The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal accidents” (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recent ly in the history of mankind in the implementation of modernization the question about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should be seen in the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintentional traumas lead to different ambivalent consequences. It is necessary to consider the layed hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

Participation, New Forms of Corporate Governance and Social Responsibility – History, Discussions and Realities – Industrialised Countries, Central and Eastern Europe and Developing Countries

Discussions to “participation” started in Germany within labour movement & works councils in 19th/20th centuries. Main questions were how works & representatives can participate in the production process, in works force organisation, decision making etc. The promoters were socialist parties & left wing circles, trade unions & works councils.

In France in the 80-s the “participation” was that base-democratic right which should stamp the “socialism in the colours of France”. Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90-s went around Japanese participation offers in production processes. Predominantly was - “Japanisation”. The following “Flexurity debate”, had the idea to exchange “flexibility of working regime” into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ies in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bearer of debate were less in trade unions or left political circles. Targets were common responsibilities of stake- and shareholders for environment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Trade unions in supervisory boards and works committees support this course; however, they were not any more the sole or key players of debate.

The discourse wins in social and changes away only from conditions of employment to the responsibilities and the consequences of the application of products. ISO 26000 is asked from the supervisory boards, the shareholders’ meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European countries.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)

Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day’s expenses but also people’s perception of how their effort and performance is valued by others (e.g. the employer), which can be a considerable aspect of mental well-being. In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people’s lives are from diverse perspectives, which together form their “objective living conditions”. As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one’s own life, such as life satisfaction or happiness. The life domains that are included in the index are:

- income / standard of living

Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges the ideas about ‘Japanese-ness’ and the labour movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesitcated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sóhyô, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NPO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civic society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archivial, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, weaves fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of a-funksie) and renders certain domains of the index seem to be unrelated to those macro indicators. Particularly, this concerns the domains housing area and health. Hence, the indicator can give differentiated insight into the “performance” of countries concerning their population’s objective living conditions.

Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al., 1969). Due to the heavy impact of colonialism and political power imperialism of the colonial powers – the role of languages in these nations starting from the 15–16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction.

Although there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as diverse in the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education.

In many of these nations local / nature languages were not given any importance at the national international. They were treated under the banner ‘vernacular languages’, and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colonial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.

KRITSKI, EUGENE* (GlobeScan Incorporated, eugene.kritski@globescan.com)

Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxymoron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumerist tendencies in the two-dimensional space defined by “Environmentalist” and “Materialist” attitudes. A large proportion of consumers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirationals. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirationals may gain gratification from sustainable purchasing and sustainable consumption. Aspirationals represent hundreds of millions of consumers globally. They are most prominent in countries with a tradition of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchasing might be introduced to Aspirationals as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members’ demo- and psychographics. The segments’ attitudes will be causally linked to a broad range of socially and environmentally responsible behaviours, and communication patterns.

Multilingualism and Community-Building Among Brussels Based Civil Servants and Lobbyists: Perceptions, Practices and Power Positions

This presentation explores the multilingual and multicultural aspects of community-building, networking and communication in the EU’s political and administrative system with special attention to the effects of a multilingual and multicultural working environment on the actors’ identities. In order to track these aspects we investigated the networking and communicative preferences of EU civil servants and lobbyists based on broad-scale survey data (277 surveys com-
plicated) and thematic interviews (17 hours of recorded materials). We argue that the power dimension of the linguistic choices among EU bureaucrats is especially important, since as Mamadouh (2002) observes: Language(s) regulate(s) access to political, economic, and cultural resources. Language matters to access the supranational political arena (for example, to acquire a position in an EU institution or a policy network), as well as to control political representatives and civil servants at the EU level.

The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by English. It also appears that in their professional context, our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more present in political discourse than with practical considerations. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents’ social identities are rather influenced by new signifiers related to economic globalization and competition and their institutional positions than their linguistic backgrounds or the multilingual practices they take part in.

**I Hope to Muddle through until the Retirement** - the Aging Workforce in Demanding and Dangerous Jobs

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation (flight and ground crew), forestry, farming, agriculture (farmers, traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seems strange - in performing arts (ballerinas). Slovenia, a ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and structured questionnaires with relevant workforce representatives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (mainly market driven) period respectively, to identify similarities and differences in challenges. Thirdly, the problem is approached from social policy point of view to demonstrate the inefficiency of the latest changes in the Slovenian pension system regarding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatisation, Europeanization and globalisation. The influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security from society, state and companies to individuals. The individualisation of risks has serious consequences for quality of work and working conditions of workers whose responsibilities for decent retirement and satisfaction pensions are severely reduced.

*Testimonies and evidence were collected as a part of a research project, commissioned by consortium of Slovenian Unions Associations (Alternativa and Free Trade Unions), Ministry of Labour, Family, Social Affairs and Equal Opportunities, Chamber of Commerce and Norway Grants found.

**Europeanizing Social Science - the Case of the European Social Survey**

This paper sketch out and analyze the historical development of the European Social Survey (ESS). In the 1996 a group of European social scientist under the auspice of the European Science Foundation initiated what became one of them largest social scientific projects, a project that now is seen as the golden standard in transnational social research. The first wave was launched in 2001 and has since been conducted biannually in an increasing number of European countries. From the first wave and onwards the ESS has been heavily funded through the European Union Frame Work Programmes and National Research Councils. Simultaneously the ESS has been leading in developing and disseminating transnational surveys research techniques from items design through field works to data management and dissemination. Using documents and interviews, the paper analyses the role of the ESS shedding light two interrelate processes both very central to the analysis of social sciences in society. First, it can tell us about the current changes and developments of surveys research. Surveys research has been one of the most influential social scientific techniques, but the classical techniques of surveys research has in different ways been attached to the nation state. Thus, the paper asks which kinds of changes does transnationalization of surveys research bring? Secondly, the paper analyses the relations between the social sciences and the EU. The social sciences has since their first institutionalization been closely entangled to the nation state, but how is this entanglement changes in the Europeanization process and with what consequences for the social scientific knowledge?

**Resistance to Mining in the Current and Past World-Historical Conjunctures: A Comparison of Mobilization Against Globalizing Capitalism Across Place and Time**

This is an incorporated comparison of resistance to destructive resource extraction by mining in the current and past world-historical conjunctures. The analysis is based on long-term participant observation and field research in the most important mining investment areas in Brazil, India and Finland. The empirical quality of the analysis of the current conjuncture allows to test world-system theories often based not so much upon large-N comparative ethnography. The findings are related to historical ruptures and continuities in resistance, seeking causal explanations and reasons to why mobilization against globalizing capitalism has occurred in some places and times and not others. The mining industry and regional trajectories will be historized and tied into the current events by historical institutional analysis.

**Korean Environmental Sociology: History and Characteristics**

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology which was founded in 2001 organized theoretical and empirical research and has published Academic Journal ECO since 2001. Seejae Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development models. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

**An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?**

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent post-individual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Joint Impact of Paternal and Maternal Parenting Styles on Children’s High-School Academic Achievement in Taiwan

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers’ and mothers’ parenting styles jointly influenced their children’s academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father’s and mother’s parenting styles jointly influenced their children’s development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children’s academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being “yan” (strict) and being “tsi” (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children’s academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children’s development in Taiwan.

Renwissance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectives, eg., collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with numerous contradictions, attachment both to the country they live in and its culture (France) and to the country and culture of their origin (Algeria), also from their ambition to avoid the abuse towards the suburbs of the French cities which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of “humanistic coefficient” was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state’s integrating policy.

KUBO, HIDEO* (Kyoto Sangyo University, kubo1978@cc.kyoto-su.ac.jp)
Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated his general theory. When Tanase studied abroad in 1970’s, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parson’s theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodern theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons’ functional analysis uniquely to study law and society in Japan. He decomposed research objects (fort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons’ general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons’ general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase’s application becomes a nice model of using Parsons’ general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.

KUBO, TAKAYUKI* (The Fukuoka Asian Urban Research Center, tak9kubo@gmail.com)
Tokyo as No. 4: A perspective from World City Ranking

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social problems have been threatened to ecological environments. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example. This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburban area and examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Local Responses to Increasing Vacant Houses in Tokyo

English has increasingly been positioned as a global lingua franca in public and academic discourses especially in non-English-dominant countries like Japan. To gain a better understanding of the language choice of Japanese transnational workers of five Japanese manufacturing companies who were assigned to work in China, Korea, or Thailand, semi-structured interviews revealed that for workplace communication, Japanese was predominant in China and exclusively in Korea, whereas English was exclusively used in Thailand. Almost all interviewees developed truncated repertoire of the local language in order to fulfill daily survival needs (Blommaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

**Conflict Management in Prostitution** (性活“=Seikatsu”) — the Structure and Meaning of Pluralistic Justice

“Conflict management in prostitution” have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kenya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as“性活者”= Seikatsu-sya”, sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the “real” situation of conflict management in prostitution (I call it normally as“性活”= “Seikatsu”, sex-practical use) . For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interview is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with “law” even “living law” in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against “law” finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is illegal or illegal. Because the “law” must be different for each in multiliter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

**Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States**

Since the 1990’s, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgendered who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers’ experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, the asylum seekers and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

**Gendered Innovations In Hospital Workforce Management: A Scoping Study**

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of ‘gendered innovations’ that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare system into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are taken effectively in hospital management, despite an increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

**Gendered Innovations In Hospital Workforce Management: A Scoping Study**

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of ‘gendered innovations’ that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare system into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are taken effectively in hospital management, despite an increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

**Mapping The Governance Of Care and Professional Development: A European Comparative Study**

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-oriented approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on Western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system...
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) ‘integrated professional development’ emerges in the context of decentralisation and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study that class differences (licentiate) level of professions, in order to achieve transformative potential, must be connected and backed-up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from scientific analyses that most former Socialists countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patrimonial or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu among others, that social norms relating to specific gender roles, self-control, race and other status and identity markers play a marked role in the repertoires Europeans use for assessing the bodies of both men and women.

Abortion Policies and Health Outcomes in Latin America: What Are the Relevant Lessons for Africa?

Both Latin America and sub-Saharan Africa have high abortion rates (generally above 30/1,000 women aged 15-44) despite overwhelmingly restrictive moral, legal, and social sanctions. Although data are limited, enough is known to examine how Latin American countries are making progress in negotiating the challenges posed by abortion and compare it with the situation in sub-Saharan Africa. This allows identification of relevant lessons for improving health and social outcomes in much of Africa.

Several decades ago, many Latin American countries had economic levels similar to many African nations today. They have since achieved better contraceptive practice and social outcomes, and are now witnessing declining rates of abortion, unsafe procedures, and related deaths. In contrast, Africa accounts for over half of the world’s unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for ameliorating present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple innovations (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change by bolstering policy reform, and better outcomes in this deeply controversial policy arena.

State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly contraceptive method that accounts for over 50% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injections are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second
most common method. We use survey data, documentary evidence, and key informants to examine these developments further. With certain caveats, the Indonesian experience offers lessons for instituting more solidly founded contraceptive and population policies and for accelerating the path toward replacement-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing injectable use can help meet demands on the fragile state health system, make use of Egypt's underdeveloped community-based channels, and may serve as a catalyst for other Arab states to help them reach more sustainable population and development trajectories.

Depression, Suicidal Ideation and High-Risk Behaviors Among Underserved Youths in Central Mexico

Background: The staggering cost of depressive disorders and suicide on the quality of life of patients and families, the increased mortality risk, and the high economic burden demand our attention. There is evidence suggesting that engagement in risky behaviors, development of negative habits such as using alcohol, tobacco, and drugs, and depressive disorders all begin during adolescence. Further, substance use, in particular smoking and drinking, has been linked to depression and suicide risk. The study aim was to evaluate the prevalence of depression and suicidal ideation and identify predictors that could inform a prevention program.

Method: Using a cross-sectional study design with a probability sample, 702 adolescents from low-income, rural high school students in the central Mexican state of Guanajuato were surveyed.

Results: Almost half (49.2%) of participants showed some level of depression (CES-D > 16), with 23.6% identified as suffering severe depression (CES-D > 25). Logistic regression analyses indicated that controlling for financial status, symptoms of depression were predicted by female sex, low self-esteem, risky behaviors, conflictive parent-teen relationships, and binge alcohol drinking. The same variables with the exception of binge drinking predicted severe depression. In turn, suicidal ideation was associated with depression, low self-esteem, high-risk behaviors, and conflictive relationships with parents. A similar pattern of clustered behaviors and suicidal ideation and identify predictors that could inform a prevention program.

Conclusions: Predicting and ultimately preventing depression is of enormous public health significance. The findings can inform the design of interventions to prevent this early pattern of depressive disorders and associated risk factors among low-income, rural youth in Mexico and possibly in other contexts.

Urban American Indian Youth Religion, Native Spirituality, and Well-Being: A Latent Class Analysis

Most American Indians (AI) in the United States now live in urban rather than tribal areas yet little is known about their interconnected spiritual, religious and cultural worlds. This presentation documents ways that urban AI middle school students were involved with religious institutions and Native spiritual and cultural practices, and assessed how these differences related to cultural identities and risk and protective behaviors. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern US metropolitan area. Latent class analysis identified distinctive groups of youth according to religious affiliations, attendance at religious services, adherence to Christian and traditional spiritual beliefs, sense of Native spirituality, and involvement with spiritually significant Native cultural practices. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern US metropolitan area. Latent class analysis identified distinctive groups of youth according to religious affiliations, attendance at religious services, adherence to Christian and traditional spiritual beliefs, sense of Native spirituality, and involvement with spiritually significant Native cultural practices.

Two groups followed Native beliefs and spiritual practices, one affiliated with the Native American Church (NAC) and another unaffiliated with any church. The fifth, non-religious group, was unaffiliated, followed neither Christian nor traditional beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA indicated that the two Christian groups were higher in SES, had lived longer in the urban area, and reported more pro-social behaviors and better decision-making than the non-religious group. The two Christian groups were also the most substance using friends. The two groups embracing AI spiritual beliefs, and was uninvolved in Native spirituality and cultural practices.

Marginalized or Empowered? Conflict Induced Internally Displaced Kurdish Women's Experiences in Turkey

This study is focusing on the conflict-induced internally displaced Kurdish women's experiences. There has been an ongoing internal armed conflict in Turkey since 1984 and one of the consequences of this conflict is the internal displacement that occurred in 1990s. In the displacement process, women and other family members were victimized. They did not only loose their homelands, but they also had to struggle in the city centers with poverty and discrimination.

After they started to live in the city centers, women may become both marginalized and empowered. The aim of the study is to understand the situations that lead Kurdish women to be marginalized and/or empowered in the cities to which they have been forced to migrate. After the displacement process, which is one of the major victimization processes for these women, some of them may be trapped in ethnic and gender-based discrimination and may become more marginalized in the city centers. But marginalization and empowerment are not fixed categories and there is always a possibility for these women to transform their marginalized position into empowerment. By political engagement, working outside home and/or being head of the household these women may break the cycle of their marginalization and becomes empowered in the city centers.

Gender and Medical Specialization: Segregation By Culture or Choice?

Women taking to gainful employment and professional practice are on the rise in India and medicine is one such profession which by its nature, prestige and rewards comes to be sought after most by women. It is precisely owing to these traits, the medical profession has been strongly aspired by their male counterparts as well, which might bring into play the forces of gender bias and gender discrimination as has been the case with the phenomenon of gainful employment in general. The paper seeks to ascertain empirically the considerations, motivations and preferences influencing women's choice of career path in medical profession by women in medical profession. The findings are based on in-depth interviews with 237 women physicians in the City of Bangalore in India. The findings reveal that women doctors are inclined and constrained to avoid such branches that tend to be male dominated. It is further noticed that women doctors tend to opt for the soft specializations industry less sought after function, male counterparts and hence are less expensive in terms of course fees and capitation, and also are relatively less paid on the one hand and provide less intrinsic satisfaction and recognition in medical circles and society on the other. The experiences and dispositions of women doctors appear to indicate that their decisions on specialization tend to be culturally conditioned and are outcome of their tendency to avoid areas of medicine over which their male counterparts are assumed exercise a cultural and professional prerogative and unjustified monopoly.

KULKARNI, JAYASHREE V* (JSW Steel Ltd., jaya1581@rediffmail.com)
Technology Induced Inequalities at Workplace – an Indian Experience

Inter-industry variations in compensation packages has since long been a normal phenomenon in industrial circles as it comes to be determined by the functional importance of respective industry and the levels of skills and expertise required. The paper deals with recent trends toward increasing inequalities in earnings in Indian work organizations. It is assumed that growing complexity of knowledge and skills required, length and cost of training requisite for operations, increase in capital expenditure requirements and growing sophistication and standardization of industrial processes and production methods and technological innovations and their dispersion through forces of globalisation and these developments have implications for compensation packages across the industries resulting in increasing inequalities in wages within and across industries. The analysis of data pertaining to variations in pay and allowances in 16 labour intensive and 14 technology intensive manufacturing establishments in India over a period of 20 years indicate that differential emphasis on technology and innovations in different industries has brought about unprecedented inequities in the levels of income between the industries and even within the industries across the cadres. Such inequalities are further accentuated by elimination of moderately skilled workers on grounds of obsolescence and redundancy. The findings further indicate that the technology induced variations in income in Indian Industries vary significantly with sector of industrial operations and its functional importance for economy on the one hand and its potential for creation of wealth on the other.

**Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN**

The purpose of this study was to investigate the change of population from 1967–2060 and to study the demographic dividend among ASEAN countries and health care among aging using qualitative methods from secondary level of population data. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency while the death rate is very low and birth rate is declining. The total fertility rate of the ASEAN population is 2.4. The demographic dividend could be categorized into three groups including 1) countries that already have passed opportunity, i.e., Singapore, Thailand and Vietnam, 2) countries that have had the chance to handle this prime event, i.e., Indonesia, Malaysia, Brunei Darussalam and Myanmar, and 3) countries that will meet this situation in the future, i.e., the Philippines, Cambodia and Lao PDR.

The ASEAN community consists of ten countries as its members which all have different population structures, hence dividend occurs more than once and each country could give a hand to others to help solve problems and clear effects. It may be necessary for countries which have not faced the prime period to learn experiences from those who have passed the period. For labor issues, population segments could be reallocated to countries that lack human development resources resulting in the new trends in health care systems for aging people in the future.

**History of Courtship and Dating in Japan**

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsukamato-ko (the groom commuted to the bride residence), to the muku-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men’s families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yoiya pattern based on the mutual consent of the marriage partners. Then, two types of mate selection pattern emerged: the arranged (miiya) and the romantic marriage (ren-ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization the miiya was the predominant pattern, however the complete reversal has emerged today, and ren-ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singleness of Japanese men and women today are one of the major reasons for the fertility decline. Attempting to provide young people with mate selection opportunities various “kon-katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Machi-Kon (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

**Car Festivals (Religious Yatraas) in India: A Dimension of Leisure Tourism (A Case Of ‘Nanda Devi Raj-Jat Yatra’ In Uttarakhand, India)**

This paper is about the car festivals (Religious Yatraas) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, jagannath Puri Rath Yatra (Orissa, India), Mysore Rath Mahotsav Yatra, Mysore (Karnataka, India), and Nanda Devi Raj-Jat Yatra (Uttarakhand, India) etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. Nanda Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttararakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping-Some Illustrations from Western Himalayas

Around 10,000 years ago human being had started domestication of plants and animals, even before this period, people had been altering pests and animal for their own benefit by using other means such as fire-stick farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and at least selecting three respondents from each village, 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, semi-culture and horticulture and earning very good income and experienced change in the amenities available in the household as well as they are capable to provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sd131012@g.hit-u.ac.jp)

The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons.

Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers, publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies, the beginning of 1930's, American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.

KUMKAR, NILS C.* (University of Leipzig, nc.kumkar@uni-leipzig.de)

The Geographies Of Discontent

The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-criticism in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined Habitus, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the Habitus as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

KUMSA, ALEMAYEHU* (Charles University, alemaye.hu.kumsa@ff.cuni.cz)

Conflict In Ethiopia

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word colonus, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where they are viewed as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teaches us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing its neighbouring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

KUMSA, ALEMAYEHU* (Charles University, alemaye.hu.kumsa@ff.cuni.cz)

The Roots of Horn of African Conflicts

The Roots of Horn of African Conflicts

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of Africa is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waaqifana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper.

Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new influences make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with-in-laws. They also experience the unreasonable underestimation of their natal family’s SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan’s limited living space.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with-in-laws. They also experience the unreasonable underestimation of their natal family’s SES by their in-laws.

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People's Politics in Democratization Process in Thailand

This paper aims to explore the concept of people’s politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people’s active involvement. People’s participation has also been launched throughout the country. Both the government and the government officials in the political movements towards democracy will be examined in the paper. The grassroots’ movement for human security, equity and opportunity will be studied as an example of the strengthening of people’s politics in terms of deliberative democracy, civic education and democracy. The role of the people’s movement will be addressed through the works of Center for People’s Political Development Center supported by King Prajadhipok’s Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people’s politics development in the future.

Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society’s acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system’s ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

The ultimate goal of this study is to develop an assessment framework that is both comprehensive and feasible in the area of disaster management. The paper first reviews and analyzes the capability assessment systems carried out in the United States, New Zealand, and Japan. We then modify the US national preparedness system (e.g., core preparedness capability) and develop a framework based on Taiwan’s experiences in disaster management. The resultant assessment framework is constructed with a matrix of 19 disaster tasks (e.g., risk assessment, evacuation, and housing) and 11 capability elements (e.g., planning, science and technology, and social capital). It assesses whether a local society has the required institutional mechanisms and resources to execute these tasks in three disaster management missions (i.e., prevention and mitigation, response, and recovery). The result of this capability assessment framework is expected to be applied further in disaster risk assessment and capacity building program.

Public Environmental Concern in Taiwan

One of the top 21 emerging global environmental issues for the 21st century identified by the UNEP foresight report is ‘Social Tipping Points: Catalyzing Rapid Shifts for Transformative Change in Human Behavior’. (#5) Its root can be thus inferred that humans need to change original destructive actions and need to learn to adapt to changing climate and environment (with combined influences of both natural and human forces). Moreover, these actions need to be taken with a more rapidly speed. However, the factors that trigger people’s behavioral changes are often differentiated due to countries’ different socio-economic contexts. Therefore, it is important to understand how individuals in different cultures think of, know of, and plan to respond to these environmental challenges and to investigate the interrelationship between people’s environmental attitude and environmental behaviors. This paper aims to answer these two research questions.

The study reports the data (n=2209) derived from 2010 Taiwan Social Change Survey (TSCS)—a longitudinal face-to-face national survey project conducted each year since 1985. The results find that the Taiwanese public is concerned about environmental issues and they demonstrate a positive environmental value system in terms of protecting the environment, coexisting with the nature and other species, and respecting the earth. However, they show a level of inconsistency in the frequency of taking pro-environmental behaviors. While they often recycle for renewable resources, they rarely consume organic foods and drive less personal vehicles. The preliminary analysis suggests that there are deficits between pro-environmental attitude and actual environmental actions. To overcome this behavior deficit, it is perhaps necessary to provide net-benefit incentives to Taiwanese people.

KUPFERBERG, FEIWEL* (Malmoe University, feiwel.kupferberg@mah.se)

The Intellectual Advantages and Dangers of Borrowing, the Complex Relation Between Literature and Sociology

Literature and sociology are two types of intellectual games. Literature is driven by the rules of art. The latter foreground such aesthetic techniques as estrangement (anti-essentialism), meaning gaps ( let the reader guess) and the captive mind ( manipulated emotions). Sociology is a scientific discipline and is hence bound by the rules of typological construction (essentialism), methodological reflection (transparent language) and distanced role-taking ( critical empathy). This does not exclude intellectual borrowing of the insights, imagination and language produced by writers. A good starting-point to reflect on these issues is the methodology of Ervin Goffman. He uses literary sources mainly for their accurate ethnographic observations in particular from the French existentialist writers Jean-Paul Sartre and Simone de Beauvoir in order to investigate issues of identity and identity work and more generally the micro norms of interaction between ego- and alter.

What Goffman tends to ignore though is that in particular Sartre in all his novels and dramas describes alter as “stranger”. There are never any close emotional relationship between ego and alter. In order to fully explore the imaginative possibilities of literature, other French writers such as Proust and Celine should be looked into as the latter suggest that social relations between strangers can change into intimacy but also return to the civility between strangers in public.

Nor should sociologists ignore how literary theorists analyze the works of fiction writers, reading such work helps us better to understand both what is specific for the literary text but also how the techniques, imagination and language of fiction writers illuminate important aspects of issues that sociologists have tended to leave out in their interpretative work such as the importance of events, time, place, artifacts, representations, bodies, problem-solving etc.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with the cultural norms of the organization, where trust is a part of every interaction for communication and employee involvement, along with strategies for reducing community in a way that encouraged the actions necessary to reduce the growing culture indexes are inversely related to overall level of trust and loyalty. The study will be determined by the specific rate of each type of loyalty Organizational trust is related to employees’ loyalty, i.e. each component of or- ganizational culture is linked with the proactive approach, that involves the love of the neighbor. This is then linked with the analysis of the rituals of reconcilliation where the emotions are public- ally assumed as minimal precondition for reconcilliation but the ideal reconcillia- tion is linked with the proactive approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the role and dynamics of the tolerance/love/hatred complex. This is then linked with the externally visible out of the whole of human sensory experience.

The peculiarities social media is the social context (“the ideology of the time”), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the infor- mation, of connection information to one or another area of subject’s life and etc. Users’ trust in e-zines is one of particular cases of media-trust, which is a result of three basic components: trust to information, trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relation- ship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent’s characteristics has identified.

**KURODA, YOSHIHIKO*** (Nagoya University, krd@nagoya-u.jp)

**Globalization in East Asia and Contemporary Situation in Northeast Asian Societies**

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 – higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tensions both between Japan and China, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China’s relationship is often described as comprising “Cold politics and hot economics”. It can be said the same for Japan- and Korea’s relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of “Cold politics and hot economics”, as is recently observed in hate speech against foreigners from Korean.

**Ready or Not? California’s Early Assessment Program and the Transition to College**

Nearly one in three first-time freshmen in the U.S. are enrolled in some remedial/ developmental course in English or math at their college or community college (U.S. Department of Education, 2003). Rates of remedial course enrollment vary substantially across U.S. colleges and universities, with some institutions not offering any and others enrolling upwards of 80 percent of their incoming students in remedial classes. Part of the explanation for the large share of remedial students in American colleges and universities may be limited information. Students are often ill informed about what they need to do to succeed in college and subject to the (arguably) mistaken perception that everyone must at least attend, if not complete, college in order to succeed in the labor market. A majority of high school students, regardless of their academic performance, report that they will attend college (Rosenbaum, 2001). In fact, academic performance accounts for little of the variance in students’ expected levels of educational attainment. Despite the pressing need to ensure that more students obtain a postsecondary degree, we know surprisingly little about what leads to college readiness and degree completion.

This study focuses on California’s efforts to improve college readiness through the Early Assessment Program (EAP). The EAP is an intervention designed to increase the quality of information about academic preparedness available to high school students. We aim to understand how an increase in information about college readiness affects students’ preparedness for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.

**Financial Support for Families with Children and Its Trade-Offs: Balancing Redistribution and Parental Work Incentives to Increase Well-Being of Families**

Financial support for families with children implies inherent trade-offs some of which are less obvious than others. In the end these trade-offs determine the effectivenss of policy with respect to the material situation of families and employment of parents - two crucial elements for the well-being of families. We analyse several kinds of trade-offs involved using a careful selection of potential changes to the system of financial support for families with children. We focus on: 1) the trade-off between redistribution of income to poorer households and improving work incentives, 2) the trade-off between improving work incentives for better off and poorer households, 3) the trade-off between improving work incentives for first and for second earners in couples. The exercise is conducted on data from Poland, a country characterized by high levels of child poverty, low female employment and one of the lowest fertility rates in Europe. We demonstrate the complexity of potential consequences of family support policy and stress the need for well-defined policy goals and careful analysis ahead of any reform.

**Supporting or Hindering Maternal Employment? Comparing Financial Incentives within Family Policies in CEE Countries**

The Central and Eastern European (CEE) countries have often been treated as a monolith in comparative social policy analyses. While there are moderate differences in gender employment gaps of childless men and women in these countries, the picture of employment among parents of young children is completely different. The employment rates of fathers of preschool children are very high in all CEE countries, ranging between 98% and 94%, but the employment of mothers diverges from 36% in Czech Republic to 81% in Slovenia. Previous research has showed that there are different cultural, structural and economic factors influencing
Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country illegally. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

KUSAKABE, NAONORI* (Bunkyo Gakuin University, nkusakabe@bgu.ac.jp)

Vulnerabilities to Cyclonic Disasters in Bangladesh

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underrate the displaced people's evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2001 and 2007 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation and enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

KUSAYANAGI, CHIHAYA* (Waseda University, kusayanagi@waseda.jp)

“Individuality” As a Moral Expression in Japan

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. These words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “Individualization” and “individualism” in Japan are vocabularies often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku” (personal or solly on their own), and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

KUSEIN, ISAEV* (Kyrgyz-Turkish University Manas, kuseinsaiev@yahoo.com)
Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather novel to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is "a more sober political identity" that separates itself from the background of the past centred around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the choice of civil nation. Dominant and homogenous communities which can, however, turn out to be less stable, emphasize the (precarious) achievement of homeownership, the neighborly families who lived in mobile home communities in Florida, during the unfolding of globalisation. This research was part of a larger research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhume, insensitive, detached system and strategy.

RC43-720.2
KUSENBACH, MARGARETHE* (University of South Florida, mkusenba@usf.edu)
Between Lifestyle and Necessity: Senior Mobile Home Living in Florida

This paper focuses on a community-type that has long been attractive to older people in the Gulf states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the "mobile home lifestyle" in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less stable, affordable, and personally fulfilling for older people than originally anticipated.

RC43-719.4
KUSENBACH, MARGARETHE* (University of South Florida, mkusenba@usf.edu)
"Look at My House!"—Home-Making and Identity in an Urban Mobile Home Park

This paper focuses on meanings and practices of home among residents of a predominantly Latino mobile home park in Florida. It is based on an analysis of 30 qualitative interviews conducted with sixteen Latino/a, twelve White, and two African American community residents, follow up walks with fifteen interview participants, and ethnographic field notes written by a Latino student researcher and community resident during 2008-2009. This research was part of a larger study investigating the communities and disaster vulnerabilities of working class families who lived in mobile home communities in Florida, during the unfolding of the last U.S. economic crisis.

The paper specifically discusses the meanings and emotions of home for the Latino/as, who were predominantly immigrants, and emphasizes differences with how white residents thought and felt about their places. Latino/as generally displayed great pride in their neatly decorated and customized mobile homes. They emphasized their (achieved) achievement of homeownership, the neighborhood community, and the park's safety and tranquility (especially when compared with surrounding areas) in their descriptions, which functioned as markers of decency, upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of "trailer" residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.

The Business Case For Labour Broking In South Africa

Globalisation has brought about changes in the world in particular the restructuring of the workplace in order to promote labour market flexibility. Labour brokers have been traditionally associated with the growth of waged occupations created in temporary jobs and casual positions. South Africa is currently dealing with the rising use by companies of temporary employment agencies, also known as labour brokers, who apparently facilitate this labour market flexibility. Labour broking has stirred up a lot of controversy in South Africa through the media, unions and many movements to the point where labour broking has been labelled as a new form of slavery that further fuels workers rights exploitation. Certain abuses have been associated with the practice of labour broking in relation to ensuring decent jobs in South Africa's globalizing capitalism. This research has been conducted regarding the business case for labour broking and subjecting it to an assessment alongside the notion of decent work as advocated by the international Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhume, insensitive, detached system and strategy.

Multicultural Movements In Indonesia: A New Youth Initiative For Social Transformation

The massive process of reislamization of society that started to develop after the time of 'Reforms' in 1998 has brought many social changes in everyday practice of social life in Indonesia. Today, Indonesia has to face almost everyday the problems related with the disruption of harmony of living-together. Besides religious-fundamentalism and terrorism, the intolerance among religious groups, violence against minorities and the demise of cultural diversity respect value have become a serious problem in society. Concerned with that situation, many young people in Yogyakarta in Central Java have built movements for bringing back social tolerance in Indonesian public sphere. As counter-actions and counter-discourses, the movement has successfully gained the public support and built larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global society and its institutes in their interaction with the state.
multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

KUZMINA, ELENA* (MGIMO University, helen.i.kuzmina@gmail.com)
Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economical and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social transformation. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon.

