Nonresponse bias is a well-studied issue. Some techniques to reduce this source of errors are applied during data collection (e.g., targeted fieldwork) and some post-survey. Depending on the available paradata, nonresponse adjustments can be calculated to hopefully correct for bias. However, especially with low response rates, is the loss in precision that it causes. If adjustment weights vary highly, the confidence intervals become larger. The increase in standard errors can in some cases counter-balance the decrease in bias. Moreover, a good nonresponse adjustment is based on variables that highly correlate with the outcome of interest. However, such variables are rarely available. For this reason the choice of a nonresponse adjustment technique and variables used have to be thought of carefully.

We will study two nonresponse adjustments for the ESS 2012 survey in Switzerland. The first will be based on socio-demographical variables from the population register from which the sample is drawn. Such paradata are commonly used in post-survey adjustment, as they are often the only data available. But they are known to have low correlations with response propensities and with many key variables. In a second step, data from the nonresponse survey that was conducted shortly after the main ESS 2012 will also be used to construct post-survey adjustment. The nonresponse survey is designed to collect information that correlates highly with the propensity to answer and should lead to an efficient nonresponse adjustment. The expected decrease in bias could badly be neutralized by the possibly substantial effect on precision of such a weighting scheme. A second shortcoming is that the core of the nonrespondents that did not participate to either survey cannot be corrected for. Our aim is to compare these two methods, assessing the effect on estimates, nonresponse bias and on the precision of these estimates by applying a bootstrapping.

Parental Unemployment, Socioeconomic Status and Economic Recession

We study the intergenerational impact of parental unemployment on the socioeconomic status of the children. We compare the Finnish children facing parental unemployment during the rapid economic growth of the late 1980s and the recession of the early 1990s at the age of 12-18, taking into account the length of parental unemployment spell. The recession was one of the worst in the OECD history and in Finland far more severe than the recession of the 1930s. The ISIE status of the children was observed when they were 30 years old in the mid-2000s, after a decade of growing economic prosperity.

We use propensity score matching to analyze high quality Finnish register data, including 15991 children. We match each individual experiencing parental unemployment in childhood to a pair with similar parental background according to matching variables and calculate the average treatment effect (ATE) to measure differences in ISIE. The matching variables include the occupational class status and educational background of both parents, whether the parents were divorced or separated and household income during the examined period.

The results indicate that parental unemployment has a statistically significant negative effect on the socioeconomic status of the children only during economic growth. Only when the spell is longer than three years the unemployment also has a negative effect during depression. In the further analyses we consider the gender differences and the unemployment of both or only one of the parents.

The results suggest that the negative effect of parental unemployment is largely related to non-economic factors, such as lost social capital or stronger negative stigmatization. They also indicate that the economic depression may level off the negative intergenerational effects otherwise associated with parental unemployment.

A Sociological Examination of Property Inheritance System in Esan Land of Edo State Nigeria

This paper examined Property Inheritance system in Esan land which constitutes Central Senatorial District of Edo State, Nigeria. The study examined variants of inheritance system as they affect the women folk and the coping strategies adopted by the women in living with inheritance pattern. Qualitative research method was adopted. We discovered that this desire for male preference for the purpose of inheritance among the women folk. To sustain this hegemony of male preference for inheritance purposes, women were further manipulated consciously or unconsciously, through various socio-cultural constraints, to give credence and legitimacy to these variants of inheritance system. From the study population, a marriage without a male child was deemed not to be a successful one. Three major strategies were identified to have been employed by women to cope and live with the inheritance systems: The first involved those that resigned to fate and accepted the system. The second are those who have also accepted the inheritance system but devised a means of creating their own wealth; and thirdly, those who stressed the need for women empowerment and education of the girl child. However, there appeared to be some windows of change opening up in relation to the issue of Property inheritance systems in Esan land. In order to squarely address the problem of Property Inheritance in Esan land some recommendations were suggested.

New Players, Old Game: The Chinese-Brazilian Relations

Spokesmen of countries in the global South frequently use the rhetoric of South-South cooperation. At the same time many of these countries integrate themselves all the more closely into the international free trade regime as it was installed during the height of Western hegemony. This paper analyzes the relations between China and Brazil as a case example of South-South cooperation that has intensified rapidly in recent years. Based on qualitative interviews with scholars and policy advisors realized in 2011/12 in both countries and backed by a review of secondary literature, it focuses on the question of whether developments in the South remain guided by thinking in Western categories and worldviews or whether they actually present new approaches to international cooperation.

Politicians from both countries often speak about equality, mutual benefit, and the rejection of hegemony. This implies a rejection of the disproportionately strong position of Western states in global economic affairs and a struggle for self-determined development. The argument of this paper is, however, that this does not necessarily imply a rejection of Western norms and values. Development models in the South – be they free market or state-led – first of all aim at growth and competitiveness. Both China and Brazil benefit from their mutual economic exchange within the liberalized global economy. They benefit, however, in terms of national economic growth, while connected problems like social inequality are considered as issues for national social policies. Accordingly, reform-proposals of the global economic order basically aim at changing the power balance between states rather than the underlying principles of cooperation. Therefore, the question of how the rise and cooperation among the South represents an alternative globalization or whether it merely reproduces material and power imbalances and their epistemological justifications, not only between but also within these countries.
The present study deploys a socio-genetic notion of hypothesis testing based on activity theory and Bernstein’s theory of codes. It analyses hypothesis testing in different pedagogical settings, from grammar to communication courses at entry level in Japan. In light of the results, it is suggested that the hypothesis-testing processes carried out by students are specific activities closely linked to the pedagogical objectives set by the teacher in the classroom and developed in other settings. In other words, in grammar tasks that have as object the learning of the formal system, students will see severely limited their capacity to test hypotheses in the field of pragmatics or explore the communicative potential of language. In contrast, during a communicative class, students will see limited their capacity to explicitly test hypotheses concerned with formal aspects of language. The apparent integration of a programme does no ensure hypothesis testing (or L2 development). Instruction should be subsumed under developmental targets and not the other way around. It is concluded that structural instructional tasks represent a bridge between theory and practice and an opportunity for students to test their hypotheses, as they are given more control over instructional tasks.

Making Home in Helsinki: Indian Skilled Migrants and Housing

How have Indian skilled migrants settled in the Finnish built environment? This paper discusses the issue by analysing the housing experiences of Indian skilled migrants living in the Helsinki metropolitan area, Finland. The study’s background is in urban geography and housing studies, and it employs both structuralist and humanistic views in order to tackle this multifaceted research problem.

Immigration to Finland is a relatively new phenomenon. As a receiving country, Finland offers rather homogeneous housing alternatives. Furthermore, India and Finland differ greatly in climate and culture. What are the home-making practices of Indian migrants in this challenging environment? How do they choose their dwellings and what are the important aspects of housing for them? Do they feel at home in their neighborhoods and in relation to native population? How do they construct their social life in the frame of the build environment?

The data consists of semi-structured interviews with Indian skilled migrants who have migrated to Finland to work. All of the interviewees were highly educated and worked in knowledge-intensive positions in research and business fields. The results of this study offer insight to the home-making practices of this migrant group and can be utilized in shaping the housing policy of the diversifying country.

An Assessment of Intervention Programmes Aimed at Addressing the High Failure RATE of Students at Universities in South Africa (SA)

Since the early 1990s, the failure rate among students and especially first year students enrolled at South African (SA) universities has been exceptionally high. In 2008, Higher Education South Africa (HESA), the vice-chancellors’ association representing the country’s 23 public universities reported that the student drop-out rate had grown alarmingly and had hit 35% at some universities, with the bulk of those leaving being first year students (Makonyi, 2008). Specific to the SA context is the political and moral imperative of access, equity and success – forces playing themselves out in a society undergoing massive and rapid transformation.

Needless to say, the literature provides extensive explanations and reasons for this high failure rate ranging from poverty, lack of funding, poor student housing to academic under-preparedness. Most of the reasons are neither new nor specific to the SA context. Parallels can be drawn with universities in diverse and heterogenous societies. Universities have responded in several ways through the implementation of programmes ranging from supplemental instruction to staff development programmes.

The aim of this paper is to provide an assessment of the type and nature of intervention programmes offered across all 23 universities in SA with a focus on its objectives, the intended outcomes and the sector it targets. The method used for gathering information is based mainly on documents and official publications of the institution which may be combined with a few interviews.

Intimacy in Mexican Society over the XX Century

Intimacy is a relatively recent theme in international literature. It is also a difficulty in sociological research of communication, since it combines feelings and subjective interactions, all of which are difficult to grasp. This paper aims to analyse intimacy in Mexican society throughout the 20th century, specifically in family settings. My aim is to explore two aspects of the ideas developed by Giddens and Jamieson regarding the Western debate: on the one hand, to identify the features of 20th century Mexican society that point towards different types of intimacy, taking as a criterion for classification the balance between the bonds of family obligation and freedom of choice when making those bonds, and on the other hand, to consider whether over the course of the century there was a transition towards a consolidating of intimate practices, and in other words, what kinds of intimate citizenships – to use Plummer’s term – developed during that century. I accept as a starting point the argument of Jamieson that all societies develop some sort of intimacy grounded on close association and privileged knowledge. Mexican society and family life can be therefore analysed from this perspective.

The results of this study offer insight to the home-making practices of this migrant group and can be utilized in shaping the housing policy of the diversifying country.

The Emerging Action Fields of Solidarity Economy: The Brazilian Case

This project aims to produce theory about “emerging action fields” (Fligstein & McAdam, 2012) that promote and sustain, through normative and strategic innovation, community-based initiatives based on principles of “Solidarity Economy (S-ECO).”

The paper discusses the issue by analysing the housing experiences of Indian skilled migrants living in the Helsinki metropolitan area, Finland. The study’s background is in urban geography and housing studies, and it employs both structuralist and humanistic views in order to tackle this multifaceted research problem.

The discussion is organised as follows: I first develop some of the theoretical assumptions which guide the study of intimacy nowadays and how it can be applied to a Latin American society, and in Mexico in particular. Secondly, I trace some of the characteristics intimacy has assumed in three periods: from 1900 to 1950, from 1950 to 1970, and from 1970 to 2000.

Competition, the Implicate Relation of Memories and Traumas of Israelis and Palestinians

Israel and Palestine, over the course of their historical conflict, have created a complex patchwork of memory narratives dealing with different representations of the same landscape. The paper examines how the two peoples have elaborat-
ed their narratives of national identity by practicing a pre-modern repertoire to shape a modern identity, and by knitting together their collective, multiple visions of the land. Israelis and Palestinians have used space as a temporal-spatial tool to practice the remembering of lost land and to elaborate an imaginative geography. In an intractable conflict like the Israeli-Palestinian one, a culture of conflict and a psychological repertoire of conflict have developed. This repertoire includes ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict. My purpose is to focus attention on both narratives adopting Bar-Tal's view: "Israeli society represents a mirror image of the Arab societies, particularly of the Palestinian society (…), both societies shared beliefs and mutually held social representations." (Bar-Tal 1998). The case of the Israeli and Palestinian memories raises many questions; however, I wish to limit the discussion to the relationship between dreamt/imagined space in the Diasporas memories, and the entanglements related to loss and claims of return. The time line does not follow a unified, predictable trajectory. A temporal dialogue keeps memory alive, but the past is not simply 'preserved.' The results of the 1948 war dramatically changed the relationship to the land. Political Zionism fulfills for "people without land the dreamt-of homeland. The uprooting from the homeland is the focal point of Palestinian national identity, the trauma and the loss feeds their memory and nourish their narratives.

Is Mobilization for a Better Life a Challenge to Change Society?

Contemporary social movements are in large extent linked by networked communication technologies, quickly developing a borderless public sphere in a mix of new cosmopolitan citizenship deep-rooted to local issues. The social movements of the internet age create online and offline communities to share views, practices, and strategies, creating a third space defined by Castells a space of autonomy to challenge the disciplinary power. In the paper, first we pay attention how the communication flows across the offline and the online communities are set up, how the local level is intertwined to borderless frame to enhance collective strategies. We analyses how they capitalized past social movements backgrounds, like campaigns, and networking platforms, how they appraised the repertoire of action and communication forms of past social movements. Secondly, we pay attention to Middle East social movements in the call to question the Western concept of citizenship rights, pressuring the illegal migration flows and showing the EU exclusionist vision.

Contested Control: An Institutional Ethnography of Immigration Offices in Germany

This presentation takes a closer look at the place in which the legal status of migrants, and thus their access to public life, is decided. Without legal residence, immigrants are unable to work, study or attain most social welfare. The focus is on the process of the regulation of immigrants in immigration offices in Germany. Rather than looking at legislation, its application and implementation will be considered through an institutional ethnography of the bureaucracy of migration management. The presentation is thus about individual stories and the system that assesses and processes their requests. It is based on four four-month periods of participant observation in different immigration offices, gaining repeated in-depth and longitudinal insights into the implementation of immigration law in Germany. The study is neither a technical assessment of the efficiency of German immigration bureaucracy nor does it measure the application of individual paragraphs and passages of the law. In its broader approach, it examines the law as well as those who apply it, the conditions under which it is applied as well as the forces that shape these conditions. In looking at the "human face" of migration policy and immigration policing, this study aims to shed light on the practice of immigration caseworkers in exercising their power: to decide who can stay – and why.

Bridging the Silos: Curriculum Development As a Tool for Cross Disciplines in the Arts, Sciences and Humanities

Investigators in the 21st century are finding that there are tools, information and points of view from other disciplines than their own that can answer the problem they are studying. However, higher education becomes more restrictive as a student moves from general education courses into graduate school, where a single department awards degree based on a usually narrow set of course requirements and a thesis or dissertation. Little is known about the kinds of cross-disciplinary courses that are currently being offered, the mechanisms that employed to offer them in order to enhance curriculum effectiveness. A first necessary step is to research current cross-disciplinary offerings in higher education on an international basis in order to understand the modes of development of such curricula. We present an analysis of a compendium of arts-science-humanities cross-disciplinary courses created through several Calls for Contributions (2009 to 2013). A web site was created and submissions were posted at http://www.utdallas.edu/crete/cdryl. Permissions and updates were received for over 100 courses, along with additional material. The data (from courses) was analyzed as to the nature of the cross-disciplines, level of offering (graduate vs. undergraduate), geographical location, level of collaboration (number of instructors) and department(s) offering the course. A comprehensive re-visionsing of curricular structure to encourage collaborative and cooperative teaching of integrative courses and programs is needed. Suggested actions include specific ideas to enhance networking and visibility, asset mapping, sharing of syllabi and course materials, and a research effort to demonstrate how they broaden the effectiveness of cross-disciplinary arts-humanities courses. This preliminary study points the way towards further efforts in curricular design and research that will be required for cross-disciplinary courses to be integrated into college curriculum. This project was initiated for a SEAD white paper, developed in collaboration with the Leonardo Education and Art Forum (LEAF), and supported by the National Science Foundation under Grant No.1142510.

Alternative Visions Of Work In a Neoliberal World: An Impossible Dream Or a Project Under Construction?

"We give people jobs" is the capitalists’ prime legitimation for monopolizing political and economic power. The reality behind this ideology is that the role of capitalists is to make sure that the supply of jobs is inadequate and to degrade those jobs that remain. Yet, the idea that supporting the dominance of capital is the only way to force the conflict. My purpose is to focus attention on both narratives adopting Bar-Tal’s view: “Israeli society represents a mirror image of the Arab societies, particularly of the Palestinian society (…), both societies shared beliefs and mutually held social representations.” (Bar-Tal 1998). The case of the Israeli and Palestinian memories raises many questions; however, I wish to limit the discussion to the relationship between dreamt/imagined space in the Diasporas memories, and the entanglements related to loss and claims of return. EULE, TOBIAS* (University of Bern, tobias.eule@soz.unibe.ch)

Migrants Vs. the State: Courtroom Dynamics in Immigration Law Cases in Germany

Appeals on immigration law decisions are usually the first points of contact between migrants and the legal system of their country of destination. As a result, the courtroom has a highly symbolic role to play, as it represents “the” overall legal system and will shape general attitudes and expectations of immigrants of “the law”. In addition, immigration law cases can be highly politicised and held under high levels of public scrutiny. Finally, they are an essential starting point for the appealing party, because the legal residence status mediates all other aspects of life for immigrants. Based on ethnographic observations of court sessions in Germany and interviews with all agents involved (migrants, their lawyers, immigration officials, judges), this presentation will show how all courtroom interactions engage on these three levels: the actual case, the symbolic-integrative, and the political. As a result, informal interactions and side remarks between legal agents play a crucial role, especially if they are outside of official court transcripts. Specifically judges and migrant advocates play a specific role, and in order to show their impartiality by completely ignoring the precarious situation of the appealing party.

National Terrains and Transnational Articulations: Global Labor’s Evolving Architecture Under Late Neoliberalism

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Improving Teacher Quality: Outcomes of a Clinical Model for Teacher Preparation

Teacher quality, as it relates to the preparation of new teachers, has drawn widespread national attention in recent years. With problems such as teacher attrition, especially among early career teachers (Cochran-Smith, 2004; Darling-Hammond, 2003; Ingersoll, 2001), the need for a new model to educate teachers in the service of P-12 student learning is compelling. Guided by principles detailed in the Blue Ribbon Panel Report (NCATE, 2010), current reform in teacher education focuses on clinical preparation and partnerships between higher education and P-12 to prepare teachers for improved student learning.

Using qualitative and quantitative data, this project examines the implementation of a clinical partnership for teacher preparation involving a college of education at a Midwestern research university and one large urban public middle school in the local district. The partnership builds on the previously established collaboration among educators in the district, the college, and the university, to offer a more authentic, comprehensive, and systemic approach to clinical teacher preparation. The project addresses two goals:

1. To determine the extent to which the clinical model in this middle school develops toward “integrated” on the Continuum of Partnership Development for Clinically Based Teacher Preparation (Howell, 2013; NCATE, 2010).

2. To document, assess, and track improvement of teacher candidate performance and related outcomes of a clinical partnership.

Project findings inform the development and implementation of model of teacher preparation and provide direction for educators who are establishing or refining clinical partnerships. The transformation of teacher education through clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing development of teachers who effectively enhance student learning in all contexts. The extent to which this is successful holds broader implications for replicating and sustaining the model at other middle schools with similar characteristics both locally and beyond.

Everything but the Funnel Cake: Art and the University of Puerto Rico Student Occupation of 2010

My dissertation, Everything but the Funnel Cake: Art and the University of Puerto Rico Student Occupation of 2010, explains the use of aesthetic performance and display in protest. In the summer of 2010, students occupied the University of Puerto Rico (UPR) campus, protesting austerity policies by newly elected Governor Luis Fortuño. In retrospect, the occupation would be referred to as “The Creative Strike,” for its overwhelming aesthetic dimension. Drawing upon two years of ethnographic data, including both on-site and virtual observations, 31 in-depth interviews, and movement documentation, my research is situated at the nexus of sociocultural studies of protest and political movements. The use of artistic intervention in protest is not novel; however, contexts specific to the 21st century, including new media, paved the way for an emerging set of tactics in response to increasing privatization and economic austerity measures. The UPR student occupation is a powerful example of what is possible when a student organization, such as the Occupy movement, acts as a site for collective political action and organization, and dynamic aesthetic atmosphere. This dissertation illuminates the elevated role of art as a means to manage movement pluralism, demonstrating how aesthetics are deployed to both unify and differentiate movement participants. It combines major theoretical perspectives from social movements, the sociology of culture, and political sociology, filling in subsidiary gaps in our understanding of cultural identity formation, and the challenge of political pluralism. In doing so, it illuminates both longstanding protest challenges and 21st century configurations.

YOUNG, KATHRYN (Wayne State University, kbyoung@wayne.edu)

Knowledge Transfer: From Indentify Determinants of Poor Sleep in Nursing Homes to Developing and Implementing Solutions Supported By Technology

This paper presents the process of knowledge transfer from within a research project into the development of best practice recommendations. It will show how researchers inform practice development involving the use of technology and how this can improve night time care provision in nursing homes.

An extensive study of 10 nursing homes in England aiming to identify the determinants of poor sleep for resident and staff identified a collection of quantitative and qualitative data from 183 residents aged 65-100 and 40 members of staff. One of the key findings from the study was related to sleep disruption caused by regular, physical checking of the bedrooms to establish if they needed changing. A recommendation from the study was to enhance person-centred care at night by the use of technology: sensors in the mattress. In this instance the use of sensors in a mattress can for example indicate whether the bed is wet or dry and when the resident is more restless, implying that they are not in a deep sleep phase. Care supported by technology can be provided when it is needed and suits the individual sleep pattern of residents. Consequently restorative sleep can be achieved and dignity maintained. Thus the evidence based knowledge and understanding related to a determinant of poor sleep is transferred to the development of care giving procedures involving the use of technology. This process can be seen to improve care delivery and result in an outcome which acknowledges the individuality of night time sleep and personal preferences of older people.

The research was supported by the New Dynamics of Ageing Initiative, a multi-disciplinary research programme funded by AHRC, BBSRC, EPSRC, ESRC and MRC (RES-339-25-0009).

Rico Student Occupation

Explains the use of aesthetic performance and display in protest. In the summer of 2010, students occupied the University of Puerto Rico, protesting austerity policies by newly elected Governor Luis Fortuño. In retrospect, the occupation would be referred to as “The Creative Strike,” for its overwhelming aesthetic dimension. Drawing upon two years of ethnographic data, I explore the role played by sociomaterial assemblage for collective thinking activities. To do so, I suggest the adoption of a slightly different research paradigm compared to the classic sociomaterial apparatus (Leonardi and Bailey, 2010; Orlikowski, 2007) based on a Cultural Historical Activity Theory (CHAT) framework, suggesting an original perspective to look at the role of material artefacts during thinking activities.

Dutch-Japanese Encounters: Gendered Experiences Of The Japanese Occupation Of The Netherlands East Indies

This paper examines the stories of women who transgressed national and racial boundaries by entering a relationship with the ‘enemy’ during the Pacific War: Indo-European women (with Dutch citizenship) who conceived a child with a Japanese man during the Japanese occupation of the Netherlands East Indies (1942-45). To date, their actions remain highly controversial in the Netherlands, as they apparently willingly engaged with an enemy that even now evokes strong emotions for subjecting large parts of the Dutch civilian population to three years of internment. Unlike Comfort Women, they have not received recognition for their wartime experience in form of pensions for war victims, as they were considered as collaborators, opportunists and prostitutes. The treatment they suffered by their own families and communities left deep scars in the lives of women and their children, and evokes memories that are often too painful to articulate even in private. The persisting silence surrounding the origins of their children constitutes an important starting point to investigate the political and social processes that have defined the ‘truth’ and memory of the war and women’s experiences of the occupation. Their stories reveal that their actions not only contradicted the wartime enemy image, but also the prevailing ideologies of women’s expected relationship to the nation and its men. Based on Japanese and Dutch archival documents, including interrogation reports and accounts of mothers themselves, and 21 life history interviews with children born of these unions, I reconstruct the wartime experiences of these mothers from the perspective of their children. Their stories not only shed light on women’s agency and their gendered experience of life and survival during the Japanese occupation, but also a family and community discourse, that continues to marginalize and silence women and children within the history and memory of the Japanese occupation.

Sex and Witchcraft: Performing and Transforming the Gendered Body

Eighty people dance naked around a large bonfire during an all night ritual at Faunalia, a Pagan festival in Australia. This paper examines how these ritual performances transform embodied forms of gender inequality for women and men. Women with poor body image find self confidence and pleasure in their somatic performance. Men discover new ways of relating to the feminine sides of themselves. Both men and women explore same-sex interactions, such as kissing someone of the same gender, and as a consequence become more comfortable with homoerotic desire. The paper argues that many forms of gender inequality are located in emotional and somatic self-understandings and that ritual performances allow these to be countered and transformed.

The Museification of Military Coup and the Years of Dictatorship in Chile. the Construction of Post-Conflict Visual Imaginations at the Memory and Human Rights Museum of Santiago

Through the example of the Memory and Human Rights Museum of Santiago (MMHR), this paper analyses the display of different images and objects associated with the military coup (September 11, 1973) and the years of dictatorship in Chile (1973-1989). Inaugurated in 2010 under the government of Michelle Bachelet (2006-2010), the MMHR constitutes a major architectural and curatorial project created in order to ‘never forget’ the traumatic past of the country. Since the last five years, different forms of images of this past have been publicly reproduced and exposed, especially by television. This text explores the hypothesis that the emergence of the Memory and Human Rights Museum constitutes a powerful signal of re-definition of national memory that seems to “leave behind” all social conflicts and political divisions in Chilean society. Are the visual strategies of collective remembrance contributing to a process of consensus? What is the relationship between the museification of images and the redefinition of the national memory? These questions are explored by following the MMHR visitors in their interaction with architecture as well as by the analysis of the formation of collections and the display of museum images.

Mediterranean Crossings: Postcoloniality and Migratory Practices from France to the Maghreb

Despite shifts in perspective and theoretical renewal, socio-anthropology continues to neglect even more significant North-South movements. Inversing the canonical distinction between countries of immigration and countries of emigration, this proposal problematizes the categories hitherto used to define these movements and presents the main results of a group research project on mobility from France to the Maghreb countries. At the crossroads of urban and migration studies, the proposed approach underscores the complexity of actors’ experiences, in addition to the ways in which they position themselves in relation to the spatial movement undertaken. The diversity of figures, trajectories and networks but also the imaginaries and practices that emerge from mobility, giving rise to distinct social situations, will be discussed using a specific and historically salient ethno-graphic case study: that of Algeria. Particular attention will be paid to the impacts of these social situations on local society and the logics of interaction produced.

Edgework: A Modern Phenomenon Or a Discourse Symbolising An Innate Human Quest?

The paper explores if edgework is rooted in a human quest for excitement and challenge and if contemporary edgework can be compared with historical explorative expeditions, where humans and equipment endured extreme challenges. Hunter Thompson (1971, 1979) defined edgework as a voluntary risk activity requiring extraordinary knowledge, mental and physical skills, which is different from voluntary risk taking actions where no skills above everyday knowledge are required. More recently, Lyng (1990) explores the edgework discourse in analysing skydiving and Fletcher’s (2008) risky behaviour and practices within elite and professional sport. Activates based on a perception of having control of a situation, such as gambling, might also relate to edgework (Fabiansson 2010). The paper argues from Bourdieu’s (1978, 1984) habitus discourse the influence of the social and cultural environment on human action and perception of societal place, that contemporary edgework activities and historical expeditions have common grounds in symbolising an innate human quest to challenge the everyday, but differs in presentation of the achievements in the private and public spheres. Where historical expeditions are placed in the public sphere for the explorer to gain public acknowledgement, while modern edgework is practiced in the private sphere or within a close knit group of likeminded edgework followers.

FABIANSSON, CHARLOTTE* (Victoria University, Charlotte.Fabiansson@vu.edu.au)
Young People Feeling Valued and Safe In Mono - and Multi-Ethnic Australian Communities

The paper explores if young people growing up in mono-ethnic regional or in multi-ethnic urban communities present different experiences in feeling valued and safe in their community. The paper argues from Bourdieu's (1978, 1984) habitus discourse that the social and cultural environment influence the community setting and young people's feelings of being supported by friends, their social networks, and trust in people. The mono-ethnic young people live in regional communities dominated by generations of Anglo-Australian heritage and traditions. While the young people living in multi-ethnic communities live in ethnically diverse urban communities in Western and South Western Sydney with its intermix of young people from Arabic and Middle Eastern, Pacific Island and Asian heritage. The young people in the mono-and multi-ethnic communities are all aged between 13 and 21 years and live with their families. The research shows that the urban young people living in multi-ethnic communities feel more valued by friends and they have more positive experiences about community living. They feel more supported by friends, but also by their extended family, a contributing circumstance for them to feel more secure in the community, then what the mono-ethnic regional young people expressed.

Neo-Traditionalism, One or Many? Structure of Gender Roles at Individual and Country Levels

Transformation of gender roles is regarded as one of the key dimensions of modernization. Notions of gender, as hardly any other set of beliefs, possess universal relevance and pervade everyday life. Not surprisingly, the gender issue has become one of the key themes in rhetoric and sources of mass mobilization for neo-traditionalism. As a result of the polarization of positions in global public debate, most gender role expectations are easily recognized as belonging to either a liberal or a neo-traditionalist value set. What remains less clear, however, is the variability of modernization patterns for different gender norms. Do all role expectations form a one-dimensional factor, or are there several autonomous dimensions of notions about gender, each with its own liberal versus neo-traditionalist extremes? Can we find the same dimensions to be used to compare gender role expectations at individual and country levels? To answer these questions, we analyzed the integrated database of the European Values Survey and World Values Survey by means of multilevel structural equations modeling. The formulations of relevant items, as well as the current theoretical agenda, suggested their possible division of gender roles into those describing behavior in work and family settings. The results, however, revealed a division along different lines: the first factor comprises duties, both in public and private spheres, while the second factor includes hedonist gender role expectations, related to self-fulfillment and enjoyment. At the country level, the first factor proved to be non-existent, while the second was reproduced with almost the same structure as at the individual level. Thus, gender roles are both horizontally and vertically differentiated, and form different dimensions of neo-traditionalism. To account for these differences, we compare sets of predictors for the two factors, with special regard to cross-level interactions.

Envisioning a Real Utopia in Iran

The Real Utopia scholarship is overwhelmingly focused on cases that take place in liberal democratic political systems. It remains unclear however, how real utopias can be envisioned and realized in the absence of a vibrant public sphere. In this paper I present original research on a utopian project in Iran, an initiative called Sustainable Living which is a cooperative that embraces an alternative lifestyle and whose aim is to create Iran's first eco-village. Through an analysis of this initiative I elucidate how a real utopian vision becomes desired and acted upon in Iranian society. I demonstrate the channels through which utopian visions are circulated and are adapted to local context in Iran, and ultimately I seek to broaden our understanding of the realization of emancipatory social science. Hence, I not only show how utopias are envisioned in Iran but I examine the groundbreaking struggle of people to make them real in a restrictive political environment.

The Political Economy of Religiosity: Development and Inequality Reconsidered

Existing studies present economic development and income inequality as two key determinants of cross-national differences in religiosity, and of changes in religiosity over time. But the case for both explanatory variables remains uncertain. First, some studies claim that religiosity has not been declining over time; if so, rising incomes cannot have had any impact. Second, there is as much reason to think religiosity is a cause as a consequence of development and inequality. Third, the mechanisms linking inequality to religiosity remain unknown. Addressing each of these limitations, this paper tests more robustly whether and potentially why economic development and income inequality shape religiosity. I find, first, that inequality, though not development, correlates with religiosity over time. Second, using an instrument to rule out reverse-causality, historically rooted differences in both inequality and development have powerfully shaped countries' current levels of religiosity. Third, deference to authority correlates with both inequality and religiosity, suggesting it is a key mechanism linking the two. In recent decades, then, the increasing inequality experienced by many countries appears to be one reason for the relatively modest decline in religiosity.
Does inequality discourage political engagement? Previous studies have noted that people are less politically engaged in societies with higher income inequality. This cross-sectional association has been taken as evidence of a causal relationship, with inequality discouraging engagement by leading all but the wealthiest people to conclude that politics is not about them or their concerns. If correct, this interpretation suggests the increase in inequality seen in many countries in recent decades has been driving down engagement, with potentially serious implications for the quality of democracy. Yet the association could be spurious, or due to reverse-causality. The very reason scholars care about political engagement is that they believe it has consequences for democracy and distribution; rather than inequality discouraging engagement, disengagement could foster inequality. Using multilevel models fitted to two measures of engagement from all five waves of the World/ European Values Surveys, this paper re-assesses the thesis of a causal relationship running from inequality to disengagement, in two ways. First, I investigate whether the relationship holds not just cross-sectionally but also longitudinally. Second, I use an instrument for inequality to test whether the correlation between inequality and engagement holds even when ruling out reverse-causality. I find mixed evidence for a relationship over time, but a clear correlation when instrumenting for inequality. At least over the long run, then, it seems that unequal societies tend to develop less participatory politics.

Providing AIDS Nursing Care In Botswana; what Explains The Level Of Job Satisfaction

Despite the many strengths of its health services and economy, Botswana has experienced one of the world's worst HIV/AIDS epidemics. HIV prevalence for most age groups doubled over the 1990s resulting in an adult infection rate of 38.6%, which was reported in the National Survey for 2001. HIV/AIDS infection became the leading cause of hospital admissions as health services in all units of the healthcare system became strained and shortages of clinical personnel, especially nurses, appeared nationwide. As a result of many new & expanded government health services, the HIV infection rate and number of new cases has declined significantly. Recent data shows that 31.8% of women attending antenatal care clinics & 17.4% of the child population are infected with HIV-1. Yet, as with other countries of Southern Africa, Botswana continues to have a generalized epidemic that for the foreseeable future will present a challenge to its healthcare system. Nurses and other clinical service providers must constantly treat HIV symptoms and AIDS related illnesses while also giving other required care. The purpose of this analysis is to determine the level of job satisfaction and its predictors among a sample of 202 nurses involved in HIV/AIDS care in Botswana. A model is derived for explaining job satisfaction among these nurses which can be tested in other healthcare systems in Africa.

Returns to Vocational Education and Training (VET) in Times of Crises: A Stepping Stone or a Trap for Career Advancement?

VET is often acknowledged as being a very efficient stepping stone to integrate the labor market: it prevents unemployment risks and insures good returns to first employment. However, while benefits of VET are undeniable from a short-term perspective, they remain more questionable from a longer-term stance: it would seem that, from a longer-term perspective, graduates of VET face higher unemployment risk and lower career advancement opportunities than their counterparts with general education. Yet, this under-studied aspect is crucial as the political response to the recent economic crisis has been to promote vocationally oriented education rather than general education (see Europe 2020 strategy). Therefore, I will investigate the following research questions: Does VET offers better – stable and long-term – returns to education than other academically oriented educational tracks? How these returns vary according to institutional arrangements and according to economic context? I will focus on four countries who depict different educational systems, namely France, Germany, Switzerland and the United-Kingdom to investigate these questions. In order to gain insights as regards to the relationships between geographical origins, I will use the prospect of each cohort of VET graduates using labour force survey data on the longest-time frame as possible. In other words, the analysis will consist in analysing returns to VET in each countries at an aggregated level to see whether we can observe cohort and/or period effects.

I expect important cross-national differences in returns to VET, with higher returns to VET in countries with vocationally oriented educational systems (Germany and Switzerland) and lower returns in more academically oriented ones (France and UK). I furthermore expect overall long-term returns to VET to have decreased since the emergence of repeated economic crises.

Media Literacy As an Educative Tool Against Inequality: The Results of the Programme “Preventing in Madrid”

Most analysis on the effects of Media and new Technologies on children and teenagers focussed risks (or the social risks (concerning inequality, social stereotypes, violence or substance abuse behaviours that may be increased by the patterns shown by Media) either on the positive opportunities that Media may bring (regarding new chances of learning and development). Based on the integration of both sort of studies, this research underlines the use of Media Literacy as a tool to be included in prevention programmes with children and teenagers, in order both to reduce social risks and to increase opportunities of freedom and equality. As an example, we propose the results of Preventing in Madrid (Universitat Complutense de Madrid), a prevention programme against violence and social discrimination that has been developed in schools of Madrid since 2002.

FAN, GANG-HUA* (Shih-Hsin University, ganghuo.fan@gmail.com)

Gender Differences in Religious Influence on Subjective Well-Being: Evidence from Japan, South Korea and Taiwan

Research has consistently shown that women tend to be more religious than men. The structural location theory proposes that, due to disadvantageous social positions, women are more likely than men to regard religion as an alternative source of social support. The relative importance of religiosity versus socioeconomic status on subjective well-being is thus expected to be more salient among women. Nevertheless, empirical verifications of this thesis, especially under East Asian contexts, are relatively few. To address this gap, this article use data drawn from AsiaBarometer 2006 survey to examines gender differences in religious influence on subjective well-being (measured with happiness and life satisfaction) in three East Asian societies: Japan, South Korea, and Taiwan. The three hypotheses generated in this research are: 1) the association between religiosity and subjective well-being is stronger among women; 2) the relative importance of religiosity compared to socioeconomic status on subjective well-being is greater among women; 3) gender differences in religious influence on subjective well-being are more salient in societies with greater gender stratification. Results of analyses provide certain support for the above three hypotheses. In these three East Asian societies, the influences of religiosity on subjective well-being are more significant among women in both absolute and relative measure. Also, gender differences in the association between religiosity and subjective well-being appear to be more salient in South Korea, where gender stratification in terms of education and occupational status is greater than that in Japan and Taiwan.

Education Delayed but Not Denied: Returning to School of the Chinese Cultural Revolution Cohort

This paper examines a unique Chinese cohort whose educational opportunities were lost due to an unexpected exogenous shock. The Cultural Revolution (CR) cohort came of age during China’s Cultural Revolution decade (1966-76), when the educational system came to a halt (especially colleges whose normal recruitment stopped for 11 years). Based on life history data collected in the 1994 State and Life Chances in Urban China Survey (Zhou and Moen 2002) and Cox proportional hazards models, I find that, compared with the pre-CR cohort just before them, the CR cohort members are considerably more likely to return to school after the Cultural Revolution to compensate for their initial educational disadvantages, thus narrowing (but not closing) their educational gap with the pre-CR cohort as they age. Marriage and having young children discourage women - but not men - from returning to school. In addition, children whose fathers held a senior-high degree and/or whose fathers were cadres or middle-class/intellectuals have significantly higher school reentry rates, which lead to a widening educational stratification with respect to social origins, nullifying the state’s success in attenuating inter-generational transmission of educational disadvantage by launching the Cultural Revolution, as reported previously using data collected from the CR cohort in their early adulthood (Deng and Treiman 1997; Zhou, Moen, and Tuma 1998).

Choice and Inequality: Transition from Secondary to Tertiary Education in Chile

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Higher education is increasingly desired by families because it is seen as an important mechanism of social mobility that allows students to achieve better living standards. However, access to higher education appears consistently correlated with student socioeconomic status. The lack of prior opportunity to study a curricular program that provides both the quality and content required to proceed to higher education is suggested as the most important barrier. It is worse, then, that some low-income, high-performing students who expect to continue to higher education choose programs with lower-level content or quality.

This study utilizes the case of Chile to explore whether choice between vocational and academic education at secondary level (VESL and AESL respectively) could help to the reproduction of inequality throughout the diversion of high-performing low-income students from the academic to the vocational track. This study approaches a causal analysis combining propensity score matching and robustness check strategies. It also uses an ad hoc survey and a rich panel of census data that follows students from eighth grade to higher education.

The findings show that socioeconomic status, culture, the environment, and self-perception are correlated with enrollment in VESL. In addition, there is an important gap in the national entrance test to higher education between comparable VESL and AESL students (0.2 – 0.5 SD). Results also show that high-performing, low-income VESL students are less likely to go to a bachelor degree program and more likely to enter a vocational program at tertiary level than a comparable AESL student. Finally, VESL students tend to have a lower persistence at vocational tertiary education than AESL students. Hence, VESL could be distracting and preventing some low-income, high-performing students from obtaining better incomes, employability, and social status, ultimately reducing their social mobility. In this way, choice could be contributing to the reproduction of inequality.

**Childhood in the City: The Children in Focus**

Research indicates that children have spent more time in institutionalised places than in public spaces (WARD, 1978; RASMUSSEN, SMIDT, 2003; TONUCCI, 1996). However, the same studies show the ability of these children in breaking the charges. In fact, transforming spaces planned for them in their places. Thus, the claim that urban children experience fewer public spaces is not universal but may vary from city to city, neighborhood to neighborhood depending on the social groups that live there. The present work aims to study specifically how four five-year-old children, two girls and two boys, who live in Brasilia/Distrito Federal/ Brazil, perceive the city. Thus, from the recognition of children as social agents, producing meaning and that regardless of their size interact with the physical environment (CHRISTENSEN; O’BRIEN, 2003), we propose this research. The methodology of the study considers the child as a primary informant and seeks to involve them in the research process. Thus, the child was invited to build a city map with blocks of wood and artifacts in miniature, like cars and trees. Later, presenting the picture of the city map construction, it was possible to conduct a photo-elicitation exercise (CLARK-IBÁÑEZ, 2004; BANKS, 2009). The methodology helped to increase the involvement of children in discussing aspects related to their urban experiences.

**Women’s Local Social Movements**

This study aims to understand whether the phenomenon of rural women’s collective action in Dasun, Kediri can be interpreted as a social movements, and related to the issues, actors and the setting, how’s that social movements can be categorized and have an implication to social justice, and can improve the inequality of women’s life. Based on this, this study aims (1) to explore and interpret the phenomenon of collective action undertaken by women in Dasun, if indeed a social movement and (2) the implications of social movements to improve inequality of women’s life and to develop a social justice.

This study is a qualitative research with an ethnographic approach, which a plural method include observation, participation, analysis of records, and interviews. The subjects of this study included some Dasun’s women activist and outsiders who were involved in the growth of the local social movements.

Based on the results of field research and theoretical analysis led to some the conclusion, an important finding of this study, show that a women leader is the product of the movements. The ability to produce a leaders, as far as the author know, is the specific notion that can not be found on collective action in other places. Collective action in Dasun can be interpreted as a social movements, with the fulfillment of the element of collectivity, shared goals, a loose organization, leadership moving beyond the village’s authority. The implications of the achievement of social movements in family life is shown by the involvement of women in decision-making and financial control lies in the female. In society, women have begun to participate in the socio-cultural, political, economic and environmental fields which can improve inequality of women’s life and to develop a social justice.

**FARQUHAR, KAREN** (Swinburne University of Technology, kfarquharson@swin.edu.au)

**Race without Racial Classification: The Case of Australia**

Australia is a settler nation that has been structured along racial lines, in particular, the White Australia Policy, which limited migration to people who were considered first ‘white,’ then to those from Europe. However with the end of the White Australia Policy in the 1970s Australia stopped collecting most forms of racial data. As a result, Australia has no official racial classification system. Nevertheless, race and racism are part of everyday experience and discourse in Australia.

There are debates around the collection of racial data. Proponents argue that it is critical to measure race and racism. Critics argue that the counter-argument is that race, a social construction, is solidified and reified as a social institution through racial classification. If we are to dismantle racial hierarchy, we must first dismantle racial categorization. This paper considers race in the absence of a racial classification system. Through an examination of race in contemporary Australian media discourses and through Australia’s census categories, I explore what happens to race and racism when race outside of Aboriginality not officially measured.

**Family, Neighborhood, and School-Based Networks of Black and White Adolescents: Effects on Conventional and Unconventional Behavior**

Adolescents drift between family, school, and neighborhood networks, taking on situated identities in each context and being subject to different ideologies. Their behavior may vary depending upon the degree to which they are embedded in each type of social capital. We examine how embeddedness in family, school, or neighborhood networks affects conventional and unconventional behavior. Data were gathered as part of a longitudinal study of families (N=699), friendships, and adolescent development in Buffalo, New York. We first compare networks of black and white adolescents, along with the degree to which they are embedded in family, school-based, or neighborhood networks. Second, we examine the effects of embeddedness in each type of network on conventional and unconventional behavior. The larger the percent of network members seen in a context, the more embedded in that context. Finally, we examine whether effects vary by race. On average, black adolescents’ networks are smaller than whites, but they include a much larger percentage of family members (i.e., blacks are more embedded in family networks), Whites are more embedded in school-based networks. Both groups are equally embedded in neighborhood networks. The more embedded adolescents are in family networks, the higher their GPA’s, and the less likely they are to smoke marijuana, get drunk, commit acts of major deviance, or have multiple sex partners. Interaction effects show stronger effects of family embeddedness for black adolescents on multiple sexual partners, and for whites on marijuana use. Regardless of race, the more embedded in school-based networks, the higher their GPAs, the less likely they are to smoke cigarettes, and the fewer sex partners they have had. The more embedded adolescents are in neighborhood networks, the more likely they are to smoke cigarettes, use marijuana, and commit major acts of deviance, such as robbery, assault, or gang fighting.

**The “Foreigner” in China’s Corporate Labor Market: A Critical Race Perspective on Skilled Migration**

This paper weaves field theory to critical race theory to conceptualize the inter-ethnic competition among actors in the multinational field of corporate employ-ment in China’s most global city Shanghai. In sum, the field of corporate work is constituted as a field of relationships and activities in which ethnic social, cultural and symbolic capital serve as field-relevant resources. In this field “highly skilled” networkers in Shanghai are hired in part for their cultural and ethnic backgrounds, so that ethnic and national identity are part of the cultural constructions of technical “skills.” There thus can be no separation between purely technical and culturally based accounts of human capital within this field. Rather the field of corporate labor is revealed to be a site of ethnic and racial micropolitics, in which actors compete and contest a position in the racially and ethnically stratified field. Grounded in a long-term
ethnographic study with over three hundred in-depth interviews, this approach provides an account of the changing position of the foreign skilled migrant in the corporate labor force in Shanghai from the 1980s to the 2010s, a period in during which expatriates transition from a dominant field position as incumbents who defined the ‘rules of the game’ for employment, to challengers who must defend a marginal position within a much expanded field.

Narrowing The Pipeline? Assessing Female Participation in STEM Fields

The underrepresentation of female Science, Technology, Engineering, and Mathematics (STEM) faculty members at teaching institutions leaves few role models for young female students, particularly racial/ethnic minorities, interested in pursuing careers in STEM academic fields. A shortage in the number of professions women in STEM narrows the pipeline for future progress in every STEM discipline. The underrepresentation of women STEM faculty members everywhere, but most notably at small, primarily teaching institutions parallels the national statistics, which indicate numbers disproportionate to student and community demographics at institutions of higher education.

We intend to: examine and evaluate the specific needs and practices regarding advancement of women in STEM fields at a small, southern, rural, primarily teaching university and similar regional teaching institutions, and formulate specific sustainable strategies and goals toward increasing representation of women for the success of female scientists, our institution, and the future of scientific innovation.

A variety of measurable quantitative data and qualitative information will be systematically gathered from female STEM faculty and from a comparison group of male STEM faculty to determine causal factors influencing the underrepresentation of women in STEM. All baseline data gathered on female STEM faculty will be compared to results obtained from male STEM faculty. The data will be analyzed in order to assess needs and methods for implementing policies and conditions favorable for achieving positive change in the number of and professional advancement of STEM female faculty at this institution and to contribute to the existing body of knowledge regarding the underrepresentation of women STEM faculty.

FARRO, ANTIMO LUGI* (Università di Roma La Sapienza, antimolugi.farro@uniroma1.it)

Subjective Struggles and Collective Movements

Movements are constitutive parts of contemporary global realities, buttressed forward by online communicational flows. They present a counterpoint to broad systemic powers which aim to condition and control individuality, thereby deconstructing social life. Financial forces are increasingly constituted through informational platforms, which take place outside the real economy. Moreover these movements increasingly underscore the differentiation between themselves and systemic actors. Movements underscore for us the separation between systemic forces and real life as expressions of the fragmentation of social life. Individual subjects become participants in the construction of collective movements to affirm themselves in the face of systemic domination as well as to engage in experiments around new living constructs as an alternative sociability to fragmentation. Communication by physical and online networks enables individuals to establish a common cultural framework. The result of this is a new political re-democratization and sociability confronting the contemporary context of global reality.

RC47-767.3

FARRO, ANTIMO LUGI* (University Sapienza Roma, antimolugi.farro@uniroma1.it)

Urban and Environmental Development Issues

Collective movements operating at local, national, regional levels are contesting the increasing global trend of urbanization as a threat to environmental sustainability. Movements have become central to the economic, social, cultural and political contexts of environmental management. They confront the problematic activities of dominant financial actors whose activities mold urban spaces. They highlight the importance of subjective engagements with actual physical space that increasingly takes the form of individual actions. The individualization of collective action brings forward new experimental spaces that suggest the building of a new sociability as they contest urban development and the risk it poses for environmental sustainability.

Sharing to Belong: African Women in Sydney and Practices of Social Solidarity

Nestled inside a 1980s-style arcade in the Western Suburbs of Sydney, the African Village Market is a meeting place, social enterprise and a site of recognition. The market was established as a means through which African women in Sydney could sell their own products, provide African foods that were otherwise hard to get and foster a sense of community among African groups in Sydney. Drawing on ethnographic research conducted at the African Village Market in late 2013-early 2014, this paper will explore how women at the market experiment and give meaning to solidarity. While the market holds a particular resonance for the Kenyan community in Sydney, it also functions as a meeting place for other African communities. It is a particular site where solidarity is practised in the everyday through the act of sharing; the sharing of space, friendship, knowledge and support. By asking why people choose to share with each other, what they choose to share and who they choose to share with, this research will explore the complex ways that solidarity functions across various axes of difference. In the context of a steady decline in funding for ethnic group organisations, it is necessary to understand what role these spaces play as sites of difference that foster a sense of social solidarity within and across communities.

Geographies of Reflexivity: The Spatio-Temporality of Contemporary Youth Subjectivities

This paper approaches the spatio-temporality of contemporary youth subjectivities through a discussion of the spatial dimensions of individualisation. The paper argues for a renewed focus on the reflexive practices of young people in relation to the way that local social conditions are shaped and reshaped as part of broader processes of social change taking place across the western world. Emerging debates about the meaning and significance of reflexivity are situated within geographical theories that emphasise the construction of space as a meeting point of temporalities, as well as the relationship between place, identity, and social practice. In order to provide a located and spatialised understanding of the consequences of social change for young people’s identities, the reflexive practices and biographies of young people in different spatial contexts are situated within this theoretical context. The paper argues that reflexivity is a spatialised phenomenon: young people mobilise reflexive practices in relation to local structural conditions, themselves embedded within the spatial dynamics of globalisation and individualisation. The paper concludes by calling for a spatialised understanding of the consequences of social change for young people’s identities.

Place, Rural Youth Identities, and Social Change

This paper responds to emerging critiques of the metrocentric and placeless focus of contemporary youth studies with a located, emplaced analysis of youth identities in rural and regional Australia. While theories of social change currently influential in youth studies depict a homogeneous and placeless modernity, nevertheless the processes these theories describe have reshaped young lives differently across urban and rural environments. Drawing on a research project ongoing in western Victoria, this paper analyses young people’s identities and biographical narratives in relation to arguments about social change, including arguments about globalisation, individualisation, reflexivity and the meaning of place in late modernity. Narratives and biographical imaginings of rural and regional young people articulate identities constructed across geographical scales, as well as providing a located understanding of the genesis of reflexivity and its relationality to mobility and local inequalities. Discussing the contemporary significance of place, mobility, and changing geographical inequalities, this paper moves towards a spatialised and comparative analysis of youth identities in a changing world.

FARSAKOGLU, EDA HATICE* (Lund University, eda.farsakoglu@soc.lu.se)
Everyday Boundaries and ‘Queer’ Experiences in the Transit Migratory Space of Turkey

Looking at the everyday as a crucial site for being and becoming as well as for (re)shaping belonging(s) of marginalized social groups (Manalansan, 2003), this paper seeks to examine the everyday worlds of Iranian queer refugees in Turkey. The paper draws on findings from a doctoral dissertation project, which is based on 11-months of fieldwork consisting of key-informant interviews as well as on ethnographic data and narratives collected through in-depth interviews with 43 Iranian sexual refugees living in different “refugee” cities in Turkey. Turkey is a transit locality for non-European refugee communities due to its “geographical” limitation to the 1951 Geneva Convention. Among other irregular migrants and transit refugees, Turkey hosts many Iranian queer subjects, who are seeking asylum based on sexual orientation and gender identity persecution and waiting for resettlement to a third country in the global North. Time they spend between their “departure” and “final” destination affects and inflects their everyday life struggles and experiences as they shift across multiple boundaries and hierarchical axes of difference within the conditions of cross-border mobility as well as of asylum seeking while living in the transit migratory space of Turkey. In that sense, the main aim of the paper is to go beyond a panoramic snapshot of what the mundane activities of Iranian sexual refugee population in transit in Turkey looks like, toward a sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of migrating Iranian sexual dissidents.

FASSAKOGLU, EDA HATICE* (Lund University, eda.fassakoglou@soc.lu.se)

Identities, Migrations, and Asylum: Thinking through the Experiences of Queer Refugees

Since the early 2000’s Turkey has become a prominent transit destination for Iranian queer refugees who are seeking asylum based on sexual orientation and gender identity persecution. However, to date, there has been little research focusing on this growing component of queer/asylum mobilities. In line with the larger literature on international forced migration, much of the existing literature has avoided asking questions about these queer subjects’ understanding of self in relation to their given name, as well as concerning their choices and motivations for departure. Often, this lack of academic coverage is due to so-called protection-related ethical dilemmas which many researchers are facing. Paradoxically, however, to avoid asking such questions in our researches strengthens the victim perspective on human mobility and instance towards queer refugees. This might even further diminish possibilities of inclusion for (queer) subjects who seek justice, safety, and belonging beyond the borders of their countries. Moreover, this lack of academic coverage elides the real complexity of (queer) asylum mobilities.

Drawing upon in-depth interviews with 43 Iranian sexual dissidents seeking asylum and waiting for resettlement to a third-country in transit in Turkey, this paper offers insights into Iranian queer refugees’ understanding of self in relation to their movement as well as concerning their choices and motivations for departure. More specifically, the paper draws on the migratory trajectories and identity accounts of Iranian queer refugees to formulate an understanding of how they create, sustain, and/or negotiate a sense of self and belonging while shifting across multiple boundaries and hierarchical axes of difference within the international refugee regime. The main argument of the paper is that experiences at the intersection of queerness and refugeeness, influenced by the norms, politics, and processes of the refugee apparatus in the migratory space of Turkey constrain Iranian queer refugees’ possibilities for being, becoming, and belonging.

Poplife. a Strategy to Mitigate the Social Risk

The research is centered on the hypothesis that the propensity of a significant number of young people to partecipate to a reality show is related to social risk and uncertainty in planning their own life. Such an hypothesis is captured under the concept of realism. From a theoretical point of view, realism may be defined as a social logic characterizing the relationship between reality and imagination as strategy to cope with fundamental social risk. Such a logic has been very pervasive in the past fifteen years in Italy as well as in many other countries. From an empirical standpoint, the research is supported by 750 video interviews, and pictures of individuals wishing to partecipate to the reality show “Big Brother” (Italian edition). The results show that realism is, in many cases, the response of individuals to the fragmentation and the precariousness of social experience from both neo-liberalism and failure of societal institutions in keeping alive the emancipatory promise. Particularly, the logics of the action of the young people surveyed are explored in two directions. In the first, they show a sort of “camouflage” through which they intend to mitigate the discovery of a social insecurity that becomes existential and that seeks to transform the feeling of con- fusion and demoralization in challenge and euphoria. In the second, participation to the reality show it is only a realistic strategy. They use imaginary to be able to live an “ordinary” life that is now made impervious by social conditions. It is the project of life that is configured, today, for them, as “microtopia”. As a result, the audition replaces the “social proof” and the Big Brother house becomes a space suspended between imagination and reality having the appearance of a melancholy therapy to survive.

Experiences on Improving Quality in Home Care Services for Seniors in Argentina

In this paper we present research progress on the National Home Care Program in Argentina that has been carried out continuously since 1997 and with greater intensity in the period 2003-2013. The objective of the research is to investigate the impact of public policy aimed at the older population with some degree of dependence with respect to the learning incorporated by public and non-governmental organizations involved in the decentralized structure from which perform these services.

The proposed research is a comparative case study of implementing organizational changes in the National Home Care Program in order to detect changes and learning that occurred in these organizations from the perspective of the actors (members of these organizations and users of its services, including home caregivers service cooperatives originated in the program) to build indicators and make proposals for continuous improvement of the quality of this public policy.

Caregiving and Employment in the Canadian Context

According to Statistics Canada, in 2012 more than 8M Canadians had provided care to a family member or friend with a long-term health condition, disability or aging-related needs during the previous year. The largest proportion (44%) were age 45-64—that is, baby boomers in peak earning years. Moreover, the number of boomer caregivers increased by 20% between 2007 and 2012. As in most developed countries, most Canadian caregivers are employed and many report care-related employment consequences. Many also report psychological, emotional and physical health consequences, many of which are serious enough to result in a visit to the doctor. Gender differences are narrowing; a slim majority (54%) of caregivers were women in 2012, but women still spend more time on care tasks, do more high demand tasks (personal and medical care), and experience more health and economic consequences.

Demand for care will continue to grow in Canada, as in most parts of the world. But Canada’s public caregiver support infrastructure is under-developed compared to other countries. And despite growing evidence of negative impacts, caregiving can have on labour force attachment, commitment and productivity, Canadian caregivers remain largely uncompromised to supportive workplace practices for caregivers.

In this paper we report results from further analysis of Statistics Canada’s 2012 General Social Survey on Caregiving and Care Receiving examining incidence and predictors of care-related health and employment consequences for caregivers, as well as estimates of monetary costs that accrue to caregivers’ employers as a result. These findings will be interpreted against the backdrop of the Canadian public and private policy context and implications for future policy and practice in the health and continuing care and labour domains discussed.

FATTORE, TOBIA* (Macquarie University, tobia.fattore@mq.edu.au)

Children’s Health and Well-Being: Making Sense of the Health Conundrum

Lifestyle related morbidities affecting children have attracted attention from national and international policy makers. One response to these public health concerns is to inform children and their parents of health promoting behaviours so as to establish life long habits for good health. However, epidemiological trends suggest that the prevalence of childhood morbidities is increasing. This suggests that health promotion programs appear to be struggling in effecting change in response to a complex set of factors driving this trend.

This paper attempts to make a small contribution to understanding this problem by presenting some research on children’s understandings of health and well being. The study, funded by NHMRC, is a participatory, mixed-methods research study with 123 children aged 8-15 years, focussed on children’s understandings of ‘well-being’. While a significant amount of research draws upon the sociology
of health to understand children's perspectives of their illness, less common is research that obtains children's perspectives of what health or well-being means.

Our findings show that when children discuss their health they invoke themes from health promotion campaigns, which share many of the features of 'healthism' (Crawford 1980). However, children also call upon different and more broad-ranging meanings of well-being which problematise these healthism discourses. These include locating health as one dimension of well-being that prioritisises agency, security and a positive sense of self; as promoting the body as a 'functional entity; and of health as generated intersubjectively which reproduce patterns of moral anxiety among carers. The findings suggest that children's understandings of well-being provide important clues as to the limits of health promotion campaigns and a set of considerations policy-makers need to take into account to effectively respond to the health conundrum.

FATTORE, TOBIA* (Macquarie University, tobia.fattore@mq.edu.au)
Enterprise and Network As the Basis of Solidarity – Strong and Weak Ties in Children's Work on the Informal Economy

Fundamental transformations in the world of work have created different opportunities for social integration depending on group membership. Furthermore these transformations have helped define the different economies of work in which people work in. This presentation critically evaluates children's work in the informal economy. Based on a study of 11000 children 12 to 16 years of age in New South Wales, Australia, the presentation examines, for the work children perform on the informal economy, how the particularity of relationships between employers and employees prescribes rules of conduct given the absence of other forms of social integration, such as formal regulations. It examines the extent network solidarity, and particularly reciprocity, provides a normative structure that underpins operation of the informal economy for children.

Three main types of work performed by young people on the informal economy are identified: enterprise workers, informal employees and associative workers. Each category of work is embedded in different social relations between ‘worker’ and ‘employer’ that represent different relationships of appropriation. These relationships of appropriation reflect latent class structures with young people from lower backgrounds more likely to undertake work as informal employees and wealthier young people more likely to be involved in enterprise work. The nature of appropriation also influences intrinsic and extrinsic orientations towards work. Informal employee relations, predicated upon strong particularistic ties, do not evidence greater levels of intrinsic attitudes, but are least common modified. Enterprise work, predicated upon weak universal ties, is characterised by higher levels of instrumental attitudes. However young people from poorer neighbourhoods are more likely to show altruistic orientations.

FAWAZ, JULIA* (Universidad del Bio-Bio, Chile, m.fawaz@ubiobio.cl)
New Roles in Rural Contexts. Women, Work and Family in Chile Today

Globalization, modernization and neoliberal policies have significantly contributed to the transformation of traditional rural life in Chile in the last decades. A more heterogenous and modernized rural world has emerged, although still strong gender and social inequalities remain. Within these changes, the visibility of women in public spaces highlights, in particular in the educational sphere and in labor market, even though Chile still has a low rate of female labor participation compared to other Latin American and OECD countries. These new reality implies that the traditional sexual division of labor is being transformed and questioned, since women incorporation to higher educational levels and to labor markets implies for them geographical mobility, new social and economic networks and new perceptions and images about their roles in society. Therefore, the new productive roles and women empowerment at personal, family and local levels, having accordingly an impact in family life and men’s role.

From a perspective that combines quantitative and qualitative methods, this paper analyzes the effects of the new productive role of women in the restructuring and current dynamics of families, in the intra-family relationships, negotiations and processes and strategies of conciliation between work and family, and explores the implications of these changes at local and community levels and for society as well. The paper is part of a broader study held in the province of Ñuble, Central Chile, concerning with female work in different social and geographic spaces and the effects of paid female work at personal and family levels and in local and national development (Proyecto DIUBB 133324 2/R).

Famine Meets with Conflicts in West African Sahel Region: A Retrospective Study

The Sahel constitutes the eco-climatic and bio-geographic zone of transition, in Africa, between the Sahara desert to the north and the Sudanese Savanna to the south. It covers parts of (from west to east) the Gambia, Senegal, southern Mauritania, central Mali, Burkina Faso, southern Algeria and Niger, northern Nigeria and Cameroon, central Chad, southern Sudan, northern South Sudan and Eritrea. Famine has been a perennial problem in the Sahel region of West Africa and some parts of Senegal, Mauritania, Mali, Niger, Chad and Sudan are hard hit. One of the area’s worst droughts occurred in 1914, but the increased rainfall throughout the 1960s made the drier areas more sustainable. The highly visible famines occurred between 1968 and 1974, 2005 and 2007 and in 2010. And these recorded the presence of international humanitarian assistance. In the West African Sahel, majority of people survive by producing crops such as groundnuts, grains and in addition rearing of animal. Man-made problems also complicated the issue of famine and it’s attendant consequences particularly the political instability of several countries where the locust had infested their crops could not receive adequate treatment. For examples conflicts in Mali and Niger forced over 300,000 people from various households with many escaping to refugee camps in neighbouring countries. Traditional animal grazing routes have been cut off due to the conflicts, which have far reaching consequences for West Africa sub-regional food security. The paper discusses the historical antecedents of famine and conflicts in the Sahel region of West Africa, analyses the effectiveness of the World Food Programme , the governments of the various affected countries and other international humanitarian assistance in the quest for food security in the region. Consequently, the paper recommends plausible solutions to both famine and conflicts in the region.

FEDOROVA, ALENA* (Ural Federal University, dekan_2002@mail.ru)

The Influence of the Organizational Performance on Psychosocial Health at Work

At the present time there is a domination of cost-effectiveness criteria in the practices of modern businesses which are more attracted by the economic and management activities that can allow the company to prosper and achieve efficient financial results. Nonetheless, statistics show a steady growth in the numbers of workers who are victims of diseases such as addiction to alcohol, drugs, mental disorders and insomnia, the difference caused by excessive stress due to adverse methods of work organization and interpersonal relations in the workplace. Downsizing, layoffs, retirement, overtime work and forced leaves without pay have a significant disruptive impact on workers, their physical, social and psychological wellbeing. Thus, there is underestimated the social aspect of a negative impact of the organization's economic activities on psychosocial health at work. The given research deals with the issue of social pollution, expressed in reducing the level of welfare and deterioration of physical and psychosocial health of workers caused by the economic activities of the company. The theoretical study has allowed us to formulate hypotheses about the toxic management practices and their negative impact on people's psychosocial health. An empirical study conducted by the authors in comparison between Russian and Italian companies has permitted to verify the given hypotheses: to examine in detail the nature of social pollution of the intra-organizational environment and to identify toxic elements of the socio-labour relations in the company. An important feature of the current research is studying the social pollution phenomenon from the point of view of employees, employers and trade unions.

FEDULOVA, ALLA (Lomonosov Moscow State University)

Russian Universities in the Neo-Liberal Reforms

In Russia, for two decades, neo-liberal reforms have been carried out in all spheres of social life: economy, politics, culture, and education. The higher education reforms (universities in particular) dismantle the previous Soviet national education system trying to substitute it by a new pattern based on the Western model “for the purpose of being fully integrated into the global community”. The process of transplanting Western education patterns on Russian ground resulted in the fact that education no longer performs its most important social functions of integration and differentiation.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The integration function implies the system of education that is supposed to reproduce a set of core values reflecting the spiritual priorities of society and uniting people in a common social, historical and cultural community. It is known far and wide that every society does its best to preserve national identity, socio-cultural and mental characteristics of the population. Therefore, in order not to lose national identity communities try to transmit (and reinforce) their most important values through education systems.

The differentiation function implies preparing people of the younger generation for “embedding” them into cells of the social structure, bringing social and occupational structure of society into the right track; preparing the right number of specialists of different skill levels and different specialties for the country, according to the strategy of its development.

But the paradox of contemporary Russian situation is that neither twenty years ago, when the construction of the neo-liberal capitalism was just at the beginning, nor now – nobody elaborated or formulated the development strategy. There was too much that was obscure: there wasn’t ordered a priority system in the development of certain sectors in the economy, science, and social services. People were unaware of the economic model and the model of society they would create in the future.

The film Factory

This communication “The film factory” about globalisation and labor markets will examine different forms of work organization in film studios. Drawing on concrete analyses carried out, for the most part, in the Barrandov’s studios in Prague, the paper takes filmic delocalizations as a framework and considers filmmaking processes as well as the organization of the labor market. Particular attention is given to contractual workers in the French entertainment industry (intermittents) in order to understand the anonymous history of the technicians who craft the cinema and the inequalities process in this field.

This communication (Globalisation et dynamique des marchés du travail) will draw on sociological inquiries on these subjects, published in my book “La fabrique cinématographique et professions” (The Filmic Factory. Careers and Professions)” Ed Armand Colin, Paris 2011.

Pathways For Prevention: Disentangling Causal Relationships Of Preventable Mortality and Forced Migration In Post-Colonial Africa

If humanity consensually agrees that innocent children should be spared the ravages of violence, political murder is not a reasonable means of debate, and that no person should be led to starvation at gunpoint, then we must also agree that humanity has failed modern Africa. This research summary points to a volume of historical evidence linking a host of independent factors that consistently predict higher rates of preventable mortality from violence, starvation, and disease across sub-Saharan nations. A wide-angle view of dictatorship and resource mismanagement as “the increasing interconnections between youth across the world and their awareness of such connections” (Schafer, cited in Hansen 2008). It has become clear that the current challenge for sociological and anthropological research is to map the new contours of these changing times and the role played by various social agents. The epistemological orientation is guided by the extended case method proposed by M. Burawoy (1998). This method is based on an interpretive view of social science, generalizing from structural and symbolic connections between actors and social processes, as revealed by the research itself.

Science of Selection: Developing Social Technology in Educational and Vocational Field 1920–1940, Norway

This paper explores how creating the applied science psychotechnics redefined societies’ views on abilities and disabilities during the early twentieth century. The main empirical sources are textbooks, articles and political documents. It studies the making of applied psychology as two interrelated processes: first, the early experimental laboratory developments of scientific knowledge and the new understanding of the relationship between body and mind, and second, the introduction of new tools in the French entertainment industry (intermittents) as well as the organization of the labor market.

When Men Kill Women and When Women Kill Men: The Aspects of Gender and Social Class in Legal Discourse at Homicide Trials

This work investigates how aspects of gender relations permeate the system of justice, giving rise to practices that corroborates relations of dominance and reproduction of inequalities in the trial by Jury. It analyzed the discourses of the prosecutors and public defenders who acted in the trial by Jury in the city of Porto Alegre, in the State of Rio Grande do Sul, Brazil, from October 2008 until November 2010 only in cases involving men who killed women and women who...
killed men. A total of 26 sessions where observed and systematically registered in field diaries. The study identified aspects related to gender and social classes being mobilized in the discourse of those agents in the legal field to constituent-tiate their thesis for both accusation and defense. It is possible to perceive that these aspects are summoned in representations elaborated in the discourse as an strategy undertaken by the agents for a differentiation of the cases submitted to the trial as being either “crimes of passion” or “drug trafficking crimes”. Accord- ing to the findings of this research, the resort to this strategy makes evident a discursive violence in relation to aspects of gender and social class yielding the idea of defendants (female or male), victims (female or male) or crime committed being “more accepted” or “more tolerated” than others.

Globalization, Market Transition, and Variety of Developmental Models: The Case of the Chinese Car Industry

The Chinese automobile industry has been experiencing some profound changes during the recent market transition and globalization of the Chinese economy. Regarding to the ownership structure and technological upgrading strategies, there have been emerging four major developmental models among the domestic assemblers. Three major theoretical perspectives are then em-ployed including the Schumpeter's hypothesis, the approach of global value chain, and the developmental stage argument; however all have major limitations to provide a good explanation. This paper proposed to apply an institutionalist approach to understand such a variety of developmental models in the Chinese automobile industry. Four re-presentative cases including FAW, SAIC Group, Chery and Geely were sampled for a systematic comparison in the empirical analysis. The major argument is that the divergent paths among these Chinese car makers were historically rooted in the pre-reform era of the planned economy, from where the local political structure, developmental ideas and related agencies took on different looks in the market transition and together contributed to a local social construction over the local automobile sector.

Bringing the State(s) Back in: From Lula's Bolsa Família to Dilma's Sem Miséria

Since Brazil's former President Lula Ignacio da Silva launched his successful national conditional cash transfer program (CCT) known as Bolsa Família (BF) in 2003, academics and development practitioners have been fixated on—who gets it, how are the beneficiaries identified, where does the money come from and how is it delivered, and what are the program's impacts—usually, does it reduce pover-ty. Judged upon these variables, BF has been quite successful and has been wide-ly diffused throughout Latin America. It has however, been criticized for being a rather narrow form of social protection. This paper argues that BF and like-CCT's should not be considered as ends in themselves, but rather as a means towards consolidating a broader poverty alleviation strategy that includes complementa-ry social investment initiatives such as labour activation policies and vocational training. Within Sem Miséria, new supply-side initiatives are being grafted onto the otherwise stable framework of BF. By tracing the timing and sequencing of Brazil's poverty alleviation initiatives over three presidents, this paper will demon-strate that Dilma's Sem Miséria is an institutionally feasible next step in expanding Brazil's social investment strategy beyond CCTs, a strategy that is dependent both here and elsewhere on cross-sectoral and intergovernmental collaboration.

Civilizational Basis of Russian Modernization

Every country participating in the global modern age contest, has its own unique modernization profile, which is based on the country's civilizational fea-tures. Speed and specifics of every country's traditional societies evolution into the modern ones and further, are still subject to close analysis with a view to dis-cover efficient methods, reasons, mechanisms, recipes and secrets of “progressive” and “accelerated” modernization development. Russian modernization determinants are of a special interest because they hold back progressive, sustainable and effective growth. For over three centuries they have been recurring repeatedly, with great persistency and literality, and the modernization processes have been of inorganic, catching-up, tardy, mobilization, relapsing and recurrent nature. Their implementation procedure includes initia-tion not by society but by government using force. These processes are deeply rooted in Russian civilizational history and culture, as well as character and psy-chology; they are enormously powerful and no matter how much the government or population want it, they cannot easily “adjust” them. These features of Russian modernization obstruct the transfer from tradition to modernity, and disable long-term and productive Russian modernization on a “Western model”, which would result in actual democracy, corruption level de-crease, rule of law, and thereupon, in economic, environmental, cultural and technological achievements. Individual reforms and “modernization leaps” initi-ated “from the top-down”, can only lead to temporary and relative results. Spe-cific version of traditional society based on recurrent waves and de-moderniza-tion elements of the largest modernization projects, keeps prevailing. There is “balancing” between the imminence of “catching-up” copying of certain elements from Western modernity, and “national peculiarity” as inability to implement this assimilation, as well as floating influence by increase of one factor after another without a resulting vector.

The Multi-Culinary City: Transforming Traditions

Multi-cultural/multi-ethnic/multi-culinary : these dimensions of gastronomic spaces complement even as they counter each other. The proliferation of restaura-nts of all sorts and the consequent profusion of culinary choices endow the city with a cornucopia of gastronomic spaces. Yet, all gastronomic spaces are not equal. Horizontal differentiation conflicts with vertical distinctions: The premium placed on creativity relegates the reproduction of tradition lesser status than pro-duction of the new, the untoward, the heretofore unknown. In the exceptionally competitive dining world of New York City, culinary identity builds, not on products or people or places, but from the infusion and transformation of a broad range of traditions.

Perceptions of Discriminatory Practices Among Bric's Countries: Brazil and South Africa

This paper addresses the question of whether individual perception of discrimination is affected by occupational segregation by race and job status. We use data from Brazilian 2000 Census, Belo Horizonte Area Survey (2005) and Cape Area Survey (2005) conducted by the Federal University of Minas Gerais and Cape Town University. These surveys were designed to have comparable socioeconom- ic measures of many kinds of both cities. Processes of opening and closing of the labor market due to racial discriminatory practices are well-established topics among social stratification literature.

Perceptions of discrimination in South Africa and in Brazil are unique phe- nomena. In South Africa, up to 1994 discriminatory practices based on race were straightforward and safeguarded by national constitution. African, Coloured and Indian inhabitants were denied the right to vote and forced to reside in peripheral townships. Interracial sex or marriage was formally prohibited. In Brazil, in anoth- er hand, there is no clearly distinct cultural boundary that separates blacks from whites. Both groups have the same mother tongue and most identify themselves with the same icons of Brazilian nationality. The commonalities among Brazilian ethnic groups led to the establishment of a myth of racial democracy, that despite being contested with evidences, still seems to prevail in some sectors of society, whereas discriminatory practices linger as a tacit social agreement. We found ev- idences in both countries that point to a higher perception of social discriminato- ry practices when the socioeconomic and cultural status of the under-privileged group is higher. We can imply that more access to material and symbolic goods of the dominant group – as information, earnings and culture – could increase, instead of diminish, the perception of the minority groups of their conditions of prejudice and discrimination in the society.

Between Academic Tourism and Student Mobility: Narratives of Students on the Move

More than ever before student mobility is playing an important role to fulfill the idea behind “becoming a global citizen”. Whether private or public, universities all over the world are incurring in their mission statements the commitment of attain- ing global citizenship by their students. US universities have a long tradition of sending students abroad (Hooffa 2007), in Europe they have developed a similar structure as a result of the Bolongna Process. The vast majority of students in- volved in mobility are non-degree students who spend a year, semester or a few weeks abroad. Being abroad involves a complex process in which several agendas intersect, the university sending the student, the host university, the student’s family, the host communities with all their cohorts and the student. From each side, several discourses and concers arise: global citizenship, campus international- ization, cultural awareness, safety and security and the student personal, and often times, not clearly formulated agenda. Having received US students regu- larly in Merida, Mexico for over a period of twenty years, in this session I explore the narratives of travel and experiences that they have created/constructed in order to cope with their daily experiences while in Mexico when trying to conceal the different agendas. Of particular interest is their effort to avoid stereotypes, create a community on the move and engage with other communities avoiding academic tourism and the tourist gaze.

Changes in the Health System of the B’laan Indigenous Community— Its Factors and Effects

The influences on the changes of the health system within a B’laan indigenous community in Southern Philippines deserve a deeper sociological analysis to partly explain the disparages in the epidemiological trend presently observable in indigenous health. In order to understand how health system adaptation is logically focused on the various aspects of belief system on health and illness, the health providers, preventive and curative treatments, utilization of medicines, and food source and dietary patterns. External factors in the form of exposure to outsiders, government intervention, acculturation to western-based medicine, and agro- industrialization are considered to be strong influences to the changes in the health system. On the other hand, internal influences to change include the demise and decline of traditional healers in the community as well as the non-utilization of the present locals to their traditional health knowledge.

As the change in the health system among the B’laans is inevitable and appar- ent, their ability to create an adaptive mechanism in the management of sickness, health and well-being is very limited. In turn, low adaptation capacity to west- ern-based medicine likely result to poor health outcomes among the indigenous groups when compared to their referent majority population. Beneath the force- ful influences, we go through the production and relations of power within the health system as the driving element for low-adaptive capacity.
Economic and Labour Market Outsiderism Among Young People in the EU

This paper analyzes economic and labour market outsiderism for young people across different European countries and welfare regime models. We define ‘outsiders’ as those people who are either unemployed, in temporary contracts or have an income below 60% of the median. By using cross-sectional data from the European Union Statistics on Income and Living Conditions (EU-SILC, 2006) we find: (1) a considerable variation in rates of youth outsiderism across EU member states. The youth outsiderism – measured observing the duration of the spell of outsiderism – is higher in Mediterranean countries than in liberal, Continental and Scandinavian countries; (2) that the depth of youth outsiderism is influenced by the different types of skills possessed by young people. However, the strength of the effect varies across different welfare regimes.

FERRÉ, MYRA MARX* (University of Wisconsin, mferree@ssc.wisc.edu)

Inequality, Intersectionality & the Politics of Discourse

Paying attention to the history of the concept of intersectionality is essential if it is to be used to illuminate rather than disguise the dynamic politics of multiple inequalities in particular sites. The European borrowing of an originally US-centered term raises interesting questions of the kind of political work it is intended to accomplish. The naming of certain issues as “intersectional” (which implies that others are not) and the frequent use of the term “diversity” as a near-synonym to intersectionality as a process (which tends to remove it from a political to a managerial context) are two of the potential problems that arise in transplanting this term from one specific context to another.Intersectionality arose as Crenshaw’s means of naming the exclusions in US antidiscrimination law targeting race and gender separately. What work does intersectionality do instead in contexts in which diversity is framed as an addition to gender mainstreaming (“gender plus”) or as localizing and individualizing culture as “differences” in Europe? Can intersectionality travel transnationally without either obscuring the distinctive history of racialized nationalism in the US or encouraging avoidance of confronting modern forms of racialization in Europe? Looking at several specific cases illuminates this argument about the “traveling discourse” of intersectional feminist policy discourse.

The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and constitute the greatest challenge to the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empirically recent objects of the contemporary sociologies, in order to deal with the super complexity of social dynamics in a polycentric and polyphonic world. Considering this perspective, recent studies on conflicts demands a robust intercultural substratum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different restrictions or arbitrages, such as: (i) legal issues, related to the use or appropriation of natural resources; (ii) scarcity related to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to review and analyze the state of art on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.

The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and constitute the greatest challenge to the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empirically recent objects of the contemporary sociologies, in order to deal with the super complexity of social dynamics in a polycentric and polyphonic world. Considering this perspective, recent studies on conflicts demands a robust intercultural substratum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different restrictions or arbitrages, such as: (i) legal issues, related to the use or appropriation of natural resources; (ii) scarcity related to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to review and analyze the state of art on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.
Africa has always been affected by external influences such as Western colonial rule and processes of independence of most states since the 1960s. The changing nature of African post-colonial politics led to increasing conflicts in most states because of power devolution and violent regime changes by military coups. Historical causes of intra-state small wars are mostly due to belligerents and non-state actors having long and grievance issues, power struggles, resource wars, ethnic and religious differences, a lack of western norms and values which are not part of cultural ideas of development and also a lack of democratic principles, as these are not yet instituted in most countries. The default action is always to fall back on violence when belligerents are dissatisfied with current governments and breaking of peace accords by either of them. Changing sides in Africa is a normal occurrence, because alliances can change overnight. Enduring conflicts such as those in the Democratic Republic of Congo (DRC) and Sudan lead to economic hardships and social problems through the internal displacement of thousands of people in their home countries, as well as those of political refugees. Consequently, two-thirds of global conflict is currently in Africa and the majority of United Nations (UN) peace missions are hosted in these conflict-ridden African states. Reference to South African peacekeeping contributions in these states will be made briefly.

The presentation aims to understand to what extent the present crisis increases gender and class inequalities and subjective well being in Europe. In periods of rising unemployment and reduced disposable income, it is clearly relevant to assess their differential impact on gender and class relations. Evidence will mainly be collected from the different rounds of the European Social Survey (ESS - 2002; 2004; 2006; 2008; 2010 and 2012). Other sources will also be used such as official information of GDP, Unemployment rates, Gini Indexes per country, Human Development Index (HDI), Gender Development Index (GDI) and Gender Empowerment Measurement (GEM), in order to “quantify” the effects of the crisis, comparing rescued and non-rescued European countries, the last ones being submitted for long to severe austerity policies.
The rise of sociology during the Nineteenth century represented not only the strengthening of new ways of understanding the reality of social problems. In this historical process, it is also possible to see the rise of new ways of comprehending the scientific knowledge, specially the problem of objectivity in social science fields in connection with the objectivity foundations of natural sciences. The sociological “discourses” of the period were observed and understood throughout the classic period as a proto-reflexive critical concern about the logical development of the scientific reasoning, both in natural and human sciences (Geisteswissenschaften).

As a result of the classical sociological analysis of the scientific method as a way of constituting the epistemic roots of social sciences reasoning, the sociology developed during the XIX century an important and unique capacity of comprehending “science through the scientific method”. Thus, in this paper we aim to develop a historical analysis of the rise of the critical and “reflexive vocation” of classic sociology as an important epistemic condition to the strengthening of the modern sociological conception of science in different fields of sociology like sociology of knowledge, sociology of science and sociology of scientific knowledge. In a first moment, the classics of sociology pointed out the “problem of knowledge” as an internal challenge to the development of a sociology as a scientific way of thinking; in a second moment, the contemporary sociology pointed out the “problem of knowledge” as a general difficulty to the whole scientific conception of reality, promoting a crisis in the logical demarcation of science in face of a real “social demarcation of knowledge”.

Russian In Israel: Group Competition and Language Status

A linguistic situation in Israel has been charged with conflicts since the formation of the state. The primacy of Hebrew was the ideological cornerstone of Zionism. Immigrant literatures have been long central in the historical formation processes in which the Hebrew language was tied to the political creation of the state. Hebrew was used in law, alongside of the Arabic language, created for the Arab citizens. In this study, Hebrew has been seen as the language of the Jewish majority, and Arabic as the language of the Arab minority, in the bi-lingual state of Israel.

Ex-Soviet immigrants were primarily monolingual Russian speakers brought up in a multi-ethnic country where Russian dominated. Members of this group had higher education status than average Israelis and rejection of their mother tongue was perceived as the first step in downward mobility. This paper will analyze how the roll of Russian-language media, schools, theaters, associations of compatriots and various informal networks went hand in hand with the promotion of the Russian language in the host society. We will look into the role of immigrant politicians, scientists and artists in bringing Russian culture to native Israelis thus preventing ghettoization of the immigrant community. We will also discuss linguistic implications of the rising status of Russian-speaking Israelis for one-and-a-half and second generation immigrants. Material for the paper was drawn from in-depth interviews, conventional and electronic media and participatory observation.

FICHTER, MICHAEL* (Global Labour University, mike.fichter@global-labour-university.org)

Meeting the Challenge of Global Corporate Power: A Strategy for Global Unionism

Today, unions around the world are struggling to fulfill their role as voices of the political interests of working people. In a world of increased precariousness, offshoring, flexibilization and casualization of work, the loss of union power and the deregulation of labor markets has flourished and opened the way for increasing precariousness and agency work. While continuing to fight to promote a fairer society, unions now face the challenge of how best to organize workers in a truly transnational context.

There is a significant challenge involved with balancing food security at local and global levels whilst mitigating the environmental and social consequences of the historically productive food chain. This work addresses the importance of education in the South Australian agricultural sector as a tool to maximise beneficial outcomes. The results of a blended mixed method research project, which involved farmers and governance stakeholders in South Australia, are presented as empirical evidence highlighting the positive roles education, in particular university education; have in regard to increasing sustainability. Interviews with agricultural governance stakeholders emphasised the important role that education will play in building the adaptive capacity of farmers and having positive outcomes on the future development of the South Australian agricultural industry. It was also found that higher levels of formal education contributed to farmers: having greater confidence in their respective communities; being more likely to prioritise their environmental stewardship roles; being less concerned about the risks posed by large agri-business corporations; feeling there was less need to articulate the agricultural industry or restrict imports; and, looking for more support from government to adapt to a changing climate. Most importantly, however, was the dramatic reduction in farmer concerns with government support programs as education levels went from secondary or less, through to vocational qualifications, and finally university degrees. These results suggest that further education provides farmers with the capacity to compete effectively in a liberalised economy.

FIG, DAVID* (University of Cape Town, davidfig@iafrica.com)

A New Tsunami: The South African Anti-Nuclear Movement in the Wake of Fukushima

South Africa’s government has made clear its plans to order a fleet of six nuclear reactors, providing an additional output of 9 600 megawatts. It also aims to reactivate other elements of the nuclear fuel chain such as the construction of an enrichment plant, a fuel fabrication plant, and a nuclear waste smelter. President Zuma has taken over from his deputy the chairing of the National Nuclear Energy Executive Co-ordination Committee, the intra-governmental body that is charged with overseeing procurement. The overnight costs of the reactors alone are likely to amount to between US$60 – 100 billion, by far the biggest infrastructural purchase made by democratic South Africa in its 20-year history.

Seemingly the impact of Fukushima has not had repercussions among the responsible decision makers. Instead they have sought and gained approval from the International Atomic Energy Agency for the expanded nuclear programme. However, civil society continues to challenge the plans as a fait accompli. Whilst the political threat in the anti-nuclear campaign is connected to the environmental NGO sector, new formations and new sectoral opposition is notable. Significant disquiet has been voiced by the trade union movement (in political alliance with government, but not on this issue), faith-based communities, academic energy researchers and civil society energy lobbyists, the consortium of large-scale electricity using companies, communities situated close to the construction of nuclear facilities, and even the government’s National Planning Commission.

The paper seeks to understand the dynamics of government indifference to Fukushima, and the stress on Fukushima by opposing social movements, who have adopted TSUNAMI as the name of their coalition (The South African United National Antinuclear Mobilising Initiative).

Shale Gas in South Africa: Regulating a Resource Grab

A number of transnational oil companies have recently been given the go-ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier moratorium in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism are dependent, and a substantial portion of the population of the Karoo region. In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa’s land surface.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The country’s mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry’s activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned in civil society, pointing to shale gas as tipifying the ‘resource curse’.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the new South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

Inscribing Dance: From Embodiment to Digital Media

Inscribing dance: from embodiment to digital media

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It’s matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanency.

Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, through video recording and preservation of intangible cultural heritage through the documentation of the interpretation of dance works, it cannot be taken for the work itself (as is the text of a play in theatre or the score for music). Further, this accessibility of information through technology, this “visibility in excess”, is questioned both by practitioners and scholars; it can create a cultural bias, contributing to the contamination by technological means of feasts and dances and promote dancing dialogues established between generations. The ritual system, constituted by means of arts and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults’ dance – sussu) and modernity (youth’s dance – forró), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

“Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivations of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the policy as well. An institutionalized labour movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration, even when they have adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course unions do not act to influence policy or organise migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organising efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

A State/Society Approach to Labor Standards Enforcement

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be changed, then push and pull the state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can create conditions for partnering with agencies in enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the setting enforcement right as a technical problem that can be solved with the right strategy or correct internal organization of the bureaucracy. By contrast, it treats enforcement as a political problem of constructing institutions that can facilitate collaboration across the state and society divide, thus ensuring greater enforcement capacity. Our analysis of cases from highly different political and cultural contexts (US and Argentina), we contend that the latter approach has the potential to help
labor organizations further enforcement and argue that these findings suggest a need to develop more expansive theories of the enforcement process.

**Intergenerational Dependencies: Challenges for Theory, Research and Policy**

This paper examines recent developments in the theory of intergenerational solidarity and dependency, drawing on a review of key sociological studies and policy documents. Despite the rejection of the generational conflict hypothesis in the sociology of ageing, prominent public authors such as Fishman (2010) continue to give popular support to the perspective of demographic determinism and apocalyptic demography. As well as helping to refute such views, attention to the theory of intergenerational dependencies is argued, has the capacity to reinvigorate research on the sociology of ageing and to provide new research perspectives on policy in the epoch of longevity.

**Comparing Two “Banglatowns” – Reflections on the Use and Transformation of the Streets in Rome and London**

The paper aims at comparing how two different “Banglatowns” were built-up in London and Rome. In both cases the “street” played a core role in urban transformation.

In London, the Spitalfields’ case will be analysed. Here, a typical inner city has become in the last 40 years one of the biggest Bangladeshi enclaves in Europe. Since the end of the 1990s, its marketing as London’s Banglatown was a product of an alliance between Bangladeshi political and commercial elites that represent the majority in the local Council. A number of area-based initiatives played a core role in this process.

In Rome, the Torpignattara case will be considered. This is an Italian “periphery” that started to receive foreign immigrants, in particular from Bangladesh, since the 1990s. Here it was the absence of this place in the policy agenda, and some consequent intensive uses of the streets by the immigrants’ population that led to its labelling as a Banglatown.

Based on the idea of “diversity” that considers multiple axes of differentiation (e.g. national origin, class, gender), the paper will explore how these places’ transformation led to a reconfiguration of the streets’ uses that included new groups, excluding others.

The comparison between the two cases will focus on some core issues:
- With reference to the debate between formal vs. informal, policy vs. practice, citizenship right vs. urbanity right, was the presence/absence of a public policy where the immigrants played a core role a minus or a plus in these places?
- Is the street a privileged space for the cohabitation of differences?
- What kind of diversity is produced in the space of the street?
- With reference to the Bangla-towns image, what kind of “authenticity” was produced? Is authenticity a meaningful issue for the social construction of spaces?

**Distrust and Law-Evasion In Iran (Case study: Tehran city)**

Distrust and law-evasion in Iran. Case study: Tehran city

Social capital is basis of development and stability in every society. Trust is one of the most important social capital indicators. Distrust is signe of erosion of social capital in every society. Erosion of social capital is named as Weak Intergroup objective and subjective relations in society, can issue disorder or law evasion in society. Therefore distrust to other (people and the authorities) about law-obligation can inbreed law-evasion in society. So this article explains distrust effect on law-evasion. In this research is used Putnam and fukuyama theory to analyzes social capital erosion. This method is survey research the study population of this study of women and men over 24 years in Tehran. And the data collected by questionnaire from a sample of size 384 people in Tehran. Method of sampling is Multi-stage sampling. After data collecting, research hypotheses examined in two inferential and descriptive levels by Amos and Spss package. Law evasion is divided in two dimensions: objective law-evasion (behavior) and subjective law-evasion (orientation). In contextual variables, it is seen meaningful relation among gender, marriage position, type of job, age, education, economic position with two dimensions of law-evasion. Basic variables in this research with their total effect on dependent variable consist of, civil distrust (0/44), generalized distrust (0/21), disbelief to law (0/26). Generally, these independent variables (with subjective law-evasion) explain 43% of dependent variable variance (objective law-evasion). Whereas these variables explain 14% of subjective law-evasion variance. So social capital erosion has more effect on subjective law-evasion (orientation) into objective law-evasion (behavior). Hence to support inter group social capital in society can issue revial of law orientations and hence obey the law in society.

Keywords:
- Distrust, subjective law-evasion, objective law-evasion, disbelief to law,

*Emotions and the Self’s Past and Future*

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one’s identity and morality. Many of his examples make it difficult to distinguish them from particular strong feelings caused by the perception of others. A British sociologist, Margaret Archer, proposed that in our inner conversations about our future commitments our memory of our past experiences and of the emotions that accompanied them contribute to the very process of decision-making about the future. Also in this case emotions seem to help in the process of teasing out one’s preferences and, once these are chosen, of buttressing them. Discussing one form of reflexivity, however, Margaret Archer puts her finger on how the propensity to value strong emotional attachments can standardize personal responses to a great variety of situations, often with disastrous effects to the self. In my talk in contrast I want to show how specific emotions or, better yet, personal emotional geographies, are constitutive of unique individual identities in a sense of fixing or freezing the way an individual relates to her or his self, others and to the past, present and/or future.

*Changing Family Models: Emerging New Opportunities for Fathers in Catalonia (Spain)*

In the ongoing debate on changing family models as a result of the decline of the male breadwinner family model, the main focus has generally been placed on a possible shift towards a dual, full-time, adult worker model with a more equal gender balance and where fathers are expected to devote more time to the care of children (Lewis, Campbell and Huerta, 2008; Daly, 2011). On the other hand, in a context of growing family diversity less attention has been paid to the emergence of other work-family arrangements with emerging opportunities for fathers’ dedication to their children. This is the case of couples with children in which both partners are unemployed or where the potential breadwinner is a woman.

In the present contribution, in the framework of a research project under way on father involvement in the care of children, we are trying to explore the characteristics and profiles of these families with a special emphasis on the changing role of fathers, in an institutional context where new social policies of fatherhood are being developed in the last decade. Using data from ECVP 2011, a regional survey whose main focus has recently been harmonized with EU-SILC, the paper examines the extent to which soaring male unemployment rates, in connection with other social and economic factors, are shaping new patterns of allocation of time involving a more equitable sharing of childcare and of domestic tasks between partners. What can be the long term consequences of these new developments for gender balance and for the relationships between fathers and children? Are there these new arrangements here to stay as emerging new opportunities for fathers or will they fade away as soon as there is an economic recovery?

*Indicators for the Institutionalization of the Social Sciences and Humanities*

We will present an interim report of work done in the EU funded INTERCO-SSH project, which deals with the institutionalisation and development of the social sciences and the humanities (SSH) in Europe. We will suggest a concise set of indicators which is being established for a comparative analysis of the development of the SSH in different national contexts. Preliminary data will focus on SSH disciplines in Germany, France and the UK from 1945 to the present. We will ask how these indicators can be used for the history of the SSH and what developments they are able to depict. The sources used are of qualitative and quantitative nature: interviews, statistical and bibliometric data, academic texts and archival records are gathered and combined for this purpose.

The objectives of this work is to identify national patterns of institutionalization which might explain the relative isolation of national traditions in the SSH and to assess the importance of the disciplinary division of labor within the SSH in order to reflect upon the historically changing power relations between branches of study, processes of professionalization of new disciplines, the reshaping of traditional forms of scholarship and the potentialities of new mechanisms of intellectu
International Mobility of German Diplomats and Their Families: Direct and Cross-over Effects on Quality of Life, Family and Partnership Outcomes

International work assignments are often found to be stressful and to affect employees’ and their accompanying partners’ well-being. However, whether this applies also to diplomatic personnel who are relocated regularly is unclear. The study surveyed the health-related quality of life, work and family life, and the partnership satisfaction of German diplomats. Potential risk factors are the duration of international mobility (years spent in the diplomatic rotation scheme; number of postings abroad), perceived stress, and employee’s attitudes towards working/living in diplomatic rotation. Potential protective factors include cognitive coping, internal control beliefs, self-efficacy, preoccupation with the host country’s culture, and social support. As a key aspect, crossover effects between employees and accompanying partners are analyzed. N=2,433 active diplomats in the German Foreign Service were assessed using self-rated online questionnaires. Corresponding assessments were obtained from N=321 accompanying partners. While perceived stress had negative effects on all three outcomes, the number of years passed in diplomatic service and the number of postings had no effect. Diplomats who saw more advantages over disadvantages in diplomatic rotation reported better health, easier reconciliation of work and family life and better partnership satisfaction. Cognitive coping, self-efficacy and social support had several positive effects on the outcomes. Additionally, cognitive coping moderated the effects of stress on health. Crossover effects revealed that accompanying partners’ stress levels and their attitudes towards living in diplomatic rotation were among the determinants of expatriates’ quality of life, family, and partnership outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employer’s prevention strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

FLINKFELDT, MARIE* (Uppsala University, marie.flinkfeldt@soc.uu.se)
‘cultures of Sick Leave’: Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden

In line with what has been described as a ‘cultural turn’ in the social sciences over the last decade, ‘cultures of sick leave’ has become an important concept in Swedish social insurance studies as well as in political debates. ‘Culture’ has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining how the concept is used and what it does, this study offers an ethnomethodological understanding both on the empirical level and on a meta-level. It is found that ‘culture’ tends to be used (or refuted) as explanation, without much theoretical or methodological grounding. Instead, culture is often applied in a common-sense manner, rarely problematizing how it translates into empirical studies. The paper discusses how the concept of culture works to negotiate the institutional category ‘sick absentee’ in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a ‘culture’ anyway, and what can be done about it? As an ethnomethodological approach, the paper suggests ethnomethodology’s way of studying culture as it is being ‘done’. Seeing culture as constituted in discourse, and placing culture in action rather than action in culture, opens up for a bottom-up analysis in which members’ situated practices are in focus. Furthermore, conversation analysis provides a rigorous methodological framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctors, and the state official administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the concept are co-constructed and negotiated: how ‘cultures of sick leave’ are done in the fine details of interaction.

Buddhism and Critical Social Science on the Causes of Suffering: Immigration Detention Regimes has important implications, not least of which is the fact that it appears to have occurred at the same time that the number of migrant detainees has increased. Is there a correlation between the institutionalization of detention regimes and the increasing reliance of this method of migration control? Using data on detention regimes from the member states of the Council of Europe, where human rights norms appear to have had an important impact on how detention practices have evolved in recent years, this paper seeks to address this question through differing theoretical approaches to state behavior. For example, has pressure from human rights actors been a key driving force for the institutionalization of detention? If, so what implications might this have for how rights actors view the long-term consequences of certain liberal norms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the Europe region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Frontier Societies: Culture and Social Institutions

The paper presents a cross-cultural study of contemporary frontier societies, based on analyses of World Values Survey data from the USA, the Russian Federation, Canada, Australia, Argentina, and Brazil. Consistent with Turner’s “frontier thesis”, we find that frontier societies carry a common syndrome of socio-cultural attributes, ranging from higher levels of membership in voluntary associations and civic activism, to greater libertarianism and skepticism of government. The “how rights actors view the long-term consequences of certain liberal norms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the Europe region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Re-Thinking Cautious Urban Renewal. The IBA (Berlin, 1984/87) As an Early Experiment for a Politicized Strategy for a Sustainable City

Apart from the fact that the strategies for a sustainable city today form the basis of a neo-liberal urban, mainly environmental policy, the main question remains of the meaning of initial potential of some of the key concepts. The International Building Exhibition (IBA) in Berlin in 1984/87 with its two areas IBA Alt and IBA Neu, and the two strategies of a critical reconstruction and a cautious urban renewal, seen as a paradigmatic case study in light of the specific situation in Germany in the 1980s, especially the conditions in West Berlin, by linking urban rehabilitation with social and ecological objectives produced alternative, but ultimately normative models of urban regeneration, not only with regard to European urban planning, but of global interest. This paper analyzes, to what extent primarily the IBA Alt - as a paradigmatic concept of development in response to the policy of redevelopment by demolition and reconstruction of the 1960s and the Intensive Squeezing Practice, with its procedural processes of advocacy, participation, and self-building for the socially engaged and responsible restoration and maintenance of old tenements, new forms of responsibility and ownership, the provision of green spaces and social infrastructure – at first promised a politicization and democratization of urban renewal and everyday life. Since the IBA, funded by federal and state agencies, is called back to mind for its projects and protagonists with various research, exhibition and publication projects to mark its 25th anniversary, I will discuss the function of cautious urban renewal, both its positive achievements and uttered criticisms. In revisiting the IBA, I intend to provide a historically argued contribution to this current debate on sustainability and the city, by not only by highlighting planning processes, but by challenging the dimensions of the ecological and the social.

On the Maturation of Immigration Detention: Theoretical Approaches and Evidence

The detention of irregular migrants and asylum seekers has become a prominent feature of both national and international efforts to “manage” global migration. An important aspect of this phenomenon is the emergence of new institutions devoted to migrant detention, which can be observed for example in the gradual shift in countries across the globe from using prisons or other “off-the-shelf” facilities to dedicated immigration detention centers. This maturation of immigration detention regimes has important implications, not least of which is...
Social Cohesion in Multi-Ethnic Community

From the beginning of the sociological study, social cohesion in community, usually measured by community ties, have been a key topic of discussion. Community ties provide social support, foster social relations, and facilitate social capital among residents in a community. They also facilitate a sense of attachment to the community, encouraging a commitment to local institutions and involvement in community activities. Two major hypotheses have guided the discussion of community ties in the literature: the race/ethnic homogeneity hypothesis and the integration hypothesis. The race/ethnic homogeneity hypothesis suggests that the larger co-ethnic proportion in a community promotes community ties, while the integration hypothesis suggests that length of residency in the community facilitates community ties. Though there are many publications on these two hypotheses, the majority of them have considered the significance changes in society. First, we know little about how the hypotheses are relevant to the current population of immigrants who come from diverse social and demographic backgrounds. It has been well documented that the representation of immigrants significantly varies across North American cities. Some cities become more multi-ethnic, little is known of how the two hypotheses relate to different racial and ethnic groups. In this study, we merged the 2008 General Social Survey with the 2006 Canadian census to explore how co-ethnic composition and duration of residence in a community are related to community ties. The findings suggest that, in a multi-ethnic context, co-ethnic proportion in the community is no longer associated with overall community ties for minority members and immigrants. However, our findings show that the association between residing for a longer time in a community and overall community ties is still applicable today.

The Role of Intellectuals in the Construction of Public Policies: The Example of the Educational Reform of Vichy

This paper aims to show how intellectuals can contribute to the imposition and the justification of a particular social order through their participation in the construction of a public policy. From the example of the educational reform of Vichy, we shall show the role played by some intellectuals in the definition of a "school problem" and in the prescription and the implementation of solutions to solve it.

Some of conservative intellectuals (academics, writers, journalists) assembled in networks (circles, leagues, associations) struggle, in the interwar period, against the republican school and its ideals. A relatively unified discourse about the problem of the school appears, transmitted by significant resources (specialized and mainstream publications, public meetings, etc.). The establishment of the republican education system in France in 1882, which is the result of the effort of some political and religious leaders, was not yet complete. The emphasis of this "school problem" by Petain and other high-ranking military officers, members of the same groups which were marginalized under the Third Republic, give them a window of opportunity to contribute directly to the reforms (I). The seven ministers of Education under Vichy, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy, give them a window of opportunity to contribute directly to the reforms (II).

Both Vichy and the Fourth Republic attempt to impose a new vision of the educational institution and the limits to which it is confronted. In 1940, the establishment of the Vichy regime allows activists of a conservative school, marginalized under the Third Republic, to occupy key positions in the Ministry of National Education. Against the republican school (free, secular, positivist) established in the early 19th century in France, Vichy, the Vichy School (as the school of Vichy became known) is proposed as necessary to recover France (I). Beyond the speeches, some tools are actually implemented by the new government to produce this new vision of educational institution: change the structure of the Ministry, transform the organization of teaching, change teachers’ formation, impose new men at all levels of the hierarchy, etc. (II). This symbolic violence, which really translates into some institutional structures of the society - very quickly because of the authoritarian nature of the regime - is however limited by some actors. Teachers, street level bureaucrats who are responsible for implementing the reform, will resist at this violence (III).

FONTAINE, JULIETTE* (Univ Paris I, Sorbonne, CESSP CRPS, Juliette.Fontaine@univ-paris1.fr)

When Symbolic Violence Changes: The Example of the Educational Reform of Vichy

This paper aims to understand the mechanisms of symbolic violence through the capacity of the State to impose a specific social order by means of public policies and its control over the exercise of symbolic violence: as much as the government justifies and legitimizes its intervention, it legitimizes the dominant representations of the social world. From the example of the educational reform of the Vichy regime - on which focus our thesis - we will concretely evaluate what resources the new government has in order to impose a new vision of the educational institution and the limits to which it is confronted.

In 1940, the establishment of the Vichy regime allows activists of a conservative school, marginalized under the Third Republic, to occupy key positions in the Ministry of National Education. Against the republican school (free, secular, positivist) established in the early 19th century in France, Vichy, the Vichy School (as the school of Vichy became known) is proposed as necessary to recover France (I). Beyond the speeches, some tools are actually implemented by the new government to produce this new vision of educational institution: change the structure of the Ministry, transform the organization of teaching, change teachers’ formation, impose new men at all levels of the hierarchy, etc. (II). This symbolic violence, which really translates into some institutional structures of the society - very quickly because of the authoritarian nature of the regime - is however limited by some actors. Teachers, street level bureaucrats who are responsible for implementing the reform, will resist at this violence (III).

Si les inégalités numériques s’intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques off et on line (Granjon, 2009 ; Cassilli, 2010 ; Fontant, 2011). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

En entremêlant les dimensions institutionnelles, représentationnelles et usuelles, le projet de recherche intitulé “Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales” (RC14-254.4) avec les partenaires Sandra Fontan, Barbara Fontenelle et Micaël Lentezec vise à révéler le pouvoir de renforcement des inégalités sociales et à formuler des propositions d’actions à mettre en œuvre.

Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales

Si les inégalités numériques s’intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques off et on line (Granjon, 2009 ; Cassilli, 2010 ; Fontant, 2011). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

Le Mentezec (2010 et ANR INEDUC) interrogera l’articulation institutions/ usages en montrant en quoi les institutions d’aide à l’insertion renforcent les phénomènes d’exclusion à travers la mise en place de dispositifs techniques présupposant des savoir-faire chez les usagers. Plus largement, la relation d’aide proposée s’établit sur un rapport dominant-dominé créant une forme d’inégalité qui touche les capacités d’actions des personnes.

Fontan (2010 et ANR INEDUC) questionnera le rapport représentations/ usages en montrant que la tyrannie de la majorité (Pasquier, 2005) crée une norme sociale pouvant générer des difficultés d’appropriation chez les adolescents. La pression sociale à “devoir y être” ne sous-entend pas nécessairement des compétences développées ni des usages variés. Elle s’attache à déconstruire le mythe du “Digital Natives” (Presnyk, 2001) qui présuppose implicitement une inégalité des pratiques et voile le rôle des apprentissages.

Ainsi, cette proposition de communication contribue à relativiser les visions échantillonnées du numérique (notamment ces bienfaits émancipatoires) en en montrant son pouvoir de renforcement des inégalités sociales.

Consumption and the Social Organization of the Illusion

CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION
Isleide A. Fontenelle
Associate Professor - Fundação Getulio Vargas - Brazil 
idefontenelle@uol.com.br

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. The analysis adopts the Marxist approach with regard to consumption’s place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a new form of subjectivity who is moved by a desire to consume. Resorting to the dialectical method as developed by Marx, i.e. based on the idea of movement and contradiction, the article tries to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the “enclosure of the commons”.

SANTOS, ANA CRISTINA (Centre for Social Studies - University of Coimbra - Portugal)

Disabled Women and Sexual Violence in Portugal

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning difficulties either living in institutions or with their families (OPM, 2002; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in Portugal. Therefore the lives of disabled people are still marked by exclusion, poverty and prejudice. In a context that is particularly disabling, masculinized and male-oriented, such as Portugal, disabled women are in a particularly vulnerable position, accumulating the inequalities based on disability and sexism.

Based on the Social Model of Disability and drawing on the research project “Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal” (funded by the Portuguese Foundation for Science and Technology - reference PhM/GC/005/2008) and on my post-doctoral research on disability and citizenship in Portugal (funded by FCT – Reference SFRH/BPD/8059/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage and original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

What’s New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People’s Movement

Until the 1960s, social movements were comprised mainly of workers’ movements, focused on class and economic issues, highly organised in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social conflicts beyond the workforce, particularly in Europe and North America, and the subsequent emergence of numerous social movements around new ‘post-material’ issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society as its key location, organised in non-hierarchical structures and networks and embracing direct action and protest. As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled “for equality and participation on an equal footing with other citizens” (Dridger, 1989: 1). This action was made possible by the creation of the Disabled People’s Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People’s Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People’s Movement in Portugal (completed at the University of Leeds – UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People’s Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people’s movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

FORBES-MEWETT, HELEN* (Monash University, helen.forbesmewett@monash.edu)
Violence Against Female International Students and the Need for \textit{Gender Security}

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than one-third of women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally, with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for \textit{gender security}. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research involving international students and other key informers who work closely with international students. The paper presents knowledge about stalking, rape, assault and domestic violence against female international students. The study also presents ideas about education and response programs that address the issue of gender security. The study uses an intersectional analysis and a claim for human rights to argue for an expansion of preventative and response programs relating to violence against female international students. Findings indicate that female international students are far more likely to be victims of violence than male international students. It is also suggested that low reporting of gender-based violence is exacerbated within the international student cohort. The findings of this paper will be of value to female international students and their families, wider communities including in particular women from diverse backgrounds, practitioners and scholars concerned with the issue of violence against women, the international education sector, and host education institutions and nations.

FORD, MARGOT* (University of Newcastle, Margot.Ford@newcastle.edu.au)

Comparing Inequality of Educational Achievement in Australia, Britain and South Africa

Using Critical Race Theory as a foundation, this paper will analyse inequality of educational achievement of racially marginalised groups in Australia, England, and South Africa. The countries have quite different but connected histories. This paper will focus upon indigenous Australians, Khoisan in the Western Cape of South Africa and Afro-Brazilian migrants in England. We describe the scope of inequality. In each country the educational system is failing these marginalised groups, despite the recognition of inequalities based on race, ethnic and cultural markers rather than on educational ability. Western style education systems privilege particular epistemological and pedagogical approaches, education structural features, and the curriculum, to the exclusion of different, more inclusive and culturally appropriate approaches that could effectively reduce the inequality.

Breaking through or Locked in? Global Unions and Their Institutional Articulation with Trade Unions in Asia

Both leading labour geographers and theorists of transnational activism have noted that there is a weak understanding of the articulation between global institutions and networks, institutions and social formations at other geographic scales. Akrich (2005) has suggested, what is lacking more generally in discussions of globalisation and civil society is recognition of the specificity of the mechanisms necessary to confront the concrete experiences that mould discontent into specific grievances against specific targets and the ability to ‘negotiate boundaries’ between ‘domestic political settings, national governments and international institutions.

This paper takes up these concerns with regard to the articulation between the Global Union Federations (GFUs) and trade unions in Asia. The GFUs have all grown over the last decade in in terms of affiliated unions, members and geographic coverage. However, this formal increase in global representativeness has not always translated into legitimacy and meaningful influence with affiliates or externally. GFUs have coordinated many effective multi-scalar union-building or organisational and campaign initiatives – something their status as ‘global’ coordination bodies affords unique opportunities to do. However, it is also evident that the scope, form and intensity of GFU interventions are defined by their own institutional capacity and limitations (including resource constraints), leading to an uneven and opportunistic implementation of strategies and goals.

This paper analyses the complex interaction between the development, durability and effect of global/regional labour networks and campaigns and the institutionally embedded character of unions and workers at national and sub-national scales. It argues that, in Asia, such an analysis requires deep consideration of varying institutional and political landscapes as well as unions’ forms, repertoires of action, understandings of labour internationalism and articulation to the state and politics at geographic resolutions including, but moving beyond, the national scale.

FOSSATI, FLAVIA* (University of Zurich, fossati@pw.uzh.ch)
Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Contest in Western Europe

Activation policies became the means of choice to address typically post-industrial unemployment rates in a context of “permanent austerity” (Pierson 1996). However, comparatively little is known about how these “novel” policy instruments influence the political contest and the coalition formation mechanisms in this policy domain.

First, in line with the debate on multidimensional modernising reforms (Bonoli and Natale 2012; Häusermann 2010; Clasen and Clegg 2011) this paper investigates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite’s preferences pertain to more than one dimension.

Second, the analyses address the political elite’s coalition patterns by focusing in particular on the political left testing the hypothesis whether social democratic parties address rather insider or outsiders’ interests (Rueda 2007, Schwander 2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e. parties, state bodies, employers’ and social movement organisations in three dualising (France, Germany, Italy) and in two flexicurity-oriented countries (Denmark, Switzerland). The analytical strategy relies on factor and cluster analyses of preference measures weighted by the respective issue salience (cf. Kriesi et al. 2000).

The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite’s preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a redistributive and on an activation dimension. Interestingly, the most salient and controversial related to policies which concern the national repertoire of the labour market regime at stake. Finally, the results support scholars arguing that mainstream left parties support the interests of both insiders and outsiders (Schwander 2012), however, it results that the precise nature of coalitions is regime specific.

‘Belonging’ in The Land Down-Under: Insights from Three Methodologies

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodologies among different populations. Results from face to face interviews plus a photovoice exercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and post-national identities. Membership Categorisation Analysis is used to interrogate the presumptions included in the prompts used to generate the data (question themes, images for photographs, and images for focus group discussion). The range of parameters of belonging from the (civic and ethnic belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory discussion appears as one of the greatest innovations occurred in Brazilian democracy since the 1980’s, and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to verify what was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting’s minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide inequality conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual

Desde hace al menos tres décadas la noción de comunidad se ha vuelto central para una variedad de disciplinas asociadas al campo de las humanidades. El llamado “renacimiento de la comunidad” supuso la tarea de retrazar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es sabido, el surgimiento de la teoría sociológica a mediados del siglo XIX impactó de manera decisiva en la formación y el desarrollo del concepto de comunidad. La evolución acerca de las transformaciones en los usos y significados de dicho concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potenciales de diversas herramientas y propuestas teórico-metodológicas provenientes de perspectivas no específicamente sociológicas. En este trabajo nos proponemos, entonces, analizar de forma crítica y constructiva las posibilidades concretas de investigación teórica o metateórica en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la “historia conceptual” y la “historia intelectual”.

Youth in the Age of Austerity

This paper will draw upon international evidence of how youth’s and the ‘youth question’ within social and public policy has been (and is) changing as a result of the global disruption to international capital. It will examine how ‘financial restructuring’ in different countries is impacting on public and social policies aimed at the young and how the concepts such as ‘youth’; ‘age’, ‘transition’; ‘diversity’; ‘risk’ and ‘inclusion’ and citizenship are being reconstructed and reconfigured in policy discourses. Since the early 80s ‘neoliberalism’ has been seen as the major driver to national and international policy frameworks in western type states. This paper will argue that the recent ‘crisis’ does not create new responses but has accelerated neoliberal strategies that see public and social policies and practices help western states implement a range of new ways of managing young people and the ‘youth question’. The focus of the paper will therefore be on how youth
‘policy’ is using the ‘crisis’ in responding to the youth question, how it is creating new narratives of youth and the life course and what new types of ‘societal pathways’ into adulthood for the young are emerging as a result of recent austerity measures in policy. The analysis will examine these developments by the use of a number of international case studies, across Austria, North America and Europe highlighting the political ecological framework of policy that integrates an understanding of how ‘finance’, ‘markets’ and various neoliberal policy responses to them are re-shaping the life course for the young through the implementation of austerity measures.

FRANCIS, ARA* (College of the Holy Cross, afrancis@holycross.edu)
A Tale of Two Sorrows: Hurricane Katrina, Parenting Trouble, and the Politics of Suffering

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars’ participation in the construction of what constitutes “legitimate” distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of “sufferers.” We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists’ adoption of psychological and psychiatric vocabularies of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.

FRANZEN, SARAH* (Emory University, sarfranzen@gmail.com)
Contested Landscapes: Film Narratives and the Meaning of Land Rights

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline of ownership. This trend has many causes, including intimidation, force, access to capital and information, and the legal nature of many African-American landholdings. Alongside the legal battles and political movements that have come to define land ownership, however, are lived experiences and personal relationships that are intimately tied to landscapes. Using ethnocritsic film to document and present images of land and stories from rural African-Americans who claim land rights, my research examines the complex and overlapping interactions between humans and land. Land is more than an economic and political asset; for many rural African-Americans land holds meaning and memories and creates a sense of place and identity. These stories reveal that the best legal option for retaining land is not always congruent with the inherent meaning of ownership. In this paper, I use interdisciplinary modes of inquiry to examine the structure of historic and contemporary African-American land ownership and land loss and to demonstrate how personal stories and oral histories often reveal symbolic and temporal layers of understanding that question the very meaning of land rights.

(Im)Mobile Youth?: Globalisation, Leisure and Social Change in Scotland and Hong Kong

In recent years, the ‘global’ question has become central to debate in the social sciences. For some, processes of globalisation have increased mobility of people, culture and technology; for others, access to ‘global’ culture remains sharply stratified by access to resources, with those at the margins rendered increasingly immobile, both spatially and socially. At the same time, however, the globalisation of ‘mobile’ technology has opened up corridors of dialogue and interaction between disparate cultures and communities in ways that are both emergent and inchoate. These new ‘geographies of mobility’ strike at the heart of debates surrounding the lived experiences of globalisation: the tension between ‘spaces of place’ and ‘spaces of flows’. These debates have a particular resonance for young people, whose lives are lived at the precarious frontier of the global economy, and the leading-edge of global consumer culture.

This paper will engage with these debates through reflection on emergent findings from an ongoing comparative study of youth leisure, funded by the ESRC, in two geographically and culturally diverse research sites: Scotland and Hong Kong. The study adopts a historical and cross-cultural comparative design, building on landmark research carried out in both study locations by the pioneering sociologist Pearl Jephcott, involving concurrent fieldwork and data-collection in communities in both locales - including ethnographic observations, stakeholder interviews, focus group discussions, oral history interviews, and on-line data-collection. While methodologically rooted in these ‘spaces of place’, the paper will engage with the new configurations of identity and subjectivity thrown up by the emergent ‘spaces of flows’ that compose the lived experience of youthful global modernities.

Multileveled Uncertainty: Meso-micro Linkages between Trust and Confidence

This paper seeks to conceptualise the relationship between trusting institutions and trusting people. While these two types of trust are clearly linked and share important characteristics, they are also distinctly different at a phenomenological level. This paper elucidates these similarities and differences and the ways in which the two levels interact. First, it draws on Niklas Luhmann’s analysis of uncertainty and contingency along with his phenomenological distinction between trust in people and confidence in systems and institutions. Secondly, it draws on K. E. Loegstrup’s phenomenology of trusting as the default attitude within familiar social worlds.

Two fundamentally different ways of dealing with uncertainty are conceptualised. Trust, it is argued, is related only to alterity but depends on confidence in systems/institutions in order to bracket the contingency associated with any intersubjective encounter. Trust is possible only when preceded by a trusting orientation that is to say that whatever future is in store will not be a bad one. This orientation is it is an expectation of a more or less wide array of possible futures all within what is familiarly relevant to at specific situation, delineated by confidence. However, trust also provides the foundations for building confidence. Confidence can only be established once the issue of human agency invariable linked to institutions and systems has been settled the the form of trust. Consequently, confidence is learned from trusting. The contribution of this paper is two-fold. First, it brings together otherwise disparate writing on the relationship between trust in institutions and trust in people, helping to clarify this point in trust research. Secondly, it provides conceptual tools to describe and analyse the relationships between trust in intersubjective relations and the ways that familiar institutional and organizational backdrops provide the confidence to trust the other.

FREDRIKSEN, MORTEN* (Aalborg University, mfr@dps.aau.dk)
Nordic Moral Repertoires: A Contribution To a Comparative Cultural Sociology Of Social Justice

The great values similarity between the Nordic states seems to be a fact beyond dispute (Kildal and Kuhne 2005; Svalfors 2003; Svalfors 2006). However, since contemporary research primarily focus on the historical and socio-economical causes of these attitudes, the Nordic inhabitants reasons for having these perceptions are all but unknown. This paper seeks to contribute to an understanding of these reasons.

Identifying macro level drivers is crucial to explaining the development and continued existence of welfare states and institutions. Nonetheless, these are inadequate for understanding why people hold values and perceptions supportive of specific institutional structures: people express egalitarian ideas because this is important and meaningful to them, not because they have a working class upbringing.

The analytical framework applied in this paper is drawn from the Sociology of Valuation and Evaluation (Hall and Lamont 2013; Lamont 2012) emerging in the intersection between political sociology (Boltanski and Thévenot 2006; Wagner 1999) and comparative cultural sociology (DiMaggio 1987; Lamont and Molnar 2002). This approach suggests that perceptions of what is good and just differs between groups and nations because of differences in preferred cultural standards of valuation and evaluation.

This paper seeks addresses these research questions:

- What are the dominant standards of valuation employed in justifying welfare states and institutions?
- Which group identities (nation, class, generation) are most salient to differences in standards of valuation?

The research project is a comparative cultural study of Sweden and Denmark focusing on issues of social justice. 60 semi-structured interviews are carried out in each country with people between 25 and 70 currently employed. The sample

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is balanced in terms of age, gender and class. The interviews explore the four subject areas: social justice, redistribution, work, and institutional legitimacy and trust.

Sustainable Credit Guarantee Associations

Purpose of the paper
This research analyses credit guarantee associations and their contribution to financial solutions for local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

Research method
Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (ÖNKGF), in Sweden.

Research Findings
Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that ÖNKGF creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. They get advantage to attract new members by emphasising democratic management and members’ sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members’ participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

Main Contribution
The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of ÖNKGF. We recommend managers to develop networks with members and other stakeholders to promote cooperative collateral financial activities in the local economy to legitimate and sustain their business in the local society.

Social Memories In South America: Generational Narratives In Times Of Political Youth Activism

Social memories in South America: generational narratives in times of political youth activism

Raimundo Frei (PhD Candidate)
Humboldt Universität zu Berlin

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries and those born after the dictatorships in the Southern Cone. Against this background, the main research questions are whether and how generational narratives have emerged in the context of political democratization. Generational narratives link life course sequences with experiences of collective events. This connection must not be regarded in terms of Mannheim’s idea of ‘participation in the same destiny’. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives are attempts to bestow coherence and connect biography and history.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilization in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country’s undemocratic past.

