insight into interpretation differences across respondents in a cross-national perspective. The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their countries’ history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism. It is assumed to be anchored in well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? what kind of differences there are between social classes and trust? Can we find one Nordic model, or are there different models? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.

Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “seriality” of the festivals devoted to local identity or the new culture of slowness, as well as the inability to properly manage edutainment, are stifling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, how societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experimental archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, "liquid" and post-modern orientation could be overcome by a return of "solid" and material aspects. With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Educación Inconsistente; ejercicio Profesional Desigual

José César Mendoza-Cornejo

[1] Profesor investigador. CUCBA-UdeG. México
Email: cesarm@cucba.udg.mx

En la historia del hombre sedentario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta "diferencia". Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del illetrado etc. términos que provocan divergencia y estancamiento. Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanista, con ideas que convengan en la solidaridad y por consiguiente, hacia una visión de interés colectivo.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud aniquila la democracia. Lo que hace falta es un ejercicio colectivo, circunscribiendo los principios que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

Con el objetivo de evaluar el comportamiento –simulación- de productores y profesionistas se efectuó una encuesta en localidades del Estado de Jalisco.

Resultados:
El INEGI 2010 concuerda con la indagación, el esfuerzo por hacer más es poco, desatendiendo a quien radica lejos de los centros, simulación que provoca desigualdad separándolos del resto y de las oportunidades, generando abandoño, emigrando en busca de anhelos donde su personalidad es menguada por lo desigualdad y de la estratificación social, separándolas del resto y de las oportunidades, generando abandoño, emigrando en busca de anhelos donde su personalidad es menguada por lo desigualdad y de la estratificación social.

Conclusiones:
La universidad y su comunidad deben ser ambiciosos y asumir un objetivo humanista y reorientar programas escolares y acciones como el Servicio Social.

Brazilians living in Paraguay are the largest immigrant group in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in homelands elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favour of crossing the frontier into Brazil to vote to the polls on elections days. Furthermore, the Paraguayan residents in Brazil will be able to cast their ballots in Paraguayan elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals' cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociologists. It consists of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. And 25% are overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Ingelhart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies divide in relation to experiences of authenticity. Turner found no relationship between respondents' cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Misère au Borinage (1933) from Joris Ivens. The first one show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one show the very arid and difficult life of the Belgian miners of Borinage, focusing in their harsh and overlong working conditions that has lead to a major strike in 1933, after the world-wide crisis of 1929 in the USA.

Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in an harmonic process and questioning the "natural" approach of a film like Nanook of the North. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capital also reproduces the misery of the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documentary film in history to put the working class in the central place as a film subject, Borinage is the first one to show the working class in the process to become a historical subject to change the world, like fiction has already made in Eisenstein’s Potenkim (1925).

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of
images and the exterior "reality" that the camera faces are more fragrant and undeniable, based on the theoretical assumptions made by Foucault in What is an author? and by Pierre Sorlin in Sociologie du Cinéma. It discusses the documentary cinema by analyzing their relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality they allude. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the misperception of a film as the "real" itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film Les Maîtres Fous, by Jean Rouch, as a Discourse and not as a film, as his Director. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the "other" (a ritual) and not a discourse that alludes something else (the French colonial heritage).

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label's work consists in organizing collection that gather music from "exotic places where the music originated" so the rest of the world could know about that culture "as it is". But what we observed in the research activity is that the curatorial work of the label brings a strong authorship signature: the label isn't only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorial practices occurring in the relationship between the label and the director is not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediaries instances, precisely because they see themselves as capable to live in this between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own beliefs, it's always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of "other voices" is a central analytical topic.

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such crimes. Both countries have recently created governmental offices and programs to combat such acts. The persistence of multisided violence may not cause the horrific carnage that, for example, the 20th century witnessed. But what we observed in the research activity is that the curatorial work of the label brings a strong authorship signature: the label isn't only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorial practices occurring in the relationship between the label and the director is not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediaries instances, precisely because they see themselves as capable to live in this between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own beliefs, it's always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of "other voices" is a central analytical topic.

An Operational Framework for Addressing Socio-Political Environment of Disaster Risk Reduction-Oriented Spatial Planning

Spatial planning plays a significant role in disaster risk reduction (DRR); UN Habitat has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning. Lack of good governance, incompetence of institutions and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongla Port City in Bangladesh and Medellín in Colombia. Both of these cases suffer from smeared mapping in Mongla and flash flooding in Medellín. The obvious differences between them (cultural environment, social structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local level DRR planning. Its implementation is difficult because of lack of coordination and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.

Effects of Rating Scale Polarity on Attitude Measurements with Latent Variables

Beside the item content, rating scales represent a central data base for survey measures. Attitudes are often measured by a certain number of items thought to present a latent concept. This paper focuses on the polarity of rating scales and its impact on the attitude measurements with latent variables. With respect to social sciences methodology, bipolar and unipolar rating scales are distinguished. Both polars reflect two opposing alternatives (e.g. agree-disagree) with a conceptual zero as midpoint (neither/nor). Unipolar scales (e.g. level of importance; do not agree – agree) reflect varying levels of the same dimension with the middle category presenting the conceptual dimension's midpoint (e.g. moderate). In surveys so-called “mixed” rating scales are often used, as for instance a unipolar rating scale with a midpoint that reflects a conceptual zero point.

The present study addresses the question how attitude measures with latent variables are affected by unipolar, bipolar and mixed rating scales. A 2x2 randomized experimental design was implemented varying polarity (unipolar vs. bipolar) and middle category (matching vs. non-matching to scale polarity). Different attitude constructs were measured using these rating scales. The effect of rating scale formats on item loadings, error terms and dimensionality of items were assessed using Confirmatory Factor Analyses (CFAs). The effects were also modeled and tested with help of structural equation modeling (SEM) taking response sets and certain personal characteristics into account. The participants were 522 members of GESIS online access panel representing a probability sample of German residents. The results show an effect of experimental manipulation on item loadings and error term variances. The effect of experimental manipulation on attitude measurements was mediated by response sets. The results are discussed in terms of their applicability for surveyors and researchers.

Problems of Recognition Extremist Information on the Internet

In recent years, there is an increase of extremist activities in different countries in the world. Terrorist organizations skillfully recruited new supporters. Internet is one way of attracting people to the organization of extremist activities. Information on the extremist organizations are placed on websites explicitly or implicitly linked to DRR aimed at destabilizing the political situation in the country and poses a threat to the health and life of many people. Internet users are not always able to clearly define which kind of information they receive from different sites is really extremist information.

In 2013, we conducted the research in a large industrial center of Yekaterinburg (Russia). The method of research is case-study. The aims are to examine
Indigenous Pathways in Social Research: Addressing Inequities

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is the ongoing social research and the role of research to address human rights in their communities. In the year 2005, the Mexican government, through the Program for the Eradication of Poverty (PROSPER), launched the Comprehensive Program for the Development of Basic Social Services (PPDSB), to eradicate poverty and reduce inequality. This program is implemented through Local Development Agencies (ADL). The Local Development Agencies (ADL) are institutions created by the Mexican government to address poverty and inequality, with the objective of providing social services, education, health, and housing to communities. The effects of these programs have been mixed, with some success in reducing poverty but also criticism for the lack of accountability and transparency. The role of research in this context is crucial to understand the effectiveness of these programs and to inform policy decisions. This article will focus on the role of research in the Mexican context and its potential to address the issues of poverty and inequality.
harmony and the new era of even weaker national governance, accelerated by the process of decentralisation (chihō bunken) and deepening fiscal crisis (making politicians powerless and leaving people on their own) have imposed individualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defense and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, especially to families.

MEUTH, MIRIAM* (University of Frankfurt, meuth@em.uni-frankfurt.de)
Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labour market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

Hooliganism and the Dark Side of Football Events

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Descriptions of fights, stones, lights, fires are all features that the victims dominate the coverage. At the same time the term "hooliganism" has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of "hooliganism" is to make sense of seemingly “senseless” violence, to produce a surplus of order over disorder. From the hooligan's own perspective the violence is by no means "senseless" but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus “fair” – duels, in which the combatants could achieve or restore their honor. In this paper we want to address the phenomenon of “hooliganism” from a cultural sociological point of view. We contrast the “public” perspective and the media imagery of violent acts of hooliganism with the self-concept of the subculture in question. This comparison shows that hooliganism is a deeply ambivalent phenomenon. It is both playful and serious, sport and “war”. Hooligans are peaceful and “invisible” in everyday life, while their role as violence-provocateurs as long as the “moral holiday” (Randall Collins) lasts. We argue that this in-betweeness makes hooliganism so hard to grasp by science, politics and the media.

Transformations Of Cultural Identity: Japanese Mothers Raising Intercultural Families in Australia

Abstract:
Stuart Hall argues that identity is not about ‘who we are’ or ‘where we come from’, but about ‘becoming’ something. This paper explores Japanese women’s changing cultural identity by focussing on those who have chosen to leave their homeland and settled in Australia to raise a family. Selected from a larger study of mixed marriage, this paper focuses on three case studies of Japanese women who settled in Western Australia with their European migrant husbands and raised children in the third culture are the focus of this paper. It examines how these women adjusted their cultural values in relation to their husband’s culture and the new host culture, how they raised their children in a foreign land with a foreign husband, and the manner in which they retained elements of their Japanese identity, re-creating themselves through different stages in life. While their experiences demonstrate challenges, not least of which is that of ‘culture shock’, and racism, they also offer evidence of resilience and creativity in the negotiation of cultural adaptation. This paper demonstrates the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family, and the historical and political background of the society in which these women live.

MEYER, MICHELLE* (Texas A&M University, mneyer@arch.tamu.edu)
Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency’s “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational and community capital benefits the individuals, organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organizations (Kapucu et al. 2010). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kopinke et al. 2006; Kapucu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations use of networks for disaster situations (Boerfel, Lai, and Chewing 2010). In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience.

My results address how the ‘Whole Community’ is practiced as well as contribute to organizational theory about social capital’s effect on organizational and community outcomes.

JS-60.4
MEYER, MICHELLE* (Texas A&M University, mneyer@arch.tamu.edu)
The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resiliency is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individuals and members of the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure social capital and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure social capital and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure social capital and one urban, I discuss disaster social capital and its role in families’ resilience. Collective Action and Collective Actors in Fields: Some Ontological Clariﬁcation of a Recent Debate in Neo-Institutionalism

The concept of “fields” has a lively history. Starting as one of the crucial con-
cepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general con-
cept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This inter-
esting development is, however, accompanied by some weaknesses: Currently, individual actors and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual actors.

We take the distinction between agency and actors immanent in theories of pro-
cess (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of modernity (Luckmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jepperson 2000). They are often confronted with the obli-
gation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actual-
ized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clariﬁed picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within ﬁelds, for example how agency and actors are constituted by ﬁelds at the same time as they constitute them.

Modern Times: How Organizational Time Structures Inﬂuence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as orga-
nization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic proﬁt, media organizations disseminate information and schools educate. However, in doing this they use their own speciﬁc structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timetables, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (tempo-
rall) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organi-
izational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientiﬁc ﬁndings can hardly be deﬁned in advance. However, organizations, such as uni-
versities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical studies which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we de-
velop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

The Dilemma of Feminist ‘Double Activism’ and the Pressure of Separatism

Feminism shares boundaries with other political movements, often acting in syn-
ergy with many of them. The term “double activism,” coined by Italian femi-
nists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist col-
lectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conﬂicting loyalties in the 60s and 70s by feminists advocating a complete separation of their move-
mends. “Double activists who lived this experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely outside frames of reference controlled by masculine thought. The pressure felt was described as schizophrenia resulting from being engaged in two opposite worlds and not feeling whole in neither of them. This presentation is based on a comparative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found be-
tween feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of femin-
ism while seeking to bring feminist principles and feminist struggles within leftist groups.

MICHEL, PATRICK* (École Hautes Études Sciences Sociales, patrick.michel@ens.fr)

Elements of a Socio-History of the Relation Between Nation and Religion – The Case of Catholicism

The nation has been, simultaneously, a privileged tool of modernisation (that is of disenchantment) and of the political, and also a potential tool of perpetuation of a new type of enchantment (which is a privileged space for the refusal of mo-
}
imposed in the 19th and 20th centuries while (re)producing inequality, and result- ing in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred- ible. Should a space which can bring back the current evolutions carried by the acceleration of globalisation exist, the best option would be the one that carries the resistance against this process. In a situation that is characterized by the disqualification of the absolute and the passage of ‘sameness’ to plurality, there should be no surprise to the fact that we are witnessing some actions towards the reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations (and the successive reorganisation of these relations) maintained by the catholic church towards the nation. In an orientation to follow the sign of the times (if not to transform it, at least to inhabit it), religion and the nation are both categories which share with intimacy the avatars of legitimacy, that is the rebuilding (and the partial over-imposing) of complex dispositions to organise the religious. What it play around religion and the nation can only make sense when dealing with the contemporary redeployment of these devices.

The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a “resource”, as a way of generating economic value. It is in this context that arise no- tions bringing together seemingly antithetical terms, as “economy of culture” and “creative economy”. The study aims to show how this new isomorphism of spirit, the world of culture seems to incorporate both practices and discourses from the new corporate world, which in its turn seems to feed on the cultural sphere. In this increasingly intricate intertwining between economy and culture, it seems to be an isomorphism between the practices of companies of the flexible capitalism and certain agencies of culture. Under the rhetoric of “organizational innovation”, these agencies replicate business models such as the networking, horizontal, an-ti-hierarchical organization, based on crowdsourcing and / or crowdfunding, etc. In these new models of “cultural business”, content producers find themselves in precarious employment, and later on in the promise of eventually monetize their creative capital, they experience temporary and outsourced contracts. As Max Weber teaches us, each form of capitalism needs a corresponding “spirit”, so that will be also a discourse isomorphism between the world of flexible economy and the sphere of culture. The discourses about the non-separation between profes- sional and personal life, between work and leisure that flexible capitalism took from counterculture is easily extended to current artistic and cultural activities because such ideas refer to the historical separation between art and work that founded the very category of “artist”. Through the analysis of similar practices and discourses into the corporate world and in the cultural sphere, the study will show how the precariousness has been rhetorically transformed into flexibility and freedom and how, even under the rhetoric of altertiveness, culture in the flexible economy has contributed to the reproduction of an unequal world.

Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social policy analysis in the past. Nowadays the nature of inequalities and types of interventions are changing. The paper aims at analysing the inequalities in subjective well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the paper: Does the welfare state reduce inequalities in people’s overall subjective well-being? Does the welfare state reduce inequalities in people’s satisfac-tion in various domains of life such as health or work-life balance?

2. The goal of the paper is to measure and compare, across European coun- tries, inequalities in overall and domain subjective well-being (SWB) based on subjective indicators of well-being. Doing so allows for the evaluation of effects of economic and demographic changes in societies and to provide information on well-being of different groups in the European societies. So the first question asked is of diagnostic nature: what are the inequalities of well-being of parents and non-parents among European countries? Are there cross-national differences in the level of inequalities in subjective well-being belonging to the vulnerable groups due to specific life course stages (parenthood, marital status)?

3. The paper considers the broadly defined cross national, comparative analy-sis of contemporary family policy as well as gender regimes. The paper will assess if the cross-national differences in the level of inequalities in sub- jective well-being of parents and non-parents can be related to the welfare state regimes or to specific policies.

The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as organizational features of schools interact with students’ individual characteristics. The organizational feature of interest in this paper is school racial, ethnic, and social class (SES) composition. This paper asks the following question: “Does school racial and SES composition affect individuals’ K-12 reading and language arts achievement?” To answer it, the authors conduct a metagression of the US social science literature published in the last 20 years on the relationship between reading and language arts outcomes and the racial, ethnic, and SES composition of the K-12 schools students attend. The authors employ a two-level hierarchical linear model (HLM) to synthesize approximately 75 primary studies with 200 re- gression effects. The tentative answer to this research question is a qualified yes; students attending schools with concentrations of disadvantaged racial minority and/or poor peers achieve less academic progress than their otherwise compara-bly composed counterparts in more racially heterogeneous or lower poverty schools. Preliminary results indicate that attending a racially isolated disadvantaged minority school has a statistically significant negative effect on reading and language arts achieve- ment. This relationship is moderated by the size of the sample in the primary study and by the way the independent variable (school racial/ethnic composition) was operationalized. Effects vary for different racial and ethnic minority groups and the effects are stronger in secondary compared to elementary grades. The emergence and widening of the race gaps as students move through the grades suggest that the association of racial and social class isolation with reading and language arts performance compounds over time, illustrating how school composi-tion effects reflect the dynamics of structural vulnerability theory.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@unc.edu)
The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US and other multiethnic democratic nations this responsibility is complicated by the growing demographic diversity among students, a diversity fueled by internation-al migration. The central argument of this paper is that integrated schooling is a necessary, albeit insufficient, condition for developing the social cohesion that just, multiethnic democratic societies require to flourish. Using the United States as a strategic case study, the paper synthesizes the US educational, social, and behavioral science literatures on the effects of school and classroom racial, eth- nic, and social class composition on short- and long-term academic and nonaca-demic outcomes across the life course, with special attention paid to immigrant youth. The preponderance of the extant US literature on the topic links integrated schooling to improved academic and non-academic outcomes, and suggests in-tegrated schooling is also a necessary, though, insufficient enabling condition for fostering civic engagement in multiethnic democratic societies. Ironically, despite this growing corpus of evidence, US schools are segregating by race, ethnicity, and/or social class. To be sure, because of international and internal migration trends, the nature of US school segregation has changed so that today it is much more ethnically complex than the Black-White or Brown-White binaries of the past. Nonetheless, studies indicate that today, as in the past, schools with concentra-tions of poor disadvantaged minority students generally fail to educate their students. The paper discusses the implications of its findings for 21st century edu-ca tion in the US and other multiethnic democratic societies (especially OECD countries) facing the opportunities and challenges of multiethnic diversity and international migration pose for delivering educational excellence and equity to all students.

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and ends of one’s action. Weaker contributory ethic of responsibility with an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends— that is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’— and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one’s action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicate how an ethic of responsibility “takes account of precisely the average deficiencies of people” and can therefore be linked to empirical social psychology. Redefining Weber’s ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

Global Presence of Japanese Popular Culture as one of the Cultural Waves from Asia

The presentation will focus on the overseas project of “J-pop”. Few previous studies related to this topic focus closely on the efforts of players in J-pop sector to promote J-pop overseas, especially their cooperation with government and players in overseas market, although such a J-pop’s overseas project is planned and implemented on the basis of their close communications and relationships. In this presentation, therefore, I propose to understand J-pop’s global spread in terms of the network of agencies with central focus on the players of a certain overseas business project of J-pop and government. What kind of “power” “energy” and “motivation” is shared and circulated among their entanglements? How can we develop an understanding of the “network” concept through the global spread of J-pop? Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.

MIHARA, RYOTARO* (University of Oxford, mihararyotaro9@gmail.com)

Networking “Cool Japan”: Re-Considering the Notion of “Network” through the Global Spread of Japanese Popular Culture

It has been more than a decade since the global appeal and presence of Japanese popular culture (hereinafter called “J-pop”) became significant and was labeled as “Cool Japan.” Even Japanese government has recently committed itself to the overseas promotion of J-pop, and the resulting policy set has been called “Cool Japan” policies and business projects. In order to stimulate public discussion whether to withdraw from nuclear energy on a national level, and this paper focuses on partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DPJ government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the result of the deliberative poll, approximately half of the participants supported the complete phase-out of nuclear energy, and it was reflected on the government policy decision to some extent. Some of the major findings from the participant observation of the deliberative poll are as follows: first, the public participation and deliberation substantially impacted on the policy formulation, producing a complementary effect to a wide range of direct actions such as demonstration and public comments. Second, the deliberative poll provided ordinary citizens with opportunities to question the existing authority of experts and make informed judgments about national energy policy. Third, however, the result of the deliberative poll was abandoned once the conservative coalition took power at the end of the year, and there still remain many challenges
about connections between public deliberative/participatory exercises and decision-making in energy policy.

Family and Non-Family Support during the Transition to Parenthood

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Evenson and Simon, 2005, Umberger et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahnesman et al., 2004) is in conflict with parents’ leisure, freedom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003). Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, advice and information, as well as material support, see: Bengtson, 2001, Chan and Ermisch, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviate the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers’ wellbeing.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2).

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

MIKUCKA, MALGORZATA* (Higher School of Economics, mikucka.m@gmail.com)

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institutions of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being gap of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000, Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular, I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Survey for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the within-counry differences across time.

Results show that the life satisfaction gap between the married and the never-married decreased over time at a rate that could close the well-being gap between themarried and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore, the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed form configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond its boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011 - beginning of 2012 (a sample – 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project “Trajectories of family models and social networks: intergenerational dimension”, financed by the European Social Fund (ESF).

Changing The Subject: Occupy Wall Street's Achievements and Prospects In Comparative Perspective

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Europe, and soon after its critique of inequality gained traction with the slogan “We Are The 99%.” It helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the results of a representative survey we conducted of New York City Occupy Wall Street participants in a May 2012 protest march, we analyze the movement’s characteristics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such movements before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the individuals’ free will and decision making, the expectations horizon assumed, and the perception of control over the future life. At the medi level, it will explore two dimensions: a) social cohesion in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic
and political. At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasize the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with both patient outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognize the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

Dark Shades of travel: Death Tourism with its Legal and Social Implications

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of, in some cases, a therapeutic travel that culminates in assistance to end one’s life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing both digital media and first-hand experiences, this paper explores the possibilities of this article. Whereas much of the contemporary research in dark tourism focuses on sights, experiences, and actual memorialization, death tourism tends to comprise a holistic view of the emerging phenomenon by viewing supply and demand management (and promotion), political interpretation and control. The final component of the paper views societal interpretations of death tourism and its potential for market expansion. There have been several social movements and legislative attempts to curtail the spread of assisted suicide and death tourism; however, the demand for the services has grown to the point where jurisdictions are considering measures to allow this practice. Such an expansion of legalized assisted suicide will allow those seeking the right to die more options for a death within a diversified tourism industry and how the trend of death tourism is potentially spreading to other countries beyond Europe.

Researching Virtual Realities – Methodological and Conceptual Issues

The first decades of the century have seen profound transformations of societies through the creation of ‘virtual worlds’ populated by ‘avatars’, alternate online identities. For many, the opportunity to take on an alternate identity in a ‘virtual world’ is its primary attraction. Biological constraints, from being plain or unattractive through being too old or the wrong gender to having a physical handicap, can be transcended. Arguably, moral constraints need not apply either. While not ‘real’ in the physical sense, ‘virtual worlds’ can be very real in their effects and are independently evolving societies. They have economies that interact with economies in the ‘real world’ and it is possible to make a living or become rich in the real world through your activities in a virtual world. Even in their present, rudimentary form, some persons prefer their virtual identities and lives to those in their ‘first lives’. Driven by strong economic and technological imperatives, human/computer interfaces and virtual realities will become radically more immersive in the near future. It is not hyperbole to speculate that this could have profound effects for what means to be human and social in the 21st century.

Using Biographical and Family History Methods in Sub-Saharan Africa: Inheritance in Kenya

Inheritance systems and practices in sub-Saharan Africa play a key role in people’s ability to exit poverty, or, conversely, plunging them further into it. As land is seen as a means to be human and social in the 21st century, this paper will explore some of the myriad issues – ethical, methodological and practical - that arise from conducting research, particularly biographical research, in virtual worlds.

Mō Tātou: Doing It for Ourselves. Developing Indigenous Māori and Pacific Marine Scientists in Aotearoa / New Zealand through Tino Rangatiratanga (Self-Determination)

Persistent ethnic disparities in tertiary success have been experienced by indigenous and minority students globally, especially in the sciences, and more so at postgraduate level. Nevertheless, Te Rōpū Āwhina (Āwhina), a programme based on the Māori (indigenous people of Aotearoa / New Zealand) concept of whānau (extended family) at Victoria University of Wellington (VUW), has substantially increased the number of Māori and Pacific undergraduate and postgraduate students in the science, engineering, architecture and design disciplines. The kaupapa (goal) of Āwhina is to produce Māori and Pacific scientists who contribute to Māori and Pacific community development and leadership. An important Āwhina initiative, the Āwhina VUCEL Incubator (AVI), is based at VUW’s Coastal Ecology Laboratory (VUCEL). The kaupapa of the AVI is to develop outstanding Māori and Pacific marine scientists capable of advancing scientific understanding and, critically, contributing to leadership and development in their communities in meaningful and significant ways. Māori and Pacific marine science capability is built through direct involvement in research that benefits those communities. Key aspects of our work and kaupapa are exemplified by two recent activities discussed in the presentation: (1) The Āwhina Summer Cybrospace event where * denotes a presenting author. Abstracts are organized by first presenting author's last name.
years 12 and 13 rangatahi (youth) from Ngāti Kahungunu and other iwi (tribes) and Āwhina local community clusters participated in hands-on activities including marine laboratory and field-based activities, and (2) a project developed by Ngāti Kahungunu iwi Incorporated (NKII: the tribal entity for Ngāti Kahungunu) in partnership with the AVI to increase Māori capability around marine resource management and provide pathways into marine science for Ngāti Kahungunu rangatahi. We describe the partnership approach taken to develop the project with NKII, evaluation of the Summer Cybrospace event, and research being undertaken to demonstrate that Āwhina and the AVI are having a positive influence on Māori and Pacific success in science-related disciplines.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care remains very low. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-1 qualitative study, entailing three, in-depth interviews found that gender inequality in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included 'tonge' fathers and mothers – 'primary time' parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally. The social policy underlying the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in 'doing family'. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own 'rights' while mothers shoulder a disproportionately burden of everyday 'responsibility' for children (even in 'equal shared care' situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within ' intact' families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan's ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low. The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo's recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in tourism activities in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers. In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed audial and visual methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested the great importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their use by participants point to a complex interweaving of absences and pressures cutting the private and public spheres, (and often reflected and reproduced by academic disciplines). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

‘Taking Photos? I Don’t Do That Anymore’: Critiquing the Photo-Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects’ (Luttrell and Challen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age. Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audial (sound diaries) or textual (written or txt). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making method and an exploration of its limitations.

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged and anti-authoritarianism built on social movement participation and ideological commitment to produce music that could be used as a tool for sustaining anti-authoritarian identities and supporting mobilization. Countercultural re-actions attacked authoritarianism from a different angle, challenging established national identities by bringing foreign ideals of power and thereby also threatening the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing a polarized cultural landscape. In other environments, the two paths converged as artists collaborated to combine political and cultural responses to repression. These dynamics in turn shaped the cultural and political environment of resistance to authoritarianism, just as much as social movements and, sometimes, in the absence of openly manifest social movements. Building on this comparison, the author draws broader conclusions on the long-term impact of resistant art on the cultural, political and social landscape in which it develops.

From the Inner Workings of Innovation to Historical Accounts of Artistic Development

What mechanisms drive innovation in art? How does exploring this question invite broader understandings of the history of artistic movements? This paper examines and their movements develop. A look at the local, regional and international dynamics that impacted these movements reveals repeating mechanisms that both facilitate and limit innovation. The study of Brazilian artists and movements reveals processes relevant to the broader, historical development of artistic movements in Latin America. Methodologically, the focus on innovation in art worlds requires constant shifting among analytical levels in order to grasp transnational influences, the interactions of global and local actors, and the dynamic of change and transformation in art worlds. Adding a relational focus to this multi-level approach helps to unveil the channels whereby artists and their movements develop. The study describes three stages in the evolution of art movements in Brazil over the 20th century. First, a concern with authenticity that led to explorations of “native” Brazilian cultural heritage; second, a fragmented notion of national culture that built on mid-century populism; and third, the critical and grounded incorporation of diverse cultural elements within an international and, in some cases, global cultural sphere. The identification of mechanisms that repeat over time with each step in the development of an artistic trajectory is a tool that may be applied beyond this case. These mechanisms shed light on widely recognized phenomena such as revivalism, nationalism, counterculture and political engagement in art. The paper demonstrates, both empirically and analytically, how low it is possible through the study of innovation. To build a broader narrative of the struggles through which artists and their audiences build identities within national contexts.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverishing neighborhoods. The author argues that this uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

Model Minority and Discrimination: Case of the Second Generation of Cambodians Refugees in France

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghrebian immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asian immigrants were considered to be a ‘non-problematic’ or ‘silent’ group in the integration process at the local resettlement and benefited from a warm welcome (Gilles 2000; Simon-Barouh 2003). They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify their stance on non-racist citizens (Roquejoffre 2009:118). With this good reputation, they became a ‘model minority’ in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Taming 2000). However, the idea that Asians can be accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the context of French society, the positioning of Southeast Asian refugees as ‘exceptional’ resulted from colonial history and the politics of compassion. But this exceptionality risks generating racialised practices. Regarding Second generation, their educational success in science and their typical choice for the sector of the communication industry has been noticed (Le Huu 1996; Meslin 2006; Masse 1996). Are they really success in their schooling and professional career? It is doubtful if they
realistically benefit from their positive image in their living experience. By examining educational and occupational attainments of the second generation of Cambodians refugees in France, I will show aspects of discrimination encountered by them as a model minority. I use interviews collected from my field research conducted between 2010 and 2011 for this analysis.

How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Regarding the US, this study analyzes the coexistence and institutional changes due to the significant changes taking place in the world economy. One of the more relevant characteristics of globalization in this process and the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require large investments to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city's largest public spaces, which are mostly fenced off and for which entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skating, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of mobility. The paper also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world economy. One of the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require large investments to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?
Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Scholzman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/ strengthen the impact of the social background on student’s citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as democratic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ and school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation, conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

To identify the growing problem of gender inequality in cities.
To identify the need for micro financing.
How micro financing contribute to support and empowerment.
How marginalized women’s lives are impacted by micro financing and the importance of replicating this phenomenon.

The hypothesis is that interdisciplinary action can be considered as a form of collective action according to the following definition: Collective action is “the result of a social action (or collective challenge) carried out by the set of formal and informal interactions established between (1) a plurality of individuals; collectives and organized groups and (2) other social and political actors with which they come into conflict. This conflict is triggered by the appropriation (of), participation (in), and transformation of relations of power to achieve social goals, and above all, through the mobilization of certain sectors of society” (Tejerina, 2010).

When collective action forms groups it is crucial to understand how these collective entities are shaped by means of discussions, negotiation and re-negotiation processes and not take their existence for granted. There is a need to develop a typology of different kinds of interdisciplinary collaboration in which the emphasis is on the structure it are reflected. This paper will focus on the key elements to construct a theoretical model for interdisciplinary action and intend to contribute to improve the vision on how interdisciplinary actions change knowledge production and how the aims, motivations, and interactions among interdisciplinary problems synchronize and find resonance (or not) in an environment of limited resources and changing opportunities in which there are collaborators and opponents that need to dialog. Supported by the National Science Foundation under Grant No. 1142510.

Leisure Unites and Strengthens Family Bonds --- A Case Study on Families That Spend Quality Time on Holidays Together

Family will always continue to remain in one form or other as the basic building blocks of society. Today’s world is one that is saddled with competition deadlines stress. With high profile jobs to be managed and education degrees to be attained by children to secure their future it’s so important that families make quality time for leisure.

The researcher tries to unfold the following objectives:
*To identify the growing problem of gender disparity due to job studies constraints.
*To identify the importance of making time for leisure to be together.
*How quality leisure time binds groupsoand contribute to bonding and unity.

The impact of leisure on the family life today and the need for families’ world wide to do the same.

With the above objectives in mind the researcher is analyzing the role leisure plays in building tight family bonds.

The study will select few cases where girl students who reside far away from homes in hostels but are still close to their family members and share a strong bond.

Migration and Gender Inequality --- a Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small business, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize capital productively. With the expansion of microfinance facilities credit is also now available to many of these small business, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women’s empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The researcher tries to unfold the following objectives:

Exploring a Model of Inter-Disciplinarity Based on Collective Action Theories

The objective is to develop a theoretical model to analyse and facilitate trans-disciplinary dialog and collaboration between art, science, engineering and humanities (SEAD). The model is inspired in key concepts taken from sociological Theories of Collective Action, which are applied to analyse different kinds of collective actions. We propose that these theories can be pertinent to understand the interaction between the main dimensions, agents, resources, contexts and strategies of trans-disciplinary action.

Methodological K/NOTs: Designing Research on the Enforcement of Labour Standards

This paper traces methodological considerations in designing a research project which aimed to challenge the enforcement of labour standards in Ontario, Canada. It documents the discussions of a multi-disciplinary team, situated in both universities and community settings, which met over a three year period to develop the project design. Discussion of methodological possibilities often began with “nots”; that is, consensus on methodological approaches the team collectively rejected. Out of these discussions emerged suggestions and approaches through which we navigated dilemmas in research design. Three such “knots” are presented in this paper, specifically: [i] epistemological tensions around mixed methods and the politics of mixing, [ii] the attempt to capture the relationships between policies and their practice/enactment, as well as research and its impact [iii] the need to develop interviews which both establish respondents as knowers, and simultaneously focus on that which is unsaid/normalized in life history accounts.

New Gendered Practices in Auxiliary Services in India's High Tech Firms

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards-driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

**Rethinking Pharmaceuticalisation from the View of Japanese Context**

Medicalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as “the process by which social, behavioural or bodily conditions are treated and controlled by pharmaceutical means” (in need of treatment, with medical drugs by doctors or patients) (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousands hits for “pharmaceuticalisation” in Google, and only seven for the topic of “pharmaceuticalisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Despite of the discussion of the concept is increasingly developed in scholarly literature, the discussion in Japanese is poorly developed. Therefore, by considering the reason for lack of the discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalising pharmaceuticalisation without considering the empirical phenomena of Japan might be affect individual or group health implication.

**Reclaiming the Skin: The Tattooing and Piercing YOUTH Revolution and the Body-Skin-Mind Problem**

All modern countries have recently experienced a “tattoo Renaissance.” This has become an essential part of what is here termed a movement for self-rights, the main driving force of which have been adolescents and young adults. Although tattooing and piercing, even in their more extreme forms, are generally no longer regarded as signs of social deviance, they are still viewed as “self-sabotage” since they not only pose a threat to physical and mental health, but also matter in recruitment for a range of jobs, especially those involving a business brand. This paper examines the relationships between self, social roles, tattoos as self-brands, and business brands. Only after attention became directed to the employment problems that people with extensive and visible body modifications sometimes encounter did it become obvious that an individual’s skin is a contested territory that is as much a part of an individual’s body as it is a part of the role, over which the employer rules. Tattooing as a social phenomenon is thus an appropriate object for the study of the individual-society controversy, where the battle for the primary self, which is as much individual as it is social, becomes a form of rebellion in the name of self-rights and the reclaiming of the skin. The revolutions of previous centuries may have liberated the body, and even the mind, but they never included the skin.

Studying tattooing as a new social phenomenon, coupled with new developments in psychoanalysis (Anzieu), may radically advance the theory of self. The body-mind problem remains a philosophical problem because philosophy has not thematized the third party in the relationship, which both divides and unites them – the skin. The body-skin-mind problem thus provides a new starting point and philosophical platform for socio-psychological discussions of self.
“Health for all” is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

MISKOLCI, RICHARD* (Universidade Federal São Carlos, ufscar7@gmail.com)
San Francisco and The New Economy Of Desire
Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the cultural production in which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by the phenomena like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partnership. From Agitation to Political Autonomy: Interlinking in Three Movements in a Northern Province of India
This paper attempts explore the impending continuities in people’s mobilization by identifying the inter-linkages in three contemporary movements in a northern province (Uttar-khand) of India. In an empirical study of the three movements; the movement against felling trees (chippko i.e. hugging trees), the movement against alcoholism (Sharab-bandli), and the movement for a separate hill state, it has been found that these movements are entwined in terms of issues, leadership, organizations and ideologies. The present paper highlights the role of the middle class in contributing to evolve and articulate the issue/demand of the protection of a customary right of the local populace into a demand of political autonomy and the right to self-development of a regional community. Secondly, the paper focuses on pathways of the growth of specialized organizations from a spectrum of people’s groupings. Thirdly, the paper explains the nature and role of leadership and intellectuals in creating and articulating symbols, discourse and narratives of a distinct identity. Furthermore, it also pinpoints the role of middle class youth in dissemination of partial and total ideologies and debates which engender the conditions of mass awakening and thereby broadening the public sphere and rousing people to provide a critique and organize unmitting struggles. The aforesaid mass mobilizations by way of intensifying issues/ demands, strengthening organized efforts and upgrading ideological inputs has produced conditions for civil society to collectively engage against state and eventually increasing people’s space i.e. moving a step forward in democratization.

MISRA, RAJESH* (Sociology, rajeshsocio@gmail.com)
The New-Petty-Embourgeoisment of Professionals in the Age of Globalization
Ever expanding global corporate capitalism has all-encompassing influences; professionals are engulfed within its own expanding formantum domain. Professions once considered liberal and noble are being transformed into intellectual workers of the corporate sector of all kinds of societies. Professional expertise and intellectual capacities are being utilized for commerce and maximization of profit rather than in the interest of the client and the public. This applies to scientists, doctors and lawyers who are in the function of corporate capital on the one hand and perform the task of labour by producing the surplus. The growth of the knowledge economy world over has created vast opportunities for this kind and concomitant growth of the new middle class consisting professionals. A study of Indian professionals, working in various kinds of corporate sectors operating in different countries, where they are undergoing the processes of new petty-embourgeoisment. The autonomy of the new middle class is grounded in the specialized professional knowledge; however, they work like intellectual white-collars and able to exercise lesser degree of professional independence. Furthermore, the ascendency of new technology in all spheres of work organization has brought about a change in formal organizational relations which leads to work autonomy a class character of the new middle class, but at the same time it leads to ‘diskilising’. It has been found that more homogenous life chances and life style are on rise among the professional middle class at the global level. It can be argued that they are moving from the old petty bourgeois nature and location to the new petty bourgeois class location as also subjective identity.

Reconsideration of Isigami Research By Aruga Kizaemon: Based on the Tutiya Takao’s Field Notes
We aim to reexamine both the distinguished monograph “The large family system and the Nago (serf) system at isigami hamlet, Ninohe county, Nanbu district” written by ARUGA Kizaemon in 1939, who is one of the founder of Japanese rural sociology, and some field notes and documents by TUTIYA Takao, who is a professor of economic history and participated in this research as a coworker but withdrew from it in midstream.
In this monograph, the serf system which was present at Isigami was investigated and analyzed in detail. From this monograph, ARUGA was going to form the “Douzoku(cognate groups) theory”, which is the base structure of Japanese society.
However, when we read this monograph, we feel Aruga did not pay enough attention to the lacquer ware which a head family of Isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the charcoal was important for the cash income, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?
On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA. In this report, we try to consider the following points in reference to these notebooks and other documents. 1) Why did TUTIYA abandon a joint investigation? What was the critical issue for him? 2) In this critical issue, what position does the data of the lacquer ware business occupy? 3) Can we see something new when compared to the monograph by ARUGA?
Through these questions, we try to relativize the Douzoku theory and to examine the dispute over the Japanese capitalism.

MISUMI, KAZUTO* (Kyushu University, kmisumi@scs.kyushu-u.ac.jp)
Net-Base Theory of Social Capital
The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base’. Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and networked individuals, provided with ideas of content analysis. In sum, net-base makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through providing ideas of content analysis. This paper offers net-base as an intersection of self-coordination and autonomic conducts and therefore illustrates that the public intellectuals’ role is determined by their ability to imprint themselves on a wider social imaginary through providing ideas of content analysis.

RC20-356.1

MISZTAL, BARBARA* (University of Leicester, bm50@le.ac.uk)
Trust and Modes of Cooperation

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskskill people from cooperative competencies (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet at the same time, these decisions themselves need new strategies of trying to prove that they could ‘live in truth’, approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectuals’ role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underlining structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

Qualitative Analysis for Sociological Study of Various Conditions of Happiness

What I would like to emphasize in this presentation is that now we need to turn to analysis of contents (not only on the basis of qualitative data for the sociological study of “happiness.” To say it objectively, we need to examine the methods and effects of detective analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination has three clusters of open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer “very happy.” As a result, three clusters were found, according to the regions, with different “conditions for happiness.” Feature keywords for happiness are; In the Capital, “above average income,” “economic problems, close people,” and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

MITA, MUNESUKE* (National Association Session, m.mita.vc@gmail.com)
A Framework for the Sociology of Future: Logistics Curve and the Axial Ages

Until the later decades of the 20th century, almost “self-evident” image of the history was that of the ever-accelerating progress. That image of history had the objective basis; statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biologists know well of the S-shaped “logistics curve” of every species, with the 3 stages: Ⅰ. of slow foreflow, Ⅱ. of rapid or explosive propagation and Ⅲ. of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970, turning point from acceleration to deceleration. We are already passing the historical point of junction from the stage Ⅲ to Ⅱ. Macroscopic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. “Globe” is a paradoxical geometry; infinite and finite, the logical meaning of the “globalization” lies in this paradox (Jaspers talks of the “Axial Age” – simultaneous emergence of major world religions and philosophy; Old basis of Christianity, Buddhism, Confucianism, and Greek philosophies. Sociological background of the “Axial Age” can be understood as the ensemble of the interrelated factors: 1) Emergence of the monetary systems; 2) rise of the cities and liberation from the communities; 3) crisis of lives thrown into the infinity of the world. Monetary system, urbanization, and the infinity of the life world are the very essences of modernity. For that reason, the Axial Age has been the basis of life and world until the final phase of modernity. Modernity can be seen as the stage Ⅱ. Axial Age was the critical point from 1 to Ⅱ.

MITCHELL, ANDREW** (University of Kumamoto, andrew.mitchell.leeds@gmail.com)
Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann’s Social Systems Theory

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan’s nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own strengths, they discuss specific points regarding nuclear policy with little regard to the wider picture. They all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann’s Social Systems Theory, this paper proposes to frame the different views on the nuclear
issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan's political system acts as a second-order observer of these observations. By understanding political social system which acts to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan's economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little influence on the use of alcohol and tobacco. Yet, this paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People’s Perception in the Perspective of Community Policing

Apposite police-community relationship in India is still in a nascent stage owing to the assorted attribute of the Indian society. Caste, communal and religious discord act as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people’s perception of police-community relations in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by large, in the capital cities of north east India have been successful in bridging the gap between the police and the public. The north east of India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has suffered discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community development programmes of which community policing is surely a must. In this regard, the findings of the present study can contribute in analysing the nature of police-public relations and the impediments to stronger police-community interactions in the north east of India.

I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic... Academic Mothers: Power and Powerlessness in Academia and in Homes

Power and powerlessness are two poles of the continuum of life that Academic mothers inhabit by virtue of simply playing these roles in convergence with each other.

There’s is a double edged problem. Traditionally women are denied the thinking and reflecting acumen and are seen as substandard contributors to the academic discourse. Interestingly, mothering is defined in many cultures as a full time responsibility and one that is the most treasured attribute of women. One the other hand, thinking and emotionalization are seen as opposed traits that logically imply academic mothers to be lacking in the basic requisite of mothering, on the other, women’s intuitive emotionalization is seen as coming in the way of a scientific approach required of women as Academics. This study seeks to understand women’s experiences, positive and negative in terms of transgressing these straight jacketed boundaries and combining the

**role of mothers and academics in India, Brazil and South Africa and seeks to explore how strong traditions of family values in these cultures influence and impact women in the Academia. Some of the questions it seeks to address are as follows:**

In what ways do women live these roles which are very demanding and challenging, also satisfying and fulfilling? What are women’s obstacles, what are their strengths? How do academic mothers do a different kind of academics, maybe or a different kind of mothering, so as to satisfy their aspirations from these two roles, two lives? What are their tensions, how do they resolve them, what kind of adaptations do women make? What kind of a philosophy on life and work do they develop? This paper seeks to explore the different responsibilities simultaneously. The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15 women Academicians in India.

Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Thereupon, they attempt to unravel an unexpected harm in doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace social investment strategy. A large gain in social benefits seems possible with the rethinking of an inter-generational redistribution. Yet, social investment strategy has been weak both in discourse and in practice. Although the Democratic Party of Japan (DPJ) government (2009-2012) pursued some policy innovation in the area of childcare and youth programs under the slogan of “children first,” a paradigm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in Japan despite the fact that its social and economic conditions should provide a fertile soil for such a strategy. We shall explore the political conditions which prevent the full-fledged development of the ideas and practices of social investment strategy. In so doing, we show how the dominant force of neoliberalism constitutes a stumbling block in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and “career education” from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statism, and the persistence of traditional gender roles.

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today’s highly informative society. At a socio-economic dimension, Big Data (and data-mining technology) is expected to rediscover the information marketplace as a rich untouched field, and that it will produce industrial reorganization and activation, just like fossil fuel (and mining technology) accelerated the Industrial Revolution in the 20th century.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing. At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to determine people's decision making and mechanism of action selection, and help predict people's behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people's free will and humanness, and may seriously change the relation between an individual and society.

These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today's antinomies of information technology could be considered by using Bourdieu's sociological methods of overcoming dualism.

The Effects of Child Birth on Marital Satisfaction in Contemporary Japan

Marital satisfaction has been studied in family sociology all over the world. In Japan, many empirical findings regarding the determinants of marital satisfaction have also been accumulated. However, most prior researches in Japan have limitation of data quality because they use cross-sectional datasets or panel datasets without matching specification, recoding the relationship between child birth and marital satisfaction by longitudinal analysis would be important for Japan in an era of low birthrates and high rate of unmarried people.

We examine how child birth, years from marriage, amount of time of conversation with spouse, occupational career, and socio economic status affect the levels of marital satisfaction. Our focus is on the relationship between gender and child birth and marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

Datasets from the National Family Research of Japan, 2008-2012 Panel Study (NRJ-P08) are used. Fixed effects regression models are applied to analyze that panel datasets.

Our analytical results show that the expected relationship between child birth and marital satisfaction. As the same with findings by prior research, first child birth has negative effect on marital satisfaction while second or later child birth points are whether or not the finding that first child birth just has an impact on marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

The Formation Process of the “National Orthodoxy” Regime in Contemporary Russia

Through dramatic domestic and foreign changes over the Soviet Union's extinction, Russia has historically reappeared on the world's stage. Although contemporary Russia does not have a firm unification principle, a “National Orthodoxy” regime is being formed. The “National Orthodoxy” corresponds to “the state religion” as the core element of national unification. Separate from “the private Orthodoxy” as a lived faith, “the public Orthodoxy” emerged as a principle to replace the “National Orthodoxy”. The “National Orthodoxy” regime is the ideological foundation within which the Russian Orthodox Church should unify with the people of Russia and is a political religious system where national unification is realized by the ideology. Under this regime, the value of the Orthodoxy applies to all the people of Russia. The Russian Orthodox Church promotes a harmonious agreement between the Russian state and society.

The Russian Orthodox Church has been revived in contemporary Russia. While the movement from the bottom known as the private side mixes with the policy from the top known as the government side, “the National Orthodoxy” regime formation process in Russia is promoted. In addition, it is observed that the “centralization of the Orthodoxy” assumes that the Orthodoxy is a unification principle and at the same time, the “marginalization of the Non-Orthodoxy” suppresses and removes religion except the Orthodoxy. In this country, dual structure exists separately while the various schools of religion in the private sphere overlap with “the National Orthodoxy” in the public sphere. The contemporary Russian national identity may say to be reconstructed, with the principle of unification known as the “the National Orthodoxy” regime at its core.

Doing Occidentalism through Mangaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture that are shaped by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (F. Coronil 2007). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/ periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the country with the highest number of anime series broadcast on television outside Japan (M. Pelliteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be examined through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mangouesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles.

My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka’s performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and on the other hand, on women-only stages, there is an unequal construction of gender.

I will also discuss the audience’s approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society’s gender consciousness.

Musicoity in Post-War Japan: German Influence and Social Context

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan. Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicians was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Dahlhaus's social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the ‘great German music’ from the country's guilt and emphasize the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

New Urban Childhoods? Globalisation, Socialisation and Urban Informality on Children in Ghana

Globalisation has fuelled rapid and unprecedented levels of urban expansion the consequences of which for children's socialisation have been profound. ‘Urbanisation without industrialisation’ is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear as causes and symptoms of lasting economic and social decline. It is argued here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do this, the child is considered ‘outside the regulative ambit of the family’ (Hart White 2010) - i.e., is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of ‘slums’ and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo

This paper is concerned with the way the development of global migration has made its impact upon Japan’s urban communities. Nowadays in Japanese metropolitan areas, it is common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing constantly. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new ‘Chinatown’. But this is a new kind of ‘Chinatown’. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan’s other major Chinatowns, such as Yokohama. Nor do we see the concentration of Chinese shops, though there is still a background of Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese commuters who travel to and from the precinct, as well as to the various free Chinese papers which inform Chinese residents of applications for visas or accommodations, and which are published in different languages and styles. This area is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting commuters.

The Sociology of Fatherhood and Consumption: Empirical Evidence from Soon-to-be Parents in Japan

Japanese society has been undergoing tremendous transformations in recent years. One of them is the change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Institutionalization Among Older Adults in Japan

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver's capability, rather than the older adult's declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have been examined from both care perspectives, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Implications of Social Capital for Family Life: The Case of « Non-Statutory Parent »

My communication is on the subject of the « non-statutory parent », i.e. the person who, within a couple, fulfills the role of « parent » for a child not legally his or her own, but the offspring of his or her mate. The main results I will present is that the family’s environment of friends, and kin represents a social capital that plays an integrating role through its validation of the NSP’s right to
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectivity of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SPs or NSPs’ network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the non-statutory parent; and the degree of embeddedness of close personal relationshipships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

**MOIDI, ISHWAR** (India International Institute of Social Sciences, liiss2005modi@yahoo.co.in)

**Emerging Society and Sociological Discourse in India**

Inequalities between women and men stem from the assignment of the “care” work to women. In Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices define different ways of conceiving the concept of “care”. “Care” is a state in the context of the “active social state”, because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work— the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by professional authenticity and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.

**The Work – Family Interface Among Dutch Navy Personnel and Their Spouses**

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

**The Middle Eastern Origins of Dictatorship and Democracy**

How do we assess Arab Spring/Occupy almost 3 year later— the hopes for the emergence of popular democracy have now faded or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did/not really apply today. Most of the MENA countries were the legacies of anti-colonial struggles and struggles for independence and democratic self-governance, but Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliberal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the “waves of democracy” and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various fundamentalists from Moslem Brotherhood to Enhada-which were ill equipped to shepherd a modern economy. But without having experience in actual governance as opposed to critics w/o power they did quite poorly. However dismissal the short term, and it may get worse, structural factors intersect, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been in practice, they were democratic in form and now there can be no going back to uneducated “presidents for life”. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption/and corruption, and struggles for independence and democracy self-governance. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption, and growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption, and growing.

Living Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguérour, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds. Some studies have reported that young people in non-European immigrant backgrounds are affected by a phenomenon known as ‘intra-ethnic’ familial relationships. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding projects to live in may obstruct the young people’s entry into adult life. How do these most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion leaders still view the level of educational attainment in South Africa as disappointing as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises the generic mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of sustained transformation which gravitates towards whole school development and culture that envisions quality education for all.

Cultural Capital and Educational Inequality: A Lesson from India

Cultural Capital and educational inequality: a lesson from India

Byasa Moharana, SAI Thakur and Shweta Choubey
Education is supposed to play a major role in bridging the gap between the haves and the have-nots through generating cultural capital. In case of third-world countries such as India, the quality of education that is provided to the poor has been grossly inadequate for the purpose. As a result the gap between the elite and the masses is increasing every passing decade. With liberalization of economy in India since 1990s, the state is increasingly withdrawing from welfare sectors, and therefore, the quality of education has suffered. While the elite depend on the private schools, the rural and the urban poor depend on the poor quality of education in government schools. In terms of content of the syllabus and the pedagogical methods adopted to teach them, schooling is not a pleasurable experience for the children coming from disadvantaged backgrounds. Thus they drop out from the school or are poorly qualified to receive higher education.

While this is the dark reality, there is a ray of hope as some of the organizations have stepped in to help tackle the situation primarily through alternative pedagogical interventions. These new methods of teaching science and mathematics etc. have helped the poor students to perform better in schools and get motivated for higher education. In fact, the program was adopted by one of the provincial governments in all schools, but later discontinued due to pressure from World Bank.

Analysing field-based data, the authors argue that these methods, though not the only solution, are one potent way of providing an enabling platform for generation of cultural capital for the rural and urban poor to compete with the elite students.

Key-words: Education and inequality, Cultural capital, alternative pedagogies, Education in India

Eco-Tourism in the State of Jammu & Kashmir: An Assemblage of Urbanism

The state of Jammu & Kashmir being the abode of Himalayas represents an epitome of natural beauty and, hence, has emerged as one of the top most tourist resorts of the world. The tourism in J & K has come to be identified as the mainstay of the state’s economy. In the absence of inadequate infrastructure and specific and sound interventional measures at place, the state couldn’t secure properly at many counts be that guest-host relationship, conforming to the environmental norms or drawing the expected dividend. This paper endeavors to explore the sociology of tourism in Kashmir with a due focus on socio-economic dimensions of tourism besides highlighting the need towards the eco-tourism in the state so that the tourist potential can be optimally realized that too, on the sustainable basis.
MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. There are two departments within these luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focusing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transparency of these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization via families, such as refugee and forcibly displaced families. Moreover, much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post-migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013 - Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased especially in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty risk rate. We conduct our analysis using the tax benefit system as our case study. We are estimating the poverty risk rate in Finland for the 1990s depression and post 2008 recession. We have estimated the counterfactual poverty rates during 1993-2013 by using the SISU microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have reduced the poverty risk rate. Changes in taxation had a considerably larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has increased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.
radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how is it possible, if German is positioned as “mother tongue” which is “to be learned first”.

WG01-887.1

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “exploitation of self-realization” has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and security, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “exploitation of self-realization” model.

MONFORTE, PIERRE* (University of Leicester, pm260@le.ac.uk)

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

The Symbolic Representation of Borders in the Protest Against ‘Fortress Europe’: The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequentely, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territorities can now be found across countries.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders can now be encountered across countries.

Since the 1980s, social movements’ scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact.

Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequentely, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territorities can now be found across countries.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders can now be encountered across countries.

Since the 1980s, social movements’ scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact.

Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

MONFORTE, PIERRE* (University of Leicester, pm260@le.ac.uk)

The Symbolic Representation of Borders in the Protest Against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territorities can now be found across countries.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed.

This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stresses, and Mental Health in Older Japanese Adults

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stresses, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey of People’s Living Conditions (CSPLC) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, working status, equivalised disposable household income), disease (the top five responses chosen by each group), psychosocial stresses (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stresses of ‘one’s disease/long-term care’, ‘disability/long-term care of other family members’, ‘income/family budget/debts’, and ‘motivation in life’ were found to be significantly associated with mental health. In young-old men, equivalised disposable household income, working status, and the psychosocial stressor of ‘one’s job’ were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalised disposable household income, eye diseases, lower back pain, and the psychosocial stressor of ‘relationship with family’. In old-old men, the psychosocial stressor of ‘relationship with family’ was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of ‘relationship with family’ were related to mental health.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and security, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “exploitation of self-realization” model.
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created an extended set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna Europeanization of three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable to not be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing aspirations. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

MONTÁNEZ JIMÉNEZ, ANTONIO* (Universidad Complutense de Madrid, amjsociologia@gmail.com)

“the Global Evangelist Movement of the “Gypsies”. in Spain’s Case”

The aim of this paper is to highlight some of the most relevant phenomena which occurred to understand the aforementioned expansion, the intimate relationship of the Pentecostal religion with the articulation, re-composition and renovation of the identities found in ethnic communities, and presents the particular case of the expansion of Pentecostalism among the ethnic Gypsy communities in Europe in general, and in particular, Spain. Gypsy Pentecostalism has designated a mutation of the mission of evangelising the Gypsy people throughout the world, offers a biblical interpretation of the origins of the Gypsy people, placing them in one of the 12 lost tribes of Israel, and a historical interpretation of the unfortunate journey they faced in this world, culminating with the ethnic genocide during the II World War. Gypsy Pentecostalism promotes the conservation of some of the most deep rooted elements of their ethnic tradition and confronts the production of ethnic identities and collective designated representations.

The proposed paper deals with the expansion of the Pentecostal religion on three levels.

At the supranational level. The Pentecostal religion’s role in the emergence and promotion of an ethnic sense of global diaspora, which remains articulated in organisational and institutional networks and movements. At the national level. The role of Pentecostalism in the renovation of the Spanish Gypsy’s ethnic and cultural identities. At the local level. The role of the Pentecostal religion in the articulation and re-composition of the different identities among Spanish Gypsies and non-Spanish Gypsies (above all Romanians) after the intensification of the arrival of transnational migratory waves of European Romanians to Spain in the 21st century.

This paper forms part of the doctoral thesis of the author, funded by the Spanish Government (Subprogram FPI-MICIN) as part of the Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux (GERICR) research program

Post-Repatration Careers of Japanese Knowledge Workers

A key element of the globalization of knowledge work involves the international transfer of executives. Yet despite the importance of this process, the repatriation of business people is still an under-researched area. The majority of existing research into the phenomenon is based on cross-sectional surveys and interviews of North American and European business people. The emphasis is typically on how to make the process more effective for companies, for instance, by improving failure rates, and largely assumes the existence of Anglo-Saxon style labour markets for the management of ‘talent’. Consequently, certain empirical and theoretical elements remain unexplored. We don’t know much about repatriation from other nations, and more specifically, about their career perceptions post repatriation. This paper addresses this gap by looking two Japanese business people and asking how they make sense of their unfolding careers. To do this, the authors followed their repatriated careers and career perceptions after their return from assignments in North America, interviewing them over an extended time period (seventeen months and twenty four months respectively). The main finding of the research is that (these) Japanese repatriates do not have explicit and pre-planned career paths. Furthermore, this lack of a career path does not concern them. Instead, their careers are subject to a fuzzy career logic that depends on circumstances. Given the extensive literature on protean and boundless careers, as well as the need for individuals to take charge of their own careers, this is a significant finding. The theoretical contribution of this research is the idea of fuzzy career logic, and the paper will show how it not only provides a useful framework for understanding how Japanese repatriates navigate their careers, but also how it gives an important alternative to, and critique of, the view that careers should be planned in a strategic manner.

Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older people and to improve the quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successful ageing...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

Transnational Aging in Mexico: the Experience about Elderly Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de retiro laboral en estos dos grupos y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guanajuato y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración en el período de retiro laboral, los cambios en su identidad y el apego al lugar, redes sociales y prácticas culturales.

La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

Policy Advisors and Scientists’ Mental Models Of Policy-Making: Validating An Elicitation Method

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals’ mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists’ mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists (and) policy advisors supported more community-oriented ap- proaches to policy-making (political and community accountability mental models). Network analysis of the influence diagrams supported these results: the majority of policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more influential and connected. We triangulated these results with the quantitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. On the basis of its usefulness, policy advisors’ mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and how they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role of the labor that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative ‘labor’ more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ small farmer that has informed indigenous knowledge for generations. The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identi-ties (half, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is connected to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monolithic, immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkejin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alter-native ethnic identities (Nikkei, Okinawan).

MOOREHEAD, ROBERT* (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)

Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth’s parents’ experiences in Japan play in shaping the youth’s ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (half, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is connected to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monolithic, immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkejin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia in their everyday lives, and participate in institutions, out of fear of being discriminated against. Thus, it will be apparent that the Islamophobia that some say exists because Muslims refuse to ‘integrate’ is actually a factor in discouraging Muslims from ‘integrating’. The situation is more nuanced than this though as I will argue later, that despite Islamophobia, Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in combating Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to being a Muslim in Britain, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

MORAGA CUBILLOS, MARCELA* (Pontifical Catholic University of Chile, memorga@uc.cl)

The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control

Comparative data from Latin American countries in 2006 locates Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use.

This research analyzes the pattern taken by the relation between school bonding and the involvement with behaviors that usually are considered as risky, like substances use, from a perspective based on social control applied specifically in the Chilean context. The previous descriptive analysis shows i) an increasing prevalence of truancy as students get older, ii) a reduction of students happiness in school, iii) a decrease in the importance of good grades, and iv) reducing the importance that students connect to the generation of positive opinion on teachers. Besides, truancy more than duplicates the odds of tobacco and marijuana consumption in the upcoming years. While the students happiness in school, the importance of good grades and the relevance assigned by students in the generation of a good impression on teachers reduce the odds.

The analysis was based on a panel data from a longitudinal study of tobacco, alcohol and drugs throughout school populations, made by The Pontifical Catholic University. They collected information from variables related to family, school, pairs and substance use of Chilean students in seventh grade during 2008 (N=4.387) from townships with a population over 30,000 across the metropolitan region. The students were annually re-interviewed until 2011.

MORALES, ANA* (University of Manchester, ana.morales@postgrad.manchester.ac.uk)

The Effects of Socio-Economic Background and Parental Involvement on Children’s Early Cognitive Development: The Case of Chile

Children’s development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style, and children’s characteristics as well as geographical location of the household.

Results show that parental involvement, which is a threefold indicator composed by positive parenting, parental stimulation and ineffective parenting, does make a significant difference, where positive parenting and parental stimulation are positively associated with the cognitive development scores, while ineffective parenting is negatively associated with the scores. On the other hand, results show that cognitive development scores are significantly higher for children living in the wealthiest households with respect to those in the poorest ones. Furthermore, income can moderate the effect of parental involvement, where a high level of positive parenting has a stronger positive impact on poor children, while the negative impact of ineffective parenting is stronger on children from the higher quintiles, and finally, parental stimulation has a stronger impact on the wealthier children.

From these results, it is possible to assert that parental involvement has the potential to contribute to reduce the gap in the cognitive skills achieved by children according to the level of income of the households they live in, which can be of particular relevance for reducing the inequality-related gap in later life outcomes.
Political satire programs on television are experiencing a small boom in democratic societies. One of its themes is the economic crisis star, centered in ridiculing not only the protagonists but also in their victims, explaining what were the causes and what could be the ways to tackle the crisis. Through humor, these programs reach millions of viewers, presenting serious issues of political community.

This is true also on the theoretical side, where social investment is both policy analyses show how the notion functions as somewhat of a 'catchall' strategy. This is partly explained by the multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to use a qualitative methodological perspective on how women's education partly explains differential patterns with respect to employment, work-family balance and access to family life in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the reality of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

**Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)**

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns in different countries based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Pettit and Hook, 2005). However, very few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the family life cycle in these different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Reidinger, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to use a qualitative methodological perspective on how women's education partly explains differential patterns with respect to employment, work-family balance and access to family life in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the reality of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

**International Couples Shaping Migration to Japan**

The Japanese are living longer and having fewer children than any other industrialized nation in the world. Immigration is seen as the key long-term solution to a shrinking tax base and a shortage of workers. Despite the reluctance of the Japanese to allow a large number of foreigners into the country, immigrants who have been integrating into Japan via international marriages for decades. Whether arranged or not, the couples who married in the 1980s or for love (dating back to 1600), these couples are important because they represent the most intimate relationship possible and are an indicator of social distance and integration, both in how the couples cope and how other Japanese view these couples. I interviewed 40 individuals involved in international marriages in a rural area of Japan (Joetsu, Niigata). I transcribed the interviews and coded them using a computer software program called Dedoose. I analyzed the data using the guidelines of grounded theory, namely coding and memo-writing. I focused on the differences and similarities between those international couples who married for love (typically Western males and Japanese females) and those that were arranged (typically Japanese males and Southeast Asian females). There are important differences between the race and gender of these two types of couples, as well as the reasons for why they chose to marry a Japanese national and live in Japan. On the other hand, there are many similarities between these couples when it comes to having to adjust to living in a new culture, learn Japanese, raise children, and deal with extended family members. These similarities and differences offer a unique and intimate window into how the Japanese view foreigners living in Japan.
The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members confute legal status with nationalism, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the social and cultural meaning at the symbolic boundaries that defines the social boundary.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions.

The centrality and compatibility of religious beliefs with organ donation varied between ethnic/faith groups. Although few regarded organ donation as forbidden, religious scriptures there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain senseate for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnna) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-Atlantic space of the US-Japanese homo social “complexity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism of the homo-social complexity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering the two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoh, Kokichi, 2006, Shohgo no Shoarei, Toshindoro). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to the terms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birth rate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new educational systems open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grand-children, siblings and friends? How do their neighbours and friends care for their children and parents? How do their social networks change during the life course?

MORRIS, ALDON* (Northwestern University, amorris@northwestern.edu)

W.E.B. Du Bois was one of a handful of scholars of the 20th century with a sustained global impact on sociological, literary, and political knowledge. In this paper, Morris will draw on evidence from his forthcoming book with the University of California Press to demonstrate that Du Bois was the founding father of scientific sociology in the United States; that is, American scientific sociology was founded in a segregated black university by a black man. This paper disconfirms the accepted wisdom that American scientific sociology was founded solely by white sociologists in elite white universities. This paper will explore the methods Du Bois pioneered and his novel theorizing that laid the foundations for subsequent sociological analyses. The paper will offer an account of the dynamic forces that generate scientific schools of thought and that undergirded knowledge production in social sciences during Du Bois’ era.

Negotiating Safety in Relationships: Children’s Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Australia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenomenology, ethics of care and dialogical ethics.

The aim of the study was to hear children’s voices in primary care research about children’s safety and resilience in the context of family violence. The research questions sought to understand children and mothers’ perspectives on children’s safety and resilience; establish how children’s safety is realised in the context of family violence and determine how children’s voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’. Informed by the model, implications for policy, practice and further research will be considered.

Moving Through Space

Spaces in urban geography are rich with signs and symbols related to nation- as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of detaining enemy non-combatant. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantanamo prison. The second work is Doris Salcedo’s 2007 work, 6 y 7 Noviembre. Salcedo installed a sculpture over the Palace of Justice building in Colombia’s capital city, Bogotá. The work remembered the events of 6 to 7 November 1985 when military stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create affect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effectively present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

MORRISON, IAN A* (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of nation and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic conception of the nation. The de-ethnicisation and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ related to the measures adopted to promote this conception of such a nation. Of particular focus have been the practices of reasonable accommodation for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The present paper examines the manner in which these two seemingly oppositional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

Modern Morality? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grandparents/parents, and children. For example, there is clearly a rapid process of marketization taking place, where consumer durables like mobile phones are becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Therefore, there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived bringing risks to children. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers - and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

‘Have to Help and Improve Their Life’: Young People’s ‘transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper examines two case studies to explore children’s experiences of leaving school and why. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as ‘dropping out’ fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental ‘shocks’. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people’s choices and trajectories. The paper questions the utility of the concept of ‘transition’ and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, that are generating powerful inequalties that mean that some groups of young people are ‘left behind’.

MORSELLI, DAVIDE* (University of Lausanne, davide.morselli@unil.ch)

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for retrospective data collection. While there is a general agreement that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggest that the LHC performance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAPI. However, studies using self-administered LHC on youth sex behavior argued that LHC can be used also used in self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family tiMes survey) between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of resident moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even...
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe successful parental role models. A second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 children from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and 422 of their G3 children aged 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G3’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Dogan’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”?: Translating IE Research to Community, Government and Academics in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct social and policy levels were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interview, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.

MOSBAH-NATANSON, SEBASTIEN* (Paris Sorbonne University Abu Dhabi, sebastien.natanson@psuad.ac.ae)

The Forgotten One of the Triad: Why Did Rene Worms, and Not Emile Durkheim or Gabriel Tarde, Fail?

Rene Worms (1870-1926) was a brilliant young philosopher who entered sociology at the beginning of the 20th century and had a bright academic career as a university professor and high civil servant. His first contribution was institutional, with the creation of the first French academic journal dedicated to sociology (the Revue internationale de sociologie in 1893), one of the first monographic series (Bibliotheque de sociologie internationale) and national and international organizations (Institut international de sociologie, Societe de sociologie in Paris). He gathered dozens of intellectuals around these different initiatives. Theoretically, he was at first a strong advocate of organicism, even if he was very open to other theories and currents in his journal and his collection. Very few academic works have been published about this author, considering he played a minor in the history of French sociology. Without totally rejecting this assertion, this communication will try to reassess his role in the development of the discipline, and to provide with explanations of his failure and of his forgotten memory. We will focus on several factors such as his will to internationalize the discipline while it was still very weak nationally, or the consequences of his theoretical choice. We shall also insist on the paradoxes of the durkheimian writing for the history of French sociology.

Transformation of Drug Policy in Poland: From Complete Depenalisation of Drug Possession to Its Absolute Criminalization

Last three decades witnessed crucial transitions in Poland towards market economy and multi-party system. This process severely affected all spheres of life, including drug consumption and public policy in that area. Definition of drug addiction as a social structure in the beginning of the 1990’s whilst new laws and new wealth as well as growing poverty and social exclusion demanded moral justification. A number of social problems have suddenly become moral issues, subject of vivid moral debates and accusations in fight for moral supremacy. In result, legal provisions had to be introduced to symbolise new moral order. In 1997 drug possession was penalised. A number of drug-related crimes skyrocketed from several thousand prior to the penalisation to eighty-thousand ten years later. In a decade, several hundred thousand, mostly young people underwent legal prosecution, most of them got convicted in criminal registers which reduces their prospects in the labour market. Despite softening of the drug laws in the recent years, criminalisation of drug possession widened a generation gap and excluded significant proportion of the young generation labelling them as criminal deviants.

PRES-2.2

MOSOETSA, SARAH* (University of Witwatersrand, Sarah.Mosoeitsa@wits.ac.za)

The Micro-Politics of Poverty and Inequality: Implications for the Real “Hidden Abode of Production” in South Africa

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remain undeniably high. The dominant narrative by most South Africans is “awukho umsebenzi” and “asinamali” – there is no work and we do not have money. South Africa’s transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neoliberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Moosberg, Linda (University of Gothenburg, linda.moosberg@socwork.gu.se)

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Mosselson, Aidan (University College London, aidan.mosselson.11@ucl.ac.uk)

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg’s inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a ‘vacuum of belonging’ (Gott and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, disease and street children. Criminals and their victims (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the relationship between urban and social regeneration as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able to or prevented from exercising their spatial imaginations and abilities.

Mosselson, Aidan (University College London, aidan.mosselson.11@ucl.ac.uk)

Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg

In academic literature, urban regeneration is more often than not treated as a code-word for gentrification or dismissed as a term developers use to sugar-coat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannesburg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and contextually sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu’s notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision. Cities are part of broader social contexts and milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Motcham, Casimir (National University of Ireland, cassidb@gmail.com)

Youth Policy in Ireland and India: A Comparative Study

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource.’ This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies can be found within Europe, there is little research on how the intervention of the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, institutions, ideas and international environment. It examines the major ‘actors and agents’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, development, culture(s) and other economic, social, and political factors. However, there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one’s non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to one’s parents. On the other hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998). Because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does “family crisis” mean to the mothers of non-heterosexual children? In order to answer this question, this paper explores how gender influences a parent’s reaction to coming out in the context of their social and personal circumstances.

Previous research on parents’ reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child of the same gender than of the opposite gender (Ibid). However, what are the reasons for these differences? Moreover, can the same be observed in the case of Japan?

This paper explores how gender influences a parent’s reaction to coming out in the context of their social and personal circumstances. In particular, it discusses how mothers assume gender roles in coping with their children’s disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The
research revealed that mothers of a non-heterosexual child were especially afraid of the collapse of the family they created (i.e. “family crisis”), but whereas fathers did not present such narratives. Mothers react strongly to the “family crisis” due to traditionally given gender roles, in which they are expected to be more accountable for family affairs. Yet interestingly, these gender roles also influence mothers to overcome the “family crisis.”

Contentious Politics and the Global South

Referring to new challenges in the study of contemporary social movements, Tarrow claims that “To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them” (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement in two trends, a more contained in the “West”, and a more transgressive in the “Rest”, leaves out many issues around which movements in the Latin America have been contending. However, attempts to explain the particularities of Latin American social movements has led to the development of specific theories, treating the region as sui generis (Costa 2010). Thus, in the analytical openness and systematic character of the framework Contentious Politics lie its main virtues: it invites for dialogue and results in a collective process of knowledge construction. It has a serious limitation for that purpose, as Brigel (2011) objects: instead of its claimed epistemological turn, “Contentious Politics” is an ontological movement, a change in what to study (action and structure, relational dynamics by mechanisms and processes). The analytical openness in the “Total” turn is yet to come, by the incorporation of epistemologies from the Global South.

This paper attempts to contribute to this challenge, based on claims raised by Latin American scholars and movements, organized in five elements: the spatiality of contentious politics, in particular subaltern strategies of place based identity building; the commodification and the colonality of knowledge; the potential of contemporary peasant and indigenous movements; the social question as a cross-cutting issue; legal mobilization based on non-individualist conceptions of rights.

Fighting GM Crops in Argentina and Brazil: Global Constraints, National Opportunities?

When one looks at current figures, in which Brazil and Argentina are, respectively, the second and third world’s biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and keep revolving around the issue are difficult to visualize. However, the adoption of the technology has been disputed for almost two decades. A major difference was the capacity of Brazilian movements to jeopardize the interests of the pro-GMOS coalition; they had to wait for a decade until soybean production had been converted to GM seeds, what took four years in Argentina. This created a widespread recognition of a controversy over GM crops in Brazil, what never happened in Argentina.

There are many other factors differentiating the cases, but also similarities between them. Frames were similar; because movements participate in transnational advocacy networks, where frames circulate. Different from many conflicts in the Global North against GMOs, in these countries there were not only issue-oriented groups, but also identity politics, as peasant movements were important actors. The Via Campesina frame “food sovereignty” is very prominent. A major difference lies in the organizational bases and forms for resisting GM crops. The great power of the Brazilian movements lies in the building of a sustained campaign among environmental, consumer rights, agro-ecology, human rights and peasants groups. A coalition was formed with dissident scientists, allies in social agencies and politicians. They engaged in legal mobilization and developed a strong communication front as early as 1999, with a weekly newsletter and a blog. None of these factors are found in the Argentinean case.

The belief that by acting together there was a possibility of affecting social change makes a crucial difference: Argentinean activists perceive more global constraints to their fight, whereas Brazilians perceive more national opportunities to theirs.

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological stage. As secularism has been called the “holy alliance” of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in “sciences of religion” that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrarily, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and charismatic community as authoritarian and intolerant of all forms of individual diversity.

The Protestant Ethic Thesis before Weber: Forerunners in France and Brazil

It is well known that the “Protestant Ethic” thesis had existed for quite some time prior to Max Weber’s own formulation. Some specific cases of anticipation of the thesis are represented by Émile de Laveleye and Napoléon Roussel, in the French speaking world of the 19th century and, in the same century, by Brazilian writers Tavares Bastos, E. Carlos Pereira and a certain number of missionaries of English and North-American background who worked in Brazil, like Zachary Taylor and others. Even details of Weber’s thesis, concerning, for instance, the emphasis on the consequences of sectarianism (“Sektentum”) are present in mid-19th century Tavares Bastos’ works (who wrote in Portuguese), or even knew he had existed. While such forerunners do not necessarily reach the same level of theoretical, indeed of theological refinement as does Weber, they view adhesion to Protestantism (albeit, at times, in a rather cultural and secularized sense) as a necessary condition for modernization and economic development. A common source to Weber and, on the other hand, the forerunners, may have been Hegel’s Lessons on the Philosophy of History which, directly or indirectly, did not take long to reach Brazil and, of course, France. Weber’s own formulation of the thesis seems to represent a largely secularized version of a traditional tenet of Protestant apologetics. Again in largely secularized terms, this is still, in early 21st century, a fully living, indeed burning issue in both France and Brazil, being but a continuation of the Kulturkampf, the culture war, which has for so long opposed the Protestant and Catholic conceptions of society and modernization.

MOULENE, FREDERIC* (Université de Strasbourg, frederic.moulene@voila.fr)

The Challenge of Sociology of Language: Living in Society, Living with Words

Nowadays, “sociology of language” is explicitly identified in the research groups within the I.S.A. although sociological associations all over the world don’t seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to the sociology of language. The cause is probably that it is difficult for sociologists to work on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonic principles of Saussure for whom language has to be studied beyond the social context; it is significant that a scholar as influential as Thrasyvoulos Pallis follows the “saussurean dichotomy” and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain things are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social
reality is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

Homogenous or Not?

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japan's nuclear debate has been characterized by a homogenous media. This paper generates evidence that suggests the nuclear arms debate is more complex than previously reported. The analysis further indicates that the media's role in nuclear arms control is more nuanced than previously supposed.

The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and comparatively disengaging construction – of urban informality generated by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical space, materially and symbolically, in structuring the urbanization in which wealthy property interests employ the attribute of informality to stave off “Third World” settlements and enable a “First World” lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent “informality” takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elites. Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosing of the urban elite in “gated communities” is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interactions between these private urban developments and surrounding marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

Network Analysis For Discovering Political Conflict In Standardized Interviews

This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftists or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

Segregation Of Roma Children In The Czech Educational System

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities one half, of Roma children have received education in these type of schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s access to education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose the child to work of pedagogical and psychological centers (which have to diagnose a child with disorders in order for it to be placed in a special school) in terms of improving their diagnostic methods and their work with socially disadvantaged children. In April 2010, the Czech Ombudsman concluded that the disproportionally high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which are used for discrimination and by which the Roma children are seek to change the discriminatory practice I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some
of the Czech citizens from the education process and what are the main consequences of such approach.

MUIR, KRISTY* (University of New South Wales, k.muir@unsw.edu.au)

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people’s transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people’s choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

MUIRHEAD, BRUCE* (University of Waterloo, muirhead@uwaterloo.ca)

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose ethical and moral underpinnings remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of ecological condition? What effects, if any, will this have on land quality, use of agricultural speculation on the most disadvantaged.

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatized in its ownership and governance. Illustrative of this point has been the declination authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grab and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agri-food governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift. By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests of the broader public and the disadvantaged, in particular.

MUKHERJEE, SONALI* (Institute of Social Sciences, sonali.mukherjee97@yahoo.com)

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Hanayavists of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with differences in caste and gender. Now the other hand, the ingrained mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as inferior others. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society, it is possible that their children may be expected to be repressed by the governmental policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to engage the leaders of non-profit organisations themselves in the research process. The paper draws on earlier work on the hybridisation of social housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences over the past two years of market and operations. This method involves collation of responses to scales surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up depth interviews to explore and interpret the meanings of their responses.

Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the within-firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

First, because of its high unemployment level, well above those of other countries in the OECD. Secondly, because of the strong incidence of the temporal rate, with levels close to 30% since the first Labor Reform in 1984, and third, for the extraordinary inflow of migrants in the first decade of the XXI century, representing a foreign population of 3.6% in 2000 to 14% only ten years later.

This study seeks to test the assimilation thesis in a segmented labor market during a recessionary economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporal contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individuation processes to, instead, focus on a single model of Japanese-ness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the rigidity of its job-hunting system, the curriculum of homogeneity and individuality suppression that begin in the school and echoes in society, the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging among the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness, linked to the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individuation and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the oppression of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what the youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operate in addition to the ones from everyday life.

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a reaction to the instrumental view of the expressive work orientations, as a response to the uncertain and risky labor conditions.

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level –aggregated and individual- and will be based on relevant data from the European Social Survey (2004 and 2010).

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level –aggregated and individual- and will be based on relevant data from the European Social Survey (2004 and 2010).
The Influence of Linguistic Inequality on the Vitality of Two Otompan Language of Mexico: Chichimeco Jonaz and Tlahuica

In this paper we explore the influence of linguistic inequality on the vitality of two related Otompan languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants represents the second biggest Japanese descendant group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese cuisine. Japanese sushi and sashimi awakened the curiosity of Brazilian people, and the curiosity leads to the exploration of the Japanese culture.

In order to analyze the culture deployed from this habit, this article has the objective to identify the values linked to the attributes pointed by the consumers of Japanese food. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The ladder technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

Local Policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the 'command centres' of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particular in a landscape of private apartment and suburban areas. This analysis of urban surveillance is still undergoing an uncertain transition in the encounter with global neoliberal capitalism.
There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and an unprecedented mobilization of wide areas. As a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying damages would apply to victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers' involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study:

- What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

The GGS data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

Knowledge Workers' Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neo-liberistic logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects' education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Semenza, 2012). Which relation does it hold between educational levels and possibility of effectively deploying the acquired competences and skills? How do knowledge workers represent and face their precarious conditions?

Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 and 45, have been collected in reference to the transitions between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts.

The research inquires on the one hand the risks of depauperation of knowledge and deskilling of highly educated young workers; on the other hand, the strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers.

In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as “independent and professionals”, though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.
Position of Women in Sociology or Female Founders in Sociology

Sister's founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even though there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle's distinction between male/female, according to authoress Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, religion and activity. Logic of domination under its objectification, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalestream, independent man vs. Independent women, Aristotle's misogyny.

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a recourse, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70's, 80's, and early 90's. The organization's type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70's and early 90's; how does this change impact youth power and position in the oPt; How do different types of organizations provide different strategies, forms, of youth engagement?

Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The "comfort" women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting reactions from right-wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universalism that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan's issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize. This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current 'rape myths' and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettable, tolerance of sexual violence against women penetrates even the law. Concerning this, CEDAW, in its 2000 General Observations, urged Japan to revise Articles 198, 225, and 226 of the Penal Code which criminalize sexual intercourse with a child under 13. The revision of these laws is a key step towards the prevention of sexual violence and the protection of women's rights.

Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This reflects several reasons for language shift to take place language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting in languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational-de
demands. Therefore, I propose a new approach to these models.

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Successful reintegration into the host country begins in the host country (Kathleen Newland and Aaron Terrazas, 2009). Children are usually not reckoned as vulnerable when migrating with their family. Parents and common people often think that moving temporarily to a developed country will give no distress. However, the true problems have arisen both in integration and reintegration. Indonesian children of migrants have to encounter challenges and inequalities when practicing cultural and religious norms in a country where those are different or do not exist. The interview with Indonesian moslem children revealed a fact that they felt a little “different” when their Japanese friends asked about why they were fasting. Meanwhile, in the reintegration, most of them experienced the phase of silence when they did not feel belong to the society while they know they should. One respondent had experienced an unsuccessful reintegration when his school became one terrifying place because he was bullied for his unreadliness to face language and cultural challenges. He remains friendless until now. In the findings, it is revealed that parents usually claimed that there were no significant problems in both phases. They were all worried only about getting a school and financing the children. While, some children showed the opposite behaviors, telling that their parents did not know their feelings. Some even felt traumatic in migrating to Japan. All children deserve to have a safe place wherever they are in the world. This issue should be well-addressed by parents, schools both in Japan and Indonesia, and endorsed by the government policies to properly support these children in undergoing the adaptation phases, especially the underestimated reintegration.

Contesting Chinese Capitalism

As the developmentalist goal of catching-up with the West is gradually achieved, will China’s political economy begin to gradually converge on an Anglo-Saxon (neoliberal) variety of capitalism? Or, in contrast, will the ‘China Model’ of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades? This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideational battle to define China’s national development strategy in the 21st century.

Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different hegemonic visions for China’s future:

1. The ‘neoliberal’ vision which proposes to further liberalize China’s economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the ‘authoritarian socialist’ vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the ‘liberal democrat’ vision which combines a faith in markets and a distaste for state own-
ership with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy - it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominantly positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of ‘Blockupy’, a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women's reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather they are challenged and reinterpreted in ways that support mothers’ participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people’s trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

The main findings are: First, the proportion of “jobless people who have a desire to work” increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and married women often worked if they were younger and had smaller savings. Second, in 2010, male “jobless people who do not desire to work” and “jobless people who have a desire to work” were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither seek for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women in Japan.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority’s medias? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shimbu and São Paulo Shimbu, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the article. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various 'applications'. It facilitates exchange of data between the 'networked' 'networking' society. The promise of communications technology among other things is the democracy and the user defined nature of interaction of players constituted by it. But the use of 'bubble' (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

This paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the 'bubble' generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of 'cultural' capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.

Costs for Survival

The necessary cost to continue the life increase year by year. It is said a baby woman in Japanese consume a debt 7 million yen’s back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility. It is the same thing Japanese welfare-employment regime has supported, by service and contribution to the society? Our study picks up a 15 villages' examination to answer that question modeled on Japan where a mayor live and can't run through the cost for survival. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = (welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance), for incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizen’s perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen's life differently according to one's industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap
by analyzing what determines "what amount of income people think that they should earn." To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of 'just income gap' between these groups. As a result, we find that gaps of perceived appropriate income between different employment status and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women valued leisure highly, it is not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities give feelings of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their broader cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring "a better life for all", it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic services (water and electricity) from cut-offs to prepaid meters. In these struggles, residents identified largely as poor people and demand that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles forced the municipality into its own series of policy formulation processes in response. This paper will explore the culmination of these processes in the City of Johannesburg's most recent indifferent management policy, which, it will show, puts forward a "pro-poor approach" that brings together a targeted model of party decommittalisation of comprehensive access to services for those identified as "the poor", that are nevertheless delivered within a system that is run along market principles overall. It will argue that the nature of this differentiated system perpetuates inequality even though it might address poverty by encouraging a particular form of life for those identified as "the poor".

Examining the Impact of Health and Housing on Poverty Among Older Australians

As with most OECD countries, the Australian population is ageing. It is predicted that by 2050, over 20 per cent of the Australian population will be aged 65 and over, compared to 13.4 per cent in 2010. The Australian retirement income system is heralded as an exemplar of the World Bank's three tiers approach, with the over, compared to 13.4 per cent in 2010. The Australian retirement income system is heralded as an exemplar of the World Bank's three tiers approach, with the provision of additional supports to those in old age, including provision of health and aged care services. Existing studies indicate that Australia performs below the OECD average in terms of poverty, defined narrowly in terms of income, but these studies ignore the critical role that home ownership and health care provisions play in maintaining a decent standard of living for older people. This paper compares a range of alternative approaches to beyond the conventional income approach by taking account of the role of housing wealth, housing costs, health costs and health needs in affecting the poverty rates of older people – relative to general living standards and relative to the risks facing other demographic groups. Attention is focused on comparing poverty rates before and after allowing for housing and health care costs and the sensitivity of these findings to poverty line variations. The results are based on integrating reported and imputed data from two national household surveys: Wave 10 of the Household, Income and Labour Dynamics in Australia survey and the 2009-10 Survey of the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and characteristics of the neighbourhood and financial stress, income manage-ability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

NAIR, MANJUSHA* (National University of Singapore, manjusha@nus.edu.sg)
A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pratibha, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmission unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. These strikes were remarkable for the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the factory and in the local community. The strikes were inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.
NAITO, ASAO* (Meiji University, naitoao@kisc.meiji.ac.jp)
From Analysis of ijime (Bullying) in Japanese Schools to Constructing Theories of Psycho-Social Orders

In this paper, we examine ijime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo's experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, ijime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of ijime can be ascribed to the psycho-social order imposed on the students' everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study. (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

NAKA, NORIA* (Toyo Eiwa University, naka@toyoewa.ac.jp)
Clarification and Visual Representation of Concept of Power

Key Words: two ways of inference about power, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power. During the last decade, discussions about concept of power became unnecessary complicated and confusing. Some arguments on power such as one of M. Foucault are “philosophical-sociological” theory rather than empirical-sociological theory. This state of affairs resulted in confusion about concept of power among students of sociology. In addition to this, there is not much effort to visually represent concept of power so that students may conceptually and easily understand power.