The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

KÜNEMUND, HARALD* (University of Vechta, harald.kuenemund@uni-vechta.de)
Life Expectancy and Retirement Age: Policy Options and Practise

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforces. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforces (gender equality) and social inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growing friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)
The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rather based on local patronage and personal appeal than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1000 people were killed and over 300000 displaced. It was thus remarkable when the newly aligned major political camps released programmatic manifestos for the 2013 elections. They included some claims in the field of education (universalization and enforcing into a common vision the national curriculum), social security (catalysed by a serious electoral crisis, politics finally resulted in policies.

KÖNIG, ALEXANDRA* (University of Wuppertal, okoenig@uni-wuppertal.de)
Faces of Uncertain Transitions to Adulthood – in Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its’ manifold fields of education are ideal cases for studying the phenomena in question. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will
(a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalist apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances);
(b) differentiate between levels of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone);
(c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In forms of our research project, we link theories of interactionism (e.g., Meads processual concept of "self": Strauss' concept of "status passage") with Bourdieu’s theory of social inequality (and his concept of "field") to understand the strategies and orientations of adolescents at the threshold to adulthood.

RC04-80.9
KÖNIG, ALEXANDRA* (University of Wuppertal, okoenig@uni-wuppertal.de)
Orientation and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term "self-project" (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing "self-project", that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions, and it is (c) embedded in an interactive process with generalized and structural others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points:
(a) The structredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering. b) The access to different fields of education: While the criteria for access to university are universal and transparent for the "good" chances (like teaching or engineering. c) The access to different fields of education are ideal cases for studying the phenomena in question.
Educational Inequality and Welfare State Patterns

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

KÖPPE, STEPHAN* (University of Dundee, s.koeppe@dundee.ac.uk)
The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is passed down generations. In recent years this idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

LABUCAY, IREMAE* (Social Weather Stations, mae.labucay@gmail.com)
SANDOVAL, GERARDO (Social Weather Stations)
Gender, Work and Family: The Situation in the Philippines

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as "homemakers". Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these homeowners to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in this term, it needs to be constantly reconsidered, the rise of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villageness”. Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organizations in France. The analysis of the Journal official, a registry of all associations created in France, shows a net decline of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO’s engaged into development work in Morocco.

What are the relationships between this reorientation of Moroccan volunteering and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10 000 people and focusing on both immigrant integration and transnational practices shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding "here and there" of immigrant transnational organizations.

Nationalism and Attitudes Towards Immigrants: Canada and Taiwan Compared

Canada and Taiwan are both developed societies with a full range of class cleavages that grew out of waves of settlement from elsewhere. Both have a complex internal ethnic structure, with two large majorities, aboriginal minorities, and waves of more recent immigrants. In recent decades, both societies have experienced important re-definitions of the relationship between the aboriginal segments and the larger society. In Taiwan, the cleavage between the long-established Taiwanese and Mainlanders is an overarching one that has ramifications in many areas of political life. This parallels Canada’s linguistic dualism. In Canada the history of dual European settlement has led to one that has ramifications in many areas of political life. This parallels Canada’s association of migrant organisations in 2002. These transnational associations are mostly NGO’s engaged in long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villageness”.

At the same time, these new regulations have taken place against a background of changes in migration policies and the dynamics of migration.

In this context, this paper aims at analysing the effects of these trends and contrasts on employment and working conditions of care/domestic workers (elderly and child care), in an intersectional perspective. We will discuss in which ways these consequences are similar or not for migrant and not migrant domestic workers and if not, why and how.

A European research project coordinated by the ILO has been instrumental in foregrounding issues relating to the role and working conditions of migrants as caregivers. This paper will present results from the French case as an example of mixed care regimes. Data sources include LFS data, policy reports, interviews with union representatives, government departments, NGOs (16) and migrants working in the sector (50).

L’action Et Les Politiques Syndicales à L’Épargne De L’aide Et Des Services à Domicile En Europe. Le Cas De La France

En France, comme pour d’autres pays européens, l’aide et les services à domicile sont le lieu, depuis plusieurs décennies d’expérimentations discrètes en matière d’émergence de nouvelles formes d’emploi et de précarisation du travail. Dans le même temps, des avancées certaines mais fragiles ont aussi eu lieu et, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de management et d’encadrement du personnel. L’on raisonne sur le secteur marchand ou non marchand, du côté des organisations syndicales, le secteur apparaît comme un nouvel enjeu. De nouvelles pratiques et politiques émergent, tandis que les militantes du terrain continuent d’être engagées dans un travail militant au quotidien, dans un univers où les taux de syndicalisation sont faibles.

Cette communication propose de s’intéresser aux formes des politiques et de l’action syndicales dans l’aide et les services à domicile en France, en articulant les différentes échelles de l’action syndicale et en revenant sur les contradictions à l’oeuvre. L’analyse documentaire, d’entretiens réalisés auprès d’acteurs syndicaux et institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l’oeuvre et de la façon dont elles peuvent peser pour changer le travail, qu’il s’agisse d’actions au quotidien ou de formes d’intervention dans des instances internationales. Les données sont extraites d’une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par le BIP (Fonds européen) menée au moment de l’application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

The Egypt/Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufism in forming the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world: Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in...
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

LADNER, ANDREAS* (University of Lausanne, andreas.ladner@idheep.unil.ch)
How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufts 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed and to what extent the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

LAFORGIA, REBECCA* (Adelaide university, rebecca.laforgia@adelaide.edu.au)
Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times ‘an ongoing crisis of attentiveness.’ Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be ‘an ethical listening subject.’ He argues this subject will make “the choice to listen selectively.” This does not mean Beard explains to only those points at which we feel “safe” but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Hoffield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Hoffield argue this listening then in turn creates the ‘self’. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

LAFREE, GARY* (University of Maryland, garyloffree@gmail.com)
Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. countries from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

Back to the Future?How 3D Printing Technology Reassembles Museums’ Materiality with Scenarios Analysis

3D printing or ‘personal fabrication’, as a newly emergent technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the widespread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum’s aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field. Based on 3D printing’s current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of ‘forms of museum capital: Firstly, it analyzes current museums’ acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection’s restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing ‘engaged in museums’ interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-making in the age of (im)mobility. Some scenarios analysis of the 3D printing’s general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

Educational Inequality in China -- Preliminary Findings from Recent High School Graduates in Urban Nanjing

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus on educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening discriminates exploited by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious high schools, and students with better self-reported academic performance are more likely than their counterparts to enter key universities. Father’s education and family prestige, and key university are significant correlates of social participation and occupancy of leadership position. Implications of the findings will be discussed.

RUAN, DANCHING (Hong Kong Baptist University)

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are often presented in the form of social organizations. School is a major social organization in contemporary societies; there may be individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural conditions of social network formation. Existing studies have mainly focused on the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese students face great changes in social networks, e.g. changes in the key others, which differ significantly in resource input and prestige. Differences in network changes between these two types of universities are compared. Second, how may participation in extracurricular activities and part-time employment, two major aspects of university life, affect the social network structure? Changes in network size and diversity are measured. Preliminary findings show that transition to key university, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

Creating Agora Chronotopes on Young People’s Political Participation in Transnational Meetings

This paper deals with young people’s political participation in transnational meetings. Methodologically the study aims to shed light on multi-acted global ethno-ography. Young people are viewed here as a social age group sensitive to critical, alternative and even radical political participation. The diversity of the young actors and their actions is captured by using several different methods. The research sites are the EU Presidency Youth Event (2006 Hyyinkää, Finland), the Global Young Greens Conference (2008 Stockholm, Sweden and three World Social Forums (2006 Bamako, Mali; 2007 Nairobi Kenya and 2009 Belém, Brazil). The data consists of participant observation, documents and media articles of the meetings, interviews, photos, video, and internet data. In this paper the diverse field of youth political participation in transnational agoras is studied by using a cross-table of cosmopolitan resources (or the lack of them) and everyday-makers – expert citizen dichotomy. First, the young participants of the EU Presidency youth event are studied as an example of expert citizens with cosmopolitan resources (these resources include, for example, language skills, higher education and international social network). Second, the paper analyses those everyday-makers who use performative politics to demonstrate their political missions here and now. But in order to make the social movement global they need cosmopolitan resources to be able to use the social media tools and work globally. Third, the paper reflects upon the difficulties of reaching those actors who lack cosmopolitan resources, either everyday-makers or expert citizens. The go-along method and the use of the interpreters are shown as ways to reach these young people’s political missions. Fourth, the paper underlines the importance of “contact zones” for deeper democracy and for boosted dialogue between different kinds of participants.

Spaces of Dialogue? the Case of the Wsf Tunis 2013 from the Perspective of Local Youth and Volunteers

The paper focuses on the World Social Forum (the WSF) held in Tunis 26-30 March 2013 from the local youth perspective. The WSF Tunis brought together 60,000 participants from formal and informal social movements and networks all over the world for five days. The authors distinguish the young WSF volunteers from other Tunisian youth who participated in the forum. The data drives from participatory ethnography and action research. Around 15 WSF volunteers and 20 young Tunisian civil society actors involved in the WSF Tunis were interviewed during and right after the forum.

The research questions focus empirically on the dialogue/non-dialogue from the young Tunisian participants points-of-view: 1) what kind of local (Tunisian) dialogue took place; and 2) what kind of global dialogue (esp. together with non-Tunisian participants) took place – inside and outside workshops and sessions. These questions intertwine with the questions of why the WSF came to Tunisia and what affect it had to the local civil-society from the young informant’s perspective. The paper also studies the roles and effects of the local youth in the WSF as well as the success and shortcomings of the WSF Tunis from the perspectives of the young volunteers and young Tunisian civil society actors.

The Tunisian author of the paper (Jabberi) was the volunteer coordinator in the WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in the forum (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the global South and North takes also place in the setting of co-authors, carefully reflected in the paper.

Producing Knowledge about Post-Separation Stalking from Children’s Point of View - Children As Social Actors?

In this presentation, the post-separation stalking is understood as gendered violence from the children’s point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children and their mothers’ wellbeing. Stalking is defined as severe, continuing, multidimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production. The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alii Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The principle has been to enable safety spaces for children’s voices. The children’s knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children’s narration. The data is collected by children’s groups based on interviews and workshops conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced threads within such discourse obscure a regime of institutional reification requiring interrogation.
Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine if perceptions they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers. It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students. Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/ inhuman beating” in schools. These views expressed by teachers raise important policy implications.

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex competitive milieu articulating local and global dynamics. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national CCT programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper presents two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household’s surveys, and on programmes assessments and internally available data through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.

Response Latencies and IRT Person Estimates Using CASI

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

The possible practical consequences of the use of this algorithm for survey research are discussed.

Deferential Surrogates and Professional Others: Recruitment and Training Of Migrant Care Workers In Taiwan and Japan

When outsourcing care to foreign workers, a society must engage in discursive reconstruction and institutional reorganization of intimate labor. Should care be seen as a family duty or professional work? Should care be characterized as a culturally embedded practice or a market form of labor that can be easily outsourced to foreigners? This paper examines the operation of transnational care regimes in Asia by comparing the recruitment and training of migrant care workers in Taiwan and Japan. Although both countries seek migrant workers as a solution to the similar problems in aging population and care deficit, Japan and Taiwan have adopted distinct models which demonstrate varied ways of intersecting migration regime and care regime: Migrant care workers in Taiwan are positioned as “deferential surrogates” while their counterparts in Japan are seen as “professional others.” It is often assumed that East Asian societies share substantial cultural affinity due to their intersecting histories and common tradition of Confucianism. This comparative study not only shows varied institutional parameters of care that organize the family, market and state in distinct patterns, but it also demonstrates that cultural values and social practices such as familism and gendered division of care are subject to transformation under the influence of state intervention and global market.

Tiger Parents in a Globalized World: Class, Immigration and Transnationalism

The reductive image of “tiger mom” has overshadowed the changing practices of and class differences within Chinese parenting. Based on in-depth interviews with parents in Taiwan and Chinese immigrants in the US, my paper examines how globalization has differential impacts upon the styles of childrearing across class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is influenced by class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is class divided. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is class divided. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is class divided.
the global economic downturn has affected well-being of all employees, the ramifications for individual employees’ remain unclear. The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright’s class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifurð, Bison and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures
In this paper we compare different methods of measuring social capital in conjunction with alters’ resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego’s social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting large-scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries
During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the ‘new middle classes’. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumption patterns.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver
On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into “loft-living” condos, rundown streetscapes were intensely policed then trendyfied, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver’s revitalization while exacerbating the city’s problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public’s field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of “protection against the elements”.

Arguing that the camping ban did not eliminate homelessness and interested in how Denver’s homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: 1. a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

“Because You’re a Migrant, They Treat You Really Tough.” Findings of a Qualitative Study on Young Migrant’s Perception of the Armed Forces in Germany
In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of “others”. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewees allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritative countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewees played a subtle role in producing an environment of interest/disinterest for the arms forces in the group discussions. In unintentionalBlank

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of a sexualisation of the researcher occurred that focussed on the researcher's sexuality and his sexual biography. The paper addresses methodological ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytic concepts of inter-subjectivity and counter-transference it argues for reflexively bringing in into the research process one's own sexuality as a researcher as a means for a deeper understanding of the production of sexual life stories in the interview situation. The double-bind of being researcher and perceived peer that may lead to exploitations of the interviewee's fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

Mobilizing for Dignity: Recognition and Social Movements
How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy. How have such movements fared? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in Marxist critique of alienation, Lukac's critique of reification, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilizations.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity
Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban financing, and urban rebuilding projects.
Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the « Japanese miracle » which occurred from the 1960s to the 1990s, during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.
Two new phenomenons are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the ediction of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of European and American cities facing the same issues than Tokyo. 
This paper will present the urban transformations induced by urban maturity, and will allow to discuss the notion of urban maturity, taken as a notion in opposition with the model of shrinking city.

Résister à La Précarisation Du Travail Dans Une Sidérurgie Brésilienne : Malgré Le Syndicat ?
En fonction du principe de l’unité syndicale, le Syndicat des métallurgistes de Ouro Branco et base (SINDOB) est le seul syndicat à représenter les travailleurs de la métallurgie et de la sidérurgie dans la région de la Vallée du Paraopeba située dans l’État de Minas Gerais au Brésil. Le SINDOB est notamment le syndicat qui représente la moitié des 6.000 travailleurs directs (et un dixième des 4.000 travailleurs sous-traitants) de l’ancienne sidérurgie Açominhas, une entreprise étatique privatisée en 1990 et aujourd’hui détenue par le groupe brésilien Gerdau, 14e producteur d’acier dans le monde. Une enquête par entretiens a été menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette sidérurgie dans le cadre d’une thèse de doctorat sur les formes de résistance non institutionnalisées des travailleurs. Les dirigeants syndicaux interviewés – trois directeurs et le président – affichent leur politique auprès de la Gerdau : « négocier ». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd’hui « tranquille » grâce à ce « partenariat » établi depuis de longues années avec le groupe sidérurgique. Les bouleversements de l’organisation du travail dans cette entreprise – commencés par « l’assainissement » financier et administratif d’avant la privatisation et suivis par la politique managériale du groupe Gerdau – ont changé le scénario du travail et de l’emploi dans toute la région. Dans un contexte de précarisation sociale du travail, nous souhaitons discuter les relations entre la politique syndicale de la négociation et la fragmentation des résistances des travailleurs face aux restructurations du travail.

LAPEGNA, PABLO* (University of Georgia, plapegna@uga.edu)

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank’s recommendations as a result of the deleterious consequences of these strategies. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal politics (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments.
Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests contested the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

LAPOINTE, PAUL-ANDRÉ* (Université Laval, paul-andre.lapointe@rl.ulaval.ca)

Teamwork Diversity
The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production team, which first appeared in Japan’s industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy improvement. On the other hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today’s workplaces?
Does teamwork represent a breakthrough from Taylorism or a strengthening of Taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec manufacturing sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.
Two logics of teamwork adoption are also contrasted. Lean team adoption relies on the logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both Taylorism and lean teams. They also contribute to an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.
**Legitimation Work: A Social Theory**

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimizing their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provides funding, and the general public provides legitimacy. In satisfying the three publics the actors engaged in presenting the relevance and importance of the publicly funded organizations are conducting legitimation work. Legitimation work is a social process being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization's communication with the various publics and what role they play in the legitimation work.

**Undeserved Unhappiness: A Comparison of Philippines and Japan**

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS’ participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

**Dis)Placing Trust: The Effects of Job Displacement on Generalized Trust over the Lifecourse**

The adoption of ‘flexible modes of production’ across much of the developed world has been theoretically postulated to be a substantial driver of declining macro-levels of social capital and generalized trust. A key facet of ‘flexible modes of production’ believed to be particularly harmful for social capital are increasing rates of job displacement (e.g. involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the posited association, very little has research has investigated if, how and why job displacement affects social capital. This paper explores how experiences of job displacement can affect individuals’ tendencies to (dis)trust over the adult lifecourse, using two-waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job displacement between the ages of 33 and 50, appears to significantly scar generalized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains higher amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work; the more central employment is to individuals’ lives the stronger the negative effect of displacement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spillover into the wider social sphere, both at micro- and macro-levels.

**Dissolving Inequality? Changing Cultural Models, Education and Social Mobility in Ghana**

In northern Ghana, cultural models of how to get on have changed drastically within the last generation. Coming from a part of the country that has been economically and politically marginalized throughout the colonial and post-colonial periods, people belief that formal education and modern professional careers - instead of traditional livelihoods centered around subsistence agriculture, labor migration and reciprocity within extended families - provide the only way to be successful and to achieve life chances comparable to those people in the southern part of the country have. Changing cultural models are the result of the decline of rural livelihoods that is caused environmental changes but equally rooted in internationally promoted structural adjustment policies that have disadvantaged local smallholders and led to the influx of highly subsidized cheap agricultural imports. But despite serious investment in education by both parents and students, poor educational quality of public schools and the lack of a conducive environment for educational careers and educational malperformance. High cost of secondary and tertiary education further reduces the number of students actually able to achieve meaningful educational outcomes and social mobility. Long-term qualitative and quantitative research shows that education, despite of its potential to promote equity, in the absence of specific public programs addressing the education of deprived members of the Ghanaian society, rather leads to personal frustration, as shifting cultural models of success cannot be met, and societal marginalization, as social mobility is not achieved. This situation has the potential to create social unrest and destabilize the Ghanaian society as adequate employment for the poorly educated youth is increasing difficult to get by. On the general level research shows that education on the societal level can only contribute to equality, if it is paralleled by policies that specifically target the needs of those marginalized.

**Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia**

This paper aims at comparing female trajectories in three BRICS—Brazil, China, and Russia—since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population, as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: *Capital for the Future*).

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation, I will look at how such carbon offsets resulting from this value chain are sold to the final consumer. In particular, I will be interested in how Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in mobilizing offsetters. Building on the analysis of various offsetters, I will show that the understanding of the Peruvian context is very different for them a is their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.

**Financial Inclusion As a Basic Human Right? Reframing Inequalities in > the > South**

A new wave of commodification “all the way down” (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizenship to equal consumers and from risk-sharing to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of decommodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) propose redistributive and other (Shiller) an innovative financial inclusion as a basic human right. This paper will present the comparison between markets and informal financial structures, showing that the former one strongly rely on the latter one. Moreover, it will identify the factors that most contribute to explain gender asymmetries in each country.

d'activation, caractérisées par un projet institutionnel d'incitation à l'adaptabilité aux normes d'emploi (Cassiers et al., 2005). Ce mode de gestion spécifique de relation avec les chômeurs comporte en effet des caractéristiques communes avec le paternalisme : personnalisé, il combine coercition, autonomie et vision du bien commun marquée par une logique de contrepartie (Boisenu et al., 2003). En revanche, une différence importante subsiste à travers le poids de la rationalisation gestionnaire, qui s'incarne notamment dans le profilage des chômeurs. Ces nouvelles formes de paternalisme, qui prennent également pour appui la légitimation de l'asymétrie des rapports entre employeurs et chômeurs au nom d'une rationalisation supposée des entreprises, se situent donc à la croisée de deux visées, la subjectivation et la rationalisation. À partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession as an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized administrative act) of the unemployed in the framework of the New Custom, introduced in 2006, on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

By changing the standards, organization, this industrial rationalization of a new type reconfigures the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment, lifestyle), and strategies of avoidance or neutralization of the most coercive professional acts.

The paper examines also the notion of subjectivity in social policies and the prescriptive strength of standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed recruitability, by the establishment of trusted devices or else by the taking account of a "situated rationality" of the unemployed.

Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination

The category of 'Leisure' as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reasoning and intellectual spaces that scholars must somehow shoehorn their ideas into and making a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work, in a call and argument about extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation's commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrella.

LAW, ALAN* (Trent University, alaw@trentu.ca)

Leisure, Justice and Economic Collapse

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx International collaboration – using common methods to collect and share information on experiences of living with and navigating cancer. Interviews were conducted with people who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were striking similarities. Participants talked about their motivations to help others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in reliving some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

SIPPEL, SARAH* (University of Leipzig, sippel@uni-leipzig.de)

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia's past development was assured through foreign capital, so the nation's future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent – and nature – of the purchases is not in the nation's best interests. Critics argue that some of Australia's most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is 're patrioted', taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of 'financialisation'. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculation in land along with opportunities for more secure food production for oil-rich but land- and water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorising the sociological 'meaning' of financialisation as it affects the Australian agrifood sector.
The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental disorders and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their own family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come form the family members are denied resulting in their deprivation and desertions. Consequently, the welfare intervention form GO's and NGO's are looked forward to fulfill their basic needs. The health care and support systems promoted through GO's and NGO's provide some solace to their requirements. The condition of the elderly population in rural India is not properly addressed. There is not enough provision of care and support and status in rural community. This paper is and outcome of the field investigations conducted on socio-economic and health status of elder population in selected block in state of Tamil Nadu, India. This paper analyses the status of the elderly population in terms socio-economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

**Negotiated Revolutions 2.0? The Arab Uprisings In Comparative Perspective**

The 2011-12 uprisings in North Africa and the Middle East have helped to re-ignite scholarly interest in revolutions. But what kind of revolutions do these uprisings represent? This article situates the Arab uprisings within the context of post-Cold War revolutions, locating them within a cluster of ‘negotiated revolutions’ that have emerged over the past twenty years. ‘Negotiated revolutions’ differ from ‘modern revolutions’ in five main ways: they result from a relatively rather than a systemic state crisis; their trajectories are characterized by negotiations rather than armed confrontation; their participants reject the utopian commitments of past revolutions; they are welcomed rather than disavowed by leading international actors; and they lead to the development of weak rather than strong states. The article assesses the Arab uprisings within this schema, arguing that those who see the Arab uprisings as offering a new model of revolutionary change, their causes, trajectories, and outcomes are broadly familiar. Extending this point, not only do the 2011-12 uprisings sit within a family of revolutions that can be traced back to 1989, their focus on political justice rather than ‘the social question’ means that the uprisings share a family resemblance to previous instances of ‘self-limiting revolutions’. This comparison illuminates both the strengths and shortcomings of the 2011-12 uprisings.

**Sociology and the Myth of the Crisis**

Ever since Comte, sociological scholarship is predicated on the legitimizing image of being the science of crises and conflict. The dealing with crises has attended to the question of how they arise, how they may be prevented through sociological insight, and what role they play for the functioning of our socio-cultural reality. According to A. Weber sociology itself is a ‘daughter of crisis’ entering the academic world in the so called saint-simonian time of modernity; a period of change, tremors, uncertainty and unsettledness be it with regard to the political, the economic or the societal order. Even nowadays, we can witness the tops of crisis and conflict as being the ever renewed funding myth of our discipline by e.g. having a brief look at the major themes discussed at various national and international congresses of sociology.

Within our contribution we will show that whilst early sociologist have both attempted to understand the ontological causes of crises in order to cope with these anomalous crises and believed in the eschatology of a cathartic grande crise finale, recent sociological theory mainly regards crises as a part of a social drama and all the uncertainties accompanied as constitutive for the structuring and the stabilization of the routine of social reality. Herein crises are no more labeled as punctual outbursts but seem to offer an omnipresent model of contemporary social reality. Positioning that the routinization of crises is at the stake of present sociological narrations, we will finally question how this ever-present dystopian corrective of tremors can function as a ‘challenge of reality’ (Baudrillard).

**Instrumental and Political Asymmetries in Coastal Risks Perception Between the French State, Local Actors and the European Union**

**Background**

- Recent concerns have stressed a probable increase of the frequency of extreme events and new risks linked to climate change.
- Between generic models and emerging big data strategies, best predictive configurations are not firmly established.
- Political tensions with legal framework under progress. Tensions occur between the State and local actors concerning the responsibility of risk prediction and preparedness, as illustrated by the case of storm Xynthia (Feb. 2010, 59 causalities mainly in France): while the State has not properly applied its own directives, it is suing local mayors for not respecting them; in turn, following the trend of participative science, local towns are recruiting technicians to have their own measures. Local territories also show growing demand of satellite observation solutions offered by the European Union.

**Hypotheses and questions**

How cognitive facilities and political margins of maneuver influence each other: whether, to what extent and in what cases an instrumental asymmetry occurs between the State and local actors (i.e., the State using rather generic prediction instruments, vs. local actors using rather territory-specific information). If so, are such asymmetries a condition or an effect of political tensions? Do scientists play a neutral role in the way they produce and disseminate data, models and scenarios?

**Terrain and approach**

Comparative approach with case studies: geographical comparisons (France-USA-Japan); risk comparisons (oil spills, algal blooms); scientific and socio-technical configurations (instrumental strategies and division of labor).

**Perceptions Of Executive Government Leadership In The Age Of Engagement And Community Based Decision Making**

Pour aborder ces questions on pourra tirer des éléments de la mise en place des techniques de transplantation du visage au cours des années 2000 et de leurs modes de légitimation.
Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today, new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions. The research will focus on the three primary subgroup involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a focused word by the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tolls of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO’s. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

The idea of justice is connected with the distribution of natural and social resources among people and the criteria and mechanisms of corruption of justices. Putting together the theories of justice by John Rawls(2003), Amartya Sen(2011), Nancy Fraser(2009) and Martha Nussbaum(2011) that represent the political, economic and cultural aspects of justice, that are related to the justice found in the ways of life and not only in the legal recognition, we can extract elements characterizing the social justice in the plan sense. Then we can also allow investigating its presence in the free participation of individuals in the social networks.

Consequences of Alternative Feminist Approaches to Land and Housing Security

In September 2013, the Huairou Commission, an international non-governmental organization that works with grassroots women, and Espacio Feminista, who work with landless women in Recife, Brazil, held an expert group meeting. Patricia Chavez, founder of Espacio Feminista, said:

“We need to go deep into what development is; we are just accepting a process of urbanization; people are not obliged to live in riverbanks, hills. We are being forced out of fields, to open up space. [There is a] model of development that is being imposed … let us not be transformed into something that is not compatible with our needs.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market and paid subsistence wages, with no protections. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the “diverse” economy as developed by J.K. Gibson-Graham, authors of _The End of Capitalism (As We Knew It): A Feminist Critique of Political Economy_ (1996, 2006). The diverse economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist). On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

Global Cyberspace: The Involvement Problem

In the present-day information world the involvement of an individual in Cyber-space is an important social marker determining belonging to one or another social group. Your circle of contacts, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren’t an Internet user. On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development and the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

LEBEER, GUY* (Université Libre de Bruxelles, g.beer@ulb.ac.be)

Les Droits Du Patient Et La Dépénalisation De L'euthanasie Comme Lieux De Questionnement De La Médecine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépénalisant l’euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des praticiens en matière d’information et devait, notamment, assurer au patient un accès direct à son dossier médical. L’application de cette loi fait problème aujourd’hui, et pas seulement en raison de la volonté du corps médical de maintenir son autonomie de pouvoir mais aussi du fait des carences de la loi elle-même et de la représentation qu’elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l’unanimité. La Loi de dépénalisation de l’euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d’abréger ses souffrances. L’application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l’entremise de la notion de “clause de conscience”. La question est cependant plus complexe car si l’autonomie du médecin peut apparaître comme un frein à l’exercice de ce type de droit, elle peut aussi constituer le moyen de s’opposer à bien d’autres obstacles d’ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés et de susciter – et notamment autour de la redéfinition de la figure du médecin – et des tentatives entreprises dans les divers lieux de la décision politique en vue de les surmonter.

LECCARDI, CARMEN* (University of Milano-Bicocca, carmen.leccardi@unimib.it)
The Spaces and Times of Youth Culture in the New Century
It is starkly evident in the new century young people's biographical constructions come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingency of identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism
Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels:
- corporate level, characterized by an increased heterogeneity in terms of organization and performance
- institution level, characterized by a decay of previous forms of coordination and a revival
- social compromise level, characterized by a surge of multidimensional inequalities.
We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation
In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified as "welfare orientation" (Takegawa, 2000). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affect such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new "regulation mode" capable to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitalisms, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

LEE, ANNA JUNGEUN* (New York University, aj548@nyu.edu)
The NFA Resistance to the KORUS FTA
This paper focuses on the Korean National Farmers Association (NFA)'s failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming be-
came threatened in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the “Nyelani Declaration” from the international movement of food sovereignty, resistance was unsuccessful due to the fact that “larger strides” of globalized resources did not interweave with NFA's internal strategy and international support. Thus NFA's leadership and policy failed to create a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.

KIM, JIK-SOO (Chung-Ang University)
Precarious Working Life and Militant Activism of Non-Regular Workers in South Korea
From the early 2000s, non-regular employment has become a core labor policy issue in South Korea. Non-regular labor, comprised of a variety of precarious employment patterns, such as fixed-term workers, part-time workers, dispatched and subcontracted workers, home workers, and dependent self-employed workers, has proliferated in Korea, particularly along with changing corporate employment strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety-net.

Given their precarious working life, non-regular workers came to the fore as a symbol of militant labor activism over the past ten years. They organized their unions even under their employers' harsh suppression and the lack of regular workers' support. Those precarious workers engaged in the prolonged strike action to defend their unions from the employers' suppression and protest against inhuman discrimination imposed on them. Faced with limited movement resources, they often resorted to extreme struggling actions, such as hunger strike, sit-down demonstration at the air, and even committing suicide, in order to gain public attention and create societal pressure to resolve their issues.

In this context, our paper is to discern why union behavior of non-standard workers are so militant, and to examine causal relationship between those workers' precarious working life and their militancy.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India
Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian Society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affiliation have been carved in Deccan basalt.

From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollution. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government. An initial part of this paper presents understanding of Ajanta caves as general description and the significance of Ajanta caves. Second part of this paper analyses the impacts of cultural heritage tourism on the Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. This is part of summary, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to preserve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.

Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses data from states as the unit of analysis with an assumption that stratification takes place everywhere. The second is a between-country perspective that has usually been taken by development scholars. As the focus lies on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the two within- and between-country stratification concepts in a sense that it perceives stratification as individual income hierarchies and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) with achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modestly than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received much attention. In this paper, we highlight the role of relational skill assets of native workers in explaining native workers' attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct three dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an 'entrance skill barrier' and the latter as a 'pullding factor' that attracts skilled or unskilled immigrant workers. Then, we create a new independent variable, "relational skill specificity," which is a relative measure of interpersonal skills over instrumental skills in one's occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over instrumental skills are less likely to hold strong anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings of existing studies. The main finding is that different levels of anti-immigrant sentiments between skilled manual workers (e.g., craftsmen), and skilled non-manual workers (e.g., professionals), originate not only from different levels of cognitive skills but also from varying levels (or compositions) of relational skills. Overall, the findings of this study provide a novel pathway of causal explanation of how native individual workers develop their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

RC47-765.7

LEE, CHOONIB* (Stony Brook University, choonib.lee@stonybrook.edu)

This paper will explore how the Black Panther Party (BPP) transformed its chief strategies for the Civil Rights Movement from violent to nonviolent throughout the late 1960s and early 1970s in the United States. The BPP has been infamous for Black Nationalism and armed struggles against racist violence, as opposed to the nonviolent methods for the Movement popularized by Martin Luther King Jr. In contrast to the well-known armed demonstrations of the BPP, there were in fact serious debates within the group on the effectiveness of violent tactics, and the leaders of the group promoted more nonviolent actions. After the FBI's count-er-intelligence efforts particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group's relatively nonviolent strategies, such as their free breakfast programs, Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP's violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state's effort to destroy the BPP, as well as the two men's personal power struggle.