Consumidores Críticos, Pacientes Informados y Pacientes Tradicionales: Visiones y Prácticas De Cuidado De La Salud Entre Usuarios y No Usuarios De Medicinas Alternativas En Buenos Aires

Unos de los rasgos de las sociedades occidentales es el énfasis en la responsabilidad individual en el cuidado integral de la salud. Conservar y mejorar la salud se ha convertido en una medida del logro personal en un contexto epide-
imológico en el que se ha incrementado la mortalidad y morbilidad debido a la transición demográfica, con la transformación de la morbilidad en enfermedad crónica que se contraen, o acomodan de manera complementaria, los de las medicinas alternativas que destacan su capacidad curativa, el bienestar psicosfísico y espiritual, y el rol activo del individuo en la salud holística. Basándonos en el análisis cualitativo de 8 grupos focalizados con varones y mujeres de clase media de entre 20 y 50 años de edad realizados en el Área Metropolitana de Buenos Aires en el 2013, analizamos sus concepciones de salud y riesgo, la credibilidad otorgada a los distintos sistemas expertos y saberes populares, y las autoimágenes emergentes en torno a las prácticas de cuidado. Entre estas imágenes identificamos, la del consumer critico frente a la “moda de la vida saludable” y la creciente comercialización de productos y servicios bajo esta rúbrica, así como respecto del uso de fármacos; la del paciente informado que a partir de la experiencia personal y de terceros, la información disponible en Internet, los medios masivos de comunicación, y la literatura de divulgación, opta por distintas alternativas de cuidado –cuyas nuevas interacciones se complementan terapéutica– y bien descarta la opción de recurrir a medicinas alternativas; y la del paciente tradicional que se sienta bien cuidado por los especialistas de la biomedicina y que participa de redes familiares y sociales en las que no se cuestiona el paradigma biomédico.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory institutions appear as one of the greatest innovations occurred in Brazilian democracy since the 1980’s, and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to examine how the participatory process was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting’s minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide equalitarian conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

Transparent Patients: Addressing Risk in Health Information Exchanges

In the United States (US), Health Information Exchanges (HIEs) are emergent initiatives designed to pool the personal health information of individual patients in order to facilitate care. Proponents also hope that HIEs will support diverse secondary uses of health information (e.g. biomedical research, public health
surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIEs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content- and discourse-analysis), this paper considers how HIEs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIEs in the US.

**Solidarity (and alternative) Economy and Its Anarchist Grammar**

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a ‘grammar’ to articulate the normative macro-elements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19th century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Proudhon in the 19th and movement protagonists in the 20th century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammatical lens, but also how the movement can loosen its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

**Solidarity Regimes and Individualization: Institutional Change In Social Security Schemes**

Since the 1990s so-called mature and upcoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic and cultural changes, and they are at the same time highly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to institutional convergence, in our case to institutions based on the concept of self-responsibility. Concepts, however, find entrance into institutions in very different ways. Actors, for instance, interpret self-responsibility in terms of individualization on the one hand, or subsidiarity on the other. Often with corresponding family obligations on the other hand, and indeed, institutional differences are to be found both in international comparison and within single welfare states, and family elements cannot be interpreted as the remains of former family-based welfare models. Thereby, unexpected effects and unbalanced influence of concepts on single institutions can result in institutional contradictions which, again, might be contradictory for the social citizens and lead to new forms of social inequality. The degree of individualization of different social rights to social security has, however, not been systematically gathered, even though its social and economic importance is increasing.

The aim of this contribution is to provide an analytical tool to identify the degree of individualization in social security institutions. The institutional degree of individualization will be measured for old age schemes separately for the northern European welfare states at three points in time. It will therefore, secondly, deliver original empirical results on instituted intergenerational dependencies and it will challenge the assumption of convergence of welfare institutions with regard to individualization.

**Understanding Mobile Childhoods: Children of Migrations from the Philippines to Europe**

Contemporary parental migrations have resulted in the rise of many transnational families characterized by solidarity despite family separation across geographical distances. Children of these families have attracted scientific attention for the last twenty-five years, which reflects the existing social concern about their well-being as they grow up separated from one or both of their parents. When family reunification takes place in the receiving country of the migrant parents, children themselves become migrants. Such mobile childhood is considered atypical in both the children’s society of origin and of destination. How to capture the diversity of childhood experiences of these children migrants? In what way do their experiences present scientific challenges to the study of migrant children and their mobile childhoods? In this presentation, we explore these questions by focusing on the childhood experiences of Filipino migrants’ children who have grown up partly in the Philippines partly and finally in France and Italy. Here, we examine their experiences in terms of mobility to unlock their subjectivities and agency. The results of our ethnographic fieldwork among children of Filipino immigrants in France and in Italy demonstrate the different forms of mobility of young migrants throughout the migration process. Using mobility as an analytical lens, we attempt to move beyond nation-state borders by considering carefully the context and temporalities of mobile children’s childhoods.

At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

At the leading edge – Does gender still matter? A qualitative study on successful coping strategies and prevailing obstacles in academia. Analysing female careers in Austria

Although academic science in Austria is still male-dominated to a great extent, recent development evidences changes especially in higher positions. Statistics on the Austrian setting show that the share of female scientists at upper levels of the career ladder is shifting slightly but steadily. This article deals with explanations for this development phase and analyses crucial biographies of female academic careers in leading positions. For this reason, the paper focuses on three key research questions: Which obstacles hinder successful female careers? How do successful female scientists overcome these obstacles and which long-term strategies are used to acquire or hold leading positions? The findings are based on eleven qualitative interviews with the most successful female scholars in Austria (i.e., rectors and vice-rectors). The findings are arranged in three sections: (1) The results emphasise obstacles impeding female scientific careers. The analysis reveals that informal encounters, (male-dominated) social networks and the requirement both to be geographical mobile and to handle family issues at the same time are important obstacles. (2) The analysis concentrates on the underlying mechanisms in terms of how successfully female scientists manage to overcome these obstacles. With regard to informal encounters, it appears to be important to keep the distance from one’s environment, while pursuit of change can be seen as a crucial mechanism in terms of coping with the negative effects of (male-dominated) networks. Planning and organisational skills are decisive in conciliating geographic mobility and family obligations. (3) Finally, this paper elaborates on different long-term strategies applied by women in order to achieve leading positions.

Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOEP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the German rates of low-paid workers are quite striking (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrast, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation.

Against this backdrop we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment. Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

Using Canonical Correlation for Index Construction with Aggregated Data

Indices constructed by aggregated data are frequently used for macro data or multilevel studies. There are several statistical approaches to construct such macro indices (as has been done by World Bank econometricians or psychometricians who deal with cross-country research questions).

For measuring multi-facet phenomena on the macro level (such as happiness, corruption or freedom), one would consider indices based on sub components which refer to the same phenomenon. Specifically, for convergent validity it seems important that the sub components measure different aspects of the same phenomenon but ideally nothing else (convergent validity). Statistical methods applied for index construction usually regard for convergent validity. This implies that most components or indices are constructed with high reliability. For preserving validity completely, one should also consider differences in measurement to other constructs or phenomena (discriminant validity). This is typically not under consideration in econometricians’ way of procedures when indices are constructed. It is also obvious that indices regarded by psychometric attempts of index construction are a method that allows for both reliability and validity, e.g. for warranting discriminant validity, we suggest canonical correlation as a procedure of macro index construction.

We show the advantages of canonical correlation for macro indices construction by referring to the seldom scrutinized social phenomenon of personal freedom. One of canonical correlation analysis mostly used application is the reduction of dimensionality (Anderson 1984) which is a crucial matter in index construction when sub components are also concerned.

The construction process is compared to factor analysis results (e.g. the role of eigenvalues in both procedures, Burt 1948), it is shown that both methods do not necessarily end up with the same results. In sum, canonical correlation is a more flexible tool that comes with stricter assumptions but with a clearer concept of what should be excluded from the index.

FUJII, YASUYUKI* (The University of Tokyo, ysvkjf@yahoo.co.jp)

Housing Market and the Activities of Land Banks in Socioeconomically Distressed Neighborhoods in Cleveland, Ohio, the United States

Abandoned and vacant properties are a serious urban issue as blight induces further blight. Real estate prices are nominal in some parcels in blighted neighborhoods. Also, subprime lending hit low-income neighborhoods the hardest. Moreover, foreclosure sales sometimes malfunction due to speculators.

Cleveland, Ohio has lost more than 50% of its population from the peak. In case of Cleveland, distressed neighborhoods are found in the east of Cuyahoga River, especially areas bisected by Cleveland’s primary corridor that connects Downtown and University Circle. Draft Cleveland Sustainable Development Pattern guides development and housing to high-priority zones. The map shows development horizon of short term, medium term and long term. Ordinary as well as distressed neighborhoods tend to be left “blank” or at best categorized as long term. Land bank is an effective tool to repurpose blighted properties to productive use. Cleveland has a unique two-strata land bank system. The City of Cleveland Land Bank, a city government program, has existed since 1976 and now owns over 11,000 lots on conditions that such lots have no structure. Cuyahoga County Land Reutilization Corporation, an innovative land bank established in 2009, acquires properties including with structures from various sources: tax foreclosure, national mortgagers, REOs and deed-in-lieu. The two land banks work in partnership.

This paper quantitatively clarifies the situations of Cleveland’s highly distressed neighborhoods and discusses how to tackle the issue of distress. Analyzed are private real estate transaction, foreclosure flings, Sheriff’s sales and acquisition/sales by land banks as well as socioeconomic indicators including income, poverty and vacancy. The historical perspective, year 2000, 2006 (pre-housing crisis) and 2012, is all an emphasis. Stabilization of neighborhood and (re)creation of social capital are discussed through a case study of Reimagining Cleveland, a pilot program till 2015 to utilize City Land Bank-owned vacant lots by indigenousness of a community.

Environmental Destruction and the Social Impacts of the Fukushima Nuclear Disaster

The Fukushima nuclear disaster is sometimes called as the worst environmental pollution in Japan. However, the social impact of the Fukushima nuclear disaster has particular features different from other previous environmental pollution cases such as Minamata disease. In this paper I’d like to point out the problems of the refugees from the highly radiation-contaminated area in Fukushima from the perspective on the social structure of pollution victims based on the sociological study of the cases of the ‘kogai’ or the industrial pollution in Japan.

In most cases of kogai, although it took many years for a human damage to be identified as a pollution related disease, the seriousness of the human damage was perceived. Whereas in case of the low dose exposure in the Fukushima disaster, it’s impacts to human health have not been clarified yet and still controversial. At this point, in Fukushima prefecture, more than 150 thousand of people were forced to evacuate from their community soon after the accidents. Recently the national government is trying to shift a focusing point to return and rebuild the communities.

Social stresses in the evacuation, even family members have to be forced the separation. For example some mothers have taken refuge far away from Fukushima with her children, left their husbands for their jobs in Fukushima. Since there is no credible health standard for the radioactive contaminations, each of them has to make very difficult decision independently. These difficulties might bring the deeper cleavages in human relationships within communities as well as within families.

Social stresses of refugees and residents are related with their previous attitudes and sentiments to nuclear facilities in the area. In comparison with the study of the victims of the past ‘kogai’, I will discuss this connection and their anxiety of being neglected their damages.

FUJIKAWA, KEN* (Meiji Gakuin University, fujikawa@soc.meiji-gakuin.ac.jp)

Social Movements in Solution Process of Environmental Problems: From Case Studies of the Anti-Pollution Movements in Japan

In Japan, many environmental social movements arose against industrial pollution called ‘kogai’ in 1960s. However, most of them are dissolved in solution process of the current issues in 1970s. The decrease of social interests in pollution problems have been a cause of recurrences of similar problems. We can see same situations in Asian countries where the residents around the construction site for chemical factory do not know about the previous pollution problems such as Bhopal case.

In this paper I will start with two case studies of environmental movements which are related with ‘kogai’ and have continued.

‘Itai-itai disease’, or ‘ouch-ouch’ disease, cadmium poisoning is the first pollution related disease certified by national government in 1968. The grass-root movements Itai-itai disease have continued to work for more than forty years. They have also affected the cadmium regulation policy in Japan and have support the residential movements occurred in other cadmium contamination area. And they have enforced the environmental measures of the mining company which was a defendant of the trial filed by the victims of Itai-itai disease in 1968. Recently they have succeeded to reduce the cadmium emission to nearly zero level. The long-term corporate measures between the residents and the company have attracted considerable attention from some East Asian Countries.

There are some movements to inform Asian people of the experiences of pollution problems in Japan. Asia Arsenic Network (AAN) organized after the settlement of Toroku Arsenic Poisoning low suit in 1991 is one of the most important groups in this respect. AAN supports the people who are suffering from arsenics pollution caused by natural water flow, mainly in Bangladesh.

At the final section of this paper I’ll consider the meaning of these movements, referring to the grass-roots movements following Love Canal case in the USA.

Do Increasing Attorneys Mean Increasing Poor Attorneys?

In this paper, I will analyze the income distribution of active attorneys in Japan using the decennial income survey data from 1980 to 2010. The Japan Federation of Bar Associations and the Japan Association of Bar Associations of the 62nd Legal Apprenticeship Cohort (registered in 2009) conducted in 2010 and early 2014 by myself and other legal sociologists as well as the yearly tax statistics compiled by the National Tax Agency Japan. The number of Japanese attorneys is rapidly increasing, especially since Japanese style of law school was inaugurated in 2004. Not only this time, but also whenever an agenda to increase the number of attorney...
Work Motivation and Social Networking Development in Professional's Job Change Behavior: A Comparison Between the U.S. and Japan

As professionals' work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However, a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough.

In the U.S. on the other hand, professionals in Silicon Valley, California found ventures one after another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new ideas. They are also looking for colleagues with whom to work and not to change jobs even if the work is not interesting enough.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed.

These differences in the social environment surrounding professionals have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition/alliance—namely “coalition work” (Staggenborg 1986), “mesomobilization” (Gerhards & Rucht 1992), and “resource dependence perspective” (from the sociology of the organization)—are comparatively examined and analyzed. This paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources, and benefit sharing, and biosafety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations and academic committees built some coalitions; (2) environmental coalitions for fishing (2) nongovernmental organizations’ (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/COP 10) in Nagoya city during 2010, in which there was coalition building between environmental NGOs, grassroots groups, consumer organizations, and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.
Bangladesh is described as the “Next 11” or “Frontier 5” and it is expected that it will grow to be a key player in the world economy. Macro-economic data, such as GDP growth rates which are as high as 6% since 2000, are indicators for the potential of Bangladesh’s economy. The Ready-Made Garment (RMG) sector is the country’s most dominant industry as well as its leading industry to export foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4th place behind China, Hong Kong, and Italy in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account when evaluating the real circumstance surrounding RMG sector: (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) RMG is divided into two categories, woven and knit, and can only self-sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh’s competitive advantage is found largely in lower wages among other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Souring countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

PR or Social Movement? : Against Climate Change Campaigns in Japan
This presentation examines the national campaign against climate change in Japan through the “frame alignment process” with from the state to the public based on the frame analysis in the social movement research.
State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it into matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted.
Thus, I investigated one of the national campaigns against climate change, Team Minus 6% (2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and values and strategies that had been adopted. The results showed an overall preference for “frame bridging” and “frame amplification” in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through “All Japan.”
In particular, they focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.
2. They presented the value of “individual environmentalism” in which the efforts of everyone adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.
3. They adopted a “personal interest strategy,” whereas individual interests and climate change issues are connected.

Uses of the Future: The Problem of Theodicy in Nagasaki
How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focuses on the religious mode of theodicy which can be seen among the catholic community on one hand, and “tragic mode of theodicy” (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Park on the other, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a “burnt offering” by providence. Although the catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also createssemantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the catholic community, narratives of suffering in Nagasaki through the municipal commemoration was not giving any meaning based on religious worldview. Rather, it makes a way to deal with contingency of the suffering potentially in the future by realization of the ideal of the “world peace” and “abolition of nuclear weapons.” 68 years after the attack, the latter mode of theodicy is predominant in the public commemorations of the Nagasaki atomic bomb attack. It is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

On the Potential of the Classic Japanese Theories of Sociology of Law
After the end of the Cold War, since early 1990s, the structure of the world society has been greatly changing under the pressure of globalization. The world society is becoming politically multi-polarized, economically covered with the global market and the law becomes complex and hybrid on the global level. Every national society becomes multi-lingual and multi-cultural. Worldwide information
networks make the global transaction much easier than in former times. Legal scholars are as if on an uncertain voyage.

However, against all expectations, I insist that we can find a helpful compass for the voyage in the discussion by classic Japanese socio-legal theorists. The modern Japanese law had been constituted under the pressure of the global colonialization in the second half of 19th century, since opening the country in the late Edo era. Still in the first half of 20th century, Japanese legal scholars had to be strongly conscious of the global pressure to harmonize between traditional Japanese laws and modernized Western laws. Even Japan’s defeat in World War II was regarded as a result of less attainment of the legal modernization in Japan. The pioneer theorists of sociology of law acted in that age.

History repeats itself. Global legal issues similar to that of in the age of colonialization have been revived since 1990s. Current hot issues relating to the interface between the global economic laws and domestic civil laws are quite similar to that of the transplantation of Western law into Japanese/Asian society. The discussion on the support for the development of laws in underdeveloped countries is also a revived issue in the colonialization age. Of course, the discussions on the polarization between traditional Japanese/Asian and modernized Western law are outdated. Nevertheless, it seems that we can extract valuable indications from the classic Japanese theories of sociology of law.

Representation on the Experience of Suffering in Urban Space: Wall Murals in Belfast

The purpose of this presentation is to show how hostility and empathy have been expressed in post-conflict Northern Ireland society by using an analytical framework of visual data in sociology.

Visual culture has been widely argued in various disciplines. Although many disciplines have been effectively analyzed visual representations, my focus here is to apply a sociological method of urban studies on the analysis of the visual representation.

My research interest is to examine the collective consciousness and memories of two communities where their identities have been part shaped by the images and icons shared in their communities. To do so, I will deal with and discuss wall paintings in Belfast. Mural can be seen as a community medium (Rolston 1998), since the approval of the community is needed in order for a mural to exist in the community for a long time.

My focus is on production, circulation and reception of murals in the urban space. In particular, I will look at the emplacement of murals in order to assess the positioning of each image in community.

The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities. 2) Remembering the dark side of the history of their communities is considered to be expressed (not covered up) in both communities, although some of them are usually seen in residential areas, 3) “Empathy” between the two communities can be seen when they deal with the experience of sufferings under the authority.

Emerging Child Care Services in France and Japan: Public, Private or Associative?

Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociality. Third, the quality of the child care services depends on the working conditions of child care staff. In many cases, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parent day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associative sector are growing instead of the public sector. What are the factors of this change? How shall this change influence on the quality of ECEC system? I selected two countries for comparison: France and Japan. First I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second I will show some examples of good practices in education and care system provided by the associative sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.

Network Diversity and Educational Inequality: A Case Study Of China

Following the line of James Coleman, this paper focuses on how network diversity influences educational inequality. Social capital is positively related to one’s academic performance. One way to gain more social capital is having a diverse social network as we can access to various kinds of social capital from network within the community. However, disadvantageous social backgrounds tend to have a less diverse social network. However, if students from a disadvantaged group have a less diverse educational support network, then why would some of them still be able to achieve academic success, such as attending an elite university? This study examines the case of students from both disadvantaged and advantaged groups in China as an example to answer the above question.

In the summer of 2008, we conducted in-depth interviews with 30 undergraduate students from two of the most prestigious universities in China – Peking University and Tsinghua University. Twenty were rural students, and the other 10 urban. By comparing the educational support networks of these two groups we discovered that the educational support network of rural students is generally larger than that of urban students. This is because rural students face more barriers than urban students and their network members are less able to provide them with resources, so they need more supporters than urban students in their journey to elite colleges. This indicates that rural students often get more help from the state and therefore have to rely on their own resources to achieve academic mobility.

Nervous System: Media, Communications and the Fight for the City

As nervous communities confront the specter of austerity budgets, growing inequality and a diminishing public sector, the question that organizers encounter is how to shift from multiple autonomous movements in a city to one movement for the city. This paper details and analyzes the role of media and communications in the process of developing a united front of people and organizations fighting for urban social change. Specifically, we look at the practices of the Media Mobilizing Project (MMP) in Philadelphia. MMP is both a community-based media project and a network of organizations across the Philadelphia region that aim to “build a movement to end poverty led by the poor and working class, united across color lines.” Through MMP’s use of media and communications we argue that communication technologies can be reimagined as a distributed nervous system that connects different parts of the urban social body, bring students together with janitors, teachers, and community members fighting displacement.
In this paper we use the concept of the nervous system to analyze the manner through which media conjoins people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

Rhizomatic Resistance: Social Movement Politics from Porto Alegre to Tunis and Frankfurt

The last three decades have seen massive protests and mobilizations. From the Zapatista uprising in Chiapas in the 1990s to mass demonstrations against war and protests at virtually all gatherings of world leaders to struggles in North Africa and most recently Occupy Wall Street and anti-austerity type mobilizations, protests and social movement organizing have taken place across the globe against rising inequality, war, the dispossesion of rights and entitlements, democratic deficits and austerity politics.

This paper examines this arch of movement-based politics. Situating it within former commons movement organizing and relating it to shifting dynamics of capitalism, I argue that contemporary movement-based politics is relying on and enacting a distinct and novel movement logic. Different from the so-called “Old Left” of mass unions and parties and the more identitarian politics of the “New Left”, contemporary movement formations are based on what I suggest to call a “Rhizomatic Logic,” forging linkages and synergies across the fractured landscape of “old” and “new” left. Throwing on multiplicity and thus lacking a dominant core or main axis, the rhizomatic logic emphasizes multi-connectivity and heterogeneity of political struggles, which has no central actor, issue, strategy, or ideology beyond opposition to neoliberalism and thus a subsequent need for thicker communicative processes. While this logic allows for unprecedented connections as well as tempering of inherent antinomies of diverse movements and groups, it simultaneously limits the degree of congealed and resilient movement building. Most recently this Rhizomatic Resistance model has found varied expressions in pro-democracy as well as occupy-type and anti-austerity protests from Tunis to New York and Athens to Frankfurt.

Return of Religion in the Public Sphere? Comparing the Nordic Countries

This paper analyzes the role of religion in the public sphere in the Nordic countries during the past twenty years. While some scholars have claimed that there is a return of public religion in Western countries, this paper asks if this is a reasonable claim for the five Nordic countries. These countries harbor a combination of modern and different features that make for an interesting comparative study. The public sphere is here identified as the state, politics, the media and civil society. The study is based on a wide range of quantitative and qualitative data. The data show a trend towards disestablishment, with the exception of Denmark and Iceland. Although religion is not a major issue among the political parties, it is more debated in the parliaments, except in Sweden. The media do not seem to center more on religion than before. Finally, religious communities seem to deal with the growing diversity by engaging with current political issues and dialogue initiatives. This study indicates that religion has had more of a continued role in the public sphere in the Nordic countries, although it is changing, most notably in Sweden, followed by Denmark, and Norway, and the least in Finland and Iceland.

A Socially Value to Support and Rehabilitate the Elderly

What meaning of punishment the elderly offenders, it is the only to pay for crime of them? I think that there is the socially value of support of them, in the criminal policy on aged societies. From social work practice I have presented to need of support them, as a marginalized people, and I want to discuss the meanings, purposes of this practices.
spread daughter preference, I investigate whether Japanese parents with a first-born son tend to not only have a second child but also have one sooner. Previous research shows that having a first child with socioeconomic and behavioral traits that make parenting easier is associated with a second birth (e.g., Jokela, 2010). It is commonly known that young male children are more difficult to raise than females because they are more prone to illness and injury. Also, boys are considered more physically active and require parental attention. Then, parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21st Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explanations. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how gender of the first-born child and measures of parenting difficulty (i.e., occurrence of illnesses, accidents, or perceived parenting burden/anxiety) as well as other characteristics affect parity progression. Interactions between gender and parenting difficulty on parity progression will also be considered.

Child Trafficking in the EU

The paper presents findings from an empirical study of the trafficking of Roma children into the UK, involving the establishment of the first EU wide police joint investigatory team (JIT) to investigate the illegal movement of humans in Europe. The paper draws on 12 months of UK-based research and four research visits to Romania and Bulgaria yielding more that 100 hours of interview data collected from interviews with senior actors within policing and justice agencies, Roma advocacy NGOs, and child protection organisations in the UK, Romania and Bulgaria. This paper disaggregates and re-prioritising marginalised populations across different jurisdictions and how vulnerabilities are exacerbated by the diverse and often conflicting remits of the various agencies involved. The paper discusses how the impact of structural issues such as poverty and exclusion, and the resulting conflations of the criminalisation and victimisation of the Roma, has not only limited the effectiveness of available responses to child trafficking, but also served to aggravate the increasingly adverse conditions faced by 'Europe's favourite scapegoat'. The paper additionally seeks to progress a theoretical space by linking such analysis to sociologies of mobility, marginalisation and the pluralised rendering of criminalised and victimised others. Key here are the myriad ways in which (national and organisational) borders are imagined, governed and responded to by diverse groups of criminals, victims, criminal justice and social services agencies.

Security, Surveillance and Space: Contested Topologies of Anticipatory Urban Counter-Terrorist Surveillance

Drawing on data generated from ethnographic research and two years of interviews with counter-terrorism practitioners this paper analyses practices and arrangements of domestic security surveillance operations in two empirical cases: the London Olympic security programme and, also, urban counter-terrorism surveillance measures in a British city. Particular emphasis is placed on the anticipatory nature in security practice and how collapsing distinctions between internal and external security draw multiple new actors and agencies into the dis-patch of counter-terrorism and attendant surveillance practices. With them come diverse practices, orthodoxies, values, techniques, weightings of risk and ambitions for security and surveillance. The paper argues that topological approaches informed by Foucauldian notions of ‘security’ (2007) and biopolitics (2008) provide a useful starting point for understanding of these heterogeneous configurations, techniques and practice of surveillance. Such approaches not only provide conceptual tools to articulate the diversity, plurality, conflict and cohesion within CT practice but, also, capture how power simultaneously operates at different scales and for varying (sometimes competing) purposes. Moreover, the paper argues that such conceptualisations of security represent a move beyond territorial control to the management of circulations, where subjects are left in situ, but their mobilities are monitored, delineated and assessed and, ultimately, reclaims elements of Foucauldian surveillance-focused debate from the shadow of panoptic analyses.

Parental Leave Policies in the French Work Family Regime: Innovative Formulation, Disappopriating Implementation

Theoretically, this proposal hinges its analysis around the concept of Work Family Regime - which at the same time draws from the knowledge acquired from large European comparative studies and from those which come from the feminist critique of these works. It then makes a study of the French Work Family Regime through family policies and, in particular, the formulation and implementation of parental leave.

France has formulated parental leave that is neutral and very innovative in its formulation but which does not fundamentally question, in its implementation, the unequal position of men and women in employment and within the family. Consequently, despite the fact it is very innovative and well founded from the point of view of a better hinge point between Family and Work, the use of the device remains almost exclusively female, puts the employment of women at a disadvantage and reinforces gender inequalities. The world economic crisis, by making available employment and the means of the social investment more scarce, has only reinforced such a dynamic.

In fact, the real sociological question is less to understand how the crisis is putting the brakes on (or even destroying) acquired experience in terms of reconciling working life/family life than to measure the growing discrepancies between social practices and normative frameworks that cause dysfunction and inconsistency phenomena within most contemporary societies. The discrepancy between standards and practices are reinforced against three contradictory phenomena: one that refers to the process of homogenising employment ratios between men and women; a second that refers to the permanence of a sexual allocation of productive and reproductive activities (sexual division of social activities); and a third which expresses the desire of women and men to be able to be reconciled without wearing down their working life and their family life.

Further Development in Study of Dispute Patterns in Central Eastern Europe

As the research on dispute patterns in popular legal culture in Poland is developing the further research results are presented. The 2013 results of field interviews in bi-ethnic area will be presented checking the hypothesized similarity of disputing patterns amongst Polish and Ukrainian population in Poland as well as the initial 2014 data on large urban population in Eastern Ukraine as compared with Polish population in Poland. The reasoning behind is that though different in their identity the two societies had enough similar past that they should display the same basic features of the willingness to dispute, use courts or to settle disputes informally. The methodology of further study concerning the use courts within such comparison will be presented. Variety of types of disputes is under study ranging from traffic disputes through business disputes to family disputes.

Fuwu, Makiko* (Tokyo Metropolitan University, fuwa@tmu.ac.jp)

Gender Inequality: Work and Family Conflict in Contemporary Japan

The number of dual-earner households has increased during the last several decades in Japan. Nevertheless, women still perform most of the housework, despite being employed full time. The issue of work and family conflict—particularly for female workers—has drawn the attention of policy makers, because it has often been associated with the issues of low marriage and fertility rates. Thus, in order to create family-friendly work environment, many Japanese companies have recently begun implementing policies such as overtime work restriction for employees with young children, enhancement of employees’ discretion over the pace and schedule of work, and introduction of various work-life balance measures. On one hand, these policies are expected to facilitate the continuous employment of women. On the other hand, their effects on household management—how spouses divide housework and communicative work, among other—are uncertain, because these policies are often created taking into account women’s responsibilities at home and aim to reduce women’s work and family conflict. Gender biases may affect the way spouses divide the housework and communicate with each other. This paper examines the impact of friendly-week work environment on (1) the division of housework between spouses and (2) the frequency of communication (conversation and having meals together) between spouses. The Japanese Life Course Panel Survey (LPS), a national longitudinal survey of the youth and middle-aged in Japan (i.e., individuals from 20 to 40 years old), was used in this research.
As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first this seems to be a reversal of the processes of secularization that have intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular manga and anime stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storyworlds. While some scholars view this as the further commercialization and secularization of “traditional” religio-cultural practices, these practices reveal how both “high” and “moderate” cultural forms—i.e., religion and the popular culture forms of anime/manga—in fact share overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that “anime pilgrimage” reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical solidarity and self-advancement. This further calls into question conventional views of distinctions between “traditional” and “popular” cultural forms by revealing how new technologies and pop culture media can be reshaped into augmenting and intensifying previous cultural practices of pilgrimage, self-advancement, and solidarity.
her friends to join a tent protest in Tel-Aviv on “14July”, an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protesters -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Schechter, 2012). Public support was 91% (July 2011 Peace Index). Israeli mainstream media - printed, online and electronic - supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activ- ist, journalists, new and mainstream media audiences; through a combined methodology: offline and online ethnography and netnography; in-depth inter- view with activists and journalists; and quantitative and qualitative text analyses.

**The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area**

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa Metropolitan area. Our research questions are: did areas' organiza- tional resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have consid- erably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establish- ments for social services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over oth- ers. The economic crisis not only undermined the capabilities of the household sector, but also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent vari- able is a composite measure of social disorganization: crime (homicides), poverty rates, school dropout rates, and overweight births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent vari- ables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

**The Spatial Capital of Urban and Suburban Families: The Effects of Place on Children's Activities and Parental Satisfaction**

Families’ life chances are affected by where they live as well as by their finan- cial, social, and cultural capital. That’s because their residence affects the likely- hood of accessing organizational resources (Wilson, 1987). The latter include employ- ment, education, health care, and food as well as entertainment, religion, and culture. Logan (2012) characterized this “unequal access or exposure by different population groups” spatial inequality.

The concept of spatial capital reconceptualizes spatial inequality in network terms and sheds light on how an area’s transportation network can reduce/en- hance spatial inequality. This concept focuses attention on the different abilities of households to access diverse elements in the context of the urban design (Marcus, 2010). Families’ access to organizational resources is measured using - network analytic techniques, i.e., how many supermarkets, doctors’ offices, parks, schools, sports clubs, etc. can families reach through the transportation grid in a reasonable amount of time. This will depend on how transportation networks are designed, where establishments are located in the network, the family’s location, and the family’s transportation and communication technologies, e.g., cars, bikes, smart phones, GPS devices, etc.

We use data from surveys of families in 2003 and 2013 in the Phoenix-Mesa ur- banized area and spatial data that we collected on a variety of establishments that provide services and activities for children for these same years. We hypothesize that availability of families using and evaluating establishments that are more accessible to them will be function of how many establishments are accessi- ble to them through the transportation network. The more choices a family has, the more likely they will take advantage of them and the happier they will be. We find that there are distinctive archetypical models where we model the likelihood of families’ use of different establishments and their satisfaction using areal data to define the set of establishments accessible to them.

The Perception of Leisure By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?

Family, education and work in later life, care for grandchildren as well as the imperative of "active" and "healthy" ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e. "the stress generated within in a person who cannot comply or has difficulty complying with the expectations of a role or a set of roles" (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project "Role overload: grandparents in the era of active ageing", the perception of various and dynamic roles performed by the elderly will be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available resources and the interpretation of the grandparent’s role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

GALER, NICOLA* (University of Birmingham, n.gale@bham.ac.uk)

Knowing the Body and Embodifying Knowledge - the Practice of Complementary and Alternative Medicine

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of 'embodied knowledge'. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to their implications for both spatial/boundary boundaries and timescales in practice.

While health professionals of all types have been traditionally viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counterbalance to the focus on knowledge of the bodies of ‘others’. The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be ‘energetic’, ‘emotional’, or ‘spiritual’ bodies. The ‘diseases’ of bio-medicine becomes instead framed as ‘dis-ease’, an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/boundary boundaries are not necessarily relevant. Touch can be ‘energetic’ rather than physical, and the focus is on the subjective experience of illness, pain, and disease. This experience can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of ‘embodied knowledge’ is vital to our understanding of the knowledge base of healing practices internationally.

National Educational Systems and Academic Profession: Portuguese and Spanish Cases

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale’s calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the educational systems in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professional competences of professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Educa-

The Invisible Spring*: Internet and Political Practices in Colombian and Brazilian Mobilization

When it comes to social movements like the 'Arab Spring', Occupy Wall Street and the Indignados in Spain, there is widespread uncertainty about the extent of their international dimensions. But we do know that these movements penetrated borders to gain support from other contexts, where the use of internet and social networks (especially Facebook) involved the configuration of a particular mode of protest and mobilization. What is the relationship between these events and the mobilizations in other contexts?

Two cases concern us: the MANE (Mesa Amplia Nacional Estudiantil) in Colombia, which deployed an unprecedented student movement in the last 40 years of national history, whose founding charter explicitly refers to the events in Tunisia, Egypt and Spain, and ACAMPA SAMPA OCUPA SAMPA from the Occupy movement in Sao Paulo, born of the global call to install camps in different cities in October 2011.

This paper shows, in a transnational perspective, how the emergence of new forms of communication in the Latin American context involves a reconfiguration of political action and denotes a new politicity process. The « Invisible Spring » is the metaphor of the origin and deployment of the new movements, their actions against invisibility, and the new online collective actions and protest mobilizations.

This paper will expose the invisibility notion concerning three dimensions: the international mass media, the political character of these mobilizations, and the connections between these movements and the three international movements (Arab Spring, Indignados, and Occupy). The analysis concerning the Latin American cases presents two foci: the motivations and discourses and the actions and organisational forms.

Overall, the Framework is a PhD research project oriented to analyse the transformations of political practices of the young people in Latin America through the use of internet (Colombia and Brazil cases).

This paper can be presented in spanish.
contexto, se hace imprescindible que los investigadores mantengan una postura ética manifiesta, entre otros valores, en la búsqueda incansable por el verdad y el trabajo en colaboración, que les permita generar nuevos conocimientos y aplicarlos a los problemas complejos del mundo actual. Contrariamente al espiritu ético que tendría que guiar este quehacer científico, en los últimos años se ha incrementado el plagio académico, como una práctica no ética de los investigadores. En tanto que esta práctica fraudulenta se ha evidenciado a partir de las publicaciones, el presente trabajo busca analizar este fenómeno en tres niveles. El primero versa sobre la normatividad y políticas institucionales para promover la producción y la evaluación cuantitativas en la promoción de carrera y la obtención de mayores niveles de remuneración. El segundo se centrará en la filosofía de publicar o perecer (publish or perish philosophy) y los valores del sistema de producción académica. El tercero busca concretarlo en estudios de caso. Con estos tres niveles de análisis, se propone hacer un acercamiento a este problema de pérdida de valores en la producción académica, así como sus implicaciones en la formación de investigadores y en la generación del conocimiento necesario para la comprensión y la solución a los problemas de nuestro tiempo.

Human Well-Being in a Media Multitasking Environment

The paper discusses the relationship between media multitasking (MM) and human well-being. Media multitasking (MM) is changing the way people think, talk, learn, socialize and view the world. MM has both cognitive and behavioral consequences on human beings. On the one hand, it drains the brain altering memory, linguistic ability, and learning process and, also, overwhelming humans with a huge amount of potential information, it can lead them to a feeling of being paralyzed and unable to make decisions. On the other hand, being pervasive in people’s lives, MM shapes their social interactions creating new “social aliens”, and let them experience a weaker capability of being connected with their own self. Generation gap makes a big difference in the perception of how profoundly MM is affecting human well-being. And in this respect, in an evolutionary framework, does the “digital immigrant” (M. Prensky) original mould risk of disappear- ing, to leave the place to the “digital native” new mould, shaped with new cognitiv and behavioral characteristics? Are the digital natives going to create a new meaning for human well-being? Or the digital immigrants will be able to drive to a third model?

The paper reviews the literature on the topic, examines the above issues and, based on some empirical results, proposes some perspectives for the future.

Technology and Immortality: The Digital Narration of the Anthropologic Myth of Amortality

Death had always a traditional role on recording differences and inequalities of member of society. The raise of the modern version of the anthropologic myth of Amortality on the hand, and the new digital devices of immortality on the other hand, both realize a contemporary narration of immortality. It points of change, of inequality, but in the same time, the new idea of immortality as well as a narration that holds together the dead and the alive and that stars by the personal intent (purpose) of the subjects.

The highlights of presentation stressed these points:
• The digital development of amortality on the net: Facebook and other sites.
  • Immortality for everyone:
    o The latest boundaries: the self made immortality and the QR code
    o Short bibliography

the dead and the alive and that to st held by the personal intent (purpose) of the subjects.

The highlights of presentation stressed these points:

Elections and Territorial Inequalities in Post-Revolutionary Tunisia

Elections and territorial inequalities in post-revolutionary Tunisia By giving a comfortable advance to the Islamist party of Ennahdha (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the social and socio-territorial bases of major Tunisian parties through combining quantitative analyses at different scales and field surveys in specific localities. Although most interpretations have focused on the cultural modernist vs. conservative cleavage, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

The Reputation Economy: Knowledge Workers and Freelance Networks

A decade after Richard Florida’s ‘creative class’ manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determinant element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

Placemaking: Inequality By Accident or By Design

Placemaking: Inequality By Accident or By Design

This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the ‘neighborhood effect’ in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines all three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS technology beyond its traditional borders, in part through the popularization of tourism and professional relocation services that make use of maps, labels and index numbers to facilitate the evaluation of cities and neighborhoods in terms of characteristics commonly understood as amenities, opportunities and risks. The assessment of educational systems at the level of schools, walkability within user-determined boundaries, public safety or “dangerousness” on the basis of levels of exposure to crime, and motor vehicle accidents or pollution are just a few of the indicators to be described.

On the basis of this background review, this paper will shift its focus to the consequences for inequality that are inherent in the uses of spatial analysis as aids to public participation in the planning of neighborhood and community change, especially as they relate to an emphasis on public transportation as a feature of so-called “smart growth” initiatives.

(Mis)Recognition, Ressentiment, and Dualism: Challenges for a New Sittlichkeit

In this presentation I shall argue that the category of ‘recognition’ (Hegel, Honneth) and its approach to social justice can be enriched if we address two major issues: a) the first problem posed for any theory of recognition is to forge a theory of social institutions embedding social justice. Following Axel Honneth’s recent shift towards the work of Durkheim and Parsons, I shall defend this pattern arguing that a new theory of Sittlichkeit is indeed pressing for an adequate approach to social justice through the lens of recognition. Yet, and this is issue (b), Honneth’s theory leaves largely unaddressed the issue of ressentiment, a powerful index of recognition and disrespect. I shall thus attempt to fill this void in Honneth drawing on Max Scheler’s configuration of ressentiment. It seems that ressentiment is pertinent to a theory of just social institutions in many ways. For instance, I shall address Parsons’ inclusion of ‘sour grapes’ pathology in his theory of modern so-cial roles; and, relating to the radicalization of systems theory like Luhmann is important because he locates, perhaps unwittingly, a space in society where ressentiment may be cultivated. This is no other than the inelastic binary code which sets a social system’s self-definition in motion. Rigid, and systemically coded, dualisms give rise to feelings of ressentiment between categories (‘left-right’, ‘progressives’-‘conservatives’, ‘public-private’, ‘pro-globalization-anti-globalization’ advocates) and shipwreck important reforms that would mitigate injustice and would improve patterns of intersubjective recognition. Augmenting the category of ‘misrecognition’ to include the ressentiment problematic can help social theo-rists to theorize better significant empirical findings (e.g. Wilkinson and Pickett, The Spirit Level) that bear on the issue of contemporary social institutions and their approach to social justice.

GANAS, SPIROS* (Deree-the American College of Greece, snagas@acg.edu)

Human Rights and Agency: Sociological Opportunities in the Capabilities Approach

In this article I shall argue that Amartya Sen’s capability approach offers a promising renewal of sociological approaches to human rights. Sociology has only recently titled towards the capabilities approach. I shall suggest that, on the one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program’s central categories have a precedent among many social theorists. Seeing this affinity as an opportunity for creative theory-building in sociology, and drawing on sociology’s accomplishments, I argue that normative components of Sen’s ideas have been prefigured primarily by Parsons and to a lesser extent by Giddens. The capability approach mediates, I shall suggest, the formal aspects of Parsons’ idea of ‘capacity’ with Giddens’ idea of ‘capability’ in the context of the latter’s theory of structuration. On the other hand, many theories of agency in sociology are normatively wanting. If configured along the tracks of capabilities, sociological categories, like agency, can signal a progressive shift in sociology attentive to human rights, a core component of Sen’s research program. Compounded with capabilities, a new notion of agency can offer the appropriate normative justification to the ‘public sociology’ paradigm which re-introduces normative considerations in sociological discourses. If this proposed reconstruction is plausible, then it can contribute towards regenerating the capabilities approach sociologically, reconfirming its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

The Study of Hindu Woman Problems in Morden Society

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensual women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes-form women in the village, middle class women in the cities, government women in New Del-hi-women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother of a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relation-ship and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns. Some of the problems involved in modern Indian womanhood. Except for wid-owhood, they are related to changing times and the impact of the globalisation.

The Role of NGOs in (de-)Constructing ‘Flight’ Migration at the Mediterranean Borders

Since its inception of the 1985 Schengen Agreement, internal borders within the Schengen space have been abolished. No doubt that this has bolstered the freedom of human mobility within the Schengen borers, which went hand in hand with the southbound, and more recently eastbound, EU enlargement. Observers speak of transnational mobility, commuter/shuttle migration, moving away from the presumed linear nature of migration in the study of immigration. But this is just one part of the European migration landscape: the mobility to the southeast-ern and southern external borders seems no less vibrant yet the entry into these has become severely hardened owing to the ever tightening border control, as widely reported by the media.

However, we still know very little about what the Mediterranean member states’ migration regimes have in common. Even lesser analyzed is the role of NGOs in supporting these migrants as well as responding to the media cover-age about forced flight from Africa and the Middle East. The aim of this paper is threefold: firstly, we shed light on the practices of NGOs in Southern Europe, particularly focusing on their reaction to, and collaboration with, migration poli-cies at the government and EU level. Secondly, we explore the role of meso-level social networks among NGOs in not only supporting migrants but also (un-) making flight migration, by contemplating on the question whether the difference between the “forced” and “voluntary” migration is only a theoretical one. Third, we envisage visualizing our findings through Google Earth. This paper draws on expert interviews and documents collected in our research-based seminar at the University of the Aegean.

A new digital revolution is coming, this time not only in management of cultur-al activities but also in the administration systems of cultural organizations and institutions. Digitization of cultural management and administration will allow cul-tural managers and administrators to develop and manage real/physical cultural events on demand, wherever and whenever they need them in Info-Communica-tion globalization. This paper examines and analyses the cultural events and ac-tivities in recent cultural and economic crisis. It examines cultural management as a very important issue of organising cultural events and activities both locally and globally. It focuses on cloud computing, digitization of cultural activities, cultural strategies and crisis management. It explores digitalisation of cultural administra-tion structures and proposes a new dynamic model, the "Dynamic Perception of Cultural Activities" (DAP).
According to Norbert Elias, the loving relationship between two people is, at the same time, subjective and objective. It is so because the relationship is related to three different yet overlapped dimensions, namely: the experience of love from the ‘I’ in relation to another person; the experience generated in the ‘US’ which implies observation and bonding of the loving relation; and the ‘THEM’ experience regarding the observation, experience and bonding of ‘others’ with those who are in the loving relationship.

In the first part of the paper, we will develop the “US” dimension through love relationships in heterosexual couples. The aforementioned dimension implies not only a discursive story, but also a story of experiences. Experience here relates to a mutually created process that involves the existence of two or more embodied pysic systems which “grow old together” (Schutz, 1932) and persistently irritate each other (Luhmann, 1984).

The observation of a particular “US” story is thus made possible through the experience of the condition that the “US” is in a continuous present which includes social discourse (power, gender, class), relational moulding or what Goffman studied as ‘interaction’, and synchrony between what the mind/bodies create whilst together.

In the second part of the paper, we will observe the “US” dimension through the interaction process (Goffmann, 1983) using a finer level of analysis: sensible proximity (Simmel, 1908). Our starting point is that in interaction with others and specifically in the ‘sensible proximity’, bodies produce Sinn which is mutually interpeted (Sabido, 2012). We will develop this through the example of the loving interaction in a heterosexual couple. The presentation will finish with some examples that illustrate this sensible process.
new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

Brazilian Long-Term Migrant Women in Japan. Work, Family and Subjectivities

This paper aims to present the first results of research initiated in January 2013 about Brazilian women migrant in Japan. Japan has accepted Brazilians of Japaneese filiation and their spouses as labor force for over twenty years. The Brazilian community in Japan remains the third largest foreign community (population of just over 210,000 in 2012) in that country. If studies of the Brazilian community in Japan have been conducted in both countries, the investigative analysis of gender relations in migration context is still incipient. Women’s role in the migration process is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women’s choices. In this study, the particularity of the migration cases is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women’s choices. In this study, the particularity of the migration process in Brazilian women’s case. What is the objective and the subjective reasons to leave the country? Secondly, once in the country, what are the specific issues that those women face daily as immigrants, in the public and private spheres? How gender arrangement is done in terms of domestic work and child education? How they organize their everyday life as well as their emotional aspects as (foreign) workers, wives and mothers, specially when their residence in the foreign country became durable (contrary to their initial project)? Our analysis will be based mainly on qualitative research conducted with six Brazilian women, of Japanese origin or not, who live in Japan in a long-term period (about twenty years).

GARCIA LANDA, LAURA* (Universidad Nacional Autónoma de México, garlanster@gmail.com)
Academic Language Barriers: Professional Stigma or Recognition and Success?

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic papers that may place both academic and students at stakes with the linguistic and extra-linguistic uses of codes unknown to them and their English teachers. This practice surpasses their real conditions of coping with those matters in a short term period, which triggers ill practices that place them in face threatening situations that later may become a barrier for achieving this institutional goal.

Within this context, English holds the status of the language of academic and professional communication. In this sense, it has become a privileged language in the academic and professional realm, where academic production and activities in other languages are stigmatized. We analyze implicit and explicit language policies in macro and micro school practices where language status places individuals in asymmetric relationships, and see how these agents have become critical or not to their state of alienation, commodification and consecration. We also analyze their cultural trajectories, cultural fields and cultural capital in order to see how they resignify their habitus.

This paper presents how the position of English as a professional language has brought “natural academic practices” that disfavor researchers, teachers and students in carrying out their daily academic activities and in attaining academic recognition and success and favor those who respect the doxa (Bourdieu, 2001).

GARCIA-RAMOS, TANIA* (University of Puerto Rico, taniagarcia22@hotmail.com)
Labor Precarization in Puerto Rico: World-System Crisis, State Paradoxes and Resistance Struggles

In the research conducted from 2008 to 2012: Labor Precarization in Puerto Rico: World-system crisis, state paradoxes and resistance struggles, I studied labor precarization in Puerto Rico from a world-historical perspective (Wallertstein, 2004). The methodological approach consisted in the construction of a microhistory (Tomich, 2008) examining the following three space-temporalities: 1) the short term, massive layoffs and resistance struggles in Puerto Rico during 2009, 2) the medium term, the analysis of these layoffs and resistances within the context of the world economic and political crisis, from 1968-72/73 to the present, and 3) the long term, the analysis of the 2009 massive layoffs and resistance struggles within the historical crisis of capitalism.

In the short term, I described how union workers and other groups resisted the massive layoffs of 30,000 workers, a policy implemented by the Government in 2009. Typical governmental responses to the fiscal deficit, led to an unemployment rate of 16.9% in 2010. Employment rate decreased to 33% in 2011. In the medium term, the massive layoffs and resistance struggles held in 2009 were analyzed in the conjuncture context of the economic, political and social crisis from 1968/1972 to the present (Wallertstein, 2004). Considering the experience of the people and groups who participated in these resistance struggles, six challenges are discussed for unions and other groups. The potency of these and other groups to become anti-systemic movements is discussed. These movements can contribute to create new principles and politics for work and life. These principles and politics will be discussed supporting a new world-system beyond capitalism, the long term temporality presented across the research.

GARCIA-RAMOS, TANIA* (University of Puerto Rico, taniagarcia22@hotmail.com)
Resistance Struggles and Movements in Puerto Rico: Towards a New Politics for Life and Work

This paper is a product of research conducted between 2008 and 2012. The research centers on the analyses of the resistance struggles in Puerto Rico during 2009 to confront the layoff of 30,000 public employees. As a result of these layoffs, the union movement confronted six challenges. I discuss the potential insurgent movements that could be present in other social and political spaces.

The year 2009, and the first strike at the University of Puerto Rico in 2010, integrated the most active and prolonged struggles in our country for the last decade. In these struggles participated unions, economists, political and religious groups, feminists, students and professors. As in other important struggles, we wonder among the most important protagonistic groups.

The objectives of this paper are: 1) Explain two significant events that took place in this period: the peoples’ assembly and the one day general work stoppage, 2) Discuss proposals of diverse groups to deal with the crisis, 3) To present a brief historical background of the fragmentation in regards to the local union movement, 4) To evaluate the main challenges and potential insurgency for union and other social movements. Among these challenges are: 1) The continuous dialogue on the meaning of work and the role of workers in this systemic crisis, 2) The importance of diversifying the activities of resistance, 3) Unions and other resistance groups should be aware and oppose the attempt of the state to criminalize their struggle. Finally, the integration of struggles and movements in South Korea, South Africa and Latin-America pose the need for new ways for international alliances between formal and informal workers. These alliances can confront the precarization of labor creating new principles and politics for life and work.

Something Is Changing: Italian Young People Between Religious Indifference and New Form of Believing

Several studies on youth and religion stress how only a very small proportion of the youth population has anything to do with organized religion. There has been, on the one hand, a growth of interest in alternative forms of spirituality and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario. Are we looking at an Italian version of religious modernity which, on one hand, reflects the typical expectations of living in a pluralistic society and, on the other, forms them within the long tradition of culture and religious socialization which are typical of a country where both Catholicism and church are strong? Or are we looking at, among young people, the emerging of a generation characterized by religious incredulity? In this paper we're going to present findings of a qualitative study carried out with 150 young people aged 18-24, in order to better understand, in the framework of socialization outcomes, what are the key determinants of believing or disbelieving among young people. In this study, we pay particular attention to the main reasons of their taking distance from the religion. The collected interviews allow us to define a typology, defining mainly four kinds of youths according to their religious definition and their religious practice, to their opinion on the Catholic church and to their religious socialization.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Double Estrangement, Embodying a Reflexive Habitus: The Experience of Minority Group Boys in Three Inner City Primary Schools in Dublin, Ireland

This paper introduces the concept of 'double estrangement' which is based within a somatic Bourdieusian framework and draws from DeBoois concept of 'double consciousness' and the work of Abdelmalek Sayad. Drawing on a large qualitative dataset I will argue that migrant group boys in Dublins north inner city tend to experience their body image with unease, as somewhat problematic 'shameful bodies', through which they suffer from a break with their embodied selves and a disruption of their internal time as they are pushed between habitual and reflexive action. The dual elements of 'double estrangement' will be outlined, firstly, it will be contend that visible difference and dispositions of the body mark migrant boys out as not belonging and this provokes a tendency for them to feel constantly on display and judged through their bodies. Secondly, I will argue this has the effect of heightening a boy's self-consciousness of their body as an object of value within peer interactions and this reflection estranges them from their habitual embodied being. This paper will conclude by illustrating how double estrangement acts as a form of symbolic violence within the 'child world' of the school, spaces in which the attention of children is on their peers instead of authority figures (Hill 1997). I will argue the development of a 'reflective habitus' or habitual disposition to reflect on one's body, estranges migrant origin boys from the embodied orthodoxy of the child world field and this is used to justify inequalities between boys and disfigure race within encounters.

Embodying The Least Adult Role: Reflections On Youth Research

The aim of this paper is to emphasize the embodied root of reflexivity, fieldwork and intellectual activity within the youth studies field. This paper will begin by arguing that academic research is not a separate form of action, placing the researcher in a position of epistemological privilege, but is an embodied capacity developed through practical activity. The particular importance of this for youth research will be explained through an exploration of qualitative 'least-adult' (Mandell 1988) research with children, which this author engaged in for a longitudinal ethnography, which explored the inter-ethnic relations between primary school children in the academic years of 2007/2008 and 2008/2009. Through a description of the network process and challenges, conventional notions of reflexivity within youth research will be highlighted and the desirability of reflection in its intellectualist definition will be questioned. Taking Allison James (2000) contention that any account of children or childhood must be rooted in an embodied perspective, as the process of growing up places the body at the heart of a child's identity, this paper will argue that ethical research with children must acknow-ledge the somatic process of research or fall into a Cartesian trap that reflective research exists as something other than an embodied manner of being. This paper will conclude by arguing that intellectual activity is ultimately critical and engaged and that reflexivity within the youth studies field is better understood as a 'reflective habitus' developed through practical activity within the fields of research, academic literature and the embodied linguistic schema of the habitus.
What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Slovak region of Vojvodina (Serbs and Hungarians, Slovaks), in the Ukrainian region of Kharkiv (Ukrainians and Russians, Belarussians, Jews), and in the Siberian region of Tumen (Russians and Ukrainians, Caucasians, Tartars). To each sample the attitudes towards Europe and its meanings were requested. The main meanings (through attitudes) of Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a common family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of all these meanings between the macro-regions, between ethnic groups, and between majorities and minorities. The paper examines the macro-regions, first of all, and inside each region between minorities and majorities. Besides at the same level of macro-region also the structure of the meaning is very different. For example, the more important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in Vojvodina the first factor is more complex. In the Kharkiv region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea): so as the most important factor (first) is simple for the groups of the Tumen region, but the structure of the meanings of Europe is composed of West and vague idea.

Comparing Latin American Migration in Different Urban Settings: Theoretical and Epistemological Issues

This paper offers a epistemological reflection on comparing Latin American migration in different urban settings. We provide a framework of analysis that is at the same time theoretical and epistemological. Migrants are simultaneously emigrants (thus coming from a certain “society of origin”) and immigrants (that are bound by a new set of structural conditions). Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu and fields ibidem.) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound by a new set of structural conditions in the host society. Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu and fields ibidem.) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound by a new set of structural conditions in the host society.

Latin American Migrants in Bilingual Cities: A Comparison Between Barcelona and Brussels

This paper analyzes comparatively the language use of Latin American migrants in two bilingual cities: Barcelona (Spain) and Brussels (Belgium). Both cities share some similarities but also have different dimensions. Bilingualism in Barcelona is based on two cooficial languages Spanish and Catalan. While Spanish is the official language for all Spain, Catalan it is only the official language in Catalonia (the region). Latin American migrants from most countries (with the notable exception of Brazil) are already Spanish speakers and therefore have little incentives to learn Catalan. However, nationalist policies in Catalonia and Barcelona encourage use of Catalan and give preference to those who can speak Catalan in the labour market. On the other hand, Brussels is the capital of a country strongly divided amongst linguistic lines. In Belgium only Brussels is bilingual while the regions of Wallonia (French) and Flanders (Dutch) are monolingual. Migration policies depend on municipality, meaning that in Flemish speaking municipalities Dutch prevails while French is dominant in the French speaking. Latin American migrants in Brussels, native speakers of Spanish or Portuguese (brazilians) do not speak any of the two as mother tongue and have to learn. Choice of language learnt is related to the context of settlement and social networks. The paper concludes with a reflection on the features of Latin Americans and the likely outcome of the migrant integration in the two cities.

Meanings Of Europe For Ethnic Minorities and Majorities

Case of the US Bases Cleanup Campaign in the Philippines

This paper aims to extend the concept of abeyance structures to the case of the US bases cleanup campaign in the Philippines and US. Abeyance structures refer to various organizational arrangements that absorb the spillover of activists after a social movement declines. In this paper, I outline four routes by which former partners took after the decline of the said campaign. I use in-depth interviews (n=31), secondary data, and internet archives in drawing themes on the routes taken by core activists of the disbanded campaign. I define these routes as follows: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (2) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (3) Route 3 wherein former partners remain in the spirit of the campaign hoping to renew it in the future; and (4) Route 4 wherein a US-based partner-organization structures itself by adopting a transnational environmental justice framework of action, and cultivating an organizational culture to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations to provide for their daily welfare. Other partners, who include mostly nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networks to overcome inequalities among partners.

GATA, MA. LARISSA LELU* (University of the Philippines, mlcp.gata@gmail.com)

Theory of Engaged Collaboration Across Borders: Alternative Perspective on Transnational Advocacy Networks

This paper proposes a theory of engaged collaboration across borders to explain the process by which local environmental campaign initiated in a Third World setting transforms into a transnational advocacy network. I use grounded theory as tool for analysis in examining archival documents and interviews (n=31) and the conceptualization of the theory of engaged collaboration across borders. Engaged collaboration theory is the alternative route to Keck and Sikkink’s (1998) Boomerang pattern and a corollary to parallel advocacy. What I define as “theory of engaged collaboration” emphasizes an alternative route to the concept of engaged collaboration. The theory of engaged collaboration across borders suggests the following: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (2) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (3) Route 3 wherein former partners remain in the spirit of the campaign hoping to renew it in the future; and (4) Route 4 wherein a US-based partner-organization structures itself by adopting a transnational environmental justice framework of action, and cultivating an organizational culture to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations to provide for their daily welfare. Other partners, who include mostly nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networks to overcome inequalities among partners.
volved in the lives of the community being advocated on. In the case study, three prominent dimensions of engaged collaboration are present. The technical/legal dimension comprises the strategic decisions on information sharing, policy advocacy, research, and litigation aspects of activism. The ethical dimension covers the moral and affective aspects of the campaign using victimization frame. Finally, the ethnic dimension caters to the collective identity of the campaign anchored on Filipino nationalist identity and the underlying colonial past that created it. Thus, this theory on engaged collaboration enriches the literature because it takes into account how the external advocates deepen their involvement in domestic affairs not only with their partner organizations and the targeted states, but more importantly with the community of victims.

Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well-known fact that India is mostly an Agrarian country and even today 70% of its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevals only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes different layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnic and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalistic mode of production coupled with an unstable returns due to change in climatic conditions resulting the farmers entering into debt traps which leads to help loss condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of post globalization.

This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

Telangana Movement: A Study of Problems and Prospects

Telangana movement for separate state hood is historically well known all over the world. One of the reasons for its popularity is that its peasantry revolt with arms during (1946-48) under the Leadership of Communists against the Nizams regime. This movement has created lot of inequalities and uneven development among the three regions of the state. Telangana natural resources like land, water, forest, mines were extracted unabatedly since the formation of Andhra Pradesh. Against this discrimination and exploitation separate Telangana movement under the leadership of Dr. M. Chenna Reddy was organized in the year 1969. About 400 students and youth were killed during this movement. Due to political betrayal of the parties in the power the moment was subsided. However, in the year 2001 separate Telangana Movement again started under the leadership of K. Chandra Shaker Rao who is a shrewd politician. During the last 12 years of the Movement, about 1000 students and youth sacrificed their lives. In view of the above background this paper mainly aims at to understand the unethical political stands and manipulations of various political parties in the state and at the center in decision making process of the formation of Telangana state. The other objective of the study is to present how people's cause and political aspirations of Telangana region manipulated and marginalized for the selfish ends of Seemandhra.

Litterary Cognition and Scientific Fiction Literature As Subject of Knowledge Digressions Around the Pathic VS Epistemic Connection

This presentation aims to consider on one hand science as narrative, as fiction, and on the other hand literature as production as knowledge. We will therefore talk here of *literary cognition* and *scientific fiction* by analyzing the confrontation of two areas: literary and scientific (sociological).

The analysis will be organised around four cases (two for each area):

- For the area of literary fiction:
  - On one hand the case of T.-S. Kuhn who consistently stages throughout his whole work the theme of experimental science aiming to make us wonder about the workings of nature;
  - And on the other hand the case of Julio Cortazar (who incidentally translated Poe) who for his part stages the theme of the most everyday aspects of social life, in a neo-fantastic way, aiming to make us question the functioning of this social life.
- For the area of scientific narrative:
  - On one hand the case of F.-E. A. Poe who consistently stages throughout his whole work the theme of experimental science aiming to make us wonder about the workings of nature;
  - And on the other hand the case of Jean Duvignaud who addresses this issue by the introduction of the science of Culture (so called comprehensive, to use Weber's distinction) by developing the concept of *utopian reconstruction*. This perspective will allow to show how the narrative thinks, how to write is to argue, is to think. We will thus see that narrative categories function as conceptual categories of discovery, as arguments, as cognitive categories, literature and science (sociology) each appearing sometimes as creation, sometimes as discovery.

To Embark and/or be Embarked? Emotion As Element of Method Digressions Around the Sensitive VS Intelligible Connection

“This move someone around, he has to be emotionally moved.” said Régis Debray. Sociology is above all a question of vision, perspective, lighting, angle, depth of field, focus and of course fine tuning. Do we not recurrently talk about the “sociological eye”? This issue is of course also relevant to the sociology of art and it is in this context that the question of emotion will be examined here.

Thus, along with John Dewey, we will consider that *aesthetic emotion* is not a form of feeling that exists independently, but an *emotion* that is caused by an expressive material inducing a transformation of the initial feelings. What will interest us here is how emotions are then functioning as mediations between the different actors in the process of artistic production. To this end, the semiotic narrative analysis of a scene of the Wim Wenders film *Der Himmel über Berlin* will be an excuse to draft a reflection on the idea of intellectual risk taking (gambling) drawing *the pathetic dimension* into its path. We will speak here of a *sociological focus method* characterizing the socio-anthropological posture. Emotion does not exclude reason and to that extent we therefore cannot afford not to take into account the issue of emotion in the *sociological method*.

At the heart of the creation process, emotion and the gambling concept will thus enable us to recall that thinking, also in science, is working from a fictional construction of reality (itself fictional construction of the “real”) as an intra-subjective, empathic and heuristic process, where emotion, omnipresent, must necessarily be taken into account.

Political Parties and Community Organising in an Era of Membership Decline

At a time when formal party memberships are declining across advanced industrial democracies, political parties are experimenting with new ways to re-engage members and reach out to party supporters. Adapted from the experience of American party organisations and campaigns, political parties in the United Kingdom have adopted community organising techniques as a means to address the resource and linkage implications of declining party memberships and to engage supporters (and not just party members) in the community. This paper analyses the character of and motivation for these techniques, how they have been implemented by the Labour Party, the Liberal Democrats and the Conserva...
The research of young intellectuals takes on special significance in the con-ditions of Russia’s transition to the information-oriented society. Attention con-centrates on the cultural characteristics of the observable social group because of the “cultural lag” which takes place in the most part of Russian province cities. The main role in cultural reproduction and translation plays the young university-tutors as the most active and mobile group. They were considering as either main subjects of the cultural work in the social space of region. It is necessary to find out their cultural needs and general condition of incorporated cultural capital because of their influence on young people’s values and aims.

The empirical base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project “Professional potential of young tutors in Russian province”. The analysis contains information about basic components of young academics incorporated capital: leisure structure and the place of cultural practices within, the art forms and styles which prefers the researched group, the perception of province cities’ cultural infrastructure, opinions about necessity of higher art education preservation.

The results of research let us tell about hypernationality in the behavior of young academics, which concentrates on their professional responsibilities and forget about cultural self-development. They constrict their functions to the information translation and don’t feel themselves as the active subjects of social changes.

The main respondents doesn’t think of themselves as a “cultural class” and don’t regard their lifestyle as different from life of the majority. Un-stable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

The Idea of Age-Friendly Cities and Communities As the Answer for Global Trends of Aging Societies

The aging process is great and unheard of in the past, challenge for govern-ments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life and mobility.

Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create friendly environment for the elderly: social solutions conducive to maintaining an active lifestyle and innovative projects allowing for broad independent.

The answer to this can be the concept of Age-friendly Cities and Communities (AFC) which was conceived in 2005 at the XVIII IAGG World Congress of Gerontology and Geriatrics in Rio de Janeiro. It immediately attracted enthusiastic interest, active lifestyle and innovative projects allowing for broad independent.

The analysis of the PASS.

The empiric base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project “Professional potential of young tutors in Russian province”. The The Appearance of a Sub-Field of Medicine of Poverty in France

This paper aims to tell and analyze the processes and historical back-ground which gave rise to a sub-field (in a Bourdieusian understanding) of medicine of poverty in France from the early 1980’s to the 2010’s. Splitting them from the other insurance holders by the establishment of a special health insurance (Aide Médicale d’Etat, State Medical Aid), this population was put at the edge of the health system. It led to unequal health practices and increased the difficulties to access health care providers and health insurance. These two levels of barriers have been underlined by the empirical research based on the study of a department in the French public hospital, named PASS (Permanence d’accès aux soins de santé : Depart-ment of health care access). The PASS is specialized in taking care of patients without health care insurance which are mainly illegal migrants.

The Aide Médicale d’Etat from the other insurances made possible for the administration and practitioners to have discriminating practices. The admin-istration uses the processing of the applications (delaying them for example), while some practitioners exclude those patients from their practice. These barri-ers keep a part of this population out of the regular health care system, compel-ting them to go to special health care providers as the PASS. However the special-ization of health practitioners in those patients generated new practices, which showed the relevance and the complementarity of combined social and medical care, networking, and recognition of the social and cultural determinants of health.

This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by public hospitals in France through the analysis of the PASS.

The Inclusion in Society through Religious Orientation? Biographies of Male Students Participating in the ‘Gülen Movement’ in Germany

The so-called ‘Gülen movement’ (Ebaugh 2009), a global network revolving around a Turkish-Islamic preacher, has become increasingly visible inside Ger-many. Founding private elementary and secondary schools, as well as centers for private coaching, supporting intercultural and interreligious dialogues, and separating out groups such as “Our Jihad is education”, the movement acts to render possible the educational success of children of Turkish immigrants. By referring to themselves and their practices as hizmet (service), network participants also aim to alter the common view of ‘backward Islam’, a view perpetuated by popular discourse, and to contribute to a perception of a ‘modern’ Islam, which can be synthesized with the natural sciences and with globalized multicultural meritocracies. And so, to lead a Muslim life the ‘Gülenian’ can be understood as a promise to become successful, educated members of society.

In our lecture, we wish to present some reconstructive results of an analysis of biographies of male students who attend a weekly religious school (discussion circle) in hizmet. By this we wish to discuss how inclusion and exclusion can oper-ate as productive concepts for understanding the students’ narratives about be-coming members of hizmet. Our claim is that participation in the hizmet functions not only as a religious orientation, but also plays an important role in resolving crises among young Turkish adults. These crises result from discriminatory discourse in the public sphere in Germany against Turkish migrants and Islam, and from the enforcement of cultural, religious and ethnic difference in schools and
tives, and considers some of the implications for political parties as membership organisations.

The will to universalize the French health insurance system at the end of the 90’s a new marginalized category of patients: illegal migrants.
The need for assessing women’s unpaid work and reproductive activity has long been discussed by economists within the context of estimation of a country’s economic growth rates, as well as by sociologists within the inequality studies. The world statistical practice has acknowledged that working time budget surveys remain to be the most relevant tool to obtain reliable information on unaccounted work because such surveys allow estimating the ratio of time spent by women and men on labour market employment and on unpaid work in households. The proposed paper is devoted to presentation of the results of a special sociological survey on assessment of women’s unaccounted work realized in Ukraine. The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

A particular emphasis is given to gender assessment of involvement to informal work, which makes a rather important problem in the region of transition economies. The role of prevailing gender stereotypes in reproduction of gender inequality is also analyzed based on data of the national sociological survey, as well as on the results of European Sociological Survey. The latter survey reveals a striking contrast between Ukraine and other countries of Europe in terms of public opinion on social gender roles and norms, in particular those related to women’s priorities in harmonizing their work and family obligations.

The paper provides also some analysis of gender policies realized in the country, and subsequent conclusions and recommendations on harmonization of gender disparities in paid/unpaid work balance and general empowerment of women in the country.

**Liquid Organising and Soft Leadership in the Popular Protest Wave**

In activist and academic discourse it is often claimed that contemporary protest movements, including the Arab Spring, the indignados and Occupy Wall Street are ‘leaderless’ or ‘horizontal’ movements (see for example Castells, 2012). However, looking at their internal doings and at their communications it becomes soon evident that far from being leaderless, these movements are characterised by new forms of both personal and collective leadership, in which activist clusters often numbering no more than a dozen people come to acquire much influence in the direction of social movements. What we are witnessing to is thus not the end of leadership, but the emergence of a new form of leadership which attempts to harness the communicative ecology of contemporary social movements.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book Tweets and the Streets (2012) I describe contemporary leadership as ‘soft leadership’. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006).

Leadership comes to revolve around community management and facilitation, rather than outright ‘direction’ of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and ‘liquid’ practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing social movements at their inception, it also runs the risk of exacerbating contemporary movements’ well known tendency towards evanescence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very ‘liquidity’.

**Towards a Methodology of Visual Analysis on Twitter. the Earthquake in Northern Italy**

The catastrophic event represents a relevant and interesting place of observation of communication practices and narration strategies started by media.

Traditional media represent the catastrophe with almost known strategies – both in the entertainment frame and in order to fulfill their informative role using precise selective criteria – otherwise social media have to be considered as different, if not new, contexts of production and circulation of the catastrophic imagery.

It is sure that in cases visual communication – in other words the production, diffusion and usage of images – has a central role for the symbolic handling of the natural determinism (Durkheim).

From these assumptions, the paper presents the results of a research conducted on a sample of 4257 images uploaded on Twitter during the first day of the earthquake that happened in northern Italy May 20, 2012. On the basis of this analysis, it is proposed a typology of images to sustain a first and general work of interpretation emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very ‘liquidity’.

GERBIER-AUBLANC, MARJORIE* (Cepad, Paris Descartes University, France, g.marjorie@hotmail.com)

In social sciences, it is now trite to say that HIV/AIDS reveals relations of pow-er. But what could it mean to argue that the epidemic is the incubator of new social interplays in a post-colonial context? The way Sub-Saharan African women living in France have become key players to fight HIV, within communal associations (prevention and support groups), is an illustrative example of such a question. A socio-ethnographic fieldwork led by direct observations and inter-views, from October 2011 to July 2013, invites me to explore this issue through the prism of Intersectionality and Care Theories. Care is understood here as an ethics of Subalterns and a singular political process, following the reflections of J.Tronto (1993).

The subaltern position of those women - as women, migrants, from a post-co-lonial minority and sometimes HIV-positive - led them to develop an expertise of complexity and a model of intervention drawn on an ethics of Care. Their par-ticipation to fight HIV in France represents an unprecedented way to position themselves and reverse the multifaceted relations of power they are the object. Thus, this paper will explore how they socially and politically use the traditional categories assigned by the dominant society to transform their subaltern position in this post-colonial context. A special focus will be given to the way they review their subaltern status toward white French women, within a racialized gendered labour market and an excluding access to citizenship. As an example of grounded theory approach, this field research proposes a theoretical opening that let us thinking about the transition of subaltern identities in light of the intertwining of multifaceted inequalities in a post-colonial epidemic context.

Tensions Between Identities and Roles: When Sub-Saharan African Women Living with HIV Become Health Mediators in France

Between 2000 and 2005, an experimental training program for « new health actors » was lead in France, to improve access to HIV prevention and healthcare for populations in condition of vulnerability. This program trained more than 150 health mediators from the targeted social groups and it included many Sub-Sa-haran African women living with HIV in France, recruited from communal association. Through their interventions in the Infectious Disease Wards of the Hospitals, the peer health mediators have turned key players in the relationship between patients and professionals.

This paper proposes to explore the specific interactions between HIV-positive health mediators and institutional healthcare professionals, in particular physi-cians and social workers. This reflection is based on a socio-ethnographic field re-search led from October 2011 to July 2013, by conducting 18 months of direct ob-servations in HIV communitarian associations and 85 interviews with HIV-positive patients, health mediators, physicians and social workers. The roles that health mediators are asked to play to improve patients’ quality of care will be examined. It will highlight the tensions that they experiment between the double identity of being an HIV-positive patient and a healthcare professional. A special attention will be given to their specific position within a set of unbalanced relationships with physicians and social workers. Thus, this paper aims at showing that the professional participation of those patient-expert has inexorably improve patients and professionals interactions, by helping reconfigure the hierarchical position of physicians and the states of patienthood. Nevertheless, their intermediary status (between being a patient and an healthcare professional) reveals serious social issues, especially because they are included in an intertwining of unequal power relationships.

Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs revenues from different sources have multiplied over the past decades. Today’s football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team’s success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club’s overall market value, the higher are its players’ chances of success. 2) The increasing multinationality of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multina-tionality can also have positive effects on their performance because players from different countries can bring new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team’s market value has a very strong (positive) influence on their success rate – indeed, ‘money scores goals’. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of some players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from many different nationalities – multinationality, then, influences a team’s chances of success negatively.

Transnational Linguistic Capital. Explaining Multilingualism and English Proficiency in 27 European Countries

Since the second half of the twentieth century, the extent, frequency, and speed of exchange and interconnectedness between different nation states and different world regions have increased enormously, a process described in the literature as globalisation. As the world system consists of multiple nation state containers and as most nation states have different official languages participa-tion in globalisation is among other things dependent on people’s ability to speak the languages of others. Those who only speak their native language are, in contrast, tied to their home country and can only take slight advantage of the perks of a globalised world. Transnational linguistic capital therefore might become a new measure of social inequality in today’s increasingly globalised world.

The question central to our study is to what degree citizens in different coun-tries possess transnational linguistic capital and how to explain the differences in multilingualism both between and within the countries. Using a survey conducted in the 27 member countries of the European Union we analyse the respondents’ proficiencies in foreign languages.

We present a general explanatory model for foreign language proficiency, create hypotheses from this model and test them empirically by using multilevel techniques. We find that the size of a country, the prevalence of a respondent’s native language, the linguistic difference between one’s mother tongue and the foreign language affect foreign language acquisition negatively, whereas a coun-try’s level of education has a positive influence. Using Bourdieu’s theory of social class, we show that besides other factors a respondent’s social class position and the level of education are important micro-level factors that help to increase a person’s transnational linguistic capital.

After the Insurgency: Changing Strategies for Countering Political Inequalities in Bangladesh

To what extent so-called minority populations gain access to decision-making processes in national government structures is one of the crucial questions for understanding the causes and consequences of ethnic conflict. Especially when nation-building processes are determined by the nationalist projects of major-it-y populations, the demand for autonomy has emerged as a central demand of the ‘ext’, replacing ‘voice’. This paper argues that the strategies for tackling such political inequalities have changed recently, which goes also to the credit of more efficient transnational and global networks. Based on empirical findings from Bangladesh, it argues that ‘voice’ has become a matter of strategic concession, which has not only caused by shifting power-relations and expressions of solidarity within the subcontinent and globally, but which is also related to social transformations within the conflict region itself: the rise of a new generation with quite diverse individual and
collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities: migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

Towards a New Security Culture 2030

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges?

The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

Theoretical and conceptual framework
Theoretically we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Biechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren’t objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of “security culture” (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

Methodology
The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

Results
The results address the above stated questions and will be displayed as statistical numbers and figures.

Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the valorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transiting towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.

The “Incest-Beast” of Amstetten

Durkheim has shown that the atonement of crime creates solidarity among those who condemn it. Therefore, crime contributes to sustain the social and moral order, although and because the deed questions them. Nevertheless, there are violent acts that transcend this order in a way that makes it impossible to classify them as acts of “normal violence”. Cannibalism, incest and senseless cruelty not only evoke refusal but strong emotions such as disgust and hatred. We want to argue that crime becomes more polluting and unclassifiable when it “amalgamates” different kinds of violence – for example imprisonment, incest and cruelty (Jan Philipp Reemtsma termed them “locative”, “raptive” and “autotelic” violence). If there is “only” one transgression the crime is more likely to be integrated into society. In this paper we want to address the case of incest committed in Austria in 2009 by Joseph Fritzl. He held his daughter captive for 24 years in a self-made cellar in the house he lived in with his wife, telling her, the daughter had run off to join a religious sect. He abused and raped his daughter thousands of times fathering seven children. Some lived with their mother in the cellar, the others lived with their “grandparents” as Fritzl told his wife, his daughter had left them at their doorstep. The case of the “incest monster” was of international interest. At the end of the conviction in March 2009 Fritzl was found guilty and was sentenced to life imprisonment. He was thought to be both sane and mentally abnormal. In this paper we want to analyze the case of the “Incest-Beast Fritzl” as a deeply polluting act of violence that was scandalized throughout the media. Transcending the notion of “normal violence” by combining various transgressions the crime had to be framed as an extraordinary, monstrous act.

RC04-96.5
GETZ, SHLOMO* (Academic College of Emeq Jezreel, shlomog@yv.ac.il)
Place of Residence and Higher Education Choice

It is generally assumed that the lower class faces restricted access to higher education and that opportunities of college choice and choice of field of study are restricted for lower class students. Differences of students’ choice by place of residence are usually explained by the socioeconomic status of the place of residence.

Studies conducted in Israel examined the effect of living in four types of locations (city, small town, Jewish village and Arab village) on higher education choices. Those locations may be ranked from high SES in the city through small town, Jewish village and finally the lowest SES in the Arab village. Those studies do not treat place of residence as a monolithic entity. They examine students’ patterns of college and field of studies choices controlling for individual SES and academic achievements. The hypothesis is that place of residence is not only a geographical attribute but also a social place that influences self-identity and plays a role in students’ choice regardless SES or academic abilities.

Findings show that the place of residence has a net effect on students’ choices, and it interacts with SES and with academic abilities. This effect is differential. “Successful” students from cities tend to enroll in more prestigious universities and in prestigious fields of study, like medicine and law. Students from Arab villages tend to enroll in less prestigious universities and choose lower status fields of study, like paramedical studies. Students from towns and Jewish villages are similar in their choices. Less “successful” students are less influenced by their residential place.

It is argued that those differences show an influence of residential place as a way of life, and create a “habitus” based on locality. This “habitus” lead to differential college and fields of study choice, interacting with academic achievement and SES.

Open Source Professionalism: Changing Forms of Professional Expertise

Public professionals often complain about their lack of autonomy and the pressures put on their work by “outsiders”, such as managers, politicians, inspectors, clients and the press. They experience red tape, bureaucratic burdens and accountability pressures that curtail them and their service provision. But when professionals are set free and when bureaucratic and managerial standards are dismantled, public professionals might become insecure.

In this paper we show that the problem public professionals face is not standards per se but inappropriate standards - standards that are not meaningful for doing their job, and not legitimate.
GIACOMAN HERNANDEZ, CLAUDIA* (Pontificia Universidad Católica, cgiacoma@uc.cl)

Shaping Body By the Food: Perceptions in Chilenos and Mexicans Adults

The incorporation principle is the common belief that the food ingesting by humans is transforming the body and identity of the eater, and for this reason, the control of food is central in the control of the self (Fischler, 1996). Using this concept, this work show how people think the food like a way to shaping body and the role given to the individual and environmental factors in the control of this process. From 70 semi-structured interviews in Santiago and Mexico City, I identifi ed that people actually think that food is one of the main factors that shape the body, helping achieve an ideal body or not. The interviewees think that moderation in the intake and consumption of healthy foods produce slender silhouettes; on the contrary, they believe that rich food intakes and consumption of junk food make overweight bodies. I identifi ed two opinions on the individual’s ability to control their body through food. On the one hand, who believe that the quality of ingested food depends mainly on the individual and their will because it is the individual who decides what to eat and therefore what kind of body have. On the other hand, are those who believe that individuals are limited in their decisions by factors outside the human being, as the available food supply, the resources and the food culture. The fi rst position was more common among Mexican inter- viewees, while the second position was more usual among Chilenes interviewees.

Energy Cooperation and Security In The Eastern Mediterranean and Its Future Impact To Local Political Conflicts and To EU-Integration and Enlargement

Due to recent important developments in the energy field in the Eastern Mediter- ranean over the last few years this region is becoming the focus of a growing geopolitical tectonic shift affecting all neighbouring countries, especially Turkey, Lebanon, and Greece. Important developments are, however, expected not only in the energy field as such which will put the relationship of these countries to the EU on a new track, anyway. Leaving aside merely economic impacts of en- ergy supplies from this region to the EU in the years to come one should state that energy is currently going on to a very significant role in the background of local political and ethical conflicts which will greatly affect the EU-integration and enlargement processes as well as the EU Neighbourhood Policy ahead. Existing and future alliances as well as conflict potentials deriving from the energy strategies of all countries concerned in the Eastern Mediterranean region will transform the region’s political and social identity in a significant way. This is expected also as it becomes clear that the energy situation in the region under which conditions multilateral cooperation could support regional solutions to political and ethical conflicts thus enhancing economic prosperity in the EU and beyond.

**Social Relationships in Later Life: The Role of Childhood Circumstances**

This presentation outlines results from a 12-month multi-method investigation of how exercise physiology research focused on physiological mechanisms and markers of sport performance is enhanced, curtailed, shaped and ultimately deployed, by broader sociological, political, historical and technological trajectories. In doing so, this presentation follows the theoretical leads of Jacques Ellul, Erving Goffman, and Norbert Elias in briefly reviewing three discrete but connected issues. First, the social and political factors that affect the conduct of lab-based research and how they shape knowledge processes from discovery to development, delivery, and use in the sports world; second, the processes of identification, construction, and resolution of bioethical problems in sport and exercise physiology research; and finally, the ways technologically mediated understandings of people developed in the lab and manifest in sporting endeavours facilitate the emergence and transmission of cultural logics and societal values. Second, by analyzing in detail the recursive relationship between the different approaches are robust to the violation of equality assumptions. In particular, we examine the case where the correlations between level one variables vary across contexts. Second, we show the impact of specifying “simplistic” models that ignore context-specific heterogeneity. How well do the different approaches handle unspecified (random) slopes that vary over level two units? Third, we explore the consequences of Normal and Gamma distributed errors
at both levels one and two. Finally, we alter the number of level two units, as any simulation study on hierarchical data should.

We focus on linear models with continuous outcomes and on standard set ups as they are typically implemented in applied research papers. However, we also plan to investigate whether and when more refined versions of the three modeling approaches such as GLS with bootstrapping or multilevel SEM improve their performance.

Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change

As nation-states are further lowering their climate ambitions in response to the economic crisis, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group indicates that the cities combined have about 4700 actions directed at mitigation and adaptation. However, the question remains whether these actions have resulted in different practices within the cities’ institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also examine what dimensions are particularly relevant to these changing practices. The preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice. Yet the changing practices are primarily associated with spatial departments such as transport and spatial development.

GILBERT, CLAUDE* (CNRS, claudel.gilbert@msh-alpes.fr)

Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But only the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representatives of the state attach importance to these powers (corresponding to the “state of emergency”).

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons: central governments no longer have resources to support alone public policy in this area. A divorce occurred between formal and actual capacity of the state (in particular during disasters). Second, for political reasons: local authorities (in particular in the major cities) and a part of civil society (in particular firms) want to play a role in defining policies they help to finance. Third for “societal reasons”: disasters can no longer justify the interruption of democracy.

We begin to accept the idea that the state can not be the only or the main actor to manage risks and crises. Reflections on resilience are intended, including by officials, to promote the involvement of other actors in society. But politicians and administrators want both transfer a part of their responsibilities while keeping control of risk and crisis management. There is an ambiguity that local authorities and other actors of civil society help to maintain: if they want to play a more important role, they do not want to assume state responsibilities.

The question central of this paper is to know what are the effects of this ambiguous situation in the effective management of risks and crises (especially from the example of pandemic influenza threats).

GILBERT, EMILY* (University of Toronto,  emily.gilbert@utoronto.ca)

How Much Is a Dead Soldier Worth?

How much is a dead soldier worth? This paper will interrogate the monetary value ascribed to the death of soldiers in the 21st century, and the narratives of sacrifice and heroism that inflate military fatalities. Rather than focus on public funerals and burial, I explore the more intimate (yet no less social) acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the ‘inadvertent’ death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the ‘hearts and minds’ of the population, and demonstrate the compassion of the international forces. How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated? And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

The Mercurial Piece of the HIV/AIDS Puzzle: ‘Stigma’ and HIV/AIDS in South Africa As a Social Scientist’s Challenge

‘Stigma’ and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emer-
gence of HIV/AIDS. The range of negative responses associated with the epidemic placed 'stigma' on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning is ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises.

The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in light of HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at ‘measuring’ stigma and reducing its impact is evidence that ‘stigma’ exists out there and continues to be a threat to the successful implementation of public health programmes.

Social and Economic Inequality As Deviantogenic Factor

There is no only “reason” of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific “weight”, “power”, value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as “reasons” of crime and others of negative (deviant) acts.

The ever-growing economic polarization of the population in Russia – is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 1:4.5 in 1994 up to 1:15 in 1999 and later up to 1:18.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Ofklov, I. Skifsky, E. Yuzikhanova. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs and economy inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Ofklov, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was also lowest (15,600) and suicide too (39,200). According to research of I. Skifsky (dynamics in 25 years, from 1980 to 2004), the correlation coefficient between homicides and Gini index was the highest 0.9253, between suicides and Gini index 0.8433.

The catastrophic growth of social and economic inequality serves in Russia as the main factor of deviant manifestations.

Gender Politics, Virtuous Racism and Diasporic Political Resistance in Europe

Gender politics has long been the staple of national discourse surrounding the integration of colonial diasporas in Europe, in particular in Britain and France. If during the 1970s and 1980s the male immigrant father was depicted as patriarchal and oppressive who prevented his female counterparts from integrating into the state, contemporaneous debates in relation to their children perpetuate similar tropes. Male diasporic citizens, now in their third and fourth generations, have come to be seen through pathological images that place exclusive focus on their supposed dysfunctional gender relations rooted in ‘other’ cultural practices.

This paper examines how dominant narratives of the patriarchal and redundant migrant and diasporic male rooted in culture depoliticise – and erase – decades-long struggles to carve their rightful places in Britain and France. De-industrialisation, joblessness, extreme right-wing racism and institutional exclusion are silenced as the driving forces for contemporaneous male political resistance (civil riots). Instead, dominant discourses pathologising ‘other’ cultures divide diasporic men and women, pitting them against one another to legitimise the intervention of the state, a process the French sociologist Nacira Guénif-Souilamas terms ‘virtuous racism’. The paper traces the deployment of virtuous racism in Britain and France that serve to reinforce structural inequalities through their precise erasure under the privileging of culture to ‘explain’ diasporic gender politics.

Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar

Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar

Michael Gillan and Htwe Htwe Thein

Abstract:

This paper examines the emergence of open industrial conflict (strikes, various forms of worker protests) in Myanmar (Burma), with special reference to industrial clusters/special economic zones in the urban periphery of Yangon, the nation’s largest city. In recent years, Myanmar has shifted towards quasi-democratic governance and this has led to significant change in both external relations (i.e. the suspension of most international trade sanction measures) and internal institutional development. The paper will explain that although worker initiated protest and strike actions in various industries preceded democratic reforms, these changes have enabled more prevalent and open expressions of dissent. Indeed, the growing incidences of conflict, alongside the reformation of institutions and governance, mean that the labour ‘problem’ has for the first time in contemporary Myanmar come into view as an important area for intervention and management by the State. Arguably, however, the development of mediating labour institutions (law, dispute resolution agencies, trade unions, employer associations) has lagged behind the expression and management of conflict in the industry, leading to ambiguity as to the capacity and role of the state and workers’ conceptions of forms of collective association, citizenship and dissent.

Moreover, industry development and forms of labour regulation have emerged not only via shifting relations between the state, capital and labour at a national scale. Geopolitics and international institutional actors (ILO, Global Unions, INGOs), forms of supra-national regulation (for instance, the impact of international trade sanctions) multi-scalar production and economic networks (investor and supplier relations) have also played an important role in institutional formation and reformation and the dynamics of industrial conflict.
extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and "liberated" what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the 'ageing' of those youth cultures have affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This 'cultural turn' is exemplified in contemporary research into ageing lifestyles, ageing and exercise, ageing and fashion, ageing and sex and more generally the performativities of ageing. Rather than developing a transgressive 'age liberation' movement however, much of this embodying performativity seeks to resist the purchase of 'agedness' on fashioning lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one's adult life.

How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativized, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arising new for both established and emerging communities. In this paper we explore methodological questions relating to the idea of 'migrant condition' of human beings. Situating the self and the family in a context of fluidity and constant change entails developing family practices in which belonging are understood as the ambraliveness of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.

GILLIÉRON, GWENDOLYN* (University of Applied Sciences and Arts, gwendolyn.gillieron@fhnw.ch)

Limits of Complexity - the Need of a Multilevel Approach in Migration Research

In the age of migration, cities have become heterogenic places, which strongly influence the life courses of their inhabitants. They define their framework of opportunities in the economic, educational and social fields. As heterogenic places, cities are a situation of inequality challenged to be transformed to inequality challenging diversity of their inhabitants. In an international complementary research project on life strategies of migrant families in different local, regional and national urban contexts, the question of heterogeneity and its possibility for comparison arises. The multilevel approach is applied to different urban and political contexts in Brazil, Germany and Klagenfurt (Austria). The challenge of this research is challenging, because there are not only life strategies of migrant families, which will be researched and internationally compared, but also the relevance of local, regional and national influence on life strategies will be analysed. What is particularly interesting is the question concerning the sort of orientations migrant families develop towards the location they are living in and how they are influenced by local and national factors.

By identifying and discussing the relevant contexts for multilevel analysis in our international research project, the paper will present methodological challenges of multilevel analysis in the international comparison research. While the multilevel framework guarantees intersubjectivity and contributes to avoiding methodological nationalism, it raises the question about the limits of complexity in the international comparative research. Based on the analysis of group discussions in all three localities, we will show how multilevel research works in practice and discuss difficulties regarding research practice and methodology.

Deliberating Alternatives to Capital: A Critical Cosmopolitanist Approach

Critical analysis of ideological divisions in the broad Global Left, via the historical, ideational and practical roots of these differences is important, for a key reason: it can help us explain the Left’s past and present shortcomings and difficulties in creating viable coherent solutions to the multiple crises of the world capitalist system. Through such a critical historical analysis of the Left, we can explore some of the key practical and intellectual dilemmas that have caused divisions; e.g. grand debates or dilemmas such as reform vs. revolution (strategy); local/national vs. world/global (scale); ecological vs. economic (value-interest); cultural vs. political (identity); individual vs. collective/community and society.

This paper outlines the principles of a new theoretical approach to studying ‘transformative ideological visions’ and ‘regenerative social counter-currents’ that may significantly influence debate and practice around constructing new radical and democratic alternatives to existing systems of domination and hierarchy embedded in capitalist social relations. When dealing with transformative ideas and practices, a critical account of cosmopolitanism can be employed in two ways: (1) as a critical analytical framework, that helps us examine alternative ideologies to the social relations of capital, in terms of their capacity to create historical ‘moments and conditions’ for other alternatives to flourish; and (2) as a normative reference framework that can facilitate belonging and connection between rival transformative practices and political agendas. Such a critical account of cosmopolitanism requires a ‘dialectical mode of criticism’ that needs to be self-reflexively applied to our understanding of the cosmopolitan and its history. Nascent elements of such a critical cosmopolitanism already exist among some synthetic contemporary radical ideologies, such as eco-feminism and radical economic democracy, as well as some forces amongst the global social justice movements, including within the World Social Forum, the Occupy movements, and in the recent anti-austerity social movements and popular uprisings.

Design, Undesign and Redesign: Eliminating Embodied Inequality

Over the past several decades, design and branding efforts for social justice and democracy have exponentially increased. Designers have apprehended and applied market strategies to create products and images to change the world. However, to date, design and branding have not been analyzed to understand and reassign their power in creating, labeling, and affixing differential worth to bodies that are disenfranchised because they are atypical, unruly alters. This vacuum leaves a huge gap in intellectual development and guidance necessary to harness design and image to challenge and diminish social inequities that have prevented local through global social acceptance for the full range of bodies. In this presentation, we argue, and illustrate through a targeted analysis of embodied design, its epistemic and axiological foundations and its praxis that design and branding are tacit yet powerful influences on the creation, reification and perpetuation of the acceptable human corpus and its opposite. We illustrate how design and its byproducts in advanced capitalist global, national and local environments are significant social influences on determining and reifying embodied worth, internalized and assigned identity of category members, social status, and comparative flourishing of members of diverse social groups. Given this understanding, we conclude with the constructs of undesign and redesign as the power tools to advance symmetry, inclusivity, and equality for diverse bodies.

Towards a Democratic and Emancipatory University: Feminist Popular Extension and New Relations Between University and Society in Brazil

Popular Extension is a key element for comprehending the relationship between society and universities in Latin America. By making possible a close-col...
laboration between universities and social movements, Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice on building a real alternative to the hegemonic models of university and rationality. Recognizing the central importance of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project “Popular Legal Promoters” on coping with gender based violence in the outskirts of Brasilia, Brazil. Established jointly by feminist movements, the University of Brasilia and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

GIORGINO, VINCENZO* (University of Torino, vincenzo, giorgino@unito.it)

The Contemplative Turn in Sociological Imagination

In my presentation I will address some epistemological and theoretical aspects related to the integration between sociological and contemplative methods. The latter are social practices originating from the wisdom traditions of human culture, maintained in the human mind and spiritual grounds. Their recent popularization (going back to the 70s) enables non-experts to achieve specific knowledge. The most successful attempt in this translated is currently found in the so called mindfulness programs, oriented to integrate the biomedical approach and nurturing the subject of the so called integrative or behavioural medicine; it has also a strong focus to use in psychological therapy. Through the 80s and 90s they constituted a growing bulk of research, recently testified by the birth of the scientific journal Mindfulness, not to mention its growing influence in education and management, especially in the literature about learning organizations.

My aim is to focus on the conceptual background in which such kinds of integrative programs can be developed in social sciences, outlining some implications for transformative sociology as well. The core discussion is focused on the re-definition of experience, self and action, taking into account an established tradition of first-person inquiry and narrative research.

From my point of view, the attempt to set up such an integration calls for an enactive approach: via introducing an embodied and interactional perspective, it challenges the dominant representational model of knowledge. In this direction, it could also be of help in broadening and reshaping what we intend by change, contributing to a pragmatic “social transformation from within” and alleviate social suffering.

In my intention, this transdisciplinary effort aims to help at disentangling some crucial sociological concerns and contributes to an experiential, post-constructivist approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

Time Saving Account, Capitalization To Improve The Work Life Balance?

The time saving account was introduced in 1994 in France. At first underutilized, this mechanism allows the employees to accumulate extra working time on an individual “time account” to be utilised later, became the nodal point of the time-reduction national policy bringing legal working time from 39h to 35h a week in 1998 and 2000. While time reduction was relentlessly pointed as a central cause of French companies loss of competitiveness in regards to international competitors, this mechanism sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bounds linking the various policy scales (Scarpa 2009, Anderson, Ostrom 2008; Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational or global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

Comparing Employment Policies in a Globalising World: New Challenges and New Methods

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionaly associated with the nation and the nation-state: public problem formulation, public problem resolution and the definition of citizenship as a form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurs as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national contexts, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bounds linking the various policy scales (Scarpa 2009, Anderson, Ostrom 2008; Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational or global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

IGNOU- Paradigm Shift for Higher Education in India

India’s higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total approximate number of institutions imparting higher education in India is 26,000 whereas it stands at 6,706 in USA and 4,000 in China.

Despite massive expansion, there is a mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent.

Open distance learning is one such strategy which aims at universalization of higher education, to address the barriers of higher education.

IGNOU- Indira Gandhi National Open

The Indira Gandhi National Open University (IGNOU) was established by an Act of Parliament in 1985, has continuously striven to build an inclusive knowledge society through inclusive education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reach out to the disadvantaged by offering programmes at affordable costs
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology.

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provides seamless access to sustainable education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reach out to the disadvantaged by offering programmes at affordable costs
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology.

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provides seamless access to sustainable education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reach out to the disadvantaged by offering programmes at affordable costs
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology.

The University is committed to quality in teaching, research and extension activities through ODL system.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis, a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Impacts of Brazil and India’s Development Dialog on Poverty Alleviation Policies: Knowledge Sharing and South-South Cooperation

Since the beginning of the 1990s a South American approach to Conditional Cash Transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main experiences can be singled out as most significant for their characteristics, range and influence: the Mexican Oportunidades and the Brazilian Bolsa Familia. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program.

The intensity of well-being approach provides a way to measure a country’s progress towards alleviation of poverty and its slope over time: the spread of this model of poverty is currently in discussion in many south-south forums around the world like BRICS and IBSA. As part of this current discussion in 2012 the city of New Delhi started a pilot program focused on poverty reduction as a result of the on-going National Debate about Cash Transfer Policies. The Latin American experiences were important base for the Indian discussion and the results exposes challenges to the southern model.

This article presents the results of a research done in Brazil and India asking what can be learned from experience in this south-south development dialog. It exposes the challenges and opportunities as well as the different approaches that each society gives to the same set of policies as well as the discussions about poverty and development.

Questioning Development: Global Integration and the Ecological Efficiency of Well-Being

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain different countries’ carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country's progress towards simultaneous environmental and social sustainability by asking how energy (or ecologically) intensively (or efficiently) a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored for this topic in the sociological literature. Results indicate that varying forms of integration have an impact on states' abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.

Migrant Nannies In French and German Households – Insights From a Care Worker’s Point Of View

“...This presentation focuses on migrant nannies working in two European countries: France and Germany. The main interest of this comparative analysis is to evaluate social policies of these two nation states through biographical research with migrant care workers who take care of small children in private households on a regular basis. This is a crucial task as nowadays the industrialized countries are highly interested in finding adequate solutions to their increasing care-deficit. European countries like France and Germany are structurally close and face similar problems such as demographic aging and the pluralization of life and work forms. However, their efforts to guarantee the production of human beings themselves in a globalised and capitalised world differ remarkably. At this juncture, migrant care workers are important key actors, because they represent a significant resource. Therefore it will be interesting to analyze how dimensions of class, but also of gender, national belonging and race/nationality affect the relation to local families. The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work, realities of their employers: from a nanny’s perspective...”

Migrant Nannies In French and German Households – Insights From a Care Worker’s Point Of View
The study on value orientations in Russia has been conducted from the middle of the 1960s when the theoretical works by a psychologist B. G. Anan’ev, sociologist A. G. Zdravomyslov, V. A. Iadov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers’ value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Iadov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and “re-comprehension of values” on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds theses defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodological correctness and opportunities for the data comparison remain to be a subject of criticism.

“Inter-Vey”. Towards the Conversational Survey

The ‘Inter-Vey’. Towards the Conversational Survey

For decades, the dilemma between open-ended and closed-ended response alternatives occupied the methodological debate. Over the years, dominant approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological decision has been the survey’s fortune, making it the methodology most widely used in the social sciences, however it produces a large amount of biases well known in the literature: misunderstanding of the response alternatives by the interviewees, the multiple word meanings of response alternatives due the communicative functions of quantifiers, the invented opinions (or lies) phenomenon, the influence of the response alternatives on formation of the judgment, social desirability effects, the yea-saying and response set phenomena, etc..

In order to remedy these biases an alternative proposal can be designed by re-discovering and adapting two “old” proposals: Likert’s technique called “fixed questionnaire answers” (1930s), and Galtung’s (1967) procedure named “open question/closed answer”. Both procedures are guided by the same discursive principles: make the interview into a conversation, let the interviewee answer freely in his/her own words, and thus release him/her from the researcher’s schemes, making an “interviewee-centered” survey.

These principles have been recently blended in an innovative technique for collecting survey data, which has been named “inter-vey” (Gobo and Mauceri 2014), blending in-depth and survey interview (or unstructured & structured interview). “Inter-vey” is based on the idea of the “conversationalizing survey” (Schober and lecting survey data, which has been named “inter-vey” (Gobo and Mauceri 2014), freely in his/her own words, and thus release him/her from the researcher’s question/free answers” (1940s), and Galtung’s (1967) procedure named “open questions”.

GNEVASHEVA, VERA* (Moscow University for the Humanities, vera.cos@rambler.ru)

Value Identity of Russian Younger’s

The very recent report published by the United Nations confirms unsurprising-ly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people’s everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it.

Islam government policies that have been used to deal with at least some of these concerns have not always been systematic. The Islamic government’s disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that ‘Islam’ informing process, state-provided education, people’s attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. ‘Islam’ really incapableness of tackling climate challenges in the context of Iran? A social constructionism approach of ‘Islam’ will be presented.

GODRIE, BAPTISTE* (University of Montreal, godrie.baptiste@yahoo.fr)

Shaping the Contour of Psychiatric Intervention. Peer Support’s Contribution in the at Home Project, Montreal

To what extent does the integration of peer support workers (former service users) in mental health services contribute to the renewal of clinical intervention among homeless people with severe mental health illnesses? This presentation is an analysis of the integration of three peer support workers in two intensive case management teams and one assertive community treatment (ACT) team of the At Home project, Montreal, Quebec, Canada (2009-2013). This housing first project (also conducted in four other Canadian cities) compares clinical and housing support services to conventional services. An important feature of the project is the participation of service users in the governance and the clinical intervention.

We’ll discuss the clinical practices developed within the teams by the peer workers in collaboration with the clinical staff, placing a particular emphasis on two of their contributions: 1) bringing their experience of severe mental illness and their broader experiential knowledge into the understanding of the service users’ situation and the thoughtful application of coercive measures, contributing to the improvement of the existing services; 2) challenging the classical definition of clinical distance with the service users, contributing to the redefinition of the clinical intervention in the At Home project. These two contributions will open the debate on the professionalization of peer support workers and their ability to shake the professional psychiatric hierarchy and the traditional practices.

The qualitative data was collected during a PhD field work through observation and individual and group interviews conducted during the year 2012 with 25 peer support workers, clinical staff, managers and psychiatrists of the At Home project in Montreal.

Changing Life Course, Changing Housing and the Housing Market

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social prob-
Intergenerational Reciprocity – the Idealization of the Interchangeability of Phases of Life

Among the prominent concepts used for the sociological description of intergenerational relations is the one of reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Gouldner in the perspective of exchange theory, thereby ignoring other traditions of thought. In the course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the “goods” exchanged between generations are not equivalent, that this exchange extends over enormous spans of time, and that donors often are not rewarded by the original recipients. Theorists reacted by introducing additional elements: the double-pole relation was extended to a three-pole relation, time was neutralized in the idea of generalized reciprocity, and models were assembled that allowed the translation of actually incommensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

Dying or Living: A Moral Dilemma for Ethical Warriors

Western countries have developed a romantic vision of soldier’s relation to death. In France, the so-called “acceptance of supreme sacrifice” is deeply rooted in both warfare ancient history and the over promotion of physical courage. Dying for France’s higher interest is considered as the core of military identity. This heroic ideology, reinforced by the professionalization of French forces in 1994 which initiated a professional/client relationship between service members and citizens.

Debates about the future of the French forces always focus on how to adapt the current format of the military to the new expectations and constraints it faces. I would suggest that this is the wrong way to deal with these issues. I would suggest instead that we should re-think the way we consider the military in regard to our current objectives and constraints, and not according to outdated concepts.

The proposed presentation thus aims at re-thinking the French *pro patria mori* to the light of the current framework in which the French military is used, getting rid of the weight of history and re-assessing our relation to death in warfare.

My reflections will be supported by philosophical and sociological considerations about the relation to physical courage and the need to get rid of the idea that courage is intrinsically linked to combat.
through the visibility of the clothed body - relying on connections between the local and the global – ultimately comes to shape the local landscape.

Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-side focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality. Social inequality, differentiations in economic, educational and cultural capital elevate through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of a new collective scheme such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals’ different present and future based on their social class. The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class replication model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class. Within a mature phase of post-consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

Social Movements and Protests in Brazil in 2013-What’s New?

Social movements and protests in Brazil in 2013-what’s new?

The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like feature role of cooperation and of political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: which the character and sense of the demonstrations, what’s the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations

Most defence organizations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, in missions, in academic settings). Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of ‘collaborative work arrangements,’ it is indeed an important issue that affects both operational and organizational effectiveness. This presentation will focus on several related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative. Further, results from the Canadian Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (ND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the DND/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge that are critical to operational and functional, as well as upon civilian personnel trained in a variety of occupations acquiring a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

Oh, Didn’t Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational value that has been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members’ perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee identification. Moreover, mediation analysis indicated that military personnel’s perceptions of informational justice were related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice. Implications for information sharing within military organizations are discussed.

Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention

The recent decade has witnessed remarkable success in various aspects of socio-economic development in Tropical Africa. However, contrary to the “development is the best contraceptive” expectations, fertility in many countries remains stalled, frequently at very high levels of 5 and more children per woman. We investigate possible causes and behaviour patterns underlying “pro-natalism” to reveal that some of the best-recognized fertility-inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the rocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal primary education (with particular attention to enrollment of women in their 20s and early 30s) accompanied by re-introducing family planning campaigns as a development priority.

Climate Change and Coastal Adaptation: Planting the Seed for Adaptive Governance in Portugal

The most recent IPCC report confirms that climate change is very likely to increase coastal risks. This means that all vulnerable coasts will be required to adopt innovative adaptation strategies. In countries such as Portugal, economic austerity may result in reduced funds for rising coastal defence expenditures. Therefore, coastal management will have to confront a geomorphological and social process of creative and progressive adaptive governance if future economies and societies are to remain viable and resilient.

Social scientists will be heavily involved in this challenging prospect. This was the experience of a three-year research - CHANGE - Changing Coasts, Changing Climate, Changing Communities (2010-2013). The project used climate scenarios for the coming decades to promote a meaningful dialogue between a range of interested parties and coastal managers regarding possible planning and financing options in three different coastal locations in Portugal.

The research identified a high awareness across the stakeholder spectrum of the impacts of climate change. But it also discovered a dominant feeling of hopelessness towards future solutions for coastal protection and funding. Furthermore, all previous attempts by coastal managers to engage stakeholders are widely perceived to be failures.

These critical gaps in processes, action and communication have been analysed in a set of interactive workshops. Representatives from regional government and municipalities, private companies, universities, fishermen, among others, met together to discuss science and communication; social and economic impacts; public participation; financing and adaptation solutions.

The presence of the team, coupled a detailed public opinion survey at each location, demonstrably raised awareness on coastal change and sowed the seeds for creating an inclusive coastal forum, engaging local stakeholders in the mission of spreading the adaptation message. The research paper will sum up the results of the CHANGE process, aiming to offer a contribution towards new models of adaptive coastal governance.

Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful “velvet” or “color” revolutions in the USSR and Eastern Europe in 1989, or the pro-democracy uprisings in Ukraine in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power – Islamists – alongside the secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal regional, ethnic and tribal divisions.

Native Languages of the Bering Strait: The Changing Conditions of Interaction and Endangernment

A characteristic quality of the area under consideration is the variety of distinct groups inhabiting it. If one only counts broad ethnic and linguistic categories, Chukchi, Siberian Yupik (including St. Lawrence Island Yupik), Naukan Yupik, Inupiaq, and, to a lesser degree, Central Alaskan Yupik have to be considered. The native groups in question have always been in close contact, communicating with each other in both native languages, as well as in English, Russian, and pidgins, both locally designed and maritime ‘jargon’.

The paper presents a diachronic study (from late 19th century to the present) of how changing political contexts influenced the prestige of languages in question and their use in interethnic communication at different periods of time. The focus is on individual sociolinguistics that comes from the memories collected. At the same time, the analysis takes into account that personal memories are obviously prompted by later political and social events, and sociolinguistic and political boundaries make a projection on a personal language map. In conclusion, at attempt has been made to link socio-political changes to the degree of language endangerment.

The Entrepreneurial University: Institutional, Political and Social Factors

The mission of the public research university is to advance excellence in research, scholarship and creative activities. Within the increasing cutbacks in government spending on science, the university should achieve a greater degree of flexibility to be more prepared to respond to the needs of a knowledge-based society. It means the greater significance to the ways in which the production of scientific knowledge and the technology transfer are organized. We think that the political sociology of science approach can be adequately applied to study the institutional matrix of the entrepreneurial sector of the public research university. We suggest that intertwining of the institutional, political and social factors gives us an opportunity to build a good explanatory model of the development of the research sector of the university. Political factors cover the state policies, programs and initiatives to engage in and support the technology transfer. Institutional factors cover direct steps undertaken by the university officials to guarantee true entrepreneurial activity. And social factors include both the relationship between the university and the public, and the dynamics of aspirations and value orientations within the community of scholars, contract researchers, project managers, technicians and other professionals who actually make theoretical and practical advancements of science a success. The conjunction of such factors involves a broad cast of actors, with well-developed and well-conceived perspectives. So it is not a surprise that such factors can be multidirectional. We think that a careful study of antagonisms inherent in such factors may provide us with good insights into regional science-based economic development. To justify this, some results of a broad study of the entrepreneurial activity and the research sectors of the universities in Western Siberia will be provided.

Brain Drain and Academic Mobility

Emigration of high-skilled professionals from less developed countries to developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries. Skilled emigration has been analysed according to two contrasting models: the model of the exodus that stresses the idea that more skilled individuals are forced to the exile, allowing them to get a job and a remuneration corresponding to their training; the model of the Diaspora that stresses the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

This research aims to test the comprehensive power of each of these theses referencing to the mobility of highly qualified Portuguese professionals to Europe in the last decade. Portugal is one of the European countries where the drain is more accentuated in the last years, estimated at 19,5%.

Articulating an extensive research with an in-depth analysis we seek to identify the subjectivity of the direct actors of emigration in some of its main working contexts. We use a mixed strategy which makes use of the questionnaire surveys that aims to characterize the push and pull factors present in the decision to emigrate, as well as the effects of deskilling, reskilling and up-skilling resulting from migration; and, life stories and interviews with focus groups that will draft the life trajectories, the differential effects of socialization on the biographical dispositions and the strategies of improving the educational capital. Using a multiple case methodology we will describe and compare the circumstances, the modalities and the characteristics of the Portuguese student mobility of 1st, 2nd, or 3rd cycle that leads to insert primary or secondary segments of the employment system of the receiving European countries.
Since at least the 1990s, representatives from several Ecuadorian indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessionaires that operated in the Lago Agrio oil field of the Ecuadorian Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US —where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuan battle, however, is an $18.2 billion judgment issued by an Ecuadorian court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has rekindled an interesting debate on the development of mechanisms for the protection of diffuse rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues insofar they contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.

‘the Reinvention of the Traditional’ in the Post-Traditional Societies
—an Essay on Encouragement of ‘Dependence’

The theory of reflexive modernization led by A. Giddens and U. Beck characterizes modern societies as post-traditional. These societies become characterized by the free play of supply and demand, is also necessary to observe the biographical trajectories in order to understand the reasons and destinations of migration. The mobility is intended to test the theoretical hypotheses presented in the literature. Our hypothesis consist in assuming that the different migration flows as well as the contexts, projects, the paths of life and how biographical expectations are constructed and therefore can be understood by the concerns of these mobilities. The literature identifies five main theoretical hypotheses with different levels of empirical evidence: a) brain drain; b) beneficial brain drain; c) cross fertilization of elites; d) brain circulation by creating networks; e) latent brain drain due to the mobility training.

Using a multiple case methodology we will describe and compare the circumstances, the modalities and the characteristics of the mobility of two types of migration of high skilled Portuguese individuals in Europe: a) long-term migration to a European country for work in primary or secondary segment of the employment system; b) temporary or commuting mobility through European networks of science, production, services or culture.

Monopoly on the Use of Force As a Metanarrative: Violent Non-State Actors and Political Repercussions in the Global South

This study seeks to problematize the concept of state monopoly of force, establishing discussions about the use of violence as a polysemic concept. Accordingly, we seek to examine the actions of non-state actors in the so-called Global South countries, understanding these groups as political actors able to establish political changes in the contexts where they are inserted.

The article will focus on groups in Rio de Janeiro, Brazil, and Tripoli, in Libya. In this sense, it is deeply based in data collected by the authors on field research. Although these assemblages possess distinct characteristics, “Militia” in the Brazilian case and “Neomercenaries” in Libya, the analysis demonstrate similar characteristics, especially on the symbolic reframing of the state monopoly for the use of violence.

The type of control exercised by these groups occurs mainly through the establishment of direct governance in a specific location, particularly by coercion and political power. As a consequence, its performance ultimately emphasizes elements that highlight the inefficiency - or the renunciation - of the State since their composition is based on non-state networks that provides financial support and goals and sustained largely by fear and territorial control.

Much of the debate about violent non-state actors is centered in reflections about the threats that such agents might represent for the structures of government authority. In this sense, the growth of non-state actors would necessarily create effects that decreased state capacity and provokes the erosion of the legitimacy of the use of force. However, in the present analysis, we prefer to address the issue through the lens of reframing: the presence such actors actually indicate changes in the state performance and modifications on the symbolic forms legitimate use of violence.

double troubled-young people struggling to cope with the conjoined status of neet-youth homelessness in times of austerity

despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NEET-youth homelessness, particularly in times of economic austerity. As such, the NEET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NEET-youth homelessness framework presented herein is that irrespective of the importance of micro-level factors and personal preferences in shaping young people’s lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell, et al, 2011).

Importantly, the NEET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant ‘silos’ approach to understanding both NEETism and youth homelessness separately, despite their acknowledged links (Smith, J. and Ravenhill, M. (2006);Quilgars et al, 2008; Jones, 2009). This paper postulates that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthoods.

assessing the influence of global inequalities and public policies indicators on support for state: insights for welfare state sustainability and democracy responsiveness

public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002). Contrasting with the comparative welfare state literature, that usually focuses on social indicators’ annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators’ overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP Role of Government, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a “thermostat” pattern (Wlizen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., help to understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

gonthier, freddéric* (université de grenoble, frederic.gonthier@iep-grenoble.fr)

comparing the evolution of attitudes toward government: cross-cutting substantial and methodological issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether the two main attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare the global trends across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space. Then we use multilevel modeling to look at the evolutions among subpublics, especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?

Identidad Nacional, Imaginarios Sobre El Estado Nación y Procesos De Exclusión De Los Migrantes Internacionales

Argentina ha sido y es un país atravesado por procesos migratorios. De este modo, se fue constituyendo un imaginario social acerca de los aportes y las pérdidas que la llegada de los migrantes significaban para la “identidad nacional”. A su vez se ha planteado el modo en que la identidad nacional se construye a partir de procesos migratorios. El presente trabajo analiza de qué modo la presencia de migrantes internacionales supone un desafío a la estructuración de las sociedades organizadas bajo la idea de identidad nacional. Así, la presencia de dichos migrantes es vista como una figura “ruptura” en el rol del nacional, “ficción”, pero no por ello menos efectiva en la “reconstrucción” de la “comunidad de nacionales”. Intentaremos indagar sobre las manifiestaciones de los argentinos acerca de las migraciones llamadas “tradicionales” (que incluyen a las olas migratorias de fines del siglo XIX y principios del XX) y las “actuales (desde la segunda mitad del siglo XX a la actualidad).”

Social Capital and Primary Care Professionals’ Accomplishment of Management Targets

It has been argued that fostering cooperation among general practitioners (GPs) and between GPs and other professional groups (e.g., nurses, hospital specialists) contributes to improve performances. A relevant factor influencing such cooperation is the social capital (Inken & Tsang, 2005; Reagans & Zuckerman, 2001). We interpret such factor as the informal ties existing within professionals and organization members and instrumental to exploit valuable resources such as information and knowledge.

We aim to provide insight on the influence of socio-demographic and organizational characteristics of GP practices on the social structure of each physician’s advice network, and on whether such social relationships lead to performance improvement.

We collected data by means of a questionnaire covering specific aspects of social capital and administered to the GPs of a Local Health Unit (LHU) in Italy. Moreover, we gathered data concerning GPs’ logistical arrangements and performance (in terms of meeting targets of appropriate pharmaceutical prescriptions). Social network analysis was used to measure the composition (degree and closeness), heterogeneity and homophily (Abassi et al., 2012; McCarty, 2002) of the personal advice networks of respondents (response rate: 58%) and to test, on one hand, whether logistic or demographic characteristics influence such measures, on the other hand, whether such measures (representing proxies of social capital) influence GPs performance.

The study provides insights on the capabilities hidden in the informal relationships of primary care professionals. In addition, it enhances our understanding of the determinants of GPs’ organizational performance, which is both an important issue for policy makers and an intriguing facet of the shift between clinical professionals and management.

What Happened with Our Plans? Plans and Behaviour of First Time Dual-Earner Couples in Spain

Most studies show that the arrival of the first child produces a new gender balance within the couple, and frequently initiates long-lasting gender inequalities. This paper investigates how first time parents deal with the reconciliation problem (combining paid and unpaid work), which are the consequences of adopting different reconciliation strategies (use of family policies, informal networks and couples’ time) on gender inequalities, and to what extent different strategies are based on individual attitudes and societal constraints in Spain. This study has two peculiarities. The first one is the sample selection. We interview couples which had a fairly egalitarian division of labour when they were expecting the first child, and we interview them again one and a half year later; when most couples have already made the decision to return to paid work. The second one is the historical moment in which the interviews were conducted, marked by a deep economic crisis and a sharp weakening of men’s working conditions. The study is based on a sample of 33 egalitarian dual-earner couples interviewed two times firstly in 2011 and secondly in 2013. Results indicate that mothers elaborate more realistic expectations during pregnancy about their chances to combine work and care. Moreover, we often express dissatisfaction with work-life balance and a greater gap between identified needs and really feelings in women, feel that their arrangements are fully justified by their job constrictions and the economic crisis. This study highlights the importance of a good policy design in order to favour gender balance over the life course, even in the worst socio-economic circumstances.

Male Homicide and Life Expectancy in Mexico

Objective. To determine the impact of homicide on male life expectancy in Mexico and its 32 states during the three-year periods 1998–2000 and 2008–2010 and the weight of the different age groups in years of life expectancy lost (YLEG) due to this cause. Methods. Based on official death and population data, abridged tables for male mortality in Mexico as a whole and its states were created for the three examined periods. Health-adjusted life expectancy (YLEG) for men aged 15 to 75 were calculated by selected causes (homicide, diabetes mellitus, and traffic accidents) and age groups in each three-year period. Results. In the years between the 1998–2000 and 2008–2010 periods, YLEG due to homicide increased in the most affected states. For example, for school-aged youths, in the year 1998–2000 YLEG due to homicide in the state of Chihuahua was 15.2 years, while in 2008–2010 exceeded two, with the state of Chihuahua standing out at 5.2 years. In 14 of the 18 states where health-adjusted life expectancy among men declined between the two three-year periods, the YLEG due to homicide increased. From 2008 to 2010, homicides were the leading cause of YLEG among men aged 20–44. YLEG due to homicide among those aged 15–44 increased between the two three-year
periods. Conclusions. The increase in the rate of homicidal violence, especially among young people, is impeding an increase in male life expectancy in Mexico. In several states, such as Chihuahua and Durango, this violence appears to be the main reason for the decline in life expectancy among men aged 15 to 75.

I present a case study of a negotiation process between the Colombian government and non-state agents from the system of international cooperation for development, the international human rights system, international NGOs and domestic civil society aimed at the regulation of human rights problematic in Colombia. The outcomes of this negotiation show how a political governance structure can emerge as a change in the political regulation model of this problematic at the national level.

This kind of negotiations entails the participation of plural social agents that act at different scales (national and international), with different interests and power capacities. It must solve the problem of inter-sectorial coordination (state agents and non-state agents) in order to overcome political conflicts and get at some point of agreement with regard to how regulate the problem under consideration. In this research, I used a combination of the structuration theory and the Coleman’s macro-micro-macro loop in order to explain how this governance structure emerged as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

Human Rights and Political Governance: The Problem of Monitoring and Compliance with the Human Rights NORM in a MULTI-Agent and MULTI-Scalar Perspective

The monitoring and compliance with human rights norm in domestic political contexts can be analyzed as a social risk. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to the regulation of this kind of risk. Political governance is understood as a negotiation process between state and non-state agents that works as an interface between the domestic political system and regulation processes of the human rights problematic outside this system, mainly at the international level.

I present a case study of a negotiation process between the Colombian government and non-state agents from the system of international cooperation for development, the international human rights system, international NGOs and domestic civil society aimed at the regulation of human rights problematic in Colombia. The outcomes of this negotiation show how a political governance structure can emerge as a change in the political regulation model of this problematic at the national level.

This kind of negotiations entails the participation of plural social agents that act at different scales (national and international), with different interests and power capacity and that must solve a problem of inter-sectorial coordination (state agents and non-state agents) in order to overcome political conflicts and get at some point of agreement with regard to how regulate the social risk under consideration. In this research, I used a combination of the structuration theory (Giddens), the Coleman’s macro-micro-macro loop and the scalar approach to governance (Gareis) in order to explain how this governance structure emerged as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

Family and School Effects in the Explanation of Migrant-Native Differences in Performance and Educational Expectations in Spain

We examine the effects of school context on educational outcomes and outcomes of the children of immigrants, in comparison with natives in Spain, an under-represented case in the international literature and a fast growing immigra- tion destination in Europe. Using two recent datasets, 2011 Change Survey and the Secondary Schooling Evaluation Survey, which cluster students across schools, we investigate the factors that contribute to the migrant-native differences in school performance and the formation of long-term educational expectations, and propose an explanation to migrant optimism. We look at three dependent variables: Performance is here studied from both an [1] objective (test scores) and [2] subjective perspective (estimation by children and their parents of whether their performance allows to reach tertiary education) and [3] the adjusted educational expectations (controlled for prior performance). Our results reveal the different way that school context works for immigrant and native origin children. Although immigrant children themselves understand the constraints that such disadvantage imposes on their future educational careers, immigrant parents seem to hold on to a rather unrealistic position. This parental optimism in turn seems to boost the career expectation of immigrant children independent of school effects. Thus while school context determines the performance of immi-grant origin students to a greater extent than those of natives, the opposite is true for expectations. The formation of aspirations is more family-oriented among im-
migrants, and thus more positive, than among natives. Whether the long-term educational careers of immigrant children are as successful as they expect is a matter of how they do cognitively in schools, in which there is a greater role for support or contradict sociological theories about the origins, diffusion, and outcomes of movements.