Therefore, there is a need to reorganize and clarify concept of power. The purpose of this presentation is fourfold. First, two ways of inference about power will be suggested; a “prospective way” that indicates “power as potential” and a “retrospective way” that indicates “power as an effect on the outcome.”

Second, the “situation-process” model will be suggested to understand power conceptually. In this model, an actor means a person (or a group), structure means symbolic-systems, social rules such as customs and laws, and organizational structure in addition to physical structure. Situation means a state in which persons or groups are placed in. Process means interaction processes and communication modes.

Third, “conceptual formula” on power will be suggested as below:

-Simple Power = (power resources {knowledge})
-communication skill
-interaction power = (power resources {knowledge})
-communication skill

Perception (truthfulness & legitimacy)

Fourth, a visual diagram on power will be made to make it easy for students to understand concept of power.

These four, i.e., distinction of two different ways of inference, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power, will enhance understanding of students about power.

The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result. The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as “an economic forest” producing firewood. Therefore it is important natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the mangrove activity flows from the foreign country as the urgent matter.

However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. Generally, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.

NAKAGAWA, KAZUAKI* (leisure, gawocyayan@gmail.com)
Positive/Negative on Leisure: From the Perspective of the Difference of Enjoyment and Pleasure

This presentation aims to examine positive / negative on leisure we participate in. In the examination, we hopefully apply flow theory described mainly by Csikszentmihalyi. he has found out the significance of Intrinsically Reward leading to Enjoyment, as the main interest he examined the case studies such as rock climbing everyday work. This study distinguishes the positive from the negate, applying critically flow theory. The main issue is the difference of Enjoyment and Pleasure. According to Csikszentmihalyi, enjoyment is useful for the growth of self. Pleasure is useful just for keeping the order of self, it exists just on time.

On the other side we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand Pleasure when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective on the growth of self, we can take positive parts in leisure. So is the chance which we create Enjoyment.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating Enjoyment.

Women On Top: The Temporal Status Of Gender In Elite Professions

The recent growth of women's integration into "high-status" professions over time has been documented around the world, but stark variation exists across fields of education, government and corporations. However, while there has been much focus on women's labor force participation generally, the literature surrounding hubs of elite workforces is more fragmented. As a result, we lack a holistic view of the experience of gender in high-end professional spaces where women continue to permeate in new and diverging ways from the past. There is of course important research that explores the experience of women in specific industries and organization types, but there remains a need for more studies using comparative frameworks. For instance, across the world, most governments have far less than 50 percent of women members making critical decisions in their countries. In corporations globally, women have progressively taken over greater numbers of high-status positions, but at C Suite levels success continues to be dominated by men. While industries in each country have unique drivers of inequality, common mechanisms lead to the overwhelming lack of women in high echelons of professional organizations cross-nationally. In this paper, we provide a meta-analysis of existing literature describing the mechanisms that perpetuate gender inequality within and across international professions. Building on existing sociological research examining gender in the legal profession, consulting and academia, we ask: (a) What kind of changes have we seen over time in these elite professional spaces? (b) How are these changes different from findings in the labor force more generally? (c) What does this emergence say for how we think about inequality and stratification in these professions more generally?
Effects of Wives’ Relative Resources on Husbands’ Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands’ gender role attitudes among dual-earner couples with children are associated with their wives’ relative resources, namely, their economic contributions to the family, employment status, and educational levels. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives’ economic contributions to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through a path analysis. First, when wives’ educational levels or managerial posts are higher, wives’ incomes will be higher. The wives’ higher income is associated with the husbands’ more egalitarian gender role attitudes. However, the wives’ educational levels or managerial posts are not directly associated with the husbands’ gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives’ social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands’ gender role attitudes concern their wives’ provider roles within the family, but not with their wives’ social roles in public. Second, it is speculated that the smaller the difference between husbands’ incomes and their wives’ incomes, lower the level of husbands’ tendency to adopt traditional gender role attitudes.

First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutions and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capital, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shape the distinct characteristics of the global movements.

The Making of the Global Social Movements in the Japanese Sixties

Preliminary scholarships in the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create a cosmopolitan society during the 1960s in Japan—Anti-Vietnam War movement, which created alliance with the movements in the

The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens

In the literature of comparative politics, there is a growing interest on the caus- es and consequences of the intra-party democracy such as the adoption of pri- maries for the leadership selection. Our paper examines the dynamics and the developments of intra-party democracy in the main political parties in Japan and its impact on citizens’ political participation and partisanship, based on the newly constructed comprehensive dataset on the party-leader selection in Japan.

This paper consists of three main sections. The first section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature.

The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan.

The third section then investigates the impact of the intra-party democracy on the citizens’ participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens’ party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

Solution To Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free riders. The meta norm requires all persons to be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person cannot play both roles, and examined whether the division can solve the problem of free riders. So in Aumann's two kinds of players, one who does not engage in a production (that is, he/she doesn't pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the "guardian." The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the "tributary." With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably "cosmopolitan" film, My Nightingale (Watashi no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan's ethnic-nationalist period during the Second World War. I ask the following three research questions: First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existing in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria's slogan of gozoku kyōwa (heavenly place of virtuous rule) as simple political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repression and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Support Search Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCV), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpenetration between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressures of values -- the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

NAKAMURA, MAYUMI* (University of Toyama, mayumi.nakamura8@gmail.com)

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, engaging in corporate law. Such bifurcation is related to regional differences. For instance, international law firms are only located in metropolitan areas, and female lawyers forego job opportunities to work for such firms are limited to those who practice in such area. Moreover, traditional gender values are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantages for female lawyers in finding jobs in those areas. Thus, this presentation sets out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer's census (Keizai Kihan Chosa) conducted by Japan Federation of Bar Associations in 2010.

NAKAMURA, SHOHEI* (Kyoto University, fodelsekontroll@gmail.com)

There has been a presupposition in the explanation of ethnicity as sub-groups of a nation-state that there exist persistent, if not fixed, boundaries between these groups. Many scholars have postulated that the modern nation-state imposes homogeneous notions of groups that people eventually accept, resulting in rigid social demarcation within the population. The case of Betawi ethnicity, the "Batavian Indigenous" who emerged as a creole in the colonial setting, illustrates a distinct contradiction to such conventional wisdom. Betawi people basically accepted the state-sponsored definition of ethnicity, yet they emphasized the similarity rather than the difference between cultural features of different groups and those of "Betawi culture" officially defined by the government, so that people of different group-consciousness could tolerate each other within one broader category. The category of Betawi has come so far as to subsume those of foreign origins who were once labeled as non-Indigenous/Inlander and excluded from the category of Indonesian Nation/ Bangsa Indonesia. Today this ethnicity exhibits the potential for delegitimizing the persistent and exclusive human classification of "Inlander" or "Bangsa Indonesia" which has long been promoted and imposed by colonial authority, as well as by authoritarian rule.

Such notable tolerance to otherness cannot sufficiently be explained by the sole fact that Betawi started off as a creole. The presenter investigates the origin of this tolerance by describing Betawi’s genesis as Creolization, where different groups are intermingled and fused; and the group’s vicissitude under state cultural policy as Amalgamation, where various ideas of group-consciousness are reorganized and reconstituted under a broader singular category. The transition of Betawi ethnicity instantiates a paradoxical consequence: universalistic rhetoric of difference that the state promotes along with the flat-faces demarcation of geographical units in turn become the principle for partial deauthorization of supposedly rigid boundaries and incessant inclusion of different senses of belonging.

Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low-income countries, governmental organizations (GOs) and non-governmental organizations (NGOS) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as the physical environment and the economic circumstances on a temporary basis. The data used in this presentation will be documents on GOs/ NGOs’ activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Social Care at Japanese Snack Bars

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called “mama” by customer) is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day’s hard work.

Most of the customer is married and belong to companies. They go to Japanese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It’s possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more incinerators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequality in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Principle. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators to realize In-Ward-Waste-Disposal was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of Incinerationism as the policy paradigm in waste management, while the siting became stagnant when the urgency was eased as the economy became sluggish and the influence of Incinerationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequality began.

NAKAZAWA, WATARU* (Osaka University, wnokazawa@hus.osaka-u.ac.jp)

Impact of the Long Recession on Japanese Careers

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman brother economic crisis of 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered as regular workers. In this presentation, I propose to use the data from the Japanese Life Course Panel Survey that was started in 2007 and is followed up annually. The data includes information on occupation, working conditions, and educational backgrounds, and will help examine the frequency of change of jobs, the duration of stay in a given workplace as well as the above-mentioned issues.

Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum

In Korea, the gap between the poor and the rich has become a serious social problem since the economic crisis. 1997. Inequality distribution has been equalized until 1997, but income disparity has taken sudden turn for a worse after economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, populationization of unemployment and dissolution of family, disappearance of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one's socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one's future. The economic deprivation such as difficulties of earning daily bread, unstable house condition, and overdue educational expenses as well as worsening family financial situation are the critical independent factors which negatively affect on the one's social relations and subjective ethos. The economic deprivation has a bad effect on the social aspiration and upwardly mobile expectation. Thus the social predicaments have been deepening the social gap among the people in the decline of social capital and lowering self-identified social stratum and social aspiration. We utilize the national survey data which conducted by Institute for Social Development and Policy Research, SNU in October 2012. Interviews were conducted with male and females age 19 and above. The total usable sample size was 1,000. The sample was selected through a process of multi-stage area cluster probability sampling.

Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of non-conformist technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag still behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. If this study stresses that intervention of natives needs more reflection, Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough and indepth research for cross-border interview intervention is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two settings, solutions will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State about “Viet Kieu”, including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them as an important part of Vietnamese community. In doing so, the researchers will interview “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefit from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and locally-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated to the communal arrangement when some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making.

This paper concerns the movement defined as “Body Hacktivism”, whose goal is to unite hacking, body modification and activism. The body hacking is a current whose enthusiasts are found in different places in Europe and the Americas, and are connected through a network. The voluntary and experimental approach of the “Body Hacktivism” has as extension the creation of new devices that can be added and interacted with the body. For instance, the implant of R.F.I.D. microchips under human skin, subcutaneous magnetic implants which take the form of metal pieces whose main interest is to react to waves and electromagnetic fields, replacement of skin parts by titanium plates that can be used as a receptacle for various components, and also the explorations of sexuality by the creation of virtual and physical reality convergence in the metaverse. These artists’ experience and their mise en scène of the self in the context of body modification is usually accompanied of a political discourse, that claims the individual’s right to his/her own body. The existence of these discourses has decisive power in forming and unforming conceptions of the future body, excluding and including possibilities. If for the body hackers the future exists first in imagination, their next step is the willingness to make it real through experiments, opening the possibility to make their futuristic dreams become reality. Our line of thinking reconceptualizes “body” in terms of assemblages, relations, practices and distributes agency and knowledge across heterogeneous materials. The Body Hacktivism is actively challenging long-held normative beliefs about what bodies do, what they should look like and how they should behave. They are not only pushing the boundaries of their own bodies, but are explicitly challenging the very definition of nature, culture, and technology.

Empleo De La Tecnología Para Enseñar Matemáticas En Ciencias Sociales

Nuestra labor diaria consiste en enseñar matemáticas a los alumnos de las licenciaturas que se ofrecen en la División de Ciencias Sociales y Humanidades (DCSH) de la Universidad Autónoma Metropolitana plantel Chochimilco (UAM-X). La enseñanza de las matemáticas, por sí misma, tropieza con obstáculos que se van incrementando cuando los estudiantes a los que se les trata de instruir pertenecen a un área, supuestamente, alejada de ellas.

En la DCSH cada grupo es atendido por tres profesores con distinta formación que trabajan coordinadamente, integrando las diferentes disciplinas que intervienen, el módulo alrededor de un tema eje; es el especialista en matemáticas, quien se topa con más dificultades para lograr la integración de su materia al resto del material.

Esta compleja situación problematiza el proceso de enseñanza y nos conduce a modificar las estrategias apoyándonos en la tecnología para disminuir esta aversión de los estudiantes y mejorar los resultados, haciendo la clase accesible, divertida e interesante.

Para garantizar un buen logro en el proceso enseñanza aprendizaje se considera importante tomar en cuenta el estilo utilizado por cada estudiante para aprender, muchas veces, ni él mismo es consciente de su existencia, por lo que hacer énfasis sobre ella es un primer paso hacia la evaluación, pues el discente puede empezar a aprender a apreciar lo que requiere para lograrlo.

En este trabajo se propone un método de enseñanza a través de los principios conceptuales de la UAM-X, compatible con las actividades fundamentales de la enseñanza modular, que incluye entre sus características:

- Apoyo en la intuición
- Apoyo en lo real y actual
- Utilización de herramientas tecnológicas
- Conciencia de la importancia de la motivación
- Adquisición de los procesos típicos del pensamiento matemático a través del aprendizaje activo
- Enseñanza a través de la solución de problemas
- Balance entre el rigor y la aplicación

Hacking the Body : Body Enhancement and the Construction of the Envisioned Future

This paper concerns the movement defined as “Body Hacktivism”, whose goal is to unite hacking, body modification and activism. The body hacking is a current whose enthusiasts are found in different places in Europe and the Americas, and are connected through a network. The voluntary and experimental approach of the “Body Hacktivism” has as extension the creation of new devices that can be added and interacted with the body. For instance, the implant of R.F.I.D. microchips under human skin, subcutaneous magnetic implants which take the form of metal pieces whose main interest is to react to waves and electromagnetic fields, replacement of skin parts by titanium plates that can be used as a receptacle for various components, and also the explorations of sexuality by the creation of virtual and physical reality convergence in the metaverse. These artists’ experience and their mise en scène of the self in the context of body modification is usually accompanied of a political discourse, that claims the individual’s right to his/her own body. The existence of these discourses has decisive power in forming and unforming conceptions of the future body, excluding and including possibilities. If for the body hackers the future exists first in imagination, their next step is the willingness to make it real through experiments, opening the possibility to make their futuristic dreams become reality.
Indian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the mainstay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by small holdings, low technology, little value addition and mass commercial losses. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened ‘Agricultural Transformation Agenda’ which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-à-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that could not generate the implement environment. The paper concludes by observing some disturbing signals associated with the policy.

NAUDET, JULES* (Nigerian Rural Sociological Association, angolnaswem@gmail.com)

Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:
1° The 1991 liberalization policies had an impact on the shape and density of networks.
2° Networks are still very much shaped by the stakes the State has in PSU companies.
3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.
4° Connections between firms are likely to be structured by caste and family networks.
5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well. The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (“anchors”), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multiactor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit context of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The principal aim of this paper is to explain the scope and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

Corporate Interlocks and the Specificities of Indian Capitalism

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative typology.

This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSU); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations between both number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive outcomes measured at different ages: socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of sibships present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Prevent or Cure – the New Philosophy of Health Care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographical changes and particularly - aging of the society. This induces the choice of criteria, and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

This paper examines violence against women emanates from the social hypothesis of superiority of men over women. Insubordination of women legitimates gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

The Dynamics of Migration Processes in Modern Russia: Analysis, Problems and Prospects

For the present stage of social and socio-economic transformation in Russia is characterized by sharp increase attention to the migration processes, the dynamics of which every year is losing its momentum, a negative impact on the demographic situation in the country. The immigration influx is now no longer compensate for the natural decline in population - as it was in the 90s.

We have seen a rapid and continuing growth in life expectancy. This, coupled with the objective needs of the country.

It shouldn’t be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to specify the determinant of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.

Financialization and (Global) Class

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970s, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global “market culture”, emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a “global financial class”.

Defence and Security Policies in the EU: From Decision Making to Political Culture

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European “Security Research” activities , sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in “civil” security. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

Les Représentations Sociales De La Dépression Et L'accès Aux Services De Santé Mentale Des Jeunes Dépressifs: Une Question D'Identité?

The question of the accessibility of services to mental health care may not be limited to a specific country. One of the key factors to consider is the accessibility of services to mental health care. This is particularly relevant in countries where mental health care services are not widely available. While there is a growing recognition of the importance of mental health care services, there is still a lot of work to be done to improve access to these services.

Cynical Vs Empathetic Worldview Schemas and Fairness Perception

This research explores the contrast between cynicism, as a component of Kwok Lou’s human social axioms construct, and a more empathetic or altruistic view of the social world. As such it looks at the contrast between what game theorists call “zero-sum” perception and “positive-sum” perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, this seems to capture a critical dimension in human social worldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The research explores ‘cynical’ and ‘empathetic’ orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to undergraduate students in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

Emerging Dimensions of Senior Friendly Built Environment in Aging Societies

The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimension, summarise buildings in a way that is relevant to the residents’ quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the felling of well - being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Steward 1998, Duffy et al. 1996). 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home). 6. Orientation – Disorientation – Confusion regarding place, time, personal identity, or social situation – is common among people with dementia (Cohen & Weisman, 1991). 7. Sensory simulation is concerned with the different elements of sight, smell, hearing and touch. 8. Conflicts between different building users (because senior care housing is not only a living setting but also a staff’s working place). 9. Participation and contributions of older people.

The objective of the presented method is to compile a comprehensive overview of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.

“No Time like the Present”: Lessons Learned on Timeliness of Disaster Donations

In the aftermath of each disaster, material goods flow into the disaster affected area. Given with the intention to help survivors, the influx of items often generates situations which creates a “second disaster” or, in other words, an over abundance of items that are inappropriate, difficult to sort, costly to transport or store, and challenging to distribute. This paper takes a closer examination of one contributing factor to the problems associated with the disaster management process: the timeliness of donations. Drawing interviews following several disasters events that struck the United States in 2012 and 2013, as well as interviews following Hurricane Katrina’s devastation in 2005, this study explores the extent to which donation supply is often incongruous with donation demand. Lessons learned from these disaster events suggest the need for a system that accounts for the progression of need in affected communities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The social and logistical pressures on organizations to accept non-priority items are discussed, as are the benefits reaped by organizations that employed time-lines of donations management.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in shrinking cities all over the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) outmigration was selective: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pererilhidalgo 2008). Typical impacts are effects of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5,6 million units, of which almost 50 percent belong to the target group of social housing (households with less than 30% of median wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing development plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, decision-making structures) or original specifications (planning procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments’ and housing policies’ potentials to better the attendance of intense urbanisation-processes observed internationally.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become linked with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001. Four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industries. The children who work in the industries are more likely to have poor health. The study also revealed that the nature of occupation, females more than males predominate the Filipino labor migrants in the last decade. This study supports the World system theory where the peripheral countries like the Philippines supplies the labor demands of the core regions. The annual remittances of Filipino labor migrants has kept the Philippine economy afloat and are now regarded as “heroes”. Due to the failure of the Philippine government to provide job opportunities for its growing labor force population and in spite of the social cost to the families left behind, the Filipinos will search for jobs outside of the country. Thus, labor migration from the Philippines is a global phenomenon for as long as there are market demands for Filipino labor.

Family Policy and Child Poverty in Global Perspective

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from linear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the ‘black box’ of program content. This paper extends the comparative analysis of links in broad welfare state regimes; leaving unexplored the ‘black box’ of program content. This paper extends the comparative analysis of links in broad welfare state regimes; leaving unexplored the ‘black box’ of program content. This paper extends the comparative analysis of links in broad welfare state regimes; leaving unexplored the ‘black box’ of program content.
they have suffered from and struggled with their anxiety and distress, caused complex relationships between radiation, people, and science, through the narrations with medical and scientific knowledge. In this paper, I will explore the reality of radiation and its effects are often socially constructed through their inactual health problems which radiation may cause, people frequently suffer from exposed to radiation shows different aspects of this issue. First, in addition to and physical fields. However, a study on narratives and life-stories of people touch of . But it can be harmful for human body . Today, especially since the horrific of Atomic Bomb survivors .

In recent years, a growing number of urban policy makers are tackling the issue of sustainability with an increasing use of ICTs. In this sense, projects implementing advanced prototypes, systems in Information and Communication Technologies refer to the topic of 'Smart Cities'. This rhetoric leads to questioning their interactions with institutions of higher education, especially since the “World Symposium on Sustainable Development at Universities” (WSSD-U-2012). The paper analyzes the on-going relationships between urban sustainability, 'smart devices' and academic actors. To what extent do these interactions contribute to bridging the perceived gap between science and society? What transformation do they induce in university practices? If a new social contract with scientists is announced, how does it redefine the role of sociologists?

Firstly, a review of existing literature and experiments will examine the varying inclusions of smart technologies in universities with an eye to sustainable development. Our participatory observation in the “Green Campus Summit” (Puducherry, April 2013) also takes part in this international state of art. There will be a panoply of focus on the implications and possibilities for sociology to develop this field of research. Then, it will be analyzed from an empirical viewpoint. In this regard, the second part will deepen our sociological action research on the project “Smart Campus” carried out by the University of Versailles Saint-Quentin. Making use of innovative methodologies and covering a smart grid that enables the campuses to produce renewable energy and to optimize its uses for sustainable living and transportation, this case study is proving to be of particular interest.

In the light of an international overview and local insights, we will finally discuss the challenges of trans-disciplinary collaboration for sociology at the meso-level where university participates in Smart Cities.

Conditional Cash Transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union's Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches that are more robust and that provide possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors' life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors' reality of radiation and scientific knowledge affect with each other.

Women's Health and Healthcare Accessibility: A Study Among Kuki Indigenous Group in India

Understanding women's health is often limited in the context of women's childbearing functions which only reflects a fragmented view of women's health and women's bodies. It almost neglects the socio-cultural matrix in which women's ill development such as the milieu of poverty, patriarchy, and other life stresses. Similar is the case with the Kuki women, indigenous group in India, whose health concerns are more nuanced with several confounding factors such as poverty, overwork, and social inequality. The conceptual framework of this paper is within the social model of health theory embracing the context of health and illness beyond the biological model. The barrier to attain maximum utilization of healthcare by the Kuki women is the result of the interplay of many factors whereby the socio-economic conditions, religion, political and cultural factors are being considered in the study. The main objective is to dwell on these underlying issues that pertain to women's health reflecting on Kuki women. The paper also attempts to explore the prevalent healthcare services and its limitations to women's health care needs. One of the areas which were selected for the study through systematic random sampling. The method of study is exploratory in nature and the source of data collection is based on observation and interviews. While both men and women suffer the consequences of an inequitable system and redistribution of resources, evidently unequal burdens of domestic labor, discrimination in the allocation of household resources, constraints on women's capacity to determine their own sexuality and procreativity, inequalities in waged work and political power. The paper contests that the improvement in the economic, political, cultural, and educational and health status of Kuki women will contribute to improvements and elevation in the life conditions of the society in large.

Family Practice and Family Structure – Do Policies Matter?

In most Western countries the family is subject to major changes: marriage and fertility is on the decline, cohabitation and divorces rates are soaring and the share of childless and childfree persons increases. Most countries have developed a bunch of policies to cope with these trends. Two major strategies can be observed: First, governments try to go against the tide and safeguard traditional marriages and the conjugal families, or, second, adjust introduce social and family policies to prevent negative consequences for the emerging alternative families.
However, little is known what the effect of such policies is: Do policies which fa-
vour the traditional marriage family increase marriage rates and stability of mar-
rriage families? Do policies with a focus on single parents, patch-work families etc.
accelerate the trend to more instable family relations? Do social policies as an
alternative to family security increase cohabitation and divorce rates?

The analysis is based on official national statistics for OECD countries and cov-
ers the time span from 1980 to 2010. The analysis shows that social policies and
family policies such as child care services provide alternatives to the traditional
marriage families and family at all. Such measure increase cohabitation rates and
divorce rates while fertility rates decrease. A generous and benevolent welfare
state seems to provide alternatives to the traditional marriage families. Marriage
is no more a precondition to avoid or escape poverty. Social security and family
policies have lowered the material necessity to enter marriage, and increased the
opportunity to exit unpleasant family constellations.

The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy

Debates on processes of democratization create the impression that the mid-
dle-class and/or the civil society are the drivers of democratic change and the
backbone of democracy. Seen from this perspective either these groups fight for
democratic change or once they have a basic political freedom they will quasi
automatically take possession of democracy. This was the expectation in the USA
before the Iraq invasion (what we may call the “Rumsfeld Utopia”). However, we
have learned that in Iraq, after the Arab spring and in many countries that under-
went processes of democratization during the 1980s and 1990s there was no au-
tomatic process towards democracy. In these transitions the middle-class played
an important role and many of the civil society associations, social movements
and especially their political leaders had a middle class background. But the po-
litical groups and the leaders that opposed the ideas of a liberal democracy also
had support from middle classes. At least in Africa and the Middle East the
middle-class-based civil society represent competing concepts of socio-political
order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic
rule (or socialism in Latin America). The claim for democratic elections may be
used to legitimize any of the socio-political orders.

NEUBERGER, FRANZ* (University of Zurich, neuberger@soziologie.uzh.ch)

FAMILY SUPPORT AND QUALITY OF LIFE: STRUCTURED AMBIVALENCE AS
BRIDGING CONCEPT BETWEEN THE INDIVIDUAL AND THE STATE

The relation between familial support and the welfare state as providers of
support has been extensively researched in Europe. Most studies thereby focus
on the quantitative dimensions, e.g. who provides how much support to whom.
Existing research is descriptive in nature and rarely based on a sound theoretical
frame. A qualitative dimension that might contribute to the theoretical frame,
however, receives little attention, e.g. what are the motives for providing sup-
port to one’s kin, and what is the effect of providing support on one’s quality of
life? Using the Survey of Health, Ageing and Retirement in Europe data with 16 Eu-
ropean countries, differences in the effects of family support on the quality of life
of people aged 50+ are analysed by applying hierarchical linear models with random
effects and cross-level interactions.

The concept of structured ambivalence as a link between micro (individual be-
aviour) and macro (cultural and institutional context) is used to explain these
differences. Structured ambivalence is thereby defined as discrepancy between
individual behaviour and contextual factors and assumed to reduce quality of
life. Our findings show that support providers’ quality of life is not only shaped
by individual circumstances, but by cultural norms and social policies. Structural
ambivalence lowers QoL, e.g. when family members do not live up to prevailing
family expectations and obligations. Doing so, we provide a fruitful application
of structured ambivalence as theoretical concept as well as new insights in the
relation between social policies, individual action and quality of life.

INTRODUCING TECHNOLOGIES IN AFRICA: BETWEEN APPROPRIATION AND
THE CHALLENGE OF A TROJAN HORSE

Current studies on the introduction of technological innovations in Africa un-
derline that we observe a process of appropriation. This is in line with the hypo-
theses of the science and technology studies (STS) claiming that the development,
use and understanding of technology has to be seen as a social process between
people and (technological) ‘actants’. The findings from mostly anthropological
studies focus in the same way as STS on the change of technologies according to
the social conditions of their use and emphasize the influences of the local
context on the technology. Up to this point STS seems to produce in Africa sim-
ilar results as in the Global North (or the industrialized societies). However, the
introduction of technological innovations (InAd) and the interaction of individ-
uals with the technology itself. The use of specific technologies may change the
behavior and expectation of the users, too. Modern technology also incorporates
basic ideas of modernity like the mastering of nature. Once new technologies are
used they may act as a Trojan horse of modernization. In Giddens terms the behavior-
al changes are consequences of modernity. Therefore, technological innovation
as a social process takes effect in two ways it shapes the technology but also the
users. Which way these changes take is an open question, STS has shown that the
development and application of technologies is a social process. When we use this
approach outside the Global North we have to admit that the technology itself
plays an important role. We have to put more emphasis on the notion and
function of ‘actants’.

The Validity Of Response Latency Measurement In Cati Surveys

There is agreement among researchers that the measurement of raw response
times from surveys requires a treatment for baseline speed of respondents and
individuals. There remains disagreement about the appropriate procedure to
transform raw response times to response latency and there is no study that evalu-
ates the different approaches with regards to their potential measurement
error, which may have an affect on modeling and causal inference. This article
fills this gap by examining the measurement validity of different ways raw re-
sponse times from surveys requires a treatment for baseline speed of respondents and
individuals. There remains disagreement about the appropriate procedure to
transform raw response times to response latency and there is no study that evalu-
ates the different approaches with regards to their potential measurement
error, which may have an affect on modeling and causal inference. This article

Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event's anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a 'new media event'—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski's death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording's electronic nature, we argue, complicated an 'open-shut' case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

Mainland Chinese Sex Workers in Hong Kong: Multiple Forms of Inequality Both in their Pasts and the Present

Purpose: This research aims to understand the lives and views of sex workers from Mainland China working in Hong Kong. Design: This research appropriates the theoretical tools of Pierre Bourdieu and uses an ethnographic approach to explore the issue Hong Kong, including expert interviews, interviews with sex workers, participant observation and field documents. Findings: Results point to gender inequality and various other forms of oppression weaving together to form the past and current experiences of sex workers in Hong Kong from a Mainland Chinese background.

Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve the understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

Fighting Against Youth Unemployment: The Hong Kong Experience

NGAI, NGAN-PUN (Dr.)
Adjunct Professor & Senior College Tutor
Shaw College & Department of Social Work
The Chinese University of Hong Kong

In Hong Kong, the high youth unemployment rate due to the rising uncertainty and variability of global economy and financial crisis since the late 1990s has driven the Government and various sectors to commit themselves to enforce a series of remedial policies and services to alleviate the problem of youth jobless and get youth into jobs and work training. The concrete plan targeting at unemployed youth includes two major categories: First, several pre-employment training programs such as Youth Pre-employment Training program, Project Yin, Youth Work Experience and Training Scheme, and Hong Kong Young Ambassador Scheme, and second, temporary employment opportunities such as Special Job Attachment Program, Program Assistant, Peer Counselors, and Summer Student Helper. This paper examines issues relating to those policies and training programs aiming at fighting against youth unemployment and proposes plausible solutions to remedy and improve the present policies and practices in dealing with the problems. The proposed measures are: 1) formulating a long-term youth employment policy to provide youth with appropriate training in occupational knowledge and skills; 2) setting up a centralized system to strengthen the information and communication network of the territory's labor market in order to facilitate youth to seek employment resources and assistance; 3) building up closer collaboration between the voluntary service sector and the business sector in order to look for more pre-employment training opportunities, chances of temporary employment, full-time job possibilities, community participation and financial support; and 4) using multiple methods to fight against youth unemployment.

NGAI, STEVEN SEK-YUM* (Chinese University of Hong Kong, sngai@swk.cuhk.edu.hk)

Enhancing Employability Through Youth Training Schemes? The Experiences Of Non-Engaged Young People In Hong Kong

The process of globalization, the rate of technological change, the convergence of information and communication technologies, and major changes in government policies are leading to the development of a “weightless” economy, to rapidly changing job requirements, and to what some call the “jobless training generation.” In Hong Kong, the labor market is tilting towards extensive increases in the demand for higher skill levels and the labor demand for low skill levels is weakening. In this environment, young people are hit disproportionately hard, obscuring paths to adult statuses, identities, and activities. As such, many young people have been left out of the transition from school to work, with more and more of them not in education, training, and employment. This paper seeks to investigate the school-to-work experiences of non-engaged youth – young people aged 15-24 who do not participate in education, training, and employment. Based on data from focus groups involving 50 non-engaged young people in Hong Kong, it seeks to: 1) examine how these young people are being systematically propelled to the edges of conventional pathways to adulthood; and 2) assess the efficacy of governmental training schemes that aim to develop employability as a strategy for engaging this population. The paper concludes by outlining prospects for future policy development, focusing on gaps and weaknesses in current provision and practice. It is suggested that effective guidance to non-engaged young people must pay adequate attention to the social context within which the individual operates. Assumptions behind the government’s individualistic lifelong learning policy are called into question. This paper has direct relevance to Theme II.3 “Youth Unemployment/Underemployment and Precarity” of the RC34 Sessions at the XVIII ISA World Congress of Sociology as more and more young people worldwide are now living in economic disadvantaged circumstances and facing problems in their school-to-work transition.

NGILA, DOROTHY* (Academy of Science of South Africa (ASSAf), dorothy@assaf.org.za)

Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa

The importance of documenting data on the inclusion and participation of women and girls in a society’s science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality
and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa’s reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender policy has been put into place and operates in all the realms of government. A lack of funding, human resources’ constraints and insufficient co-ordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematics at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women’s participation in the STI system in South Africa. South Africa has an aging, predominantly white male scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country.

NGUYEN, CHARLES* (University of Hawai’i at Mānoa, charles@hawaii.edu)

For Our Children’s Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam’s growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government has instigated the rural communities to develop into urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza and coupled Anthropogenic systems. My findings show that there are key differences in how traditional, transitional and modern farming communities are affected by and understand rural development. Particularly interesting findings include significant perception differences found between the men and the women surveyed. I predict that the cognitive differences of Vietnamese citizens would not simply be due to differences in resources or education; however, a gradual process in which cultural practices becomes embedded in everyday behavior.

Self-Employment in Tourism Business Among Japanese Expatriates in Bali, Indonesia

Migration and Tourism
Self-employment in Tourism Business among Japanese Expatriates in Bali, Indonesia

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five nationalities visiting to Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran and Kuta. The result of this study showed that: 1) The primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after setting; 5) To maintain a peaceful lifestyle is a higher priority than to extend their business. Entrepreneurial activities among Japanese expatriates community in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese expatriates and local community.

Ecological Disasters: The Political Economy Of Floods in Pakistan

“Ecological Disasters: The Political Economy of Floods in Pakistan”

In 2010–11, Pakistan was struck by two successive flood disasters that wrought massive destruction all across the country, especially three of its provinces that sit ashore the Indus River—Punjab, Pakhtunkhwa and Sindh. Thousands of people were killed, while twenty million, mostly rural residents of Pakistan’s farmland, were displaced from their homes and hearths. The dollar value of these losses was estimated at $20bn, which was 0.8% of Pakistan’s GDP. The state and its institutions failed to uphold their obligations to protect the citizens during or after the disaster. Their role, however, goes back to the very making of the disaster that arose from the flawed pattern of development. This project, thus, explores the economic and power relations in society that “manufacture” such disasters. In particular, it explores the “man-made” aspect of Pakistan’s floods that were presented by the state and its institutions as a “natural” disaster. The paper seeks to embed the disaster in Pakistan’s political economy that broadly manifests in its development patterns. In this regard, three empirical indices are chosen to document the development pattern that best explains the flood disasters: (a) development of the Indus waters in man-made structures; (b) diversion of the Indus waters in massive damming; (b) loss of wetlands to the recreational assets. The paper seeks to embed the disaster in Pakistan’s political economy that broadly manifests in its development patterns. In this regard, three empirical indices are chosen to document the development pattern that best explains the flood disasters: (a) development of the Indus waters in man-made structures; (b) diversion of the Indus waters in massive damming; (b) loss of wetlands to the recreational assets. **Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases**

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well proclaimed the Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS agricultural sciences, economy, sociology and others are far from providing effective knowledge in order to solve the problem. If these observations are correct, than the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian systems theory but limited to African cases. (1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

**Aging and China’s Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012**

By 2012, China’s population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) of the population by 2050. At this rate, the 65+ age group will equal 13% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society.

While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China’s central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to take active measures to foster a society which meets the needs of the aging population. Preferential measures and tax benefits for private investors in the senior care industry have also been implemented. The industry is wide-ranging with new opportunities surfacing and growth is expected.

However, China’s senior care industry, situated in the largest consumer society worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population.

From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.

**Current Social Welfare Conditions in China**

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities where current senior populations and examine the issues between the system and actual reality for workers. Finally, we'll suggest ideas for how existing issues could be resolved.
Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and migration is particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbour- hood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Polish Identity As Entrance Ticked and Barrier On An Altered Labour Market

Taking its point of departure in current research on Polish migrant labourers in Denmark this presentation will discuss ways to understand how and why different intersections come to have diverse impacts according to the contexts they are taking place within.

Different ‘identities’ – such as ethnic, national, religious – have had a very limited importance at the Scandinavian labour market through most of the 20th Century. The labour movement and the workers’ unions possessed immense influence on the labour supply and were able to prevent uncontrolled influx of workers and maintain union membership as the only prerequisite for employment. Thus the few emigrating workers became internalised in the existing union system and worked on general conditions.

Following the collapse of the Eastern bloc and the success of a neoliberal political and economical regime this order of the day has fundamentally altered. A consequence of this is a major revitalisation of ethnicity as a marker of specific abilities.

The presentation outlines how ethnicity at one point has become a means to get access to the national labour market in the host country, in this case because a certain Polish work ethos is claimed (and, notably, for a lower wage). At the same time however, this opportunity can be a barrier of being regarded an ordinary part on that same market. As a consequence the whole social organization around the migrant workers is impacted of the circumstances, not least the prospective family life.

On the basis of fieldwork among Polish workers on Danish construction sites, representatives from unions and employer organizations in both Denmark and Poland, politicians on national and EU level, the presentation discusses how migrants come by under these circumstances and how the challenges can be tackled within a national and supranational framework.

Neighbourhood Socialisation of Youth’s Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilient respond relatively more adaptively and flexibly to situational demands, while both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers’ and undercontrollers’ work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilient’s work commitments are not influenced. In turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents’ unemployment is unlikely to be, and stabilised by the neighbourhood context. Furthermore, undercontrollers’ work commitments and unemployment and overcontrollers’ work commitments are influenced by the neighbourhood, while resilient remain unaffected. This finding is in line with the idea that resilients are better able to cope with environmental demands, while overcontrollers and undercontrollers are more likely to be affected by their environment.
This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporarily-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt’s (1993) argument about the conditional and compensatory nature of collective masculinity. Second, alcohol plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youthsquads (janggot) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

Using Local Cultural Forms To Talk To Youth In The Global South

This paper uses material from two research projects, one in Fiji and the other in Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is veivosaki-yaga, which in Fijian literary parlance means ‘worthwhile discussion or conversation’. The term veivosaki connotes a neutral sense of conversation and dialogue rather than storytelling. Yaga literally means ‘useful or worthwhile’. By engaging in veivosaki-yaga, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of nongkrong (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom nongkrong is their favoured leisure practice with age peers. Nongkrong is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like talanoa research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

**Discovering Ideological Codes in the Professional Work of Daycare Personnel**

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children’s cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardised mapping and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

**The Practice of Control in Risk Activities**

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls “a technology of the self”. With this shift in focus to control, participants in risk activities are understood as practicing a dominating ideal in the post-war era, where domestic responsibilities are increasingly supposed to be responsible and in control of his/her own life (Simon).

**Legalizing Internet Piracy through State-Invented Religion? A Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopivism As Religion**

In 2011 the Swedish Kammarrkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopism (Det missionerande kopismföreningen) as a faith based community (trossförening). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequence of this production are in relation to power and ideology.

**A Discourse on Transnational Crisis of Legitimation**

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be mutual...
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in response to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite different both in method by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or be misconstrued) as acts of “terrorism”.

Temporary Transnational Migrants from East Asia to Japan: As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people’s practices while referring to the transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary laborers under the foreign trainees’ system. We focus on these trainees, called ‘Kennshusei/ Jisshusei’, at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism’, in parallel to ‘actual transnationalism’ and ‘ideal transnationalism’. While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required for transnational socio-political practice.

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture-- the Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women’s culture that it is part of. Specifically, through an analysis of articles (text and images) in female oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from “Johnny’s Entertainment” were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendships and relationships of mutual trust between the members of the group are represented frequently. “The every day” of idols, including events at school and community (friends or family are depicted, and many instances of physical contact and conversation are made to look like expressions of homosexual relationships. Situations that consist of silly tomfoolery and play by these idols are usually referred to as “Wachawacha-kan”. What is important here is that the existence of female fans is not represented at all in the discourse of these articles.

In other words, male idols are represented as “ideal love partner” for women, but at the same time as someone who could not possibly ever enter into a heterosexual relationship with the reader of these media. In the social background of this peculiar development, links can be made with “yaoi” culture (female made and oriented fiction on romantic and sexual relationships between men in Japan, as well as changes of heterosexual values. In this way, I consider characteristics of recent Japanese woman culture through magazine media.

Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse – “anti-nuclear”, by relating various points at issue with anti-nuclear lives after Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has started from ten years before. 12 sets of wind power have already worked now.

The results are as follows: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes become wide, and they have a variety of motivations for the investigation, not only environmental consciousness, but the commitment to windmill and the expectation for a dividend.

If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movement. However, with anti-nuclear participants’ motivations, and the renewable energy movements related with “anti-nuclear” is too simplified.

Re-Entering the Labor Market after Childbirth Among Japanese Women

This study explores the women’s working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on the issue. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women’s career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPSC). This study uses data collected from 1993 to 2008.

Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of it. Results of investigation show that method show how working when their first child is ten years old is 65%. Results of Cox regression model show that university graduates are less likely to get a job compared to those who completed high school, however, it seems that husband’s income is more influential than education on whether a woman get a job or stay out of labor force. Then, focusing on those who started their first job after childbirth non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to change their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women’s career development there will be discussed.

Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of “no immediate harm,” others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, in many ways the public has attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrad 2012), is an important sites where laypeople’s experience, knowledge, and logic are constructed and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1877; 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Yamamoto Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around an-“safe” camps, in many ways the public has attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrad 2012), is an important sites where laypeople’s experience, knowledge, and logic are constructed and negotiated.

La montée en puissance de cette catégorie est à la fois une opportunité et un piège. Elle ouvre la possibilité d’interroger les facteurs collectifs de risque, à la source des difficultés psychologiques et individualisées des salariés. Mais elle peut refmmer le débat sur les sources organisationnelles de ces difficultés en mettant l’accent sur la nécessité de « protéger » de ces risques les travailleurs qui comme opérateurs passifs, confrontés à un environnement hostile. Et donc d’ouvrir la voie à un nouvel hygiénisme. L’opportunité offerte de mettre en place des espaces collectifs de controverse sur les enjeux d’organisation, de qualité ou d’efficacité de l’activité n’est pas sauf. Les « RPS » fonctionnent alors comme un piège, tenant éloignés syndicalistes et représentants du personnel des salariés et de leur expertise que ces derniers détiennent sur le travail et les sources organisationnelles de leurs difficultés.

A partir d’une série d’enquêtes de terrains en cours on montrera le rôle des contextes d’action qui sont ceux des équipes syndicales dans l’éventail des situations rencontrées. Elles vont de l’intégration à des dispositifs managériaux visant à « soigner les travailleurs les plus fragiles » à des expériences d’écoute syndicale de l’expérience laborieuse, revivifiant à la fois la pratique syndicale et la critique de l’organisation du travail.

NOACK, CONSTANZÉ* (Heinrich-Heine-University Dusseldorf, noack@phil.hhu.de)

“Everyday knowledge” is constructed in the mass media by debating or inter- weaving current knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the “discourse analysis as well as sociology of knowledge”, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects. On the base of social upheaval knowledge and social knowledge the broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is “new everyday knowledge” and not only repetition of long established knowledge. Therefore the question arises how knowledge, which has the potential to form and distribute new “everyday knowledge”, is being produced by the media.

Taking up the discourse around a media buzzword such as sōshoku danshi (grass eating or herbivore men) – describing young men who are said to shy away from women, and by doing so seem to uphold another form of masculinity – will help to understand whether and how these media products are distributing socially important topics to the public. Furthermore, I am concerned with the process in which academic and everyday knowledge is forming a part of the knowledge stock of Japanese society and in which ways mass media is taking up the role to form “new everyday knowledge”.

Comparative Research on Contemporary Youth Social Movements: The Case of the Genind Project

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called ‘Arab spring’, continued with the ‘Spanish revolution’ of 15-M, the Chinese student protests, riots in some English working class suburbs, the Occupy Movement in the United States and ended—at least till date—with riots in Turkey and Brasil. The antecedents date back to the ‘anti-globalization’ movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French ‘banlieues’ in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indignant Generation. Space, culture and power in the youth movement of 2011 [GENIND]. While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net).The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish case as a reference point and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt), and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on ongoing ethnographic research, their orientation is primarily theoretical. The main

Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. I review interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs’ strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist’s prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sense-making theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (whose responsibility it is to discontinue), prioritizing ability (how comfortable it is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome).