I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against violent strategies for the BPP, will be the key to understanding the inter-relationship between the social movement's militancy and the state's oppression.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong inter-generational link in economic disadvantage, documenting the ways in which socio-economic status is transmitted from one generation to the next. Childhood socioeconomic status plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. Ambiguous evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper presents a cross-sectional analysis that turns around the question of socio-economic mobility: How is childhood poverty experienced by parents passed on to their offspring's poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper explores how parental socioeconomic standing affects parents' childhood poverty, which in turn affects children's childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of child-bearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

The Alienated Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globalized advanced industrial labor market, which legitimacy accelerated universities as corporations. The neo-liberalist conception, to be called the ‘corporatizing culture’, by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by underfunding and critical thinking from corporate capitalism. The meaning of university autonomy is replaced gradually by market-oriented values and ideologies. The effect is that professors will be called to public accountability and make their performance accessible to the multiple stakeholders in society. Their freedom for doing research projects is increasingly dependent and more commercially oriented. The subjective and democratic freedom of professors seem to be weakened by the management of teaching quality assessments. The author hence pertains to argue in this paper that the alienated images of professors such as de-subjective, non-ethical, and disposable, distorted by neo-liberal discourses, need to be addressed seriously, if the last Professors as social conscience and the voice of justice could last and fight back in the neo-liberal corporatizing world.
The Transformation of Family Law and Discourses in South Korea: Gendering the Migration System

Since the Korean family law including the family head system was enacted in 1958, the status ‘a head of family’ had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on ‘why the abolition of the family head system was possible in 2005’ and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has orientated toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is ‘what social conditions created a new family discourse and brought about the abolition of family head system?’ The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between ‘gender equality vs. tradition.’ However, after the 2000s, the change of the family structure with the economic crisis has involved the risk on the class and patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one’s family.

Emerging Form of Governance in the Global Animation Industry

Emerging Form of Governance in the Global Animation Industry

This paper attempts to do gendering the migration system in East Asia by focusing on the urbanization. Inter-Area migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998)’s work, I attempt to gendering the regional migration system by examining feminized migration streams: labor migration for care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly unformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIH and the Gini coefficient, affordable housing and affordability of household are more important subjects in Korea than the level of housing wealth, in view of inequality. The third thing is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and labor migration policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorials and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Employment Permit System (EPS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme was so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans’ historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’(‘minjunguji’ in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2003. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’. This paper aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – A Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undeniably but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Freeter’s Free’er(2007-2008) and Lost Gene(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-) publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

Japanese Military ‘comfort Women’: Reconstructing Identities, Shifting Boundaries

This paper explores how Japanese military ‘comfort women’ (Japanese military sexual slaves) have de/reconstructed their own identities as negotiating boundaries of nation, state, gender, and political ideology. Based upon ethnographic field research in recent years, this paper explores how these women have been actively engaged in transnational women’s movements against imperialism, colonialism, militarism, and patriarchy. Particularly, focusing on the Wednesday Demonstration and the Butterfly Fund led by former Japanese ‘comfort’ women, I will examine what made ‘grandma’(Halmomi in Korean) not a helpless victim but a symbol of peace and women’s rights across time and space.

Can We Hear Subaltern Woman’s Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea

The purpose of this paper is to illuminate the implication of feminist oral history as critically reexamining the relationship between hearer and speaker, presenter and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camps in South Korea (yanggongwi), we tried to reveal the experiences of historically excluded and marginalized ‘Other’, and their new practices of voice and resistance. We argue ‘Other’ not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijokhon (formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/coincidence, the enforced/voluntary, prostitution/imate relationship, and being a prostitute/military bride while continually negotiating as well as conflicting with various myths and ideologies of ‘normative woman’, ‘official nation’, and ‘normal family’. In addition, women’s narratives to cause the rupture of our own stereotypical images of military prostitute not only prove the possibility to reconsider identity of subaltern woman, but also redirect the research focus from the object to the subject (hidden) desire to represent others. Therefore, we argue that feminist researchers to represent other’s experiences should inquiry what/how we can hear, ‘why we want to know others,’ and ‘who we are’, instead of asking whether ‘subaltern can speak or not, which shed light on what feminist oral history would be like.

LEE, NAERYUN* (University of Chicago, naeryun@suchicago.edu)

Relative Social Standing and Support for Nativism

This paper explores the relationship between relative social standing and one’s attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one’s nativist attitudes by exploring the individual-level effects of education and
income in conjunction with the societal level of inequality in 29 countries, using international Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance a place or a host country become a place where women run away from others like-minded actors. From an analysis of the social interactions within these grassroots organisations, the Old Tokaido Road Shingawara House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to ascribe their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the self-organisations of the 2012 Hino Shinsengumi Festival reveal Shinsengumi’s symbolic capacity enables the symbol’s narrators to carve their own terrains by transcending conventional social and physical boundaries as they come together and across their differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reactions onto their social realities. In this light, strong organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

Religion, Civil Society and Multiculturalism in Korea

In this study, I examine the role of religion as a socially integrating force in the transition of Korean society toward multiculturalism. In this era of globalization, when most nations are becoming multilingual or multicultural, arguments and conflicts over multiculturalism are topics of heated debate worldwide. Theoretically, I take this consideration of civil religion and Casanova’s “public religion” and examine whether these social theories may have validity for explaining the roles of religion in multicultural social context of Korea.

My research tries to compare the roles and functions of three major religions (e.g., Catholicism, Protestantism, and Buddhism) in their social works for immigrant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers.

As a result, Catholic churches manage the most various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Catholic leaders work with civil NGOs for the social integration. Protestant churches have most number of social welfare centers for the migrant workers in Korea. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophetic traditions unlike Christianity, put little effort into these issues. However, every religion, to different degrees, appears to secure its interest in the expansion of religious influence on a society. What is significant in the public roles of religion should be engaged in the civil ethos of a “good society” (Bellah).

Contemporary Religious Landscapes in South Korea: From Diversity to Commonality in a Habermasian Post-Secular Society

The contemporary religious landscape of South Korea is summarized with three major religious influences—Buddhism, Protestantism, Catholicism—from which the Korean religious field had been subordinated to and passively modeled by exogenous socio-political factors such as Japanese colonial war, and military-dictatorial regimes, and democratization processes. The current monopoly of religious market is the result of inter-play between internal dynamics of religion and external social forces. Although a highly competitive ecology of religions often causes social conflicts, it also makes positive conditions to reflect on Habermasian post-secular perspectives in the public space. Also, peculiar tensions between homes and churches, and their unique positions in society. Through collective action, they also instigate social and political changes, which eventually confirm each other's differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reactions onto their social realities. In this light, strong organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariously. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalistic reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

Precarious Work and New Class in Post-Industrial South Korea

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, working conditions, or economic situation. However, we suggest that not only employment insecurity but also insecurity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition we include how individual workers perceive 'precariousness' and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the newly-class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will also be considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave – 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents

Due to South Korea's (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationships is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important role of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

Mobility of Chinese and Korean Marriage Migrants in Japan Rural Areas

In this research report, we are going to look at mobility of South Korean and Chinese female marriage migrants in Japan from the following perspectives: 1) suspicion raised among people in the community by marriage migrants' temporarily returning to their hometown, 2) proportional growth of monolingual in their offspring generation. In rural areas, marriage migrants are still seen as "escaping brides", and are under significant influence of this old paternalistic belief that "Once married into a family, she belongs to it". This idea has taken root in both migrants' mobility negatively, and has worked as a mechanism which restricts it. This report will present our perceptions toward female marriage migrants' mobility through cases in Toshoku and Tokai districts.

Canadian Women's Perspectives On Disability, Underemployment and Health

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

The State's Role in Gentrification: Beyond the Co-Optation and Repression Dichotomy

This paper examines the local state's role in the gentrification process. I compare two cases where gentrification pressure is high and the state has a significant stake in gentrification—Downtown Los Angeles and the old neighborhoods within the city of Seoul. On a superficial level, the state seems inclusive in Los Angeles and willing to incorporate voices that rally against gentrification, and the state in Seoul seems to be exclusive, and at times violently repressive. These two cases show how the existing social movement theory that projects a trend towards a “Social Movement Society”, exclusively, in the Western world, where social movements are much more prevalent, yet are contained and co-opted (Meyer and Tarrow, eds., 1998). However, this literature can inspire scholars from taking seriously the double role the state has in these states that simultaneously co-opts and represses. In so doing, it can create a false dichotomy between the role of the Western and the non-Western state in governing gentrification. Contrary to this view, through participant observation in both cities, I come to unveil the underlying similarities of the two states’ roles in controlling dissent. I analyze how both states 1) mask their involvement in repression and 2) delegitimize dissenting voices to avoid a legitimacy crisis. Focusing on similarities on the abstract level will help scholars of urban sociology to better articulate the theories of the role of the local state in facilitating gentrification, which has been under-theorized despite the early attempt by Logan and Molotch (1987) to bring the state back in with their ‘growth machine’ thesis. With comparative case study, the point is not to discern the degree of state’s involvement in various cases but to identify types of involvement of the state that will further serve as a stepping-stone for elaborating the theory of gentrification.

Erasing the Line Between Work and Leisure in Korea

This paper examines the blurring of the line between work and leisure in Korea, which is now in a highly industrialized, hard-working society prompted by rapid globalization. It also has a well-developed ICT infrastructure with a highly educated and skilled labour force, now evolving into an increasingly older society within a creative, service economy. In these contexts, individuals in Korea, both at work and at leisure, are facing diverse inequalities depending on their social structural conditions. This paper mainly regards leisure as un-coerced activity, while...
Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained significant relevance in Quebec, especially as of 2006 (Lefebvre, 2008). The arrival of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities' religious requests and the post 9/11 context contributed to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific “reasonable accommodations” implemented in response to religious requests of pupils and teachers – in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practices – with the aim of disclosing the effects that the so-called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question of what it means “to be sporty”. From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet “training and competing” but to go further so as to include more and more ephemeral physical activity forms. In this study, a scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etic dual approach.

Sociologists aim to discover the sociocultural, cultural, demographical characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The development of free points software proposes some modern approaches for dealing with two-way tables (Yule’s Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher’s goals (Wheaton, 2005) enable to detect and visualize (Elly, 1999) the sociocultural, cultural, demographical effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting social inequality in educational achievement. However, evidence on the short and longer term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this point to the facts that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic background.

Educational Expansion, Earnings Compression and Changes in Intergenerational Economic Mobility: Evidence from French Cohorts, 1931-1976

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly influenced by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1930s and those born in the mid 1950s, but substantially rises for cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than the elasticity found for international staff sharing house, office and meal. To a certain extent, these changes are due to the persistence of inequality across generations.

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professionals’ own expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues.

Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research - to what extent, in which roles, for what purposes and to what effect... In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists

Beyond Rational Dialogue: Alternative Modes of Participation

The stumbling blocks of the “dialogical” procedures spread in the political public place and put in the service of the democratic participation of the citizens can be limited, by-passed even by the development of modalities and “post-dialogical” devices of sustainable cooperation in the public and “private” places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The “post-dialogical” way suggests that the “dialogical” devices in the service of the democratic participation are neither a necessary condition, nor a sufficient condition of the mobilization of the actors or the exercise of the citizenship. The passage of the models and the devices of participation of “dialogical” type in the models and devices of cooperation of “post-dialogical” type allows to envisage/sustainable democratic methods of social exchange and governance beyond the public place and beyond the political space, by considering their development and their functioning in the “private” spaces, in particular those of the world of work and of everyday life. The way of the cooperation groups a big variety of approaches and experiences and suggest, beyond the devices of interaction, to question the transformations of the company and the State, as well as their possible evolution towards the forms of “the cooperative company” and of “cooperative State”, major partners, with civil society, of the democratic governance of our societies.

Our paper will include a theoretical approach and the synthesis of the results of our field work in the domain of industrial democracy and of citizen contribution to sustainable development in France and in Europe.

Do-It-Yourself Finance! A Participatory Action Research in Community-Based Finance Systems in the Netherlands

The contemporary global financial and economic crisis has led to a shrinking Dutch welfare state, which encourages citizens to help and support each other on the grassroots level. This paper provides insights in a community-based savings and credit mechanism, called CAF-group. The rationale of CAF-groups derives from informal savings and credit associations in developing countries and migrants in the West. Since the early 1990s, international and local development organisations have learned from this phenomenon and have developed a methodology for self-funded financial groups to improve the well-being of vulnerable people.

Lately, CAF-groups have been successfully implemented in Spain, Italy, Portugal, Hungary, Belgium and the Netherlands. Based on practical evidence in Europe, one can assume that participation has a positive impact on the freedom of vulnerable people.

The implementation of self-funded financial groups in the Netherlands is supported by a participatory action research program. This paper discusses the results of this program by exploring whether and how participation of members can improve their well-being based on the capability approach of Sen (1993). Therefore, the capability approach is operationalized and applied to three CAF-groups in The Hague, the Netherlands: (1) men, 40 plus, ethnically-mixed; (2) women, 40 plus, ethnically-mixed; (3) mixed sex, below 30, Aruban ethnicity. Data is collected through qualitative interviews with members, participatory observations of group meetings and evaluation workshops.

This research provides insights into the operational features of community-based financing mechanisms, here three CAF-group in comparative perspective, and demonstrates how grassroots solidarity economy processes can contribute to the general well-being of vulnerable people in a time of global crisis.

Certifying Practitioners and Accrediting Programs: The United States Experience

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice (applied, clinical and public sociology).

In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master’s or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their action oriented work. Certification is not licensure as granted by a state or commonwealth.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master's, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of defining an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under renewed scrutiny. The main rationale for the Greenbelt was the need to protect green space from further land encroachment by Toronto’s massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. It is in tandem with this legislation, a second provincial legislations came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the two municipalities – Markham and Barrie – the “inside” of the greenbelt and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of texts, and newspapers. It is hoped to draw general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of “unemployment II benefits”. I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 1981) of the young adults. There have been approaches to understand the situations of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Goetz 2012), but the focus is on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to Flaherty/Quaroni (1996). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000). Glaser, Barney G. and Strauss, Anselm L. (1967): The Discovery of Grounded Theory. Chicago, Aldine.  
Schütze, Fritz (1981): Prozeßstrukturen des Lebensablaufs. In: Joachim Matthes, Arno Weifenberger and Manfred Stosberg (eds.): Biographie in handlungswissenschaftlicher Perspektive. Kolloquium am Sozialwissenschaftlichen For...
 Constraining and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course. This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotypical and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

* Individual and Structural Causes of Neet - a Case Study of Austria

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of NEET be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

* Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect labeled as structural or model-inherent interaction and/or compression effect if both covariates contribute significantly to the explanation of the outcome. The idea and meaning of interaction in nonlinear models didn't result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing options, based on the combination of theoretical and methodological arguments.

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative technologies for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the time limited impact, while other technologies like the mobile phone have spread in Africa quickly.

This paper will determine how a more dynamic approach could help to analyse the way actors interact and build relations around new technological products, so to understand how their dissemination could be accelerated. Technologies have their own life and need to produce a specific context to thrive (Laitour, 1996). Markets are created by policies and institutions; a series of stable rules embedded in organizations or networks have to emerge to make them sustainable. Clean decentralised energy technologies are “new” in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming, leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1989. Of the most in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders' identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in it and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm.

Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think that in this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

Contested Multiculturalism in Germany? - the Debate on Circumcision

In the words of Angela Merkel multiculturalism has "utterly failed" in Germany (16/10/2010). Although the former German President Christian Wulff had stated "Islam also belongs in Germany" only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children's rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced into the German Civil Code that made circumcision for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the ‘boundaries of the social world’ (Lukmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This includes a reinterpretation of circumcision as a practice potentially 'cutting back' children's rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

Maladies Chroniques, Transitions Professionnelles Et Changement Social

A l'occasion d'une recherche d'une durée de trois ans ayant pour thématique centrale les rapports entre maladie chronique et travail, cette communication s'efforcera de montrer que, à l'occasion d'un dispositif spécifique de recherche action clinique que nous présenterons, la rupture biographique (Bidart 2006, Grossetti 2006) se transmet en une dynamique de transformation sociale. La transformation personnelle débouche, « naturellement », sur une dynamique de transformation collective via la présence d'un groupe, qui un temps long, conduit chacun à quitter le récit de sa vie pour moi, pour mettre en commun ce qui dans son parcours individuel fait écho aux autres participants. Le récit de sa vie, de la simple vie, de ce que certains appellent la vie nue (Arendt, 2002 ; Agamben, 1998) ou la vie vivable (Butler, 2010) se transmet toujours peu à peu en une réflexion sur ce qu'il faudrait transformer chez soi, chez les autres et dans la société afin de parvenir à une vie en santé. Ce sont alors les normes sociales du travail enten- dues comme la représentation sociale du travail-emploi qui détermine l'accès aux ressources de base requises pour répondre au commandement contempo- rain de l'individu maître d'œuvre de sa propre existence » (Castel 2011) qui sont questionnées. Quel que soit l'âge, le sexe ou le niveau social c'est bien la question de la centralité du travail dans une vie qui est mise en débat. Cette recherche montre bien à quel point les transitions sont des occasions de co-construction du changement individuel et social. Si les façons de penser changent, elles con- duisent alors à une volonté de changement social qui se manifeste via différentes stratégies que ce soit dans le milieu familial comme dans celui des organisations et des institutions.

From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices differentiating the involvements. The if things into these practices and of a special configuration these practices carried out: masculine software developer.

The argumentation will begin with introducing theories of practices as an instructive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The so produced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creative, “guarantees” the social order in the observed field.

Involved Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at the diversity of the participation practices it is clear that the complex dynamics of changing gender relations in the private sphere.

Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father’s uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstinence from career ambitions is a permanent source of conflict.

The argumentation will begin with introducing theories of practices as an instructive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. Involved Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at the diversity of the participation practices it is clear that the complex dynamics of changing gender relations in the private sphere.

Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father’s uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstinence from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father’s engagement, but, on the other side, tend to defend the household as their domain. Often the father gets into a position of his wife’s “junior partner”. If men refuse to be the junior partner a new kind of gender conflict arises. Closing the gap between “culture and conduct of fatherhood” (LaRossa) proves to be complicated in different respects. It even can evoke new conflicts.

Homeownership, Social Policy, and the Crisis: How Austerity Policies Fortify Property-Based Private Welfare Systems

It has been argued that the nexus of increasing homeownership rates, accumulation of housing wealth, as well as financialization of housing markets have facilitated the emergence a social policy model in which households and families draw on their home as a source of private and collective security, especially at a later stage of the life course. If ever there was opportunity to reinforce such a property-based welfare system, it is the ‘black swan’ financial crisis and its consequent backlash on public budgets, the rationale being that the threat of state bankruptcies is now job centered. Our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father’s uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstinence from career ambitions is a permanent source of conflict.

The difference based gender order has been eroding by women’s educational advancement, by postfeminism and globalisation and flexibilisation of employment. The difference based gender order developed as the neopatriarchal authority reared. Formal and legal male superiority was reduced with women’s votes, legal reforms for women’s own rights of property and decision in the family. The worldwide spread of Fordist/Toyotist mass production established men as core workers and women as housewives.

Changing Gender Orders and the Variety of Gender Welfare Regimes

The paper considers the present transformation towards a flexible gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal order was established which assigned public and domestic power to men and defined women as mothers and housewives. The the difference based gender order developed as the neopatriarchal authority reared. Formal and legal male superiority was reduced with women’s votes, legal reforms for women’s own rights of property and decision in the family. The worldwide spread of Fordist/Toyotist mass production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women’s educational advancements, by postfeminism and globalisation and flexibilisation of employment. The difference based gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.
nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and eco-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be loosely grouped under the banner of soft power research. Perhaps spurred on by China’s adoption of Nye’s notion of soft power in recent times, these focus on the management of how one’s own nations is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy. Both bodies of work develop in parallel they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research’s main goal is to highlight thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of new forms of identification and belonging. The main goal is to highlight paths, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on every day practises, on the methods of planning for the future, on the interpersonal relationships. The main research is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of new forms of identification and belonging. The research will also point out the impact of the crisis on every day practises, on the methods of planning for the future, on the interpersonal relationships.

The analyses will provide an empirical evidence base to: (1) assess the extent of the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, cultural, social, political (electoral and non-electoral participation) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate to this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of contemporary British immigrants and their descendants. The dimensionality of the dimensionality will follow the work by Bean et al (2012) and use factor analysis to determine the underlying number of factors behind variables deemed to be representative of the immigrant adaptation experience and assess the structural equivalencies in the factor analyses across gender, ethnic, and generational lines. The analyses will provide an empirical evidence base to: (1) assess the extent of inequalities in adaptation across gender, ethnic, and generational lines, and (2) examine the extent to which the uncovered dimensions of adaptation in the British context match existing theoretical views.

User Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory for welfare services, organizations that receive public funding. Also encouraged by consumerist impetus, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-
signals in these organizational platforms. Habermas’ model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas’ theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world interact to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making.

The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Determinants of Effective Cross-Border Cooperation

The world over local communities broach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities’ capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Ivangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study’s outcomes, the paper uses collective-efficacy theory to measure each community’s response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

Implications of Generational Change for the Armed Forces

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to be characterized with distinct attitudinal structures and behavioral patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations is said to encompass generalizable characteristics and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of the urban studies literature. In this paper, I examine relocation from informal settlements in Cape Town in the context of emergent forms of socio-spatial confinement. I relate the proliferation of post-apartheid forms – state-provisioned formal housing, rental stock for the working poor, TRAs, and others – to a broader process of dispossession and confinement. Drawing on a year of ethnographic fieldwork in relocation sites across the Cape Flats, I argue that post-apartheid urban relocations can be characterized as dispossession through delivery. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely through formal housing allocation that segments of the population are relegated to the margins. South Africa’s informal settlements were targeted and removed en bloc – what I call indiscriminate dispossession – post-apartheid removals entail a process of selective dispossession. Under the rubric of “meaningful engagement” and “participatory upgrading,” the City capitalized upon factionalism within settlements to create a distinction between “deserving” and “undeserving” residents: neighborhood groups that successfully portrayed themselves as legitimate representatives are defined as “deserving” and gain formal housing, while contending groups are defined as “undeserving” and relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

CORKINDALE, CAROLYN* (Flinders University, Carolyn@corkindale.net)
Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future

Despite the growing urgency of scientists’ warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries or millennia, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible.

A recent increase in manifest and unpredicted climate disasters, which have at times struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute substantial but affordable sums on a regular basis for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks “in the next two years”, “during your lifetime” and “in centuries to come”, suggesting no progressive discounting of the future.

LEVER-TRACY, CONSTANCE* (University of South Australia, constance.lever-tracy@flinders.edu.au)

The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances. Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice. Transnational assistance can be equally inadequate or inappropriate as illustrated by the diverse ways in which forces of gender and race, and the lack of preparedness for radiation effects on US personnel assisting at Fukushima. The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities. On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee’s study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

Dispossession and Social Theory: Comparing the Politics of Land and Labor

This paper draws on over two years of ethnographic research on anti-dispossession struggles in India to analyze how the politics of land dispossession differs from the politics of labor exploitation. Based on this comparison, it tries to show how core features of Marxian social theory—including theories of the state, ideology, and historical agency—must be reconstructed in light of the recognition that dispossession is an ongoing feature, and not simply a historical precondition, of capitalist development. The paper concludes with reflections on the possibilities for creating alliances between land and labor struggles.

LEVIN, JACK* (Northeastern University, jlevin@neu.edu)

Blurring the Boundaries: The Declining Significance of Age

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the cult of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of ‘emerging adulthood’. Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to ‘boomer changes’. The book thus takes a comprehensive life course approach to aging.

Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.A da Fontinha (PORTUGAL – PORTO)

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unevenly urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporaneous religion, also arouse renewal urban struggle dynamics, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributes to the problems that exist in the processes analysis in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movements these processes engage and what are fragilities and lines of flight can they offer?

On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a Brazilian urban slum habitation type – placed on Vila Olímpia Neighbourhood, and Es.Col.A da Fontinha, a squat-eviction process of an auto-managed collective transformed in an auto-managed collective space. Immerged on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to oppose that path, almost heroically. Attempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict merge itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from 'bottom up' has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the present fragmentation. In education, this implied breaking with the "old" divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturality in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

LEVÀNEN, JARKKO* (University of Helsinki, jarkko.levanen@helsinki.fi)
Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operational management. Heavy industries also play a crucial role in achieving the challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collective learning in complex operational environments? Numerous analyses concerning the performance of policy designs have emphasized the importance of such flexibility that allows steering the regulation based on regulated actors' experiences. Such an opportunity may be called as a feedback between institutional and operational environments and it seems to be very important element also according to collective learning. Few studies, however, have analyzed the capability of policy designs to strengthen such institutional feedback in practice. Based on a case study of industrial region located in the northern Finland, I argue that institutional feedback is very important in industrial waste management. My preliminary findings point out that optimally institutional feedback allows the continuous learning and the development of industrial systems towards better material efficiency.

Conversing with the Executioner: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor

In this presentation, we will expose a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristical dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of "moral-concerns" of massmurderers. In our research, we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead these "veterans" beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the themes of indignation in both contexts and more specifically on the relations to money and the management of resources that emerge for the perpetrators in the course of their duties.

LEWANDOWSKI, ROMAN* (Voivodeship Rehabilitation Hospital for Children, rlewan@wp.pl)
Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment

Poland, like other European post-communist countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organization access to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communist system, costs control were made through a lack of access to expensive medical technologies, which absorbed both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

LEWIN-EPSTEIN, NOAH* (Tel Aviv University, noah1@post.tau.ac.il)
Changing Circumstances in Late Life and the Relationship to Household Debt

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one’s health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two central concepts: social stratification: consumption and risk. With regard the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt.

Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-
Natural Surveillance: Google Trekker and the End of Wilderness

Natural Surveillance: Google Trekker and the End of Wilderness

For individuals seeking refuge from the increasingly monitored spaces of urbanized “control societies,” the idea of untamed wilderness has long held a special appeal. Figuring prominently in various strains of ecological writing and literary romanticism, wilderness has also been central to various indigenous belief systems in the Americas, Australia, and New Zealand. In these contexts, wilderness has often been valorized as an aesthetic, moral, and national resource of the highest order, a sacred place for the regenerative experience of living “off the grid” of corporate media spectacle in the guise of a purportedly idyllic and ostensibly shared global story, which uniquely reveals about host cultures, carrying real implications for international relations and domestic interests. Such a rich cultural repertoire constitutes the collective memory. It is in this sense that British media coverage of Beijing Olympics has shaped how a distant culture is discursively constructed and geopolitically defined. This article will answer the following questions:

-How does media narratives of Beijing Olympics relate to the wider context of China in the British Imaginary?
-How does the character of reportage vary between different titles?
-What is the general image of China that emerges from the coverage to be analysed?

Evaluating how does media narratives of Beijing Olympics relate to the wider context of an evolving repertoire of Orientalism in a discursively constructed and geopolitically defined China in the British Imaginary. This article will answer the following questions:

-Which themes are focused on in the British press coverage of Beijing Olympics?
-How does the character of reportage vary between different titles?
-What is the general image of China that emerges from the coverage to be analysed?

Categorised as ‘mega-events’, the Olympics have long been an incredibly elaborate media spectacle in the guise of a purportedly idyllic and ostensibly shared global story, which uniquely reveals about host cultures, carrying real implications for international relations and domestic interests. Such a rich cultural repertoire shared in the media discourse becomes part of the popular imagination that constitutes the collective memory. It is in this sense that British media coverage of Beijing Olympics has shaped how a distant culture is discursively constructed and geopolitically defined. This article will answer the following questions:

-Which themes are focused on in the British press coverage of Beijing Olympics?
-How does the character of reportage vary between different titles?
-What is the general image of China that emerges from the coverage to be analysed?

The development of Chinese society has been shaped by its interaction with the global economy and international relations. The influence of Western ideas, particularly those related to democracy and capitalism, has been significant. However, the Chinese government has maintained its traditional governance structure and political system. This article will answer the following questions:

-How has the development of Chinese society been influenced by Western ideas?
-What is the role of the Chinese government in shaping the country's development?
-What challenges do China face in maintaining its traditional governance structure and political system?

The Trend of Educational Inequality in China during 1940 - 2011

Because Hukou system has been existing for long time which resulted persistent and severe inequalities between urban and rural residents, including educational inequality. In today’s China, urban-rural segmentation is the most

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
influential factor affecting educational inequality, and educational gap between urban and rural population is much larger than of class, race, gender and nationalities. This paper, based on national survey data of 2006, 2008 and 2010, examines the change of the educational inequality between urban and rural residents over time. It concludes that educational gap between urban and rural children has been continuing to enlarge in spite of rapid educational expansion.

A New Cycle: Understanding the Current Life Course of Rural Families in Western China

Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economical meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a pair may change its agricultural management depending on the experiences and views of the teachers in a primary school. The study on the experiences and views of the teachers in a primary school . The study aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analysing the responses of the teachers in the campaign against male power.

In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six pairs of teachers, from which the authors conducted interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance. The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men's abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men's advantaged position, women's domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men's dissociation may imply that men can also enjoy working with children and the solid teaching profession.

Gender and Power in the Primary Teaching Workplace: Women's Fight Against Male Power in Taiwan

This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analysing the responses of the teachers in the campaign against male power.

In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six pairs of teachers, from which the authors conducted interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance. The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men's abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men's advantaged position, women's domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men's dissociation may imply that men can also enjoy working with children and the solid teaching profession.

Parents' Commute to Work and Children's Social and Emotional Wellbeing in Germany

Based on a nationally representative sample from the German Socioeconomic Panel Data (SOEP), we examined the relationship between parents' commute to work and five domains of child emotional and behavioral problems, using SDQ and controlling for family socioeconomic and demographic characteristics and child gender. The findings show that commute to work by both fathers and mothers when their children aged 3 to 4 years was associated with a higher level of emotional and behavioral problems in their children two years later. In both-parent families, father's daily commute to work two years prior was associated with higher scores for peer problems and, to a lesser extent, higher scores for emotional symptoms and hyperactivity when the children aged 5 to 6 years. Daily long distance commutes (40 or more km each way) in fathers was associated with the child's wellbeing in six of 10 domains when the child was aged 10 to 11 years.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. Income Inequality, the Welfare State, and Economic Growth Across Time and Space

Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primarily studied the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state. Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-recursive structural equation modeling by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

Is the Preference for Men an Advantage or Gender Inequality?: A Case Study of the School Management in Taiwan

The aims of this paper are to explore whether and how men are preferred and advantaged in attaining managerial positions within the school context by drawing on the experiences and views of the teachers in a primary school. The study was carried out between 2008 and 2009 in a primary school in southwest Taiwan. Non-participant observation and individual semi-structured interviews are the main sources of data collection.
Exploring the Sense of Justice about Grades in Group Projects

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal design, representative samples, consideration of selection and information bias, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and an adverse child developmental outcome. The associations were partially mediated through parental depressive symptomology, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

Impact of Conjugal Living Arrangement on Marital Satisfaction in China’s Rural Labor Flows

In the context of rural people floating out for jobs, one of challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey “Population Mobility and Reproductive Health / Family planning Service”, which was carried out in Anhui province of China in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction.

The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men intermarry with women, working at hometown, only a few of their wives float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

Law and Rebuilding Community In Post-Disaster Recovery In China

This paper is based on a qualitative research mentioned above, which attempts to understand the social political and cultural practices of Taiwanese migrant workers in Beijing and Shanghai. Although Taiwanese migrant workers in China took several active measures to make up the shortcomings of the law for rebuilding the community. Firstly, the State of Council made specially and comprehensively the post-disaster recovery regulation. Secondly, different governments were facilitated to build up mutual help relationship so as to restore and revitalize the economy and social development as soon as possible. Thirdly, government adopted many occupation disaster policies synchronizing with the planning and rebuilding disaster zone. Finally, in the process of rebuilding, the ability of self aid and help of individual and family was emphasized by the government and community which began to promote drastically to train and educate the civil society’s disaster response ever than before. In sum, the benefits generated from recovery practices of the Chinese must be very helpful to amend and perfect the existing recovery articles of the act.