_A New Crisologie after 2008? Crises and Cognitive Autonomy_

This paper is an attempt to address Morin’s (1968) plea for a sociology of crisis, focusing particularly on the role of intellectuals in shaping the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis.

Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narration where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells. Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek _krino_ (to cut, to select, to judge) – narratives do frequently appear, for without a minimum of foreseeable action, access is impossible and the future unearvably amiss.

If, precisely at the moment in which narrations are the most unstable we need them ever more urgently, we face a tension where the role of intellectuals becomes fundamental. Already Gramsci had acknowledged this. Furthermore, as Morin had already argued, intellectual reactions to a crisis are in no way readily predictable, for they raise forcefully the issue of the justification of normality. This might even mean the ascent of ‘regressive’ responses to a crisis – plagued with dualisms – or a newfound sense of complexity.

From this starting point, I attempt to weave together the tension between cognitive autonomy and narration after critical events. I argue that in order to fathom intellectual change and crisis, sociology must meet at least two characteristics: first, it must understand cognitive autonomy as a relational (not absolute) characteristic of intellectual actors and second, it must be particularly attentive to the issue of time in a self-reflecting way, i.e., it must be itself a ‘temporalized’ sociology.

_Think Tanks As Public Intellectuals? Recent Developments in the Sociology of Think Tanks_

This paper’s aim is to contribute to the sociological literature on think tanks by drawing insights from the sociology of intellectuals. I first proceed by describing and establishing links between some of the latest contributions stemming from sociology and political science: Tom Medvetz’s Bourdieusian framework and Hartwig Pautz’s neogramscian approach. From there, a discussion ensues on the potentialities and limits of those perspectives to study intellectual change, independence and stability within think tanks. Herein positioning theory, previously used to study public intellectuals (Baert) becomes relevant, as it highlights the relationship between a public intervention, its context and other actors. In the case of think tanks, it highlights how these organisations must “juggle with” diverse forms of legitimacy and authority within and outside, cross-cut by institutional and economic constraints. Since within think tanks individuals and institutions are enmeshed in various public debates and connect to a range of people and organisations, alliances are crystallised in the public sphere through the think tank’s intellectual reputation (and the form we understand a think tank’s intellectual function: based on technocratic expertise, on being a critical voice, etc.). These resources can in turn be mobilised in the form of allegiances and distances, economic constraints and intellectual resources. This reputation thus becomes a think tank’s greatest asset, its depository of symbolic capital. A public intervention is therefore an exercise of weaving together the intellectual image of a think tank, “talking”, as it were, through its experts in every public intervention and across platforms and publics. This stretches the concept of cognitive autonomy in interesting ways, as organisations themselves generate an image vis-à-vis the image of those who talk on its behalf. In order to exemplify this I expose the case of the British think tank “New Economics Foundation”.

_**Beyond Environmentalism: ‘living Well’ and ‘bio-Civilisation’ at the UN Rio+20 Summit**_

Concepts of ‘living well’ are re- framing the ways in which global justice movements challenge market globalism. In the 2012 counter-mobilisations against the United Nations Rio+20 Summit the vision for an alternative future was centred on the idea of a ‘bio-civilisation’. The concept was introduced to challenge the idea of a marketised ‘Green Economy’ as promoted by the UN outcome document - ‘The Future We Want’. Against commodification, a bio-civilisation was defined as a paradigmatic social and ecological commons, and was embodied in the alternative UN Social Forum document - ‘Another Future is Possible’. In the process of countering the UN’s free market environmentalism, the bio-civilisation concept was elaborated in some depth, across a range of policy fields, as a form of ‘living well’. The paper outlines the political contexts in which the bio-civilisation concept has emerged, and how it has been used to signify a clear break with green neo-liberalism. The paper identifies sources of agency for bio-civilisation, both as a lived practice and as a transformative program.

_Occupy Wall Street and 15M in Comparative and Theoretical Perspective_

This paper compares and contrasts the 15M movement in Spain (los indignados) with the Occupy Wall Street movement in the United States. We examine the class and social background and the grievances and concerns of the protesters in each country. We also examine the external and cross-border influences on each movement, public opinion toward each movement, and the tactical repertoire, achievements, and limitations of each movement. We ask how these movements support or contradict sociological theories about the origins, diffusion, and outcomes of movements.

_Researching the Ordinary: The Extraordinary Sociological Research of Pearl Jephcott (1900-1980)_

The lives and works of many sociologists have not been well documented and explored yet even when these biographical accounts are combined with boarder authoritative accounts of the discipline this ‘standard history’ is by no means a fully complete nor an uncontentious one. There are numerous others who have made, or continue to make, an outstanding contribution to the understanding of social life but who have become lost within the minutia of academic historiographies. As such considerably more needs to be done to examine the history of our discipline and reassess the significant contributions made by ‘other’ researchers so that we may also reappraise what can be learnt from these ordinary sociologists. In this paper we argue that Pearl Jephcott (1900-1980) is one such researcher whose contribution to sociology, and the sociologies of youth and community in particular, is suitable for reassessment. Her books - Girls Growing Up (1942), Rising Twenty (1948) Some Young People (1954) Married Women Working (1962), A Troubled Area: Notes on Notting Hill (1964), Time of One’s Own (1967) and Homes in High Flats (1971) – were both formative for many themes within sociology of the 1940s, 1950s and 1960s, as well as having contemporary relevance despite being largely forgotten. Focusing on two books in particular - Time of One's Own (1967) and Homes in High Flats (1971) and data collected over a ten-year period from various archives and Universities, we discuss (i) Jephcott’s sociological practice based on ‘reality congruent’ theory developed in order that she may cast a lens on the realities of working class life. She wrote richly detailed studies that offered an unsentimental reflection of ‘lived realities’, of the ordinary, of the mundane, of the realities of working class life. She wrote richly detailed studies that offered an unsentimental reflection of ‘lived realities’, of the ordinary, of the mundane, of the realities of working class life.

_Obesity and Gender As Status Characteristics_

For over 30 years, researchers have examined social influence and persuasion using Status Characteristics Theory (Berger and Conner 1974). While research has investigated beauty and attractiveness as status characteristics (e.g., Webster and Driskell 1983), no research to date has investigated obesity as a status characteristic. The current paper reviews the literature on influence and persuasion, demonstrating how they are related to status characteristics. Next, this paper
This paper examines the contentious politics of salinity in the Mekong Delta, paying particular attention to the competing perspectives towards salinization that exist within both the Vietnamese state and in rural communities in salinity-affected areas. Drawing on interviews with Vietnamese officials and reviews of policy documents, I first look at the competing interests - such as export-oriented development and national food security - which drive tensions over salinization at the policy level. I then turn my attention to differing perspectives and attitudes towards salinity at the local level, drawing on focus group interviews and ethnographic observation to examine the reasons - ideological and material - for which some social groups in the Mekong Delta have embraced salinization and salt-water shrimp farming, while others have sought to persist with rice farming even in the face of mounting salinity pressures.

The Mekong Delta region of southern Vietnam is currently undergoing a massive and rapid environmental transformation. As the sea-levels rise and an increasing volume of fresh water is diverted from the upper reaches of the river, both for hydropower and for irrigation, waterways and soils along the coast have become increasingly saline. Driven by the rising tides, water from the South China Sea now penetrates for dozens of miles inland, up the mouths of the Mekong and its distributaries and into the irrigation canals that cross Hatch the delta, posing a mounting threat to rice production and to agricultural livelihoods in the region. This change, however, is not seen by all actors as a negative one; instead, many residents of the region have abandoned rice farming for saltwater aquaculture, turning their rice paddies into saline ponds and cultivating farmed shrimp for international markets.
huge machineries of calculation have been mobilised. Regular surveys are used to track progress and to respond to the first sign of ‘decline’. In this sense, we could say that the complexity and uncertainties of the world are transferred to the processes of calculation, which in turn render clear and less uncertain accounts of the world in the form of numbers.

In this paper, I take the notion of ‘uncertainty’ to the statistical translations of the education world and the attempts made through these translations to erase uncertainty and ambiguity and provide clear, certain accounts. I explore how complex such operations are, and how the uncertainty and complexity of the world constantly challenge and undermine the attempts to tame it. I support my thesis with several empirical examples from my research on the Programme for International Student Assessment (PISA) and on Australia’s Education Revolution. I explore the dilemmas involved in these attempts to contain uncertainty (including through mathematical devices such as calculating ‘confidence intervals’), and the ways in which the world exceeds these attempts to contain its uncertainty.

Using Callon et al’s (2001) notion of ‘acting in an uncertain world’, in particular their argument with regard to ‘hybrid forums’, I argue in this paper that keeping uncertainties alive can have the beneficial effect of bringing more resources and expertise forward and adding new voices into the discussion. Uncertainty can thus be an asset rather than a problem to be solved.

Towards a Synergy Society: Beyond Reflexive Modernization

The purpose of this paper is to consider the reality of synergy society criticizing the theory of reflexive modernization and third way. Though positive welfare oriented third way politics has acquired greater importance in creating active civil society and wealth, it is too Western because reflexive modernization implies the project of political social concern against the ideal of just order. Synergy society is the collaboration beyond boarders. It lies in seeking the social well-being accompanying with rethinking process of modern values. The rise of communication sector where consultant, adviser, planner and religion play an important role in empowerment is a characteristic of synergy society. Instead of public sphere, we focus on the institutional embedding of synergy develops to construct interactive partnerships with synergy networks of well-being.

GOTTFRIED, HEIDI* (Wayne State University, heidi.gottfried@wayne.edu)

Re-Regulating Reproductive Bargains

This paper proposes a framework integrating varieties of capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance models and related labor regulations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic models. Without a systematic account of the gender dimensions of employment practices, institutions, and regulations, the varieties of capitalism approach cannot decipher the gendered patterns of nonstandard employment and its variation across countries. National variation in gendering of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargaining. Reproductive bargaining constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalist countries, including the United States, the United Kingdom, Germany and Japan, I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of labor and the quality of these arrangements. An examination of the European Union and the International Labor Organization also suggests that supra-national institutions influence the transfer of regulatory norms. Yet, employment outcomes and workplace practices still largely depend on a country’s type of welfare state, coordination mechanisms of employment relations, and varieties of reproductive bargain.

GOTTLIEB, AVI* (Tel Aviv University, gottlieb@post.tau.ac.il)

Climate Change Policy: The Role of the World’s Cities

The community of nations has struggled in vain to shape a coherent and effective mechanism to combat the global rise in greenhouse gases. Rather than advancing toward the modest emissions reduction target set by the 1997 Kyoto Protocol, we have witnessed a dramatic increase in global emissions. Concurrently, climate change policies have devolved to non-governmental actors and to sub-national levels, often with far greater effectiveness. Particularly noteworthy is the role of cities around the world in adapting to climate change. Already home to over 50% of the world population and routinely major players in the global economy, the world’s cities are primary consumers of energy and other natural resources and account for an estimated 70% of global greenhouse gas emissions – a ratio likely to increase dramatically in the future. Moreover, many of the world’s cities are acutely vulnerable to the effects of climate change, such as rising sea levels.

In light of these profound challenges, it is hardly surprising that many cities are vanguards in reducing GHG emissions, increasing energy efficiency, and adapting to the socio-economic, economic, and social risks of climate change. Hundreds of cities around the world have successfully established and implemented climate action plans with ambitious emission reduction and energy efficiency targets, and many are taking preventive measures to cope with climate change-related risks.

In light of the unparalleled challenges to urban planning and economic, social, and environmental policy posed by climate change, the articulation of a theoretical model that defines the key elements that contribute to the success of climate change policies is of utmost importance. The current study elaborates such a model and tests it empirically by examining several case studies in cities around the world.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, efforts are needed to smooth gender differences and increase access to education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

GOULD, MARK* (Haverford College, mgould@haverford.edu)

Natural Law, Human Rights and Sociological Theory

Barnett has argued that the requirements of organized social life are the principles of natural law. These laws are “as fixed and unchangeable as the laws which operate in the natural world.” For Barnett, the (normative) force of natural law is found in “if-then” propositions. “If you want to achieve Y, then you ought to do Z.”

There are three dimensions of sociological theory integral to a natural law argument, which is essential in the formulation of a human rights agenda. Barnett’s characterization of the normative force of natural law requires that sociological
theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes a critical dimension of the whole, where personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional interdependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advice and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has an impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family status. Do different configurations provide different types of interdependencies?

Data is drawn from a Portuguese national survey applied to cross-sectional samples of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) and recent immigrants. These interdependencies can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has an impact on networks’ multiplexity. GOVENDER, JAYANATHAN* (Nelson Mandela Metropolitan University, jay.govender@nmmu.ac.za)

Unemployed Youth: South Africa's 'ticking-time bomb' or 'democratic dividend'? Young South African's make up 72% of the unemployed. Organized labor's reference to the problem as the 'ticking-time bomb, has become an emblem attached to young people. Political and social comment insists that there is a need for alarm and consternation. Even government planners refer to youth unemployment as 'the greatest threat to social cohesion' and the 'single greatest risk to social stability in South Africa'.

Amidst this dark discourse, government believes that young South Africans may in fact become a 'democratic dividend', rather than present any immediate risk or future threat.

The paper will analyze both claims for their respective merits. It will locate the analysis within an educational and labour market framework. However, given such a framework, equitable social relationships. Here, Barnett’s standard for cultural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

Professing Hegemony: Consensus Building in the Chinese Higher Education Sector

This paper proposes that the economic, political and social transformation of the People’s Republic of China in the post-reform era is an example of “passive revolution.” This study is based on a pre-empting a revolution frow followed following the disastrous Cultural Revolution. Building upon deeply-held structural hegemonic beliefs, the leading Communist Party has, especially in the aftermath of Tiananmen, sought to build consensus to a teleological project: the rejuvenation of the Chinese nation.

Moreover, that overarching vision for the rejuvenation of China has proved to be durable and robust, changing at pace with the shifting needs of China in a time of dramatic transformation. It has grown to envelop ideas rooted in China’s ancient philosophical traditions as well as more recent historical experience and new concepts designed to characterize the post-reform era.

In an attempt to present a more comprehensive sociological framework and further their argument, this paper examines the materialization of national, agential hegemonic projects and the subsequent negotiation of consensus. Focusing on the reform of China’s Higher Education sector, the research discerns a process by which the ruling party skillfully articulates its own interests with agents operating in and across different fields of activity. Through the strategic deployment of resources, and the resulting competition over those resources the unintended consequence of which is to propel the Chinese HE sector along a trajectory deemed desirable by the CCP and PRC government, a limited form of hegemony characterized as much by the negotiation of consent as by the negotiation of conquest, has emerged.

In doing so, this paper views contemporary China as one characterized by much as much by consensus as coercion; identifies the overarching vision to which consensus is sought, and defines those actors with whom consensus is sought and also the process through which such consensus can be negotiated.

Globalization and New Communication Technology in a North Indian Urban Setting

The process of globalization in India has brought many changes not only in the sphere of Indian economy but also brought ample scope for the mass media communication to expand its network at global level. The advent of satellite television in the early nineties and new communication technology in the later part of nineties have shape the process of globalization of mass media in Indian society. Government organization has not only improved the performance of these organizations but also helped in the growth of the media sector in India. The number of internet users and mobile phones has increased tremendously in the recent past. It has enabled fast and uninterrupted communication between the masses located even in remote areas. These new communication technologies are giving rise to new patterns of communication and culture and have great impact of the style of life of their users. The present paper is aimed to understand the social background of the users of new communication technologies and the patterns of mass media exposure as well as patterns of using new communication technologies on the internet and mobile phone in Ghaziabad town of Uttar Pradesh on purposeful sampling (N=240) using and a highly structured interview schedule. It was found that there was a sharp difference in the patterns of using internet and mobile
phone. The use of mobile phone was relatively wider than the accessibility of the internet. The connectivity of mobile phone is spreading cutting across all caste, class and gender categories but internet connectivity is still confined to some selected sections of the mobile users.

**Religion and Church in Times of Social Change**

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the religious transition to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers, who remained in open or covert opposition to the system.

2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominations, compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WWII). That’s why communist authorities had to take into account the “local conditions”: the policy towards the churches and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.

3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy, able and willing to stand up for their rights, and the democratic government accepted them or even sought their support.

4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.

5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as will society’s attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.

6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WVS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on state-church relations and sensitive issues are not represented equally well).

**RC33-582.5**

**GRABOWSKA, MIROSLAWA*** (University of Warsaw, grabomir@is.uw.edu.pl)

**DURLIK, JANUSZ*** (Public Opinion Research Center, jdurlik@cbos.pl)

**Social Conditions of Survey Research**

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the “escape from the field of the questionnaire” and significant and refused to answer. We attempted to determine whether these responses depend on how and why they demand the questions’ issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender and age, presentation and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

**The Life Course and Individual Time Styles of Elderly People in Cross-Cultural Perspective**

The life course and individual time styles of elderly people in cross-cultural perspective

Our contribution presents the conceptual framework as well as preliminary findings from a cross-cultural qualitative study, focusing on life course-related time perceptions and time-related agency of older persons in Germany and the United States. Both countries are similarly affected by demographic change, but reveal significant differences regarding life course structures and the institutionalization of old age. Our epistemological interest centers on the interaction between the wealth of everyday time and biographical time poverty in old age. A special focus is set on the relationships between experienced life sovereignty during the life course and the perception of one’s own finitude in old age, i.e. the potential tension between a more autonomous disposition of time in daily routines on the one hand and the necessity of handling the limitations and unavailability of one’s own time on the other. How do both forms of time management interact with each other – and to what extent does the specific individual time style in old age relate to the internal temporal ordering of the life courses elderly people experienced in younger age? Based on problem-centered interviews including large biographical-narrative parts with retirees from various social milieus and different cohorts, we investigate individual experiences with managing ageing, lifetime and everyday time. A special focus is set on the effects of culture (e.g. regarding the relevance of autonomy values or the societal handling of death and finitude). In doing so, the common self-restriction in ageing research with its still-dominant focus on the cultural “own” is overcome. Simultaneously, we aim at gaining a deeper understanding of the peculiarities of different cultural contexts and their specific impacts on the structure of life courses and individual experiences with time and aging.

**Unhappy Souls at Work: Subjective Narrations about Psychosocial Working Stress**

Since the end of the last century new types of work, employment and management have caused substantial changes in contemporary subjectivity. In the meantime, an increasing social consciousness about psychosocial problems caused by working stress can be observed. In public and media discourses, the “diseases of the soul” are increasingly linked to flexibilized working and living conditions in late capitalism. On the other hand the reality of “the exhausted self” (Ehrenberg) is questioned – at least in Germany – on the part of psychiatrists and employers’ associations. At the same time, the “psychomedicalization of the social” is gaining significance in almost every area of social reality.

In my research I aim to contrast these complex socio-discursive interpretation schemes with the subjective knowledge about psychosocial working stress people develop under flexibilized working conditions. I want to know how affected individuals integrate this experience of emotional stress caused by work. By conducting narrative interviews with persons from different working areas (education, health, industrial production, financial services) who have been suffering from incapacity to work due to psychological strain, the interpretive patterns in which this experience is subjectively framed are investigated. The analysis shows how and to what extent psychological vocabulary and interpretation schemes frame subjective interpretations of stressful working experiences – and that they are used in multifaceted and often creative ways, oscillating for example between criticism of working conditions on the one hand and an psychologically “informed” self-ascription of causes on the other. In my contribution I will explore the types of narration and implicit knowledge individuals concerned by working
stress use in order to re-establish and/or maintain their personal and biographical agency.

Age and Knowledge As Challenging Factors for the Energy Transition in Germany

The German federal policy for phasing out nuclear power and supporting a shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step-by-step adapting to new circumstances. This stability is reflected in an outstandingly long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel that embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well-trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and eco-friendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientation towards stability and security – be it in terms of employment or in terms of infrastructure.

Eco-Innovation – a New Paradigm for Latin America?

Global phenomena of climate change on the one hand and not predictable technological risks of energy supply on the other hand are challenging not only Germany and the European Union but society, politics, science and industry worldwide. The answers to these challenges are very different. Some countries are screening their existing energy concepts and are searching ways of alternative energy, such as legislation on clean technologies, so-called eco-innovation. It is especially this shift to eco-innovation that catches our attention. It is not reserved for energy technologies. Sustainable products can also be found in other industries, such as textile. But in the ongoing of the energy turn policy, promoting renewable energies increasingly subsumed the concept (Cooke 2010). In the last decades energy policy lived a process of securitization. The connotation of energy policy with the field of security policy automatically led to a change of the political and organizational framework of governance. The shift towards innovation policy therefore means not also a reorientation of concepts but also a shift of governance towards multi-level-governance (Kern und Bulkeley 2009) – so far the debate in Europe. How is this concept discussed in Latin America? While the shift towards renewable energy is a quite new debate for Europe, Brazil had already a share of 58.4% of renewables on total energy production in 1970 (Maihold und Müller 2012). Nevertheless compliance to renewable energy not always meant fact compatible among them. Our main goal is to evaluate if theories on Latin American polities are present in the Filipino case as well. Located in Southeast Asia, the Philippines share several cultural and political features with many Latin American countries, such as social and political inequality, patronage and state inefficiency. Despite such problems, the Philippines and most Latin American countries have managed to sustain a democratic routine since the mid-80s. The Philippines and Latin America also face similar challenges, for instance popular dissatisfaction with political elites, high levels of uncertainty and alsocsi (as a form of political violence). In order to sustain our argument of case similarity, first we compare historical patterns of development in the Philippines and Latin America. Then we compare available survey data on Latin America and the Philippines in order to test whether political values are in fact compatible among them. Our main goal is to evaluate if theories on Latin American politics effectively apply to an external case. If the similarity remains true, we may say that the Philippines in fact provides a ‘hoop test’ for Latin America. If not, the challenge becomes to incorporate findings in our understanding of Latin America and the Philippines.

The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?

In a classic 1968 paper, Merton described the “Matthew Effect” as the tendency of elite scientists to accumulate advantage. In a classic study of the effects, Zuckerman and Cole (1975) documented the experiences of women scientists and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant research both globally and within the world. Recently, the Council of the Canadian Academies’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academics.

In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research funding and awards), career satisfaction, and awards and honours. As well, we examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show...
that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

Investigating Teachers’ Decision-Making about the Use of Digital Technology in Kindergarten

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced Information Communication Technology (ICT) skill sets to meet the demands of global ‘knowledge’ economies. Political imperatives to introduce digital technology in educational settings have technological, curriculum, and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountabilities and an absence of early childhood education digital technology policy the question arises, “How do teachers make decisions about the use of digital technology in kindergarten classroom practice?”

To address my research interest in teacher decision-making about the use of digital technology in Kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Crèche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project “Interacting with knowledge, interacting with people: Web searching in early childhood” (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use of digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

GRASSI, MARZIA* (University of Lisbon, marzia.grassi@ics.ul.pt)

Places and Belongings: “Circular” Conjugality Between Angola and Portugal

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjugality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, living apart (one in Portugal, the other in Angola), we need to understand the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data gathered under my coordination in the ongoing project “Places and belongings: circular conjugality between Angola and Portugal” (PTDF/ACFR/119149/2010) captures the repercussions of mobility on conjugality as well as the self-perception and representations of those involved of the domestic space – here understood in its physical, affective, and social dimensions. When a conjugal pair separates as a result of the migration of one person, fluid forms of conjugality arise, demanding realignment of gender roles. The “circular” forms of conjugality that are emerging today can also be studied from the point of view of Post-colonialism Theory – seen in the continuities and ruptures in Portugal’s colonial imagination, the gender-role building, and the migrations between the two countries. The paper contains a first lecture and analysis of the data already collected in the before mentioned project.

Clouds over Spain: Work and Family in the Age of Austerity

Purpose – This paper aims to contribute to the academic literature in two ways. Firstly, the paper will analyse the impact of the financial crisis on the level of flexibility, autonomy and stress of Spanish employees. Secondly, this study aims to identify if the impact of the economic crisis on the work-family balance differs by sex, educational level, economic sector and regions across Spain.

Design/methodology/approach – The article reviews relevant literature in work-family balance. Two databases (2005 Ad-hoc Module on work life balance; 2010 Ad-hoc module on conciliation between working life and family life) were analysed in order to characterise work-family balance before and during the economic recession.

Findings – The findings revealed that (a) economic crisis had a negative impact on the control and autonomy that Spaniards had of their jobs, (b) economic crisis diminishes the level of flexibility at work (c) economic crisis had a negative impact on the level of stress among Spanish employees.

Originality/value – Despite the explosive growth in the work-family literature, it is not easy to find empirical evidence showing the relationship between financial crisis and work-family balance. Moreover, the case of Spain is very interesting given the very specific circumstances of austerity there.

GRAU-GRAU, MARC* (University of Edinburgh, M.Grau-Grau@sms.ed.ac.uk)

Invisible Assets: What Working Fathers Learn from Their Families

Within the work-family balance literature little is known about the benefits and rewards perceived by working fathers in combining their work and family roles. As literature revealed, research on work-family balance has primarily focus on negative outcomes between work and family domain. The conflict perspective is rooted in scarcity theory (Goode, 1960; Marks, 1977), which assumes that human resources of time, energy and attention are finite. Work-family researchers (Barrett, 1998; Greenhaus and Parasuraman, 1999) have called for an approach or theory that examines the positive side of work-family balance.

Greenhaus and Powell (2006) did an effort to fully capture the mechanism of enrichment. During the same year, Carlson et al. (2006) published a work-family enrichment scale, based on Greenhaus and Powell’s construct. The recent valid work-family enrichment scale is helping us to examine and determine whether employed parents are gaining knowledge, acquiring skills or having new perspectives in one role that can have a positive impact on the other role. However, neither the theoretical arguments nor the work-family enrichment scale are shedding light on which specific skills, knowledge, resources, values or perspectives are working parents developing or learning in one role that can be transferred in another role and vice versa. Qualitative research methods seem useful for this aim.

Thus, the purpose of this study are, first, to examine if the rewards and benefits perceived by working fathers in occupying both roles fits in the work-family enrichment construct proposed by Greenhaus and Powell (2006), second, to examine if there are differences between the rewards and benefits developed at home and rewards and benefits developed at the workplace; third, to extend the work-family enrichment theory to new samples in Catalonia.

GRAVANTE, TOMMASO* (Seville University, f.gravante@gmail.com)

When People Fight By Themselves. Anarchist Practices and Values In Grassroots Groups

From the early 21st century, protests in Argentina led by the slogan ‘They all must open the door to a new cycle of mobilizations, both in Latin America and other places around the world, which were led by social subjects excluded from the analyses and definitions of collective action traditionally centered on the institutional and structural dimension of protest. The current interest in the cultural and subjective dimensions of the study of social movements has raised the academic and political visibility of grassroots groups, characterized by a social and self-managed organization and proposals where social discourses and practices of anarchism can be observed.

In this paper we wish to contribute to the comprehension of these experiences by putting forward an analysis of the ethical values of anarchism, based on a piece of research work regarding movements such as NOTAV and NOMUOS in Italy, los indignados in Spain and the insurgency in Oaxaca in Mexico. We aim to highlight that the anarchist values and practices do not arise ‘abruptly’ or as the ‘ultimate’ possibility for change after the failure and the cooption carried out by the ‘civil society’ and leftist organizations, but consist of a cultural and practical repertoire of protest that has always been present in grassroots organizations.

Based on the direct experience of more than twenty years in the anarchist movement in different countries, such as Italy, Spain, UK and Mexico, and also on theoretical work, we will show that this interconnection between anarchism and grassroots struggles are not new. As for the anarchist subjects who make themselves present in many of these protests, whether local or national, they have always valued the space of daily practice as a room for struggle and social change.

Domestic Abuse in the British Military Community: Structure, Discourse, and Help-Seeking

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper employs a feminist analysis to explore civilian military wives’ experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses which construct military culture. Following Stark (2007), I conceptualise domestic abuse not merely as a crime of assault, but as a gendered pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of “unfreedom” through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities for, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetrated domestic abuse, and military and civilian support workers with experience of supporting either/both of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constructions of the public and private spheres, wives’ disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In concluding, I explore the contributions of this work for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21st century.

RC12-230.1
GRAY, KEVIN* (American University of Sharjah, kgray@aus.edu) Systems Theory and the Constitutionalization of International Law

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann’s theory to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theories have drawn on Habermas work to suggest that it is possible to imagine a constitutionalization of international law and legitimation of international institution along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and DellaValle 2009; Von Bogdandy and Kuzniak 2010). I will develop this concept further in order to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics – where strong publics are parliaments and other deliberative institutions, and weak publics are those public spheres which influence parliaments and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge of theory of law as outlined in Between Facts and Norms – law is a ‘transformer’ which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with law making in the international arena. Luhmann and Teubner’s model of law formation does a better job of describing both meaning formation in law (Teubner 1989) and the relationship between law and different branches of both public and private international law, and the public sphere (Ladeur 2005; Teubner 1997). I will make reference to the so-called Solange Decisions in making this argument.

GRAY, ROSSARIN SOOTIPONG* (Mahidol University, rossarin.gra@mahidol.ac.th) NGOWIWATCHAI, NONGLAK (National Statistical Office, Ministry of Information and Technology) Religiosity, Spirituality and Happiness In Buddhist Thailand

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the 34th and 35th Household Cultural Situation Surveys in 2008 and 2011 were utilized. They are the national representative sample surveys. The sample consisted of 25,950 population in 2008 and 23,670 population in 2011. Based on binary logistic regressions, the results reveal that Thai people were happier. Religiosity and spirituality were associated with happiness statistically significantly after controlling for study year, demographic factors (age, sex and marital status) and socioeconomic factors (education and occupation). Those who always undertook all five precepts and meditated in Buddhist holy days and other important days were more likely to be happier. Those who expressed their gratitude, gave an opportunity to others before self and donated regularly were more likely to be happier than those who rarely or never did them. The findings suggest that religiosity and spirituality played a vital role in increasing happiness among Thai people during the difficult time.

GRAZIOSI, MARIOLINA* (University of Milan, mario. graziosi@unimi.it) The Self and Identity in Technological Times

Abstract
The self and identity in technological times

I intend to explore the impact of technology on the formation of the self and identity. The Italian philosopher Umberto Galimberti, in his book Psycho and Technique (1999), maintains that it is no longer accurate to speak of alienation. When Marx advanced his concept of alienation in capitalist society man was still a subject who could imagine new horizons. Today, the domination of technology has reached a point where the relationship between man and technology has been reversed: technology is the subject and man is the predicate. In this new situation, it is not correct to speak of alienation but rather of identification with technology. In a world totally generated by technical equipment, according to Galimberti, man is an official apparatus and his identity coincides with his function. Thus, man is himself only if he is functional to the other, technology (1999).

In the light of Galimberti’s thesis, can we still speak of a reflexive identity developed in contemporary society, as the sociologist Anthony Giddens does? For Giddens, we can still believe, as the rationalist philosopher Jean-Jacques Rousseau and De Beauvoir did in the seventies, that identity is a project and coincides with subjectivity? Moreover, what becomes of the self? If identity coincides with function, the self is totally swallowed up, and the difference between interior and external life is suppressed. Naturally, this creates a psychological and sociological pathology of which we have denounced when he spoke of the one-dimensional man. Galimberti speaks of the death of the psyche because what is enhanced are the intellectual abilities while emotions are disregarded (1999).

GREBE, EDUARD* (University of Cape Town, eduard.grebe@uct.ac.za) LOW, MARCUS (Treatment Action Campaign) New Forms Of Transnational Organisation On Access To Medicines: The Global Activist Response To The Imatinib (Glivec) Case

In the late 1990s and early 2000s, global AIDS treatment activism had been characterised by innovative forms of organisation, including the construction of transnational ‘networks of influence’ (Grebe 2004, 2012) incorporating activist networks and broader coalitions comprising national and international advocacy groups, lawyers, scientists, the media, etc. These networks were built and deployed in order to expand access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely disorganised. The recent patent dispute between Novartis and the Indian patent office over the rejected patent application for the cancer drug imatinib (sold as Glivec)—the rejection eventually confirmed by the Indian Supreme Court in 2013—spurred existing activist networks into action for a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade “watchlist” in response). The mobilisation described in this paper illustrates the innovative characteristics of activism on access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organisation that span geographic and sectoral boundaries—representing what Ferguson (2004) might have termed ‘horizontal topologies of power’—in order to deploy influence and social power at the global level. The paper further develops the ‘networks of influence’ theorisation of transnational civil society mobilisation previously described.

Immigration and Public Opinion in Japan: Keys to Fostering Integration

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opposition—already observed in the developing world—may increase. In this case, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country. If communities and local policymakers hope to foster integration and improve relations with immigrant communities, this research can provide important clues as to what sort of actions can be taken.

Criminal Careers: Discrete or Continuous CANCELLED

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. This approach represents a set of individual event sequences and a number of discrete trajectories. Individuals are typically matched to the trajectory that is most likely, given the distinctive pattern of that individual’s sequence. We use hierarchical linear modeling and individual time series techniques to test the assumption that arrest trajectories are meaningfully and usefully classified into a number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

"What Is to be Sustained?: Towards a Critical Theory of Urban Sustainability"

We live in a time when the need for urban sustainability has become a new common sense. We daily witness confirmation of the famous prediction made by Henri Lefebvre that our planet is becoming progressively urbanized, as well as more crisis-prone (Lefebvre, 1970). Urban sustainability appears to many the systems, and its religious traditions. A country’s level of economic development, its educational attainment, and its religious composition shape its political institutions and practices, indirectly affecting its use of the death penalty. The paper concludes by discussing likely future trends.

TG03-938.1
GREGG, BENJAMIN* (University of Texas at Austin, bgregg@ austintexas.edu)
The Local Construction Of a Human Right To Democracy

Is the idea of a human right to democracy coherent? Sociolinguistically oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These are empirically studied in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders and their obligation to ensure the practice and defense of that right. If, as it appears, in the Arab Spring there were no domestic institutions or powers obliged to ensure a human right to democracy, could any conceivable foreign institutions or forces be so obliged – and obliged, perhaps, to intervene? Intervention ranges from “soft” forms, such as scholarships for dissidents, to “harder” forms, such as financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for any given individual in a particular political community, a human right to democracy imposes obligations only on fellow members of that community. The idea of a universal human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly influence the vernacularization of democracy. Then a human right to democracy would be a local, domestic construction by the participants themselves rather than a foreign import or imposition.

What Cognitive Sociology Can Contribute To Human Rights Diffusion

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

335
Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words “from within” already suggest a central aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? What should the religious community do to redeem both possibilities? As theory, it combines cognitive sociology with normative philosophy. With practical intent, it would facilitate human rights diffusion through a new conceptual insight. It construes human rights as a cultural phenomenon and (5) as a social system. (6) These steps render human rights, understood in the least taxaying way as merely parochial social constructions, nonetheless less spreadable across cultural and political boundaries—through a technique of “cognitive reframing.”
out in public institutions (hospitals and prisons), where religion meets the secular and the old religious monopoly meets religious diversification. **Educational Accountability, Safety, and Youth**

Abstract:

Young people who feel unsafe and disconnected from their neighbourhoods are most likely to engage in violent or unsafe actions, themselves (McMurtry & Curling, 2008). Students designated as ‘unsafe’ through Ontario’s Safe Schools legislation are pushed out of their neighbourhood schools through suspension, expulsion, and proactive relocation processes. In this way, Safe Schools and other institutional processes that are designed to mediate the unsafe behaviour of particular young people also serve to exclude these youth from their neighbourhoods and neighbourhood institutions, increasing the risk that the young person will engage in further violence. During our presentation, we will describe a project that seeks to understand how young people’s transitions between programs and between systems (e.g., education and youth criminal justice) influence their own experiences of safety and unsafety and their connections to their neighbourhoods, to community-based organizations, and to mainstream institutions.

Research for this project is being conducted in collaboration with a community hub organization – Promoting Education and Community Health (PEACH). PEACH is located in a designated priority neighbourhood in Toronto. It houses a Safe and Caring Schools program for the Toronto and the Toronto Catholic District School Boards. The research – an institutional ethnography – documents and analyzes inter-institutional accountability processes, policy, and programming that shapes Boards. The research – an institutional ethnography – documents and analyzes

**Finding a Language for Mental Distress: Narrative Accounts of ECT**

Electroconvulsive therapy (ECT) remains one of the most controversial treatments in mental health today. It can cause permanent loss of some personal memories. ECT if often given to people with severe depression who have not responded to other treatments or for people who have responded to ECT treatment previously. The treatment’s effectiveness for those with so-called drug-resistant depression vary from 40-70%. The decision to have ECT is viewed seriously by clinicians and ECT remains one of the most intrusive clinical practices in modern psychiatry. The issue of “capacity” to make a decision is viewed by the medical establishment in the UK as the ability to (a) understand the issues and (b) to weigh them in making a decision. However under the Mental Capacity Act, a doctor can declare that it is in their best interests. Alternatively, they may be detained under a section of the Mental Health Act. If, on the other hand, they are capacitous, then their wish not to have ECT must be respected: they cannot receive ECT, even if they are detained under the Mental Health Act.

However comparatively little qualitative research has been conducted into the decision-making process, experience of ECT or a fuller narrative investigation of the effects of ECT. This paper presents this decision as located in the wider context of someone’s feelings about their mental health, their social care and support networks, and their experience of mental health treatment – including their experiences of compulsory care. Through the analysis of the narratives of 30 people who have been offered ECT, and 13 carers, (collected by the Health Experiences Research Group at the University of Oxford) the broad social context of this decision is described and analysed with some surprising results.

**Sociology of Corruption**

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of dedifferentiation, a throwback of modernity, because their superior, to functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent of subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy context. The reference to the political culture may be enough to highlight that corruption in everyday life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzer refer to social structuralizations, which promote structural level corruption. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to...

Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic

A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and the USA. When the wave arrived to the US the New Yorkers gave to name to the Occupy Wall Street movement, because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level. To sum up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents’ parents, continues to indirectly influence the religiosity of students in the 2010s.

The Death of Reading (or, Worrying about the Wrong Things)

“The Death of Reading (or, Worrying about the Wrong Things)"

In a digital world, scholars and the general public have both assumed and misunderstood the death of reading, especially leisure reading of print media. Research on young, highly educated digital natives from the developing and the post-Soviet Russia (Nigeria, Ghana, South Africa, Malawi, Botswana, Kyrgyzstan, the United States, China, and Japan) suggests that a persistent reading class is reproducing itself and is retaining a preference for print over screens. This paper reviews these findings and considers their implications for the future mediascape.

Orthodox Christianity and Mixed Religiosity Among Russian University Students

In the early 90s of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students’ mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a ‘practicing Orthodox believers’ group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level. To sum it up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents’ parents, continues to indirectly influence the religiosity of students in the 2010s.
Following the Constitution of an Organizational “Way of Seeing”: Intertwining Talk, Body and Materiality in Context

Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styhre, 2011); construction (Nicolini, 2007); medicine (Mondada, 2003); Alae (2008), scientific work (Daston, 2008; Vitereri, 2012; Vertesi, 2012), researchers have shown how the members share a “professional vision” (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational “way of seeing” is interactionally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the multidimensional dimension of the interactions (Mondada, 2008). I studied the survey work as a situated activity and an interactive activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property, and, in particular, how specific “practices of seeing” (Styhre, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective “way of seeing” in organization. In this presentation, I would like to contribute to the discussion of the role of “socio-technical arrangements/agencements” (Callon, 2004; Latour, 2005) in processes of constituting an organizational “way of seeing”.

Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people see in obligatory school imagine their future jobs, and how the representation of jobs impacts their professional aspirations and choices. In particular I wish to explore how two different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of how difficult the studies to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competences, as to parent expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

Marathon Running, “Bodies for Others,” and Social Class in Post-Communist Estonia

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twenty-fold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and the social consequences it has for the development of the body in the context of novel ideologies of health, welfare, and success in post-communist Estonia. Bourdieu’s notion of “bodies for others” is particularly helpful when trying to make sense of both the runners’ perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. Therefore, running the multivocal multimodal representation of running as a social class if it does not contradict that class’s relation to the body at its deepest and most unconscious level. The paper demonstrates that subjective one’s body to the regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed “optimisation of the self” constitutes a new form of biopolitics that fits with the neoliberal values of efficiency and productivity.

GROSSI PORTO, MARIA STELA* (Brasilia University, msgrossi@unb.br)
Police Organization; Professional Identity and Social Representations in Brazil

In contemporary Brazilian society police violence and his involvement in violent acts of conflict resolution are topics relevant to those who are interested in understanding the public security dilemmas. In this sense, this paper aims to analyze how police forces are organized, which relationships are there between this organization, the professional identity and police violence: how police organization and practices are represented by police officers and the effects of these representations for the way they understand their role as responsible to assure the law and order. We believe that these representations have developments not only in maintaining law and order but also in ensuring all human rights. We still believe that such practices result from the symbolic universe through which police officers conceive themselves in terms of marks, belongs and identity records.

The paper is based on a survey that was structured using the Theory of Social Representations- TSR. The empirical goal was to obtain, and to compare, the social representations that military and civil Brazilian police make about their organizations, practices, professional performance and relationships with society. We also compare social representations that police officers create about themselves and the ones they believe society creates about them.

The design of the survey was a sample structured by spatial divisions, hierarchies, roles and sex, comparing both policies: the sample is compounded by 399 questionnaires for the civil police and more 1,181 answered by military police officers, both male and female. Also, we have done interviews and focus groups.

The analysis focuses on motivations for the choice of the profession; the pride of the profession; representations of fear, stress, uncertainty and risk arising from police work; and how all these symbols affects police organization and daily performance.

Exploring Residential Mobility As a Spatial Practice Via Qualitative Interviews, Quantitative Survey and Agent Based Modeling

The paper reports on a collaboration of sociologists and landscape ecologists in understanding future residential patterns in a medium sized shrinking city in Germany. Shrinking cities are an especially interesting case here, because numbers of inner city relocations are in general higher than in other cities (Sturm et al. 2013 for Germany). This is due to housing over-supply with more and cheaper offers being available. Like this, patterns of socio-spatial segregation can alter faster.

In a step-wise design, we included inductive and deductive steps, qualitative and quantitative approaches and finally the construction of an agent-based model to simulate future households residential mobility patterns. Firstly, we explored mobility practices by means of in-depth interviews from which we derived context-appropriate information on the orientations and decision criteria of residents. Here, space is included as the life worlds of interviewees.

Secondly, from these results, we constructed a classic questionnaire survey to achieve representative data on the decision criteria among different social and demographic groups. In this step, administrative spatial boundaries were introduced in order to standardize questionnaire responses. From the survey results, thirdly, we develop rules of behavior of households and simulate their decisions in an agent-based model (ABM) as a method to understand patterns emerging from individual behavior. Thus, ABMs use abstract spatial categories and typologies of spatial practices of agents (households in our case). In ABMs, space can be both an independent variable (thus influencing behaviour) and a dependent variable (if the space is influenced by human actions) In our case, space is an independent variable in that location choice depends on the socio-spatial structures and the images attached to certain places and neighbourhoods, on distances to work-places, social networks, infrastructure access etc. Space is a dependent variable when analyzing collective householdsimigration patterns and the changed patterns of socio-spatial segregation.

Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities

Socio-spatial segregation - the question of the uneven distribution of social groups in urban space - is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in todays cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which lose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other economic restructuring, processes of suburbanization, political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project “Shrink Smart”: Leipzig/ Germany, Ostrava/ Czech Republic, and Genoa/ Italy. The loss of inhabitants due to far reaching de-industrialization experiences, job migration, suburbanization and steep drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social make up of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, aging, and socio-spatial inequalities. The results show that even though linkages are made to association of changes in social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.

GROTOWSKA-LEDER, JOLANTA* (Institute of Sociology, University of Lodz, leded@interia.pl)
Why Do They Sit at Home? the Neet Youth in Poland in Perspective of UE

The paper focuses on NEET youth in Poland in the perspective of EU. The NEET is the acronym of the young who are not in education, employment or training and first emerged in the UK in the late 1980s, reflecting an alternative way of categorizing young people following changes in unemployment benefit policies. Now the interest in the NEET group has grown at EU policy level, and NEET-equivalent definitions have been discussed.

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life-course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people’s transitions towards independent living. Being NEET is the risk for a young people and for society.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. The study are based on quantitative data of the Eurostat and Polish Central Statistical Office for the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative
data collecting of own research to show the reasons of the young belonging to NEET for their fate and the decision to remain outside the labor market and education. This part of the analysis concentrate of most significant events in a young Pole’s life during the transition from childhood into independent adult life (from education to employment, leaving parental home, family formation, etc.).

GRUJIC, MARIJA* (Goethe University, marioj.grujic@gmail.com)
The Ambivalence of Memory and History - the Case of Kosovo and Serbia in the Biographies of the Kosovro Serbs

The main topic of my presentation is how Serb and Kosovo histories are discussed and negotiated in the biographies of the Kosovo Serbs living in the displacement in Serbia. I am drawing on the biographical interviews collected in Serbia in 2012, and my ongoing doctoral research on the intersectionality of national, gender and religious facets in the social and political realities of the war and belligerent nationalism caused migrations. In particular, I want to focus on the interrelatedness between political (national) and religious dominant discourses on Kosovo as “Heart of Serbia” or “Serbian Jerusalem” in the biographies of the Kosovro Serbs. Therefore, I am looking into the period after the North Atlantic Treaty Organization (NATO) bombing of Kosovo and Serbia in 1999 (when majority of the Serbian population left Kosovo), and the social and political situating of Kosovo in the Serbian national-religious (Serbian Orthodox) memory practices relevant to this event and the wider understanding of the “Kosovo conflict”.

My argument is that the notion of a “Kosovar” carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the “other kind of Serb”. In addition, the political community of belonging for the Kosovo Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living in Serbia is visible significant referential and different points as localities of belonging – in terms of language, region and ethnicity. Although, in the studies on social exclusion and boundary-making this could be described as a “classical” examples of the tensions between the “newcomers” and “locals”, or “established” and “outsiders” leading to different aspects of Othering and marginalization, in the case of the Kosovo Serbs (IDPs ethnic majority) it is paradoxical. Namely, Kosovo-Serbia displacement/emplacement politics of belonging shows a significant gap in relation to the dominant (right wing) nationalist discourses on Serbians and Serbianhood – describing Kosovo as the most important topos of the Serbian national history, and Kosovo Serbs portrayed in as a “Serbian martyrs” while Kosovo is a Serbian Jerusalem.

My argument is that the notion of a “Kosovar” carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the “other kind of Serb”. In addition, the political community of belonging for the Kosovo Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living in Serbia is visible significant referential and different points as localities of belonging – in terms of language, region and ethnicity. Measuring Employment Standards Violations, Erosion and Evasion Using a Telephone Survey

This paper reports on efforts to develop a telephone survey that measures the overall prevalence of employment standards (ES) violations as well as their...
Analyses to investigate these problems.

Yekaterinburg is a typical Russian city. It has all types of higher schools. There is a concern to the problems of higher education in modern Russia. Representation of higher education in modern Russia. The research methodology combines qualitative and quantitative methods.

Depth interviews with experts are applied on purpose to identify central issues. It is necessary to explore students' attitudes to higher education. To explore the demands of students. The research of transformation of higher education in contemporary Russia and subject to reform. Transforming the problems of transformation of higher education in contemporary Russia and its implications for labor and educational markets.

Welfare states increasingly foster policies that individualize risks over the life course. Welfare states, not primarily families or households, need to be able to support themselves financially throughout adulthood (financial independence). Employment interruptions and career adjustments in favor of child care have short-term and long-term consequences for an individual's ability to maintain economic independence. In this paper we investigate German mothers' financial independence before and after the birth of a child. In particular, we assess how long it takes for mothers to re-attain financial independence after the birth of a child. We also identify individual and group characteristics which speed up the re-attainment of economic independence upon return to employment. Empirically, we focus on employed women in the eastern part of Germany, who entered motherhood between 1992 and 2009. We operationalize financial independence in two ways. We first measure how long it takes for mothers until their earnings (re-)approach the minimum living wage (Existenzminimum). Second, we estimate the duration until mothers are back on their pre-birth earnings levels. We apply event history techniques, using a novel longitudinal register data set (BASiD data). Our findings show a deep East-West divide in the speed with which mothers re-attain financial independence. Within ten years upon staring a family, less than 25% of West German mothers have re-attained their pre-birth earnings. Just about 50% reach the minimum living wage or higher. Eastern German mothers regain financial independence much faster and at higher rates. More than 60% reach their pre-birth earnings within ten years. About 80 percent reach the minimum wage threshold. Our findings are in stark contrast with the general idea that German mothers first reenter employment part time and regain financial independence when children get older. The defining moment for re-attaining financial independence is the moment of returning to work.
Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities

Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology. A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced is important; 5) finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in instruments of environmental governance.

Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities

The analysis of the work trajectories shows that uncertainty and instability are part of most of these itineraries, with the exception of some groups of garment workers from big transnational factories, technical and professional workers of higher hierarchy in call centers and tenured musicians from the most stable orchestras. While precariousness in garment industry is multidimensional, in the call centers precariousness is mainly based on quality metrics, and among musicians multiactivity is the main feature of this phenomenon. In these conditions the meanings of work are multiple and require from workers constant adaptations along their labor trajectories.

The Personal Impact of New Activation Possibilities on Social Assistance Claimants in Norway, Austria and Belgium

Studies of the psychology of poverty report on the psychosocial barriers – including lay and stigma – that may be experienced in tandem with financial instability within the Scandinavian (Angelin, 2009; Jonsson and Starrin, 2000; Underlid, 2005), Austrian (Die Armutskonferenz, 2008; Leibtseder, 2013) and Belgian settings (Raeymaeckers and Dierckx, 2012). While social assistance may mediate shaming and stigmatisation, it may also exacerbate them, undermining the agency of users. Across Europe, a new emphasis on work activation has taken place in the realm of social assistance. New requirements have been added to a previously established set of social contract entitlements (Lødemel and Moreira, forthcoming, 2014). While new activation approaches may heighten the stigma attached to the socially constructed categories surrounding social assistance, Norway, Austria and Belgium are three settings in which the activation landscape for social assistance has resulted in a publicly promoted offer of more for the claimant. Norway’s approach has been characterised as a best-case scenario for the social assistance claimant and has since the mid-2000s provided those eligible for social security support with a new emphasis on work activation. This approach has become more commonly associated with state level unemployment services. In the same period, Belgium has also moved towards active inclusion and tailor-made approaches, as reflected in a pilot project (‘Public Centre of Social Welfare’) with intensified collaboration between the regional employment agency and social assistance authorities. A 2010 federal and provincial agreement in Austria was to provide claimants with better access to jobcentres, but with local responsibility for activation. Drawing on interview data with social assistance claimants, we explore and contrast the personal impact of the approaches in these three settings. The paper highlights the crucial place of the claimant in the evaluation of activation strategies and offers preliminary conclusions concerning its impact on claimants and suggests several lessons to be learned.

On the Concept of ‘human’ and the Aporia of Social Sciences

It is to be ascertained by way of a simple juxtaposition that the set of concepts “human / human being / humanity / humanness”, which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of “human” does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it. It belongs to a class of concepts that I provisionally call “hoxo”. A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construction of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construction. The concept “human” is the best and truest of this kind. It is the epitome of “hoxo”. Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtualness. To top it all, one of the most significant features of “humanness” and human existence consists in the circumstance that the humanness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept “human” is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is daunted always end up in a cul-de-sac of some type of biology. Parallel to a radical critique of the central conceptual edifice of the modern social sciences, and, within the framework of a theory of ‘modified and extended semiotics’, and a qualitatively different mode of knowledge production developed on the basis of this, my paper offers a radically new line of approach to the texture and the mode of operation of human society.

Postcolonial Sociology: An Oxymoron or a Border Crossing?

Since its inception, the division established in the course of securing the disciplinary borders of the sociology field between the populations to be studied by sociologists and those who fell in the “other” group to be studied by anthropologists, was taken for granted. This continued to remain the case even when the political conditions of possibility of the institutional recognition of their profession that included the labor division between sociology and anthropology. Now that the
descendants of those other populations have become the new citizens of former
empires such as France and UK, or Japan, the question of the repatriation in the
sociological repertoire of notions such as de/colonization, indigenity, autochtho
ny, and the coloniality of power and social relations, in terms of gender, race and
ethnicity is to be investigated anew. If such endeavor is upheld in various cor
ners of the episteme of the sociology has become, in places like France, where a
main sociological contribution was made, it remains a contentious topic. From
this situated sociological universalism, post-colonial studies remain the outside
of the sociological field. Whether one thinks of courses taught in an interdisciplin
ary perspective or of research funding moving beyond the pale of deliverables,
coloniality and its contemporary expressions are unthinkable in a still ethnocen
tric sociology climate. Acknowledging that the colonial is indeed the past and the
outside of sociologized societies and sociological routines, but also their present,
may be a first step towards a postcolonial sociology in search of its academic loca
tions and professional habitats. Mapping such an ongoing history may help
include, or not, France in a global dialectical field aiming at understanding
enduring inequality processes.

GUÉNIF-SOULAMAS, NACIRÃ (University Paris 8, ngs39@hotmail.fr)

Reflecting/Reflexive Surface: An Ethno-Gender Othering Experience

Practicing sociology as an art of resistance offers an unusual vantage point
on what may seem to be the hidden agenda of the sociological duty: locating the
other sociologist from within. Beyond empirical and routinized practices, this
paper aims at giving an account of oneself as a sociologist at the margin or as a
minority sociologist. Recording and narrating various encounters of the othering
processes, it will explain and discuss the kind of knowledge built under such guise
and the way in which it can add some value to the sociological experience. Undo
ing the disciplinary process still considered central to the existence of sociology is
an intellectual itinerary and a collective platform for change in times of enduring
inequalities. Reconciling the individual and intimate, here considered as a reflect
ing/reflexive surface, with sociology as a discipline will be one of the challenges
of this paper, as it is one for sociologists in a common world of uncertain paths
to equality.

Party Members in Bulgaria, Slovakia and Czech Republic

Political parties in ECE countries are assessed as unstable, weakly en
trenched into the civil society, very much attached to the state (Hafrner: 2001) and
with low levels of members (Brezen and all.). Political parties in ECE countries are
even described as “party with no members” (Cabada: 2013). This is problematic for
the parties, the levels of representativeness and the leverage between
representation and the expression of different civic groups and interests. In general, parties in
ECE countries are not implementing formal rules for equal representation of
young people, woman and minorities. According to some researches the bound
aries between statutes of formal party membership and other forms of activism
overlap in policy design and implementation (Kemp, Parto and Gibson, 2005) .

In those rough economic times that we are experiencing in Europe – and de
spite the rhetoric of the “age of irresponsibility” that offhandedly hold
civil society organizations (focus group, on-line survey, and document analysis) we will try to define i) motivations,
ii) interests, and ii) profiles of civil society organizations, taking into account that,
the interest for sustainability issues and the redefinition of social priorities in
empires such as France and UK, or Japan, the question of the repatriation in the

study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organizations, or the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

(Almost) Four Decades of Punk in Portugal: A Culture Still Young?

It’s been nearly four decades since the emergence of the first punk movement - in the UK and USA - and, since then, the 'movement' has deeply changed at different levels. One key aspect of this transformation of the punk has to do with how it has been globalized and differently appropriated by urban youths from different parts of the world. What were, at the beginning, the key milestones and who were the original Portuguese punk players? How the punk movement allows us to read and understand the evolution and transformation of Portuguese society over the past four decades, in their aspirations, expectations and weaknesses? Why punk still is, until nowadays, a relevant reference point for some Portuguese youths, persisting as a relevant and dynamic urban culture? And, on the other hand, how is it possible to get inside this 'scene' and still claim to be punk? Here, will be deeply analyzed a wide range of interviews conducted with dozens of participants in the Portuguese punk scene, from different generations. This approach focuses on a social theory argument – one that has been delayed, although is a rather relevant one– around the following question: the subcultural concept is still heuristic regarding the understanding and explanation of the youth resistance rituals or, in the other hand, we are standing before a context of explaining opportunity of the post-subcultural theories as we emerge in a context of change, transience, neo-tribalism, bands and scenes? In times of growing economical and social-easing; we discuss here the complex processes of youth identity construction around the punk, that global mediascape. This multifaceted landscape of the musical youth cultures, made of multiple expressions and references, finds meaning in an also plural ontological landscape.

GUERRA, PAULA* (Faculty of Arts University of Porto, paula.kismif@gmail.com)

A Different Kind of Tension: Portuguese Musical Creation and Identity Narratives

In this paper, we propose a discussion around the relationship between music and society. Considering that the core object of the Sociology of Arts is, at last, the musical practice, it’s derivation of social and cultural histories. In this sense, we look to analyze of the identity features present in the Portuguese music editions of the years 2011 and 2012. It is important to understand the established relations between music and society: how far music expresses themes, subjects, emotions? How far those themes, subjects and emotions, as well as the social reality, reflect themselves in music? Reckoning music as a social phenomenon, sociology must understand the evolution and transformation of Portuguese society over the past four decades, in their aspirations, expectations and weaknesses? Why punk still is, until nowadays, a relevant reference point for some Portuguese youths, persisting as a relevant and dynamic urban culture? And, on the other hand, how is it possible to get inside this 'scene' and still claim to be punk? Here, will be deeply analyzed a wide range of interviews conducted with dozens of participants in the Portuguese punk scene, from different generations. This approach focuses on a social theory argument – one that has been delayed, although is a rather relevant one– around the following question: the subcultural concept is still heuristic regarding the understanding and explanation of the youth resistance rituals or, in the other hand, we are standing before a context of explaining opportunity of the post-subcultural theories as we emerge in a context of change, transience, neo-tribalism, bands and scenes? The Effect of the 2008 War on Estonian Public Confidence in International Organisations: A Mixed Methods Study

When the so-called 5 Day War between Russia and Georgia occurred in the summer of 2008, the Estonian public reaction was especially passionate. Two major explanations stem from the strong identification of Estonians with the situation of Georgia (post-Soviet state, small country, Russian citizens/speakers on Georgian territory) and the question of existential insecurity (will the EU and NATO guarantee our security in case of necessity?). Using a mixed methods research design, in this study we investigate how the 2008 war between Russia and Georgia affected public confidence in international organisations in Estonia. Data for this study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. International Comparisons of Health Systems: Tools of Learning or Tools of Power?

International comparisons have become unavoidable for anyone who wants to govern health systems, including health organizations and professions. Because science cannot be evidence based, health care policies and decisions might also be evidence-based. In parallel, since the early sociologists it is believed that comparing is the better way to produce “evidence-based social science”. As a consequence, comparing is believed to be the better way to conduct efficient policies to face health systems challenges. But the many and recurrent flaws of these comparisons can doubt on their actual role and effects. Among the most common deficiencies are the comparability of data, the lack of clear definitions of terms (like “shortage” or “nurses”) and the state-centrism of comparisons (while issues are more and more either decentralized or global).

Why thus such a success of international comparisons among health policy-makers? The argument developed in this paper is that behind their technical substrate and their apparent neutrality, international comparisons carry values, interests and power relations. Under the guise of rationalizing and depoliticizing decisions, international comparisons are less a tool of learning than a tool of power. They are probably the fundamental reason for their success. First, comparisons hide that health policies choices are always value-laden. Indeed, comparisons are in themselves “scientific” and thus deliver the “truth”. Furthermore, the language through which comparisons are presented (tables, histogram, etc.) create effects of truth. As a consequence comparisons rule out any debate. Moreover, international comparisons create political pressure, not least because this language is easily understandable and particularly well-suited for the mass media.

This gap between the official and unofficial role of international health comparisons can contribute to explain the tension between the apparent convergence and persistence of country-specific arrangements.

This paper will develop all these points on the basis of case studies from Europe, the USA and Asia.

Redefining The Public Space Through Art and Culture Events—The Case Of Bat Yam City In Israel

I propose to examine the ways in which contested images are inscribed in the public space behind and beyond art events. The city of Bat Yam in Israel was chosen as the location of this study because, in recent years, it has been the municipal authority of Bat Yam to promote diverse cultural enterprises such as the Biennale of Landscape Urbanism, and the street theatre festival that has taken place since 1996 along other art projects. According to the extensive research about the linkage of art and gentrification (Freeman and Braconi, 2004) and in keeping with the social profile of Bat- Yam—a medium–lower class city on the Mediterranean coast south of Tel Aviv-Yafo metropolitan area—this policy evidently constitutes an explicit attempt to improve the town's prestige and attract potential new residents and investors. The groups of artists that participate in the municipal projects have a different aim: to empower residents and their identities in the public space and rehabilitate the local multicultural communities. This paper will focus on the strategies used by different actors during the three intensive days of the International Festival of Street Theatre to influence on the public space through the umbrella of top-down art events for the purpose of reinforcing their social aims.

From this perspective, the process at the festival may be viewed as a microcosm or a lab that allows us to examine whether and how the public space and more specifically the linguistic landscape reflects or conceals the conflict between social forces, especially between the municipality, which strives to promote...
the economic and social regeneration of the area, and the groups of artists, who propose to empower residents and their identities in the public space and attain the rehabilitation of the actual community.

**Trade Unions As “Contested” Legal Intermediaries ? Reflection on British Unions’ Legal Mobilisation for Equal Pay Since 1970**

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not developed in a consistent manner over time and across unions though. In the 2000’s, unions have been heavily criticized for having consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as “contested organisations” which highlights the disputes both between and within unions as to what constitutes the central trade unions’ project”. To understand why union legal mobilization for equal pay has been so controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as “contested legal intermediaries”. Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations existing between members with different interests, the competing relations between union officials and their base, and the often adverse relations between trade unions and employers. I will also claim that litigation strategies need to be apprehended in their complex and sometimes constrained relationships with other types of legal strategies such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

**Fishing in River, Confrontations at Risks and Ambiguous Situations**

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denote the presence of the works modifying the living environment of the local residents (Lolive, 1997), or externalities are denounced as being risks (Chataureynaud and Torny, 1999; Borraz, 2008). But what about cases where the local residents do not denounce the industrial risks and confront themselves with the risks? And what can be their incidence on the risk management? Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, minimize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1992) and opportunities (Star, 1969) are first useful theories, sometimes the ambiguous role of rules and the political positioning of actors around them, allow to understand better the confrontation of the local residents to the risks.

To develop these points, we shall approach the confrontation of fishermen at the risks generated by the hydroelectric exploitation of rivers. Beginning with a description of rivers (I), the contribution will analyze the reasons bringing fishermen’s specific segment to confront with their risks (II). If their limited recognition, their rhetoric of underestimation and their perceptions bring them to trivialize the risks (III), the activities are facilitated by multiple rules which create ambiguous situations (Lot, 2008). They clarify the situations by establishing “cognitive compromises” (Amalberti, on 1996) or by mobilizing “techniques of neutralization” (Sykes and Matza, on 1957) to justify their practices (IV). The ambiguous situations are maintained by the associations of fishermen in order to develop their practice.

**Children’s Participation in the Promotion of Their Right to Health: The Specialists’ View**

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children’s scholars and NGOs specialized in child health have about the role of the children’s participation in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to information as a prerequisite to participation in the promotion of the right to health; c) the connection of health education as an instrument of information dissemination; d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the sine qua non to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include ‘learning by doing’, which is centered on the development of personal and social tools. One text alone mentions the importance of the children’s awareness and knowledge about their own rights, as well as that of exercising their citizenship.

**Household Carers and Gender Inequalities: A Comparative Perspective on Care**

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread centred on complex power (gender, social class, race and sex) relations embedded in the broader sociocultural context, and particularly in children’s cultures. The bully, along with a group of followers, enforces a prescriptive ideal. His or her performance classifies and naturalizes normality through symbolic assets that act to produce and socially legitimize the socially established, ideal types. The ‘popular’ and ‘successful’ ‘infuse desired attributes, and guide the actions of those who must live in constant fear of isolation and rejection. Noteworthy is the continuous effort by boys and girls towards the visually ‘perfect’, which is intensifies by a celebrity-driven culture and their own exposure on social networks. The processes of identity formation and competition are marked by a differentiation from the abject. The Other is the self’s regulating and identity referential. It directly affects subjectivities drifting from guilt to resignation, failure or hope of a future metamorphosis. As an example, there is the figure of the ‘whore’, who manages sexual regulation, and prompts a demand for prescriptive performances of femininity by the ‘good girls’. Thus, the bullying-engendered game of violence segregates children territorially, and affirms and protects dominant identities, affiliations, representations and social roles.

**Bullying As Social Control: Prejudice and Discrimination Among Children**

This study examines bullying as a form of control, surveillance and punishment of socially deviant behavior among children. This violent practice mobilizes regulation-powered rules that outline the limits and possibilities of what it means to be a boy or a girl. It is based on data from an exploratory ethnographic research in primary and secondary education schools in Brazil. It is argued that bullying is centered on complex power (gender, social class, race and sex) relations embedded in the broader sociocultural context, and particularly in children’s cultures. The bully, along with a group of followers, enforces a prescriptive ideal. His or her performance classifies and naturalizes normality through symbolic assets that act to produce and socially legitimize the socially established, ideal types. The ‘popular’ and ‘successful’ ‘infuse desired attributes, and guide the actions of those who must live in constant fear of isolation and rejection. Noteworthy is the continuous effort by boys and girls towards the visually ‘perfect’, which is intensifies by a celebrity-driven culture and their own exposure on social networks. The processes of identity formation and competition are marked by a differentiation from the abject. The Other is the self’s regulating and identity referential. Understanding the Social, Cultural and Economic Factors That Shape the Acceptance, Use and Resistance to GM Crops: A Comparative Approach

Although the growth of GM crops has been dramatic, its uptake has not been the smooth transition predicted by its advocates. Unless we examine why GM crops have not been universally accepted as a public good, we will fail to understand the conditions under which “GM crops can help to feed the world.” To answer this question we develop a research programme of fieldwork within and across India, Mexico and Brazil. Our research looks to contribute: (1) to enrich the debate at the level of culture and ontology; (2) to attend to the meanings of GM crops and foods and how they are embedded in practice; and (3) to develop deliberative methodologies to engender a broader set of options for GM policy and agenda setting. The main objective is to highlight the distinctive political, anthropological and cultural dynamics to the debate on GM crops across the 3 countries. Through this research, funded by The John Templeton Foundation, we identified some gaps in the literature: (1) little in-depth research examining the impacts of GM crops on farmers’ communities and their culturally-specific farming and related practices: how GM crops have been embedded into everyday life contexts, how benefits and risks have been assessed from diverse cultural perspectives, how they have affected at all farmers’ social situations, practical knowledge, and their engagements with the land and food. (2) little in-depth examination of public perceptions of GM foods, and (3) little attempt to engage farmers (particularly female), citizens, regulators and scientists in deliberation, to assess how and under what conditions GM crops can be developed fully cognizant of social, cultural and spiritual values. In the research we developed a) stakeholder structured interviews; b) stakeholder qualitative questionnaires; c) Ethnographic fieldwork with farmers and researchers and 4) focus groups with urban consumers.

Handling the End-of-Life Between Institutions and the Individual

Many factors are involved in defining the changes within the field of death and dying: innovations in medical knowledge and practice; changes in health institutions, family structures and everyday life practices; the pluralism of beliefs and religious affiliations. A new dimension is represented by the emergence of the legitimacy accorded to the individual’s decisions in choosing how to handle his end of life. This is no small thing, and, in fact, it has led to the opening of a rather heated debate in the public space.

The paper examines some recent cases in order to identify the knotty problems around which the change develops, oppositions are articulated, and instable compromises are reached.

Intergenerational Transfers and Solidarity in the Wake of a House-Price Boom: The Case of Norway

Housing is an important source of households’ wealth. Tenure is becoming an important marker of social difference and point of distinction between ‘good’ and ‘poor’ housing. In Norway most households have become home owners early rather than late. In the last two decades has changed the conditions and opportunities different cohorts has met to access homeownership and climb the housing ladder. While young households meet the increased housing prices amount to substantial housing wealth for older households and a capacity to support their own children’s acquisition of a home.

An important question in the paper is how middle aged and elderly Norwegian dispose their growing housing wealth. Do they spend their wealth, do they continue to save or do they help younger family members? Another question is whether new generations of elderly behave in other ways than generations before them. Our main question is whether an explanation based on different attitudes in different generations or an explanation based on life course changes fit our data on how middle aged and elderly people plan to dispose their housing wealth.

The enormous increase of housing wealth is a new phenomenon than the Scandinavian Welfare State where good housing originally was one of the pillars but not the vehicle of capital collection as we see today. We will ask how this development in the housing sector and in the system of family wealth affects other aspect of the Scandinavian Model as for instance pensions and policies towards income and wealth distribution. We will also make a short comparison with Sweden, another representative of The Scandinavian Model, with a system of housing tenure where the rate of individual home ownership is much lower than in Norway.

The Territorial Separated Marriage As a New Reality

Aim of this research is a one new form of marriage – the territorial separated marriage. Now some part of migrants have two (or more) families: the first is in the motherland and the alternative – on the migration territory. What are the reasons of this situation? How many kinds and species it has? What are the profit and problems men and women have? What about children?

Background of this research is the theory of demographic transition, theory of social stratification and social mobility, analysis of the international labor market and labor migration and the model of balance outlays/income of the generation offered by author, published in the paper of RC33 Eighth International Conference on Social Science Methodology in Sydney, July 2012 (N. P. Guliaeva. Socio-demographic problem of modern society: age structure, migration and labour force). The research method is the analysis of the open (official) statistic data, media data (including internet source) and the results of investigating activity published by another authors and researching centers.

Results: the territorial separated marriage is a new form of marriage generated by long-time migration. Appearance a new marriage on recipient territory often does not destroyed a first marriage on the motherland. Frequently it is because the marriage was not possibility or necessity removing the first family to the job land. At the same time the job of the working migrant is the main source of income to both families.

It is concluded that the territorial separated marriage is reality. As international migration is growing it is opportunity of the dissemination of this form of marriage.
ties for women and men on a labor market, expansion of opportunities for career growth women, appointments them on senior positions.

The state supports strengthening of social protection and protection of mother and children, baby sitting simplification for working parents according to the ratified in the Workers with Family Responsibilities Convention of the International Labour Organization increase in number of kindergartens, and also development of services on to family planning.

For the purpose of realization of noted directions the parliament of Azerbaijan accepted a number of the target documents. The parliament accepted such important documents as, “Strategy of the Azerbaijan families”, the National plan of action on gender equality. Children's code and National children's strategy. Along with it, in the country are created institute “Family psychologist”, the help and shelter centers for the women who have undergone the household to violence, and also system of monitoring of violence against women, evasion of women from education and early marriages.

GUN CUNINGHAME, PATRICK* (Universidad Autónoma Metropolitana, pgcuninghame@yahoo.co.uk)

Resistance to Precarity in Knowledge Production, the Case of a Mexican State University

The plurality of Autonomous Metropolitan University manual, administrative and academic workers was one of the main causes of the SITUAM trade union’s strike between February and April 2008, the longest since the university’s foundation in Mexico City in 1974. However, the conflict has remained unsolved and it seems that this process will continue to provoke unrest and tension among workers until it is solved, probably after another form of strike or industrial dispute in the near future, especially given the recent 2012 Labour and Education neoliberal structural reforms which have already provoked considerable resistance among state school teachers and university students.

But what exactly is university precarity? What are its main forms? Could it be more effectively combated than through the stalemate trench warfare of the prolonged strike? In an attempt to answer these questions this paper starts from the proposition suggested by the international online discussion list and blog “Edu-factory” that the university has become an increasingly privatized and globalized “factory” for the production and dissemination of knowledge in the most intensified and competitive form possible, increasingly linked to the demands of private enterprise and the “free market”, rather than those of society. These developments occur within and are crucial to the ongoing transition from industrial to cognitive capitalism. As the higher education sector is key to the creation of surplus value in cognitive capitalism in which the production and strategic dissemination of knowledge is central, a series of struggles are now being fought both privatization and transnationalization of the sector as well as the precariousness, flexibilisation and casualization of its workforce. Finally, the organization of the production and distribution of knowledge as “commons” instead of fetishized market commodity appears to be the key to thwarting the neoliberalization of the public university.

University Student's Attitudes Towards Affirmative Action Policy: Reflections from India

The structure of the Indian society is based on the practice of caste hierarchy legitimizes the unequal social status and institutionalized policy of domination and deprivation from the material and ideological resources of the state, society and economy. Since the colonial times the demand for affirmative action policy (popularly known as reservation policy) in education based on caste is a source of ideological conflict between the upper caste and lower castes. The higher educational institutions in general and universities in India in particular have become the centres of battle ground for the advocates and opponents of reservation policy. The objective of the present is to evaluate the university students on the policy of reservation based on gender, caste, class, tribe, religion, region and physical disability. The sample of the study consists of 500 * denotes a presenting author. Abstracts are organized by first presenting author's last name.
students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritiorious and talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as a enabling mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with reservation and suspension of reservation policy within the framework of public policy and development discourse.

Understanding Swedishness and Conceptualizing the Self: The Perspective of Young Women of Middle Eastern Backgrounds Living in Sweden

Searching for a sense of belonging and defining one's sense of self has become a complex task in this globalized world. The way we define ourselves, for instance along ethnic lines, has consequences for our understandings of others in our everyday lives. This presentation will depart from a project that uses semi-structured qualitative interviews – with 24 young women of Middle Eastern backgrounds aged 15-22 – to explore the ways in which identity can be constructed. The reason why these women's identity is in focus is that they have been the subject of heated debates on honor related violence in the Swedish news media in recent years. Against this backdrop, questions about the implications of being regarded as ethnic 'Others' can be explored. In this presentation, the focus will be on social identity processes and the interplay between self- and public image, with specific regards to ethnic identity. The presentation will draw attention to the way in which understandings of Swedishness play a role in these women's conceptualization of self. These understandings include, among others, assumptions regarding Swedishness' liberal approach to norms on sexuality and the informants' relation to the Swedish society as a home, yet, not a 'homeland'. As such, the presentation problematizes how sense of belonging and definitions of the self are constructed when identity is contested and negotiated in everyday life settings.

An Emerging Social Movement in China: Frames and Activists in Dog-Rescue Actions

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China since 2011. These seen activities have taken action on highways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs. In China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform affluence and consumption? And how has such a movement been able to expand, especially in a social milieu that generally conservative and authoritarian?

Adopting the lens of frame theory, this research endeavors to answer these questions by inquiring into the participants and organizers of these activities and the frames they share and develop in spearheading their organization and movement. In turn, a critical analysis of the broader social, cultural and economic changes in post-reform China will be carried out.

A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns has been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing have been delivered as well.

The Social Role of Legal Theory: Kawashima’s Theory in Japan, the United States and China

Since the late 1970s, Kawashima's approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociolegal scholarship share a skepticism about efforts to explore Japanese law through the lens of culture, which they see as conceptually weak, undefined. With cultural translation theory, this paper argues that vagueusness of Kawashima's theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture.

A case study of Communicational Impact in Kawashima's Legal consciousness theory is analyzed in two part: the first, to compare the form of Kawashima's work and this discourse on public, with a paperback book called Nichijun no ho ishi (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory, by following Kawashima's Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.
Brotherhood, Masculinity, and Social Capital: Fraternities At The University Of The Philippines Diliman

The paper is based on the study of college fraternities rooted in traditions of brotherhood and loyalty at the University of the Philippines Diliman (UPD), the country's premier state university campus. Tracing their roots in the early 1900s, UPD fraternities have built a vast network of brotherhood ties connecting various generations of men, from college students to professionals who now occupy leadership positions and status in government, private and corporate sectors in the Philippines. The study looks into the identity formation of young men, including the quest to be part of a trust-based social network to affirm masculinity, survive the competitive challenges or enjoy the adventures presented by college life, and assure paths to social capital and professional status.

The paper discusses how young men gravitate to fraternities for constructive aims such as academic excellence and socio-civic service, on the one hand, and become emboldened in antisocial violent behaviors within their group or in conflict with rival fraternities on the other. Such violence in gang fights and hazing rites has claimed the lives of at least eleven, and injured hundreds of young college men in the history of the university. The concepts social capital, identity and masculinity are utilized to understand the meaning of “brotherhood”, the origin and shifts in orientation and behavior of the group and individual members over generations. The study analyzed documents supplied by fraternities, and examined the narratives of fraternity “bros” or members from various generations or cohorts since the 1950s to the present.

Ethnic Conflict and Internal Colonialism: Theoretical Reflections for the Indigenous Mobilizations of the 21st Century

This paper discusses why ethnic conflict in Latin America is not related to secession or ethno nationalism, rather it is characterized as a renewed political activism of indigenous peoples denouncing violence and threat in a context of defending territories and natural resources. The concept also implies the revision of “internal colonialism” as a theoretical guideline that inspires intellectual and political projects of ethnic mobilizations. Finally, the paper argues what are the main characteristics of ethnic conflict in Latin America: a) low tendency to rebel against the state, b) low use of violence form indigenous peoples, c) very high use of violence and threat against indigenous peoples and d) widespread social exclusion and racial discrimination.

Immigration Key for Immigrants in Spain 2013

According to our recent research study/survey, it shows that the immigrants in Spain 2013 (Romanians 19%, Moroccans 18.8%, Ecuadorians 9.4%, sub-Saharan Africans 6.3%, Colombians 6.1%, Bolivia's 9.4% and those with dual nationality 16.9%) 77.6% of them live in rental housing, 27.3% work in private labour market with temporal contracts and 21.1% with fixed or permanent contracts, while 26% are unemployed although they have worked before. 57% of them have the intention to stay definetely and in general terms, they are highly satisfied with the services. They are also highly satisfied with their interpersonal relations (88%), with their family life (80%) and at work/studies (63%). Nevertheless, only 44% of them are satisfied with the economic situation. 83.5% consider their cultural contribution as positive and 75.3% consider their economic contribution as positive and 69.8% consider their demographic contribution as positive. 50% of immigrants surveyed think that they should keep their civil traditions, specially if they can. However, 68% agree that the languages which are majority should be included in the academic curriculum and 37% agree with the headscarf ban in classrooms. Integration for 78% of the surveyed is a society issue, and those with more difficulties are the Magreb population 36.9%, the sub-Saharan African countries 13.8% and the Chinese 13%. We conclude with the affirmation that, according to the immigrants, 50% of them agree that the economic aids should exist for Spaniards and immigrants independently from their legal or illegal administrative status and for 97% of them, they should have the right to live with their families, 95% think they should collect their unemployment benefits after paying their social security taxes, 80% think they should be able to vote in local/municipal elections and 85% think they should be able to obtain the Spanish nationality.

Aesthetic Barroco As a Performance of Subaltern Cultural Societies: The Sociological Approach

Debates about originality and the origins of the world have been added by scientific revolutions in physics, biologists and neuroscientists with the multiplication of the universes, new worlds discovered and technological advancements that have changed our everyday lives. Here, the rediscovery of the importance of dreaming, meandering, and others go together with artistic expressions, literature, cultures of remix, games of masks, avatars… These announce a new equilibrium in the visible and the invisible, emotion and abstraction, the physical and the metaphysical. Which imaginaire is cause and effect of these mutations? Aesthetic Barroco imaginaire as a form of performance has been well analyze in artistic expressions to understand this plurality, but has been a little ignored as a sociological theory. As Weber uses Beruf to understand the no-minded action in capitalism, Barroquismo imaginario can be used to understand the way capitalism (development) is expressed in pluri-cultural societies with a subaltern condition. That is why we propose, as a metaphor, to include it in the performance theory to understand plurality in a globalized world; not only to comprehend traditional subaltern cultures (Latin America, Africa, Asia), but as well, for example, black groups in U.S; the suburbs cultures in develop countries, etcetera. Art and emperical sciences, worlds of fashion, architecture, literature are amongst others the witnesses of this plurality. Artifice, simulacrum, dreams, ornamentation, exaggeration, multiplication have themselves become the stuff of the ordinary, part of its structure. Its foundation myth, Barroco metaphor permits us to observe the deep meaning through the “artificial”, the reel trough the no real, the truth to the fake in this pluralist and relativist vision of existence. Jazz, blues, Gretton, spicy food, exaggerated manners, ways to talk… are just some examples will be light up to show how social meanings today are showed through superficial symbols.
The report deals with the revival of Islamic identity in the Republic of Tatarstan which is an ethnic republic within Russia and the Muslim informal organizations of Tatars. Sociological research shows that religion is more important for Tatars than for other ethnic groups who traditionally do not profess Islam. There are more Muslims among Tatars who observe religious customs and ceremonies; there are less non-believers and non-believers. As far as religion is concerned, sociologists used to argue that women were more religious than men, older people more than youth, the uneducated more than people with higher education and people from rural areas were more religious than citizens from urban areas. However due to processes of post-modernity the situation has changed and another tendency has become apparent, which is sometimes the reverse. One of these trends is Tatar youth. The research data reveals that secularization has increasingly affected young people, and their degree of religiosity does not depend on the level of education or place of residence (there is even more rapid Islamization among the educated youth of big cities). A group of strictly observing young Muslims has been pointed out. They are about 5% of all Tatar youth. They are very religious and they confirm it by their behavior. The report focuses on some initiative groups and informal organizations of Muslim young people in Tatarstan characterizing them as innovative but in which the elderly and young people meet, work together, and practically implement their projects. The findings show that one, kidnapping takes a violent dimension and it has been generalized; second, controlling for demographic characteristics, we test the hypothesis that online surveys decrease measurement error in sensitive indicators. In the first step we contrast the characteristics of samples resulting from the use of web survey data in order to overcome the limits of traditional sociological research, 2008-2013 in Tatarstan, Russia. The methods comprise of two surveys by 1500 respondents each and about 80 in-depth interviews.

Effects of Interview Mode on Self-Reported Well-Being

This study explores the differential effects of face-to-face interviewing and web survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g. the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries. Respondents at a lower cost and large numbers relative to traditional surveys that are conducted via phone, mail, or on a face-to-face basis. The Wagelndicator is a labor market oriented survey that also includes several subjective well-being indicators. In the first step we contrast the characteristics of samples resulting from different modes. Second, controlling for demographic characteristics, we test the hypothesis that online surveys decrease measurement error in sensitive questions created by the presence of an interviewer (e.g. the underreporting of socially undesirable behavior). We show that mostly in advanced economies respondents tend to report higher subjective well-being levels in the presence of an interviewer, while in developing and former communist countries the presence of an interviewer generates a downward bias in the reported well-being levels. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

Changing Identity: Istanbul Clubs during Gezi Protests

Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. Very crudely Galatasaray represent aristocracy, Fenerbahçe bourgeoisie and Beşiktaş worker class but like we said these assumptions are very crude and can not apply to fans and general public.

In June 2013 Turkey was the headline of all press worldwide. A small peaceful protest started with environment concerns turned into a nationwide protest and rebellion against ruling party AKP (Justice and Development Party) and especially its leader Recep Tayyip Erdoğan. While police brutality against peaceful demonstrations triggered the situation it must be realized that there is a building frustration in non-conservative society for the last couple of years. At Gezi Park protest we can see mostly all political, ideological views developed in Turkey. From communists to nationalist, from Muslims to Atheists, from LGBT to football fans of these 3 biggest clubs. Of course politicization of these fan groups can be described as political awakening of youth after 1980 military coup and turning it into a struggle within their passionate interest.

This paper aims to understand these fans, their change and their demands from authority.

Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)

Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)

Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European countries. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In port Harcourt, the commercial and oil Hub of Nigeria's Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is generally regarded to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 households was administered questionnaire. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that one, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiator between the victims and perpetrators of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people's behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.

Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)

Knowing ‘New’ and ‘Old’ Media: Translating Memories and Body Rhythms Across Generations

The ‘sociology of translation’ offers a variety of methodological devices in order to study body rhythms and their changing material-social Eigenzeiten. Drawing on the case of a non-profit oriented, community based project in the south of Germany, in which the elderly and young people meet, work together, and practically exchange about usages of ‘analogous’ and ‘digital’ media objects, I am going to unpack how knowing the about ‘new’ and ‘old’ is being translated and reinterpreted among the two generations. Drawing on ethnographic fieldwork I am going to...
show specifically how the implicit dimensions of knowing how to use ‘new’ and ‘old’ media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either ‘new’ or ‘old’ media and discuss the implications for a memory view on media studies. Second, I will show what happens when the implicit knowledge of using these objects is being translated to the other generation. I will follow how the rhythms of bodies in interaction with their environment change, and how the use is being remembered and reinterpreted. Third, I will discuss the implications of such an intergenerational view on the enactment of social time in each of the generations’ body rhythm.

GÖBEL, HANNA* (University of Hamburg, hanna.goebel@uni-hamburg.de)

Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations

Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a ‘sociology of translation’ and the methodological devices offered by the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconfigurations of body rhythms in the city.

The case will be unfolded in three steps. First, I will focus on specific moments when sensual ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythmanalytical as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

In the Name of the Rule of Law and Democracy: Institutional Restructuring of the State and Women's Rights in Iraq

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused of trading women’s rights for cooperation from the Islamists and reports by foreign governments, the UN and human rights organizations have until recently ignored the deterioration in the status of women and the rise in gender-based violence in Iraq. The tendency within the international community is still to consider culture, underdevelopment or religion as the root cause of women’s subordination and to push for “modern” changes in society and law in compliance with a western liberal model of law and gender egalitarianism. This article investigates the nature of negotiations among international actors, governmental authorities and local politics for institutional restructuring and the implications of this international endeavor for women’s rights and solidarity in Iraq. The article argues that the implementation of specific social and legal models/reforms based on the norms and systems in western liberal states, targeting disadvantaged groups such as women, in a socially and politically precarious context like Iraq might raise serious problems and contribute to social inequalities and violence if the complexities of local politics of gender are not analytically taken into consideration. The article aims to contribute to activist efforts to enhance women’s status in war-effected societies, promote women’s solidarity against ethnic polarization and empower women to be active agents in advancing peace and justice in the face of radical transformations taking place in society, economy and politics that are dominated by men at all levels including local, regional, national and international.

KAYA, ZEYNEP (London School of Economics)

Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g., foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western (neo)liberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethnic reconciliation and implement the rule of law (e.g., Legislative Strengthening Program sponsored by USAID and UNAMI –United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethnic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, this paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

Power Shifts and Transnationalization. a Comparative Study of Long-Term Changes in the Swedish Power Elite, 1990 - 2013

Based on three surveys with a few thousand decision-makers each in top positions in all areas of Swedish society (in 1990, 2001 and 2013), we analyze changes over a period of more than 20 years in the composition and internal power relations of the power elite. It is to our knowledge the first time that a historically oriented study has been made, where three points in time are studied using the identical research design. Also, it is possible to analyze the entire elite stratum (not just a sample) as it is small enough, while at the same time it is big enough to allow statistical analyses.

Comparisons are made both over time and in social space, that is, between different parts of the field of power, characterized and ruled by different logics and relations. The previous studies have shown systematic differences between fields and also between the genders in various respects. Our paper has three parts: the first part gives an overall perspective of the long-term development and changes, and the second part discusses some important results. The third part discusses methodological problems, emerging especially in connection with the growing transnationalization of fields and of elite groups. With the increase of international ties, migration and the merging of big business as well as of cultural and economic cooperation, important power seems to be moving from Sweden as a European periphery to the big financial and industrial centers and cultural arenas. What is a national elite group these days? Also, several sites of power are gender-balanced (or de-gendered) in Sweden. How will the scope, force and hierarchy of the gender-order be affected in the meeting with other gender-orders as part of a transnationalization process?

Competition over Expert Authority in the New Field of Human IVF

Is human IVF (in vitro fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question ignited controversy in the 1980s when the term “human IVF” first appeared, creating competition between experts.

This paper focuses on the competition over expert authority between obstetricians and gynecology clinicians (OG clinicians) and embryology (E) scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is “an amalgam of thoughts, a mixture of habits, an assemblage of techniques” (Mol & Berg 1998), not a coherent and prime face. The process of mixing and assembling that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the “dominant professional” (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OG clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise. Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

Urban Shrinkage As a Travelling Concept

Urban shrinkage as a phenomenon has globalized during the last years: worldwide, including also the global South, cities have faced population decline and its manifold consequences for urban space, fabric and society. In terms of urban theory, shrinkage as a phenomenon or way of urbanization was disregarded for a long time, or shrinkage was looked at through the lens of urban growth as the basic trend of urbanization: as deviance from the norm, a bad or false development or a temporary appearance to be overcome.

Shrinkage as a concept was used first in the German discourse and got onto the national scientific and public agenda with the extreme population losses of East German cities during the 1990s and early 2000s. Shrinkage got accepted as an international term with the growing number of comparative studies and projects from the mid-2000s onwards.

The concept of shrinkage today faces a twofold challenge: On the one hand, it still struggles for recognition as describing a common pathway of global urbanization. On the other hand, research shows an overwhelming diversity of contexts which challenges the essence of what shrinkage was hitherto be defined as. The recent crises in the US and Europe, however, represent a context where expertise and explanations from shrinking cities might be helpful for the understanding of the current transformations and ruptures.

Set against this background, this paper detects the “travel” of the concept of urban shrinkage across different contexts and scholarly communities. It discusses how the debate on shrinkage internationalized and developed in a conceptual way though “traveling”. It also reflects on how cross-national, comparative research contributes to improve the conceptual discourse about shrinkage. As for its empirical examples, the paper draws on several international research projects on shrinking cities from the early 2000s onwards.

“Soft” Knowledge As a Threat To Engineering Legitimacy

The pertinent role of technology in societal development expands the demands on future engineers to “soft” skills such as intercultural communication and consideration for economic, social and environmental aspects. Therefore, the engineering profession is in a process of re-examining and re-legitimising their knowledge-base.

In spite of a general agreement on the need for future engineers to be broad thinking and hybrid, the engineering education system has been reluctant to part with traditional knowledge regimes focusing primarily on “hard core” scientific and technical competencies.

An empirical investigation of a year group of engineering students in Denmark finds that a great deal of the professional status and legitimacy of the engineer is based on the symbolic value attributed to the engineering knowledge base. The experience of hardship and endurance in relation to the demanding workload of the science and technology disciplines and a high degree of difficulty of these subjects are seen as “tests of manhood”, ritualising the professional initiation.

This anachronistic way of legitimising the profession may bolster the self-confidence of the engineering students making it through to graduation, but it is also likely to be an obstacle to the stated objectives of engineering education systems of attracting more women to the engineering profession and of providing engineering professionals able to address challenges of a dynamic, global society.

people in Darwin recognize and understand who is Euro-Australian, who is Ab-
original, and Aboriginal views on Euro-Australian values, priorities and lifestyles. We argue that a necessary ingredient for improving race relations in Australia is for dominant cultures to understand the relative nature of their own cultural attachments. Through interviews, social media and survey with Aboriginal people this research provides a basis for Euro-Australians to discover how they are viewed from the outside. It repositions the normativity of Euro-Australian culture which is a prerequisite for a truly multicultural society.

Aboriginal disengagement from mainstream political and civil law processes and institutions contributes to their social exclusion but the reasons for this distance are not well understood. Through ideas of agency, recognition and resistance we also explore how Aboriginal people view and understand the gap between Western-style governance and traditional Aboriginal approaches to decision-making and the impact this has on patterns of compliance and participation.

Romantic Love and Media Usage Among Japanese Youth

Over 90% of Japanese married people are married until 35 years old and single people who would like to marry are 82.7%. Japanese have a strong desire for a formal marriage and making a family. An opportunity of the modern marriage is needed the encounter at a school, in friend relations, at the workplace or at a daily place. Japanese marry from 20s to early 30s, after their experience of romantic love.

After early 2000s, a new style was born in the place of an electronic encounter, like SNS web sites. This paper is aimed to examine what is the relationship between the experience of romantic love and media usage in Japan; drawn on our qualitative research conducted in 2011.

Attitudes Towards Patriotic Education and Armed Forces among Slovenian Youth

Contemporary democratic societies are encountering many demanding challenges such as decreasing political participation in the democratic societal sphere. In most European countries one can detect an almost annual drop in citizens' political participation. Due to the dramatic changes in political, security and societal conditions in Europe in the last decade, today's youth is being brought up in a fundamentally different spirit. Due to the puncturing more participative citizens for the future, there is debate in Slovenia regarding civic and patriotic education, as well as active citizenship among the youth. Differing opinions may be found on how to realise this education, and what forms and methods should be involved.

In general, two different concepts are at odds: a discipline of patriotic education, introduced in rather limited way into the Slovenian elementary schools in 2009; b) second concept attempts to cultivate a sense of taking responsibility and of the acceptance of democratic culture while simultaneously maintaining a critical stance on the very political system; this concept is traditionally not synced with military tradition, but was introduced into school curricula in 1990s. The proposed paper will analyse attitudes of youth towards patriotic education, and try to ascertain, whetever the concept of patriotic education is has been able to deliver its goals. When analysing trust of youth towards different institutions of democratic state in the last decade, one finding is relatively high trust of youth in the armed forces and school as an institution on the one side and relatively firm distrust into various political institutions of democratic state. Research question will ask how patriotic education has been accepted by the pupils and teachers and how patriotic education is affecting pupils trust in the armed forced and school as an institution on the one side and distrust various political institutions on the other.

A War without Images?

A “war without images”?: Secrecy, information and communication during the war in Mali

As the international operation is still under way in Mali since January 11th 2013, the French armed forces played a huge role in the defeat of the jihad’s fighters. From the first days of the French commitment (i.e Operation Serval) to the Mali presidential polls [August 11th 2013], this paper will deal first with the information and communication policy conducted by the French forces during this new “war on terror” both on the political and organizational sides (political discourses and structures), is the war in Mali a “war without images and without facts” as French and foreign reporters described it? How the French authorities dealt with this traditional dilemma: the (French) people’s right to be informed and the need of secrecy, especially on the front line? Based on the analysis of the political an institutional discourses and on interviews, this paper will explore all these questions.

School Alienation, Patriarchal Gender-Role Patterns and The Lower Educational Success Of Boys In Secondary Education. A Mixed-Method Study

This paper attempts to be an empirically backed contribution to the current debate on gender differences in educational success in favour of girls. As explanatory factors, school alienation and gender-role patterns – together with other crucial factors – are analysed (controlling for social origin). School alienation is characterised by a low attachment to school, low school commitment, a low identification with school and learning and an emotional detachment from academic goals and values (Finn, 1989). Gender roles illustrate – the disparities in masculinity and femininity – are orientations that are assumed to structure attitudes, aims, motivations and, finally, behaviour, and are therefore also relevant for educational success. Analyses are based on a Swiss mixed-method study (standardised survey among 872 eighth-graders, group discussions, class room observations). Results indicate that the gender gap in educational success is caused partly by boys being more alienated from school and preferring patriarchal gender roles. The impacts of these factors on educational success are mediated by school deviance. Further important issues emerging from this analysis are peer attitudes towards school and teaching style; both of them environmental factors which influence school alienation. In particular an authoritative teaching style can largely reduce school alienation.

Women in Minority Communities in West Texas: Negotiating Work and Family

This paper is based on the collection of oral histories and qualitative research that has been conducted in the Permian Basin, Texas, among the members of the African-American Community. The individuals interviewed provided a magnifi-
cation and the impact this has on patterns of compliance and participation.

Coherence; Art Content & Society

Some claim considering the content of art is a task for art critics & historians. However, this may be relevant also for sociologists, to reveal information on so-
ciety. Contemporary art is dominated by conceptual art with a broad range of art expressions, diverging from traditional art. Many consider this tendency to express democracy and art diversity; others regard it as a breakdown of rules claiming it creates art anomaly. Durkheim describes how anomaly appears in times of crisis. However, he also describes how anomaly may appear in times of sudden wealth, which is the case in Norway, which has grown tremendously rich during the last decades. Simultaneously there has been a breakdown of norms in the society, which obviously has created some features of anomaly. Additionally the art interest has increased, as well as governmental support to artists, on principals of democracy and freedom of speech. Today Norwegian artists have great free-
dom to create whatever they like, including controversial political art, such as a Norwegian artist who creates art performances in North Korea with North Korean artists. Although he is criticized by many, as his performances probably requires some connection with North Korean authorities, others defend his performanc-
es. According to Benjamin, art criticism is crucial for art development. Although Norwegian media often provide art articles, art criticism is rather weak and art is seldom criticized in a critical way. Norwegians today seems liberal to controver-
sial art, perhaps more than people outside Norway. My PhD-thesis on corporate art and architecture (2011), also reveal that Norwegian art collectors seem more
liberal to controversial art than collectors abound. This makes me wonder; is it a coherence between art liberalism and features of anxiety in a society caused by sudden wealth? May this be reflected in the content of art in the current society?

When Art Becomes an Emotional Burden

Art influence our emotions, usually positively. However, art may also appear as offending and become a burden. Here I discuss so-called “offending art”, defined as art with improper sexual, violent or blasphemous content. I use empirical examples from my PhD-thesis (2011) and new observations. My thesis reveals different practices for corporations collecting art in four countries, including the USA and Norway. Although related cultures, the policy for collecting art diverges regarding offending art. While most of the American corporations express that they avoid art that can be experienced offending by employees and visitors, the Norwegian corporations are more liberal. Although most art in the Norwegian collections are not offending, they also contain offending artworks that creates emotional reactions among employees, who experience this art as a burden. Due to the emotional impact on employees and visitors corporations have had to remove artworks from public areas, for example a painting regarded blasphemous. An artwork still hanging contains a digital text about sexual abuse and is described by employees as depressing. The employees have got used to it and suppress their emotional reactions. Corporate collectors can easily avoid offending art, as these is not in their duties, while employees feel obligated to show their art interest and support art. They also like to appear as democratic organizations and will probably not risk being accused for censoring art. Sometimes art seems prioritized on the cost of people. This applies also to commissioned art. Some new paintings in a governmental building in Oslo show falling paper and skeletons between flying buildings. Employees experience the artworks as an emotional burden, because they give associations to the terrorist attack on the government buildings in 2011. Seemingly there is a gap between fear of art censorship and consideration to employee emotions worth examining.

Institutional Change through Rational Collective Action

The paper seeks to establish an analytical framework for the study of institutional change. Its main components are drawn from sociological systems theory, rational choice and systems theory. The distinctive theoretical maneuver is assuming that modern, functionally differentiated societies can be analyzed as communities, more or less capable of collective action. The analytical core of the framework is a concept of collective action characterized by the conflict between collective and individual rational lines of action. This subjectively experienced conflict is also a social dilemma because the outcome of an action is codetermined by the choices of other actors. Mutual interdependence creates a particular social dynamic that can be applied to the study of institutional change.

We take modern society to consist of several self-referential social systems that operate through unique social media and binary codes. However, we also conceive of an alternative ontology that enables a new understanding of modern societies as communities or social wholes with varying capacity for collective action on local, regional and global levels.

Renewal of Organizing Strategies for Child Care Workers?: Union Responses to Neoliberal Child Care Reform and Downgraded Care Work in Japan

Child care work, mostly performed by women, is almost always poorly paid. Unionizing child care workers is an important strategy for securing fair compensation and better working conditions for child care workers. This entails social movement that re-evaluates care work and women's work.

In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments acted as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for publicly run child care centers. With their collective bargaining power as an occupational group and a women’s group, organized teachers have also taken a critical role in improving working conditions for child care teachers as a whole.

However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reform policies such as the privatization of accredited care centers and the deregulation of the work force. However, we will hear a different story from local care workers who are no longer part of the union. In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments acted as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for publicly run child care centers. With their collective bargaining power as an occupational group and a women’s group, organized teachers have also taken a critical role in improving working conditions for child care teachers as a whole.

However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reform policies such as the privatization of accredited care centers and the deregulation of the work force. However, we will hear a different story from local care workers who are no longer part of the union.

Hidden Tapestries of Lived Experiences: The Commodification of Latin American Migrant Workers in Canada

This paper will explore how the complex lived experiences and plural identities of Latin American agricultural migrant workers participating in Canada's Seasonal Agricultural Worker Program (SAWP) is reduced to narrow representations in the Canadian racial imaginary. Although our interactions with workers have revealed their lives to be rich tapestries of experience, love, fear, regret, and complex familial ties, popular perceptions of migrant workers remain negatively racialized, gendered and classed. We argue that this suppression of workers' individual histories in the Canadian imaginary is a key component in legitimizing and maintaining the commodification of migrant labour and, by extension, transnational systems of exploitation. In turn, these processes of inscription serve as hidden mechanisms of social and spatial control, shaping the ways that the Canadian public interacts with migrant workers and the degree to which migrants are considered part of the Canadian communities in which they live and work. Motivation for this project was sparked through the relationships we have built with migrants in our work with a grassroots migrant worker support network in the Okanagan Valley, British Columbia. This paper is also informed in part by a 2012 case study
of Mexican migrant workers in Canada's largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

“Planning the Unplanned” - Trajectories of Managing the Informal in the Urban North

This paper will present research on how informal activities and practices in Berlin’s public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of receding welfare states, many people’s possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin’s parks are faced with various regularization strategies in a city that otherwise is known for its “anything goes” attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its “urban pioneers” that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings was perceived as weakness in the new urban development processes. However, today they are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies “planned informality” is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the in/formality dualism and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about the ambiguous role of the city government that on the one hand, embedded in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in depth. This is especially the case for European cross-border commuters. Our paper aims to close this gap by taking the Central European Region (CENTROPE) as an exemplary instance. Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary, the three successor states. Theoretically, we build upon a model developed by Aguillera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2,550). Empirically, the focus of our paper lies on three research questions: What job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)? Our results strengthen the hypothesis that human and social capital resources serve as key factors for finding job strategies and successful labor market integration. For example, we can show that far family and friendship ties are more intensely related to job finding than near-family contacts. However, near or far social ties do not influence wages of cross-border commuters. Furthermore, there are substantial gender differences and differences related to previous occupa-
and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtin and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as ‘unconventional’, given her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which has generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Brahm and Bhante Sujato have, and continue to be, at the forefront of promoting gender equality in Buddhism in Australia. This paper explores the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotyping Buddhists, and Buddhism more generally, as passive and pensive, negates Buddhists’ commitment to the Bodhisattva ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

### Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw households into the currency market, making foreign exchange factors decisive. How LIBOR on the francs and a favorable exchange rate between the Polish zloty and the franc, “Franc people,” as they have come to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the “safe haven” of the Swiss franc causing its strong appreciation, the mortgage loan growth with a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: “Franc people, or “currency spread generation.” Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is “just a veil” to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle of debates about poststructuralist transformation, capitalist generation, instabilities of contemporary capitalism, and the legitimacy of speculation. What are the practices of domestic living with multiple currencies entangled through a complex long-term contract? How do charts, exchange rates, and the LIBOR index become objects of attachment both intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

### Design Experiments As Intervention: How May This be Rendered Visible?

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multisensory and process based aspects within fashion and identity studies. Furthermore, the paper address how visual, expressive and design ways of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual manifestations, people and material artefacts of culture. (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design’s main goals.

Design disciplines (including fashion design) have, throughout their histories, actively engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, critical and social design (von Busch 2008) - elements that historically have been the core of sociology. This points out some blurred boundaries between visual sociology and the study of fashion which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visible surface and re-frame these meanings in a visual and designerly manner.

### Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards

Based on a qualitative study of 120 Canadian born and immigrant workers in unorganized and non-unionized workplaces this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to connect local levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers’ actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the conditions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

### Where Is Japan in the Global Land Grab Debate?

Some of the main explanations of the “global land grab” implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world’s third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab inventories show few cases originating in Japan, has Japan’s role is scanty, and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in might go relatively unremarked. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSAVANA project in Mozambique) lowers the visibility of Japan’s actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan’s experience shows that there is much more to “land grabbing” than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

### Internet Media and Radical Conservative Activism in Japan: The Battle Against “Anti-Japanese” Enemies

Focusing on right-wing groups in Japan, this paper addresses how radical conservative activists use internet media to build collective identity and mobilize support for their campaigns. In particular, this paper will examine the online activities of two closely affiliated “grassroots” organizations: Nihon Bunka Channel Sakura, an internet broadcaster, and Ganbare Nippon, a conservative activist group. Both organizations are involved in a wide range of activist campaigns, such as opposition to “masochistic” history teaching, opposition to voting rights for foreigners, promotion of awareness about “fascist” Chinese foreign policy, protection against perceived bias in Japanese newspapers and television programs. Through content analysis of the organizations’ websites, videos, blogs, posts, and social media usage, I argue that they have embraced the latest forms of internet communications technology, and are skilfully employing the internet to spread their message. Their online activities have helped create a virtual community of supporters, many of whom also engage in offline forms of activism. In addition, this paper will explore how both organizations encourage the formation of a collective identity that sees Japan as a victim of powerful foreign and domestic “anti-Japanese” entities, and depicts their campaigns a moral struggle for truth and justice.

356
This paper examines place-based belonging as a construction of thrown together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey’s (2005) concept of thrown-togetherness and Amin’s related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through our everyday negotiations of the multiple trajectories of people, objects and symbols that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unified, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based belonging, to consider how the experience of flexibility college may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafes, bars, and shopping centres - where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to employ belonging and create opportunities for diversifying exposure; both of which have the potential to communicate the presence of the community across time and space. In doing so this work seeks to demonstrate the ways in which geographic and temporal boundaries of public space are blurred, breached and yet also reinforced, as we throw together place-based experiences of belonging.

HALL, TOM* (Cardiff University, hallta@cf.ac.uk)
City Streets, Dirty People and the Politics of Cleaning
This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the (albeit similarly physical, messy and material) work of ‘outrachel’ and street care. We consider a team of council employees in the city of Cardiff in the UK whose job it is to make repeated tours through the centre of the city, day and night, looking to establish contact with and minister to ‘vulnerable’ adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside assorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets – picking up litter, emptying the bins and sweeping surfaces clean.

The paper develops two lines of analysis. The first examines the ways in which street cleaners and outreach workers – the latter ‘moral’ street sweepers, of a sort – employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same dirty, grimy, cluttered, smelly and unsightly places as they do. The paper’s second contribution, building on the first, considers the ways in which the expected outcomes of street cleaners and street carers (outreach workers) are often equated with the appearance and look, and ‘feel’, of the places and people in, on and with whom they work. This linking of care and upkeep to appearance – as the desired outcome of work that tends to and melds place and people – signals a politics of repair, enacted with ‘deviant’ groups in frequently dirtied city places.

HALLDÉN, KARIN* (Stockholm University, karin.hallden@sofi.su.se)
Gender Differences in Academic Careers in Sweden
Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women’s likelihood of becoming professors - which is in line with previous research. However, the gender care careers. The preliminary results show that men have a higher likelihood of being matched information on individual and family related characteristics for the time in a systematic way. Hence, the current study uses Swedish register data for all professors - which is in line with previous research. However, the gender gap in academic careers gets smaller over time since obtained PhD. Parental leave and temporary parental leave have negative effects on academic careers for both men and women. When studying seperately individuals with small children in the household we find that the gender gap in academic careers is significantly larger for this group compared to the gender gap in academic careers for others academicians.

HALLER, MAX* (University of Graz, max.haller@uni-graz.at)
Ethnic Stratification and Income Inequality Around the World
The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

RC27-477.1
HALLER, MAX* (University of Graz, max.haller@uni-graz.at)
Social Inequality and Income, a Comparative, International Analysis
Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are other horizontal dimensions more important in determining who is participating in which type of sport and how often? In this presentation these questions will be examined using the 2007 International Social Survey Programme (ISSP) on “sport and leisure time.” The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as of two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular. Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent the country the lower the relevance of the horizontal dimensions. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

HALMAN, LOEK* (Tilburg University, loek.halman@uvt.nl)
Searching for European Values
Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100,000 respondents) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not in clustered coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching values.

What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogeneous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet) resulted in a converging of the values of the Europeans. Ideas of multiple or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e.g., Inglehart) seem to be confirmed by such results.

In this paper I focus on European values in 2008 and in elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identity one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The research has to look outside the family's front door and include children's stance on abuse by analysing children's own experience. The paper concludes with people's first persons accounts on growing up with parental mental illness or substance abuse focusing on parental failure, adverse outcomes in institutions, including policies, measured in terms of trust, causal narratives, the feedback model, we expect transport policies to shape citizen's attitudes towards transport and travel are increasingly shaped by the politics of choice intention, shows that transport is often relegated to a much lower level of priority. This article seeks to explore this paradox by revisiting the public policy assumption. Political tools such as speed limits, urban tolls or other carbon taxes. The paper argues that the Nordic countries have responded differently to the concerns about the public expenditures and financial disincentives for the individual to participate in the labour market, the need for an up-to-date and relevant educational and vocational training services and social regulation of the market to ensure an inclusive labour market. The paper argues that gender, ethnicity and disability represent social categories of high policy relevance for understanding the present challenges to the Nordic welfare states, including their efforts to promote the inclusion of new generations of men and women in the workforce. While the Nordic countries have been at the forefront in adopting policies to promote gender equality the Nordic countries have been more reluctant to adopt policies to ensure equal opportunities independent of disability and ethnic origin. The paper identifies the challenges for the Nordic countries and concludes by identifying the policy lessons for non-Nordic countries.

At Home and Elsewhere: How to Handle Daily Life Growing up with a “Mad Mother” or “Drunk Father”? 

Frael old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the Long-Term Care (LTC) Insurance Law). As a multicultural society, Israel serves as a natural laboratory for identifying similarities and differences between various groups. The present research compared independent Jewish and Arabic aged 55+ who live in the community, on various aspects of their preferences for care.

The study included two stages, a quantitative one, in which closed-ended questions were administered to 200 old Jews and Arabs, followed by a qualitative one, in-depth interviewing 20 respondents. The study found that Jews mostly preferred nursing or sheltered homes, whereas Arabs preferred mostly to remain in their homes. However, approximately 40% of both populations preferred “mixed care,” staying in their home with a live-in worker or with one of their children.

Three main aspects were identified: a macro-level aspect of social and cultural context (collectivism vs. individualism); a meso-level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/home; dignity vs. honor). Although main aspects were in general similar between Jewish and Arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms and the importance of home in late life.

Results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. Providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

At Home and Elsewhere: How to Handle Daily Life Growing up with a “Mad Mother” or “Drunk Father”? 

There is a large body of research on children living in families with parental mental illness/substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. The risk and harm perspective is however less suitable to study children as participating agents. There is a gap of knowledge about how these children deal with the different realities of home and away, and at what costs and benefits they adapt to these different contexts. They often have to negotiate between the often secret and shame-laden family context and arenas and situations outside the family. This paper focuses on children and young people's first persons accounts on growing up with parental mental illness or substance abuse by analysing children's own experience. The paper concludes with the suggestion that to grasp these children and young peoples lived- experiences the research has to look outside the families front door and include children's activities in school, leisure and community, and focus on the active and challenging identity work these young people go through in trying to keep their homes together while developing a sense of selves.

New Risks of Youth Exclusion. Nordic Policy Responses in a European Perspective

Including youth in the labour market is a major challenge facing many European countries, including the Nordic countries. Since 2007 many European countries have witnessed an increase in the rate of young adults neither in education, training nor employment (NEET) and an increase in the number of young adults registered as ‘unemployed’. Despite efforts at adopting counter-offensives to change the negative economic conjuncture through new measures to promote education, training and inclusion in the labour market the rate of inactive young adults has increased the last decade in Europe. Possibly we also see the impact of more long-term trends and structural changes making transitions from school to employment more difficult or variable.

This paper discusses how the Nordic governments have responded to diversity in the youth population and whether country differences in policy measures may account for the differences in unemployment and NEET rates in the Nordic countries. The paper demonstrates that the Nordic countries have responded differently to the concerns about the public expenditures and financial disincentives for the individual to participate in the labour market, the need for an up-to-date and relevant educational and vocational training services and social regulation of the market to ensure an inclusive labour market.

The paper argues that gender, ethnicity and disability represent social categories of high policy relevance for understanding the present challenges to the Nordic welfare states, including their efforts to promote the inclusion of new generations of men and women in the workforce. While the Nordic countries have been at the forefront in adopting policies to promote gender equality the Nordic countries have been more reluctant to adopt policies to ensure equal opportunities independent of disability and ethnic origin. The paper identifies the challenges for the Nordic countries and concludes by identifying the policy lessons for non-Nordic countries.

Causal Relationship Between the Feeling of Alienation and Anti-foreignism in Contemporary Japan

In the last decade, anti-foreignism has emerged gradually in Japan. Grassroots right-wing organizations such as “Zaitokukai” have held anti-Korean demonstrations repeatedly. Furthermore, we can easily find many postings and articles on the internet which have hostilities toward foreign nationals and left-wings. They claim that the people who have a liberal view on migration and advocate for immigrants are “traitor” to Japan and have intended to damage Japanese national interest. Although only a few people participate in these movements, quite a number of people may share the feeling of intolerance toward vulnerable and minority groups. For example, a national diet member Satsuki Katayama waged a campaign to investigate the recipient of welfare public assistance and expressed...
However, in this paper I argue that in order to improve global social justice in relation to both parents and violate the Convention rule against unilateral removal of the custody of the American partner, but they also breach the child's right of access and social governance.

The aim of this presentation is to clarify the relationship between a feeling of alienation and anti-feminism in Japanese ordinary people. For this purpose, I analyze the data from nationwide surveys conducted in 2009 and 2013 using the method of causal analysis and structural equation modeling.

Late-Alain Touraine's Theory of Modernity, New Subjects and Cultural Movements: Toward Theorizing Social Transformations in Contemporary Asia

The purpose of this presentation is to theorize social transformations in contemporary Asia from the perspective of late-Touraine's theory. The “compressed modernity” theory (Chang) is often used, which is based on the theory of “radicalization of modernity” (Giddens, Beck) that focuses on the institutional level of modernity. However, the latter is partly criticized by the theories of “multiple modernities” (Appadurai) and Touraine, because the cultural orientations characteristic of modernity are embodied in institutions, but not reducible to them. Its founding gesture is a break with the widespread assumptions that there is one main pattern of modernization and modernity.

This presentation explores the insights that emerge from the exploration of Touraine's major works after 1990s that are highly appreciated by the theorists of multiple modernities. Touraine does not justify modernity institutionally and does not anchor it in the market economy, the government administration, or democratic organs. Instead it brings other regions of the world into the debate over modernity.

Touraine maintains that modernity was characterized from the beginning by the two poles of reason and the resisting subject. In a world best defined by multiple process of change, there exist no other means of combining economic strategies than through the individual. It is not the individual as consumer or member of various organizations, and even less as citizen, but the individual as subject, in the desire for individuation, which constitutes the only principle able to mediate between the instrumental world and the world of identity: the collective situations that protect the uniqueness and individuality of individuals called cultural movements.

These conceptualizations can be applied to Asian societies, however to that end it should be developed into institutional analysis based on a new theoretical model from the theories of welfare regime, new social risks, social/cultural movements, and social governance.

HAMANO, TAKESHI* (The University of Kitakyushu, hamano@kitakyu-u.ac.jp)

Contested Rights of the Cross-National Family: Recent Cases of International Parental Child Abduction Between Japan and the United States

This paper aims to explore conflicting rights claims of cross-national family members. Based on multinational case studies of recent international parental child abductions involving Japan and the US, it discusses the ways in which the realization of the basic human rights of each party of a cross-national family (father, migrant mother and child) involves fundamental challenges to the achievement of social justice in the absence of a universal legal system.

In May 2013, the Japanese Diet passed a bill approving Japan's accession to the Hague Convention on the Civil Aspects of International Child Abduction. Signatories to the Convention such as the US had for many years criticized Japan for showing little interest in the increasing number of familial and international parental child abductions involving Japanese nationals. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage. In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child's right of access to both parents and violate the Convention rule against unilateral removal of the child from their habitual residence. Japan's accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter.

However, in this paper I argue that in order to improve global social justice in relation to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.

HAMARAT, NATASIA* (Université libre de Bruxelles, nhamarat@ulb.ac.be)

Taking Action for the Recognition of a Lay Expertise over the Body : A Narrative Based Activism? the Case of Breast Cancer Patients’ Organisations

For thirty years, biomedicine is characterized by the development of clinical, organizational and legal structures that promote the “narrative based medicine”. These structures are expected to strengthen the “humanization of care” and the “patient participation in decision-making”, but they also inherently contain a risk of strengthening the social control of the patient, especially in cases where these narratives are used to assess the legitimacy of the patient's demand for a medical intervention. According to Memmi (2003), a consequence of the development of the “narrative based medicine” for the therapeutic activism is the focus on issues related to the body, evidenced by the emergence of feminist and LGBTQ movements in the 1970s and, more recently, the mobilization against the AIDS epidemic and the increase of patients’ organisations. Therefore, how to think, in the same analytical framework, the incentives to produce subjective narratives of the body in the privacy of the medical practice and the public claims for recognition of a lay expertise over the body from the patient's organisations? My PhD thesis focusses on the shaping of an experiential expertise in and by the French-Belgian breast cancer patient's organisations, a pathology strongly subject to the incentive to produce narratives because of the impairment to the performative femininity. In this paper, I propose on the one hand, a reflection on the theoretical and methodological challenges that seem to be facing the researcher when she studies the political resistance in this medical context and, on the other hand, based on examples from my fieldwork, an illustration of how these activists frame their critique of the system through their personal awareness of the illness experience, transforming this awareness into a “politicized collective illness identity” (Brown et al. 2004) holding legitimacy from the discursive operation of generalization - from the singularity to the collective experience.

Linking Middle Class to Political Stability in Ghana

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

359
The concept “Middle Class” conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world. Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960's, 1970s and 1980s. But since the return to democratic rule in 1992, it has steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate. This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gage out who these middle class are? What classify them as middle class? To borrow Bourdieu’s social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?

Transforming Legal Professions in Scandinavia

In Scandinavia, the legal profession has been regarded as the midwives of the modern state; the legal profession was totally dominant in the most important position in society. However, with the development of the welfare state and with neo-liberal management methods in various branches of the public and private sector the legal profession has been replaced from the most prominent positions. With globalization new markets have opened for Scandinavian lawyers, the question is however, if the profession at large gains from the new opportunities or if the profession is stratified. This paper examines how different parts of the profession react to new challenges for the legal profession.

La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro

Los procesos formativos de los doctorandos son heterogéneos, la socialización se deriva de las comunidades a las que pertenecen. La variación en los mecanismos y modalidades se relacionan con los procesos de formación, cognición y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es un cierto shock con la realidad y dificultad que se va superando según se logre un proceso de enculturación, mediante el cual se adquieren habilidades tácitas de competencia científica a través de ensayo y error hasta lograr la independencia para la publicación (Delamont y Atkinson:2001). El propósito es abonar conocimiento sobre los vínculos de la ca
dena entre el último año del doctorado y su inserción en la comunidad científica (Laudel y Glaser, 2007) en bioquímica y ciencias sociales por el tanto las tareas y las formas en las que publican resultan, aunque tengan en común transitar por procesos cognitivos, formativos y jugar roles en la construcción de sus rutas para convertirse en investigadores. Se parte de que en estos programas de doctorado se tiene, en distintos grados, reconocimiento del campo de conocimiento, consolidación de la disciplina de formación, prestigio institucional y liderazgo del grupo de referencia; factores que aumentan la probabilidad de que sus doctor

devengan en científicos. Se presentan resultados parciales sobre las entrevistas de los egresados de estas disciplinas sobre su participación e integración en las actividades propias de la comunidad científica; se analiza la reconstrucción de sus experiencias en la formación doctoral y las posiciones que ocupan en los ámbitos de inserción laboral que reflejan su formación como científicos; finalmente, se reflexiona sobre el futuro de la socialización para la emergencia del científico.

Risk Perception and Risk Governance in East Asia

The aim of this paper is to examine salient characteristics of the public perception of risks in Beijing, Seoul, and Tokyo as capital cities of three major countries of East Asia and to explore multiple pathways to reflexive risk governance in East Asia as an important condition for second modern transformation. Based on the 2012 survey data from Beijing, Seoul, and Tokyo over the issues of risk society, risk governance, the future of East Asia, and second modernity, the authors will show 1) the overall consensus among East Asian citizens about the consequences of modernization and the future development; 2) the commonalities and differences in the public perception of risks in three capital cities; 3) the major factors which may shape a concrete paradigm of risk governance in each country. Reflexive risk governance at issue is second-modern in that state alone can no longer be able to adequately perceive and manage complex risks citizens face today, requiring a partnership through its forms are various. The authors will thus examine the reactive patterns among government, experts, NGOs, and citizens in forming risk governance, drawing particular attention to the evolving procedures in which the bottom-up inputs from citizens and the extent of institutional responsiveness are linked together to produce efficient policy outcomes. The authors will argue that it is necessary for East Asia to delineate and combine two aspects of risk governance, that is, local and cosmopolitan, depending on the types of risks to be regulated. In so doing, the authors want to demonstrate the overall commonalities of risk governance in East Asia, on the one hand, and specific characteristics involved in each country, on the other.

Transitional Justice and East Asian Community: Two Patterns of Civil Engagement

This paper deals with two salient patterns of civil engagement in South Korea and China as a collective response, first, to the lack of transitional justice on the part of Japan concerning war crimes committed by its imperial army and its colonial rule and to the difficulties in forming East Asian community in its genuine sense as we can see in European Union. Confronted with, and challenged by, this unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delineate two contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among civil societies of East Asian countries rejecting a state-centered and politically motivated nationalism. The authors argue that the advance in transitional justice in Japan is an important condition for East Asian community. At the same time, the authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese civilians as well as a genuine care by the Japanese civilians towards the war victims, will enhance the possibility of mutual understanding and solidarity among citizens of East Asian countries. To borrow authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese civilians as well as a genuine care by the Japanese civilians towards the war victims, will enhance the possibility of mutual understanding and solidarity among citizens of East Asian countries. Through civil action in the region of East Asia, the authors aim to enable mutual understanding and solidarity among East Asian citizens to advance a creative and solidarity-oriented future in the region.
have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in a incremental and bottom-up process have been turned into an attraction for people beyond Shimokitaizawa and a mainstream compatible youth culture, whereby the space is being deprived of its experienced dimension. Kimatomo in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tôkyô is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assents, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at the production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

Islamic Environmental Activism in the United States and United Kingdom

Social Movement theorists have, until recently, accepted after Marx that religion is the ‘opiate of the masses’ and inherently opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically ‘Islamic’ environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a coherent political agenda. However, their underlying ideology is grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God’s representative on earth; the environment as a ‘sign’ from God in perfect, divinely ordained balance, and the necessity of following Islamic teachings in everyday life. The secular environmental movement and its organizations have heavily influenced IEOs, both in the framing of environmental crises, and in terms of their organizational structure and forms of action. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

Growing up in a One-Parent Family: Families and Child Wellbeing

Background

A large body of international literature has documented that children who grow up living with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The Irish case is particularly interesting given the selective nature of non-marriage.