I conclude with recommendations for how to support appropriate discontinuation in primary care, including identifying up-to-date guidelines to explicitly acknowledge multimorbidity in patients and the importance of medication prioritizing, creating discontinuation alliances for GPs, e.g. with clinical pharmacists and gerontologists, and developing positive metaphors for ‘discontinuing medication’ to enable better communication with patients, e.g. drug holiday or medication pruning.

Montée Des « Risques Psychosociaux » Et Redéploiement De La Critique Du Travail : Opportunité Ou Piège ?

C’est dans une conjoncture d’affaiblissement et de professionnalisation des syndicats que s’élaborent les formes de l’exploitation, qui se traduisent par des atteintes plus fréquentes à la santé mentale des travailleurs. Ces atteintes sont désormais catégorisées comme « Risques Psychosociaux ». Cette notion l’a emporté sur d’autres comme la « souffrance », ou le « stress », parce que les professionals de la santé au travail et de sa négociation collective ont réussi à l’intégrer dans la problématique pré-existante des « risques professionnels ».

Le Travail Migrant Temporaire Au cœur De La Dynamique De Centrifugation De L'emploi Vers Les Marchés Périphériques Du Travail : Une Perspective Canadienne

La communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l’essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail : 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS) ; 2) les aides familiaux résidants émigrés dans le cadre du Programme des aides familiaux résidants (PFR) ; 3) les travailleurs migrants temporaires dits "non qualifiés" embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une "armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — "externalisables", tout en préservant l’un des plus grand paradoxe du "libéralisme réellement existant" qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment les travaillleurs de ces territoires ont également été instrumentalisés lors de la récente réforme de l’assurance-emploi au Canada. Nous mettrons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclatement d’un régime de travail de type universaliste.

explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significa-
tion from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

Social Movement Transformations in the 20th Century: Japanese Experience

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan. Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively calm up to the present. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transforma-
tion in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and percep-
tions toward social movements. Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less perform-
ance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing profes-
sionalism” (i.e. medical professionalism that includes organizational and man-
agerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach; we see competency as something new, an institutional phenomenon, instead of an individual one, and we focus on medical routines in order to analyze institutional competency. Medical routines represent institutionalized aspects of medical acts and practices and might help of hinder the rise and spread of (innovative) hybrid service delivery that is collaborative and decentralized. We especially focus on the many practical and everyday sides of medical routines. We focus on the everyday sides of orga-
nizing health care by medical professionals, including multi-professional collabo-
ration and quality and safety management. We (a) explain what we mean by med-
ical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

Patterns of the Semiperiphery: Using Valued Blockmodeling Techniques to Map and Specify the Relational Characteristics of Semiperipheral Countries

Although the trichotomy of the world-system often is specified in terms of positions of each stratum, particular the global division of labor, an increasing number of studies specify and define such strata in relational terms. Parallel to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations. However, even though the semiperiphery has a distinct role in world-system analysis, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel heuristic that identifies dependency and dominance in core-periphery struc-
tures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, has its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and the core as well as the core and the periphery? Using pre-determined core-semi-
periphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-sys-
tem analysis.

Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in the higher education system. Gender equality in the higher education sector is still unrealized: Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between hetero-
genous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These un-
forsen consequences arise out of conflicting institutional logics and were never intended by any of the institutional actors involved.

The "Invisible Hand" of Oppression - Symbolic Violence in the Precarisation of the German Labour Market
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and that causes the reproduction of social structures of domination. Symbolic violence, this "gentle violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimatises itself. It contributes both to the recognition of oppression and at the same time to the misrecognition of its arbitrariness. This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system. I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development. To theorize the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its inerterate persistence.

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the view of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel World anti-System etc. It is broadly fuelled by persistent dissatisfaction of former communist states and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as "detour from periphery to periphery", "prolonged" or "integrated" or "semi-periphery". After two decades of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the totalitarian wisdom, economic (shock therapy) or political (revolutionary removal of Communist regimes) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor politological explanations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (continuation, modernisation, innovation and transformation), and the symbolic action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers’ roles have been adapting over the last three decades financial provisioning remains the essence of “good” fathering and the work schedules associated with fathers’ employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers’ and mothers’ employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents’ organise their work and childcare arrangements in the first year of the child’s life impacts on paternal involvement as the child grows up. This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father’s contributions to childcare, and how facilitating influences which shape paternal leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers’ and fathers’ employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK’s Millennium Cohort Study reveals it is the mothers’ employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child’s life, independent of what hours the father works. Furthermore, both parent’s employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother works when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers’ work schedules are more important for fostering paternal involvement in both the immediate and longer term.

NORTHEST, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in one of its understanding of what it means to be a disabled person, and the material conditions that affect the way they experience workplace life. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its focus on institutional practices and institutional relationships and understanding of their material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long influent paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals’ bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

“What Do I Do Now?” Post-Retirement Leisure in Japan

Japan’s dankaisai, the generation that was the foundation of the country’s “economic miracle,” are retiring. As their careers come to an end, Japan’s “greatest generation” seem at last to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure trends during the past 50 years, noting how they conditioned inequality in leisure expectations and practices. Three main factors affecting variation in leisure are then investigated in detail. 1) Class. Who actually retires and how? Analysis highlights the roles of retirement bonuses, pensions, and savings, as well as government support. Japan’s elderly control much of the nation’s privately held wealth and many who are not rich have been lifted out of poverty, but poor elderly continue working out of necessity, while other carry on because work gives meaning in life. 2) Gender. In Japan’s strongly gendered society, retirement often finds two people whose leisure ideas have grown quite apart looking at each other across the breakfast table. The gendered nature of social participation remains evident in post-retirement leisure activities for men and women. Although “retirement divorce” is a danger, couples with sufficient means may share post-retirement leisure activities to be grounds for renewed mutual appreciation and affection 3) Age. Japan’s retirees exhibit significant variation in age (the so-called young olds, middle olds, and oldest olds), which influences leisure practices. As with gender and class, age-related leisure trends differences seen in Japan have parallels across East Asian societies. The paper concludes by considering the usefulness of the framework deduced from the Japanese case for studying leisure other Confucian catch-up economies.

Who’s the Terrorist?: Humanism and Moral Ambivalence in the Discourse on Terrorism

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grips on power. It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanist ideals are cast aside in the ultimate concern. Terrorist groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enculturation of humanist ideals can serve to arrest the violence surrounding terrorism.

Investigation Social Factors Influencing on Educational Opportunities Among High School Students of Tehran

This study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran. Reproduction theorists believe that strong solidarity exists between family background and the level of access to the educational facilities. Network analysis theory holds that inequal transfer of resources and opportunities leads to inequal educational opportunities. This means that people have inequal opportunities in achieving social possibilities and maintaining relationship with those who control the resources like information and bureaucratic influence, which makes the educational opportunities inequal. Having information of school programs, education and job consultation, friends in upper economy section would be some good examples.

The suryn method and questionnaire techniq used for this study. The sample volume is 300 and the sampling method is cluster sample, face and content validity used for questionnaire confirmation, cronbach’s a has been used for reliability and 78 percent is result.

According to research data, Tehran school are run 5 ways: heyat-e-omanaye, people specimen, governmental specimen, non-governmental and normal governmental.

In recent years, normal governmental schools that had more facilities or better quality of education became heyat-e-omanaye or governmental specimen.

Low-income families have problem to access appropriate schools while upper class can register to better schools by using their connections network and affording the school fees. The resources in socio-economic class leads to increasing educational sensitivity level of parents, as well as increase in communicational kills of students and boosting up heir educational motivation also dire need for access, resulting in educational progress and reducing inequal educational opportunities.

Continuing the recent trend will bring about deprivation of talented students in low-income families from proper educational facilities. This will deprive the society from part of the nation’s talent. Moreover illiteracy and semi-illiteracy portion of society will lead to subsequences such as inefficency, crime, disorder and in security.

Social Stratification and Inequality in Japan

Social Stratification and Inequality in Japan

Silvia G. Novelo y Urdanivia

ABSTRACT

When one examines the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a significant place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (sakoku). By focusing on the Japanese migratory phenomenon from a historic and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21st century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: The Sociology of Japan in the Post-Globalization Era.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The nikkeijin, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world -Meiji age- and the consequent development of a colonialist mindset and territorial expansion.

Will the nikkeijin of Latin America be able to overcome the deplorable mentalility of sakoku and become the solution to the serious demographic problem that Japan is facing?

Key words: Sakoku, Japanese xenophobia, Nikkeijin, Americas, Japanese migratory phenomenon.

Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South-East European, Post-soviet-socialist countries), the paper focuses on women’s (and men’s) status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country). Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervisor, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents’ average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader’s gender on the evaluations of CEs are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings do not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. In a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

NOVIKOVA, NATALIA* (University of Tsukuba, novikovanatv@gmail.com)

Post-Disaster Literacy of a Japanese Local Community

More than two years have passed since the Fukushima Dai-ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will overcome the disaster, yet evolved into feelings of desperation and disillusionment about actual risk. An escalated sense of the unknown and unexpected fostered a flow ofivistarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens' civic education is carried out. What is more, this paper provides what Charles Tilly called the "repertoire of collective action," in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome and transcended risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

NOVIKOVA, SVETLANA* (The Institute of the Social and Political Researches of the Russian Academy of Sciences, s_novikova60@mail.ru)

Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a "Notes of the Fatherland," "Business," "Knowledge". One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the "Notes of the Fatherland" was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2nd Petrograd State University. Only in 1916 it was an attempt to create a "Russian Sociological Society name M.M. Kovalevsky". The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: "In Russia the role of scientific arguments for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible". Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher’s Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers’ engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the Polish former soldiers of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured during mission abroad, both in terms of these combats, and the ways in which peer groups and participants try to manage and negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

NOWAK, RAPHAËL* (Griffith Centre for Cultural Research, raph.nowak@gmail.com)

Locating the Materiality of Music Artefacts

This paper aims to reinstate issues of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hieps of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite musics, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relation music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the Tsunami disaster. I attempt to reconstruct the catastrophe historical of the Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, the formation and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-Town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (e.g. "My house is located at altitude but the 1st floor was flooded."). But in the process of regional development, this risk awareness changed (e.g. “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor").

In the emergency evacuation phase, because big factories were located in a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate to the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women’s Life Trajectory: Views from the United States and Japan

Title: Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women’s Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women’s access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women’s higher education enrollment changed over time in the context of higher education system deve-
A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-

Climate change has received growing attention in both political and public areas, and now, has become one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPNet. This project explores characteristics of decision-making process around climate change policies and the Japanese team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to compare corporate culture among companies and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In this process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word “Wat”, which means “harmony”, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable ‘mapping’ of such types of behaviour that are exposed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain social area and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical space contribute to social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociocultural character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty-first century. Accordingly, many of nation states have shown a great interest in the development, transition, and expansion. This can be a characteristic under the times of climate change mitigation measures to reduce greenhouse gas emission. The current paper aimed to contribute to the literature on the relationship between single motherhood and children outcome in sub-Saharan Africa countries. The study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population and 13.4 for ever marital separation in 2005, there are indications from the media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This paper utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children’s involvement in anti-social behaviour. The major research question was: are children of single mothers more likely to be involved in crime than children in intact homes? The mean age of the respondents was 29 years (sd = 7.8). Of the 237 inmates who responded to the question on mother’s marital status, 60% had mothers currently in a union, 18% were from homes disrupted by divorce or separation and 22% had mothers who were widowed. Preliminary analysis showed that mother’s marital status was significantly related to involvement in any type of crime and the odds of being involved in stealing or armed robbery, violence-related offences and other forms of crime was higher for inmates whose mothers were divorced or separated than for those whose mothers were currently married or widowed. Increasing education and high-wage opportunities for women is recommended.

Family disruption through divorce and separation is increasingly becoming a common phenomenon in many sub-Saharan African countries. A few studies have documented the trend, patterns, determinants and effects, yet, much of the effect on children has not been as well documented as in the more developed countries. In particular, the effect of family disruption on children’s involvement in anti-social behaviour has remained largely speculative. This study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population and 13.4 for ever marital separation in 2005, there are indications from the media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This paper utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children’s involvement in anti-social behaviour. ferring 6 or more children significantly declined with decreasing age, rising edu-
cation, non-Catholic Christian affiliation and husband's desire for less children. 
Higher autonomy significantly increased the likelihood of wanting less than 6 or 
more children, having or not having siblings and co-wives were not significantly 
related to reproductive preference for 5 instead of 6 or more children. Age at first 
birth and high age significantly raised the likelihood of preferring 5 or more 
children instead of five. High fertility in a country like Nigeria is rooted in cultural 
beliefs about children and number, pre-natal control measures should be target-
more at women's attitude to large family. If Nigerian women's reproductive 
preference decline, overall fertility level in the country will also decline.

NUGRAHA, SUSIANA* (Nagasaki University, susiana.nugraha@gmail.com) 
The Extent of Socio-Economic Factors and Its Influence in Mental 
Health Condition of the Sixth Batch EPA Nurse and Care Worker 
Candidates

The migration of skilled workers such as health care workers has been inex-
tricably linked with globalization process. Although migration can be a stressful 
event for migrants (Stillman et.al, 2006), people migrate to improve their well-
being through an expansion of economic and social opportunities. This research 
aimed to figure out the extent of socio-economic background and its influence in 
mental health of the sixth batch EPA nurse and care worker candidates.

A six-pages long questionnaire has been distributed to 42 nurse and 106 care 
worker candidates, during pre-departure orientation. Questionnaire contains of: 
socio demographics background (education, age, gender, education degree, socio 
economic status), degree of preparation to migrate, degree of knowledge about Japan, 
Japanese culture, language proficiency, satisfaction with pre-departure language 
training program, motivation to go to Japan and number of social sup-
port. The General Health Questionnaire (hereafter 'GHQ') was used as a marker of 
mental health status of the respondents.

The result of this study indicated that the 6th batch EPA candidates indicated 
healthier mental health in care workers than in nurses (p<0.05), being younger 
(p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unem-
ployed at the time they applied for JI-EPA program (p<0.05), having better degree 
of knowledge about Japan (p<0.001) and having larger number of social support 
(p>0.01). While language proficiency, satisfaction with pre-departure language 
training and degree of preparation to go to Japan, had no significant correlation 
with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates 
mostly influenced by socio-economic status of the candidates prior to the depar-
ture to Japan. It can be noted also that sufficient number of information as well 
as social support must be provided for maintaining a good mental health status 
before leaving for Japan.

NUGROHO, HARI* (Leiden University, hornugroho@yahoo.com) 
Politics of Representation of the Workers’ Movements in Indonesia

The paper will discuss the politics of representation of union and different cat-
egories of its constituency in the post authoritarian Indonesia. Amidst the pres-
sure of labour market liberalisation that erodes the union power in the workplace, 
union starts to develop the strategy of community unionism and tries to play a 
broad political role through local electoral politics. The purpose of such experi-
ment is aimed for mobilizing broader support to increase union political bargain-
ing position in front of the state and employers. The union includes other local so-
cial groups such as urban poor, informal workers, and peasants as new categories 
of constituency. Consequently the integration of workers and the non-workers 
groups into union constituency results in increasing heterogeneity of the con-
stituency. Workers are not a homogeneous category, let alone the non-workers 
groups. While the union is mobilizing the constituency, groups within constitu-
cy are actually still fragmented within their partial identities and interests.

The relations between them and the union are vulnerable to contestation. This condi-
tion creates vulnerabilities within the body of constituency. This paper will show 
the interplay between the strategic homogenization and the heterogeneous real-
ties. It will also examine the power relations within the process of mobilization in 
dealing with the problems of representation gap. On the other hand, it will also 
look at how the labour process as well as external social context influence the 
dynamics. The discussion in the paper is based on a case of study on a workers' 
movement in one industrial city in the province of Central Java, Indonesia.

NUKAGA, MISAKO* (Wako University, mnukaga@wako.ac.jp) 
Becoming “Cosmopolitan Japanese”: How Japanese Adolescents 
Employ Transnational Experiences for Their Empowerment

Reflecting the imperatives of the global economy, both the Japanese govern-
ment and private companies have recently begun stressing the need to raise 
‘global talent’, especially placing value on English and various other transnational 
competences. At the local level, such global forces have led overseas Japanese 
middle-class families to adopt transnational education strategies, which enable 
them to accumulate what is called ‘global cultural capital’ (Kim 2011; Waterers 2006; 
Weenink 2008)–English skills and cosmopolitan sociability particularly, at the 
same time preserving children’s Japanese language and cultural attitudes (Nuk-
aga 2013). However, the question remains as to how these children are incorpo-
rated into the US host society and how they readapt to the Japanese society when 
they finally return home. Based on interviews with Japanese adolescents who had 
played in the US with their parents since their childhoods and later decided to 
return or actually returned to Japan for university, this study examines how they 
perceive and employ their transnational experiences to increase integration both in 
the US and Japan. Acquiring transnational habits, a double consciousness that 
analyses aspects of both life ‘here’ and ‘there’, these adolescents are capable of 
assessing the value of their global cultural capital and “Japaneseness” in the US 
and Japan respectively. Although feeling a sense of marginalization in both soci-
eties, they attempt to maintain transnational connections and learn to use trans-
national assets in appropriate contexts for their empowerment. From their own 
experience, these adolescents are often critical toward inequalities in both soci-
eties, yet they show a strong preference to become fully bilingual and bicultural 
by keeping their feet in two societies. Such strategy leads these ‘cosmopolitan 
Japanese’ adolescents to choose a job that transcends national boundaries and 
allow them to stay connected to two or more countries.

NURMI, JOHANNA* (University of Turku, johnurm@utu.fi) 
Let Go and Remember. Collective Memories and Narratives of 
Mass Violence in Finland

Due to its inexplicable and inconceivable nature, mass violence causes a con-
siderable sense of insecurity, the impacts of which are felt far from the center 
of the incidents. They extend out to touch those who are indirectly affected, 
and even people who are not personally disrupted by the events. Bystanders to these 
incidents are involved in the complex process of making sense of violence and 
death through collective memorialization practices and narratives recounting the 
incidents. These practices provide a sense of community while also being a source 
of conflict. Should the community remember and memorialize the incident, or try 
to forget it out of their minds and move on?

In this presentation I explore the bystander experience in two school shooting 
shock cases in Finland that occurred in 2007 and 2008. The analysis is based on qua-
Litative interviews with residents of the targeted communities – people who vicar-
iously experienced the shootings. The presentation is especially focused on how 
these bystanders formed memories of the incidents and recounted their personal 
experiences in the interviews. To understand how the bystander experience is 
constructed through collective practices, I examine the collective narratives, rec-
collections, and emotions shared in everyday interaction and the media. Public 
memorialization, such as attending vigils and contributing to spontaneous memo-
rials, is identified as a defining feature in the bystander experience.

RC06-126.8

NUSS, SHIRLEY* (Nuss & Assosciates, nussphd@yahoo.com) 
From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This 
meant I give up professional activities for specialized UN agencies and become a 
full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to 
a rural community with 8,000 residents. As I traveled from east to west, I entered 
a community where I never lived and where I knew no one. A new socio-culture 
came into view as I saw road signs cautioning drivers about a United Nations 
take-over of the country. My new responsibilities would be complicated by this 
environment. In order to care for my parents, I would be forced to employ my 
sociological imagination while also drawing on all skills I learned while working, 
living and traveling alone in more the fifty countries.

This paper uses participant-observation as its methodology and, thereby, 
draws on extensive notes documenting this transition from international profes-
sional to caregiver. It discusses methods used to organize support and outreach 
beginning with the few adult children who also became caregivers for elderly par-
ents. I then move to an analysis of the six batch EPA nurse and care worker candidates 
in the US and Japan respectively. Although feeling a sense of marginalization in both soci-
eties, they attempt to maintain transnational connections and learn to use trans-
national assets in appropriate contexts for their empowerment. From their own 
experience, these adolescents are often critical toward inequalities in both soci-
ieties, yet they show a strong preference to become fully bilingual and bicultural 
by keeping their feet in two societies. Such strategy leads these ‘cosmopolitan 
Japanese’ adolescents to choose a job that transcends national boundaries and 
allow them to stay connected to two or more countries. 

Some of my findings may be shocking, but most surprising is the revelation 
that the elderly are not dependent in this rural community; to the contrary, they 
form the hub of economic activity and income for a wide range of entrepreneurs. 
The paper concludes with recommendations for caregivers and policy-makers 
that take account of the elderly as increasingly forming this emerging economic 
hub of rural areas, rather than viewing them as economically dependent.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents - predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age groups. Some parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.
Clear energy. These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?

O’Brien, Rebecca* (The University of Sydney, rebecca.obrien@sydney.edu.au)  
A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian native title processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that ‘the tide of history’ had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content or form of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

O’Connor, Patricia* (University of Oxford, Trish1385@gmail.com)  
Inequality and Emotion Management in Parental Caregiving By Chinese Daughters

In the past, normative values in historically Confucian societies strongly demarcated the roles of sons and daughters with regard to the care of elderly parents. Whilst sons were charged with responsibility for parents’ wellbeing, daughters-in-law or daughters carried out the hard work of hands on caregiving.

Today the rigid family hierarchy is undergoing change due to ubiquitous education and professional employment of women. Asian daughters are becoming self-sufficient. Their domination by and dependency on the family has diminished to a great extent. Gender based roles and obligations associated with family membership have nonetheless not abated. Though daughters may now contribute as much as sons to parents’ financial support, culturally sensitized norms suggest caregiving remains within the woman’s purview. And, perhaps surprisingly given their modern lifestyles, daughters continue to be committed to this filial obligation.

Within the framework of Hochschild’s theory of emotion management, this paper explores the emotion work Chinese daughters undertake to justify and sustain their caregiving activities. Specifically, it examines the importance of emotional investment in caregiving and how daughters overcome unhappy feelings related to son favouritism in order discharge kinship responsibilities. In furtherance of this research, fifty-five Chinese women born between 1946 and 1980 participated in semistructured, in depth interviews in Hong Kong and Singapore during 2011 and 2012. Findings indicate feelings of affection rather than duty may mediate the quality and length of care daughters are willing to provide to elderly and disabled parents. If feelings of affection are absent or weak, caregiving may be unsustainable and alternative behaviours may be result. The ability to manage emotions, therefore, may not only be critical to the relationship between caregiver and care recipient but determinative of whether care is subcontracted to foreign domestic workers, parents and in-laws are placed in nursing homes, or parents are abandoned or abused.

O’Reilly, Jacqueline* (University of Brighton, jo72@brighton.ac.uk)  
Strategic Transitions For Youth Labour In Europe: The State Of The Debate

We examine how different comparative frameworks for international research have defined the ‘problem’ of youth unemployment. Reviewing national and European policies we argue that increased labour market flexibility in the context of an expansion of higher education and the legacy of long-term unemployment results in increasing polarisation for youth. Understanding youth unemployment cannot be limited only to the sphere of economic production and a narrow focus on skills attainment; it also needs to incorporate the role of families and social reproduction to understand how differential trajectories for young people have been created and are being reproduced. What distinguishes this phase of youth unemployment in comparison to the 1980s are family legacies inherent from previous recessions and the growth of work-poor households, the consequence decline of traditional employment careers as a result of labour market flexibility, and the very significant role of the European Union in funding new policy initiatives. This paper draws on the EUFYP large scale projects funded by the European Commission on ‘Overcoming Youth Unemployment’.
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group Shirōto no Ran in Tokyō, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeter-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerge as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strong and cooperative and creative commitment beyond the constraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

OBINGER, JULIA* (University of Zurich, julia.obinger@uzh.ch)
Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan's societal norms but also its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the use of public space, they introduced a countercultural infrastructure of small “autonomous zones” in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before “Occupy” even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnavalesque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homelessness to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalization and deliberate externality to the mainstream social and political institutions. Tackling this seeming contradiction, my paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of “social movements” in Japan on the basis of concepts like sub-politics, prefigurative politics, and DIY-politics.

OCENAR, CRISTINE* (Social Weather Stations, cristine.ocenar@sws.org.ph)
SABIO, GIANNE SHEENA (Social Weather Stations)
Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. OFWs are the surprising bridge between two worlds, forming the backbone of social media influences in communicating among families with OFW members. The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process of communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media and internet is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults, they address the following questions: (1) What platforms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-digitally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.

Care Regimes and De-/Familialization in Asian Seven Societies

As the first paper of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women's employment, changes in family life and welfare re-trenchment are the reasons behind people's growing concern on care. However, these are phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies social background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care diamond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialism, face-negotiation, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the societies under consideration. The major findings are:

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.

2) The role of the market is increasing dramatically in most societies.

3) People's expectation (Cicchelli and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; October et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this "de facto" cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

4) Socialist countries are showing different paths from other countries. The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

From Cultural Globalization to Aesthetic Cosmopolitanism

‘Cosmopolitanism’ is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday cultural consumption (Cicchelli and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; October et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

Young people become cosmopolitan via the globalization of the cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.)?

This perspective enables a reformulation of the question of “distinction” (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivorism (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the “social distinction”, through the reconceptualization of boundary factors which mark new lines of fragmentation in young people’s cultural universes (October, 2010). This talk will address these question through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender differences in the status and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capital, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males' wages go up and females' wages fall.

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnationalism that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants.

In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist or ethnic national categories that are rather essentialist at a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Child Bearing and Good Mothering: The Case of Turkey

According to most critical social scientists, the body of woman is accepted as a means to fulfill wishes and aspirations of politicians. In this presentation, how the capacity of woman to give a birth is politicised by government of Turkey today. Almost one year ago, the Minister of Health Affairs in Turkey started to not give permission to use the method of caesarean. And support this policy by using the good mothering discourse. This presentation is examined the attitude and behavior of pregnant women related to this policy by using qualitative techniques. How the participants express themselves as good mother and is there any relation between this feeling and this discourse are the basic questions of this presentation.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objective: To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method: A narrative interview that was conducted in 2009 with a male hemophilia in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concealed his hemophilia, HIV, and HCV status after receiving notification of HIV status, because of prejudiced and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after two hospitalizations for the side effects of interferon treatment, he quit his job, because he had experienced “a sense of crisis about revealing his HIV Status,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different medical institute, he talked about his illness experience and revealed his HIV status. Here, he was “accepted by professionals.” This was a turning point for him. Revealing his status enabled him to work flexible despite his condition. However, he faced new difficulties caused by “confusion about his multiple roles as a patient and a medical worker.” This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

ODASSO, LAURA* (Université Libre de Bruxelles GERME, laura.odasso@misha.fr)

Intermarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. “Intermarriages” refers here to couples formed by a European Union citizen and a “Third Country National” (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy UE citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization status (Strik et al., 2012; Hajat, 2010) display an overlapping of these categories (Groenendijk, 2006).

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of “otherness” according to the configurations in which the members of these couples act (Saska & al., 2011). Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” (Delcroix, 2013; Apitzsch & al., 2008) allows understanding the effects of categories as citizenship, denizenship (Bosniak, 2001) and dis-citizenship (Wodak, 2013) on these families and the
strategies adopted by their members (e.g. “doing being ordinary” [Varro, 2004; Inowlocki, 2000; Sacks, 1984]) to deal with, or at least to report, their perception of inclusion.

Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, Actiz, the Utrecht University of Applied Science has carried out an Experiment of Workplace Innovation in Elderly Care to develop a new innovative organizational design that is not only to improve the quality of care, work efficiency, BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar process in their own organization. The experiment was finished in the summer of 2013. The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality education/ learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (IGEs) selected from East and Southeast Asia) and the educational/
Transcending from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology, and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country with a highly standardized and stratified education system, and compares this subject-specific school-to-work transition patterns before and during the financial crisis. It analyzes how pathways into employment are more diverse during times of economic paucity such as after the Great Recession; however, this should not be the case for all subject areas. Indeed, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, while graduates from softer areas suffer more from the crisis and show more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by difference in human capital specifications which favors specialized over general skills. Economic fluctuations have a smaller impact on demands of general skills which translates into more fractured transition patterns.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of “social sorting” sheds a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. I look at its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers' own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interconnectedness of surveillance systems are formed in the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. Observing the way of overseeing the workers, not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia.

OGAWA, KATSUNORI* (The University of Tokyo, shu161384@gmail.com)

Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates who seek jobs. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers' preference and employers hiring decisions by using partial observability probit model(Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicit. Using a nationally representative data, we analyze how high school graduates' attain their first jobs. Previous studies have shown the importance of long-term networks among schools and employers(Rosenbaum and Kariya 1989).

We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers' hiring decisions, rather than students' vocational skills or academic achievement. Moreover, the result doesn't confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded(Granovetter 1985) in the labor market.

Coping with the Ageing Society: Migration of Care Workers to Japan and Taiwan

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long-term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time. Unlike migrants in the highly skilled sector or productive sector, care work performed in the intimate spaces entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. Observing the way of overseeing the workers, not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia.

OGAWA, REIKO* (Kyushu University, reiogawa@law.kyushu-u.ac.jp)

Searching for the Nexus Between the Care Regime and Migration Regime

The discussions on the nature of welfare states in East Asia tend to focus on the link between the economic development and social policy or emphasize on the historical legacy on the family to provide care. However, what has not been explicitly discussed is the role of migrants in providing long-term care. As the population aging accelerates care work has been increasingly undertaken by migrants who constitute an integral part of the care workforce in East Asia.

This presentation will compare Japan and Taiwan, which receive migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a ‘regional common good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.
were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working period, is a difficulty common to working women and, unfortunately, it remain current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

OGINO, MASHAHIRO* (Kwansei Gakuin University, ogino@kwansei.ac.jp)
Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of past-present-future, straight-line perception of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women’s Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigeria women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of reproductive health issues as their prerogative, issues in which the compliance of their wives is taken for granted. The study employed the women’s data from the 2008 NDHS to examine the relationship between women’s decision-making autonomy and exposure to mortality risks. Given that the study was interested in the risks of maternal mortality in the country, the analysis was restricted to only the women who had at least a birth in the last five years (preceding the survey). A total of 43,835 women interviewed nationwide in the 2008 NDHS, met the inclusion criteria. The analysis was done at univariate and bivariate levels. Also, using logistic regression models, multivariate analyses were performed to estimate the odds ratios for each of the predictor variables in the models. The study shows that 36% of the women did not make a single antenatal visit to a hospital during the duration of their last pregnancy; as many as 63% did not deliver in a health facility (government or privately owned); and about 60% did not deliver with the assistance of a skilled provider. After controlling for the confounding influence of some other independent variables, the study suggests that the "women’s autonomy" of women in household decision-making gives them a voice that is heard in the house and ability to initiate moves to obtain healthcare without necessarily waiting for “administrative clearance” from adult males within the husband’s family.

Social Historical Context Of Health and Illnesses Attributes In West-African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of over-time; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illnesses. Without mincing words, in order to effectively treat these illnesses, remedies must be both material and spiritual that is herbal remedy and amulets. Vaughn, Jacquez & Baker (2009). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate tie between cultural beliefs and health beliefs.

OGURO, MEGUMI* (The University of Tokyo, karuugen@yahoo.co.jp)
Students’ Learning and Career Choices in the Vocational Course of a General High School in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school. Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground.

This is still a serious problem that must be addressed. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider whether the vocational course is sufficient, but previous studies have lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient expertise, but because that they can take more academic classes compared to students in a vocational high school, more of them are able to enter college or vocational technical schools. By revealing how the actual practice in this kind of school affects students’ learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

OH, HAK-SOO* (Ins Labour Policy and Training, m1zuk1chon@yahoo.co.jp)
Change of Employment Structure and New Labour Movements in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practices are confronted with massive implications for work and it is becoming difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on shrinking union membership and its bargaining power in Japan.
This study presents several social problems related to the South Korean government's approach to combating bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies’ families. Schoolteachers and policymakers hope for “deviant” families to transition into a “normal” condition through healing programs. Recently, healing programs arespringing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as “deviant.” In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as “normal” in the healing program, but this is a context outside of school. Therefore, after they complete their course in the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.
Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care workers from abroad in order to fill the shortage of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care especially in the case of the Japanese government's project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation to research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan's EPA project based on the research team's various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard recruitment and employment system for border-crossing nurses and care workers.

Femen in Tunisia: Came. Stripped. Conquered. Conquered What?

The paper examines different responses to the activist group Femen's practices and messages by young activists in different political alliances, including feminist groups, in Tunisia in 2013. The Tunisian Femen context is especially interesting as it captures so many contemporary tensions regarding social change, youth political engagements, transnational movements, cultural conservatism, generational clashes, politicized embodiment and shame, public sexualization, and changing fundamentalisms. While Femen has challenged global feminist movements and provoked unusually explicit anger, ridicule and dismissal among women's movements and conservative religious authorities alike it could potentially evoke other types of responses from activist youth, especially in the aftermath of the initial revolution and later frustration in Tunisia, where a generational conflict on issues of rights and freedoms and bodily integrity is often explicitly politicized. The paper analyses the ways the Tunisian responses frame the activist group's messianic meaninglessness, of Femen's explicit agenda and the followed media turmoil. The first interviews were conducted during the first on-line appearances of the Amina Tyler's internet action in March 2013, and continued in several phases as the event received international media attention and analytical narratives began to consolidate. The Western responses provoked counter-reactions that the Femen event can be seen to have become one analytical window to self-understandings of gender politics among youth in the aftermath of the Revolution in contemporary Tunisia.

OINAS, ELINA* (University of Helsinki, elina.oinas@helsinki.fi)

HIV, Stigma and Agency

Stigmatization is here studied through interviews with HIV treatment activists and voluntary HIV treatment counsellors in an urban township in South Africa. While being also activists, the counsellors form a support and advocacy group within the clinics where they volunteer, as well as in the community and society at large. I will examine how they talk about their views on expertise and knowledge, health care, authority, biomedicine and community. These patients describe their lives, care and survival as an entangled net of different relations that sustain them, a net of relations that produces healthier embodiment including both human and non-human actors: for example, help, hope, food, laboratory results, transport to the clinic, and last but not least, the pills. Activists who politicize access to medicine and therefore add the dimension of rights and global injustice to the spectrum of questions, of medicalization and politicalization theses should consider, tackle stigma by a de-individualization of shame as a side-effect of politicization. The paper asks what destigmatization strategies the less vocal clinic volunteers use, as they also indicate that a major bulk of their work deals successfully with stigma. Different meanings for silences, intimacy, secrecy, confidentiality and rights are analysed.

**Social Exclusion and Health Outcomes of Single-Mother Households in Japan**

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has a significant negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow up.

**OKADA, SOSUKE** (University of Arizona, sokada@email.arizona.edu)

**Structure of Cultural Rejection**

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals’ perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified positions correspond with individuals’ perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

**The Relationship Between Financialization and Accounting Standards: A Japanese Perspective**

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is reconsidered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies. This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japanese accounting reforms such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

**A Comparative Study of Effort and Examinations in Japan and England**

This paper compares Japanese and English emphasis on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.” It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture espouses the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

**OKBANI, NADIA** (Science Po Bordeaux, nadiaokbani@yahoo.fr)

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Saddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different agents interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this paper is expected to analyze how organizational context, economic crisis, and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization, with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explains how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyzes how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some perspectives for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outputs for beneficiaries.

**Australia’s Temporary Migrant Work Programs and Its Neighbouring Regions**

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a ‘migration and development’ styled program with some nations in the Pacific (the Seasonal Workers Program). TFWs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific working in low paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne’s inner West, formed in part by overlapping waves of migrants. The Vietnamese diaspora, and more recently migrants from African countries, influence the contemporary mix of people. Migrants’ engagements with more than one society and in various forms of transnational networks are an evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational politics. Participation in networks of Asian commerce is deme- strated in the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market.

Migrants’ transnational experiences, connections and networks are part of the uneven networks of colonial capitalisms, and how they are being rearticulated in the making of place. The making of place in this context is not simply an expression of the political economy of the city or the nation. Rather, it is an expression of the political economy of the city and the nation as the result of the making of place.

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and in-depth interviews were conducted with key informants. For secondary source, data was sourced from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment procedure, opportunities for corruption, and lack of economic dependency. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities (VIPs), issuing counter orders by superior officers and lack of adequate accom-

modation. Also, some of the consequences of the above includes lack of good governance, marginalization/frustration of public officials and diversion of public funds. Moreover, it is recommended that in order to win the war against corruption, there is need to reduce government involvement in all economic spheres as well as improving accountability and transparency in financial disclosure. This will eliminate opportunities for corrupt dealings.

What Is Diagnosis?: Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan

Background: A nationwide study reported that 6.3% of normal class students seemingly had developmental disorders. These students or children in Japan called as “kininaru-kodomo” or children with special care needs. However, there is no legitimate definition of children with special care needs. Therefore, its relationship with professionals’ viewpoints is ambiguous according to the professionals’ viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2019) and Citation Information by NII (1991-2013) were systematically searched. Participant observation was conducted at multiple parent organizations. Moreover, narrative data was gathered through a key informant interview. These theoretical and fieldwork data were analyzed to hypothesis the relationship between the term’s concept and the presence of medical diagnosis.

Results: A literature review revealed that medical professionals used the term of “kininaru-kodomo” as the synonym of children with developmental disorders. On the other hand, teachers of preschools and primary schools regarded them as children with troubles in group actions regardless of the presence of diagnosis. However, the tide of medicalization had occurred in schools and a public health nurse stated that preschool teachers asked municipalities to pick up the trouble-some preschoolers as a possible case of developmental disorders at an infant medical checkup. In a medical professional’s perception, “kininaru-kodomo” was considered a child who could not be diagnosed because of their normal intellectual ability. Moreover, the distinction between “kininaru-kodomo” and normal children was considered blur.

Conclusion: The hybrid concept analysis demonstrated the arbitrariness of the application of the diagnosis of developmental disorders to children with special care needs. Making a common definition of “kininaru-kodomo” is necessary to help professionals from overlooking the care needs of children with or without developmental disorders.

Young People with Debt Problems: Uncertain Transition to Adulthood in Finland

Gaining financial independence is a part of becoming an adult in Finnish so-ciety and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18-25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforce- ment register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems start to accumulate and what kind of specific debt problems young people are facing. Socio-demographic background is taken into con-sideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19 debt problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source eventual escalation of debt problems, and new concerns have arisen on unpaid fines. Finnish young people start to accumulate means in relation to economic independency, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV’s agency in managing the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: ‘cultural immunity’ and ‘rights-based’ discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, ‘modernisation’ and religious discourses.

Secondly, I focus on the ways in which PLHIV and the health system have dealt with the individual and collective levels. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants’ reconstructions of HIV through narratives of ‘injustice’ and ‘neglect’ are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

OKUDA, SHOKO* (Keio University, okusho35@sfc.keio.ac.jp)

Pharmaceuticalization and Social Inequalities: An Examination of Problems Relating to Depression in Japan

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been exacerbated by the pharmaceuticalization of mental health. This trend further promotes the individualization of social problems and encourages people to seek hospital consultations. Since selective serotonin reuptake inhibitors were introduced to Japan's pharmaceutical market in 1999, demand for anti-depressant medications has rapidly expanded. It seems likely that then the efforts of pharmaceutical companies, as part of their marketing strategies, to increase people's awareness of mental illness have led people who are not actually depressed to have medical consultations and drug treatments for it. This phenomenon is known as ‘disease mongering’ and has been reported on. Problems exist from the medical perspective and also include the following: expansion of the diagnostic criteria for depression as formulated in the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders: treatments that rely heavily on drugs; and biomedicalization. Another reason for the increase in medical consultations is the declining function of communal bodies such as companies and local communities, a move that has left individuals to deal directly with organizational and social problems. This has resulted in individuals suffering psychologically, for example, with anxiety, worry, and depression. In summary, this sociological research has analyzed the problems of depression in Japan and revealed how the pharmaceuticalization of mental health accelerates the individualization of social problems, thereby creating new social problems and social inequality.

OKUDA, MUTSUKO* (Kazanawa University,mutsku@staff.kanazawa-u.ac.jp)

Reconstructions of HIV and Its Stigma through Biographical Narratives of People Living with HIV in Turkey

The paper aims at exploring the subjective perception of living with HIV and its stigma through the biographical narratives of people living with HIV (PLHIV) in Turkey. Primary data were generated with 24 PLHIV, following biographical narrative as a method. The study employs a retrospective method (BNIM) and with 32 key informants, including doctors and civil society workers providing services to PLHIV.

Biographical narratives of PLHIV are analysed to understand the implications of the discursive structures around HIV/AIDS in Turkey for PLHIV’s construction of identity. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV-stigma. PLHIV’s biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma being reconstructed through PLHIV’s interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of the ‘state’. The paper focuses on three types of narratives, with respect to these three milieu: Narratives of ‘uncertainties and distrust in medical profession’, the ‘positive reconstruction of being HIV-positive’ and the narratives of ‘injustice and neglect’ reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.

OKUMURA, AKIKO* (University of Tokyo, okk.o.kumura@gmail.com)

A Variation Study of Dialect Contact and Obsolescence in Japanese Community in Mexico City

Ever since the first migration to in 1897, Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community in Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been a contact between the Japanese regional dialects among them. This study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 2000 minutes of collected through my field visits in 2012 and 2013 in Mexico City. The informants are over eighty of Japanese immigrants and their families. The linguistic variable examined in the analysis is negation suffix. The negation form is realized in different forms according to dialect. The major variants are -nai and -n, the former is mainly used in...
eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Diacritics in Contact (Trudgill 1968) helped account for the negation system in this diaspora variety of Japanese.

Edgewise Community: Real Estate and Asian Settlers in Tokyo

After the latter half of the 1980’s the number of Asian people has increased as “new comer” in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called “edge-wised community.” Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents’ motives in acquiring the housing and in having relationship with the network and other surroundings. Especially focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes(1931): Chicago School third term, in his research of “Chicago real estate Board” housing land and building dealers are classified in five groups. In this report, combining both Hughes’s classification and the reporter’s classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to “cooperative channel” centering housing land and building dealers in “edge-wised community,” improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

The Medicalization of “Depression” Across the Globe

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical model. Here, we examine the patterns of individuals across 17 societies to develop a scenario meeting DSM-IV criteria for an “official” diagnosis of depression. What individuals label and suggest what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken.

Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that depression is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

Housing Well Being and Social Inequality in Europe: A Comparative Analysis

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Though around these changes in housing prices and expenditures, housing security and quality, but can also stand in the way of life projects.

The paradox is that home ownership does not exclude housing deprivation. The hypothesis is that households’ social class plays a role in enabling owners to combine home ownership and well-being.

On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insight about the divergences in living conditions and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners should be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

RC21-361.6

Social Mix in Deprived Areas: A Solution to What?

Social Mix in deprived areas: a solution to what?

The research study refers to the results of a housing mix policy in Turin (Italy) based on the conversion of the real estate complexes built at the time of the 2006 Winter Olympic Games into public and subsidized housing and aimed at creating a housing mix capable of generating a social mix. Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood).

The policymakers’ expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster connections between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment starting from those expected results, hypotheses and outcomes of this specific attempt have been investigated. In the observed neighbouring social mix has not produced all the hoped-for effects. The greatest benefits have been

The paper focuses on the process of rules establishing in the making of existing patterns related to the monetary practices in young family households. Full-time? How many bank accounts should a cohabiting couple open: one that is provided by a grandmother be rewarded financially by her daughter working and economic reasoning. Examples of such problems are: Should childcare tary practices are problematized and represented the paper uses the qualitative tion of models of family life, the process of individualization, and a shift in family transformation of 1989, are now in crucial age for making a wide range of life and strategies made by young Poles who constitute the “free market generation.”