The Bureaucracy and the Construction of Risk in China

There were three large-loss fires ignited by exterior-wall insulating materials which raised the fire risk of insulating materials a hot topic in the past three years in China. An amount of public policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council of China that calmed the things down. This paper is based on a qualitative research mentioned above, which attempts to elaborate the logics of the bureaucracies of China in the process of construction and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict first and then risk consensus among the three stakeholders mentioned above. From this research, we get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segregations of bureaucracy which all try their best to shift their responsibility, and this leads to the “organized irresponsibility” which seems to be a classic case in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public’s benefit and safety, it’s still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.

Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Dujiangyan, Hangzhou, and Tianjin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucracies are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, however, the liberal state has introduce more open-bottom, spontaneous, and community-driven forms of urban initiatives. Especially when it comes to urban culture, there is much discussion about the explosion of creativity and entrepreneurialism from below; the state seems to have disappeared from the sociological field of vision.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China

China’s class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined particular friendship ties across class boundaries. In particular, analysis of strength and diversity of cross-class social ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

Living in the Gray Zone: State’s in/Exclusion of Live-in Migrant Care Workers in Taiwan

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the “graying” of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to Labor Standard Law that defines the rights of workers.

Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

Exploring the Meaning of Social Justice in Chinese Context

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work undergraduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province.

Result indicates that this group of interviewed students perceives social justice as a distant ideal which is too difficult to achieve. From the students’ narratives, a strong sense of powerlessness was detected and they feel constrained a lot by current social and political reality in Chinese society. They mostly construct the idea of justice within a nation-state framework by using a resource-distribution scheme.

Their conception of social justice is largely a mixed product of Western-orientated social work education and their growing-up experience in transitional Chinese society. In addition, it is worth exploring the distinctive and long-lasting effect of their received political education (mainly derived from Marxists’ theories) in high schools which offers them vocabulary, standpoint, and theoretical assumptions to develop their interpretations of justice. Based on above empirical findings, this research suggests some future directions for promoting a more inclusive and globalized understanding of social justice among the Chinese youth.
A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers' Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organisations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious ‘conglomerate’ within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organisation transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organisation's modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun's book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers' participations in the organisation's volunteering activities help to consolidate and coordinate lay followers' religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious ‘conglomerate’ which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai’s prime-time drama (also known as Da-Ai Dramas) across both networks from June, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the entertainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training. In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship knowledge and power. As students now have extended power coming out of the classroom and are intertwined with the adult world and “control”. From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances. As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented. Next, an analysis of this situation will be given. Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care (“test and treat”), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 65.5% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to “test and treat” among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine’s (2007) call for a feminist geography on interactions between social categories and spatial ordering, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women’s foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of ‘women alone’ in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of public action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons’ Conception Of Societal Community

On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with functionalism and topos theory. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, well over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that has emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative subsystem and American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equilibrating effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modern-izing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of the modernizing paradigm. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecogni- tion that continues to hobble the task of social theory today.

Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for a so-called “Peace product” (which is produced jointly by Israelis and Palestinians) and treatments). In a first step, the probabilities to take up employment are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection effect at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

Conflict and Economic Consequences: Comparative Notes on “Going to War”

Wars are beneficial some argue. Wars are costly others argue. Some experiences prove that technological development in warring situations (may) have positive spin offs later on. Wars can be simultaneously costly and beneficial others argue. Some suggest that being a victor in one war can create a psychosis or collective social memory that propels the victorious state/nation into long term militarist adventures that eventually leads to its downfall. Against this background we are discussing four case studies.

These paper explores in some detail four economies in terms of preparations and consequences during the Second World War, namely that of Nazi Germany, the UK, the USA and South Africa. A look is taken at the economic state of these countries before the war, preparing for war, economic developments during the waging of the war and the socio-economic and political outcomes. It concludes with some lessons learnt and pointers for the future. In our conclusion the reader may find in his/her own deduction that going to war – even if coming out victorious – may be far costlier on the long term than we tend to think.

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release. To assess the dynamics of age during incarceration and upon release, life-history interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a ‘deep-freeze’, prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to garner greater understanding of subsequent desistance post-release.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers’ Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an “adult worker model”, aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly to actual work and labour market participation. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first experiment, the probabilities to take up employment are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection effect at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

**Change of Basic Human Values in Europe 2002-2012**

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theory of the structure of basic values, has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses use data from European Social Survey (ESS), which includes one of mentioned instruments—a short version of portrait value questionnaire (PQV-21).

ESS is a comparative social survey with free access and very high quality criterions. It was started in 2002 and is conducted in every second year in most of European countries. Therefore this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

**LILLRANK, PAUL** (Aalto University, paul.lillrank@aalto.fi)

**The New Normal As a System Challenge**

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that “the low hanging fruit” of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the “more, mobility, and mentality revolutions”. Daniel Alpert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism. Tyler Cowen argues that due to Internet, globalization and smart machines “average is over” and the middle classes are shrinking.

Ian Morris builds a historical argument about “growth ceilings” that can’t be penetrated without major systemic changes.

In the international debate Japan is seen as an example of things to come. In spite of economic and demographic decline, social order and reasonable labor force participation have been maintained. Therefore the question is, can Japan again be seen as “number one” in adjustment to the New Normal?

**Rediscovery of Asia – from the Value-Based Orientalism to Strategic Universal Asianism**

The so-called Asian Values debate has long history. In the late 19th and the early 20th century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectivism such a like an orientalism defined by the western scholars, on the other hand, to modernize themselves without loss of their own identity, because the process of Asian modernization at that time had lain between Scylla of nationalism and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues had contended with traditional Confucianism and orientalism of linear development which had endangered both Asian and European, and had attempted to de-objectivization of Japan and the whole Asia in the name of ’Great Asia’. On the contrary, Sun, yat-sen, the father-fig ure of modern China, has attempted with his famous three principles of the people(so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and welfare. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of ‘Great Asia’, which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of Orientalism in community, this study aims to review in the present to criticize certain version of Asian modernism, this article this examines the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.

**The Profession of Minority Journalists: The Voices of Zainichi (ethnic Korean) Journalists in Mainstream Newsrooms**

This study aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around journalism and multiculturalism have criticized their mainstream professional norm of journalists as objectivity, the other adopts a viewpoint as a minority in journalism. This study redefines this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of ‘professional identity’ over ‘ethnic identity’ is observed in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue ‘ethnic identity’ as their foremost mission, however utilizing this ‘ethnic identity’ to redefines this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

Ciencia, Tecnología e Industria a Servicio De La Inclusión Digital y Social

En Brasil existe un enorme 3 millones de PCs, osea, personas en sillas de ruedas con parálisis cerebral. Actualmente nadie puede decir que está inserto en el mundo que puede interrinfear en el mundo está fuera de las grandes redes sociales en el Internet. Para enfrentarse fue desarrollada una pesquisa de sociología con integrando tecnologías digitales y recurso aprendizaje enlazando una red entre agencia de fomento de pesquisa, fábrica de productos de accesibilidad, Universidades, familia de los pacientes, terapeutas, escuela y poder público. El objetivo final de la pesquisa era un producto industrial acoplado en una silla de ruedas postural y de procesos técnicos especialmente configurados para realizar integración digital y social de jóvenes en silla de ruedas y que no pueden mover los miembros superiores.

El artículo presenta una pequeña introducción teoría de la vida social simbólica que fundamenta la aplicación de la pesquisa, describes dos casos bien diferenciados de éxito de inclusión digital en la pesquisa: una joven con lesión neuromotor congénita en proceso de alfabetización asistida por computadora y otra joven con lesión adquirida – ya alfabetizada. Ambas utilizan mouse de cabeza y recursos de vocalización computacional asistida integrada en servicios interdisciplinares de rehabilitación e inclusión digital y social. Destacamos la importancia de la red de compañerías montada entre terapeutas, Universidad y una industria de productos de accesibilidad y el impacto del medios de comunicación delante de los resultados positivos alcanzados con las dos jóvenes.

Por fin, desarrollamos una rápida inclusión.

Reframing Citizenship in Contemporary Brazil: The Effectiveness of Democratic Institutions

After the highly enthusiastic expectations raised by the re-democratization of Brazil in the 1980s, contemporary sociologists and political scientists are more likely to analyze the effectiveness of political institutions that were created by the democratic constitution in 1988. This work compares the democratic effectiveness of two of these institutions: the conselhos (councils) and the ouvidoras (ombudsmen). Each of them sets a particular way of dealing with patrimonialism, a tradition of corruption and dictatorship. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of conselhos is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the constitutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of conselhos and ouvidoras are also analyzed in the light of the broader debate on the reformation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks. The conclusions are as follows. 1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable. 2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values. 3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations. 4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students
The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism. Facebook has gradually played a substantial role in students’ college life due to cultural globalization facilitated by information and communication technology and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea. 32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration. The conceptions of performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows. 1. It’s all/not only about having fun? 2. Awareness of image management vs. ordinariness; 3. Intersection of gender and class. The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities
The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to provide a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: the first one focus on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of mobility and migration that structure labor markets; the third one deals with the temporal dimension of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants’ adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work
This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in the global social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key theoretical focal points: (a) to seek to determine what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and (un)intended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to engage with youth in austerity and young people’s responses to inequalities, (d) to understand economic insecurity, youth poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes apply or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibilization, and how the process of globalization has influenced life-course patterns and inequality structures in the local communities. The author would like to debate the results of qualitative and quantitative empirical research, but also focus on the conceptual tools used in the analysis.

The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions
Rapid economic and social changes coupled with constantly changing policies have had impacts on the ways in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by exploring the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajec-
There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or migrant sex workers in Japan. A precious commodity and valuable export for their countries, Asian women leave their countries - to work as nurses in the United States, to be domestic workers in Hong Kong, or to work as hostesses or migrant sex workers in Japan. The motivations for these women to migrate are often driven by the desire for economic opportunity, to abandon their families and seek better living conditions, or to escape from oppressive conditions in their home countries.

The global fragmented despotism that characterizes the world factory has been shaped by three key elements: (1) internal globalization, which refers to the integration of the factory's production processes and employees belonging to different nationalities; (2) organizational fragmentation, which refers to the autonomy of BGs and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and the horizontal segmentation of employees belonging to different nationalities.

The organizational structure of world factory may be helpful for explaining Foxconn's poor labor conditions and workers' suicides. Since 2000, however, this re-entry has not been readily observed. Since martial law was abolished in 1987 in Taiwan, the rate of depression has increased. The OLS regression model cannot entangle the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort affect female employment and whether women's participation in the labor force correlates with their family obligations or co-hort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend school. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.
This paper explores parallels and dynamic interplays between charismatic Christianity (Pentecostalism and Lutheran charismatic revivalism) and «traditional» understandings of mysterious power as related to an occult sphere in Iringa, a regional capital of South Central Tanzania. I discuss how notions of mystical power as constructive, defensive and necessary yet also dangerous and potentially destructive are adopted into and partly transformed by charismatic discourses on the realm of darkness and related ritual practices of empowerment, rupture and spiritual struggle. Attempting to move beyond a rigid continuity-discontinuity dichotomy I suggest that the relationship between Pentecostal-charismatic Christianity and traditional religion/culture may better be grasped in terms of coevalness, intersections and ongoing mutual influence than temporalising difference.

Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management

During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function (as it was in R&D units towards an integration of technological, market, organizational and institutional dimensions (Tidd, Bessant & Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et.al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need for not only all members of organizations but also external partners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burns, 2009, Weick & Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hazyl&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include social and cultural epistemologies. Human interaction in ecology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschel & Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hazy & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case

The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries’ capacity to maintain sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors—where the movement is generally from the periphery/semi-periphery to the core—demonstrates a certain pattern in the migration of nurses and doctors from the periphery of the global care economy comprises the larger portion of the international migration flow of nurses and doctors.

This paper focuses on the Philippines as the top-ranking source country for nurses and fourth for doctors in the global care economy. It provides a brief profile of Filipino international nurse and doctor migration, offers an explanation of this phenomenon and what the consequences are of this pattern. It incorporates insights from interviews the author conducted on the experiences of Filipino nurses and doctors who migrated to the US, Germany, and Denmark as part of a multi-year research project on the international migration of nurses and doctors into healthcare systems. A look into the Philippine case can provide insights into the uneven outcomes of labor migration in the global care economy in the context of neoliberalism and their policy implications.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change 1. more flexibility in systems and infrastructure so the public could escape ‘path dependency’ including flexibilisation of large scale equipment, drainage and sewage systems, and water governance systems including water policies and pricing 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account and the project team to continue to be involved in everyday practices and values around water including risk and trust. Enabling the everyday activities of achieving ‘cleanliness, comfort and convenience’ (Shove 2003) while using less water. I argue that we need to know more about the ‘meso’ level of the water sensitive practices of diverse communities and households to effectively promote and achieve change.

LINJAKUMPU, AINI* (University of Lapland, aini.linjakumpu@ulapland.fi)

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one’s life. The situation is definitely different when one is born into a religious community. I.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one’s belief or concrete activities as well as the spiritual teaching undertaken by the community. Moreover, capital-enhancing digital uses were the factor that transformed the gap of classic socio-demographic factors such as education and language proficiency into insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and psychological well-being was found. These results suggest that capital-enhancing digital uses may be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. 

LINELL, MIKAEL* (Mid Sweden University, mikael.linell@miun.se)

Managing Social Unrest through Risk: Reinventing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmo during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing ‘calculations about probable futures in the present followed by interventions into the present in order to control that potential future’ (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective

The digital divide is a social side effect of the information age. The technological movement enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the “second level” digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The study of this paper were: to present the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital and to characterize the link between the digital divide and social stratification. The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old.

Resisting the Neoliberal Turn in Swedish Housing Provision

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 

Table of Contents
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing stock is老化，also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. A point at which the Swedish housing system has been thoroughly deregulated from the 1990s onwards, to get gradually become one of the most liberal market-governed housing markets in the Western world (Hedin et al. 2012, p.444). The lack of national government interventions and the absence of a national urban policy have led to an increased debate within private sector, tenants’ organizations as well as the growth of new social movements based on housing issues. The social movements articulated around housing provision are fighting against the fear of ‘renoviction’, territorial stigmatization and the difficulties for young people to enter the housing market due to the increased housing shortage.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this ‘dysfunctional’ housing market is an illustration of the growing importance of socio-spatial, gendered and racial segregation within the Swedish urban landscape.

Confidence Building and Stakeholder Involvement in Nuclear Waste Management. the “Glocalization” of Social Acceptability

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decisional processes, leading the different agencies to transform their approaches and integrate what they call the “social aspects” (or the “problem of social acceptability”) of the waste into their research agenda. In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear or organizations and aims at facilitate the sharing of experiences in order to ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2003). This kind of multi-level strategy that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?

In most of the European countries that are confronted with the problem of nuclear waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the “participative or deliberative turn” (Leloup, 2006; Chilvers, 2008; Barthe, 2006). Whilst technocratic rationality dominates the process, the new “societal aspects” of nuclear waste management (mainly the emergence of organized local contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this “participatory turn” in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the “societal aspects” of high level waste management: it is claimed that the problem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogic account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.

LITTLE, STEPHEN* (The Asia Pacific Technology Network, little@stepheneillittle.com)
Social Resilience: Learning From Hanshin and Tohoku

Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context.

In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations.

However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster respectively fails to respond to remembrance intervention, a concentration of institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists

This paper examines attitudes towards education and explores informal educational structures in the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one of the parts of lifelong learning that impli cate the process of gaining knowledge and skills while individuals interchange with their social environment. Many anarchists tend to criticize prevailing educational practices and maintain the concept of libertarian pedagogy and postmodernist critique of formal education. They suggest that governmental institutions reproduce social inequality and constrain people from getting knowledge in order to create governable and disciplined subjects. My findings show that anarchists realize their own learning needs and carry out appropriate learning activities that are crucial for their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them into their daily routine. Their rhetoric, deeds, consumption practices and forms of communications are tightly connected (in dialectical way) with those attainments that are distributed by channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international MYPACE (Memory, Youth, Political Legacy and Civic Engagement) project.
The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a rapid increase in economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese has increased, and the likelihood for married women to bear children for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio extremely skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Chinese Elite Higher Education and Reproduction of Educational Inequality

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through Guokao examination only. This new strategy is called Independent Freshman Admission (IFA, or Zai Zhu Zhao Sheng in Chinese). Whereas ample evidence exists for the social disadvantages of people with low SES in the ability to access and complete elite higher education in Westernized countries, research on educational inequality at elite universities in non-Western countries has remained scarce. This research, using administrative data from one Chinese elite university in the years 2007 and 2008, presents behind-the-scenes details of admission processes at Chinese elite universities for the first time and demonstrates the impact of these processes on educational stratification in a radically changing society. Significant associations were found in the IFA selection process between students' socioeconomic origin and whether they passed the multi-stage selection process to access tertiary education. The new IFA system favors students from higher socio-economic origins at the expense of students from lower socio-economic backgrounds in admission to elite universities. Furthermore, this institutional reform of elite higher education will likely have a long-term impact on the social origins of the intellectual elite and changes in social structure in Chinese society.

Inequality, Government Trust and Election Participation

It is a hot topic that how to promote Social transformation of the trust in govern- ment and election participation in China. This paper presents the relationship of inequality, government trust and election participation and why people take part in conventional political participations. The author argues that government trust plays an important role in conventional political participation, but contrary to more traditional models, there is regional disparity of the conventional political par- ticipation. Taking the case of Taiwan, this paper presents the relationship of inequality, government trust and election participation and why people take part in conventional political participations.

Locality and the Moral Inequality of MDMA Users in Taiwan: A Case of a Newly Democratized Country

The ‘normalization thesis’ has been developed to explain the massive increase of drug consumption in recent years, because of the growing popularity of dance/ clubs. It is within the young people. Different from most of the criticism, this paper thinks it short of ethical prudence and sociological insight: it incites moral panic for its effect to legitimizing the drug use without identifying the social attributes of drug user. Seeing these weaknesses, this paper presents a figurational approach to explore moral narrative of different social space, and their response to drug consumption. Data were collected by reinterpreting the existing researches in Tai- wan, as well as by the fieldworks implemented in Taipei City and Pingtung County by way of semi-structured interview. It is confirmed that individual pleasure is the reason to take MDMA in both regions and ‘peer pressure’ plays no role in their use of MDMA. Taking a relational ontology, this paper finds that there are two kinds of moral narrative in term of their attitude toward the moral centre. Those who live in Taipei City are more interested with, and capable of challenging the moral discourse that MDMA is illegal and dangerous, while those living in Pingtung County take a relatively detached view from the moral centre. In other words, the closer MDMA users to the moral centre, the more likely they take an active way to defy the centre; the farer they are from the centre, the more possibly they take a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratization, and their capacity to challenge the moral centre is unequal.

Relationship Among Fathers’ Occupation, Fathers’ Parenting Behaviors and Children’s Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children’s education. By incorporating cultural capital in Bourdieu’s theory of reproduction, therefore, an empirical study was conducted by putting together a study concept of “economic strata of fathers (occupations) → fathers’ parenting behaviors → accomplishment of children’s education” by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shansi Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu’s theory of reproduction can be applicable to society in China, with a significant influence from fathers’ parenting behaviors on self-esteem and aca- demic performance of children. First of all, all parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher reliance on school education than home education. On the other hand, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to chil- dren. Self-employed fathers have higher income than blue-collar and white-collar
Strata and own abundant network resources; however emphasize education for males over females.

Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also linked to the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise versus potential challenge and Beijing's maintenance of status quo versus liberal revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Gender, Law and Legal Professions in China

Based on surveys, interviews, and archival research, this paper attempts to analyze Chinese women's current status and impact in the legal professions. This paper introduces and compares the Chinese pioneer women lawyers and some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict. In the past, being affected by biological determinism, gender essentialism and dualism hierarchy; the ability of women to study law and work in the legal professions was not fully implemented. Since Chinese judicial reform started toward harmonious justice and multiple dispute settlement mechanisms, Chinese women judges, due to their abilities of mediation, have played more of an important role in the Chinese judicial system. Sex discrimination and gender bias however still exists in the legal professions in China.

Local Institutions and Historical Contingency: Divergent Paths in Local Economic

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. Specifically, the passive nature of the local state complemented with the bridging character of informal associations and the more independent entrepreneur of local firms in Wenzhou have contributed to a local transition from a semiliberal capitalism throughout 1980s to a market economy coordinated by locally weak but semiautonomous business associations since the second half of 1990s. By contrast, a strong and omnipresent local state together with rampant business associations and dependent entrepreneurship of the local state have shaped a path of transition from local state corporatism to a mixed-market economy coordinated by the local state at the turn of the century. On the other hand, with a dominant local state intervention and the weakened business associations and entrepreneurship, Chongqing transformed from a typical path of planned economy to a mixed-market economy.

Cultural Stigma and Social Exclusion for Adolescent with Mental Illness: A Case Study in Guangzhou, China

Due to the prevailing stigma towards people with mental illness, adolescents with mental health problems are facing overwhelming social exclusion in mainland China. In order to respond to the lack of studies on the social exclusion for young adolescent with mental illness in Chinese context, this study tried to explore the process of seeking medical service and daily struggles for teenagers with mental health problems in China. A case study has been conducted to understand the social exclusion for a middle school student in her school life. The data was collected from researcher's one-year placement as a social worker in a junior middle school in Guangzhou, China. The girl, her classmates, her parents, and her teachers were targeted interviewees. According to the research findings, the cultural construction of mentally disabled people as violent and demoniacal from social media and Chinese traditional belief has profoundly affected the adolescent's mental well-being. The research also identified a dilemma faced by young people with mental health problems. On one hand, they are entitled to the social welfare on the other hand, the labeling effect in social welfare provision and legal responsibility for school to take care of students' safety in Chinese social context result in an unfriendly environment for the young people in school, as being rejected by school and teachers once diagnosed. Chinese cultural value that emphasized family to take care of it member also leaves the family with great anxiety. A new service model as 'medical care - social workers - teachers - families – peers' for social work intervention, which seeks to promote community understanding on adolescents with mental illness, reduce the labeling consequences of 'stigma', and initiate a more positive social support environment for young patients' rehabilitation was advocated.

Gentrification during the Redevelopment of Urban Villages in Shenzhen, China

Developing countries have witnessed unprecedentedly rapid urbanization process, whereas we are worried to see that most of the urbanization happened in the form of urban sprawl. It is the situation in most fast growing cities that on the one hand, urban land is expanding into rural areas without control; on the other hand, many distressed inner urban sites are left unused. During the new stage of China's urbanization, massive urban expansion is no longer encouraged, replaced by more sustainable and intensive utilization of urban land. Nowadays large scales of urban redevelopment have been taking place in China. Among which the redevelopment of urban villages has received substantial attention. Urban village is a unique phenomenon due to China's dual land system and residence registration system. Within urban areas, urban villages have unique social functions by providing low-rent housing for large amounts of low-income rural migrants. Under the risk of losing low-rent houses, the redeveloping activity will affect these migrants significantly. Right now in China, Shenzhen has become a leader among all the cities in the field of urban renewal, of which an important part is the renewal of urban villages. Owing to rapid urbanization on one hand and limited land resources on the other, Shenzhen has encountered unprecedented development bottleneck. Taking Shenzhen as a study area, this article investigates the gentrification process during the redevelopment of urban villages. The mechanism of gentrification, as well as the cause and effect of gentrification are analyzed based on typical case studies.

Social Capital, Resilience and Self-Efficacy in Promoting Psychosocial Development Among Senior Middle School Students in Zhongshan, China

Although social capital theory has been widely applied in western countries to investigate positive factors to children and youth's development outcomes, little attempt has been made to test the applicability of social capital theory to adolescents in mainland China, especially for those who are after the compulsory education in medium-sized cities. This research aims at understanding whether and how social capital from the family, school, peer, and community contexts relate to the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students' interaction to school and teachers display significantly positive relation with adolescents' mental health, behavior adjustment, clear and positive identity, but not with students' social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students' behavioral adjustment. Students with more encouragement and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students' development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

Educational Expansion of the Upper Secondary Schools in Taiwan

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government has promulgated the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP.

Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze the backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

The Development of Inter-Firm Trust: Cases from the Animation Game Industry

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more internationalization and inter-firm collaboration takes place. Such topics as “how to select a trust-worthy partner”, “how to continuously maintain good relationships with collaborators” are of great value for both academic studies and business practice. This paper explores the questions and observations, which are further developed and analyzed. Experts of these institutions try to prevent disability, define it and contest its impacts in different ways. The interaction of these professionals is entailed a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices on disability insurance and rehabilitation in Finland. The focus of the article is its contributory disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Disability and the Limits of Knowledge. Uncertainties of Expert Practices in Insurance Companies

Disability is one of the most significant insurable risks in human life. Insuring disability, either statutorily or voluntarily, is not an easy task for insurance companies. As a result, business experts are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entangled with each other. Experts of these institutions try to prevent disability, define it and contest its impacts in different ways. The interaction of these professionals is entailed a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices on disability insurance and rehabilitation in Finland. The focus of the article is its contributory disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Conflicts Between Artisanal Miners and the Government in Mongolia

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of “Gold Program” in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate without any legal coordination and official registration for the last decade. The Government made an effort to dissolve those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the tow sides. Remarkably, no comprehensive survey was conducted on this newly generated community in Mongolian society.

Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary activities.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

Leisure in an Unequal World: Gender Differences in Australia

This paper traces the development of leisure in Australia along gender lines. Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and programs. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.
Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.

Cyberspace: A New “Fieldwork” Experience For Sociologists

While cyberspace clearly is a new research field, scholars are just starting to study how to grasp the full meaning of social relations in cyberspace. This question puzzles numerous disciplines of social sciences. Traditionally, the explanation of the process of research means that researchers have to go back and forth between the theoretical perspective and the empirical reality. They essentially start from one of these two starting points to get towards the other. But how to do that in the digital world? This space shares characteristics of both theoretical and empirical worlds, but nevertheless, differs greatly from both. The paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a strengthening found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper exposes three main reasons why and how cyberspace should be designed as a field of investigation: 1) because it is a place (cyberspace is a place in the geographical sense), 2) there are several means to do research in cyberspace and 3) there is an ethic of research inherent to it. We therefore believe it is possible to say that cyberspace is not a field like any other. It is rather a new mediator between theory and reality. A better understanding of this cyberspace field should provide better tools and concepts to apprehend the social reality in the digital world. The originality of the paper is based on the current inability of different research methods to understand and analyze cyberspace as a research object but also on their inability to understand and properly analyze the social phenomenon of cyberspace.

Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – In Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutics of justice are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of “exegesis” as the basis for constructing an alternative approach, and theologically conservative “Western” biblicism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constructing the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, of moral concern, are presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I study philanthropic and charitable activity in what world polity scholars have called a ‘global moral order’ that champions virtue and positions voluntary associations, including foundations and charities, as legitimate actors for solving global problems. The first part of the study presents a cross-national dataset on the growth of philanthropic organizations in more than 100 countries since the 1970s. Results from the study find that models of charitable activity are structured in the culture of world society.
La modernidad que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para terminar con el malestar y la maldad de la sociedad. El liberalismo por la ética se consideró un elemento subjetivo, no científico y se apartó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apartó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apartó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. In this context, the education universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, lo que produciría profesionales que tuviera como su práctica promover la sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la incompatibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la sociedad igualitaria, rompiendo con el malestar y la maldad de la sociedad. Por el lado de la ilustración y el liberalismo, porque la ética se consideró un elemento subjetivo, no científico y se apartó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En este contexto, la educación universitaria está recuperando en los planes de estudio la ética profesional como una dimensión formativa indispensable para orientar la práctica profesional hacia el combate a la desigualdad.

A partir del principio fundamental de "exclusión de la exclusión" que sustenta la sociología y la antropología que conforman la ética planetaria que propone Edgar Morin, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

**A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality**

In previous works (Fachelli, 2009; Fachelli & López-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2007, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. With this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called "structural and articulated typology": we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into "m" factors. Then we apply cluster analysis to classify individuals into "key" groups or "types" on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to "inequality" level. The question that arises is how generate a composite indicator, that we call "social distance", based in a multidimensional measure taking into account the principal factors common components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will present the results based on the analysis of the Labor Force Survey of Argentina in 2012.

**From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain**

For the past ten years, the management and promotion of circular migration flows has been a pivotal element of migration management policy in Spain, particularly of low-skilled workers in sectors such as seasonal agriculture and hospitality. It was commonly considered that this type of international mobility allows migrants to adapt to receiving countries labour market needs without incurring in the social costs of permanent settlement. Additionally, circular migration is regarded as a beneficial form of international mobility for migrants themselves and countries of origin. The aim of this paper is to analyse the Spanish policies developed in relation to the seasonal migrant workers for agriculture. We try to answer two key issues: (a) how Spanish policies regarding seasonal workers have been designed (b) and what purposes they responded to. We take into account three dimensions of the policy making: (a) national labour market demands (b) international relations framework (c) and the legitimization and meaning of these policies in the domestic political arena and economic relations between enterprises, trade and the boundaries between them gradually fade as far as their social perception. Sociological approaches in this area have been aware of these more structural changes expressed by this type of consumption: (i) the therapeutisation of performance; (ii) new dimensions of pharmacologicalisation; and (iii) commodification and consumer culture in the production of new needs. In this communication, we intend to discuss performance consumptions focusing on the subject contextual patterns of the role of labor and academic contexts. The goal is to shift the focus from the mechanisms of consumer culture to the contextual effects. We aim to discuss how social contexts structure individuals’ investments on performance; how they contribute in the construction of social consumption needs; how they generate legitimacy to consume; and how they shape performance expectations. For this purpose, it is intended to compare the performance consumptions between two young population groups – university students and young workers (without university education) – exploring the analytical triangulation between consumption, performance and pressure perceived by respondents, and shared expectations. The empirical support for this questioning is based on extensive as well as qualitative data, collected within a study carried out in Portugal on young population (18 to 29 years old).

**La Formación De Profesionales Ante La Inequidad. Desafío ético De La Educación Universitaria**

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inequitativo. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendente a la constitución del ethos de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhumana está predominando en la educación, particularmente en el nivel terciario, cuyos efectos en el desarrollo moral de los educandos son preocupantes, si tomamos en cuenta el desinterés que muestran por contribuir desde sus campos de conocimientos a la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades prioritarias en la universidad mexicana es concebir a la ética profesional no sólo como códigos de buen comportamiento sino, además, como un dispositivo intelectual y moral para hacer la crítica a la ausencia de equidad en la distribución de los bienes que la sociedad ha producido. Al observar lo que acontece en los escenarios institucionales y escuchar las opiniones de los estudiantes, así mismo, al identificar las limitaciones e inherentes de los profesores en una universidad del noroeste del país, la cual seleccionamos para nuestro estudio, nos permitirá apreciar los rasgos de esta problemática de la educación superior, analizada desde la perspectiva de la ética profesional. Crear conocimiento en este campo, hace posible imaginar alternativas para la intervención educativa con un sentido transformador y progresista.

Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970’s, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several countries within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000’s.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and, c) actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to interpret security as complex technology – in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combination of different cause-and-effect chains – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, ever increasing time constraints and increasing economic competition on different levels, we want to explore how is it possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

1. Differences in educational background and professional view on security
2. Differences in organizational backgrounds (bureaucracies, free-lancers, etc.)
3. Differences in institutional backgrounds (ministries, security services, airport management)
4. Differences between passengers and participants, staff

Each of these differences presents special challenges, inhabits various risks and is met by distinct sets of practices that buffer them in a way that the security processes do not collapse. Therefore the aim of our contribution is also to discuss how these special forms of managing differences are interconnected and dependent on, but also irritate each other.

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

The role of teacher expectations in pupils’ achievements has been heavily researched during the past 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects on learning opportunities and on pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academically performing children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

However, despite the fact that there is evidence speaking against discrimination in grading or track assignment against pupils with low socioeconomic background and/or immigrant background on part of teachers in Germany the role of self-fulfilling prophecies remains heavily underevaluated. Whether they occur in German schools has not yet been answered. Therefore, their possible role for the emergence and maintenance of educational inequalities remains unknown.