Methods

This article extends the literature in this area by employing propensity score matching using data from the first wave of the Growing up in Ireland child cohort study. We compare a range of child and family outcomes between a series of treatment groups (cohabiting parents, never-married one-parent families and step families) and a control group of married biological parents using semi-parametric estimators.

Results

Marriage has significant positive effects on child health outcomes, educational scores and psychological wellbeing. Selection effects however account for a non-trivial proportion of the differences in child outcomes at age 9 across families but hidden bias remains an important issue. The main finding is that the socio-economic disadvantages inherent in childbearing outside of marriage account for a non-trivial portion of the effects of family type.

Conclusions

The selection argument assessed in this paper maintains that childbearing outside of marriage does not necessarily cause negative consequences for child development. The majority of Irish mothers who give birth outside a traditional married setting come from impoverished backgrounds so that much of the adverse consequences on child development are an artefact of pre-existing socio-economic disadvantages resultant in different lifestyles, including factors such as rates of smoking during pregnancy and lower rates of breastfeeding.

Comparing the Governance of Novel Products and Processes of Biotechnology

The emergence of novel products and processes of biotechnology in medicine, industry and agriculture has been accompanied by promises of healthier, safer and more productive lives and societies. However, biotechnology has also served as cause and catalyst of social controversy about the physical safety and social desirability of novel technologies. Such controversies have put the principles, institutions and instruments of governance, which has conventionally guided the interactions between science and society, under pressure. While researchers in articles on technology studies (STS) have done extensive work on the substance and processes of such controversies, they have devoted less effort to link their work to the broader tradition in political science and political sociology, which analyses more general principles and varieties of governance in modern societies.

This paper presents an attempt to start to fill this gap and develop a conceptual framework for comparing and analysing new and emerging modes of governance affiliated with biotechnology in the light of more general approaches to governance. We aim for a framework that can facilitate comparative inquiries and learning across different contexts and applications, e.g. biomedical and agricultural applications, and across different policies and policy domains, e.g. different regional, national and supranational settings.

We introduce five different dimensions of governance, which we discuss with empirical illustrations: 1) the purpose of governance, 2) the drivers of governance change, 3) temporalities of governance, 4) extension of the modes of governance, and 5) sources of acceptance/legitimacy.

Punitive Trends in Germany: What Role Does the Media Play?

In criminology there has been an active discussion about rising punitiveness in the United States and other Western societies (e.g. Garland, Wacquant). The present contribution aims to examine the factors that drive individual punitiveness. Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

This is done in a twofold way. Firstly, we look at patterns of media consumption and punitiveness at the micro level. The empirical analyses are based on three waves of a nationwide representative survey conducted in Germany in the years 2004, 2006 and 2010 by the Criminological Research Institute of Lower Saxony. Secondly, a content analysis of German newspapers assesses the way crime and criminals are represented in the media and to what extent this has changed over time (e.g. if newspapers evoke more empathy for victims). Therefore we analyzed the trends in the use of three different types of newspapers (quality press, local press, yellow press) for the years preceding the surveys (2003, 2005, 2009). This strategy allows examining how trends in punitive attitudes can be explained by changes in individual media consumption patterns and by changes in the quality of media coverage.

The results confirm the impact of the media on punitiveness. Other factors on the macro level, for instance trends in the crime rate, which may also drive punitive attitudes will be discussed.

From Enclaves to Citadels: A Dynamic and Contested Transformation of Informal Settlements in Urban China

The economic reforms of the late seventies led to a massive urban expansion in China as villages were swallowed by the urban sprawl. The most striking example is Shenzhen, an area with 300,000 inhabitants grew into a metropolis of 14 million people over a couple of decades. Today only 3 million are formal residents of the city, and the rest of the people without local residency are excluded from subsidized amenities like education, health care and social housing. Most of the people that move into the city find accommodation in one of the 320 villages that have become embedded in the urban fabric. These urban villages provide rough-
ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests social and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led developments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to fall on the same redevelopment path.

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Geryn, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in “scientific” knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no “correct” knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates how online discussions about Wikipedia entries on the Fukushima Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thiomersal), Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provisions an online discussion space for each article. This offers a rich space for examining how scientific knowledge is negotiated in an open online environment. This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

Unequal Housing Choices and the Residential Segregation in Urban China

The growth and transformation of cities in China continue to absorb migrants from both ends of the economic spectrum, giving rise to socially mixed cities. Concurrently is the elevated level of residential segregation owing to new forms of enclave urbanism such as gated communities and urban villages. Factors including historical legacy, land institution and property-led development have contributed to a divided residential pattern at the neighborhood level, but the divisions are not necessarily as significant at larger spatial units. This paper, by analysing the distribution of both urban population and housing provision in Shenzhen, explicitly unravels the spatial logic of the divided pattern of the population. As expected, migrants and local hukou holders are largely segregated by different housing choices, however, due to the relatively even distribution of a vast amount of migrant enclaves, at the sub-district level a rather low degree of segregation is manifest. This residential pattern is salutary as it maintains a spatially equitable housing provision.

Understanding Boundaries For Knowledge Sharing In Online Communities

Online knowledge sharing activities are flourishing with the advent of social media. Websites such as Facebook, Twitter, and Wikipedia facilitate knowledge sharing in online communities that extend beyond the constraints of existing organizational boundaries (Qualman 2011). Since the focus of prior research has generally been limited to knowledge sharing within organizations (e.g., Wang & Noe, 2010), it is imperative to better understand its practice on Web 2.0 platforms and in these online communities (Allen 2010). As Vakkayil (2012) contends, the concept of boundaries is informative for understanding knowledge sharing and creation in the online discussion space. This study aims to explore the use of online platforms and online environments that extend beyond the constraints of existing organizational structures. Although it becomes easier and faster to share knowledge and collaborate online, few studies have investigate how boundaries and boundary-crossing in Web 2.0 environments affect online collaboration, knowledge sharing, and participation. This paper aims to explore the usefulness of employing existing boundary frameworks to facilitate knowledge sharing and collaboration. To test and modify existing theoretical frameworks of boundaries we analyzed Wikipedia entries about the Japanese nuclear power plant accident triggered by the Tōhoku earthquake in March 2011. This event attracted attention from around the world and is useful for our research because the case investigated multiple boundaries and various processes of boundary-crossing. Based on the data and the literature we propose a refined framework for boundaries and boundary-crossing, and by doing so this paper advances our understanding of boundaries for knowledge sharing in online communities and identifies how these boundaries facilitate or hinder equal participation.

HARA, TOSHIHIKO* (Sapporo City University, t_hara@scu.ac.jp)

Japan As a Shrinking Society: What Is the Condition for Recovering the Replacement Level of Fertility?

This paper focuses on the phenomenon of shrinking society emerging in Japan and its sociological meanings, such as the possible historical consequence of demographic transition from high birth and death rates to low ones. First, we used the Historical Statistics of Japan (Statistics Bureau and the Director General for Policy Planning of Japan, 2006) and Population Projections for Japan (National Institute of Population and Social Research, January 2012) to show the past and future development of the dependency ratio from 1891 to 2100. Second, utilizing the life table population and Net Reproduction Rate (NRR), we observed separately the effects of the increasing life expectancy and declining fertility on the dependency ratio. Finally, we analyzed the historical relations among women’s survival rates at reproductive age, the theoretical fertility rate for maintaining the reproductive level (NRR = 1), and the recorded Total Fertility Rate (TFR). Important findings are as follows. (1) The effects of the rising longevity on the dependency ratios were stable until the average life expectancy reached around 70 years. When the life expectancy at reproductive age reached 88 years at the maximum level near 100%, the dependency ratio began to grow swiftly according to the extension of life expectancy. (2) Historical observation showed TFR as adapting to the theoretical level of fertility (NRR = 1) at a certain time lag and corresponding
with women's survival rates at reproductive age. (3) For women, their expanding lifespan and survival rates at reproductive age could have influenced reproductive decision making to minimize the risk of childbearing; even if the theoretical fertility rate meets the reproductive level, women's views may remain unchanged. In Japan, fertility is lower than the replacement level because women's cost-benefit imbalance for childbearing is too high.

HARADA, HIROO* (Senshu University, h2@isc.senshu-u.ac.jp) MURAKAMI, SHUNSUKE (Senshu University) OYANE, JUN (Senshu University) INUMA, TAKEKO (Senshu University) MARUMO, YUICHI (Senshu University) KANG, DEOKSU (Senshu University) MIYAGAWA, HIKEZAKU (Senshu University)

Social Capital of Seven Countries/Areas in East Asia: From the Questionnaire Approach

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about 'social capital' both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawa-saki City, Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that 'social capital' might differ from the degree of econom-ic development and urbanization. We define 'social capital' as the index of four components; social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet. We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but 'social capital' differs in urban and rural areas, families, communities, and so on. This may also suggest that 'social capital' differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis. We have to carefully treat the outcome of the questionnaire, because the degree of 'social capital' does not imply the superiority or inferiority, nor the positive or negative side of 'social capital' just declares the type of social rela-tionship and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

HARAGUCHI, YAYOI* (Ibaraki University, yayoih@mx.ibaraki.ac.jp)

Civil Movements in Low-Recognized Disaster Affected Areas

We discuss how civil movements have developed to protect children from radia-tion pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as 'Affected Areas' by the government, although local residents have sought to gain institutional recognition of the damage due to the nuclear accidents. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAA).

It is important to pay attention to LRDAA in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institu-tional recognition, residents in LDRRA have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushi-ma. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislatures, and the government of Japan. We an-alyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out that the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government's attitude toward citizen groups from oppositional to cooperative.

Toward the Inclusive Resilience for Both Individuals and Community

This presentation focuses on the different kinds of social conflicts between local people/individuals and the communities/local governments arising in the process of disaster rebuilding. It seems that the cases of Hurricane Katrina and Fukushima Nuclear Power Plant Accidents are so much different, but there are a few similarities between two cases. One of them is contradiction between community resilience and individual resilience.

First, we would like to consider the case, for instance, that the poor and social minority have been excluded in the process of community rebuilding, while community prosperity are achieved to some extent and community resilience increases in the aftermath of disaster.

The city of New Orleans after Hurricane Katrina could be considered to be one of these cases. Since Hurricane Katrina, the city of New Orleans has been seeming imploding. In attracting new industry and younger generation, the less resilient the community will be. Contradiction between community resilience and individual resilience could happen in both natural disasters and technological disasters. We will discuss two cases in depth at the presentation.

HARAMBAM, JARON* (Erasmus University Rotterdam, jaron.harambam@gmail.com)

Conspiracists’ Longings for a Pure Science

Conspiracist theories in recent decades become a popular and widespread cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a communality can be found in the challenge they pose to the epistemic authority of science. The social sciences have, however, sim-ply conceived of conspiracy theories as bad science, making a parady out of the respectable scientific tradition, but in their moral condemnations these scholars leave unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch “conspiracy milieu” to explore what conspiracy theorists claim about science, scientists and the knowl-edge they produce. On the most abstract level is modern science critiqued for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge sci-entific experts produce which in practice is not living up to its a-social ideal of objectivity and disinterestedness. The last strand of critiques then centers around the powerful social position scientific experts have established in relation to out-siders that subordinate laymen and protect their in-group. In sum, what these cri-tiques articulate is a (particular) public understanding of science. Despite a strong critique of science, conspiracy theorists are not against science, but hold a rather ambivalent position: science is at once sacralized for its intentions but profaned for its social functions. I conclude by showing how these critiques resonate with both with pre- and post-modern scientific understandings of science, and argue how the frality of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary western conspiracy theories.

Strategy and Identity in the “Conspiracy Milieu”

Strategy and Identity in the “Conspiracy Milieu”

Conspiracy theories have in recent decades become a popular cultural phe-nomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of “conspiracy theorists” in rather ahistorical terms: they have paraded stories of an out-dated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who these people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch conspiracy milieu to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a communality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these
changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order, practices therefore take place on the barricades, particularly on the Internet. The mediators at last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work (Rosso, Dekas & Wrzesniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work. The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations. Four distinct types of ascription of meaning emerged from the data: 1) reference to basic identification with work, 2) reference to meaningful aspects of work, 3) reference to the purpose of work for a greater good, 4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the “good life” and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyles include “Lifestyles of Health and Sustainability” (LOHAS) and “Lifestyles of Voluntary Simplicity” (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that understanding of work as expressed by these new lifestyle groups, but questions of the “good life” and appropriate, sustainable consumption have increased China’s reliance on exports, particularly to the core capitalist economies of the United States and the European Union. Reflecting fears that this scale of accumulation is not sustainable, the government’s 12th Five Year Plan (2011 to 2015) called for slower growth and rebalancing from investment to consumption, in part at least through higher wages. Such an approach, however, presents a threat to China’s comparative advantage based on low wages and super-exploitation. Some regions and sectors are already under strain and production has moved within China or to other cheaper economies. In addition, the combined and uneven nature of China’s development, sectorally and regionally, underpins the fractured interests of the ruling class. Finally, the presentation will point to the massive infusion of financial used to “soften” the outcome of the global crisis that has produced property bubbles, which are further fueling inequality and discontent.

By examining the contradictions in China’s model of growth and the shifting dynamics of its place in the global division of labour, the aim of this paper is to understand the tensions in the class relations that underpin the Chinese ‘success story’. It will provide the contextual underpinnings necessary for understanding the environment in which increasingly restive Chinese labour is located. The paper will argue that China’s integration with global capitalism and global circuits of capital, particularly from the early 1990s to 2008-2009, has been a major cause of this slow growth, but has also sharply increased its economic vulnerability as manifested in its exposure during the 2008 crisis. High rates of growth, driven by unprecedented accumulation that outstrips private consumption, has increased China’s reliance on exports, particularly to the core capitalist economies of the United States and the European Union. Reflecting fears that this scale of accumulation is not sustainable, the government’s 12th Five Year Plan (2011 to 2015) called for slower growth and rebalancing from investment to consumption, in part at least through higher wages. Such an approach, however, presents a threat to China’s comparative advantage based on low wages and super-exploitation. Some regions and sectors are already under strain and production has moved within China or to other cheaper economies. In addition, the combined and uneven nature of China’s development, sectorally and regionally, underpins the fractured interests of the ruling class. Finally, the presentation will point to the massive infusion of financial used to “soften” the outcome of the global crisis that has produced property bubbles, which are further fueling inequality and discontent.

Geo-immersive technologies are a set of nascent services that digitally record public spaces and then make the imagery accessible to anyone with an Internet connection. The best known is perhaps Google’s StreetView service. This paper argues that by transmitting images of public spaces to anonymous groups of billions, far removed both spatially and temporally from the site of the initial public behaviour, these technologies form a new kind of public street surveillance.

This paper shows that certain images captured by such technologies are increasingly harvested by anonymous users, who seek out photographs they find notable and re-share them. Such ‘notable’ images frequently include images of topless women, or women sunbathing, or women merely dressed in a fashion the anonymous crowd feels is worthy of comment. This paper argues that geo-immersive surveillance thereby replicates the male gaze in a manner that has adverse impacts for the claims of a range of equity-seeking groups, particularly but not exclusively women.

In most jurisdictions, such photography is nonetheless largely unregulated. Individuals are typically treated as having no reasonable expectation of privacy while in public and thus are granted no legal recourse to prevent such “street photography” or seek ex post facto remedy. At the same time, Google and other service providers make no efforts to enforce copyright over the imagery they publish, and thus certain photographs tend to rapidly go ‘viral’, increasing their potential to create harm.

This paper suggests that this situation demands regulatory change. The balance between privacy claims in public and legitimate claims for freedom of expression through “street photography” must be better struck in a way that acknowledges the differing ways in which surveillance is experienced by different groups, who may be more susceptible to surveillance-related harms.

The aim of this study is to explore the meeting of academic and praxis discourses in group tutoring of undergraduate’s thesis. The point of departure is that the quality of the theses undergraduate and master level, at the teacher education programs has been questioned by The Swedish National Agency for Higher Education (2006). The main critic concerns lack of academic qualities, such as failing theoretical awareness, weak analysis, normativity and lack of critical writing and thinking. The teacher education program is, however, primarily defined as a professional training program meaning that students to a large extent are focusing on the practical aspects of the profession. Two differing discourses can thus be identified, and this contradiction is explored by investigating the difference between students’ and the supervisor’s perceptions of the purpose of the thesis writing. The results from the analysis, of the transcribed extracts of
verbal interaction, show that the academic code is used mainly by the tutor and the pracix code by the students. The study focuses on the meeting between these codes/discourses in relation to supervision and is inspired by the code theory of Basil Bernstein, where “codes” are used to describe regulative principles; realized through different possibilities of selection and combination (Atkinson, 1985). Language is in addition used as a means to understand social relationships, structures and processes. It is noticeable that, within these codes, the same expressions were used to great extent, but with different meanings and in different contexts.

HARJU, ANNE* (Malmö University, anne.harju@mah.se)

Children's Reproduction of Power Relations in the City

This study investigates power relations in a small city in southern Sweden. It is a city where there have been radical social changes in the population structure due to a major inflow of immigrants. The social situation can best be described as filled with tension between different groups. In relation to the tension there is a strong and dominant narrative about “us” and “them”, relating to the categories “Swedes” and “immigrants”. The study has two aims in relation to this narrative. One is to explore how it is used to reproduce power relations in the city. The second aim is to investigate how children actively use and reformulate the narrative and the power relations within it.

The point of departure is the assumption that human beings are embedded in figurations (families, social class, ethnic groups, nations etc) containing different power ratios that are transferred from one generation to another (Elias 2009). Socialization is thus central in the transmission of power ratios, as children acquire adult standards of behavior and social norms. However, children are from, childhood sociology's point of view, also active agents involved in creating and influence their own and others' lives, which implies that socialization is not equal to adaptation and internalization, but also to children's negotiation, sharing and creation of culture (Allison, Jens and Prout 1998, Corsaro 2005). In the study the children's contribution to reproduction and reformulation, in relation to the narrative of “us” and “them”, is in line with William Corsaro's (2005) concept of interpretative reproduction. The term interpretative captures children's participation in their own unique peer cultures by creatively taking information from the adult world to address their own peer concerns, while the term reproduction captures the idea that children not only internalize society and culture, but actively contribute to cultural production and change.

Educational Institutions As Mating Markets

Educational institutions are important settings in which future partners meet and where inequalities in the current and next generation are reproduced. Yet there is little research on educational institutions as mating markets, partly due to limitations with existing data. In this study, we use population register data to follow the educational histories of an entire birth cohort of Swedes, born in 1970. We are able to identify the educational institutions the members of this cohort attended, and analyze if there are differences in sex partners overlapped in these institutions. We focus on high schools (Gymnasium) and universities. As the outcome, we focus on first births and analyze assortative mating through the characteristics of the parents. We estimate which share of our cohort members overlapped with (“met”) their partner in high school or university and use contextual level information on the structure and social compositions of the high schools and universities attended to analyze the probability of meeting one’s partner in these institutions, and on the probability of assortative mating according to age, ethnicity, and class background. Our preliminary results suggest that up to 40% of educationally homogenous couples have met in university, and that the social and demographic compositions of both high schools and universities shape meeting chances and mating along demographic and social lines.

Newspaper Messages about Public and Private Health-Care Services in Australia: The Entrenchment of Unequal Choice

Media representations of health care can perpetuate stereotypes about public and private systems that unequally shape consumers' perceptions and enactment of health-care choice. For instance, recent research about Australians’ distrust of public and private health care suggests that participants’ concerns about long public hospital waiting lists echo prominent media messages, which might in turn contribute to the fact that one in two Australians supplement Medicare (the universal public health insurance scheme) with private insurance. As part of a larger study about health-care choice, we seek to understand ways in which the media represent both public and private health services, and their role in structuring different ‘choice’ pathways through Australia’s health-care maze. This paper presents results from an analysis of newspaper reporting of public and private health care. The sample consists of newspaper articles and letters dealing with public and private health services, private insurance and Medicare from ‘broadsheet’ and ‘tabloid’ newspapers in three Australian states (2011-13). These texts were coded for positive, negative and neutral messages about public and private care and examined for representations of choice, trust and responsibility. In line with the theoretical framework for our study, we also focused on articles that presented different aspects of ‘health-care capital’ – economic, social, symbolic or geographic – as influencing consumers’ capacity for health-care choice. The analysis reveals variation by state, newspaper, and over time.

We found that articles in the populist tabloid papers are dominated by negative, frightening messages about the “crisis” in public health systems and, to a lesser extent, the threat of rising costs of private health insurance. The ‘quality’ broadsheets present more balanced accounts, with articles typically combining positive, negative and neutral messages. Media representations thus contribute to the differential structuring of health-care choice, potentially compromising quality of care and exacerbating inequality.

HARMAN, VICKI* (Royal Holloway University of London, v.harmann@rhul.ac.uk)

Ballroom and Latin American Dancing, Gender and Emotions

Ballroom and Latin American dancing has a long history and is practised across generations. This study also has distinctive roles for men and women, traditionally with the man leading (setting the timing and deciding the figures to be danced) and the woman following (performing the figures indicated by her partner). Drawing on ethnographic research at dancing competitions in England, this paper considers the manifestation of emotions in Ballroom and Latin American dancing. It argues that competitive Ballroom dancing can be regarded as a form of serious leisure where a complex mix of emotions are experienced, including excitement, anticipation, disappointment and reconciliation. Significantly, for its participants Ballroom dancing offers both ‘thrills’ (sharply exciting, memorable events) and ‘flow’ (Steebns, 2008). A paper exploring emotions and relationships can be seen as key to success. The paper considers emotions at Ballroom dancing competitions and the extent to which their manifestation is linked with gender.

Doing and Displaying Families through the Preparation of Children’s Lunchboxes

This paper analyses family life and social change from the perspective of parents and their daily routines of preparing lunches for their children. In this study lunchboxes are understood as an artefact linking together discourses and practices of doing and displaying families, marketplace and government considerations of feeding children and broader issues of care and surveillance in private and public settings. At a time when the roles of men and women are experiencing considerable change, this paper explores family life and gender roles by considering who is responsible for preparing children’s lunches, how they feel about it and how this daily practice connects with workplace considerations. Drawing on photo-elicit interviews and focus groups with British parents with children aged between nine and eleven years old, we explore majority and minority experiences in order to contribute a greater understanding of how traditional and non-traditional families negotiate family display through children’s lunchboxes.

Researching Racism: Reflections on Different Methodological Approaches to Recording People’s Experiences of Racism

This paper combines two contrasting and complementing methodologies to explore young people’s experiences of racism in everyday life. The paper will reflect on how the use of qualitative and quantitative methods can lead us to different understandings of experienced racism. The first method uses ethnography and non-structured interviews which do not directly ask respondents to talk about their experiences of racism. The second method examines data from the
Understanding Society (UK) survey, which records people's responses to specific questions about their own and others' experiences of racism.

What emerged is that in the qualitative project, participants found it difficult to name racism and denied that quite explicit forms of racism they had experienced was 'really' racism. In the survey, respondents recorded widespread racism which they and/or people they knew had experienced. This paper considers some of the implications of these apparently divergent findings. The use of ready-structured questions is helpful in alerting us to the persisting prevalence of racism. This is facilitated when survey respondents are not actively encouraged to reflect on the personal and inter-group dimensions of racism. The other part of the story is that there are other elements of inequality and discrimination which we could not capture in the survey.

The presented process is in itself helpful in revealing a great deal about the nature of different forms of racism. The paper also indicates that this has worrying implications for the ways in which racism can be resisted in everyday life when it can be so difficult to talk about.

HARRIKARI, TIMO* (University of Helsinki, timo.harrikari@helsinki.fi)
Securitizing Childhood – Childhood and Youth in Finnish Crime Prevention Programmes

Several international analyses of criminal justice and social policy have revealed an increased focus on children and young people during the past decades. One of the key characteristics of the recent interest has been a new concern, even with signs of moral panic. This type of public interest originates from the turn towards crime policy in the US and UK in the 1970s and 1980s, leading to a punitive turn in youth crime policy, to the rise of the risk agenda and, in general, to the intensification of formal social control towards children, young people and families with children.

The described transformation has expanded into a wide-scale international phenomenon, an increasing awareness, even from country to another. This development has also touched the Nordic welfare states. Consequently, the presentation addresses the issue of how children and young people are constructed and governed in Finland's crime prevention and securitising programmes and projects. The analysed data consists of abstracts and appraisals of 88 local securitising programs.

The results of the analysis suggest that, in many ways, the programmes reflect a post-recession situation in Finnish society. Children and young people are dominantly positioned as 'risks' or as 'exposed to risks' and the goals and means of the programmes are connected with intensifying their control. The results suggest that the status of security speech and crime prevention technologies within the entity of governing childhood and youth require critical consideration.

The presentation is based on the article published in *Youth Justice* in April 2013.

HARRIS, CRAIG* (Michigan State University, harrisc@msu.edu)
Alternative Food Networks in Monterrey Mexico

The agri-food system in Monterrey, Mexico is structured by three segments. One segment consists of the "traditional" Mexican diet of corn, beans, rice, chicken and pork. For residents of Monterrey, these foodstuffs are usually purchased at local *mercaditos* from local vendors who have acquired the foods from long supply chains. The second segment consists of the rapidly growing middle class and upper class. They purchase their foods at national and transnational supermarkets, and they tend to consume a more international middle class diet. The third segment is an emerging alternative food network that emphasizes locally produced foods, distinctive traditional foods, heirloom varieties of vegetables, organic farming, and artisanal food production. This segment attracts both middle class and upper class shoppers, who find these foods in health food stores, niche shops and periodic alternative food markets. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one's consumption from the transnational agri-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

CHENG, MARIAH (Carolina Population Center, University of North Carolina at Chapel Hill)
Family Structure Models and Nonmarital Childbearing in the Transition to Adulthood

Nonmarital childbearing is now a common fertility event during the transition to adulthood in the America. Current estimates indicate more than forty percent of births occur to unmarried women in the U.S., however, the image of a single, unmarried mother raising a child on her own is no longer accurate. This paper uses national data from Add Health to document the relationship contexts (co-habitation, dating relationship, no relationship) in which nonmarital first births occur and model the environmental influences of family structure on nonmarital first births that women aged 24-32 have experienced by 2008-09. We focus particularly on collective socialization effects of family structure models during adolescence by exploiting Add Health's unique design to measure family structure in the multiple social contexts of adolescent life, including the family, peer group, school, and neighborhood. We analyze both traditional (prevalence of two-parent families) and contemporary (prevalence of single-parent families) family structure models in these multiple social contexts during adolescence on subsequent nonmarital childbearing and the circumstances of nonmarital first births. Controlling for other economic and policy-relevant determinants of nonmarital childbearing and socioeconomic confounding factors, we find robust and significant effects of family structure models in the multiple contexts of adolescents' lives on subsequent nonmarital childbearing that are independent and additive. When the prevalence of two-parent families is low or the prevalence of single-parent families is high, young adults face higher risks of nonmarital childbearing, and these risks are additive across the family, peer group, school or neighborhood context.

SCULLY, BEN (University of Witwatersrand)
Before and Beyond Neoliberalism: The Development Of Precarity and The Emerging Alternative

In this paper we contend that, to understand what might exist beyond neoliberalism, we need to rethink processes of capitalist development *before* neoliberalism. We make two arguments.

First, for poorer countries, processes of commodification which are highlighted as evidence of neoliberalism often predate the neoliberal era. Third World development policies tended to make social and economic life more precarious as a corollary to capital accumulation, *before* neoliberalism as an ideology took hold. Second, intense theoretical focus on neoliberalism obscures a recent shift in the global South towards a tendential and tangible de-commodification of social

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

366
life. In fact, during the height of what is widely accepted as the period of neolib-
eral triumph in many countries across the global South, the relationship between
work, land, and welfare has begun to transform in ways that look quite different from
what the dominant paradigm leads us to expect.

The most salient examples today are state-led social protection programs
which have been implemented across the former Third World. For those who
lament that the post-2008 crisis has produced no Polanyian double movement,
we argue that these state-driven social assistance policies are precisely such a
mechanism. These emerged not out of technocratic fixes from above but often
out of political and social struggles from below. The rise and spread of these pro-
grams are not only in stark contrast to popular conceptions of a neoliberal rein-
forcement, but are specifically targeted at social strata whose precarity has been
largely generated by developmental policies which predated the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of
social protection while focusing on the past two decades in the global South, and
qualitative comparisons of these programs in the BICs – Brazil, India, China and
South Africa – as evidence of our argument.

kevanharris@gmail.com)
Two, Three, Many Middle Classes: Theorizing Middle Class Power
From a Global Perspective

Analyses of the post-2008 global wave of social protest have generally cel-
ibrated the rise of educated middle classes as a driver of historical change as
eagerly and widely as the destruction of the world of precapitalism. In the
global South, middle classes are analyzed as both object and subject: the goal
of economic growth is a middle-class society and the middle class is assumed to be
the most suitable base for political development. Yet public discussion about the
middle class occurs with a set of implicit assumptions which underpin this sort of
teleological talk, many of which derive from the application of late 19th-early 20th
century sociological theory to the 21st century world economy. As an interven-
tion in contemporary debates over class and protest, in this paper I reconstruct
the concept of the middle class for the purpose of analyzing the current political
economy of middle-income countries. To do so, I historicize middle class forma-
tion through a series of coupled and irregular characteristics of class formation on a
world-historical scale over the past several centuries. I argue that a key secular
process of the history of capitalism is the production of “middling” classes, yet
these classes themselves are transformed along with the capitalist world econ-
omy. Social theory has tended to reify a particular instance of this process, the rise
of the 19th century European bourgeoisie to state power, as a general theory of
class formation. This Whiggish story is arguably the main cause of confusion with
in the debate over the post-2008 global protest wave. To analyze what is actually
new about the “new middle class” of the late 20th and early 21st centuries for the
global South, I create a typology of four ideal-type middle classes and identify
their social position and structural power vis-à-vis the state and economy.

HARVEY, DAINA* (College of the Holy Cross,
dharvey@holycross.edu)
“disaster Capitalism’, Regular Capitalism, and the Search for a
Big Mac: Undermining Assumptions of ‘What is to be Done’ for
Marginalized Communities in the Aftermath of Disasters.”

In the aftermath of Hurricane Katrina and the federal levee failures the EPA
declared 100% of the homes in the Lower Ninth Ward uninhabitable. Nearly five
years later there was no police or fire station, no continuously operating health
clinic, no grocery store, no community center, and one school where before there
had been a gymnasium and a high school. As were the whole re-
nefication of New Orleans, residents of the Lower Ninth Ward were dealing with
what Harvey (2013) has called “secondary violences”—social policies that have
resulted in the hyper-marginalization of the community. In the midst of this aban-
donment non-profits and volunteers have sought to fill the void left by the State.
These non-profits have been staffed mainly by non-residents who have brought
ideas on rebuilding sustainable communities and environmental justice, and who
have been weary of what Klein (2007) has called “disaster capitalism”—which in-
volve, in part, corporations (with the aid of government) using the “shock and awe” of
the natural disaster to seize taken-for-granted rights and raid the public
sphere. Rather than embracing the social justice mission of many visitors and
volunteers, residents simply want their neighborhood back. In many instance
these ideas and efforts have been rejected as urban experimentation. Rather
than a green-grocer residents want a Wal-Mart. Many have opposed projects like
rebuilding roads with permeable concrete to reduce the pollution of rainwater,
mer-
ket’s, and the widespread use of vacated lots for guerilla gardening. This
paper, based on thirteen months of field-work in the Lower Ninth Ward, looks at
the problems of rebuilding marginalized communities through volunteer labor in
the aftermath of disasters. Ultimately, I suggest that these problems result in a
process of misrecognition whereby rebuilding efforts stall.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
is only bringing public works of long lines of a huge coastal levee like the Great Wall. Despite being a fisherman's village, new life will start away from the ocean and with no ocean view.

Among residents, there are a lot of clashes of interests. Within a household, we can find a generational gap between the retired elderly with a pension and the younger generation who seeks a job and is raising children. While the former wants to stay within the village, the latter hopes to move out of the village, to an inland area more convenient for getting higher income, shopping, transportation and education. The town forecasts the population aging rate of over 15% of elderly will increase to 33% in the year of 2033, from 28% before the tsunami attack. The population will decrease to less than 13,000 from 17,000. How can we support the recovering process?

HASHIMOTO, AKIHiko* (Nat Inst Educational Policy Research, soubun@white.plala.or.jp)

Comparison of the “Examination Hell” (JP) and “Testing Wars” (US)

Comparison of the Examination Hell and the Testing Wars is the comparison of Japanese school examination and American school testing, mainly in the 19th century. Specifically, for Japanese examination, I will explain how Japanese elementary school examination had been composed during the very short years of the beginning of Meiji Era; from 1868 to about 1879. It seems to inherit the ethos of being official from the feudal ages when only some portions of the Samurai Class (ruling class) executed examinations for the sake of encouraging prudent students of the Samurai. However, it got the new "shape" or "form" from Western school examination information. Judging from the remaining foreign books of those ages, it is likely to say they came mainly from America. After Western information, Japanese examination got many rule books as well as guide books.

For American testing, William Reese’s Testing Wars in the Public Schools: A Forgotten History,(2013), tells us many about how testing in 19th century American public schools had flourished under the influence of Europe. The years, from 1868 to about 1879, when the information about the testing of this country came to Japan and utilized much, were such era that standardized testing was almost conquering all States, regardless of the good will to improve teaching by using statistics and testing; days of testing’s side effects.

My comparison would be made on both examinations’ (testings’) procedure of implementation, process of execution, standards for scoring, logic and ways of its utilization and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people’s understanding of assessment and evaluation of both culture differ.

Generations and Globalization: Shifting Family Relations in a Postindustrial Society

This presentation provides a cultural sociology of changing intergenerational relations in the face of globalization, focusing on a historized account of shifting family relations that have dramatically altered the landscape for elderly people in Japan today. The demographic and economic transformations that have impacted expectations of social welfare and the ground rules of social obligations will also be examined as part of a broader trend in postindustrial societies. Drawing on her work on comparative aging, Hashimoto will discuss how these shifts have influenced the cultural ideals of aging in the global era.

Multi-Sensory Experiences at Aso Farmland, Kumamoto, Japan

Aso Farmland is a multi-sensory experience for tourists. The farm stay resort allows tourists to consume local food produced in the region at 11 restaurants, exercise in an activity zone, and enjoy a variety of onsen baths including mud baths, as well as heated saunas (earth power spas) lined with different herbs and minerals as well as a cold dome. Visitors can place their feet in a pool of fish. The paper will look at attempts by the attraction to provide a stimulating environment taking visitors beyond their reliance on just sight to engage in a more holistic experience.

The Non-Nationalized Narrative of Two Korean School Graduates

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean school (Yoseonggak) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been identified with North Korea, and Korean school students are exposed to the outside prejudice that they are “brainwashed, anti-Japanese children.”

In this paper, based on an interview about whether it was appropriate to exclude Korean schools from the waiver program, I present the complicated realities of an insider’s life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation zainichi Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviewer is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as “the occasion to put my life in order,” I could hear these insider’s life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewees’ reasons and experiences are different from each other, the opinions they arrive at in this interview are similar:

1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school.
2) Neither interviewee entirely denies the value of Korean school itself.
3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one another? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (i.e. North Korean) framework.

The Disconstructive Curricular and Performance of Gendered Identity on Social Media

This article looks at the construction and performance of gendered identity through the medium of social media. Data was collected from a sub-section of Facebook webpages belonging to the Slut Walk movement. Our analysis suggests that gender is constructed through the subjects’ participation in the ‘post-feminist masquerade’ – through which their gendered identity is defined in relation to a hetroiconic masculine ideal. This situates the network of sites within a post-feminist context, characterised by the ambivalent and appropriative treatment of feminism. Acts of resistance are framed as individual, momentary ruptures of Judith Butler’s heterosexual matrix of ‘cultural intelligibility’. The online context of these ruptures is found to vest a creative potential, by removing the constraints of time and location, indicating that the impact of these ruptures may extend beyond its immediate environment.
paper will consider the policy implications of these findings for ethnic minority management, and the lessons learned for other multi-ethnic jurisdictions.

HASSLER, BJÖRN* (Södertörn University, bjorn.hassler@sh.se)  
Cooperation In Marine Governance: The Case Of Eutrophication and Over-Fishing In The Baltic Sea

Over-fishing and eutrophication caused by agricultural nutrient run-off comprise two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure in Elinor Ostrom’s work on design principles, arguing that a selection of these principles fruitfully can be scaled to serve as analytical tools at the international level. The principles of conflict resolution mechanisms, nested enterprises and monitoring are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute hard cases in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nestness is often incomplete, that is, the intentional fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

The Co-Construction of Identity As 'Japanese Women Living Abroad' in Interview Narratives

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere reproduction of personal experience but as a process of co-construction influenced by the social norms of their new communities. In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bamberg 1997, De Fina 2003, De Fina, Shiffrin and Bamberg 2006 and others), analytical methods of small stories (Bamberg 2004, Georgakopoulou 2007) and multimodality (Goodwin 1981, 1986, McNeill 1992, 2005, Kataoka 2011). Analysis of the data shows how co-construction is manifested in linguistic and other semiotic resources - final particles, supportive giving/ receiving verbs, nodding, laughter, dysfluency, overlapping, gesture, eye gaze, and so on - appearing in interview narratives. This presentation will reveal that 1) how the narrative message can be conveyed by not only language, but also other semiotic resources, 2) the participants of the conversation put much value on collaboratively constructing their mutual identities in the ‘here and now’ situation, rather than the contents of their storytelling, 3) they inevitably encounter aspects of internal conflict derived from the fact that they represent their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

HATA, MIKAKO* (Hannazono University, hata.mikako@gmail.com)  
Reading Comics with Ears

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopoeia, emonata, and even gutters convey meanings non-verbal. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page. Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made translating speech of comics catering for visually challenged people. Although translating images to voice information has been already practiced on speech translation of films, in comics-to-speech translation it is necessary to bring not only characters’ behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, whereas others have never seen pages and see comics as entertainment-oriented stories, in other words they are not so interested in the visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works. The focal points of this paper are both on translators’ experiences of reproducing comics with oral language and on readers’ experiences of reading comics with ears. This paper describes how comics communicate with readers without using images, via translators’ modest intervention, and examines what for people read comics.

HATTATOGLU, DILEK* (Mugla Sitki Kocman University, dilekhattatooglu@gmail.com)  
Reflections on the New Patterns of Exclusion within the Working Class: Exclusion As “Omission” and the Struggle of Homebased Workers Union in Turkey

Homebased work, one of the most expanding work forms in the context of globalisation, has been one of the most invisible forms of work in the global economy. This invisibility can be related to its women concentration in the male dominant world of existing organisations and systematic negligence of the second. This is why homebased workers, like other informal workers, have found ways of positioning themselves. These new agents with different aims and scope, and consequently organising strategies, have entered to the field of social movements and formal social policy. This development has not only an important effect on the field of social movements and public social policy, also marks a significant transformation in the patterns of exclusion: a shift from mere exclusion to an ‘inclusive’ one, at least in Turkey. In the past, exclusion was mainly in the form of almost complete denial of the existence of homebased work and these workers, now their acceptance as full workers do not make a sense in the decision making processes of social policy or in the context of social movements. Almost every concrete instance, they are forgotten to be invited to involve in. This negligence can also have several forms: to forget they are workers, union is not a charity association, they are not experts working for it... In some instances, when they make corrections, they are often treated as ‘systereical’, over-emotional women expressing anger improperly.

This paper describes these new patterns and takes the “omission”, as the most common form of exclusion in the case of homebased workers’ organising in Turkey. By exploring the perspective of the representatives of social movements/ organisations who omit systematically, and then, by discussion of these data with union members, aims to contribute the exploration of grounds of solidarity and action.

HAUG, CHRISTOPH* (University of Gothenburg, haug@gu.se)  
“We Want to Report about Everything!” How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partner is obliged to deliver before they receive the next slice of funding.

The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways, allowing donors to appropriate the credits for the work done by the recipients of their funds.

Based on a case study from donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of reporting. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to "report about everything", meaning: not only what the donor wants to hear. Arbitrary forms of "telling the whole story", including grievances outside the scope of the donor’s program, are interpreted as expressions of dissent aimed towards the construction of a dialogic relationship between donors and recipients. It is discussed whether this is possible within or alongside with RBM, or whether dialogue based on local experiences implies a rejection of the RBM framework.

Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence withoutSilencing?

This paper starts from the observation that most of the literature on decision-making is about the individualism: at least in the western world, it seems that a decision can only be understood as the outcome of an individual act or an aggregate thereof (voting). Nevertheless, genuinely collective practices of decision-making (consensus) are widespread across institutional and cultural settings, but the collective dimension of these is inadequately understood, leading to a confusion between unanimity (everyone agrees) and consensus (no one disagrees). Both researchers and practitioners of decision-making have largely avoided this issue, so that empirical studies often remain unclear about how exactly a decision was made, and decision-making groups sometimes find themselves in the paradoxical situation of disagreeing whether they have reached consensus or not.

Based on participant observation of numerous meetings among global justice activists using the consensus principle, this study seeks to untangle some of the conceptual confusion through a detailed interactional analysis of meetings as communicative events. Focusing on the final stage of the decision-making process, the paper identifies four types of consensus: imposed, acclaimed, hasty, and considerate. Drawing on previous findings from conversation analysis, it is argued that although they all observe the absence of voiced disagreement, they differ significantly in how this absence is constructed interactionally. Therefore, what appears to be the same mode of decision-making – consensus – should be treated as different modes, both by researchers and practitioners. The paper concludes by discussing the consequences of this analysis for radical democracy and anti-hegemonic practice, wondering whether it is possible to produce silence without silencing.

Towards a Post-Hermeneutic Phenomenology

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be interpreted in order to lay bare an underlaying and absolute meaning. Thus we tend to subject the multitudinousness of lived experiences to different kinds of selection and reduction implied by that production of knowledge aiming to render the world in clarity.

Nevertheless, the blurriness of emotive and physical reactions to the world can be said to be due not to their impreciseness but rather to their richness in nuance and complexity. Hence, they may be much precise vehicles of meaning not in spite of but on account of their indistinctness.

In this paper we ask what epistemological potentials might be revealed if we explore our lived experiences in their own right rather than try to explicate them and make them conclusive. Based on empirical research of our own, we turn our interest towards the possibilities of understanding bodily reactions during the process of research as being informative in themselves and discuss possibilities for turning them into scientific writings that likewise invite a reading not only with the intellect but also with the senses. We propose an approach to both the making and communication of knowledge, which could be called post-herme-neutic – a phenomenology not aiming at fixation of identified significance, but at a knowing that includes and even takes advantage of the fluctuating and manifold ways we experience the world when we move in it instead of stopping to make analysis.

Hormone Decline and Aging: Sociology of a Medical Promise

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine’s hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the myth of the “youth of youth”, for thousands of years and in a great many civilizations. This idea emerges regularly in the public and scientific space, from the early 20th Century attempts to transplant animal glands in order to restore the vitality of people’s youthful state to the forecasts made about “regenerative” medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have even intensified and become more structured, with the development of so-called “anti-aging” medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body’s functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible “youth pill”.

It this presentation we will first examine the construction of DHEA’s anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, impact on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

Company Brand Vs. Professionalism: The Marginalization of Women in TV Newsrooms in Japan

This paper analyzes Japanese media elites from a gender perspective in order to identify why male domination stubbornly persists even in a working environment where institutional arrangements all seem to support women, such as paid maternity leave and an equal payment agreement. We argue that the pervasive domination of corporate culture, rather than journalistic professionalism, is the source of the persistent marginalization of women in the media sector.

A growing number of women have entered the world of corporate journalism in Japan since the late 80s after the implementation of the Equal Employment Opportunity Law in 1986, but the ratio of women in senior management positions still remains at the lowest level among advanced industrial countries, according to a survey by the International Women’s Media Foundation in 2010.

Having conducted in-depth interviews on the social/educational background, professional career and life course of 21 senior news editors ranging from their late 40s to late 50s at leading TV stations in Japan, we identified clear differences between the genders in their understandings of the role of professionalism and the brands of the companies to which they belong. Female journalists tend to rely more on meritoric professionalism based upon individual skills and achievements in moving up the corporate ladder, whereas their male counterparts feel their success largely owes to informal networks and prestigious corporate brands to which they belong.

Although gender studies has emphasized the masculine nature of the concept of professionalism, and the sociology of work has revealed the self-centered ideology underlying professionalism in many occupations, we contend that playing down the role of professionals and professionalism imposes a substantial brake on change in terms of gender equality within an occupation.

HAYASHI, MAYUMI* (King’s College London, mayumi.1.hayashi@kcl.ac.uk)
tially transcending national boundaries. It will also consider how experiences and volunteers being discouraged. In conclusion, this paper will discuss suggestions with the challenges encountered by organisations. For instance, while the standardised universal Japanese models provide traditional government community resources, the British model emphasises partnership working and recognises innovation and professionalism, and Sweden's model is characterised by localism and sensitivity towards the employment of 'conventional' labour, with volunteers being discouraged. In conclusion, this paper will discuss suggestions for future care policy making and possible refinement of the care market, potentially transcending national boundaries. It will also consider how experiences and best practice from the models examined here could be utilised in other countries to pursue evidence-based sustainable care policies and promote civil society.

Pipeline Rupture

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno, near San Francisco, California. The resulting fire burned for two days. Eight people died, and thirty eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using document analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke's work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than practical change in Africa.

This paper explores the position of the "Gringo" in the racial order of Ecuador. The paper is based on 69 qualitative interviews conducted in 2011, 2012 and 2013 with lifestyle migrants from North America now residing permanently in Ecuador. They are supplemented with ethnographic field notes. North Americans in Ecuador are particularly concerned about their ethnic identity there, and describe the following community in racialised terms, as Gringo. I posit that the "Gringo" is a racial category, and while it does not carry the same negative connotations in Ecuador that it does elsewhere in Latin America, it refers to a particular phenotype, often also marked by cultural symbols, such as clothing. The paper discusses what racial gringuidad supposedly means for North American lifestyle migrants in the Ecuadorian context. These narratives tell us more about the lifestyle migrant themselves than about the real meaning attached to their apparent physical differences. The paper then identifies strategies or practices that lifestyle migrants in Ecuador have adopted in the face of their Gringo identity, or 'Gringuidad.' First, some North Americans in Ecuador have begun to police the behaviour of the North American community in a bid to optimize Ecuadorian perceptions of "Gringos," reinforcing their racialised self-identity rather than deconstructing it. The second strategy consists of individual attempts to further integrate into Ecuadorian society, particularly by learning Spanish. These practices illustrate a fantasy of ethnic mobility. Yet, even as integration promises to diminish "Gringiness," the Ecuadorian "Other" with whom lifestyle migrants desire to integrate is raced and classed in the Ecuadorian social order, thus potentially reproducing existing inequalities. The paper explores the intersection of North American racialization in the context of Ecuador, where the meaning of race is often quite different.

Violent Natures: From Coercive Conservation to Climate Change in Africa

Since the colonial era, African natures—both external landscapes and internal human dispositions—have been constructed as violent via the parallel ideologies of wildlife conservation and climate change. Both address the human impact on, responsibility for, and stewardship of the environment through the lens of violent nature. During the colonial era in East Africa, 'natives' were relegated to specific areas, their lands usurped for white settlement and the conservation of dangerous wildlife. Today, conservationists continue to violently evict residents of East and Southern Africa from apparently precarious landscapes. In colonial and contemporary conservation, both 'native' and nature appear unruly and potentially violent. Under the ideology of climate change, as well, poor, non-white populations usually bear the brunt of catastrophic natural (or unnatural) disasters, at the same time that they are blamed for contributing to the underlying environmental causes of such events. African environments and peoples are therefore constructed as inherently violent and in need of external intervention via the rhetoric of both conservation and climate change.

Each system of thought employs science and technology to cast the power-stricken, racialized 'other' in the role of the enlightened noble conservationist; evil instigator of anti-conservatism or climate change-inducing practices; or victim of the violent environments engendered by conservation and climate change. These can be described, at a basic theoretical level, on the characteristic of 'native,' nature, or both 'native' and nature, as violent. "Violent Natures" thus explores the racialization of nature by connecting the parallel stories of conservation and climate change in Africa.

The Peace-Securing Body in East African Pastoral Society

When approaching anthropologically to emergence of the new disease in the way that goes beyond a dichotomy between nature and culture, the phenomenological body, which enables to attach significance to experience, is often assumed. While its silent power of representation can be explicated, the social and political power is removed from consideration. To illuminate the body power in toto, the paper describes the process of embodiment of political violence with reference to local medicine and the subsistence activity for healing patients. The Karimojong, Dodoth and jie in northeastern Uganda and the Turkana in southwestern Kenya live in the dry savanna, keeping cattle, goats and sheep. Their living setting, the Uganda-Kenya international boundary, is trans-local-national multi-layered space, where armed violent conflict has occurred endlessly in the wake of the spread of automatic rifles and forcible pacification. Political violence separates herders’ bodies as grounds of cultural existence from particular place and time and creates new classification, and then each body becomes the antagonistic referent. Since 2000s’ disarmament policy in the area, the epidemic chronic disease, distribution, provision, conservation and consumption of cultures.

HEAP, JOSEPHINE* (Stockholm University, josephine.heap@ki.se)

Multiple Disadvantage in Midlife and Old Age - Exploring the Associations

To experience multiple disadvantage – the simultaneous occurrence of disadvantages such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life.

Previous research has established that individuals’ health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life is a time when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in midlife and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no disadvantages in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

HEARN, JEFF* (Örebro University, jeff.hearn@oru.se)

Autoethnography, Theorizing and Transnational Movements and Moments

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interrogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland (Autobiography, nation, postcolonialism and gender, *Irish Journal of Sociology, 2005*). The second focuses on changing relations to children, family and household (**The personal is work is political is theoretical: continuities and discontinuities in (pro)feminism, Women’s Studies, men and myself**, NORA, 2008). The third concerns changing relations to transnationalisations, transdisciplinary and transinstitutional developments (<i>Opening up material-discursive (trans)forms of life ... politically, theoretically, institutionally, personally**, in M. Wotjaszek and E. Just (eds.) Quilting Stories: Essays in Honor of Elzbieta H. Oleksy, 2012). And the fourth highlights the relations of men, intersectionality, organizations and profeminism in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (Equality, Diversity and Inclusion, 2014).

In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limitations; critical positionality of members of superordinate groups; the problematisation of the male “I” (Contradictory masculinities/men’s “I”: the rewriting of men, and the concept of gex, *Revista Canaria de Estudios Ingleses, 2013*); and the relation of body and writing (Writing as intimate friends ... how does writing profeminist research become methodologically challenging?, in M. Livholt (ed.) Emergent Writing Methodologies in Feminist Studies, Routledge, 2011).

HEARN, JEFF* (Örebro University, jeff.hearn@oru.se)

Interrogating Violence Against Women and State Violence Policy through Gendered Intersectionalities and Intersectional Gender: Local, National and Transnational Contexts

This paper arises from collective work within the 5-year Swedish Research Council project, “Feminist Theorizings of Intersectionality, Transversal Dialogues
and New Synergies*, organised within GEKcel Collegium for Advanced Transdisciplinary Gender Studies (Otrebro-Karlstad-Linköping Universities), with specific focus on violence seen as inequalities (Hearn, Sociological Review, 2012; Current Sociology, 2013). The larger project examines intersectionality in gender studies, in relation and dialogue with the diverse, sometimes conflictual, theoretical and political positions in feminist debates (Walby, Armstrong, Strid, 2012; Strid et al., Social Politics, forthcoming). The project is designed against this background of rich, diverse feminist traditions for theorizing of intersectionality, and informed by tensions between these traditions. This paper takes up this challenge in terms of violence, especially violence against women, and state policy thereon, addressing the place of violence in contemporary state regulation and intersectional gender relations. The paper examines the complex, situated and spatial relationship between theorizing on violence against women and state policy on such violence (Hearn and Mckie, Policy & Politics, 2008; Violence Against Women, 2010). This focus continues investigations on multiple linkages between multiple inequalities, policy and theory, in local, national and transnational contexts. More specifically, drawing on extensive comparative European data at local, national and transnational, it explores the concepts of gendered intersectionalities and intersectional gender by examining how multiple inequalities, long been prominent in feminist activism and intervention on violence, are made invisible and conceptualized in state gender-based violence policy and debates. Attention is paid especially to tendencies to degendering strategies in violence research and state policy. A key aim of the paper is to investigate how analysis can be a starting point for assessing if, how and to what extent the inclusion of multiple inequalities could increase the quality of policy, for both reducing and stopping violence, and assisting those subject to violence.

HEATH, MELANIE* (McMaster University, mheath@mcmaster.ca)

**Gender Equality or Religious Freedom? Testing Competing Rights in the Canadian Polygamy Trial**

Constitutional provisions protecting fundamental human rights are central features of liberal democracies. However, tensions exist between the construction of rights as universal principles and their application in a fragmented political world. For example, the right to be free from discrimination based on creed or gender may be at odds with each other or with other rights, laws, and practices. The Canadian *Charter of Rights and Freedoms* of 1982 guarantees freedom of conscience and religion and the right to equal protection and benefit of the law without discrimination based on race, national or ethnic origin, color, religion, sex, age or mental or physical disability. The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concerning autonomy, cultural integrity, and religious freedom are pitted against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia ruled against the polygamous marriage of a couple from the United States. The Canadian high court in its defense of the Canadian common law tradition and the inadequacy of state intervention in such matters, decided, with the support of the federal government, that the case against polygamy was not a “provision” as defined in the Canadian Constitution. The Canadian *Charter of Rights and Freedoms*, which guarantees freedom of conscience and religion, was found not to have been violated.

The present paper examines the constitutional and political arguments made in the polygamy criminal case against the polygamous marriage of a couple from the United States and the Supreme Court of British Columbia's decision to uphold the polygamous marriage of a couple from the United States.

HEATH, MELANIE* (McMaster University, mheath@mcmaster.ca)

Migrants are a particularly visible and vulnerable group due to the fact that they are not citizens of the country in which they live. Moreover, when a migrant enters another country illegally, or enters legally and subsequently loses legal immigration status, her or his susceptibility to exploitation increases. The instability of migrant status is further complicated when immigrants participate in undesirable or illegal practices in the host country. France has a particularly complicated history of migration, and involves immigrants predominantly from Gambia, Mali, Mauritania, and Senegal. During the period following World War II, immigration to France significantly increased due to the shortage of male workers. Under the family reunification immigration policy that took effect in 1974, France permitted the immigration of polygamous families. In 1993, it passed the *Loi Ponsot*, which altered the immigration law so that only one spouse per immigrant would be issued a visa. The law has had negative consequences for polygamous families, as it requires multiple spouses to divorce and “décohabitation” (physically separate their households) or face deportation. Women living in polygamy in France are particularly vulnerable. They may choose to bear numerous children to increase their monthly family allowances and to avoid deportation as guaranteed under the post-1993 legal framework. Yet, many are forced to live in undesirable situations and social housing. Drawing from in-depth interviews with women living in polygamy in France, this paper examines the ways that the legal and policy framework shapes the mobility of African polygamous wives. It uncovers the strategies these women employ to manage their precarious immigration status in France.
The Global Corporate Elite Uncovered

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multiple polar architecture of the global corporate elite. As an alternative to large-scale art and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directorates between a set of 100,000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

The Social Construction Of Prices – The Impact Of Culture, Networks and Institutional Rules On Stock Quotations

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the historical tradition of trading networks in culturally constrained frames of meaning, corporate networks and institutionalized rules. Economic sociology is well aware of such social forces. Still, sociological investigation of price formation lacks both theoretical integration and empirical evidence for how different types of market conditions interact and influence prices.

Qualification and Social Inclusion

Processes of Success Among Students in Gender Segregated VET – Qualification and Social Inclusion

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and I will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeship, ‘leaks’ a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for prenticeship, and the longitudinal development of macroeconomic structures are discussed. Secondly, I investigate correlation networks of stock listed companies using social network analysis. I am particularly interested in the shifts occurring in the network ecology after the financial crisis and the subsequent changes in each system’s stability. Finally, the change of stock repurchase laws in Germany in 1998 delivers an ‘experimental’ setting for different types of rule based information trading before and after the legislation reform. Applying Event Study methods the short- and long-term influence of repurchase plans in the US and Germany is compared.

Rethinking Child Welfare Policy

Studies on children's welfare have been pursued in a separate strand from the welfare state literature in general. Welfare state theory has for long been blind to children as actors and research on children's participation has neglected welfare state theory. This should warrant us to rethink and reformulate the concept of child welfare. The point of departure is the concept of welfare as formulated in the welfare state literature. Beyond the traditional social welfare model of welfare, children are seen as the subject of welfare policies, but also as agents. The objective of this project is to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which support or hinder the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.
surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as ‘beings’ and ‘becomings’ by recognizing that it may be necessary to invest in children’s education and child care but that this is not sufficient as long as we do not consider children’s rights to voice.

Hunting the Northern Lights

This work in process explores gendered landscapes imbuing the increased use of ‘hunt’, ‘hunters’ and ‘hunting’ in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest in Finnmark Reiselsv’s (county DMO) winter project in 2002. The evolution of the last decade’s hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedie and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bee, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfler, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relationship to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former event today is mainly a masculine pursuit which requires preparation and good physical strengths the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008).

Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as skiing and northern lights hunts. These tourists emphasise the purerness and freshness of the winter climate as well as a fascination for winter lighs during the day and night. Other tourists dislike being cold on holiday and would only travel to warmer climates. Some of these tourists live in winter destinations and know how to deal with a cold climate. Others do not. In particular disinterest in winter activities, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the indictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem, Hannah Arendt mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the witness account of the Auschwitz survivor Alfred Oppenheimer who gave a testimony at the Eichmann trial.

The paper refers to other reconciliation attempts such as the truth commission in South Africa or the Comfort Women issue in Korea and Japan and seeks to identify conditions that make future reconciliation possible.

The example of the comfort women in Japan shows that witness testimonies alone cannot lead to positive change and reconciliation as long as there is no recognition of wrongdoing and guilty behavior in the first place. In other words witness accounts can only be effective and fulfill their purpose if there is an opposition between the individual or a political body who acknowledges his wrongdoing. In the case of the Eichmann trial and the South African truth commission the perpetrators were physically present whereas in the case of the comfort women nobody has assumed responsibility.
Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleeter, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to ‘teach for social justice’, equipping them with the necessary skills during their training, and retaining them in schools in important tasks for policy makers and teacher educators.

This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants’ perceptions of teaching, learning and second-level education in Ireland.

Researching teacher candidates’ diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mismatch between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993, Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students).

Issues related to equity in and equity through teacher education admission (Child et al., 2011), access and widening participation policies will be explored with the aim of opening up important debates about what types of teachers are needed in today’s schools and how policy makers and teacher educators can assure that the most committed and suitable individuals are attracted to and can enter ITE programmes.

Distinction Practices and Socialization Of ‘Native” and “Foreign” Elites In Mexico

The paper summarizes the results of an empirical research project on “native” and “foreign” elites in Mexico in a comparative perspective. The focus is set on the elites’ different attitudes, socialization and distinction practices (in particular “completeness” versus “synecdocism”). Furthermore, the relations and interactions between ‘native” Mexican elites and “foreign” expatriate elites in Mexico are taken into account.

Similar to other ‘emerging market’ countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helú being the richest business man in the world.

Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign – bringing to Mexico their own foreign top-management (expatriates), cultures and distinction practices. The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed.

It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards synecdocism.

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The use of noncontingent incentives constitutes a well-established technique in order to reduce both item- and unit-nonresponse in self-administered surveys. While the use of noncontingent incentives is well established in the initial mailing should be the method of choice, the use of nonmonetary incentives might be more appropriate in at least two situations: Depending on the study area, various regulations on data protection or budget restrictions might prohibit researchers from sending multiple follow-up reminders as suggested in Dillman’s Total Design Method (TDM). Current research indicates that low-value nonmonetary incentives can serve as a substitute for the absence of follow-up mailings to a certain degree. Secondly, the use of monetary incentives might be disadvantageous in interaction with certain survey-topics (e.g. topics that correspond to reciprocity, morality or other social desirable norms as well as intimate questions) and might even turn out to provoke reactance on the respondent’s side.

The contribution renders the adequacy of nonmonetary incentives under these two conditions and presents the results of an experimental designed study. 400 questionnaires were sent out. Respondents, who received a survey on “Morality and Conscience in modern life”, the initial mailing of a ball pen showed significant effects on the following criteria:

- Response rate (unit-and item-non response) and response-speed
- Sample-composition
- Data Quality (Elaborateness of answers to open-ended questions and Reduction of Acquiescence Response Patterns)

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash- or money-related incentives in certain contexts.
ranging from qualified workers to task flexible and innovative workers. The third reference framework is the task-approach by Autor and others (2003) about the share of routinized occupations, which is an enhancement of the “Skill-Biased Technological Change” approach.

Questions we address empirically (analyzing primary data of surveys of employees and firms) include:
- What is the extent of RE on the labour market?
- What characterizes jobs in RE?
- Are there unequal chances for working in RE as opposed to other occupations?

Uncertain Transitions: Changing Attitudes, Values and Lifestyles of Young Finns

This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project “The changing lifestyles and values of temporary employed young people in the different labour markets of Finland” analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporary unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on theory and evidence with the biocological model of human development through life-course (Bronfenbrenner, 1995) the paper discusses about the impact of uncertain transitions on coping with shifts between dependency and independency as a result of prolonged transitions (c.f. Du Bois & Stauber 2005, “yoyo transition”).

Leaders’ Enhancement of Leader–Member Exchange (LMX) Relationships: An Examination of Leaders’ Cognitive Support and Knowledge Resources in Research Group

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers’ perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigate the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM): Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

Leaving the Parental Home and the Material Conditions of Entering Adult Life

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnett, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars insisted on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain autonomy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyzes are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into account other considerations like life-events, and information about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents’ household is correlated with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

HENDERSON, LESLEY* (Brunel University, lesley.henderson@brunel.ac.uk)
Mediating Mental Distress in Young People: The Role of Popular UK Media in Challenging Stigma

Most mental-health needs in young people are unmet, even in high income countries and ‘stigma associated with mental disorder is a key challenge’ (Patel et al, 2007). Media representations are considered to play a key role in fuelling stigma though this is not a new problem. Mental illness and prejudice has a trajectory which predates modern media and is deeply ingrained culturally (Signorilli, 1993). This paper draws on semi structured interviews with programme makers and source organisations as well as thematic content analysis to explore messages concerning young people in mental distress. What role might popular media play in helping to challenge or perpetuate stigma? Are there unique opportunities created by popular television that challenge prevailing representations of young people in distress? How do source organisations work with programme makers to create positive collaborations? What are the associated opportunities and pitfalls? Is there evidence that such representations can change attitudes and beliefs? This paper builds on studies that have identified connections between media coverage and public beliefs about mental health (Philo 1993). The negative coverage of mental health is considered to bear significant responsibility for fuelling public prejudice and misconceptions (Wahl, 2003). Acute conditions such as schizophrenia are associated with particular stigma and the media stereotyping of those affected by such diagnoses is considered to have significant repercussions for their social network. Charities and other organisations have explicitly targeted popular prime time drama in a range of successful health campaigns and there is evidence that young people are receptive to ‘public’ issue messages within popular media formats (see Henderson, 2007). This paper examines the relationship between UK entertainment in shaping public understanding of risk and suggests that populist depictions of young people in mental distress can challenge prevailing perceptions of those affected and represent their experience in unique ways.

‘What’s in a Gauge?’ an Assessment of Self-Reported Measures of Informal Activities

The relationship between different measures of informal activities is at best unpredictable. In theory, if one estimated the same reality, the outcome of different measures should point in the same direction. That remains unclear in the case of informal activities. This paper assesses self-reported survey measures of informal activities. If surveys measure informal activities in a reliable way, the possible applications are extensive. In comparison to national level macro-economic estimates, their potential is much bigger.

One source of bias in surveys is the respondents’ propensity to answer sensitive questions in a socially desirable way. This problem would be limited to the impact of the error terms on the condition that the bias were randomly and evenly distributed throughout the population. One possible consequential issue in questionnaire based measures of informal activities, however, is that the social desirability bias may be associated with certain group characteristics. In this contribution we will investigate the indication that the prevalence of the social desirability bias in a given population is positively associated with experiences concerning government interventions. The lack of rule of law or of basic individual rights should influence the willingness to honestly disclose past illegitimate actions such as tax evasion off-the-books work by respondents.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Indeed, the disturbing fact is that the gap between macro-economic and survey based estimates of informal activities seems to be bigger in former communist regimes in Central Europe or repressive right wing governments. This paper tests the prediction that the social desirability bias in self-reported survey measures of informal economic activities depends on this institutional history. Based on the second round of theEss, this thesis is tested with the help of comparison with other forms of (economic) deviance, the impact of generations to the social desirability bias and direct measures of negative attitudes toward informal activities.

Creativity As Anti-Alienation: Towards a Sociology of Artistic Labor

Based on qualitative research in the fields of the visual arts and design we aim to show that the actors in those realms experience the non-alienating qualities of their work even under current conditions of an intensified economisation of the “aesthetic” sphere. The idea and the activity of “creative labour” thus may still serve as an ideal for a Critical Theory of alienation. We propose that this view is legitimated by the self-reflexive stance of this type of activity on the one hand and the self-proclaimed distance to economic logics in the mode of production on the other hand. For example, some artists we interviewed who were quite aware of the commercial dimension of their activities proclaimed anti-economic zones and un-commercial times in their creative process. The autonomy attributed to the idea of creativity and the practice of creative work thus seems to allow for a relative and at least temporal distance to economic calculations and its potentially alienating effects.

This is a surprising result because it runs against two major trends in contemporary European sociology. First, against the impetus to interpret the discourse on creativity mainly in its complicity with neoliberalism (for example following the sociology of critique of Boltanski/Chiapello or proponents of Governmentality Studies such as Thomas Osborne or Ulrich Broeckling), and secondly, against the perceived need to focus on issues of marketization resp. financialization and economic speculations in the analysis of all areas of social life (according to Michael Sandel and others). While both trends can hardly be ignored, the ‘liberating’ effect and the ‘paradox’ of creative work for the actors themselves however seems to be relatively stable. This is an argument in favour of the classical “artistic” critique of capitalism that is sometimes under a meta-critical attack in recent sociological research.

HENNING, CHRISTOPH* (University of St. Gallen, Switzerland, christoph.henning@unisg.ch)
Reification, Money, and Wage Labour: A Defense of the Classical Theory

Reification is not a new topic, neither in Sociology nor in Social Philosophy: Authors such as Geo. Burdick/Luckmann, Hannah Arendt and Helmut Plessner have described it already. Astonishingly, however, when Axel Honneth ‘reconstructed’ this concept from the angle of his normative theory of recognition in 2005, he did not include the ‘classic’ factors of reification: money and wage labour, in his new version of the theory. This lead, or so I will argue, to a re-idealisation of the concept which had more in common with Hegel than it had with the classical Critical theory that used this term in a Marxist understanding.

Against this moralization and de-economisation of the term, this paper argues for a re-economised theory of reification. The starting point for an alternative reconstruction, however, is not History and Class Consciousness, but the political economy of Karl Marx himself, who already used the term in an interesting way (e.g. in V. III of Capital). The paper will first develop and defend a sociological interpretation of Marx’s Pariser Manuskripte (1844) and Capital (1867), where Marx identifies the mechanisms of a monetarized economy and a production based on wage labour as the main drivers of a capitalistic ‘reification’ of social relations. In a second step I will apply this reformulated classical theory of reification to today’s globalized and flexibilized economy. I would like to suggest that conceptually the ‘classic’ tradition of Critical theory still has a lot to offer for an analysis of contemporary capitalism.

HENRICKS, KASEY* (Loyola University Chicago, khenricks@bobfn.org)
No Taxation without Discrimination: The Racial Interconnectedness of the Three-Fifths Clause, Taxation, and Alienation

“No taxation without representation!” These iconic words of tax rebels like the “Sons of Liberty” marked the birth of a new nation. Yet when they became formalized under law, neither can be fully understood without reference to race.

In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and enfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not “no taxation without representation” but “no taxation without discrimination.”

From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization, an Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization. An Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

After years of numerous worldwide strategies and policies, implemented by different public, private, national, and transnational actors, who want to install a gender and equal opportunities approach for women, what is the final assessment of these practices? What true empowerment and what real capabilities have been achieved by these different actions? Are there any significant transformations that we can identify in these attempts?

Some interesting answers to these questions can be found in the case of female seasonal agricultural workers. After going through a process of proletarianization and insertion into, by definition, precarious and unstable work, numerous changes have affected their social, economic, cultural and domestic environment. These include access to a consumer society, participation in new networking and the sharing of responsibilities in the family area. But in a context of great inequality and precariousness, how can we talk about empowerment and capability?

Purposes and Rationalities in a Globalized and Multicultural World: A Study of the Agricultural Sector in Chile

Purpose and rationalities in the agricultural sector of Chile are shaped by the need for productivity and profitability, which are key goals of the sector. This is driven by the globalization of agriculture and the need to adapt to the changing market demands. The agricultural sector in Chile faces significant challenges, including fluctuating global markets, environmental constraints, and the need to maintain a competitive edge in a rapidly changing world.

Hermanowicz, Joseph* (The University of Georgia, jch1@uga.edu)

Colleagues and Quests For Immortality

Achievement in the professions is situated relationally. Work comes to constitute contribution only by the judgments of colleagues. This is paradoxically the case in science and scholarship, a realm understood to be imbued by charismatic authority, where colleagues not only sanction behavior but also serve as a conduit by which others are immortalized for their contributions. Normative, it would stand to reason that colleagues would be held in high regard; the work of scholars and the lives of scientists and scholars, depend on them. The present work, however, examines empirically how incumbents value colleagues in actuality. Taking academia as a site for analysis, the present work investigates one aspect of the social significance of colleagues by asking how scientists might desire being remembered by them. The study is thus centered on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the desire being remembered by them. The study is thus focused on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the desire being remembered by them. The study is thus centered on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the desire being remembered by them. The study is thus centered on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the desire being remembered by them. The study is thus centered on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the desire being remembered by them. The study is thus centered on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the desire being remembered by them.

Data come from in-depth, face-to-face interviews with 60 scientists at a variety of points in their careers and employed at a range of types of universities.

The results reveal a highly circumscribed set of ways—just eight in number—that scientists wish to be remembered. Ways of remembrance cluster on professional versus personal grounds, which constitute a contest in the politics of reputation and commemoration. In addition, responses vary by departmental tier, age, and productivity. The discussion exposes social codes of scientists, which, while purporting to offer a universal and contradictory, are used to project a transcendent route to remembrance, nested in the context of work values, norms, and perceptions. Anticipation of the self in memoriam is argued to constitute a principal means by which people socially construct status.

The paper is fully written and complete. The presentation will discuss its major points.

Internationalization of Knowledge Work in Argentina: The Case of ‘Global Professors’

Globalization has changed the world in many aspects relevant for professionals and ‘knowledge workers’, such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of ‘symbolic analysts’ and other ‘knowledge workers’, who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for ‘knowledge workers’ and for cross-border higher education, and subsequently this may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a ‘global professors’ in 21st century. A growing number of professors are working in different countries but without moving: moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing on Argentina.

BIALAKOWSKY, ALBERTO* (Universidad de Buenos Aires, albialo@gmail.com)

Sociología DEL Trabajo Y Desigualdad: Nuevos Desafíos Globales - Labor Sociology and Inequality: New Global Challenges

En 1995 reflexionamos sobre la Sociología del Trabajo y sus paradigmas disciplinarios, afirmando que había que superar el reduccionismo economicista. Tan- to por la necesidad de incluir otras perspectivas, como por las dificultades que suponía dar cuenta de las nuevas realidades de las transformaciones post-fordistas en el capitalismo globalizado.

En 2012 actualizamos la descripción y análisis histórico de los procesos sociales de trabajo, ampliándolos a escala global y relacionándolos con el desarrollo del moderno sistema mundial.

El propósito de este trabajo continuar el esfuerzo para superar el mainstream de la Sociología del Trabajo, con miradas euro centrícas que consideraban como modelo de trabajador al obrero industrial asalariado, lo que ya era insuficiente para dar cuenta del mundo laboral de los “Años Dorados”, fuera de los países centrales.

Esto implica la necesidad de abarcar en el análisis un espectro más amplio y diverso de categorías del trabajo, y la elasticidad permanente que supone la existencia de población “supernumeraria” en diferentes momentos y localizaciones como, por ejemplo, ahora en la Unión Europea.

La crisis a la que hoy se enfrenta la Humanidad, ya no sólo es económica sino sistemática: involucrando los recursos planetarios disponibles, alterados y extingüibles.

En segundo lugar, para la sociología laboral, la necesidad de renovación para comprender el sistema dominante capitalista (procesos financieros y tecnológicos, poderes globales); la racionalidad y metabolismo del sistema; la baja respuesta global e identitaria de los colectivos sindicales tradicionales; el avance de las fuerzas productivas tradicionales y sus contradicciones; las nuevas transformaciones en el capitalismo globalizado.

Para ello, se abordarán elementos de las nuevas corrientes del pensamiento crítico y de las realidades del trabajo hoy para dar cuenta de cómo afectan a la división del trabajo global y a los trabajadores.
Globalizing the Classroom: Innovative Approach to National and International Learning

This essay examines an innovative approach to teaching globalization and assesses a course on Globalization, Social Justice and Human Rights co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, polities, environments, and human societies are experiencing great connections across the globe, the educational system continues to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of student learning involves non-print media, including the use of technology; the role of language and communication, and; accommodating diverse educational needs/approaches, including undertaking collaborative group work across borders. A shared core syllabus can be modified by institution to satisfy local needs. We examine the following: the logistics of this course; the obstacles and possibilities in its implementation, including the use of technology; the role of language and communication, and; mechanisms for adapting faculty participants’ needs to local curricular guidelines. We also address the benefits of the course for students, such as exposure to a wider variety of perspectives and pedagogical approaches; the development of teamwork skills, including developing a flexible mind frame; accepting and accommodating diverse educational needs/approaches, and; promoting interdisciplinary collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic calendars, facilitating transnational group service learning projects, and the greater time demands required to coordinate and monitor students’ online interactions. Our objective is to continue improving and introducing approaches to teaching globalization.

Aesthetic Proximity and Performance Among "Hatsune Miku" Cosplayers in Japan

"Cosplay" is an activity popular among Japanese youth where somebody dresses up, in the most of the cases, as a fictional character. I focus on those cosplay behaviors on the character named "Hatsune Miku," a voice synthesizer presented as a female fictional character developed by "Crypton Future Media," under the concept of a "virtual idol." This synthesizer uses the "vocaloid" technology developed by Yamaha Corporation and is used to "sing" the songs produced by her users. However, unlike many other popular characters, Hatsune Miku is characterized by her offer a distinctive aesthetic. Never before, instead of lose "reality" because of this "lack," is precisely thanks to this characteristic that she has the versatility of appearing in many media (mainly User Generated Media) and be used freely in many different ways, becoming a perfect icon of the " Participatory Culture," as imagined by H. Jenkins (2006). The particular kind of reality that supports her success as a "virtual idol" is described following "character performance" theory proposed by G. Ito (2005). In my study I analyze the role of this kind of reality among Miku's fans in Japan, departing from Ito's theory of "Kyaro." However, while Ito's theory is centered on iconic futures of Japanese comic books (manga), I will adapt his theory into a wider use of the "Kyaro," and particularly its performative use in the cosplay. For this aim, I will move from the textual iconicity focused by Ito, towards the idea of "aesthetic proximity" as proposed by Sandvooss (2005a, 2005b) in the study of fan affectivity, and therefore, focusing not on the "visual" but on the "aesthetic" dimension of popular culture. As a result, my aim is to present an example of how "reality" is constructed and performed in social practice in the particular case of contemporary Japanese cosplay culture.

La Industria De La Migración En Los Flujos De Trabajadores Temporales Legales De México A Estados Unidos

La producción de la migración internacional, ya sea como movimiento colectivo o act individual, no solo es resultado de las grandes desigualdades económicas entre países. La migración también requiere de intermediarios que ponen en juego saberes e infraestructuras que vinculan efectiva y eficientemente a empleadores, por un lado, y trabajadores, por el otro. Definimos a este conjunto de intermediarios como la industria de la migración. Aunque es comúnmente asociada con las migraciones indocumentadas, la industria de la migración también está presente en los flujos autorizados por el estado, sean éstos permanentes o temporales. En este trabajo analizamos el papel que la industria de la migración juega en la organización del flujo de trabajadores mexicanos a los Estados Unidos, bajo el programa de visas temporales H2. Si bien el programa de visas H2 es un programa del gobierno norteamericano creado para suministrar trabajadores de baja calificación a la agricultura y otras industrias intensivas de mano de obra, el manejo práctico de dicho programa está en manos privadas. La administración práctica de este programa inicia con un conjunto de agencias estadounidenses que certifican, a nombre de los empleadores, la "escasez" de mano de obra en determinada industria y región de la Unión Americana. Estas mismas agencias colaboran con contratistas mexicanos y norteamericanos para anunciar, seleccionar y contratar a los trabajadores que deberán de tramitar sus visas H2 en el consulado de los Estados Unidos en Monterrey, México. Esta ciudad es el epicentro de la industria de la migración que maneja programa H2. En este trabajo analizamos a los actores que la conforman, sus saberes y articulaciones: reclutadores, transporistas, hoteleros y tramitadores de documentos.

The Industry of Migrant Mobility: Bastard Institutions and Infrastructures in the Eastern and Western Migrant Corridors of the U.S.-Mexico Border

The international migration scholarship has paid little attention to the actors, institutions and infrastructures that facilitate migrant mobility. In this paper, we use the concept of migration industry as "bastard institution" and "infrastructure" to analyze migrant mobility in two corridors of the United States-Mexico border: the Monterrey-Texas or eastern corridor and the Tijuana-California or western corridor. Coined by sociologist Everett Hughes, bastard institutions are "chronic deviations from established institutions, which provide alternative distribution channels of goods and services. The migration industry can be conceptualized as a bastard institution in that such industry and its actors provide alternatives to state sanctioned mobility across international borders. We also conceptualize the migration industry as infrastructure, that is, as institutionalized means which facilitate migrant mobility. How did a migration industry of migrant mobility emerge
in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

**Thinking through Worker Responses to Globalisation – What's Geography Got to Do with It?**

Everywhere we go, it seems, we hear about globalisation. And, if we are associated with a labour movement in any way, we often hear a corollary to this globalisation talk – ‘workers must organise globally’, ‘unions must internationalise’, and many similar such statements. Certainly, I don’t want to suggest here that these are not important elements in a vibrant labour politics that seeks to confront the untrammeled power of global capital. There are growing numbers of labour unions who are merging across international borders as a way to gain leverage in the global economy. But what I do want to suggest is that responses to the activities of global capital are more complicated than a simple ‘we need to globalise’ response. And part of what complicates this is questions of geography.

In this paper, then, I will detail some of the geographical approaches that a group of self-styled ‘Labour geographers’ have developed to think through issues of worker power to show how the way in which the geography of capitalism is made is both reflective of capital-labour conflicts but also constitutive thereof. In particular, I will focus upon two claims which, when viewed through a geographical lens, are problematic than at first perceived, these being: (1) the claim that workers must organise at the same geographical scale as capital if they are to have any purchase upon the world economy (i.e., globally); and 2) that transnational organising by workers is necessarily progressive. Such geographical perspectives provide a means to think about world order and political praxis in geography. But what I do want to suggest is that responses to the activities of global capital are more complicated than a simple ‘we need to globalise’ response. And part of what complicates this is questions of geography.

**Is There a Field of Art in Russia?**

A popular opinion among the international and Russian art communities is that Russian art collectors—often thought of as nouveaux riches—have no taste. Contemporary Russian art is also poorly received by both, and frequently dismissed as derivative of western art. And Russian art world insiders often complain that because of a lack of education, the general Russian public does not understand temporary Russian art is also poorly received by both, and frequently dismissed as derivative of western art. And Russian art world insiders often complain that because of a lack of education, the general Russian public does not understand non-Russian art from the general perspective of communication and restructures the first accounts of generalized symbolic media in the form of money, payments and today’s nexus of exchange, as initially described by Marx and later by Adorno. Second, the piece studies how monetary economics includes within in its internal operations in front of an increasingly complex environment. The third part of the paper describes the epistemological transformations that are required. In effect, the current development of autonomous systems asks for different methodologies and epistemological perspectives in order to observe and decrypt the new landscape arising from the way in which society has evolved.

Increased reflexivity within system’s production (Luhmann, 1995) has important consequences in respect to the communication flow in society. What are these consequences? Wilke (Willke,2007:14) envisages the market within a variety of mechanisms to ensure coordination and cooperation. Nevertheless, disembodied media of communication may have erosive effects upon previous modalities of coordination and cooperation. In what extent the recent developments of derivatives and newer media of communication within economy renews Marxist perspectives of reification?

Concluding, a comparative analysis of the communicative power of distinct media of communication must be part of economics. This supposes an enlargement of communication as a field in order to comprehend the distinct systemic varieties of communication at stake, the diverse semantic and praxical purposes that they serve, and the possibility of overlapping communications that create further risk.

**The Logics of Bureaucratic Appointments and the Construction of the New Ecuadorian Migration Policy**

This paper explores the logics of bureaucratic appointments during the first five years of the Ecuadorian president Rafael Correa’s administration (2007-2011) through the case study of recruitments in different levels of bureaucracy in one of the government’s new emblematic institutions – the National Secretariat for Migrants. With this case study, we aim to better understand the relations between bureaucratic appointments within the Secretariat and the process of designing and implementing the new Ecuadorian migration policy.

By introducing a typology of actors that traces their careers (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees’ affiliation to Correa’s party, Alianza País, but also on their involvement in the social movement organizations mobilized for the migrants’ cause.

Relying on this *tableau* of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of capitals (Bourdieu, 1972, 2004), practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the restructuring of the bureaucratic field during the Correa administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

**Consequences of Newer Media of Communication within Economy As a System**

In order to understand the future of economy as a social system, my research review a theory of media from the general perspective of communication and retraces the first accounts of generalized symbolic media in the form of money, payments and today’s nexus of exchange, as initially described by Marx and later by Adorno. Second, the piece studies how monetary economics includes within its internal operations in front of an increasingly complex environment. The third part of the paper describes the epistemological transformations that are required. In effect, the current development of autonomous systems asks for different methodologies and epistemological perspectives in order to observe and decrypt the new landscape arising from the way in which society has evolved.

Increased reflexivity within system’s production (Luhmann, 1995) has important consequences in respect to the communication flow in society. What are these consequences? Wilke (Willke,2007:14) envisages the market within a variety of mechanisms to ensure coordination and cooperation. Nevertheless, disembodied media of communication may have erosive effects upon previous modalities of coordination and cooperation. In what extent the recent developments of derivatives and newer media of communication within economy renews Marxist perspectives of reification?

Concluding, a comparative analysis of the communicative power of distinct media of communication must be part of economics. This supposes an enlargement of communication as a field in order to comprehend the distinct systemic varieties of communication at stake, the diverse semantic and praxical purposes that they serve, and the possibility of overlapping communications that create further risk.

traditional concepts of cognition is urgent. Understanding emergence takes then a central role.

The implications of my research are 1. A decentring of the anthropic perspective to understanding complex social communication. 2. A revision of determinist views to ascertain conflicts in social systems’ communications. 3. My research offers a practical approach to maximize the possibilities that direct human agency has to circumvent stabilized communications in social systems. Finally, the piece offers new venues to understand the relationship between human agency and systemic stability.

HERRON, MELINDA* (The University of Melbourne, mherron@student.unimelb.edu.au)

Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of ‘Australian’ national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethical-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric.

Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insights into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting ‘flavour of the month’ political and institutional discourses.

Politicization of the Youth in Germany – Two Case-Studies about Protest Movements

In this paper I want to explore the criminalization and politicization of young left-radicals (anti-germans) through the use of biographical methods. I found a connection between young left radicals and graffiti artists and gang-members in the 1990s in Frankfurt am Main, because of their experience of racism and disregard in the German host society. After the German reunification a new form of politicization took place as well as on the political left side of society as on the side of migrants. The attacks on the home for people seeking asylum in Rostock, Mölln and Hoyerswerda led to other aspects of politicization that will be discussed. Both groups felt affected by this situation. In the session I would like to present two cases. The first one is about the approach of an anti-german activist. The second one deals with a former gang-member from the 90s. Both cases are based on narrative interviews and participant observation for example the ways of acting in demonstrations.

HERTOGHS, MAJA* (PhD Student, hertoghs@fsw.eur.nl)

Shaping National Borders and Imagining National Belonging through the Professional Practices of Asylum

This paper is part of an ongoing ethnographic study of the Dutch asylum process. I explore how competing professional practices of ‘the asylum procedure’ shape a specific kind of (national) border-performance and works to produce images of national belonging.

Non-Western migrants pose a dilemma for ‘nation states’ leading to a manifold of control measurements and monitoring strategies. In part this dilemma is dealt with in and through an asylum procedure that incorporates both the compassionate promise to protect ‘authentic refugees’ and repress a complexity of differently classified non-Western migrants. In this spatio-temporal asylum process the asylum applicant resides in a liminal manifold of interaction, in which professional negotiations and visualizations of ‘deservingness’ unfold between legal representa-

atives of asylum applicants and well-trained IND officers representing the state. Such asylum practices can be understood as particular ways of performing the border (cf. Green, 2010). While, often, national borders are taken for granted as stable, fixed and as an ever-present reality, a national border is dynamically made and unmade, present or non-present. The presence and making of the border is a process that is dependent on a distinct and particular way of well-developed border regime, such borders radically disappear when flows of capital are of concern (cf. Appadurai & Holston).

Through the ‘problem’ of asylum and non-Western immigration the national border is made into a (liminal) space of separation; in various detention or ‘application’ buildings ‘asylum seekers’ are classified (separated) as either ‘good’ or ‘bogus’ and, accordingly, labelled as (un)deserving to enter the ‘sovereign’ domain of the ‘national community’. As such, the border-performances of the asylum procedure shape specific and diverging relationships between the ‘national self’ and the ‘other’. These professionalized border practices, consequently, produce and visualize images of national belonging.

HERVE, BRUNO* (EHESS (Paris), ph. herve@gmail.com)
Le paternalisme recylé. Le Cas D'un Projet Minier Au Pérou

Le paternalisme comme système total régiissant la relation entre employeur et salarié a été en essor à la fin de l'industrialisation et du travail salarié en Europe. A travers ses différentes caractéristiques et ses différents usages, (encadrement de la population marginale, outil de fidélisation et de discipline, univers clos, outil de contrôle politique et social permettant de faire écran à l'Etat et aux luttes sociales), ce système demeure au travers de relations plus complexes et d'acteurs nouveaux.

Nous observons ce système de domination au Pérou, où certaines entreprises minières ont un contrôle non seulement sur leurs salariés, mais sur l'ensemble de la population avoisinant le projet minier. Nous voulons étudier la relation entre l'entreprise minière Suisse Xstrata, et la communauté de Fuerabamba au Pérou. Installée depuis 2005 sur le territoire communal, l'entreprise développe des stratégies d'adhésion à son modèle, notamment à travers le système de Responsabilité Sociale.

Le paternalisme n'est pas, ici, uniquement la prise en charge des employés par l'entreprise, mais en système intégrant les habitants de la communauté (fidélisation, dépendance, distraction, suivi « social », sponsoring, etc.) pour le bon déroulement de son projet.

Ainsi, l'entreprise remplace l'Etat, crée son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et des ateliers, (ré)invente des traditions et des concours de danses traditionnelles, promeut le développement dans la communauté et s'impose comme l'entity légitime pour prêcher la bonne parole aux paysans.

HERVIK, PETER* (Aalborg University, hervik@cgs.aau.dk)
The Nexus of Scandinavian Exclusionary Thinking and the Naturalization of Difference

Studies of European political party programs, social movements, news media coverage, scores of books, and social media networks have embraced a negative dialogue towards migrants, whose identities are increasingly seen as incompatible with "Western" values and presenting a major challenge to the democracy. Sponsors of these public discourse support anti-migration and oppositionary stances to "migrant sympathizers", who are often represented as traitors or cowards. These also fuel a process where xenophobia and zero-tolerance have become naturalized and morally accepted ways to respond to the non-Western migrants. But how do people reason reason on these issues in everyday interaction and during interviews? The aim of this paper is to discuss how negativity against migrants in Scandinavia is related to negative beliefs towards "multiculturality", "feminism", and "liberals" (left-wingers) in Scandinavian popular reasoning about difference. While there is much research about different forms of exclusionary beliefs separately and against specific collectivities, there is little scientific knowledge about how one belief co-exists with another as figures in reasoning. We approach this coexistence as a "hexus of exclusionary beliefs" with its blurred relations, inherent contradictions, and taken for granted assumptions. Through interactive methods that include a variety of qualitative interviews and participant observation followed by analysis of online social media and web news commenting, we seek to understand the cultural logics of this contemporary Scandinavian reasoning about difference, and if successful we can supply some input to the discussion whether the anti-relations are believed by diffusion, analogy, correlation, or competition.

Re-Membering the Past: Biblical Archaeology Between Secularization and Religionization

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both “religion” and “the secular” are not universal nor essentialist entities, but rather contingent dimensions of social life that are embodied in time, place, and changing historical circumstances. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monotheistic religions was disrupted by the secular school of biblical criticism that flourished in Germany from the mid-19th century and challenged the historicity of the biblical narrative. A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavating sites mentioned in the Old Testament and thereby testifying to the historicity of the biblical events. This approach was enthusiastically adopted by secular Israeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion.

Since the 1990s, the pendulum has swung toward a critical view of the archaeological data. Secular scientific archaeology rejected the shackles of religion and national concerns.

HERZOG, HANNA* (Tel Aviv University, hherzog@post.tau.ac.il)
Present Absentees: Internal Refugeeism As Location and Identity in the Second and Third Generations of Palestinian Women Citizens of Israel

I explore the emergence and significance of the identity of “internal refugees:” the identity of Palestinian citizens of Israel who were expelled from their localities in 1948 and, though remaining within the state of Israel's borders, were denied the right to return there, and were forced to reside in other places. The analysis is based on 15 biographical narratives of women who are second and third generations of internal refugees who were born in the host localities.

The theoretical and empirical claim is that refugeeism as location and as identity is a liminal arena that both enables an examination of women's experience and offers a new viewpoint for understanding Jewish and Palestinian societies as well as women's experiences. My argument is twofold: first, women's multi-faceted marginal location within both Jewish society and their own society enables them to challenge both societies.

Second, internal refugee status for the second and third generations of Palestinian citizens in Israel, has become a category of identity alongside national, ethnic, religious and gendered categories. It is an identity category through which existential experiences are interpreted, and a collective, familial and personal history is constituted. Like national, ethnic, and gendered identity, this category is also subject to constant negotiations and contestation over its boundaries and meaning, but is unique in its location. From the woman refugee's position somewhere/nowhere, women are able to develop a strong political critique towards their own society (Palestinian within Israel, in the Occupied Territories, in the Diaspora) and toward Jewish society.

Family Matters: The Effect of Demographic Changes in Family Patterns on Rising Income Inequality

The purpose of the proposed study is to investigate the impact changes in family patterns have on the rise in income inequality. Our study focuses on changes in family patterns in Israel during the last decades and their relations to the rise in income inequality across Israeli households. Specifically, the research will focus on changes in women's labor force participation, and changes in educational homogamy and how they affected income inequality. During the last decades income inequality rose dramatically in Israel. At the same time, women improved their educational attainment and labor force participation, similar to what is found in other industrialized countries. Using data from the Israeli census of 1983 and 2008, we present a decomposition of the Theil Index in order to explore the relative “contribution” of the increase in women's labor force participation and changes in assortative mating.

Our preliminary results indicate that the widening inequality was by and large a result of widening inequalities within the different types of households (based on education). This might indicate that educational assortative mating alone cannot explain the increase in inequality and should be, therefore, studied in tandem with the actual work patterns of women in households with different levels of spouses' education. The period under question witnessed a rise in women's labor force participation (Kimhi, 2012). While most households in Israel are composed of two earners there is still a substantial variation among them in their earner composition, with some having two full-time earners, while in others one spouse (or both) work on a part-time basis, and still others have only one provider. The effect of women's employment on inequality seems of great importance, since their pattern of work is more varied than that of men.

Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area

Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research area is also, as a following question: how can vulnerable coastal areas make a transition towards areas that are more resilient and better prepared to cope with unexpected ecological, social and economic changes in the future? In this paper the concepts of tourism, complex social-ecological systems, resilience and planning will be illustrated by the case of the Dutch Wadden area, which is one of the largest tidal wetlands in the world and was enlisted as UNESCO World Heritage in 2009.

This paper will be organized in three parts. First, we will examine the concept of tourism and indicate where the academic gaps and shortcomings regarding tourism in vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Ballesteros, 2011) and to find ways to develop and protect at the same time. Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable areas through different scales. Planning is important and has to be done carefully, since tourism can lead to regional development, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Reclaiming Democracy: Popular Participation of the Left and Right in Venezuela and Bolivia

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to form a socialist revolution in Venezuela and Bolivia. To date, PB has only succeeded in the Bolivian Left cases.

Venezuela also successfully implemented PB and has made a transition in a socialist direction. PB, which was first introduced by the socialist Chavez, has been continued by the socialist government of Nicolas Maduro.

The economic and political shortcomings of representative democracy have led many to search for alternative, more direct and participatory forms of democracy. This has led, in particular, to local-level experimentation with popular control over political decision-making, via institutions such as participatory budgeting, a practice giving citizens control over local budget decisions that has spread to more than a thousand cities worldwide. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony.

Juilio Caro Baroja (1914-1995) was a Spanish-Basque social anthropologist and one of the founding fathers of modern Spanish and Basque Anthropology. Despite his lifetime achievements and his recognition as being one of the leading figures in the field - Caro Baroja is the author of two dozen books and numerous articles - internationally speaking, Caro Baroja and his work remain barely known. The lack of international acknowledgement is partly due to non-translation, just as he did for his own work. In my presentation we will look at Caro Baroja and his work as that of a forerunner to modern cultural sociology.

Participatory Democracy and Socialism: How to Extend Participatory Democracy from the Political to the Economic Sphere

The economic and political shortcomings of representative democracy have led many to search for alternative, more direct and participatory forms of democracy. This has led, in particular, to local-level experimentation with popular control over political decision-making, via institutions such as participatory budgeting, a practice giving citizens control over local budget decisions that has spread to more than a thousand cities worldwide. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony. These characteristics are: internal democracy; links to popular movements; a prefigurative commitment to democratic socialism; and links to/autonomy from the national state. This argument is illustrated by examining participatory control over political and economic decision-making in Torres, which has been called "Venezuela's first socialist city".

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to form a socialist revolution in Venezuela and Bolivia. To date, PB has only succeeded in the Bolivian Left cases.

Venezuela also successfully implemented PB and has made a transition in a socialist direction. PB, which was first introduced by the socialist Chavez, has been continued by the socialist government of Nicolas Maduro.

Global Academic Participation: Opportunities and Threats

A recent Japan initiative, “Global 30 Project for Establishing Core Universities for Internationalization,” aims to recruit 300,000 additional students from outside Japan by 2020 to study in English, and to send more Japanese students overseas, mainly to English-speaking areas. These and other developments are a response to decreasing numbers of Japanese students studying abroad, and demographic shifts domestically.

Gradot (2007), presenting a comprehensive survey of global trends involving English Language education (ELI), outlines a strong economic correlation with language learning. This economic imperative has influenced some Japanese companies, such as Uniqlo and T.J. Maxx, to pursue higher English proficiency from a number of their workforce. This indicates a change in attitudes to the professional use of English in the workplace, but may not be matched by institutions of higher education in Japan. Yamagami & Tollefson (2011) report that globalization forces can offer opportunities and threats for global non-native speakers of English.

A higher educational approach promoting awareness and skills necessary to be global, are keys to gaining access to predominantly English academic discourse. Such access can lead to the sharing of common life goals and more specific participatory mechanisms across national boundaries and cultures. The promotion of both global awareness and skills, based on Steiner’s three-tiered model of social life development, involves discipline-specific information exchanges and knowledge-sharing, specific genres, highly specialized terminology, and a high level of expertise (Swales, 1990).

Content and language integrated communication learning or CLICL, prioritizing academic literacies and discipline-specific content, provides learners with knowledge, skills, and life values enabling them to be mobile in local and global workplaces, including academia. Our paper provides an account of CLICL, which balances academic literacies and discipline-specific knowledge, skills, and values. We outline the practicalities that nurture CLICL, or lead to its rejection.

The Changing Significance of Social Class in Later Life

During the 1980s the concept of class constituted a fundamental touchstone of social gerontology. This was especially true within the political economy approach. However, with the development of societies of a ‘late’ phase of modernity this concern was overshadowed by an engagement with other stratification orders. This has had the consequence of leaving class analysis “surprisingly underdeveloped”. Although the field does at times focus on the class background of older people, the arbitrary implementation of Marxist or Weberian standpoints informs us only of the extent that older persons conform to middle-aged norms rather than shedding light either on the unique character of class relations in later life. Moreover, tracing the class position of older people back to the breadwinner’s final occupation does not really account the reality of older people’s connection to class. This ‘modernist’ strategy contains crucial analytical and empirical lacunae. For instance, whilst it may have been valid in the past when most individuals died either before or soon after statutory retirement age, nowadays retirement generally signals the start of a ‘third age’ phase of life. Moreover, instead of an ‘add and stir’ approach to class where age is ‘added on’ to older people, these models, then, question the stability of a particular ‘older’ people as ‘older’ men and ‘older’ women when they are addressing the linkages between ageing and class. This presentation will introduce the key themes of power identity and lifestyle as they connect to class in later life and assess the extent to which social class is a useful category in studying old age.

How Can the Public Service Improve the Uncertain Transition of Youth into Adulthood? a Case Study of Educational Support Centers in Japan

In Japan, the uncertain transition into adulthood for some young people is recognized as the problem of futoko: a term that refers to youths who have been absent from their school for over 30 days in a single year. A person with experience of futoko tends to have difficulty in advancing to a higher education or obtaining a job, and may become isolated from society. Futoko shares similarity with hikikomori, as both refer to a youth’s withdrawal from the public sphere. In contrast to hikikomori, however, futoko youths are formally registered in school, and the educational administration agency therefore attempts to become involved with them.

This paper examines the governmental service for futoko adolescents, with the aim to clarify the factors constraining the transition of this age group to school or work. We focus on the Educational Support Centers (ESCs) program, which is the most extensive and longest-running policy of Japanese Ministry of Education for futoko juveniles. Futoko has been a topic of interest for many Japanese sociologists, however ESCs have received little attention to date. Using interview data from the instructors of ESCs in four cities, we examine how the staffs approach futoko youths.

The major findings are summarized below. First, although instructors find young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths’ private lives because of limited authority. Secondly, the background of lacking social skills, young people are often plagued by familial problems or economic difficulties that make it harder for instructors to improve their situations.

This study demonstrates that governmental support makes the phenomenon of青春の絶縁, the modern concept of futoko, more visible, but it confronts the dilemmas of how (and to what extent) the public service can intervene in the private problems that underlie futoko.

Civil-Military Gap in Japan: Comparing the 2004 and 2013 Surveys -- CANCELLED

This paper compares two surveys conducted by the authors in 2004 and 2013 which looks at the possible "civil-military gap" in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gaps between the officers and civilian elite, while there were signs of gap with the general public. (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the "civil-military gap."

Contested Spaces. Informality, Dwelling and Spatial Governance in Berlin

This paper examines the intersections between informality and the governance of space in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law. In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday practices of their inhabitants. Here the urban is seen as "a site that is neither inhabited but produced through that inhabiting" (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Baay’s (1997, 2000) notion of ‘quiet encroachment’, which describes the quotidian and longsome advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: ‘Schrébergärten’ (best translated as allotment gardens), camp sites and ‘Wagenburgen’ (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalization, I set out to explore, if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of encroachment. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their uses, their practices similarly weaken their positions within the city.

The Rules That Govern Peoplexs Lives: Informality in Tallinn, Bafatá and Berlin

Urban research has long related informality to a lack of state capacity or a failure of institutions. This assumption not only lacks attention to the heterogeneous logics and relations through which informality is produced by multiple actors in- and outside of the state, it has also created a dividing line between states. Whereas some states are understood to manage urban development through a coherently functioning state apparatus, others presumably fail to regulate. To unmake and reframe such understandings this paper offers a theoretical exploration into the ways in which informality is infused in contemporary urban development in both the north and the south. Based on a comparison of three case studies in Tallinn (Estonia), Berlin (Germany) and Bafatá (Guinea-Bissau), our line of argumentation focuses on the ways in which local state agencies are entan-

gled in the workings of informality. Drawing on these cases, we suggest that if we seek to account for the similarities and differences in the informализation of cities across the globe we need to reconsider the role of states. First, state institutions shape urban development through everyday negotiations, legal incoherencies and regulatory ambiguities. Second, people’s lives are not only governed by the state but also by alternative forms of rule and institutions that exist beyond the state. It follows that allegedly informal processes can similarly be understood as a form of formality, while what appears as formal might work through multiple informal relations. Our comparison, then, aims to work towards an understand-
ging of informality that is more attuned to the multiple roles adopted by different actors involved in urban processes and the power relations that are mobilized in this process.

HILGERT, CHRISTIAN* (University of Bielefeld, christian.hilgert@uni-bielefeld.de)
Species out of Place – Investigating the Visual Framing of an Ecological Problem

Invasive species designate a recently emerged category of ecological risks: alien plants and animals, introduced by human agency, causing extinctions of native species and also diverse economic, aesthetic and human health problems. This paper argues that much scientific, political and economic attention is motivated people worldwide to participate in a vast array of organized attempts to preserve and restore local environments.

My paper investigates the frames (Goffman, Gamson) that constitute this ecological claim (Hannigan). Basically it reveals a construction of nature as differentiated in well-ordered, stable, and homogenous units (ecosystems, ecological communities). I argue that specific visual frames are crucial in establishing the problem formula in question by integrating the realms of science, media and political action. Exhibitions, flyers, documentary films, websites and databanks use maps, photographs, graphics, icons and numbers to display environments as relatively homogenous spaces, which enable clear-cut distinctions of inside and outside (native/alien). Thus specific species become perceivable as invaders and understandable as phenomena of disorder (biological pollution). Furthermore visual references of horror and science-fiction stories (aliens, zombies, monsters, etc.) relate factual and technical information metaphorically to more emotional realms of experience and popular imagination. By means of these forms of ecological communication (Luhmann) encourage state actors and civil society to fight against certain species. The imagery of dangerous aliens strongly resembles notions of political conservatism, romanticism and xenophobia. Hence it aligns with certain cultural critiques of the disintegrative forces of globalization. As national, ethnic and other perceived primordial identities are feared to dissolve, so is nature. But if undoing globalization is inconceivable, and society and nature have to be understood as inseparably entangled (Latour), don’t we have to confront this nostalgic ecolo-
y of small-scale orders with a need to originate positive representations of our globalizing environments, as recent postulates of cosmopolitanism (Beck, Heise) suggest?

Language and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg

This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely referred to as xenophobic attacks – the status of African migrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of "otherness" within the metropolitan boundaries of the "City of Johannesburg." We begin with a GIS-based study of speakers designated "other" in the 2011 census; focusing particular attention on the distribution of foreign others at neighbour-
hood level. This section provides the backdrop to a more focused study of Zimbabwean migrants; drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu’s "economy of social practice" as an analyti-
cal framework, we show how each neighbourhood is a social universe of struggle that is inscribed with its own internal logic and relational matrix of recognition, and how language repertoires are adapted to fit these matrices. We discuss these patterns critically, and relate them to the wider "field of power", a complex so-
ciopolitical economy that belies the post-1994 Constitutional enshrinement of eleven official languages.

A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England

The paper compares and contrasts three English, rural villages, each with different low employment characteristics, to investigate how these different rural resources that have informed their social histories: one geographic proximity to Southern UK cities (for commuting purposes); another offering a heritage site (several buildings and ruins of historical note) and, finally one with geographic characteristics that brought a large-scale industry temporarily to the village, but only to depart with similar rapidity.

Through this comparative analysis, the paper considers the impact of these individual circumstances for each village before and after (in the modern-day context). It draws upon a portfolio of evidence including macro contextualizing backgro...
How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the ‘Post-Oslo’ Period

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. In academic literature on Palestine, it has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family. Alexander (2010) has argued that the involvement of women in the conflict has had an impact on the development of family relations and the construction of manhood and family relations. Therefore, we want to focus on this specific topic of family relations and their implications in the present time.

Women’s Experience of Maternal Morbidity - a Global Meta Ethnography

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared ‘biographic’ pathways, regardless of inequalities in economies, healthcare resources and the social capital of women in different settings.

Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy. Studies of near miss maternal morbidity, where a woman needs urgent life saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

Methods: Qualitative interview studies of near-miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

Financement: There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low very greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the ‘social capital’ of women in different contexts impact on the long-term emotional and physical impact of these experiences?

Conclusion: This presentation will explore what can we learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

ESA The Position Of The Female Gender In The Political Space. An Analytical Biography Access To The Study Of East German Female Politicians Career Chances

This abstract aimed to determine the career opportunities of East German female politicians in the context of the collapse of the GDR and the following transformation processes had crucial influence on the political culture at the present time. This research examined strategy shift in vegetable oil sector among global transnational corporations, focusing on Asian TNCs like Japanese sogo-shosha and food industry, together with related trade liberalization and deregulation policies of Asian countries in the Corporate Food Regime (McMichael, 2005). These shifts are analyzed to see how increasing Asian countries' dependency on global vegetable oil, which can jeopardize their food security as the global oil supply increasingly depend on only two crops, oil palm and soybean, produced in the limited number of countries. The shifts can also jeopardize public health of the Asian population.
by increasing availability of oils and fats in the nations’ diet as a forerunner of nutrition transition.

Asian countries have rapidly increased vegetable oil supply in last few decades. China and India transformed from mostly self-sufficient countries of vegetable oils into the global leading importers by rapidly increasing imports of palm oil, and of soybean in case of China, since the mid-1990s. Thailand and South Korea have increased their vegetable oil supply, mainly with palm oil and soybean oil, after the financial crash in 1997. Japan liberated its vegetable oil supply decades ago and reduced its self-sufficiency rate as low as 2%. More significantly, recent neoliberal trade liberalization, especially direct foreign investment and corporatization, are suspected to be facilitating (re)structuring of the supply chains of vegetable oils with development of food industry based on imported vegetable oil and oil crops, like building large-scale oilseed crushing facilities or developing instant noodle industry in China. The increased availability of oils and fats, and the concurrent change in diet toward higher-fat, lower-carbohydrate, more processed food, can jeopardize the public health among Asian nations. This research investigates the structural changes in vegetable oil supply and demand in Asia, in order to secure food and health of the population.

**Legitimacy or Legitimation?**

After years of Great East Japan Earthquake, day and day, disparities in restoration among similar regions are seen as social problem. In this study, we explore the limitation of this schematic way of making problem, through the process-oriented research of local governments’ decision-making concerning their restorations. Certainly, restoration disparities among regions are verified statistically, for instance, numerical difference of population recovery rate. Furthermore, the popularly supported national policies have been made to target restoration disparities among regions. However, each of region or its local government has been permitted to decide distinctive plan or style of restoration. After the Second World War, Japanese local government is not just bound by national law but also become to be allowed to pursue its autonomy. Additionally, this degree of allowance of local autonomy has increased with successive fiscal crisis of national government. In fact, through our follow-up survey of the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive...
increase in average life expectancy, in addition to the scheduled rise in pension premiums. While these measures are expected to improve the financial sustainability of the pension system, they are also likely to aggravate the problems of inequality and poverty among the elderly. Concerns over this issue have led to policy discussions on the need for a minimum guarantee in pension benefits. The coalition government formed in 2009 and led by the Democratic Party of Japan developed a plan to introduce a minimum pension scheme, but the plan was not implemented. In light of these policy developments, this study explores the possibilities for a comprehensive but more targeted reform of old-age security to address inequality among the elderly.

First, this study analyzes citizens’ attitudes toward the pension system using national survey data. The data show that citizens tend to have high expectations of the social security system.

This study then examines the historical and institutional factors behind the problem of old-age poverty in Japan and how they have evolved. This includes the development of a pension system and the role of the government in the provision of social security. The study also considers the impact of globalization on the pension system.

Lastly, this study analyzes the employment situations of middle-aged and older workers. It is suggested that improvements in the employment policies for these workers should be prioritized, given their high work ethic and the financial difficulties of the public pension system.

**Emploi Domestique Et Travail Du Care Dans Une Perspective Comparative**

Dans cette communication sera présenté l’apport des volets quantitatif et qualitatif dans la recherche au Brésil pour discuter dans quelle mesure ils contribuent à éclairer les questions complexes relatives à la catégorisation de ces emplois. Il s’agit d’avancer dans cette catégorisation en examinant notamment la « zone grise » entre emploi domestique et métiers du care. For l’aspect de comparaison internationale, nous nous limiterons au volet qualitatif, puisque nous ne disposons des données chiffrées comparables pour les autres deux pays, et aux aides à domicile, laissant de côté le matériel relatif au travail du care dans les institutions, sur lequel nous avons déjà des publications. La manière dont les aides à domicile perçoivent et déclinent leur identité professionnelle sera le fil conducteur de cette deuxième partie de la communication. En conclusion, nous présenterons des pistes de travail pour approfondir l’analyse de l’évolution de l’emploi domestique et des métiers du care dans des contextes sociétés contractuels à partir de l’hypothèse que les différences dans la jonction socio-économique et institutionnelle de ces pays ont des implications sur la division sexuelle du travail et des professions, ainsi que sur les processus d’acquisition des qualifications et le rapport subjectif au travail et au métier.

**Confrontation and Resistance in the Production of Space in Downtown Sao Paulo: Urban Vision on the Collectors of Recyclable Materials**

In last decades, real estate production turned into a main capitalist way of reproducing the global financial dynamics. For urban space this means impoverishment of a city notion. For social mobilization that seeks for the reduction of social inequalities it leads to a perception of insignificance of small victories, even with a high level form of organization. In this way, the urban vision over society by philosopher Henri Lefebvre, not just makes clear the role of the urban for capitalization, but also gives us elements of reflection for social mobilization practices by an observation of urban social practices. That is what is shown by an urban vision on the case of resistance of recyclable materials collectors in downtown Sao Paulo.

**Housing Policy and Gentrification: Conflicts and Contradictions in the Inner City of Sao Paulo**

During the last decades, Neil Smith is developing a conceptual framework linking neoliberal urbanism and gentrification. In his works, the increasing role of the state as an agent of the market is underlined. Also, according to Smith, in a context of globalization and financial capital, the gentrification is thoroughly generalized as an urban strategy (Smith, 2002). This paper aims to discussing the concept and the elements of gentrification in cities of emerging economies, using as an empirical case the inner city of Sao Paulo, Brazil. Since the nineties, the central area of Sao Paulo is being subject of several urban interventions, varying from the promotion of new cultural facilities to the redevelopment of several blocks as a key to increase population in the historical neighborhoods. The most recent intervention presented is using the housing policy as an instrument to promote gentrification, by removing several buildings, today occupied by poor families that were once attracted by low rent prices, in order to make room to new developments to address the housing needs of the emerging middle class. The conflicts and contradictions that are arising from these projects are meaningful and give us strong elements to deepen the political terms of the Smith’s concept of gentrification, coloring it with the characteristics of the Brazilian uneven urban development.

**For a Happy Encounter Between a Researcher and a Participant Living in the Different Contexts of Social Organization of Gender**

In this paper I discuss how to interpret and represent individual gender biographies in transcultural research settings when a researcher meets with informants who belong to different social and historical contexts. In my experiences regarding gender biographies in transcultural research almost all informants talked about ‘their’ social norms of gender before telling their life histories, although it is very important to understand the conflicts between their biographies and social contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argue ‘transnationality’ or ‘transculturality’ of the filed to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

**Housing and Social Re-Stratification**

This article looks at transformations in the role of housing in social stratification. During the ‘golden age’ with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle-class home ownership and redistributives schemes of providing social rented dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the ‘global age’, new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have become more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplary countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

HIRAYAMA, YOSUKE* (Kobe University, yosukeh@kobe-u.ac.jp)
Reshaping the Housing System in the Context of Japan’s Post-Growth Society

Many mature economies are now entering the ‘post-growth’ era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards ‘post-growth societies’ where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-aging population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-pricing volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar ‘golden age’ of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, the welfare state and urban transformations. With entering the ‘global age’, however, the ‘post-growth’ social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping ‘post-growth societies’.

Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has been evaluated and compared with many other countries, and it is being evaluated with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been changes in the labor conditions that have created uncertainty. In our research project: Professional Ethics for Professors and especially from the open question: which are the five necessary actions to prepare teachers about professional values? we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of team work and personal relations and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

HISANO, SHUJI* (Kyoto University, hisano@econ.kyoto-u.ac.jp)

Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in)security politics in Japan and East Asia, and could therefore be an introduction to the session. With its rapid economic growth, East Asia is widely recognised as one of the most important regions in the world economy. Despite its significance in the globalised agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region’s heavy dependence on food imports has become too significant to be disregarded. According to FAOSTAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural imports in 2010. This situation is unsustainable not only for regional economies but also for the world food economy in the era of “the end of cheap food”. A heightened sense of “food crisis”, especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our “food security concerns” are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

In this paper, the development of policies and discourses on food (in)security will be critically analysed as a underlying basis for further empirical studies with a perspective for social mobilisation of food sovereignty in the region.

Policing and Autonomy of Community: Comparative Study of Japan and Indonesia

The objective of this presentation is to clarify the character of community policing in Japan and Indonesia from the viewpoint of the autonomy of community and my filed research. This presentation will be divided into three parts.

First, I will examine some discussions and theories regarding the community policing, where we will see that the autonomy of community is needed to manage the way of policing practiced in community in the case of the US. Then, I will clarify the crisis of the autonomy of community with special attention to a discrimination among communities. It has been produced by the development of suburban area and individualized auto-mobility in the US.

Secondly, we will turn to the case of Japan, and I will cover weakening roll of Japanese neighborhood organizations and activation of policing by the central government. The government tries to apply “broken window theory” and discourses of tradition of mutual help on community. Through the cases, I will identify the difference and similarity with the social condition of the US and clarify difficulty of the autonomy of community in Japan.

In the third part, we will look at the community policing of Indonesia in the development era and evaluate a mixture between local security and urban security for community development in Bali. The police has tried to apply the community policing in order to reestablish new structure of the police and grasp vigilante groups since the collapse of centralized policy. However, in the case of Sanur area in Bali, we will see the success of community policing with new image of tourism. Finally, through the analysis, I will clarify the advantage of the community development through the mixture of policing and local creative activities.

Burmese Refugees and Ethnic Business in Japan

While Japan is said to be the country which has one of the strictest control for refugees and asylum seekers, Japanese government accept some refugees, especially from Burma. After receiving the asylum, some of Burmese run a small business in their community. How do Burmese become a refugee entrepreneur? How do they run a small business? This presentation aims to explore the factors which foster the refugee entrepreneur from the view point of the opportunity structure theory. This presentation is based on the field work data carried out in Tokyo, Japan from 2004 to present. The data consists of interviews with Burmese refugees, refugee advocacy NGOs, Government agency, and other related personnel.

Based on the opportunity structure theory, there are some types of Burmese small businesses. One type is a small business serving an ethnic community’s needs. With the help of their colleagues, they mobilized various ethnic resources: capital, labour and skills. Other type is small business serving an open market. They try to attract non-Burmese customers for their shops. However, their businesses are not stable because of the small size of their ethnic market and the intense competition of the service industry. Following the presentation, I will discuss the economic integration of refugees in the future.

HIYAZAKI, MASAYA* (Meiji University, masayan2010@gmail.com)

The Communion without Boundaries and Sakae Osugi’s Anarchism

The purpose of this paper is to investigate the political ideals of Sakae Osugi. Osugi argued that it was possible to establish a “society of mutual aid” based on the principle of “expansion of life”. In his view, the hierarchy meant fixing the boundary and every boundary was an expression and exercise of power. That explains why anarchism is a perpetual movement which attempts to transcend every boundary of the hierarchy. Osugi aimed at a free and diversified federal society where life is expanded. Osugi’s influence stemmed from his articulation of the basic concerns of his generation. That generation confronted difficulties of a different order from those faced by the Meiji leadership. Osugi was attracted to the problem presented by the emerging masses: how could they be incorporated in society? His reply to this question was “mutual aid”. This paper focuses on the relation between both notions of freedom and society and analyzes it throwing a light on the principle of “expansion of life” in Osugi’s anarchism. Similarly to his contemporaries, it might be helpful to enquire into that principle, in a way that is beneficial to the relation between freedom and society.

This paper addresses Chinese women’s self-conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid and diffuse than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between currents inside and the world spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013). The erotic is a “camp” of contradictions, however, eros transcends the “politicisation of life chances” which are not equal. Indeed, people in their movements, emotions, and desires are themselves made in terms of the discourses and unequal differences, of the present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the fields of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a politics of iconogenesis using new social media (Ho, 2005, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self-narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

**Women Negotiating Work and Family Responsibilities in Hong Kong and Britain: Rethinking Modernity, Individualization and Intimacy**

Drawing on comparative qualitative research conducted in Hong Kong and Britain, this paper contests western theorists’ ideas on the consequences of modernity for women’s orientations to work and family. Our data derive from life history interviews and focus groups with young women and their mothers in both locations and reveal both similarities and differences in the effects of social change on the two generations. The differences cannot be attributed to the pace or duration of modernization, nor are they wholly consistent with the changes that might be predicted by Giddens’ (1992) ‘transformation of intimacy’ thesis or Beck and Beck Gernsheim’s (2002) individualization thesis. While the Hong Kong women are more committed to family than their British counterparts (cf Chang and Song 2010; Jackson and Ho 2013), in particular in terms of obligations to close kin, they are also far more career oriented. Conversely, the British women seem much more individualistic, sometimes hedonistic, in their personal lifestyle choices, but they are far more willing to sacrifice career to motherhood than those in Hong Kong. Hong Kong women are much more strategic in pursuing economic opportunities, evident especially in pressure on daughters to succeed, in terms of advancing the family as a whole. This is in keeping with the idea of Asian instrumental/utilitarian familialism (Lau 1978; Chang 2003; Chang and Song 2010). Young British women are encouraged by their families to succeed, but this is not of course thought of in terms of enjoyment, achievement or personal fulfilment. These differences are not only cultural, we argue, but also a result of material conditions of life in each location and the ways in which gender intersects with other inequalities in local contexts, creating differential opportunities and barriers to reconciling family and work under late modern conditions.
built up an ideology that only domestic food is reliable and good for Korean people's body and health, no matter how those foods are produced. Regulations to enforce labeling the origins of food production enhance Korean national identity and sentiment towards their domestic products as well as nation. Fear penetrates when evolving foreign food products. Crisis of food safety thus is not only an issue about health and well beings but rather an issue in political arena. It shows the anxiety and senses of threats when South Koreans have to face other powerful countries around them such as US, China and Japan. Safety only exists inside the door. Nationality is thus not only essential for people, but also for food.

Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternative Sociotechnical Network of Assisted Reproductive Technologies

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only "married" (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligibility criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between legal restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbians in Taiwan how did they negotiate to get access. Despite of the legal restriction. First, the author find self-insertion is not well diffused and used in Taiwan like the United States and some other western countries, and it's due to different feminist movement context and the predominant feminist antinatalism discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) women to fulfill legal marriage criteria. More, some physician's consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marriage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found how lesbians in Taiwan negotiate and navigate their way to access ARTs. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

Starting from Unequal Positions: Patterns of Young Households Starting on the Amsterdam Housing Market

This paper takes a broad perspective regarding the success with which young people can leave their parental home and become an independent household in Amsterdam. High demand pressures on the local housing market and the financial crisis are seen to place constraints on the accessibility for young households. Nevertheless, paradoxically, especially the influx of young households currently contributes to Amsterdam's population growth. However – and most important to this paper – previous research suggest that inequalities between different starter groups have grown. These inequalities are often transferred from one generation to the next. Using longitudinal individual register data this paper looks at patterns of inequality between young households with different backgrounds as they make their first steps as independent households. Especially their parental background is of importance to this analysis.

Our data suggests that the number of starter households with wealthy parents and following university education entering the Amsterdam housing market is growing, whereas disadvantaged starter groups are increasingly excluded. We will analyze how socioeconomic and parental backgrounds influence young household's entrance on the Amsterdam housing market. Included elements are the age of nest-leaving, tenure type they move into, the type of household they form, and the chance of moving back to their parental home after a brief period of independent living (boomerang kids).

Processes of gentrification have made most of Amsterdam's inner-ring neighbours more expensive, the study aims to. This results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that starters who move into the most expensive neighbourhoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

Managing the Difference Engine: A Cybernetic Analysis of Discrimination

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, cannot be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetics, Bateson's models for schismogenesis and for schizogenesis will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Philology tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multi-culturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine's account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot's theory of fractals will be drawn on, as will theories of artificial life.

Do RRT and the Crosswise Model Produce Valid Measurements of Sensitive Items? An Online Validation Study

Social desirability and the fear of negative consequences often deter a considerable share of survey respondents from truthfully responding to sensitive items such as own norm violations (e.g., nonvoting, tax evasion, cheating). As a consequence, the prevalence of norm violations is underestimated and results are inaccurate. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) or the Crosswise Model (Tian et al. 2007), a new variation of the RRT, are intended to mitigate this problem by providing complete concealment of respondents’ answers.

However, it is far from clear whether these indirect techniques generally produce more valid measurements than standard direct questioning (DQ). Furthermore, most systematic evaluations so far compare a particular method’s resulting prevalence estimates of sensitive behavior with DQ estimates under the “more-is-better”-assumption and lack a known true value for validation. Under the “more-is-better”-assumption higher prevalence estimates are interpreted as more valid estimates. So, it cannot be ruled out that higher prevalence estimates are a methodological artifact and not the result of a technique’s superior validity. Whether or not a particular sensitive question technique truly produces more valid measurements can only be answered for certain with validation studies. But the possibilities to carry out validation studies are rare and the topics’ range very restricted.