Moving out of “Their Places” – Structural Factors for Post-Independence Ukrainian Migration to Australia

Ex-Prisoners Debt: An Indirect Criminal Risk Factor

Studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path. However, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. According to the Danish Administra-
tion of Justice Act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, DNA-tests, technical and ac-
count investigations etc.). Denmark is the only Scandinavian country, and the only country in the European Union, who does not take the income level of the convicted into consideration, when calculating the legal costs. Nor do they have a common practice of remitting convicted’s considerable legal costs. Thus, we must regard most ex-prisoners in Denmark as highly indebted to the state. The ex-prisoners debt is generally understood as causing dynamic problems, but legal regulation, as an unintended consequence of the indebtedness, is still poorly explored. My research is based on interviews and follow-up-interviews with 41 ex-prisoners. The interviews and follow-up-interviews have been carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners’ indebtedness and living conditions confirm that ex-prisoners share a passive at-
titude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear. Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners farther from the legitimated so-
cio-economic advantaged affiliations because of their debt to the state.

The Al Capone Method in the Danish Police

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Meth-

Using a combination of migration literature analysis and practical experiences of Ukrainian migrants in Australia this paper examines systemic differences in actual mechanisms for incorporation and integration, depending on the period in which Australia accepted immigrants and Ukrainians left Ukraine. Particularly, it explores the role of Ukraine/Australia structural factors in generating post-in-
dependence Ukrainian immigration. Emigration waves from the Ukraine after the change in Ukraine and changes in Australian migration policy, the paper suggests there are 3 distinctive periods of post-independence Ukrainian immigration to Australia, the first decade: from 1991 until 1999; the second decade: from 2000- 2009 and the beginning of the third: from 2010 until 2013. 51 “personal” stories enables to understand determinative structural factors that deeply influences mi-
gration, such as state policies, economic situations, and transnational networks, through comparative perspective in effecting the capacity and choices made by each migrant depending on his/her immigration period. It puts forward the idea that these factors strongly influenced and shaped migrants’ life strategies and mechanisms of integration in recipient society as well as formed the way this eth-

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video, recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dying from a gunshot inflicted by a regime related shooter during protests against the fraudulent Iranian presidential election. Neda almost instantly became a transnational injustice symbol representing the unjust nature of the Iranian regime. The case of Neda is interesting for social movement scholars for a variety of reasons, including the role of new media and the power of photography and citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptual as well as methodological questions about the transnationality of transnational movements. Because while Neda’s televised death, motivated various activist organizations and interest organizations to act and criticize the Iranian regime, the activities around the Neda injustice symbol was much broader. Apart from activists, three categories of actors in particular were vociferous and active: politicians/political parties, media, and networked citizens all expressed outrage and demanded action on the basis of the footage of the funeral.

This propels us to ask how we can best conceptualize the activities surrounding Neda’s death. Was it a transnational social movement – or something else? In the paper I argue that it was in fact a social movement. Accordingly, I contend that the defining element of a movement is not the actors involved, but rather the kind of action expressed. I go on to propose that this way of understanding social movements may be especially pertinent in a transnational context where information circulates rapidly and where actors are increasingly networked, connected, and visible and able to engage in numerous and often different political issues at the same time.

On Policy-Making and Legitimation of the Law in Contemporary Pluralistic Society

This paper’s aim is to discuss the substantive dimension, quality and content of current law-policy making and socio-legal legitimation of law in present-day highly mobile, complex, multiethnic society. A special focus will be devoted on the coupling of the epoehal crisis of formal-official State-nation law and the rising differentiation of social and legal sub-systems. Most relevant problematic variables related to the traditional value-oriented identity patterns and interests will be considered.

The quest for new models of citizenship and representations related to the search for new participatory rituals and institutional ceremonial events and high-tech interactions will be analysed also in relation to their current reliability and accountability.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with worrying concerns on the health of its citizens. In fact, the current economic situation threatens to undermine all dimensions of well-being of a population. The situation is still ongoing, the timing and outcome is impossible to predict, but that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin et al., 2010; Cylus et al., 2012; Artazcoz et al., 2004) and data made it possible to substantiate the effects of unemployment and increasing poverty on health inequalities.

In this paper we will try to verify the consequences of the economic crisis on health in Italy, what is the state of health inequalities and what are the risk factors for proximal (material, psychosocial, occupational, environmental and behavioral), most affected by the economic situation.

Using data by “Health for All Italy” we rebuild the health status of the Italian population in the last 10 years to demonstrate the changes and estimate the consequences of the current crisis, and increase in social inequalities.

In time of crisis it is even more necessary to ensure access to health services, especially to the weaker member of society, since the health needs may grow rapidly. Moreover, given the particular situation and conformations of Italy will place the focus on geographical differences between the north and south of the country.

The first results show that, indeed, in recent years are increasing cases of suicide and depression, and all diseases related to the area of mental health (Costa et al., 2012). Health outcomes that are affected by an economic crisis ranging from subjective health, physical health, mental health and may vary in relation to socioeconomic status and place of residence.

OLIVEIRA DIAS, PATRICIA* (PUC-RS, rappatiro@gmail.com)
Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemocratization have strongly impacted relational and material conditions of low-class families. Acute transformations took place especially in the realms of mother-child relations and participation in the labor market, division of domestic labor and domestic violence throughout the last decades, as reflected in the life course of women. This paper presents results from qualitative research with two or three generations of women in urban, low-class families in Brazil. The interviews were conducted with several families as part of two research projects in recent years.

The reconstruction of women’s life stories and biographical self-presentations will highlight the reproduction or transformation of social patterns against the backdrop of new socioeconomic configurations and social policies. This reconstruction will trace, on the one hand, the changes in the perception of women’s role in the family as it relates to gender equality. On the other hand, it will be discussed how women experience their embeddedness in family structures as influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in Southeast-Brazil will be presented. The analysis of the narrative interviews, following the reflexive-reconstructive biographical method, focuses on how the interviewed women define their life course between opportunities and constraints. This is seen in close relation with the social developments taking place around the subjects, as postulated by the biographical policy analysis. The research results can also cast a light on different patterns of generational intercontingency found in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel Honneth’s Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important proponents of a theoretical paradigm for the social sciences centered on the idea of “recognition.” This notion has, of course, entirely different meanings in the various contexts in which it is called upon. In Honneth’s specific case, it is of decisive importance the fact that his theorizations around the centrality of recognition relations for human self-realization are rooted precisely in the negative experiences of denial of recognition: disrespect or misrecognition. Despite the more than twenty years that separate us from the publication of Honneth’s Struggle for Recognition, however, it seems that the theoretical genesis of this important book has not yet been grasped in its full potential for understanding today’s modern societies and for a revitalization of the social sciences in general, and of Critical Theory in particular. This is due, as I see it, to the misreading of Honneth’s works as much as to the author’s insistence on making the philosophical work of Hegel the logical point of departure of his theory.

In this presentation, I want to cast light on other motives that animated the formulation of this recognition-theoretical critical model, aside from the Hegelian works from the period of Jena: namely, the sociological and historiographical studies that convinced Honneth of the undeniable moral character of social struggles that is, the American and especially British Sociology of the Working Class that flourished in the 1980’s. This influence reveal a closer relation between Honneth’s work and empirical social research than is made visible in his books. I argue, finally, that this connection is a most fruitful one and that Honneth, however, partially abandons it in his recent works – despite its precise meta-theoretical formulation under the name of “normative reconstruction” in his latest book, Das Recht der Freiheit (2011).
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor performance of SSH research has been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itine and ex-post) and comparison of the impact from SSH research, taking into account the large number of quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

The Student Movement in the (Mexican) Democratic Process

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition -from a seven decades hegemonic party rule to a right wing government- Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral fraud and social unrest. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was the cornerstone of social polarization, because it deepened inequalities both in opportunities for access to education and the struggle for democracy. Part of the explanation is a differential educational discourse, between public and private. This makes perceptions on democracy and social justice impact contradictory the identity of student groups.

Thus, in the middle of the election campaign the student movement “#yosoy132” emerged. It claimed the defense of democracy and faced the position of the old-regime candidate, due to his intricate web of complicity. The movement, originated in private universities and extended to the public, could articulate a series of social justice and democratic liberties: radical transformation of information of mass media, for better education and against neoliberal economic model. It was expressed in a wide repertoire of demonstrations, rallies and parallel networks with working and middle classes.

The differential impact of this movement on the national politics and media democratization, based on the previously discussed, is in the present debate contradictory. These are the aspects that will be developed in this paper.

Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare

Background

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the problems involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

Study and methods

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and nurses in comparison to doctors, were in charge of the management of nurses to doctors.

Outline of paper presentation

The purpose of the presentation is to describe how different modes of expert knowledge give rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

OMENMA, J. TOCHUKWU* (University of Nigeria, Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)

This paper is premised on the nomination of 17 council chairmen (not Chairwomen) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party's policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political candidates are not inclusive of the women candidates, and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political 'godfather' and women underrepresentation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria

This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military empire. While the city is not a colonial settlement after the collapse of the Oyo Empire, Ibadan thereby emerged a military empire. While the city is not a colonial settlement, there are two dominant social systems that coexist within a large spectrum of Yorubaland by the end of the 19th Century. Ibadan developed a unique patronage structure based on the babaogun clientelistic system. The babaogun system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the babaogun system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general are the political economy of colonial patronage and succeeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in Ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of ‘unfavorable inclusion’ suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of the excluded. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In fact, employment has become a conveyor belt that drives people to these institutions. The paper will argue that identifying the social institutions that propagate deprivation of capabilities and functioning as the target of social policy transcends the limitations of social exclusion and inclusion debate.

The “Romantic Love” of Young Adults in Japan

Since the 1980s, the late marriage and non-marriage action has become remarkable and decrease-in-the-birthrate problem has started gaining people's attention in Japan. In these social backgrounds, the importance of research on “romantic love” with sovereignty was also started recognizing. However, the study accumulations of “romantic love” are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their “romantic love” by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with heterogeneous sexual single men and woman, born in 1983 to in 1993. Each group is divided by social positions such as students, company employees and gender. Using these data, I found that Japanese young adults tie the construal relationship by declaration and whether they are dating officially or not is quite important to have sex because it can be the permission, which shows their sexual relationships are right socially. Moreover, the analysis proves that there are not big differences about sexual behavior by gender; however, it shows that there are some differences in awareness of the marriage and “romantic love” by gender. Especially, women group members tend to set the time limit to 30 years old to get marriage and to think they should defer to marriage otherwise they feel they are wasting time. However, from the narratives of survey respondents, it suggests conditions required for marriage and conditions required for romantic love are ambivalence. In Japan where a modern family ideology and a love marriage ideology are left firmly, it could make not only marriage but also “romantic love” difficult.

Transformation of Framings of Seafood Sustainability Certification Schemes

International sustainability certification schemes have been widely accepted at industries and markets partially because of their common basic structure represented by transparency, science-based measurable standards, and third-party auditing. In result such certification schemes provide alternative regulatory mechanisms beyond borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly for their social purpose, the framings of each scheme shows gradual transformation corresponding to criticisms. Drawing on three different international seafood certification schemes namely Natureland's organic seafood, Marine Stewardship Council and Aquaculture Stewardship Council, this paper analyzes the transformation of framing of seafood certification schemes in which each scheme integrates knowledge other than scientific ones into standards and structure of scheme. In other words, it is a new function in certification framing to achieve fine balance between credibility and critical mass.

Comparative Sociology of 11 to 18 Examinations in Thailand, England, and Japan

This paper proposes a comparison of 11 to 18 examinations and the changes they have undergone in Thailand, England, and Japan. This has valuable significance as a focus of Comparative Sociology; this series of examinations has had common and persistent importance in various societies, which makes them an appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the socio-cultural network concept, that there are profound similarities and differences in the changes in 11 to 18 examinations in these areas. These results will reveal a process that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations for Comparative Sociology. It combines qualitative and quantitative methods, not by simple mixture but by close connection. Through this innovation, the Comparative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal tension that sociologists face between science and literature.

Reconstructing Sustainable Communities through Mutual Help Networks in East Asia: A Comparison of Mutual Help Networks in Japan, South Korea and China

One way that man has maintained society throughout history is through networks of mutual help. The purpose of this paper is to show that such traditional mutual help persists in East Asia, but has been transformed in the transition to modernization and has contributed to the development of both South Korean and Chinese modern society. Mutual help in these two societies is compared with the already well-studied Japanese case. The phenomenon is divided into three categories. One is reciprocity in helping to plant rice and re-roof houses by exchanging goods. The second is redistribution. In exchange for the right to get foods from a common store, local people have the obligation to maintain a common pool of resources. Finally, unidirectional help refers to support in funeral and wedding
cere monies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions has continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999.

There are inadequate number of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Sur- vival rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.). This study aims to find out post earthquake impact of disaster on children up to their adult ages.

Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher’s classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

The Second Group of Keban Dam Studies in Upper Part of Firat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later on to many projects in the world. However, there are no studies on high dam projects in many countries on the neck of many rivers and river basins. Kariba, Aswan, James Bay I-I, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focus of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encourage all findings from the fields (human and nature). This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues. The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project And recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Firat Basin. The findings will be discussed separately. A special emphasis will be given to indirect natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

The Competency of Midwives in Independent Practice: Their Supporting Mothers’ Autonomy in Childrearing

The objective of the present study is to clarify the competency of private midwives through examination of how midwives help mothers gain autonomy in childrearing. An empowerment approach was used as a conceptual framework. This research was conducted with midwives working at three facilities. Data were obtained by observing each encounter between mothers and midwives; that was realized from the 30th week of mother’s pregnancy to 3 months after their delivery. In addition, the midwives and the mothers were interviewed. Data were analyzed by qualitative and inductive analysis. Recorded data were coded and categorized, and a total of 7 categories and 39 subcategories were extracted. The results showed that midwives build relationships of mutual trust with mothers, empowering mothers through psychological and educational support and helping them to be independent. The competency of midwives in independent practice could be classified into the following five types: 1) based on mutual trust, the midwife builds a relationship with each client to facilitate friendly interactions as a health-care provider; 2) the midwife evaluates situations and assesses the skill set of each client; 3) the midwife becomes close to each client and provides individual assistance; 4) the midwife provides reliable techniques in various situations; and 5) the midwife offers information beforehand to prepare each pregnant woman to become a mother and then supports the new family after birth.

International / Military-Public-Private Cooperation in Disaster Relief | Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private ac-
tors from inside and outside of Japan were engaged in disaster relief. These in-
ternational/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the view point the MOD and JSDF. First, it was discovered that there was considerable room for improvement in U.S.-U.S. bilateral and joint operations in the event of a large-scale disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Cooperation with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster kept them from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake. A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODA, SHINJI* (Hosei University, shinji-0219@hotmail.co.jp)

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named “Tax for Climate Change Mitigation”) on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in European countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving a low-carbon society, it is essential to find problems of policy making processes and constantly strives for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.
Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak's Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called 'Arab revolutions' in 2011. Some attribute the young protagonists of more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people's activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so fortunate whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so fortunate whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so fortunate with regards to the influx of 'outsiders' across the nation-state? This paper aims to evaluate the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

Young activists are, however, depicted often as somewhat one-dimensional social actors. 

The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called "organization theory" forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue "rational strategies" under "structured conditions" defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changematic and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and industrial estates. This paper primarily focuses on the view that the substubs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changematic and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and industrial estates. This paper primarily focuses on the view that the substubs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changematic and whose old community it has replaced.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. This paper explains the mechanism of heightened mobility of community members, and describes the community around Jakarta metropolitan area on my own door-to-door survey of 659 suburban households.

This data revealed that almost all of the residents (83.9%) are newcomers. The people who had lived there before building the industrial estates have already moved, so the activities of the old neighborhood associations (called Rukun-Tetangga / Rukun-Warga) have almost stopped. Nevertheless, 62.3% of newcomers still join Gotong-Royong (traditional mutual assistance activities) and 32.6% of them are involved in religious (Islamic) activities. This implies that people are trying to search for new ways to enhance social unity, away from the old community structure.

Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year on year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Stew...
adship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the regulatory risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

ORELLANA, GERARDO* (Universidad Nacional Autónoma de México, orellana.gerardo@gmail.com)
The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislation. This restricts the National Government’s possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population’s involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012. The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted.

The results also suggest the vulnerability of the population, especially when increasing the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsically complex interaction of organizational dynamics, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimation are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a trilemma of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

ORMOND, MEGHANN* (Wageningen University, meghann.ormond@wur.nl)
Intermediaries, Facilitators, Agents, Guides: Steering International Medical Travel to Malaysia

Malaysian authorities’ desire for foreign patient-consumers from higher-income countries and the spectacular medical tourism infrastructure being developed to cater to them exists in contrast to the actual everyday flows of intra-regional lower-income patient-consumers who, comprising the bulk of medical travellers to Malaysia, have been fundamental in both constituting and sustaining the country’s medical travel destinations. This paper draws on interviews with medical travel companies in Malaysia and Indonesia that promote Malaysian private health care to prospective patient-consumers from both higher-income and lower-income countries. It compares and contrasts the functions of these companies, their relationships with patient-consumers and the ways in which they represent and negotiate the differences between health care in patients’ countries of origin and in Malaysia.

Moralistic Trust and Rationality: The Individualization of Trust

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin (1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous research has shown that generalized trust is the confidence and voluntary association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people's actions. Therefore, institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust in members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral value is rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative analyses based on the questionnaire survey data in Japan.

The Migration and Development Nexus: Gender Insights

Research on development and migration has mostly stemmed from an economic concern (assessing the volume, cost, and contribution of migrants to the local development), largely overlooking women and gender issues. The New Economics of Labour Migration (NELM), the transnational paradigm and the livelihood approaches are known to have enlarged the scope of the migration and development nexus (Haas 2010). One aim of our paper is to review how gender studies have also contributed to the shifts in the debate on migration and development and how gender issues have been incorporated.

On the other hand, over the last decade, abundant literature relating to the migrations, women/gender and development. Various studies consider that institutional confidence and voluntary association membership are the two main explanatory variables to determine generalized trust.

"New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities"

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training is given to all participants an insight in the armed forces the way armed forces would look like, as well as give the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with separate facilities. The SAF and the SPES share 50% of the education and training at the barracks. Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training. The paper assesses the effectiveness of this new and original project.

Les Protestations Brésiliennes De Juin 2013

Cette exposition a comme objectif de présenter une morphologie critique des protestations brésiliennes de juin 2013 pour mettre en cause les sens politiques qui ont été déroulés à partir de la visibilité du pouvoir des formes d'organisation horizontale et de l'action directe. Un des sujets plus significatifs est la question sur la mobilisation tant des militants que des gens qui, en général, sont allés à la rue sans aucune unité idéologique claire. C'est-à-dire, il s'agit de situer le problème des émotions et des passions impliquées par l'action dans une perspective non seulement focalisée sur les justifications politiques, mais principalement sur la dimension pratique du procès qui les a conduit vers une expérience subjectivement plus concrète et plus intensive. Dans cette direction interprétative, il faut reprendre l'histoire du Brésil contemporain, surtout les trois dernières décennies, qui correspondent au périodes démocratiques. L'héritage de la résistance au régime dictatorial a été potentialisé par l'invention et dissémination pour toute la société civile organisée, aussi dans l'État et le monde du travail, des dispositifs de participation sociale, « à la gauche », et de mécanismes de responsabilisation individuelle, « à la droite ». Les « journées de juin » ont démontré le carrefour et la masse intensification d'un procès de mobilisation de la subjectivité, qui a été accumulée par les savoirs et technologies crées pendant la consolidation de la démocratie. Cependant, ceci a été produit à côté d'un déclin croissant des mouvements sociaux et des organisations de classe ouvrière. Les « journées de juin » présentent une problématisation stratégique pour comprendre mieux la centralité de cette injonction généralisée à la participation et responsabilisation, de laquelle la mobilisation subjective est son principal effet politique actuel.

Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called “Jurus Feratu.” These reforms were intended to enhance the user’s access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead’s study on the quality of legal aid lawyers in U.K. One of the

The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women's participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports. Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the General Agricultural Policy (GAP). In Austria, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Master status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

SARC (Scientists/Artists Research Collaborations)

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well-established, international electronic festival called ISEA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support by the University of New Mexico campus in Albuquerque and the Center for Advanced Research Collaboration. The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no policies applied to SARC’s future programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intensions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.
Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan

According to Japan's National Police Agency, 30,133 businesses were reported to engage in altering the racist public discourse. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and repudiation of homosexuality: How To Do With Research Results In A Racist Public Discourse?

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not take such racist experiences, but also to deal with the young men's discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants' successful integration. In these discourses often two racialised images are constructed: the native 'own people' are contrasted by 'Muslim immigrants'. While the former constitutes the 'tolerant' side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to 'their' homophobia which is constructed as an effect of Muslim culture and its primitive cornerstones. In our paper we will present key findings of our studies and we will share our strategies to engage in altering the racist public discourse.
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state.

In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a ‘pro-mining’ coalition against environmental protesters, developing common strategies and tactics against the protests. This study points to an examination of the environmental protest movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In those cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant party in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

OZEN, HAYRIYE* (Attilim University, hozen@atilim.edu.tr)

Radical Left Wing Groups and Environmental Mobilizations in Turkey

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations played decisive in the generation of these grassroots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

What Does Gezi Park Resistance Mean in Turkish Democracy?

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half the voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained preeminence. Consequently, widespread populist dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force.

Gezi Park protests were an expression of the “pluralist” anxieties and democratic hopes of the people.

Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non-pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.

Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.
African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian- ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de- nominations and Churches in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pas- tor Sunday Adelaja in Ukraine.

What does it mean to be a “footballeuse” (a soccer player) in Senegal? In Sen-egal, women’s soccer is more than a game, it is a counterculture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the “footballluse” culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how
racy will be the object of my contribution. In my paper I want to unfold the thesis, that the present form of giving people more participation within political processes and providing more insights into documents of governance is an intermediate step to change western style of democracy fundamentally. I want to focus the question how new media, especially so-called ‘social media’, may overcome the traditional dichotomy between parliamentary representative democratic traditions and grassroots oriented plebiscitary democratic elements. Since some years this question has been primarily debated under the term of ‘Liquid Democracy’. It stands for the idea to make democracy more liquid, more transparent and more flexible. People should have the opportunity to participate in political affairs comprehensively to delegating the powers of the sovereignty to a body of human elect from time to time for four or five years. “Liquid Democracy” will give people the possibility to campaign effectively and collaboratively for the issues they are concerned about. The paper will show which social, political and technological concepts for such a liquid democracy exist. Which discourses in different areas and scientific disciplines occur, and which experiences and evaluations are available.

Dialectic of Enlightenment’s Critique of the Civilizing Process As Aufhebung of a Debate

During November and December 1941, the Institute of Social Research delivered a series of public lectures at Columbia University on the question of how National Socialism should be characterized. The positions within the debate could roughly be divided into two major groups: on the one hand stood the conclusion that capitalism led to the governance issues through major transformations, ending the old order, that of State Capitalism (Pollock); and, on the other hand, a depiction of the current capitalist system as a totalitarian-led monopoly economy (Neumann and the others). Dialectic of Enlightenment – written by Adorno and Horkheimer in 1944 in exile in the USA but first published in 1947 by the small and actively anti-Nazi Querido Publisher in Amsterdam – followed this debate and is, in a way, a response to the questions posed in 1941, developing however yet another interpretation. I would like to argue that the book does not make use of the State Capitalist thesis, as forwarded by most literature, but can rather be understood through two largely unexamined keys: the ratchet theory and dialectical anthropology. As early as the 1940s, one can recognize a growing emphasis on a critique of the civilizing process in Horkheimer and Adorno’s texts. Dialectic of Enlightenment condenses these efforts and can be considered an Aufhebung (sublation) of the Columbia debate from 1941. This paper will go about reconstructing the 1941 debate, follow various texts written by Adorno and Horkheimer in the late 1930s and early 1940s, analyze letters between them and approach Dialectic of Enlightenment in order to analyze its political answer to the Columbia debate, which is itself based on a critique of the civilizing process founded on a theory of rackets and on dialectical anthropology.

PAIDAKAKI, ANGELIKI* (KU Leuven, angeli.kpaidakaki@asro.kuleuven.be)

Analyzing the Socially Transformative Capacity of Post-Disaster Reconstruction

Traditional theories of disaster management have neglected the role of community organizations in building urban resilience to natural hazards. They assume instead that the state, often in coordination with market forces, is the most important agent in dealing with disaster risk. My aim is to challenge this assumption. By studying the emblematic moment of post-disaster reconstruction, I intend to deal with these governance issues. My working hypothesis argues that local community struggle for permanent housing provision during the rehabilitation period contributes significantly to transforming multi-scalar disaster governance and building resilience to future hazards.

The paper will start with a zoomed-out investigation of the urban socio-environmental problematics in order to a) identify and untangle the interwoven economic, political, social and ecological processes that together form uneven and unjust urban assemblages, b) trace and clarify the concepts of vulnerability and resilience and c) uncover their underpinning discourses.

This “zoomed-out” identification of the socio-ecological urban problematics and vulnerabilities and the discourses behind them will be instrumental to “zooming-in” on possible entry points for new discourses for disaster resilience and institutional change in disaster intervention. Through the lens of the long-term reconstruction period, I will analyze the potential of the development and implementation of alternative housing policies in a) enhancing empowerment and social resilience, b) promoting integrated modes of urban development, and c) revealing new institutional perspectives in dealing with disaster governance.

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPOLN) which set out to examine Europe’s position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization for Europe and its Regions. Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state/ regional level.

The authors identify two intersecting spatial processes in European APS-generated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

Positive Aeging and Leisure: Role of Leisure in Healthy Ageing of the Elderly in India

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines healthy aging as “a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity”. Healthy aging depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related conditions. The study aims to find out the role of Leisure in promoting healthy aging among the elderly in India urban society.

Hypothesis constructed to direct the study are:  
1. Involvement in Leisure activity results in healthy ageing.  
2. Type of Leisure activities play a role in the health of the elderly age person.  
3. Every Leisure activity does not have a positive role in healthy ageing.  

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:

Health has two broad parameters, mental health and the physical health. Type of the leisure activity affects the mental and physical health differently. Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

Technological and political illiteracy: Its effect on social change in Latin America

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making that is now developed, lo somete a discusión and proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia donde debería apuntar la transferencia tecnológica en estos países.

RC19-331.4 PALIER, BRUNO* (Sciences Po, bruno.palier@sciences-po.fr) HEMERICK, ANTON (VU University Amsterdam) What Are the Opportunities for Social Investment in the Continental European Welfare States?

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways. In the early 1990s, the Netherlands has made a strong social activation turn in social security, coupled to a more flexible service-based labour market. In France, there has always been a strong policy legacy of pro-natalist childcare support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

RC31-527.1 PALMBERGER, MONIKA* (Inst Study Religious & Ethnic Diversity, palemberg@mmg.mpg.de) Feelings of Ambivalence: Ageing Labour Migrants in Vienna

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for late life.

Vienna’s labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

RC30-512.2 PALSANE, VANDANA* (College Arts & Commerce for Women, vpalsane@yahoo.co.in) Informalization of Labour: Recent Trends in India's Urban Economy

Informalization of labour: Recent trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way - the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

Theories of new organizational forms usually assume that in the 21st century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented. In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into an almost Weberian structure. In order to do so we will show the parallelism between processes occurring in many kibbutz communities by analyzing two case studies of kibbutz plants. This is done by studying the interplay between changes in the kibbutz culture and changes in the plant through life cycle theories and organizational culture theories.

Our research methodology was qualitative and ethnographic interviews were held with kibbutz members employed by the organization, with kibbutz members and with CEOs that had held jobs in the past. The interviews were conducted...
out in last twenty years, which depict the miserable working conditions of India's informal sector workers.

While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world's labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

*Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka*

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially play and understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers’ career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students with various activities; an opportunity to re-identify one’s own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

*Cyberspace and Cross-Cultural Relationships Online*

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride industry. It is generally assumed that, when women from developing countries turn to intermarriage sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the fact that women are seeking ‘intimacy’ in online contexts?

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue relationships online and why intermarriage dating sites appear to be displacing other ways of meeting foreign partners. It draws on in-depth online and offline interviews with 24 Thai women who have experienced online dating on the internet. The findings show that through internet and increased accessibility of the Internet in the context of globalization and transnational networks allows women to consider a wider set of possible lives and partners than they ever have before. Although some women might be confronted with dilemmas or stereotypes of seeking cross-cultural relationships online, almost all of the women interviewed perceived intermarriage websites as an important channel leading them to meet and fall in love with Western men in the Internet era.

**Delivery Of Quality Education In Global Era**

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to higher value-added manufacturing and service industries. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic systems and the global community. In each of these areas the need for a more sustained and purposeful focus on each country of progress towards the three goals of ‘successful’ engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and teaching policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as ‘victims’, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view.

While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia’s largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world’s biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between a Thai company and Tesco PLC, the world’s second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an account of the struggles confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

PANTUMSINCHAI, PENN* (University of Hawaii at Manoa, ppantum@hawaii.edu)

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producer to the consumer. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009. Dubbed “the world’s largest funding platform for creative projects” (http://www.kickstarter.com), a platform in which producers of any kind (films, games, music, art, technology) can ask for donations for creative projects, Kickstarter puts the power in the consumers’ hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems simple, yet it is rife with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the ‘backers’ (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on the creative projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or individual creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are also analyzed to provide a larger picture on the effectiveness of a possible future of consumer-sponsored production.

FRATSEA, LOUKIA-MARIA (Harokopio University)

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an intensive study of the dynamics between immigrant associations in voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. A preliminary survey will be carried out in a competitive analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

WG03-912.1

PAPAKOSTAS, APOSTOLIS* (Södertörn University, apostolis.papakostas@sh.se)

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of conflicts between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of conflicts between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of “neighbors war against neighbors”, in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of a stable sense of community. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

RC33-580.3

PAPASTEFANOU, GEORGIOS* (Leibniz Institute for Social Sciences, georgios.papastefanou@gesis.org)

The Day after: The Effect of Diary Timing on Time Data Analysis

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random housework-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the day was filled in by the respondent. By means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

JS-72.4

PAPE, MADELEINE* (University of Wisconsin-Madison, mpape@wisc.edu)

From the Global South to the Globe: Pathways to Participatory Budgeting

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In 1989, the city of Porto Alegre in southern Brazil implemented the world’s first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States’ (US) first experiment in PB in the city’s 49th ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganzuza, forthcoming). To better understand the mechanisms driving the diffusion of PB across the globe, I argue that the study of the diffusion mechanisms for PB provide important insights for the study of the diffusion of PB in other locations, particularly in relation to current experiments in the US. I argue that PB has the potential to be equally implemented in a given location, provided that the support environment in which PB is taking place. For example, events such as the World Social Forum, where Chicago Alderman Joe Moore first learned of PB, may have played a considerable role in spreading PB beyond Latin America. But once PB lands on American shores, what kind of support is needed, who are the organisations that provide such support, and which actors from civil society and the state commit to building its success?

In this paper I consider the diffusion pathways for PB, in terms of both the information networks that spread the idea, and the support environment that makes its implementation possible in a given location. By doing so, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to identify the actors that influence the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as well as the expansion of associations in civil society. As PB moves north from the Global South, how is it being adapted, and how do outcomes vary?

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to identify the actors that influence the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of “overmanagerialization of academic work” (Todd, et al 2013). Academics’ programs that continue to engage on progressive issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. “Internationalization” of programs has become a buzz idea that most universities in North America are pursuing, but the question remains “What kind of internationalization? And who is benefiting from this process?”

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an “international Youth Right project” during the past two years. The author discusses the steps taken to textually transform the “local realities” of the everyday experience of youth advocating for the protection of their rights into textual instruments of control-financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different “project managements processes” required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project –children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are justified and legitimate. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples’ everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol(conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebols and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol’s construction companies and ‘Apari’ became a typical dwelling form of middle class in Korea. The middle class people dwelling in the ‘Olympic village’ invented their own consumer culture and lifestyle. That is, ‘distinction’ in Bourdieus’ term began among the citizens.

The middle class’s everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college(University) in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collected in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth’s work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(university) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering second labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul* male group and Non-Metropolitan areas’ female group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by goup characteristic.

Solidarity and Empowerment of Women Workers in Asia

Solidarity has been stressed as one of the most important tools for powerless and marginalized groups of people let alone labor movements. Pressures from globalization create additional demands for workers and activists to extend their solidarity across the borders. This is not only because globalization has created problems that connect people’s lives across national boundaries, but also because it has produced many situations and cases in which workers, and activists face similar problems and circumstances, making sharing and learning from each other useful. Based on my experience working at the Working Women Academy

Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support

Very low fertility is regarded as a serious social concern in South Korea. Korean government has contrived diverse policy approaches to provide various incentives for reproductive behaviors. More or less, the public response to low fertility tends to be basically economic framework of rational choice and assumes that reducing the constraint and cost for reproduction would increase fertility rate. In this regard, the new government of president Park Keun-Hye pledged to provide financial support for child birth and education more extensive than ever before. Setting aside the question whether the promise could be fulfilled given the limited budget, this paper examines the origins and development of the individual rational choice would achieve its intended policy outcome without proper checks to the endlessly rising cost of reproduction.

Instead of the individual rational choice, this paper proposes a structural and historical perspective on the demographic transition and proper policy and practices. In the paper examines the origins and development of the family planning, which was established as the primary national policy of economic development through the 1960s and the early 1990s, and discusses its implication on social change and the subsequent fertility decline in South Korea. Fertility declines have proceeded in complex rationalities on which people felt responsible for their own destiny and family, such as the Malthusian ethical check. But also the strong desire for material well being and preferred children's success contributed to the strict birth control and ignorance for unwanted births.

Life History and Family Changes in Korea and Japan

This study examines important characteristics of family changes and modernities embedded in the life history of Korean and Japanese elders born in the 1920s and 1940s. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elderly people's own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family in origin, educational, experiences of adolescence, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders' willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elders. Modern construction of patriarchal family and its change are compared. In regard to the period of childhood and the youth, the mixture of kinship and modern rearing, gendered education, and influences of imperial war and Korean war, diaspora and repatriation were interconnected. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.
social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socio-economic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

'Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters'

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject's on those who purport to be their masters. With this reformulation of Spivak’s classic question from 1988 set alongside the anthropology alluded to by a version of James C. Scott’s book title from 2008, the paper focuses on the subaltern’s alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of ‘power over…’) and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised ‘over them’.

How can a ‘power to…’ be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of Indio, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily in the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the alteration of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zebravale’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes towards sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens’ deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria, Australia after the 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from violence.

Disaster provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring men’s interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Australia and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected reduction in support ratio. The results show that mortality improvement has the greatest effect on support ratios in Japan and in East-Central European countries. Anticipated mortality improvement is of far lesser significance to Northern and Western European and English-speaking countries. The paper discusses the dependency of the estimated effects of mortality improvement on support ratios on assumed levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that oppositional conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing class processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social embeddedness of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal country that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

PARRACHO SANT’ANNA, SABRINA* (Universidade Federal do Rio de Janeiro, saoparracho@gmail.com)

Rio Museum of Art in Times of Trouble

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of exhibitionary institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the emergence of a shared project. To think about these issues, I have been investigating, reflecting and writing about controversies and to build consensus around the concepts of modern, contemporary, and a global (and / or creative) city. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city’s image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

PASCALE, CELLINE-MARIE* (American University, pascale@american.edu)

Fukushima, Tsunamis and Earthquakes: The Meanings of Risk in the 21st Century

The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daiichi nuclear reactor failed in the face of an earthquake and subsequent tsunami. This paper witnessed a combination of natural disaster and human error that resulted in local devastation, national trauma, and global consequence. In a global landscape, the representational practices through which the events of Fukushima have gained meaning are central, both within and across national boundaries. The representational practices of major media outlets gain even greater hegemonic significance when travel to such catastrophes is restricted or complicated by the catastrophe itself. Representational practices not only produce specific forms of knowledge, they also construct what comes to be understood as legitimate forms of inquiry.

In the United States, the presence and meaning of “risk” in relation to Fukushima reproduced very specific relations of power/knowledge. This paper examines over 2100 articles about the catastrophes at Fukushima published in 4 major U.S. media outlets between March 2011 and March 2013. The analysis includes articles from two newspapers, the Washington Post and The New York Times and two nationally prominent blogs, Politico and The Huffington Post.

The representational practices that construct “risk” cannot be fully understood without asking “risk for whom?” and “risk to what?” Using a close textual reading and poststructural discourse analysis, the paper deconstructs the representa- tional practices that construct “risk” for plant workers, the general population of Japan, economies, ecosystems and energy resources. Among the many consequences of the increasing globalization of “risk,” is the reality that the presence and meaning of “risk” will continue to be highly medi- ated. This paper contributes to the discipline through nuanced discussion of representational practices and the increasing globalization of risk. It suggests implications for social theory and social research more broadly.

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed on differently situated Palestinians as boundaries for research and to as- sume that these imposed divisions are the most salient factors in the everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices to the negotiation of border-crossing political and legal differences. Second, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.

PASQUETTI, SILVIA* (University of Cambridge, sp638@cam.ac.uk)
"He Is Not Clean:" an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores how the discourses of political information and the practices of the modern state's security agencies can shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting "collaborators" (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents' reputation, and support for the physical expulsion and even violent death of alleged "informers." City residents experience political informing as a form of "symbolic dirt" that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predication of former "collaborators" who were relocated by the state's security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state's security apparatus in shaping emotional relationships and responses among targeted people.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the 'Bologna process'.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four-to-six years courses - to a new sequential system of 'bachelor/master/doctoral program'. Bachelor/master and doctoral programs have been accompanied by the introduction of long courses ('Ciclo Unico'), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelors are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT-2011 "Survey on the transition to work of University graduates" to examine the early labour market returns of young graduates from bachelor's, master's and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor's graduates have the highest leisure usefully and constructively. The various objects of culture such as literature, music, art, religion and philosophy are the creation of leisure. But it is not possible to comprehend this diversity of cultural forms and processes that organize inequalities in Italy at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further frozen a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehension of these differentiations and cultural practices as they remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centratility and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk pregnancy in their lives are early childhood and reproductive years. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistants in proportion of moderately skilled workers by automated systems. Large capital goods and consumer durables industries in India which had taken steady decline in proportion of moderately skilled workers by automated systems. The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

Globalisation, Technology Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automated systems. The findings show that technology up gradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. For their disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce which is looked upon as a serious social and emotional threat to women.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon'ble Supreme Court, all the citizens are to segregate the garbage at source. The waste generated in Kolhapur city per day is 150-165MT. The contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for making biogas for water. But as the company went into liquidation, this project was closed in July 2011. KMC had given a contract of collection and transportation of solid waste to Ramkey Group Pvt. Ltd. from 20th Nov. 2007 to 15th August 2013. But the contract was ended by the KMC in June 2011 as the company was not lifting all the waste from the city.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon'ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon'ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc. The paper examines the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

Causes and Social Implications of Educational Inequities in Indonesia

Educational inequities in Indonesia has been existed for many years. Two major challenges with respect to educational inequities are access to and quality of education. Access to primary education is almost universal, while access to junior and senior secondary are still far from the government target. Let alone the tertiary education. The quality of education occurs at all levels of schooling. The twin problem of educational inequities is a major concern of the Government of Indonesia (GoI). Over the last decade GoI has allocated 20 percent of its national budget towards education sector. GoI has made numerous attempts to overcome the inequity issue through, such as regulating the functional assignment between central and subnational governments in providing primary and secondary education, and issuing the minimum service standard for its implementation. Apparently these regulations were not prepared in a systemic and integrated fashion. This...
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

**Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)**

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e., the shift toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to misgivings of western industrial technologies and their non-sustainability. Noteworthy that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations that are based on traditional and indigenous knowledge systems and also to transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well-known resource mobilization theory of social movements. Lately the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

**Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha**

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGO) i.e., for which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the members of the group, absorb blame for failure and cost-bearing and contains RBG related to the young generation and related to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

**A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance**

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can be ‘colonized’ by other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance:

- in the funding structure of the public accident insurance (classifying companies into risk groups)
- in research priority setting and prevention campaigns of mutual trade associations
- in inspection strategies of the Lander (risk-rationalizing the use of limited control resources)

These fragmented and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misconceived form of risk governance. To enlighten this blind spot, this paper examines the role of territorial self-regulation by the sixteen Lander in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

**Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?**
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going econom- ic crises are widening the gap between upper and lower strata of urban societies further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of democratic and community-oriented police practices in urban areas (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2010).

The Immigrant Childhood As Subject in Social Policy in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is dist- tant from the essential idea of the childish being, and expressed in different ways across the history in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open genera- tional and gender relations of power with other actors, in their families and other social areas. Nevertheless, that social action is not often recognized in the soci- ety and in the academic field, due to the adolescentism that discriminates them against because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2010).

The Immigrant Childhood in Chile

This paper presents part of the results of a FONDECYT investigation that ana- lyzes the integration of immigrant children and adolescents. The study was fi- nanced with public funds and was designed to address the policy and social inter- ventions carried out by the State and ONG within migrant communities.

The study is based on the Sociology of Childhood that defines childhood as a three dimensional concept. The first dimension addresses childhood as a social construction, which is separate from the essential idea of the childish being. This social construction has been expressed in different ways across history and in every sociopolitical context.

The second dimension defines childhood as a permanent sociological category of the social structure, although its members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open generational and gender relations of power with other actors, both within their families and in other social areas. Nevertheless, that social role is not often recog- nized in society and in academics. This is due to the adolescentism that discrimi- nates against them because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 1992; Gaitán 2006; Unda 2010).

In the investigation, the social integration of migrant children is analyzed through semi-structured interviews with migrant children aged 8 to 15, as well as by participant observation in state Offices of Rights Protection. It is taken to be the exercise of its rights and the development of transnational practices and how social intervention hinders and/or provides that integration.

Finally, the investigation concludes that migratory trajectories and diverse so- cial factors (such as genre, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrant generations living in Chile.
• the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)
• the researcher's academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland’s most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers, as issues were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors that the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IIE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodology to the local accomplishment of the social with a Marxist insight into people’s active participation in extended social relations that can ‘overpower’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequence of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography of student-equity practices in Australian higher education, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcription is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to elucidate within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possible more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology has been central to the study of health inequalities, it has required another form of ‘othering’ and marginalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not ‘know their place’ in a hierarchy, and detailed knowledge of the extent inequality was wide. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women’s bodies and homes. Most striking was a discourse of no legitimate dependency - an often painful discourse, where all as aspects of dependency were disavowed and self-reliance valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifest in the holding of the self to impossible standards of non-dependence, and through the ‘othering’ of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

PEARCE, TOLA* (University of Missouri, Columbia, pearce@missouri.edu)

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

The interest in the wellbeing of women in Africa comes from a longstanding concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalisation. The data come from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors’ lives. I take my lead from Sassen’s (2006) use of the term ‘capabilities’ and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which female economic and reproductive roles were central. With colonization, women continued to work, but with less public assistance than men. Independence brought the promise of increased services: health, education, electricity, etc. However, the quality of life declined and development policies have enabled both the state and spouses to capture women’s roles as providers. The paper assesses work environments and the women’s position in the economy. Globalization is, for example, destabilizing former negotiations on responsibilities for children (e.g. school fees). Under mounting stress women appear to look to individualized solutions to problems. A major focus for them has been religion.
The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which Western scientific evidence has not been able to provide all answers. In the process, the trust built up by other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

PEDERSSON, ANDERS* (University of Gothenburg, anders.pedersson@lir.gu.se)
Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered. In my investigation of the relation between criminology and sociology in post-war Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the Swedish political discussion on crime. The levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. Analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinary and interdisciplinarity. It problematizes the relation between sociology and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

PEDERSON, THOMAS* (Wayne State University, Pederson@wayne.edu)
Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry, the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region’s largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infrastructure, and governance. While such deployments are framed as both inevitable and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished Black and immigrant residents.

My paper analyzes Detroit’s neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in Detroit’s suburban suburbs of Detroit to demonstrate the ways in which nostalgia for the city among suburban whites, rituals of place-making, and their intersection with the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region’s resources, cultural representations, and power.