This paper tries to shed light on the role teacher expectations play in pupils’ academic performance within German primary schools. One line of research suggests that teachers often have lower expectations for the academically performing children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

We propose the application of the frame-selection model in order to theoretically explain self-fulfilling prophecies within the schooling context. In doing so we identify conditions under which broad based teacher expectations for certain groups of pupils may emerge and how they may be mediated through the class-room interaction. In a final step we empirically test the hypotheses and answer whether teacher expectation effects contribute to the emergence of social and/or ethnic educational inequalities or not.

Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany

We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of ‘lost decades(s)’ stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than were to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created
regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regulated employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any potential gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general “adaptation problem” referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current “post-Civil Rights era”. I begin with an overview of what I call the “civil rights mode” of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a “civil liberties mode,” a race-neutral or “color-blind” strategy that has recently gained favor in American advocacy politics. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than ‘repositories for the deceased’. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represented and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to extended families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of social and marital marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociability in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the “spatial turn” in the social sciences, relational definitions of space have prevailed; yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relationships between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaningfulness.

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of one’s age. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection. It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with refraction based on lineage, cohort and chronological age. It also develops a critical psychodynamic understanding of social relations in so far as a preconscious ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.
This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and on laptop computer and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants' willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, para data on time and changes of answers were collected. The results on the differences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents' performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

Evaluating Government's Environmental Performance: Evidence from China

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government's environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government's environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents argue that their government has done too little; while 6.17% of the respondents think that their central government has not only done too little but also done too much. (2) Environmental performance in central government or local government become even worse in 2010 than in 2003 CGSS data. (3) As for central government's environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban respondents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government's performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government's environmental performance. These results suggest that government's environmental performance in China today are a mixed system, in which objective environmental problems and residents' subject perception and social characteristics coexist to determine how the Chinese evaluate their government's environmental performance.
This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of highly stable for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes and consist with socialization perspective. The study also suggests that the parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that occur along the subsequent years, as indicated by the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature has conceptualized women’s involvement through core strategies for small businesses, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective. Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between the entrepreneur and patriarch. The findings indicate that the patriarchal firm’s adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneurs’ entrepreneurial capability, the nature of their specific industry, and family relationships. Wives’ adaptive entrepreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a strong patriarchal culture, particularly those in an extended family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions.

The observations further reveal that wives’ entrepreneurial identity is shaped by the process of their experience work within the context of daily organizational routines, which can increase their self-empowerment and improve women’s agency. However, lack of opportunity to cultivate their entrepreneurship asserts their gendered identity and reinforces marginality.

Communication As A Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. This study explores how local contributions of social networks to the organization at the internal level are not clear enough because it is considered that the commercial issues tend to prevail. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization?

In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a “brand new” type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, American African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others’ sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen as this particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research and safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the ‘relationships’ (with the sex workers). Length of time of researcher’s immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research and safety in both the field and the laboratory.

Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hukous of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, facing these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

Power without Representation: The Coherence and Closeness of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain these claims, they must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we reexamine the membership of NAS and the society the entire NAS, its executive committee, and its three national groups. This analysis shows that even though NAS is highly coherent, it is excessively endogamous: rather than reflecting the diversity of North America, it only reunites a select group of U.S. or pro-US leaders, members of transnational corporations and partners from five freelance. That is, we focus on the agendas of the NAS’ annual and regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily exclusive, it presents the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a power founded on opinion, rather than on force and material interests— heavily depends on the hard power of established hierarchies.
The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating; how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

Social Science and Alienation In School

School can in many ways be seen as a place distant from life in general: In classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school became more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present.

This result in light of contemporary educational policy reforms in Britain. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

LUNDBY, ERIKA* (Linnéa University, Erika.Lundby@lnu.se)

Young Consumers In Sweden

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particular importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed as consumers have gradually changed, from being observed and judged towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new competence and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.
Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, in a sense, to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

LYTKINA, EKATERINA* (National Research University, ekaterina.lytkina@gmail.com)

Transformation – Reality or Simulacrum?

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context

The paper is aimed at examination of the difference of nature and characteristics of alienation and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomic behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

LÖFQVIST, LOUISE* (Linnaeus University, louise.lofqvist@lnu.se)

Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.
The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies of merrin on the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results show that birth cohort size has significant impacts on education achievement. However, the impacts of birth cohort size on male and female, on urban and rural populations and their differences, are not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what intercultural education in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, despite the organization’s goals, it has failed to scrutinize the idea of “intercultural” in terms related to international diversity or issues connected to social justice even as Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.
Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle class and its perception of the socioeconomic elite. The global emergence of the middle classes has also contributed to new cultural conceptions of justice/injustice, discontent and critique towards the socioeconomic elite, such as different discourses in middle classes, their feelings, perceptions of it, the role of adaptation responses. However, it is unclear whether these efforts represent the modernization of traditional patriarchy and those specific to post-patriarchy. Recasting patriarchy in this way enables one to grasp the logic of action and internal contradictions of each type of arrangement by identifying their singularities without placing them hierarchically on an “axis of progress.” Moreover, this analytical move also makes it possible to compare all gender arrangements according to their relationship to the principle of patriarchy.

MACMAHON, AMY* (University of Queensland, amy.macmahon@uqconnect.edu.au)

Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity - may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, overpopulation and salinity. Smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women's role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent...
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

MACPHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)
The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – or all. Solving this puzzle requires an examination of the trajectories of state-movement interaction in periods of crisis. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crisis-torn states have defined and adopted the democratization claims of the syndicalists reveals the trajectories of state-movement interaction that are conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation. Existing social movement theories of democratic movement have been too to both enrich and reconfigure the study of this long-term perspective. In addition, this study reveals how the movement’s rights claims to economic democracy (both inside and outside the workplace) underwent a transformation from largely implicit to explicit human rights frames, thus facilitating connection with non-labor democratic movements. Finally, tracing state-movement interaction in unstable economic contexts bears on questions of the meaning and realization of economic rights; the crucial test of such rights claims in periods of crisis becomes the degree to which workers and other stakeholders have democratic input on policy and thus avoid “cost shifting.”

MAEDA, TOMOHIKO* (Meijo University, tmaeda@meijo-u.ac.jp)
The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, “Legal consciousness of Japanese,” in 1967, theories of legal consciousness and legal culture have been central to the issues of scholarly controversies in various fields of socio-legal studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints for socio-legal studies on globalization and local adaptation. I would argue that theories of legal consciousness and legal culture serve for studies on globalization and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep an eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal adaptation to globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, they would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories. I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organizational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulatory environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using material from a three-years research project focusing on sense-making processes at sector and organizational level, we can show not only that there is new discourse related to la labour-related issues but also how this discourse is reflected by evolving employment policies. Overall, ‘market accountability’ puts long-established professional concepts under strain. However, the ‘sense-making’ is different between

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
regulators and those who have to implement regulations. This suggests that the rationale of hospital employment is changing bottom-up, often against what regu-
larers conceive as an adequate design for hospital work.

**Childcare and Elderly Care in Bologna**

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegat-
ed to women to sustain its members. Such model had strong influences on women job and family policies, resulting in one of the lowest fertility rates all over Europe and will be suffering in the next years from an increasingly higher age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare policy between politics and citizens has been able to attract and keep women and it has been the first to introduce childcare services in the 60's, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labour mar-
ket in Italy. However, the financial crisis and the consequent reduction of public funds have put in question the sustainability of Bologna's model in recent years.

In the present paper, we will show results from a series of 8 focus groups in-
volved 34 working women conducted in Bologna during 2013, which have been se-
lected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the work-life bal-
ance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50s will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

**Possibility of Area Management Organizations for “Bulwark” Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –**

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presenta-
tion, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific pur-
pose (such as area management, or historical and business management of his-
torical market), equipped with business specialist- staffs, and also it is governed by volunteer citizen board members. “Half private, half government”entity is run or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood's core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International-
al PDA (inventing “IDEA Space” project for assisting local small businesses, using “visioning”method). These trials are expected to be effective “bulwark’s against diver-
ting impacts of neoliberal developments. This presentation concretely gazes at the PDA’s efforts (and the like’s of area management organizations) to keep local core of cultures, local “life economy” with concrete devices from the stand-
point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organ-
izations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

**Instrumental Action and Rhetoric: Framing Rational Action on Language Field**

The paper makes a theoretical reconstruction of a model for instrumental ac-
tion in language, using the notion of rhetoric. It takes persuasive language to be
constitutive of instrumental reason, and analyses the possibility of bring to the
theory of social action some concepts from linguistic field. The first step estab-
lishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric
in order to create the persuasive frames of reality and use them for self-persua-
sion and for persuade other people to go into a specific course of action. Since
deliberation is a problem of collective action and rationality we can understand
rhetoric in terms of building a new descriptive model of rationality, in other
words, we can describe rationality as a rhetoric operation: it consists in giving
different degrees of truth to the information available and then create conditions
for choosing a specific way. This approach builds a critical view to the notion
of information as objective data collected by rational actors, and points to the delib-
eration as a cognitive way to deal with framed discourses about reality. Based on
this model we can criticize some analytical problems from the theories of rational
choice concerning collective action, here represented by M. Olson’s paradox and,
and in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the con-
cept of optimal amount of gathered information. The concepts of rhetoric give
to the theory of rational action a key to understand how in empirical situation words,
and sometimes just words, are enough to create action.

**Social Norms and Policy Influence on Family Formation in Sweden**

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equity and low fertility in postindustrial societies. The theoretical framework is designed to explore the role of in which family- and gender-role norms, institu-
tions, and economic context intertwine with the family formation intentions and
behaviors of young adults. We focus on two sets of social norms (family- and gen-
der-role norms) in influencing individuals’ intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the “norm” of family, and the second dealing with the appropriate roles of men and
women in the family and in the public sphere, especially the labor market.
Our analytical model seeks to attribute equal explanatory power to men’s as well
as women’s opportunities for engaging in positively viewed activities in the spheres
of family and work. In our empirical analyses we rely on a mixed-methods ap-
proach. In this paper, we combine a quantitative analysis based on data extract-
ed from the Swedish Young Adult Panel Study on attitudes to work, family and
gender roles and their possible impact on family formation (intentions) among
Swedish young adults in the first decade of the 21st century, with a qualitative
analysis of narratives in in-depth interviews (N=80), carried out with women and
men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings
for the qualitative part indicate that young adults view Swedish family policies
as good even when having little first-hand knowledge of them. We discuss similari-
ties and differences across gender and family status, as well as the implications
of our findings for research and for policy design.

**Development, Modernity and Nanotechnology: The Challenges Of a Time**

This paper aims to raise some thoughts on the present time and the relation-
ship between modernity, environment and development, starting from some
questions: if we continue to follow the current economic model, of never-end-
 development and capital expansion, what awaits for us? Is there a future? Will
the human species take part in it? How to divert the course of this rudderless
ship guided by a commandant called Progress? In search of clues that point to
the possible answers, we walk at some tracks left in late 1960s and early 1970s,
by Josué de Castro, on the changes that had already been felt in his time and the
threat that hovered in the world due to environment imbalances arising from
the development model based in the expansionary logic of capital, the rampant
belief in science and technology, then to reflect on the reality of our time and the
progress and achievements in the field of science and technology, and the chal-
enges we face against the advance of new technologies - and this is the case of
nanotechnology. Nanotechnology is a technology that can have and already has
numerous applications. It’s, in the point of view of the market, a safe investment
for choosing a specific route. This approach builds a critical view to the notion
words, we can describe rationality as a rhetoric operation: it consists in giving
the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organ-
izations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psychological studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batterers, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculation, and the role they attribute to the role of other agents. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under which individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes the on social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collective of actors and social entrepreneurial communities. We should better know these collective in order to differentiate their actors at the same times social activists and entrepreneurs. My second hypothesis concerns the role of their devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and the acting devices permits to female the social fabric of solidarity economic initiatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collective and their acting and learning devices are developed at the very heart of co working

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the under privileged neighborhoods, urban sanitation is on par with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants. Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace's standard of living a challenge to manage. Due to this inefficiency, most the city's periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In favelas, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaks out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Guanabara Bay has been contaminated since the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

Contemporary Grandparenthood in Germany: A Perspective Of Social Inequality

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociological of age, the study aims to demonstrate the usefulness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualized in the form of unequal access to the grandparent role (e.g. the transition to grandparenthood). On the other hand, social inequality is conceptualized in the form of unequal outcomes connected to grandparenthood (e.g. levels of subjective well-being).

Based on data from the German Ageing Survey (DEAS) and applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced as prospective grandparenthood does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grandchildren for grandparental subjective well-being are unequally distributed across educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued social position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

Reconciling Work and Motherhood: Class and Access to Childcare in Dublin

The ‘motherhood penalty’ is invoked to explain the lower labour force participation of Irish women. Mothers with third level education who combine paid employment with parenting are particularly vulnerable. The purpose of this paper is to compare their respective orientations to work and their reconciliation strategies. Mothers with third level education earned incomes that enabled them to combine their paid work and parenting. The exceptional mothers in our focus groups with low educational levels were part time. Grandparents or siblings also provided care. These constitute a mixture of childcare strategies not easily replicated. Childcare policies in a neo-liberal welfare state are insufficient to meet the needs of working mothers. Grandparenthood is an important source of support and childcare for working mothers, in particular mothers of working age who have not yet had children and who have the resources to make such an arrangement.

The ‘motherhood penalty’ is invoked to explain the lower labour force participation of Irish women. The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1974 in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ aid programs. Although ROWITE was disbanded in 1998, its concerns were, in part, picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

*Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes*

Annsofe Mahrs Träff, PhD-candidate National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describe physical activity in ways that emphasize the benefits of physical activity for them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do not describe that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

*Global Arenas of Knowledge: Perspectives from the Brazilian Case*

This paper aims to present the major guidelines of the project ‘Global Arenas of Knowledge’ and its first results. The project involves theoretical work to reformulate the sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the postcolonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished ‘third world’ and where knowledge institutions are well established: South Africa, Brasil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic work, interviews, documentary work and quantitative methods of citation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain.

I focus on the study of three major domains of knowledge which are more closely related to the proposed session: a) how the dynamics center/ periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

**MAICH, KATHERINE** (University of California, Berkeley, kmaich@berkeley.edu)

*Legislation and its Discontents: Consequences of the Peruvian Household Workers Law*

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms.

Colonial relations persist in the apartments and homes across wealthy districts of the capital yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourist industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital’s growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

*From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?*

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of hands went to the streets to demand an end to the Syrpolitacal, as well as political, legal, and economic changes. The state’s approach to the protests was one of confrontation and repression.

My research focuses on the political violence of 2005-2006 in Lebanon with a focus on the relationship between political demonstrations and sectarian political discourse. How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.
assassination was a “political earthquake” that shifted the attention of the Leba-
inese society from mainly Pan-Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of
the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

**Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality**

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to be
the main ‘care’ in these circumstances. A dedicated income support payment for
some Australian carers has been available since the 1980s. Unlike many other forms
of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fic-
nam’s analysis of the claiming and framing of European care policies (2010),
we argue that changes to Australian carers’ income support have developed with-
in competing frames of social justice and social investment. The social investment
frame, which prioritises paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of income support, such as unemployment benefits and payments for
sole parents. However, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people for
whom they care.

**MAKI, YOKO** (Hitotsubashi University, maki.yoko@nifty.com)

**Middle Class Women’s Work and Childcare in Paris**

Today, France draws attention from neighbouring countries because of its high
birth rate. French women are also relatively active in their labour work participa-
 tion. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to the
issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare is the registered childminder, the so-called
“Assistants maternels”, and not nurseries as in Sweden. The paper will put the
emphasis on this French registered childminder system.

According to a French national report on childcare, in 2011, 37 % of children
under three whose parents worked full time were left with registered childminder-
s who were approved by the local authorities and received children mainly
in their own homes. 18% of children had places in nurseries, and 4 % were left
with unregistered childminders, usually professional nannies who worked in the
home. 18% of children had places in nurseries, and 4 % were left
with unregistered childminders, usually professional nannies who worked in the
home.

The French “Assistant maternal” system was passed into legislation in 1977 to
clarify the undeclared work, and progressed during the 1990s to increase jobs in
the domestic sphere. Local authorities conduct home inspections, and 120 hours
of professional training is required for approval. The state takes charge of the
social security cost of childminders.

Now in Paris, many childminders are immigrant women and they help middle
class French women to work outside the home and to get higher wages than the
childminders do. Mothers are generally satisfied with this system because of the
flexibility of working time, which means the longer and less well paid work of
immigrant women supports the work and families of French middle class women.

**MAKINO, TOMOKAZU** (Japan Society Promotion of Science, makinotomo815@gmail.com)

*The Transformation Of Self-Confiscation In Japanese Youth: From 1992 To 2012*

Japan’s economy entered a long period of stagnation, known as the “Lost Two
Decade,” after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
about the self-consciousness of Japanese youth. But we can get another figure of
Japanese youth from the outcome of the research of Japan Youth Study Group,
conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
selves, and feel senses of themselves. They are anything but fragile. By the way,
our main interest of comparison of three or more time point is that we can disting-
uish between temporary trend and long-term trend. For example, the ratio of re-
pondents of feeling sense of oneself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfici-
ally behaviour has increased from 2002 to 2012. These means long-term trend of diver-
ficien of the self. On the other hand, the ratio of loving oneself had increased from
1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What
causes for these? We can consider two matters. First, the cultural-social change
underpinning long-term trend, for instance, the diffusion of mobile media and
social network service accelerating the diversification of the self. Also, we need
consider what happened in 2002 (about temporary trend). We try to explain the
structure of self-affirmation by comparing the determinant and related item of
self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

* A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory of
“Water War”? “Water War” in 2000 was an anti-privatization movement towards the public
water service and it changed the water law and forced a private company to with-
draw.

The goal of the social activists who had played a main role in “Water War” was
to improve water resource accessibility. However, the success of “Water War” did
not solve the water resource problem in Bolivia. Does it mean that the other issue
was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the
water situation not mentioned. In order to investigate a “real” driving factor that
had caused the problem, analysis of the Water War should be revisited from dif-
ferent angle. A water shortage is classified into two factors: “Real scarcity” and
“Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of
volumetric quantities, incurred mainly from population growth, industrialization
and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the
exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards manu-
factured scarcity. It prevented its focus from real scarcity, which is also pivotal
in order to solve the water resource problem. This study uses the original data of
fieldwork and local newspapers from three times of fieldwork by the author. I
will use discourse analyses to expose the process of why social activists chose to
focus on “Manufactured scarcity” in order to gain the civilian support. I present
the importance of recognizing the each characteristic of water scarcity to improve
the water resource problem. This research intends to provide a new framework
for equitable water distribution.

**MAKITA, MEIKO** (University of Nottingham, Meiko.Makita@nottingham.ac.uk)

*Pathways Of Aging: Old Women's Gendered Narratives and Cultural-Historical Locations*

**Pathways of Aging: Old Women’s gendered narratives and cultural-his-
torical location**

Social gerontology has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a
lifetimes’ experiences. In this paper I explore the themes that old Mexican women
themselves identified as important in shaping their pathways towards old age. I
do so by employing a thematic-narrative analysis of multiple in-depth interviews
with 32 women aged 60 to 89.

Throughout their life-course the women’s personal biographies, their current
social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My
inquiry is to stress the importance of structural and personal mechanisms that
underpin the socio-cultural construction of aging and old age; the relation be-
 tween the objective reality and subjective experiences of aging. By making refer-
ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story.

There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters.

The women’s 'formal and informal participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

The Complex Adaptive Systems Approach. a Sociocybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal character, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that system and complexity are primarily attributes of an observer, an operation of “punctuation” in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an “invented reality” (von Foerster) and the system that simulates the real system would be doubly so.

CAS-epistemic limits become more evident in its sociological models called “Artificial Societies”. The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, “self-referential” (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg-historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg. Not no Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city - it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors' personal narratives and ruminations on going Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongolaza.

Mattering Difference Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been promoted by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the “developed” world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the “developing” world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations from health policymakers, researchers and practitioners as the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military's involvement in disaster management.

Transnationalization of Labor Mobility Development Trends and Selected Challenges of Its Regulation

Ever since the early development of the industrial mode of production paid employment has been strongly structured by regional or at least national mobility structures until the end of the 20th Century. Ways to the workplace were primarily daily oscillations; spatially varying work assignments concentrated on relatively small group of experts and construction workers.

With the internationalization of value chains, migration and organizations, this picture changed dramatically. Labor mobility becomes transnational for a constantly growing share of the working population. This concerns inner-European labor migration as a crisis-induced labor migration, as well as contract and subcontract work, but also the growing cross-border mobility within profit and non-profit organizations as well as the increase of locally recruited employees who have the nationality of the "parent organization". In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and participation conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research foundation (DFG) on cross-border personnel mobility in organizations.

MALICK, MIRA* (Waseda University, lequin@ruri.waseda.jp)

Leisure based youth subcultures are often depicted and best remembered in the common imagination as the material manifestations that they occupy at the height of their popularity. The styles, behaviors and practices of these subcultures are often thought to reflect how participants feel, what they value and the lifestyles they desire. Oftentimes disemised as mere 'fashion fads' or instances of deviance, subcultural participation is characterized and reduced to a passing period of youth to be outgrown or resolved as one moves into adulthood. Visual Kei refers to an aesthetic movement in Japanese rock music as well as the subculture surrounding the consumption, production and practices of its performers and fans. This paper critiques such notions of subculture as tied to a temporal period of youth by examining the generational shifts and continuous participation that extend well into adulthood from within an established leisure-based subculture such as Visual Kei, which is now in its third generation of practice and re-production.

To this end, this paper will compare the difference between each generation of the subculture by focusing on subcultural symbols and how the meaning attached to these symbols (in the form of dress, discourse and performance) transforms over time. It is suggested that these symbols form both the basis of a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, allowing for the continuation of the subculture, albeit not without contestation as to the meaning and function of such symbols varies across the generations. The article concludes that potent symbols that continue to resonate with the values and orientations of people over time say much about people's feelings regarding larger, hegemonic socio-cultural norms as they do about individual values.

Youth and Social Movements In Japan Characteristics Of The Rebellious Youth and Its Mobilization In Japan

Though not as spectacular or massive as in other countries, recent mobilization of the youth in Japan is however a major phenomenon that triggers the attention of the media and the general public. Especially, the mobilization of young non-regular workers since 2000 has had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance of the media and the general public. Especially, the mobilization of young and orientations of people over time say much about people's feelings regarding larger, hegemonic socio-cultural norms as they do about individual values.

Contested Proprietary Technology: In Search Of a Non-Proprietary Technology in Agriculture In India

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improve agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems in raising questions of equity, sustainability, justice – attributed as well as cognitive. Further, productivity based on green revolution strategy has...
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflictual interests about ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo financius”. In the last decades, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in Israel, analyzing the various actors populating it, the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

Social Housing in Sustainable City

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the population of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the researches on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46,000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregular, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.
From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey prove that their predominant level of socio-ecological tension in the region of explosion even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conceptualisation of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of united federal unified information system on nature which secures environment protection;
- introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

New Ethics of Russian Ecologists: Myth or Reality?

New professional ethics is becoming important in the conditions of unequal societies, especially during the socio-ecological crisis. The present study is examined a possible ethical transformation of the professional ecological group in contemporary Russia and other Post-Soviet countries which are societies of anarchy. The ecological ethics and morality are latent and only a part of bigger system of values. It can be seen as a historical phenomenon which evolves and exists as a number of developing and interchanging moral systems.

While economics sounds during the globalization process, the ecological morality often keeps silent. Modern ecological ethics and morality are degraded, mostly its regulating influence is evident in emergency situations only. Furthermore, the prominent social orders and levels (including social-professional group of ecologists) have their own specific "ecological moralities". The findings of the expert survey present the social attitudes and system of values of these professionals and the views of the lay public about their social role. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. The competency of ecologists is higher comparing with others professional groups of this field, they have a sufficient influence to other professionals. The main social features of the group are: adequate axiological and emotional relation to society and nature, the availability of specific knowledge, capacities to creative action and thinking, which help them to analyze the real socio-ecological problems and to make the balanced optimal decisions in the sphere of nature protection. The institutionalization of the ecologists is influenced by its special characteristics: the special role of ecological ethics in activity of the professional and the importance of professional activity in conditions of local ecological crisis which leads to development of professional self-identity and appearing of professional pathos.

Strategies for Change: Immigrant Women Confronting Dekilling and De-professionalization

This paper is based on empirical data from a research study[1] on the experience of highly educated Chinese and Indian immigrant women who were professionals in their home country. In particular, this paper aims to discover how the women utilize their agencies to mobilize a myriad local and transnational strategies to confront and change their situations in the context of neoliberal restructuring and the concomitant deskilling and de-professionalization of immigrant women in the new country.

The study found that despite their education, immigrant women professionals are routinely being deskilled, and are channeled into precarious positions which are low paid, part-time, flexible, with no security nor benefits. In order to survive in a racialized and gendered globalized labor market, some women lowered their employment expectations, and took on menial, precarious employment in the new country in order to gain “Canadian experience” and to make ends meet.

Others tried to improve their situation through formal retraining processes by returning to college/university so as to gain formal Canadian education, knowledge and skill. Our research also found that the immigrant women were actively participating in transnational practices. For examples, some immigrant women who were unable to juggle their paid work and looking after young children, sent their children back to their home country to be cared for by extended family members so they could focus on their job search or engage in paid employment to make ends meet.

Education-Inequality Trap: State Contributions to the Vicious Cycle

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to better-earning sectors of the economy is limited by one’s social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education—access to it and its outcomes—form a trap that leads to the reproduction of initial inequalities.

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities.

In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state’s role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths through which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of "education for all." Viewing high inequality negatively as not merely impedes growth but also restricts people’s exercise of their freedoms, the paper also attempts to partake in the discourse of inequality and its relation to development.

As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contradictory hypotheses on occupational life course related with work uncertainties:

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education- work- retirement.
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to:
- Model individual trajectories of occupational status related with job uncertainties (identifying different typologies of risks).
- Assess the social conditioning of these trajectories, namely the influence of socio economic status, educational level, family structure and birth cohort.

Optimal Matching Analysis is applied to model time-related processes in order to identify labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existing theoretical models rather than defining them a priori on theoretical grounds. Data come from EDER 2012, a national longitudinal survey.

The results of the analysis suggest:
- The tripartition model exists but it is gendered and different for each cohort.
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: 1. Family and occupational constraints; 2. Social resources and; 3. Institutional performances in each country.
- These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.

Role Of ICT In Mitigating Social Problems

In India children from poor families get enrolled in free government primary schools. However, due to poor quality of schooling majority of them drop out without acquiring fundamental primary education. To address this problem the current research explores the use of ICT to provide web based quality teaching by developing and also customising available teaching materials in the internet.

The project also aims at identifying potential teachers from among the aged who otherwise suffer from loneliness and spending meaningful time by teaching disadvantaged children, without moving out of their homes. Through this initiative of using ICT to the elderly people, we also aim at fulfilling them to make use of ICT to meet their some other needs (by using email, Skype, net based purchasing and availing of other needed services)

We have made trials in web based teaching making it very interactive, in a tribal boarding school for girls, with very positive results which is discussed in the paper. After few more trail runs we will arrange for regular supplementary teaching to deficient schools to improve the teaching quality and assess the learning outcomes and aim at replicating this model for wide impact.
the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as being originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

MANDIC, DANILÔ (Harvard University, mandic@fas.harvard.edu)

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia from 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfullness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

 Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2007), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mische 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technoloyes, media, institutions). Strongly connected with the concepts of reflexivity and creativity the “capacity to aspire” has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

Reflections on a Rural Community Traversed by the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, agriculture is related to local and regional markets. Since 2009, it features a resort – an uprooted space geared towards international luxury tourism. In this context, specific elements of the globalization process are involved, such as financial (global and regional), touristic and political interests. The Tupé Reserve appears as an arena of interaction among several actors, being a border of production of consumer demands and new lifestyles in which imageries, values and worldviews are shared. Thus, the social relations there are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as happening due to processes of socialisation, are instances of socialisation of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances in network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wmb264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections–in spite of its increasing inequalities–; it is the second world producer of copper and gold; and multinational corporations control 85% of the country’s mineral resources.

In this context, miners worked to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital–particularly within specific workplaces–, but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state’s interventions in the mining industry’s collective bargaining in1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted–in contrast with the political transformations of other Latin American countries–; mining is the most important economic activity; and more than 70% of this industry’s workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years. Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted mineworkers organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers’ mobilizations and labor law’s trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers’ mobilizations produced divergent outcomes. In Chile, subcontracted workers organized their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers’ struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers’ organizations affected the reforms they got: restrictive in Peru–they are not for all the workers in the industry–and more inclusive in Chile.

DSM V, a Sociological View

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analysing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, how do the organisations function that produce the DSM? What are their sources of income and power? how do they change? and how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into DSM in which the DSM is developed. To my knowledge, this has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

Highly-Skilled Immigrant Women’s Labor Market Access: A Comparison of Indians in the United States and North Africans in France

Using the concept of cumulative disadvantage, this paper examines how early disadvantage in immigration generates barri ers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration–student migrants, single women, and French-styled North African educational qualifications–North African women experience barriers in accessing skilled work – difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategize by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women’s immigration is marked by early disadvantages – their legal status as “dependent” wives, the non-transfer of Indian credentials and separability for care work – that contribute to their de-skilling. In response, they strategize through the pathway of gradual ascent – moving from low-wage to high-wage work; (re)education and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes - education-work experience, professional network, interaction effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these converts their early disadvantages to “contingent advantage” resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their “categorical disadvantage” - long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the

**MANSOURI, VALI*** (George Mason University, vmansouri@masonlive.gmu.edu)

*Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt*

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in conceptualizing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of Ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimized the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of Egypt; is characterized by the diffusion of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand, Mubarak’s National Democratic Party (NDP) of Egypt was more closely characterized by patronymical bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

*Patterns of ICTs Using and Information Flow: A Study of Rural India*

Patterns of ICTs Using and Information Flow: A Study of Rural India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socio-economic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, they still exist, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain unreached by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include “all” (Chiumenti 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas, India is a country of multiple divides as social and economic divides already exists in the country, and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

*Rexal Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities*

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of these peoples’ emigration and settlement is considered to extend back to the late 19th century when immigrants and their descendents moved to the Americas. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have ideas of ethnic or political loyalty, national and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discrimina-

tory treatment by the Japanese impacted on the collective image of the Nikkei in America? The Nikkeis’ return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the sensation of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

*Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope*

The transformation of New York City into a global corporate city and the conse-
quences of its support on small firms and on dwindling employment opportun-
ities for blue-collar workers began to create housing opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistribut-
ing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community orga-
nizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification inves-
tigates the middle class’ desire for diversity and difference (Lee et al., 2009) as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

*Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn*

Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘cooleness’ – showing off trendy styles and great flavors - which seems a reflec-
tion of the commodification of cultural production.

In using the concept of ‘tool’ as a framework understanding it as a cultural cate-
gory in its own right (Pountain and Robins 2000) – this work explores the way gentrification interconnects with the development of an individual habitus as a

South Africa within Brics: Emerging Society and Sociological Discourse

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant influence on regional and global affairs.

In 2010, South Africa was the last country joined by the BRICS and currently holds the Chair of the Group. Against the aforementioned background, as well as South Africa’s strategic position in Africa, facets of the social structure as well as critical processes act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to – in terms of social structure – critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues, for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/AIDS, etc.), as well as other issues related to sustainability will be touched on. Interwoven with the above-mentioned, the normative component of culture, namely values, norms and sanctions will also be part of the picture.

Closely linked to social structure, the following critical processes will in an integrative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, nationalisation, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to – from the South African perspective – analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

Can the Racialised Other ‘Belong? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination.

Drawing on a qualitative study on identity and belonging among skilled ‘black’ African migrants, we argue in this paper that experiences of racism and racial discrimination are entwined with ascriptions of ‘otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ (invited) into Australia to fulfil an identified ‘need’ in the labour market co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more “the condition of being transparent”. It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is the global ICTs system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors of such a process. Second, imitating food processing traceability tools, it is possible to propose a “policies processing software” for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a “barcode” to reveal who proposed an action and how it was designed, implemented and evaluated.