Therefore, we designed an online experiment which allows for the in-depth validation of any sensitive question technique. Inspired by Fischbacher and Heusl’s (2008) widely used cheating dice game we developed two dice games where respondents had an incentive to violate a norm, i.e., they could illegitimately claim a bonus payment. After the game, respondents were surveyed about their personal norm adherence, i.e., whether they cheated or not. We used different sensitive question techniques to survey this sensitive item. Resulting prevalence estimates were then validated with the true observed behavior.

Institutional Ethnography for Oppressed People

The especially oppressed people in modern society are the people with communicative, mental or social disabilities stemming from brain injuries, developmental disorders and mental illness such as schizophrenia. These people are in many ways marginalized in modern society where social and communicative skills are highly valued and sometimes requisite for achieving a position on the labor market as well as getting into social networks of modern urban subcultures. Being in such a position often makes them ultimately dependent on welfare institutions where they have difficulties in expressing their needs and demands for social relations, daily activities and means for personal development.

Since 1997 the author has been involved in several investigations into the institutional landscape for these people following the ambitions of an applied institutional ethnography. That means that our point of departure was the life-world of these people and their efforts to get a coherent everyday life and a basis for personal development. With this reference we judged the total structure of insti-
Experiencing It like a “Gogo”: Intergenerational Relationships in South Africa

“Gogo” is the Zulu word (from “ugogo”) for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and everyday poverty. An estimated 1.2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers’ contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complex and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grand-motherhood in Mpumalanga, South Africa towards a deeper understanding of such inter-generational relationships. The main findings relate to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

Promoting Intangible Cultural Heritage Protection Through Research: An Analysis Of The Impact Of Academic Discourse On Local Protection And Tourism Practices In China

This study traces the impact of the Chinese academic discourse on intangible cultural heritage protection and tourism practices in the PRC at the subnational level. Since the concept of intangible cultural heritage (ICH) entered the Chinese academic discourse in 2003, the academic elite has actively promoted the development and protection of intangible cultural heritage nationally through the publication and circulation of research. While their influence on the drafting process of the ‘Intangible Cultural Heritage Law’ has been acknowledged, hitherto little research has been conducted on their impact on local governmental policies, protection strategies and tourist promotion activities. This paper therefore aims at filling this research gap by conducting a comparative historical text analysis of Chinese academic journals from 2003 to 2013 in order to assess how academic discourse affects local government strategies for the branding of intangible cultural heritage. Comparing various selected cases, the paper will examine how scholars support local governments by reinventing and framing local traditions according to ICH discourse, promoting them for ICH nomination and attributing tourist values. Furthermore, it will explore how successful local government practices and management models of ICH protection are disseminated within epistemic communities of scholars, ICH experts and local administrators. The findings not only shed light on the impact of Chinese academic discourse on specific local practices of ICH protection but also point to common protection strategies ready for adoption in other localities.

HOLDGRÜN, PHOEBE* (German Institute for Japanese Studies, holdgruen@dijtokyo.org)

High Aims, Low Outcome: Implementing Gender Equality in Japan

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan at state. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012. This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses, how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectures, an outlook of policy change during the DPI government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of gender equality in Japanese policies as well as on a paper on the impact of the DPI government in terms of gender equality policies (both published 2013).

**Alcohol, the Body and Gender in Later Life**

Alcohol consumption in later life has emerged as a public health concern in many advanced economies in recent years associated with an observed increase in alcohol consumption among the elderly. The dominant public health message has centred on the need to moderate drinking in later life due to the direct and indirect impact that alcohol has on frailty in later life. This paper challenges the assumption that increased alcohol is associated with functional as well as social decline, but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and case-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on quantitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

**Youth Leisure As Job Training and the Pursuit of Distinctiveness**

In 2009 a group of students at the University of California, Santa Cruz who self-styled themselves as the ‘Research and Destroy Collective’ issued a *Communiqué from an absent future* denouncing how demands on young to perform and be active rather than liberating, were stifling their futures, and that ‘even leisure is a form of job training’. This paper responds to this rally cry to map out how young people are increasingly engaging in leisure pursuits in advanced economies in order to enhance their CVs. I will consider how leisure activities, which may include travel, sport, hobbies, volunteering and membership of organisations, are increasingly seen as ways of standing out from the crowd and demarcating oneself as distinctive. While these quests for uniqueness is not a particularly new quality assumption that increased alcohol is associated with functional as well as social decline, but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and case-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on quantitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

**HOLLEMAN, HANNAH** (Amherst College, hannah.hollemann@gmail.com)

**Supply-Side Economics and Demand-Side Planning: U.S. Southwest Water Challenges, the Case of Oklahoma**

In 2013 the U.S. government categorized all 77 counties in Oklahoma a disaster area due to persistent drought conditions. While 597 counties nationally were in drought, the declaration of the dominant mode of planning for addressing such long-term anthropogenic crises. I argue that the official designation of drought-stricken counties as facing "disaster," has short-term implications and is therefore misleading. This region must be recognized as facing an historical transition, in need of genuinely democratic, and ecological or real "supply-side," economic planning to avoid some of the worst ecological and social outcomes. To end, I offer suggestions based on current, localized attempts at planning outside of the dominant framework, for alternative approaches that, if forced by movements to the state level, or beyond, could help reverse current trends.
authority of the industry over colonised places / spaces and over histories / contemporaneities.

The presentation therefore will principally question:

~1 = Which priority areas of concern in international tourism should be
decolonised, if any?

~2 = What would / should / could the decolonisation of Tourism Studies
principally entail, or mainly consist of?

~3 = Who should be involved in the so-called decolonised ‘cleansing’ of
Tourism Studies?

~4 = How would the decolonisation of tourism be substantiated educa-
tionally (in the schooling of practitioners and researchers who currently
drive international tourism)?

The main supposition undergirding this paper is that the decolonisation of
the so-called ‘bleached realm of tourism’ (after Pfaelzer’s term “bleached” field /
“bleaches”) would involve considerable conceptual unsettlement
for many of those who work in Tourism Studies / Tourism Management. Much
of the required re-oriented understanding would indeed be corrective (as the in-
dustry’s internal and collaborative sinews of oppression are identified). Hence
a more fluid acumen is demanded vis-a-vis the fields “improved conversation with
the world” (after Bauman), where the productive / cosmosensible genre latent with-
in it can be positively used much more strategically and frequently for distant /
removed / colonised populations in their own found interests.

Tourism Studies and The Contagions Of Conformity: The Wilful
Contagions Of Our Own Backyard

In 2011, Heffernan produced Wilful Blindness, a text inspecting “why we [in our
institutions] ignore the obvious, at our peril” as the examined the structures of
how our brains and working experiences work to see Europe — within our instrumental-
tions / corporates / organisations — act with such sustained blindness and such
deliberate indifference to what outsiders deem to be very large, important, or
crucial matters. Thus, Heffernan’s “security of institutional connivance and organ-
isational silence” will be distilled to generate discussion amongst RC50 delegates
to critique what forms of groupthink blindnesses / wilful ignorances / under-rec-
nogised abnegations might indeed characterise ‘Tourism Studies’ / as a disciplin-
ing institution.

In this Heffernian light, Tourism Studies will be dissected to reveal (from the
presenters’ own working experiences to see Europe — and, sadly, restrictive)
conformity, Tourism Studies will be posited as a domain that:

* is intrinsically interdisciplinary, yet offers so few bona fide interdisciplinary /
multi-disciplinary / trans-disciplinary investigations;
* fundamentally deals with the image of places and spaces, yet rarely codifies
counter mixes of symbolic (or representational) impacts as it coterminously plays
habitual homage to long-established economic, cultural, social, political, and en-
vironmental impacts;
* is seemingly a creative industry which selects, produces, and projects ‘differ-
ences’ about peoples / places / pasts, yet which has only the poorest of connec-
tions with other lead creative / inscriptive industries such as film / the media /
the arts.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s
conceivable ‘purblind addiction to received procedure’; and, (ii) upon their own
individual willing subservience to such forms of unquestioned / unthought praxis.

Marginalizing of students despite official preventive efforts

Marginalizing of students despite official preventive efforts

Finland has a reputation of providing a good and just education for all stu-
dents independent of ability and background. However, even in this kind of edu-
cational system there are students who are marginalized. We focus here on the
relationship between laws and official documents regarding issues concerning
social justice issues and, on the other hand, discriminatory practices. We lean on a
discourse analysis of the rhetorical policy level including the national curricu-
um. This analysis is compared to empirical findings about students’ experiences
regarding social justice issues.

There are some remarkable socio-cultural differences in Finnish schools. For
example, the gender differences in literacy are the largest in Finland of all the
OECD countries. Childhood poverty is increasing in Finland and the gap between
the poor and the wealthy is increasing. This has serious implications for teachers
and the daily life in school can be unfair for certain groups of students. This
unfairness and marginalization can have long-term consequences for welfare
and achievement.

Photography As a Research Method in Exploring Bilingual
Teenagers’ Language Minority Group Identifications

Using participatory photography as a research method is underutilized in
sociological youth studies. Young people today are comfortable using photo-
graphs for communication. Visual research methods are increasing in overall im-
portance, but especially the analysis and interpretation of visual data have not
changed much in the last decades. Hence, the focus in this paper is on analysis
and interpretation of photographs taken by 15-year old students in the compre-
nensive school in Finland. The importance of the researcher's language minority
habitus in interpretation is explored in relation to the habits of the language
minority students.

The teenagers all belong to the Swedish speaking minority group in Finland.
The purpose of this study is to explore how the Swedish language minority stu-
dents position themselves with regard to belonging to the Finland-Swedish group.
We found that photographs show that in both countries breast cancer patients who
were interested in exploring how photographs and interviews comple-
ment each other. Of particular interest are the teenagers’ identifications with
and their views of the Finland-Swedish language minority group.

The study is part of a larger multi-sited ethnography and in this paper we focus on
the photographs taken by students in four schools and 62 interviews and 22
photo elicitation interviews.

We found that the photographs and the interviews complemented each other
by bringing up different issues. The interviews focused mostly on the language it-
self, using photography as well as interviews as the data collection methods. In
particular we were interested in examining how photographs and interviews com-
plement each other. Of particular interest are the teenagers’ identifications with
and their views of the Finland-Swedish language minority group.

In this Heffernanian light, Tourism Studies will be dissected to reveal (from the
presenters own working experiences to see Europe — and, sadly, restrictive)
conformity, Tourism Studies will be posited as a domain that:

* is intrinsically interdisciplinary, yet offers so few bona fide interdisciplinary /
multi-disciplinary / trans-disciplinary investigations;
* fundamentally deals with the image of places and spaces, yet rarely codifies
counter mixes of symbolic (or representational) impacts as it coterminously plays
habitual homage to long-established economic, cultural, social, political, and en-
vironmental impacts;
* is seemingly a creative industry which selects, produces, and projects ‘differ-
ences’ about peoples / places / pasts, yet which has only the poorest of connec-
tions with other lead creative / inscriptive industries such as film / the media /
the arts.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s
conceivable ‘purblind addiction to received procedure’; and, (ii) upon their own

Producing Inequality: How Welfare Institutions Influence and
Shape Cancer Experiences – Comparisons Between German and
Japanese Patient Narratives

This paper aims to understand the influence of welfare institutions on illness
experiences, particular health insurance and income compensation policies, by
comparing narrative interviews with breast- and prostate cancer patients in Ger-
many (n=90 for both cancers) and Japan (n=97 for both cancers). Both countries
have a comprehensive social security system. Using the data collected for the
project Database of Individual Patient Experiences (DIPEx), two levels of com-
parisons will be sought: 1) country and 2) disease type, resulting in 4 analytic
groups. Due to language constraints, cross-national comparisons will be based on
the analysis within each country is complete with regards to the study question:
How do health insurance systems and income compensation policies such as sick
leave and disability benefits affect the experience of having cancer?

Preliminary findings show that in both countries breast cancer patients who
are generally younger and thus still in the workforce tend to express financial
concerns more than prostate cancer patients. However, the impact of financial
pressure is more apparent in Japan where out-of-pocket copayments are higher
and the terms for sick leave are less favorable to employees, affecting patients’
treatment decisions and the timing of return to work. For German patients

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
are eligible for early retirement and disability benefits, the diagnosis in many cases does not present financial disaster. However, receiving disability benefits led to stigmatization through the bureaucratic mechanism in place. Subsequently women discussed feelings of shame and worthlessness induced by bureaucratic mechanisms.

The present study will be one of the first studies in which international comparisons on qualitative interview materials that have been collected in different languages and by different interviewers are analyzed within the same research framework. Thus the paper presents important findings on production of inequality in high-income countries, and provides a new methodology for cross-cultural secondary analysis.

HOLMES, PABLO* (University of Brasilia, pabloholmes@gmail.com)

Social Inequalities in Latin American Social Thought: Beyond Culturalism and Class Theory

Since its origins in the nineteenth century, Latin American social theory has been primarily concerned with the unequal position of the region in the world society. The “Latin American condition” has been largely explained with reference to its “cultural singularity” vis-à-vis “developed” societies. In the last two decades, following a broader critique of developmental theories, there has been a strong criticism of cultural explanations for global, regional and national inequalities in the region. In Brazil, some theoretical attempts have attracted attention. The first one, formulated in the beginning of the nineties, argued that structural forms of extreme social exclusion from modern social systems like law, politics, economy and education would have striking consequences for the institutional reproduction of these systems in the region. Accordingly, there would emerge a small sector of a socially over-integrated population, which would be in the position of using legal and political institutions for its advantage. Simultaneously, a broader sector of under-integrated population would have only an insignificant meaning for institutional operations, remaining thus excluded and being used to reproduce unequal social structures. Another well-known approach has drawn on many elements of this formulation, insisting, however, on classical categories of class theory to explain the social reproduction of inequality.

In the present paper, I would like to look critically at these different interpretations. I will, thus, argue that, although one can consider the existence of social classes as an outcome of important social dynamics, any theoretical explanation of social inequalities in the Latin American context must take into account the role of legal and political institutions. The paper also argues for the necessity of taking not only institutions into account, but also for importance of bringing back the role of transnational institutional dynamics in the debate, although without stepping back into old culturalist traps.

The Social Constitutionalization of Trade? the WTO-Trips and the Changes of a Reembedment of the Global Regime of Intellectual Property

Since the financial crisis, the consciousness has grown that increasing social inequalities can have impairing implications for the functioning of institutions and for economic efficiency. Nevertheless, the tools that were known until now to tackle inequalities still seem to be ineffective on the transnational level. Mechanisms of tax & transfer, as well as the promotion of social rights, cannot be used in the same way as they had been in national contexts. For many scholars, the only way to face these problems would be a shift towards the transnationalization of social rights. Although much talk has been seen on the necessity of “constitutionalizing” the WTO, the fact remains true that the global regime of trade remains highly fragmented. Moreover, the rules of the many regimes existing in the WTO do not seem to be interpreted under the light of the so-called “global regimes of human rights”. Rather, it seems that they reproduce extremely specialized vocabularies, each of them taking for granted specific conceptions of how to balance property and social rights. As some authors argue, if it is true that the highly specialized global regimes of governance operate in close relation to economic knowledge, maybe they could develop some sort of “responsivity” to their non economic social environment on which they depend. In the present paper, by carefully analyzing 34 decisions of WTO dispute settlements regarding the Agreement on Trade-Related Aspects of Intellectual Property Rights, I try to assess the extent to which it is possible to identify in this regime internal elements of the constitutional semantics of social rights or possible functional equivalents of it. Hence, I will assert whether it makes sense to have any hope on transnational constitutionalization processes of trade carried out exclusively by the legal and functional mechanisms of economic global governance.
The Function and Uses of Society

Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a reified collective concept; and in the wake of the globalization debate, the critique of ‘container theories’ of society has further decreased the number of those who regard society as an essential sociological concept. But ‘society without society’ not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the position of the term outside academic discourse. This paper addresses the sociological and everyday uses of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of ‘society’ is thereby discursively constructed? The usages of the term ‘society’ in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that ‘society’ usually refers to an anonymously constituted and therefore not directly addressable social horizon.

Reflecting on Work Practices: Possibilities for Dialogue and Collaborative Knowledge Production in Institutional Ethnography

The presentation explores ontological and epistemological issues of institutional ethnography (IE) in relation to bringing together different knowledges and epistemic commitments. More specifically, the presentation addresses the possibilities for dialogue and collaborative knowledge production between research participants’ practice-oriented, experience-based ideas about their work and researchers’ academically informed concepts. The issues are explored through analysis of how participants in an IE project, namely researchers and maternity nurses, engage in reflection collaboratively on the care activities. The material analyzed are fieldnotes produced at workshops arranged for joint reflection on the nurses’ own work practices as documented on video.

The analysis shows that the possibilities for, and the difficulties of, achieving dialogue emerge from three sources. First, conflicting knowledge interests between researchers and research participants may lead to complementary projects in situations where all parties align themselves with the other’s interests. In such situations, experience-based knowledge may be co-produced through storytelling motives. Second, doing IE is about the researcher moving from one setting to another and taking up different positions accordingly. These fluid positions create constraints and possibilities for dialogue. An outsider expert/administrator position and circumstances that reinforce it are not conducing to the articulation of multiple voices. However, it is possible to shift the overall positioning so that the participants may co-produce knowledge. In my case this was done through working with videos and researchers’ provocative commentary that bordered on the political. Third, presenting theory-based interpretation that addressed an organizing element of care provoked accounts that addressed the organizing element from a different angle and specified how such organization is actually realized. Reframing the ongoing analysis through such dialogically produced experience-based knowledge means that theoretical concepts are used not to make generalizing statements on commonalities in the material but to put them to test.

After the Dream of Medicine As a Versatile Solution, What Comes Next?

Since ancient times, Japan has had an unusual self-care culture. Following Japan’s nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for promoting medicalization. Modern Western medicine is currently the national standard in Japan, systematizing universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people’s high level of interest in health does not exert an influence on the institutional level. Thus, medical discourse still has primary influence. We have studied illnesses that lack objective abnormalities, especially the awareness of fibromyalgia, with respect to both patients and physicians. Although medicalization has prevailed in all fields in Japan, disseminating the concept of fibromyalgia and incorporating its treatment in the health-care system has lagged markedly compared with other countries.

This paper presents four phases of medicalization for descriptive purposes: cultural basis and prevailing healthism; explanation of specific conditions using medical terms; institutionalization and dissemination of medical categories; and demedicalization of untreatable conditions. We discuss the issues related to each phase using the data from our previous survey. We especially address the situation after medicalization has progressed with respect to fibromyalgia diagnosis: whether fibromyalgia is being diagnosed but social awareness does not follow or effective remedies do not exist, how do patients and physicians interpret the diagnosis of fibromyalgia? We describe the process of demedicalization, whose characteristics in Japan may differ from those in Western countries. Namely, following the excessive expectations of biomedicine and distrust in medicine, it is possible that the Japanese are currently seeking greater faith in traditional forms of medicine, as a form of “regression.” This analysis presents a basis for rethinking the question of what comes after medicalization.

HOMMADOROVA, ANYA* (University of Tsukuba, anutah@gmail.com)

Blocking the Road to the Future: Biases and Misperceptions of Chinese Youth

The future of Asia will be highly influenced by the current opinions of its youth and bilateral relations between China and Japan. The current perceptions of the Chinese youth have not been consistently documented and there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers’ opinions.

Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents’ feelings as well as how they believed themselves to be perceived by the other nation. Therefore, to improve the relations between the two countries in the future it is imperative to identify the feelings and the perceptions of the Chinese youth concerning Japan and opinions on the controversial issues. Preliminary analysis of data collected from 261 college students indicates that, on average, Chinese students rate themselves and their peers to be more knowledgeable than the average Japanese student on China-Japan relations; what is more, they perceive the Japanese to have more amiable feelings towards China than their Chinese counterparts feel toward Japan. There is evidence to suspect the false-consensus bias is present and the possibility of naive realism which has conflict resolution implications. Though numerous social scientists have focused on the past and the historic issues between Japan and China, my goal is to focus on the current perceptions and their implications for building a better future.

HOMMERICH, CAROLA* (Institute for Japanese Studies, hommerich@dijtokyo.org)

The Advent of Vulnerability: Socioeconomic Insecurities and Feelings of Social Isolation in Contemporary Japan

Over the past two decades, topics related to social inequality have come to dominate public discourse in Japan. Over the same time span, the number of Japanese who experience socioeconomic anxiety in their everyday life has increased. Analysis of data of a nationwide survey carried out by the author for the German Institute for Japanese Studies (DJI) in 2009 shows, that an increase of social risks is not only perceived as something affecting others, but that socioeconomic anxieties and fears of social isolation spread throughout all strata of Japanese society. The data indicate that such negative emotions have a strong negative impact on subjective well-being in the Japanese context.

An analysis of who is most likely to be affected reveals objective differences in social status to be only weakly associated with a variation in insecurities. Instead, resources of different forms of trust and individual coping competences – in particular the sense of coherence – are decisive for an experience of status anxiety or social isolation.

However, trust levels, especially in governmental welfare, prove to be low in Japan, and, thus, cannot fully develop their protective function. Japan has not yet managed the transition from a society based on assurance to a society based on trust. Most of all the young generation is vulnerable and ill-equipped to cope with the new social risks it faces in present-day Japan.

Who Feels Powerless?: An Examination on Self-Attitudes of Japanese Youth

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCS), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCS data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the stalemated social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

HONDAGNEU-SOTETO, PIERRETTE* (University of Southern California, soteto@usc.edu)
Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizo, from southern Mexico and Guatemala.

Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks.

The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacas that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchy, poverty. So it is important to ask why in Korean discussions on individualization are key determining variables of social emotional stability.

The Power of Expectation: Apply Wisconsin Model in China's Educational Stratification

Besides Blau-Doncan's Status Attainment Model, Wisconsin Model is another important model in US to explain educational and occupational stratification and mobility. However, the Wisconsin Model is relatively ignored in Chinese stratification studies. Drawing upon data from a national survey conducted by Tsing-people, this study presents the evaluation methods of social emotional stability, under educational expectations of Chinese parents: idealistic educational aspiration and realistic educational expectation, and then examines the effects of parental educational aspiration and expectation on children's educational achievements.

In this paper, first, I describe the distribution of educational expectation levels across different classes both in urban and rural China. Second, I analyze the formation mechanisms of the gap between idealistic aspiration and realistic expectation, examining feasible influencing factors. Third, I adopt a family capital framework, mainly including social and cultural capitals, to explain how educational expectations work in household level. In sum, this paper attempts to reveal the cognitive and behavioral processes of how educational stratification occurred in current Chinese society.

HONKANEN, ANTTI* (University of Eastern Finland, antti.honkanen@uef.fi)
Golden Age - Ageing, Well-Being and Tourism

Population ageing is likely to affect the tourism movements especially in Western countries. The importance of seniors for the tourism economy is growing. Nowadays seniors are expected to be more active in domestic tourism and traveling more often abroad than previous generations. However, there are several reasons why ageing people are not traveling as health problems and lack of resources.

The paper clarifies how active travelers ageing people are and it identifies reasons why seniors are not participated in tourism. The main research question is how well self-estimated health predicts the propensity to travel and travel activity is compared with other leisure activities.

The survey questionnaire was distributed to inhabitants of North Savo region (Finland) in the end of 2011 and at the beginning of 2012. The response rate was 31 %. In total 1827 inhabitants participated in the survey. The survey was named as Aging and well-being in North-Savo as part of the Age Innovation 2012-2014 Project.

According to preliminary results, only 4 percent of respondents answered they did not participate in domestic tourism but 20 percent were not traveling abroad.
The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents’ self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

Child Investment in Youth Care Services: Dilemmas and Consequences

Welfare states have (re-)invented family policy as a response to the notion that children are the social, cultural and economic capital of societies. Consequently, the healthy development of children is an important aim in policies regarding child care, and the role of parents in safeguarding their children’s development is stressed. For professionals working in the field of youth care this change in policy aims has had its effects on the way their profession is organized and carried out: 1. more attention is directed towards preventive and early interventions—in order to ensure the best possible developmental trajectory—as opposed to curative interventions; 2. There is a stronger emphasis on effectiveness and evidence based practices and its concurrent emphasis on protocols and guidelines. At the same time however, professionals are expected to adjust their work to the demands of parents, and to serve parental expectations and wishes. In line with this, professionals find themselves balancing “distance” and “control”: working with parents presupposes that professionals can’t be directive and should refrain from being too authoritative. Yet, professionals also expected to intervene when children are at risk, and policy measures emphasize risk-assessments and inter-organizational information exchange.

The international research project “Governing New Social Risks” centers on this turn to parenting. In our paper we will discuss how these changes and dilemmas have affected the way in which professionals understand and organize their own profession, and their relation with parents and families. Based on interviews with (academic) parenting experts, relevant policy makers and professionals themselves, we will present our findings on how professionals give form to these policy changes. Although the turn to parenting takes place throughout welfare states, we will focus on the Netherlands as a case example. However, data from the other European countries included in this international research project, will be taken into account.

« Utopie » Dans L'enclos, Ou égalité Ségréguée

Cette communication a pour but d'avoir une meilleure connaissance sur la mentalité de l'époque sur laquelle reposait la société moderne du Japon dans la première moitié du 20ème siècle et de montrer que l’on poursuivit au niveau national un idéal d’ « égalité » non seulement dans la vie politique mais aussi dans la vie quotidienne. On connaît bien que l’égalité sur le plan politique a été partiellement mise en œuvre lors de la réforme des lois électorales qui ouvrait la porte aux scrutins universels en 1925. De l’autre côté, il n’en est pas demeuré moins que la misère et l’inégalité sociale n’étaient pas encore déracinées dans la vie quotidienne, c’est-à-dire dans celle des vulnérables comme des ouvriers, des malades, des handicapés etc. Ce sont encore des problèmes d’aujourd’hui. La résolution s’est réalisée à cet égard d’une manière ségrégative: tout en séparant les pauvres des riches, les malades et les handicapés des personnes en santé, on a mis les précédentes dans l’enclos. On voudrait donc dans cette recherche historique montrer un aspect peu étudié sur la mentalité de l’époque qu’on pourrait appeler une « utopie dans l’enclos » en jetant une lumière nouvelle sur en particulier la vie des ouvriers d’usine et des lépreux dans la léproserie avec le changement de la conscience sociale en perspectives socio-historiques.

A ‘Ritual’ of Surgical Mask Wearing in Japan: A Short History

The practice of surgical mask wearing in Japan has been adopted by a significant proportion of the national population and has become embedded in people’s everyday lives. This paper studies the practice as a ‘ritual’ and outlines its history in Japan. The notion of ritual is employed in this paper, not analytically, but operationally, in order to highlight the structural/functional aspect of the practice, by which individuals come to terms with invisible threats. In the 1920s, the practice of mask wearing, introduced from the West and conveying the symbolism of modern science, replaced pre-modern ‘superstitious’ rituals against flu in Japan. It started to be worn by healthy individuals in order to avoid infection, and spread as a matter of social etiquette to the infected, so as not to infect others. In addition to this usage, which continues up to the present, by the 1990s masks had become widely used by cedar pollinosis sufferers to avoid inhaling pollen. Some people wear masks in order to prevent their throats from drying up or to keep dust out of their noses while others hide their faces for cosmetic or psychological reasons. More recently, radioactive particles from Fukushima and air pollution spreading from China have been added to the list of health risks to be minimised by wearing masks. Wearing a mask appears to provide peace of mind amidst uncertainties. Its instrumental value in reducing health risks is scientifically

The Invention of Religion Category and the Formation of the Secular in Japan

This paper examines the social construction of the categories of 'religion' and the 'secular' in Japan. This is a preliminary analysis of how the term 'religion' was employed by the state to establish the secular, and how the term 'religion' is used strategically by people in their everyday language. The Japanese concept of 'religion' shûkyô was invented amid the power struggle of international diplomacy against the Western colonial powers in the mid-nineteenth century. It also played an integral role in the formation of non-religion (or the secular), more specifically, the modern Japanese nation-state. After the fall of the shogunate in 1868 and throughout the modernisation process thereafter, the invention of the religion category, in turn, demarcated the modern Japanese secular, the category of non-religion, where the centralised state legitimated its authority over the population. The secularity of the state enabled the government to mobilise various groups classified as 'religious' for political purposes, while suppressing so-called 'pseudo-religious' groups, in order to achieve the ideological goal of the Japanese nation-state. After the Second World War, these categories of 'religion' and the 'secular' were reformulated under the influence of American-style liberal democratic values and sensitivities, which delimit the post-war Japanese secular. The boundary between these two realms, however, has always been ambiguous and often contentious. This paper argues that sociological studies of religion should critically analyse the social construction of the religion-secular dichotomy, by focusing on the social process in which particular meanings of the terms of religion and 'the secular' have been constructed and the ways in which the two categories are demarcated from each other.

Managing Complex Organizations In A Global WORLD

Modern business organizations are complex dynamic systems in a complex dynamic environment. This environment has the properties of an eco-system rather than those of a controlled and steered system. This holds for the economy and for its particular subsystems like the health care system, both constituting the complex and dynamic environment of internally complex organizations like hospitals. Such organizations often move at the edge of chaos and sometimes beyond. In their operations they need to be understood as actor-systems at different internal levels.

Examples from hospitals will illustrate management problems resulting from the combination of high internal and high external complexity and dynamics. This requires to clarify the concepts of both complexity and organization from a cybernetic perspective. A generic reference model of organizations will be used for the subsequent analysis.

Central to this is Luhmann’s ‘s2’ dictum, that only complexity can reduce complexity. It will be analyzed how this could be achieved by taking a sociocybernetic approach.

For this purpose concepts will be used like: open information, teamwork, task forces, leadership styles, subsystem autonomy, problem-orientation, staff-line organization, matrix organization, Web 2.0 leadership, organizational culture, mediation, etc.

Any activity, also informational, requires energy. Increasing the efficiency of an organization when facing complexity can be achieved by: (a) Changing objectives, (b) reorganizing structures, (c) reorganizing process, including management, (d) depleting stocks (material, financial, but also health and motivation of staff).

The strategy chosen has to be sustainable without unduly reducing the internal complexity of the organization, essential for its capacity to cope with external complexity. This both according to Luhmann and according to Ashby’s ‘Law of Requisite Variability’.

Hypotheses will be presented, how a sociocybernetic approach to managing complex organizations can help to avoid problems and failures.

_Apart from this, the paper will present a sociocybernetic but non-luhmanian approach._

A Birthright to Belong: Hereditary Claims and Religious Authenticity Among Converts to Judaism

This paper examines individuals who convert to a new religious identity as adults and the ways in which they use perceived sources of external validation to make claims to religious belonging and authenticity. This study on which this paper is drawn includes 100 in-depth interviews with converts to Judaism in three metropolitan areas representing distinct regions of the United States: New York City (Northeast), Atlanta, GA (South), and the San Francisco Bay Area (West Coast). In particular, respondents employed various methods of making hereditary or genetic claims to Judaism, including discussing evidence of Jewish ancestry discovered in DNA tests (taken post-conversion) and telling stories of distant relatives who family members believe may have been Jewish. When paired with respondents’ belief that others often do not see them as authentically Jewish because of not being born into a Jewish family (particularly as stated by those who did not make genetic/hereditary claims), it is clear that the perceived ability to make genetic/hereditary claims is meaningful to converts, providing a sense of having the right to belong to their new religious community. I further explore how the language of politics, through semi-structured interviews with children of inter-religious parents, I examine the mechanisms most salient in religious identity and belonging. By addressing the role of genetics and heritage in making claims to religious belonging, this paper shreds light on the complex intersection of race and religion as categories of identity in American society.
ology, state, modernity, family and kinship, civilizations, and human inequalities. A tentative re-interpretation of Parsons' AGIL-scheme in light of Thorthorn's life-long preoccupation with the same themes ends the paper. This brings us to the present state of the discipline, its relationship to the outer world and prospects for its future.

Miracles, Giants, Dragons and Small Tigers: Beyond the Unique, Hybrid, World and Model – Asian Welfare States on the Move?

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the foreground of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transformation going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular Western researchers have flocked to this lump of sugar and interacted with the social policy developments in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. Bringing Science and Academia to the Population: Activities to Raise Questions and Make People Think in Vulnerable Urban Contexts

The university role in society has been increasingly framed by models aligned with academic capitalism, institutional competition and the quantification of activities/results. These, associated to decreasing resources and public funding, are placing the integrity of the university as a social institution at risk. The roles in society that universities are expected to pursue have also multiplied and substantially increased the burden placed on these institutions. One of the new dimensions of the mission of universities is their role in the education of the university – also dubbed as the 3rd mission. This has been gaining increasing relevance in more recent years as a form to open the university to society. Yet, in most countries, this latter mission of the university is somewhat understood as a fuzzy concept and there is a tendency to associate it with activities associated with commercialization of science. In this article, we argue that this may be a simplistic view of the service mission, and that this mission in fact can encompass a range of activities that can not only benefit the university – orienting it to fulfill its social mandate and consolidate its legitimacy - but also contribute directly to the benefit of populations in vulnerable urban areas. Through the use of two cases studies focused on activities voluntary developed by academics of a school of engineering in Lisbon, Portugal, we analyze two strategic activities that aimed at bringing the university to vulnerable populations and if not solve, at least raise awareness about risky phenomena and vulnerable situations. These cases represent an overhaul of the more narrow thinking on the service mission of the university, as they combine activities that interact public understanding of science purposes, with hands-on teaching that applies engineering theoretical principles to real life cases, while fostering interdisciplinary research.

Differentiated Rights, Segmented Labour Markets: The Emergence of New Guestworker Regimes and the Making of Marginalised Precarity in Western Europe

This paper contrasts current labour migration with post-WWII guestworker programmes and argues that hierarchical differentiation and exacerbated precarisation for some migrant groups are the main characteristics of current labour migration regimes. My main objective is to show how both low-wage and ‘elitie’ migration programmes are structured by (i) the securitisation of migration and (ii) racialised boundary making. These processes are disguised by the hegemonical notion of migration management. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid industrial jobs has given way to a simultaneity of (i) even more precarious forms of employment mainly in agriculture, tourism, and construction and (ii) relatively privileged elite migration linked to the transnational mobility of capital and goods. These new labour mobilities are regulated by complex legal frameworks that are marked by a radical deprivation of fundamental rights for some migrants, while other groups face hardly any mobility barriers. Second, in all three case countries the establishment of these new frameworks was dependent on a securitised discursive context in which migration was mainly discussed as an existential threat to social security, cultural identity, and public order. This context was used to establish policies that would have been considered illegitimate under ‘normal’ circumstances. Third, I explore the ways in which the differentiation between migrant groups is linked and how these processes are maintained in the context of EU-integration. Developments are very similar across all three countries – although they represent different ‘varieties of capitalism’, party systems, migration histories, and welfare regimes. Together they illustrate how the neoliberal political-economic project structures life chances of millions of migrant

Enforced Temporariness – the Interplay of Securitisation and Economisation and the Emergence of Temporary Migrant Worker Programmes in Western Europe

Focusing on the level of migration politics, this paper enquires into the logics and processes underlying the formulation of temporary migrant worker programmes. Based on Foucault's analysis of liberal governmentality and Jessop's strategic-relational approach, I argue that the governing of temporary labour migration in liberal nation-states requires sophisticated political technologies. These technologies entail the differentiated deprivation of fundamental rights and are therefore neither unproblematic nor self-evident. Developing and establishing the necessary legal categorisations along skill levels, nationality, employment status etc. requires a complex interplay of two political rationalities that are often conceived of as contradictory: the securitisation and the economisation of migration. Once established, differentiations and measures introduced under securitised conditions can be invested in utilitarian migration policies. The interplay of these two rationalities depends on and is mediated by wider political-economic and societal transformation processes. In order to illustrate this general argument, I, first, give an overview of temporary migration policies introduced in Western European nation-states from the early 1990s onwards. Similar policies have been implemented in nation-states representing different “varieties of capitalism”; party systems, migration histories, and welfare regimes. In a second step, I focus on developments in the UK and Austria to show how the securitisation of migration changed the strategic setting and thus enabled some actors to push their agenda of enforced temporariness and radicalised precarcity. Finally, I discuss how these political developments are linked to changes in the political-economic context – and argue that the interplay of securitisation and economisation has allowed how to adapt migration regimes in line with new labour market needs.

Grass-Roots Healthcare Reforms: Collaboration Between Patient Support Groups and Medical Professionals

Healthcare reform that responds to unmet needs is a most urgent challenge. While many individuals and agencies, including governments, associations of healthcare professionals and lawyers have worked to solve these problems, the collective action of people with illnesses and disabilities and their families is just as important. The aim of this study is to examine how patients' support groups can change and help to create healthcare services that satisfy what they want and suit their needs, by examining the activities of two organizations: one for people with sarcoma (a sort of cancer), and the other for ME/CFS (myalgic encephalomyelitis / chronic fatigue syndrome) focusing on their advocacy activities. The advocacy activities of these groups can be called Health Social Movements. According to my previous survey, patients expected that the groups’ activities would change governmental healthcare policy, provide adequate medical and social services and eliminate discriminative perceptions against their disabilities. But there are so many obstacles they must face until their expectations are realized. However, these case studies showed that the advocacy activities of patients groups have actually achieved their goals to change the healthcare settings. The sarcoma support group persuaded medical professionals to establish a sarcoma center at hospitals to provide appropriate medical access for the patients. The ME/CFS support group has convinced medical professionals to conduct scientific research on the disease and government workers to set reasonable social services. This study suggests that the advocacy activities of the groups are becoming increasingly important for both the patients themselves and healthcare providers. A sign of social transformation of the healthcare structure, from a bureau-crat-driven one to a civilian-driven one, can be seen in this study. This process of people's involvement should be a key factor in the design of a more effective and sustainable healthcare system in the future.

Institutional Entrepreneurs in Multi-National Corporations: Embedding the Managers' Networks into Organizational Fields

This research focuses upon the institutional systems which have been constructed by the regional head-quarter managers of Japanese multinational corporations (MNCs) in Asia-pacific. Theoretical frameworks for dealing with these systems or conditions are notably conceptions of institutional entrepreneurship. The activities of Japanese multinational corporations in the Asian region are not new. They have been going on for decades and have been characterized by a tradition in which managerial control has been centralized by its home base in Japan. But this has changed with the expansion of production-consumption in the Asian region. Contemporary MNCs are much more sensitive to local conditions. Such changes have induced new organisational forms with the formation of regional networks surrounding these headquarters with active and energetic horizontal exchanges. These institutional systems effectively function when activities in regional networks are appropriately embedded into related organizational fields. In many cases, such relational activities are initiated by headquarters in Japan, however they require appropriate and realistic organizational procedures. In general, Japanese expatriates who are delegated from the head office in Japan have played vital roles in such system-construction as institutional entrepreneurs. They utilize their positions and authority derived from the head office, and at the same time they have made efforts to advance their local networks and use resources and relationships in the host community so as to develop a new institutional scheme which is responsive to the perceptions of members who are involved in these networks. For some reasons, their efforts have not always led to successful outcomes. In this research, the entrepreneurial characteristics that have been shown in the construction of appropriate relations between their networks and the fields are presented in order to identify the factors which determine success and failure.

Elderly Prisoners' Life World - Comparative Study in NZ and Japan

The Elderly Prisoners' Life World-comparative study between NZ and Japan In Japan and NZ the crime rate of the elderly persons (up to 65) is dramatically getting upward since 1990s. I and John Pratt(NZ) have engaged in the comparative study to make clear the backgrounds and reasons to put the elderly persons committing crimes. Both countries did a lot of effort to prevent them from doing crime and take care for them after release from the prisons. Nevertheless, such kinds of crime policy and the welfare trials were found out ineffective for the decrease their reoffending. Therefore we make our ideas to understand the elderly people in terms of their life world such as their life plans in childhood, dreams, hope, political needs, religious consciousness, love, alterity, family networks, crime and violence aspirations and satisfactions etc.

Based on the research findings (600 prisoners in Japan and 66 prisoners in NZ), here, we would like to construct their life worlds to get some suggestions to step forwards for them in their future without the criminal lives.

The Determinants of Cross-National Variation in Migrant Accessibility to Rights

Nation-states vary largely in the degree to which the economic, social, cultural, civil and political rights enjoyed by the native citizenry are conferred upon foreign nationals, and rarely do non-nationals fully enjoy the rights to which they naturalize. There is considerable cross-national variation in accessibility to the legal institutions of citizenship, but extant studies on the determinants of such variation are fragmented, revealing contradictory findings. Comparative studies, though informative, are largely qualitative and geographically limited to Western liberal democracies, making it difficult to make generalizable claims about other parts of the world. Furthermore, there has been limited theorization on the impact of international exogenous pressures on citizenship and nationality laws. Using the 2001 Citizenship Laws of the World dataset to obtain data on the minimum residential requirements for naturalization, we test whether rights' accessibility to rights, this cross-national study utilizes OLS regression to compare the explanatory power of world culture variables against domestic economic, political, and demographic variables commonly used in studies on the determinants of citizenship laws. Results show that international non-governmental organization (INGO) membership best predicts cross-national variance in the minimum residency length requirements for naturalization, thereby suggesting that extensive linkages with INGOs and the resulting diffusion of world cultural scripts on human rights into the domestic society and polity influence a state's willingness to confer the ultimate means to legal membership and rights.
Many Post-Modern Princes? Rival Cosmopolitanisms in the Global Field of Justicemovements

In this article, Hosseini reflects on the recent organizational and ideational shifts in the so-called global justice movements. While some recent studies conceptualize these movements as ideologically mature and coherent, other inquiries, highlighting growing disorganizations, fragmentations, disappointments, and disputes. The former argues that underlying global solidarities are coherent cosmopolitanist or nationalist values, whereas the latter claims that the global justice movements lack the necessary ideological vision for unifying the masses behind a global project for changing the world capitalist system. Alternatively, by drawing on his research project (2002-2006) and examples from the post-GFC uprisings including the Occupy movements in 2012, Hosseini argues that there have been four major parallel trends of ideological changes, dividing the global field of transformative practices between rival camps in terms of their orientations towards cosmopolitanist values. There are however significant potentials for traversing the divisions between the cosmopolitanist camps. Among them is the rise of a new (meta-)ideological vision, coined here transversalism by him. Transversalism assumes the possibility of creating common grounds for dialogue, collective learning or actions among multiple progressive identities and ideological visions in the global field of resistance. It appears in two forms: (1) the extension of any of the above mentioned camps to accommodate some of the principles of the other camps, such as regional Bolivian cooperation between socialist/peasant states in Latin America in recent years, or the idea of Democratic global Keynesianism; or (2) in the form of indep-}

Mending the Master Programmes: An Effort to Improve Progression and Completion Rates in Graduate Education

Generally, studies of dropout and completion in higher education have been concerned with undergraduate education and little attention has been paid to graduate level. The Bologna process has led to a introduction of reforms in higher education in several European countries. In Norway a comprehensive reform in higher education – the Quality Reform – was implemented in 2003. Two of the aims with this reform was to improve the students' progression and completion in higher education. To achieve this, a number of changes regarding the structure and pedagogy in Norwegian higher education system were introduced.

This article addresses completion and dropout in Norwegian university graduate higher education before and after the reform, using register data consisting of three cohort groups. The key research question is to investigate if there are changes over time in completion rates and dropout rates in graduate university education, and if the changes can be interpreted as an effect of the comprehensive reform in Norwegian higher education implemented in 2003. To what extent can national translations of international reforms make changes in national completion rates?

Preliminary analyses, including important independent variables such as SES and gender, indicate that there has been an improvement in completion rates after the reform, but that the dropout rate might not have changed significantly over time. There is an improvement in the proportion of students completing on an estimated time (2 years). Moreover, the process of completing a graduate university degree in general is more rapid after the reform than before.

Social Innovation: Driving Force Of Social Change

The importance of social innovation in successfully addressing social, economic, political and environmental challenges of the 21st century such as e.g. poverty and inequality is recognised not only within the Europe 2020 strategy but also on a global scale. However, despite this growing awareness of the significance of social innovation, there is still no sustained and systematic analysis of social innovation, its theories, characteristics and impacts.

Since Schumpeter, the concept of innovation has focused predominantly on economic and technical developments, whereas social sciences were particularly interested in the corresponding social processes and effects. This may explain why social sciences, to this day, have been conducting empirical work on social innovations quite comprehensively, but without labeling them as such and, with few exceptions, without a concept of social innovation informed by social theory.

In light of the increasing importance of social innovation the paper looks at the theoretical concepts, areas of empirical research and observable trends in the field of social innovation on a global scale. It gives an overview of the current situation and the perspectives of socio-scientific innovation research that have greatly contributed to the development and spread of an enlightened socio-scientific understanding of innovation.

It will present the objectives and the concept of the global research project SI-DRIVE (7. Framework programme of the European Commission) which intends to extend knowledge about social innovation (Si). Facilitating empowerment within innovation processes driving social change can and shall be a main result of social innovations. Thus, social innovations need to mobilise citizens to take an active part in innovation processes and thereby enhance society’s generic innovative capacity. This requires new models of governance in favour of self-organisation and political participation, allowing sometimes unexpected results through the involvement of stakeholders.

Food Markets of Oaxaca (southern Mexico); Culinary Heritage, Gender and the Slow Food Movement

In 2010 traditional Mexican cuisine - ancestral, ongoing community culture - was inscribed on the Representative List of the Intangible Cultural Heritage of Humanity of UNESCO. Significant element of the indigenous culinary heritage of the southern state of Oaxaca - characterized by its ethnic and cultural heterogeneity and rich biodiversity - is famous for its regional cuisine considered to be the most sophisticated in Mexico and well established network of traditional markets.

Nowadays, those lively, highly gendered spaces are not merely tourist attraction but still form a crucial part of local economy and communal life. In the same time, new styles and spaces for food consumption have emerged in the region due to advances of globalization and intensified processes of human mobility (migration, tourism, growing expatriate communities etc.). One of them

From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond

In this presentation, I will draw from the lessons of Taiwan’s local environmen-
tal history in 10 counties and cities over the past 60 years to assess the possible
future for sustainable development.

First, I will sketch the overall and particular historical trajectories of how local
environment has been affected and become deteriorated by human actions and
government policy factors such as ill planned industrialization and over urbaniza-
tion in many localities.

Second, I will look into the rise, development, and effect of green local civil

Second, I will look into the rise, development, and effect of green local civil

experience and beyond. From Environmental History to Sustainable Future? On the Taiwan
Experience and Beyond

The contemporary self-help culture raises scholars’ interest, through it to
investigate whether the discourse and imagination of intimate relationship or
biographical pattern and life decisions. However, although people still rely on
advices and counsels from self-help books and manuals written by experts and
professions when they are troubled by questions about relationship and life,
more and more people login to online forums to ask for advices from other or-
dinary people. Not only in new media but in non-western context is the self-help
culture significant and prosperous, though in different ways from western societ-
is on which most studies concentrate. Therefore, this study aims to inquire the
advise interaction about intimate relationship on an online forum (Boy-Girls) of
Taiwan’s largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I ex-
amine the discourses about intimacy in Taiwan and compare with what have been
suggested in the previous studies based on the Western self-help literature in
print media. The online advising discussion shows different concerns and disc-
urses about intimate relationship, and has a different relationship between ad-
visers and advises. First, family issues, gender difference, and ethics of relation-
ship are main themes in the discussion. Secondly, comparing to what have been
indicated in the past, the discussion in virtual forum concerns less self-centered
than ethnocentric, less value of self than equality between genders. These
discourses may promote a perspective of intimacy based on rather mutually de-
pendent partnership than ego-centered atomic individuals. Finally, the pattern of
the production of discourse in online forums is different from the way structured
in mass media which allows only one author/expert/advisor preaches their ideas/
experience/strategies to the mass audience. In this sense, the different relation-
ship between advisers and advises in new media, I argue, is the reason resulting
in different discourses about intimate relationship and self.

Big Data: The Concept in the Next Society

In our society, each social phenomenon leans on every new concept to clarify.
Concept of “Big Data” reveals the novel route to further illustrate our society.
Combining endless possibility in the society nowadays, connection produces
innumerable different situation since they are highly correlated. These variable
context currently become a huge complexity than within the modern society in the
sense of Niklas Luhmann. Therefore, the aim of next society is finding a way to
construct the order of the system (in the sense of Dirk Baecker), not reducing the
complexity instead.

Facebook demonstrated a solution, which has been developed by the society. By
algorithmic programming in Facebook, each loose coupling (uncertainties) click of
the user is now referring to different distinction and building up the boundary of
meaning. Every time user clicks “like” on status that it means he understands
something. Following understanding and meaning, the uncertain state will soon
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty is possible to construct the order or coexist with other systems.

The novelty of “Big Data” isn’t itself but clarify the targeted question. The paper
illustrated how Facebook reveals the solution to the problem of the next society,
computer society, as Dirk Baecker said.

Living Arrangement, Intergenerational Support, and Life Satisfaction in Japan, Mainland China and Taiwan

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but also forms a basis for promoting intergenerational exchanges between older parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support and individual life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that coresident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn't live with children.

Results from logistic regression models suggest that while living with own parents does not appear to affect adult children's life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction of female adults in Mainland China and male adults in Taiwan. Japanese males who didn't live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn't live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life.

While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

Fourthly, the hypothesis of social stratification is rejected. Parents of different status groups make similar fertility decisions. Fifthly, the data didn't support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the "developmental state". Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the impetus of post-war East Asian development stems from the external big bang of shock up the existing social orders and molded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous factors in terms of historical events or conjunctural forces in shaping the development, I argue that the existing social structure matters: Its interaction with the state shapes and constrains state choices and thus can account for the variations in strategies.

I make three claims to explain the divergence between Taiwan and South Korea: First, I illustrate how different configuration of state-society relationships (the state-business relationship) responded differently to similar historical conjunctures. Secondly, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationship, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.

Constructing a Quality Regime: The Origins of Taiwan's Export-Led Capitalism

Two key features of East Asian capitalism are the predominant involvement of the state in the economy and success via "export building". This paper revisits one of the original successful tigers, Taiwan, by examining the mechanisms of state involvement and the processes of integration into the world market at the firm level. The conventional explanation of East Asian development focuses on the state capacities in shifting to export-led industrialization (in contrast to the lack of such state capabilities in Latin America and India) and the emphasis on industrial policies to induce entrepreneurship. A direct implication of this interpretation is that when the state intervenes, it tends to produce large firms and encourage industrial concentration. Yet, the Taiwanese SMEs as key exporters has run against the evidence elsewhere. If export-led development is an important element in understanding East Asian capitalism, and if the state-centric thesis is to have any explanatory power, we need to show how the East Asian states escort firms in the world market. Specifically, how has Taiwan, an example, coordinated a system of SMEs in its quest for integration into the global economy?

Through in-depth case studies of the 1970s key export industries, this paper illustrates the patterns and ways in which the Taiwanese state coordinated and interacted with the decentralized SMEs. The linkages between the state and SMEs were through varieties of technology and export promotion programs carried out by various kinds of semi-governmental organizations with an emphasis on technical standardization (at the firm level) and ensuring quality control. These mechanisms criss cross in over centuries to establish systems of trust, and they had an impact on the formation and patterns of firms' subsequent technological learning.

This reinterpretation of Taiwan's post-war experience is relevant to debates on models of Asian capitalism(s).
On Appropriation and Japanese Sociology: The Case of Postmodern Social Theory

What does it mean to appropriate a social theoretical approach—initially developed elsewhere—into a different social context? The aim of this paper is to interrogate this very question through the prism of contemporary Japanese sociology. While some scholars have suggested that the practice of appropriation indicates a lack of creativity, others have suggested that something more intricate and innovative has been at work in Japan (Elliott, Katagiri and Sawai 2013: 11-12). In this paper, I substantiate the latter interpretation of Japanese sociology by exploring how postmodern social theories have been used to generate insights about contemporary Japanese society in new and unconventional ways.

Although postmodern social theory is now regarded as a largely defunct—if not also unproductive—area of study in the Western world (e.g., Ryan 2007), Atsushi Sawai (2013) describes how the field continues to remain relevant in the Japanese context. This is because Japanese scholarship on the postmodern has not remained overly fixed on the issue of epistemology, as a sizeable portion of postmodern social theory in Japan has sought to analyze various social transformations and events.

It is also crucial to note that the scholarly debate on postmodernity and postmodernism in Japan has not unfolded in the same way as it has in the West. What is unique about Japanese postmodern social theory is that it has not simply held a ‘diachronic’ view of postmodern cultural (Koto 2006). Some scholars have noted that it is possible to detect postmodern features in pre-modern periods of Japanese history, and that postmodernity may overlap with ‘indigenous’ to Japanese society since then rather than otherwise thought (Katarnari 1985).

Post-Developmental State with the “Therapeutic” Turn: The Case of Taiwan
The East Asian developmental states fell for decades due to global economic restructuring and their respective contradictions and dilemmas. Political exploration of post-developmental scenarios remains ongoing. In Taiwan, this exploration could be termed as “therapeutic turn” in three respects. First, the implementation of the ‘welfare state’, that is, the implementation of National Health Insurance, wherein population health became a new ideology of legitimation. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the descending information and communication industry, for a new mod of growth. Third, there is a ‘managerialist-developmental’ creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, privatization of health promotion on the one hand, and intensifying welfare regime on the other, contribute to a disjunction among current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the ‘welfare turn’ is in fact a political project and illustrate how the therapeutic turn of Taiwanese post-developmental state runs into crisis.

Is There a Motherhood Penalty in Taiwan? The Effect of Childcare on the Wages of Women
Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital theory, neoclassical theory of compensating differentials, and statistical discrimination theory. First, scholars employing human capital theory have assumed that many women spend time at home caring for children, interrupting their job experience. This interruption is likely to reduce the accumulation of human capital such as work experience, seniority, and formal skills. Therefore, the loss of the human capital may have an influence on later wages. Second, the neoclassical theory of compensating differentials suggests that mothers may trade off higher wages for ‘mother-friendly’ jobs that are easier to accommodate their responsibility of childcare and employment. Finally, the main argument of statistical discrimination is that employers may discriminate against women because of their motherhood status. Compared to the rich evidence of childcare wage penalty in the United States, the relationships between motherhood and the wages of women have not been well investigated in Taiwan. Therefore, this paper aims to examine the wage penalty for motherhood by using data from Panel Study of Family Dynamics with fixed-effects models. The research analyzes whether the effects vary by different marital statuses.

The Knowledge Inequity in Hidden Curriculum of Taiwanese Higher Education Under the Trend of Globalization: The Comparison Between Private General University and Technology University
The knowledge condition in higher education under the trend of globalization has been moving toward post modern universities, which is consistent with the argument of Lyotard (1984) – the rise of performativity. Under the dominance of performativity, the curriculum with practice, efficiency, performance or productivity has undoubtedly become the important strategy for universities. Moreover, the vocationalization of curriculum in higher education and the hidden curriculum of performativity especially in higher education institutions.

It is worth studying whether there remains knowledge classification in terms of management and skills among students between the hidden curriculum of performativity in private general universities and those in private technology universities. The inequity as well the corresponding consequence in the workplace is the main issue of this research.

This paper aims to explore the relevant arguments about vocationalization and hidden curriculum of the higher education under in the trend of globalization. Samples for case study include two private universities, one general university and one technology university, from which the knowledge classification and the inequity in the hidden curriculum of performativity will be explored.

This a qualitative research and the method includes text analysis and interviews. It is expected that the vocationalization of curriculum and the inequality in the hidden curriculum of performativity can be unveiled for the reflection of the undergraduate curriculum related policies in higher education institutions.

Key words : vocationalization of curriculum in higher education, globalization, performativity, hidden curriculum, sociology of knowledge

HSUNG, RAY-MAY* (National Chengchi University, hsung@nccu.edu.tw)
Social Capital, Civic Engagement, and Political Efficacy in East Asia
This study attempts to explore plausible mechanisms among social capital, trust, civic engagement, and political efficacy in four East Asian societies. The data are from the 2012 East Asia Social Survey on Social Capital, including data from Taiwan, China, Japan, and Korea. This study differentiates social capital into individual social capital, organizational social capital, and trust. Individual social capital is measured by the diversity of accessed position-generated networks, and organizational social capital is measured by the diversity of voluntary associations people participated in. Trust is classified into three types of trust as well: trust to personal contacts, trust to public agents, and general trust. This study attempts to examine the effects of individual and organizational social capitals on three types of trust, and then furthermore examine the function of all types of social capitals in terms of civic engagement and perception to political efficacy. One dominant and most universal mechanism of effect is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated individual social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy even are stronger effect for those in Korea. Trust to government agents and trust to personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.

Green Home for Whom? Estimating Green Housing Opportunities of Various Socio-Economic Groups in Nanjing China
Although sustainability is considered an integration of society, economy, and environment, it is criticized that the concept of sustainable city is not necessarily accessible or affordable to the majority. The improvement of the quality of life after sustainable plans leads to a significant market premium which can only be afforded by the minority. Take Nanjing as an example. In the transition from an industrial to a post-industrial city, Nanjing government attempts to build a sustainable city by constructing green apartments, improving metro networks, and upgrading老旧的 industrial areas. However, the construction of new apartment buildings are mainly built in places with good accessibility and neighbourhood quality. The high prices make green apartments as a symbol of luxury for the upper-middle class. To involve different socio-economic groups in developing a sustainable
Parental Migration and Adolescents’ Transitioning to High School

Parental Migration and Adolescents’ Transitioning to High School in Rural China

The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals’ lifetime status and the society’s educational stratification and social inequality. Educational reforms beginning in 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China.

Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?

This paper investigates how parental labor migration influences rural adolescents’ transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more demand on children’s time and labor on housework or farming, access to parents’ information and networks on migrant work opportunities, and changes in parents’ values and attitudes about children’s education. These mechanisms will in turn affect children’s aspirations, motivations, academic performance and educational outcomes in different ways.

The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

Profesiones Sin Fronteras? Las Trayectorias Profesionales De Los Ingenieros Mexicanos Que Migran a Estados Unidos

Con los procesos de globalización, la migración calificada se ha incrementado de forma importante en las últimas décadas. Se advierte un interés notable de países desarrollados por atraer a profesionales, sobre todo ingenieros, que a su vez aportan con sus conocimientos y habilidades la renovación de la industria. La relación de la inmigración con la formación de un capital humano altamente cualificado se ha fortalecido en los últimos años.

El trabajo se basa en las teorías de la migración internacional y en las proyecciones de la demanda laboral en los países de destino. Los resultados indican que el ingrediente principal de la migración es la formación profesional. La formación profesional es un factor crítico en la decisión de emigrar, ya que permite la adquisición de habilidades específicas que son valoradas en los países de destino.

En la ponencia se muestra la heterogeneidad de las trayectorias de los ingeniros en función de cuatro dimensiones principales: a) su capacidad de agencia a lo largo de la trayectoria b) la escalabilidad en la que se desplaza el trayecto c) la legitimidad de su condición de ingenieros en un país extrañero y d) la forma en que se adquieren nuevas competencias profesionales o se transforman las que había adquirido en México.

Los resultados muestran que los ingenieros mexicanos encuentran en general oportunidades de desarrollo profesional en Estados Unidos con la excepción de algunos grupos de jóvenes ingenieros con trayectorias en fases tempranas que sufren graves condiciones de precariedad. Las trayectorias con mejores condiciones laborales son las de aquellos ingenieros que estudiaron una maestría o un doctorado en Estados Unidos.

Passive Revolution: The Retreat of the Taiwanese Developmental State Since 1990s

Since the late 1980s, under the “double squeeze” of democratization and globalization, it is undeniable that the developmental state in Taiwan has undergone significant transformation along the course of economic development. Yet a nagging question remains unanswered is how to comprehend this transformation. It is to illuminate and conceptualize this transformation of the developmental state to which this paper is devoted. More substantively, based on the policy regime approach, the main research objective is to investigate the changing role of the state in fulfilling the dual and often contradictory function of accumulation and legitimation (especially since the 1990s). Three strategic research sites can be chosen: accumulation regime, welfare regime and fiscal regime. Whereby examining the accumulation regime helps us understand how the state involves in promoting capital accumulation, the welfare regime characterizes the state’s pursuit of legitimation. And in order to decipher the tension of accumulation/legitimation nexus, the fiscal regime is accordingly examined. The main concern for fiscal politics are to discover the principles governing the volume and allocation of state finances and expenditures and the distribution of tax burden among various economic classes. Fiscal regime is therefore the linchpin among all the three policy regimes to help us identify the action of the state.

Institutional Divergence in Petrochemical Industry of Mexico and Taiwan: Combined Effect or Failure of State Intervention and Liberal Marketization?

This paper examines the shift from interventionist state to market-led growth in petrochemical industry for both Taiwan and Mexico since 1980s, which leads to the formation of mixed-market economies (MME) in these two countries. Despite the similarity, Taiwanese petrochemical industry demonstrates a backward and forward linkage in a full scale of privatization, whereas Mexico comes to a rupture of backward linkage and importing a large quantity of immediate chemical products with huge trade deficit while implementing privatized contractors.

This paper argues that despite the transition of state policy from interventionism to neo-liberalism in the 1980s, the differences in economic performance of these two countries’ petrochemical industries are determined by the different kind of market institutions-building and state-business collaboration, a result of respective path dependence in Taiwan and Mexico.

The finding indicates that the Mexican model of state-business coordination via “PEMEX and contractors” and strategic alliance have failed to create incentives for public-private partnership as well as attract investment due to state ownership of oil in the upper stream and oligopoly among big corporations dominated by a few business groups in the middle stream of Mexican petrochemical industry. By contrast, in Taiwan’s case the effectiveness of state intervention lies in developing a state-business co-evolutionary model, featuring not competing with business but rather complementing to business needs in the market. It seems that the continuity of state intervention in Taiwan has penetrated into the era of neo-liberalism, while lacking monopoly and oligopoly in Mexican case.

Teacher Quality Vs. Social Justice: Issue and Status Quo in Taiwan

Teacher quality is taken as the strategy to social justice in the trend of standard-based teacher education. In the accountability of the interpretation of social justice is about student learning opportunity that let every student can learn depends on teacher quality. Especially, all students in every school can receive teaching from qualified, knowledgeable, and capability teachers that means school success. The assumption of the relationship of teacher quality and student learning is worth to investigate. Why the relationship is about social justice, what kind of social justice in the assumption, and how about the context in Taiwan is its meaning in Taiwan the same in the concept of standard-based teacher education with globalization? Therefore, this paper would like to find the relationship between the student learning and social justice in the case. Second, this paper would like to
analyze the relationship of teacher quality with social justice in Taiwan context. Finally, this paper provides some findings and suggestions.

The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examining foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Food is not only a necessity in daily life, but also a contested site where gender, class, and ethnicity intersect. Chinese marriage migrants are often depicted as opportunistic gold diggers in the Taiwanese society. Not only do they suffer various forms of discrimination from the general public, but even more unbearably, within their own family. This research shows that living arrangement has a great influence on Chinese marriage migrants’ agency. In a “three generation cohabitation” setting, the dining table becomes a battlefield between Chinese immigrant wives and their Taiwanese in-laws. Chinese immigrant wives’ food preferences and cooking habits such as the general usage of oil, salt, MSG, and other condiments are associated with their national origin, further classified as the lack of modern knowledge and inferior. In the name of a “healthier” diet, Taiwanese in-laws often despise Chinese marriage migrants cooking habits and ask them to adapt. Food consumption and cooking styles not only draws a subtle ethnic line between Chinese marriage migrants and their Taiwanese in-laws, but also serve as a marker of status and class. Facing such difficulties in the domestic sphere, Chinese marriage migrants often claim that unlike many restaurants in Taiwan, what they cook are the real “authentic” Chinese food. They develop a nationalist discourse as a means of asserting their subjectivity and the legitimacy of being a good mother. With limited agency in food consumption in their own household, Chinese marriage migrants, despite they come from different regions, have collective memories and establish a special bouding, a sense of belonging through food making and sharing.

“I Want to be a Breadwinner Too”: Chinese Marriage Migrants’ Narratives of Gender, Identity, and Family in Taiwan

This study aims to explore the intricate gender dynamics in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Gender is not only a major element to immigrant identity, but also a vehicle for minority groups to claim cultural superiority over the dominant group. Taiwanese men and Chinese women have very different expectations of gender roles in marriage. Taiwanese men and their parents expect Chinese women to behave in a traditional way – to be a good stay-home wife/mother/daughter-in-law. Yet Chinese women, who grew up in communist China, consider such expectations outdated. Most of these Chinese women anticipate Taiwan as a more modern and Westernized society before getting married, but only to find out that patriarchal ideology and practices still prevailing. In contrast to stereotypes portraying Chinese marriage migrants as lazy and opportunistic “gold-diggers,” many of these immigrant wives, despite external immigration policies and their lack of local networks, express a strong desire to work. Being confined in the domestic sphere, these Chinese women long for part of their old identity – a financially-independent working women. Facing stigmas in the Taiwanese society, Chinese immigrant wives criticize that their Taiwanese in-laws are under Japanese colonialism and feudal Confucianism’s influence, thus they are backwards and lack of modern concepts of gender equality. This research argues that these Chinese marriage migrants develop such discourse as a strategy of resistance – a means of asserting their progressiveness. At the same time, gender dynamics in the household (private sphere) has become a public issue – the Taiwanese government launches programs to “teach” Chinese women how to be an “appropriate” Taiwanese wife/daughters-in-law. This study elaborates how the conduct of micro private life is deeply tied to macro social structures.

History and Text: A Study on the Changing Forms of Governmentality of the Communist Party of China

Following the traditions of New Historicism, this paper explores the historicity of text and the textuality of history through a case study on the changing forms of governmentality of the Communist Party of China (CPC) before and after the foundation of the People’s Republic of China (PRC).

The paper focuses on two social movements initiated by CPC: Land Reform before the foundation of PRC and Patriotic Hygiene Campaign afterwards. The former movement intended to classify ‘class backgrounds’ of people in rural China in order to distribute private properties to create an egalitarian society. While the latter aimed to arouse awareness of public health so as to win an alleged germ warfare and raise people’s standard of living.

The first part of the paper uses two literature texts to analyze the change of governmentality. One is Ding Ling’s award-winning novel Sun Shines on Sanggang River which portraits the Land Reform. The other is Clear Skywritten by renowned playwright Cao Yu which tells the story of how an American-sponsored hospital transformed during the Patriotic Hygiene Campaign. Under CPC’s ideological influence, both texts served the purpose of political propaganda. While the former marked character and storytelling reveal the change of CPC’s governmentality from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse.

Second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, this paper uncovers the changing meaning of the idiom ‘class enemy’. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatnum of the same word unveils the fact that history is more of a narrative open to various interpretations than a solid causality between events.

Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong Jiangmen city, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of “Jiangmen nuclear crisis” on Sina Weibo revealed two important oppositional frames: risk of radioactive contamination and its hazardous effects on health; untrustworthiness towards the local government and the attendant low level of acceptance of the sitting plan. The framing process was facilitated by the Internet and shaped by contextual factors as well as interactions between government and opponents. The sense of risk has been heightened after the Fukushima Daiichi nuclear accident and frequently referred to in the framing process. Yet, unlike the previous literature emphasizing the importance of “technological fix”, the risk was framed as a social issue associated with the lack of confidence in authorities’ supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution on problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials’ inappropriate responses, ill-prepared feedback channels, and more importantly the micro-blogging censorship. As untrustworthiness levels increased, the sense of risk was also enhanced. Besides, the Internet played an important role in revealing the procedural flaws and demonstrating the potential widespread fallout through digital mapping system; it also helped activists counter officials’ discourse head-on. These findings echo previous conclusion that limited public participation in the decision-making process is crucial to anti-nuclear activism. However, the interactive framing processes suggest that the public’s perspectives on environmental issues are inevitably intertwined with government’s responses and the public’s general perception of the government.

The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. The data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second,
in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers' human resource management in Kaohsiung and future studies were discussed.

Inclusionary Housing in China: Achievements and Challenges

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban land and local governments’ right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What are its social, economic and political costs and benefits? 3) What kind of mechanisms needs to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

HUANG, YUQIN* (East China University, yuqinhuang2004@hotmail.com)

Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when integrating with such institutional hurdle as hukou (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai hukou and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 per cent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called “group renting” (qun zu) in which existing medium-end even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city centers. The motivation of these people lies in the local government has taken measures to stop ‘group renting’ which leaves many young non-locals nowhere to find a home. The second case is about a recent regulation issued by Shanghai government in which non-local unmarried residents are denied the right to buy a home in Shanghai. The effects of this regulation are gendered in protests. By analysing these two cases, this article aims to show how the right to the city of the young non-locals has been contested by the government mandate, it does not results in increased social and spatial inclusion. Moreover, in contrast to their own discourse around risk-based regulation, participants locate possibilities for citizenship in particular spaces that encourage individuals to develop collective identities, the actors interviewed were not brought into the arena of social change via consumption activities. Interestingly, these individuals continue to advocate for greater consumer education and opportunities for ethical consumption as tactics to enlist greater citizen engagement, tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored. Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the impacts of risk-based OHS governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. We compare and explain their role in German and British OHS governance. We argue that variation in treatment of occupational illness across countries depends -- apart from historical and legal conditions -- on the organisational structure of professions (e.g. regulatory agencies vs. professional associations) within the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the United Kingdom, while the medical profession in Germany treats each case as particular and thus incorporates risk-based risk management in the case of serious health damages as defining element of OHS regulation. To do so, we compare the impacts of risk-based OHS governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professions in Occupational Health and Safety Regulation in Germany and the United Kingdom

Risk-based governance provides, inter alia, the means to target regulatory interventions by risk factors and to account for the occurrence of ‘rare’ and their impact. For example, in 2005, the influential British Hampton Review suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based settings may have unintended consequences, leading to higher risk perceptions among health professionals or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored. Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the impacts of risk-based OHS governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. Social Movements and The Citizen-Consumer: Evidence From The Canadian Sustainable Food Movement

The proposed presentation builds on the established limitations of the citizen-consumer hybrid through a study of key actors in the sustainable food movement. While others have focused on how consumers are mobilized to purchase ethical products as an expression of citizenship or social agency, we examine the motivations of social movement actors and their tactics for engaging others. Using the case of food, we examine how movement actors seek to engage consumers through food products, while encouraging movement towards citizenship responsibilities and political change. Data are derived from a qualitative case study of 45 leaders from civil society, the state, and the market in two Canadian cities. Findings are used to scrutinize the concept of the citizen-consumer hybrid as this entity relates to environmental social movements. While advocates of shopping for change suggest that ethical consumption creates opportunities and discursive spaces that encourage individuals to develop collective identities, the actors interviewed were not brought into the arena of social change via consumption activities. Interestingly, these individuals continue to advocate for greater consumer education and opportunities for ethical consumption as tactics to enlist greater citizen engagement, tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored. Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation.

Breaking the Cycle: Inequality, Social Investment, and Human Capital in Latin America

Latin America has long lagged behind the East Asian Tigers in investment in education. In particular, Latin American countries failed to invest heavily in public secondary education. This has had costs both in terms of economic growth and inequality. After some 20 years of democracy and particularly with the turn to the left, social investment in the form of increasing expenditures on education and health care and the spread of Conditional Cash Transfer Programs has received unprecedented attention. The CCTs are based on the recognition that investment in the human capital of the next generation requires that poverty in the present generation be addressed. We argue that in Latin America social investment, human capital stock and inequality and poverty are linked in a feedback causal process and present quantitative and qualitative evidence supporting our argument.

Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden of care on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventer medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents/carers’ children’s and health professionals’ understandings of asthma and their perceptions of the barriers and facilitators to good asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasises the dynamic, multi-dimensional and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses using this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identity is continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distractions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

Legal Consciousness and Labour Insurgency: A Comparison Between China and the U.S

This paper seeks to examine the effects of legalization of labour relations on workers’ political strategy to lay claim to resources and reproduce their dominant status. Some U.S. scholars pointed out that the Wagner Act has deradicalised the U.S. labour movement by imbuing legal consciousness that built upon contractualism and private property rights into workers and by confining their actions within the legal institutes and practices (Klare 1978, 1982). Similarly, many scholars in the field of labour studies highlighted that the labour movement was used by the party-state to channel workers’ protests into bureaucratic procedures (Lee 2007; Gallagher 2007; Friedman and Lee 2010; Chen and Tang 2013). However, little is known about the grievance-diversion mechanism vested in the Chinese labour laws system. For example, how does the party-state make workers believe that the legal system can protect their interests so that many of them do not launch an insurgency? To what extent do workers trust the legal system? Under what circumstances will they bypass it?

This paper aims to fill up these gaps by analyzing how the Chinese party-state construct the legal consciousness of workers, the characteristics of this consciousness, and when and how workers would act beyond the legal consciousness. I answer these questions from two approaches. First, while not many current studies examine the Chinese labour laws from the perspective of workers, I have conducted 60 in-depth interviews with workers in the Guangdong province in order to find out the agential viewpoint on the juridico-political structure and the characteristics of their legal consciousness. Second, by comparing to the Wagner Act in the U.S., I aim to investigate the impact of this legal consciousness on labour insurgency in China and the possibility of overcoming its effects.

How Parental Absence and Social Capital Influence the Psychosocial Development of Left behind Children Whose Parent(s) Work Abroad? - the Case of Yanji City, China

As a major supplier of migrant labor, China has a large number of people who are moving from rural to urban cities and even crossing borders to search for better opportunities and wish for a better future for their families. This paper focuses on the left behind children in China whose parent(s) work abroad (LBCPWA). The reason is that these children are largely ignored in the country, and such cohort of children are encountering the crisis of troubles within the context of globalisation, which has threaten the qualites of life for this vulnerable child population.

Previous literature shows that when compared with children of non-migrant families, the psychosocial development of LBCPWA due to parental absence is mixed. Some studies indicate a significant difference between LBCPWA and children of non-migrant families, while others show identical results. In this vein, this study employs a resilience perspective that regards social capital as protective mechanism, which can buffer or mediate the impact of parental absence on the psychosocial development of LBCPWA. It adopts a quantitative research method, uses a cross-sectional survey design to collect information from a sample of 1000 LBCPWA and children of non-migrant families in Yanji city, China-an ethnic minorities area, where international migration is a common phenomenon. The findings and policy implications are discussed.

The Mapping of Leisure Value in Chinese Cultural Tradition

In the 5000-year-long history of Chinese culture, leisure culture has played an important role in passing on Confucian, Daoist, and Buddhist culture. In the modern times to the present day, leisure as a specific cultural form, has often permeated people’s lifestyles and behavioral patterns widely as a force that is direct, intimate, free, sentimental, and humanizing. Not only has leisure aided human beings in a biological sense, helping them to recover their physical strength and energy, but through meaningful leisure activities people have brought forth many beautiful fruits — spiritual sublimation and the release of humanistic concern and creativity. This kind of wisdom helps us to realize that the leisure life is not a privilege limited to the rich and the successful only, but a product of a carefree mind.

But, China is entering a new historical stage: a stage of rapid changes when material wealth has been greatly increased, a stage when human beings are not...
in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires.

Unfortunately, Today, traditional values of leisure have in this multivariate social transformation been mutilated more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and shopping, or with what is fashionable that the rich like to boast about.

This article attempts sort out Chinese traditional leisure culture and style from Confucianism, Buddhism and Taoism... as well to reflection on contemporary Chinese face to the confusion and diff... as well to the loss of leisure value and... traditions.

Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back' neoliberalism) differ from those found in the following 'roll-out' or embedding phase of neoliberalism implemented by Third Way Labour governments in both countries. The study continues public support in many public support in many policy areas arguably contributed to the internal crisis that provoked an adaptation of the neoliberal project. Moreover, the paper explores what has happened to public support for the welfare state following the external crisis provoked by the financial meltdown of 2008-2009: do New Zealand and British public attitudes show signs of resistance against austerity measures or do they indicate a third, 'roll-over' period of neoliberalism whereby the public accepts not only a neoliberal economic agenda but also the need for further retrenchment of the welfare state? Conclusions about the politics of social policy at the level of public opinion are drawn from a qualitative analysis of both survey data over three decades and interview/focus group conducted in New Zealand, offering both good and bad news for welfare state advocates.

Lack of Universal School Education: A Potent Agent for Preservation and Propagation of Inequalities in Developing Nations

Education is said to be a social institution that eliminates inequalities through its individual (formation of social personality, social placement, social mobility etc.) and societal (social stability, division of labour, social change etc.) functions. Multiter educational systems in developing capitalist economies like India pose challenges to its functions and marginalise masses. States run schools with school teachers in the possession of unprofessional values catalising this phenomenon. This paper is based on a preliminary study to investigate the prevalence of unprofessional practices among school teachers. Six undesirable values investigated in the school were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

Generational Orders in Azerbaijan and Kyrgyzstan - Young Adults Between Independence and Interdependence

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents’ will, to support parents financially, to support them with care work or just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well as by a generational and gendered order as they may be especially strong towards daughters. These strong expectations young adults are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context. Various solutions are worked out in such conflictive constellations, some being more, some being less realistic planning, and most of them maintaining the validity of an age hierarchical order. By concentrating on two contrastable social groups in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

HUNT, STEPHEN* (University of the West of England, Stephen3.Hunt@uwe.ac.uk)
Sexual Rights In The UK: The Christian Right and The

In recent years the United Kingdom, much like other western democracies, has seen the proliferation of sexual minority rights largely through equality legislation (especially Equality Acts 2006, 2010). As a consequence many faith communities are now challenged by such legislative enactments that advance the equality, citizenship and social inclusion of sexual minorities (and heterosexuality) and prohibit discrimination in various economic and social spheres. This paper will explore attitudes and views of conservative Christian churches that have come out strongly against such developments on moral grounds and advance freedom of speech to express their vehement views. Christian Right campaigning groups are however more strident in their attitudes which have tended to have become increasingly polarized. This paper considers the key issues in the context of, firstly, the result of increasing marginalization of conservative Christians in a post-Christian environment and, secondly and relatedly, the narrative of rights and the philosophical underpinnings that they adopt in the opposition to sexual rights. The paper will also consider how such narratives also engage with religious rights that are simultaneously advanced by the Equality Acts 2006, 2010 and which generate contradictions and conflict/potential conflict between sexual and religious rights.

Sidewalk Cafes: Formal and Informal Negotiation of Private and Public Space in the Creation of a Parochial Social Order
Albert Hunter
Northwestern University
Abstract

Sidewalk cafés are a venue for exploring the intersection of public and private space in the urban environment. Drawing on the work of Duneier, Goffman, Hunter, Lofland, Sennett, Whyte, Zukin and others the research defines the way in which the transition between the public space of the sidewalk and the private space of a restaurant are symbolically negotiated and defined. The result is a new social order – a parochial realm – that selectively draws on and amalgamates elements of the public and private realms. In addition to the informal negotiation

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
of norms defining this space among patrons, proprietors and passersby. The research also explores more formal mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. We also trace the mutual impact of the two levels of informal and formal negotiation processes. The research explores variations in these negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a “consumer” and at the formal level as a city plan commissioner.

A Reflection on Social Class Differences in Australian Mothers’ Experiences of Full-Time Employment and Family Life

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers’ experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, I will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the increasing demands of middle-class employment create ‘a time deficit’, which may deplete women’s capacities to genuinely attain ‘the good life’, associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of ‘good motherhood’, regardless of a woman’s social class location.

Older Canadian Men’s Perceptions and Experiences of Ageism in Everyday Life

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from in-depth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogeneous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual). Our analysis of the data revealed three key findings: a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalized ageism. Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalized elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of the need for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, ‘dirty old men’, or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age related social networking sites. By taking the position that youths’ identity is fluid and dynamic, this paper aims to look at the ways in which Malaysian youths construct and manage their online identities through visuals posted on popular social networking sites. A sample of 20 youths aged between 18 to 25 years residing in urban Penang participated in this ethnographic study. Preliminary results show that these youths own sever-

Advancing Gender Equality in Nordic Academia: Political Will and Persistent Paradoxes

The Nordic countries – Denmark, Finland, Iceland, Norway, and Sweden – can be characterized as global leaders when it comes to overall gender equality of society (World Economic Forum, 2012). Political will to advance gender equality in academia is evidenced by the gender equality promotion that has been actively on the national policy agendas since the late 1970s-early 1980s, through various national level interventions, especially so in Finland, Norway and Sweden. Gender equality is addressed in the university legislation in Norway and Sweden, and universities are legally obliged to engage in equality planning. These three countries show the highest proportion of women on scientific boards in the European Union, approaching gender parity, and the highest proportion of women among university Vice-Chancellors in the EU (EC, 2013). Even if many key gatekeeping influences shaping the academic and scientific landscape show greater gender equality, unequal gendered structures in academic careers prevail. If the proportion of women among full professors is used as an indicator of gender equality in academia and science, Norway and Sweden do not excel in a European comparison, having only reached the same level as the European (EU-27) countries on average, while Denmark has among the lowest, whereas Finland among the highest proportions of women among full professors within the EU. This paper interrogates the Nordic paradox of high overall gender equality in the society, political will and active policy regulation to advance gender equality in academia and science, on the one hand, and the persistent unequal gendered structures in academic careers and inequalities in resource allocation, especially in research funding, on the other. Accordingly, differences and similarities between the Nordic countries will be highlighted and discussed, along with historical developments, policy landscapes and continuing resistances to greater gender equality.

The crisis of organized labour has given rise to an extensive literature and various policy ideas for trade union renewal. One proposal has been to call for union mergers to create new types of labour organizations better equipped to conduct campaigns to increase union density and influence. Are such mergers an indication of union weakness or, if undertaken strategically, do they hold promise for a reinvigorated labour movement?

After reviewing past union mergers in selected industrial relations systems, the paper focuses on a recent new union formed out of the merger of two large private sector unions—the Canadian Auto Workers and the Communications, Energy, and Paper Workers Union of Canada. The paper provides the background to the merger and offers an assessment of the possibilities for labour movement revitalization.

Objectives for the new union include the organization of non-union workers, especially in private service sectors characterized by a concentration of younger employees who make up much of the difficult to organize precariat. New organizational approaches include building union-associational and community chapters. These tactics require innovative union philosophies, organization structures more appropriate to the new general unions, and political campaigns to change legislation. Having critically considered these and other ideas on restructuring more appropriate to the new general unions, and political campaigns to change legislation in Canada, the United States and Mexico, the paper assesses each of these sets of claims. Finally, the paper gives policy recommendations for advancing class perspectives that can provide a counter-hegemonic political culture change legislation. Having critically considered these and other ideas on restructuring more appropriate to the new general unions, and political campaigns to change legislation in Canada, the United States and Mexico, the paper assesses each of these sets of claims. ropean context, telework - an arrangement that enables employees work from home - has been suggested as a virtual mobility option with the potential to reduce the ‘consumption of distance’ associated with regular commuting. Given its emphasis on the application of technology to solve environmental problems, the uncritical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers Shouldering a substantial social burden arising from technology-aided changes in work practices.

**Smart CCTV in Contemporary Crime Control: Policies and Practices of Surveillance**

I would like to address risk governance in crime control by illustrating the development and implementation of so-called “smart” CCTV systems in Germany. These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms. Since this technology is not based on the psychological or criminological analysis of deviant individuals, but on the analysis of situation and space classified as dangerous, it comes with an expansion of risk perception: everyone who is monitored by these systems is a potential risk. Hence, smart CCTV can be seen as a signature of a new rational of crime control, described by scholars as situational crime prevention, new penology or neo-liberal governmentality. In this new rational, smart CCTV is seen as an efficient and effective tool for security measures. In accordance with this view both, advocates and critics of this technique draw a picture of new powers of control, that stretch with a re-coding of risk and security. On the other hand its practical implications correlate with a multitude of social factors.

**RC20-347.3**

**HÄNZI, DENIS** (TU Darmstadt, hzenia@fs.tu-darmstadt.de)

A century ago, Max Weber concisely brought Switzerland’s character as a “Wilsensches Nation” back into the public’s view. Only on the condition of a shared belief in the unique nature of their habits and morals, the identity of the Swiss could emerge and consolidate. Based on a mythology of rural-alpine nativeness and isolation, this “belief in commonality” entails both the construction of boundaries vis-a-vis the threatening outside world and corresponding semantics of resistance. Given the recent discussions on foreign “attacks” on the Swiss banking secrecy and the increased charismatisation of the Swiss mountain guide (an idealization of the laudable Swiss) at the present time, it becomes apparent that this architecture of “Swissness” still provides important symbolic resources.

Yet, what about those Swiss who do not live on the very “Helvetic island” but are dispersed all over the globe? First, the paper aims at discerning how the Swiss expatriate is being drawn as a distinct identity in a multi-dimensional policy space. Indeed, the adaptation of the male breadwinner model to new needs and values has remained weak. The paper argues that the politics of reform must be analyzed with a coalitional approach in a multi-dimensional policy space. Indeed, the question of good or bad “performance” seems to be crucial in our late capitalist days: be it on the stock exchange, be it in TV-casting-shows or the context of resource allocation in the academic field. But what do we know about the reciprocal relationship of the performing arts and theories of performativity, as they experience a real boom in the wake of the performative turn?

In this presentation, it is assumed that the theatrical art world is a universe of discourse and practice par excellence not only allowing to observe performative phenomena and develop new theoretical approaches to performativity – but especially to shed light on the interrelationship between scientific paradigm shifts and changes regarding the fight for recognition within the field of performing arts. As will be shown, the performative turn in theater studies and sociology of art is attended by transformations of theatrical creation. Thus, the paper aims at discerning in what way this interrelation fosters a new logic of artistic recognition. Within the framework of the latter, it headmost is the mastery of “performative piroquets” that will be awarded: Artists more and more have to assert themselves as virtuosos of a somehow “reflective” performativity.

In order to go to the bottom of this phenomenon, two theoretical reconsiderations will be proposed: First, referring to Michel Foucault, it will be argued that one can speak of a “discursive explosion” around and apropos “performativity” within the theatrical art world, producing new forms of artistic mysteriousness. Second, drawing on Max Weber, this latter proposition will be linked to a charisma-theoretical model of artistic performativity.

**Different Paths of Family Policy Modernization in Continental Welfare States**

Family policy in continental welfare states strongly reflected the male breadwinner model at the beginning of the 1970s. This model has become increasingly ill-suited with regard to new social structures and values. This paper studies the impact of new social needs and demands on family and care policy and politics in Germany and Switzerland. The power resources approach falls short of explaining how new forms of continental care policy “modernization”, since the labor movement has no strong interest in care policy and the mobilization of women’s organizations has remained weak. The paper argues that the politics of reform must be analyzed with a coalitional approach in a multi-dimensional policy space. Indeed, the adaptation of the male breadwinner model to new needs and values can be achieved through different paths, namely via a) the recognition of care work (recognition model), b) increased female labor market participation (working mother model) or c) an overall rebalancing of work and care for both men and women (social transformation model). Both the working mother model and the social transformation model contain elements of the social investment agenda. Each of these reform directions gives rise to different conflict lines that foster specific actor alliances.

Based on an empirical analysis of actor positions in all family policy reform processes since the 1970s, the results show that in both countries, social-liberal and cross-class alliances between employers and the left have become important drivers of the working mother model, whereas social-conservative alliances tend to advocate the recognition model. This multi-dimensionality of care policy modernization has led to sequential waves of care policy reforms in Germany and to reform stalemate in Switzerland until the end of the 1990s. Recently, social-liberal and cross-class alliances have become successful drivers of family policy, mostly in the direction of a working mother model.

To Govern Artfully. Linking Relational Public Art to Urban Governance Toward New Forms of Civic Participation

The paper describes preliminary results of an interdisciplinary research (involving sociologists and architects), funded by the Autonomous Region of Sardinia. The analysis focuses on the experiences of relational public art (or community art), studying the strategies that artists activate to enable citizens’ engagement in the transformation of urban spaces. These strategies are able to “revitalize” models of urban governance in which participation often translates in a mere consultative process. We are facing emergent phenomena that are not only “counter-cultures”, but could also feed into processes of policy formation and decision making. Indeed, the “new genre of public art”, represents a new way in which citizenship is practiced: artists ask the audience to become co-authors in the construction of their works, taking in charge conflicts related to urban spaces, intercepting needs and experiences of people who live in these spaces, and activating citizens’ awareness of their role in the transformation of urban spaces. Starting from a background analysis of significant national and international case studies, the research focuses on Sardinian experiences activated in the urban “border areas”. The aim is to investigate – through interviews to the “citizen-artists” and the other actors involved in the artistic intervention – the practices of production and consumption (active/participatory); the shared meanings of participation, politics, community, territory; the representations of the other actors; the discourses related to objectives and results; the communication strategies; the interaction with the reference contexts. The process of analysis will conclude with the production of three outputs: a “Participatory Research Laboratory” which involves artists and other actors of the urban governance (architects, sociologists, public administrators, stakeholders); an online platform containing informations (texts, video, images, georeferenced maps) about experiences we analysed and the modalities to activate similar participatory processes; a procedural tool for administrators, oriented towards a participatory territorial planning.

Celebrating Multiculturalism: Multicultural Fairs and the Art of Consumption

In countries like Spain where transnational immigration is a relatively new phenomenon, it is not uncommon the celebration of multicultural fairs and events sought to represent the cultural diversity brought by transnational immigrants. Yet, as I will show, these fairs are not so much a celebration of cultural diversity but a reification of culture and of cultural production. In this paper I will pay attention to three interconnected set of issues: first, I will analyze the institutional discourse behind the organization of such fairs as well as the processes through which only certain cultures are invited to participate; as I will show, the choice of cultures invited to participate reproduce the idea of otherness and alterity of immigrants in so far as the ‘exotic’ element (food, music, dance) seems to be a decisive aspect in defining who will and who will not participate. Second, I will examine the extent to which these fairs are organized around consumption and how the reduction of culture to an object of market commodities further contributes to reproduce the image of alterity and otherness in so far as these commodities are not integrated within the contexts where they are produced; and third, I will explore how and to what extent the fact that these fairs are organized in terms of emergent nation-states contributes to homogenize and to erase the cultural diversity within each nation-state by reproducing the 19th century ideal of (culturally) homogeneous nation-states. As I will show, the way in which these fairs are organized emphasize the processes of exotization, commoditisation and homogenization of the cultural productions of immigrants to the expense of issues of citizenship and the rights of immigrants: their contribution, their role in the social imaginary that regards cultural production as an impediment to full citizenship instead of viewing culture as the vehicle through which citizenship is constructed.
Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in there field, but it will also demand to carry out work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curricula -either as knowledge discipline or transversal axis - is recent and even more so when it refers to specific aspects of this discipline. The research analyses the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about values for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of: the instrument validated by Hirsch (2005) from National Autonomous University of Mexico (UNAM) for ethical values; the questionnaire for the assessment of competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according to Alcoberra, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law: it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use a transgression to save life at the expense of an unequal relationship between the physician and the patient. The paper aims to address the theme of the session by using the ‘Overcoming Modernity’ symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as ‘infamous’ or even ‘notorious’, not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium’s prominence in the wartime period and its nationalistic position as part of political and cultural thought has been sporadically re-examined starting with Takeuchi Yoshimi’s essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt at ‘overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

**Urban Conflicts As Spaces of Politicization of Collective Action Around the City: Notes to Think the Continuities and Discontinuities of Urban Social Movements in the City of Santiago (Chile)**

Over the last 40 years the city of Santiago has experienced deep transformations, which have been linked to the implementation of neoliberal policies. Also, the city has been not only the stage, but rather the protagonist of a variety of conflicts around urban issues, such as urban growth, use and appropriation of urban spaces, environmental, demand for housing. This has been the scenario in which old and new forms of collective actions have emerged to propose new forms of appropriation and use of urban spaces, transforming the urban space into an object of political action.

In this context, this paper aims to study the processes of politicization and de-politicization as the urban conflicts have been developed in these frameworks of action, understanding that the politicization goes beyond the mere mobilization and involves the generation of new spaces for the production of reality, in this case realities and socio-political imaginaries around the design, management, use and appropriation of urban space and urban goods. However, preliminary data analysis on urban conflicts in the city of Santiago suggest that not all collective actions around urban issues develop the same levels and types of politicization. Therefore, in this paper I will try to address the following question: what are the factors that can explain the trajectories of the process of politicization or depoliticization of collective action around urban issues? To answer this question I will study the collective actions that have developed around the problems of access to housing, inquiring into its politicization paths from the mechanisms and strategies that develop as part of their urban struggles (configuration of their social networks, identity, organizational structure and action strategies). Finally, I will try establish the relationship between the processes of politicization and the construction of imaginaries and collective discourses around the city and urban issues.

**Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism**

The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash with nationalism as the face of modernity. Culturalism can be seen as one of models of political communities that would circulate in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogun...
**The Promotion of Agency in a Conflict-Affected Context. The Social Participation of Children and Adolescents in the West Bank**

One of the most challenging narratives in the past few years (and probably one of the most stimulating for the future) has been the importance of children's active participation not only in terms of having the right to say, but of the right to choose among alternatives in communication systems, i.e. in terms of practicing agency rather than simply having voice. Supporting and improving children's capabilities means promoting children's participation beyond their right to speak and to be heard, to a wider concept of active citizenship, which means contributing to the structuring of social systems. In this approach, therefore, children's capabilities assume the social form of children's agency. In other words, the idea of agency emphasizes that children can condition the actions of their interlocutors in communication with them, above all in interactions and can, in this way, transform the social structures.

This presentation tries to examine how children's agency and participation can be promoted in a conflict-affected context. With this aim the chapter conducts an evaluative analysis of a project of international cooperation developed by Oxfam Italy and the Palestinian NGO Dci/Ps which is aimed to promote social participation and to raise children's rights awareness among Palestinian children and adolescents.

The analysis is conducted by drawing on theoretical and methodological concepts from recent literature on social participation, sociology of childhood and Sen's capability approach, and looking at 1. the structures that promote agency in communication processes, 2. the ways in which agency modifies the structures of communication processes. The analysis of videorecorded data permitted some conclusions about social conversion processes and factors of agency, which allow social change. Our data shows that social change can be enhanced through children and adults' turns, but it is determined only in the self-organisation of a communication system.

**Positioning and Counter-Positioning in an Institutional Setting. the Role of Children’s Active Participation in Managing Conflicts**

This paper presents some videorecorded episodes of conflicts involving children and adults at school. These cases describe the multidimensionality of school community work and point to: 1) the distinctiveness of the interactional construction of the conflicts in schools; 2) the ways institutionalized organizational narratives become cultural resources for framing, scripting, and revising problems as plots; and 3) the interdependence of micro- and macro processes. The approach construes conflicts as a dynamic part of classroom social life in which personal expressions are affected by and affect teachers' and students' classroom norms of conduct. Conflicts are observed in discursive practices that interactively construct social positions and diverging/shared narratives. Drawing from work on organizational narratives, positioning theory, and conflict analysis, this presentation focuses in particular on the role of children's active participation in managing conflicts in an institutional setting.

**Nurses’ Attitudes Toward Migrant Care Workers In Hospitals In Israel**

**Aims.** To examine nurses’ attitudes on tasks that paid carers of older patients should or should not be allowed to perform and to examine the factors that best explain nurses’ attitudes towards the involvement of paid carers in providing care during the older patients’ hospitalization.

**Background.** Many older patients who are hospitalized are functionally dependent and employ paid carers who perform a variety of tasks during hospitalization. Yet, this issue has been barely examined.

**Methods.** The study included a combination of qualitative and quantitative research methods.

**Results.** There were no formal policies and guidelines regarding the tasks that paid carers should be allowed to perform. The majority of nurses perceived that paid carers should be allowed to perform a variety of tasks except for professional nursing tasks. Type of hospital and ward and nurses’ education were significant in explaining nurses’ attitudes towards involvement of paid carers in providing care to their older care recipients.

**Conclusions.** Attitudes of nurses towards paid carers are determined mainly by local organizational characteristics and nurses’ education. There is need for explicit policies and practice guidelines and their enforcement with regard to paid carers.

---

**Acquiring a ‘Right’ Combination of Capital: Japanese Nouveau Elites’ Capital Accumulation Trajectories for Children through International Schooling in Tokyo**

As economic globalization has been proliferated by nation-states’ espousal of neo-liberal agendas, various domains of educational institutions have been internationalized and valorized globally valid forms of cultural competencies, termed educational ‘capital’ (GCC). With the rapid changes occurring in the global fields of education and business, many East Asian families and students have pursued GCC through international schooling, overseas education, and/or extra-curricular activities in order to improve and/or secure their status position in the global stratification hierarchy. However, existing research pays little attention to these families’ strategies and trajectories of accumulation of not only GCC but also national cultural capital (NCC) through schooling and extra-curricular activities. By examining school choice patterns of nouveau elite families having enrolled their children in the preschool section of international schools in Tokyo, this paper examines a neglected domain of parental strategies to acquire the ‘right’ combination of GCC and NCC for their children through a series of school choices (e.g., preschool, primary school and secondary school sectors of international or Japanese schools). My findings reveal that Japanese nouveau elites see an embodied form of NCC (e.g., Japanese language and mannerism) as a primary resource to constitute their child’s identity as cosmopolitan Japanese. Therefore, the mothers monitor their child’s language acquisition and strategize to have their children acquire both GCC and NCC, which lead the families to be flexible and spontaneous in their decision-making to enroll their child in overseas schools, local Japanese school or other international schools in Tokyo. I conclude that NCC is still recognized as an important set of competencies for globally-minded elites in the context of Japan and that makes the families’ capital accumulation strategies complex, flexible and stressful.

**Is It Possible to Overcome Social Gap through Coproduction? : Kashiiwa’s Practical Experience As A Radioactive ‘Hotspot’ after 3.11**

Kashiiwa, a typical commuter town in the Greater Tokyo Area, is a significant urban farming area where the principle of ‘local production for local consumption’ is here to stay. However, Kashiiwa lapsed into being the most serious ‘hotspot’

---

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the ‘Round-table Meeting for “Kashiwani Products for the Kashiwani People” towards Security and Safety’, and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childrearing years—to be engaged in that meeting. We deliberately and scientifically discussed some unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved the recovery of the reliability of local farm products.

Our primal motivation to convene the meeting was to overcome the ‘gap within the local community’, namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of ‘choice’ and ‘mobility’ between them. Redefining local consum- ers and farmers as Kashiwani citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-communication strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiwana, this presentation will discuss social ‘cooperation’ and trust-building between people with opposite interests under the risk of uncertainty.

An aim of this presentation is to describe the great distance in risk evaluation regarding the Fukushima people with dementia (PWD) in Japan and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann (1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimating a seriousness of the Fukushima nuclear disaster, and a possibility of spreading of radioacti- vity in the early on. A distinction between experts and citizens has been expressed in many books and articles in various journals and newspapers, which included opening essays to the monthly legal magazine called Horitsu Jiho.

The methodology is a life history analysis, which tries to reconstruct Kaino’s life to some extent. A comparative law perspective has been requisite as an attorney regional peasants who insisted upon their rights of iriai, and developed the sphere of environmental law.

The willingness of PWD to speak publically about their thinking and de- sires around 2004 is considered a significant event. Afterward, their state- ments became a central issue in dementia care. The mass media and especially the NHK (Japan Broadcasting Cooperation), which produced television documentary programs on this subject, have promoted this trend. The event of 2004 has been definitely important in changing the image of PWD. However, the views and wishes of PWD have been uncovered and con- structed in diverse way in each field of dementia care, and the NHK has re- ported some outstanding care practices. The empirical exploration of this im- age change is an issue in sociology. How has the image of dementia changed from the historical perspective? The NHK has re- constructed and modifying to broadcast data archives and asking for participants to challenge some themes. As a participant, I obtained access to the video data systems for a year and created the following three types of data:

1. a title and contents list of TV programs about dementia;
2. documentation of the story, the contexts and scenes of each program; and
3. pictures of symbolic scenes in these programs.

Results: Two controversial descriptive patterns of the thoughts and wishes of those with PWD emerged. The first is that descriptions of these characteristics relate to problematic behaviors for caregivers. The second is that when PWD suf- fers think and feel are important in and of themselves and, therefore, sometimes conflict with the needs of caregivers.

A Pragmatic-Semiotic Analysis of “Occupy Nigeria Group” Online Posts on the 2012 Fuel Subsidy Removal in Nigeria
In response to the fuel subsidy removal by the Nigerian government on 1st January 2012, Occupy Nigeria Group, a protest movement, embarked on different mass strike actions and demonstrations including online activism. The civil resistant actions geared towards reversal of petrol pump price increase deployed certain verbal and visual means in portraying the government and its actions. Previous studies on online protest discourse in Nigeria have adopted sociolinguistic and discourse analysis approaches in examining issues of identity and self-determination with little attention paid to visual-pragmatic strategies in representing people and their actions. This paper, therefore, undertakes a pragmatically oriented investigation of “Occupy Nigeria Group” online posts on the 2012 fuel subsidy removal in Nigeria with a view to examining verbal and visual modes of representing people and their actions in the event. Seventy-five online protest posts purposively sampled from the groups’ page are used to identify and categorize various pragma-semiotic elements and functions in the representations using insights from Mey’s pragmatic act, Halliday’s systemic functional linguistics and the semiotic theory. It is observed that the verbal mode complements the visual in projecting the demands and resistance of the group. The findings also reveal the use of various visual-pragmatic strategies such as prayer, negative labelling, humour, mockery, abuse, passionate and fierce appeal, including photo trick. This study has established some pragmatically semiotic patterns in verbal-visual posts in the Nigerian online protest context. An awareness of the peculiar patterns and use is crucial in understanding and interpretation of socio-political realities of such news events by online consumers.

Comparative, Realistic, Communitarian and Public Qualities: Looking Back Michitaka Kaino’s Sociology of Law
Among Japanese socio-legal scholars, Michitaka Kaino (1908-1975) remains hidden abroad, though he is unique with comparative, realistic, communitarian and public qualities. Kaino covers the Emperor system/fascism, human rights, the courts, ownership, commons, family, sociology of law and pollution, which are titles of his eight collective works. He wrote many papers and articles in various journals and newspapers, which included opening essays to the monthly legal magazine called Horitsu Jiho. Furthermore, he invoked Western legal doctrine to solve domestic problems, presided over a public book-reading circle, represented as an attorney regional peasants who insisted upon their rights of iriai, and deve- loped the sphere of environmental law.

Above-mentioned Kaino’s qualities seemed to have characterized Japanese so- ciology of law to some extent. A comparative law perspective has been requisite for most Japanese socio-legal scholars. Realistic view of law in confrontation with Japanese social situation has become a matter of course. Kaino’s stance to the right of iriai has been reevaluated in light of the study on the commons. In ref- erence to the notion of “public sociology”, Kaino’s stance and works seem to fit “public sociology of law”.

The methodology is a life history analysis, which tries to reconstruct Kaino’s personal experience and life from his written records such as interviews and his biography. It is expected that a relationship between one socio-legal scholar and society would be brought into relief through this approach. Thereafter, qualities, merits and limits of Kaino’s sociology of law will be considered from the point of view of globalization.

Mediating the Professional and the Amateur: Social Activism in a Post-Union Democracy
Since the fallout of the triple disaster in March 2011, coupled with the government’s pursuit of the reactivation of nuclear plants, Japan has once again become a seedbed for grassroots political activity. Various anti-nuclear rallies and demonstrations are held across Japan, and the largest of them all, the Friday Protest rally in front of the Prime Minister’s Official Residence has been staged more than fifty times. Such contentious activism, especially among Japanese youth, has been quite inconceivable in the country for many years. How should we understand this development in relation to the three decades of relative silence after the end of student movements in the 1970s, which is said to have left a negative legacy by its violent disintegration? Building on the sociological studies of the protest cycles, this paper explores the concept of “abeyance” and demonstrates the working of “mediators” as key actors for social movement continuity in a post-union democracy.

Climate Change Policy-Making Process and Reasons of Its Stagnation: Activities and Preferences of Stakeholders in Japan

Institutional processes of making political decisions determine the range of their outcomes. The international comparative research project, the COMPON project (Disaster Climate Change Policy Networks), explores characteristics of the decision making processes in each society, based on common methods. The purpose of this presentation is to show results of the Japanese face-to-face questionnaire survey to national stakeholders and to discuss its interesting findings, especially on activities and preferences of major stakeholders.

The COMPON-Japan conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change really occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases. On preferences of domestic climate change policies, there is a cleavage over policy orientations, especially between industries and NGOs. Industries prefer a bottom-up voluntary goal setting, while NGOs prefer more institutionalized and legally binding measures.

Our respondents replied the progress of climate change policies are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government’s coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies.

Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami.

Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan.

Community organizations for disaster management (jishubousaikai) are conventionally established under each residents’ association (choonai). Women in their 60’s and 70’s, retired but active, are the main members of jishubousaikai. Women of the same generation also participate in activities of jishubousaikai, but they are seldom engaged in decision-making because of pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

The Factors of Japanese Female Workers’ Job Quitting for Childbirth/Childrearing

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Hakim stresses on “preferences” between work and home to explain behaviors of female workers with family responsibilities; “work-centered”, “home-centered”, and “adaptive”. She presents the data that many of women are “adaptive” in Europe. She also points out the influences of relaxing labor market regulations.
on increasing part-time work and on intermittent careers which are typical of adaptive women. I suppose it is also important in Japan to focus on the structure of labor market as influential factors to explain the mass of women’s behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as part-time and temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers’ job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations. The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their organizations and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose non-regular jobs in order to balance work with family lives.

The Influence of Gabriel Tarde on the Development of Japanese Sociology in the Early Twentieth Century

The purpose of this paper is to examine Gabriel Tarde’s influence on the development of Japanese Sociology in the Early Twentieth Century. During the period, Tarde was an opinion leader of French sociology with his famous opponent, Émile Durkheim. After his death in 1904, Tarde’s presence in the French academic community declined gradually, while Durkheim earned a reputation with his collaborators known as “Durkheimian school.” Unlike Durkheim, a professor at the Sorbonne, Tarde did not have his own students at the Collège de France, where lectures were open for everyone. It may be one of the main reasons for Tarde’s decline, as some historians of sociology think.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the Collège de France. One of Japanese sociologists who attended Tarde’s course, Shotaro Yoneda (1873-1945), became the first professor of modern philosophy at the Collège de France. One of Japanese sociologists who attended Tarde’s course, Shotaro Yoneda (1873-1945), became the first professor of sociology at the Kyoto Imperial University. Yonedo established his sociological theory based on Tarde’s “inter-psychology.” In 1913, Yonedo co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Tongo Takebe (1871-1945), who also attended Tarde’s course. Yonedo’s earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde’s idea for his “Power theory of economics,” but also discussed Tarde’s imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde’s sociology was more important in Japan than in his home country.

What Is Happening in the Northern Mozambique Under the ProSavana Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia

This paper intends to reveal what is happening in the Northern Mozambique under the ProSAVANA Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called “land grabbing”, is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers? In Mozambique, some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, ProSAVANA programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of ProSAVANA covers the Nampula, Zambezia and Niassa provinces.

The UNAC (Uniao Nacional de Camponeses) and international NGOs are claiming to stop ProSAVANA because of many problems causing from ProSAVANA and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on such projects, especially how large scale land acquisition by foreign investment infringes food sovereignty of the society.

Rural Cooperation in the Republic of Tatarstan(Russia);Ethnographic Case-Study

The results of social survey (2013) in Pestrechinsky and Kukmorsky municipal areas of the Republic of Tatarstan (Russia) of such components as self-estimate of material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., draw a stable psychosocial climate of a rural area. Mutual support is a phenomenon in modern society where personal values and social identity dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tatarstan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestrechinsky area are concentrated basically on mezelevel and in Kukmorsky area on microlevel. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
material state of his/her own family, social activity, satisfaction with ecological situ-
atuation in the area of residence, interaction with bodies of local authorities, migra-
tion moods, life ambitions, etc., draws stable psychosocial climate of a rural area.

Mutual support is a phenomenon in modern society where personal values and

disunity dominate. This phenomenon is characteristic of very few rural ar-
eas of Russia and it was found in rural areas of Tatarstan. The explanation of
this fact lays, in the opinion of the author, in socialist values of rural popula-
tion especially typical for the area where the proportion of old people is quite
big. Social networks reflecting rural population cooperation in Pestrechnsky area
are concentrated basically on mezolevel and in Kukmorsky area on microlevel.

Projective trajectories of rural population towards development of all spheres of
life in a rural area are connected with intergenerational continuity due to family
agricultural business.

1. Specifics of a demographic portrait of population in Pestrechnsky area re-
flected on making facilities inside the house. At the same time home improve-
ment in Kukmorsky area is connected with household needs outside the house.
2. Rural residents working on a family farm show high level of satisfaction of
fulfillment of his/her reproductive capabilities. 3. Such form of rural residents'
cooperation as condemnation of co-residents for not taking part in life of a rural
community. 4. Life of rural people living in Pestrechnsky area is concentrated on
the development of a social wellbeing while in Kukmorsky area - on personal
wellbeing. None of these strategies cannot be viewed acknowledged as the best
for the development of a rural society because personal welfare also constitutes
social capital of the whole area.

A Visual Retrospect of Istanbul’s Galata Neighborhood: Pursuing the Path of Socio-Spatial Segregation

This paper will examine the visual effects of gentrification in the historic neigh-
brborhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have
done in 2004 and conducting a new fieldwork in the neighborhood, I intend to
examine the evolution of visual contrasts between physical proximity and social
distance, revealing the differences and similarities concerning residential segre-
gation and neighborhood change. Galata is a historical district which was inhab-
itied by non-Muslim minorities until the first half of the twentieth century when
these had to leave the country for various reasons, including the creation of the
State of Israel, the events of 6-7 September 1955, the “wealth tax” in 1964 and
the cancellation of the residence permit for more than eight thousand Greeks.
These years also represent a significant wave of migration from underdeveloped
regions of southeastern Turkey towards Istanbul. These migrants have settled in
the neglected and abandoned apartments mainly in Galata. In the 70s, small fac-
tories moved into the area, usually in the ground pavements, destroying the walls
in order to install machines and thus worsening the condition of the buildings.
Since the 2000’s the dilapidated buildings are restored and the migrant popu-
lation is gradually displaced and replaced firstly by the middle and then upper
classes. Using the concept of territoriality, enrolling in both frames of time and
space, this study aims to elaborate the interpenetration of these two structures
and to identify the new currents, ways, developed by different social groups living
in the district, of appropriating the same urban space.

Is a Non-Violent Way of Resistance Against Violence Possible?
Istanbul’s Gezi Park As a Battlefield

This paper will examine the interactions between the actors of the Gezi Park
urban uprising and the Turkish state in the framework of shifting violent and
non-violent strategies. The movement of peaceful, unarmed, non-violent people
against the demolition of the Park was faced with violent tactics from the police
force, varying from excessive use of tear gas and water cannons to plastic bullets,
while streets turned into battlefields. This led to an emotional urban communing
process of different political groups with different perspectives or agendas, and
even “ordinary” people without any activist experience or intent, which represents
a unique characteristic. The approach of the government, fostered by accusing
the protesters of being “looters”, has resulted in defensive, as well as new, cre-
ative, non-violent (but not always) ways of resistances such as standing still and
silent in front of the police or painting stairs in rainbow colors. This study aims
to elaborate the two months of resistance spreading over Turkey, from the main
reasons behind it, as excessive police intervention, not merely during uprisings,
but even before as discursive and political violence; which makes it one of the rea-
sons behind the resistance. Apart from being a participatory action research, this
paper will also cover discussions on violence, which was one of the main issues
within the movement too.

The Focus on Everyday Life As a Turn to the Human Dimension of Social Structures

The focus on everyday life as a turn to the human dimension of social struc-
tures

If to use the metaphor of construction, we can say that the classical sociology
mainly interested in architecture, leaving on the periphery of his attention the
problem of the nature of the materials. This was reflected in the priority of macro
sociology. Theories focusing attention to the logic of behavior not the masses
and groups, but individual, emerged but they always, first of all, were in the back-
ground, secondly, do not exert any noticeable influence on the theory of mac-
ro-level.

At the end of the twentieth century, the visible turn of social science to every-
day life had acquired a paradigmatic character (P.Szominka). If to you use the
construction metaphor, we can say that the sociology came to understanding that
the “architectural forms” are unthinkable without careful study of the molecular
structure of materials from which they are implemented. This means that the
traditional division of macro and micro sociology has lost the meaning. Social
system predetermines the quality of used elements, and the characteristics of the
latter depends the fate of the system. In other words, the social structure is no
longer regarded as something external to the people. Firstly, the social structure
is understood as sustainable forms of social behavior (the theory of structuration
by E. Giddens). Secondly, the social structure is regarded as socially programmed
behavior of individuals (the concept of habitus by P.Bourdieu). As the inter-
action of individuals generates external emergent quality in form of social and
cultural fields (situational approach by K.Lewin). Fourthly, situations of daily inter-
action acquire stable and predictable forms in the context of the action of mac-
ro-level institutions (Performance Theory).

British Muslim Response to the Post-9/11 Uncertainties

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on
Terror and its effects have had a tremendous sociopolitical impact on the British
Muslim polity. On the one hand the effects have fostered Islamophobia and the
securitization of Muslims. But on the other hand, which is the focus of this paper,
the aforementioned events have fostered an atmosphere where sociopolitical
and religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and they identified
three main ways in which the Muslim community is changing. Firstly, some Mus-
lims are adopting a literalist reading of Islam, which is performance orientated
and pieti conscious. Secondly, a small number of Muslims are reading Islam in
a liberal reformist way within a modern sociopolitical milieu. The group is com-
posed of born and convert Muslims and ethnically diverse. The reformists tend
to focus on human rights, women rights and the rights of the Muslim LGBT com-

munity. Finally, an increasingly large number of young Muslims are becoming
politically assertive, confident, and organized. These Muslims in the main are con-
cerned with human rights, especially of fellow Muslims. Like the literalist group,
this group is composed born and convert Muslims and is also ethnically diverse.
This group adheres to a mixture of reformist and literalist reading of Islam and
often receives criticism from the literalists.
In this paper I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call 'therapeutic zones', which clarify the social dynamics and insecurity became the social issues in Japan. One of the major reasons of this is clearly rooted in the limited social inclusion of non-regular workers within the institutionalized pattern of social security of livelihood and future prospects. Although the last several years witnessed some attempts of re-regulation of labor markets under the governance of the Democratic Party of Japan such as the revisions of Temporary Dispatching Work Law and Part-time Work Law, the processes and the outcomes of re-regulation appear to legitimize or even formalize the existing structure of inequalities and exclusion. The paper argues that the situation cannot be turned around unless the specific link between employment security and future prospects. The paper points out the necessity to overcome the standard employment centrist that produces the ironic consequences.

Almost fifteen years have passed since the rising levels of inequality and insecurity became the social issues in Japan. Vocational and Academic Effects on Gender Segregation in VET - a Three Country Comparison, Germany, Norway and Canada

Gender segregated vocational education and training (VET) is usually attributed to gender stereotyped career choices of students at the end of junior high school. However, institutional logics may also promote gender segregation in VET. Empirical findings in German-speaking countries show that mixed-gender educational programs require higher school achievement compared to both male- and female-typed programs.

The paper investigates how institutional logics of the education system impact on the allocation of school leavers to gender-typed upper secondary (general and vocational) programs in Germany (DE), Norway (NO) and Canada (CA). We test the assumptions that (a) the more vocationalised an educational program, the more gender-typed the program (vocational effect), and that (b) mixed-gender education programs require higher academic school achievement than gender-typed programs (academic effect).

The three countries were selected because of their different educational policies (vocational and academic principles in DE; academic and universalistic principles in CA; NO sharing the vocational principle with DE, and the universalistic principle with CA). We use youth panel data in all three countries (DE: BIBB Transition Survey 2006; NO: Young in Norway YIN; CA: Youth in Transition Survey YITS) to analyse both the vocational and the academic effect on educational gender segregation. We apply multinomial logistic regressions for men and women separately, with gender-type of the educational program (male-typed, mixed-gender, female-typed) being the dependent variable to test our hypotheses.

Preliminary results show clear evidence for the vocational effect on educational gender segregation in all three countries, including Canada. In contrast, the academic effect on educational gender segregation is strong in Germany but relatively weak in Canada and Norway. We interpret our findings with the unique constellation of different educational principles (vocational, academic, universalistic) in each country.

Shrinking the Ballooning Young Precariat Class in Nigeria: The Need for Youth Empowerment

All over the world, the debunkment of a new class has been observed with new demands for the progressive troika of equality, liberty and fraternity. Far from being the forlorn cry for the establishment of a Marxian utopia or pantosocracy, the genuine demands for egalitarianism necessitating the restructuration of economic, social and cultural capitals has become a desideratum for society’s preservation. Social upheavals, civil protests and collective movements led by a determined precariat to address social ills and worsening inequalities will continue unabated until the political and economic managers of the state capitulate to these demands. In Nigeria, the elite is already aware of the potential vituperation and precariousness of this class. Existing diurnal narrative in Nigeria is awash with the virulence and dudgeon expressed by this class. Violent crimes such as terrorism, armed banditry, carjacking, cybercrimes, human trafficking of persons, militancy and kidnapping are major highlights of the viciousness and massochism manifested by this class. Evil contradictions have become weapons for economic compensation and retribution on an insensitive elite and society. The imagery of Nigeria’s future is akin to sitting on a time-bomb or walking a jagged precipice. In this paper, authors contend that the growing precariat class in Nigeria must not be ignored. Leaning on the political-economy paradigmatic thesis, they argue that the political class must reverse its natural shenanigans and rhetoric for change programmes that will impact on Nigerian youths who are simmering with rage and disenchantment. Lurking around for the right moment, this dangerous class could spell the doomsday for an already divided polity if genuine efforts are not well advised. Youth empowerment programmes must be practically rolled out soon and fast with a genuine politics of paradise built on the principles of economic security and social wellbeing to integrate this class into mainstream society.

Bodies-in-Design: Impairment and Embodiment in Universal Design

Bodies-in-design: impairment and embodiment in Universal Design

Designed objects and environments are often inattentive to impairment or bodily form and performance. This has resulted in a heightened awareness for a socially just design that is sensitive to the complexities of bodily actions and encounters, leading to the emergence of movements such as Universal Design. Drawing on a study on the relationships between impairment, embodiment, and design, this paper considers the diverse ways in which major exponents of universally designed products and services construct the impaired body, or the bodies for which they purport to design. Discussing data from interviews with designers in companies at the forefront of making universally designed products, we consider how the impaired body is designed into objects and environments, and how far designing for impaired corporeality is possible, and desirable, within the confines of commercially orientated organisations. As our research suggests, while Universal Design purports to design for all, the practices of designers sometimes risk falling back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

Social Stratification and the Formation of Single Parent Household in Japan

It has been confirmed that the children who grew up in a single parent household had many disadvantages both on educational attainment and the life course afterwards. This finding is robust in US, but recently Japanese studies have also found it repeatedly in Japan. This is to say that parental divorce limit their children’s life chance, and hence reduce their children’s intergenerational social mobility.

If we have concern with the intergenerational reproduction of poverty (or social stratification), we have to clarify the relationship between social attributes and the occurrence of the single parent households. We use the data of Longitudinal Survey of Newborns in the 21st Century (2001 Cohort) by Ministry of Health, Labour and Welfare of Japan. Respondent were randomly selected from men and women who nurture kids born either between at January 10th and 17th in 2001 or at between 10th and 17th in July in 2001. Initial survey was done in 2002 and the sample size was 47,015. Afterwards, panel survey has been done for every year, except for 2007.

We set household composition at 9th survey (conducted in 2010) as basic dependent variable. As sample attrition was serious, we dealt with this sample selection bias by propensity score analysis and Heckman’s two stage estimation probit model (Heckit). We found that those who did not have college or university degree, those who had married at early ages, and those who had low household income at the impaired body is designed into objects and environments, but they also tended to divorce and form a single parent household in 2010. Marital relationships of those at low socioeconomic status were generally insecure and were likely to disrupt. These findings suggest the mediating effect of divorce between parents’ low educational attainment and those of their children’s.

Does Trust Promote Generosity?

Both of trust and generosity have been considered as important factors to promote cooperation (Yamagishi 1998, Nesse 2001). Some researchers argue that trust plays a significant role in assessing quality and trustworthiness of unknown others. On the other hand, generosity is defined as a tendency to forgive defects or failures of partners (Exline & Baumeister 2000, McCullough 2008). However, these two cooperation promoting-traits appear to be incompatible. Trust helps us to assess partner's trustworthiness, which may lead to a withdrawal from inappropriate relationships. On the other hand, generosity helps us to forgive partner's mistakes, implying that we make a commitment in spite of partner's failures. Therefore, the question is: Are these two traits really compatible? And if so, how do we have developed these two seemingly contradicting traits?

Here, we aim to clarify the puzzling relationship between trust and generosity by using an agent-based modeling. We adopt trust game as a basic building block and then incorporate two further elements into our model. One is related to heterogeneous agents in terms of abilities to fulfill donor's expectation. The other element is related to partner choice, commitment (repeated trust game with the same partner) and an exit. Trust is thus formulated as selective strategies in the context of partner choice, whereas generosity is defined as forgiveness of partner's failures in the context of commitment relationship. We carry out the set of computer simulation experiments to assess the viability of several strategies.

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that as group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. Put it differently, there exists a coevolution mechanism of trust and generosity in our social world.

Facing the Selves in the Field Research of Immigrants: From the Research Question Based on Visibility to Led through Daily Relationships

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalization environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers' perceptions that categorized immigrants as the “aliens” visibly in the social structure, while the researchers' positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to insinuate their presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships with immigrants focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghassan Hage proposed (Hage 2005).

Based on my research, I experienced these approaches as transition from the former to the latter, that criticized the direct linkage between the notion of “aliens” and their visibility by walking away from the ethnic festivity to the daily relationships among return migrants from Peru, and by getting involved an trouble of a family that shaken researcher's existence to remind me my family backgrounds as also return migrants from Korean peninsula after the colonial period.