The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospitalised patients are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: ‘KRAM screening & intervention’, that is registration and detection of patients’ so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospital to all patients. In this paper, I will try to analyse the relation between health professionals and hospitalised patients are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. Performance Consumptions, Sleep Management and Risk Perceptions

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about “healthy lifestyles”, sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement.

The investment that shapes consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weigh between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. What transnational experiences may signify for a music culture, which travels between places and spaces, are discussed through case studies. Bolivian/Andean urban folk music, which contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of identity formation are not to be described. Aspects about relationships between Andean popular music, Latin American music and Bolivian music, stardom and audiences are addressed.

Questions about defining identities and mixing influences are considered. I also try to show how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as how relationships between the local and global music culture and new as well as old identities, articulated on the Internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces and a sense of belongingness in cultural activities of diaspora.

PELLIZZONI, LUIGI* (University of Trieste, pellizzoni@sp.units.it)

Farewell to the Heuristics of Fear? the ‘affirmative’ Turn in Environmental Social Theory

Some of the most interesting developments in social theory are presently occurring at the cross-roads of environment and technoscience scholarship. The paper aims to interrogate two especially salient, and remarkably overlapping, trends. The first one is the return of ‘materiality’. This trend has been around for some years especially in the form of an expanding ‘society of practices’. Yet more recently new forms of ‘naturalism’ have been flourishing, which mark a sharp break with the long predominance of cultural/discursive constructivism, without reverting to traditional realist cases. Significant examples come, more than from environmental sociology strictly speaking, from post-structuralist orientations in STS, philosophical anthropology and feminist theory, which converge on accounts of the reality of matter in terms of fluidity of organic and inorganic life or of the multiplicities of human-encountered (natural) nature. The second trend is a reworking of the implications of risk and uncertainty. Whereas, for years, awareness of socio-environmental complexities led to a plea for ‘technologies of humility’, now an emerging tendency is for taking ‘braver’ standpoints by which, if uncertainty cannot be avoided, then it has not to be feared but rather it has to be ‘tapped’. This is signalled by burgeonings of narratives and techniques of vision, anticipation and resilience, for example as regards ‘nanofutures’, human enhancement and climate change. If the ‘heuristics of fear’ has been for decades the trademark orientation of most environmental social theory, this turn towards ontology-focused ‘affirmative’ heuristics asks for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obscures a major socio-political, perhaps even an anthropological, transformation?

PELLIZZONI, LUIGI* (University of Trieste, pellizzoni@sp.units.it)

Ontological Struggles: New Materialisms and the Challenge of Impotentiality

According to Giorgio Agamben, the most devious operation of power today is that which is able to fold over our potentiality – what we can do – but over our impotentiality – what we can not do. Following this insight the paper interrogates the recent turn in cutting-edge social theory from cultural constructionism to new forms of materialism and naturalism. On one side the emancipatory import of deconstructing traditional accounts of knowledge, reality and subjectivity is questioned for its eventual ineffectiveness against domination and inequality. On the other, cultural constructionism is deemed incapable to account for the materialities emerging from technoscience advancements. Traditional ‘negative’ modes of critique are replaced by ‘affirmative’ orientations which celebrate the dynamic, ‘vital’, ‘agential’, ever-changing character of the organic and inorganic world, and the impossibility to accord to any distinction between epistemic and ontological states, substance and information, materiality and virtuality. The puissance of life is increasingly played against the constrictions of pouvoir. The paper analyzes new materialist standpoints, with special reference to feminist and post-Marxist positions, focusing on two problems. First, as if overwhelmed by technoscience’s success, new accounts of matter and subjectivity rely heavily on the former’s, hardly normatively neutral, images and metaphors. Second, the growing replacement of ‘being’ with ‘doing’ implied in new ontologies, suggests we are confronted with a most accomplished expression of the operational paradigm that underpins Western metaphysics. As a consequence, emancipatory puissance and dominating pouvoir are increasingly blurred in an ontological politics which seems today the ultimate terrain of social struggles – as testified by actual difficulties in distinguishing neoliberal human enhancement programs from new materialisms’ post-humanist pleas. Fighting inequality and domination, it is argued, entails pointing to the opposite direction to much human imagination, i.e., towards ‘impotentialities’, substance and information, materiality and virtuality. The paper discusses the indications provided in this regard by Agamben and Adorno.

Eating Organic, Growing It Yourself

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security. In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers wildly use chemical inputs without proper skills and State control.

Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is normal. It is what they produce or source locally in the village. Instead, their important questions are about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and produces surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consummators, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampom Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampom Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting “care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a “care drain” in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care for those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

The “New” Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion?

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address environmental and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and care. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support. This study addresses these issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has no impact on perceived support. However, poverty-reduction and disaster-related relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support.

These findings support the view that relocation reduces older adults’ perceived access to social support. This is particularly evident with regard to poverty-reduction and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence”, “gender identity”, “gender equality” appear everyday in mass media. Such discursive proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call “gender studies” was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this epistemological, theoretical and methodological renewal. Therefore, in this paper I am looking forward to: 1) exploring the origins of the category “gender” as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has entailed a new context for youth labor market and mobility. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduate workers, and by a dual youth policy discourse of promoting the entering subject and protecting the ‘at-risk’. Based on a study of the life experiences of young Cambodian urban migrant labor workers (n=20) and university students (n=31) in Cambodia in 2011–2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the intersectional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an altered structure of inequalities broadly tantamount to the emerging working and educated middle classes.

Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia

The generalized ‘late’ modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial ‘normal’ life course. This paper attempts at a complex exploration of the embeddedness of opportunities and risks in the individual’s social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the ‘new’ contexts for youth labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both old risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.

“If You Have a Giving Heart”: The Framing of Post-Disaster Need and Donations

The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguin-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman’s (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform these frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

Emotional Control in the Financial Marketing

In the scope of a major research program about emotional normatization in the context of capitalism, I would like to focus on the emotional normalization of the financial investor. By analyzing Behavioral Economics texts about the emotions of the economic man in the financial market, I pretend to show how this bibliography: 1) explains economic crises as consequences of emotional based decision taking, an irrational behavior of the economic subjects responsible for breaking the market equilibrium; 2) normalizes emotions of the investors and offers self control techniques; 3) teaches how to predict and to use the emotional conduct of others investors to obtain economic profits. This bibliography, recognizing the investor as a emotional being, converts emotions in a professional competence that requires previous training to develop human capital. In this way, emotions are regulated and subordinated to a economic logic.

The Potential of Telecare/AAL Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany

The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to ‘ageing in place’ in two regions in Poland and Germany with a particularly high share of older people – the Małopolska region surrounding the city of Cracow and Upper Lusatia (“Oberlausitz”) to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people.

This research analyzes the potential of telecare/AAL technologies for improving older people’s quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL application in older people’s homes. In the Małopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

Auntie Does Not Know What Sociologists Do. Do Not Blame Her: A History of Professionalisation of Sociology in Argentina (1960-2010)

The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organizational frameworks in which local sociologists have tried to set their professional and academic issues. Third, it presents some data from a research that focuses on the working conditions of sociology graduates in Argentina from different cohorts. One, a group graduated from 1961 to 1974, it had an early and successful professional insertion linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sector. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.

Revisiting La Cooperacion Desde La Transferencia Tecnologica

La transferencia tecnológica no es solo hoy día aceptada como un elemento dinámico en el crecimiento de las capacidades materiales de los países de “menor desarrollo relativo”, sino además como un proceso fundamental asociado a cambios en la cultura y la historia. Ha adquirido relevancia en las agendas de los distintos foros de negociación - multilateral y regional, en una vinculación prospectiva a las necesidades de desarrollo de los países de industrialización; más recientemente se ha tomado conciencia sobre la diversidad de problemas que se generan por la exigencia de factores concretos de asimilación, aprendizaje, apropiación y adecuación, a contextos culturales, regionales, locales, específicos, vinculados con la contribución a la mejora de las circunstancias que rodean a la construcción, aplicación, operatividad y consecuencias asociadas a la transferencia tecnológica. Esta investigación, descriptiva, sigue dos vías de análisis, por un lado, desde el planteamiento de “soberanía tecnológica”, donde la decisión sobre el país o tecnología fuente se reconoce en el ámbito de lo público, tiene una dimensión política y una nueva agenda de negociación defensiva en fuerte controversia sobre la liberación de los servicios de educación y salud por afectar la protección de bienes sociales que son derechos humanos. Por otro lado, desde las prácticas e instituciones presentes en la complejidad industrial y tecnológica nacional. Ambas vías desafían la comprensión multidimensional del papel de la cooperación internacional en los procesos de transferencia para reconstruir estratégicamente hacia capacidades tecnológicas propias. Finalmente, se determina la ausencia de “infraestructuras de interface” que permitan la interacción oportuna, la expansión de las redes, y que abran futuro, el alcance futuro de las redes de cooperación o de las “infraestructuras de interface” necesarias y concretar los resultados convenidos.

A European Mining Boomtown Case Study. Toward a Sociological Theory of Boomtowns in a Global World?

By mean a case study, this paper aims to test many of the William Freudenburg’s theories on boomtown phenomenon. Apart from his contributions to the understanding of the social impact during and the following years after the construction of large scale project, his theory has been continuously trying to describe the long term social consequences in the so called boomtowns. Judging by the results, the apparently boom experienced might not be such in many cases. It might be simply a rapid urban growth in the vicinity of the large scale project, but in contrast, the region as a whole, i.e. including municipalities around, might suffer just not after the natural resource exhaustion but from the shrinking of the activity, from shrinking. Secondly, results confirm Freudenburg’s theory on the addictive character of the natural resources dependent economies. Judging by the in-depth interviews conducted among social actors, the concept of development is truly limited to the hope of a new boom as those lived in the past. This hope is nurture by political institutions and trade unions who despite the closure of the mine and the fewer chance to repeat such boom, still struggle for attracting large scale industrial projects. The formers know about the electoral benefits and
the latter would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of collective. These are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business idea”, the highlighting of entrepreneurship related subjects in the universities´ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the prevailing optimistic and dominated discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

PÉREZ-CASTRO, JUDITH* (Juarez Autonomous University of Tabasco, pkjudith33@yahoo.com.mx)

Vulnerability and Educational Opportunities in Higher Education Students from Mexico

Higher education enrollment in Mexico has increased considerably since the second half of the 20th century. Nowadays, it is estimated that 33% of school-aged young people attend tertiary education. However, the educational system still has many limitations; two of them are the restricted access to vulnerable people and the low rates of retention.

In 2013, the Law to Prevent and Eliminate Discrimination was issued. Regarding education, this Law seeks to eradicate any kind of discriminatory behaviors that might hinder or limit access to public or private education, scholarships or other educational incentives. However, until now, vulnerable people in higher education are underrepresented and there are no official data about the proportion of vulnerable students that are actually registered in tertiary institutions.

This paper is the result of a study that aims to understand the possibilities and difficulties faced by vulnerable people to enter, remain and graduate from higher education. Specifically, we focus on three vulnerable groups: ethnic people, disabled and women heads of households. We also encompass four dimensions:
1) Personal features, 2) Family conditions, 3) Institutional constraints, and 4) Public policies. Each dimension covers an array of factors or variables.

The results showed us that factors such as prior educational background, interpersonal relationships with other students, with teachers and administrators, parents’ education, family income and the lack of inclusive policies either public or private tend to affect the rates of admission, retention and graduation of vulnerable students. In contrast, geographical origins and institutional action plans may have a positive effect on vulnerability. This paper shows how these vulnerable students are actually registered in tertiary institutions.

Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Duller et al, 2103) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers’ everyday prac-
tice that draws on Institutional Ethnography, Critical Discourse Analysis and On-
tological inquiry as a means for uncovering, not only the being of social relations
in everyday practice but also how that relation can be understood ontologically.
It addresses, in particular, how the mediation of teachers’ work relates to the
influences and interests of others by tracing the constitution of social relations
disclosed in relations that emerge between teachers’ perceptions of practice and
their enactments. In doing so, the being of the social comes into view.
IE’s recognition of being in practice is acknowledged. To better understand the
impacts of this ontological dimension on practice, analysis of data, extends IE by
drawing on Heidegger’s (2005) conception of ontological inquiry. This has been
chosen for its dual focus in explaining the significance of Being, itself, and to re-
veal explicitly the Being of people and equipment in teachers’ work.
Analysis of research data offered by practising teachers, confirmed textual me-
diation in everyday practice. It revealed, too, teachers who practised circumspectly.
In doing so, the ontological significance of who we are to how and why we enter
into social relations was exposed.

The Making Of Obedience To Authority: From Binet To Asch To Milgram

The design of Milgram’s Obedience to Authority can be traced back through
Asch’s classic experiment on conformity to Binet’s experiments on memory and
suggestion. Binet and Milgram used what is now termed exploratory experimen-
tation which is not guided by theory or hypotheses but consists of carrying out
systematic variations of conditions to formulate empirical rules. Binet conducted two experi-
ments. Binet and Henri (1894) wondered what would happen if school children
were given a suggestion so slight that they did not notice its existence? Children
were shown a model line on one board and then had to identify the model line on
a second board that contained a set of lines including the model line. When the
student picked a line on the second board, the experimenter would quietly ask,
“Are you really sure? Is it not the next line?” In a second experiment Binet (1900)
showed a group of three pupils six objects on a poster board for a few minutes
and then asked them a series of questions about what they remembered about
the objects recently seen. It revealed that the most powerful societal covariates de-
termining the relationship between infant mortality and women’s schooling, are
income poverty, child health services and breastfeeding. Women’s education ex-
plains 30-40% of the cross-country variation of infant survival. A key finding is that
influences outside the health sphere improve health practices and performance.
This global update is in line with what smaller N country-studies and survey based
community studies have shown. The results stress that the universal social poli-
cies are fundamental in explaining the pattern of demographic transition in
the global South.

Transnational Solidarity Of Trade Unions In Europe: Two Cases Of
Institutional Work Against The Background Of The Euro-Crisis

Trade unions and labour movements have emphasized solidarity as a universal
principle based on common interests of all workers, regardless of borders and
boundaries. Despite this rhetoric they have primarily organised national or sub-
national collectivities and contributed to establish common identities and moral
norms in these contexts. Modern notions of solidarity are thus firmly established
at the national level, while at the European level liberal market principles and
social indifference predominate. This prevailing social indifference has been chal-
lenged by at least two developments: (1) the introduction of a common curren-
cy, and (2) European economic governance in response to the Euro-crisis. Both
developments have led trade unions to transnationalize their strategies: (1) As
monetary integration abandoned the option to devalue currencies as a strategy
to improve international competitiveness, wage setting institutions have come
under pressure. This in turn induced trade unions in some sectors to coordinate
their wage bargaining policies across borders. (2) Far reaching austerity measures
in EU countries had a big impact on labour market and social policies - trade
unions responded to these pressures by organizing and mobilising resistance
at transnational level, e.g. the European Action Days.
Our empirical research in both fields (wage bargaining and protest move-
ments) is guided by the following question: What constrains and opportunities
have trade unions in Europe encountered in their strategic attempts to create and
maintain solidarity enhancing institutions at transnational level?
Our central argument rests on two assumptions proposed by the classic sociol-
ologist G. Simmel (1908): He states that conflict is an important step from mutual
ignorance to social integration. However, the integrative impact of conflict is de-
pendent on legitimized institutions and practices of conflict resolution (Vobruba
2013), which themselves are contested. To explain union strategies in multi-level
fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009)
and power resource theory.

PERO, DAVIDE* (University of Nottingham, davide.pero@nottingham.ac.uk)

ALBERTI, GABRIELLA (Leeds University Business School)

This paper discusses collective practices of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organising initiatives in the cleaning sector such as ‘The 3 Cosas Campaign’ and ‘Justice for Cleaners’ whereby migrant workers have been struggling for more dignified and equitable working conditions with the support of their communities, within and without formal and recognised trade unions. This discussion will critically con-
sider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organizations, focusing on the tension between the class-based and so-called ‘ethnic’ identities of these groups under study.

The paper aims to contribute to the theoretical debate on how to apply the
framework of intersectionality (Yuval-Davies 2011) to the study of migration and
labour movements. Inspired by recent critiques of the resilience of methodolog-
ical nationalism (Glick Schiller and Caglar 2006; Glick Schiller 2008), our examina-
tion will question prevalent theorizations of collective action and migrants’ forms
of political engagement persisting in social movements and migration studies. It
will also question the ethnocentric and institutionalist focus of traditional indus-
trial relations literature highlighting the benefits of an interdisciplinary approach
to the study of migrants’ politics across the literature on migration and labor rela-
tions.

Yuval-Davies (2011). The Politics of Belonging. Intersectional Contestations. Lon-
don: Sage.
Isolation in Montreal, Canada

Strategies of Resistance: Migrant Caregivers Dealing with Social Isolation in Montreal, Canada

Cette recherche exploratoire est consacrée à la question de l'isolement, comme l'appauvrissement chronique des liens personnels et/ou sociaux (Weiss 1973 dans Guberman et al. 1993), chez les aides familiales migrantes de la région métropolitaine de Montréal (Canada). Provenant de divers pays « du Sud », les travailleuses admissibles au Canada dans le cadre du Programme des aides familiaux résidants (PAFR) sont engagées pour effectuer à domicile le travail reproduit de la vie quotidienne de la personne âgée, malade, et/ou en situation de handicap, entretien ménager). L'une des exigences du PAFR concerne l'obligation pour les candidates de résider chez leur employeur. Plusieurs organismes nationaux (Commission des droits de la personne et de la jeunesse, Association des aides familiales du Québec (AAFQ)) et internationaux (Bureau international du Travail, Délégation française au Canada) dénoncent cette contrainte au logement en raison des abus qu'elle est susceptible d'entrainer. Parmi les effets néfastes connus, l'isolement des travailleuses est fréquemment mentionné, sans faire l'objet de travaux spécifiques. Cette étude qualitative inspirée des principes de la recherche féministe aborde cette question à partir des interrogations suivantes : Quelles sont les causes de l'isolement chez les travailleuses interviewées, et comment celui-ci se traduit-il dans le quotidien des répondantes? Comment les participants s'adaptent-elles aux contraintes de logement? Une douzaine d'entretiens semi-dirigés réalisés auprès de femmes immigrantes en cours de réalisation ou ayant récemment terminé le PAFR nous indique que certains facteurs tels que le degré de mobilité, les possibilités de socialisation hors du foyer de travail, et l'implication au sein de groupes et/ou associations façonnent l'expérience du PAFR et agissent sur le sentiment d'isolement. Analysées à travers le prisme de la consubstantialité des oppressions (Kergoat 2009), les différentes stratégies de résistance contre les facteurs d'isolement mobilisés par les travailleuses montrent l'adaptabilité dont elles font preuve devant la rigidité des conditions d'immigration imposées.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory

The transferece of Macao' administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 90's of the Xth century the end of a migratory experience in a very specific 'context', frequently characterized as being almost 'colonial'. Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants
who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this 'new' political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the 'colonial' period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identity terms) highlighting the continuities and changes observed.

PESSOA, INES* (ISCTE - IUL, inespessoa@yahoo.com)

Portuguese Youngsters on the Move after the Macao's Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2 footprint on self-supplied behavior were used to estimate households' carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the "Schwartz value inventory", people's perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or "milieu" segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different "social milieus", i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

PETERSSON, FRIDA* (University of Gothenburg, frida.petersson@socwork.gu.se)

The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) - the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients' lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals' talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, "drug-free" and "drug-abuse" are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals' talk, it is possible to live a "drug-free", "normal" life with methadone, as long as it is distributed by the clinics and ingested according to the staff's recommendations, while taking the same amount of dogs obtained from a source other than the clinic is defined as "drug abuse", legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients' modes of resistance, such as subjective interpretations of staffs' arguments or "narratives of resistance".

Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.

The research question is: "Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?"

The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

Mass Media Representations Of Multifarious Violence During The Greek 'crisis' In 2013: A Qualitative Approach

The multifold violence observed during the Greek 'crisis' corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the construction between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

**High Quality Education: Globalization and Problems of National Educational Systems**

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the education systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia.

While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

**Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study**

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless – very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

**The Impact of Contractual Relationships to the Identity and Values of Religious Organizations – a Pilot Study in Sweden**

Part of the growing impact of new liberal economic market rationality is an increasing demand of religious organizations to establish partnerships or contracts with the state. Deregulation and liberalization of (public) welfare services in Sweden and the US during the 1990s resulted in greater attention to civil society as a resource in welfare provision. While the previous state-based welfare model advocated financial solidarity and equal rights to welfare services, the new marked-based model is based on the idea of the individual's right to freedom of choice and accepts different individual financial capacities. From being advocates for a comprehensive welfare system equal for all, religious organizations are presently invited and enrolled as contracted parts of a system accepting inequality in welfare provision related to the financial capacity of the individual. Indications from previous research show that tensions between their identity and the implicit values of contractual relationships are not an easy conciliation. This paper focuses on the specific profile and qualities of religious organizations which at an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for tuning down the religious profile or a demand for accepting values in conflict with its core values. This paper discusses the short term and long term consequences for religious organizations identity and freedom by entering into partnership or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religious Identity in a European Perspective (WREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.

PEUCKER, MARIO* (The University of Melbourne, mpeucker@unimelb.edu.au)

Seeking a Voice: Muslim Organisations in Australia and Germany and Their Struggle for Civic Recognition

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethnically-racially-minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, especially more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim communities have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care

Our main interest is the professional use of “social assistive robots” (Kolling et al. 2013). We call them “emotion simulating & stimulating robots” as they are designed to fulfill “experiential aspects of belonging” (Klein et al 2013). We have developed an interactive robot with highest therapeutic effect: A baby harp seal Paro developed by AIST, a leading Japanese industrial automation pioneer. Whereas this as interactive robot with highest therapeutic effect praised machine is getting usual in Japanese private households, in Germany it slowly finds its way into Elderly Health Care Institutions. According to that we are interested how the robot becomes embedded in the care-resident-relationship.

To which aim use carer the robot in their caring activities and routines? Which meaning is transferred with this special usage? Not only the singular performance but also the object with which the action is carried out is a carrier of meaning. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

PFAU-EFFINGER, BIRGIT* (University of Hamburg, pfau-effinger@wiso.uni-hamburg.de)

Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? and How is it possible to explain cross-national differences? The paper introduces the theoretical approach of the “gender arrangement” of the author as an explanatory framework for cross-national differences. This approach combines the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actors’ constellations and action, which form the societal structure for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European welfare states. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and in the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.

PFALLER, LARISSA* (University of Erlangen - FAU, Larissa.Pfaller@fau.de)

From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives

At least since the founding of the A4M (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way.

Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical life plans for ageing.

The interviews show the profound impact of anti-aging on the individuals’ biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstructions of the significance of anti-aging for the interviewees’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

The Sociological Discourse on Inequality and Social Class in France

The Sociological Discourse on Inequality and Social Class in France

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
As Athens experiences a militarised zone (Kurtovik 2013), the government is perceived as EU-dependent by most citizens, and chooses to demonstrate its strength by demarcating different groups as ‘deviants’ (Dalakoglou 2013: 30). Radical left and anarchists, as well as migrants and refugees, are constructed by the ruling parties as threats (Zenakos 2013); for public security (Philipp 2013), or as dangerous ‘hygienic bombs’ against national health (Parsanoglou 2012). Newly-deployed and heavily-armed police forces are ordered to fight the ‘undesired’ objects. The increased establishment of far right discourses and neo-nazi-activism support this development (Philipp 2012).

The atmosphere of austerity and oppression has deeply influenced activist activity of this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

My presentation shortly outlines relevant historical circumstances before turning to the activism and its discursive narrative. It will investigate the ‘undesired’ objects of these groups and the continuation of far right discourses in Athens.

Women’s Empowerment As a Determinant of Fertility Change in Southeast Asia

The fertility levels of Southeast Asian countries have been dropping dramtically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries also experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women’s empowerment has not reached a consensus. Women’s empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women’s empowerment include the percentage of women’s education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women’s holding manager’s positions. At individual level, women’s empowerment can be measured by women’s educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women’s empowerment. Most studies have been looking at women’s empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women’s empowerment and the framework of relationship between women’s empowerment and fertility changes will be reviewed. Furthermore, the current situation of women’s empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women’s empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women’s empowerment plays a role in the region’s demographic change.

Violent and Non-Violent Logics in Contemporary Greek Protests

The explosion of Athens as radicalisation becomes accentuated during economic and political turmoil. I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces: migrants, anti-nationalists, anarchists, neighbourhood activists, and radical leftists.

From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and reflections on violence performed by themselves and others.

In the case of Athens the consequences of increasing cleavages and precarisation by the ‘Euro-Crisis’ are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a hub for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

RC11-204.3

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g., gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper examines the role of social class and social divisions within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground the idea of generations as a meaningful unit of analysis; the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often perceived on the basis of a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisionising and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justificiation from convention theory (Boltanski and Thévenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone-who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with different approaches in terms of strategies, a reflection is presented on community organization, food systems innovation and the role of market in food relations.

Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research

This presentation bears on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectorial panels for scenarios development and reassessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions, taking into account the role played by urban spaces and their development. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?” In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Austerity and The University In Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst the Conservative-Liberal Democrat Coalition Government has been a sustained governmental policy to increase the participation of 18- to 30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participatory processes in EDL actions provides young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of silence’ in which listening to others is ‘off the agenda’. This paper presents the argument that right wing populism has made inroads into those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has defined the political system. The paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MIPPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘reconcile all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3).

National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework

Globalized state-societies in the twenty-first century are framed by national cultures. This cultural metaframe is insufficiently understood by sociologists and other social scientists. Yet national cultures are full of social mechanisms that shape domestic politics, economic success and failure, and the evolution of global society. To make use of this framework for explanatory purposes, it needs to be underscored that nationalizing mechanisms are sociocultural mechanisms that work in conjunction with better known political and economic mechanisms. Based on a novel conceptualization of national cultures, the contours of which this paper will lay out, it quickly becomes evident why and how in general terms nationalizing mechanisms operate in a broad range of social systems from small groups to large movements and organizations. Whether, where and to what extent the inclusion of nationalizing mechanisms can make a substantive contribution to explanation is an open empirical and theoretical question. The argument presented here reconceptualizes existing empirical and theoretical knowledge on nations and societies in order to open up a fresh perspective and sketch out a basic framework for one of the most misunderstood areas of social reality in the global age. This paper further develops the author’s previous foundational work on social systems and nationalizing mechanisms aimed at rehabilitating the central significance of nation for the sociological enterprise.

PILLAY, KATHRYN* (University of KwaZulu-Natal, pillaykat@ukzn.ac.za)

“Nation Under Siege from Foreigners”: Exploring Notions of Belonging and Exclusion in Post-Apartheid South Africa

South Africa finally became a democratic country in April 1994 after the first ‘free and fair’ general elections took place. A commitment was made by the ANC-led government to ‘non-racialism’ based on a Constitution which was inclusive of all the ‘races’, accepting shared citizenship. In this paper I contend that even though the democratic state acknowledges South Africans of Indian descent as part of its national discourse, and continually affirms their ‘part’ in the national democratic revolution, it nevertheless still perpetuates the notion of essential ‘differences’ between ‘peoples’ which originated in colonialism, was entrenched further after the formation of the Union, and legitimised through various policies during apartheid. Even though the Population Registration Act (PRA) was repealed, the racial categories that were reproduced and legitimised by the Act still exist. ‘Race’ then continues to be an axis around which South African society revolves. I argue that the continuation of ‘race’ classification through legislated and bureaucratic guises perpetuate racialisation and ‘race thinking’, which is evident in self-perceptions and the perceptions of ‘others’. The argument is demonstrated by empirically examining how South Africans of Indian descent are homogenised and labeled as a separate and distinct group, and in addition how they are perceived as ‘a people’ or ‘community’ with fixed and essentialised identities and ultimately ‘belonging’ to another country, to which they could easily ‘return’, as evidenced by calls to ‘go home’ heard at various points in time during the post-1994 democratic era. Empirical evidence will be provided to reveal how, as a result of this perpetuation of difference based on ‘race’, similar processes of othering and anti-Indian sentiment, reminiscent of the political eras prior to democracy, persist in public and popular discourse in contemporary South African society, and is exposed at various junctures.

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the most distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different “Bolivarian Missions” offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim that have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been included, which represents an important gap in the literature that deals with the Venezue-

elation case. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphers, consistent with the public discourse around the existence of the so-called “Mission Sucré”. This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many “Aldeias Universitárias” that operate throughout the country’s regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, État et sociétés politiques en France, 1977) and those perceived as having benefited from them. The discourses made by the neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of “free” food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).

Leisure and Family : A Mutually Supportive Relationship

W. H. Davies in his lovely poem ‘leisure’ states the wonder of a life worth living where one has no time for leisure, why are we so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand beneath the boughs and stare as long as sheep or cows. No time to see, in broad day light streams full of stars like skies at night. A poor life this if, full of care we have no time to stand and stare.

The loneliness and isolation of an individual has been a persistent theme in twentieth century. We were all born social and need company to live a happy and fruitful life. The institution of family has been with us with a set of cultural patterns that the oldest of all research and study. Anthropoligists, sociologists and psychologists reveal the importance of family in shaping one’s personality. The basic psycho-social cultural elements in a family is the fellowship which springs from sharing and caring in leisure hours by way of interaction and interpersonal communication with each other in their respective roles to create a common familial culture.

It is true that human beings find time to catch up with family and friends during their tea and lunch breaks. Hence they need to find time to cultivate and nurture their relationships and it is all about effective time management.

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.

Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggregation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement slowly shifting to (neo)liberal positions and loosing the touch with the workers base as well as the young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way.

The popularity of those youth movements partially lies in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing forward. Moreover, this subcultural-political connection seems to have an impact on today’s radical movements making them mostly a young people’s domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements’ publications (printed and online) collected over the years.

Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretariat of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinian social science system (institutions, agenda, researchers’ profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country.

In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentina’s scientific field is currently featured by a dynamic, predominantly public and professionalized system that has witnessed a geometrical growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:

1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences;
2) the structural heterogeneity of Argentina’s scientific field, featured by the split between CONICET and the public university system;
3) the national-contrary circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.
4) There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

Youth Online Communities in Social Russian Nets As an Object of Social Research

Social nets is new social communication environment and the majority of people are involved into them all over the world.

The leader among existing social nets in Russia and Russian-speaking area is Vkontakte.

In the social net of Vkontakte there is an orthodox audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodox audience are three age groups which expose relevant portraits of the orthodox audience in Vkontakte: under 18-24, 25-34 years and over 35 years.

Communities in the social net is main communicative core around which users’ interests are formed. For our purpose all orthodox communities in Vkontakte can
be divided into four groups: communities of general orthodox theme, communi-
ties where the main content is presented by the quotations of revered fathers and
modern members of clergy, and also parables and cautionary tales, issue-re-
lated communities (question to priests, for youth, family, devoted to beneficence,
etc.), and at last territorially united communities (the communities of bishoprics,
youth orthodoxy, district, etc.).

Each orthodox group in VKontakte and its only unique target audience on the
basis of which the group administration chooses content: by format (articles, news,
blogs, quotations), by form (text, photo, audio, video), by the functionality of
VKontakte social net (discussions, meetings).

In orthodox communities VKontakte the model of social interaction ‘online-of-
line’ is actively developed. Within the framework of this model the participants
of communities are informed about offline events running (rapidly erected tem-
ples buildings, beneficence, meetings with interesting people, etc.) via VKontakte
functionalities (messages, meetings). Due to communities participants high degree
of loyalty the information about future events is spread by ‘virus’ method by the
means of likes and repost system.

**The Fourth Paradigm**

The paradigm shifts which featured the systemic thinking from the 1980s to
the end of the last century and the very beginning of the 21st lead to some radical
epistemological changes at the crossroads between communication sciences
and sociology. This paper on one side reconstructs the key paradigm shifts in
system theory from the whole /part one (P1) to the system/environment one (P2)
and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather
unlikely in systems theory and still the key global economical, technological, so-
cial challenges of our times required revolutionary shifts. The other side of this
paper is essentially focused on theorizing a fourth paradigm shift which selects
the fragments of the late XX century epistemological debate turning them in
a systematic (in the Mertonian meaning of the term) redesign of the concept of
system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it”

(Barash 2008: 25)

“Some increase in plasticity is to be expected […], it represents the extrapolation
of a trend toward variability already apparent in the baboons, chimpanzees and other
cercopithecoids what is really surprising however is the extreme to which it has been
carried. Why are human societies this flexible?”

(Wilson, 2000: 548)

**PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)**

**“Hypercitizenship” and the Evolution of a Global Identity**

The idea of the citizenship paper moves from the consideration of autonomous agents
and global flows eventually converging by means of autoptic systems.

This work reframes the topic of the reconfiguration in the evolving social sce-
narios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a
multidimensional and multipolar convergence among different kinds of citizenship.

**With its four conceptual dimensions, Hypercitizenship, features the strategic attitude of those areas in which capitalism is turning into turbogenetic capitalism. Its main features are the following:**

Cosmopolitan, scientific, societarian and entre-

**eneurial.**

The Hypercitizenship concept is focused on the fact that communication about
key challenges of our times is increasingly meaning communication and public understanding of science and technology for governance and policymaking on a
global, global and continental scale.

From this point of view, law becomes one of the à la carte products to be
bought by browsing a global “catalogue” (Mundus) surfing on a technological
platform (Globus) of which the internet is the best metaphor and which can
be seen as the most important platform for convergence developements and
as a driver of several, key, changes. This new media platform is cosmopolitan and
local while the mass media often still fall into the methodological nationalism trap.

Indeed, the emerging scenarios are more and more shaped by supranation-
al (UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s…) entities and by
new localisms which cannot survive outside a global network.

Thıs, the emerging globality is witnessing that the “national state” citizenship is
too big -bureaucratically speaking, but too small -in competitive terms-, to be

strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the glocal age is
rising, which we refer to as “Hypercitizenship”.

**How to Tether an Investment Banker: Observing Innovation and Control in Islamic Finance**

Scholars of alternative economies have noted that financial markets are par-
ticularly resistant to social experimentation due to the absence of institutional-
ized dialogue between finance industry insiders and outside critics. A noteworthy
exception is the recent development of Islamic investment banking in Malaysia,
where (external) Islamic scholars are in an institutionalized dialogue with (insider)
investment bankers.

This dialogue has created an ongoing experiment to create “sukuk,” a novel fi-
nancial instrument designed as a moral replacement for sovereign and corporate
bonds. “Conventional” bonds are understood by many Islamic scholars as immoral
because they are untested from real economic activity and produce reve-

nue streams based on “interest.” In contrast, sukuk are alternative asset-backed
securities (ABSs) putatively tethered to the real economy and generating moral
revenue streams without recourse to interest. This initiative is ambitious and
global: in 2012, $137 billion sukuk were created (issued) world-wide in a number
of currencies.

To theorize the social mechanisms and governance structures that enable such
dialogue, this paper investigates two questions centered on how theologians un-
derstand and control investment bankers. How do Islamic scholars and financial
engineers speak with one another with sufficient expertise so as to co-construct
new asset-backed securities that conform both to theologians’ interpretations of
Islam as well as to bankers’ perceptions of marketability and profitability? More-
over, how can religious scholars control financiers sufficiently to enforce mini-
mum standards of moral compliance?

To investigate these two questions, this paper draws on 48 focused, ethno-

graphic interviews conducted in 2012 and 2013 in investment banks with financial
engineers and Islamic experts who co-produce sukuk. The paper and presenta-
tion summarizes the case, theorizes social mechanisms and governance struc-
tures, and hypothesizes implications of the case for other morally-committed fi-
nancial reform projects seeking to dialogue with and control investment bankers,
such as Occupy Wall Street.

**PITTI, ILARIA* (University of Bologna, ilaria.pitti@gmail.com)**

**Contemporary Adults: Understanding Youth through Intergenerational Comparison**

Although sociology has already deeply analysed the profound changes oc-
curred to youth and paths of transition to adulthood in the last decades, it is
often possible to notice two glaring deficiencies in many sociological works:

firstly, young people are frequently conceived as a category of its own, a spe-
cific social group that is somewhat isolated and studied separately, making it
most a comparison with the previous young generations; secondly littl

e attention has been payed to adulthood, the final destination of youth.

Adults should be a model for young people’s transitions, but within the contempo-

rarily context this stage of life’s standard model is threaten by contemporary trans-
formations and late-modern processes (individualisation, flexibilisation, globali-
sation, juvenilisation) and it’s become more and more complex to define what is
‘young’ and what is ‘adult’, where youth finishes and where adulthood starts, which
functions characterise these two ages and which are their reciprocal connections.

All that has huge consequences on the (individual and social) identity both of young
people and adults, on their intergenerational relations and on new social transitions.
The intent of the proposed contribute is to think youth in a generationa
way by studying young people in relation and in comparison to the co-pres-
ent adult generation, lighting up the contemporary features of adulthood.

The proposed contribute - based on an empirical research which involved 30
Italian young people aged between 18 and 24yo and their significant adults
through semi-structured interviews- aims at contrasting the specific inter-
preteds of adult identity emerging from the representations and practic-
es of adulthood of two generations: the baby boom and the millennial one.

Through this comparison the presented research highlights the processes be-
nneath contemporary intergenerational dynamics inside and outside the family,
allowing a deeper knowledge and understanding of contemporary youth.

Central Bank 'Independence'

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but they have been forced to play an 'unfair game', as Hyman Minsky said nearly two years ago. This paper investigates 'independence', not only as a sociological misnomer, but as a normative and functional one that embodies central bank quantitative easing since the crisis. The Fed's QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes, while central banks are quantitative easing into the crisis. This debate focuses on differences between central banks, but also the effects of central bank quantitative easing since the crisis. The Fed's QE has enormous impact on most other economies. National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified [in ways not specified] as leading national social thinkers, though there are also some cases where the contents of leading sociological journals (identified as such in ways not specified) are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a ‘national’ sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understudied, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust—fidelity, competency, integrity, and global trust—and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among health care providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). Discussion: The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Unethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth club over a 12 month period, I analyse the basis of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions. Like others, I advocate for ongoing reflexive engagement with ethical issues as they emerge in the research journey (Sime 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

PLUSS, CAROLINE* (Nanyang Technological University, pluss@ntu.edu.sg)

Cosmopolitan and Essentialized Socialities in Transnational Spaces

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several countries. These two forms of socialities are negotiated and embedded in processes of cross-fertilizations among these forms of (counter-)democracy and representations and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of understanding youth activism through the lens of counter-democracy and representative democracy. Taken together, they offer concrete ways forward for a multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

PLZS, VICKY* (Victoria University, vicky.plows@vuu.edu.au)

Reducing or Reproducing Inequalities? Ethics and the Researcher’s Role in Negotiating Power Relations Between Young People

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young research participants (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for youth researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001).

For youth researchers concerned with and committed to challenging injustices and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth club over a 12 month period, I analyse the basis of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions. The Models of Orthodox Christian Parishes within Post-Soviet Russia: The Influence of Social Environment
Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are variagated and have own features demanding on different factors (mainly of territorial and administrative character).

The sociological researches within Kashirskoe and Nikolsky deaneries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. "The churches with elderly communities unclosed in soviet period". The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parishes in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants: those who were in the church in soviet times and those who came there in post-soviet period;

2. "The parishes with constantly varied community" are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;

3. "The churches in holiday villages with cottagers communities" and "The guest church";

4. "The parishes with the community of "the active" are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;

5. "The parishes of specific destiny". There are parishes which are known for their unparalleled features, as for instance one of Sati-no-Russkoe of Nikolsky deanery: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church apsidal background of luxurious houses raised around and even its own parish tragedy - the murder of a priest.

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically: an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real- and fantasized- potential of their own participation in Nazi society as a teenager, as well as her fear of being killed over the course of a life? And in which way does it enable her to speak about her experiences of sexualized violence as well as to embed her National Socialist cursive patterns of interpretation her discussion of these issues is bound. My paper is based on the diary written by the biographer from 1944 of her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be on the repetitive pattern of "seduction", which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of "seduction" allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voicevosky-Katchalov Estate Project in the Vologda Region and the Urgy Environmental Project in the Kostroma Region

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the “Abramovich’s case” is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyzes the visual indicators of the “Manor Khvaleevskoe” - restored by the famous financier Yuri Voicevosky-Katchalov (“Standard Bank”), the family estate of the 19th century in the Vologda Region in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region, which stands on wealth than in the past. But the most advanced villagers already realize the significance and value of the ‘old style’ living. A new migration force is about to radically change the profile of local community life but tends to preserve diverse ‘indicators’ of old times. The dramatic crisis of urban life enables sizeable groups of middle-class professionals and IT-experts to consider moving to environmentally balanced areas in the North of Russia.

Informality and Policy Making: Evidence from Post-Socialist Spaces

Informed by participant observation in public places, informal interviews and a large-scale survey, this paper explores the way informal practices may impact on policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a “culture of corruption” to introduce the concept of “(non-) state socialism”, defined as a system for redistribution of welfare based on human interaction and interdependencies, replacing state agency where and when this latter is ineffective or absent. (Non) state socialism refers to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fiscal fraud or bribing) and those harming the fellow citizen directly (trafficking, narco-traffic). Although both “illegal” the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regulates itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

Renegotiating Social Policy through Informality: A Post-Socialist Perspective

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation of the formal and informal level of social and welfare policies in postsocialism.

Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialisation one. As a result, research has been preoccupied with possible areas of interventions, and steps to take, in order to speed up this convergence. This assumption has been challenged by an emerging body of literature that, starting from a post-structuralist perspective, suggest that development patterns may differ geographically and historically and that there are alternatives to state and state socialism defined as retaining strong elements of Keynsianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The 1978 World Cup in Argentina, from within Its Political Prisons and Clandestine Detention Centres

Situated at the crossroads between the study of political repression and the media coverage of a sports event, this paper focuses on the reception of Argentina’s 1978 World Cup among those who were imprisoned in clandestine detention centres, in a political context that some have described as state terrorism.

Our examination of testimony accounts from the oral archive Memoria Abierta has shown that a number of survivors who were illegally imprisoned during the World Cup recall and express feelings about this event. While we expected conterversial spaces to be fully hermetic and insulated from outside information - as total institutions (Goffman, 1961) -, we observe, in contrast, the precarious conditions through which the prisoners accessed either celebrated or scorned football and nation. Indeed, rather than having been censured or concealed by the repressors, the World Cup, as a national festivity and media event, was to some extent integrated to repressive practices.

We will discuss a number of situations evoked by the survivors in which the World Cup and its media broadcast intervene in the power logics of military personnel and their relationship to the inmates (better described as “disappeared” in the case of clandestine detention centres). We will also discuss the effects of the “informational porosity” of the total institution in the inmates’ experience. Our discussion will be centered on the subjectivity of social actors: their opinions, expectations, and causes of suffering. We will also discuss the limits of such an attempt to reconstruct these positionings, given the passage of time and the contentious nature of this international sports event.

Informality and Policy Making: Evidence from Postsocialist Spaces

Informality, in a political context that some have described as “state terrorism”, was an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fiscal fraud or bribing) and those harming the fellow citizen directly (trafficking, narco-traffic). Although both “illegal” the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regulates itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

**POMA, ALICE** (UPO and EEHA-CSIC, alice.poma@gmail.com)

**Feeling Intensely and Changing Radically. How Emotions Felt in Protest Lead to a Cultural Change**

The aim of the paper will be to present our proposal of analysis that links the emotions felt in protest and the transformations of consciousness and behaviour considered as outcomes of the protest.

Aware of the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest, in which people decide to take part in the struggle and devote themselves to it, changing their way to see the world and their relationship and bond with other people in a process that leads to transformations of consciousness and behaviour and, finally, to their empowerment.

Based on previous empirical research where we have studied different experiences of protest and political struggle in Spain and Mexico (indignados, #osoy132, two Oaxaca’s women collectives, Mexican anarcho-punk movement and a few resistances against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-social-structural literature cannot perceive. The methodology that we have
developed throughout our research is based on depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riohal valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Images des latino americains dans la direction de la composante militaire de la MINUSTAH (Mission des Nations Unies pour la Stabilisation en Haïti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government which erupted on February 29, 2004. More than eight years since the implementation of the United Peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thoughts and opinions with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the «imagined Haitian nation.»