MAREKOVIC, ANNA-MARIA* (Linnaeus University, anna-maria.marekovic@lnu.se)

Against All Odds – First Generation Immigrants in Upper Secondary Education

This paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of “late arrived students” enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and foreign-born residents. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students.

An initial survey study in Malmö, Sweden’s third largest city, showed that a majority of late arrived students had entered the same upper secondary school. The additional material consists of interviews with school personnel as well as interviews with ten students at this school who arrived to Sweden between 2000 and 2012. The students were interviewed with respect to their school achievement, their experiences of school and the reasons why they chose the school.

The material reveals that in order to get a better understanding of the aspects contributing to school achievement, school culture as well as the individual migratory experiences and social capital need to be considered, and in particular how they interact. The paper also discusses the obstacles that young students especially concerning language acquisition, and the strategies involved in overcoming them.

The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the 'image' plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing profession is highly professionalized, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the 'self-representation' of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local 'urban imagery' (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers leading to the creation of environmental green markets. The presentation's perspective on how city marketing operates in daily business and a critical, independent opinion about the 'outcomes' of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are discussed in the local media. Lastly, the picture analysis displays what and how local peculiarities are condensed to a coherent image and what stays unaccounted. Cities around the world try to attract almost the same audience. Within their image production they carefully observe other cities, which are perceived as role models and competitors. This paper presents a comparative in-depth analysis of the image production of Glasgow and Frankfurt, and shows how globally communicated 'self-representations' refer to the 'cumulative texture' (Sutcliffe 1984) of the local urban culture.

MARIANO, DANICAR* (National University of Singapore, danicar.mariano@gmail.com)

The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs—one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also denies access to certain people, gay and lesbians, women over 40-45, singles, and women who cannot gestate. The BAC’s ban on payments reveals a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting “weaker classes” and “not importing Singapore’s fertility issues to other nations.”

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place for the protection of the fertility tourism destinations. Hospitals are lobbying to the government to revise some of the stricter regulations or ‘lose out’ to neighboring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and most importantly, loose regulations and “bioavailable” citizens are their main advantage and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

MARKHAM, WILLIAM* (University of North Carolina, Bill@uncg.edu)

Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades—a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular. Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy. Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum—which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunnsson (2002)—can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s notion of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-

*Shaping the Things to Come: Concepts of Planning and European Modernity*

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaks of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “natural” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis.

Yet, it is a key concept whose historical context is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

*Foundational Political Myths in Divided Societies: The Case of Montenegro*

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial political investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explains their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of “non-reciprocal foundational mythology” and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

*Post-Nationalism in Practice: European Citizens’ Initiative*

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

*When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies*

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incomensurable) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservationists to adapt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformation. Seeking insights about ways to preserve the integrity of the work, they respect its symbolic and cultural significance. These efforts by art conservators to draw on sociological insights provide a compelling example of the relevance and uses of sociological research in contemporary art worlds, however they also raise questions about decision-making, in particular how to use social scientific theory as an affordance for practical action.

*Environmental Trust: A Cross-National Study*

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains understudied. This research examines environmental trust using the International Social Survey Program Environment data from 2000 to advance the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

*Pathways to Environmental Activism Across Time and Place*

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the theories across the countries included. The course of resourcing, awareness of consequences, and attitudes combined affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.

Families’ Control and Youth Sexuality As Meaningful to Young Peoples’ Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered to be a process that takes place naturally, with the acquisition of social roles and responsibilities. However, some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young people’s trajectories, sexuality is often forgotten or, even, insignificant in their transition to adulthood. Thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children’s play. Based on 60 in-depth interviews conducted in Central Portugal, with 60 white young adults, aged between 18 and 28 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead aspects related with family control, as: pionarity in the analysis of gender relations and sexuality, will be analyzed as young people go from young to adults, especially in what concerns educational paths, control, sexuality and gender can have implications on the ways (some) young people be ashamed of being heterosexual? These are some of the questions that arise in the discussion of the paper.

Social and Solidarity Economy As a Real Utopian Design: A Comparative Perspective

Social and solidarity economy (SSE) presents a collective project for another way of organizing the production and the society, in which the economy is subordinated to its social function. Thus, the paper discusses SSE as a real utopian proposal (Wright 2010): its institutional design is desirable in terms of egalitarian emancipatory ideals, such as privileging the collective ownership and control of economic resources and integrating solidarity in the core of economic activities as a means to achieve common goals; it constitutes a viable, and to some extent achievable, alternative to capitalist arrangements, since it has been partially implemented and is active on the political agenda worldwide; it contributes to a pathway of social empowerment, as it involves collective actors taking control of the economy over the capital or the state. However, SSE is also a complex field pervaded by tensions and conflicts. If, on the one hand, it embodies a normative vision for overcoming the hegemony of the dominant system, on the other, some experiences have become complementary or even functional to the capitalist world. The paper results from ongoing PhD research and its purpose is to critically examine SSE, in light of an empirical comparative analysis based on one case from the North (Portugal) and one case from the South (Brazil).

“Is Heterosexuality That Bad? Questioning Some Presuppositions and Asking for a Sociological Analyses of Sexuality”

“Is heterosexuality all negative? Why is heterosexuality so dangerous or bad? Are heterosexual women all submissive, victims and passive subjects? Should people be ashamed of being heterosexual? These are some of the questions that come through my mind as I was working on my PhD dissertation and attending conferences about sexuality. Giving credit and importance to the work of feminist authors is one way to deal with these questions. I will try to show that attention for problems related with power in gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, I still felt that something was missing in those discourses. Notwithstanding, simultaneously I was reading the work of some social scientist that problematized “my concerns”. I felt more reassured. I have to say then that this presentation is also personal. But from a personal unease I wanted to insist on the sociological problematization of sexuality and gender, following the analytical tools given by authors like Gagnon and Simon, Weeks, Thorne, Connell, Richard, Jackson or Bozon, as well as some other sociological authors like Archer, Mouzelis or Lahire, and using a critical realism perspective. The idea here is not to deny all the problems with living in a hetero-normative world, dominated by ideals of masculine supremacy, but to ask for a sociological approach into gender and sexuality, where categories, identities, norms and values are not taken for granted, but subjected to scrutiny, taking into consideration the multilevel and interconnected social world where they are constructed and enacted, and where individuals should be thought of as socially positioned, action as conditioned and categories critically analysed as relational and contextualized.

Out of Time: Uchronian and Dyschronian Devices in Social Theory

Social Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, uchronian thought paves the way to a better understanding of causality mechanisms at the macro-sociological level, separating the essential traits from the ancillary elements. Secondly, the use of uchronias is particularly helpful in comparative historical analysis, introducing conditional reasoning and “if” instruments of analysis, offering a clear cut division between universal rules and contextually valid models. Thirdly, analysis of uchronian literature and fictional arrangements modeled by imaginary times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks. Building dyschronian times (like the ones imagined by Tarde) reflects the way groups and individuals, criticize existing modernities, hierarchize the current system and think about their possible effects. Fourthly, uchronia asserts the levels of temporal continuity and discontinuity that characterize specific societies, making perceptible the creation of foci, imaginary foundations, communiaian links, and invented traditions. Finally, uchronian thought offers insights on the ways we predict, memorize, accelerate and decelerate time and how we sew the threads that link past, present and future in intelligible ways.

Returnees, Knowledge Spillovers and The Family’s Role In International Migration - The Case Of Brazilian Families Returned From Paraguay

The complexity of family arrangements that constitute the return migration of Brazilians from Paraguay can be identified as an important element in maintaining the circulation between the two countries and the consolidation of transnational space brasílgio. The return plays an important role in migrants’ direction and in the daily interpersonal relationships between migrants and non-migrants, either in Brazil or in Paraguay, forming a web of friendship and solidarity that sustains this intense cross-border transit of people, goods and information. Thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and/or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. This paper describes the changes in volume and composition of family arrangements of Brazilian returnees from Paraguay in the five-year periods 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. Information from the Brazilian Demographic Censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

H1: It is expected that in the period 2005/2010, there is greater diversification of family participation in the migration projected for Brazil, both of returnees, as well as of the international migrants coming from Paraguay.

H2: Although a structural pattern persists, given the nature of family ties, we expect a change in the roles of families in the return to Brazil and in the entry of foreigners from Paraguay, given changes in economic and political contexts of the two countries.

Out of Time: Uchronian and Dyschronian Devices in Social Theory
Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological responses or emotional expression, theorists have sought a deeper instrument to understand moral boundaries and civilized constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating in-tedications, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize the filmography of disgust by focusing their attention either on the mutilated, raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demiurgic role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a source of contamination or as a threat to the artificial-natural divide or the human-animal partition. Cronenberg's filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or exploitation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize these commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature's patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns. The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

An Integrative Model for Analyzing Strategic Corporate Social Responsibility in Portugal

Capital increasingly takes the integration of corporate social responsibility (CSR) into account in the development of business strategy. Nowhere has this been more the case than in the European Union, where commissions on CSR have reported and made policy recommendations to the European Parliament. Different firms adopt different CSR perspectives, from denial of any interest to commitment to a long-term CSR strategy for sustainability. The paper identifies levels of engagement that we place on a continuum of what we call CSR maturity. Previous studies have neglected the relationship between different business strategies and the firm's degree of CSR maturity. The research considers the variables underlying commitment to strategic CSR by looking at major companies listed on the Portuguese stock exchange. We are interested in how these companies formulate, implement, and align CSR with business strategy.

After a critical literature review of strategic CSR, we present a matrix and analysis grid that distinguishes different types of strategic CSR orientation, and assesses their degree of maturity. The paper includes the findings of a pilot case study that will apply to our ongoing research.

The proposed model identifies six types of strategic CSR by looking at patterns in the company-environment relationship. This matrix serves as a diagnostic and improvement tool for the company to take advantage of CSR as a strategic force that simultaneously creates competitive advantage and social value.

The paper advances understanding of strategic CSR and proposes a model to evaluate the maturity of a firm's integration of CSR into its business strategy. The research holds special interest at a time when Portuguese capital seeks to balance shareholder pressure to find new markets and sources of profit with strategic decisions on whether to pursue CSR as a viable path to profitability and long-term sustainability.

Examining the Long-Term Effects Families: Preparando La Nueva Generación, a Culturally-Specific Mexican American Parenting Intervention

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Familias: Preparando la Nueva Generación (FPNG), designed to increase the effects of keepin’ it REAL (kiR), an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition receiving only kiR, and (3) parent + youth condition, receiving FPNG and kiR.

Youth and parents completed a wave 1 pre-test prior to implementation, a wave 2 short-term post-test 12 months later, and a wave 3 long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and kiR had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only kiR. These effects, however, were completely mediated by anti-substance use norms – youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in the strengthening of efficacy of youth-only classroom-based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin’ REAL (Marchétié REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementing the short-term post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in keepin’ REAL compared to youth in the control group. Growth curve models indicated that over time the effects of keepin’ REAL are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group drank alcohol significantly more frequently over time. The study concludes that keepin’ REAL can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

MARSTON, GREG* (QUT, greg.marston@qut.edu.au)

Rethinking the Marketisation of Australia’s Employment Services

In Australia the dominant construction of citizen obligation for the unemployed has legitimated a host of policies and practices, including ‘strong paternalism’, punitive financial sanctions and tightly scripted employment pathways that allow little room for the exercise of autonomy. Moreover, the Australian Government has devolved responsibility for the exercise of rights and obligations to a ‘quasi-market’ network of private and non-profit organisations in the form of Job Services Australia. The institutional design of unemployment policy combined with the privatisation of employment services has created a number of unintended consequences over nearly two decades of reform. The ‘helping relationship’ has been commodified, front-line staff discretion has been reduced and the employment outcomes for the long-term unemployed have seen little improvement. Incremental reform by successive Australian governments has done little to address the power imbalance and unintended consequences associated with disciplinary poverty governance. This paper seeks to examine how the processes and outcomes might be transformed so that employment assistance can become a key plank of a more just and respectful society. To this end, the paper will employ a historical and comparative analysis to problematize governance of the unemployed in Australia, reviewing recent evidence. I will argue that a new system should devolve responsibility for the exercise of rights and obligations to a ‘quasi-market’ network of private and non-profit organisations in the form of Job Services Australia.

These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in the strengthening of efficacy of youth-only classroom-based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

Global social governance is increasingly characterized by complex and fragmented institutional arrangements. In this paper, we study the role of NGOs in these governance arrangements. In particular, we are interested in the question whether NGOs have the potential to be drivers of policy synergy or policy conflict. We understand policy synergy as a situation in which the interaction of different policies leads to more favorable outcomes than would have been achieved independently. Policy conflict describes a situation in which the interaction of different policies results in more negative outcomes than if these...
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.).

The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these “living together apart” situations in France and Argentina, with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

Managing Organisational Religious Diversity in Finland

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state’s involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous changes in the relations between the Catholic Church and the State in Argentina.

Religion and the National Imagination

The arrival of Jorge Bergoglio to the Holy See has introduced a number of changes in the relations between the Catholic Church and the State in Argentina. While traditionally, these relations have been characterized by the preferential status of Catholicism as quasi-official religion and its active presence in the government’s decisions, in the last decade it was noticeable a succession of conflicts between the Church and State. However, few days after the coronation of Pope Francisco, government discourse changed radically, emphasizing the importance of having “a Argentinean Pope.” The media and various forms of popular expression (graffiti, jokes, cartoons, montages on Facebook, etc.) express how unprecedented and unexpected this situation was, from a key that combines various representations of national culture.

In this new picture, the traditional and conservative homology between Argentine national identity and Catholicism, acquires new features, especially at the level of popular religion.

In this work, I will observe a specific matrix that allows to relate to the sacred and the idea of nation: soccer. Soccer appears as one of the matrices that model the relationships with the sacred: not as metalanguage, nor as religious meta-
phor, but anchored in the specific experiences and particular semantics and their influence on the imagination of the nation and of religion, Soccer, as a matrix, helps us to problematize hegemonic definitions of religion and national identity.

Black Ethnicity and Rethinking Assimilation Theories: A Multilevel Analysis of Housing Values Among and Between Whites and Native- and Foreign-Born Blacks in the U.S

Black-white residential segregation is still a reality in America. Research shows black homeowners are more segregated from white homeowners than black renters are from white renters. The findings have been interpreted to mean blacks do not benefit as much from home ownership because home ownership does not lead to greater access to white space. Implicit in this interpretation is the mistaken belief blacks ultimately desire residence in white neighborhoods and home ownership in said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Are there age disparities in housing values for blacks and whites and how have they changed over time? 2. Are the racial disparities larger or smaller between whites and foreign-born blacks or between whites and native-born blacks? 3. What social and demographic variables account for the variations in housing values by race and by ethnicity? 4. What are the theoretical and methodological implications of the study findings?

Gender Inequalities in Health and Socioeconomic Status: Analysis through Healthy Expectancies in the Basque Country (Spain)

In the Basque Country, like in most societies, women survive longer than men but are less healthy. However, several authors have criticized this fact as being too simplistic and not taking into account that men and women are heterogeneous groups. It is necessary that the study of gender inequalities in health consider other variables such as educational level, social class or age that can explain this gender gap.

The aim of the present paper is to examine gender inequalities in health and their change in the Basque Country considering two variables of socioeconomic status, and healthy expectancy as the main result variable, which integrates health and mortality. This measure also allows separating life expectancy into years of life in good and poor health. Educational level and a deprivation index of the residence area were used as socioeconomic status variables. The last one summarizes four characteristics of census tracks (unemployment, manual and eventual workers, insufficient education overall and in young people). Health expectancy was calculated in two periods (1996-2001 and 2001-2006).

Women lived more years than men at all ages, periods and social groups, but the gender gap varied by age and social position. Thus, differences between men and women were greater as the level of education decreased or increased the deprivation index. The difference in the number of years between men and women was lower when considering only the years in good health, so that women lived more years in poor health. The gap between men and women decreased in the second period compared to the first.

A comprehensive view which integrates gender and socioeconomic inequalities is necessary to adequately understand the health differences between men and women.

Gender, Ageing and Everyday Life: Visually Representing the Body

As people grow older, daily norms and practices can be disrupted, the taken for granted nature of embodiment challenged, and people may increasingly be required to make sense of bodily changes in order to maintain and/or re-negotiate their identities. Drawing on the findings from an empirical study Photographing Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices of participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayal, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual data that they produce. Through these visual representations, and participant narratives discussing their daily practices, indicate that the body is a process of ‘becoming’, a continual bodily ‘project’ (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants’ negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing and the body.

Cultural Representations of Widowhood: Social Media and the Declaration of a Status

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life course. Cultural representations of widowhood is necessary to adequately understand the health differences between men and women.

enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions and the precariousness of their living conditions in the last years. The aim of this paper is to analyse the evolution of women’s living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complexify this research around that hypothesis. In a first moment, we will analyse women as a precarious group as a whole, in spite of the increase of women acceding to the workplace. This paradox certifies the socio-economic dimension of precariousness (employment, income and education—conditions of women (Borderías, Carrasco y Torns, 2011; Torns, 2012) and the collective. In a first moment, we will analyse women as a precarious group as a whole, in spite of the increase of women accessing the workplace. This paradox certifies the incorporation of women to the workplace is always done in conditions and the process of precarization in Spain between 1995 and 2010. and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAS analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous population, the immigrants. Prejudices and stereotypes are easily fostered and develop in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the 1960’s, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrant men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that son's and brother's migration along with other structural changes on sending societies has broken down the traditional system of protection based on son's inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improved their situation, without establishing direct causality relations as women's paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men's migration to USA and finally users y costumbres (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPFAR

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver's metaphor on communication as exchange of information and develops Buber's and Peters' ideas on communication as a manifestation of the ethical, where the ethical is described as openness to others. Openness to others is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyond preachment. Extreme cases of annihilation of others can come to an estimate in oneself and have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implantations, involvement of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

Science without Borders: An Academic Mobility Program from the Brazilian Government

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a post-graduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented looks to analyze the results of the program as well as the possible difficulties it faces in achieving its goals.

Collective Rights to Life and New Social Justice: Lessons from Latin America

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is a federal government reaction to question the general rights of privatization. Additionally, they suggest a new social justice hierarchy that underline the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia’s, are interesting ones to reflect about this change of development paradigms.

Intellectuals and Development: Reflection from Diverse Latin America States

Intellectuals and development: reflection from divers Latin America statements

Paulo Henrique Martins
Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of different national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic mechanisms reactions that question the general rights of privatization. Additionally, it is impossible to generalize this understanding of development to others continents but it is very important to try to compare some different processes. The second point is that the idea of development in the region is linked to the idea of power system, because what is developed is not the country but the power. Then, in this sense, it is possible to define some different development patterns in Latin America that reflect some possibilities of alliances between social and political forces that contribute to organize national power systems in the last decades. To demonstrate our papers we will try to show the differences and similarities between Brazilian and Bolivian cases. It is important to show the relationship and
differences between economic and political spheres and about global and local views, from different contexts.

Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional help. Their financial aid at critical junctures is not uncommon. In the absence of other sources of support, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interviews method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance. The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandchildren than with maternal grandchildren. Likewise grandparents have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

MARZORATI, ROBERTA* (University of Milano-Bicocca, roberta.marzorati@unimib.it)

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying according to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promoting interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: a building hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Pakistani Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social emplacement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The diffused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economic structure, political and cultural tradition. International migration has become relevant here since the early ‘90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the higher concentration of Pakistani citizens in Italy. Immigrants found employment as both unskilled and skilled workers in the small industries which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistan Punjab.

The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place trough ethnic and non-ethnic forms of incorporation shaped by local administrative and non-state actors, like associations and NGOs of a catholic background. The data collected (through ethnographic fieldwork and qualitative interviews with immigrants and privileged observers) show the ambivalence of such forms of incorporation, in which different features of the immigrant population – such as status and socio-economic gaps, habits, cultural traditions and migratory paths - together with the local government practices and discourse, coalesce in defining different trajectories of immigrants’ emplacement in the local society as well as transnational social spaces and urban fields.

Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK

Contemporary studies on intra-EU (European Union) migration have paid in-creasing attention to forms of secondary mobilities, either in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants’ hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizenship, many find themselves caught in a settlement trap in the UK because of initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precarious workers in the UK.

Globalisation and Governance: The Global Environmental Impact of Financial Incentives in Oil and Gas

In the context of the current financial crisis and the BP Texas City refinery disaster, financial incentives have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivations beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage complex technologies safely. We examine the extent to which people respond to financial incentives in this environment, the potential for perverse consequences, and approaches that most appropriately focus attention on major hazard risk. This analysis is based on qualitative interviews and document analysis on the incentive schemes in oil, gas, chemical, and mining companies.

We argue that despite discomfort with the concept that safety decisions might be influenced by money, financial incentives do influence priorities and behaviours. We conclude that financial incentives matter in corporate environments because they do not rely for their effect on economic self-interest alone. Instead they tap a number of human motives, among them the need for approval, the need to belong and the need to be recognised as making a valuable contribution.
to deal with the challenges of teaching about citizenship, yet without directly confronting the system that requires them to teach only the official version of citizenship. We specifically explore, based on the teachers’ own perception, what practices are used in delivering their own conceptions of “citizenships”, and how they confront the explicit and implicit supervision of the Ministry of Education.

MAST, JASON* (University of Warwick, j.l.mast@warwick.ac.uk)
The Ick Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussuran semiotics, Sahlin’s analysis of Western industrial food production, and Judith Butler’s performativity of gender. Marshall Sahlin (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptive schemes such as the incest and cannibalism taboos. “Edibility is inversely related to humanity,” he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlin was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into objects connecting to humanness, pleasurable even such as a delicacy. An insect on an American dinner plate, except in rare and select places, represents “matter out of place” and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. This challenge is overcoming “the ick factor” – the eyes, the wings, the legs... people won’t accept it beyond novelty,” one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into “mini-live-stocks,” ones that are interpreted as not merely edible but as desirable.

Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, they form this strategy to different degrees while remaining in the same region. The communities declared itself neutral without any bargaining with armed groups, the ATCC negated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to choose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The study draws on both quantitative and qualitative data. A dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops, inform the analysis of both the emergence of noncooperation and its variation. These findings are the basis of a larger research project that aims to theorize the emergence and sustenance of community-based noncooperation and its variation. These findings are the basis of a larger research project that aims to theorize the emergence and sustenance of community-based noncooperation and its variation.

Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: “love all other nations as you love your own”. We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives of all religions believe in a single faith (almost no exception each ethnic group is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are ethnic Macedonians who are Muslims. Typical examples for this are the Torbeshi who are ethnic Macedonians who follow the Islam religion. But, most of the last census declared themselves as ethnic Albanians, even though they don’t know the Albanian language. This proves the fact that the religious identity is a key factor in forming an ethnic identity. The appearance of such strong ethnic nationalism can be expressed only if the religious feelings are weakened. That is what’s happening in the Macedonian state, despite the influence of its basic religious institutions (Macedonian Orthodox Church). The Orthodox Church has the main role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult times. It is also the church that in 1991 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.

Coping with Risk and Uncertainty in Civil War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Although commonly portrayed as either mere victims or resources to be plundered, civilians in warzones face a wide number of possible responses to armed groups’ demands and war strategies. Studies dealing with the micro-dynamics of civil war have informed us extensively on some of these responses, such as displacement, obedience and active collaboration. However, other responses such as resistance and defiance have attracted scant scholarly attention. Despite of the high risks involved and the high levels of uncertainty outcomes are subject to, unarmed civilians have chosen to defy armed groups through different strategies of noncooperation. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to seek protection from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what different communities chose to noncooperate over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (transformation), anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops with members of both communities, inform the analysis of the emergence of non-cooperation in warzones.

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Sustainable development aims at environmental protection, social well-being and economic development. Over the years, corporate houses have realized that it is in the interest of business to operate within a healthy environment and economy and that sustainable development must be incorporated into the vision, mission and policies of business. This paper highlights the initiatives taken by leading corporate houses for sustainable development. These corporate include Apple, Cipla, McDonald, Philips, HUL, Reliance, Tata Group, Panasonic, ICICI Foundation and Bajaj Group. The study reveals that environmental excellence has become a part of corporate strategic thinking. However, in spite of all the initiatives with respect to sustainable development, the picture is dismal and shocking, not only in India, but world over. The three goals of sustainable remain unachieved to a significant extent. It is reported that 40% deaths globally can be attributed to air, water and soil pollution. 925 in a sample of 109 Indian respondents on were identified greenhouses gases is released into the atmosphere. Further, rural-urban inequality is increasing while 15% of the world’s population goes to bed hungry. The author suggests the need for adopting a holistic approach towards sustainable development and the relevance of Mahatma Gandhi’s Universal Trusteeship concept. The culture and mission of the business enterprise must be aligned to gether. A sense of mission and social goal for the organization needs to be developed. The paper suggests a model which takes into account the economic, technological, social, environmental, value-based society, learning and adaptability aspects of sustainable development which rests on the belief that sustainable development is a pervasive philosophy to which every participant in the global economy (industry, community, government, NGO’s etc.) must subscribe.

Structural Social Support: Insights from Sociograms of Aging Individuals

The objective of the present study was to understand the structural social support and social network of the aging persons using sociograms. The study was based on a sample of 109 Indian respondents on were identified snowball sampling technique and following clear inclusive and exclusive criteria of selection. The sample was classified on the basis of working status (pre-retired, retired and post retired) and gender. Respondents completed the short form of Social Support Questionnaire (Sarason et al 1987). The items assessing the number of persons remains similar across working groups and gender however the nature of dependence changes dramatically. It is revealed that social network of the pre-retired group is predominantly family centered where spouse is perceived as most important support system followed by children, friends, relatives and siblings. For the retired persons, spouse support is critically important. Contrarily, the post-retired depend more on themselves under different situations which require support from others. The importance of supportive neighbors and same sex friendships increase significantly for post retired males whereas family (children, grandchildren and relatives) remains the pivotal support system for the post retired women. Changes in the nature of structural social networks with respect to dependence on others, gender diversity in support networks, frequency of seeking help, availability of support, intergenerational support and emergence of personally satisfying leisure activities emerge as a result of aging process and remain different for both men and women across time.

Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights

Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights

Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural number of persons and functional level) of satisfaction of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Subjective Happiness Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness (r = .291, p<0.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (p<0.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with only functional social support (r = .516, p<0.01) for retired persons. However subjective happiness is unrelated with both the dimensions of social support in case of pre-retired and post retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women’s participation in transnational feminist networks and the UN Conferences on Women and Brazil’s ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980’s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women’s movements. The third wave of the Brazilian feminist movements encompasses the civic participation of Brazilian women in the first thirty years from a social movement perspective. Governance change from a social movement perspective to a democratic regime as well as participation in the transnational women’s movement and Brazil’s ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive policies to support the accomplishment of social justice. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement world-wide. In sum, we would like to suggest that globalization the local and localizing the global should be at the center of both feminist activism and scholarship.

Informal Support Networks and Female Career Continuity

In this exploratory study, we focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personnel and gender issues in 22 Japanese companies or associations. My major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering...
emotional support in times of trouble, and providing role models for working women. Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?
Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices. This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan
The issues related to care-giving conducted by male.
-Through the example of a husband and the son caregiver participating in the self-help group-

In Japan, the number of men caring for their wives or their parents has gradually been increasing in Japan. In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male. Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience. As a result, I understood that a male caretaker faced various problems. Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

Career Plan and Gender Norms Among High School Girls in Tokyo

In sharp contrast to many North American and European countries, the M-shaped pattern of labor force participation rate of Japanese married women has been so far persisting to a substantial extent. Due to the decrease in productive age population and reluctance to opening the labor market for immigrants, Japanese policy makers regard married women with a young child as one of its remaining human resources to be tapped, and propose some policy options which give an incentive to join at paid work by reducing their burdens of unpaid early child care. On the other hand, Hakim (1992) suggests that the girls’ anticipation of their own future career (career plan) affects their labor market participation in middle-ages. According to her inference, career plan at the time of early adolescence among girls has an influence on the decision-making about their labor force participation of decades later and therefore gender division of labor as well.

The present research aims to explore what kind of factors relates to the attitude to their career plan among female high school students. In particular, our attention lies in its relationship with gender role norms. The research conducted a self-administered survey to second year students (at the age of 15 or 16) who attended ten public high schools in Tokyo and interviewed 114 consisting of female respondents with multinomial and nested binomial model. The results are basically supportive of Hakim’s “graceful slaves vs self-made women” hypothesis. In addition, although the constraint to our data collection makes it less assertive, the job status of respondent’s mother affects daughter’s career plans.

Heritage Language Maintenance in Old and New Japanese Communities in Mexico

This paper reports the first sociolinguistic investigation of heritage language maintenance in two distinct types of Japanese migrant communities in Mexico City (old pre-war labour migrants and new recent self-movers). We investigate which social factors most strongly contribute to the preservation of Japanese oral language ability in these two communities among social variables, namely age, generation, sex, identity, education, mass media, language importance, language used at home and work and contact with community members in Mexico as well as relatives and friends in their homeland, Japan.

The results confirm the significant effects of languages used in the home and educational domains upon the maintenance of the heritage language in both old and new migrant communities, while highlighting the community-specific effects of both age and languages used in the workplace among the old community and those of contact with the homeland in the case of the newcomer community. We argue that these differences indicate that in the older community, where a strong solidarity network has been developed but where contact with the homeland has been mostly lost, the use of Japanese in the workplace is most likely to help pre-war migrants maintain it, whilst in the more recent newcomer community with more loose-knit Japanese networks within Mexico, frequent interaction with relatives and friends in Japan serves to strongly support the retention of high language ability.

This paper concludes that heritage language use in both home and school is indeed the fundamental determiner of migrant heritage language survival, whilst different factors, such as the use of the heritage language in the workplace and contact with the homeland, may aid its preservation depending upon the recency of the community’s arrival as well as the strength of the community’s network.

MATSUMOTO, MIWAO* (The University of Tokyo, ghc03207@nifty.ne.jp)
Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanisms of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of HLW (High-level Radioactive Waste). First, it shows the significance of the situation of facilities for the disposal of HLW (High-level Radioactive Waste). Secondly, it points out a significant factor in the siting of facilities, the changing significance of the disposal of HLW (High-level Radioactive Waste). Thirdly, the paper highlights a significant result from the making of a decision-making process and its impact on the significance of the disposal of HLW (High-level Radioactive Waste).

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex ante expertise rather than ex post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situations of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn't find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multiple comparisons, the researchers found that there were no significant differences in the level of trust between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

Postrevisionalist Islam or Traumatic Resecularization? What Does Historicizing the Religio-Political Unity Offer in the Post-Khomeini Iranian Context?

The postrevolutionary Iranian “Islamic revivalists” (who now call themselves “principlists”) still evoke an early twentieth-century event that—in their collective reconstruction of the past—crucially drafted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him totragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hasan Madaras (d. 1937), the prominent Shi’i mujahid and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded post-revolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Iranian monthly Mehrnom and the June 2013 principlist political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect upon two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?
Deciding 'Quality' Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they 'know' what constitutes a 'quality' cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish 'clinical expertise' around cord blood treatments would impact upon perceptions of 'quality' cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sakakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive 'quality' in cord blood in a global context, and what factors influence their perceptions, will be presented.

Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that they will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement and the Japanese government had asked for the abolishment of the 'best practice tariff' and asked for the abolishment of the mismatch of accepting care workers. Though the Japanese care industry is suffering from a serious labor shortage, Japan has designed an absolute strict policy for the entrance of foreign care workers.

At the beginning of this program, hundreds of candidates came to Japan and trained for the National Nursing Examination which is the same for a Japanese examinee. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this examination.

Five years have passed since this program started, the number of candidates is declining each year. The most significant problem with this program is that foreign care workers are unwanted by the Japanese care industry. Japan takes no account of their former job careers, even if they have a nurse license in their home country. These skills and experience are just a prerequisite for being a candidate. Even though Japan has the most aging population coupled with lowest birth rate in the world, Japanese government are still lacking a long wide vision in regard to migration policy.

MATSUTANI, MINORI* (Kyoto University, minori.matsutani@gmail.com)

Beyond the Skill Migration: Middle Class North-South Mobility in Asia

Favell's famous work, Eurosstyles and Eurocities(2008) arouse wide academic interest in mobilities in EU. Under the popularization of international migration, migrants' social background and migration flows from/in North has been diverse. As Scott(2006) claimed, it has "become a 'normal' middle-class activity rather than something exclusively confined to an economic elite." However, these works are limited on the research area. This paper tries to theorize the middle class North-South mobility in Asia, based on empirical work among young Japanese migrant workers in Asian cities, including Shanghai, Hong Kong and Singapore.