“Battle Hymn of the Tiger Mom” As Social Capital Building

“In Battle Hymn of the Tiger Mom” As Social Capital Building

In this presentation, I explore Amy Chua's “Battle Hymn of the Tiger Mom” as a model minority and social capital built by second generation Chinese American. I examine Chua's account in relation to Asian immigrant experiences, social and cultural ties, and communities in U.S. race and ethnic relations. The questions asked include: How did Chua raise her children to obtain social capital and educational opportunities in U.S. society? What were the limitations and (unintended) consequences of her strategy? How can/should we situate Chua's account in the history of Asian American social, cultural, political, and educational experiences? Does her account overcome stereotypes against Asian Americans, or those against other racial minorities?

I situate Chua's account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua's account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua's account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents' experiences and they are very conscious not to allow their children to lose them while becoming “American.”

Reading “Battle Hymn of Tiger Mom” As an Educational Biography

Reading “Battle Hymn of the Tiger Mom” As an Educational (and Socio-Political) Biography

In this presentation, I explore Amy Chua's “Battle Hymn of the Tiger Mom” as a biographical account of child rearing by a second generation Chinese American. I examine Chua's account in relation to Asian immigrant experiences in the United States. The questions asked include: How does Chua talk about the ways in which she raised her children to attain high educational achievement in U.S. society? What were the limitations and (unintended) consequences of her strategy? How can/should we situate Chua's biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua's account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans. I review the literature on educational attainment of Asian Americans to point out the missing area is Asian Americans' self account of education at home, i.e., how they raise their children.

Second, I analyze Chua's account. Chua comes from an intellectually elite family, and she herself is also an intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua's account also implies that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua's account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the biographical account of second-generation mothers is advantageous, as they know the ways their foreign-born parents raised their children and they are very conscious of how they raise their children.

The comparative world-systems approach analyzes systems of societies rather than a single society. Interaction networks in world-systems comprise systems of human societies which are bounded in space and engage in regularized interactions through their interconnectedness. The evolutionary growth of the connections and intensified linkages through cycles and oscillations has formed increasingly larger and integrated world-systems over time. Structural globalization is thus conceptualized as an elementary trend that prevailed in the last two centuries. While the world-systems approach explains evolutionary growth of interaction networks over time, it is conscious of historical contingencies as well as spatially and temporally specific conditions for local polities. This aspect is compatible with recently developing agent-based social science. Applying spatial agent-based simulation, the current study engages in examination of historical cases. In particular, this study focused...
Vocational Education and Gendered School-to-Work Transitions in Switzerland and Japan

The labour markets of Japan and Switzerland are significantly gender segregated. In Switzerland the need for labour market gender segregation begins with the gendered orientations of young school-leavers. Via the Vocational education and training (VET) system and the occupational linkage of education and employment, early career aspirations are transformed into gendered employment opportunities. VET is indeed very prominent in Switzerland, where seven out of ten upper secondary graduates come from vocational programs.

But the case of Japan challenges the assumption that gender segregation is mainly due to gender segregated VET. Japan's upper secondary graduation rates figures are more than reversed from those of Switzerland with three out of four graduates having enrolled in general programmes and only one out of four in VET. Within VET, however, Japan (JP) and Switzerland (CH) show a similar distribution of upper secondary vocational training by field of education and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. Therefor the paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

We use comparable youth panel data for both countries to analyse our research question (JP: Youth cohort study of Japan; CH: Transitions from Education to Employment TREE). Our dependant variable is job gender concentration as measured on industry level. We apply stepwise linear regressions to analyse country-specific effects of (1) junior high school variables (CH: track, mark, literacy skills; JP: position of class), (2) senior high school variables (field of VET, academic level), (3) higher education variables (field of study, short vs. long studies), (4) family background variables, and finally (5) gender on job gender concentration.

The findings allow for a critical assessment of VET's contribution to job gender segregation in different educational systems.

Widowhood Practices Among the Edo People in Nigeria: Continuity and Change

This is an empirical study involving both quantitative and qualitative approaches. It explores the widowhood practices among the Edo people n Nigeria which is a patriarchal society where majority of women especially those in the rural areas suffer from severe cultural constraints and inhibitions, creating an unequal relationship between men and women. The widowhood rites are often very dehumanizing to the extent that it erodes the self-esteem, potentials and capabilities of women. They are made to suffer emotionally, physically and economically as they are often denied the essentials of life. In terms of their means of livelihood, a woman enjoys access to land for farm purposes when her husband is alive; but at death, she becomes vulnerable to the dictates of her late husband's relations as she is seen as part of the property to be inherited by the family. The case is made worse by the cases noted that in some cases he has no form of adjudication on her behalf even though he carries any significant effect especially in the rural milieu where customary law seems to be stronger than statutory law. This is the debilitating situation facing most widows in Edo State, Nigeria, hence the need to examine the prevailing situation and proffer appropriate solutions that would help address the challenges of widowhood practices in the 21st century and beyond.

Keywords: Cultural constraints; customary law; patriarchal societies; rural areas; statutory law; widowhood practices

The Sex Lives Of Sex Researchers

The Sex Lives of Sex Researchers

As sexuality studies develops as a field, recent biographies feature some prominent figures. In addition to several texts on Alfred Kinsey, these biographies include those of Michel Foucault, Richard von Krafft-Ebing, Jeannette Foster Howard, the first libid, and the Kinsey Institute, and William Masters and Virginia Johnson. Some of this work is superb scholarship. Some might be considered "pathography," Joyce Carol Oates term for "the technique of envisaging the sensational underside of its subject's life."

Pathographies of sexuality researchers spin for perversion. For example, James Miller's biography of Michel Foucault links Foucault's work to a range of unconventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portrays her as a sexually captivated secretary and delights in exposing surprising aspects of the researchers' sex lives. Historian James Jones biography of Kinsey perhaps most typifies the genre. Jones claimed that Kinsey's research was driven by his own "inner demons" which allegedly included homosexuality, masochism, and a range of sexual compulsions such as masturbating with objects inserted into his urethra. This paper examines a number of biographies of sexuality scholars, and explores the dilemma biographers face in writing about the sex lives of these researchers. I suggest that, despite increased acceptance and even excitement about the academic study of sexuality, sexual stigma is a persistent theme in the stories about researchers themselves. Biographers use sex to frame the story, locating sex research in a brew of perverse desires and practices, and contending that the researcher's deviance colors or discredits the scholarship.

Does Inequality Matter? Intergenerational Relations in European Welfare States

Intergenerational transfers of money, time and space are important features of parent-child relationships. Previous research reveals substantial differences in intergenerational solidarity, raising the question of causes and reasons for European divergences. Apart from inequality on the micro level, meso level structures (family) as well as macro level factors are important in order to understand differences in support levels of giving and taking money, time and space within and also between countries. While single types of solidarity have been predominantly analysed separately, a joint analysis is still missing.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), 14 European countries are analysed to measure the impact of inequality structures on functional solidarity between parents and their adult children. Multilevel analyses including micro, meso and macro levels indicate that need and opportunity structures as well as variations in family composition and cultural-contextual differences between welfare state regimes matter for intergenerational relations. Children in need get more support than better situated offspring. Simultaneously, parents with better opportunity structures help more. Furthermore, we can observe that parents in low-level service states and high poverty and income inequality countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other: children who receive time support from their parents often receive monetary help as well.

Money Vs. Space? Intergenerational Transfers in a Comparative Perspective

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational coreidence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of money and space. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Using the Survey of Health, Ageing and Retirement in Europe (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark and Sweden parents rather offer monetary support. Furthermore, the provision of living space seems to substitute direct financial transfers.

Ukrainian New Left and Grassroots Social Protests: A Thorny Way to Hegemony

When and how the emerging radical new left in the post-Soviet societies is able to win hegemony within the rising social-economic protests mobilization? In the context of the post-Soviet weak civil society the new left has a unique opportunity to use the 'primacy effect' in order to win strong position within the grassroots social protests. The prior strong position within the movement around some problem gives the privileged position compared to other political groups when the mass mobilization around it erupts. I will analyze the case of Ukrainian radical leftist student union 'Direct Action' organized in 2008 by ideological anarchists and libertarian Marxists which appeared to lead 20,000 student mobilization in over 15 Ukrainian cities against introduction of paid services in secondary education in 2010 when established student NGOs were siding with the government or discovering they have no mobilization potential. However, the 'primacy effect' has its limits as not so many issues are remaining 'vacant' (because of the far right active intervention particularly) and not each issues has the same potential to destabilize the political regime. It means an increasing necessity for the post-Soviet new left to win and retain hegemony in the broad coalitions competing with other politicized and often hostile actors over non-politicized masses. Analyzing the case of highly successful 'Save Old Kiev' initiative against the privatization of public space, established in 2007 with the dominance of the new left groups coalition but where the
far right has ultimately won hegemony. I will show the process of ‘double institutionalization’: participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

An Analysis of Imagined Boundary of the “Japanese”: Results from an Internet Survey in Japan

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the “Japanese” among Japanese people.

There is a legal definition of the Japanese, that is, the Japanese is the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or ‘real Japanese’) and non-Japanese may vary from person to person according to their experiences and social status. Especially, judgments in terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people’s imagined boundary and definition of the “Japanese” in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical combination of conditions relevant to national identity, i.e., nationality, resident, blood, and language, and asked respondents to judge whether a person who has a certain combination of conditions is regarded as the “Japanese” or not.

By using this data, we can capture a person’s imagined boundary as a Boolean algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

Income Inequality and Relative Deprivation: A Formal Theoretic View

In a time of increase of inequality, does people’s frustration or feelings of deprivation rise? If it is yes, why do theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals?

This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhaki’s (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gin’s inequality coefficient.

In this paper especially, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people’s relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990’s. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market today. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Heckman’s two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Secondly, however, male job changers with ‘weak ties’ get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where workers may lose their human capital and be put under uncertainty about their career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network’s aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball

As the result of globalization of a sport, the border crossings of athlete are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has ever been considered with capital and economic motive.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league.

This network has assumed Central America-Caribbean region by 1950s and East Asia after 1990’s, and has been expanding to the ‘Baseball Barren’, Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the ‘Baseball Barren’, and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it have been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as a conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of ‘labor’, but parts of ‘consume’.

From this analysis, the word of ‘Sport Labor Migration’ is becoming no longer appropriate to represent the border crossings of athletes.

Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children

Raising and nurturing children is one of the most important functions of a modern family. If the emotional parent-child bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship.

This study discusses the process of creating new relationships and parents’ viewpoint by analyzing the narratives of parents of Japanese transgender children. Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children’s problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an “as suspected” response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child’s unique or queer gender identity. And in their life stories, parents tried to reconfirm or reconstruct images of their children and refortify their emotional ties with them.

How Do Support Providers Deploy Care Workers Effectively in Japan?

This presentation aims to develop a more effective method of deploying care workers for in-home care of aged persons. Although in Japan the government promoted long-term care for aged persons who require it in accordance with the Long-Term Care Insurance Law (Kaigo Hoken Ho), aged persons do not always find compatible care workers. This is not only because of the shortage of care
workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing compatible care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers. To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford. These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

The Education of Young Brazilians in Japan

Currently (2011), the Brazilian population in Japan totals 210,032. Of that total 46,855 (22%) are under 20 years old, and 24,061 (11%) under 10 years old. From these data, we can conclude that many of these children attend, or have attended, school in Japan. Compared to the Japanese-Brazilian adults living in Japan, their children learn the Japanese language much more easily and quickly. Many of these children start their education in Japanese kindergartens, and then most of them continue studying in Japanese schools. Some advance to the university level. However, even if they speak the Japanese language, most of them have problems keeping up with the regular disciplines. The main reason is that they don't have the background the other Japanese children have. Additionally, they don't have their parents' help with their studies at home since most of the Brazilian parents are not fluent in the Japanese language. Another issue to be considered is that in Japan, education is mandatory for children under 15 years old who are citizens, but optional for foreigners. One problem here is how Japanese society views foreigners. For the Japanese, the Japanese-Brazilians are temporary foreign workers who will leave Japan after a finite period of time. The result is that the Japanese-Brazilians are dealt with as visitors, and this feeling extends to the children. This treatment negatively affects any policy regarding the education of foreign children in Japan. The prospect for Japanese-Brazilian children in the future depends on where they settle. Lacking a higher education a large number of Brazilian children experience difficulties with stability and ascension in both Japanese and Brazilian societies. In this paper I will focus on cases of young Brazilians raised in Japan who were successful in obtaining a higher education in Japanese universities, although they are currently the minority.

Volunteerism among Mexican Youth in the US: The Role of Family Capital

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation theory, first generation Mexican immigrant youth are found to be more likely to engage in volunteerism compared to their third+ generation counterparts. This difference is most pronounced at the lower end of the family income spectrum. The study also analyzes the effects of components of family capital, family income and parental education. Compared to the Japanese-Brazilian adults living in Japan, their children learn the Japanese language much more easily and quickly. Many of these children start their education in Japanese kindergartens, and then most of them continue studying in Japanese schools. Some advance to the university level. However, even if they speak the Japanese language, most of them have problems keeping up with the regular disciplines. The main reason is that they don't have the background the other Japanese children have. A Political Ecology of Aquaculture Certification: Towards a ‘modernization of Ecology’

The article examines environmental certification regimes in the global aquaculture as an example of ecological modernization. While the fundamental tenet of ecological modernization is to shape capitalism by ecological principles, the study shows instead that through environmental certification regimes, ecology or nature itself is largely shaped, transformed and restructured to fit into, and thus serve, neoliberal governance and accumulation in a normalized manner. Certification regimes offer some avenues for a sustainable aquaculture; however, the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

Violence and Education in Judo Practices: A Comparison of France and Japan

In this presentation, I examine the relationship between education and violence through judo practices of children in Japan and France. Judo originated in Japan but it is not anymore popular there. While the population of judo players is less than 200 thousands in Japan, it is almost 600 thousands in France where the national population is two times less than that of Japan. In order to compare the judo practices in these two countries, first of all, I examine the recent debates in Japan on the violence related to judo and on the ideas of judo as education (Matsubara 2013; Uchida 2013; Yamaguchi 2013). Then I take French examples with the data collected from my interviews to French judo coaches especially at a Brittany region and my fieldworks at a judo club in a Paris suburb, infamous for a poor and dangerous area. From my ethnographic research at this area, I found the social boundary in the area and that it was closely related to the order of violence (iso 2013).The study shows that the values and the morals that are not common in the area but are more extensively in France in practicing judo. The judo practice in the club is common to others in France. Contrary to France where the judo practices are oriented to avoid any violence and they are often considered as education, judo and jujitsu players are often considered as violent in Japan but the Japanese educational policy has believed the educational
values of judo. Such policy has caused mortal accidents at public schools every year in Japan. I examine why the judo practices are so different in these two countries in regard to education and violence.

Habermas' Discourse Theory and the Concept of Public Sphere

The aim of this paper is to clarify the concept of Jürgen Habermas' public sphere in his book, *Between Facts and Norms*, especially focusing on his perspective and method.

In this book, discourse theory is formulated with "D: Just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses." However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere is "a warning system with sensors that, though un-specialized, are sensitive throughout society" and "can best be described as a network for communicating information and points of view."

Some existing discussion found that Habermas succeeds to use a theoretical technique, called conversion of perspective and shift the level of a reference in *The Theory of Communicative Action*. However this paper points out that Habermas already uses similar techniques in *Between Facts and Norms*. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, such as politics and law, one of focusing point is a public sphere. Finally, we think on the feasibility of the concept of Habermas' public sphere as an analytical tool of actual problems.

ISTVAN, ALESHA* (Texas A&M University, aistvan@tamu.edu)

Using an illustration of the relationship between the U.S. environmental movement and the U.S. wind energy industry, I develop a theory for understanding the relationship between social movements and their economic outcomes. Synthesizing the social movement theory of political process with the economic theory of social structure of accumulation, I argue that social movements become more and less important to industry creation based on the intersection of the cycle of accumulation and the cycle of contention with the industry's position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four distinct propositions to further clarify this theory. First, during times when economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become less important and the macro-political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

Re-Thinking of Community Based Pre-Disaster Activities; The Problem of Social Divisions in the Case of Japan

As the lessons learned about local initiative of disaster preparedness, this paper will be re-thinking the role of local community mainly focusing on the case of Japan recent two decades and especially based on the original research findings about neighborhood association “chonai-ka” and “making secure-and-safe community activity” after the Great Kobe Earthquake of 1995. The questions are 1) why and how previous disasters and terrorism have changed local communities’ disaster preparedness and risk perception nationwide, 2) how the local office promoted risk mitigation at the level of local community and 3) whether they worked out or not during the tsunami disaster efficiently.

The findings are as follows: 1) that the local communities are one of the best social capitals which are worked as emergent aiding and caring system each other and so 2) the construction of “chonai-ka” based disaster preparedness have become main important program of the disaster planning nationwide. For the “chonai-ka”, the problem of risk become more and more main subject of their activities. 3) This trend was connected to nationwide anxiety and “making secure-and-safe community activity” after terrorism using chemical substance by cult in 1995 Japan. But 4) the initiative of the activities is not belong to “chonai-ka” or local community itself and 5) the social division within local community itself is the problem such as the isolation of disabled people or other minority which Tsunami disaster revealed in 2011. This is an evidence in the case of unequal gender/ethnic relationships in communities and reflected in the local pre-disaster preparedness.

The discussion is 1) how the disaster studies take up the problem of social division in the theme of local community at global level and 2) how the relationships of the nations and local citizens in the disaster planning should be.

The Role of Japanese Public Health Nurses’ Activities As Post-Disaster Assistance

This paper will examine about the construction of disaster resilient local community based on multiple social networks through the cases of public health nurse activity in the tsunami devastated area.

The questions of this paper are 1) why and how the professional ability of public health nurse are efficient at the post-disaster time and 2) how it is different from volunteer activities such as non-specialized NPOs or neighborhood disaster prevent associations at the community base.

This paper is based mainly on the findings of my own interview with public health nurses who worked in northern Iwate prefecture and detailed survey on the public health reports about the disaster assistance. The findings are that 1) their activities are focusing on informal care and long-term support for community re-construction as well as official nursing services in the shelter right after the disaster, 2) their professional skills were especially effective in case they conducted their research about the health status for all surviving citizens in the area by using nationwide public health nurse human-resource network. And 3) they can support efficiently the destroyed local public office because they have been long working there and knowing in detail about clients and their community. It is important significantly different from other non-professionalized volunteers that 4) they have professional skills and a long year experiences of local community based caring and they have a variety of wide networks all over Japan.

I will discuss about collaboration of public health services with other local institutions, NPOs, volunteers and organizations for disaster vulnerable people such as elderly women. Japanese public health nurse activities is one of the best examples of post-disaster assistance system which has been uniquely rooted in local communities culturally and historically.

What the Ubiquitous Network Society Brings in Japan: Influences of the Mobile Internet Devices on Teenagers

Advanced technologies sometimes corrodde social institution. “Act on Development of an Environment that Provides Safe and Secure Internet Use for Young People” is a Japanese law which binds every parent to set up mobile web filter on the mobile phone of her/his child to block “harmful” information in cyberspace. However, recent prevalence of smart phones and hotspots in Japan is spoiling this protection.

In this paper we want to describe current trends of the Internet use among Japanese schoolchildren based on several surveys we exercised in 2010 – 2013 in Gunma prefecture. The results show that many teenagers use their mobile internet devices in a quite unguarded manner. For example, 20% of high school girls answered our questionnaire that they had met someone they had come to know through the Internet.

We are convinced that, basically, teenagers are exposed to three types of different risks. The first risk is caused by the fact that they are connected directly with the outer world, where evil adults (or non-adults) are waiting for their victims. This risk contains cyber-crimes such as enticement, deception or false billing. Another risk comes from the situation in which the teenagers are connected online with themselves. Cyber-bullying, or cyber-troubles are getting serious because they happen where neither teachers nor their parents can observe. The last risk comes from the recent convenient condition of the ubiquitous network. Schoolchildren are exposed to the risk of addiction to the Internet activities, such as online games, blogs, SNSs, live-chatting or online-shopping.

We want to illustrate what Japanese teenagers or parents suffer from and what we should do in order to protect schoolchildren. We don’t think we can prevent teenagers from connecting with the web, therefore, at last we have to teach them how to adapt themselves to the coming digital age.

Transformation of Relationship in the Second Modernity in Japan in Comparison with the Theory of Reflexive Modernization

The aim of this report is to examine how far the theory reflexive modernization can be applied to the Japanese society today.

Examining titles of books and headlines in Asahi-newspaper, we see abrupt increase of the word ‘relationships (Tsunagari)’ and ‘ties (Kizuna)’ in and after 2011, when the big earthquake occurred. Precise examination leads us to other finding that since 2007 the number of these words began to increase and that the word of ‘relationships (Tsunagari)’ mostly relates to family or community. Moreover, in 2007 a new word ‘activity to get married (Konkatsu)’ was coined and since then the word has got popularity. These suggest surge of interest in how to create or keep relationship in family or neighborhood. These phenomena to seek relationship actively seem to correspond with the theory of ‘pure relationship’ by J.A.Giddens or of individualization by U.Bec at a glance.

However, there are data which are contrary to their theories. If we focus on family relationship, since about 2000 we see tendencies that people regard family relationship as more important than before. First, people try to stop postponing formation of the family, which is not successful though. Second, they try to keep the family relationship; they support the idea that one should keep the family relationship, even if one becomes to dislike his or her partner, which are contrary to Giddens’s theory. Third, more people tend to support the normal family: registered marriage and the family consisting of a husband, a wife and their children. While Western societies are experiencing the diversification of families in the same sphere, Japanese society is experiencing the re-institutionalization of family on people’s consciousness.

In conclusion, although the theory of reflexive modernization is a useful tool to research Japanese society, we should re-theorize it from our differences.

Expansion of Secondary Education in a Transition Economy: The Case of Vietnam

This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialistic economy to a market-based one. Influenced by this drastic transition of economy, people’s aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school now shows stagnation, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization process and secondly, the newly increased labor force. High school expansion of second-also too much education to work as part of the manual labor force in factories. In conclusion, this paper forecasts the future of post rapid expansion of second-also too much education to work as part of the manual labor force in factories.

Experiences of Difficulties Faced By Hikikomori People within Everyday-Life: From the Perspective of View of Intimacy

This paper aims to describe the experiences of difficulties faced by the withdrawal of youth from society known as hikikomori in Japan. This paper is based on fieldwork data and narratives of hikikomori people in self-support group in Kobe. This self-support group organizes peer supporters with their experiences, and provides support to hikikomori people as the person concerned (Tojisha). This paper analyzes their narratives from the approach of life-history analysis. In Japan, hikikomori phenomenon has been problematized since the 1990s. According to research conducted by the Cabinet Office in 2010, the population of hikikomori (age range 15-39), is estimated 696 thousand (comprising 1.79% of the total population of Japan). In this survey, hikikomori is defined as “people who predominantly stay at home for more than six months, other than for household work, child-care, schizophrenia or physical illness.” Therefore, hikikomori has been referred to as problems of psychology and requires psychiatric treatment. Moreover, hikikomori has been also identified as problems related to Japanese education and employment systems. However, experiences of difficulties faced by hikikomori people are more complex. In fact, on their narratives, they address the various issues which they face in their daily lives. When talking experiences by hikikomori, they talk about various categories of human relations. In particular, their narratives on difficulties are often associated with intimate relationships, gender, sexuality and the other. For example, a hikikomori person said “I am troubled about how to interact with other people familiarly.” Thus, this paper focuses on the intimacy of human relationships within their everyday-life experiences. Through this analysis, I argue that the experiences of difficulties faced by hikikomori people not only reflect instability of employment of youth but also related to the anxiety and uncertainty concerning their intimate relationships.

Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia

Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia

Abstract

This paper explores the changing embodiment experiences of new disabled women after the 2006 earthquake disaster in Bantul district, Yogyakarta province, Indonesia. As a consequence of the disaster, thousands of people lose their parts of their bodies and become disabled. Not only they faced psychological suffering and trauma caused by the earthquake but also they should deal with many challenges in order to survive in their subsequent lives. Their properties were vanished and the situation was exacerbated by their work inability as a result of their impairment. They have been adapting to unproper environment situation such as inappropriate facilities that hinder their mobilities. This situation even worse for new women with disabilities because they have not only to struggle for daily needs, they also have to challenge multiple oppression because they are disabled, because they are women and because they are poor and do not have ability to work. They also have been experiencing changing embodiment. After the disaster they lose their dignity and have to adapt to their new embodiment experiences. They have to follow procedures of medicalization to their physical disabilities in order to close with normality and should involve in some programs such as work skills from government and NGOs. This paper deal with ethnographic approach of the personal experiences of 5 new disabled women in comparing embodiment experiences before and after become disabled. This paper also discloses the embodiment process after 5 years of disaster and how those women with disabilities exercise their bodies to mainstream disabilities in their families and neighbourhoods.

Keywords: Disaster, embodiment, women with disabilities

The Impact of Inequality on Subjective Well-Being

One of the most debated questions in happiness studies is whether or not there is a relationship between income and life satisfaction. The evidence is rather mixed (Easterlin, 1974; Hagerty and Venhoven, 2003). This study attempts to give an answer as well, using preliminary data from the European Survey on In-
come and Living Conditions (EU-SILC), which contains a very good measure of income and several indicators on subjective well-being (overall life satisfaction, meaning of life, positive and negative affects). Multilevel regression is employed as a method, in order to study the impact of country level variables, especially related to income distribution, and the differences between European societies. The hypothesis is that inequality may be the missing link between GDP and subjective well-being.

'Tolerance' Frame As a Hindrance to Effective Public/Authorities Feedback in Belarus

The report is going to consider 'tolerance' as a misconception and an ideological frame. A critical assessment will be done of tolerance on the part of Belarusian people. It is going to be shown that a) tolerance as an invariably beneficent trait of the Belarusian people is quite mistaken, b) that the 'tolerance' frame interferes with democratic governance principles as accepted and practiced worldwide, c) that responses to public dissatisfaction (part and parcel of normal governance systems) in Belarus are complicated due to persistence of the 'tolerance' frame; and d) that for public and sustainable democratic outcomes in Belarus a regular public/authority feedback should be restored by getting rid of 'tolerance' as part of the ideological apparatus.

The idea of this paper concerns 'tolerance' as it enters democratic governance schemes and might be leading to their malfunction. The word tolerance is widely used in liberal democracies and is ascribed a positive meaning. However, it appears that tolerance is not necessarily a virtue. The word tolerance has negative connotations as it acknowledges a problem. The danger with the ideological frame 'tolerance' is that it might enter democratic governance models where it can effectively block public responses to dissatisfaction. This way, the system is incapable of conveying public dissatisfaction, and the stimulus is removed for the authorities to improve their work. This might be evident in Belarus, where people have little opportunity to convey their dissatisfaction, given that they are considered as well as consider themselves 'tolerant'. In this case, their tolerance, being mere holding on, is a potential volcano.

Spatial and Temporal Structures of Inequality in the Super-Urbanized World. Flow-Structures of Glam-Capitalism and New Configurations of Inequality

The economy and society in networked enclaves of globality – super-urbanized areas like Los Angeles, New York, Tokyo, Hong Kong, Moscow, London, Buenos Aires etc., are considered as glam-capitalism. Preconditions for new form of capitalism have been generated by virtualization of social structures. By the 2000s intensive commoditization of images had led to overbranding and triviality of the virtual commodification strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being since the 1930s specific live style or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups.

By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being since the 1930s specific live style or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

The positive results of the reform are: the expansion of research in the universities and special foundations, financing the first stage of innovations, were founded, including national and regional venture capital funds. The innovation activity of the universities was stimulated. In 2009 the government introduced status “research university” and began to support research universities with special mega-grants. To receive this status universities prepare reports for their research development.

The amount of funds received by the university from external sources is among the indicators that are taken into account during the competition. A detailed analysis of the problems that arise after the reforms, shows the positive and negative effects of each reform on the research activities of universities. The positive results of the reform are: the expansion of research in the universities, the emergence of new laboratories and scientific equipment update, inviting well-known scientists to carry out joint research projects. But still the main source of funding for research in universities is the state budget. There are significant restrictions on the receipt of funds for research from other sources. Limited income of the population in Russia does not allow for raise tuition fees. The economic crisis and the reluctance of the innovative entrepreneurs restrict the flow of funds from the business sector. There is also a contradiction between the development of innovation activity and basic research.

IVANOVA, ELENA* (Sociological Institute of the Russian Academy of Sciences, ea.ivanova@spbrc.nw.ru)
Reforms in Higher Education in Russia: The Transition to a Market Model

The pressure on universities to increase external sources of funding research became the global trend. This trend is consistent with the basic principle of a modern market economy - the demand of increasing the efficiency of all actors and to reduce government deficits.

In the last 20 years Russian higher education took several reforms. After 1992 many technical institutes have expanded the number of faculties and have become state universities. They were allowed to introduce tuition fees. In 2003 the special foundations, financing the first stage of innovations, were founded, including national and regional venture capital funds. The innovation activity of the universities was stimulated. In 2009 the government introduced status “research university” and began to support research universities with special mega-grants. To receive this status universities prepare reports for their research development.

The amount of funds received by the university from external sources is among the indicators that are taken into account during the competition. A detailed analysis of the problems that arise after the reforms, shows the positive and negative effects of each reform on the research activities of universities. The positive results of the reform are: the expansion of research in the universities, the emergence of new laboratories and scientific equipment update, inviting well-known scientists to carry out joint research projects. RC49-802.7
IVANOVA, TETYANA* (Sumy State University, sociol_tanya@mail.ru)
Anxiety and Social Change

The purpose of the study: a comparative study of the correlation between the levels of anxiety, and some of the economic characteristics of the countries. Indicators: the level of anxiety (Q3 - Q4 – EVS), the level of happiness (Q3 – EVS), the level of social activity (Q5aA – EVS), human development index and human development rates.

High growth rates of human development level positively correlate with increased level of anxiety (0, 76) and negatively correlate with the level of happiness (-0, 51) and the level of social activity (-0, 57).

The Next Transformation: From Glam-Capitalism to Alter-Capitalism

Globalization has resulted not in the ‘world society’ but rather in networked enclaves of globality: New York, Tokyo, Hong Kong, Moscow, London etc. People live in such enclaves experiencing globality through intensive flows of consumer goods, technologies, migrations, money, media-generated images (Apparatu). There capitalism has been transformed into glam-capitalism. Preconditions for glam-capitalism were created by virtualization of social structures. Hyper-reality of simulations producing copies without original (Baudrillard) is adequate model for networked in the enclaves as well as for politics of images and media.

By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being specific live style or aesthetic form, glamour becomes now newest rationality of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like ‘copy left’, ‘open source’, ‘creative commons’, and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

After-social movements reinforce functionality and competition against images producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Low growth human development index are accompanied by reduced anxiety (-0.88), high level of social activity (0.81) and feeling of happiness (0.71).

Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease in activity occurs in depression. Anxiety is accompanied by disappearing of emotions, interest loss, and energy reduction.

Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

IVORY, TRISTAN* (Stanford University, tivory@stanford.edu) Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased immigration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of immigration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a “visible minority”) and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participatory observations from a 12-month period in the Greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in perceived settings, prioritization, workplace selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant’s legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

RC06-120.2

IVORY, TRISTAN* (Stanford University, tivory@stanford.edu) Marriage As a Social Resource: Distinctions Among Immigrants In Japan

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalmijn 1993; Rosenfeld, 2001), the basic premise has remained intact (Qian and Lichter 2000; Cherlin 2004; Waters and Jiménez 2005). Research on new receiving destinations, however, has been much more conclusive about the nature and sequence of native-born/immigrant intermarriage within the process of group assimilation (Kalmijn 1998). Using interview and observational data gathered from the Sub-Saharan African population residing in the Greater Tokyo Metropolitan Region between July 2011 and August 2012, I show that marriage is substantially different across two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less instrumental mate-selection process and increases the likelihood of marriage to non-native-born individuals. The segmented nature of immigrant/native-born intermarriage in Japan highlights the importance context and country-specific factors play in understanding intermarriage and the process of group assimilation.

IWAHARA, HIROI* (The University of Tokyo, irohi.iwahara@gmail.com) Balinese Reactions to UNWTO’s Global Code of Ethics for Tourism: A Case Study of Balinese NGO’s Initiative

This paper examines an emerging tourism-related movement in Bali, initiated by the local NGO to reform long established mass-tourism. While Bali is well-known as Indonesia’s most prestigious tourism destination today, Bali’s economic prosperity has been seen as resulting from the development of the tourism industry since the 1970s. However, especially after the 2002 terrorist attack, various socio-cultural, economic and environmental changes caused by modernization have come to be recognized as serious threats not only for the social stability but also for the tourism development among the Balinese. This is partly but significantly because Bali has been relying on international tourism. In other words, tourists’ fluid attitudes on culture and the environment seriously concern tourism practitioners. Consequently, although there is no unified idea and approach, introducing sustainable tourism has come to attract considerable attention especially among Balinese intellectuals, policy makers and NGOs.

A local NGO, Wisnu foundation, has launched a village tourism project called ‘Bali DWE’ in 2010. The project has two purposes: to promote alternative forms of tourism and to preserve the Balinese cultural heritage. In order to publicize the necessity of reforming Balinese tourism, Wisnu foundation came up with ethical standards based on the UNWTO’s Global Code of Ethics for Tourism (GCTE) supported by urban intellectuals.

This paper firstly illustrates how Wisnu foundation and its collaborators identified the issues of tourism in Bali and promoted its ethical dimension by ‘rear-ranging’ the concept of tourism. The outcome of the field research reveals that although there is an apparent divergence between active villagers and urban intellectuals, NGOs in terms of their perspectives on tourism, preserving culture and means of livelihood, the usage of GCTE is playing a certain role in uniting the participants of the project.

IWAI, HACHIRO* (Kyoto University, iwai.hachiro.2r@kyoto-u.ac.jp) The Impacts of Wartime Mobilization on Postwar Social Stratification in Japan: A New Direction of Quantitative Historical Research

During the World War II, a large number of Japanese men were drafted in military service or forced to work for military factories. After WWII, they returned home from military or moved from military factories to other workplaces. This massive wartime mobilization is often denigrated within Japanese society. I used light historical data of respondents born from 1886 to 1985. This work history data included the information on wartime experiences such as military service. So far, this information has not been utilized in Social Stratification and Mobility research. Using the data, we could reconstruct the information on what age the respondents started military service, at what age they returned from military or in what kind of job they engaged after WWII. Life histories of respondents born from 1901 to 1925 are thought to be strongly influenced by WWII since they experienced the wartime at their active adult ages. Using 1955 and 1965 Social Stratification and Mobility surveys, this paper, first, attempts to reconstruct life history data of respondents that enable us to analyze the relations between wartime experiences and careers. The analyses of this life history data, then, reveal that there are clear age differences in wartime experiences among birth cohorts. Third, multivariate analyses of postwar occupational attainment indicate that although educational levels strongly influence patterns of occupational transitions from wartime to postwar period among people who experienced wartime mobilization in their twenties and thirties of age, family background is more important in the transition period than before. Based on these results, this paper discusses the future possibilities of quantitative historical research.

RC55-882.2

IWAI, HACHIRO* (Kyoto University, iwai.hachiro.2r@kyoto-u.ac.jp) Who Tolerates the Use of Physical Punishment?

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by massive wartime controlling have been reported in Japan. Before that incident, although the Fundamental Law of School Education prohibits physical punishment, public opinion generally tended to tolerate the use of physical punishment by parents in Japan. Many people think that hitting a child as a way of parenting is unavoidable in some cases. According to JGSS-2008 data, more than 60% of respondents approve the use of physical punishment by parents. Physical punishment by teachers was also more or less permitted in JGSS-2000/2001. It is now necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. This paper explores the factors of approving the use of physical punishment among Japanese adults. The results of analysis show that gender and the experience of being a subject of violence in childhood are necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. The results of analysis show that gender and the experience of being a subject of violence in childhood are strongly related to the attitude toward approving physical punishment. Young people who suffered violence in childhood are likely to support the use of physical punishment by parents. In addition, women whose father was perceived to ignore her in childhood are likely to support the physical punishment. The results imply that physical punishment possesses ritualistic elements among Japanese people by symbolizing intimate relationships. It is also suggested that new types of ritualistic behavior in intimate relationships should be created in order to prevent serious problems by physical punishment.

The Impact of Fukushima Daiichi Nuclear Accident on People's Attitudes Toward Nuclear Energy Policy: Silent Movement

Multiple nationwide opinion surveys, carried out by the government (cabinet office), major media (national newspapers and NHK), the National Institute for Environmental Studies, and the Atomic Energy Society of Japan, have revealed that the Fukushima nuclear accident have heightened people's perception of disaster risks, fear of nuclear accident, and recognition of pollution, and have changed public opinion on nuclear energy policy. The gap of opinion on nuclear energy policy between environmentalists and lay people has widened after the disaster happened.

The results of Japanese General Social Survey data show that the objection to the promotion of nuclear energy is strong among females, and weaker among young males and the supporters of the LDP. This is similar to the data collected after the Chernobyl accident. Among people who live in a 70km radius of nuclear plants, those who live nearer to plants tend to evaluate nuclear disaster risks higher. Distance from nuclear plants and the perception of earthquake risk interactively correlate with the opinion on nuclear issues: among people whose evaluation of earthquake risk is low, those who live nearer to the plants are more likely to object to the risk status. Abolishment of nuclear plants. It is also found that the nuclear disaster has changed not only people's attitudes but also people's behavior. People have come to try to save electricity in addition to turning off electrical equipments frequently. It has led to the 5.1% reduction of electrical demands over the previous year in 2011, and 1.0% more in 2012. The level of commitment to energy conservation is found to be correlated with opinion on nuclear issues: 80% of the proponents of nuclear reactor decommissioning have tried to reduce electric consumption. The reduction of electrical demands has been people's silent movement, that is, their manifestation towards the nuclear energy policy.

The Apple Does NOT Fall FAR from the Tree: Offspring of Interracial Marriages in Brazil

Starting from colonial times, Brazil has a long history of racial miscegenation. How do families structure themselves in respect to a concept of racial hierarchy? Several censuses and survey from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: "White", "Black", "Asian", "Mixed race" and "Native Brazilian". Though it is possible that some subjectivity is present at the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards "whitening" of the population until 1991, with a slight reversal in 2000, resuming the "whitening" trend up to 2010 (the latest census). But how do offspring of interracial marriages self-report themselves? Among possible alternatives, is the race/skin color of the dominant factor? Is this choice affected by geographical region or social status? Is there a noticeable time trend in choices made? The study analysis data from five Brazilian censuses, between 1960 and 2010, in order to identify patterns and trends among offspring of inter-racial marriages.

Among exogamic couples where one of the partners is "White", this is the dominant race/skin color alternative for the offspring. When the mother is "White" the difference with respect to other alternatives is even wider, less so, when the father is "Asian". The reported proportion of "White" children increases with socio-economic status to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards "whitening" of the population until 1991, with a slight reversal in 2000, resuming the "whitening" trend up to 2010 (the latest census). Japanese Single Fathers’ Role Performance and Resources in Family and Work

In this study, interviews with single fathers were conducted in a semi-structured way, and the balancing of their roles as fathers and workers was investigated. The sampling number was ten and all the samples were single fathers living in urban areas with a child or children aged under 18. The sampling was carried out by network-sampling through two NPO supporting single fathers. All the collected data were divided into two groups depending on whether or not the samples lived with parents able to share the burden of child-rearing and the data were analyzed with the constant comparative method. The results showed that housework and child-rearing skills are required as necessary resources at home, and all the fathers who lived independently of their parents have acquired these skills. The need for these two skills decreases slightly in the case of those living together with their parents, although these fathers have concerns about declining support from their father and/or mother. In terms of career roles, fathers living apart from their parents focus on advanced scheduling in order to receive maximum support from their parents as well as from the public, and therefore a work environment that facilitates making advanced schedules is an important resource for them. On the other hand, fathers who share the burden of child-rearing with their parents pay attention to the politics of the work environment so as to gain an understanding of their coworkers in order to fulfill their parental roles. Finally, for both groups, the sense of a single father and management skills to create suitable conditions for child-rearing are essential in order to accomplish their roles as both a worker and a parent. In addition, it was found that a single father has a unique identity structured by family role, work role, and masculinities.

Social Structure, Race, and Racial Relations in Japan

Literature on racialization processes has predominantly examined the Western societal contexts and societies where high levels of racial/ethnic diversity and conflicts existed, such as the U.S., Europe, Brazil and South Africa. These studies have identified that social institutions, ideologies, and social interactions together shape, legitimize and thus perpetuate systemic racial inequality by classifying individuals as ‘whites’ and ‘non-whites.’ Yet, theoretically grounded studies on racialization in other societies have been limited; we know little about if and how structural forces affect racial hierarchy and meanings in other social contexts. This study highlights the intricate relationship between social structure and historical development of the concept of race and subsequent racialization processes in Japan, using semi-structured interviews of foreign residents in Japan and Japanese individuals. It shows how the state, its structural positioning, cultural representations, and dominant discourses of different foreigner groups together condition Japanese individuals’ understanding of race, racial hierarchy, and their position within the hierarchy. The concept of race in Japan denotes a combination of phenotype, nationality, and cultural desirability internalized among Japanese individuals. Following this conceptualization, Japanese is understood to be a distinct racial group while foreign migrants become marginalized differently based on their perceived racial statuses. This study also highlights the salience of structural forces in creating and maintaining the significance of race, racial meanings and hierarchy, similar to the racialization processes documented in previous studies; since the ideology of homogenous Japan and importance of maintaining social boundaries have been heavily embedded in the structure, there is a limited opportunity for social integration, which perpetuates the rigid racial boundaries. Thus, it provides deeper understanding of the effects of racially biased structure in perpetuating and even fostering racist acts and attitudes, which is imperative in bringing about positive changes to alleviate the increasing racial tension and conflicts in Japan.

Indigenous Populations Achieving Human Rights in the Global South?

The adoption of the UN Declaration on the Rights of Indigenous Peoples has resulted in enthusiasm for the potential it provides and skepticism surrounding the limitations of the Declaration (Anaya 2009, Schulte-Tenckhoff 2012, Watson and Venne 2012, Xanthaki 2010). While there remains much to be skeptical about, including continued human rights violations, little or no legal standing to demand human rights, and a state-centric model of protection and provision of human rights, unexpected victories are emerging.
Catholic Faith-Based Filipino Organizations in Japan

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipinos to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong. Discussion of this paper is partly based on an author’s three-year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagayap Ota Filipino Associations or KOFA. A reflexive account, this paper narrates the experiences of the organization as it tries to cultivate a “space” in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

New Donors of Development Assistance: Theorizing the Future of the OECD Aid Apparatus

This paper explores the new role that non-OECD nations such as Brazil, India, Russia, South Africa, South Korea and, especially, China are playing in providing international development aid. While global aid flows from traditional OECD nations remain significant to the development of global politics and what William Robinson calls the “Transnational State” (TNS) apparatus, these new aid donors are challenging the Western nations’ vision of what development means and what kind of global economy is being built. The consequences of these increasing aid flows for the global economy and for the development of aid recipient nations at this point are unclear. But it is crucial for scholars to pay close attention to the rise in official development assistance (ODA) from non-OECD nations as a key indicator of global political and economic integration. Often considered to be of secondary importance to many globalization scholars (who prefer indicators such as foreign direct investment (FDI) and international trade), ODA is perhaps the most important measure of “economic politics” (to use Bourdieu’s definition of globalization) for sociologists of development to observe. Bringing together insights from world systems theory, world polity theory, Robinson’s Transnational State perspective, and Saskia Sassen’s work on deterritoriality and denationalization, this paper will offer some theoretical analysis of the role that new donors are likely to play within the global political economy in the coming decades. Particular attention is paid to whether the so-called “South-South” aid from these new donors is really “South-South,” whether we can expect to see a counterhegemonic shift in aid practice, what kind of future conflicts between donors are on the horizon, what this might mean for world state formation, and finally, whether any of this amounts to the beginning of the end for the nearly 60-year old Western aid apparatus.

Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias? By Using the Propensity Score Adjustment?

The main goal of this presentation is to find out whether the refusals to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation. Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood of refusal is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsu et al. 2011). This procedure is not based on the assumption that item non-response is systematic, however PSA is more effective when missingness mechanism is systematic, but I will demonstrate the usefulness of a credit-scoring model for such purposes. In fact it is also based on logistic regression, but it helps to choose the relevant set of predictors as well as to illustrate and understand the nature of income refusals. Secondly, based on the data from the “Polish General Social Survey”, an assessment will be provided of whether PSW or PSA leads to lower total survey error (TSE). By removing the known values of income I will consider three patterns of missingness: (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values. Findings are four-fold: (1) PSA is much more effective when missingness mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSA increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

Classical Sociologists on Music and Society

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc. Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-disciplines. The problem of its theoretical backwardness was stressed out by Alphans Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistent conceptual grid. There is also poor debate on the role and significance of classical sociology reflection on music and society in the contemporary sociology. The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The leitmotiv of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociologists of music.

Multiculturalism and Minority Well-Being in Fourteen European States

Despite pronouncements of its death by leaders of key European states in 2010, multiculturalism “carries on” (to use the Guardian’s term 9/19/12) in public discussion. Despite its recent decline in political favorability, multiculturalism has become a permanent fixture of life in the European Union today. While the majority of European citizens agrees that multiculturalism is part of a larger human-rights revolution involving ethnic and racial diversity,” Using the European Social Survey (2002, 2008, 2010) for fourteen European states with scores on the Banting/Kymlicka Multiculturalism Policy Index (MPI), we operationalize well-being in terms of the Council of Europe’s (2003) specification of the eight key areas of life (cf. Jackson and Doerschler, 2012). These are employment, housing, health care, nutrition, education, information, culture, and basic public functions (which include equality, anti-discrimination and self-organization) (Jackson and Doerschler, 2012: 1). Greater well-being of minority populations is seen to result from reductions in disparities and polarizations between them and the majority population (European Parliament, 2007). Scores for the eight dimensions of multicultural policy development (Banting/Kymlicka, 2012) allow us to consider the effects that specific state policies have on targeted areas of minority well-being. We furthermore examine the hypothesis that the situation of minorities also improves when states turn toward multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Do minorities report greater trust in the political system where multiculturalism has taken hold? What happens to majority group members’ levels of education, employment and political trust as states implement multicultural policies? These are the questions on which this paper centers. With such information, political leaders can defend multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. "Multiple discrimination" is a special focus of the European Union’s Agency for Fundamental Rights. Discussion of the need for a “Horizontal Directive” (EU-MIDIS, 2010: 5:5) and the “Genderrace” project of the 7th Framework Programme both highlight multiple discrimination and the “intersectionality” (Gendercare, 2010: 272) of axes of discrimination. The GenderRace report (2010: 32) uses the term intersectionality “to define a situation… in which several grounds of discrimination interact concurrently.”

This report follows the European Commission’s 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy Index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to the cultural, political, legal and ethical/moral issues associated with the logic of specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate respects unique and non-replicable.” (2002: 90).

The paper focuses on several enhancements that emerge “because of the cultural effect of interrelatedness and the ability to the benefit of Europe and its member-states.

Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks

In their bid to globalise, transnational corporations (TNC’s) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC’s invest in a range of powerful and innovative advertising, marketing and promotion campaigns, marketer’s pressure to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant mine (Goldman and Papson, 1996) resulting in a range of political, economic and ethical questions. This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey’s concept of monopoly rent which emerges “because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects non-replicable.” This paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate the cultural, political, legal and ethical/moral issues associated with the logic of monopoly rents.

Towards a Practice Theoretic Approach to Understanding Sexuality

In our book ‘Theorising Sexuality’ (2010) we re-worked the Interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1973) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Luhmann and deGola in order to enable an understanding of the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of Wacquant, Schatzki/Redclift /Warde. and Shove in order to set out the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

Environmental Governance and Risks in Brazil

Environmental governance has advanced in Brazil since the Rio Conference. Different stakeholders have had a relevant role in the process that has permeated in a growing scale the process of decision making and formulation of new public policies. The process of environmental governance has brought into scene stakeholders representing the public and private sector and the social movements, mainly the environmental movement. The incorporation of new social actors with differentiated demands on the management of natural resources has become more frequent as to issues on water, solid waste, biodiversity and climate. The engagement of these different actors has brought to the environmental arena, a logic of dispute and negotiation on aspects linked to natural resources, sustainability in cities, impact of degradation of water sources, loss of biodiversity, conflicts with indigenous population on land, impact of hydroelectricity projects and more recently on the impacts of climate variability and its multidimensional aspects.

The paper will approach how national policies are taking place adequately or insufficiently taking into consideration the complexity of the process of environmental governance, and what this implies in terms of enlargement of the role and engagement of stakeholders in the process of decision making. The analysis will focus on the the strengthening of deliberative spaces, multiple governance networks that promote awareness and mobilization to face uncertainties and potential risks in cities and biodiverse spaces and the pressure to reduce socio-environmental and knowledge based asymmetries.

Several civil society organizations have had in the last years important role facing environmental governance and risks in Brazil, and these initiatives promoted advancements towards democratizing access to information, besides pressuring for more transparent and participative decision making processes on environmental policies and the need to take into consideration diversities, complexities of transformations taking place in a context of global climatic uncertainties.

Developing Care-Technologies While Balancing Utopian/Dystopian Worldviews: Dimensions of Attention

Collaborating since 2005 in different interdisciplinary pre-competitive care technology research projects in Flanders (Belgium), we learned about crucial dimensions to balance the tendency of supporting utopian/dystopian views on the impact on wellbeing and quality of care due to new care technologies. The goal of these subsidized projects is to innovate in a way added value is created for its future users and valorization potential is the collaborative companies in general the team is rather utopian on the capabilities of the information and communication technology.

Involving potential users from ideation phase towards valuation of prototypes is a primary way to bring balance in looking at both positive and negative consequences of the future care technology. Due to the involvement of social scientists, over the years we moved from a pathology-centered problem definition, over an age-focused approach towards a care dependent approach. Concurrently, we emphasized the need of a multi-stakeholder approach, grounded in the insights of the Social Construction of Technology perspective (cf Bijker, Rip). These premises of human centered design are not enough to balance the tensions and paradoxes encountered when studying the potential consequences of envisioned care solutions and their impact on care-giving.

Recurrent dimensions of empowerment and disempowerment, that are potential pitfalls, are described in this paper. Essential themes will be: self-determination of care dependent and his/her caregivers, impact of technology on the caring relationship and quality of service by care organizations, role of present and future infrastructure and learning curve of present and future users, ... We also discuss the ways in which we try to balance tensions and paradoxes in this field, using in all phases of innovation binder approach (scenario’s and persona’s, tech cards, ...), and supporting the development of CareLivingLabs. We illustrate these with examples from past and current projects.

Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary – or, the critical comparative reflection about media formats – constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how mediatization has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

Orphans Other Dead ends in the History of Sociology: Symbolic Interactionism and the Mid-20th Century American Compromise

To conceptualize dead ends in the history of sociology, we examine how intellectual lineages, networks and institutional histories have been narrated in U.S. sociology. Introductory sociology textbooks are strategic research sites because they are a space where sub-disciplines, academic institutions, curriculum, individual intellectuals, and market dynamics intersect. Examining textbook narrations of the discipline, we ask: What has been narrated as central? What has been omitted? How are the intellectual lineages, networks and institutional histories of symbolic interactionism as an orphan – a causal condition of the discipline, we ask: What has been narrated as central? What has been omitted? How are the intellectual lineages, networks and institutional histories of symbolic interactionism in U.S. sociology textbooks today, a fact which explains the isolation of symbolic interactionism from the power centers of disciplinary sociology.

Conflict over Confirmation Teaching in Public School – the Impact of Neoliberal Policies on Local Political Level in Denmark

The neoliberal discourse is part of a larger shift from democratic to neoliberal policies that has been occurring over the past decades; a shift accompanied by both discursive and structural changes in society. If the neoliberal discourse is transforming the core functions of government globally, then this must also be true in the case of the close cooperation between the Danish state and the national church in Denmark. In this paper the cases of conflict over and transformation of the position of confirmation teaching in Denmark is analyzed in order to find out if the changes is a result of neoliberal policies in Denmark or simply a matter of structural changes caused by another rational basis. In Denmark confirmation teaching is part of the public schools timetable according to the Primary Education Act. Municipalities in Denmark have according to the Primary Education Act the right to place the confirmation teaching after school but until recently it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument using this position tradition to place the confirmations teaching after school is the increasing conflict between religious and non-religious beliefs. Instead it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument using this position tradition to place the confirmations teaching after school is the increasing conflict between religious and non-religious beliefs.

Multi-Sensory Tourist Experiences

Since the end of the twentieth century, there has been an ocular-centric affinity in tourism research, often related to studies of place images and tourists’ visual sensations. But there is more to travel than sightseeing: travel experiences are not just in the eye of the beholder but also in the ears, palate, nose, hands and feet. Tourist experiences are both corporeal and multisensory. Although vision is a dominant mode of consciousness in the modern world and some 90% of our perceptual intake is visual, this may not indicate an overall significance of eyesight. What one might call polychromism is a manifestation of the increased emphasis on senses other than vision in travel experiences. Based on personal interviews, the paper will exemplify some under-researched non-visual tourist experiences related to travel experiences related to travel experiences.

Decent Work and Corporate Social Responsibility: Contemporary Debates about Human Rights and Paternalism in Organizations in Brazil and Portugal

The concept of decent work (ILO) has recently appeared in corporate social responsibility (CSR) academic debates although the type of contract, the degree of diversity and gender equity are themes emerging in business landscape. Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (2011), national discussions and effective practices are not homogeneous. The CSR academic debate revolves around the perspective on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose motor function is masking the “real intentions” of corporations in their quest for higher profits (Thorton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes
to build the legitimacy of organizations in contemporary capitalism (Fremman, 1984). The aim of this work is to investigate the influence of the guidelines of decent work in CSR in the national contexts between Brazil and Portugal, on a comparative basis. We investigated the existing regulatory guidelines for CSR through documents, corporate social reports and comparative studies of the relevant legislation. The results demonstrate that while human rights and decent work appear as topics of CSR agendas in both countries, in Brazil, the corporate actions are voluntary, whereas in Portugal, there are laws that reinforce the communication of business practices within the CSR and decent work.

L’Évolution De La COMPétence En Organisation Des Collections De Documents Numériques: Le Cas De L’entrée Dans L’Enseignement Supérieur

La fracture numérique de second degré (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d’informations sont disponibles (Gantz & Reinsel, 2011), où l’accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Teevan, 2007), la dynamique sociale des objets médiatiques se complexifie, la compétence à organiser ces informations devient fondamentale. Cette compétence d’organisation correspond à la capacité à imaginer des structures pertinentes et à les implanter à l’aide d’outils matériels ou logiciels. Dans les usages, cette compétence à organiser s’actualise aussi bien dans des activités de recherche, que de gestion des flux d’informations, ou de stockage (Jones, 2008).

Une série d’interviews d’étudiants réalisées avant et après leur entrée à l’université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d’adopter et de modifier les afforances (Norman, 1990) offertes par leur environnement. Trois catégories d’afforances peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d’organisation consiste donc pour l’utilisateur à prendre parti des afforances et contraintes des outils adoptés afin d’aménager l’environnement technologique pour le faire correspondre à la structure de l’activité de l’usager, de sorte qu’il soutienne au mieux celle-ci (Kirsh 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence: l’intensité des usages des médias (Schradie, 2011), la variété des contextes sociaux dans lequel les usages se développent (Ito et al., 2009), et finalement, le rôle de stimulateur des relations sociales de l’utilisateur. Nos premières observations semblent indiquer que, plus encore que l’intensité ou la variété des usages, l’entourage des usagers joue un rôle primordial dans le développement de la compétence d’organisation, en ce qu’il crée des opportunités d’échange et de confrontation de pratiques médiatiques.

Marginalization As the Social Context of Risk Perception in Everyday Life

In this paper, by adopting a constructivist perspective, it is tried to address the question of how experience of marginalization and a sense of exclusion could affect the ways individuals perceive risks in everyday life. In general, social constructivist approaches to epistemological status of risk emphasize that the perceptions of risk are socially constructed and cultural and political contexts impact on how risk are made sense by people. The methodology in this research is based on qualitative methods and the data has been obtained through in-depth interview with 28 students from the University of Tehran in Iran. In the interviews we asked the students to describe how they make sense risks in their everyday life. Furthermore, they were asked to describe their experience with a sense of exclusion as a consequence of being marginalized in society. According to the findings, the ways the university students perceive risks have been closely intermingled with their experience of marginalization in their everyday life. Although studying in university may potentially result in social inclusion, most of the students have had the experience of marginalization in their everyday life and have been aware of economic inequality and also ethnic, gender and generational discriminations. This has led to exclusion and so provides a context for perception of risk and uncertainty. Particularly, when they try to build a desirable personal lifestyle, they face various social restrictions, which cause risks and uncertainty in their everyday life. In the other words, the social conditions of being marginalized lead to perceptions of some types of risk specially, those which are related to their lifestyle.

JAGIELSKA, MAGDALENA* (Graduate School for Social Research, magda.jagiel ska@hotmail.com)

Creativity and Embeddedness

Creativity, understood as an innovative and novel way to solve problems and that is combined with a variety of factors influence both the sociological perspective, as well as psychological. One is the factors influencing the level of creativity might be also the quality of social interactions and the conforming influence the possibility of being misunderstood or socially rejected.

The aim of the study would be to create analyze the relationship between the characteristics of the social structure and individual degree of creativity. The study group was analyzed from the perspective of the declared behavior in different social situations, declared level optimal distinctiveness and tendency to take the social risk. The level of creativity was measured by tests of divergent thinking based on the number of different responses to a given problem. Demographic factors were controlled. A study was conducted using a commercial online tool tracking IP numbers of participants based on the answers given by 306 people.

Analysis shown that people who tended to be more socially independent and less embedded in the social networks gave more divergent responses to the creativity test during the research. The level of individual creativity, commonly regarded as psychological factor, might be influenced by the social milieu of the person.

Are European Fundamental Rights to Information and Consultation Getting Diluted By National Implementations?

Study on Implementation of European Works Councils Directive 2009/38/EC in the Field of Access to Justice

The paper aims at drawing attention to proper transposition of EU directives as a challenge for ensuring effective workers’ rights to information and consultation (I&C). To this end it looks at the example of implementation of the European Works Councils (EWC) directives 94/45/EC and 2009/38/EC with a special focus on enforcement provisions. The choice of implementation of EWCs legislation as a ‘lab case’ is relevant in several ways: a) being an EU originating institution requiring implementation into national industrial relations (IR) and legal systems they represent a perfect example of tension between coherence of centrally introduced rights and their national ‘conjunction’; b) the original directive 94/45/EC, substantially modified by recast directive 2009/38/EC and recently transposed provides for an apt up-to-date test-case; c) it addresses loopholes in existing research and has both a political and practical relevance for over 1000 active EWCs and over 17 mil. workers they represent.

The paper will provide comparative overview of national transpositions of specific key provisions of directive 2009/38/EC and an analysis of their coherence with the source regulation. Focusing on transposition of enforcement provisions on access to justice and sanctions it will argue that a formalistic ‘copy-paste implementation’ without consideration of the ultimate principle of effectiveness acts as impediment to coherent application of the fundamental right to I&C. To this end it will present jurisprudence of the European Court of Justice and research on the meaning of ‘effective, proportionate and dissuasive sanctions’.

The paper will also argue against the lenient approach supporting the view that differences between national IR justify cases of substantial/excessive, divergences in implementation. By means of reference to EU institutional developments and interventionism in the field of financial market and environmental regulation it will also challenge the view that the European Commission has no competence with regard to setting sanctions.

Do Equality Values Differ in Asian and Western Cultures? Results from the Social Inequality Module of the ISSP 2009

Whether certain values are unique or specific to a group, a nation, or a culture, has been a topic of lengthy debates. During the last decades the interest has shifted from smaller to larger collectives and from smaller to larger regions. The European Values Surveys was an early attempt to identify cultural values, first in West European societies, and later in Europe as a whole. Whether the goal of the enterprise has been reached remains an open question. What most European
societies really distinguish from other societies is the millennia-long Christian tradition. But has this tradition also brought forth unique values? And if so, are they still influential in modern societies?

In the nineties a similar debate started in Asia. Asian values were initially seen as a stronghold against Western value imperialism and against Western democ-ratization. The conceptual resonance of this welfare liberalism and the empirical resonance of values of the European findings on value pluralism. Dalton and Nhu-Ngoc (2005) could not iden-tify specific and homogeneous value patterns in the Confucian societies. Rather, family orientations and respect of authorities largely varied in Asian countries.

This work raises the question of whether the expansion of a new egalitarian model of openness to society in Pentecostals and Charismatic churches, especially in Northern Mexico, may explain the growth of Evangelical Christians, with new forms to mobilize symbolic capital and social participation.

In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector allows them to open new opportunities. This has implied new social change projects based on individual conversion. To study the above, this paper analyzes some cases of Rehabilitation Centers in Tijuana, and Ensenada, Baja California.

Formal and Informal Female Migration: Challenges of Governance in Bangladesh

In the last three decades, Bangladesh has grown to be an important source of labor migration. Female labor migration, however, has lagged far behind the male migration. In the past decade, the number of Bangladeshi women migrants has increased. Official figures put the proportion of Bangladeshi female labor migrants as 1% of the total number of migrant workers in 2003. In recent years, proportions of women as total migrants is estimated at around 14%. Bangladesh female migrant workers go to the Gulf countries, Lebanon, and Singa-pore to work as domestic workers. Many Bangladeshi women also went to work in the textile industries in Malaysia, Mauritius, and Korea. In addition to formal labor migration, an undetermined number of female workers go to neighboring In-dia to work as domestic workers as well as in entertainment industries. The issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

Technology and Family Leisure: Is It the Way Forward?

Families are one of the fundamental units of society and are the building blocks of social structures and organizations in every culture. A theoretical framework that has been used to describe and understand how families function and interact is the Family Systems Theory (Steinglass 1987; Whitchurch & Constantine 1993). According to the Family Systems Theory, the family is a complex system of individ-uals interacting with one another. The concepts of family cohesion, family adapt-ability and family communication are the key to continuation of family systems. Over the last seventy years, researchers have consistently reported positive relationships between family leisure and positive family outcomes when examining recreation and leisure patterns among families (Hawks 1991; Holman & Epperson 1984; Ornth & Mancini 1991).

Enjoying family leisure time can be a way through which cohesion, adaptability and communication is increased within families. The perils of the modern world with its fast paced life, both parents working, emergence of nuclear families, pressures of weekend socializing, demands of curriculum on the children have all made a serious dent in family leisure time.

The present paper proposes to examine the role of technology especially com-munication technology in promoting family leisure time amongst urban educated families.
by social scientists. One of the most important applications of the use of spatial analysis in sociology, demography and population studies is the socio-spatial segregation. Some countries are studying the spatial concentration of the population with respect to race/color, but in others, such as Brazil, the miscegenation of the population is high, and so it makes no sense to study segregation by this variable. In this case, the income of the person can be the key variable in this process. Spatial analysis techniques, such as isolation indexes, are then used to analyze the spatial segregation according to income, translated by poverty or wealth. However, in each geographical unit (scale) used, the result of the analysis may be different. Then, the main goal of this paper is to create a multi-scale analysis of the effects of segregation in terms of isolation of poverty and wealth indicators. Our assumption is that when we increase the scale of the segregation analysis, the inequalities also increase. And this is what we attempt to show with this paper, using data from census tracts of 2010 for the city of São Paulo, the most populated in Brazil.

DE OLIVEIRA LIRA, JONATHA RODRIGO (University of Campinas)

The Changes in the Form of Japanese Integration in Brazil

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arriving of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country tradition in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

Urban Scenes and Place Identity: The Case of Seoul

The scene perspective can help us understand cities in terms of cultural amenities. Its abstract characteristics can join Asia with the US and Europe so that social scientists, policymakers, and average citizens can coherently interpret common features of world city systems. Scenes can be defined as the specific lifestyle of a place. Thus, a scene is more than a neighborhood or its physical structures. It includes collections of people labeled by race, class, gender, etc. It also includes specific combinations of these groups and activities that join them together. With these characteristics, scenes show the specific cultural tastes of the residents, shop owners, and visitors. They show their own internal logic and dramas that, for instance, shine glamorously rather than fade into anonymity, project warmth and intimacy rather than distance and aloofness, maintain an authentic and real life rather than a phony existence.

Place identity can be formed through interactions between the physical characteristics of specific places and the people using the physical facilities. In this sense, urban scenes are closely related with place identity. Both urban scenes and place identity are considered as contributing to the creative regeneration of a city. In this paper, we present how urban scenes can contribute to developing place identity. To do so, we will compare a Seoul scene map with a map of the migration population of Seoul. This will lead us to incorporate characteristics of people into the facility data of the scene map in the specific place of Seoul. With this analysis, we expect to capture the dynamics of place identity and the influence of scenes on party identity.

JANKOWSKI, BARBARA* (IREM France, barbarajanko@yahoo.fr)

Sharing Information at the Operative Level

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we should learn more about how we protect vital information, or how it is obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas “friction” and “fog” act as much between the belligerents as within the armed forces.

My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where they learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not.

The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training centre.

Antonio Gramsci’s Prison Notebooks on the Role of ‘the Intellectual’ Meets Social Responsibility Theory

This paper seeks to explore social responsibility theory that emerged in the 1940s to protect freedom of speech, the media, and the public/citizens’ right-to-know from government and corporatist interventions in information and moral exchanges. However, the strategy in the paper is to marry social responsibility theory with the writings on ‘hegemony’ or ‘cultural leadership’ in the Prison Notebooks and Antonio Gramsci’s
thesis on the role of ‘the intellectual’ in times of social crises and social change. The discussion in the context of the paper, is integrated into the overarching and broader contextual theme (of the conference) on ‘facing an unequal world (and the) challenges for global society’.

JANSSON, ANDRÉ* (Karlstad University, andre.jansson@kau.se)
Hospitality and Recognition in the Transmedia Age: Mediatization As Social Critique

Recent (trans)media innovations, such as the smartphone and social networking sites, have drastically altered the conditions of everyday life in affluent societies. Such developments have on the one hand contributed to potentially expanding lifeworlds and extended social affordances in terms of mobility and social connectivity. On the other hand, research from various disciplines has pointed to social disorders, or ‘pathologies’, related to the everyday dependency on such technologies, as well as to the socially segregating nature of these developments. Against this backdrop, the suggested paper engages with the ongoing academic debate around mediatization, generally understood as a meta-process of complex socio-cultural change, and focuses particularly on the critical potential of this concept. The argument is developed in three steps. Firstly, a general approach to social recognition is presented, based primarily on the works of Axel Honneth and media theorist Roger Silverstone. Here, the concepts of hospitality (Silverstone) and recognition (Honneth) are singled out as key (mutually dependent) facets of a socially sustainable and egalitarian (global) society. Secondly, the paper introduces a model of mediatization as a socio-spatial meta-process, based on Lefebvre’s triadic notion of social space. The combined social forces of mediatization are mediated through three regimes of dependency: “material indispensability and adaptation”, “premediation of experience” and “normalization of social practice”. These regimes are to be understood as analytical tools for advancing a critical approach to the mediatization meta-process. Finally, the paper provides an empirically grounded analysis of the current status of hospitality and recognition in mediatized lifeworlds. The empirical analysis integrates qualitative interview data from two different field-work sites; (a) a small-town middle class neighborhood in Sweden and (b) an expatriate community of UN employed Scandina davians in Geneva, Switzerland. Altogether, the paper contributes to a situated and contextually sensitive critique of mediatization.

JAROSZ, EWA* (Polish Academy of Sciences, ewajarosz@yahoo.com)
Social Structure and Daily Behaviours: A Cross-Sectional Analysis of Time-Use Patterns in Poland and Armenia

Sociological and economic literature points to numerous differences across societies and social categories in their patterns of time allocation. For instance, studies of the labour force show that daily behaviours differ significantly between people of higher and lower occupational status (e.g. Kahn and Schooler, 1983). In the same time, behaviours of one social category, e.g. the unemployed, can be substantially different across different societies (e.g. Krueger, 2008). There are thus at least two dimensions that affect people's daily time-use patterns: social norms and arrangements in a particular country, and individual place within the social structure. This study addresses both of them, analysing the influence of the macro-level setting (country) and basic social characteristics (gender, age, and employment status) on individual time-use patterns. This approach focuses on differences in the sequence structure and time allocation (e.g. unpaid work, socializing) analysed in a cross-sectional perspective. Since most of the existing reports on structural differences in behaviours come from developed Western countries, this study uses time-use data from the countries rarely included in conventional research carried out in the field. The time-use patterns of Poles and Armenians are compared in terms of how much they differ across social categories, as well as what are other lines of such differentiation in these societies. The additional benefit of the study is that it compares daily practices in the countries of Central Eastern Europe and the South Caucasus region.

RC28-481.4

JAROSZ, EWA* (Polish Academy of Sciences, ewajarosz@yahoo.com)
Stuck in the Moment? Time Perspective and Time Allocation Across Social Classes in Poland

Individual's time perspective and everyday time-use patterns have major impact on all realms of human life. They influence the chances for upwards mobility and affect individual life trajectories. As put by Jeremy Rifkin, “those who are most present oriented are swept into the future that others have laid out for them” (Rifkin, 1987). However, time perspective is a multidimensional phenomenon and need studies in relation to the actual time use patterns – in which it is supposed to be reflected. Only combining attitudinal and behavioural data can give deeper insights into socially differentiating role of temporal arrangements. This study analyses daily time allocation patterns in conjunction with temporal preferences and the possible drivers behind them - such as individual time perspective and time constraints. It focuses on the relationship between the perception of time or daily allocation of time and individual position in the social structure. Using quantitative data for Polish population aged 24-65 (n=780), it shows how temporal orientations and perception of time are related to individual social position and how they differ depending on the respondent's genders, age, educational attainment or occupational category (ISCO-based). The study casts light on the much overlooked dimension of social inequality, including the effect of temporal perspective on status attainment, social determinants of the ability to plan long-term and delay gratification, as well as the life course-related choices and their consequences.

JASSO, GUILLERMINA* (New York University, gj1@nyu.edu)
Happiness in the New Unified Theory of Sociobehavioral Processes

This paper explores more deeply the part played by happiness in the recent attempt to unify justice, status, and power theories. Specifically, the paper does three things: First, it strengthens the foundation from Plato and Aristotle for the theory's premise that different people seek happiness in different ways and by different means. Second, it connects those different ways and different means to the attributes and possessions that people care about, as well as to the basic outcome -- justice, status, or power -- that is activated. Third, the paper analyzes a new set of situations in justice theory, in which individuals may compare themselves to everyone who outranks them (on the salient attribute or possession), everyone whom they outrank, or everyone in general. These situations lead to different outcomes both for individuals and for societies. Further, the paper shows vividly the implied effects of inequality in the distributions of attributes and possessions on average happiness and inequality in happiness.

JAUREGUIBERRY, FRANCIS* (Université de Pau, francis.jaureguiberry@univ-pau.fr)
Technologies De Communication Et inégalités D'Usage

Il est devenu quasi impossible de se déconnecter des technologies de l'information et de la communication. Parce qu'elles sont des outils facilitateurs du quotidien, synonymes d'immediateté, de sécurité, d'ouverture et d'évasion. Se tenir informé, gérer son emploi du temps, faire ses réservations et achats, se sentir en sécurité et près des êtres chers malgré l'éloignement physique, autant de raisons nous portant vers une connexion permanente. Mais cette connexion est aussi synonyme d'information non désirée, d'appels intempestifs, de surcharge de travail, de confusion entre urgence et importance, de nouvelles dépendances et de contrôles non autorisés.

Face à cela, des tactiques de réajustement visant à reprendre la main dans la gestion de son temps et de ses occupations apparaissent. Il s'agit de conduites de refus, non pas des technologies de l'information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle. Or, il s'avère que cette capacité de maîtrise des flux informationnels est très inégalitaire. Dans les organisations, il y a ceux qui ont le pouvoir de se déconnecter et ceux qui ont le devoir de rester connecté, dans la vie privée ceux qui...
Experiencing multiculturalism, and combining a postcolonial feminist perspective with intergenerational communication, transnational migrant families are examined with a view to understanding the realities and negotiations between generations as well as how cultural values are transmitted across generations. In particular the communication: varied aspects such as verbal and nonverbal, that grandparents use in relation to their grandchildren will be examined. A nuanced analysis of gender intersecting with race, class, ethnicity and cultural diversity will be used in this study. The goal is to empirically uncover and shed light on the following questions: How do grandparents transmit cultural values to their grandchildren in the Canadian context?

More specifically, what negotiations do grandmothers make to effectively communicate with their grandchildren about the cultures of their countries of origin?

Interviews, at least ten to twelve, using a semi structured interview protocol as well as focus groups if needed will be conducted in Ottawa among grandmothers and a group of respondents from varied cultures as possible representing varied nationalities and cultures will be selected to participate in the study.

AHMED, RUKHSANA (University of Ottawa)
The Cons/Truction of Gender in the Canadian Construction Industry

We examine the Canadian construction industry by looking at how gender interacts with various markers of identity within the construction industry: such as age, ethnicity, class, race, education etc. in Canada and how these interactions affect women’s participation in the industry. We base our categorization of gender and race to a broad sense to include its intersection with other aspects such as ethnicity, race etc. (Denis, 2006; Mohanty, 2003; Spivak, 1999; Tastoglu, 2006). In the Canadian context, the espoused policies of multiculturalism and immigration provide a context for immigration related research (see http://canada.metropolis.net/index_e.html). However, we have challenges of labour force participation of immigrants and of women in almost every sector (Cohen, 1994; Watts & MacPhail, 2004).

In addition, research on the construction industry in Canada has shown that it is highly gendered in terms of the experiences of women (Watts, 2007) manifest in such behaviours as sexual harassment of women as well as a hierarchical and male dominated culture (Watts, 2007). At the same time, immigrants into Canada who are very diverse in terms of the various facets of identity outlined above have also tried in some instances to make inroads into the construction industry (Walton-Roberts & Hiebert, 1997).

By performing secondary data analysis (Rubin, Rubin, & Peele, 2005) through a survey of the literature as well as through an examination of construction industry periodicals, we want to examine how gender in its broadest conception as intersecting with race, ethnicity, and age, and other dimensions plays a role in the construction industry in Canada and, if there are differences in various segments of Canadian society.

We will do this by a comparison between mainstream women’s participation and the barriers faced by them, in the construction industry, and ethnic immigrant women.

RC36-624.3
JEANTET, AURÉLIE* (Université Sorbonne Nouvelle Paris 3, aurelie.jeantet@free.fr)
Emotion at Work: Between Alienation and Resistance

This presentation endeavors to utilize the concept of emotion in an heuristic and sociological manner in order to investigate the subjective link we have with work. More specifically, we will use it as a means to grasp not only the suffering and alienation that are associated with work, but also the pleasure that can intervene to ameliorate work-related pathologies. Furthermore, if we view emotions as a link to the self as well as to others and to the world, it becomes possible for an investigation of emotions associated with work to reveal how relationships to work can point to forms of resistance. It is also necessary in this regard to take into account the fact that the concept of emotion enables us to rethink the classical oppositions between rationality and affect, nature and culture, and masculinity and femininity. In addition, what Rimé (2006) has written about the social elements of emotion from a psychological point of view can be developed from a sociological and critical perspective. Finally, the concept of emotion is subversive in a manner that is analogous to the way in which care theory is subversive, which Caroll Gilligan (2013) has demonstrated. This is particularly the case at the work place, which is characterized by control and self-control. The discussion will thus seek to reveal how the concept of emotion not only is heuristic in character, but also possesses a subversive and critical force.
Rebuilding Memories, Projecting Utopia in Lac-Mégantic Reconstruction

On July 6th, 2013, a train carrying crude oil derailed in downtown Lac-Mégantic, a town of about 6,000 located in the Estrie region. The industrial accident caused a series of explosions, killing 47 people. The fire destroyed almost half of the main street and affected the surrounding residential areas. The disaster created an acute awareness of Quebec cities vulnerability to industrial risks. On one hand, it launched a debate among planners, business groups and other decision-makers on how to cope with the train tracks crossing densely populated areas. On the other hand, many questions remained on how to maintain sustainable local economies that rely very much on the presence of the railroad system. Reconstruction plans were laid out within weeks of the disaster, proposing to redevelop a new commercial area, and creating a memorial ground where once stood the destroyed buildings. The community seemed absent of the debate, seen rightfully as a victim of events, and yet not perceived as an actor of the reconstruction process. The destruction of the urban fabric of Lac-Mégantic raises issues of collaborative resilience and participatory planning: cities are spaces of the every day, of belonging and care, approaching linking social and cultural resilience to planning and policy can generate a stronger collective capacity in decision-making. The loss of space called for an affective response that traditional Canadian planning is sometimes overlooking. This communication proposes to discuss the use of cognitive maps as a methodological tool that can be used in understanding how people perceive their environment, the last one, the one that is being lived in and the one that will be built. It will analyse how they can highlight the construction of overlapping narratives that can contribute to the resilience process, and how it can potentially be used in the reconstruction process.

When Religion Influences Political Choices in the Context of Nation, the Case of Political Theology of Dietrich Bonhoeffer

In the times of Nazi regime every choice made was political, obviously. It made nearly every sphere of life political (as Hobbes and Schmitt would tell us). Research on the history of churches – both catholic and evangelic – clearly shows how the national identity and ideology influenced their institutional form.

Nowadays, religious identity, which influences the political choices, is connected with the religious extremism, unwholesome lack of separation between church and state, establishing political rules due to religious norma, which lead to human rights violation. My aim is to describe opposite side of the idea of linking religion to politics and nationality. Moreover, the concept which I’ll present the theological and religious concept by Dietrich Bonhoeffer, “Protestantism”, member of the anti-Nazi resistance. I will put the national context - strongly rooted in the German concept of the state and law, as well as Luther’s theology and German patriotism of Bonhoeffer on one hand, and the idea of the complete irrelevance of the national question on the other. According to the Author – the answer for the Christian man is obvious and the only one he could provide. Unconditional accompaniment, the weakest brothers’ (as Bonhoeffer called Jews) is both political (being in the opposition) and religious (directly resulting from the teaching of Christ) choice.

Bonhoeffer’s political theology is a concept created within the concrete political and historical reality and is a part of German philosophy heritage. However, answers given by Bonhoeffer, not disregarding the idea of nationality, make it completely irrelevant. I’ll present the relationship between religion, the concept of nation and political choices. Thus, I will show different from most of contemporary ideas interpretation of relationships among those categories.

Putting Care at the Center of the Global Agenda

The pervasive inequalities in the world limit the prospects of masses of people – persons as well as communities – of living full and satisfying lives. The deficit in wellbeing reflects a critical deficit in care, since the core of wellbeing is to be found in caring and receiving care.

All human beings have to be cared for; most human beings (notably women) are responsible for caring for others during long periods of their lives. Survival depends on being cared for. Social bonds depend on and express themselves through caring.

Since care has been usually provided in the domestic economy, in the “privacy” of families and households, the deficit was and still is to a large extent visible. Contrary to current trends in the political economy of the world implying privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between age groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.
For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of ‘indeterminate sex’ (ICD-9-CM code 752.7). But this diagnosis is a rather poor description of sex, in effect explicitly diagnosing intersex while implicitly diagnosing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lynson, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this vein, we (1) show how multiple social actors (e.g. parents, doctors, technolog- ists, legal and cultural institutions) contribute to diagnosing the individual’s ‘true sex,’ which, once determined, can be ‘restored’ medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals ‘sick’ – not their chromosomes or organs.

The aim of this paper is to discuss relevant approaches for studying how students get introduced to their expert culture during an intensive, inquiry-orient- ed period in their education (e.g. residency, fellowship). Methodologically, this means to make use of public care institutions in as much as the cultural systeminclines agents to support the idea that good mothers should take care of their children, rather than only nurses.

The aim of this paper is to contribute to a better, more comprehensive understanding of the factors which explain variations in female labor force participation in different European localities. The major research question thus becomes: how has the interplay between supply side, demand side and cultural factors structured the level and character of female employment in different European localities?

The paper deals with masculinity and risk in the urban space of Brazil. The analysis seeks to comprehend sense and structure in the life-threatening manouevres of racing, beginning with the significations that the young racing enthu- siasts attribute to their experiences of speed and thrill. Due to the illegal nature of road racing – racha – the research process for this study began in the virtual field of the internet community where young racers present and discuss their attraction (or even addiction) to acceleration and risk. Data was later collected in the ‘real’ field of roads (illegal) and autodromes (legal). The urban space of racha as a social practice is constituted by several groups whose members differentiate themselves through contrasting preferences in music and clothing. In this process of construction they deploy and modify their bodies, at the same time seeking prestige and social reputation. Racing exhibits the joint power of the male driver and the modulated machine. We see here a kind of humachine constituted in the risk and danger of the race. The young men are thrilled by the heavy sound and vibration. In the moment of the race, they modify their registers of perception, time is accelerated, and they are released from the normal constraints of gravity in urban space. By high-tuning the engines the rachadors make themselves ready to transgress limits and norms of security and speed. The machine becomes an extension of the male body, a muscle car, a new sensory interpretation of the corporeal and the engine.
Fairness-Awareness Difference Depending on Form of Employment: The Case of South Korea

The main purpose of this study is to examine the relationship between the levels of Fairness-awareness and Forms of employment using data from 2009 Korea General Social Survey(KSG) survey. In the field of Sociology, only few works has been dealing with fairness-awareness itself as a unit of analysis, despite numerous attempts to consider inequality in connection with social status, class, resource allocation and distribution process etc. even that earlier researchers have limitations that many studies could not explain which variable affect Fairness-awareness of organization or they only concentrate positive influence of fairness-awareness affect to organization. Grounded on this, I analyze the data concentrating upon the Main Hypothesis which is "there are existing Fairness-awareness difference depending on Form of Employment (Permanent/Temporary)" and demographic variables as a Moderator. And the results are as in the following: (a) Temporary position have an positive effect on Fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between Fairness-awareness level of procedural and Form of Employment.

Organizational Evolution and Innovation of Korean Anti-Base Movement

The organizational evolution and innovation of Korean Anti-Base Movement – focuses on the network of multi-layered network. It is a main feature of Korean Anti-Base Movement(KABM) that it has been affected by the historical tradition and culture of democracy movement. First, KABM started in 1988, directly after the June democracy movement in 1987. Second, democracy movement organizations paid attention to local issues in the 1990s and built the main local organizations of KABM as solidarity ones. Third, the activity networks of democracy movement was a major factor of the building of national solidarity network and massive nationwide mobilization. Some factors of successful Maehyang-ri struggle can be explained by these.

But in the early 2000s, the organizational evolution and innovation of Korean Anti-Base Movement is problematic because legalistic, and formal integration requirements, such as passing a language or knowledge of host society exam, say nothing about real, i.e. cultural consumption, something central and unavoidable that spawned social, cultural, economic and technical responses, which in turn shape our history. But because this is a problem which is widespread, permanent and global, with environmental and public health effects on current and future generations, intervention in this field has to be guided by a combination of responsible use of resources, sustain-able patterns of production, consumption and development, and the involvement of citizen-consumers. From these foundations I seek to show, first, that waste as a “problem” is the product of an order of production and consumption increasingly shaped by industrialization and urbanization. This was accompanied by a cultural process of sensibilities, mentalities and philosophical and medical convictions, which encouraged the sanitizing of public spaces, greater individuality, the refinement of manners and of the sense of smell. Secondly, I see waste as an environmental issue and as a factor which encourages the search for ingenious technological developments, stimulates international political measures, and interventions in social networks and institutions. The belief that the “problem” of waste can be only fixed technically is pure fantasy. Facing up to the problem effectively will also depend on co-ordinated political approaches and patterns of develop-ment which achieve harmonious combinations of the social, the economic and the political. Finally, I analyse waste in the context of its commodification as waste management activities are also significant business opportunities.

The Rise of China and Post-Neoliberalism Among Southern Resource Exporters

Studies of the rise of China and its interaction with the rest of the global South have quickly grown into an established research programme in recent years. Eff-orts have generally concentrated on investments in natural resources and agr-iculture, new aid relationships and questions of political non-interference and human rights. I begin from a broader world-historical perspective which analyze-ces contemporary China-driven structural transformation in the global capitalist economy and its implications for states in the South. The scale and speed of Chi-nese growth in recent decades has led to a level of import demand for natural resources of sufficient global weight to have prompted the 2002-2008 commodity boom. Even today, with a stagnating global North, fuel and mineral prices remain well above pre-2000s levels. As China, and increasingly other large Southern econom-ies, continue to develop and urbanise, high natural resource prices seem likely to last sustained for another decade or more. This provides the revenue which is freeing hard commodity exporting states from the neoliberalising discipline im-posed by the IIFs and global capital markets, easing a key constraint on their pol-icy trajectories and thus allowing for alternatives in political-economic direction of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commod-ities demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) do-nor dependence are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political-econo-mic formation. In world-historical terms, these may tentatively point towards emerging regimes of accumulation centred around a new phase of material-ly-based growth in the global capitalist economy.

Normal Waste: Confronting This Unavoidable Matter in the Technoscientific and Consumer Society

If we think about the topic of waste today we have to be aware of its plastic and ambiguous nature, rejecting both the economic view, which sees it as lost and as a negative value, and the socio-cultural view, which associates it merely with fear and repugnance. “Normal waste” summarizes in a two-word formula the idea that waste is a normal condition of a society of widespread production and consumption, something central and unavoidable that spawns social, cultural, economic and technical responses, which in turn shape our history. But because this is a problem which is widespread, permanent and global, with environmental and public health effects on current and future generations, intervention in this field has to be guided by a combination of responsible use of resources, sustain-able patterns of production, consumption and development, and the involvement of citizen-consumers. From these foundations I seek to show, first, that waste as a “problem” is the product of an order of production and consumption increasingly shaped by industrialization and urbanization. This was accompanied by a cultural process of sensibilities, mentalities and philosophical and medical convictions, which encouraged the sanitizing of public spaces, greater individuality, the refinement of manners and of the sense of smell. Secondly, I see waste as an environmental issue and as a factor which encourages the search for ingenious technological developments, stimulates international political measures, and interventions in social networks and institutions. The belief that the “problem” of waste can be only fixed technically is pure fantasy. Facing up to the problem effectively will also depend on co-ordinated political approaches and patterns of develop-ment which achieve harmonious combinations of the social, the economic and the political. Finally, I analyse waste in the context of its commodification as waste management activities are also significant business opportunities.

The Incredible Message of Integration Requirements for Migrants - An Articulation of Ethnicity, Race and Nationhood

Over the last 20 years, immigration policies in Europe have seen a drastic change in their approach to immigrant integration. From a rights based vision founded on the (legal) empowerment of the individual immigrant, with close-to equal rights as the best practice regarding integration, Europe has moved to a situation where integration is seen as a string of formal acts immigrants have to perform in order to obtain rights. Equal rights or naturalization is regarded as the final step of in-TEGRATION rather than its beginning. From an essential tool for integration, rights have developed to a reward for achieving formal integration requirements. This is problematic because legalistic, and formal integration requirements, such as passing a language or knowledge of host society exam, say nothing about real, i.e. social, integration of newcomers. Also, such formalistic approach to integration disregards that the host society also has a role in the integration of migrants. Nevertheless, the formalized approach to integration is regarded as best practice in many EU member states, including new destinations of or immigrants, such as Spain, Greece, or Italy.

This paper will (1) map the paradigm change from a rights based approach to integration to a reward driven formalistic approach to integration in Europe over the last 20 years; (2) play the detrimental effects of these changes on the process of inclusion of migrants into host society; say nothing about real, i.e. social, integration of newcomers. Also, such formalistic approach to integration disregards that the host society also has a role in the integration of migrants. Nevertheless, the formalized approach to integration is regarded as best practice in many EU member states, including new destinations of or immigrants, such as Spain, Greece, or Italy.

Sociological Problems and Educational Divergence

This talk focuses on the relationship between education and social structure through applying Anthony Giddens's structuration theory to rural Tibetan society in China. In this, we analyse the dialectical relationship among local social structures and the dynamics of social change in rural society. The paper also examines how the use of myth and symbol have helped to reinforce and control the social order in the construction of this identity and are reflected in stories, views of nature, the dialectical relationships of world and social beings.

The paper will seek to answer. Relying on national immigration regulation in the EU and its Member States, such as the UK, Germany, Belgium, or the Netherlands, but also looking at Canada or Australia, the paper will try to (1) describe the ideal image of societies reflected in societies, (2) assess the excluding features of these test and whether they build up create cultural boundaries, and (3) investigate in how far these tests reflect reality.

Dualistic Production Regime and Dualistic Peripheral Workers - The Changing Labor Process and Power Relations In a Chinese State-Owned-Enterprise In The New Era Of Globalization

This article explores the changing labor process and power relations in Chinese State-Owned-Enterprise under the influence of the global economy recession and Chinese new labor contract. It depicts the everyday working life of two groups of workers and the dynamics of workplace conflict based on author's intensive fieldwork during 2010 - 2011 at an old machinery factory, which located in Guangzhou city.

The research finds that, after the contractor teams were invited into the workshop, a new model of labor control - the dualistic production regime - has emerged in a Chinese SOE. The structural positions of different workers were utilized by the managers under this regime. With relative high age and outdated skills, the formal contract workers were disadvantaged in the labor market, so the strategic dualistic labor control was established for them. Based on secure employment, basic benefit, but insecure low wage. Without city Hukou and legal contract, the temporary workers from contractor teams were threatened by the second-class position in city, and the formal control were imposed on them based on insecure wage but secure employment. The disparity between core workers and peripheral workers were blurred, both groups of workers were in the similar disadvantage position, and the dualistic peripheral workers were generated in the workplace. Finally, different workers' expression and reflection were the important elements which reshaped the dualistic production regime. Resistance of the formal contract workers intensified managers' reliance on the contractor teams, while the toleration of the temporary workers placed themselves in the more marginal position.

From this study, people can better understand the potential and limit of Chinese SOE workers and the likely role they may play in the evolution of labor relations under China's changing environment.

Resistance of the formal contract workers intensifies managers' reliance on the contractor teams, while the toleration of the temporary workers placed themselves in the more marginal position.

From this study, people can better understand the potential and limit of Chinese SOE workers and the likely role they may play in the evolution of labor relations under China's changing environment.
Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz, the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

**Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010**

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory—industrialization and economic development are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment rate increased dramatically, while the spatial disparities are substantial. Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within provincial divisions, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors.

This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic development, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

**Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector**

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic transformation - will result from such investments. Yet, studies have shown that in many developing countries, years of active multinational involvement by multinational corporations in the local economy have not had the desired effects: anticipated socio-economic transformation in the developing countries have not occurred. It is against this backdrop that this paper examines the skills development programmes and strategies in Nigeria’s multinational corporate sector vis-à-vis the dominant national discourses on skills development in Nigeria. The focus is on the extent to which multinational corporations operating in Nigeria have facilitated the acquisition, by Nigerians, of vital skills. From interviews conducted in key Nigerian national manpower policy agencies and two multinational companies, each with over half a century of active industrial operations in Nigeria, the paper argues that despite the long period of involvement, multinational companies operating in Nigeria still source vital skills from their home countries. Besides, the levels of investment in skills development in the local economy suggest a possibility of skills protectionism – an active or unwitting process of ‘hoarding’ vital skills rather than transfer them to local employees. The paper thus highlights the challenges and contradictions of aligning the economic calculations and objectives of corporations to national human capital development imperatives, and one of the subtle ways in which global skills inequality is sustained.

**Are Science, Technology and Innovation Fulfilling the Needs of Society?**

For decades science was considered the major force for the advancement of humankind. Ironically, S&T has notoriously progressed either for the preparation or the realization of war. Likewise, the gigantic technological steps made by humanity during the race to the moon are also of paramount importance. Science was regarded as the answer to the problems of humanity. However, many times science, rather the use that man makes of science is counterproductive to the human ideals. Based on scientific discoveries man has made, and used, weaponry for massive destruction. The potential for annihilation of the human race of chemical, biological and nuclear weapons currently stored and recently used by a number of countries is beyond limits. However, scientists as a whole don’t pay enough attention to the development of science for the benefit of humanity. Based on this inattention to social problems, UNESCO in an effort to catch the attention of scientists organized the symposium “Science for the 21st Century”, in 1999. The objective was the formulation of a new relationship between science and society, that is, a new social contract with science based on the assumption that science is to be subjected to public scrutiny. The debate on the need for a democratic discussion of scientific priorities, the size of its budget, its institutional structure, and the use that is given to the results of scientific labor, was recuperated. It was asserted that such decisions cannot be left simply in the hands of scientists and government officials. However, fifteen years later, the results of this global effort seems to be null. This paper gives some insights and examples of the work for responding to this question, and how it could be more involved on the decision making of the scientific labor.

**Renting and Sharing: Housing Options for the Poor**

The government of Mexico encouraged the construction industry and the financial sector through massive new housing projects, particularly from 2000 to 2012. Developers built houses and acquired land reserves where the price of the land was cheap: on the far away outskirts of the cities. An important impact of this policy on the poor is that cheap land where irregular settlements would in the past have developed, has now become scarcer and more expensive. Over half of the population do not qualify for the new houses, anyway. Thus the financialization of housing on the periphery of Mexican cities is likely to have pushed the poor back into existing low-income settlements, or forced them to remain there, thus encouraging the already ongoing process of consolidation of irregular settlements. Old low-income settlements, founded more than 20 or even 50 years ago, have earned themselves a privileged location in the cities by now, as they can offer their inhabitants proximity to employment and infrastructure. In these areas, renting or sharing accommodation has become an important option for those with low incomes, either because, as is often the case, it is the only choice they have, or else because it suits their family or economic situation to rent instead of buying. Also, shared arrangements play a fundamental role in the lives of the most vulnerable groups: single mothers, the sick, the handicapped, and people of an advanced age. However, we know very little about current conditions in these settlements, and the problems faced by owners, tenants and sharers. To shed light on these parts of the city, I use information obtained from questionnaires and in-depth interviews conducted in Mexico, as part of a major research project into 11 cities in 9 countries of Latin America (the Latin American Housing Network).

**Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa**

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and inactivity on the part of civil society organisations and also of parent departments to effectively address these problems. Drawing on this context, I make two interconnected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of ‘invisibility’ to operate within this system. By this I refer to the range of sustained strategies that workers and foreign workers in particular- engage in to earn livelihoods. Drawing on a global literature of mobilisation, and community relations, I argue that in the face of the poor and inhumane conditions that workers face, silence and invisibility are tactics that they use to fight back and survive.
This paper examines affiliation divestiture process of Korean business groups, chaebol, in 1989-2010. One of the characteristics of chaebol is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network's holding company. Thereupon, the corporate network, composed of individual legal corporations, is the group owner family's privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm's typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure's network across time. The result is as follows. First, group network's cohesiveness is an important factor of making affiliate divestiture. Next, separation experience works as a path-dependency by becoming 'a logic of succession.' Third, business groups which have not alternative option to the present situation of the segmented labor market.

Non-regular workers is about 60-70% of the regular workers, while they engage stances of Korean labor market, focusing on the automobile industry. As global making affiliate divestiture. Next, separation experience works as a path-dependency by becoming 'a logic of succession.' Third, business groups which have not alternative option to the present situation of the segmented labor market. After then, we will try to present an alternative to the present situation of the segmented labor market.
can be organized to different degrees, and some phenomena are only partially
organized. The least common denominator of organization is that it is a decided
order. Without a decision, no organization, not even a partial one. Here, a dis-
tinction is made between full organization and different forms of partial orga-
nization, the latter consisting of mixes of organization and other social orders; a
phenomenon may be a mix of organization and institution (if it, e.g., rests heavily
on rules, norms and beliefs) or a mix of organization and network (if it lacks a
clear formal hierarchy). Organization is a widespread form of social order. Many
such phenomena are temporally delimited. Here a distinction is made, regarding
the nature of temporariness, between known and unknown time-faiths. The lat-
ter (when it is not known when a phenomenon will take place) is characterised
by a higher degree of uncertainty. Disaster management belong to this catego-
ry. Different aspects of disaster management are analysed with this theoretical
framework.

Change in Daily Eating Habits – Organization and Arrangement of
Nutrition Patterns in the Context of Family and Public Compared
Between Germany and Japan

Instead of looking at unknown social arrangements far away, comparative so-
ciological research should investigate the alien within the known following suit
the ethnographic research of modern industrial society. While comparing the de-
velopment of western industrial states, sociology can get insights in the meaning
of social problems, its circumstances and consequences.

This perspective will be presented by an on-going project comparing eating
habits of everyday life between Japan and Germany. The stark contrast between
European and Asian nutrition habits illustrated by the German-Japanese com-
parison is examined to discuss the correlation of malnutrition, change of family
structures, gendered responsibilities, and daily eating habits in regard to cultural
differences as well as to numerous similar characteristics of the current social
change. Thereby, the focus is to be laid on specific and comparative analyses
as to how the diagnose of “malnutrition” is made, which shape it assumes and
which causes are being named. Ultimately, it has to be questioned what kind of
regional country-specific solutions of the stated problem take root and which
family-subsidiary components functions can be taken by extra-familial agents of socialization in order to teach nutrition skills. Afterwards, different
national approaches to a solution of the respective problems of how to arrange
daily nutrition in the area of tension between private and public nutrition supply
as well as their transnational learning potentials can be discussed.

To compare developed countries with each other in regard to particular prob-
lems will not only result in new knowledge about the research objectives but will
also help to evaluate and develop the theory of World Society, whether the world is
differentiating into a multiplicity of societies or unifies in a way which takes a
segmental, regional differentiation into account.

JOHN, RENÊ* (Institut für Sozialinnovation,
rene.john@isinova.org)
Times of Innovation – Innovation of Times

Social relevant times are caused only by social events. However the variety of
events rapidly increases by the density of possibilities rising the problem of
synchronization of social time. Pre-modernity could refer to natural events for
this purpose. More important was the reference to the idea of fixed temporal
horizons – the past and the future though. These temporal fixations were bro-
ken by modernization, presenting the problem of synchronization anew and even
exacerbate it by developments like sciences or the European expansion. Thus
synchronization means the possibility of a joined temporal orientation by a fixed
horizon rather than the alignment of times. At first modern synchronization could
be ensured by world concept of progress. But once its singularity had dissipated
into a manifold moving concept (Koselleck’s “Bewegungsbegriff”) the problem oc-
curred again. It could also not be solved by introducing mechanical time measure-
ments or longitudes. Nowadays innovations have been established as synchroniz-
ing mechanisms. The factual specific, recombination re-arranges particular social
relationships in regard to their temporal conditions. Organisations shape innova-
tions into plans, they appear as cycles for society. Innovations as plans and as cy-
cles fix the temporal horizons. However innovations do not any more synchronize
universal throughout all social different areas. Rather innovations synchronize in
a particular way specific factual arrangements for specific social circumstances.
In an evolutionary perspective these social structures are addressed by selections
and re-stabilisations. The success incident to innovation in a sense of social far
reaching and enduring affiliations provokes ever anew de-synchronizing vari-
as of social structure trying to surpass earlier attempts in regard to range
and endurance. Therefore innovations as alternative synchronization attempts
increase in frequency. Under the current conditions of functional differentiation
this can never result in a universal synchronization of world society but results in
a highly dynamic multiplicity of temporal regimes.

Intersections Between Western and Indian Childhood Discourses

This paper presents one of the chapters in my Ph.D. dissertation on Conceptu-
alising Childhood, Indian children as a social category are neither homogeneous
nor monolithic. “Childhood” in Indian discourses represent “shifting set of ideas”
developed over a period of time, and across different sub-cultures. In this paper
I requirements that neo-liberalism places on criticism. In this study in order to show that childhood discourses (located in the West) documented in
this study are getting percolated into Indian discourses due to globalization of
childhood discourses, even as there are protests about childhood discourses be-
ing Eurocentric. In both the West and in India plurality of childhoods have been
acknowledged in discourses on Childhood. Indian sociological studies document
multiplicity of childhoods which in turn depends on varying factors such as re-
gion, religion, caste, social class, gender, family structure, etc. What emerges from
the study of texts on the subject, is that both India and the West children have
been marginalized in sociological discourses on children until now. There is a
perceived emergent decrease in patriarchal control of children by adults, with
adult-child relations becoming more democratic and participatory, manifested in
greater negotiation of control by children. The “Century of the Child” notable for
the United Nations Convention on the Rights of the Child (1989) and the new So-
ciology of Childhood has brought children into the arena of international politics
and academic debates in both the North and the South.

Pedagogies and Practices in the Modern and Postmodern

There is a paradigmatic shift in how pedagogy is conceived and practiced
in contemporary discourses. In this paper, I focus on the discourses that arise out
of the fragmentation of the project of modernity. I attempt to make a distinction
between modernist and postmodernist educational theory, their languages and
vocabulary and their tools of measurement. Furthermore I show that issues re-
lated to change, crisis, difference, diversity and fragmentation of identity, and
knowledge and power are important aspects of the emerging conceptualization
within pedagogy. I try to describe some pedagogies such as the notion of “border
pedagogy” etc. have emerged from critical pedagogues who locate themselves
within the postmodern. Pedagogies that give students an opportunity to engage
in multiple reference points that constitute different cultural codes. Finally I raise
the problems that the radical critique of postmodernism pose for education that
is central to post-Enlightenment, emancipatory, liberal humanist project of mod-
ernism.

JOHNSON, PAULINE* (Macquarie University,
Pauline.Johnson@mq.edu.au)
Sociology and The Critique Of Neo-Liberalism

On all sides we’re hearing that social critique is in trouble. Nancy Fraser’s re-
marks about a ‘crisis of critique’ confirm Axel Honneth’s account of critique’s ‘per-
plexing predicament’. Peter Wagner too observes that contemporary capitalism is
‘often seen to be beyond the reach of critique’. What is alarming everybody
is the supposition that the project of immanent critique has been undermined by
what Honneth calls the ‘neo-liberal revolution’. Immanent critique, Michael Walzer
tells us, judges the present with reference to ideals that are purely internal to a
particular socio-cultural context. Immanent critique is having a hard time because
the normative principles and ideals internal to our social and institutional prac-
tices appear to have been resignified in capitalist friendly terms by a triumphant
neo-liberalism. So neo-liberalism issues a peculiar challenge to social critique. The
distortions and cultural costs of its strategy of appropriations and resignifications
will be explored. Pedagogues have responded by constructing new educational prac-
tices to a scientific integrity, the critical sociologist struggles to meet these demands.
So what, then, of Wagner’s claims about sociology’s vital contribution to a critical
consciousness of modernity? My paper will briefly reconstruct his programme for
a critical sociology of modernity and will argue that it falls short of the distinctive
critical strategies. I conclude by suggesting that we need to sharpen our tools of
practice to a critique that weighs up the cultural costs and damages in neo-liberalism’s
re-working of our normative principles and ideals.
Organising the ‘Invisible’ Sector: A Case Study on Household Workers in Lima

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all households workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector ‘invisible’ and thus the workers’ rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers’ movement. In recent years, household workers have increasingly mobilised on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for domestic workers, setting labour standards for persons working in house- hold services. Peru has not yet ratified the convention, but especially the local household workers’ organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers’ organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

Women Human Rights Defenders: Promoting Women’s (Human) Rights in Honduras

This paper explores the recent developments in women’s human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d’état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women’s groups. While promoting gender equality and organizing against militarism, neo-liberal practises and human rights violations, Honduran women activists have constructed and adapted the notion of human rights in their claims. Moreover, a wide variety of women’s groups including feminists, teachers, community leaders, labour union members and LGBT activists, among others, have met challenges collectively as ‘women hu- man rights defenders’. I suggest that as a consequence, the discourse on women’s human rights has moved from academic spaces and a ‘feminist project’ to the everyday understandings of a large number of women’s groups and most importantly, a new framing of women’s agency. In doing so, activists have, moreover, enhanced their alliances with supportive women’s groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women’s rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activists’ work and the women’s movement in Honduras generally.

Sustainable Consumption and the Enactment of the Fairtrade-Market in Vienna

Since the current discussion about the extent and manifestation of a environmental crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are currently undergoing a fundamental transformation. Moreover, moral values and commitments are considered as constitutive of economic operations. But whether this culturalisation of the economy must be understood as based on a commercialisation of markets (Stehr) or rather is the result of an economic colonialisation of markets (Habermas) is neither theoretically nor empirically verified. My contribution is based on these considerations: on the basis of a praxeological research approach I ask how and in relation to which practices the so-called ‘fairtrade’ market enacted and, in doing so, moves in a tension between a commercialisation of markets and the economic colonialisation of morals. I consider these questions with reference to empirical research; starting in a fairtrade district in Vienna, the capital of Austria, I focus primarily on the constitution practices and settings in which the fairtrade market is enacted. In doing so I address especially the questions how citizens consumers are able to learn about social and environmental risks and to what extent consumption of fair and sustainable products are driven by practices as well as respective sociocultural orders.

Sustainable Practices and Behaviour

Practice theories are at the cutting edge of research on sustainable consumption and environmental management. They claim an alternative route to conceptualize the dynamics of social change by addressing both, the persistence and the innovativeness of human behaviour. The focus of this research is the daily unsustainable routines, i.e. the everyday doings of people, carried out by bodies with the assistance of things, be it instruments or the surrounding infrastructure. Practice theories draw attention to core issues which remain quite often unaddressed by behavioural approaches such as large scale infrastructures or material agents as actors of everyday life. If it comes to behavioural changes towards a more sustainable way of living practice theories pose the critical question whether at all and how it is possible to steer or to govern social practices. Our contribution gives an overview of the ‘practical turn’ in social science and its reception within the discourse and research on sustainable development. Social practices are especially linked to studies of consumption routines as well as lifestyles and the conditions for changing them towards sustainability.

What Kind of Power Is ‘Love Power’? II - Continuing the Elaboration of a Theoretical Concept

Love, more specifically “love power,” is central in my mode of theorizing contemporary western societies. In the article, “What Kind of Power is ‘Love Power’?”, I outline briefly, three ways in which I have approached this key question. I have done this, firstly, by comparing “love power” with “labor power,” concluding that the two human powers are both similar and basically different, and that both can be seen as specifically human “world creative capacities” (in the sense explicated by Marx); secondly, by distinguishing care and erotic/erotic ecstasy, as the defining elements of the internal dialectic in sexual love; and, thirdly, by asking, what kind of power love power is, looking (in vain) for answers among the so-called “power terms” as presented in dictionaries and applied in most prevailing social and political paradigms. I conclude that love power would add a new dimension and enrich the whole complexity of power terms. In this paper I will continue to elaborate the concept of “love power” roughly along these three lines. The aim is to explore, develop further, and reflect over the strength and delimitation of my love theory. I will expand the comparative view (labor vs love in Marx) by bringing in and assessing some other, apparently similar or overlapping theories and key concepts where creative and transformative powers are also at the center: some feminist historical-materialist work/labor-related concepts, and also concepts, generated within other research traditions, in particular “desire” and “erotic power” as variously framed by, or through critical debate with, psychoanalytic theory. Thus, drawing on the explanations in the first part of the paper, I seek to explicate further my understanding of love as polivalent power and power, and what point I am trying to make by theorizing sexual love and love power in a specifically historically located context.

How Brown-Coal Mining Affects the Lives of Older Long-Time Inhabitants of the German Lusatia Region

Not only the profound shock of events such as war that can shake societal structures and with that throw people of every age off their accustomed paths. Also events like natural catastrophes (floods, fires, storms) can threaten people’s physical and spiritual health.

Another different form of serious influence on human lives is represented by events that emerge neither as a result of war nor through the forces of nature, but solely through the decision-making power of hierarchies. As when the Olympic Games required new sports venues to be built, and whole city quarters had to be flattened, or superhighway construction causes many houses or even whole localities to disappear, a severe, all-encompassing form of violent intervention acts on and against the existence of the people living in these areas. It is the same for people who live in mineral-rich regions.

In my contribution I examine the influence of renewed coal strip-mining and the resettlements necessitated by it on the lives of older people in the Lusatia region. Many of them will soon have to experience being uprooted from their homes for the third time in their lives – after the first time in the Second World War, then in consequence of strip-mining in GDR times, and now through renewed plans to mine extensively on what they thought was an area secure from future extraction.

How do older people react to the loss of their familiar environment? How does the necessity of resettlement affect their health, spiritual well-being, as well as their sense of security in old age? What strategies do they develop to face the impending physical and mental effects of the threatened resettlement? The variety of responses to these questions – based on my research interviews carried out from 2010 in the region – is formulated in my presentation.

2011 and 2068: Transnational Crisis - Transnational Social Movements?

2011 and 2068: Transnational Crisis - Transnational Social Movements?

The Arab Spring revolts, the Indignados and international Occupy! protests would be placed as harbingers of an international, even transnational, movement capable of displacing political elites' neo-liberal agendas and politically and economically repressive regimes which. Clues for the feasibility of this transnational potential can be derived from comparisons with the protest movements closest in scale and character: those of the late 1960s. The two upsurges are similar in their lateral, non-hierarchical mobilisation and organisation, rejection of conventional 'system' politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties' protests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties' campaigners' radical alternatives to liberal or managed democracy were isolated or subverted. The reversal of their tantalising vision of substantive equality, into nineteenth-century levels of economic inequality, suggests that contemporary movements need transnational, radical alternatives to today's transnational economic crisis. What lessons do the failure of sixties radicalism in the sharing of transnational perspectives and programmes only through a transnational, but ultimately unworkable ideological paradigms. Yet comparison, with the newer vehicles of global and social media and practices such as Occupy! Suggests these need, but lack, the meaningful and coherent discourse(s) to achieve the transnational force for political change.

Measuring Corporate Social Responsibility for Consumers: Lessons Learned from Seven Years in the Field

Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data do indicate that companies must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of generically capturing the many facets of corporate conduct – deceitful data (or data that is the product of over-biased data) – deceptive marketing that makes corporations appear socially responsible – conceals historical grievances and can distort perceptions of corporate conduct.

Drawing from a seven-year public sociology research project that uses independent, third party data to evaluate corporate practices, this presentation examines the art and science of rating corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement:

1. The Data Integrity Problem: Including all reliable data, on the one hand, while excluding overly-biased data (or data that is the product of greeningwash), on the other.
2. The Data Quantity Problem: Uncovering too little data on some companies and too much (potentially overlapping) data on others.
3. The Past/ present Problem: Weighing companies’ legacy of positive or negative conduct against more recent indications of change.
4. The Multidimensional Problem: Determining the comparative value of different dimensions of social responsibility (e.g., human rights, the environment, political lobbying).
5. The Simplicity/Complexity Problem: Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.
The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscores how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

JONES, ELLIS* (College of the Holy Cross, ejones@holycross.edu)

Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3rd party tracking of corporate behavior? The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity in: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with some surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significant and different methodologies. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute ("State of Power 2013") and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems. Final recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than to the economic realm to neoliberal ideologies while focusing on social change efforts in other arenas.

JONES, HELEN* (University of Huddersfield, h.m.f.jones@hud.ac.uk)

Youth Work in England: An Uncertain Future?

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are 'NEET', the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011. Perhaps it is not surprising that UNICEF (2007) found the UK's children and young people to be the unhappiest out of those living in 21 developed countries. Aspiration levels included attitudes to education, personal well-being, home and family life and general satisfaction with their lives. The OECD (2013) has found that young people are most likely to suffer from governmental austerity packages; they suffer most from cuts. Young workers have always tended to look back to a golden age. Currently, the period when government funding was channeled into work with young people via local authorities and third sector/ voluntary organizations provides the touchstone. In April 2013, the UK's magazine Children and Young People Now published an article entitled, 'Youth sector on a "knife-edge" as third of organizations at risk'. It presented a depressing overview of reductions in expenditure and a pessimistic prediction of the future. Youth services have been subject to swinging cuts accompanied by amalgamation with targeted and acute services. This paper identifies the aspects of young people's lives which have been affected by different cuts and other policy changes. Where possible, examples of innovative practice will be discussed. These present exciting ideas which have potential to be replicated if funds are found: although the future is uncertain, we owe the country's young people a more optimistic future.

Class and Health Inequalities in Later Life

For over sixty years significant research activity has addressed the extent to which the effects of social class over the life-course have determined or contributed to an individual's economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement issues among a growing body of epidemiological and social researchers. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. This paper will interrogate these issues as they relate to the role of class in later life, using the prism of health inequalities. The paper will discuss the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be conceptualised in relation to a population that may have been out of the workforce for many decades?

JONES, IAN REES* (Cardiff University, jonesir4@cardiff.ac.uk)

Communities, Connectivities and Later Life

The rapid diffusion of forms of Information and Communication Technologies (ICT), mobile technologies and social media have transformed many aspects of social relationships and enabled new forms of social connectivity. However, the impact of virtual connectivity on community and communication for those in later life is not well understood. Research suggests that for older people internet use and its impacts are multifactorial and differ according to the nature of social relations. Research in this area has produced ambiguous results. Researchers have found that, where older people were previously socially isolated, by becoming internet users they were able to keep in touch with friends and family often across geographical distances. Others have found cyber communities to have a negative impact in terms of withdrawal from the outside world leading to a contraction in the use of social and physical space. It is certainly the case that the expansion of social networks beyond the local neighbourhood that domestic ICT allows can lead to profound changes in the nature of community in later life. Research on the internet has tended to focus on a digital divide, on the impact on community and social capital and on political and cultural participation. While the most common uses of computers by older people appear to be related to communication and social support, leisure and entertainment, health information, educational information and productivity, this is not that different to younger groups. The presentation will address; theoretical approaches to new technologies and social relations in later life, trends in internet use among older people, research addressing the digital divide, patterns of motivation and use, the impact on social relations and social networks and the consequences of technological change for older people in temporal and spatial terms.

As part of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. They may also have to learn how to manipulate the network so that they retain a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to perform certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at “Techno,” human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies, and psychology, but in this network they necessarily remain some of the softest parts with different (dis)abilities and utilities. The analysis of ethnographic data from “Techno” suggests that technology and vulnerability is closely linked. The white-collar-domain of the network results in one set of human vulnerabilities and the blue collar in, to some extent, another, but the real difference lies in the actor’s possibility to manipulate the network. Depending on your formal position, who you know, how you are categorized (in terms of age, education etc.), and how well you fit into the network, you will be able to tinker with work schedules and the ordering of new machinery or software to different degrees. Being able to manipulate the network partially, the proportion of women has significantly increased and their manipulation-strategies differ depending on what resources they possess and how closely they are monitored by management and co-workers.
In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women's potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shapes this group of highly skilled Malaysian women’s identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework of transnational identities and transnational learning in knowledge-intensive industries. The discussion also considers an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women's successful participation in the global economy.

Studying Selected Youth Transition Studies Between the Global North and South: A Conceptual & Methodological Analysis

This paper examines selected youth transition statistics and studies between the Global North and South, and focuses at understanding how conceptually and methodologically these studies may be related and contextualised to researching “transition crisis” in the Philippines. It focuses at assessing unemployment and education performance indexes from selected countries, and identifies how these statistical variations reflect similarities and differences among work-education nexus across cultures. Methodologically, the paper evaluates empirical designs of selected studies to recognize what good measure of youth transition estimate may be applicable to Global South countries like the Philippines. In the end, the paper draws insights from youth statistics and content analysis of studies to inform the design and texture of conducting local youth transition research in the Philippines.

Theoretical Consistence Between Goffman and Luhmann

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by pointing out the theoretical consistence between Goffman and Luhmann. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Its argument will be based on the idea that the two sociologists, this article will develop its arguments according to the following guidelines:

1. Foreword
2. George Herbert Mead as a point of reflection: Both Goffman and Luhmann are unsatisfied with Meads' explanation as to the process of self-formation.
3. Double contingency as a chance: Unlike Parsons, both Goffman and Luhmann do not treat double contingency as an communicative obstacle needed to be overcome through common culture normality, but as a chance or a pressure to set dynamic practices in motion.
4. Person/Non-Person: Both of them pay attention to the possible qualities and attributes of self-identity which are temporarily excluded from the side of non-person, but could potentially be ascribed as the self-identity. This may explain why one would behave so cautiously in the social interactions to maintain the civilian self.
5. Conclusion: Inspired by the above discussion about the theoretical consistence between Goffman and Luhmann, I would like to suggest, as the conclusion of this article, a practical perspective of a “self” that refruse the ontological existence of a pre-social self.

JUKKALA, TANYA* (University of Skövde, tanya.jukkala@sh.se)

Overcoming Alienation: A Luhmannian Perspective

The concept of alienation can be found in micro- as well as macro-level socio-cultural settings. The present discussion seeks an understanding of alienation, and possible ways to overcome it, in relation to Niklas Luhmann's theoretical perspective, which, given its non-hierarchical structure, may provide a possibility of conceptualizing alienation from “both sides”. In Luhmann's theory of social systems, individuals (i.e. psychic systems) are seen as residing in the environment of other social systems and thus not constituting a part of it. It is argued, on the one hand, that this results in an essential, and alienating, differentiation of psychic systems from social systems. On the other hand, the differentiation of systems from their environment (and other systems in it) provides systems with a particular “freedom” in terms of acting according to their own, non-alienating, system logic (i.e. functionally). Nevertheless, psychic systems want to participate in the communication of social systems and this is possible only through access to system-specific media of communication, which are defined by social systems. In relation to this, psychic systems appear to be condemned to act according to the logic of social systems, which consequently would emphasize the alienating process of social participation and reduce the “freedom” of psychic systems. However, media of communication may be defined in one way in social systems while, from the perspective of psychic systems, alternative ways to access system media through various creative and unexpected processes may be possible. The equal “freedom” of psychic systems in relation to social systems would seem to emphasize such a possibility. It is thus argued that Luhmann's theoretical perspective provides a possibility for psychic systems of social participation according to their own logic, and that this possibility may provide a key for understanding how the alienation of social participation can be overcome.

Addictive Gaming: Self-Addictions of Alienation and the Biographical Context. Life Story Interviews with Video Game Addicts

Since the 1990ties computer and video games are discussed as being addictive. In media and research the phenomenon has gained great attention and with the appearance of internet gaming disorders research diagnosis in the appendix of the recently published fifth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM V) addictive gaming made a further step towards official recognition. Looked at addictive gaming from a social science perspective one could say that it is considered a social problem. But how do affected gamers perceive and interpret their gaming behaviour themselves?

This presentation tries to give an answer presenting biographical narrative interviews with german male and female gamers who are or were at some point classified as video game addicts according to a psychological screening instrument (CSAS II) (Rehbein et al. 2010) and/or self-analysis. The main objective is to take the subjective perspectives of the video gamers seriously and to reconstruct their self-analyses within their complex interrelationship between everyday life and the biography and the virtual world. By presenting exemplary cases it will be shown, without idealising or pathologising from the outset, which everyday and lifestyle problems can be solved using the virtual practices and which dysfunctionalities and follow-on problems this is potentially linked to.

The project follows Grounded Theory and in the analysis also uses the method of Objective Hermeneutics. References:

From Protest Event to Protest Wave: A Theoretical Appraisal on the World-Historical Perspective

For a long time social movement studies are strongly influenced by the geographical and historical points of reference. Empirically, most social movement theories have been generated from case studies of short-term mobilization activity in the global North. Methodologically, the study of social movements is overwhelmingly characterized by case-oriented studies. However, one of the most fundamental characteristics about social movement is the ‘connectedness’, both temporally and spatially, of collective actions with each other. This leads us to draw on a theoretical approach that attempts to identify similar processes and dynamics that operate in diverse cases of contention. “Protest waves” as understood in this manner offer us the possibility of constructing a systemic analysis that could identify and then particularly explain contention processes in the...
global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country’s specific characteristics and its location in the world-economy structure. These kinds of linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are decomposing and transforming. This heuristic characteristic of collective action has an evident affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

Information Management, Collective Intelligence and Knowledge Management Within the Context Of Crisis Resolution - Going Global

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global.

Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war.

Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict and “wars of regimes” are concurrently going global. Therefore it is more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “CSR” as a new paradigm to overcome calamities. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge management is based on accepted values:

- respect
- responsibility

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field.
We will argue that the focus on high reliable screening organizations is too narrow – instead the whole airport needs to function as a high reliability network of organizations. Since airports do not solely consist of security producing organizations but rather need to be understood as complex systems of heterogeneous actors such as airlines, airport management, retailers, etc., security regulations often can conflict with their standard procedures and organizational logics. To maintain the processes that are vital for these actors adaptive strategies evolve constantly and are passed on. These adjustments are often not formalized but remain informal since they transgress the rules of the security system. They are therefore hard to be detected in the predominant security regime as they are not intended and the regime builds on idealized assumptions of compliance. Consequently, new safety threats for the airport system can arise due to the attempt to increase the security regulations in this critical infrastructure. The presentation builds on findings of a research project on the social production of (in)security on airports in Germany.

JUNISBAI, AZAMAT* (Pitzer College, ajunisba@pitzer.edu) JUNISBAI, BARBARA (Pitzer College)

In this paper, we examine attitudes about the desirability of democracy versus dictatorship in Kazakhstan and Kyrgyzstan, two of the most pro-market economies in post-Soviet Eurasia. Drawing on original data collected in late 2012, we raise a series of fundamental questions about the link between market economies and democratic political culture. Are some societal groups more receptive to democratic ideals than others? Are the middle classes, following expansionist market reforms and a shrinking of the welfare state, as hungry for political change and as hostile to dictatorship as democratic theorists posit? How do individual experiences with the transition to capitalism affect not only perceptions of current government performance, but preferences for the political future? To uncover answers, we systematically test the effects of a host of demographic and individual-level characteristics using a nationally representative dataset of 3000 respondents (1500 in each country). We look at minority versus titular status, household income, educational attainment, area of residence, and religiosity, as well as individual trajectories in the labor market, understandings of the roots of social inequality, and one’s satisfaction with current political institutions and practices. We find that, more than two decades since the onset of independence, post-communist citizens remain divided over basic questions of governance, and this division is especially pronounced in Kyrgyzstan. In addition, surprising patterns of group and individual-level preferences emerge, challenging a number of conventional theoretical expectations.

Transformation of Gender Roles in Lithuanian Society

In 1990 after regaining Lithuanian independence, women organizations started their active performance. The majority of these organizations summoned re-constructive congresses, for example Lithuanian Women Catholic organization which was forbidden in the 1940s when the Soviet Union occupied Lithuania. At the beginning of 1990 the first democratic election to the Supreme Council of Lithuanian Soviet Socialist Republic was held. In 1990 there were 14 women who made up 10% of the elected in the Seimas (Parliament).