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercial has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.

Equidad Étnica Y De Género EN LOS Estudios De Posgrado. Casos EN Las Universidades AUTNomas De ChiaPs Y Yucatán

Lo que aquí se expone forma parte de una investigación más ampliamente realizada en México bajo el título “Ética profesional y posgrado. Valores presentes en las prácticas de generación y transmisión de conocimientos que llevan a cabo cuerpos académicos y grupos de investigación educativa”, buscando comparar experiencias de formación ética profesional en programas de posgrado que ofrecen instituciones de educación superior en distintas entidades federativas. Chiapas y Yucatán son dos estados de la República Mexicana con diversos grados de desarrollo socioeconómico en los que habitan poblaciones pertenecientes a diversos grupos étnicos. A lo largo de los años, las iniquedades sociales que caracterizan a las sociedades poscoloniales por motivo de la etnia y el género han mostrado algunos cambios en ambos estados, sin embargo persisten rezagos en materia educativa que se hacen más evidentes en los niveles de educación superior. En esta comunicación se realiza un análisis comparativo que muestra cambios ocurridos del año 2000 al 2013 en la composición de la matrícula que estudia en programas de posgrado en las universidades públicas más importantes de la región sureste de México, las cuales se ubican en estos estados: la Universidad Autónoma de Yucatán (UADY) y la Universidad Autónoma de Chiapas (UNACH).

Young College Students and Their Values: A Comparative Study Between Brazil and China

Young college students and their values: a comparative study between Brazil and China

Marilena Nakano
Marília Pontes Sposito

This is a quantitative sampling research held within the scope of the Brazil-China Agreement. It compares the Brazilian college youth with the Chinese, in the 17 to 24 year-old age bracket. The data was obtained in 2012, by means of a same questionnaire in both countries.

The paper will privilege the data related to values and visions about the best and the worst aspects of being a youngster. It will analyze the differences between young men and women. In spite of similarities, what attracts most attention is the configuration of the two distinct modes of being young: a Brazilian and a Chinese.

There will also be some reflections about the research conduction process and the interactions between the researchers and the different cultures and countries are also be considered.

With regard to the results, the peculiarities of each group are being identified. Thus, for example, for Brazilian college students, the best thing about being young is to have “dreams and objectives” and the worst part is to “not be able to be self-supporting”. On the other hand, for the Chinese youngsters that were interviewed, the best thing is “to be healthy and fit” and the worst is “to be insecure regarding the future”. It is interesting to note that they fear they can be “easily influenced”, whereas this fear is not strongly representational among Brazilians.

Notwithstanding the singularities observed between the youths of each society, it can be observed that there are some transversal points of contact that allow us to go ahead in drawing up the contemporary juvenile condition, incorporating the differences of genders as a fundamental aspect.

An “Area” Studies Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign affairs became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connexions between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these developments are less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6th Division of the College des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinarity approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproductive Health and Rights in 20 countries in the global south and the specific Newfoundland context. We aim to contribute to the research on women’s health and rights in Newfoundland, the only province in Canada that is rural. The research is part of a larger project on reproductive health and rights in the global south, which explores the impacts of transnational dynamics on reproductive health and rights. The project is based on a qualitative research methodology, including interviews, focus groups, and document analysis. The data collected from the research on Newfoundland is used to build a case study that can be used to analyze the intersection of local and global factors in shaping reproductive health and rights in the province. The case study is also intended to emphasize the importance of using a transnational perspective to understand reproductive health and rights in Newfoundland.

Sustainable Consumption Among Brazilian Young: Daily Practices and Political Participation

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a qualitative and a quantitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil, São Paulo and Rio de Janeiro, and (2) a focus group cultural analysis conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. In this process, consumptions are perceived and used as a way of political pressure to improve social and environmental conditions. Nonetheless, the technical abilities of its users (Dodier, 1993), as well as the environmental conditions have to be taken into consideration. Technological innovation could, at some point, be seen as a first step towards social innovation, and therefore towards social inclusion of young people with disabilities.
El presente ensayo busca interpretar las implicaciones civilizatorias que veimos presentes en el conflicto del TIPNIS (Bolivia), resaltando la importancia que para el caso de aquellos y las vidas territoriales, social y ambientales tiene el desarrollo del conflicto del TIPNIS. En la primera parte se hace un análisis desde los múltiples espacio-tiempos que están implicados en el conflicto. En segundo lugar se centra el análisis en las actuales presiones desde dinámicas socio-espaciales, especialmente de ampliación del capitalismo en frentes de expansión/invasión, que constituyen tensiones territoriales sobre y alrededor del territorio y territorialidad de los pueblos indígenas del TIPNIS.

El estudio resalta el papel de los movimientos sociales bolivianos en la configuración de las nuevas luchas lúdicas emancipatorias en el mundo ancladas a los conceptos claves tectónico-políticos como territorio, autonomía, autogobierno, buen vivir, madre tierra, derechos de la naturaleza, estado plurinacional comunitario, resiguiendo la antigua lucha por la tierra en una otra clave teórico-política, distinta de la liberal y/o marxista. El ensayo destaca la importancia de entender las propias dimensiones que el TIPNIS nos plantea para tomar las decisiones que están en juego, y que constituyen toda una ancrucida en el continente, el mundo y también para los gobiernos progresistas que intentan empujar cambios en la actualidad.
but one important issue has been legal change. The introduction of no-fault di-
vorce in the post-war years contributed to the rapid increase in divorce, and more
recently the idea that same-sex marriage will be sanctioned by law has stirred up
significant public controversy.

Debates around the legal recognition of same-sex marriage and other related
matters such as gay adoption are often linked in the public sphere. The proposed paper seeks to examine
whether the inclusion of religious and spiritual arguments in the public debate
as a framework to examine the impact of religion as a cultural resource in debate
and decision making is meaningful within the framework of ‘public religions’. The argument presented by Habermas (2008) of post-secularity will be used
- Shari’a law – illustrates the ideas of ‘public religions’

Our paper draws on an Australian research grant to study the same-sex mar-
diate in Australia and New Zealand, and on a second grant proposal to undertake
a comparative study of legal change in relation to marriage in Australia,
France and the United States.

Political Decisions in the Area of Public Security and the Action of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil

The purpose of this communication is to present our findings of an original research
that is being conducted at the Center for the Study of Violence of the University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations - hooded men, shooting their victims from a motorcycle
or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions, around which a dynamics of action-reaction seemed to be installed. For now, our
main hypothesis is that previous political decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings
between members of the State of São Paulo Military Police and members of the
PCC (First Capital’s Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying principles as well as the
routines and different sources of tensions surrounding the politics of truth com-
missons that are currently convened in Brazil by systematically cataloguing them
and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions in Brazil did not occur at the onset of the emerging democratic regime. Instead, they are an emergent phenomenon, appearing in the context of an already mature
democracy, and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff in
May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-
-shaped by its own agents during past military governments (1946 to 1988), but
does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxilliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

Ranking Regimes, “World Class” Universities, and the
Improvement of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are
highly ranked according to their “impact factor.” A world-wide movement has
pushed scholars to publish in English-language journals, to the detriment, we
argue, for intellectual life at the national level. We first document evidence for this
pressure, then discuss the consequences of funding mechanisms and research
assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest
in the new managerialism and standardization of academic exercises; 3) the
price culture of international scholarly publishing, which takes advantage of the
preceding developments by charging high prices to maximize profits; 4) deci-
isions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.
segregation with the same-sex partnering data from the 2010 U.S. census to cal-
culate segregation scores for the 100 metropolitan with the largest homosexual
populations. We show that there is a sizable amount of residential segregation
between these two groups. We also show that gay male households are more
segregated from heterosexual households than are lesbian households. And we
show that the level of segregation varies positively across the metropolitan areas
with the size of the gay male and lesbian population. Our research contributes
to the general literature on residential segregation by focusing on a non-racial
minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in
Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality
along gender, generation and geography. Magnitude and recent trends in in-
equality vary across regions and countries. Educational differences by genera-
tion indicate the speed of change in human capital formation over time and we
identify different patterns of educational transitions that are closely connected to
societal, educational and institutional contexts. We focus on pathways from female
disadvantage to gender equality and new forms of inequality. The closing of gen-
der gaps is typical mostly of developing countries, where recent gains in educa-
tion are often more pronounced for women compared to men, but are not always
sufficient to remove the limitation in access to education; whereas the issue of
male disadvantage especially in higher (i.e. post-secondary) education emerges in
developed countries of the North, as well as countries in Latin America, East and
South-East Asia. It must be emphasised that gender inequalities are an important
aspect of “over-education” for the future of potentially “over-educated” societies,
but are not always sufficient to address these problems.

We base our analyses on a unique global dataset on educational attainment --
comprising the reconstruction and projection of educational attainment from
1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

HIV, Dating and Mating: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration of Human Rights counts among its fundamen-
tals the right to marry and found a family (Article 16), it is often informal societal
discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS
deal with the stigma of their status from both external to and from within the gay
community. Often they are legally required to disclose their stigma prior to sexu-
al activity, in essence moving them directly to what Goffman (1963) calls discre-
ticed. Despite overwhelming evidence that sero-discordant couples can effectively
manage HIV transmission risk through safer sex practices, positive men must
negotiate their status in a dating landscape often characterized by stigmatizing
language that polarizes gay men in to “clean” or “dirty” states, the latter referring
to men who are HIV positive; in effect making their sexual history their calling
card. This paper begins with a critique of Goffman that offers an alternative for
those who are perceived to be inherently and irreparably discrected, and then
presents an analysis of a comparative sample of three hundred personal adver-
sesments across three differently populated American cities: large metropolitan,
medium urban, and rural. Extracted from the free and open website craigslist.
org, the advertisements are qualitatively analyzed for stigmatizing language such as
“clean only,” “drug and disease free (DDF),” and other text used to commu-
nicate sero-status. The paper concludes with a discussion of implications and
suggestions for researchers interested in studying inherently stigmatized groups.

Persistent School Segregation or Change Toward Inclusive
Education? The Convention on the Rights of People with Disabilities
and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UN-
CRPD) was ratified in Germany in 2009. Article 24 requires that nation-states im-
plement an inclusive education system. This ambitious goal poses great challeng-
for many of the institutionalized and special education systems can facilitate—or
hinder—inclusive education. Germany is one of the countries worldwide that, to
achieve the UNCRPD’s goals, must transform its highly segregated education sys-
tem. In fact, for decades Germany has maintained one of the most differentiated
and segregated education systems in Europe. Inclusive education contradicts not
only contemporary special education structures, but the entire highly-stratified
general education system, addressing a core conflict in German education policy.
The consequences of segregation, such as social assistance receipts over the life
of childhood course, are dramatic even if they have not often been calculated.

Thus, this neo-institutional analysis examines both the barriers and the re-
form mechanisms that impact the implementation of the UNCRPD in a decentral-
ized national context. German federalism guarantees the sixteen Bundesländer
authority over educational matters; however, ratified human rights conventions
demand fundamental reforms regardless of regional policymaking preferences
and priorities. Based on historical process-tracing and expert interviews (with pol-
icy-makers, administrators, scholars, and advocacy groups), we contrast “leader”
Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive educa-
tion has diffused broadly since the 1970s. In the southern state of Bavaria, im-
plementation is just beginning; indeed, the law’s intents are being subverted by
government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of
institutional persistence and change: power-based, legitimacy-based, utilitarian,
and functional. This analysis contributes to the theoretical literature on institu-
tional change and path dependence, to studies on the human rights revolution in
education (UNCRPD in particular), and to research on inclusive and special educa-
tion, long marginalized in the sociology of education.

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies. This paper analyses through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show how the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows that these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a Commons Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption. This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies for ensure its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logics. These experiences demonstrate the limits of technological innovation in moving towards a post-carbon society. Urgent changes in how socioeconomic activity is organized are also claimed.

PRANDNER, DIMITRI* (University of Salzburg, dimitri.prandner@sbg.ac.at)

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping narratives of their specific historic narratives of those specific nations.

Those narrative structures are figured and refigured to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press (“Die Presse” and “Der Standard”) did discuss potential futures in relation to internationa l terror from 2001 to 2011 and how those futures were continuously includ ed into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do they reference those figures built within a national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

PRATA, ANA* (California State University Northridge, ana.prata@csun.edu)

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamentar y members, and activists in both countries have inserted issues of gender equal ity and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political and social movements have inserted issues of gender equality an d women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it? Is the economic crisis affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

Residents’ Responses to the May 1-4 2010 Boston Water Contamination Incident

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, bottled water, bottled water, and bottled water. An in-person survey was conducted within the May 1-4 2010 Boston water contamination incident. Most residents received warnings from news media and peers and these warnings mentioned 2.3 of five recommended elements of a warning message—most commonly the threat and the recommended protective action. Consumption of untreated tap water declined, consumption of personally chlorinated water remained negligible, and consumption of bottled water and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This finding calls attention to the need to recognize that, although increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

Families Apart: Long-term Implications of Canada’s Live-in Caregiver Program for Filipino Migrant Workers and their Families

Canada’s Live-in Caregiver Program (LCP) is one of Canada’s largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global expansion in temporary foreign worker programs. The majority of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in care work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada’s top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came through the LCP. I report on research carried out in collaboration with the Philippine Women Centre of BC that documents the long-term effects of this program on Filipino families settling permanently in Canada, with a special focus on the challenges faced by Filipino youths reuniting with the mothers in Vancouver.

Testimonial Theatre, Transnational Debate and Filipino Labour Migration to Canada

I have for many years worked with the Philippine Women Centre of BC (PWC) to document the experiences of Filipina migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care and need into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to narrate their stories of life in Canada differently to their families in the Philippines. In November 2013 we presented the play at PETA Theatre in Manila in an effort to elicit a new domestic workers’ narrative of life in Canada. What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a parent is expected to work in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.

The Politics of Intergenerational Conflict: A Comparative Study of the UK and Japan

Internationally we are witnessing renewed conflict over political settlements and attempts to forge a new moral economy of welfare in economically straightened times. In some (but not all) advanced economies these disputes are crystallising around the concept of intergenerational equity with a noticeable re-positioning of older people as the selfish welfare generation. In this paper we consider the recent resurgence/emergence of discourses of intergenerational conflict in the politics of financing later life, especially pensions and social care, in the UK and Japan. In both countries there are calls in government and public life for a re-balancing of public expenditure in favour of youth, while age-divisive policies set the intellectual and political debate as a matter of intergenerational tension. Both are wealthy, advanced democracies, with old and ageing populations, facing prolonged austerity. Yet in many cultural, political and institutional respects they are quite different and have historically combined different modes of governing in the interests of social welfare. The UK emphasises free will, individualism and market solutions, whilst in Japan, the emphasis is on balancing free-market thinking with some sense of social responsibility and community, along with calls for reforms of existing collectivist policies, all in the context of strong traditions of intergenerational solidarity and filial piety. We consider how and why this policy prescriptive language has emerged in both countries, what purposes it is serving, and what the consequences might be for the distribution of resources in later life. We then assess analysis of each country in comparative perspective, highlighting factors that contribute to differences or features that transcend national boundaries. We conclude that publicly framing the allocation of financial resources as a matter of intergenerational conflict masks inequalities in the social distribution of resources within all age groups that arise with the increased marketisation of late life welfare.

You Are a Dark Person after All

In the 1960s I visited one of the first racially mixed primary schools in the Netherlands. Half of the 200 pupils were second generation Moluccan children, whose parents felt forced to leave their home country in 1951 in the aftermath of the decolonization of the Dutch East Indies. Some forty years later I recorded the lifestories of 35 of my former classmates. This paper will focus on the extent in which the native Dutch, as members of the ethnic majority, and the Moluccan-Dutch, who perceive themselves as second generation political exiles, identify with Dutch society. More specifically, it will analyse how their accounts tap into but also resist dominant discourses of race, ethnicity and culture. While the stories of the native Dutch contain a range of images of the ‘other’, from special or pitiful to unsettling or inferior, and often express concern about the ability or willingness of ‘foreigners’ to adapt to Dutch culture, the Moluccan accounts appear to be devoid of any imagery of immigrants as ‘other’, as well as any concern about cultural integration. On the other hand, while most native Dutch emphasised that they considered Moluccans to be part of ‘us’, the Moluccan accounts testified that, due to their different culture or outward appearance, they cannot but identify as ‘other’.

Being Active As a Route to Health and Happiness

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One of the consequences of recognising such a transition is that the health policies of rich nations have incorporated a concern to promote ‘healthy lifestyles’ and a personal sense of ‘wellbeing’ with the ultimate aim of reducing mortality and morbidity rates across the life-course. One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what ‘activity’ is and what might promote that. The data were collected in the course of researching the use and potential use of a linear park designed for an inner city area stretching across

to seek jobs in modern economic sectors. This type of arguments in popular music, which involves masculine identities, is often associated with hegemonic masculinity and intersects with other variables such as social status, race, and ethnicity. Musicians in this genre often present themselves as powerful and dominant figures in their daily lives, demonstrating the masculine traits they attribute to themselves. However, the research on transnational families of migrant men is still in its infancy, and the role of masculinity in this context requires further exploration.

To explore this issue, the paper draws on D'Aubeterre's (2001, p.32) observation that transnational Bolivian migrant men residing in the Brazilian capital Brasilia often negotiate their masculinities in a context of transnational family relations. The focus on migrant men, particularly in the research on transnational families, is crucial because of the multiplicity of factors that influence the experience of migration. These factors include economic pressures, political instability, and social marginalization in the country of origin, as well as the challenges of adjusting to a new cultural environment in the host country. Understanding the ways in which migrant men construct their masculinities in these contexts is essential to comprehending their experiences of migration and their interactions with their families.

The derived conclusion is that the multiplicity of factors behind the violence at each stage of history elucidates certain specific goals. These goals are achieved through the agency of the oppressor in each case, and it is clear that the Japanese faith being targeted. Thus, the continued repression of the Japanese Christians is seen to be a bias of political convenience rather than ideological conviction.

PROVERB, ROBERT* (The New School for Social Research, provr436@newschool.edu) Symbolic Freedoms: Physical and Structural Violence Toward Christianity Through Peace and Conflict Within Japan, 1549-1952

The history of Christianity in Japan has been fraught with tumult since the religion's formal arrival in the 16th century. In order to properly assess the degree to which structured and explicit violence against Christianity became permanent in the sociopolitical landscape of Japan since its introduction, this paper provides a theoretical examination of scholarly literature regarding several historical periods of note through a chronological “grand narrative” structure. It is necessary to take into account the political climate surrounding the repression of Christianity during each of the eras mentioned in this text. In Japan, if there indeed lies a pattern of immanent quality in the violence toward Christianity across these eras, then as Etienne Balibar states, we witness a “systematic use of violence to prevent collective movements of emancipation that aim at transforming the structures of domination.”

The evidence examined is therefore directed toward the question of violence toward Christians as an institution or a matter of political expediency immediate to each circumstance up to the end of the proscription in 1873, with additional considerations of the subsequent years until the postwar Allied Occupation.

The derived conclusion is that the multiplicity of factors behind the violence at each stage of history elucidates certain specific goals. These goals are achieved through the agency of the oppressor in each case, and it is clear that the Japanese faith being targeted. Thus, the continued repression of the Japanese Christians is seen to be a bias of political convenience rather than ideological conviction.

PROZOROVA, YULIA* (Russian Academy of Sciences, yulia.prozorova@gmail.com) “Intercivilizational Encounters” with the West and Modernizing Moves in Post-Soviet Russia: Civilizational Perspective

The present paper considers civilizational analysis as an appropriate theoretical framework for the study of transformations and modernization in the post-Soviet Russia. Unlike the conceptions of linear westernization, ‘transition’ or modernization theory and its variations (catch-up modernization, ‘convergence’, etc.) civilizational analysis and multiple modernities theory do not disregard in-depth understanding of cultural traditions, sociocultural settings, internal contradictions and historical background. The changes in contemporary Russia and the distinction of Russian modernity are mainly shaped by the post-Soviet encounter of the Russian society with its legacy of the “soviet project of modernity” (I. Arnason) and imperial traditions with Western modernity. The first post-Soviet decade was a period of the ultimate ‘transition’ to the western modernity and the domination of Westernism in political discourse. Acquired Western institutional models and cultural ideas (capitalist free-market economy and democratic policy with liberal ideology, to name few) have been originally interpreted and mutated while being assimilated into the Russian context. Following Arnason, the encounter between the West and the rest is seen as a global projection of the problematic that remains open to diverse alternative interpretations. To illuminate the outcomes and impact of the Western borrowings and reveal factors affecting their adaptation, the paper proposes to conceptualize contacts between the post-Soviet Russia and the West as “intercultural encounters” (B. Nelson and J. Arnason) with a focus on the interaction between different “civilizational complexes” (B. Nelson). The post-Soviet “encounters” induced changes in cultural orientations, interpretation of power,
institutional forms and design, patterns of reciprocities and “structures of consciousness” (liberal world-views, new concepts, rationales and logic of action, market rationality, individualism, etc.). These borrowings are considered with the regard to the peculiarities of the Russian civilizational complex (inclination toward the organization of political power in a centralized, authoritative manner, role of political and ideological/religious orthodoxy, distinct rationality, etc.).

PUISKEN, HENRIK* (Bielefeld University, henrik.puisken@uni-bielefeld.de)

Locus of Control and Cumulative (Dis-)Advantage in the Labor Market

The relationship between Locus of Control (LoC) and occupational outputs has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities lead to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of “Fixed-Effects-Models” I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

PUISKEN, HENRIK* (Bielefeld University, henrik.puisken@uni-bielefeld.de)

The Effect of Inequalities within Families on Work-Values of Adolescents

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents’ development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the paper investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social comparisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a “de-identification” is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 2000-2011. In the SOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of “Sibling-Fixed-Effects-Models” I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

Neoliberal Rationalities in Vocational Higher Education

The increasing function of universities as institutions for mass education might affect democracy and the universities’ contribution to society. Students as choice-agents need to be involved in these processes. This paper scrutinises how students’ practical considerations for future choices in education and occupations correspond to policy objectives of socially productive educational choices. These objectives currently follow neoliberal rationalities regarding how to divide the responsibilities between the state and its citizens. In this context, choice-agents have to learn to identify themselves as economic subjects able to cope with economic transformation.

The aim of our research is to examine the correspondence between educational policy objectives and students’ educational choices in practice. The research questions are: Are there aspects of externalization or externalization and motives reflect a (neo-)liberal instrumentality? Is there a resistance against such rationalities in students’ actual choice-strategies? This issue is empirically investigated via a semi-structured questionnaire (n=840) with students from 14 vocational Swedish Human Resource programmes in higher education. The case of higher education programmes was seen relevant, since weak professional university programmes tend to stimulate rationalities amongst students that ritualise the role of education in terms of its formal credentials. Vocational programs are also a significant growth sector in higher education, with large proportions of non-traditional students.

What is unclear, however, is whether these forms of education reinforce a desired policy ambition with regard to instrumental choices in education. These are policy rationalities that are questioned in the paper from a critical semantic approach indicating that the policies fundamentally rest on manipulative powers where human agency is forced into instrumental decision-making. The results of the study point to patterns where students resist instrumentality and integrate their decisions in education as reflexive and relative autonomous personal projects in relation to the recognized social powers of the labour market.

Interrelation Between Organizational Trust and Organizational Innovativeness from a Context Perspective

The paper explores the interrelation between organizational trust, which is defined as an attitude combined of affective and cognitive components (McAllister, 1995), and organizational innovativeness, an organizational capability to create new ideas, experiment and engage in creative processes and which is operationalized as a five-dimensional construct consisting of product, market, process, behaviour and strategy innovativeness (Wang and Ahmed, 2004). We study the interrelation from the perspective of innovation context and take Lithuania as a case of a low innovation context and Finland as a high innovation one according to the Global Innovation Index 2013. The research examines whether different components of organizational trust can result in different organizational capability to engage in creative and innovative processes.

The empirical data for this study were collected by means of a standardised electronic questionnaire from 3 organizations in Finland (n=719) in 2011, and so far 4 organizations in Lithuania where a survey is still carried on since 2012 (current n=536, survey to be completed December 2013). Based on preliminary findings of regressional analysis, the emotional component of organizational trust has a much more significant effect on organizational innovativeness than cognitive one. Its affect on the dimensions of behavioral, process and strategic innovativeness exceeds its impact on market and product innovativeness. These findings imply that creativity may be malpracticed in organizational setting and more self-focused rather than result-oriented.

The research findings will have theoretical implications concerning the role of emotion to organizational innovativeness, discussing the need for golden mean in practicing organizational trust. From a managerial perspective, potential risks arising from high organizational trust and certain dimensions of organizational innovativeness will be discussed considering the innovation context.

Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only Integrat-ed project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta, or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

New Alternative Masculinities Against Gender Violence

This paper presents a South's contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promotes a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM) and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Homes en Diáleg (Men in Dialogue), a men's organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2016), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different cultures. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state’s inherited industrial structure and ties to the world economy prior to 1990. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while the initial inherited ties to the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India

*Dr. P. Koteshwar

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in the post globalized era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequence the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means. India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society. However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system iniquity in higher education.

A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn’s production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers’ suffering from work pressure, anxieties and desperation at an unprecedented level.

PUN, NGAI* (Hong Kong Polytechnic University, punngai@gmail.com)

Communism Revisited: A Third World Perspective

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn’t succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it. Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn’t vanish but this didn’t put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an Idea of History. There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state. Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Capitalism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistece of a ruling-class political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction.

The picture that emerges may help to explain, within a constructivist theoretical framework, the Italian lack of engagement towards the “bandwagon” formed by countries that have managed to gain an advantage by the phenomena of globalization in terms of growth, competitiveness, development and democratization of decision-making processes of their political systems (by implementing, for example, inclusive decision-making practices supported by the use of new technologies of information and communication).

The aim of the contribution is therefore a general reflection on the political culture of the Italian political elites and its “weight” in shifting the impact of globalization from a potential added value for both national local and national development towards the actual practical loss of competitiveness of the whole system.
essay *The Gift*, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g. Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift and abstract.

Two Social Movements in China: Foreign Foes, Critiques of Tradition and Collective Commitments

The paper reports on a theoretical and historical research project comparing two contrasting social movements that shaped China's immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966-76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China's international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directly to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

A case study of Wuhan City about research on improvement strategies of the state-owned mining shantytowns under the guidance of ecological civilization construction

With the rapid development of China's urbanization, industrialization, expansion of urban population, housing becomes a growing problem, especially the growing problem of settlements decline. At present, our old settlements regeneration are mainly used in large-scale reconstruction of the tear down, and it has brought up housing prices, the differentiation of urban living space, the loss of urban form and urban culture and other issues. Under the impacts of the living environment development of the 21st century, the harmony of “Man and Nature” became the theme of urban development, which requires the city old settlements to provide a sustainable development of rehabilitation programs, the sustainable development concept of “Reconstruction – renewable urban settlements came into being, it is designed to improve the living environment, optimize the layout, and enhance the quality of the living, and inject new vitality to the healthy development of the city, while also promoting China's housing market in the context of rapid healthy urbanization and stable development, to build “eco-society”.

Through the study of the planning of Wuhan City and the state-owned mining shantytowns settlements regeneration from the planning and material transformation level, proposed to construct an ecological society proposed to try new ideas to improve the living space for vulnerable groups such as the shantytowns, and other cities.

New Religious and Nonreligious Organisations: Competition, Contest & Communalities

What are the communalities and differences between religious and nonreligious organisations? With ‘nonreligion’ I am referring to groups that are generally considered to be not religious but are nevertheless related to ‘religion’ in important ways. Obvious examples are atheist, rationalist, and secular humanist organisations. Despite their roots in the 19th century, their apparent growth in many parts of the world and their realignment in the contemporary world make them in many ways new forms of (nonreligious) organisations. My engagement with such groups will primarily draw on a long-term study of rationalist and atheist organizations in India (Quack 2012) as well as data from atheist groups in the Philippines and humanist associations in Sweden and Germany. These organisations try to spread an explicitly secular worldview, provide secular alternatives to religious life-cycle rituals, and stand in direct and indirect competition and contest with religious organisations in various ways. To analyse these relationships, I will critically engage with the ‘theory of religious and secular competition’ devel-
op ed by the sociologist Jörg Stolz (2009) to complement the ‘religious economies approach’ within secularization theory. Based on a relational approach to study ‘nonreligious’ groups and organizations (Quack 2014), I will further engage with the organisations’ struggles for various kinds of capital within institutional and field-related ‘logics’. On this basis, I discuss the ways in which nonreligious organisations can be situated within the ‘surroundings’ of a religious field, thereby complementing Bourdieusian studies of specific religious fields.

QUAH, SHARON* (National University of Singapore, sharon.quah@nus.edu.sg)

Reconfiguring Personal Communities in A ‘ Divorce Biography ’

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and policy discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral degradation and instead focuses on the ways in which individuals organise their family life and practices.

My research argues that divorce creates spaces, however fraught, for individuals to construct what I call ‘a divorce biography’. These spaces include the ways in which divorce copes with the crisis, organises one’s personal relationships and hopes plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choices, manage around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, when some methodological homogeneity can often be taken for granted, copes with the crisis, organises one’s personal relationships and hopes plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choices, manage around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

Understanding Patterns of Political Participation – Are National Borders Natural Borders?

Different modes of political participation are often seen as expressions of the loyalty to or discontent with the society that people live in. Institutionalized, formal participatory behaviors such as voting or petitioning are understood to signal compliance, support and trust for the political system, non-institutional behaviors such as boycotts or participation in demonstrations are understood to signal conflict and risks for social cohesion. Obviously, the likelihood that respondents report certain behaviors depends – besides respondent socio-demographic reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

Genre Et Vieillissement : L’expérience De Femmes aînées Immigrantes

Cette communication présente certains résultats d’une recherche qualitative menée auprès de 90 femmes aînées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les aînées immigrantes sont rarement traitées presque toujours dans des groupes relativement homogènes (femmes de même âge, liens avec les petits-enfants, impact de l’éloignement géographique) (ATTAS-Donfut, 2008; Phillipson, 2002; Treas et Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche visait à comprendre l’expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comme aînées dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise en général et en genre, nos montrerons que la trajectoire migratoire de ces femmes amène des changements et/ou des ajustements dans le sens qu’elles se font de leur place, à la fois dans la société et dans la famille, de même que dans leurs pratiques concrètes. Ainsi, chez certaines, la migration est un facteur de déstabilisation (isolement, repli sur soi, vulnérabilité) alors que pour d’autres, elle est un facteur de « libération » des pressions familiales et familiales vécues dans le pays d’origine, voire d’émancipation.

Regulation of Private Expenditures in Cross-National Perspective

Over the past decade, health spending in many developed countries has grown faster than gross domestic product, leading governments to search for alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on both population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater governmental regulation of the private insurance industry.

This paper will examine this hypothesis with the Health Insurance Access Database (HIAD), by demonstrating the variation over time, by health service and...
across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across 10 OECD countries (Australia, Canada, Denmark, Finland, France, Germany, Italy, the Netherlands, United Kingdom, and United States). These countries were selected to provide a range of variation (and thus to allow for contrasts) with regards to Esping-Andersen's Welfare Regime classification (liberal, social democratic, conservative). Contributing to the HIAD's type of health system (comprehensive, welfare-oriented, entrepreneurial) and the OECD's typology of the role of PHI within that system (primary, primary substitutive, supplementary, duplicative or complementary).

This research will inform and feed the current debate on the future of health care in developed countries and on the interplay between the public and private sectors in these changes.

Quality of Data Collected from a Vulnerable Population: Using the Calendar Method and Third-Party Help

In the field of social sciences, collecting extensive retrospective data such as life histories has been fraught with recall errors compromising the quality of the data. Collection of life histories gets even more challenging when it has to be done among vulnerable groups, such as poor households who are victims of involun-

tary displacement and resettlement due to disasters or infrastructure projects. Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The substantive focus of this study is to obtain "social capital" histories on the level of neighbourhood, households, and heads of households. In addition to the usual aided recall features the calendar procedure included the option to allow, in certain parts of the interview, the help of "third parties" in the recollection of the requested information. These "third parties" are either household members or friends of the respondent who also reside in the same community. Collaborative recall generally increases due to disasters or infrastructure projects. The Problematic of Gestión in the Soft Industry

The ponencia se orienta a dar respuesta, en base a un estudio de caso en la industria del software, a la pregunta ¿de qué manera las organizaciones, los gerentes y los trabajadores lidian con las tensiones relacionadas con la innovación? ¿La hipótesis es que dadas las características del trabajo en esta industria, que tiene como eje la innovación en conocimientos y con una fuerte autonomía de los trabajadores, su gestión no puede apoyarse solo en las estrategias de los empresarios o gerencias de RRHH, teniendo éstas que articularse con el componente humano. Estas nuevas modalidades de gestión por ende deben tener como eje central la construcción de relaciones sociales en la organización. Esto, en concreto, una fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad.

Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y artican tres dimensiones problemáticas: a) normativa: Supone dar cuenta de la construcción de normas internas desde una perspectiva amplia que considere tanto las normas formales como las informales, las reglas autónomas como las de control, las normas jurídicas como las de tipo ético. La dimensión es relevante en un mundo que parece poco estructurado en relación a otros sistemas productivos. b) performativa: Esta dimensión tiene relación con el concepto de eficiencia, de su construcción in situ. En ella cobra relevancia la distinción entre los conceptos de productividad, más acorde al mundo industrial, y el de performance, más acorde a la dinámica del sector. c) Cognitiva: Refiere a la reflexividad que emana de la concepción normativa y la dimensión performativa aportando una mirada dinámica de los procesos de gestión. Importa en esta dimensión la construcción social del conocimiento y las identidades construidas en torno al mismo.

QUINTANILLA, CARLOS* (Universidad Nacional Autónoma de México, carlquin@yahoo.com)

VILLARESPE, VERONICA (Universidad Nacional Autónoma de México)
Guidelines for the Creation of Laws and Intuitions in Order to Eradicate Poverty in Mexico

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty. The situation is the same in Mexico; we try to reuse some transcendental aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the rights that are set forth in the Constitution. What we would like to posit is that actions, both legal and institutional, are required in order resolving this problem: actions that take into account the economic/social context and that contribute to transform it.

Social Discourse about the King of Spain and Freedom of Speech. Pragmalinguistic Analysis of Slander

Discursos sobre el rey y libertad de expresión. Análisis lingüístico pragmático de la injuria

La monarquía sigue siendo hoy por hoy el primer gran tabú informativo en España. Pese a la libertad de expresión que garantiza la Constitución, el artículo 490 del Código Penal singulariza la figura del Rey con especial protección contra calumnias e injurias. No resulta difícil encontrar ejemplos de discursos públicos (tanto periodísticos como políticos), que han sido denunciados como injuriosos contra la Corona, siendo sus autores procesados y sentenciados, algunos con pena de prisión. Pero ¿qué es exactamente una injuria? Su valor semántico no es estable, y depende del contexto su determinación. La definición de diccionario no nos resuelve mucho en este sentido (según la RAE “agrávio, ultraje de obra o de palabra”, “hecho o dicho contra razón y justicia”, “daño o incomodidad que causa algo”, “delito o falta consistente en la imputación a alguien de un hecho o cualidad en menoscabo de su fama o estimación”). Y la interpretación jurídica no es única frente a los mismos hechos o dichos, como demuestra la existencia de sentencias categóricas que identificaban un discurso como injuria, posteriormente revocadas por errores tribunales de superior rango, con el consiguiente debate judicial en torno al valor del término.

Mediante el análisis del discurso de algunos casos importantes (como el caso Otegi y el caso Martínez-Ingés) podemos acercarnos al estudio de la injuria como hecho comunicativo y lingúistico. Un método pragmalinguístico que toma como base la teoría de la relevancia de Sperber y Wilson permitirá adentrarse en el proceso inferencial de interpretación de la injuria, con especial atención al contexto en el que se produce y se recibe.

Quintans Lopez, Rebeca*

Social Discourse about the King of Spain and Freedom of Speech. Pragmalinguistic Analysis of Slander

Discursos sobre el rey y libertad de expresión. Análisis lingüístico pragmático de la injuria

Por un lado una investigación sobre los distintos programas gubernamentales y sus efectos reales sobre los individuos y las comunidades.

Por lo contrario, hacia un análisis sobre el desvío de los mismos programas.

Por otro lado una investigación sobre la percepción dominante en México de la situación de la pobreza basado en los estudios realizados por C.K Prah- alad. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionando dignidad y empoderamiento a las familias de bajos recursos.

Este trabajo propone una metodología en tres fases:
Participation and Justice In Marine Governance

The theoretical discussion in this article is illustrated by drawing on empirical material from two case studies of marine nature reserves establishment in Sweden and a case study of ENGO participation in regional marine environmental governance platforms managing the Baltic Sea. Interviews with different actors address how procedural justice affects legitimacy of decisions made on the back of this processes. Furthermore, based on the material, unequal distribution of various resources affects the perceived balance of justice between actors in favor of more resourceful actors as participants and agenda setters. The findings show that actors' abilities to act upon opportunities given by society seems highly dependent on the actors' access to different kinds of resources/capacities. Weaker actors may risk getting ignored, neglected, manipulated or even abused.

Procedural Justice In Marine Nature Reserve Establishment

Participatory environmental governance is framed as contributing to the equity ambitions of sustainable development. The trend of formal delegation of power to decentralized institutions of various kinds has been extensive. It can be questioned, however, if these more pluralistic approaches can adequately deal with and balance uneven power relationships between stakeholders or if existing power relations are reproduced through these processes. As a result of pre-existing inequalities weaker actors may risk getting ignored, neglected, manipulated or even abused. Marine governance has also adopted these democratic ambitions, but empirical examination of practice has been severely neglected by the social science.

The “Age Complex” in Childhood Studies and the Limits of a Politics of Age

The present work discusses the significance of age as the cornerstone notion which has historically embodied studies of children and childhood. Naturalized as a handy indicator of change along the life cycle and inherently simple as a concept, age has, nevertheless, allowed for scarce questionning concerning its own epistemological conditions of possibility. For instance, can age de-/re-construct the evolutionary temporality in which it was initially conceived? How can age divisions and differences be re-construed in view of emancipatory ideals of children? Hasn't age contributed to an under-socialized notion of children? Modern childhood owes its origins to the emergent historical importance given to human differentiation along the life course, a principle which came to preside over the formation of organisms, individuals and societies. Chronological age became the index which testified to socially and biologically relevant changes against the backdrop of an individual's identity. How human differentials along the life course should be signified, predicted and legitimated became an accomplishment of age taxonomies or life stages. Studies of childhood emerging in the second half of the twentieth century, like sociology and anthropology, problematized the contextually unbound nature of age changes and its reifying effects on human subjectivities. Did these dispositions that were tapped by age were brought to converge, although age, as an explanatory concept, was not entirely overcome lurking beneath the constructionist efforts to understand childhood and children. Age constitutes, then, a "complex" given its overall adherence to modern as well as contemporary perspectives of childhood studies. Problematizing age points in the direction of inquiring about the nature of the disputes and conflicts of age-related social groups and the limits of such a politics of age.

Ambiguous Collectives - Creative Workers and Their Integration in Urban Space

Looking at people working in the areas of arts, design, architecture, fashion, multimedia, communication and consulting, it is hardly possible to identify a more or less homogeneous "creative class" (Florida 2002) that would contribute to the competitive advantage of urban regions by producing cultural values apt to create a distinct identity in the global competition. From our point of view, they rather form ambiguous collectives that are continuously reconfigured by the transformation of urban space.

Marazzi (1997) argues, the organisation of cooperation in post-Fordist labour organisation passes from wage form to space form. Creative workers have a peculiar function within this process, because they help to transform urban space into a source for economic production and organisation. They do so by assigning symbolic value to cultural peculiarities of quarters, by exploring the limits between private and public space, between working time and leisure time, between economic interests and cultural values. Creative workers enact the game of exploring these limits as essential part of their professional and cultural identity. Yet, as stated, this form of "identity" is ambiguous, since it indeed may function as a driver for gains in social distinction, for accumulating cultural and social capital (Bowdieu 1997), but distorts and veils real differences in income and social security.

We will refer to two phenomena regarding creative workers’ use of spaces: 1) the founding of common spaces like office communities and 2) the organisation of protests against the structures of the social insurance system. This enables us to show a general picture of minimal assistance from the state and a reliance on extended families to take care of individuals. Although there are indications of social security mechanisms in African countries including pensions and family allowances, these may be partly or solely carried by the private sector. However, the current democratically elected South African government developed a multitude of policies and acts in place to support people at risk (e.g. poor or abused people), but these target individuals. In the draft White Paper families at risk are identified, but policy makers are unclear on how to match support to such families with the realities. The Latin American family policy examples, such as Progres Arco Solidario (implemented from 2002 in Chile), did not find support with the South African government. This lack of support for these types of policies is not entirely clear but the principle of expected counter performance (such as progressing in school) did not seem to find favour. Instead, idealised notions of nuclear families are put forward in the draft White Paper but here alternative policy directions will be suggested.
to address the question if the need for collective organisation is necessarily sub-
ordinated to the capitalisation of cultural production via the valorisation of city
quarters in terms of real estate prices, or if shared spaces are an opportunity for
enhancing participation in the shaping of urban environments.

"Serious Leisure": Film Festivals As Techno-Audiovisual Capital
Author: Rosario Radakovich

Film festivals are considered as part of a "serious leisure" for the audiences. Most of them are considered as a "distinct" cultural activity, also an specific "tech-
no-audiodvisual" or "techno-cultural" capital (O’Keefe: 2009). Film festivals give au-
dience the opportunity to be part of an specialized knowledge, a creative and
innovative environment—with film-makers, cultural journalists, etc., be included
in premiers, and be part of the atmosphere of contemporary global culture.
(Singer, 2001).

As a result, audiences expect festivals provide a certain "quality guarantee" in
order to show to the friends and family the value of this prestigious activity. Ac-
cording to De Valck (2006) festival audiences use the experience as evidence of
cultural capital in conversations between friends and family. In this context, what
are the forms of "serious leisure" associated to audiovisual cultural capital?

This paper will analyze the case of the International Film Festival in Montevideo
organized by Cinemateca Uruguay, in order to explore the consumption of film
festivals as a “serious leisure” in Uruguay. The methodology includes personal
interviews and focus group study with film festival “selected” audiences. The re-
sults are part of a research about uruguyan audience cinema, developed in the
Information and Communication Development Program in the Universidad de
la Republica (PRODUCT IDEAL), with an interdisiplinary research team between

RADFORD, LORRAINE* (University of Central Lancashire,
lradford@uclan.ac.uk)

Domestic Violence, Coercive Control and ‘Riskym Parenting’

This paper will consider the concept of risk in relation to parenting in the con-
text of domestic violence. Since the ‘discovery’ of violence in families in the nine-
teenth century and the ‘re-discovery’ associated with the birth of second wave
feminism in the 1960s, definitions of ‘violence’ and ‘child abuse’ have expanded
in high income nations. In the UK the official definition of domestic violence has
been changed to include the concept of ‘coercive and controlling behaviour’ de-
finied as ‘an act or a pattern of acts of assault, threats, humiliation and intimidation
or other abuse that is used to harm, punish, or frighten their victim’ and ‘a range of
acts designed to make a person subordinate and/or dependent by isolating them from
sources of support, exploiting their resources and capacities for personal gain, depriv-
ing them of the means needed for independence, resistance and escape and regulating
their everyday behaviour’. In this paper, Stark’s (2005) concept of coercive control
will be applied to fathering in the context of domestic violence. Child care after
separation or divorce has become a gendered political issue. The implications of
applying the concept of coercive control to fathering for equality, safety and
justice in managing violence and risk in post separation relationships between
parents and children will be discussed.