In decades, the destinations of Japanese migrants have been gradually shifting from Western countries to Asian countries. This occurs in the economic transition or power-shift between Japan and other Asian countries. Young generation increasingly prefer economic opportunities in Asian global cities. They are not typical expatriates transferred from headquarters, nor project-based temporary professionals, but contract-based and locally hired workers moving individually. This represents a new trend of migration, which has emerged in the last decade. A network migration system has formed in Hong Kong and transplanted to other areas and discuss the characteristics of the migrants. The phenomenon formed a market-based migration system arranged by staffing agencies. Now Japanese companies abroad have two types of Japanese workers; expatriates sent by the same company and locally hired contract workers positioned under the local. The contract workers' career plans are often inconsistent with the actual achievements, since they are excluded from the companies' promotion system. Consequently, many of them use their working experience and social networks acquired while abroad and find another career track with entrepreneurship. This shows a pattern that is distinct from career-based skill migration. Through these discussions, I propose a different perspective on the middle class migration in Asian context.

Identification for Career: Contemporary Young Japanese Diaspora in Asia

Most literature on contemporary Japanese diaspora has been focused on male expatriates and their families following the offshore transfer of Japanese companies. Under the popularization of international migration, however, the flow, period or style of migration and the social background of migrants are getting increasingly diverse. This paper focuses on a new type of young Japanese migrant workers in Shanghai, Hong Kong and Singapore.

They move individually and are locally hired, usually through staffing agencies. In most cases, they find positions under expatriates in Japanese companies abroad, which leads them to be marginalized in Japanese communities. They speak local language and work with local people under the management of expatriates. Therefore their identification becomes more complicated when compared with expatriates, who are strongly embedded in Japanese companies and communities. In addition, their identification influences and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working/living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora's identification.

MATSUURA, YUSUKE* (Kumamoto university, matsuura@kumamoto-u.ac.jp)

Industrial Heritage and Memory : A Case Of Miike Coal Mine

In recent decades a new gaze has appeared upon architectural remains of modern industry This gaze makes it possible to turn these remains into cultural heritage, or more precisely, industrial heritage. Architectures such as factory, dockyard and coal mine which used to be symbols of modernity has turned, after changes of economic structure, into symbols of degeneration of local towns which had depended on these industries. Industrial heritage is a way of revitalization favored by these towns.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora's identification.
This paper presents analysis of interview data from a study of ‘knowledge mobilization’ as a social process. In doing so it contrasts concepts of ‘knowledge transfer’ with those of ‘knowledge mobilization’ which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease, Alzheimer’s Disease, ALS, Parkinson’s Disease). The focus of this paper is not on these science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

MATSUZAWA, SETSUKO* (The College of Wooster, smatsuzawa@wooster.edu)

A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China’s fragmented bureaucracy. Despite TNC’s race to save one of the World’s ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC’s rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation method.

Thirdly, TNC’s inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its “Growth Machine” (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC’s wish to emphasize community participation.

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday use of new media technologies and rapid changes in consumption patterns. Everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities.

First, it sheds light on China’s fragmented bureaucracy. Despite TNC’s race to save one of the World’s ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC’s rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation method.

Thirdly, TNC’s inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its “Growth Machine” (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC’s wish to emphasize community participation.

L’accès Au Logement Des Jeunes Français : Pour Quelle Indépendance ?

Les jeunes français doivent faire face à des difficultés d’intégration de plus en plus aigus dans tous les domaines de la vie sociale : accès au travail, dans des conditions stables et en rapport avec leur niveau de qualification, accès au logement, accès aux droits sociaux, etc. Ces difficultés en font la population la plus en butte à la vulnérabilité sociale et à la précarité.

De ce fait, les enjeux qui posent sur les politiques publiques de jeunesse apparaissent importants : les nécessités sont grandes de voir se développer des actions concrètes, dispensant de sécher les parcours, de garantir un égal traitement des différentes générations, notamment en termes de protection sociale.

Pour ce faire, le paysage des politiques publiques françaises laisse plutôt apparaître des étapes éparpillées, relevant de tous les niveaux de décision, comportant peu de réflexions sur le dégagement des valeurs, des objectifs communs, des modes d’accompagnement en conséquence.

Dans ce contexte, notre communication s’attaquera à analyser l’accès des jeunes au logement indépendant. Nous partirons d’une première approche objective présentant les situations actuelles des jeunes de s’installer dans un logement. Les conditions financières, le logement indépendant, la formation, la dynamique de l’indépendance, la logistique, les vues d’avenir, les perspectives de développement, les actions publiques permettant de sécuriser les parcours, de garantir un égal traitement des différentes générations, notamment en termes de protection sociale.

The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concepts of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignment of research topics with institutional research priorities and a tightening of candidature time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

ICT and Local Development in Globalization

Abstract

In modern times, development is more or less interconnected with globalization. On the other hand, globalization processes are more or less interconnected with the use of ICT. The use of ICT is defined as the access in modern communicative systems, and as a result marks the “presence” or the “absence” of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or is it a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnectedness of the presence of ICT services in a certain area with the economic growth and the development of this specific area. Finally, it examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

Digital Technologies and Work-Family Boundaries: A Posthumanist, Performative Approach to Family Research

Our paper draws on a research project funded by the UK’s Engineering and Physical Sciences Research Council that explores how boundaries are being made between work and family in everyday practices, and how technologies are implicated in constituting these boundaries.

Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to treat and study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this approach.

Our empirical study uses sensory, visual and participatory ethnographic methods (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013). Our overall approach is to invite family members to take part in the project as collaborators in research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants. The study involves in-depth work with 5 households in North-East Scotland, with at least one child under the age of 18.

Technology and the (re)Making of Work and Family: Towards a Performative Approach to Visual Practices

Our paper draws on a project funded by UK’s Engineering and Physical Sciences Research Council that explores technology use in work and family practices in the home. Our study seeks to address a number of theoretical, methodological and substantive aims:

1. To develop a conceptual framework for studying work/family/technology practices and boundaries in the home, drawing on material-semiotic, posthumanist, and performative approaches (Barad 2007; Haraway 1997; Law 2004; Suchman 2007)

2. To explore how work/family/technology are figured – made and re-made – through everyday social and technological practices (where social and technological are not treated as separate);

3. To develop and test a portfolio of methods, drawing on visual, sensory, mobile and participatory ethnographic approaches (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013; Watts and Urry 2008). An important element of this process is to explore the performativity of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004).

Families (with at least one child under the age of 18) are invited to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants.

Our paper will address emerging questions and challenges including: Whether and how visual methods can help us grasp sociomaterial practices; how we can use visual methods in participatory, collaborative and cooperative ways with our families.

The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerably threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was “Social Hygiene”, as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or “Volkskörper”. Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated.

Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied considerably and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others, at the same time it is a good moment for an examination of the Free Trade Agreement Mexico-Japan, started eight years ago.

Heritage, Culture and Politics of Tourism Along the New Silk Road

After twenty years of the UNWTO’s Silk Road programme, there seems to be a new impetus to revive and re-envision the project to bring the heritage and cultural attractions along this ancient system of trading routes to a new prominence. A recent conference in Dunhuang in August 2013, the addition of a 30th nation into the Silk Road project, together with an action plan for the future that will build a sustainable and competitive tourism product suggests a fresh impetus and a desire for collaboration and tourism development. But to what extent does the Silk Road project offer real potential for sustainable tourism development? And what lies behind the rhetoric of the Silk Road Action plan? This paper seeks to address these issues and discourses of international collaborative tourism marketing projects with a focus on the Silk Road initiative. Whilst the aims of the project are laudable, the paper seeks to understand the power dynamics at play between these nations and the role of the UNWTO. The countries along the Silk Routes that have signed up to the project include some of the most politically unstable in recent history and the paper hopes to shed some light on the tensions between an ideal of peace and intercultural understanding through tourism development and a political, economic and social reality. The paper approaches the issues through the adoption of discursive analytical perspectives on texts: policies and plans, strategies and media items.

Who Negotiates The Relationship Between Leisure and Quality Of Life?

Increasing user’s quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user’s quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship to accommodate and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user’s outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative
style of governance. This raises the question of who is central to the process of increasing individual’s quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual’s quality of life on multiple levels. On the other hand, workers retrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are “implemented” locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshall Ganz calls “strategic capacity.” This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, a form of mobilization that is not transnational in India; socio-cultural transformations travel in the union in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal global process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

Policies Travel Uneasily: The Comparative, Relational and Translative Work Of Making Urban Policy In a Global Context

This paper intervenes in a conversation between two emerging literatures in urban studies: that which questions the generalizability of urban theory and methods developed in, and with reference to, a small number of Global North cities and the literature on ‘urban policy mobilities’ that conceptualizes the circulation of ‘best practice’ policy models. Both literatures focus on forms of theory-development, associated method-making, and questions of comparison, learning, mobility, translation, and travel. The former seeks to push academic urban studies to more fully account for the provincial (mostly Global North) character of legal changes in India; contract cleaning in India, and telecommunications in Brazil. The latter seeks to shed light on how policy communities and institutions are involved in similar intellectual work as the former. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshall Ganz calls “strategic capacity.” This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, a form of mobilization that is not transnational in India; socio-cultural transformations travel in the union in Brazil. Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework for Japan, the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and the two skill standards in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources do not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity is found in small and rural America is expected to continue into the future. The growing Hispanic minority into the health care system. The Hispanic minority into the health care system. The Hispanic minority into the health care system.

This demographic change is highlighted by rural areas, where communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care.

Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory predicts that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant social networks for inclusion of newcomers and long-timers in order to take advantage of their strengths. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

Institutional Ethnography and the “New Materialism”

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In the introduction to their 2010 collection, New Materialisms: Ontology, Agency, and Politics, Diana Coole and Samantha Frost write of an increase in "scattered but insistent demands for more materialist analysis" (p. 2). While not seeking to "deny [the] rich materialist heritage" (p. 4) that informs their work and the work of others taking part in this scholarly conversation, Coole and Frost call for the development of "renewed materialisms" up to the job of grasping and analyzing our "materially and discursively fast-changing world" (p. 4). This paper examines these theoretical and analytic trends from the perspective of institutional ethnography. I approach this literature with a friendly curiosity and share my discoveries in terms of what it's all about and what new materialists and IE materialists might have to say to each other.

Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller's patter, square dance encodes an idealized version of heteronormative, "old time" gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, floppy skirts and puff-sleeved blouses for the women. In the present day, these "invented traditions" coexist amidst a range of self-presentational options, as well as frequent urgings from within the square dance community to "update the image" of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors' club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Duel of the Dualisms: Production and Reproduction Reconfiguring

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family life, is no longer an adequate description of our complex, multi-faceted and multi-scaled family and kinship forms. The household has re-emerged as a primary site of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author's current research programs, on care migration and on life course effects of the Great Recession of 2008+, the duel and dance of the dualisms of production and reproduction in comparative contexts are explored.

RC11-202.2

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Global Ageing in Precarious Times

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour ageing as a macro, meso and micro process. As the coup d'etat in slow motion, as population ageing has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of potential paid caregivers. In this proposed talk, McDaniel draws on her extensive research on the policy implication of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.

Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan. This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which the authorized action of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in communicative capitalism, shaped by a fear of emptiness and vulnerability and embodying another self. The paper considers the implications to Taksim Square. This paper explores this transformation of action, as unity protest march to embodied grammars evident in occupations, from Tahrir Square experiences of art are more important than programmes and demands. These the embodied experience of strangeness and modes of action where evocative claiming place, but experiences of displacement and vulnerability, evident in ty, and embodied publics. Such embodied experiences are not simply acts of contemporar forms of collective action highlight the increasing importance of of Pacific Island identity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bi-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders’ enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such sports, instead positing them as exemplars of individualism and self-governance.

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However, contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodied experience of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective practice to an ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

*From Indymedia to Anonymous: Agency, Public Spheres and Internet Action*

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident of the epistemology of internet activism, with themes of horizontality, networks and openness widely repeated – themes central to many of the analyses of Indymedia, in particular by ‘scholar activists’. What is striking in the period since is the decline of this kind of action, and the emergence of a quite different form of action evident in networks such as Anonymous. These are grounded in the flipper worlds, shaped by a culture of the ephemeral, the hidden and the revealed, with an ethic of lutz, the mask and the trickster. This action takes completely different forms from the ‘open deliberation’ attributed to internet ac-

*Organising Celebrity – Social Mobility and Symbolic Violence In England's Green and Pleasant Land*

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and ‘noble’ is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of mental breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper drawing on Bourdieu’s Distinction and Giddens’ writings on ‘distanced instances’ suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

*Charisma and Subcultural Bureaucracy: Challenging Weber's Ideal Typical Distinction*

What role does charismatic authority play in the incubation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and inciting transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence. My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the context of human capital scarcity. Such charismatic leaders strategically offer subordinates "high profile" work that connects them to “big men” who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos in providing high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber’s ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

*Cultural Entropy*
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaotic alternative meanings, new practices, failed interactions and blunt disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-object interactions because objects can't engage in "impression management." As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonant meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowables, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns ( McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, placement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the growing field of materiality by specifying how material qualities of objects have independent effects, beyond falling back on the symbol-driven work of materiality. As such, in the long run, entropy is a tendency toward disorder, cultural entropy is the tendency toward disorder practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder practices, failed interactions and blatant disregard. **EPISTEMOLOGICAL POSITION**

The study investigated relationships between work-family typologies and objective markers of health. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models revealed that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood.

**THE CHALLENGES FOR SOCIAL AND ENVIRONMENTAL JUSTICEPOSED BY THE GLOBAL PANOPTIC, PENAL STATES AND DISAPPEARING STATES IN AN INCREASINGLY VULNERABLE AND UNEQUAL WORLD**

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, economic and environmental indicators of wellbeing, in order to enable an equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

When ‘the Other’ Poses the Questions: Turning the Tables to Produce Data on German National Belonging

After a change was made in Germany’s census categories in the year 2005, who is called ‘German’ to describe a much narrower group than German citizens. Germany’s population was divided into ‘Germans’ and ‘persons with a migration background’. The latter category captures, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher’s person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I—a dark-skinned, native English-speaker living in Germany—interviewed Germans (German citizens) in a mid-sized city in Germany to explore this methodological understanding of what makes one German. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germanness. My ‘otherness’ seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarities of the data produced through the interviews.

Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to influencing young American career trajectories or subsequent educational attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models revealed that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the individual level, female sport participants report higher self-reported household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom

The United Kingdom has seen dramatic changes in the nature of work and family life in the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities. Mothers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course work-family typologies. Evidence of increasing individualisation across cohorts and the potential emergence of ‘new’ typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health risk in the two
older cohorts. One of the objective health markers considered in this study is inflammation, a significant predictor of chronic diseases such as coronary heart disease and type II diabetes. Early results suggest that gender differences in employment histories remain fairly entrenched across cohorts, and that educational attainment has a stronger relationship with inflammation in mid-life than the subsequent life course work and family trajectories it sets people on.

Asian Developmental States: Innovation, Industry, and Investment in China and Japan

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan as a “plan-rational” polity initially challenged the neo-liberal assumptions of development in the West. Intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia’s newly industrializing countries (NICs), leading to a mid-range theory of state/market. Chalmers Johnson's seminal study of Japan marks a “plan-rational” polity initially challenged the neo-liberal assumptions of development in the West. Intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia’s newly industrializing countries (NICs), leading to a mid-range theory of state/market. As a result, women are described as a resource for state/market. Women are described as a resource for state/market. Innovation offers perhaps the best indicator of future competition between capitalism of the East and West.

The paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two newly industrializing countries (NICs), leading to a mid-range theory of state/market ties termed the “developmental state.”

- China followed a far different trajectory, but again with a prominent state role I look to here the current status of the developmental state in China and Japan, to assess continuities in Asian capitalism. I focus the study on the coordination of beautiful women and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatch-like events. I develop the concept of girl capital to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize girl capital through the circulation of gifts, perks, favors and intimacies to establish reciprocitational ties, buy free goods and gain support. I have observed that both among friends and in the display of wealth and gifts, women are described as a resource for state/market.

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world’s “one percent.” This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the nouveau riche convert their economic capital into symbolic and social capital. Central to such conversations are the gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club organizers and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who distinguish amongst themselves by the display of wealth and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of girl capital to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize girl capital through the circulation of gifts, perks, favors and intimacies to establish reciprocitational ties, buy free goods and gain support. I have observed that both among friends and in the display of wealth and gifts, women are described as a resource for state/market. Innovation offers perhaps the best indicator of future competition between capitalism of the East and West.

MCSORLEY, KEVIN* (University of Portsmouth, kevin.mcsorley@port.ac.uk)

Visceral Militarism: Embodiment, Intensity and Experience

This paper provides a critical reconstruction of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond the cognitivist understanding of militarism in terms of an explicit system of militaristic attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory processes through which war-preparedness is felt to be normal and desirable, through which militarism becomes assumed, and unexamined, as an ‘abstract social norm’ that may inhere within the deepest fibres of our bodily being’ (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from the growth of ‘British Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective captivation of immersive military video-gaming, and the intimacies and intensities of helicam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily transformation increasingly articulate with wider military imperatives and corporeal practices to produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialised flows of affective experience associated with contemporary transformations in war-lighting.

The Effects Of Divorce On Children From Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey

Divorce has negative socio-economic and interpersonal consequences on adults/children that consist of behavioral and emotional problems. They are more likely to divorce, more likely to marry at young ages, to report problems, perceived instability, lack of trust in their marriages. Two-parent families enjoy a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being. Lowered socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships. Many two-parent families offer a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being. Lowered socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships.

In our research, we indicate the effects of divorce on adults/children who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult’s age, gender, parental conflict, post-divorce family stability, parent-child relationships, education, socio-economic status, and income. Unmarried and children have lower levels of education, occupational status, and income. Cultural differences may vary according to age, minority status, sex, parental education, parental death and socio-economic status.

**Poverty and Unequal Development in Central America**

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua, and Costa Rica) have a very uneven level of development, with each having a great democratic stability and a good standard of living of the people that attracts the migration of its poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations. This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development throughout the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

**Social Investment at Sub-National Level in Mexico: The Role of Actors and Institutions**

Sub-national governments have been largely considered to be better equipped to respond to local preferences and needs more effectively than central governments. While this capacity has been mainly associated with the role of sub-national governments in delivering social services, their role in as social policy innovators has been scarcely studied, especially in the Latin America context. Nonetheless, as the case of Mexico shows, in the context of increasing political and financial decentralization, sub-national governments have been more active in implementing their own social policy initiatives. This paper explores the most important factors that may explain the increasing activism of sub-national governments in the social policy realm, measured by the size and type of social investment, apart from their spending in health and education services. To do so, we produce a qualitative comparative analysis that comprises three different states in Mexico: state-level is the second tier of local government in the Mexican union. This comparative analysis looks at the relationship between social policy and different political and institutional variables, including the actual capacity of the government to get financial resources, as well as the type of actors in charge of social policy in each state.

**Globalization and Human Rights**

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in different forms of time immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human rights was laid down by the United Nations General Assembly on December 10th, 1948. The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated. The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the Human rights in their respective constitution. Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society. Despite human rights becoming the subject of concern to the legal fraternity, the Asian countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

**Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan(India)**

**Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)**

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions. The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy. Group-oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc. Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, marudadi playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere.

Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

The Impact of Social Structures on Adolescents' Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran's society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals' behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents' deviant behaviors. The paper is drawn upon theories of Durkheim, Giddens, Putnam and also the evidence related to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors' behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of up rootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition of the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control and as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid ("smart grid") has started. In this smart grid private households should play a role as adaptive consumers who shift their electricity consumption according to the electricity production (from periods with low production to periods with high production) and who safe a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members everyday routines? To what extent are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

MEISSNER, MIRIAM* (University of Amsterdam, m.m.meissner@uva.nl)

Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquenched.

My objects of analysis range from filmic and documentary crisis portrayals such as Inside Job (2010, Charles Ferguson), Wall Street: Money Never Sleeps (2010, Oliver Stone) and Margin Call (2011, J.C. Chandra) to fictional and non-fictional crisis literature such as A Week in December (2009, Sebastian Faulks) and The Big Short (2010, Michael Lewis).

This paper forms part of a research project that applies anthropological and socio-semitic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.

Dans Un Contexte De Crise économique : Tensions Sur L’emploi Et Le Marché Immobilier. Quelles Conséquences Spatiales ?

Dans le cadre de la recherche ANR Transénergie, six sociologues ont entrepris deux enquêtes par entretiens semi-directifs dans les métropoles françaises de Lille et Lyon sur la classe populaire salariée stable (Bihr, Pfefferkorn, 2004) potentiellelement affectée par les évolutions économiques des marchés de l’emploi et de l’immobilier.

La première enquête (40 entretiens) s’intéresse aux candidats à l’accèsion à la propriété. La seconde (30 entretiens) s’intéresse aux salariés travaillant dans des zones d’activités périphériques.

Notre contribution traite des conséquences spatiales de tensions combinées sur les marchés de l’emploi et immobilier et s’articule autour de quatre parties:

• En situation de crise économique, l’attitude la plus répandue est de s’agripper à l’emploi. Au nom de cette sécurité professionnelle, des projets familiaux sont autant ou plus de rares quantités abandonnées, y compris des divorces. Traiter des conséquences spatiales des évolutions récentes des marchés passe d’abord par en considérer les conséquences en terme d’immobilisations.
• Les marges de manœuvre que contrôlent les salarié-es sont différentes selon qu’ils rapprochent l’emploi ou se rapprochent de l’emploi. Si la proximité domici- cial-travail détermine largement le choix résidentiel, elle n’est plus garantie. D’évi- dence, la proximité domiciale-travail devient privilège.

• Les difficultés que rencontrent certains ménages en période de crise pour accéder à la propriété ou à la location (dépôt de garantie) est donné l’inestabilité de leurs emplois, rendent plus complexe l’ajustement des localisations. L’instabilité professionnelle ou les fréquentes délocalisations d’entreprises aboutissent à cette perception que, du point de vue des navettes domicile-travail, tous les lieux se valent.

• Si la ville n’est pas cohérente (Korsu alii 2012) cela ne tient-il pas d’abord à sa forme urbaine ? Dans une ville multipolaire comme Lille si la possibilité de trouver un logement à distance raisonnable de l’emploi paraît satisfaisante, dans une métropole unipolaire comme Lyon, les difficultés à trouver une localisation satisfaisante sont plus grandes.

Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

Ways to Uncover Cognitive Processes: A Comparison of Cognitive Interviewing and Online-Probing

Cognitive processes shape the way respondents answer survey questions: how they understand a question, retrieve the relevant information, form a judgment and how they communicate it. At the different steps of this process respondents can encounter problems. Cognitive interviewing is a technique which aims to uncover the cognitive processes of respondents when answering a question and to detect problematic items in this regard.

In the last years the number of international survey programs increased. Cognitive interviewing is a valuable tool to reveal differences in the item interpretation across countries. The application of cognitive interviewing in cross-national surveys has so far been restricted, due to, e.g., restricted availability of cognitive interviewers across countries (Miller et al. 2011).

One additional inexpensive solution is online-probing which implements probing techniques from cognitive interviewing within online surveys. Although online-probing has been developed only recently, both techniques, traditional cognitive interviewing and online-probing, have been applied successfully. One can shed light on comparability issues of items in cross-national research.

However, there is still a remaining research gap. So far, both techniques have not been compared. Within the project “Optimizing Probing Procedures for Cross-National Web Surveys” data has been collected which enables such a comparison. The presentation will shed light on the differences and similarities between cognitive interviewing and online-probing. In particular, it will show what kind of cognitive processes the different techniques are able to detect and in which context which of the two approaches itself proves more useful to improve items for future use.

Brazilian Unionism and Global Union Network: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism. However, many accuse them of encouraging an enterprise microcorporatism at the expense of any collective wider interest. Additionally, the labor law reform initiated by the State promotes wage flexibility and encourages subcontracting. The picture is one where “internal” front points to a worsening in both employment conditions and use of labor force, while the “external” front is open to experiences of deliberative participation within corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the “old” and “new” labor internationalism unveils an underlying material and symbolic cleavage which opposes an “old” to a “new” working class.

Trust and Social Classes in Russia and Nordic Countries

Sociological studies have shown that economic and social inequalities are increasing everywhere. Studies have also shown that there is a strong connection between generalized trust and equality (Wilkinson & Pickett 2010). Comparative evidence indicate that strong social institutions prevent free riding and other similar problems. The Nordic countries are in many respect good examples of generalized trust, well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? what kind of differences there are between social classes and trust? Can we find one Nordic model, or are there different models? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, in societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, “liquid” and post-modern orientation could be overcome by a return of “solid” and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Educación Inconsitente: ejercicio Profesional Desigual

Educación inconsistente, ejercicio profesional desigual. José César Mendoza-Cornejo
[1] Profesor investigador. CUCBA-UdeG. México

En la historia del hombre sedentario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta “diferencia”. Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del iletrado etc. términos que provocan divergencia y estancamiento. Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanista, con intereses colectivos.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud anula el beneficio individual sobre el colectivo, circunscribiendo los principios que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

El objetivo de evaluar el comportamiento -simulación- de productores y profesionistas se efectuó una encuesta en localidades del Estado de Jalisco.

Resultados:
El INEGI 2010 concuerda con la indagación, el esfuerzo por hacer más es poco, desatendiendo a quien radica lejos de los centros, simulación que provoca desigualdad separándolos del resto y de las oportunidades, generando abandono, emigrando en busca de anhelos donde su personalidad es menguada por lo que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

Conclusiones:
La universidad y su comunidad deben ser ambiciosos y asumir un objetivo humanista y reorientar programas escolares en el que el Socio. e[1]

Menendez Domingo, Ramon* (La Trobe University, ramonmenendez21@gmail.com)
The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for studies. It consists of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. Around 25% are overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Ingehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies backgrounds. This is an opportunity to capture experiences of authenticity and their differences.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Misère ou Borinage (1933) from Joris Ivens. The first one show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shools. The second one show the very arid and difficult life of the Belgian miners of Borinage, focusing in their harsh living conditions that has lead to a major strike in 1933, after the worldwide crisis of 1929 in the USA.

Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in a harmonic process but questioning the “natural” approach of a film like Nanook of the North. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capitalist agriculture reproduces the miner’s worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documentary film in history to put the working conditions in the central place as a film subject, Borinage is the first one to show the working class in the process to become an historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

MENEZES, PAULO* (University of São Paulo, paulomen@usp.br)

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of
images and the exterior “reality” that the camera faces are more fragile and undeniable, based on the theoretical assumptions made by Foucault in What is an author? and by Pierre Sorlin in Sociologie du Cinéma.

It discusses the documentary cinema by analyzing their relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality they allude. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the misperception of a film as the “real” itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film Les Maîtres Fous, by Jean Rouch, as a Discourse and not as a film by the Director. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the “other” (a ritual) and not a discourse that alludes something else (the French colonial heritage).

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label's work consists in organizing collections that gather music from “exotic places where the music originated” so the rest of the world could know about that culture “as it is”. But what we observed in the research activity is that the curatorship work of the label brings a strong authorship signature: the label isn’t only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship posts are also active and interested acts of authorship: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to present a latent concept. This paper focuses on the polarity of rating scales and its impact on the attitude measurements with latent variables. With respect to statistical analyses, unipolar, bipolar and unipolar rating scales are distinguished. Open ended and mixed rating scales are often used, as for instance a unipolar rating scale with a midpoint that reflects a conceptual zero point.

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state has enacted a total ban on abortions, under any circumstance, even when the mother's life is in danger. Based on years of fieldwork in Guatemala and observations from El Salvador, I argue that these various forms of violence are deeply connected and have roots in multilayered violence composed of structural, symbolic, political and everyday forms of violence. I move away from explanations that focus on individual acts of aggression against women (which for the countries I examine are often are couched in machismo) to focus on extrapersonal structures that create conditions that permit such acts. The persistence of multilayered violence may not cause the horrific crimes of feminicide to occur but, I reason, the intertwined nature of these various forms of violence paves the way for these more visible forms of violence to take place and also sustains conditions of impunity on the part of the governments.

Spatial planning plays a significant role in disaster risk reduction (DRR); UN Habitat has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning. Lack of good governance, incompetence of the institutions and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongolia Port City in Bangladesh and Medellin in Colombia. Both of them surges in Mongolia and flash flooding in Medellin. The obvious differences between them (cultural environment, social structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local level DRR planning. Its implementation is difficult because of lack of coordination and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and will contribute to global DRR.
Indigenous Pathways in Social Research: Addressing Inequities Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is the social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation, titled Indigenous Knowledge Systems by Motheo Koitsiwe, a member of the Bathlhoo tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a researcher from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be on ‘Coloniality of Knowledge and Indigenous Researchers and Epistemic Federalism’.

Local Development Agencies

LOCAL DEVELOPMENT AGENCIES

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility. The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and POs (producers’ organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development. This model involved a cut in the budget for social policy and a reformulation from the mid-90’s to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

Magic in Social and Natural Worlds: Planting New and More Colorful Technologies in South Africa

Scientific knowledge and technological artifacts travel with experts from centers of knowledge production to the places where they are translated, over an uneven global terrain and amidst a social history of technological failures and resistances to the interchange of knowledge. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways in social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation, titled Indigenous Knowledge Systems by Motheo Koitsiwe, a member of the Bathlhoo tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a researcher from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be on ‘Coloniality of Knowledge and Indigenous Researchers and Epistemic Federalism’.

MERNET, DONNA* (Gallaudet University, donna.mertens@gallaudet.edu)

Colorful Technologies in South Africa

When does it become a problem? And might the object of that problem offer any lessons for us? In my presentation I will probe at the concept of ‘trust’ and its active encaged in shaping that reconstruction together with other pillars of expertise. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation, titled Indigenous Knowledge Systems by Motheo Koitsiwe, a member of the Bathlhoo tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a researcher from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. harmony and the new era of even weaker national governance, accelerated by the process of descentalisation (chihô bunken) and deepening fiscal crisis (making politicians powerless and leaving people on their own) have imposed individualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defence and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, especially to families.

Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not institutionalized as the transition from school to work for example. However, the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, special housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. Thus, it is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labor market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of "youth transition regimes" (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

Hooliganism and the Dark Side of Football Events

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Described as flying stones, lighted fires and wounded inns, the victims dominate the coverage. At the same time the term "hooliganism" has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of "hooliganism" is to make sense of seemingly "senseless" violence, to produce a surplus of order over disorder. From the hooligan's own perspective the violence is by no means "senseless" but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus "fair" – duels, in which the combatants could achieve or restore their honor. In this paper we want to address the phenomenon of "hooliganism" from a cultural sociological point of view. We contrast the "public" perspective and the media imagery of violent acts of hooliganism with the self-concept of the subculture in question. This comparison shows that hooliganism is a deeply ambivalent phenomenon. It is both playful and serious, sport and "war". Hooligans are peaceful and "invisible" in everyday life, while they are violence-prone as long as the "moral holiday" (Randall Collins) lasts. We argue that this in-betweenness makes hooliganism so hard to grasp by science, politics and the media.

Transformations Of Cultural Identity: Japanese Mothers Raising Intercultural Families in Australia

Abstract: Stuart Hall argues that identity is not about ‘who we are’ or ‘where we come from’, but about ‘becoming’ something. This paper explores Japanese women’s changing cultural identity by focussing on those who have chosen to leave their homeland and settled in Australia to raise a family. Selected from a larger study of mixed marriage, this paper focuses on three case studies of Japanese women who settled in Western Australia with their European migrant husbands and raised children in the third culture are the focus of this paper. It examines how these women adjusted their cultural values in relation to their husband’s culture and the new host culture, how they raised their children in a foreign land with a foreign husband, and the manner in which they retained elements of their Japanese identity, re-creating themselves through different stages in life. While their experiences demonstrate challenges, not least of which a culture shock, and racism, they also offer evidence of resilience and creativity in the negotiation of cultural adaptation. This paper demonstrates the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family, and the historical and political background of the society in which these women live.