Transformation of the Constitution of the Republic of Lithuania of 1992 consolidates the equality of men and women. A legal measure to eliminate gender discrimination is the Law of Equal Opportunities which was passed in 1999. This law was the first of its kind in Central and Eastern Europe. On September 29, 2008 the Seimas signed National agreement on realizing women and men's equal rights and opportunities. The agreement was initiated by the National women's consulting forum striving to enforce equal opportunities of genders in reality.

After Lithuanian society entered the 21st century, with changes in economic and social intercourse, women have become more active while looking for well-paid jobs regarding their specialties. Though tenacious stereotypes about male and female jobs still remain.

Facts of public opinion poll and social inquiries prove that patriarchal attitude, which is based on a traditional understanding of manliness and womanhood, are still popular in Lithuania. It is often stressed that it is men who should take a more important place in labour market and social life. Women's opportunities to seek for professional career or stay in a leading position are perceived sceptically. Though in Lithuania changes in labour market are present, a number of unresolved problems still remain. A problem of women – mothers' discrimination still exists.

However, an important question is open: why women electorate do not vote for women candidates?

Perspectives on Climate Resilient Food Chains - a Case Study from Finland

Climate change has several profound effects on the functionality of food supply chains. Floods, soil erosion and changes in plant species for example make agricultural activities and food production more vulnerable. It is, however, increasingly evident that local impacts of climate change on food chain may vary remarkably not only between countries but also within one country. In this regard, it is a major future task to re-organize the prevailing patterns of the food system in order to make it more resilient. It is important that all stakeholders of the supply
chain from food producers to retail and consumers have access to this transformative food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkanmaa and Southern Savo. The interviewed stakeholders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retail chains. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

JÖNHILL, JAN INGE* (Örebro University, jain.jonhill@oru.se)

The Paradox of Managing Diversity, Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective

On the background of “anti-racism” legislation, of ideas of cultural diversity and incentives of the marked economy, the management strategy of diversity management was developed in the early 1990s in Sweden. It has since then made success globally as a “new paradigm for management”. – The aim of this paper is to present some results from a research project on diversity management in mass media organizations in Sweden.

The project applies Luhmann’s systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organizations and (3) as well the complexity of the issue must be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communication-based theory.

Social changes in direction of (more) equal opportunity and inclusion chances as to cultural diversity have occurred in the studied media organizations. In a previous study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also a high confidence as to legal regulations.

Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Competence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and not focusing on person’s cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.

JÖNSSON, INGRID* (Lund University, ingrid.jonnsson@soc.lu.se)

Ingrid Jönsson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare

Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.

Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analysing recent developments of eldercare with regard to marketisation and de-/refamiliarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between caregiver and receiver look like, under what economic, social and normative conditions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, changing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis’ frame of analysis as well as in relation to the concept ‘care packages’ (used by Knijn, Jönsson, Klammer, 2005 compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for eldercare and its impact on the relationship between caregivers and receivers (dependence/interdependence) and women.

JÖNSSON, INGRID* (Lund University, ingrid.jonnsson@soc.lu.se)

Ingrid Jönsson: Childcare and Eldercare - Different Paths of Development

Traditionally welfare in Sweden is publicly paid, publicly organised and access is based on needs rather than means. Economic retrenchment, changes of governance and legal frameworks in the 1990s have an impact on the organisation of social welfare with implication for universalism, marketisation and refamiliarisation. The paper will discuss the different paths of developments for eldercare and childcare and whether ideas of social investment currently being advocated by international organisations have contributed to the different paths of development. Although ideas of social investment in Sweden dates back to the late 1930s (Morel et al 2012) recent emphasis on early childhood and care in the context of limited economic resources and changes of governance and legal frameworks have implications for eldercare. Discussing eldercare as social investment in a European context means counteracting future costs related to ageing populations while it for children means capacitating them for changing labour market and family structures with the aim of improving employability and increased economic competition. Historical reviews of childcare and eldercare including changes of governance, legal frameworks, etc. constitute the background for the analysis of recent diverging paths within the two sectors in relation to universalism, marketisation and refamiliarisation. The recent development is socially as well as gender differentiated.
Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Despite remarkable progresses in many spheres, the Gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men's work and women's work. Women's work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 corers towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of, cutting, de-husking and drying of nuts is entirely depending on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women labourers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status.

Gender Inequality in Family and Work-PLACE: An Empirical Study in Three Urban Centres in Karnataka, India

Gender inequality refers to unequal treatment or perception of individuals based on their sex. It reflects and manifests in numerous dimensions of our life. Gender inequality and resultant discrimination in varying degrees on the grounds of sex are commonly witnessed, admitted and even justified in India. Despite the policy measures to overcome gender discrimination, gender inequalities within the family and at work place still exist. Most of the forms of discrimination against women have their roots in patriarchal system and its values. Women are dominated over by their male members in their own family. They have little power in making decisions.

The present paper proposes to examine the nature and extent of gender inequality in the family and work place. The main objectives of the study are to analyse the power dimensions of women in family and work place and to examine their participation in decision-making process. This empirical study is based on field data conducted in three urban centres of Karnataka State, India. The data are collected from 500 working women. The findings of the study proved that, the power dimension splits vertically; women are discriminated by the male members in their own family and work place, they are marginalised on the bases of gender. It is suggested that progress towards Gender equality requires empowerment of women which will lead to notable changes in gender relations.

Global Social Governance As Inter- and Inner-Organisational Relations Between Actors

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors. Global social governance is commonly characterised as a complex and multi-structured process, driven by more or less powerful and legitimate actors. There are significant overlaps in their agencies, as well as they are bound in various (sometimes) overlapping networks and alliances that cut across national or organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what others do.

The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways of how the inter- and inner-organisational relations can be conceptualised and how related interactions can be understood by drawing on a number of discipline. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.

Urban Green Space Provisioning in Berlin, Germany. Environmental Justice in Sustainable Urban Green Space Planning

The city of Berlin, Germany, tries to integrate the ecological, social and economic dimensions of sustainability in all fields of policy action since some years. The main aim is to increase quality of life for all residents in an equal way. However, Berlin is facing further immigration which will lead to nearly 250,000 additional residents in the next 20 years. This population growth combined with urban planning policies of (re)densification will certainly drive the conversion of urban green spaces into residential land. This development might result in an unsustainable situation associated with age and immigrant status. Publicly available land use and socio-demographic data at sub-district level are applied in a GIS, dissimilarity index and cluster analysis approach. Our results show that although most areas are supplied with more UGS compared to the per capita target value of 6m², there is considerable dissimilarity by immigrant status and age. Environmental Justice is further discussed on a site-specific case in Berlin – the park and former city airport Berlin-Tempelhof. Visitor profiles and preferences are analysed. Results from questionnaire surveys indicate that the identified dissimilarities on sub-district level are not the same as environmental injustice in Tempelhof, but point to a mismatch of urban green space and user preferences.

We conclude that, if a city claims to follow the sustainability paradigm, successful urban green space planning should consider the match between quality of a park and specific cultural and age-dependent user needs while providing equal access to high quality green spaces for all residents.

KACHTAN, DANAK* (The Open University of Israel, danak@openu.ac.il)

From Bottom-up – a Micro-Methodological Examination of the Military

The aim of this paper is to deepen the discussion of micro-methodological examination of the military, research on the military focuses largely on a macro perspective, examining mechanisms, structure and policies. In this paper I wish to emphasize the importance and contribution of micro research, which focuses on the individuals rather than the institution; examining their experiences, understanding and interpretations.

Based on a qualitative research study, utilizing a semiotic-interpretive approach which is well-suited to examining the subjective point of view, I argue that the interpretations and experiences of the soldiers are a central means for understanding the structure, the mechanisms and processes in the military.

By focusing on interviews with 60 combat soldiers who served in two infantry brigades in the IDF (Israel Defense Force), I wish to illustrate the role of individuals in creating and perpetuating the structure, culture and mechanisms of the military as well as in challenging them. Focus on the role of the individuals, rather than the institution, enables us to examine not only how structure and culture are maintained and reproduced through formal policy, but also how they are created and formed by the soldiers, through their practices, without the external supervision of the army.

The contribution of a micro perspective is, first, to stress that mechanisms operate not just top-down but also bottom-up. Furthermore, the study illustrates how social categories, such as ethnicity and gender, are preserved and perpetuated not only by institutional mechanisms, policy and structure, but also by individuals through the ways they perform. Finally, by emphasizing a micro perspective I do not ignore the important role of the organization, but rather emphasize an additional point of view in military methodology.

For long time, Japanese people have been used to the point of view that law system and judgment of Court are constraint to citizens. It seems difficult to imagine that a lay judge can join the procedure to drafting a law or to make a judgment of the Court. Creation of lay judge system changed the relation between Court and people.

After three years of the creation, however, some problems of this system have been progressively clarified. There are some criminal cases that lay judges demanded heavier punishment than the demand of public prosecutor. There are several reasons about it: the social demand to reflect on the sentiment and the emotional bond of the victim and people related in the case, the influence of the social norm and prejudice between lay judges, and so on.

We trace here the judgment of Osaka District Court concerning to a murder caused by a man with attention deficit hyperactivity disorder (ADHD). In this case, the Court made a judgment of 20 years of imprisonment beyond the demand of the public prosecutor. The judgment is derived from the misunderstanding that the society has not any institution or facility where accepts an ex-convict with mental disabilities. The judgment based on the misunderstanding concerning to ADHD makes us to notice the necessity of the support for the lay judges when the specific knowledge is needed to examine the case.

**Existential Reflections on Leisure-Tourism-Environment Interface: A Case Study of Uttarakhand State in India**

The existence of scenic and cultural attractions in any region provides golden opportunity for economic development. Attractions bearing mythological and religious significance promise all the more monetary gains especially in a country like India where religion has a stronghold. However, promoting tourism without thoroughly understanding the interconnections which make up the region's ecology can be disastrous. The recent tragedy that hit the holy shrine at Kedarnath in Uttarakhand has triggered a crisis of faith on one hand and rekindled the development debate on the other. The Himalayan state while zealously centrestaging tourism to catalyse economic development completely ignored the carrying capacity thresholds and sidelined the environmental and zoning regulations which ultimately jeopardized the exotic environment which sustains it. The June deluge left thousands of tourists stranded in the valley created panic and disenchantment amongst the tourists giving a great blow to tourism. Now grave concerns are being shown for its revival as the livelihood of a large number of regional population depends on the tourism sector. As part of reconstruction plan visitors are being exhorted to contribute their part by visiting safer places in Uttarakhand. Therefore, it becomes pertinent to review the current tourism with a sustainable perspective.

The present paper examines the dynamics of the relationship between local people, sacred landscape and the tourism industry in the Himalayan state. It seeks to explore the shift in the profile of tourists and patterns of tourism in this region and offers reflections on how the edifice of tourism collapses under its own burden if it is devoid of tourist ethics and proper planning. Further, it emphasizes that in ecologically vulnerable systems, tourism cannot be encouraged only as an economic activity but as a cultural activity forging sustainable bonds with the sacred sites, sensitive landscapes and local folks.

**KADAR-SATAT, GITIT** (Edinburgh University, s0947261@sms.ed.ac.uk)

**Children's Leisure Pursuits: A Test of the "Homology" Versus "Omnivore-Univore" Hypotheses Debate -- CANCELLED**

Recently in the UK academic milieu, there has been a debate as to whether the link between socio-economic status (SES) and adults' participation in cultural activities conform to a "structural homology" rule (Bourdieu, 1984), or present a pattern best characterised as an "omnivore-univore" distinction (Peterson, 1992). The dispute surrounded the issue of whether in contemporary British society, cultural participation (and consumption) still signifies social-class, and in what ways. However, researchers have yet to analyse class-based patterns of cultural participation and leisure pursuits in children.

The present paper addresses this gap in knowledge by exploring the associations between SES (measured by parental education and occupation levels and by familial incomes) and children's participation in three leisure domains: social-group activities, commercial-public activities, and home-centred activities. Within each of these domains, activities from across the "highbrow-lowbrow" cultural capital spectrum are examined.

The results are used to discuss the debate on the "homology" vs. "omnivore-univore" hypotheses in the context of cultural socialisation and cultural capital acquisition in the middle childhood years. The paper relies on quantitative analyses of data drawn from the British "Millennium Cohort Study" (MCS), a survey of around 19,000 babies, all born between 2000-2002. The current analyses focus on data taken from the third and fourth sweeps of the MCS when the children were aged around 5 and 7 (respectively).

The findings indicate that children's leisure pursuits are stratified by SES: children in high-SES groups are more likely than peers in low-SES groups to participate in a range of leisure activities across the highbrow-lowbrow spectrum. This pattern of leisure participation is consistent with the "omnivore-univore" hypothesis. Yet, the results also show that the associations between SES and children's leisure pursuits are stronger for highbrow and midbrow activities than for lowbrow activities, a finding that lends support to the "homology" argument.

**The Provision and Expansion of High School Education in Post-War Japan**

This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now about 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These two features characterize high school education in Japan. At the same time, there have been regional variations in provision of high school education regarding above mentioned points. How and why was each prefecture different in providing high school education?

To answer these questions, we first classify prefectures into groups using cluster analysis then clarify determinants of regional variations. In conclusion, we discuss how these variations may affect provision of high school education in the near future, in depopulating society.

findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617). Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis

In the present paper the effects of the Greek economic crisis to the Greek society are comparatively scrutinized with concentration on both male and female access to the labor market. In particular, the issues under investigation throughout 2008-2013 are: a) the unemployment percentage both of men and women, b) men and women part-time employment and c) the correlation between studies and labor. Besides, the variable of gender is studied in combination and in relation to age and years of studies.

Through qualitative researches an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time employment of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects.

The economic crisis period is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the outcome of a policy about gender equality will be evaluated and the educational structures will be within a policy of reinforcing gender equality along with a broader policy about equality conducive to the unification of vindication schemata for both genders.

Employee Driven Innovation - an Organisational Challenge

Employee Driven Innovation - An organizational challenge

The Nordic countries are about to open there eyes for that employees in all sort of workplaces is an important an untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lacks the understanding of what it is and how to do it.

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seems to base the rather one sided notion that essential ideas occur in laboratories and research departments. However a paradigm shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up. This happens at the same time as the general level of education are rising, and businesses are hiring more people with skills to see and understand the wider importance of innovation in services, production and work processes. As part of employment in the Nordic countries adopted the concept of "employee-driven innovation" in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

KALOEVIG, ANTHONY* (Norwegian Confederation of Trade Unions, anthony.kaloevig@lo.no)

Disentangling Greek Xenophobia during Recession

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone’s economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the economic, social and cultural fabric has grown more frayed generating a mixture of frustration, insecurity and anger among Greeks which has been directed against immigrants fueling the upsurge of anti-immigration backlash. The acute augmentation of xenophobic stances has been expressed by the rise of the neo-fascist Golden Dawn which has grown from a fringe group into a nationwide political party propagating that immigrants are responsible for the economic woes of the country. The study attempts to disentangle the complexities of Greek xenophobia during the recession using an amalgam of theoretical frameworks (i.e. realistic group conflict, social identity and scapegoating theory) as well as multiple secondary data sources, i.e. European Social Survey (ESS), European Value Survey (EVS) and Eurobarometer. The analyses unveil the ideologies of Greek xenophobic stances traced in the intense inter-group competition due to the scarcity in jobs and economic recourses but most importantly in the formation of a far-right wing populist identity that tends to displace the blame for personal hardships and misfortunes onto the relatively powerless immigrant group members. The study underlines that the call to transform the xenophobic climate into a xenophilic one in Greece becomes more urgent than ever; hence immediate policy responses are needed to curtail xenophobia and safeguard the fragile social cohesion and order of the country.

Unveiling Correlates of "Don’t Know" Responses in the Left-Right Scale

Europe’s current economic crisis has spread to the political sphere and escalated populist tendencies and nationalistic politics. Specifically in indebted member-states the political crisis is echoed in citizens’ skepticism about an uncorrupted political system and widespread perceptions that political parties are not holding up ideological oriented, but rather populist, personalized and clientelistic. In a period of socio-political bewilderment, the division of traditional patterns of individual’s ideological orientation towards political parties has become more ambiguous. In empirical research a classical measure to operationalize political orientations was the Left-Right scale. The DK (Don’t Know) responses in the specific scale are usually treated similarly with “Refusal” or “No Answer” and interpreted as individuals’ cognitive inability in the left-right self-placement; hence excluded from analysis. However, in the present study the DK responses in the

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals’ perceptions of weakening of democratic institutions, their distrust in political parties to revive the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic woes. Using data from the European Social Survey and the Japanese Social Survey, the changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multivariate logistic regression analyses unveil the different impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents’ left-right orientation during a period of economic downturn and political turmoil.

**Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S.**

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship while another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the gateway hypothesis have been often unclear about what policies it entails. That is, it is argued that a policy aims to reduce the risk of exposure to marijuanain order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state-level data and entries for marijuana and other data sources (1999-2010), I estimate the effects of medical marijuana laws on alcohol-induced deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana is found to be in reduction in cocaine-induced deaths. The results shed light on understanding the complicated relationship between marijuana and substances in the sense that availability of substances plays a critical role in the gateway drug hypothesis. Alcohol is provided in a formal/ legal market whereas cocaine can be only supplied in an informal/illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

**Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 2)**

Following the presentation by Kazama, et al., we will present the results of a preliminary analysis of attitudes toward homosexuality, transgenderism and other non-normative sexualities among university students in Japan, focusing on the mechanisms through which gender, other attributes and personal experiences might shape their attitudes.

A definite and sizable body of literature on attitudes toward LGBT issues has been accumulated in the Euro-American context. Such studies are limited, however, in Asian countries. The purpose of this study is to provide a comprehensive picture based on analysis of the data, including how such attitudes relate to attitudes toward other issues, such as gender, family and nationalism. We hope to draw implications on how heteronormativity, homophobia, sexism and binary thinking of men and women constitute the experiences of young generation in the Japanese context.

**Changes in Family Forms in Japan: Analyses of Subjective Definitions**

In order to understand the changes in family pattern, it is crucial to look at how individuals understand and define the family subjectively. In this paper, I will examine the changes in the subjective boundary of the family among Japanese, namely, who among kin are normatively considered as members of the family.

The preliminary analyses of the 1st (1993) to the 4th (2008) National Family Survey of Japan conducted among married women by the National Institute of Population and Social Security Research show that there is an expanding trend of the normative boundaries. In other words, more and more types of kin are considered to be one’s “family member”. For example, the proportion responding that a “married daughter” is generally considered as one’s family member regardless of whether or not they live together increased from 35% in 1993 to 66.2% in 2008. The analyses also show that the defined boundaries vary by age, education, employment status, household size and its composition, and geographic region.

In the paper, I will further examine how the subjective family boundaries relate to their attitudes toward various family forms and ways of living, such as attitudes toward taking care of aged parents, aged couples living with their children, marriages not having children, and mothers of young children who stay home. Finally, I will compare these results based on individual level data with the macro-level data on family structure to explore possible mutual relationships behind the changes in family pattern.

**Effects of the Great East Japan Earthquake on Subjective Well-Being**

We study changes in Japanese people’s subjective well-being (happiness) and feelings of altrusm before and after the Great East Japan Earthquake of March 2011. We use a panel data set compiled by a group of researchers mainly from Keio University. Although the questionnaire is large, we focus on a question about people’s altruism. We are interested in altruism because, according to a Japanese Statistics Bureau report on expenditure by Japanese households, charitable donations increased by over 850 percent in March 2011 compared to one year earlier.

Using this large panel survey consisting of responses from over 4000 households all over Japan, we found that many Japanese people reported more feelings of altruism following the earthquake, even in the most affected areas; this is consistent with the rise in charitable giving. We also found that a large number of people reported an increase in happiness after the earthquake, in fact, as the number who reported a drop in happiness. An interpretation of this finding is suggested by a recent experiment by Dunn et al., who find that spending money on others promotes happiness; according to this story, many Japanese people became more altruistic after the earthquake, inducing them to make charitable donations, which in turn made them happier.

We are interested in seeing how changes in altruism affect changes in happiness. However, both variables are subjective, so their measurement errors are likely to be correlated. Therefore, we use a two-step procedure, first identifying the effect of altruism on an objective variable, charitable giving, and then measuring the effect of charitable giving on happiness. In each step of the analysis, we run a two-stage logit regression, which controls for reverse causality. This analysis, which deals effectively with the aforementioned problem of correlated measurement errors, yields results that are consistent with our story.
students to lean the everyday lives of rural Japan, and also to take a leadership role of university in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show to what extent this project goal has achieved its initial goal.

In 2004, central government enacted the law to reform the national universities to quasi-autonomous bodies. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. “Matsuri Project” started in 2010 as one of the University's social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called “Kiriko festival”. Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the villages and the festivals. Young students are pleased to join the festival and walk around with shoudering heavy Kiriko with village people. Before the festival began, gorgeous dinner are sometimes served to students.

For the students, joining Kiriko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, overseas students can experience the actual lives of rural villagers. So far “Matsuri Project” has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for re-vitalizing the rural communities.

Stabilization of the World Due to the Expansion of a Western State System: Explanation Using Game Theory

Stabilization of the world due to the expansion of a Western state system: Explanation using game theory

Dr. David Strang explained the stabilization of modern global society from the perspective of the (sociological) new institutional theory while criticizing the explanations given by realists in highly original research (“Anomaly and Commonplace in European Society: Realism from Ideology and Institutional Accounts.” International Organization, vol.45, 1991). He states that global society has been stabilized as a result of the expansion and the “institutionalization” of a Western state system that respects the sovereignty of each country, rather than as a result of the balance of power of countries that reasonably maximize their utility.

However, this explanation is still insufficient when we ask questions such as: why and how such an expansion took place; and why such an expansion stabilizes global society.

The answer can be derived from the fact of historical conflicts between dependencies and sovereignties. The form of the dynamic game between existing/non-resisting dependencies and oppressing/non-oppressing sovereignties is analogous to that of the well-known chainstore game. This dynamic game has two Nash equilibriums. Based on the replicator dynamics of this game, we can interpret the historical changes in global society.

Initially, in a path-dependent manner, the world heads for an equilibrium that includes “dependencies that do not resist oppressive sovereignties.” During this period, empires vie for supremacy. Subsequently, global political discourse requires sovereignties to comply with a “commitment” to non-oppressiveness. The world then heads for a subgame perfect equilibrium in which “sovereignties do not oppress resistance from dependencies.” Thus, when the sovereign authority of many countries becomes established, “cooperation” will be selected in the repeated N-person dilemma game, resulting in a more stabilized global society.

The term “institution” referred to by institutionalists can be understood as “commitment” or “equilibrium” in the game theory.

Capacity for Urban Recovery in Southern Germany after the 2013 European Floods

This proposed contribution deals with the impact of natural disaster on the recovery of urban settlements. In the 2013 European floods, settlement space in the South and East of Germany was severely impacted, including the Bavarian city of Deggendorf situated along the Danube river. Reports point out that early damage appraisals in combination with environmental degradation may significantly alter individual victims' perceptions. This study addresses this gap. A case study of a riverine town, which has been affected by the floods, is used to test hypotheses and theories about the process of urban recovery and adaptation. Urban recovery is a complex and lengthy process involving various stakeholders and institutions. This study attempts to provide a comprehensive Understanding of the process of urban recovery and adaptation in Southern Germany.

Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey

Using data from “The Study on the Quality of Life” collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 for the scale of 0-10) is higher than life satisfaction (5.98).

Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent's age shows a U-shaped effect on the life satisfaction (lowest at age 40 through 50). The happiness is positively affected by the respondent's education and being married, both of which seem to indicate more psychological, internal state of our life.

We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any other including own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accomplishment often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonie in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, which all indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.

Domestic Division of Labour and Marital Satisfaction in China

This paper analyses data of the Chinese Women’s Status Survey 2000, a national-
ional survey in China, to examine the association between housework participation
and marital satisfaction in urban and rural families. Married women’s housework
time is 2.8 times of that of married men. Yet their level of marital satisfaction is
on a par with men’s. We hypothesize that this is partly due to gender difference in
the preference about domestic roles versus work roles. We first test if housework
time forms a migration as a transition state, whose final objective is the return
for men (i.e. Do women dislike housework less than men?). We also test if work
time has a stronger negative relationship with women’s level of satisfaction than
men’s (i.e. Do women dislike paid work more than men?). Furthermore, we test
whether elderly parents’ help in housework mainly alleviate women’s domestic
burden rather than men’s. We find supportive findings for these hypotheses in
our preliminary analyses. We will employ Structural Equation Modelling to inves-
tigate the patterns of associations among different forms of marital satisfaction
(including satisfaction with the domestic division of labour, satisfaction with mar-
tial life, and satisfaction with children), the domestic division of labour and co-residence living arrangement with elderly parents.

Transnationalism and Schooling: The Case Study of a Brazilian Ethnic School in Japan

This paper aims at analyzing the relation between migration and education
through the case study of a Brazilian ethnic school in Japan. The hypothesis which
underlies this work is that the conception of Brazilian schools is related to the log-
ic which drives the migratory flow to Japan: many Brazilian migrants living in Japan
experience in Brazil as a transition state, whose final objective is the return
to their country. The experience as a temporary high school teacher in a Brazilian
school has shown that the ethnic school tends to reproduce this reasoning: the
curriculum is the same as that studied in Brazil; the textbooks are imported from
education in companies, whose educational view are strictly utilitarian; classes are
taught in Portuguese and the pedagogical objective is to prepare the students to
their return, allowing them to continue their studies in Brazil later on.

The fieldwork highlighted three points to be analyzed: first, given that the cur-
riculum focuses solely on the study of Brazil, the daily life and the migratory expe-
rience in Japan is set aside – the content of the imported textbooks does not fit to
the social reality lived by those children. Second, Brazilian schools are target of
severe criticism and receive a suspicious look by the Brazilian community itself.
Common criticisms denounce poor infrastructure, lack of skilled professionals,
corporate mindset that disrupts the schooling and high tuition fees. Third, most of
those ethnic schools are supported neither by the Brazilian government nor
by the Japanese government. Arguably, all these factors together contribute to
a poor quality of education, hindering the chances for upward mobility either in
Japan or in Brazil. Although the ethnic schools face many obstacles, there is still
a demand for them.

Urban Cultural Strategy and Japanese Animation in Nerima

Culture is now implemented for urban economic development in many ad-
vanced countries. Urban cultural strategy, trying to attract investment and hu-
man capital, became popular in Western cities from 1980s. At that time, former
industrial cities suffered from economic decline. In contrast, Japanese cities had
enjoyed economic prosperity because of industrial growth, especially the R&D
and Hi-tech industry. But from mid 1990s most Japanese cities included Tokyo
began to gradually lose the industrial base because new international division of
labor had deepened. So new plans for economic development were needed in
Japanese cities around the end of the 1990s and culture became to be recognized
as a resource for urban competitiveness. In this presentation, I will show detailed
characteristics of Tokyo, because many animation industries including Tokyo,
became the national government encouraging animation industries and
trying to reconstruct Nerima’s image as Anime Town. It is based on a partnership
with Nerima Animation Association, the trade association of anime companies
in Nerima ward, Tokyo. The purpose of this study is to explain how and why this partnership is formed and pol-
icy measures are implemented. Therefore, it is needed to focus on the flow of
event that affects the recent situation. It is shown that a civil group that aims
to construct a museum for Japanese animation and chamber of commerce played
major role to prepare institutional base for recent policies from the mid-1990s.
Although they cooperated to lobby for public supports for animation and achieve
significant results, they dissolved their partnership. I point there is a tension be-
tween culture and commerce. It affects policy formation and inter-organizational
relationship in Nerima.

KANAZAWA, YUSUKE* (Rikkyo University, kanazawa@rikkyo.ac.jp)

What Kind of Trust Do We Measure Using the Generalized Trust Question?: An Approach Based on Latent Class Model

Despite the importance in social capital research, empirical studies on gen-
eralized trust show inconsistent results. For example, trust studies have not shown
clear results with respect to the relationship between group participation and re-

dpendent level of generalized trust (Nannestad 2008). This study shows that a
part of inconsistency is due to the measurement of generalized trust. Generalized
trust is measured by such questions as “Generally speaking, would you say that
most people can be trusted, or that you can’t be too careful in dealing with peo-
ple?” This kind of question is employed in major social surveys such as World Val-
ue Survey (WVS). This study hypothesizes that respondents think some different
types of trust when they answer the generalized trust question. This study extracts
heterogeneity of trust respondents think by latent class analysis (McCUTCHEON 1987), using Japanese dataset (Social Survey of Residents’ Networks and Health).

As a result, this study extracts four types of trustors; (a) active trustors (27.6%),
who show higher levels of generalized trust and participate all kinds of social
groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust
but do not participate any kinds of social groups, (c) parochial trustors (19.6%),
who have higher levels of generalized trust but participate local groups only, (d)
distrustor (21.4%), who show lower levels of generalized trust and do not partici-
pate any kind of social group. This result shows that respondents think four differ-
ent kinds of trust when they answer the generalized trust question. Inconsistent
results in previous studies may be caused by the difference of group participation
between high trustors.

Gender Difference in the Influence of Non-Regular Employment on Mental Health: The Case of Japan

1. Aim

Studies on the relationship between non-regular employment (NRE; such as
temporary or precarious employment) and health have been increasing since the
2000s. Most of the studies reported that NRE has a negative effect on various
health outcomes including mental health.

The purpose of this study is to investigate the gender difference in the rela-
tionship between NRE and mental health in Japan. The number of NRE workers
in Japan has been increasing since the 1970s, when most of them were married
women who worked to financially assist their household under the male-bread-
winning model. However, male NRE workers has been rising since the latter half
of the 1990s. In the case of men, socio-economic disadvantages of NRE cause
a strong conflict between the male-breadwinner model and their socioeconomic
status. Therefore, we can expect that the impact of NRE on mental health is more
serious for men than for women.

2. Data

The “Japanese Study of Stratification, Health, Income, and Neighborhood” (J-SHINE)
survey data is used. This is a computer-assisted personal interview sur-
vey that was administered in Tokyo and four suburban cities in 2010 (N=4381, age
range of 25 to 50 years).

3. Findings and Discussion

In this study, I use three mental health outcomes as dependent variables: de-
pression (K6), mental component summary score (SF8) and suicidal ideation.
The results of preliminary analyses are summarized as follows. First, NRE has sig-
nificant negative effects on three outcomes in the case of men. In contrast, NRE
has no effects in the case of women. Second, after controlling for covariates, the
effects of NRE are disappeared: marital status (married) and subjective SES have
consistent positive effects on outcomes. These results suggest that lower SES of
male NRE workers decrease the possibility of getting marriage and it influences
their level of marital satisfaction.

Policies of Correcting the Physician’s Geographical Uneven Distribution in Japan

Japan has adopted the universal health care insurance system since 1961. It
means that the government has to guarantee the access to health resources to

the insured living everywhere in Japan. The other hand, Japanese physicians can practice medicine at their favorite place within Japan. This system has continued traditionally from the 19th century. Therefore, the government has not been able to adopt any policy to directly regulate the practice place of physicians. This presentation examines how the geographical distribution of physicians has changed in Japan under these circumstances. Concretely, it analyzes how the policies after the 1960s, namely the increase of medical schools in the 1970s, the regulation of hospital beds since the 1990s, the new clinical training system in the 2000s, have influenced the geographical distribution of physicians, and shows that the physician's geographical uneven distribution has decreased.

The Transition to Parenthood As Experienced by New Fathers
The Transition to Parenthood as Experienced by New Fathers
Abstract
While many studies have explored the transition to motherhood, literature on the transition to fatherhood remains scarce. This qualitative study sought to broaden the knowledge on the transition to fatherhood by analyzing the experiences of fathers to first children aged one year and under. Looking at how they cope with the challenges presented by their transition to fatherhood.
Data was collected during an unstructured group interview held in a focus group of 9 married men in Israel. The study findings reveal that, contrary to common gender stereotypes, men were mostly concerned about emotional issues, and not numerical facts, emphasizing the need for emotional support.
Four main themes were raised during the men's discussion, with which they were required to cope in their transition to fatherhood: new insights about the meaning of love in their relationships with their spouses and the changes it undergoes; emotions as men; the need to adapt to new circumstances and changes in their relationship with their spouses; a sense of delay in their emotional bonding with the child in comparison to their wives, and with the new paternal identity they must adopt; and finally their emotional experiences of delay in their emotional bonding with the child in comparison to their wives.

KANEVSII, PAVEL* (Lomonosov Moscow State University, baggio-18@yandex.ru)
International Organizations in a Global Social Inequality
Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space.
National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market's destabilization. International and regional organizations in this situation need to elaborate common rules, norms and values that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition.
Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founders of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich Gulf countries and the rest. It, in turn, influences and strengthens the ethnic, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

Understanding Science Revolution By a Trinity Model
Paradigm change is an ex post summary of Scientific Revolution. How to make out a specific Scientific Revolution is still an unsolved mystery. Philosophy, mathematics and science are trinity, logic is the core real. Logic is mined from mathematics using the methodology of philosophy thinking. In other words, logic is redefined from philosophy based on the mathematical framework. When philosophy and mathematics integrated, logic generated. While under the guidance of logic, new sciences are formulated. In order to achieve truth, transforming from engineering, art and design language to the philosophical language system based on philosophy's practice is completely significant.
Why people all think that a solution is no doubt can be found for a problem? If the language system used when searching for the answer is the same with the language system used when formulating the problem, at no time the solution can be found. The only way to eliminate the problem is to completely switch the way of practice’s thinking, which means to change the language system. Here, we stress the in-turn transfer of engineering language, philosophy language and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
mathematics language, from which a new mechanism of science development which the core element is logic can be developed.

Do Social Networks and SNS Function As Social Capital for Social Engagement?

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagement whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/drinking and neighbors’ social support as social networks, local participation, voluntary activities, and political interests as social engagement, and the presence of internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/drinking, but not neighbors’ social support. Correcting for possible bias by counterfactual analysis, it is SNS activities, not internet activities per se, that facilitate social eating/drinking. It is also observed that both social eating/drinking and neighbors’ support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust after counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious but more open people are more likely to use SNSs. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outreach weak ties encourage social engagements for local and public interests; (2) SNS activities mainly helps social outlets and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of internet activities.

Kalpana Kannabiran: Tools of Justice: Non-Discrimination and the Indian Constitution

In the years since independence, the Indian subcontinent has witnessed an alarming rise in violence against marginalized communities, with an increasing number of groups pushed to (and outside) the margins of the democratic order. Against this background of violence, injustice and the abuse of rights, Tools of Justice: Non Discrimination and the Indian Constitution explores the critical, ‘insurgent’ possibilities of constitutionalism as a means of revitalising the concepts of non-discrimination and liberty, and of reimagining citizenship.

What are the possibilities for a critical engagement with law in a context of perpetuation of atrocities against communities and the flagrant denial of liberties to marginalized groups?

Studying the links between non-discrimination and the right to liberty, the book attempts to return history and politics to constitutional hermeneutics, suggesting that interpretation is not the exclusive preserve of constitutional courts but, importantly, may be crafted by people’s movements in their exercise of a dispersed sovereignty. It attempts an intersectional approach to jurisprudence as a way of enabling the law to address the problem of discrimination along multiple intersecting axes. The argument is developed in the context of the various grounds of discrimination mentioned in the constitution — caste, tribe, religious minorities, women, sexual minorities, and disability. The book attempts to bring together an understanding of the social history of resistance to oppression in its specific forms, and the constitutional articulation of non-discrimination.

The book plots the possibilities of popular constitutionalism and constitutional morality, inside and outside courts in an attempt to project these as the other, the mirror, in which the existing constitution must validate itself. The constitution itself is not a fixed legal text, but a vision that shapes and is shaped by peoples through daily struggles and upheavals. Tools of Justice: Non-Discrimination and the Indian Constitution, New Delhi: Routledge, 2012.

Kalpna Kannabiran: Tools of Justice: Non-Discrimination and the Indian Constitution

Violence, Cumulative Discrimination and Gendered Struggles for Justice

The unabated violence against women, sexual minorities, Dalits, minorities and indigenous communities in India, it's resurgence even, resurfaces older debates on subjugation, repression and resistance struggles. There are layers of new meanings and forms and articulations of suffering and harm that grow over these older debates on inequality and discrimination that signal shifts in economic realities and legal (im)possibilities -- spreading the sense of imminent crisis. The (mis)appropriations of ideas of justice, by the state, by non-state actors and “the people”, drive new vectors of change at the intersection of law, governance and public debate. The emergence of a new common sense on the (co)habitations of gender based discrimination and the interrogation of the very construction of crisis itself -- “Is this the worst that has happened?” -- are at the centre of the renewed imagination of justice.

This paper will use the events and debates around the Report of the Committee on Amendments in Criminal Law headed by Justice Verma that recommended wide ranging changes in the law on sexual assault to open out the possibilities that a Bill of Rights for Women holds for a different imagination of justice -- looking at the specific situation of women, but also at the ways in which larger questions of modernity, impunity, targeted assault, the existing recognition of “atrocity” in the law and state practice inform and are shaped by these debates.

What are the multiple locations and articulations of the law (or is it justice in the era of modernity) -- within which the shifts in the debate need to be mapped? What are the aggravations in targeted assault that are consequent on rapid and escalating shifts in economic policy? And therefrom how does state formation take place around the edifice of patriarchy?
This is a Man's World? Changes in Disposable Income Predict Sex Ratio at Birth

The human sex ratio at birth (SRB) is long known to be relatively constant at around 105 boys born for every 100 girls. In recent studies evidence has been found that SRB may vary according to exposure to chemicals and socioeconomic conditions. SRB has also been declining after World War II in several industrial countries – a phenomenon that remains unexplained. Here we show that changes in disposable income are associated with birth sex ratios in OECD countries. Positive changes in disposable income are associated with higher proportion of male infants. We apply panel regressions to OECD data that spans the years 1971 to 2011 for 35 countries and UN fertility data in an unbalanced panel. Findings not only partly explain the rises and declines in the sex ratio in OECD countries, but also first time provide evidence of the influence of economic and social forces on SRB that can be even seen in macro level analysis. This opens up radically new research directions in social sciences, where the emphasis on the biological factors has traditionally been on how biological determinants shape social life and in the interaction of the two, not on how social and economic determinants might affect biological facts such as the sex of an infant. This furthermore contributes to debates of gender equality. Our findings suggest that the equality of opportunity differs for genders as the sex ratio depends on the underlying economic conditions: men seem to be born into better economic conditions.

Experiences of Fatherhood in Lithuania: Persistence and Changes

Men's studies is an emerging research area in many post-communist societies. There is little evidence on the impact of the rapidly changing political and socio-economic context on the normative masculinity model and male identity. The paper is directed towards a study of how men become fathers (their perception of a family and man's familial roles, motivations to have children, family planning practices) and what are the experiences of "being a father" (paternal involvement in childcare; communication and emotional ties with children; bread-winning and combining the professional and family roles). These issues are explored basing on the qualitative and quantitative Lithuanian data - the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample - 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985) and the findings of the indepth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania. The investigations were accomplished in a frame of the four years research project „Trajectories of family models and social networks: intergenerational dimension“, financed by the European Social Fund (ESF).

One of research objectives is to follow the changes in men's family and paternal roles by comparing the experiences and attitudes of generations socialized in two different historic periods – the soviet time and in the years of societal transformation after the collapse of communist regime.

Anti-Nuclear Movement in Taiwan: Fukushima Disaster Prompts the Case for Citizen Participation in Democratization of Energy Policy

The anti-nuclear power movement in Taiwan has a history of more than two decades, where the conflict has never been just a question of science, but because of uncertainty and complicated interactions of socio-technical systems, has been about interconnected economic, environmental and social concerns. In the aftermath of the neighboring 2011 Fukushima nuclear disaster, intensive media coverage and synergy among Taiwanese civil society groups and Japanese environmental activists in several national and local rallies resulted in greater public awareness of possible catastrophe from nuclear power disasters among both Taiwanese and Japanese citizens. Despite the strong civic questioning of current energy policy, the Taiwanese government, however, does not only retain its strong support of nuclear energy in guaranteeing the safety of the three current nuclear power plants, but also maintained that diminishing the fourth nuclear power plant would result in costly economic decline for Taiwan. Against that background, this paper aims to investigate how has the anti-nuclear movements in Taiwan been transformed during the past three years and to inquire reasons why it could draw varied constituents to participate in this collectivism with unprecedented scale.

In addition, this paper also analyzes how civil society through varied collective activities has challenged current energy policy and moved towards democratization of energy policy. Employing a qualitative approach along with discourse analysis and interviewing actors from the various social movement groups, the author attempts to answer questions above in five arguments – a feeling of close cultural and geographical proximity to the Japanese, increasing distrust in safety of the controversial fourth nuclear power plant, cyber communities as mobilization networks, advocacy of elite and celebrity, activism alliances across varied social movement organizations. Finally, deriving from these empirical findings, the author discusses how democratization of energy policy could take place in also recognizing key barriers.

Democratizing Expertise and Enhancing Public Participation in Deliberative Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative / participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation, employing insights from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defense in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.
New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Agerian in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning post-materialist, secular new middle class.

Drawing on post-Bourdieuian cultural sociology, we start by describing the theoretical and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class New Agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitanization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

Career VS Children: The Effects of Institutional Background on Females’ Subjective Well-Being Across Europe

The paper deals with life satisfaction and happiness among women in European countries. The research question is to disclose in which countries (with more liberal or strict labour market legislation) females are more happy to have jobs, kids or to combine children with employment. The author claims that women living in the countries with more liberal labour laws and open labour markets are happier to have children and combine their work with childcare than those women who live in countries where women have to re-enter labour market in the countries with very rigid labour legislation. The hypothesis is tested with the help of the European Value Study dataset for 2008 year, including 28 countries. The results of multilevel regression analysis proved that the hypothesis assumption and showed that females are happier in those countries with family oriented labour legislations and at the same time where it is easy to find a new job, means lebral labour markets. In the countries with high rates of employment protection legislation females are more happy with jobs than with combining motherhood and employment. Conditional effects of multilevel regression analysis showed in a more detailed way. The paper could have important implications for social policy in European countries.

KARASKOU, VICKY* (Cyprus Open University, v.karaskou@ouc.ac.cy)
From Real to Ideal: Visual Narrations of Collective Traumas and Identities

The paper will focus on the commemorative sculpture in the Republic of Cyprus and comment the role attributed to individual actors in the process of narrating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are consecrated to the dead and missing during the political inter-communal and inter-ethnic conflicts. In Cyprus the construction of national identity and the enhancement of memory mechanisms are achieved through the promotion of the individual exemplary distinction within the social body and the personification of heroic models.

Comparatively, the paper will examine an example which is placed at the opposite: the anonymity of membership in creating the nation and heroic concepts in China. Both countries are newborn states despite their long history and rich cultural background. However, their radically diverse cultural backgrounds determine in a dramatically different way the position and the role of the ‘self’ within the social group.

Greek-Orthodox tradition, under the hue of western Romanticism, mobilized personality cults in Cyprus. On the other hand, in China Socialist Realism summed up deeply rooted traditional behaviors and current political stands and revealed a different version of idealized interpretation of reality. Visual narration in China promotes the joy of the victorious results, the dynamics of the collective national struggles and the solid ground of today’s society heading to the future. Furthermore, in Chinese memorials male and female bodies are mundane vibrant actors indemnifying the achievement of a shared goal. In contrast, Cyprus promotes martyrdom and orchestrates powerful connotations with a view to keep alive the collective traumas of the past. Commemoration focuses on the transcendental dimension of the individual heroes, on passivity and loss, and links them with familiar religious connotations.

Well-Being of Bosnian Refugees

The estimated 70,000 Bosnian refugees in St. Louis suffered trauma, often including torture, during the 1992-1995 Bosnian war, with serious consequences for their well-being. The link between refugee status and poor mental health is well documented and many studies have addressed how post traumatic stress disorder (PTSD) is related to variables such as unemployment, welfare dependency, disability, social isolation and daily activity level. This paper extends the past research by exploring the relationship among mental health and several other variables that have been shown to be important in the literature looking at refugee resettlement and adaptation to a host country. Specifically, this paper examines the relationship among psychological symptom dimensions (somatization, phobic anxiety, depression, anxiety and paranoia), self-esteem, host language competency, and ethnic and host culture identity.

The study used data (n=355) from a mental health needs assessment conducted to identify and quantify the needs of the Bosnian refugee community in St. Louis, MO, USA. To examine the relationship among the above variables, Pearson correlation analyses were run. Results showed a significant negative relationship among all symptom dimensions and self-esteem and host language competency. The relationship was found among the four symptom dimensions and ethnic and host culture identity. Results suggest that self-esteem and host language competency may play a particularly important role in refugees’ mental well-being.

The results have implications for those interested in improving the well-being of refugees during their resettlement in a new homeland, mental health providers serving Bosnian and other refugee groups, and those who teach English as Second Language.

Normalcy after Stroke: Spousal Caregiving and Management of Uncertainties

Stroke is usually characterised by sudden onset, and what follows may be a fluctuating and long-term recovery trajectory marked by uncertainties. In particular, which is commonly considered a disease of old age, may pose various risks and uncertainties in the life course and biography of working age patients and their carers, who are often spouses. While chronic illnesses such as stroke have been widely conceptualised as ‘biographical disruption’ (Bury, 1982) for both patients and carers, this notion has also been contested on the basis that not all chronic illnesses can be seen exclusively as ‘disruption’. In this paper, I explore experiences of spousal carers of people who have had a stroke whilst in their working age (25-55). Drawing on qualitative data collected through 17 ethnographic in-depth interviews with spousal carers in Victoria, Australia, this paper demonstrates that their responses to stroke and the caregiving role vary across different social positions and contexts. Some participants were striving to regain a sense of normalcy, others somewhat reluctantly accepted the ‘new normal’, while yet others embraced the ‘new normal’. Departing from conceptualising carers as agentively mobilising resources and navigating a biographically uncertain trajectory in an attempt to regain normalcy. I argue that their responses are better understood as a course of action enacted by a network of individual, medical and healthcare, social, and political actors. In this respect, I suggest that responsibility as necessarily distributed, and challenge the increasingly common construction in policy and healthcare settings of informal carers as choice-making service users. By doing so, this paper aims to generate a basis on which service providers, policymakers, policy makers and members of the wider society can engage in a constructive and critical discussion towards creating a ‘caring society’.

Financialization, Crises and the Changes in the Global Income Inequality, 1820-2010

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic intensification, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analysis, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) this transformation has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative “developmental” patterns during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

Gezi Uprising in a Macro-Comparative Perspective
This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were not the only ones. For instance, the cluster of movements known as the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single-case studies mostly constructed upon the empirical flows of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports on social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. With all these, the former define neo-nationalist discourses being articulated from an “institutional power base”, “tactics” are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporarily and discursively slip through the “webs of power” that surround and constrain them.

Poetics, Politics, and Possibilities: Visualizing Our Humanity
At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community—our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the role of emotions, especially empathy, in moral thought and action. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why we respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathic impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and variations of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time.
Facebook as the most widely used social media site in the world has lead the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault's Panoptican, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template. Creating a uniform normativity through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. Edelkamp, Facebook's algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your Edgelrank score. Similar to the hermeneutic circle that allows users to gather Urry (1990) which disciplines performative travel autobiography, this same dynamic is at work on Facebook as users learn to construct images that echo those shared and positively received by others. Images that generate a large number of responses provide a model for expected and accepted contributions. Neuroscientists have also found that receiving 'likes' activates the reward center in the brain and these approval responses predict future Facebook use (Mashi et al. 2013). This informal, but immediate, feedback lets the individual know how well their performances are being received and assists them perfecting and refining their presentation to remain visible and included in this new form of society.

Job is Not Everything, the Case of Return Migration from the UK to Poland in the Wake of the 2008 Economic Crisis

The human capital approach, which is dominant in the EU migration policy, suggests that migratory experience and resources are likely to improve returnees' competitiveness and foster their successful adaptation on the home country labour market. Based on the analysis of the return migration from the UK to Poland in the context of the economic crisis in 2008, this paper critically examines this assumption. It is estimated that within 8 years after the EU enlargement in 2004 about 0.7 million Poles went to work in the United Kingdom. At the same time it is suggested that about 250 thousand Polish immigrants in Britain decided to come back to their home country. The financial crisis did not significantly influence the number of return migrants. It rather slowed down the new emigration and those who stayed in the UK employed wait-and-see strategy (Barcevičius et al.). The quantitative data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women). Situative data on Polish returnees (Bieńkowska et al.) suggest that return migrants insofar as game theory predicts that status differences will have no effect on cooperation. If cooperators are higher when the low-status actor initiates the game than when the high-status actor does so; (2) regardless of the nature of the game, the cooperation rate among high-status actors is higher than that among low-status actors; and (3) in simultaneous PDs, the level of cooperation among status differentiated actors is at the same level as it would were they both high-status partners.

Development Interventions, Livelihoods Security and Sustainability of Resources Among Tribal Communities of the South: A Case of Sugali Tribe

There is a direct link between livelihoods security and development interventions by different agencies and sustainability of the resources among the tribal communities of the global South in general and India in particular. The link between them is crucial to achieve the desired results of both sustainability of resources and livelihoods. It reduces the risks and paves the way for poverty reduction among the marginal communities of the South. To achieve the livelihood security, the donor agencies and also the State must take cognizance of and balance the existing local resources. This paper tries to address the interface between poverty reduction strategies and to attain the goal of sustainable development by managing the natural resource base among the tribal communities of Andhra Pradesh, South India. Further, it also tries to address the role of international donor agencies in bridging the gap between the haves and have nots, which is drastically increasing year by year without any change.

Sources of Data:
Paper largely depends on the primary data collected from the field site among the Sugali tribe of Andhra Pradesh, South India. It also bases its inferences on the data gathered from official reports and records, Census records, published as well as unpublished research reports, papers, etc., with reference to India. Besides, it also draws its inferences from the studies made by the authors and other scholars in Andhra Pradesh, India. It also takes into account the studies made in other parts of South Asia.
Sea level rise is one of the most critical climate change impacts that could exacerbate shoreline erosion, storm surge and flooding. As it represents complex, uncertain and significant environmental, financial, social and legal risks to coastal populations, it demands a rethink of institutional arrangements for risk governance in the whole system of Australian coastline (Abel et al., 2011; Ryan et al., 2011; Letich and Robinson, 2012). However there are challenges like conflicting expectations and normative judgements of values, contradictory perspectives of evidences and knowledge to deal with (Leitch and Robinson, 2012). Accordingly, the government will need to balance the aspiration, expectations and values of coastal communities by taking into account the social intuitions, normative judgements which hold a vital role in the ability of local authorities to shift to new governance and practices (Leitch and Robinson, 2012; Taylor et. al., 2012; Susskind, 2013). Failure to realize this may jeopardize the objectives of building trust, legitimacy and cooperation in risk management and impair the ideas of deliberation and inclusion. The risk governance in the two districts is of paramount. This study aims to explore sociologically-informed approaches to risk governance through deep investigation and understanding of how social learning underpins risk perception, communication and decision making through negotiation and compromises and that it holds potentials to improve risk governance. Theories orientations for the research derived from Luhman's System Theory and Social Amplification of Risk Framework (SARF). This study embarks on interpretive case study involving local governments in Australia with local government officers and local communities as unit of analysis. The findings that revealed the implications and explicit attention of social learning in risk decision making will be the basis of practical intervention for future risk policy making as well as extending the current sociological theories of risk.
the lecture, Adorno says that sociology needs Chimerism and Quixotic attempts. Culture critique is as important work as social critical theory in Adorno’s thought, and these two aspects in his works are related. Adorno makes methods of modern art or modern music references for creating his style of thought, for instance, collage, doodadephany, etc. And art works are regarded ideal model for social relationship because these have multiple elements with reconciliation. In this presentation, I consider relationship between modernity and critique by analyzing Adorno’s singular style of critical social thought.

KATAKAMI, HEIJIRO* (Rikkyo University, hglo2@ybb.ne.jp)

Between “Munesuke Mita” and “Yusuke Maki” -on the Possibilities of Fictional Construction By Sociology-

“Yusuke Maki” is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name “Maki” for creating a new style of sociology. Mita says that the name of “Mita” is used for works within the modern society and the name of “Maki” is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fictional sociologist “Maki” for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita’s project “Maki.” Maki often uses the word “clarity” affirmatively, and there are two aspects of this word in his works. The first connotation is the clearness and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber’s “ideal types.” But such a fictional character in sociological theory enables us to have a theoretical “clarity.” The second connotation of “clarity” is unmediated interaction between people in society. Maki’s definition of “Gemeinschaft” uses this aspect of “clarity.” The fictional sociologist “Maki” creates the image of a not yet existent utopia by combining these two aspects of “clarity.” Here is a fictional possibility of sociology. Maki’s social theory intends to create a sociology beyond the modern rationality. But it doesn’t ignore or deny the potential of modernity. He seeks to change the direction of the modern rationality. The early works of Mita and Maki largely depend on modern Western social theories, and in the later works Maki creates his original perspective of “comparative sociology” which relativizes the western modernity. A consideration of Maki’s social theory probably links to a consideration of social theories in a non-western world.

KATO, AKIHIKO* (Meiji University, katoak@meiji.ac.jp)

Strong Family Ties and Demographic Behavior in Japan

This study investigates the effects of intergenerational family ties on demographic behavior such as marriage, divorce, marital fertility, and women’s labor force participation during the child rearing period, using retrospective life history data from a nationally representative survey in Japan.

Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and union. The proportion of couples co-residing with the husband’s parent(s) or with the wife’s parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. However, the latter cohort starts living with their parent(s) soon after marriage, and then over 30% of them co-reside 10–15 years after marriage, showing a decreasing trend. In addition, for the 1960s cohort, the proportion of couples living nearby (within a walkable distance) the husband’s parent(s) or with the wife’s parent(s) is over 20%, higher than other cohorts, from the time of marriage onward.

A series of event history analyses shows interesting results: Intergenerational co-residency and proximity have strong positive effects on marital stability, marital fertility, and the labor force participation of married women. It suggests that weakening intergenerational ties can be a key cause of current demographic problems such as later and less marriage, rising divorce rate, very low fertility, and women’s labor force exit upon family formation.

In the past decade, much has been written and discussed about the relationship between strong family and low fertility. However, little literature has presented the whole picture of the relationships between strong family and demographic behavior. This paper will try to fill the gap.

KATO, KUMI* (Wakayama University, kumikato@center.wakayama-u.ac.jp)

Wolf, Extinction and Fukushima

Iitate, Fukushima is a village designated as ‘whole village evacuation’ since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the “The most beautiful villages in Japan”, and was renowned for its high quality beef and dairy products. The farming community’s spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Satsu called Yamasumijinja. The shrine’s guardian or holy messenger is a wolf considered to protect farming villages from pest animals such as deer, boar, and monkeys. The wolf’s mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Ansei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yamasumi-jinja, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the ‘spirit of the place’ is critical in the reconstruction, even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt ‘anti-nuclear’ action.
older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependency. This article focuses on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders’ perception of abuse. This paper focuses on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

KATTAKAYAM, JACOB JOHN* (University of Kerala, jkattakayam@yahoo.com)

Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Further, inadequate public healthcare facilities and expensive private healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. There is need for social security during old age quite early. The Indian Constitution guarantees social security in old age under its Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government’s social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based preliminary discrimination are now firmly embedded. Thence, more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitise the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

Informal Caregivers’ Expectations and Experiences of Hospital Admission of a Relative with Dementia

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWE) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (QoL-AD and EQ5-D0), severity of dementia (MMSE), and their family caregivers were recruited from patients referred to a specialist psychiatric service in two English general hospitals. Data was obtained about their quality of life (QoL-AD and EQ5-D0), severity of dementia (MMSE), and economic data on care services and resources (Sheehan et al 2012). These measures were repeated at six months and at twelve months after the admission of the PWD to the facility.

This Ain't Mere Eco-Nationalism: Undervalued Cultural Roots of the Lithuanian Green Movement

A nation state embodies the political order of the modernity in contrast to contemporary Green movements foreshadowing its end (Hurrel, 1994; Lash et al, 1996). Consequently, nationalism and environmentalism are considered to be hardly compatible companions (Hamilton, 2002). Therefore a puzzle of the Greens, found at the intersection of independent central and Eastern Europe in late 1980s, is often resolved with a simplistic disavowal of their “green” identity. In words of American scholar Jane I. Dawson, here Green movements were no more than a manifestation of eco-nationalism, a mere surrogate for a hidden nationalist strife (Dawson, 1996, 2000). The paper aims to challenge the eco-nationalist thesis, a reductive and homogenizing reading of eco-mobilization of 1980s in the region, bringing to the fore a deeper empirical look into complex and diverse cultural origins of pioneer organisations of the Green Movement (Lietuvos Zalieji) in Lithuania. Archival analysis and in-depth interviews with surviving fathers and active members of the Movement reveal tangible distinctions in the collective identities (Melucci, 1995) of three earliest voluntary environmental associations, Zemyna, Aukuras and Atgaja, in Lithuania. The identity work and differences among the early Greens are poorly explained by eco-nationalist argument, however, their mutual tensions are well reported by the classical distinction between anthropocentric and ecocentric wordviews (Næss, 1993; Eckersley, 1992), embedded in peculiar local cultural meanings of ‘nature’ and conflicting logics of Soviet environmental modernization, (neo)traditionalist apotheosis of indigenous ‘ethnoscape’ (Smith, 1999) and lively postmodernist celebration of the ecology of countercultural lifeworlds. These findings urge for a more rigorous and subtle approach to the play of cultural fields and cultural notions of ‘nature’ in environmental/eco-movements not only in Europe but also worldwide, including Asia (Thomas, 2002).
logic of wealth distribution in a society of scarcity to the logic of risk distribution in late modernity". Thus he pointed out the appearance of risk society "in contrast to class society".

However, Beck's thesis has been criticized in several researches by showing the continuity of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer Geißler (Geißler 1996), J.H. Goldthorpe, (Goldthorpe 2002) etc. Then how can we understand social inequality covering the relevance of risk and class. The issue is to integrate the relevance of risk and class to understand contemporary social inequality. And we need a concept which integrates class elements and risk elements.

This presentation attempts to figure out the issue to integrate class and risk concept focusing on 1980's individualization dispute in Germany.

Acceptance of Foreign Nurses Based on the EPA in Japan and Future Challenges

Objectives: The acceptance of foreign nurses started in Japan from 2008 under the Economic Partnership Agreements. Over 400 nurses have come to Japan from Indonesia and the Philippines thus far. If they do not pass the exam within 3 years, they basically have to return to their countries. They can work in Japan as nurses if they pass the Japanese national board exam for nurses within 3 years after coming to Japan and they will be paid the same or more as Japanese nurses. Passing the national board exam for nurses is the main issue for the foreign nurse candidates. So far, the rates of foreign candidate nurses passing the national board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and 9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing the exam is very challenging for them considering the fact that the overall pass rate for Japanese applicants is approximately 90%.

Methods: We conducted a study on the practice national board exam targeting Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia. We requested them to take the Japanese national board exam translated into English and Indonesian and analyzed the exam results.

Results: The percentage of correct answers was low even though the practice national board exam was written in English or Indonesian.

Conclusions: Because the percentage of correct answers was low in the study on the practice national board exam for nurses, we believe that there is a difference in the nursing training curriculums and nursing itself in each country. It is necessary to compare and study the differences in nursing training curriculums in each country as soon as possible.

On Hannah Arendt's Understanding of the Society or the Social: Resisting Unprecedented Crises

Hannah Arendt stated in The Human Condition her intention to understand society or the social as well as provide criticism on society and salvage the political to promote appreciation of and resistance against unprecedented crises. In her pursuing an understanding of society, she has adapted a unique method tracing back to the distinction between the public and the private in ancient Greece as the origin of society, and then referring to the history of theories on society presented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above method and argue that society is fundamentally ruled by the biological life process. Therefore, human life and activities in society are regulated based on whether each person contributes to the sustenance of the life process and multiplication of lives. This interpretation can link Arendt's understanding of society in The Human Condition with her descriptions on unprecedented crises in her other writings, especially The Origins of Totalitarianism. Arendt has stated that when people are extremely forced to contribute to a function of the life process, an ideology forms out of ideas of race, body, and other biological things contributable to such a function. By rise of such an ideology, People not contributable to the function have been removed to a condition of complete rightlessness in imperialism and concentration camps in totalitarianism. Moreover, to accelerate the function of the life process, humans apply nuclear fission to harness nuclear power at the risk of irreversible danger, "to act into nature".

In addition, this paper outlines my attempt to search for a normative theory in her arguments on resisting unprecedented crises by focusing on her concepts of forgiveness and promise.

"I Don't Want to be a Burden": Japanese Immigrant Acculturation and Their Attitudes Toward Non-Family-Based Elder Care

Elder care remains in the family sphere in Japan while elderly Japanese immigrants in the U.S. are actively planning to utilize formal care services. Although social structural conditions may explain these differences, they do not fully explain "how" Japanese immigrants have developed norms of independent living and utilization of formal care services. This paper will focus on how Japanese immigrant women's value acculturation leads to their cultural preference for non-family-based care. They seem to accept the U.S. norms of the independent parent-child relationship and see their children as "other" individuals rather than "inseparable" family members who are obligated to fulfill their filial duty. This value acculturation may manifest in their preference for independent living, friend-based support, and utilization of formal care services. This ensures their middle aged children's freedom from filial care duty by showing no expectation of it at all.

The Reception of "Art for art's sake" in Japan: Case Study of a Classical Music Festival Audience

The purpose of this paper is to examine how the idea of "Art for art’s sake" is received in contemporary Japan from the perspective of music and the human body. The concepts art and artist are typically described as relatively new conceptualizations that originated in modern societies. Pre-modern societies, musicians were usually not regarded as artists, but rather as artisans who produced their work based on orders received from patrons. Therefore, their work was not regarded as art but as extensions of rituals or worship practices. However, during the modern period, a movement started that viewed these artists as art. It appears that the ideal of Art for art’s sake provided impetus to this movement. In this study, we therefore attempted to determine the reception of Art for art’s sake in contemporary Japan. Research data were collected using a survey of the Saito Kinen Festival Matsumoto, which is one of the most famous music festivals in Japan.

The analysis focused on factors that oriented people toward the ideal of Art for art’s sake, and the results demonstrated the following major findings. First, people who attended the festival because of their relationships rather music interest tended to demonstrate an orientation toward Art for art’s sake. Second, participants who were closely involved with classical music indicated a strong orientation toward Art for art’s sake. Third, people who were introduced to classical

music by listening to it with media, such as televisions or radios also indicated a strong orientation toward Art for art’s sake. The results indicate that as people consume music through media rather than their bodies (e.g. playing musical instruments or attending music concerts), their musical consumption become individualized and their perspective on the ideals of art more purified.

From Clinton’s Anti-“New Terrorism” Policy to Bush’s “War on Terror”: Presidential Transition in the Anti-Terrorism Policy of the United States
This paper attempts to tackle the question of why the United States came to launch the war against Afghanistan and Iraq under the name of “Global War on Terror.” To clarify this problem, I examine the historical usage of the concept of “terrorism” by the two U. S. administrations surrounding the 9/11 attacks in 2001. It is notable that some terrorism scholars were able to “predict” the emerging threat of the religious/ethnic terrorism as “New Terrorism” shortly before the 9/11th attack on the World Trade Center. Scholars such as Daniel Benjamin and Steve Simon argued in the paper published in *Survival* that more lethal and dangerous threat of the religious terrorism was increasing. This poses a serious puzzle; because even those scholars themselves admitted that there were no dramatic statistics or even superb evidence before the 9/11 attacks. To answer this question, I focus on the concept of the “religious motivation” in those scholar’s arguments, and perform a conceptual analysis. By doing so, I argue that the advocates of the “new terrorism” did not insist the newness of the “new terrorism” based on the empirical day of the lethality of terrorist attacks at the time, but in fact they redefine the conceptual dichotomy of “religious/ethnic” based on the standard of negotiability, by which the “new terrorists” were characterized as non-negotiable and irrational jihadists. This new concept of “religious motivated terrorists” made possible the policy prescription of “war on terror” of the Bush Doctrine, which justifies the preemptive attack to those new terrorists and the “rogue states” which were supposed to harbor those terrorists.

Family Support and Mental Health Care for the Japan Self-Defense Force Personnel
Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 190,000 personnel. Given the increased operational tempo, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (JGSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and a “Mobile Counseling”, or outreach program, to provide mental health care to JGSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families’ perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of “community capacity” model will be discussed in terms of enhancement of social support networks for the JSDF families.

New Middle Class in Singapore As a Global Creative City
I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed during these 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intensions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would trace the historical transformation and analyze the sociological meanings. Singapore is a very small country. I would compare with China and other Asian cases. Particularly I would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and people and particularly I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities.(227 words)

Social Friction in the Community Hosting Evacuees of Nuclear-Disaster in Fukushima: A Case Study of Iwaki City
The Fukushima Nuclear disaster has brought various and complex social division, not only to those communities forced to evacuate but also to the communities hosing evaucues. Iwaki-City, Fukushima Pref., is currently hosting about 24,000 evacuees from several municipalities, which is the largest evacuee-hosting
municipality in Japan. One of the issues in the aftermath of disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and supporters in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existed social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and social changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women's perceptions, and their negotiations with rising phenomenon of femicide in Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out violence against women, and femicide as an extreme practice of violence through interrelationality with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class positioning, this study analyses women's emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women's practices in everyday life and re-constitute social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women's agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

Turkish Sociology’s Footprint in the History of Sociology

A simple glance at the classical or contemporary sociological theory books is enough to recognize the general tendency of limiting the history of sociology to the West in general without even mentioning the existence of other sociological traditions. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology. The purpose is to show that history of sociology cannot be limited to Western traditions only. In that term emergence of sociology in Turkey and its establishment as an academic discipline at higher education institutions is a good example.

As the need for knowledge and practice of sociology in Turkey was different from the continents the West was facing, development of sociology had its own unique way in Turkey. Sociology as an academic discipline was first taught in Darülfünun (House of Sciences) which was a higher education institution in the Ottoman Empire period. After the collapse of the Ottoman Empire and with the emergence of the new Turkish Republic, new reforms took place in higher education. In 1928, the Darülfünun was renamed Istanbul University and then up until now lots of sociology departments have been established at various Turkish universities.

One of the assertions of this paper is that while sociology is considered as a mere Western heritage, the history of sociology’s emergence and involvement in higher education in Turkey also show that particular social and historical contexts of Turkey have created different needs for and relations with it as a science resulting in different approaches and traditions which are also scientific and historical contributions and which should not be overlooked.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part1)

Purpose: Although there is a sizeable body of social research on gender inequality in Japan, biases against sexual minority groups have remained largely uninvestigated. Through surveying university students, we examined the feelings of heterosexual people towards sexual minorities.

Method: We conducted questionnaire surveys at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambiguous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with lesbians, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS is the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren't accepted due to their failing to fit into the binary. Although the feeling of rejection towards male homosexuality is stronger than that towards female homosexuality, it also suggests that gay men tend to be associated more with sexual matters than lesbians.

Social Security and Orphans in Foster Care: The Experiences of Social Workers and Home Based Care Workers in the South African State’s Provision of the Foster Care Grant

South Africa’s HIV epidemic remains the largest in the world. It is estimated that there were 5.6 million people living with HIV in 2009 (WHO, 2011: 24). South Africa had an estimated 1.9 million children who had been orphaned by AIDS by 2009 (SAHRC, 2011: 57) and this figure is expected to increase to an estimated 4 million children (approximately 10% of the entire population) by 2015 (Whiteside and Sunter in Madhavan, 2004: 1443). The South African state has a well-developed system of social security. The state introduced a foster care grant, which is unique to it, in response to the HIV and AIDS pandemic (Hearle and Ruwanpura, 2009: 427). For the state to get the foster care grant to the orphans there are several things that need to be done. The first is to pay a mediating role between the state and the orphans in foster care. This paper pays particular attention at the experiences of social workers and home based care workers in the South African state’s provision of the foster care grant in Ma-Makuya, a rural district in Northern Venda (Limpopo Province). During the Apartheid era, Ma-Makuya suffered systematic underdevelopment and is now considered to be a national poverty node (Berman and Allen, 2012:81). Data were collected from seven purposively sampled social workers and home based care workers who were interviewed in May 2013. It was found that the application of the foster care grant was dependent on the role played by the home based care workers as they were the “eyes in the community” and also they, according to the social workers, “liaised” with them. This paper also illuminates the functionality of other social institutions. These social institutions include the family, the legal system and the social services.

Detecting ‘Ripple Effects’ Of The Canterbury Earthquakes in a National Longitudinal Study Of Aging

The timing of the 2010 and 2012 surveys conducted by the New Zealand Longitudinal Study of Aging provides a clear “before and after” dimension to the exploration of the impacts of the Canterbury earthquakes, on the study population of older people. Our data shows some effects (after controlling for baseline differences) on physical and mental health, according to location, and degrees of recorded direct and indirect exposure to the Canterbury earthquakes. In particular, the aspects of control and self-realization within the quality of life measure show different trends based on location and exposure to earthquake effects. Other psychosocial measures of loneliness and depression also show regional differences. These differences are not unidirectional or consistently negative, to the extent that some exposure suggests positive outcomes on some measures. The relevance and value of these findings in terms of policy will be further enhanced by our future ability to continue to track such effects over the longer term, in light of the scale and duration of the Canterbury recovery process, and of other emerging phases of this country’s exposure to a potentially hazardous seismic environment.

Keeling, Sally* (University of Otago, Christchurch, sally.keeling@otago.ac.nz)

Health, Work, Caregiving and Retirement in the New Zealand Context

Several features of the New Zealand policy context provide an interesting comparative perspective on the relationships between caregiving, paid work and health status in the fifth wave survey of a national sample of participants aged over 55 years, drawn initially in 2006 from both the general and the Maori electoral roll. Relatively high workforce participation rates for those aged over 65 years, followed the final removal of mandatory retirement in 1999, and a universal national superannuation system has been retained alongside the development of a voluntary contributory fund, known as KiwiSaver (introduced in 2007). Legislation (ISPA) to provide a ‘default’ option to receive flexible arrangements was reviewed five years later in 2013, with a recommendation that this right be available to any employee, irrespective of needs relating to family caregiving.

In this context of arguably mixed policy messages, survey data provided by the participants in the 2013 Independence, Contributions and Connections study will be presented. As well as considering trends over the five waves from 2006, the 2013 survey offered a supplementary opportunity for caregivers to describe their caregiving roles, their sources of additional support, their views on workplace and caregiving interactions, and plans for the future.

The Question of Internet Filtering: Negotiating Discourses of ‘moral Panic’ and ‘risk’ in the Australian and British Policy Debates

The implementation of Internet filtering systems is becoming an increasingly established means of regulating the internet in many countries. The availability of pornography involving child sexual abuse is understandably an emotive concern, which makes public opinion in liberal democratic countries more accepting of Internet filtering of such content. However, the exposure of children to inappropriate online content and their increasingly autonomous activities online produce further societal anxieties. In the cases of Australia and the United Kingdom, the objectives of child protection and crime prevention inspired proposals for online screening. Although these schemes proved controversial because of concerns about their potential to (intentionally or unintentionally) prohibit a wider range of materials if they were ever to be implemented. The Australian proposal, which was set aside in 2012 after a complex five year long debate, would have applied filtering to block a range of materials deemed ‘harmful’, ‘offensive’ or ‘objectionable’ (both illegal and legal). More recently, the UK government has made calls for Internet Service Providers (ISPs) to ‘default’ on filter to address anxieties about Internet pornography and this has provoked renewed debate. These debates have involved many experts from the internet industry, filtering vendors, academic researchers, child advocacy NGOs, civil liberties groups and adult industry representatives arguing for and against the idea that the state can (or should) engage in the regulation of internet content. Drawing on comparisons from both the Australian and British examples, this paper explores how the rhetoric of ‘moral panic’ and ‘risk’ are variously used as discursive strategies in recurring policy debates about filtering pornography on the internet.

Ibn Khaldun – Assessing His Influence in the Foundation of Modern European Sociologies

In the course of recent debates around decolonizing and pluralizing the history of our discipline, Ibn Khaldun has been (re-)claimed not as a precursor, but as one of the “founding fathers” of sociology. Suspicion has been voiced that low Khaldun’s heritage, especially his Muqaddima, is indeed qualitative influence. As an important reference in the foundational phase of modern European sociology, has been sidelined with the construction of the sociological canon and thus remains today an unacknowledged source. This paper systematically assesses the presence of Ibn Khaldun as a reference in early sociology texts. Starting from a representative corpus of German-language sociological monographs published between 1900 and 1934 (bibliography provided in Kayser, 1984), this study reconstructs the circulation of Ibn Khaldun’s works within the German-language and wider European community of scholars. While the majority of ‘Ibn Khaldun content’ and ‘Ibn Khaldun quantitative references are not presented in this study, it is still important to note that a preliminary analysis hints to three potential “entry points” into modern sociology: Spanish history of ideas that refers to Ibn Khaldun’s heritage; debates between organisms and historical sociologists at the “Institut International de Sociologie” as well as Vienna as a place of debate around Ibn Khaldun, possibly through the influence of Otomann social thinkers. The paper then provides more detailed textual analysis of the reception of the Muqaddima by two important early sociologists, L. Gumplovicz and F. Oppenheimer, with regard to their “sociological theory of the state”. The way in which they mobilise Ibn Khaldun as a reference is particularly interesting with regard to the question in how far sociological theory is context-bound as opposed to generally true.

Stressors and Resiliency Resources: Explaining the Significance of Subjective Social Status and Objective Social Status for Depressive Symptoms Among African American and Afro-Caribbean Women Residing in the U.S.

Studies in the U.S. often find that black women report more subclinical depression and psychological distress than whites or black males. Scholars argue that these disparities arise from the intersection of race, gender, and social class that converge in unique ways to place Black women at higher risk of poverty and its associated stressors that challenge their emotional well-being. Stress research indicates that the strong inverse relationship observed between objective measures of social standing (e.g., education and income) and mental health arises from greater exposure to stressors and/or the lack of coping resources among the economically disadvantaged. Recent research suggests that subjective rankings relative to others may be even more influential. This study used data from the National Survey of American Life to investigate the association between objective and subjective social status and depressive symptoms among black women residing in the U.S. Using regression analyses, we investigated the extent to which two chronic stressors—perceived discrimination and financial strain—and four resiliency resources—religiosity, resilience, family, emotional and social support from family, and racial/ethnic group evaluation—mediated or moderated the association between status and symptoms. Findings revealed a strong negative relationship between subjective status and symptoms for both groups of women and a less robust relationship between education and symptoms for...
African American women. Family support and economic strain mediated this relationship for Afro-Caribbean women, while discrimination, economic strain, friends, family, and group evaluation did so for African American women. Our findings speak to the paradox of inclusion. Although the experience of subjective social status is similar for both African American and Afro-Caribbean women, the different effects of education, perceived discrimination and group evaluation suggest the need to avoid homogenization of the life experiences of women of color when examining disparities in mental health.

Platforms differ in the extent they are indirectly related to men’s gender role attitudes, suggesting that being actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child’s gender or conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. This latter finding shows that men’s work schedule and gender role attitudes are unrelated to men’s gender role attitudes, and within organizations. As such, father’s experiences with paternal involvement may not necessarily occur. In most studies, scholars have focused on men’s gender role attitudes as predictor of paternal involvement. Using data from the first two waves of the Netherlands Kinship Panel Study, we examine what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that mediate the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender role attitudes and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. Our results reveal that children who live in families with joint physical custody have higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live solely with their father. In addition, we find that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships.

There is growing evidence that providing increased voice to vulnerable or disenfranchised populations is important to improving health equity. In this paper we will examine the engagement of Aboriginal people and organisations in local government services associated with the Indigenous Health National Partnership Agreements (IHNPA) in Australia and its impact on the uptake of health assessments. The sample included qualitative and quantitative responses from 188 people involved in regional governance in Aboriginal health. The study included data on the uptake of Aboriginal health assessments from July 2008-December 2012. The eligible population was 83190 in 2008/9, 856986 in 2009/10, 88256 in 2010/11 and 90903 in 2011/12. Logistic regression was used to examine the relationships between organisations within forums and the regional uptake of Aboriginal health assessments. The independent variables included before and after the IHNPA, state, remoteness, level of representation from Aboriginal organisations and links between Aboriginal and non-Aboriginal organisations. The introduction of the IHNPA was associated with a shift in power from central government to regional forums. This shift has enabled Aboriginal people a much greater voice in governance. The results of the analyses show that improvements in the uptake of health assessments were associated with stronger links between Aboriginal organisations working with other Aboriginal organisations and between non-Aboriginal organisations working with Aboriginal organisations. Higher levels of community representation were also associated with improved uptake of health assessments in the IHNPA. The findings suggest that joint planning and the role of the Aboriginal and Torres Strait Islander Media in articulating and mobilizing different political and identity positions for Aboriginal migrants. It will focus on the development of ‘Aboriginal community’ in Turkey/Kurdistan and in Europe and the way in which they have connected, constructed a more inclusive imagined Aboriginal community. This paper will be based on 30 in-depth interviews with Aboriginal journalists and migrants of diverse age, gender, political affiliation, occupation and length of migration in London, Berlin and Stockholm.

After 43 years of follow-up, 67% of the total sample (N=2335) had died, and the proportion of non-manual workers in the sample increased over time. In both longitudinal studies, this selection process may be compounded by selective attrition. Consequently, the distribution of important social attributes, such as education or income, is likely to change over time in any given study cohort. The aim of this study is to explore changes in the distribution of baseline sample characteristics due to i) selective mortality and ii) attrition in an ageing panel sample (born 1914-1934) throughout different follow-up waves. The proportion women in the sample increased from 50% to 60% because of selective mortality. The mean level of education increased among both men and women. Similarly, changes in class structure were observed for both sexes. In particular, the proportion of manual workers decreased and the proportion of non-manual workers in the sample increased over time. In both women and men, the changes in class structure were compounded by attrition. In men but not women, selective attrition also compounded changes in education.

Father-Child Relationship Quality in Living Arrangements after Divorce

Based on multi-actor data from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender role attitudes and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. Our results reveal that children who live in families with joint physical custody have higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live solely with their father. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child’s gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men’s gender role attitudes explain men’s paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father’s role of providing is highly important, there is scant research that directly addresses providing as a form of paternal involvement. Second, I aim to unravel issues of selective attrition by focusing on men’s gender role attitudes as predictor of paternal involvement before these men enter parenthood. In most studies, scholars use the simultaneous measurement of father’s views on parental roles and paternal involvement. As such, father’s experiences with paternal involvement may well have shaped their attitudes concerning parental roles rather than the other way around.

My results show that men with more modern gender role attitudes indeed spend more time on childcare tasks, also when controlled for relevant background characteristics such as educational attainment, work hours, religiosity, age, partner status, age and gender of the child. In contrast, gender role attitudes have no impact on changes in men’s work hours across the transition to parenthood nor on their level of income. This latter finding shows that men’s work schedule and their provision are unrelated to men’s gender role attitudes, suggesting that being a good provider is of importance to all men who become fathers, irrespectively of gender role attitudes.

Does Greater Equality in Governance Contribute to Greater Health Equity? Lessons from Closing the Gap for Aboriginal Australians
Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up. The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies

The emergence of the welfare state provided a countervailing force against the social ills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations. Despite the limited institutional and theoretical perspectives, we find that individual attitudes are attracted to the material returns of the welfare state and envy of those who have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (45 countries; 112 country-time points; 120k individuals). We conclude that resource acquisition as opposed to equality or social cohesion drives the impact of welfare state institutions on individual attitudes.

Between State Bio-Power and Social Bio-Politics Documented and Undocumented Migrant Care-Workers in Israel

The paper deals with tensions emerging between high demand for migrant care-workers in affluent economies and their simultaneous construction as a demographic threat to the nation’s political body. Drawing on the empirical analysis of the Israeli case, an ethnically defined nation state and a major ‘insouciant’ of labor migration, the article examines how these tensions are put in display in the topical realm of migrants’ family formation and unity within host countries. It argues that while contradictions between the reproductive labor of migrant care-workers and their reproducing bodies are closely connected to gendered state policies manifesting labor migration, they manifest differently along the legal/illegal continuum of migration status. Thus whereas documented care-workers are subjected to the regulation of their employment conditions and protected by labor laws, they are also directly exposed to state and employers’ control on family formation. Periodically, undocumented domestic migrants who are forced to unfiltered dynamics of informality and risk of deportation, gain space for greater maneuver over the creation and maintenance of family life in host countries. Moreover, difference in the management of the reproductive-reproducing dyad around care workers according to their legal status, shape the repertoires of contention available to civil society organizations and networks as they try to assert migrants’ rights to family life in the context of global feminization of migration and stringent control policies.

Socioeconomic Influences on Inequalities of Wellbeing in Later Life: A Study of Australian Baby Boomers

Promoting health and wellbeing in individuals across the life course has become a priority for many governments and policy makers around the world. There is increasing recognition of the value of subjective measures of wellbeing as a complement to the more traditional, objective measures of health and wealth. In Australia there is a widespread view that the early post WWII birth cohort has been advantaged relative to later cohorts but there has been little attention to the advantages or disadvantages experienced in both childhood and adulthood had a cumulative effect on wellbeing on entry to later life. These findings underscore the value of examining the effects of life stage on wellbeing. We test hy-

Insights from the Past: Disaster Research and the Second Environmental Crisis

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet a growing environmental crisis occurred in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as Silent Spring and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact widening laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the Endangered Species Act were created to tackle toxic challenges to health and wellbeing. This was a time of both rapid policy innovation and moral transformation regarding human interaction with the environment. In this paper, we consider how the experiences of that earlier era can inform needed change now.

Consumption Behavior and Disaster Recovery: Insights From Eight Years In A Living Laboratory

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams and drawing from extant research in marketing, sociology and psychology, this paper explores the short- and long-term effects of these natural disasters on consumers’ consumption behaviors and how these behaviors aid in the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveying (n=448) conducted in the weeks and months after impact shed light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evolving views of possession). Follow-up surveying (n=176) four years after a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.
This paper presents findings from research in six branches of a Wal-Mart owned food chain in Johannesburg, South Africa. Wal-Mart entered South Africa in a newsmaking majority share owner-buy-out of South African listed Massmart, Holdings in 2012. This paper explores the results of research with shop floor workers. It details labour conditions and worker frustration with company and unions, alike. It examines worker politics in these stores as they struggle to combat the erosion of existing conditions, and as they struggle to be heard by their union. It discusses union efforts to support this workforce and to build an All-Africa Alliance of Wal-Mart workers. It grapples with the gap between worker experiences of precariousness in their jobs and union battles to confront this multinational on its home turf.

Precarity and the Law: Regulating Casual and Contract Labour in the South Africa Retail Sector

This paper explores the history of legislation around forms of casual, part-time and contract labour in South Africa since the 1930s. Building on my previous work on casual and part-time labour regulation in the retail sector (Kenny 2009), this paper expands the discussion to explore the legal lineages which helped to define these forms of labour within the retail and distributive sector. It seeks to examine the relationship between the law as discipline apparatus, transnational importation of law and norm, and socio-political contexts and worker and union politics in explaining changing legal provisions over time. In so doing, I hope also to examine the boundary between these forms of employment law and the influences of Masters and Servants legislation as limit for black workers in South Africa in relation to the sector.

Shifting Power Relationships in the World Economy: A Long Term Perspective

It is argued by many that position in the world economy is, for the most part, highly stable and resistant to change, at least across the macro-level “zones” that form a key element of world-systems theory. I suggest that this apparent stability actually masks a considerable amount of change and discontinuity within the global economy. This paper takes a different perspective, focusing on power rather than position, to explore the extent to which shifting relationships between military and economic power, both within and across countries, reflects a changing dynamic with significant implications for the global economy. Following Kentor (2013), the balance of economic and military power within countries is charted at 10 year intervals from 1850 to the present. I then explore the impact of this changing balance of power on movement in the world economy.

KENTOR, JEFFREY* (Eastern Michigan University, jkentor@emich.edu)

The Structure of the Global Economy 1850-2000

This research develops a new typology of the structure of the world economy, based upon Charles Tilly’s (1994) theorization of the emergence of the modern nation-state system. Following Tilly, this research conceptualizes the world economy as a four dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology. This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

Insert Coin for the Next Level! Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster

Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields.

Even if economic development processes are highly localised not all ‘locations’ are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODTU Teknokent which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M.S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that: Can digital games can be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems

Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within many less developed countries and even among some of the richest countries, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly lead to increasing inequality and less long term economic development for most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization.

Recent evidence has suggested that the impact of economic globalization has contributed to effects that are both within and less developed countries. Other data show that less developed countries in Asia, in contrast to African and Latin America, are more likely to have more economic development, less poverty, and less growth in inequality from increasing ties to the global economy.

The paper summarizes some differences between the USA and EU nations that have led to the different outcomes of globalization. It focuses on data and several years of fieldwork in four Buddhist countries in Southeast Asia (Thailand, Vietnam, Laos, Cambodia) to identify some of the causes of the impact of ties to the global economy which vary even within Asian countries, showing some Southeast Asian countries (such as Cambodia) share more characteristics with African or Latin American countries that are related to very uneven economic development, rapidly increasing inequality, and no poverty reduction.

This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

KERKHAM, LYN* (University of South Australia, Lyn.Kerkham@unisa.edu.au)

Literacy Leadership and Accountability Practices: Holding Onto Ethics in Ways That Count

Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard ‘benchmarks’. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday work of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership and how principals’ work is increasingly constructed by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of ‘validation days’, and ‘liter-
acy chats’ between a literacy leader and classroom teacher, are examples of such textually organised actions. We elaborate on these inescapable textual framings and tasks faced by the principal and literacy leader, and those that they create and modify in order to ‘hold on to ethics’.

We argue that while leaders’ and teachers’ everyday work is regulated by ‘ruling relations’ (Smith, 1999), it is also organic and responsive to the local context. We conclude with a reflection on the important situated work that school leaders do in mediating trans-local policies that might otherwise close down possibilities for engaging ethically with students and their learning in a particular school.

NIXON, HELEN (Queensland University of Technology)

_Ruling Relations at Work: The Active and Occurring Text in the Everyday Life of a Local School_

In Australia, as in many western education systems over the last two decades, discourses of accountability, transparency and performative have reshaped education policy that in turn has reorganized the work of school leaders and teachers. Increasing attention to the production, analysis and display of student achievement data has been one of the effects of this reorganization.

This paper presents some of the work undertaken by school leaders and teachers in a small religious school whose NAPLAN results suggest that it is succeeding ‘against the odds’. In the spirit of institutional ethnography we are interested in the ways in which the educators’ everyday practices in this school are textually mediated and shaped by a number of different texts and discourses, including the discourses of accountability and transparency associated with the national school reform agenda, and the discourses of professional learning, veritas and care that are promoted locally.

The paper examines how intersecting layers of national, state and sector policies connect with and coordinate school leaders’ and teachers’ everyday practices. We trace the ways in which translocal ‘ruling relations’ (Smith, 1999, 2006) of a globalized education system reach into and regulate the activities of people in local everyday settings. Our analysis uses the concept of the ‘active text’, the text as activating and occurring in a specific place and time and at the same time coordinating and ruling from a distance. We examine in detail a sequence of the production and reading of assessment data by educators in one school and consider how this codifies students and their learning experiences and articulates with and coordinates teachers’ actual practices. In this process we begin to learn from those involved how their everyday work brings into being institutional processes that produce a particular institution’s standard sequences, its decisions, policies and outcomes.

KERN, THOMAS* (Chemnitz University, thomas.kern@soziologie.tu-chemnitz.de)

_Opening and Closure in the Reproduction of Social Movements and Organizations_

This study examines the social mechanisms behind the reproduction of social movements and organizations based on Max Weber’s distinction of open and closed relationships.

Max Weber’s concept of social closure played an important role in the academic discourse about Marxist class theory in the 1970s and 1980s (Parkin 1972, 1979). Accordingly, the formation of classes is closely related to processes of social closure where a group of privileged actors monopolizes their access to certain resources (Murphy 1986, 1988). In this sense, the concept refers to a central mechanism behind the formation of social collectivities. In the context of the discussion about the production of social capital, the distinction between opening and closure was further developed and refined in the field of social network analysis. Burt (2000, 2005) demonstrated in several studies how processes of opening (brokerage) and closure affect the innovative capacities of social networks.

This presentation aims at transferring the findings of past research on social classes and networks to formal organizations and social movements. In the first part, I will discuss the social mechanisms that produce closure: While the closure of formal organizations typically depends on a continual process of decision-making (Luhmann 1998), social movements reproduce the boundary between ‘us’ and ‘them’ through ongoing mobilization. In the second part, I will draw on network analytical concepts in order to operationalize the opening and closure of social structures. In the third part, I will show on the case of the energy market in Germany how the mobilization of the environmental movement affected the balance of opening and closure between electric power companies.

Back Home: The Reintegration of Return Albanian Migrants in a ‘Foreign’ Environment

In this paper we explore the Albanian return migration from Greece. Albanian return migration is a neglected field of study and there is little empirical evidence related to it.

In the beginning of the 90s, after the fall of communism in Albania and elsewhere, Albania was the biggest exporter of migrants in the Eastern Block, judging by its proportion to the general population. Over one fourth of the country has lived or is living in a foreign country. Their main destination was Italy and Greece, because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our research is focused on the reasons of their return, the Greek debt crisis being one of them. We mainly explore the difficulties of their re-integration in Albania, and how they perceive themselves in the Albanian society. We call it a ‘re-integration’ because Albania is not the country that they left behind when they first migrated. It has changed, pretty much the same way as other closed societies have done after they opened their borders.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their re-integration? Do they include the role of the Albanian government because it has been advertising itself as a facilitator and accommodator for their smooth adaptation.

KERR, ANNE* (University of Leeds, e.a.kerr@leeds.ac.uk)

All Change: The Social Life of Change Management in the UK National Health Service

The UK NHS is going through what is typically referred to as an unprecedented period of change, marked by key priorities of patient choice, innovation, quality, innovation and the minimisation of bureaucracy. These processes are associated with a plethora of paradigms, initiatives and tools designed to support the management of change, including strategies for developing the learning organisation and the role of change agents, predictive change tools, models and processes of personal change, and the rejection of ‘old-style paternalistic’ theories of organisation and culture.

This paper will explore the rise of the change management agenda in the NHS and the organisational and psychosocial theories and values which underpin it, before moving on to consider how and why we might trace its articulation in the practices of NHS managers, drawing on preliminary data from exploratory discussions and observations with NHS managers working in a large site to be the Foundation Trust Hospital in the North of England. We consider how and why we might go about understanding the social life of change management in organisations by focusing upon manager’s practices and accounts of their experiences of and rationale for change, especially the productive character of change mantras and devices. We end with some critical reflections on the importance and the difficulties of tracking, understanding and articulating the activities and the actants of change in organisations-in-flux and in managing the ways in which we ourselves as researchers are enrolled in the processes of change we seek to study.

_Graffiti with Chinese Characteristics: A Longitudinal Study of Campus Graffiti in Northwest China_

The current paper, utilizing an original data source of approximately 400 graffiti texts from a single location in Northwest China taken in 2012 and 2013, is a longitudinal content analysis study. The markings were collected from a co high school/university campus in a predominantly Muslim region of China. The paper engages in a descriptive summation of dominant themes found in the markings and changes in these themes between the collection of original marking in 2012, and the markings that were appearing in 2013. Analysis indicates that themes are consistent with emotional issues experienced by youth embedded in transitional and temporary social networks. Beyond a pure descriptive summation, the paper further explores differences in themes appearing in its data compared to that appearing in documented studies in other parts of China and in other parts of the world.

Policing of Minorities and Police Accountability

In the European Union organizational structures, traditions and citizens’ trust in police differ substantially among the member states. While numbers of police per 100,000 population fluctuate between less than 150 to nearly 500, trust in police indicates an opposed relationship: the lower the numbers and the less money spend on police/ security the higher is trust in police (Kääräinniemi 2013). Despite of all the variety there is a common challenge to police in Europe which is the relationship between police and minorities. Whether working migrants and their descendants (e.g. Turks in Germany), traditional resident minorities (e.g. Roma in Hungary) or asylum seekers/ refugees from civil war regions (e.g. Sub-Saharan Africans in Austria), survey results indicate that minority men and women are more frequently subjected to police controls than majority citizens. More often than majority citizens, persons from a minority background feel treated unfairly by officers during encounters with police. At the same time, the victimization rates of minorities are significantly higher while their levels of reporting to police is lower, and this includes instances when they become victims of hate crimes (Goevery 2013).

The European Union has commissioned research aimed at an assessment and an improvement of police-minority relations in the EU member states. The presentation will report findings of such a project (www.corepol.eu). This research project investigates police minority problems and best practice conflict resolution in a wider perspective of restorative justice approaches in Germany, Austria and Hungary.

KESKINEN, SUVI* (University of Turku, suvkes@utu.fi)

‘Crisis of Multiculturalism’, Neoliberalism and Possibilities for Creating Alternative Narratives in Activism

During the last decade the ‘crisis of multiculturalism’ discourse has characterized media and political discussions in many European countries. Especially Muslims and non-western minorities have been framed as problematic outsiders that endanger the liberal values, followed by demands on stronger integration and assimilative measures. Notions of gender equality and sexual freedom have played a significant role in such debates not the least in the Nordic countries that build their national identities on being world-champions in achievements in gender equality. Building on interview and media data gathered in Denmark, this presentation focuses on how activists who belong (or are categorized as belonging) to racialised groups (Muslims, non-western minorities) seek to provide alternative narratives and question these hegemonic discourses about migrant/minority families and communities.

Public debates on gendered violence in Muslim families, especially forced marriages and honour-related violence, have been on the agenda in Danish media and politics since the 1990s. The othering images of the subordinated, victimized Muslim woman and the threatening, patriarchal Muslim man have circulated in the media for more than a decade, with consequences also for the everyday lives of the rationalized subjects. My paper will analyze how activists create spaces to challenge such images and discourses, as well as to produce alternative narratives and imaginaries. Moreover, it will be discussed how such spaces are shaped by neoliberal rationality that emphasizes individualization and entrepreneurialism. It will be analyzed how governmental ‘role model’ projects, mentor networks for ethnic minority women and media interest in the voice of ethnic minority women shape the spaces from which the studied activists publicly speak from – spaces embedded in, but not totally restricted by multiple power relations.

The Transform of Finnish Educational Policy - the Viewpoint of Special Education

Educational policy in Finland is based on internationally ratified treaties, such as: UN declaration 1993; Salamanca 1994; Dacar 2000, and the Universal Declaration of Human Rights 2007. Since year 1998, educational legislation has been on change towards inclusive principles and values, such as emphasizing equality, participation and shared services. Education is guaranteed for all, regardless of ones background, wealth or origin. According to the official statistics the amount of students who get special education has increased significantly from the year 2005 to 2010. The study examines educational policy in Finland and its implementation in our primary schools. The data of this study contains two educational policy documents: (Education and Research 1999-2004. A development plan and Education and Research 2011-2016. A development plan) What are the essential similarities and differences of these documents concerning special education?

Learning Communities – a New Paradigm for Education

Education is by its nature a normative enterprise and therefore guided by certain aspirations, cultural and ethical beliefs. It is no wonder that the educational systems of different countries reflect the local ideas of nation, the established ways of perceiving knowledge, ways of production, as well as religious and other normative ideas. In western countries educational thinking has generally been related to the scientific worldview that is based on Cartesian and Newtonian inquisitive thought. In this approach by taking first things apart – after that is done, the whole is constructed again. This kind of thinking has its emphasis on things like analytical thinking, determinism, and reductionism, but it cannot cope with phenomena such as complexity, purpose, intention, uncertainty and ambiguity, to name a few. The arts are, however, often mentioned to possess capacities and methodologies to deal with these latter issues. Is this really true is a question well worth to be investigated. The theory of learning communities (Wenger, 2004) offers us plausible framework, from which the premises for the role of arts in education can be outlined. However, at the same time the theory reveals also the limitations of the current structures and predominant ideas within the field. Combining the theory of situated cognition with analyzes of the on-going change in modern society, the new paradigm can be both grounded and justified that means also changes in educational designs.

From Topic to Problem. Organizational Mechanisms of Constructing Demographic Change

By referring to organizational theorists like Karl E. Weick and Niklas Luhmann, the proposed contribution starts from the assumption that for organizations demographic change is not a clear and unambiguous given problem, but rather a topic which might be regarded (i.e. constructed) as a problem or not. Consequently, demographic change is understood as a non-instructive problem, which can be framed in different ways (e.g. risk, catastrophe, or standard problem). Based on the analysis of qualitative expert interviews that has been conducted in organizations of various types (e.g. business firms, health insurer, local government, social welfare organizations), I want to present preliminary results on the question: Which structural elements and which mechanisms are crucial for the organizational construction of demographic change as a problem?

More specifically, the proposed contribution wants to shed light on two aspects: first, it is asked as what kind of problem the demographic change is constructed by organizations. This refers to the organizational construct of demographic change itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the process of constructing demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on. Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the organizational construction of demographic change and its implications for organizations.

Leisure and Life Satisfaction and Adjustment in Elderly People

LEISURE AND LIFE SATISFACTION AND ADJUSTMENT IN ELDERLY PEOPLE

Today, everyone is busy in his business. Every PEOPLE needs leisure to maintain his quality of life and satisfaction. Leisure helps the person to maintain his health. After retirement people have leisure. In old age the people feels rejected and inferior as his physical and mental abilities deteriorate. The purpose of this study is to find out the relationship among leisure and life satisfaction, leisure and adjustment of elderly people in the context with socioeconomic status and personal factors. In old age people have leisure but they may not have satisfaction because of poor economic conditions, lack of social support. In family people has social and emotional support but in old age home the get material support not emotional support. So it affects the person’s life satisfaction. Life satisfaction is very important for adjustment. 120 elderly people selected from old age home and family who are busy and 120 elderly people selected from the same population but have leisure. They have been administered life satisfaction scale and adjustment inventory.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economic status. 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economic status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and in family.

Key words: Leisure, life satisfaction, adjustment, support system

Use of Facebook As a Source of Political Participation Among University Students of Pakistan

Use of Facebook as a Source of Political Participation among University Students of Pakistan.

The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring. However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. This study is likely to see that if Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influenced its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is an association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to validate this relationship. The study will provide deep insights regarding the political use of Facebook and its influence on civic and political participation.

Islam and the Arab Muslim Refugees in United States

The studies of Arab Muslim refugees in the United States are just in the beginning; research is needed on wellbeing of families. Refugees have more challenges than many other immigrants because of what they have experienced before and after they arrive to United States. Politics, religion, and culture overlap to shape these refugees’ lives. Islam is one of the main factors that influence refugees’ resettlement and adaptation in their new home. New opportunities challenge traditional ways of living. The paper will draw on some of the findings of an on-going research study exploring refugees’ religion continuity and change; fate, rituals, and practices, the role of religion in refugees’ resettlement; adaptation, and emotional support, types of challenges faced for being Muslim, and the role of Muslim communities in refugees’ resettlement. A qualitative approach was used to test the perceptions and experiences of female Arab refugees. Semi structural interviews were conducted with refugees in the middle Atlantic area. Grounded theory was used to build useful theory about Arab Muslim refugees’ religion continuity. Findings emphasize the importance of taking a holistic approach in understanding Arab Muslim refugees’ needs which can lead to successful integration into the American society. Islam is more than religion; it represents a strong emotional support that ties the family together and helps them to assimilate to the new culture, and passing their religious values to their children is one of their priorities. In addition, it appears important for the wellbeing of refugees that they maintain their religious rituals while encouraged to integrate to the new culture. Social ties play an important role on family’s wellbeing and emotional support represented on other refugee friends, relatives, and American friends.
The Peace processes could do no better. There has been a continuous ‘fawed’ peace process in the region providing no solution but encouraging more cycles of violence. The focus of the paper is to explore the dynamics of ethnic conflicts in the region, to examine the engagement of peace process by the Indian state with different communities and to conceptualize ‘Peace’ as a trouble more than a solution.

Key words: External powers, India’s Northeast, Ethnicity, Ethnicism, Peace

Participatory Water Governance through Gender Sensitisation in the Indian Context

Equity in water, through gender-sensitization of developmental projects in the sector, is now recognised as an international agenda, owing to the commitments made in the Johannesburg Plan of Implementation, and declaration of ‘Water for Health’ as a human right. However, governments in developing countries have been found to be limited by social fabric existing at the community level, strongly held together by long standing traditions and social structures. The study discusses issues and concerns with respect to effective participation of women in governance of water projects, and provides case studies/examples to illustrate the practical implications of successes and failures to engage women for decision-making.

The study concludes that efforts that penetrate into the existing social structure to built opportunities for a re-allocation of power amongst different groups of people are required. Participatory appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

Inclusion in Continuing Education and Its Unequal Accessibility: An Empirical Analysis for Able to Work Young People in Siberian Region.

The data of two surveys conducted by us in Novosibirsk Oblast (in 2012 the economically active inhabitants of semi-urban settlements from 16 to 45 years old were surveyed, N=35; in 2008-2009 it concerned young workers of urban, semi-urban and rural settlements, N=778) demonstrate that in whole a mass demand for further education among the adults has been observed. There is a special need in higher and second higher education, as well as in the courses/programs of supplementary professional education (SPE). The largest need in additional education, professional training and retraining were revealed among those employees whose work is connected with information use or innovative activities (as well as interest in them).

Anyway among all young workers educational activity of different kinds (real or projected) is realized as the most productive means for achievement of fuller self-realization in work. So, for this purpose they prefer increasing of their educational and qualification level in the major profession (41% of answerers), also increasing of the general educational level and mental outlook (28,7%), than change of a place of work (8,9%), change of profession or kind of activity (9,8%) or even widening of an area of independent decision-making (15,6%).

However the discovered educational needs essentially surpass real involve-ment of the adult population in the continuing education. It was revealed the unequal accessibility to SPE services. Thus there is a noticeable part of employees whose work is connected with information use or innovative activities that are available to use a branch system (42,2%) and the unemployed (69%) who never passed before through profession-unequal accessibility to SPE services. Thus there is a noticeable part of employees ment of the adult population in the continuing education. It was revealed the widening of an area of independent decision-making (15,6%).

The study concludes that efforts that penetrate into the existing social structure to built opportunities for a re-allocation of power amongst different groups of people are required. Participatory appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

The Increase in Support of Right-Wing Party in Ukraine: Assessing the Social and Economical Context

The survey data show that right-wing ideology becomes more popular in Ukraine. Far-right party Svoboda, promoting racist, xenophobic views, on the parliametary elections in Ukraine received 10.44%, and was held in the Parliament for the first time (in the previous elections of 2007, it received only 0.76% of the votes). One of the most unexpected findings of the Ukrainian national exit-poll 2012 is that individuals with higher education have greater propensity to vote for this right party. Has far-right ideology such strong support in Ukraine or are there other reasons for this success? The analysis is based on the electoral statistics and nationally representative data about the well-being, educational status, ethno-linguistic affiliation, electoral history, basic social and political attitudes, and protest intentions of supporters of the right party Svoboda in Ukraine.

A Challenging View on Religion-State Relationship: Iranian Case

It's obviously documented and historically recorded that religion has always been a strong factor in Iranian society, and is embedded in social/everyday life of Iranian Muslims. Most of researches also explore that Iranian Muslims strongly believe in spirituality as well as rituals although the states might have followed secular policies in public spheres in past decades.

But what's the true reality? A survey on the basis of data collected in 2010-2012 in a few of important vital cities in Iran tries to find answers to this question. Due to the findings of this research it's suggested that although the state is to make people do rituals in public sphere and all possible efforts are done by the state, media, police etc to convince people to follow the state Islamic rules (i.e. not eating/drinking in fasting days in public spheres) -otherwise they will be punished- but it has not lead to increase in doing religious rituals in their private everyday lives.

This research explores that state's pressures on people to do rituals have been less successful although it suggest that Iranians are strongly religious and strongly believe in spirituality yet but in a personalized way.

Keywords: sociology of religion, religious legislation, religious status, public sphere, Iranian Studies.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance among them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as...
in-depth interviews, participant observation and qualitative analysis of texts was applied.

The empirical data show that under the conditions of deficient sponsorship and information support, artistic success in Petersburg largely depends on the artists’ constant self-promotion efforts (participation in competitions and collective projects, applications submission, dissemination in Internet). By accumulating material, informational and reputational resources of their members, art-communities make convenient platforms for artistic self-presentation and development both in and beyond the local market. Responding to the specific noneconomic logic of the market, symbolic recognition plays a key role: before commercial success, communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange imperceptible for the small and highly competitive market of contemporary art in St. Petersburg and balance between the margins of creative products unoriginality and unrecognizability. Thus, artistic communities can increase symbolic capitals of individual artists serving as a peculiar kind of social lift and constituting one of the major forces of the social construction of artistic reputations.

Social Effects of Neoliberal Policy in a Post-Soviet City: Urban Space Contestation Revisited

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and (re) development in Russia. Subject to this policy, contemporary St. Petersburg experiences impetuous commodification and aestheticization of urban space and, consequently, its rapid gentrification. Alternative views on how urban space should be organized make citizens consolidate and back the decisions of elites.

This paper considers the processes of urban space contestation by strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frames developed by Levebvre, Scott and de Certeau (Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frames developed by Levebvre, Scott and de Certeau (Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frames developed by Levebvre, Scott and de Certeau (Logan).

Gender Research in Japanese Sociology: Complicit or Critical?

The impact of feminism in sociology has been examined quite thoroughly in the US and Britain but comparable analysis has not been undertaken in Japanese sociology. The present paper endeavors to fill this gap, but less to assess the extent to which feminist research is represented in Japanese sociology than to examine the type of gender research published in a mainstream sociology journal, to obtain a picture of the nature of gender knowledge that is produced in sociology, and specifically, whether gender research in sociology raises questions about the way sociology is practiced. I analyzed all four issues per year from Volume 40 (1989-1990) to Volume 61 (2010) of the official general sociological journal published by the Japan Sociological Society, Japanese Sociological Review (Shakai-ku Hyoron), with a total of 558 theoretical and empirical articles. All articles were coded for topic/subarea, geographic focus, if relevant, methodology, and also gender, affiliation, and professional status of the author(s). In addition, the text of the gender-related articles were read and coded for major claims or findings and reference sources. Preliminarily, the analysis shows that most gender-related articles are on the topic of family and marriage, body and norms, intimacy and sexuality, and social stratification. The next popular topics are labor, employment and organization, and social network. Only two such topics are central to sociology represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in sociology, a highly diversified discipline, a closer look reveals a different picture, one that could suggest a marginal status. Results of further analysis will be presented at the conference.

CHALLENGES OF POVERTY AND INEQUALITY IN THE ARAB WORLD

Challenges of Poverty and Inequality in the Arab World

Despite spectacular economic rise of some of the Arab Gulf countries, poverty remains a persistent challenge in the Arab World. Social inequalities persist as new inequalities overlay older structured ones in a number of Arab countries. Developing countries have particular historical experiences, the social safety net, social inequality is often deepened by the rapid social transformations. Historically formed structured inequality often combines with new poverty to produce social turmoil. Social inequality and poverty played a critical role in the waves of social uprisings popularly known as the “Arab Springs”. There are intra and inter-regional variations in poverty in the region which help shape not only internal political outcomes, it also impacts external relationships. Some of the poor countries in the region depend on their rich neighbors to meet ends meet, while others look beyond the region for facing the challenges of entitlements. Such external relations play an important role in shaping the geo-political alignments in the region. Intra-Arab regional migration too plays an important role. Remittance earnings play a critical role in meeting the challenges of poverty in some of the countries. However, social upheavals tend to disrupt patterned migration with far reaching consequences in the intra-Arab world relationships. The paper will provide a critical survey of the state of the play of poverty and inequality in the Arab world and try to chart various social and political implications of structured inequality and poverty in the region.

Effects of Women Employment on Family Integrity (Case study: Comparative Teachers with Housewife in North of Iran)

Identifying the effects of women's employment has contributed to the strength and health of the family, and the research in the effects of women's employment has high scientific and social importance and necessity. The purpose of this study is to identify the effect of women's employment in Integrity of the families. The research method in this study is survey. Population includes 400 people of employees (teachers) from 25 to 49 years as a test group, as compared with the same number of housewives as control group. Sample size which were determined by using Cochran formula is 200 that includes 100 of the employed women and 100 of similar housewives women. Samples selection is done, using random sampling and stratific method. According to the data analysis, it was estimated that women's employment has negative effect on Family Integrity. The results of the research showed that the Integrity of family among housewives women is higher than the employment groups. More results show that whereas the income has positive relationships with the Integrity of Family; the education have negative effect on Family Integrity. Discuss show that the result of this study have been protect with the result of Alaeddini (1993), and André Michael (2003).

Sociocultural Interaction in the North Caucasus: Globalization and Identification

The North Caucasus is experiencing globalization challenges. New information technologies generate frequently the cultural shock, threatening ethnic cultures in the region. Interaction of the global and local in modern conditions strengthens intensity in tradition cultures. Therefore globality becomes time imperative. Globalization influences greatly the identity, opening a way to set of identities in the global world. Of principal value is conscious familiarization with cultural wealth of other people. We should take such values which do not break internal development of our own culture and do not tear it off from the historical roots, the best achievements and traditions. The ethnic culture can develop and rise to the universal importance only in dialogue with cultures of other ethnoses. One of the findings of modern public consciousness is that it is impossible to imagine any civilized country out of communication with other world, with other cultures. The need of interaction of Family; the education and aspiration to learn an inner world of each other lead to expansion of spiritual bonds and contacts. Ideas of preservation and further development of a human civilization are connected with the need of cultural mutual communication. Efficiency of cultural inheritance depends, first, on ability of a community to claim, master and use values of other people in one ethnic environment; secondly, on aspiration of a community to take unavailable valuable elements; and thirdly, on readiness of a community to see in loan an opportunity to open the best qualitative lines and properties. It becomes obvious that the new acquired does not lose ethnic coloring and originality, but on the contrary, it becomes more profound ethnically and at the same time integrated. This statement is especially topical for a modern sociocultural situation in the North Caucasus and in Russia as a whole.

Inequitable Access to Citizenship: Gendered Social Policies and Unattainable Democratic Ideals

Although gender equality is central to the attainment of democracy, its realisation in conceptions of citizenship in democratic states has been marred with complications. Access to citizenship rights is most often unequally experienced due to unequal power dynamics emanating from racial, gendered and socio-economic factors. As a result of these factors women and men's experiences of democratic citizenship is a site of struggle and constant negotiation. This paper seeks to interrogate the master and men's ability to access the fundamental rights guaranteed in democratic countries. This examination is undertaken through an analysis of policies in Southern Africa. The paper argues that gendered, racial and class factors hinders equitable access to citizenship rights, so does the inequitable valuing of social, economic and political rights in defining citizenship. In conclusion the paper states that inequalities limit the attainment of full democratic citizenship for most of those who have been historically excluded in terms of gender, race and class.

Micro-Credit (Self-Help group), Dalit Women Inclusive Growth and Development

In last three decades, the gospel of micro credit through Gramin Bank model have become part of global legends of development in South Asian countries including India for poverty alleviation, especially for dalit. Historically, the main basis of dalits' backwardness is effect of capital deficiency, in India's eleven five-year plan, an agenda of inclusive growth is prioritized through household saving and productive investment for capital formation and economic development. Homogenous women group formation following approach of equity, consensus, democratic culture and voluntary spirit in line of Bangladesh model of Self Help Group (SHG) is encouraged as an ideal, to promote financial self sufficiency, poverty alleviation, social, economic and political empowerment. SHG is linked to Government, NGO, Commercial Bank and private Microfinance agency for financial support, entrepreneurs, subsidies, training for capacity building etc., for creating the culture of an alternative sustainable development of the poor. An in depth study is conducted on most vulnerable Dalit women' SHGs members in eight talukas of Nanded district located in backward Marathwada region of Maharashtra. The objectives proposed to understand the extent of financial inclusion in generation of employment, income, improvement quality of life, solution of own value added problem, etc. Karl Marx and Max Weber's methodological perspectives capital accumulation and protestant-ethics of capitalism used in comprehending ethics of saving and credit of SHG phenomenon in context of development of Dalits. Ground reality of SHGs outcome reveals alarming; almost negating the goals it set, like over mental stress, raising under debt trap, pressure for over work, even less wages at cost of own freedom. The consolation is liberation from family restriction and opportunity of involvement in different social issues having no financial implications in improving living standard.

Microfinance (Self Help Group) and Tribal Women Empowerment: A Study in Nanded District of Maharashtra

Microfinance (Self Help Group) and Tribal Women Empowerment: A Study in Nanded District of Maharashtra

Since the early fifties, many developing countries are making concerted efforts to eliminate the colonial legacy of underdevelopment and social backwardness. Various measures have been undertaken to reshape the economy, social structure and cultural life of the masses. For this purpose, since independence, India has implemented various developmental programs through five-year plans to bring socio-economic transformation of the society. The induction of commercial bank, co-operative bank, regional gramin bank and others since late sixties, is one among many developmental programs operating in augmenting the living standard of poor, eliminating poverty, inequality and unemployment of the rural segments including tribes. In fact, over the years, experience shows that due to rigid formal procedure, rural poor and tribal are not able to avail many benefits from these credit institutions. Large numbers of them are still under the trap of local money lenders and other formal and informal credit agencies. These are growing concern that the banking system is not catering enough to the needs of disadvantaged groups, especially tribal and more particularly women. This study was carried out on then SHGs comprising 20 members each belonging to Kolam, Dhangar, Wangani and Golla tribal communities in Kinwat block of Nanded. The following objectives are addressed in the study. (1) To examine the effectiveness of SHGs in promoting thrift and saving among tribal women (2) To understand the dynamics of SHGs in the process of improving quality of life of tribal women (3) To assess the implication of women participation in SHGs on their overall socio-economic status. So far, SHG programs are perceived as set oral in approach and not encompass the entire fabric of human development system within which they live and survive.

Efficient Participatory Democracy: Real Utopia Model

In many societies of semiperiphery and periphery ordinary citizens face unsatisfactory conditions of work, low salaries, generated by exploitation processes

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopias approach of E.O. Wright that both real alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? This study, and qualitative expert interviews, provide grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting, referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediating mechanisms. The findings are applicable to semiperipheral, peripheral, and even core societies.

World-Systems Approach to Global Inequality in Effects of Individual Activism on Subjective Well-Being

The world is experiencing global crisis, yet proactive individuals can promote social change. Still, opportunities for activism and its impact are unequal in the modern stratified world-system. Therefore the following research question arises: what are the differences in degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being between countries of core, semiperiphery, and periphery? The preceding theoretical implications and empirical findings by M. Kohn, S.K. Parker and C.G. Collins, M. Seligman, M. Argyris, C. Webel and R. Ingelhart, L. Beer and T. Boswell, were considered. The posed hypothesis is the following: degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being are higher in core societies than in semi-peripheral societies, and in semi-peripheral societies are higher than in peripheral societies. The data collected in the World Values Survey 5th wave (2005-2008) on the sample of 49 countries with up to 69,381 respondents were used. Structural equation modeling and multiple group analysis in MPLus has been performed. In fact, the hypothesis was confirmed partially. It was proven that positive influence of person's individual activism on subjective well-being is the strongest in the core, is weaker in the semiperiphery, and is even negative in the periphery. However, it was found that there are relatively small differences between degrees of influence of individual activism on personal achievement. This finding signifies that overall human actions do lead to accomplishments, regardless of structural conditions. Moreover, it was revealed that the degrees of influence of all other constructs are surprisingly reversible: they are stronger either in the semiperiphery or the periphery and are the weakest in the core. The highest degree of influence of proactive orientation on individual activism and personal achievement in the semiperiphery testifies that people with proactive orientation do bring change there.

The Variant Actuality of Young People in Precarious Transitions in Late Modern Japan—Based on the Interviews with 51 Young People

In recent Japan, young people have experienced prolonged and complex transitions from school to work, have been forced to work in precarious jobs, or faced the risk of unemployment, poverty, and social exclusion. The Youth Cohort Study Japan (YCSJ) conducted by The Japanese Educational Research Association is a five-year panel survey that contains 1687 samples aged 20 (first wave in 2007) and 891 aged 24 (fifth wave in 2011). Our analyses of YCSJ data have indicated the characteristics of the transition from school to work in recent years, especially its precarious processes and the factors (familial and educational background, social capitals, gender bias, etc.) which have influence on the differentiation of transitional trajectories. Then we have tried to describe the actuality of youth in precarity based on qualitative analyses of interviews with those young people who have participated in our five all waves and assent to be our interviewees (we interviewed with fifty one cases). Through these analyses, we aim to show some variant types of precarious transitions. And we also suggest how young people overcome or negotiate their difficulties.

Racial Identity and Psychological Well-Being Among African Americans and Whites

Research over the past few decades finds that African Americans have persistently poorer psychological well-being than whites. African Americans score lower than whites on happiness, life satisfaction, and trust in people. In contrast, African Americans’ mental health (e.g., as measured by depressive symptoms) is comparable to or better than whites’, despite African Americans’ lower socioeconomic status and greater exposure to stressors. Scholars have speculated that a strong, positive racial identity may help explain African Americans’ good mental health, based on findings that the two are associated. If so, it means that racial identity has a beneficial or even more beneficial effect on African Americans than whites. We addressed these questions using data on African Americans and whites from the 1996-2012 General Social Surveys. We investigated how racial identity is related to psychological well-being (happiness, life satisfaction, and trust in people). Based on racial identity theory, we examined two identity dimensions—identification with (closeness to) one’s racial group and ingroup biases (negative evaluations of ingroup versus outgroup members). On average, African Americans identified with their group more than whites did, but whites evaluated their group as relatively more intelligent and hardworking than African Americans did. Stronger racial identification was associated with greater happiness, life satisfaction, and trust in people, equally for African Americans and whites. Contrary to prediction by social identity theory, favorable ingroup evaluations at an outgroup’s expense were sometimes associated with poorer psychological well-being. These effects of ingroup bias did not differ by race. We discuss what the findings imply for social identity theory and for how racial inequality influences psychological well-being.

The Role Of Risk In Child Mobility Decisions -- Empirical Evidence From Benin

Child mobility is still common throughout the West African region. This has been academically approached under the headings of child fostering, child migration, child labor and trafficking. Poverty is considered a main driver, alongside social networking and skills matching. Recent empirical work looks at the role of shocks to child mobility. Yet, it has been hypothesized that vulnerable families do not necessarily wait for a shock to occur, but might relocate children as an ex-ante strategy. The proposed paper looks at the role of risk in the child mobility decision with data from a fertility based survey of 3000 rural households in Benin, a country known for high child mobility rates. The survey allows for registering children living away from parents, their schooling status and purpose of leaving. The 2012-survey covers three important areas: poverty, exposure to the massive floods of 2010 (shock), and the household head’s level of worry about not being able to provide for his family the next 12 months (risk). The regressions show (controlling for social and demographic factors), that perceived risk correlates substantially and systematically with child mobility. Poverty and shock, on the other hand, do not correlate at a statistically significant level. This interestingly contrasts with the correlates of the schooling decision. While poverty, as previously established, correlates negatively with schooling, risk and shock do not. Focusing only on children who have left and are not in school, both risk and poverty correlate with the mobility outcome. The results support the notion that child mobility forms part of an ex-ante risk management strategy for families at risk. At the policy level this supports cash-transfer type social policy interventions, supporting findings from South-Africa where even small - but predictable incomes - like pensions and child benefits - have produced positive effects on child outcomes.

Normalizing Precarity? Youth Unemployment and Employment Instability in Poland

In the last decades, there has been a heated debate concerning the consequences of employment flexibility in many European countries. Concerns have been raised that especially women are vulnerable to unstable employment, offering inferior working conditions. Substandard employment is concentrated among young school leavers. In this context, Poland is an interesting case: although the Polish economy has done quite well throughout the current economic crisis, the rates of youth unemployment and temporary employment remain disturbingly high. Precarity for young workers appears to have become the norm, with more than 25% of economically active 15-24-year-olds in unemployment, and 66% of employees working fixed-term (EUROSTAT, 2012). This paper presents the results of an analysis of the distribution of various aspects of labour market precarity for the Polish youth: not only the rates of temporary employment, but also unstable employment histories, meaning a weak attachment to the job market. The qualitative analyses are conducted on subsamples of the youngest cohorts of respondents (aged 21-25) from two most recent waves of the Polish Panel Survey (POLPAN), 2008 and 2013. POLPAN data include detailed information on the respondents’ employment history, enabling a dynamic analysis of young people’s early labour market trajectories. The qualitative results are supplemented by a qualitative analysis of in-depth interviews, reconstructing the ways in which the young define their own experiences of unemployment and precarity. Paradoxically, it appears that even young Polish students tend to regard this word in a way that suggests that they themselves experience it as an unsatisfactory situation, psychological coping mechanisms lead them to legitimize existing labour-market inequalities.

What Does the Word ‘Joshi-Ryoku’ Mean in Terms of Gender in Japan?

Recently the word “joshi-ryoku” has become very popular on the mass media and daily life in Japan. It seems a counterpart of the word “girl’s power” in the English speaking world, which means girls’ empowerment, ambition, or strength. But joshi-ryoku has a more restrictive sense. The meaning of this word “joshi-ryoku” is more complicated and, therefore, examining the usage of the word helps us to find the complexity of the modern Japanese culture and society, especially from the viewpoint of gender.

In the 1970s, the Japanese society has experienced the changes in many points: the economy went into recession and improved: a regime change occurred: social unrest never ceased. The movements by the sexual minority people are rising, while men’s movements are stagnant and cannot achieve a change of generations.

The word “joshi-ryoku” came into use in this social situation. It means the ability that women must learn in any age. The specific meaning changes in context, it varies, from the ability as a housewife to do the housework efficiently to the ability as a working woman to manage business tasks with alacrity. So it depends on the context where and by whom it is used, conservative or liberal.

This presentation examines the variable meaning of this word depending on different contexts and, by doing so, determines the gender regime that the word implies in the present Japanese society.