The Victimisation of Childhood – Understanding Children and Violence

The media and campaigning organisations have influenced public perceptions of
violence and young people by focusing on rare and sensationalist events such as
homicides, extreme cases of child abuse and young people orchestrating riots
from smart phones in inner city areas. Representations of children and young
people as either ‘victims’ or ‘villains’ has consequences for their wellbeing – their
experiences of violence are misrepresented and over simplified, fragmented ac-
counts of the causes and consequences hinder progress in policy and practice.
Taking a feminist approach to the sociology of childhood and drawing on recent
research findings, this paper will consider what is helpful to know about the risks of
abuse, neglect and violence when working with children and young people.

Key questions addressed will be:
- What is known about the prevalence and impact of abuse, neglect and violence
  in the lives of children and young people today?
- What are the gender and age related risks? Who does what, to whom? What are
  the risks to children and young people at different ages from different perpetra-
tors? How much abuse and violence is committed by children and young people?
- Is the world a more dangerous place where children experience more violence
  and commit more violent crime than ever before?
- Are adults fears about and responses to child abuse and children’s violence part
  of the problem?

What are the challenges and opportunities we face in putting children’s experi-
ences of abuse, neglect and violence and their rights and agency at the centre of
thinking and practice?

How Many Similarities and How Many Differences? the Nature of
National Identity in a United Europe

At the beginning of XXI century Europe is subject to the internal integration
on a scale having no historical precedent. In the widespread opinion the very im-
portant factors facilitating the process of integration should be sought in a histor-
ical-cultural reality of a kind of common European identity as well as in a redefi-
nition of the concept of national interest. Therefore, several interesting questions
may get our attention: To what extent the countries forming the European com-
nunity differ, and to what extent are similar in so called national attitudes? What
is the nature of European patriotism and a sense of national identity? Are there
any divisions here? If so, what is their nature? The author tries to answer these
questions by analyzing data from two studies on “National Identity” (1995 and
2003) conducted within the International Social Survey Programme. Description
and classification of the European countries on different dimensions of national
attitudes leads to the conclusion that Europe is divided into two fundamentally
different national-cultural clusters. Their original results from a huge disparity in
the level of collective self-esteem, which is an expression of civic pride in a quality
of liberal-democratic state in various aspects of its functioning. It also turns out
that the basic division corresponds almost perfectly to the “cultural shift” on a
dimension defined by R. Inglehart as survival vs. self-expression culture. What
is important and not so obvious, the other central dimension of cultural values,
defined as tradition vs. secularization-rationalism, in no way contributes to expla-
nation of the nature of two basic national-cultural European clusters.

The Impact of the Great Recession on Educational Expectations:
Cross-National Trends in Social and Cognitive Inequalities

Does the Great Recession impact inequality of educational outcomes? Although
contributions on the effects of the global crisis on a number of social aspects have
started to emerge (e.g., Grusky et al., 2011), little is known about to what extent
inequality of educational attainment is affected by macro level trends such as changes
in the economic cycle or in unemployment rates. This paper aims to elucidate the
interplay of family background, educational expectations (conditional on cogni-
tive skills) and the economic context. Our main research question is, hence: has
the impact of family background on offspring’s educational outcomes become
stronger because of lackluster economic growth?

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Using pooled data from TIMSS 2003, 2007 and 2011 – an international survey project of competences among 8th grade students– we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variations in the context conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining the data, we take a look into the future of educational inequalities. Our results confirm the existence of systematic cross-country regularities and suggest that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamic, sometimes even ambiguous, conceptualization of CSR stems from its socially constructed nature which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper trains the spotlight on the business side of the discourse on CSR. The paper shows how Philippine companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The paper looked at thematic changes in Philippine business CSR discourse from the 1970s to the present and found an increasingly explicit presentation of a business case for CSR over the past four decades.

Reported Premarital Sex: Explaining India’s Gender Divide

The popular media tell us that the Indian premarital sex rates have risen sharply in recent decades. On closer examination, these reports appear to misrepresent the data. Local surveys have been portrayed as national. Research on one age cohort has been reported as if it covered multiple decades. The only multi-decade national survey to ask detailed sexual history questions is National Family Health Survey (NFHS, 2006b). Confining the analysis to sexual and marital history of men and women at the age of 24, it is possible to draw appropriately comparable samples of respondents from this survey representing different age cohorts based on year of birth. This shows no clear increase in the level of reported female premarital sex over time. For male respondents the rate rose from a low of 2.45% for those born in the period 1962-66 to a high of 6.98% for those born in 1977-81. The discussion below suggests some social forces that may have reduced the level of female premarital sex, but these do not explain why the reported rates are not symmetrical between men and women.

Challenges of a Global Sociology: Centers and Peripheries in the Geo-politics of Sociological Theory

Debate about the possibility of building a global sociology has gained increasing importance in recent years. In dialogue with works that argue in favor of post-national sociologies as well as literature that criticizes the hegemony of the theoretical center, we take a look into the idea of global sociology. The main sustained theoretical hypothesis is that the national experiences must be understood as bearing the potential of making important contributions to stimulate the theoretical discussion about sociological theories and concepts formulated in the centers. By mobilizing some sociological concepts such as public sphere and right to the city, originally formulated in centers, we suggest that peripheral sociologies could contribute to broaden theoretical formulations. In this sense, the theoretical construction of sociological theory must involve an equal dialogue between sociologists from the center and the periphery in order to construct a global sociology.

Deviance and Camouflage City: Sexual Deviance and The Construction Of Invisible Urban Spaces In Post-Revolutionary Tehran

This study is an attempt to expand on the relationship between sexual deviance and urban space in the context of post-revolutionary Iranian society. It focuses on Tehran, a major metropolis where gender segregation and heterosexual norms in the form of family institution appear to dominate societal norms. But this study instead offers an ethnographic account on various “sexual deviant” practices including homosexuality, transvestic fetishism, sadism, and necrophilia in diverse city spaces to shed light on a hidden world in post-revolutionary Iranian urban life. The notion of “camouflage city” underscores the complex relationship between embodiment and city space and argues how behaviors deemed “sexual deviance” in Tehran continue to undergo illumination for concealment through heterosexual normative practices sanctioned by the Islamist normative discourses and practices. The study specifically looks at transsexual practices both in terms of everyday and institutional life in the context of changing state official and public perceptions of sexual deviancy. It also looks at how such practices tend to resemble a peculiar culture of a distinct urban space where everyday sensibilities become fused with ways sexual deviance is practiced and made (in)visible in shifting daily/nightly life situations. In the final section, the study theoretically examines deviancy as performative act which is always spatial practice and that it involves a de-labeling process to destabilize the societal norms whose infractions constitute sexual deviancy.

Mobile Media, Digital Divide and Social Movements: The Case Of Iran

This study attempts to offer a theoretical interpretation of the political and social dynamic of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of texting, photographing and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimagine the public in affectively contentious ways. Yet the emotive is not “irrational,” but a distinct mode of being present in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. The mobile media practices, along with its close connection with the official order of state surveillance. However they do so in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances. Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant household. These two-way surveys are complemented by participant observations and focus group discussions.

Institutional Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasepuhan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (Company/ concession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutional causes clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasepuhan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

Cluster Dependency,Social Capital and Social Innovation : Insights from the Engineering and Plastic Clusters in Chennai, South India

In most developing countries a focus on the development of MSME or Micro,Small and Medium enterprises is evident. Operationalising this goal in the Indian context a conscious planning has been adopted not only to strengthen existing enterprises, but also to create 'clusters' of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters -the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters -engineering and plastic and in and around the city of Chennai,south India. The city however is well known for its automobile clusters. Significantly different in size, technology used and labour utilised, these 'clusters' have 'innovative practices to mobilise labour, access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nevertheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of the environment where they are located. As most of their labour is unskilled 'social capital' in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on insights obtained from a sample survey of these clusters. Questions raised include How do they ensure continuity of labour? How do they access capital and technology? How do they sustain production and marketing? Essentially the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlight the innovative practices at the workplace in a developing country like India in the context of MSME.

The Poverty in the Midst of Plenty: The Case of Fisher People

The urban poverty being widely discussed among the discourse on urbanization and poverty, the present paper attempt to shed light on the pockets of poverty in the urban area with specific reference to coastal belt and among fisher people. The fisher people living along the coastal belt are subject to all urban poverty problems notably of housing, water and sanitation, health and education. Their living environment is of poor quality and social security measures unsatisfactory. This is in spite of facts that they live in permanent settlement regions i.e. the coastal area is a skilled labour in marine fishery defying the general conviction that urban poverty has direct linkages to migration and unskilled labour. The paper is based on the data from the census of households in the coastal wards of Thiruvananthapuram Corporation, urban local body in Kerala. The fisher people dwell in the coastal belt are generally backward in terms of basic amenities and socio-economic conditions. The coastal belt of urban area is also not an exception. This paper highlights backwardness of fisher people in the survey area in education, health, basic living amenities like water, electric power, and clean living environment. Does the Corporation need to usher in more inclusive programmes, efficient management, and delivery mechanisms? Do Policy makers and implementing personnel be sensitized for fair and judicious practices? These are some of the pertinent questions addressed in this paper.

Re-Establishing the Nexus Between Sustainable Development and Disaster Risk Management: Exploring the Scope and Challenges in Stakeholder Participation

The stakeholders involved in sustainable development are also involved in risk and disaster related activities. Disaster situations bring together multiple stakeholders. This is one of the complexities of disaster response and management in general in which many actors ranging from public to private come into play. Governmental agencies create new roles to respond to disaster needs. Similarly,
non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organizing relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved.

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and disaster response programs. Given the process of repeated learning after disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states place on issues of vulnerability. It is therefore important to address issues of development during disaster re-construction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

Economic Globalization and Feminization of Labour: The Case of Domestic Servants in India

This paper discusses the consequences of economic globalization for women in India. It analyzes the neoliberal policy frame from a gender perspective to bring out the impact of economic globalization on the women's labor. Economic globalization has generated sources of livelihood and opened up new vistas of opportunities for women in the labor market. Regulations based on the neo-liberal ideology have negative impacts on women such as feminization of labor as well as poverty, low-income, exploitation and health hazards. In India, the number of women has increased most in labor-intensive, informal and unorganized and casual job sectors, besides the huge number of those educated women who are working at low level IT jobs. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle class families have shifted their burden of home management on to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female labour of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex, the lack of education, employment and economic opportunities and inequitable inheritance laws, the cultural and gender norms restricting women's sexuality and prevent them from availing themselves of information on sexual and reproductive health and unwillingness of government to publicly discuss the empowerment of women in gender relations and sexual practices. The negative impacts of neo-liberal economic policies have often failed the large segment constituted by the women in India. There is therefore the need to institutionalize regulations and structures of power in social relations and sexuality practices in a patriarchal and historically male-dominated society of multiple hierarchies like India.

Examining Child Mobility and Transport: Challenges for Theory and Practice

The paper provides an outline of the ways in which general theoretical concerns in the Sociology of Childhood relate to child mobility and transport. This paper raises issues of knowledge and insights that the findings can offer transport experts and decision makers. The argument proposed here is that the study of children and childhood is incomplete unless mobility and transport issues are located in an understanding of the complexities and varying realities of children's everyday life. The paper (1) examines children's social representation, including policies within South Africa's transport and interventions, and (2) the extent to which these frameworks incorporate national data on children's daily transport and mobility activity patterns. This paper also contributes to the growing scholarship on the social perspectives on child mobility. This emergent field has occurred alongside the child rights movement and shifts towards evidence-based policy developments and practice interventions. Consequently, contemporary mobility and transport discourses promote the idea of transport as a public good and human right and this implies that all citizens' interests and needs are of equal importance. Yet, within the sector there is still a bias towards studying the impact of child mobility on adults' mobility, their daily lives and schedules with children's voices, experiences and needs remaining obscured. This empirical marginality and invisibility fuels knowledge gaps and generates a passive, univocal and constrained view of children. It certainly impedes the development of child-centred and participatory transport policies and interventions.

International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 after arriving with his Holiness, the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore.

After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their Union city education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces. They are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are a very religious group but their religion is facing a competition from western influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

This study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to new social spaces. The paper tries to examine the gendered changes.

Gender Segregation in Hospitality Sector – Extent and Consequences

Hospitality is one industry in which women are preferred and are found in large numbers. However, allocation of responsibilities among women in hospitality organisations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process. And disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender-based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be monopolized by their male counterparts. It is the women staffs who are made to face and absorb the idiosyncrasies of the clients, who are mainly strangers, requiring them to work under stress, strain and risk. The findings further indicate that the extent of segregation appears to vary significantly with the size and sector of the establishment and the negative implications of such segregation appear to be more marked in smaller private establishments.

Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin

There has been an unprecedented increase in opportunities for migration form India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethno-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of culture conflict, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women's support networks to address issues of gender based violence.
The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

The «Italian Paradox» in the High-Tech Industries

There is an “Italian Paradox” in the development of the high-tech industries. As it is well known, Italy is under-specialised in the high tech industries and, during the last decade, has recorded disappointing performances in these sectors. In particular, the innovative capacity of Italian firms is quite low. 1) Patenting is below the European average: 7.4 patents per million of inhabitants in Italy vs 19.6 per million of inhabitants in the EU. 2) Furthermore, despite being the fourth largest economy in the EU in terms of GDP, Italy is only sixth for high-tech applications to the European Patent Office. However, Italy has a potential in these industries, which has not been fully exploited yet. In fact, it ranks third amongst European countries for the number of high tech firms and for added value. Moreover, the percentage of employment in high-tech and medium high-tech sectors on the total of workforce (8.1%) is similar to the European Union average.

On the basis of this data, how can the Italian Paradox be explained? I will try to answer this question focusing on two aspects of the “Italian case”: 1) the weakness of its National System of innovation and 2) the territorial unbalances of its economic development. In fact, according to the 2013 European Innovation Scoreboard – which gives a comparative assessment of the strength of EU27 Member States’ innovation systems – Italy ranks only nineteenth in Europe in terms of innovative capacity. Furthermore, Italy is characterized by a high degree of internal diversity. So national averages do not render the internal complexity and divergent capacity. Furthermore, Italy is characterized by a high degree of internal diversity. So national averages do not render the internal complexity and divergent capacity.

Social Changes and Social Responsibility

Responsabilidad social y su impacto en la sociedad

Como bien se conoce la responsabilidad social es un modelo de gestión que está siendo aplicado por las empresas y organizaciones a nivel mundial. En este proceso de incorporación de políticas, acciones y estrategias de responsabilidad social en organizaciones de tipo público, privado y del tercer sector es preciso entender el cambio que estas acciones ocasionan no sólo en la propia empresa, sino también en la sociedad y en particular en sus grupos de interés o stakeholders.

Para poder explicar las variables de impacto, presentaremos el caso de estudio realizado en el contexto peruano. Para esto presentaremos resultados de la investigación desarrollada para el IDIC de la Universidad de Lima, sobre los casos de tres organizaciones que tienen presencia en el Perú, como son: BBVA- Continental, Petróperu y Caritas del Perú.

Capitalism World System, Clash of Civilizations or Violence Civilizing in Contemporary World

Luego de la caída del muro de Berlín y la profetización del fin de la ideología y el último hombre el mundo contemporáneo ha estado lejos del unanimismo pro-puesto por Francis Fukuyama, la explosión de manifestaciones sociales en casi todos los aspectos de la experiencia humana no ha dado espera, movimientos sociales que van desde las clásicas reivindicaciones de clase y soberanía nacio-nal, hasta movimientos por la diferencia, el género y la identidad, pasando por movimientos ambientalistas y animalistas, son parte de un abanico de manifesta-ciones que no han obedecido el advenimiento de la sociedad liberal mundial. Esta explosión de manifestaciones no ha estado ausente de grandes procesos de violencia a nivel mundial e intervención militar en distintos países del planeta, Irak, Afganistán, Libia, Siria son algunos de los ejemplos más significativos de los complejos procesos surgidos con el “fin de las ideologías”. Las perspectivas teóricas en la comprensión de estos fenómenos son sugerentes especialmente las surgidas desde perspectivas económicas como la marxista, con el análisis de capitalismo de I. Wallerstein y el culturalismo de Samuel Huntington y las propuestas de-coloniales de múltiples intelectuales del sur global. Esta ponen-cia busca plantear el debate sobre la “naturaleza” civilizatoria de estos conflictos, pero a diferencia de Samuel Huntington, y en coherencia crítica con Wallerstein y el Giro decolonial desea plantear que de lo que se trata es de un proceso de ex-pansión civilizatorio, que a diferencia de Huntington y su culex contemporáneo de civilizaciones, este inició hace cinco siglos en América y se ha expandido por el resto del mundo, India, China, Japón, medio oriente hasta nuestros días.

**Microcredit and Poverty Alleviation In The Mexico Contemporary**

Microcredit as strategy for poverty alleviation grows stronger in the last de-cades of the twentieth century, from successful experiences in different parts of the world, both in developing countries and the developed; numerous studies be-ginning to emerge about microcredit; however these studies are mostly empirical. Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in over-coming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, addition, it creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the govern-ments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called “Opciones Productivas”, which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary Mexico.

Trust Under Conditions of Extreme Risk: Exploring Trust Networks of Clandestine Activities

Trust is important in all types of social relations, but its role is crucial in secret activities of clandestine organizations operating under conditions of extreme risk. The paper explores the sources of trust in secret activities of underground publications (so called samizdat) of Soviet Lithuania. Samizdat was one of the most persecuted means of oppositional activity in post-Stalinist Soviet Union. Therefore, building a network of samizdat publication and distribution required extremely high level of trust among collaborators.

What are the sources of trust in a situation when a correct judgement on trustworthiness of a person is a question of life-and-death? Using social network analysis, the paper explores the trust networks of several samizdat publications in Soviet Lithuania, including the most successful underground publication in the Soviet Union, The Chronicle of the Catholic Church of Lithuania which was continuously published from 1972 until the breakdown of the regime in 1989. The data is drawn from face-to-face interviews with the main publishers of the selected publications. The results of the research refute the claim of the theory of secret societies that to solve the problem of trust clandestine networks are built in pre-existing strong ties among collaborators.

The Impact Of Cultural Capital On Students’ Performances In Brazil

The main goal of this study is to verify the effect of cultural capital on students’ performances through an official test applied by the Brazilian government (Prova Brasil), the students are part of the Brazilian Elementary to High School Evaluation System (SAEB). The data set used is from the year of 2003 and involves 52,434 students. Standard test performances in the SAEB test in the fields of mathematics and Portuguese. Along with the test a questionnaire is applied to identify students’ demographic characteristics as well as their families’ profile. The research question is: what is the impact of cultural capital on students’ performances in school test controlling for their demographic characteristics and relations with other students and their teachers? The theoretical background is based on James Coleman (1997), Pierre Bourdieu (1982, 1998) and Basil Bernstein (1997). Among Brazilian scholars the study includes the ideas of Nelson Silva and Carlos Hasenbalg (2000) and Maria Lígia Barbosa (2009). The study model has as the dependent variable the students’ grades in the SAEB test and the cultural capital as the main independent variable along with the control variables. Descriptive analyses are used as well as regression models to obtain the effect of the independent variables on the dependent variable. The preliminary and main results show that there is significant association between levels of cultural capital and students’ performances in the SAEB test. Specifically, there is a significant and positive correlation between parents’ education, ownership of computer, access to the internet and newspaper reading with the performances in the SAEB test.

RC08-157.3

The most significant sociologists in Chile, in the academic field and the public sphere, have been makers of narrative accounts or stories about the reality of the country and its process of transformation which have served as guidance for social actors. Such sociological stories have helped to constitute the socio-political world and the processes occurring in it: structural transformations under Popular Unity Government (1970-1973), resistance and criticism under the military dictatorship (1973-1989), transition to democracy (late 1980s, early 1990s), etc. They have played a performative role, actively becoming part of the reality they describe. This is not merely the result of the force of ideas, but is rather a product of complex networks producing such narrative accounts, in which the authors are prominent nodes that manage to become obligatory passage point. The research examines three remarkable sociologists who have contrasting trajectories, orientational and institutional links applied with marxist critical orientation, connected to left political parties; Pedro Morandé, in the Catholic intellectual tradition, connected with the Catholic Church; and Eugenio Tironi, in a Durkheimian tradition, with participation in the State. With regard to them and in reference to the period 1970-2013 three main matters are analyzed: (1) key axes of their
sociological accounts; (2) characteristics of their networks of connections that encourage and enable their work, and then contribute to its dissemination; and (3) features that give performative strength to their narratives. The study is based on works written by these authors and others, and interviews with the authors themselves and other members of the network of production and dissemination. The analysis considers relations between local and global production of knowledge and discuss approaches such as those who assert the existence of epistemic dependency and epistemological obstacles for the production of knowledge in peripheral or semiperipheral countries.

Uncontested Science and Boundary Work: The Conceptualization and Measurement of Poverty in Chile (1987-2013)

This paper addresses the social scientific construction of the poverty in Chile, whose measurement is coordinated from the State, being of great relevance for the design of social policies and programs, and to monitor government action. The currently applied theoretical and methodological construction remained uncontested from 1987 to 2012. Despite that long period in which the measurement was a tightly sealed black box, there were many aspects that could have been questioned, in particular the conceptual and political and economic meaning and the controversy took place regarding this process. As a result, the Chilean government appointed a committee with the task of making changes in it. A first goal of the presentation is to study the factors that led to that great stability of the instrument, in spite of significant socioeconomic changes that long ago made changes advisable. Special attention is given to: (1) the origins of the measurement, in which the Economic Commission for Latin America (ECLAC) participates in an outstanding way and transferred a methodology developed for the whole region of Latin America; (2) the boundary work done by experts involved in the measurement; (3) the calculation of this epistemic construction between academic centers, state institutions and the public sphere, all of which strengthen its character of reality and hinder its questioning. A second objective is to analyze how the 2012 controversy was generated and developed. Attention is given to the intertwining of political and scientific concerns and to the rhetorical handlings associated to the boundary work done by rival factions. A third objective is to analyze the outcome of the controversy, in which the scientific demarcation is still used to hide political dilemmas and complex normative choices. The study gathers information through interviews and document reviews, and by following key players in their participation in the controversy.

Gender Inequality in Higher Education: A Study of Girl Students of Conventional Courses in Nasik, India

Keywords: Gender inequality, Higher education, Girl students, Nasik India

Gender discrimination in developing world is a crucial reality. In modern times women are performing exceptionally well in different spheres of activities. The problem of gender inequality still prevails in all spheres of life. Though Indian constitution has granted equality to women in principle, in reality majority of Indian women are facing the problem of inequality and discrimination.

The paper tries to focus on gender discrimination in higher education in India where the situation is paradoxical. On the one hand girl students are performing very well in all faculties of education, many of them are topping the merit lists, the percentage of passing is more than the boys, but at the same time according to 2011 Indian census, 35% women are illiterate. Out of the remaining 65% literate women the percentage of higher education is very low. Again there are educational disparities on the ground of rural-urban, poor-rich, higher-lower caste etc. Government has provided various facilities and concessions to facilitate education to women and decrease the disparities.

The paper tries to highlight the challenges in education before the girl students of the Department of Sociology, their ambitions, career choice and hurdles in their education, their experience about gender discrimination in the family, family background, use of facilities or concessions given by the government, etc. The data is collected by the primary techniques like questionnaire and interview. The study will be limited to the students of conventional courses. It will be conducted in one of the leading women’s college in Nasik city.

Abstract

As god is a creator of flora and fauna, a woman is a creator of family which leads to society and Nation. The Indian society considered women as weaker sex. Such sociological and cultural traditions have kept women dormant for quite a long time. Despite of all hurdles Indian women stand tall from the rest of the crowd and are Appalachian for their achievements in their respective field. The aim of this study is to discuss the issues regarding women entrepreneurship in Kanpur. Different stakeholders are playing pivotal role in women’s economic development. This paper is mostly based on Primary, secondary data and some observations and as when required. The paper talks about the status of women entrepreneurs and their competitive skills in world of business environment. Skill, knowledge and adaptability (SKAs) in business are the main reasons for women to emerge into business ventures. The paper also focuses on the problems in front of women during setting up a business enterprise and running in the competitive world. Some issues related to lack of financial support, availability of resources as well as support of stake holder etc. are major barrier in development of women entrepreneurs in India. It will also suggest the way of eliminating and reducing hurdles of the women entrepreneurship development in context of Kanpur.

Improvisation Of Destination Awareness Through Festivals and Events: Special Reference To India

As travelers become more sophisticated, destinations need to become more originitive in capturing those tourists. A potential tourist destination needs to create a brand image to compete in the global tourism marketplace. India, a land of vast cultural and regional diversities, has multi-faceted festivals. One can immediately draw a long list of religious festivals associated with various gods and goddesses, regions and traditions like holi, diwali, christmas, id (ul-fitr; ul-zuha), GurPurab, etc. The study focuses to examine the awareness of Indian festivals and their intent to travel. However, here the purpose is not to discuss the common religious festivals. It is an initiative to scrutinize upon only those festivals which are the main centers of tourist attraction. This study based upon several theories as theory of Reasoned Action, Theory of Planned Behavior, and marketing theories related to Awareness – Interest – Desire – Action (AIDA) sequence. The research is positivistic, quantitative research paradigm in which consumer behavior approaches prevail. The study postulates there is significant relationship between promotions of festivals, events and awareness of destinations. The study reveals some promotional aspects which may help in transforming the attitude of tourist towards festivals and events in India.

Globalisation and Indian Media: Certain Policy Implications

Media conglomerates and media corporatisation are phenomenon which have been studied by a number of scholars. The process of liberalisation, deregulation, globalisation and digitisation have transformed the media landscape. In India there has been a proliferation in the type of media. Simultaneously there has been growth in the quantity and quality of media content available for consumption. Like in other industries even in the media industry globalisation and diversification work hand in hand. Deregulation and convergence have also furthered affected the media industry. In the television industry there is segmentation and concentration of content. Programmes like “Who wants to be a millionaire” are adapted to the Indian scenario. Global content is transformed into local content by involving local actors. Internet is also fast becoming a segment of multi-media business. There has been a rise in the new form of communication known as mass-self communication (Manuel Castells). It is mass communication because it reaches potentially a global audience. It is self communication because individual...
The paper seeks to address health care, early marriage practice, reproductive health status, awareness about small family norm, housing conditions and health, role of media in health, awareness, utilization of medical facilities, habits and health etc. The paper explores that health of tribal women is affected by many inter-related socio-economic and cultural factors. The study reveals that women in general and tribal women in particular are the worst sufferers. Despite modernization, medicalization, globalization, marked improvement in global health and other ongoing developmental processes, the exposure of tribes in general and tribal women in particular, to modern system of medicine is not significant. The paper spurs the paradoxes of continuity study and change in the tribal health care practices and interventions. This could also be observed as the contrast between ethnicity and modern-post modern changes. Thus different patterns and levels of health inequalities could be identified among Indian tribal women. The findings will be a contribution to Medical Sociology, Sociology of Gender Studies, Social Anthropology, and to the health of tribal women.

Exploring the Environmental Consequences of Beef Production in Southern Africa

The consequences of beef production for the environment have been a hot topic in recent years. The myriad of issues raised include: the copious amounts of methane released into the atmosphere by cattle, the large quantities of water and feed used to sustain cattle, and the amount of oil that is used throughout the commodity chain in order to produce such large quantities of beef. However, environmental discourses are often confined to industrial processing systems in industrialized countries. This paper shines a light on the unique environmental context of beef production in Southern Africa and the impact of conservation policies on producers in Southern Africa. Specifically, the paper will explore the unique interplay of cattle rearing within an arid and semi-arid environment, the environmental issues relevant to smallholder and pastoral systems of production, and the issues that emerge from the interaction of livestock and wild animals.

Thai Seasonal Migrants Working for the Finnish Wild Berry Industry

In 2005 one Finnish wild berry company invited 92 Thai-workers to pick wild berries for them. Today, there is over 3000 Thai-workers during the wild berry season in Finland. Thai-pickers are not employed by the companies and therefore lack protection from labour legislation. High number of pickers need to take loans to cover the cost of travel and recruiting from Thailand. Their position is precarious, and a crop failure in Finland can mean debt after the season. The Thai temporary workers can pick berries based on Finnish right of public access to natural resources, like wild berries. Heated debate has taken place in Finland concerning the vulnerable position of the migrant pickers. The income difference between North-East Thailand and Finland is considerable, and therefore taking the risk of picking wild berries is tempting. For many successful pickers the temporary work in Finland has turned into circular migration. The presentation is based on multi-sited ethnography conducted in Finland and Thailand. Thai-migrants views and experiences are related within the wild berry industry's global production chain where berries are manufactured and added value is produced. The research material includes ca. 50 interviews of Thai-pickers and field work. Thai and Finnish civil servant interviews, company manager interviews and interviews of recruiting agencies that recruit pickers in Thailand and manage the berry camps in Finland. Body of media material has been collected since 2005. The ethnographic and other material include extensive information on workers, and differences between workers are shown to exist. Thai temporary workers are not a homogenous group. There is considerable differences in wealth, and as a result possibilities of temporary migration vary. Pickers have less negotiating power towards other actors in the business, but recently there have been protests against their unequal position in the Finnish wild berry industry.

Open Your Own Data - Creating Individual High Value for Little People from Big Data

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas.

Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - “know yourself” - you could generate more informed value when approaching a competing company. With full availability of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual’s own interest.

Children’s and Preschool Teacher’s Photographs of New Preschool Architecture: Issues of Participation and Interpretation

Children’s and preschool teacher’s photographs and experiences of new preschool architecture Kim Rasmussen

In an ongoing project (2013-2014) about children’s and preschool teacher’s interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the preschool environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, inspired from action research, new childhood sociology, phenomenology) is to create knowledge (on basis of experiences, narratives, observations/field notes, photos/visual knowledge) about the preschool environment, which might qualify the discourse of kindergartens and the new architecture.

The architecture in new chilcare-institutions breaks on several points with the former idea of “kindergarten” (small environments with an emphasis on domesticity, development and play). The new preschools in Denmark are bulky, contains many children (some more than 200 children), and are highly transparent (wide use of glass in both exterior walls). The new architecture is based on (neoliberal) ideas of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another

is how the buildings are "lived" and coded/decoded (Bernstein) and experienced by the participants. The paper and presentation will focus on issues of interpretation visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the asymmetry between children and adults: preschool teachers play a key role in the interpretation of children's photos, while it is difficult to invite and involve children (2-5 years) to interpret their own photos and words.

**Public Sociology and the Impact Agenda: A Case Study**

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying ‘impact’ (in accord with the current neoliberal agenda demanding accountability and ‘value for money’). The concepts ‘public sociology’ and ‘impact’ are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalising impact in a research project that demands the deep, and unwavering, involvement and commitment of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the ‘messiness’ of the demonstrable ‘impact’ mirrors that of the research process itself, and the pursuit of a ‘public sociology’ in this context conflicts with dominant characterisations in the literature.

**La Strada Network As an Example of Transnational Mobilization Against Trafficking in Women**

My presentation will explore mobilization around trafficking in women for the purpose of exploitation (transnational in the Central and Eastern Europe (CEE)). I will focus especially on the La Strada Network (LS) that is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking movements both in the national level as well as international level.

This network because of its roots as a cooperation between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activist networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists form Netherlands and CEE.

Secondly I will give a closer look to the framing of traffickingby the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location to the actor, the views on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way of framing by particular members of LS. Trafficking is linked to migration policy, national and international security as well as the patterns of cooperation between activists from Netherlands and CEE.

**Can Trade Unions (Be)Come Environmental Innovators?**

Thinking of environmental movements in the 21st century, trade unions are not the organisations that come to mind. They are more likely seen as part of the problem creating environmental degradation, not as part of the solution. However, especially since 2006, when the first international trade union assembly on labour and environment took place in Kenya, many unions across the world have acknowledged the need to incorporate environmental issues into their agendas. Based on two research projects investigating environmental strategies of trade unions in Brazil, India, South Africa, Sweden, Spain, and the UK, as well as those of international unions we will present some issues that characterize trade unions’ environmental engagement. To take environmental issues on board unions need to transcend their present focus on workplace concerns and reinvent themselves as social movement unions. We are especially interested in the role of individuals in this transformation process. From which societal backgrounds do environmentally engaged trade unionists come and what are the conditions which enable them to change trade union practices? What kind of social networks and relations to employers and governments are favourable to develop environmental policies of trade unions and what are the barriers for such transformations? Climate Change is a global issue and thus has to be tackled through cross-country and also inter-union alliances. However, unions are very different in terms of their histories and collective memories, political background, forms of organisation, and sectoral interests. We will discuss the impact of such differences on the unionists’ positions regarding Climate Change and the strategies developed towards addressing it and their relations to other organisations (e.g., unions and green groups).

**Trade Unions, Climate Change and Global Unequal Power Relations**

Especially since 2006 trade unions in the global north and the global south as well as international trade union federations and confederations have been developing strategies against climate change. There are many obstacles in the way of trade union strategies for climate change mitigation and adaptation. One of the most decisive is the policy conflict between unions in the global north and the global south. While there are north-north and south-south differences, the conflicts between trade unions in the global north and the global south have their origins both in the unequal living conditions of workers and the unequal power relations between unions in the global south and the global north. Based on two research projects investigating trade unions’ environmental strategies in Brazil, South Africa, India, Sweden, and the UK, we discuss the different ways in which unions of the global north and south assess the causes and consequences of climate change and the relationship between labour and nature. While in both hemispheres the protection of jobs and the protection of nature need to go hand in hand, it is mainly in unions of the global south that Capital is seen as exploiting both the earth and the worker. This creates conflicts between northern and southern unions concerning the development of climate change strategies.
The study reveals that socio-cultural factors are important in gender socializa-
tion. The study indicated that there is a significant effect of gender socialization in
the family on the young. The study also shows that there is quite a good relation
between patriarchal system and inequality of socialization.
The study makes a number of recommendations for action.

Voluntary Risk-Taking As Habituated Action: How Can a Practice-Theoretical Approach Contribute to Risk Research?

Abstract
Within the sociology of risk, the last 25 years have witnessed a development
from viewing risk as something to be avoided towards viewing risk-taking as part
of one’s self-development. Researchers have argued that routinised everyday life
compels us to make ‘escape attempts’ (Cohen & Taylor, 1992) in which we deliber-
ately put ourselves at risk. Central in this line of theorizing is Stephen Lyng’s
notion of ‘edgework’ (Lyng, 1990; 2005): i.e. voluntary risk-taking which negotiates
the ‘edge’ between control and loss-of-control (Lyng, 2005). The concept of ‘edge-
work’ sheds light on important aspects of risk-taking – but it also leaves some
aspects of risk-taking in the dark.

The empirical case under study in this paper is youth recreational drug use; a
form of voluntary risk-taking that has often been viewed in terms of edgework.
However, viewing recreational drug use as edgework also entails some limita-
tions: First, not all practices defined as risk-taking are actually experienced as
such by the people involved. Experienced recreational drug users do not necessarily
view their own drug use as ‘risky’. And second, the notion of edgework builds on
an underlying assumption about reflexivity; that risk-taking is a deliberate and
carefully considered act. However, risk-taking is perhaps not always as well-con-
sidered; it may be more spontaneous or it may be non-reflexive.

To try to take these limitations into account, the present paper will allow for
other views on risk-taking by drawing on insights from practice-theory, in par-
ticular notions of habituated action and embodied knowledge originating from
the work of Bourdieu and Wacquant. In the paper I demonstrate how a prac-
tice-theoretical approach can contribute to our understanding of youth drug use
by focusing on the subjective perceptions of risk, and on the bodily and embodied
practice of risk-taking.

Navigating the Myanmar–Thailand–Malaysia Border: The Escape Strategies of Burmese Refugees from Chin State, Myanmar, to
Battle Creek, Michigan

Forced migrants who flee their home countries as part of a mass movement face
significantly different realities than ‘refugees’, as conventionally understood
and legally defined in the West. Forced migrants typically lack secure legal status
and access to any form of welfare system. Additionally, because they lack social
structures that support international migration, they often engage in ‘step-mi-
gration’. Before arriving at their final destination, they move to nearby countries
where they can obtain assistance from other migrants, employers and smugglers
who are absent in their native communities. Scholars who study forced migration
and/or illegal migration focus especially on how migrants use resources at their
points of origin or destination or both, but they always overlook the actual bor-
der-crossing experience of these vulnerable migrants.

Based on twenty-one biographical narrative interviews with Burmese refugees
in Battle Creek, Michigan, in 2012–2013, this paper examines how illegal border
crossing from Myanmar’s Chin State to Thailand and then to Malaysia (and later to
the United States after migrants are accepted as refugees by the UNHCR in Malay-
sia) is a migration strategy rather than an ‘end state’ and, among other factors, is
related to the enormous difficulties of migrating legally to Malaysia. The paper ex-
amines hazardous border crossing (which requires clandestine agents and smug-
glers for crossing and documentation) and ‘irregular migrant’ status – defined as
the lack of legal residence in a nation-state – as essential components of forced
migration, which is no longer related only to labor migration and is an expensive,
much longer process. Thus, drawing on the concepts of increased border control,
stiffer immigration policy and definition of citizenship by nation-state, this paper
considers the agency of Burmese migrants and raises the question of whether
their ability to migrate ‘irregularly’ can be regarded as a resource in the particular
cost of forced migration.

Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women’s safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers who perform intimate labor -- domestic workers and night nurses -- seek to navigate physical and “moral” risks as they move between their homes and their place of work.

To Violate with Impunity: Legal Constructions of Marital Rape

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender based violence everyday, law has not proved efficient mechanism to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. ‘The Protection of Women from Domestic Violence Act 2005’, does include sexual abuse within the definition of domestic violence, yet it does not clearly criminalize marital sexual assault. On the other hand legislations on “rape” including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of “marital rape”. This paper attempts to understand such exemption of “marital rape” from Indian legal lexicon.

Legal constructions of “marital rape” are traced through analysis of legislations on “rape”, observation of cases at two Mahila Police Stations (All Women’s Police Station) at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women’s groups patriarchal notions continue to influence legal understanding of “marital rape”. Patriarchal and parochial notions such as “wifely duties”, “marriage as inherent consent to sex” “wife as property”, “divine ordinance” and others are invoked to justify the exemption of “marital rape”. It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far arduous. This is therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against “marital rape”.

Bulgaria Case Study: The Challenges of the 2013 Social Protests in Bulgaria

The contemporary technologically determined information and communication environment is not only facilitating users’ participation in the process of generation and dissemination of content, but is also creating new opportunities for democratic citizenship. A variety of texts on new communication characteristics (Carpentier, Castells, Deuze, Friedler, Friedman, Jakubowicz, Jensen, Lash, Patriarche, Todorov, etc.) offer multiplex approaches to this phenomenon, elucidating the interrelations between the audiences, the traditional and the social media.

The proposed text will discuss some major political and social implications of the new ways of the audiences viewed through the prism of the media activism in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose – for sustaining the democratic standards. On June 14, about 10,000 people summoned at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women’s groups patriarchal notions continue to influence legal understanding of “marital rape”. Patriarchal and parochial notions such as “wifely duties”, “marriage as inherent consent to sex” “wife as property”, “divine ordinance” and others are invoked to justify the exemption of “marital rape”. It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far arduous. This is therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against “marital rape”.

Cross-National Differences in Early Family Instability By Socioeconomic Status

Extensive research has shown that family instability has negative consequences for children’s well-being. At the same time, there is growing evidence that differences in children’s experience of family instability by parental socioeconomic status are growing—at least in the U.S. Less well understood is the extent to which parental socioeconomic status may also be occurring across industrialized countries more broadly. In this paper, we add to the literature by evaluating the extent to which the gap by education in family instability during childhood appears to be growing in cross-national context, using data for 17 industrialized countries with multi-state life tables and country-specific hazard models. To the extent that our preliminary results hold true, this research suggests that inequality in children’s family experiences may be an important feature of life across the Western industrialized world, and that protecting child well-being for those born to less advantaged parents may be a growing concern.

Subjectivity and Human Rights: A Theoretical Investigation

In spite of an enduring attention for ethics and morality, the interest of sociology for human rights is recent, although lively and prolific. Power, violence, domination, the idea that "Whoever says 'humanity' wants to betray" (Carl Schmitt), have been at the core of critical sociology much more than the analysis of subject's capability to struggle for human rights through social movements and everyday personal choices. Hence, not only positivistic tendencies have brought to mistrust towards the issue of rights, but critical and emancipative sociology as well – from Frankfurt School, to Foucault, Bourdieu and others – has been sceptical towards the topic of human rights. Indeed, a sociology of human rights is related not only to ethics, social justice and social inclusion, citizenship rights and critique of discriminations, but also to a sociology of the acting subject. A full sociological understanding of the issue of human rights needs as well a reflection on subjectivity in a pluralist, multicultural and globalized society. After a philosophical phase during which the concepts of subject and subjectivity have been criticized, deconstructed, reduced to the immanence of situated practices, the rise of the issue of human rights in the international sociological debate and in social movement studies highlights again the centrality of the problem of subjectivity (and humanity) in social theory. The aim of this presentation is to analyse the connections between contemporary sociology of human rights' movements and sociology of subjectivity.

Post-, Trans-, or De-Nationalization? Fine-Tuning Political Identifications Above and Beyond Nation-State Aligences

The literature on emerging global identifications tends to use 'post-national', 'trans-national' and 'de-national' as convenient synonyms. However, these terms are better employed to single out distinct forms of disalignment of political identification from historically solid national identities. The paper describes these forms one by one and illustrates ideal-typical contents and conditions of such diverse configurations of detachment from nationhood in practices and attitudes. The empirical part of the paper draws on a 8,500 cases survey and 160 in-depth interviews with EU citizens living in six different countries (Denmark, Germany, Italy, Romania, Spain and the UK) as part of the EUCROSS project (www.eucross.eu).

Upper Classes, Wider Horizons? the Social Stratification of Travelling in Europe

Social stratification research on leisure tends to focus on class differences in cultural consumption patterns. In this literature, seldom is travelling taken into account as a dependent variable, even if international journeys are exponential-ly rising worldwide. But how is the experience of travelling sorted across social strata? Do they increase linearly as we move up the social hierarchy, as a reflex of higher income and cultural capital? Or are they more than proportionally an elite prerogative, while the bulk of the population keeps nation-wide travel horizons? And are there societal differences in the association between social class and travelling?

In addition, this paper investigates differences in meanings of travels. We thus expand the cultural-sociological debate on the social stratification of cultural tastes to mobility behaviours. Is international travelling a form of 'omnivorous' consumption, to use the famous concept of Peterson, for the better off and most educated? Is it meant to incorporate holidays, business and sociability experiences – by analysing the distribution of national and international travels across social strata with data from the EUCROSS survey, covering six EU countries: the UK, Germany, Italy, Romania, Spain and the UK, Pre-liminary analysis of two types of EUCROSS data suggests that SES is an important predictor of mobility experiences; however, there are differences in motives of travels. Higher SES is associated with more travel for both holidays and professional trips. Furthermore, travelling patterns vary significantly depending on the countries from which they originate.

Modernity Reconfigured, or, Empire and the End of Habermas Versus Foucault

Central to debates in social theory about the relationship between modernity and critique has been the opposition, variously construed, between Foucauldian and Habermasian perspectives. Particularly in the 1980s and 1990s, and into the 2000s, these iconic figures stood for differing positions on the nature and purpose of modernity. The workings of power in modern (and perhaps post-modern) capitalist societies, and the meaning and purpose of “critical theory.” As many papers and advanced course syllabi show, the opposition itself became a tool for thinking about democracy, capitalism, violence, and so on. However, this opposition was underwritten by a surprisingly similar theoretical narrative of modernity informed by a comparative-historical sociology of national states and economies, and this narrative is in important ways incorrect and incomplete, for it excludes empire and colonization from its causal stories and cultural interpretations. A reading of the explicit and implicit historical sociologies of Foucault and of Habermas is presented, highlighting these absences. The paper then explores the recurrence of this absence in other theories of modernity or modernities, including Wittrock and Eisenstadt.