Family Caregiving and Stress Processes: Son and Daughter Caregivers in Japan

In Japan, caregiving of elderly parents has been traditionally the responsibility of the family; the wives of eldest sons, or daughters-in-law of the elderly, typically provided care for elderly parents. However, the profile of family caregivers has been changing in the past few decades. One of the major changes is the increase of male caregivers. Presently, about 30% of primary caregivers are sons or husbands of the impaired elderly. A growing concern is that these male caregivers may have different types of difficulties or stress from caregiving, compared with their female counterparts. For instance, a recent national survey on elderly abuse reported that more than a half of the abusers are male caregivers. Evidence suggests the possibility of gender differences in stress processes. However, most previous studies are on female caregivers, and research on gender differences in stress processes is very limited in Japan. Are these gender differences in the stress processes of family caregiving? This study seeks to address this question by drawing on stress process theory (Pearlin et al. 1990). I analyzed data from a survey conducted in 2011 on son and daughter caregivers aged 40 to 64 years old, who take care of their elderly parents at home as primary caregivers. The analysis results show that the stress proliferation processes of son and daughter caregivers share many similarities in terms of pattern, whereas certain differences appear to reflect the gendered nature of Japanese society.

Dimensions of Safety in the Process of Mental Health and Illness. Empirical Results and Theoretical Framework

Feeling safe in the world is regarded as a basic human need which Maslow placed at the second level of his human need hierarchy directly after bare physical survival. Consequently, lack or loss of safety in the most general sense is considered as a major risk factor for the impairment of human well being and the development of mental disorders. Dimensions of safety which have been identified as relevant for mental health are personal relationships, economic living conditions and environmental circumstances. Despite the fact that the relevance of these dimensions of safety for mental health has been confirmed in an increasing number of studies, there is still lacking a common theoretical framework that allows a comprehensive understanding of the interrelationships between individual and environmental aspects of safety in the etiology of mental disorders.

In this presentation the recent results of empirical studies on the impact of the lack or loss of safety on mental health will be discussed with regard to their contribution for the understanding of the interaction between personal characteristics and environmental hazards in the development of mental health and illness.

The Sociology of Work and Factory Sociologists in Communist Poland

In Communist Poland the sociology of work was one of the most prosperous social science branches. It was perceived as particularly important due to the Marxist emphasis on the category of work, as well as its supposed significance for national economy. It might have been even perceived as a dream come true by those who imagined social science as a scientific guidance for the practice. Besides academic field, in which the branch was hindered by imprecise definition of the very subject of its studies, normative bias, censorship and, mostly, self-censorship, the sociology of work spread to big socialist enterprises which employed professional sociologists in 1960s and 1970s. Their role was significant also due to the role of the workplace as the backbone of Socialist civil society. As a result, new occupation and potentially interesting field of intellectual activity opened for young sociologists.

The paper will base on period literature dealing with factory sociologists - limited yet existing - as well as on archive resources and interviews with ex-factory sociologists. Due to fragmentary data it will not probably be possible to describe typical social profile or career paths of factory sociologists, so the paper will concentrate on those cases in which some more detailed biographical data is available. The study will aim at describing their professional role which was by no means clearly defined, position in the factory structure/hierarchy - somewhere in between the management, Party secretary and labor unions - as well as their aspirations and career paths. A special concern of the paper will be intellectual ambitions of factory sociologists and their relations with the academic field from which they were rather isolated, what in turn caused their constant dissatisfaction.

Medicalization in Turkey in the Context of the “Health Transformation Programme”

There has recently been a growing interest on the effects of health care systems on medicalization in particular national contexts. This paper contributes to this literature by focusing on the case of Turkey, where medicalization in the form of increasing consumption of medications, use of health care services and diagnosis of a number of diseases goes in parallel with the health reform process that started a decade ago aiming to radically transform the provision and financing of healthcare services. Special emphasis is given on how policy measures such as separating purchasers from providers, encouraging competition among public providers, implementing performance-based payments, and combining public and private health care services affect medicalization by creating financial and performance-oriented incentives for physicians to alter their diagnostic and treatment behaviors. Additionally, the arguably positive and negative impacts of medicalization are discussed with reference to recent statistical data including population health indicators, patient satisfaction, outpatient/inpatient ratio, consumption of pharmaceuticals, the number of screening tests performed and the number of doctor visits with a particular focus on indications of over-diagnosis/over-treatment.

Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths

Social Capital, Social Integration and Suicidal Thoughts among Korean Youths Abstract

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular and to what extent measures of social capital are associated with having suicidal thoughts, ceteris paribus. In a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendship network size, frequency of interaction with close friends, quality of network members (number of “delinquent” friends), degree of intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents (in terms of time spent together), frequency of interaction with close friends, and neighborhood fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

Understanding Civic Engagement in Asia: The Role of Social Capital

The question of “who participates” has received a great deal of scholarly attention among political sociologists. Increasingly, students of political participation, both formal and informal, have relied on the concept of social capital defined in terms of trust, networks, norms of reciprocity, and organizational membership (Putnam 1993). In analyzing the conditions under which people choose to engage in political activities instead of opting to ride free on the efforts of others, as Jacobs and Skocpol (2005) point out in Inequality and American Democracy, equal political voice and democratically responsive governments are under increasing threat due to the declining level of political interest and participation on the part of individual citizens. Understanding why some people decide to engage in politics formally and informally, therefore, is of paramount importance not only for the US but for any democratic nation. This study proposes to investigate this topic in the context of Asian countries. Based on the multilevel analysis of the Asian Barometer Survey of Democracy, Governance and Development (2006), which consists of data on 13 countries in Asia, it examines how and to what extent various social capital indicators (i.e., generalized and institutional trust, participation in voluntary associations, and network size) influence the likelihood of engaging in political activities, while controlling for key socio-demographic factors (i.e., income, gender, education, age, and religion). Four outcome variables are examined: two formal (voting and contacting an elected official) and two informal (attending a lawful demonstration and discussing politics in social settings). Findings from hierarchical linear modeling reveal that social capital is associated with different political outcomes in complex ways, at both individual and contextual (country) levels. Theoretical implications of the quantitative results are discussed in relation to earlier findings in the extant literature.

Alternative Food Consumption and Sustainability in South Korea

Under the neo-liberal regime of South Korea, large supermarkets dominate Korean food market. Yet, there has been growing effort to find some alternatives such as local food. There has been relatively little researches done on East Asian alternative food consumption. Our paper attempts to fill this gap by investigating the attitudes and behaviors of Korean food consumers. We attempt to (1) conceptualize the ‘alterity’ in food consumption in the Korean context, (2) develop typology of alternative consumption patterns among Korean consumers, and (3) find the main factors affecting the alternative food consumption.

We have found the followings based on historical analysis and national survey of Korean consumers. First, Korean food system is characterized by low food self-sufficiency rate and alternative food discourse is strongly influenced by political ideology and nationalism. In order to reflect this historical particularity, we have conceptualized alternative food consumption by combining food consumption attitude/values and political orientations. Second, in our typology of food consumers, two types of consumers are most visible, i.e., “consumers without consciousness” and “conscious consumers without consumption.” The former consumers actually purchase organic/local food while they do not have alternative values. In general, these are consumers with high income. The latter have greater consciousness and interest in alternative foods, yet they do/con not consume organic and local foods. Third, among the total consumers, the percentage of consumers with high consciousness without consumption is higher. This might be interpreted as potential for the future of food politics for alternative food system in Korea as these consumers are likely to change their food consumption behavior in accordance with how they think. It remains to be seen whether this potential can fully develop into a social program to build a more sustainable food system in the future.

Different Manifestations of the Public Sphere in Japan and Korea

This paper examines the heterogeneous trajectory of the public sphere in Japan and Korea, especially how it is differently represented by NGOs in the two countries. The state has long been argued to safeguard the public ever since Aristotle laid the foundation for the intellectual tradition in which the state was perceived as the guardian of the universal interest. In contemporary sociology, however, this myth was challenged by a new tradition that emphasized the distinctive characteristics of modern state that concentrated on the reproduction of political power by the power elite, without paying due attention to the interest of the public.

The emergence of the public sphere in East Asia, more specifically in Japan and Korea, was rather hampered by the overdevelopment of the strong state during the process of economic development. Once the people in the two countries realized the necessity to protect their own interest as well as the public interest, they gradually initiated NGOs. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendship network size, frequency of interaction with close friends, quality of network members (number of “delinquent” friends), degree of intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents (in terms of time spent together), frequency of interaction with close friends, and neighborhood fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

Gender, Law and Legal Professions in Korea

Gender, Law and Legal Professions in Korea Since 1945 Korea has gone from colony to dictatorship to democracy. Educational opportunities for women have exploded in quantity and quality. The legal professions, once reserved only for men, have opened up to more balanced gender representation especially in the past few years, and the legal system of education has undergone a paradigm shift that may have predicted a boon for women entering the professions of law. At the same time, new laws protecting the place of women in society have been passed and seem to be working for the benefit of gender equity and equal rights. Women judges, legislators and business executives have become common forces often fighting for a more gender-balanced system.

Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarried among youth. The explanations on the issue has been given to the issues such as economic condition or individualism among them, which seems to be insufficient. This article aims to analyze the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patrilineality privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The result shows the great gender differences in the narratives of family value. Men interviewees tend to tell the sons’ responsibility of the care for the parents and the role of the male provider, while the women as well as to the consumers by the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents. So we can call the recent changes among them as ‘the family-oriented individualization’

Korean Wave As a Hybrid Subculture

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any ‘Korean subculture’ including cuisine, clothes, cosmetics and language, etc. ‘Gangnam style’ by Korean singer PSY has recently acquired more than 1.7 billion views on Y-Tube in the world within a year.

This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative aspects, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

Organizing Independent Contractors in South Korea: A Case of Insurance Agents Unionizing

The purpose of this study is to understand limitations and possibilities of organizing independent contractors by focusing on insurance agents in South Korea. Among various types of precarious employment, insurance agents are an exemplar case of independent contractor jobs. Since the 1997 crisis, the private insurance industry has shifted market risk on to workers by employment externalization in the form of independent contracting as well as introduction of variable insurance scheme. The labor standard law does not treat insurance agents as workers and most of insurance agents are not affiliated with labor unions. As a result, insurance agents are outside labor protections. Under this context, insurance agents attempted to organize their own union, Korean Insurance Agents Union (KIAU), in early 2000s, and form a branch of Korean Finance and Service Workers’ Union (KFSWU) in 2004. However, the KIAU lost rapidly its membership since the mid-2000s and have failed to revitalize itself until now. This failure might be attributed to some external and internal factors. External factors include the denial of worker status by the courts, the absence of labor market regulation by the government, and crack down on union activities by major insurance companies like Samsung. Internal factors include the absence of strategic approach on the side of the industrial union (KFSWU), individualized job characteristics of insurance agents, heterogeneity of the working conditions between regular workers of insurance companies and insurance agents. In recent attempts to re-organize insurance agents, the role of industrial union is crucial factor. Some programs turning non-regular workers into regular jobs are implemented by the KFSWU through collective agreements, however, the union focused on directly employed non-regular workers, like fixed-term workers. Moreover, the KFSWU’s strategic and long-term support was not given to insurance agents, because of its internal constraints and the lack of preparation.

Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan

The Zainichi Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But success of ethnic identity formation is not easy in a country that determines nationality by jus sanguinis and so many third- or fourth-generation of ZainichiKoreans have some trouble living as a ‘Korean.’ Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the ‘Korean Wave’ and ‘abductions by North Korea’, the discourses of Zainichi and Chosenjin, this paper attempt to analyze the implications of how the Zainichi Koreans through their selection processes of group appellation in everyday life. In this paper, looking into the survey and in-depth interview data, which I have conducted after 2008, I will also attempt to analyze the relation between the using and selecting group appellation of Zainichi Koreans and the changing of ethnic identity of them.

These approaches would bring light to new aspects not only on the current Zainichi Koreans’ identity but also on how factors, like as Zainichization, affect changing ethnic identity in host society.

South Korea’s Developmentalist Worldview and Debates about Its Modernity

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seonjinjuk (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seonjinjuk or “on the threshold of seonjinjuk” (“seonjinjuk munteok”), which provides both senses of superiority over hujinjuk (backward country) and of inferiority over seonjinjuk. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seonjinjuk as its historical national mission. This paper aims to provide a critical review of the debates about Korea’s modernity in the light of its dominant developmentalist worldview, the discourse of seonjinjuk.

International Policy-Translation Among Precarious Women Workers Organizations :Japan and Korea in Comparison

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women’s Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experience of Women’s Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women’s Trade Union (KWTU) later. On the contrary, Women’s Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2). Yet, the organizational performance and political impact of the KWTU and KWWA overwhelmed those of the Japanese, WUT and ACW2, in a decade.

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will be used for describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individuals and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women’s organization, the labor movement discourse, and the drivers in the process of policy translation.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur.

Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study

Whereas the impact of the welfare state on the quantity and quality of women’s employment is widely studied, little research has further investigated the ways other (non-welfare) types of policies affect women’s occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 35 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by laws that guarantee equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender equality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

New Media and The Social Reconstruction Of Reality

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann’s phenomenological proposition: ‘reality is socially constructed’, this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of “social reconstruction of reality.” Next, referring to the results from 2011’s survey of 1027 netizens on happiness, the constituting mechanisms of online and offline life-worlds are compared. Finally, based on aforementioned theoretical and empirical discussions, qualitative differences in online and offline life-worlds are further explored.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to favor fantasy principle. If causal logic is inherently emphasized in explaining the behaviors of citizens, narrative logic seems more salient for understanding netizen’s behaviors.

Compared to our conventional offline everyday-life which has been existing from the outset of agricultural age, online everyday-life, used to be generally looked down as ‘mock reality’ devoid of substance. However, empowered online virtual reality is now elevated to an alternative life-world capable of competing against offline actual reality. Moreover, owing to its hyper-real characteristics, online virtual reality appears to reinforce itself up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

South Korean Values: Understanding Who Koreans Are

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people in general, can serve as the starting point. Identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of “magic of numbers” and fully utilizing the power of empirical generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used.

It could be argued that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in the sense of supreme bliss. The aforementioned tendencies went through significant transformations, the sense of supreme bliss’ sought after differs from that of traditional Korean society. The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by means of meaningful and beneficial personal connections. What we are witnessing is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of immigration: often divided by esoteric categories (such as "black Russians") that are remote from our contemporary understanding of race and ethnicity. As reported progresses to the synthesis and recommendation, however, the notions of "desirable" and "undesirable" immigrants emerge as an overarching principle of categorization, and the ensuing recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstabulates align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

Attitudinal Correlates of Cohabitation in Japan

What are the attitudinal correlates of cohabitation in Japan? Cohabitation has been growing more prevalent among young cohorts in Japan, and yet little is known about its relationship with liberal attitudes on family and gender. Exploring this issue is important for testing the Second Demographic Transition theory that predicts ideational secularization as driving force for non-traditional unions like cohabitation. In this article I examine attitudes on family and gender norms that are correlated with current or past cohabitation experience. For this analysis I use the 2009 National Survey on Family and Economic Conditions (NS-FEC), a national, two-stage stratified probability sample of 3,112 Japanese men and women ages 20-49. Individuals with more liberal attitudes toward pre-marital sex and out-of-wedlock birth were more likely to have cohabited relative to those with conservative attitudes. Also, those who disagreed with forgoing divorce for the sake of children were also more likely to have cohabited. On the other hand, drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

Culture-Driven Gentrification from below: A Case Study of Tokyo, Japan

This paper analyses the ongoing process of Tokyo's gentrification from the case study of former working class neighborhood in east Tokyo. Since gentrification has generalized as a global urban phenomenon, it has become an avowed policy goal of the cities competing for economic supremacy and globalized services. In Tokyo, recent redevelopment of the central Tokyo which actively promoted by state authorities had been considered. The eastern part of Tokyo has been developed as an industrial district in the rapid economic growth period of modern Japan. Like many run-down areas in other cities, it has suffered from the decline of local manufacturing due to de-industrialization and has remained as a place that stimulates nostalgia for “good old days” rather than attractive tourist destination until 1980s. However, when art exhibitions in derelict factories and community-engaged art projects as local experiment for community rebuilding had begun in late 1990s, changes occurred gradually. Galleries and studios started to set up in the area, while tenement houses replaced with small independent restaurants and cafes. Local art festivals and tourism campaigns coupled with commercial and residential redevelopment of surrounding area started to lure tourists and relocating businesses. The initial intentions of art as a cultural resistance slowly fade out, while the focus has been moved to economic revitalization and celebrating authenticity.

This may be a common scene in many ‘creative cities’ around the world, but what makes difference is that instead of “revanchist city”, there is coexistence of expected change for gentrification from the local community itself and deep-rooted nostalgia to the past based on the myth of ethnic homogeneity. Both the main features of first-wave gentrification in 1970s and current state-led gentrification can be seen in this case, intertwining various elements of gentrification history that has been formed from multiple time and space.

KIM, SUNMIN* (University of California, Berkeley, sunmin@berkeley.edu)

This study aims to introduce a new generational politics model, and to apply it in explaining the welfare politics in South Korea where social investment strategy has recently been pursued. So far, social investment perspective underscoring policies for the early stage of life rather than policies for older age has overlooked welfare politics, whereas existing theories on welfare politics have failed to organize generational interests theoretically. To fill this theoretical gap, this study suggests ‘three generations model’ which establishes older generation, working generation, and future generation as key stakeholders having welfare status in the welfare state. Applying this model, this study explains how public pension for older generation has reformed, and how social investment policies for future generation has been pursued in the context of social investment in South Korea. The complete expansion of childcare support has been made possible as the interests of current working generation and of future generation were considered almost unapproachable. In addition, investment on future generation has been considered as compensation for generational equality in the era of ageing society. Theoretically, this study confirms that three generations model has an effective explanatory power in understanding welfare politics of social investment.

A New Style of Labor Movement Among Korean Youth

South Korea has shown high levels of collective interest in various forms of social movements in the modern history. So far, Korean scholars adopted social movement theories emphasizing the roles of resource mobilization, rational choices, political opportunity structures, or social networks; however, they could rarely include the role of emotions in social movements.

This study focuses on the factors influencing the mobilization of social movements: Although the youth generation feels anger and dissatisfaction with the perceived social injustice under the economic crisis, why do they fail to take collective actions? With the ever increasing economic polarization in the present neo-liberal regime, the relationship between emotion and social activities among young people in Korean society has been drawing scholarly attentions. As high rates of unemployment and unstable employment conditions (non-salaried and part-time work) become normalized in the society, youth anxiety and depression are emerging as societal problems. The emotions of the young generation (particularly anxiety and depression) were not approved as cultural nomos in traditional Confucianism and modernism. However, not in the line of Gustav Le Bon, the author believes that the au-64

thentic expression of collective anger (resentment) can incite proactive behavior in a late-modern or post-modern society.

In this research, the subjects are youth in their 20s, mainly college students, involved in “Alba Yeon-dae” which literally means a solidarity group for part-time work. This study employs ethnography and interviews to add dimensions to the dominant regime, which is focused on examining the different spaces and those without, and benefits that are gained in this regard. The presentation first examines constitutive elements of erotic capital in Japanese youth culture. Secondly, it examines the ways in which erotic capital differs from‘social capital’, a concept which is increasingly receiving attention.

Language Rights and Disability Studies

Language rights discourses have rapidly evolved in Japan during the last decade. From an almost unknown term, it has advanced to a frequently used concept to address linguistic inequality. By foregrounding fairness in language matters, this discourse has expanded the scope of moral arguments on language diversity in Japan.

While it is usually being largely influenced by international academic and political discourses, the Japanese discussion on language rights has gradually undergone some specific evolutions. For example, it is probably unique to Japan that the struggle for the recognition of the sign language has been one of the leading forces advancing language rights. Related to this is the most striking characteristic: the enrichment of language rights with the discourse of disability studies. The so-called social model in disability studies, which sees the cause of disability not in the body of the individual but in the society, has ostensible affinity to the idea of language rights which also focuses on injustices rooted in sociolinguistic conditions. The approach to add options rather than just change the dominant regime, or the emphasis on improving the legal framework are also features common to both discourses.
The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language. After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

Education, Employment, and Gender Role Attitudes Of Japanese Married Women In The 21st Century: Declining Significance Of Rational Choice and Cognitive Dissonance Reduction?

Several students of attitude change have utilized models that combine rational choice with cognitive dissonance. Kimura (2007) proposed a hypothesis of “rational choice and cognitive dissonance under the constraint of the segmented labor market” in order to explain the apparently paradoxical associations among education, employment, and gender role attitudes found in the data of Japanese married women in 1980s and 1990s. There was a negative relationship between educational attainment and attitudes towards the gender division of labor, a negative association between these attitudes and employment, and also a negative association between educational attainment and employment. If we analyze the data in the early 21st century, however, we can find that all of these associations are weaker than before. Although this seems to reduce the explanatory power of the hypothesis that postulates rational choice and cognitive dissonance reduction, I will examine the factors that may have contributed to these changes form a rational choice perspective. On the one hand, surveys on gender role attitudes, as well as media reports on these surveys, have pervaded Japan so that respondents might have come to regard a negative attitude towards the gender division of labor as a socially desirable response. On the other hand, protracted recession have reduced the size of the fulltime labor market as well as the husband’s income so that even highly educated wives might have become unable to resist working as part-time or dispatched workers. The latter implies that structural constraints on rationality are significant.

Branding of an Industrial Heritage and Practice of Local People: The Case Study of Gunkan-Jima

This study examines how the branding and the commodification of an ex-industrial area proceed and how they affect everyday practices and historical identities of local people. Nagasaki is a global harbor city located in southwest Japan. Less than fifteen kilometers away from the port of Nagasaki, there is Gunkan-jima island. The island was used as a coal-mining station between 1887 and 1974, contributing to the industrial modernization of Japan. In 1890, the Mitsubishi Company bought the island and set about gaining coal from the bottom of the sea. Subsequently, the company built up the island’s infrastructure as well as living quarters (such as large concrete buildings, apartments) to accommodate its workers. However, in 1974, the mines were forced to close due to an abrupt shift in energy use, which made the whole population move out of the island. Since then, Gunkan-jima has been totally uninhabited.

However recently, the island started to arouse attention as a symbolic site of industrial modernization of Japan. Nagasaki City is now attempting to re-evaluate this abandoned island as an “industrial heritage” and utilizing it as a tourism resource for regenerating the declining industrial areas. There has even been a movement to make the island a world heritage site, while tours around Gunkan-jima are also becoming more and more popular.

Using data based on fieldwork conducted in Nagasaki City and semi-structured interviews with several actors related to Gunkan-jima, I found that the branding and the commodification of the ex-industrial island have been drastically promoted by the municipal merger and the “locality” as the basis of the legitimacy to represent the island has been totally changed. These findings can be utilized in the future studies that examine the mechanism of urban regeneration projects.

**Genre As Social Force: Hollywood Cop Action from the Perspective of Filmmakers**

Recent analysis of genre as social construction shows that critics and scholars tend to categorize works of art differently than producers do. The biggest marketers in Hollywood cannot copyright genres and so avoid treating their own product as genre. They sell their films instead as unique combinations of diverse elements, in order to appeal to many audiences and differentiate product. Interviews with contributors to the Hollywood cop action movies discuss the conditions under which they come to work on the projects, the extent to which they see themselves as filmmakers, and how they craft their own work. This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrate how a genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

**Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews**

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard et al. 2000; McKenzie & Watson 2000). With the discussion having now Rights involving the role of recruitment consultants and communication skills and the ability to brand oneself in the current labour market where the CV advantage has been displaced by the tyranny of the right person. Feminist scholars (e.g. Acker 1990; Bordo 1993; McDowell 2009) have already shown how different corporeal characteristics in terms of sex/gender became categorized as suitable or unsuitable to conduct different kinds of work tasks. However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes.

The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge and performance styles to categorize which candidates would fit in with different working teams and environments. In order to fill in their clients' expectations, the consultants not only attempt to read the bodily performances of the employee candidates. In addition, due to the employment discrimination law, the consultants must be capable of interpreting the non-verbal hints of their clients concerning the ideal employee's features of the wanted employees. Theoretically, the paper draws on Marx's notions of labour, Bourdieu's (1984) conception of embodied capital and the phenomenological discussion of the lived body (e.g. Merleau-Ponty 1945).

**KINNUNEN, TAINA* (University of Tampere, tkinnun@gmail.com)**

**“Strong Ones Manage Alone, Weak Ones on Each Other’s Laps”. Love and the Finnish Touching Culture**

“Strong ones manage alone, weak ones on each other’s laps”. Love and the Finnish touching culture

The quoted phrase is an old Finnish saying which represents the traditional virtue of managing alone. The "lap" is not only a metaphorical expression; instead, it refers to the widely shared attitude to the sense of touch in human relationships. In Finland, the touch is saturated with prohibitions, fears and taboos, even in childcare. This was noticed in touch life narratives written by Finns of different generations that were gathered for the project under discussion. In particular, writers born just before or during the war years in 1939-1945, hardly remember to have experienced any caring touch by their parents. Many of them had suffered from the lack of caressing and loving touch throughout their lives.

The paper asks whether the touch as the most archaic human sense and vitally important for child development is inevitable for the human love bonds (cf. Ashley Montagu 1979). How could “love” excluded from touch even be conceptualized (cf. Luce Irigaray 1996)? How is the inevitability of touch reconciled with the fact that touch is the most politicized sense in many (northern) western cultures today where material and symbolic power has only preliminarily been discussed in academic research (cf. Constanze Claren 2005; Erin Manning; 2009; Anthony Synnott 1997)?

Even the feminist theorization of affects has neglected the sense of touch although it, to me, represents an embodied reaction and act where (social) emotions and (physical) affects merge into each others (cf. Sara Ahmed 2005). By utilizing the empirical material of the Finnish cultural context, my presentation gives an example how the socio-cultural research of senses and feminist affect theory can be utilized when studying the tangible conditions of love.

**The Conditions for Sustaining Efficient and Inefficient Norms**

Although most rational choice theorists have assumed that social norms are created to prevent negative externalities, some norms spoil the welfare of people. These inefficient norms have been discussed as “unpopular norms,” which typically include “the spinster's new clothes,” self-destructive adolescent behaviors, infibulation, and honor killing. However, it is also true that efficient norms, which prevent uncooperative behavior, are observed in social dilemma situations. In this paper, we hypothesize that long-term relations stabilize both efficient and inefficient norms, but communications destabilize inefficient norms. We analyze a Sub-game Perfect Nash Equilibrium (SPNE) and a Strong Perfect Equilibrium (SPE) in an N-person repeated prisoners’ dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all other members if s/he deviates from this expectation. Two equilibrium concepts reflect a player’s ability to communicate. A strategy profile is an SPNE if no player can carry out solitary deviations (change his/her strategy). This equilibrium concept assumes a situation such that players cannot communicate with each other, e.g. tacit price collusions in oligopoly markets. As the Folk theorem indicates, there exist inefficient SPNE’s, in which the Pareto-deficient payoff is sustained by costly punishment. In contrast, an SPE assumes a situation such that self-interest

**Future Visions and Social Theory**

Social science in general and sociology in particular are facing a challenge of conceptualizing the relation between environment and society in ways that assist the dialogue and multiple attempts for creating visions of a sustainable society. Thinking about the future always involves thinking about the future of society. However, in future studies little attention has been paid to how underlying social theories affect our future visions. Since backcasting is a special approach in future studies which starts with a normative vision of the future and elaborates a strategy to reach this normative vision, this issue is even more pressing. Our paper
aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices. In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only presented in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses.

The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilizing such methodological approaches. We argue that by focusing upon both theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

Emotions As Reason, Rationale and Result of Urban Artist Areas

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the intersection of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian – and often emotional – purposes internal to the participating artists and their community. The latter purposes are objectives directly aimed at the transformation of the area. These artist areas are “reserves” that serve as catalyst for the internal socio-spatial emotional enjoyment of artists, performing and propagating a “liberty of delectableness” not offered outside these specific areas. As a theoretical starting point I interpret texts such as Zukin’s “Loft Living” (1982), Bourdieu’s “Rules of Art” (1992) and Ehrenreich’s “Doing a Body Turn” (2006), plus the literature on the notion of “cultural sustainability” that alludes to emotional values (e.g., Kirchberg & Kagan, Brochi, Duxbury, Throsby). There is a variety of emotional benefits that can be paraphrased and typologized as “artistic community identity”, “alternative community”, “lifestyle experimentation” and “bohemian sociality” – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the “affective turn” (Clough 2007, Gregg & Seighworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

Agism and Language in Old-Age Inequality

Nikolas Coupland (2007) has focused on “style” as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coupland shows that the common sociolinguistic reduction of style to social structural affiliations entails a cost to understanding how users agentically create meaning through choices of style. Separately, Coupland bemoans that linguists have insufficiently studied discursive communication by and involving old people, disregarding a long tradition of largely psycho-cognitive studies of language practices by and toward old people (But see linguists Pennebaker et al, 1995, Sankoff & Blondeau, 2007). Excepting gerontologists, social scientists also tend to omit old people from research. General discourse rarely associates old age with matters of style, as if style-based variation is of no interest or awareness after a certain age.

Aging of the global population has been widely publicized, generally expressing fears about negative effects on society-at-large – i.e., on younger generations -underlying pervasive public attitudes of agism and disciplinary research inequality. That agism is embedded in language, and detrimentally affects aging identity-formation often through linguistic practices, has been recognized (Miniciello et al, 2011). But, “normally” examined, with little serious attempt at proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding “ableist” language and the stigmatized identity of disability. The Disability Rights Movement offers a model, led by disabled activists, eventually involving rehabilitation and other “helping professionals” and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key dis-

KIRDINA, SVETLANA* (Russian Academy of Sciences, kirdina@bk.ru)

Methodological Individualism Vs. Methodological Individualism As a Core Principle in Alternative Social Theories of Second Modernity

Modern dominant Western social theories are based largely upon methodological individualism. Attempts to overcome its confines are undertaken constantly in different analytical programs and approaches (A. Giddens, M. Archer, P. Sztompka, P. Bourdieu, J. Alexander, J. Ritzer, V. Yadv). But in fact all these approaches assume an explanation of the social and economic phenomena in terms of individual behavior and follow methodological individualism principle (S. Lukes, J. Holberg). In the paper the capabilities and limitations of methodological individualism as a core principle of mainstream sociology and economics are explored. The recent debate dealing with methodological individualism in Russian and foreign sociology and economics is considered. Institutional individualism principle (A. Agassi, F. Toboso) is tested. As a challenging view, premises for methodological institutionalism (P. Keizer, S. Kirdina) are offered and considered as an alternative and complimentary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological perspectives as philosophical precondition such as holism ("the whole is more than sum of its parts") and a reductionism ("the whole is understood as a set of primary elements forming it") respectively. Institutional matrix theory (S. Kirdina) based on methodological institutionalism principle will be presented to explain the success and failures of historical trajectories of modernization for non-Western countries as well for Western ones.

Fitness Culture As the Factor in Globalization of Recreational Sports

In the context of globalization, integration in the sphere of competitive and professional sports that receives maximum support from political and economic institutions, International Olympic Committee, and international sports federations expands to a great extent. Increasing need of the modern society for health-recreational technologies unprecedentedly reinforces the role of health culture and health industry known as "wellness". Fitness is an element of wellness culture, and it presents a universal basis for popularization of health forms of physical and sport activity along with optimization of nutrition and body weight control. It makes health fitness as the direction of recreational sports an effective tool for strengthening population’s health and preventing non-communicable diseases.

Globalization of health fitness culture is primarily determined by the development of global fitness industry. Another factor in fitness development is the activity of mass media and advertising, as well as marketing and educational campaigns in the form of fitness conventions. The third factor in globalization of fitness culture is the activities of international organization in the sphere of sports for all and fitness, which include Sport for All Commission of International Olympic Committee, the Association for International Sport for All, International Fitness Association, Federation of International Sports, Aerobics and Fitness, and others.

Issues in social factors of promoting health fitness on a global scale as well as its scientific, informational, educational, economic, legal and institutional support represent actual direction in integrative sociological research of sports, physical activity and health. Uneven development of fitness culture and inequality in access to fitness services caused by of various social factors are of particular interest to sociologists.

Problems of Access to Modern Wellness Culture

Society's growing interest to the quality of life has predetermined the development of modern culture and industry of health called "wellness." During last decades, wellness has acquired features of new institutional complex, which integrates functions of numerous spheres related to health preservation and improvement, e.g. medicine, pharmacology, sports, leisure, tourism, manufacturing of food, cosmetics and goods. The process of popularization of wellness culture is supported by scientific and educational institutions, mass media and advertising. From a sociological point of view the inclusion of individual into wellness culture is determined not only by the conditions of upbringing and quality of educational system, but also by material rewards which impact lifestyle consumption. The key role in this process is determined by individual's socio-economic status, which includes income level, nature of person's professional activity, availability of mon-
ey, free time and vitality strength for active-health leisure. In this aspect, the maximum access to the values and practices of wellness culture have the elite groups, middle classes primarily in the developed countries ("the golden billion"). Not only modern medicine and wellness culture but also basic medical care stay inaccessible for the majority, namely the poor population of the world.

In the context of universalizing societal need for health improvement, the effective strategies of increasing access to wellness culture is determined by the limits of economic growth, amplification of ecological barriers, the need to shift to wise consumption. Such strategies include raising people’s personal responsibility for their health, lifestyle, active-recreational leisure; strengthening financial, institutional and informational support; development of preventive medicine; using potential of leisure and local green tourism for expanding the access to health-recreational practices for people. In general, the study of health-stratification and unequal access to the wellness culture is based on integrative sociological approaches.

KIRIZMI, MERIC* (Osaka University, merickirmizi@gmail.com)  
The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms, based the bandwagon of neoliberal urbanism after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan’s sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage with its mayor, Tomoyuki Hashimura, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of mushrooming fancy mansions and many homeless in the city renders this policy turn questionable.

In this urban sociological research, I aim to comprehend the process of neoliberalization in Osaka City, observing this change process over the last 30 years in detail at the level of a downtown neighborhood called Horie, located in the Nishi Ward. With reference to the concepts of post-industrial city, gentrification and neoliberal urbanism, the study comprises of an analysis of visual materials and narratives of the long-time residents in the area. Despite being very close to the central business district of Osaka City, Horie has a more residential character and is interesting in terms of the regeneration of its old shopping street of furniture stores during the 1990s. Its current atmosphere is visually similar to the western examples of neoliberalized gentrified neighborhoods, with its up-market mansions, western style cafes, specialty stores catering to the office trade, trendy people strolling around, and some small crime like purse-snatching.

How Can Trade Unions Improve Quality of Work in Low-Wage Services in Europe?

In 2010 the European Union adopted the Europe 2020 strategy, emphasizing the need for increasing labour market participation with more and better jobs as essential elements of Europe’s socioeconomic model. But there is evidence that quality of work in many of the low-wage sectors in Europe is still problematic (Holman 2012) and problematic configurations produce various forms of precariousness, low-wage work, problems of social inclusion and violence at work (Kalleberg 2009). Increasingly, employment at the lower end of the spectrum of skills and wages in Europe is dominated by services that are spatially distributed and often employ vulnerable groups of employees (e.g. contract catering, office cleaning, waste collection, etc.). In these sectors, work is often outsourced from the public sector or other private sector companies and taken over by private sector service providers (large service multinationals or SMEs). The outcomes for employees often are insecure and problematic working conditions and little representation. This results from companies’ cost-cutting strategies, enhanced by changing regulations, the practices of contract awarding and public procurement, the role of the client, conditions that are likely to be exacerbated by austerity measures in the framework of the current crisis, etc. The continuous debate about the specifics of service work has brought significant evidence about the importance of thetriangle between employers, employees and customers (Korczynski 2009). The paper investigates how trade unions address these challenges at EU level and in selected European countries. It is based on the recent research done in the framework of a European comparative project WALQING (www.walqing.eu). The findings presented in the paper are mainly results of the analysis of interviews with social partner representatives in those sectors as well as from company case studies carried out in the examined countries.

Frequency of Incarceration, Criminal Thinking, and Sense of Coherence Among Male Japanese Criminals in Offender Rehabilitation Facilities

For former convicts, reintegration into society is complicated by psychological factors, such as mental strains and personality traits, and socioeconomic factors, such as unstable employment. The aim of this study was to investigate the relationship between the frequency of incarceration (at children’s self-reliance support facilities, juvenile reformatories, juvenile penitentiaries, and prisons) and the personality factors of criminal thinking and sense of coherence (SOC).

This study was conducted at two metropolitan area offender rehabilitation facilities and participants were 116 Japanese men who had been placed under parole/probationary supervision or had been recently released from prison. The participants completed a questionnaire survey that contained the Japanese...
version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of the three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, “cut off” thinking, self-deception, and problem avoidance. Spearman’s rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and each personality factor. In addition, the Man-Whitney U test and Kruskal-Wallis test were performed to analyze the relationship between frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of “cut off” thinking. The frequency of imprisonment (sentence only) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders’ SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

Young People’s Practical Agency: Transitions From FE College To Work In London

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people’s experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. This group is an under-researched ‘missing middle’ (Roberts 2011) group, who are neither NEET nor following ‘tidy’ pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at ‘the present’, and thus they develop resilience. We suggest that agency is situated and discussed the interplay between young people’s agency and the contexts in which they live, particularly in relation to youth labour market conditions.

Deteritorialising Teaching and Research through Information Technology and Capitalism

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deteritorialise teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deteritorialisation is used here in two senses: firstly as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language. This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level linking different sciences, psychology and cultural-historical activity theory. Furthermore information technology is deemed to have the general capacity of enhancing the joint knowledge creation of humans in conjunction with it. Is the future role of universities to provide such easily adaptable concepts which facilitate bringing in corporate partners by avoiding excessive clarity? Would this contribute to the techno-political utopia of virtual online communities developing the roles of the state and combating transnational corporations as Taeul Harper suggests in “Smash the Strat?”

No Wires Attached? Displacement of Power through Information Technology

What we have learned so far is that there is nothing with the Wireless Network, and this impact expresses the previous sentence in terms of translating two scientific models into material form. It was uttered as a summary of using Minerva Plaza, a set of facilities built within the University of Helsinki in order to utilise the supposed digital nativity of the students. The stated goal of Minerva Plaza is to weave together collective knowledge construction, emerging communication technologies and inclusion into the scientific community in order to prepare especially future teachers for the challenges they are predicted to meet during their careers. These goals have been somewhat congruent with The University’s ICT policies and the capacities of the selected soft- and hardware.

The collection of assembled and interconnected components of Minerva Plaza can be aptly described as volatile. They can facilitate very fast transitions from one state or point of interest to another but also being difficult to hold permanently. Some of this explicitly intended in the design. On the other hand the Wireless Local Area Network has managed to hold its position as an unintended obligatory passage point for the sets of translations of using the Plaza as planned. This paper presents an analysis on how dependency on ICT and project funding has displaced the power to decide who participates and how away from the users. This seems to resonate with David R. Johnson’s depiction of technological change as a cause of diminishing professional control within the professoriate. Unlike Johnson I argue this is caused by the volatile nature of the whole assemblage also in cases where the technology use is initiated and endorsed by the teaching professionals.

Old and New Inequalities of Educational Opportunity by Gender and Family Background in Finland

What comes to equality of educational opportunity, in the sociology of education enduring themes have been, for instance, the Bourdieuan thesis of strong reproduction and the persistency of inequality à la Shavit and Blossfeld as comes to relations between parents’ socioeconomic position and their offspring’s educational achievements. Empirical studies from various countries have started to report decline in educational inequality. Our previous studies based on Finnish longitudinal data have shown that the equality of educational opportunities, are less measured by differences in participation in university studies by gender and family background (parents’ education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

In this paper we explore equality of educational opportunity and labour market effects related to educational expansion in Finland. Our updated longitudinal register data covers five age groups of higher education students and graduates from baby boomers to recent small age groups, including for the first time also students of the universities of applied sciences. We ask to what extent expanding education improves the odds of participation in university studies when analyzed by gender and family background. We also study how the female/male relation, situation, emerging communication technologies and inclusion into the scientific community end changes along with higher education expansion. Shortly, we examine the ways in which changing gender relations in university education manifest on the labour market in the earnings of male and female graduates of various fields and family backgrounds.

Toward a Sociological Understanding of Evolutionary Time in Human Development

There is no doubt that social sciences would benefit from opening up more toward Darwinian ideas; most crucially, it would enable a more accurate grasp of the vast time periods involved in the development of our humanity and social life. As known, sociologists have had a complicated relationship with Darwinism – perhaps haunted by the specters of “Social Darwinism”, the threat of “socio-biological reductionism”, or other traumatic past experiences. This presentation seeks steps toward evolutionary sociology by examining, (1) the lessons taught...
by the currently popular “evolutionary psychology” (Tooby and Cosmides, Pinker) regarding the human nature; (2) the “Homo economicus” criticisms of evolutionary economists in the spirit of A Cooperative Species: Human Reciprocity and Its Evolution (Bowles and Gintis); (3) Geoffrey Hodgson's version of “Generalized Darwinism”; and (4) “nich-construction” approach to human “gene–culture coevolution” (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution.

While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to “the problem of social order” – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson’s model in turn utilizes pragmatist conceptual tools well, but its level-ontology and generalized principles of evolution remained less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment transaction model opens the brain-consciousness-linguage-society continuum “outside-in” rather than “inside-out” and allows understanding social processes of localized organism-environment transactions by means of which evolution can in fact only be understood.

KIJYOHARA, YUU* (The University of Tokyo, yuu.kiyohara127@gmail.com)
Did Japanese Women Writing on Cultural Issues in Post War Japan Create Solidarity Among Themselves? a Case Study of the "Kusanomi Kai" (Kusanomi association)

In post-war Japan, many Japanese women have been writing about their everyday lives, their opinions on social problems, or politics in major newspapers. These readers' columns helped in founding the “Kusanomi Kai” (Kusanomi association), an association of writers and readers, in 1955.

In my presentation, I will examine how and why a community of writers was created between 1955 and 1958. First, I will explain why they founded the communication association and made it their primary media. Back in the 1950s, women often found it difficult to get their opinion published in major newspapers, since some editors held the view that women were inferior to men and consequently criticized women's opinions that appeared in the readers' columns. To avoid being criticized, some women made “Kusanomi Kai” their primary media to communicate amongst themselves.

Second, I will discuss the practice of writing followed by the “Kusanomi Kai” members and the use of media studies. Those days, most women had little experience of making a speech in front of an audience. However, as they were good at writing, they used the skill for expressing their opinions about gender or social problems and read them out as they appeared in print. To do this, they would go to a meeting of “Kusanomi Kai” and talk about their writing in the media.

Third, I will outline the profile of the women who participated in the “Kusanomi Kai” and the categories of members in the association. The association was made up of not just housewives but also a few working women. They wrote about their opinion on issues that mattered and discussed them with each other in the group meetings. In this way, they developed a sense of intimacy and built their collective identity, not as “housewives” but as “women.”

KJELLMAN, ARNE* (Stockholm University, kjellman@dsv.su.se)
The Foundation of a Theory of Everything

This paper discusses the basis of a recently developed “Theory of Everything” that builds on a “Subject-Oriented Approach to Knowing.” Its persistent claim is that physics and modern science by their reference to the “given”, most often explicated by the concept of “matter”, have led human thinking astray. This work shows that in the very moment a thinker/knower introduces “matter”, or the like, as something subject alien, he already in the outset introduces a crippling matter/mind distinction from which knowing never will recover. This contamination spreads to other men and their languages and conceptual frameworks, hence many of the perplexities and paradoxes found in modern science. On this view, truth and falsity, right or wrong disappear, as well as the traditional role of science as a pursuit of truth. Along also goes the cleft between the social and natural sciences. This means that all knowledgeendeavours can, pace Ernst Mach, be grouped under the same umbrella. The idea of a common reality gives place to the idea of a private reality – a universe belonging to each and every man, and laboriously constructed on the basis of purely private experience. By his own will man builds this fund of cumulative experience in isolation or in a mood of communication and social consensus. In the latter case, the tools of communication are also critically influenced by his choice of conceptual seed. On this view, the first hominid man was forced to construct a private language to connect to his children simply to break free from the isolation of his thoughts. Thus Adam was forced to build an emerging science strictly in a bootstrap manner. There is no other way to explain science and human knowledge - a recognition that has hitherto been hidden by a misunderstanding of the sign function.
But inequality defined merely by access to and use of the resources within a certain protected area (PA) is a very limited, and in fact ideological, notion of social inequality. The yardstick should rather be the distribution of the general social resources of the country and beyond. Otherwise, there is the risk of naturalizing “stakeholders” as stewards and custodians of biological diversity. Such essentialism, present in the everyday practice of sustainable development, largely misses locally lived realities and aspirations, and with these the systemic and productive relation between nature conservation and exploitation, in Laos at least. Instead, a view where nature reserves are not passive reservoirs but rather “factories” that produce not only biodiversity as a residual or byproduct of socially structured practice is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

KLEINOD, MICHAEL* (Humboldt University, michael.kleinod@hu-berlin.de)

Sociology of the Frontier, Frontiers of Sociology? Ecotourism in Laos and the Social Practice of Resource Production

This presentation departs from the overall concern with the nature of power and the power of nature in current global capitalist society. It focuses on one aspect of this concern: the sociology of ecotourism in countries like Laos: frontier economies that, by definition, challenge the well-arranged epistemologies of institutionalized disciplines. I argue that attempts at understanding frontier dynamics must be decidedly sociological, i.e. aware of the dimensions and peculiarities of social practice as the very place where transformations and continuities take form. On the other hand – since theory itself is bound by and thus must reflect the complexities and limitations of time and place – sociology of frontiers must also transcend itself: first, by transcending the inherent bias that “everything is social”, albeit acknowledging that everything “is social”, second, just like socio-economic processes “run wild” at the frontier, frontier sociology has to transcend academic boundaries, within and outside the discipline.

Nature reserves are “thick” social facts constituted and maintained by socially organized and differentiated practices, and ecotourism is central in this regard. I analyze ecotourism in Lao nature reserves as a socially organized practice that crosses scales (local-global), dimensions (ecology-religion), and nature relations (subsistence-capitalist) as well as binaries such as “tradition vs. modernity” and “conservation vs. development”, which continue to pre-occupy large parts of environmental thinking and practice. Seeing nature conservation as effective resource production, I suggest a theory of frontiers as social spaces of productive conversion. I will show how a careful, reflexive materialism and an elaborated notion of social practice as the place of symbolic-material crisis regulation provide fruitful methodological grounds for a critical social theory of eco-capitalism. The presentation highlights the challenges and chances for a theory of social nature relations in late capitalism fit to deal with the diverse pitfalls of its frontiers.

Truth and (self) Censorship in Military Memoirs

Sometimes it can be fairly difficult for outsiders to gain access to the military field. However, there is a rich source on the military that is readily available for every researcher: military memoirs. This source does provide some methodological challenges, nevertheless. One might wonder about the reliability (truth) of these autobiographies and whether their content is affected by the fact that these books are prone to official censorship by the military in order to preserve operational security.

This study shows that truth and (self) censorship are not only a concern for researchers, but also for military writers themselves and it gives insight into the way soldier-authors deal with these issues. This study provides concrete quantitative data based on all military memoirs published between 2001-2010 dealing with Afghanistan experiences from five different countries (UK, US, Canada, Germany and the Netherlands).

The majority of soldier-authors make some kind of truth claim (either in the form of a subjective or objective truth) in their books that they also substantiate with references to their own lived experiences. However, at least one group of books is being actively censored by the military, but most don’t even mention it, making censorship a common military feature, that is almost normal for military writers.

KLEINOD, MICHAEL* (Humboldt University, michael.kleinod@hu-berlin.de)

Exploiting Untouched Nature? the Social Production of Nature As a Resource at Nakai-Nam Theun Npa (NNT), Lao PDR

The presentation argues that nature conservation is an external imposition on current socio-economic realities in Laos, and such an interaction to the country’s social structures and dynamics: the state and its subjects have to make do with biodiversity conservation as a fact established internationally. Therefore, resource protection feeds into extraction with some systemic necessity. Nature reserves are an effect of power differentials, so the extraction it invites or necessitates one way or the other is ridden by inequities, as well.

KLEIN, STEFAN* (Universidade de Brasilia (UnB), sfkstef@yahoo.com)

Considering the Theoretical “Status” of Critique

The hereby proposed presentation shall focus on a very specific aspect of the relation or discussion concerning modernity and critique. The aim is to, considering the multiplicities of viewpoints addressing the centrality or relevance of modernity as a centerpiece of sociological interpretation, understand to which extent a predominant and (partially) normative concept of modernity can be taken as a point of departure to define the origins of (dialectical) critique while, at the same time, distinguishing the hegemony of modernization theory.

Therefore sociological theory as critical theory should be able to establish a profound and rigorous dialogue with distinct theoretical cornerstones, and here is where the interest lies in bringing to the debate standpoints from peripheral origins, focusing specially on the contribution of the Brazilian (although from a European and migrant background) critical theorist Roberto Schwarz. One has to take into account that a significant amount of his interpretations was written from the 1960s until the 1970s, and therefore precedes the more or less recent wave of post- as well as decolonial critique.

It is central that the predominance of European colonization in so-called South America was tantamount to the pertinence of recovering modernity - carried foremost under the attributes of civilization and enlightenment - as a fundament for economic, political and social conceptions. Hence, as a centerpiece of the discussion should stand Schwarz’s effort to work out the specific and distinct traits of the so called modernization or state-formation process in Brazil and how this enables us to consider the particularities and generalities of a critical perspective based upon various academic disciplines. This dialogue of critique(s) is appraised as a possibility for putting present sociological theory under “cross-examination.”
Developing Home? Transnational and Translocal Return Migration To Ghana

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and, finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of ‘successful’ transnational actors that resemble that of the local elites who have made it in the capital or other big towns: migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana.

The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depends to a large degree on what return migrants have managed to remit back either during their migration or when returning.

Polyamory and Political Economy: A Note on Socio-Economic Inequalities

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of it and other class polymyrmorphic communities. This paper highlights the economic conditionality of polyamorous relationships and families.

Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions which riddle poly communities in advanced industrial and post-industrial societies and confine their reach to particular identities. "Polyamory" as a term was popularized at the turn of the 20th century by radical socio-political movements and their representatives.

In this paper, the author is particularly interested in how the societal consequences and possible policy recommendations are discussed.

The Challenge of Female Commuting for Partnership Stability

In modern societies, demands for spatial flexibility are omnipresent. In Germany, as in other European countries, commuting between home and the workplace is widespread. Women often neglect mobility demands when they have a partner and/or children because commuting adds an extra burden to those who are mainly responsible for the household. But of course there are also women who are female commuters and experience that commuting is as harmful as often feared. Recent findings about the impact of job related mobility on partnership stability show that long distance commuting of women increases the risk of separation for couples in Germany. The goal of this contribution is to get a deeper empirical insight in this coincidence and to explain the mechanisms behind this harmful effect.

This is possible by using the German family panel study (pairfam) which provides rich information on couples' dynamics and spatial mobility. Our contribution makes use of the first three waves of the panel. The sample consists of 2,500 women with partner aged 25 to 28 years and 35 to 38 years in the first wave. Using event-history models harmful effects of female long-distance commuting on partnership stability are replicated. In the next step, the data of the pairfam study concerning gender attitudes, employment and family preferences, and other psychological and relationship aspects are used to explain this effect. It is shown that commuting, employed to reconcile the new roles of women and men in family and working life, destabilizes couples' relationships under certain circumstances.

The societal consequences and possible policy recommendations are discussed.

Political Arrangements of “Minha Casa Minha Vida” Program - the Role of State, Civil Construction Sector and Civil Society

Historically there is a functional relationship between the development of the civil construction productive sector and the Brazilian State, with a deep impact in reproduction of the sector’s capital, being also a fundamental actor in the implementation ministry and the government’s strategic political decisions agency. Implementation decision power was granted to a public bank which acts guided by productivity goals, regardless housing needs. The constructive sector was already strongly present in the program formulation and influencing the rules to a better reproduction of the sector’s capital, being also a fundamental actor in the implementation, given that it became its main promoter.

In the case of municipalities – who had almost no influence on MCMV conception – it was assigned a role of appointing the beneficiaries of the first range (low-income families), assuring them, without financial/institutional efforts, the early re-entry in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to estimate the influence of family-oriented relocations on the re-entry in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panel Study (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010, and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entry of mothers in the labour market, whereas employment preferences have positive influences. Other important influences include marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.
Armed by the development of construction sector and by its macroeconomic, political and electoral roles. This logic shapes the actual housing policy model and explains housing investments’ decision-making process, apparently deepening territorial inequalities. Then, a pending question is: does this model contribute to or counter inequality in brazilian cities?

**KLOCHKO, MARIANNA** (The Ohio State University - Marion, klochko.1@osu.edu)

**Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?**

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world the notion of success, especially economic success, became very popular even for children. It is important to note that as economic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achieving this coveted success.

Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one’s success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic institutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with its relatively high level of corruption (according to TI index) and unstable economy might be more likely to influence the population to acquire quite different values and attitudes, more suitable to ‘cut-throat’ conditions of the market. Is the Ukrainian population’s willingness to ignore the law and basic notions of honesty an indicator of a rational adaptation?

**Good without God: Atheists Facing Moral Questions and the Question of Morality**

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power altogether is perceived to be without an ethical basis, and thus immoral.

Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts behind this accusation, how atheists react to it, what kind of morality they bring into play, and what they think about religious morality.

In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in fact a variety of approaches atheists take in facing the issue of inequality. What are these approaches share is a common pattern for nonreligious ways of dealing with social change.

These different points will be laid out and illustrated with interview material in order to create a theoretical framework regarding atheist and nonreligious morality and ethics.

**Intelligentsia in Modern Russia: Social Status Change**

Humanitarian intelligentsia is a specific social group. Throughout its history it is not only developed non-material culture of society, but also played the leading role as civil asset of the nation, its ‘conscience’. During two past decades transformation in social life put the group in necessity of social adaptation, and so far the social position of the group and its role in the new social relations became unclear.

The paper is aimed to determine the current status of humanitarian intelligentsia in socio-economic, socio-political and professional fields and seek ways to improve its civil and professional positions. The analysis is based on the theoretical and methodological approaches that take into consideration the stratification of Russian society, differences in territorial conditions and professional fields. The study was divided in two phases. Initially, a wave of semi-structured interviews (n = 100) were conducted. After that, quantitative data were collected from questionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current socio-political position of the group and its social adaptation level. The factors of status change present different levels: macro - level (socio-economic, political, socio-cultural change in the country), meso - level (the development of the region and current professional sphere), micro - level (individual knowledge, attitude and behavioral strategies).

**The Reality of Nineteen Eighty-Four. How Fiction Becomes Social**

A literary text, according to the literary theorist Wolfgang Iser, operates by oscillating between the limits of the fictional and social worlds and thereby expresses the plasticity of the human being and its continued evolution of self. Notwithstanding, the question of how these fictional ideas spread into the social domain is rarely tackled. At the heart of this presentation is the task to forward develop an understanding of how the fiction found in literature participates in the shaping of social reality.

The reception of George Orwell’s popular novel Nineteen Eighty-Four (1949) in the German public sphere in the years 1983/1984 will be taken to exemplify the irruption of the fictional into the social. Symbolizing the concept of totalitarianism in its purest and most extreme form, the element of imagery provided by the fiction of this text moves beyond signification and pretends an ontology. This socio-fictional aggregate referred to either by the novel’s title or the term Big Brother has come to shape the idea of totalitarianism for a whole era. I will introduce the social philosophy of Cornelius Castoriadis to the debate, as I believe it can help us understand the functioning of the fictional within the social as displayed in this phenomenon. Castoriadis attributes primary importance to the imagination for the creation of social knowledge as well as the interaction between the social imaginary significations and the individual radical imagination. His framework of the interrelation between the individual and the social may well be perceived as a gateway for the irruption of the fictional as found in the arts into the social. For this to happen, a sociological understanding of literature, I therefore propose to take the element of ontological pretension provided by fiction into consideration. Fiction can thus lay the foundation for abstract social terms and hence becomes part of social reality.

**Dealing with Difference: Exclusion As a Problem of the Subject or the Discourse?**

This paper integrates the sociology of knowledge approach to discourse (Rein- er Keller) into the debate on exclusion on grounds of sex, ethnicity or age. The main thesis is that exclusion is not a problem of closed or open structures, of powerless or powerful subjects or of intersectional categories. In contrast, the paper argues that exclusion is mainly a result of the interplay between discourses as structures of power and knowledge and subjects related to an institutional context. Considering empirical results, which stress the relevance and irrelevance of intersectional categories alike, the paper discusses how to deal with difference in institutions, that is how to explain mechanisms of exclusion. We propose a concept, which applies the intersectional perspective to the level of communicative interaction in institutions. Focusing on intersectional categories, the concept regards them as discursive constructions, which are more or less relevant in situations of interaction.

First, the paper discusses the main strands of related theories, which deal with the problem of structure and agency in the field of exclusion from three different perspectives: structures constitute subjects, subjects form structures, and subjects disappear behind the (intersectional) structures. Second, the paper concludes that all three mentioned perspectives miss the decisive point. Neither the focus on powerful subjects nor the dominance of structures of powers nor behind structures veiled subjects can cope with the problem of difference proceeding exclusion. To explain this phenomena a broader perspective is needed, which integrates the interplay of discourses and subjects in the context of institutions. The paper argues that intersectional categories are constructed by discourses. Discourses as structures of knowledge and power, are (re-)produced and transformed in communicative interactions. The main hypothesis is: How institutions deal with difference (and exclusion), based on certain intersectional structures, depends on the institutional context in which communicative interactions take place.

**Uncertain Landings and Slippery Cities**

This paper probes the connective tissue of globalisation through the lens of a simple object, in a pair of plastic sandals. As we follow the flip-flop trail from the oil wells in Kuwait from which plastics originate, to the garbage dumps on the edge of cities like Addis Ababa (a big emerging market for Chinese plastics) to which they are finally consigned, through the larger resonance of a small object it will become clear that globalisation is not what we understand it to be. And neither are the cities it promises to connect. The cities on the trail – cross cut by those intersecting train tracks and terrain objects – were both interpretative and slippery. While it looked from a distance as if the trail passed through particular cities, closer examination often proved otherwise, as the trail strayed into particular neighbourhoods, urban zones, exurbs, suburbs, and borders between nation-states and zones of unregistered persons. In some cities, flip-flops reveal it from an unusual angle: from the little considered vantage points of feet, streams of commerce passing through markets and garbage. It concludes that in the light of this kind of mobile, trans-local, object-led research we need to rethink cities in ways that admit both this slipperiness and streams of everyday life, as well as rethinking globalisation so as to acknowledge its ad hoc, shifting and unstable character.

**Techno-Materiality, Culture, and Climate Change: Japan and the Bilateral Carbon Offsetting Mechanism**

Across the Asia-Pacific countries including China, South Korea, Singapore, Australia and New Zealand are embracing emissions trading and establishing their own national systems. Japan is a notable exception. After several failed attempts to develop an emissions trading system, Japan is developing a unique program that emphasizes bilateral trade and technology transfer, the Bilateral Offsetting Mechanism (also known as the Joint Crediting Mechanism). Through this program Japanese companies directly trade technology for emissions offsets from developing country partners. Japan's refusal to engage in emissions trading is in part structured by its heavy reliance on fossil fuels, as well as its need to reconstitute its energy supply mix. In the aftermath of the Fukushima crisis securing energy supply is of critical importance. Broad public contestation of the continued use of nuclear energy to meet Japan's demand increases pressure to use more fossil fuels. To an extent that has placed security energy supply in direct conflict with reducing greenhouse gas emissions. However the bilateral offsetting mechanism also reflects interesting aspects of Japan's refusal to engage with more speculative forms of finance. The program emphasizes material outcomes and has the potential to make a bold policy statement in the Asia-Pacific especially as the Clean Development Mechanism fades in significance. This article explores the unique Japanese approach to climate policy, the role of both private and public sector in shaping the program, as well as the cultural elements that are reflected in its aims and institutionalization. The program is particularly evaluated from the perspective of Japanese climate policy, the role of both private and public sector in shaping the program, as well as the cultural elements that are reflected in its aims and institutionalization. The program is particularly evaluated from the perspective of Japanese climate policy.

**From Hegel to Weber: The Peculiar Relationship Between German Historiography and Sociology in the Long 19th Century**

From Hegel to Weber: The peculiar relationship between German historiography and sociology in the long 19th century

(Prof. Dr. Wolfgang Knöbl, Institut für Soziologie, University of Goettingen, Germany)
The first part of the paper focuses on the period when influential German historians tried to emancipate themselves from Hegel's philosophy of history in order to create a truly empirical science – and failed! The problem was that they couldn't solve the problem of relativism which comes up in any historical account that distances itself from Hegel's teleological perspective. Thus, historians such as Ranke and Droysen from multi-aspect theories and again came up with arguments that in the end were not too dissimilar to the Hegelian ones.

But getting rid of Hegel's teleological philosophy of history was not only a problem of historiography. It was at the centre of the emerging social sciences in general, and in particular the writings of the most important Neo-Kantians, who influenced Max Weber. Weber clearly saw the problem and deliberately tried to cut off all links leading to a philosophy of history. This was accompanied by some costs and Weber's particular conceptual move – the coining of highly robust processual terms which seemingly could not be doubted (and thus could not be relativized) – continued to base its narratives of social change on the assumption that social reality is to be understood as a cosmos driven by robust processes (like "bureaucratization", rationalization", "secularization", "institutionalization", etc). This move, so it is argued, might have been convincing in Weber's days, but it is not any longer.

KO, JYH-JER ROGER* (National Taiwan University, jko@ntu.edu.tw)

**Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan**

One emerging issue of research on work and labor market is to study the segmentation trend in job and work mobility in labor markets, and mechanisms behind segmentation processes. Recently, some researchers argued further that the division between standard and nonstandard workers has acted as an additional segmentation of labor market. This approach also paves the way to understanding of the link between precarious work and social inequalities. Considering the significant impacts and labor market policy implication of this possible segmentation, detailed empirical research is necessary to examine patterns of job and work mobility between standard and nonstandard workers, and also study if these differences have caused segmentation in labor markets of Taiwan.

Existing literatures provide two strands of arguments regarding consequences of nonstandard work arrangement: the stepping-stone hypothesis and the entrapment hypothesis. The stepping-stone hypothesis claims that nonstandard work provides a stepping stone to a standard job and is regarded as a means to flexibilize the rigid labor market. On the other hand, the entrapment hypothesis, which is derived from labor market segmentation theory, assumes that nonstandard work has long-lasting negative consequences on job mobility because it makes nonstandard workers “trapped” in the secondary labor market segment, or leads to unemployment. To investigate which hypothesis is correct in Taiwanese labor markets, I use “Manpower Utilization Quasi-Longitudinal Survey” (2008-2011) to examine job and work mobility between standard and nonstandard workers. As a result, the findings from multi-nominal logistic regression models support the hypothesis and the hypothesis and the hypothesis and the hypothesis and the hypothesis and the hypothesis and the Dark Side Of The Miracle: Hunger and Food Insecurity In Turkey

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantization, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income gap between the rich and the poor, worsening of working conditions, increase in the percentage of workers working for the minimum wage and high levels of youth unemployment. Despite these socially unfavourable social factors, official figures celebrate success in terms of food security and fight against hunger.

This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

KOH, FLORIAN* (Universidad del Norte, fkoch@uninorte.edu.co)

Arranged Urbanism: Modes of Informality and Governance Structures in Barranquilla, Colombia

During the last several years a dynamic transformation has been taking place at the northern city fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built – a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the ‘formal’ and the ‘informal’. The main finding of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of structural arrangements between the land owner and the public authorities. This form of urban development is described as ‘arranged urbanism’ and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of ‘arranged urbanism’ can also be found outside of the Latin American context and have present a new mode of planning governance in Cities in the Global South and the Global North.
view my presentation tries to provide insights on the construction of capacity to act regarding climate change on an urban level: How are climate adaptation plans elaborated, who participates in their elaboration and who not?

Women’s Health and Gender Discrimination In India

Abstract
The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realize their potential; that it’s not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy.

Women’s health in India can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women’s health status is a reflection of gender relations. It is one of the reasons that play a major role in the health outcomes of women in India. Human development Report (United Nations report, 2011) indicates that India is one of the worst countries in the world and ranked 132 out of 187 in terms of gender inequality. In 2005 India enacted the National Rural Health Mission (NRHM) with a clear set of measurable objectives, like Maternal Mortality Ratio (MMR), Infant Mortality Rate (IMR), Total Fertility Rate (TFR), and targets for National Disease Control Programmes (NDCP) in addition to create universal access to public health services and also balance the gender ratio.

The present paper focuses on the achievements of Odisha through NRHM by presenting the primary data (Bolangir, Odisha, India). There is a significant improvement in rate of decline of IMR, MMR and TFR. In addition the present study also examines gender disparities in nutritional status and concludes that women are more malnourished than male.

KOESTER, STEPHEN* (University of Colorado Denver, Steve.koester@ucdenver.edu)
LANGEGGER, SIG (Akita International University)

Finding Shelter in Denver: Multiple Regimes of Spatial Order and Multiple Coping Strategies

From a homeless person’s perspective, the neoliberal city seems like a virtual minimum-security prison. In order to work, eat and rest, they must negotiate multiple and layered ordinances regulating their activity and movement. For the homeless, simply occupying public space is already problematic. Certain municipalities allow begging, others do not. Scrapping metal often violates land use codes. In seeking services, the homeless must conform to the requirements of state and charitable service providers. Obviously, neoliberal spatial control of homelessness does not germinate from a single control center. Peck (2010) argues that the mongrel phenomenon of the neoliberal state is relationally constituted. His notion aligns with Staehehi and Mitchel (2008) claim that public space regulation does not emanate from a single ideological or practical nexus, but courses many separate interpenetrating property regimes.

In attempting to understand how homeless individuals negotiate a growing phalanx of codes and ordinances variously intended to move them toward service providers and into shelters we utilized ethnographic methods. Talking to homeless injection drug users in Denver, CO, a city wherein sleeping with any protection against the elements in public has recently been outlawed, we found that shelters, due to mandated durations of stay and strictly enforced conditions of confinement were often considered undesirable places to be. Understanding this, it is unsurprising that homeless people resist this degree of control by continuing to live in informal and often illegal places for shelter and attendance to personal hygiene. Other findings prove both ironic and tragic. We learned that as of a part of an overall strategy for negotiating Denver’s regimes of spatial confinement often leads to increased drug use. A heavy nod numbs heroin users from the cold and rain. And methamphetamine addicts frequently increase dosages and usage in order to avoid the need for sleep altogether.

Does Inclusion Mean Everyone Every Time?! – Critical Reflection on a Popular Concept

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtle (and not so subtle) forms of exclusion that have developed over the years in our society? Is it really intended that each person in it’s unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and consequential topics.

KOHLI, MARTIN* (European University Institute, martin.kohl@eui.eu)

Cleavages and Conflicts in Aging Societies: Generation, Age, Class?

Fifty years ago, inequality in developed societies disadvantaged the elderly. Becoming old could mean falling into poverty, and some sociologists interpreted retirement as a form of social exclusion and alienation. Today, the tide has turned: the elderly have benefited from the expansion of the welfare state, and some sociologists paint the bleak picture of a coming gerontocracy. The discourse on the “loss of generational equity” faults the elderly for monopolizing resources and endangering our future.

However, it remains essential to assess the extent of the generational cleavage per se and the extent to which it masks the continued existence of the “old” class cleavage between wealthy and poor (or owners and workers). There are more “new” cleavages such as those of gender and ethnicity (or “race”). Emphasizing the generational conflict tends to downplay other inequalities, and by this, risks being ideological.

I will briefly retrace the stages of this discourse, and then examine the current extent of cleavages among generations to gauge the terms of economic well-being and social inclusion. How these cleavages turn into conflicts depends on their potential for mobilization, which I will assess by examining political attitudes, participation and voting. The result is that the salience of generational conflicts is (so far) low, which I attribute to the mediating function of political institutions and of generational relations and transfers in families.

Class inequalities cumulate in old age, and class cleavages may thus deepen in future aging societies, but the potential for class mobilization seems to fade away. Generational cleavages may also deepen, not least through the current trends towards welfare state retrenchment. Whether they will lead to generational mobilization depends on the continued viability of the mediating institutions in politics and the family.

ALBERTINI, MARCO* (University of Bologna, marco.albertini2@unibo.it)

Parents’ Home Ownership and Support for Adult Children Across Europe

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by a high level of defamilialization, Continental Europe follows a model of supported familialism. The Mediterranean countries are best described as adopting a model of familialism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children's own family projects.

The present paper, based on data from SHARE and SHARELIFE, examines how parents' housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts. First, we will analyse the extent to which parent's home ownership status affects the likelihood that children co-reside with their family of origin. Our preliminary results suggest that, ceteris paribus, parents who rent their home are less likely to support their adult children through co-residence. Secondly, we want to analyse how parents' own housing experience affects the strategy that they adopt to support their adult children. For instance, does the fact that parents received support in buying their present home lead them to help their children in turn? Also, a number of other experiences – such as ownership status of one's first home after end of the parental home, age when establishing one's own household, or special events in one's housing history – are likely to affect the strategy that parents adopt in supporting their adult children. Most importantly, the role played by parents' housing experience is likely to vary across different welfare contexts.

KOHN, AYELET* (Hadassah Academic College, ayeletkohn@gmail.com)

Friends, Comrades and The Aesthetic Melting Pot: Instagram As a Tool Of Propaganda

This paper examines the ways through which the aesthetic mechanism of Instagram, a social network application designed for media sharing, is used as an...
emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defence Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew).

I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, aesthetic and emotional norms shared by the users (Chandler & Livingston, 2012). This frame of values is understood as a common ground for the Israeli users, who were raised on myths about the army and the value of deep friendship among warriors. The same frame of values serves them simultaneously as members of a social network which is based on fixed aesthetic norms such as chosen filters and the "artistic" square shape, which its similarity to Kodak Instamatic and Polaroid images makes the photographs "sentimentally beautiful" (Enquist, Magnus and Arak, 1994).

Also common are values of sharing, the meaningful dual concept of "friends", and the view act of positive motivating, may it be the army's hierarchic system or the social network's "likes". I will look into the ways through which the use of Instagram helps the sites' administrators and private users to activate a unified code of symbols, which blends individuality and nationality, the beauty of nature, the aesthetic standards of the application and the admiration of armed forces (Frieldander, 1984).

Last, and seeing Instagram as a platform for individuals to perform and share their artistic creativity (Gye, 2007), goes along with another Israeli myth, which praises soldiers as sensitive individuals who fulfil their national duty, while being young "fighters and dreamers", who express their feelings in various forms of art.

Free Movement and Serial Migration: Exploring the Lives and Motivations of Highly Skilled Finns Living Abroad

The European Union (EU) is a globally unique area, where it is possible for the majority of Europeans to study, work or retire in any of the 28 EU member states, as well Switzerland, Iceland, Norway, and Liechtenstein (Koikkalainen 2011). European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, or Eurostars (Favell, 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the experience, qualities, and motivations of the serial migrants, those who had lived abroad in at least two different countries. Why did they move abroad in the first place, and why did they move again? Do they display a particularly European identity, continue to identify with their original home country, or see themselves as global citizens (Koikkalainen 2013)? And does the ease of mobility increase the likelihood of remigration?

Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland

This conference paper focuses on two European tourism destinations that thrive on seasonal labour, often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the aurora borealis and reindeer safaris attracts just below one million tourists each year. While the profiles of these two places are very different, they yet share important similarities in terms of labour demand. In London the pubs, hotels, shops, and amusement parks rely on seasonal labour, often performed by young people originating from other European countries. In Lapland the hotels, skiing resorts, wilderness safaris and other tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our understanding of the mobility - tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience. Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. Is working at a tourism destination in fact a form of lifestyle migration? Do migrant workers form workplace communities, develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?

KOJIMA, SHINI* (University of Hawaii at Manoa, skojima@hawaii.edu)
Correlates of Work Behaviors Among Muslim Immigrants in Japan, Seoul and Taipei: A Comparative Analysis of Correlates

This study analyzes correlates of work behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013).

The results of logit analysis for the correlates of employment status show that ages 35+, entry before 1990, South Asian origin, intermarriage with a local woman and high school education have positive effects on self-employment in Japan. In South Korea ages 35+, intermarriage with a local woman and high school education have positive effects on self-employment but South Asian origin has a negative effect. In Taiwan ages 15-24 and 30-34, entry before 2007, marriage with a local woman or a conscript, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects. Therefore, the positive effects of high school education is shared by the three societies, while the effects age, year of entry, national origin and the nationality of spouse do not have consistent effects.

As for being an employee, ages 35+ and entry before 1990 have positive effects, in Japan while ages 35+ entry between 2007-2008, Indonesian origin and high school education have positive effects in South Korea and ages 35+, entry before 2007, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects in Taiwan. Therefore, the positive effects of high school education are shared by the three societies. The results for employment type and job hunting method will be also presented. In sum, there are some variables which have opposing effects in different societies. They seem to reflect the differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

KOJIMA, HIROSHI* (Waseda University, kojima@waseda.jp)
Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in East Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants. The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects. The visit to halal shops and that other origins, and very strict observance of Islamic rules have positive effects on the visit to halal restaurants and that other origins, high school or less education have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Taipei shows that living in owned housing and very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins, white-collar employment, non-strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and non-strict observance of Islamic rules and adaptation have negative effects. The results show more differences than commonalities among the three societies, possibly because of the differences in the composition of Muslim immigrants and in the availability of these facilities.
"Alternative Unions" and Their Involvement in the Post-3.11 Disaster Politics

Labor unions I call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual membership-based unions, such as general unions and community unions. I call them alternative because from the standpoint of nonstandard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded. This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live enmeshed in a complex web of individual and organizational ties, and they thrive by building new ties as they respond to emerging crises. From the standpoint of individuals who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emergent crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crises by working with other unions and civil societies. Secondly, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

Depression, Work and Identity in a Neoliberal World: Perspectives from Australia and the UK

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at play, workers in these countries have been affected by some comparable trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007, Ehrenfeld 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g. antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We locate our empirical findings in the context of theoretical debates about the impacts of neoliberalism on contemporary individuals, and draw explicit comparisons between people's experiences in Australia and the UK to illustrate our points.

Development and the Transformation of Women's Capabilities – Sociological Study of Household Footwear Cluster in India

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follow the unit based ‘labour’ system of footwear production activity at the household level. Men and women have specialization in each operation in the footwear production activity. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outsdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production systems. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training. Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has made significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.

Preschool Teachers in a Changing Institutional Context: Reforms and Prospect of Professional Group

Results of this research are the initial stage of the "Processes of the Actual Russian Market of Preschool Education" project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining statuses of positions of group, on the other hand. The cultural resource of occupation is very poorly popularized that making uncertain the symbolical capital of group in the opinion of clients (parents and educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions and measures. The professional organizations in estimate of experts received different treatment. Informants of the "pro-state" sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of "pro-market" organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classic "not bureaucratical" ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The current changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

KOLK, MARTIN* (Stockholm University, martin.kolk@sociology.su.se)

The Causal Effect of Another Sibling on Own Fertility – an Estimation of Intergenerational Fertility Correlations By Looking at Siblings of Twins

Researches have documented persistent differences in fertility between different socioeconomic groups. These differences could over several generations have important population level implications on the social transmission of socioeconomic status as the size of socioeconomic groups naturally on differential fertility. The reasons for intergenerational fertility correlations are however poorly understood. The current study attempts to differentiate between the causal role of another unexpected child in the parent generation, from the effect of other characteristics that are shared between parent and children, for explaining intergenerational fertility correlations. Thus it is possible to examine if intergenerational transmission of fertility is due to transmission of socioeconomic status, which on average is shared between individual. This is examined through an instrumental variable approach, using a twin birth as a source of exogenous variation in the size of the parent generation. Data is drawn from the complete Swedish population using administrative register data on more than 2,000,000 parent-child links. Findings show that little or none of observed fertility correlations can be attributed to the causal affect of growing up with another sibling as such, instead shared characteristics between parents and children such as fertility preferences, ethnicity, religion or socioeconomic background appears to explain observed fertility correlations.
In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those three factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 3rd grade junior high school students and their parents in that city.

Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors, 2) Experiences in nature are in correlation with only students' pro-environmental behaviors, not with parents' behaviors, 3) As for students and fathers, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors, and doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

KOMBAROV, VYACHESLAV* (Russian Academy of Science, vkombarov@gmail.com)

The “Classical” Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the “developed countries” due to formation of mass consumer society, 2) dynamics of alienation in “developing countries” that takes place in classic terms of labor and a strong social stratification. But even in the globalizing world we can see sharply distinguished types of alienation? Probably today we should talk about rhizome (Deleuze, 1980) of different dimensions of alienation. Using the concepts of diverse trans-phenomenon (trans-politics, trans-economics etc.) of French post-structuralist Jean Baudrillard (2006) I’m representing the concept of “trans-alienation” which is a hybrid of “new” Western and “old” Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The “democratic” Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomie and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a “dead subject”: a vicious circle: alienated labor ↔ alienated consumption. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show evolution of the terms “subject” and “subjectivity” and indicate the possibility of resuscitation active social subject as a full-fledged subject of power, of his will, intentions and desires. This is possible by the development of new ideas about the properties of the social environment (conditions): a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

KOMLIK, OLEG* (Ben-Gurion University, komlik@gmail.com)

The Socio-Political Foundations of the Zionist Banking System in British Mandatory Palestine and Its Institutional Change in the Political Economy of Israel

Tracing the actors and focusing on the institutional dynamics, the purpose of this paper is twofold: to explain the evolution of the Jewish Zionist banking in British Mandatory Palestine and to analyze the extensive transformation of the financial system during the first decades after the Israeli independence. In 1948, when Israel was established, there were more than twenty banks and a hundred of credit cooperatives. This was the legacy of the pre-state period in which this fragmented Jewish banking system was formed by the British liberal legal framework, social and business networks among German origin Jewish bankers, power struggles between different groups while the Zionist ideology unites them all. Thirty years later, in the end of the 1970s, the landscape of the Israeli banking was completely different: it was dominated by only three powerful banking groups which have become the exclusive actors in the financial and real markets. The government has decided to create a ‘state-led’ financial system (similar to France) and brought about an extreme consolidation in the banking sector, in order to control the monetary system and optimize the channelling of capital for achieving industrialization. Through ordinances and informal means, embedded in institutional arrangements, politicians and state bureaucrats adopted and simultaneously applied a triangular policy: giving institutional preference to three specific banks; imposing discrimination against the rest; and prompting mergers in the field. The regulatory authorities also allowed the three largest banks to become ‘universal’ (similar to Germany), what made the implementation of the
emotional and monetary support for the victims. These organizations also played a role in raising awareness about the crisis and the importance of taking action to prevent future disasters. The movements in Japan are characterized by their strong sense of solidarity and their commitment to protecting the environment and the health of future generations.

A growing number of consumers are demanding alternatives to the globalized, industrialized food system that fosters and relies upon social relations embedded in a particular place. The food localization movement is an unmistakable feature of the urban corridors of the U.S., where direct farmer-to-consumer relationships are becoming increasingly common. For instance, there has been a 4.6-fold increase in the number of farmers markets across the U.S. between 1994 and 2007, more than 12,500 U.S. farms reported marketing products using the Community Support Agriculture (CSA) model.

This article examines the development and current state of the local food movement in the Seattle metropolitan area of Washington State. We are particularly interested in the roles that different actors play, and how these actors form connections with one another as the localization movement continues to grow across this region. We also examine the positive effects that emerged from food system efforts, the challenges that were overcome and those which were not, and the emerging challenges and needs. We pay close attention to how low-income residents and ethnic minorities participated in and benefited from local food system development efforts. Data are derived from interviews with local farmers, retailers, non-governmental organizations (NGOs), and government officials conducted between 2011 and 2012. Government statistics and documents, and other archival materials were also collected and analyzed.

Overall, our preliminary findings suggest that a local food policy initiative in Seattle helped not only promote local food consumption and support local farmers, but also provided opportunities to connect various actors in the food system. What is particularly noteworthy is that local food networks connected actors belonging to traditionally different sectors, and with a regulatory schema for the sale of local foods, the localization movement became in many ways institutionalized allowing for accelerated movement toward urban sustainability.

Movements and Counter-Movements in Korean Environmental Politics of Post-Fukushima

This paper intends to explain how the Korean social movements engage in the environmental politics after Fukushima disaster by focusing on the competition between two master frames, eco-justice versus green growth. We believe that Korean social movements have more actively developed zeal of nuke-free society through engaging in various nuclear issues after the disaster. Simultaneously, counter-movements based on green growth frame have more actively supported nuclear plants as an alternative to peak oil or climate change. Each movement tries to seize the so-called master frame, eco-justice or ‘green growth’ respective-ly. As the former is strengthening its relationship with global and local NGOs, so the latter is focusing on the national and local governments, business and media groups. Divergent movements in Korea are converging again after the Fukushima incident with the flag of global justice frame with expanding its activism into transnational arena. Simultaneously counter-movements are also developing a strong solidarity with the master frame of growth. The Korean environmental movements engaging in such contentious politics pay more attention to regional collaboration in East Asia to cope with unexpected high risks at various levels.

Men Who Buy Sex

It is argued that a profound transformation of personal lives has taken place in late modern Western societies. In particular traditional ‘procreative’ and modern ‘companionate’ models of sexuality have been increasingly supplemented by ‘recreational’ sexual ethics. Hong Kong follows a similar but somewhat different path due to its Confucian Chinese culture, British colonial history (1842-1997) and the rapid advance of globalization. Departing from traditional masculine roles, Hong Kong men are struggling among different discourses of heterosexual male sexuality and are increasingly preoccupied with the construction of a new self.

It is under this background that I would like to explore the newly emerged scripts for Chinese masculinities. Based on 24 in-depth interviews and 2 focus group discussions conducted since 2012 of Hong Kong heterosexual men who buy sex, this paper examines these men’s involvement with commercial sex in relation to their male identity. Following Roelof (2007), I will argue that these men...
are a desiring subject with 'sexual, material, and affective self-interest'. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or McSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a 'sunken boat' or Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men's commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism.

**KONIECZNY, PIOTR** (Hanyang University, p.toon@post.pl)

This paper contributes to the discussion on Internet mobilization and on international social movements’ ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The paper analyzes the first Internet strike on 18th January 2012 against the SOPA legislation proposed in the USA. Wikipedians from all around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedia editors are shown to share values with the international Internet mobilization movement, through experienced Wikipedians were also likely to be conflicted about whether taking part in a protest action is not violating the site's principle of encyclopedic neutrality. Wikipedia's participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation (24 hour site's blackout) was a major factor that led to a creation of an international political opportunity structure (worldwide awareness of and protests against a proposed American legislation) enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

**Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries**

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements havepluralized and become more heterogeneous since the 1970s, while life courses destandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of destandardization by investigating which social strata are driving the process. We examine differences in destandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Surveys (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents’ 15th and 35th birthday using sequence analysis, which allows examining complex life course patterns.

The empirical results show for all countries that a) ‘traditional’ sequences of family formation are diminishing and b) life courses of the lower educated have become more destandardized than those of the higher educated strata. This is due to the fact that a new standard of family formation emerges among the higher educated, while the lower educated follow a variety of different paths. Specific life course pattern contribute to the social stratification of changing family life courses. Overall, our results suggest that destandardization is to a lesser extend fostered by value changes, but much more by social deprivation and failure to establish stable and socially accepted family trajectories among lower social strata.

**KONNO, MINAKO** (Tokyo Woman's Christian University, konno@lab.twcu.ac.jp)

**The Collective As an Idealational Entity**

As actors in a social world, we are well aware of the existence of collectives. Families, communities, organizations, social and political movements, businesses, states and so on can be considered collectives. We know that various social entities in our social world are not mere aggregates of individuals; they are more than the sum of their parts and transcend the individuals who form them. These entities act like other individual actors, welcome or reject us, ask us to act for them, and give meaning and a sense of direction to our lives.

In recent years, the existence of collectives has taken on a new meaning when we take a step outside the everyday world. Viewed from the outside, collectives seem to be mere aggregations, or relationships among individuals, the simple sum of their parts. Unlike its individual members, a collective itself cannot have a material body, a thinking brain, or a will or colonizers. If collectives exist, they cannot exist in the same sense that individual bodies do.

How can we reconcile these two perspectives? This paper argues that such a reconciliation is possible by revisiting the question of our social world, which is essentially a field of meanings. In this field, collectives exist as "idealional entities" in the words of Japanese sociologist Seijyama Kazuo. They do not exist in the same way as a material entity exists; instead, they exist as elements in a particular field of meanings. To the extent that this field is intersubjective, the collective acquires a unique ontological status for those sharing it. Thus, collectives are idealational but, nonetheless, real.

**KONNO, MINAKO** (Tokyo Woman's Christian University, konno@lab.twcu.ac.jp)

**Toward a Sociology of “Sexuate” Beings**

Although biological factors underlie human sexual behavior and interaction, sexuality is a distinctly sociological phenomenon, as it is part of the social world that is endowed with and constituted through meaning. In this regard, sexuality does not differ from other aspects of social experience. However, its close connection to the biological body presents an especially interesting challenge for sociological theorizing.

The meaning of sexuality has been explored widely in the social sciences and humanities. One notable theoretical strand in these inquiries is gender theory. Gender theorists share a sociological perspective in that they view sexuality as part of the meaning structure that we constantly create. Another important approach is the theory of sexualities, which sees sexuality as comprising complex arrangements that are supposed to be rationalized, these theorists have identified multiple ways in which everyday interactions occurring within them are sexualized.

Yet, the body itself is curiously absent from these and other theoretical approaches. Although the only way to know our bodies is through some meaningful structure, this does not mean that the body cannot exist unless meanings are attached to it. The body exerts a powerful influence on social interaction, and sociological theory must account for it.

As social theorist Drucilla Cornell has argued, we are “sexuate” beings with multiple selves and layered subjective positions. Our sexuate status creates the materials with which we construct our social world, which, is shaped through this process. A more adequate theory of sexuality must be based on an understanding of how the real and fictitious possibilities of attraction and repulsion among human organisms are acknowledged, used, and acted upon, on the one hand, or, on the other, ignored, minimized, and rejected. If, in various social contexts, nations, states and so on can be considered collectives.

Building on Cornell’s concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

**KONNO, SHINTARO** (University of Alberta, skongo@ualberta.ca)

**Diversity in Leisure and Leisure Research for Social Justice in Japan: Seeking International Conversations**

Although Japanese leisure research literature has grown over the past four decades, it has not been well recognized at the global level largely because of the language barrier. Given the consideration that leisure research is a global phenomenon we are closely interwined with each other particularly in non-Western contexts (Fox & Klauer, 2006; Iwasaki, Nishino, Onda, & Bowling, 2007), the acknowledgment of the existing Japanese leisure literature appears necessary to initiate constructive conversations on leisure and leisure research in Japan among international researchers.

Therefore, a critical review of literature on leisure and leisure research in Japan written by Japanese researchers in Japanese language was conducted. Four major challenges were subsequently identified: leisure research as historical description, the weak linkage between empirical and theoretical research, the persistent influence of a work-leisure binary perspective, and the ambiguity of the integration of leisure research to contemporary social science research. To address these challenges, I propose that diversity and social justice perspectives (Parry, Johnson, & Stewart, 2013) can facilitate researchers' conceptualizing pleasure as active and multiple phenomena reflecting social diversity, enhancing the linkage between empirical and theoretical aspects of research, increasing self-reflexivity, and pro-actively addressing social inequalities and social discourses. Rather than simply...
importing Western perspectives, this paper argues for scholarly analysis cognizant of Japanese history, culture, and contemporary social issues, particularly family issues. I argue that a culturally-adapted communitarian model of diversity perspective on contemporary Japanese family settings will open space for a just research of diverse family issues, including the rapid rise of one-two-person households and the so-called “invisible family” that do not necessarily fit the conventional idea of Japanese nuclear family. This study examines specifically gender and age issues in the contexts of such postmodern family configurations. Given the effects of globalizations on all nations, further international conversations are necessary to advance our knowledge on the subject.

**KONSTANTINOVSKIY, DAVID** (Russian Academy of Sciences, dav.konstant@gmail.com)

**Expansion Of Higher Education: Demand, Supply and Differentiation Of Universities**

Russian experience of expansion of higher education offers to understand the specific lessons. Demand and supply were drivers of changes.

Part of the national economy has formed a demand for knowledge, qualifications. On the other hand, the mass demand has been formed by employers on a more or less socialized young people whose core competency is the relative ability to learn new subjects and skills of communication. This demand has brought primarily by the service sector and trade, which began to develop explosively now. Mentioned qualities became seen as a result of staying in higher educational institution. Specialty, for which there was teaching is not important for the employer, a possessive force of a high education is essential as a certificate of appropriate training. Seller of clothes, for example, should not have a diploma of trade manager, he may have engineer or teacher degree, but availability of a diploma is mandatory.

Demand (both kinds) of the labor market was transmitted into families. The educational system has responded by supply adequate to the families’ demand. Now the increment of human capital is developed in some universities; implementation of the signal function, the production of certificates about staying in educational institution take place in other universities.

A second kind demand has led to growth of correspondence departments. There are lower requirements to students at those departments; learning there requires less time and efforts. Thus, it is easier to get a diploma. So enrolment in those departments became set equal to enrolment in full-time departments and surpassed it. Expansion of higher education turned out mainly expansion of the correspondence education.

**World Civil Society and Activist Identity in Japanese Environmental Smog**

Globalization can standardize the way people interpret their social worlds and act in them. Norms such as environmental protection, human rights and democracy have become more widely accepted. The concept of World Civil Society describes how increased civic communication across boundaries generates political opportunities for citizen groups by creating pressure towards national governments to abide by international norms in a variety of fields.

In this paper, the formation of activist identities within the Japanese Environmental SMOS is studied against the backdrop of global diffusion of norms, ideas and forms of action as well as Japan’s role in the international community. Globalization supports activist identity in Japan: Japan’s wish to become a recognized and actively contributing member of the international community creates ties with a normative community that many activists can readily relate to.

As Japanese social movement organizations have traditionally derived their strength from their unique ties with the local communities, it is important to ask how they interact in the processes of civic mobilization and formation of activist identities. Are we observing increased globalization, or the development of genuinely cosmopolitan ethos and global mentalities?

Awareness of global environmental problems transformed significantly during the so-called environmental boom of late 80s and early 90s. The 1990s have at the same time been called the era of the emergence of Japanese civil society. My paper discusses how the Western-style environmentalism influenced the Japanese environmental movement at two points of time: the environmental boom of the 90s, and post-3/11 era—and how it interacted with the indigenous elements therein. The approach is micro-sociological: I study how environmental activists represent themselves and their role in society in life-story interviews. What role does the juxtaposition of Japaneseess and foreignness have in these discourses? Is there room for cosmopolitan identities?

**Expansion of Vocational Education and the Social Reproduction of Working Class in China**

In post-reform China, the value of education is heightened in the country’s development of a market economy. Driven by a neoliberal ideology of human capital, high placed education is heralded as a means of economic growth and has implemented a series of education reforms. In parallel to the adoption of an export-oriented growth model, the role of vocational education is emphasized in the past two decades – to train secondary school graduates with skills to match the needs of the developing industrial sectors. This paper describes how the expansion of vocational education in China responds to the neoliberal idea of human capital development. It also investigates its impact on the life chances of students with rural background, who previously had limited chance for post-compulsory education. Based on the fieldwork data collected in three vocational schools in Chongqing, we find the students have an urge to craft marketable skills through the acquisition of educational credentials. Earning degrees in vocational schools is motivated by their aspiration for upward mobility. However, many students show their pessimism after working side-by-side with other factory workers on the production lines during their internship. This paper argues that under the developmental mode in a globalized market, China relies heavily on labour intensive manufacturing-based economy. The state-capital alliance has already shaped and structured the types of jobs that available in the labour market. The expansion of vocational schooling operates in the guise of training and skill development; but, in reality, these educated youth only becomes members of the new generation of migrant workers for the use of the export-led industrialization. The human capital argument for national development has failed to deliver on its promise.

**KOO, YOOJIN** (The University of Tokyo, ykoo911@gmail.com)

**Conservative Movements and Political Threat Structure: Focusing on History Issues Related Groups in Post-Cold War Japan**

Since the 1990s, a growing set of conservative movements has become conspicuous in Japan. Major movements that have brought media’s attention and political and diplomatic struggles have emerged starting from history-revising movements led by the Atarashii Rekishi Kyokasho o Tsukurukai up to Xenophobia movements led by the Zaikazukai in recent years. Taking these movements into account, this paper asks: what triggers conservative(or right wing) movements in post-Cold War Japan?

Social movement scholars have argued that mobilization is incurred from political opportunity structure(POS), which simply put, just as the context of labor market and welfare state has been changed, the patterns of governance coping with the problems have also changed significantly.

Previous literature shows that the macro-economic outcomes such as unemployment and inequality have something to do with the different patterns of governance. This study seeks to examine the relationship between governance patterns and macro-economic outcomes by analyzing the 30 year trajectories of labor market and welfare reforms and policy-making systems in 20 advanced countries. We do so by proceeding as follows:

First, using the optimal matching technique, we identify different trajectories of labor market and welfare reforms and policy-making systems in the three decades from 1980 to 2009. Second, we group the countries based on the similarities in reform trajectories and policy-making systems changes. Third, we compare the levels of unemployment rate and inequality across the groups. Then, we test the hypotheses that when the market economy have developed new social welfare and active labor market programs relatively early and have relied on more consensus-based policy-making systems, which require the cooperation between government and organized interests for coordinating macro-economic objectives. The results are in line with those findings that the countries following higher expenditure on new social risks and concerted policy-making trajectory perform better in terms of reducing unemployment and inequality. We discuss the implications of these findings for the development of new governance model in Korea.
ness: where a movement occurs when POS closes. This leads to a new light on political threat structure (PTS). While POS refers to favorable political environments, PTS presumes the opposite like repression. In this regard, this paper focuses on PTS and argues that PTS influences mobilization in the case of Japanese conservative movements. When observing conservative movements after the 1990s, movements were triggered though POS closes.

In order to support the argument, this paper first addresses the relations between POS and PTS and what constitutes PTS: threatening Cabinet’s ideology and formal speeches like the Murayama Speech, unfavorable remarks and behaviors by politicians etc. Next, by selecting three ‘major’ conservative civic groups and through discourse analysis of these groups, it explores how they were mobilized under PTS. Lastly, this paper attempts to find whether certain combination of PTS factors exist to stimulate movements.

This paper intends to contribute to understating the mobilization of conservative movements - Japanese in particular - and to the academic discourse of the relation between POS/PTS and movements.

Immigrant Occupational Attainment in Japan and Its Determinants; Is it a “Structured Settlement”? Japan as a “post-transitional society” has recently shifted into a “new” country of immigration as southern European countries. However there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to report immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed; to the first question, we answered that socioeconomic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees. In addition, there is a gender gap in a return of educational attainment, which tends to be smaller for females than for males. To the third question, we can argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in western developed countries. However, it is also revealed that Japan has experienced multiple mode of incorporation of immigrants simultaneously, or a “structured settlement” as a feature of “new” country of immigration.

KORHONEN, SIRPA* (University of Jyväskylä, Finland, sirpa.i.korhonen@jyu.fi)

Refugee Returns - Experiences of Inclusion Here and There My doctoral dissertation focuses on the personal experiences of research participants, legally defined as refugees, in relation to their reentries to the region of their origin. From Finland, a fluid concept, adopted from intercultural communication research, illuminates several types of return that appear along a spectrum from normative notions of ‘permanence’ to relatively transnational outcomes. Specific examples in my interview data include forced return, voluntary return, exodus, and exits to onward migration, patterned visits, following return in Chile, Iraq or Vietnam. Applying Rosenthal’s biographic-narrative interview as the interview method of study, the participants narrate their life story, which is then analyzed, in terms of phenomena linked to return, especially concerning the biographers’ method of study. Focusing on reentry, a concept coined from the field of intercultural communication denoting the immediate experiences of people returning, the applicability of the method is being elaborated on in reference to different types of interview participants, returning from Finland to the region of origin, e.g. the case of three voluntary returns to Iraqi Kurdistan (a region), or three interview participants held a legal status of a refugee in Finland, stayed there for at least 2 years, and returned under the auspices of an IOM programme of assisted voluntary returns in the beginning of 2013. In order to examine the return processes as a whole, with special emphasis on social relations and networks, and the impact of the time spent in Finland in the participants’ lives, the biographic-narrative interview was chosen as the most applicable method to elucidate the genesis of return, key turning points characterizing the participants’ lives, the various salient social and cultural dynamics concerning the return decision, and what the future looks like from the participants’ present perspective. It is a matter of looking at “the experiences preceding and following the phenomenon in question” (Rosenthal, 2004: 53). For the analysis, the procedure of biographical case reconstructions is followed step-by-step: biographical data, text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of and comparison of conclusions. Challenges are apparent regarding other types of biographical data. That said, both the levels of narrated and experienced life history fall within the scope of my study.

Pragmatic Restrictions: Policies and Policy Limitations In Turkish Refugee Regime

This paper scrutinizes how the Syrian refugee crisis affect Turkey’s decades long geographical restriction policy on admitting asylum seekers. It presents how formal policies provide a context for pragmatism in making immigration policies. It also debates how the reaction of societal actors to immigration affects the making of Turkish foreign policy vis-à-vis the Middle East. Thereby, looking at the Syrian refugees crisis, it presents a case of public philosophy clashing with policy. Turkey is one of the last four countries in the world that remain to impose geographical restrictions on admitting asylum seekers. For decades, policy makers appealed to Turkey’s geographical region as a discourse for rejecting asylum applications of those that came outside Europe. While under the Cold War conditions this may have made some sense, in its aftermath this policy remains un-intelligible. Given the recent hike in illegal entries to or residence of foreigners in Turkey, this paper serves to keep the government in check by pointing to informal employment in Turkey. Yet, since the 1980s geographical restriction is pragmatically used when it comes to settling people of “Turkic” descent – serving the interests of Turkish foreign policy inasmuch as its goals did not clash with the public opinion. The most recent Syrian refugee crisis, however, is the first instance whereby there is a clash between the two. AKP government seeks policy pragmatism with geographical restriction once again and provide refuge for Syrians whilst the public philosophy remains opposed to receiving any foreigners, including the Syrian refugees to Turkey.

Overall, this paper debates the Syrian refugee crisis as a case study to assess to how far Turkey’s immigration policy can appeal to pragmatic policy solutions rath- er than drastic changes in policy and public philosophy dealing with foreigners.

The Turkish Dilemma: How Should Islam Relate To Republican Era Collective Memory?

This paper scrutinizes the ways in which the secular Republican collective memory clashes with Islamist collective memory in Turkey drawing upon insights from political sociology and political history. Among others, the ascendance of political Islam in Turkey for the past decade also illustrated cleavages in society regarding the basic tenets of collective memory. Relentlessly, the supporters of secular Republicanism retained the ethos that made “Turkish people a singular nation with Islam in Turkey for the past decade also illustrated cleavages in society regarding the ancient Turkic” population of Sumerians. While not fully ridiculing

Patterns of Substance Use in Entertainment Venues in Latvia:

A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to ECMDDA). Monitoring surveys carried out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the models of adolescent drug use were identified: young people try these substances at very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug use is made to suit particular entertainment purposes and driven by desires of achieving known effect. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marijuana); at the same time drugs in pills or plasters are in favour. We can speak of a drug use model that is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs).

Patterns of Transition from Youth to Adulthood in Latvia: Comparison of Four Generations

Authors analyse the transition of young people to adulthood between the second half of 20th century and the first decade of 21st in Latvia putting in focus the transition from education to work. Employing the generations approach as a theoretical frame allows identifying the ties between historical events and living conditions, and individual biographical solutions. We distinguish four generations of youth: X, Y, Z and the time of millennium generation. Previous research demonstrates that rapid changes in political system in Latvia echoed in the transition to adulthood. We approach these changes by cross-generational comparison of young people’s transition from education to employment, their occupational choices and effects of education on further life-paths. The analysis is based on data from national youth surveys carried out between 1967 and 2012.

Up until late 1980s the transition to adulthood was a rather standardised process, the system offered stability and security at the beginning of independent life, e.g., guaranteed jobs, but some were not satisfied with that. The status of an individual was mainly defined by their position in economic, regional and political structure and was less dependent on personal qualities. The transition to market economy marked the turn towards new models; individual qualities and ability to take risks became more important than qualification and professional training. Finally, global processes marked the transition of millennium generation, when individualisation trends and increasingly complex social life encouraged looking for individual solutions by mixing various strategies and activities. For a long time the society believed that each next generation would achieve a better life. However, looking at the generation that enters the adulthood in present days brings up not so optimistic forecasts. Meanwhile youth research in Latvia suggests that modern youngsters accept the situation and recognise the increase in opportunities.
A World-Systems Methodology for the Study of Inequality

Drawing on historical data on inequality within and between regions of the world-economy, we indicate that inequality within regions in both the core and the semiperiphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributions —a global income distribution that is both systemic and historical—that has shaped the geography of winners and losers both over the long term and in more recent decades. This depiction suggests that (i) Schumpeterian cycles of innovation and creative destruction in the global production of goods and services have been key to shifting patterns of within- and between-country inequality, as these innovations have included (ii) the deployment of shifting and unevenly successful institutional strategies aiming to facilitate mobility and change for specific regions and/or nations within the world-economy. This exercise allows us to raise more important general issues about the social and political consequences of this pattern and the role of various institutional settings in shaping this pattern.

Finally, we consider the social and demographic correlates of these patterns. In particular, we consider the social and demographic correlates of these patterns in terms of their geographical and institutional settings. This exercise allows us to show the role of various institutional settings in shaping this pattern and the role of various institutional settings in shaping this pattern and its regional consequences.

KORZENIEWICZ, PATRICIO* (University of Maryland, College Park, korzen@umd.edu)

Global Migration and the Contentious Politics of Citizenship

Our understanding of migration changes fundamentally once the relevant unit of analysis is shifted from the nation-state to the world as a whole. Elsewhere, we have argued that the core and the semiperiphery of the world-economy are characterized by a dynamic interaction of labor markets and social policies, and the relevant state policies emerging thereof, have served as a fundamental basis of stratification and inequality in the world since the nineteenth century. Moreover, we have indicated that the growth of between-country inequality through most of the last two centuries became a driving force for the migration of labor and capital; growing income disparities between nations over time generated strong incentives (e.g., drastically lower wages in poor countries) for the migration of workers to higher-wage markets. This exercise allows us to link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

We focus on growing social inequality in contemporary Russia which is being fostered and reproduced by the current setting of its educational system. Particularly, we look at the impact and effects of the education policy both on the federal and the local level.

The results of the study are based on the expert survey conducted in 2013 in three regions (Moscow, the Moscow Region, the Republic of Karelia). The sample includes officials of the federal and regional level directly engaged in the education system reforms of 1990- early 2000s, as well as school principals. We also conducted a content analysis of federal and region programs and legislation in the field of education in the period under review.

We discuss the restructuring of the education system on the basis of neo-liberal approach, which has become a common trend in globalization era, but we argue that its impact in Russia has had its own particularities with respect to stratification of schools (i.e., quality, resources and context) due to its institutional pre-conditions. To do this we reconstruct the meanings inserted by various interest groups in the process of restructuring of the education system (i.e., school principals, education policy makers, etc.) and set it against the formal institutional design of the reform. We show that these reforms (extension types of schools, the provision of school choice, the legalization of paid services, and rejection of affirmative action) have provided exclusive opportunities for elite groups and at the same time have created new obstacles for the more deprived groups.

Parallel to that we also discuss how the results of pioneering sociological studies in Russia and particularly their dissemination among the expert public have pushed the issue of inequality in access to quality education to become a major point in the national policy agenda in Russia.

Multifaceted Party Membership

Party membership is in general in decline; however, both the trends and the membership figures vary among parties, and the meaning of party membership varies among members. Both the degree, type and quality of party member participation vary among party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members. Experiences from within the ‘Migrant Hierarchy’: Imposed Categorizations As Definers of Social Identity for Highly-Skilled Migrants in Finland

Studies of ethnic hierarchies in Finland show varying levels of prejudice towards particular nationalities and ethnicities. Levels of acceptance are also tied to the role of the immigrants in the economy and labor market (i.e., class standards). In the intersection of these value judgements an overall ‘migrant hierarchy’ is formed. At the bottom of this hierarchy are ‘unwanted’ humanitarian migrants from less familiar cultures, while at the top end are the ‘migrant elite’: ’wanted’, highly-skilled, and preferably Western, migrants.

I study this hierarchy as a form of categorization that creates a social structure. This structure has an effect on the construction of migrants’ self-defined social group identities; although these categorisations stem from the Finnish society and its views on immigrants, I believe that they are recognized and to certain extent internalised also by the migrants. Drawing from ethnographic and interview data emphasizing lived experience and everyday life of skilled migrants in Finland, I will discuss how the imposed categories become strategies that can be used also by the migrants themselves in identity negotiations and to represent value judgements. As such they also point to possible problems with integration: in (re) drawing their group boundaries within this new social structure, skilled migrants in Finland are defining their identities not only as who they are, but also as who they are not: not ‘unwanted’ humanitarian migrants, but also not Finns.

Can Actor Relational Approach be Combined with Institutional Ethnography – What Could be the Benefits When Studying Information and Communication Technology Use in Child Welfare?

The need to make use of an interdisciplinary approach is vital when studying the development and use of new technologies in welfare services. There is research that indicates that information and communication technology (ICT) affect
work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT.

This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems.

The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

KOSMINSKY, ETHEL* (Queens College/CUNY, ethelkos@hotmail.com)

Mayume’s Life History: Between Japan and Brazil

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese-Brazilian, her japaneseance is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn’t understand what they were talking. However, she adjusted very well to the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That’s when Mayume faced a difficult adjustment: “I wanted to come here to see the town. I didn’t want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself”. She compares the japanese town where she lived to Bastos: “Ja-pan is a diverse society... It looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that’s too much land!” Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor building, lack of respect toward the teacher, lack of discipline. Mayume’s dream is to return to Japan and attend college there. Mayume and other children face ruptures in their socialization process due to their parents’ labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

KOSMINSKY, MAREK* (Wroclaw University of Economics, marek.kosn@ue.wroc.pl)

Pension System Based on Sharecropping and Economic Security of Families

Decisions about giving birth and upbringing of children imply consent to finance the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on the sharecropping – one of schemes of incentive system under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state.

The practical implementation of such a system would be based on division of pension insurance contributions, paid by a working individual, between the two pillars of the new system, in proportion to the expenditure incurred on his (her) upbringing by the state and the parents in the past. The first part would be spent on financing the development and implementation of the concept of their contributions made in the past, during the professional activity. The second part of the contribution, the so-called second pillar, would be transferred directly to the parents of this person – increasing their pension capital (if they are still working) or in the form of direct payments (if they are already retired). Additional, capital pillar could be established to improve long-term economic security for those without children or provide an extra protection for individuals involved in the first and second pillar.

The empirical part of the analysis will be done for the pension system in Poland, in the context of its planned restructuration.

Towards Usages of Europe By Patient Representatives at National Level?

Following a series of landmark rulings of the European Court of Justice (ECJ) on cross-border healthcare, the access to healthcare for European patients has been facilitated for European patients. After ten years of negotiations these rulings have been codified in the EU’s Directive on the application of patients’ rights. Europe thus now offers national actors various resources to pursue their interests beyond the opportunities of their national healthcare system including challenges and resources for patient representatives at member state level. In do these actors use those European resources inside their national healthcare system? Based on semi-directive interviews, this paper thus investigates if and how patient ombudsmen in the Austrian healthcare system include usages of Europe into their institutionalised routines and which are the national institutional limits to those usages. The paper argues that while Europe has rendered the national institutional boundaries of healthcare systems porous, control over patient flows is kept intact and that there is only limited room for manoeuvre for patient ombudsmen to use Europe at national level.

Transition from School to Work, and Labour Market of Younger Generations in Japan

The aim of this panel session is to share with the audience the outline of chang-
ing Japanese employment practice. Japanese employment system has been clas-
sified as one of the “organization-oriented,” and it implies that it ensures long-
term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupa-
tional lives as regular employees.

As with the employment systems of other countries, Japanese employment practice is confronted with the pressure from globalization, and it is becoming dif-
ficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on prevailing insecure job market especially in younger generations in Japan.

Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan

Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan

In the late 1960s, from North America to Europe and from Latin America to Asia, many countries witnessed a wave of student protests. Since those move-
ments showed distinct features from place to place and shared similar back-
grounds such as the Cold War politics and common issues such as antiwar and academic freedom, they provide a good field to examine the critical question haunting recent social movement studies: whether and how culture matters in the emergence and process of social movements (See Johnston et al., 2009; Pol-
ley et al., 2008). Against this background, this presentation examines a campus protest at the University of Tokyo, Japan, from 1968 to 1969, using data from in-depth interviews with the participants to show how the students’ ideas shaped their perception and interpretation of the situations in the course of the struggle and influenced their choice of strategy and tactics.

This presentation focuses on a group of students called “NON SEKUTO RAJIKA-
RU” (non-sect radicals). The protestors were not monolithic but divided into three
groups in conflict: Democratic Youth League of Japan (DYL), under the guidance of the Japanese Communist Party (JCP), the New Left sectors which were seeking a new form of Marxism politics as an alternative to JCP, and the non-sect radicals with-
out any affiliation to DYL or the New Left. On one hand, the non-sect radicals and the DYL and New Left students were equally marked by Japan’s campus culture dating back to the 1910s; the strong tradition of Marxism as a guiding ideology of social movements and self-cultivation. On the other hand, the non-sect radicals developed principles against the basic lines of DYL and the New Left positions, in-
cluding centralized and hierarchical organizations and strict Marxism orthodoxy. Thus, they created decentralized and horizontal organizations and based their choice on their firsthand observations instead of ideology.
KOSUNEN, SONJA* (University of Helsinki, sonja.kosunen@helsinki.fi)

Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social divisibility’. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children at the transitional school and investigate how habits and fears regarding their children’s education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaaj, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and abroad, and as contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Expressing the Inexpressible. Japanese Artists about the March 2011 Tragedy

The number of “Shinchō” a monthly Japanese literary magazine, issued in March 2012, published short diaries written by 52 Japanese artists to commemorate the tenth anniversary of the March 11 earthquake and tsunami, which happened the year before. Artists representing various genres of art such as literature, music, photography or visual arts were requested to describe these 52 weeks of their life and the process of artistic creativity after the disaster. In the society, where speaking about one’s inner thoughts and emotions is not culturally approved. This work seems to be one of the most important, if not the sole, vehicles bringing up the vox populi to a broader attention. It can be said that it is thorough art that the social phenomena are reflected in the public discourse. It is an art that collects individual experiences of the disaster in a diary of collective memory. In this sense becomes also a political tool, as Jacques Ranciere would say, which has the power to express the inexpressible, to render visible what from various reasons could not be revealed.

In my presentation I will analyze the content of the diaries to see what aspects of the events, which took place in the aftermath of the Earthquake and Tsunami disaster, were described by the artists and what was the purpose of casting light on these particular problems. Another issue I would like to raise is the question about whether the image of the tragedy as recreated from the artistic diaries is compatible with the one presented in the official discourse.

Functional Differentiation and the Public Sphere: An Attempt in Theoretical Formalization for Historical and Comparative Research

This study elaborates on the concept of functional differentiation as a structural feature of modern society. Methodological criteria to judge whether society is differentiated functionally remain elusive, although these must be presupposed to the concept of functional differentiation. In the paper, the expansion of social differentiation is approach of society. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logic. However, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the case where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, courthouse, market, and educational system, does not guarantee a functionally differentiated structure. To exploit...
the Japanese seniors. The results of this first-wave survey of 80-year-old seniors living in a relative affluent urban area seem to show sappiness and "youthfulness" of today's Japanese seniors.

Experiences of Modernity and the Modernity of Experience

It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true what Michael Oakeshott has to say about this topic: "Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains." (quoted in: Jay 2005: 9). Although this paper sees itself in the tradition of this 'recklessness', it does not aim to escape the ambiguities of 'experiences'. On the contrary, ambiguous is not only the word, but also what it stands for. But it is precisely this ambiguity of experience, and the acknowledgement of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman).

In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the already mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolivar Echeverria. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity. Martin Jay (2005), Songs of Experience: Modern American and European. Variations on a Universal Theme, University of California Press.

Civilizational Distinction: Figurative Changes of Contemporary Societies

A common civilizational core binds all contemporary societies. It provides interaction, trust and solidarity. It is a civilizational unity is a basis for the emergence and existence of multiple modernities with their endless social and cultural diversity (S. Eisenstadt, J. Arnason, P. Wagner). The development of the western and eastern societies in the civilization relation should be comparative study based on the figurative Sociology of Norbert Elias. Figuration is an entwinement of relationships people, intended and unintended social and cultural processes. In the center of the figurative process is fluctuating voltage equilibrium, a balance of power, which belong to the structural characteristics of configurational currents. Civilizational distinction show a full range of colorful entwinements intentional and unintentional links, networks, activities, structures, states. Sociogenesis symbols of culture and civilization shows how they precede unplanned actions and relationships between individual and group. However, they require an understanding and designing models or strategies of economy, government and culture, both at the individual and collective levels. In every contemporary society develops a flexible balance of power between individuals and groups, a specific configuration of social inequality, resources, and efforts. Civilizational order as well as at global and local levels is a set of flexible forms of social mobilization, effective institutions, technology management, cultural controls and patterns. Figurative modifications, meaning moving modernities of contemporary societies, speak about degree of their civilizational variability while maintaining a fundamental properties in common. Figuration as interdependence of people is primarily mediated by factors like social communication. The main mechanism of interaction within and between national societies (states, communities) are historically formed socio-cultural practices and a variety of social communication (transit, exchange, and use of experience, knowledge and information). Civilizational configuration is a variety of modernities, coexisting and interacting actively in the changing political and socio-cultural space.

Socio-Cultural Resources Development of Russian Province ("backs") in Context of Globalization

The situation of contemporary rural province ("backs") in most Russian regions shows a doomsrum of social, economic, and cultural life. The demographic situation has stabilized, yet the population in general and of an economically
active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

KOZYREV, GENNADY* (D. Mendeleev Univ. of Chemical Technology, genkozyr@mail.ru)
Creating an image of «Victim» As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.

An image of “victim” may be classified on the following types: “victim-hero”, “victim-tragedy”, “victim-country”, “victim-nation”, “multi-functioning victim” and other.

Constructed “victim” has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of “victim”. Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of “victim” includes the following steps: aculturalization, privatization, heroization, humanization, institutionalization, historicization (mythologisation), objectivisation, legitimization, sacralization, realization of “victim’s” image in the social and political practices.

Generated image of “victim” presuppose execution following functions in the real and potential conflicts:

- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;
- upbringing of “new heroes”;
- determination of people behavior in critical situation;
- image of “victim” is becoming the elements of culture.

Deliberately thrusting of “victim” problem generates disadvantageous situation for alleged “enemy”. Direct of potential oppressor’s image constructed, with necessity to oppose or annihilate it. The most important “enemy” characteristic is its mortal threat for person, group and society. Next distinguisher of “enemy” is dehumanization.

Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.

Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called “emancipatory ecological commonism (EECC)”, aimed at ending repressive domination. The equitable meeting of needs is given priority, based on “synergistic satisfiers”, with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEIs) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEIs currently underway in Tasmania, Australia to progress towards positive ecology and EECC will comprise the final part of this paper.

Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women’s labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified than men.

If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one dimension - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico’s Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

Challenges for Teachers and Pupils on a Vocational Program

This paper aims to analyze teachers’ views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice.

In another social landscape – before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today, teachers in the vehicle and transport program partly face a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I'll still do not want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the pupils seems to believe that being a mechanic seem to have changed. My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

Social Transformation and the Memory in a Postwar Society: the Case of Kosovo

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Both conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of transformation of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and mentalities patterns and practices.

Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in-depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people's relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. The Role of Socioeconomic Status and Ethnicity

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live. Multinomial models are computed in order to account for variations within schools and between schools and to disentangle the complex causal process that determines adolescents’ aspirations and expectations. First descriptive results indicate that adolescents’ expectations reflect actual cross-country differences in age at first marriage and first birth.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

KRAUSCH, MEGHAN* (University of Minnesota, kraus310@umn.edu)
Producing the Collective Subject: Anarchist Practices at the People’s High School in Buenos Aires

This paper analyzes the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “independent left”). One such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school where these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds light on how and why some uses of consensus seem to fail flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina’s shantytown, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.
Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate traditions of practice have emerged – one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)
Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural development can differ in different ambivalences within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming. Since that time the socium has become even hypercomplex: there appeared “normal accidents” (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Urry, U. Beck). Taking into consideration these realities of new catastrophism I argue for a ‘humanistic turn’ in sociology, whereby societies should be examined through the patterns and character of their complexity-dependence and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robertson), synergetically takes into consideration paradoxes, risks, and dispersions of socium, searching for new forms of humanism, based on men's existential needs. The notion ‘praxis’ should be rediscovered: it should mean humane praxis – humanistic creative agency, the main aim of which is to preserve the human capital of all the generations and to maintain the balance between scientific, technologistic creative agency, the main aim of which is to preserve the human capital.

Vulnerabilities to the Network Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal accidents” (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recently in the history of mankind in the implementation of modernization the question about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should be the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintended traumas lead to different ambivalencies in the human agency. It is necessary to consider the delayed hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

KREISSIG, VOLKMAR* (Taita Taveta University, vkreissig@gmx.net)
Participation, New Forms of Corporate Governance and Social Responsibility – History, Discussions and Realities – Industrialised Countries, Central and Eastern Europe and Developing Countries

Discussions to “participation” started in Germany within labour movement & works councils in 19th century. Main questions were how workers & representatives can participate in the production process, in works force organisation, decision making etc. The promoters were socialist parties & left wing circles, trade unions & works councils.

In France in the 80-s the “participation” was that base-democratic right which should stamp the “socialism in the colours of France”. Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90-s went around Japanese participation offers in production processes. Predominantly was “Japanisation”. The following “Flexurity debate”, had the idea to exchange “flexibility of working regime” into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ies in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bathers of debate were less in trade unions or left political circles. Targets were common responsibilities of stake- and shareholders for environment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Trade unions in supervisory boards and works committee member’s support this course; however, they were not any more the sole or key players of debate.

The discourse wins in social and changes away only from conditions of employment to the responsibilities and the consequences of the application of products. ISO 26000 is asked from the supervisory boards, the shareholders’ meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European countries.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)
Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day's expenses but also people's perception of how their effort and performance is valued by other (e.g. the employer), which can be a considerable aspect of mental well-being.

In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-Economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)
Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people's lives are from diverse perspectives, which together form their "objective living conditions". As the name already indicates, the index particularly focuses on subjective indicators, not taking into account subjective (cognitive or affective) perceptions of one's own life, such as life satisfaction or happiness. The life domains that are included in the index are

- income / standard of living

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
- housing area
- health
- social relations
- work

Each domain incorporates a number of single indicators that describe this aspect as thoroughly as possible.

Constructing an index based on micro data has the advantage that the computation of the index for subgroups (e.g. by gender, age groups, etc.) is possible. In the lack of a micro data base for Europe that covers information on all the domains mentioned, the index combines three data sources: the EU-SILC, the ESS and the EU-LFS. At present it can be computed for a limited number of European countries for the years 2006, 2008 and 2010 (severely limited also for 2004). First results of the index indicate that there is a high correlation between macro indicators of the economic strength of a country (e.g. GDP/capita) and the index as a whole, whereas certain domains of the index seem to be unrelated to those macro indicators. Particularly, this concerns the domains housing area and health. Hence, the indicator can give differentiated insight into the “performance” of countries concerning their population’s objective living conditions.

Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges assumptions about the role of the civil society and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sōhyō, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NGO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, weaves fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothée Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg. Not no place: Johannesburg. Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city — it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on topics; the subheading Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongolozela.

Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al, 1969). Due to the heavy impact of colonization and politico-power imperialism of the colonial powers – the role of languages in these nations starting from the 15-16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction.

Although there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as diverse languages on the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education.

In many of these nations local / nature languages were not given any importance at the national international. They were treated under the banner ‘vernacular languages’, and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colonial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.

Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxymoron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumerism in the two-dimensional space defined by “Environmentalist” and “Materialist” attitudes. A large proportion of customers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirationals. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirationals may gain gratification from sustainable purchasing and sustainable consumption. Aspirationals represent hundreds of millions of consumers globally. They are most prominent in countries with a tradition of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchasing might be introduced to Aspirationals as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members’ demo- and psychographics. The segments’ attitudes will be causally linked to a broad range of socially and environmentally responsible behaviours, and communication patterns.

Multilingualism and Community-Building Among Brussels Based Civil Servants and Lobbyists: Perceptions, Practices and Power Positions

This presentation explores the multilingual and multicultural aspects of community-building, networking and communication in the EU’s political and administrative system with special attention to the effects of a multilingual and multicultural working environment on the actors’ identities. In order to track these aspects we investigated the networking and communicative preferences of EU civil servants and lobbyists based on broad-scale survey data (277 surveys com-
The ESS has been leading in developing and disseminating transnational surveys research. The first wave was launched in 2001 and has since severely reduced. The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by English. It also appears that in their professional practice our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more pronounced than in national political arenas. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents’ social identities are rather influenced by new signifiers related to economic globalization and competition and their institutional positions than their linguistic backgrounds or the multilingual practices they take part in.

“I Hope to Muddle through until the Retirement” – the Aging Workforce in Demanding and Dangerous Jobs

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation. It is found that in general (bus drivers, machine-minders, traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seems strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and structured questionnaires with relevant workforce representatives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (mainly market driven) period respectively, to identify similarities and differences in challenges. Thirdly, the problem is approached from social policy point of view to demonstrate the inefficiency of the latest changes in the Slovenian pension system regarding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatisation, Europeanization and globalization. Austria, Germany and the USA are in general (bus drivers, machine-minders, traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seems strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Korean Environmental Sociology: History and Characteristics

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology which was founded in 2000 has organized theoretical and empirical research and has published Academic Journal ECO since 2001. Seejae Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development politics. Since the Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergences, and path-dependent post-individual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

*The Joint Impact of Paternal and Maternal Parenting Styles on Children's High-School Academic Achievement in Taiwan*

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers’ and mothers’ parenting styles jointly influenced their children's academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father’s and mother's parenting styles jointly influenced their children's development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children's academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being "yan" (strict) and being "tsi" (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children's academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children's development in Taiwan.