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)
Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency’s “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational capital benefits the individual, industries produce collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reynolds and McEvily 2003). Further, it also features efficiency and effectiveness important to social service and nongovernmental organizations (Bryson et al. 1997). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kopiec 2006; Kapucu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations. For example, organizations use social capital for community disaster response and recovery. Disasters present both obstacles and opportunities that may encourage social capital formation and development among organizations. Within social service organizations, social capital is a private and public good that generates resilience for individuals and community outcomes.

JS-60.4
MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)
The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resiliency is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individuals members and the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure the availability and source of disaster-specific resources in individuals’ social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family results in extreme racial homophily of disaster social capital networks. Further, older family members are more often indicated as sources of financial assistance, which results in further pressure on their often limited resources. Finally, low-income and high-income respondents have similar disaster assistance networks, but high-income respondents will only use family for nonfinancial assistance and...
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogenous.

SCHMIDT, ROBERT J.* (Technical University of Berlin, robert.schmidt@tu-berlin.de)

Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism

The concept of “fields” has a lively history. Starting as one of the crucial concepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Flagstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of practice (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of modernity (Luhmann 1984, Foucault 1984, Luhmann 1984, Meyer/Jefferson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way. Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

BESIO, CRISTINA* (Technical University of Berlin, cristina.besio@tu-berlin.de)

Modern Times: How Organizational Time Structures Influence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timetables, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical studies which - in comparison to theoretical analyses - can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.
imposed in the 19th and 20th centuries while (re)producing indifference, and re-
sulting in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred-
ible. Should a space which can bring back the current evolutions carried by
the acceleration of globalisation exist, the best option would be the one that car-
ties the resistance against this process. In a situation that is characterized by the
disqualification of the absolute and the passage of ‘sameness’ to plurality, there
should be no surprise to the fact that we are witnessing some actions towards
the reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations
(and the successive reorganisation of these relations) maintained by the catholic
church towards the nation. In an orientation to follow the sign of the times (if not
to transform it, at least to inhabit it), religion and the nation are both categories
which share with intimacy the avatars of legitimacy, that is the rebuilding (and the
partial over-imposing) of complex dispositions to organise the religious. What it
play around religion and the nation can only make sense when dealing with the
contemporary redeployment of these devices.

MICHETTI, MIQUELI* (Fundação Getúlio Vargas, miqueлимicheliti@yahoo.com.br)
The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a
resource, as a way of generating economic value. It is in this context that arise no-
tions bringing together seemingly antithetical terms, as “economy of culture” and
“creative economy”. The study aims to show that in this new isomorphism of spirit,
the world of culture seems to incorporate both practices and discourses from the
new corporate world, which in its turn seems to feed on the cultural sphere. In
this increasingly intricate intertwining between economy and culture, it seems to
be an isomorphism between the practices of companies of the flexible capitalism
and certain agencies of culture. Under the rhetoric of “organizational innovation”,
these agencies replicate business models such as the networking, horizontal, an-
ti-hierarchical organization, based on crowdsourcing and / or crowdfunding, etc.
In these new models of “cultural business”, content producers find themselves in
precarious positions, the promise of easy money. Under the threat of eventually monetize their creative
capital, they experience temporary and outsourced contracts. As Max Weber
 teaches us, each form of capitalism needs a corresponding “spirit”, so that will
also be a discourse isomorphism between the world of flexible economy and the
sphere of culture. The discourses about the non-separation between profes-
sional and personal life, between work and leisure that flexible capitalism took
from counterculture is easily extended to current artistic and cultural activities
because such ideas refer to the historical separation between art and work that
and/or poor peers achieve less academic progress than their otherwise compara-
ble counterparts attending more racially isolated disadvantaged or low poverty schools. Preliminary
results indicate that attending a racially isolated disadvantaged minority school
has a statistically significant negative effect on reading and language arts achieve-
ment. This relationship is moderated by the size of the sample in the primary
study and by the way the independent variable (school racial/ethnic composition)
was measured. Effects vary for different racial and ethnic minority groups
and the effects are stronger in secondary compared to elementary grades. The
emergence and widening of the race gaps as students move through the grades
suggest that the association of racial and social class isolation with reading and
language arts performance compounds over time, illustrating how school compo-
station effects reflect the dynamics of structural vulnerability theory.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@unc.edu)
The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-
ties as workers,parents, friends, neighbors, and citizens. Increasingly, in the US
and other multiethnic democratic nations this responsibility is complicated by the
growing demographic diversity among students, a diversity fueled by international
migration. The central argument of this paper is that integrated schooling is a
necessary, albeit insufficient, condition for developing the social cohesion that
just, multiethnic democratic societies require to flourish. Using the United States
as a strategic case study, the paper synthesizes the US educational, social, and
behavioral science literatures on the effects of school and classroom racial, eth-
nic, and social class composition on short- and long-term academic and non-ac-
demic outcomes across the life course, with special attention paid to immigrant
Youth. The preponderance of the extant US literature on the topic links integrated
schooling to improved academic and non-academic outcomes, and suggests in-
tegrated schooling is also a necessary, though, insufficient enabling condition for
fostering civic engagement in multiethnic democratic societies. Ironically, despite
this growing corpus of evidence, US schools are segregating by race, ethnicity, and/or social class. To be sure, because of international and internal migration
trends, the nature of US school segregation has changed so that today it is much more ethnically complex than the Black-White or Brown-White binaries of the
past. Nonetheless, studies indicate that today, as in the past, schools with concen-
trations of poor disadvantaged minority students generally fail to educate their
students. The paper discusses the implications of its findings for 21st century ed-
cuation in the US and other multiethnic democratic societies (especially OECD
countries) to face the opportunity and threat of growing ethnic, cultural diversity
and international migration pose for delivering educational excellence and equity to all students.

Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in Peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The thead urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthonous frames to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations are characterized by uneasy coexistence, features of resilience and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

MIDHEMME, EMANUEL* (University of Leuven, emanuel.midheme@astro.kuleuven.be)
The Mismatch Between Planning Practice and Actually Existing Urbanisms: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and proliferation of informal urban spaces has however fomented a ‘clash of cultures’. On the one hand are private property interests (of capitalist investors) and the planners’ modernist vision of an orderly city. On the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses devised by municipal authorities to regulate and contain the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders’ claims to urban public spaces. The central argument in the paper is that the conflict between street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu.

MIEG, HARALD A.* (Humboldt-Universitaet, harald.mieg@hu-berlin.de)
Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and the ends of one’s actions. Weber contributed to the ethic of responsibility with an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends—that is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’—and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one’s action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicate how an ethic of responsibility “takes account of precisely the average deficiencies of people” and can therefore be linked to empirical social psychology. Redefining Weber’s ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of “National Debate” after Fukushima Accident

This paper explores the possibility of public participation in decision-making on nuclear energy policy through a case study of “National Debate” on energy choices after the Fukushima accident in Japan. Japan has been pressed to fundamentally reform its national energy policy in order to break away from the excessive dependence on nuclear energy. In the summer of 2012, the DPJ (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DPJ government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the efforts of players through the deliberative poll. Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.
about connections between public deliberative/participatory exercises and decision-making in energy policy.

RIZZI, ESTER (Université catholique de Louvain, Belgium)

Family and Non-Family Support during the Transition to Parenthood

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Evenson and Simon, 2005, Umberson et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahneman et al., 2004) is in conflict with parents' leisure, freedom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003).

Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, advice and information, as well as material support, see: Bengtson, 2001, Chan and Ermisch, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviate the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers' wellbeing.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2) models.

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

MIKUCKA, MALGORZATA* (Higher School of Economics, mikucka.m@gmail.com)

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000, Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the withincountry differences across time.

Results show that the life satisfaction gap between married and the never married decreased over time at a rate that could close the well-being gap between themarried and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed from configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond its boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample – 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project “Trajectories of family and non-family social networks: intergenerational dimension”, financed by the European Social Fund (ESF).

Changing The Subject: Occupy Wall Street's Achievements and Prospects In Comparative Perspective

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Europe, and soon after its critique of inequality gained traction with the slogan “We Are The 99%,” it helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the results of a representative survey we conducted of New York City Occupy Wall Street participants in a May 2012 protest march, we analyze the movement’s characteristics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such movements before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the conscious of freedom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the macro level, it will explore four dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic
and political). At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic search for comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with patient safety outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

Dark Shades of travel: Death Tourism with its Legal and Social Implications

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of desecrating travel that culminates in assistance to end one’s life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing digital media, it will focus on how low-income developing countries, how property is passed on and divided between future generations is a significant factor. This paper looks at inheritance through interviews with several generations of Kenyan families, seeking to explain that the how and why of poverty needs to be understood in the wider family context. It analyses fortunes and misfortunes of families over a given time period in the context of property ownership rights. It also looks at the impact of education and the inheritance of cultural capital. While both fertility and survival are high, traditional patterns of land inheritance can lead to the progressive sub-division of land with long-term adverse implications for sustainability. While inheritance in Kenya is male-dominated, the paper nonetheless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was found to be the reality for the overwhelming majority of the participants in the study. The practical implications of this for safeguarding the property rights of women and their children is discussed.

MILLER, ROBERT* (Queen’s University Belfast, r.miller@qub.ac.uk)

Researching Virtual Realities – Methodological and Conceptual Issues

The first decades of the century have seen profound transformations of societies through digital media. One effect of these new means of contact and technology is that virtual identity does not necessarily correspond to corporeal identity and can be divorced from it or deliberately masked. An extreme manifestation is the creation of ‘virtual worlds’ populated by ‘avatars’, alternate online identities. For many, the opportunity to take on an alternate identity in a ‘virtual world’ is its primary attraction. Biological constraints, from being plain or unattractive through being too old or the wrong gender to having a physical handicap, can be transcended. Arguably, moral constraints need not apply either. While not ‘real’ in the physical sense, virtual worlds can be very real in their effects and are independently evolving societies. They have economies that interact with economies in the ‘real world’ and it is possible to make a living or become rich in the real world through your activities in a virtual world. Even in their present, rudimentary form, some persons prefer their virtual identities and lives to those in their ‘first lives’. Driven by strong economic and technological imperatives, human/computer interfaces and virtual realities will become radically more immersive in the near future. It is not hyperbole to speculate that this could have profound effects for what it means to be human and social in the 21st century. This paper will explore some of the myriad issues – ethical, methodological and practical – that arise from conducting research, particularly biographical research, in virtual worlds.
years 12 and 13 rangatih (youth) from Ngāti Kahungunu and other iwi (tribes) and Āwhina local community clusters participated in hands-on activities including marine laboratory and field-based activities, and (2) a project developed by Ngāti Kahungunu Iwi Incorporated (NKII: the tribal entity for Ngāti Kahungunu) in partnership with the AVI, to increase Māori capability around marine resource management and provide pathways into marine science for Ngāti Kahungunu rangatih. We describe the partnership approach taken to develop the project with NKII, evaluation of the Summer Cybospaces event, and research being undertaken to demonstrate that Āwhina and the AVI are having a positive influence on Māori and Pacific success in science-related disciplines.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday children care has increased very little. Despite fathers’ general lack of ‘hands on’ parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation ‘shared parental responsibility’, which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-10 qualitative study, entailing three, in-depth interviews found that gender inequity in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included ‘tone’ fathers and mothers – ‘primary time’ parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The socio-political policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in ‘doing family’. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own children’s ‘rights’ while mothers shoulder a disproportionate burden of everyday ‘responsibility’ for children (even in ‘equal shared care’ situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within ‘intact’ families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan’s ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo’s recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourses in international tourism promotion amongst these organizations. The appeal to support both Japan’s and the disaster-region’s recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed audiovisual and visual methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested the importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their usage by participants point to a complex interweaving of absences and presents: cross-cutting the private and public spheres, (and often reflected and reproduced by academic disciplines). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

‘Taking Photos? I Don’t Do That Anymore’: Critiquing the Photo-Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an exploration of participatory media projects’ (Luttrell and Chalfen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

MILSTEIN, DENISE* (Columbia University, denicham@gmail.com)

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged musicians fled the country, while others produced music that preserved the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing a hybrid type of political engagement.

In shrinking East German cities, growing numbers of real estate investments in low-quality housing stocks are spatially selective. Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local government and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities. Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverished neighborhoods. The paper approaches the uneven development as not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

How Is Multiculturalism Americanized and Japanized?

The idea of "multiculturalism" has spread globally and impacted on the ways of being "nation-state" since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the "weak" states in the strength of multiculturalism policies, modified it to a vision of "multicultural coexistence (tabunka kyousei)" for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Regarding them, national discourses redefine the relations with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how public opinion is tolerant of them. However, in a part of the national image, The USA's liberal modifications help to implant a multicultural ethic on its national image while Japan's transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

MINATO, KUNIO* (Ritsumeikan University, minato920@gmail.com)
Nationalism, Exclusivism, and Purism: An Analytical Description of National Identity in Mongolia

In recent years, Mongolia has witnessed the rise of ultra-nationalists and even neo-Nazis. Their campaigns pillory foreigners, especially Chinese and Koreans, as threats to the "purity" of the nation, and are often accompanied by vandalism and violence. Their target is not only limited to foreign people and enterprises but also to their fellow citizens. Relations between the Mongolians and foreign investors, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, a part of the public opinion in Mongolia are conflicting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists are gaining popularity, against the backdrop of public fear that Mongolia, the country with so small population, might be easily swallowed up by the massive influx of foreign people, investments, culture, and others. Meanwhile, others explain that these ultra-nationalist groups do not represent the majority of Mongolian people, and that their activities are still in the margins. Which is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of issues on the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of "national purity." Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-socialist Europe. The paper also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world. One of the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, Mexico.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require investments to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city's largest public spaces, which are mostly fenced off and for which entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skateboarding, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relations. The paper addresses mobility as a way to explore and discuss this notion. Son jarocho is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahua and Spanish-Andaluz traditions. It is nowadays reproduced, appropriated and recreated in various locations of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used son jarocho to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is currently also sustained, informed and reshaped by transnational linkages. I suggest that son jarocho is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, Jarocho, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re-appropriated and recreated across transnational social fields.
Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady et al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Schlozman, 2003); children with well-educated parents have the knowledge, skills and attitudes for participation in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/strengthen the impact of the social background on student’s citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as democratic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ and school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide. The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Leisure Units and Strengthens Family Bonds — A Case Study on Families That Spend Quality Time on Holidays Together

Family will always continue to remain in one form or other as the basic building blocks of society. Today’s world is one that is riddled with competition deadlines stress. With high profile jobs to be managed and education degrees to be attained by children to secure their future it’s so important that families make quality time for leisure. The researcher tries to unfold the following objectives:

*To identify the growing problem of families dispersed due to job/ studies constraints
*To identify the importance of making time for leisure to be together
*How quality leisure time binds groups and contribute to bonding and unity
*The impact of leisure on the family life today and the need for families’ world wide to do the same

With the above objectives in mind the researcher is analyzing the role leisure plays in building tight family bonds. The study will select few cases where girl students who reside far away from homes in hostels but are still close to their family members and share a strong bond.

Miranda, Perpetua* (Sophia College for Women (Mumbai), India, pep30ctc@rediffmail.com)

Migration and Gender Inequality — A Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small businesses, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize their capital productively. With the expansion of Microfinance facilities credit is also now available to many of these small businesses, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women’s empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The researcher tries to unfold the following objectives:

* To identify the growing problem of gender inequality in cities.
* To identify the need for micro financing.
* How micro financing contribute to support and empowerment.
* How marginalized women’s lives are impacted by micro financing and the importance of replicating this phenomenon.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

MISHRA, NIHARRANJAN* (National Institute of Technology, niharhcu@gmail.com)

Institutionalizing Community Participation and Sustainable Irrigation Management: A Case Study from India

Community participation has become a key method in contemporary development projects. Most of the projects have given emphasis on community participation. Learning through experiences for proper operation and maintenance of irrigation systems and supply of irrigation water in adequate quantity according to a farmer’s need on time in a predictable, reliable and equitable manner, decentralised governance of irrigation infrastructure have recently been emphasised as an essential precondition. Centre as well as some States in India has adopted various Acts to encourage farmers’ participation in irrigation management. Using anthropological techniques, the present paper attempts to see the villagers’ participation in traditional system of irrigation management among the tribal communities in Kalahandi district of Western Orissa. It also critically examines the interaction of new institutions in irrigation management and their impact on age-old traditional system of community management.

It is observed in our study that the collective action or community participation was quite prevalent in the traditional system of irrigation management of tribal communities. The local knowledge, community cohesion, social capitals, traditional practices, values and beliefs were playing the most important roles in the traditional system of management. The government sponsored Water Users’ Association, which is not devised based on the local culture and needs of the local tribal communities, is not able to evoke their participation in the Water Users’ Association. The culture of ignorance, drinking alcohol, feeling marginal, poverty, illiteracy, the improper co-ordination between irrigation officials and beneficiaries, physical structure of canals, dominance of head reach, higher caste large farmers have influenced the participation of marginal farmers. Moreover, some of the factors like social norms define domestic works and childcare as women’s work and social perceptions discount women’s abilities and opinions restrict women’s participation in WUAs.

MISHRA, SHASHI* (Ramniranjan Jhunjhunwala College, avms@godrej.com)

Gender Inequality and Education for Women

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society’s women have lower status, no access to education, less food and no health care. Little work hours, have lowered incomes and little or no access to owner- ships of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for full time or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education.

Present study will explore the dropout’s girls from schools and how it affects their future life and in turn loss to nation.

Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E-Health
“Health for all” is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of light through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

San Francisco and The New Economy Of Desire

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the culture in which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by the nomena like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partnership. From Agitation to Political Autonomy: Interlinks in Three Movements in a Northern Province of India

This paper attempts explore the impending continuities in people’s mobilization by identifying the inter-linkages in three contemporary movements in a northern province (Uttarakhand) of India. In an empirical study of the three movements; the movement against falling trees (chikpo i.e. hugging trees), the movement against alcoholism (Sharab-bandli), and the movement for a separate hill state, it has been found that these movements are entwined in terms of issues, leadership, organizations and ideologies. The present paper highlights the role of the middle class in contributing to evolve and articulate the issue/demand of the protection of a customary right of the local populace into a demand of political autonomy and the right to self-development of a regional community. Secondly, the paper focuses on pathways of the growth of specialized organizations from a space explored by the people’s groupings. Thirdly, the paper explains the nature and role of leadership and intelligentsia in creating and articulating symbols, discourse and narratives of a distinct identity. Furthermore, it also pinpoints the role of middle class youth in dissemination of partial and total ideologies and debates which engender the conditions of mass awakening and thereby broadening the public sphere andousing people to provide a critique and organize registering struggles. The asiduous mass mobilizations by way of intensifying issues/demands, strengthening organized efforts and upgrading ideological inputs has produced conditions for civil society to collectively engage against state and eventually increasing people’s space i.e. moving a step forward in democratization.

The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through a practical analysis of ideas and the dissemination of their messages. 

The paper’s theoretically informed empirical research of the intellectuals’ prime function, that is, the elaboration of these symbolic configurations, focuses on the fate of East European intellectuals who assumed the role of the creators of the post-communist state. Despite their position as leaders or intellectuals, they were not able to prove that they could ‘live in truth,’ approached politics without any illusion. Yet their most effective performance was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectual’s role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and understanding structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

Trust and Modes of Cooperation

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust-based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices, the increase of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal regulations and informal means, such as trust, to secure conditions for socially beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.

MITA, AKIKO* (University of Tokyo, happiologist@hotmail.com)
Qualitative Analysis for Sociological Study of Various Conditions of Happines

What I would like to emphasize in this presentation is that now we need to turn our analysis of contents (not contents analysis) based on qualitative data for the sociological study of “happiness.” To say it objectively, we need to examine the methods and effects of detective analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination has mainly focused on open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer “very happy.” As a result, three clusters were found, according to the regions, with different “conditions for happiness.” Feature keywords for happiness are; In the Capital, “above a certain economical level, nation and politics, charity-like service, in Chiapas, the most southern border state, “economic problems, close people, religious consciousness,” in Puebla, a city in-between those, “autonomy or self-sufficiency, ‘around me’ or ‘social’ situations.” Naturally, many points are shared as well. Almost all the data used by social scientists for analysis about happiness always include measurement and scaling logistic curve. We cannot completely solve those problems but can moderate their problem levels by changing the analysis levels from whole happiness to happiness within each cluster.

This result shows two additional points, valuable to the future of sociology. One is the utility of detective analysis and research with a weaker hypothesis; different from the way with a strong hypothesis to prove, test and certify. Another is that open questionnaire, a system we cannot say we have utilized enough, can be an important source of quantitative data. With quantitative data like this, we can effectively classify and objectively treat the elements of “happiness.” Sociological method has the theory to do it and it must be an advantage to the other disciplines studying “happiness.”

A Framework for the Sociology of Future: Logistics Curve and the Axial Ages

Until the later decades of the 20th century, almost “self-evident” image of the history was that of the ever-accelerating progress. That image of history had the objective basis; statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biologists know well of the S-shaped “logistics curve” of every species, with the 3 stages, 1) of slow foreflow, 2) of rapid or explosive propagation and 3) of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970, turning point from acceleration to deceleration. We are already passing the historical point of junction from the stage II to III. Macroscopic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. “Globe” is a paradoxical geometry; infinite and finity. The geographical meaning of the “globalization” lies in this paradox. Karl Jaspers talks of the “Axial Age” – simultaneous emergence of major world religions and philosophy; Old basis of Christianity, Buddhism, Confucianism, and Greek philosophers. Sociological background of the “Axial Age” can be understood as the ensemble of the interrelated factors: 1) Emergence of the monetary systems; 2) rise of the cities and liberation from the communities; 3) crisis of lives thrown into the infinity of the world. Monetary system, urbanization, and the infinity of the life world are the very essences of modernity. For that reason, the Axial Age has been the basis of life and world until the final phase of modernity. Modernity can be seen as the stage II. Axial Age was the critical point from 1 to II.

MITCHELL, ANDREW** (University of Kumamoto, andrew.mitchell.leeds@gmail.com)
Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann’s Social Systems Theory

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan’s nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own strengths, they discuss specific points regarding nuclear policy with little regard to the wider picture. They all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann’s Social Systems Theory, this paper proposes to frame the different views on the nuclear
issue as a problem of observation by different observers within a functionally
differentiated society. The paper shall discuss the technological, economic and
public opinion issues surrounding Japanese nuclear power, demonstrate how
these are first-order observations of different observing social systems, and how
Japan’s political system acts as a second-order observer of these observations. By
understanding political/social system which acts to manage system expecta-
tion by introducing binding resolutions upon society (and thus deals in risky deci-
semaking), the limits of Japanese political action when faced with technological
risks on one hand and the desire to maintain Japan’s economic and strategic po-
sition on the other will be illustrated. This paper concludes that despite the risks of
and public hostility towards nuclear power, the rationale of Abenomics and
emerging strategic threats in East Asia leave Japan with little choice but to restart
its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little impact on the use of alcohol and tobacco than those of peers, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People’s Perception in the Perspective of Community Policing

Appearance police-community relationship in India is still in a nascent stage owing to the asserted attribute of the Indian society. Caste, communal and religious discords act as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people’s perception of police-community rela-
tions in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by the capital cities of north east India have been successful in bridging the gap between the police and the public. The north east India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has suffered discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community policing initiatives of the capital cities of north east India that have been successful in bridging the gap between the police and the public.

I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic... Academic Mothers: Power and Powerlessness in Academia and in Homes

Power and powerlessness are two poles of the continuum of life that academic mothers inhabit by virtue of simply playing these roles in convergence with each other.

There is a double edged problem. Traditionally women are denied the thinking
and reflecting acumen and are seen as substandard contributors to the ac-
demic discourse. Interestingly, mothering is defined in many cultures as a full
time responsibility and one that is the most treasured attribute of women. One
the one hand, thinking and emotionality are seen as opposed traits that logically
imply academic mothers to be lacking in the basic requisite of mothering, on the
other, women’s intuitive emotionality is seen as coming in the way of a scientific
approach required of women as Academics.

This study seeks to understand women’s experiences, positive and negative in
terms of transgressing these straight jacketed boundaries and combining the

role of mothers and academics in India, Brazil and South Africa and seeks to ex-
ploration how strong traditions of family values in these cultures influence and impact
women in the Academia. Some of the questions it seeks to address are as follows:

- In what ways do women live these roles which are very demanding and chal-
lenging, also satisfying and fulfilling? What are women’s obstacles, what are their
strengths? How do academic mothers do a different kind of academics, maybe or a
different kind of mothering, so as to satisfy their aspirations from these two
roles, two lives? What are their tensions, how do they resolve them, what kind
of adaptations do women make? What kind of a philosophy on life and work do
they develop to do two roles simultaneously?

The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15
women academics in India.

Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regu-
lar workplaces and schools as in some other countries. However, even now, one
third of adults with learning disability and autism are placed in facilities for the
mentally-handicapped, because many persons concerned do not altogether con-
sent to the idea of inclusion as such, particularly when the learning-disabled and
autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most
populated suburban area in Tokyo, to see how those who attend on the learn-
ing-disabled and autistics in the district act in response when they are exposed to
a variety of such harm in the community. The attendants are apt to assume that
harmful doings by the learning-disabled and autistics are connected with what
was done by others, including the attendants themselves. Therapon, they at-
tempts to unravel an unexpected harmful doing in terms of the relationship of the
learning-disabled and autistics with other persons, trying to see what caused each
individual with learning disability and autism to turn to be harmful. This attempt
leads to their attaching importance to painstaking communication with him/her as
a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of
double contingency first advocated by Talcott Parsons and later modified by
Niklas Luhmann, believing that it can empirically be applied.

HAMADA, ERIKO (Sophia University)

Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the
sustainability of the social security system, a high level of child poverty, and a
high rate of suicide among the youth all suggest that Japan should embrace so-
cial investment strategy. A large gain in social benefits seems possible with the
rethinking of an inter-generational redistribution. Yet, social investment strategy
has been weak both in discourse and in practice. Although the Democratic Party
of Japan (DPJ) government (2009-2012) pursued some policy innovation in the
area of childcare and youth programs under the slogan of “children first,” a para-
digm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited
in Japan despite the fact that its social and economic conditions should provide a
fertile soil for such a strategy. We shall explore the political conditions which pre-
vent the full-fledged development of the ideas and practices of social investment
strategy. In so doing, we show how the dominant force of neoliberalism consti-
tutes a stumbling bloc in policy innovation.

This paper will cover major policy changes in the realms of childcare policy
(cash allowance and daycare), youth programs for job training and job seeking,
and “career education” from the 2000s to the present day. Its main focus will be on
the rightward shift of partisan dynamics, legacy of statism, and the persistence of
traditional gender roles.

MIURA, NAOKO* (Kagawa Institute of Technology, miura@gen.kagawa-it.ac.jp)

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds
our expectations. Therefore, the view about information technology is being torn
into two conflicting poles. There are some antinomies of various dimensions in
today’s highly informative society.

At a socio-economic dimension, Big Data (and data-mining technology) is ex-
pected to rediscover the information marketplace as a rich untouched field, and
that it will produce industrial reorganization and activation, just like fossil fuel
(amazing technology) accelerated the Industrial Revolution in the 20th century.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing. At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to explain the chain people’s decision making and mechanism of action selection, and help predict people’s behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people’s free will and humanness, and may seriously change the relation between an individual and society.

These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today’s antinomies of information technology could be considered by using Bourdieu’s sociological methods of overcoming dualism.  

The Effects of Child Birth on Marital Satisfaction in Contemporary Japan

Marital satisfaction has been studied in family sociology all over the world. In Japan, many empirical findings regarding the determinants of marital satisfaction have also been accumulated. However, most prior researches in Japan have limitation of data quality because they use cross-sectional datasets or panel datasets without much longitudinal design. Reconstructing the relationship between child birth and marital satisfaction by longitudinal analysis would be important for Japan in an era of low birthrates and high rate of unmarried people.

We examine how child birth, years from marriage, amount of time of conversation with spouse, occupational career, and socio economic status affect the levels of marital satisfaction. Our focus is on how first birth and marital satisfaction while second or later child birth points are whether or not the finding that first birth just has an impact on marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

Datasets from the National Family Research of Japan, 2008-2012 Panel Study (NFRJ-08Panel) are utilized. Fixed effects regression models are applied to analyze that panel datasets. Our analytical results show that the expected relationship between child birth and marital satisfaction as the same with findings by prior research, first child birth has negative effect on marital satisfaction while second or later child birth do not necessary affect. Then, we can observe the significant interaction effects between gender and first child birth on marital satisfaction. Male respondents are more likely to decline their marital satisfaction by first child birth rather than female respondents.

These findings indicate the necessity of detailed research on the changing of life, behavior and attitude by first child birth among Japanese men. We discuss the implication of gender difference in the fluctuation process of marital satisfaction.

The Formation Process of the “National Orthodoxy” Regime in Contemporary Russia

Through dramatic domestic and foreign changes over the Soviet Union’s extinction, Russia has historically reappeared on the world’s stage. Although contemporary Russia does not have a firm unification principle, a “National Orthodoxy” regime is being formed. The “National Orthodoxy” corresponds to “the state religion” as the core element of national unification. Separate from “the private Orthodoxy” as a live faith, “the public Orthodoxy” emerged as a principle to unify the “National Orthodoxy” regime is the national ideology that the Russian Orthodox Church should unify with the people of Russia and is a political religious system where national unification is realized by the ideology. Under this regime, the value of the Orthodoxy applies to all the people of Russia. The Russian Orthodox Church promotes a harmonious agreement between the Russian state and society.

The Russian Orthodox Church has been revived in contemporary Russia. While the movement from the bottom known as the private side mixes with the policy from the top known as the government side, “the National Orthodox” regime formation process in Russia is promoted. In addition, it is observed that the “centralization of the Orthodoxy” assumes that the Orthodoxy is a unification principle. And at the same time, the marginalization of the non-Orthodoxy suppresses and removes religion except the Orthodoxy. In this country, dual structure exists separately while the various schools of religion in the private sphere overlap with “the National Orthodoxy” in the public sphere. The contemporary Russian national identity may say to be reconstructed, with the principle of unification known as the “the National Orthodoxy” regime at its core.

Doing Occidentalism through Mangaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture, shaped by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (K.M. Heller 2007). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationalism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the country with the highest number of anime series broadcast on television outside Japan (M. Pelliteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be explained through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mangaesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicians was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Dahlhaus’s social and ideological heritage in post-Nazi Germany as some researchers in the English-speaking world point out, Germany after the war needed to distinguish the ‘great German music’ from the country’s guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

**New Urban Childhoods: Globalisation, Socialisation and Urban Informality on Children in Ghana**

Globalisation has fuelled rapid and unprecedented levels of urban expansion the consequences of which for children’s socialisation have been profound. ‘Urbanisation without industrialisation’ is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear as cause and symptom of lasting economic and social ills. It is worth noting here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do this, children’s experience of structural adjustment in Ghana – a ‘poster-child’ for globalised market led development strategies – and traces through its impact on urban development in terms of ‘informalisation’ (Meagher 1995) and its corollary the growth of wageless life (Denning 2010). Particular attention is given to the implications of these developments for children as both dependent and agents and the impact of this on processes of socialisation. As structural adjustment finds a parallel in processes of domestic re-regulation, this paper argues that children’s value to their household is progressively being downgraded. While their value to their family is still protected, the offspring of his or her mate. The main results I will present is that the family’s environment of friends, and kin represents a social capital or not. **Implications of Social Capital for Family Life: The Case of « Non Statutory Parent »**

**The Sociology of Foodstuff and Consumption: Empirical Evidence from Soon-to-be-Parents in Japan**

Japanese society has been undergoing tremendous transformations in recent years. The change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the-field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation based on what we found in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis. Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectivity of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SPs or NSP’s network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the couple and absence of a degree of embeddedness of close personal relationships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

Importance of Institutional Links in the Work-Family Interface Among Dutch Navy Personnel and Their Spouses

Few studies in France have focused on immigrants’ access to vocational training. This lack of data is surprising in a field which has otherwise been extensively studied. Indeed, one of the stated goals of ‘lifelong learning’ is precisely to compensate for educational inequality, and immigrant access to lifelong learning is therefore essential. The recent study conducted by Gelot and Minni using data from the 2003 FQP survey is a key contribution in this area. They have shown that the rate of immigrant access to continuing education is lower than that of ‘people of French origin and that this disparity continues even after controlling for individual characteristics (age, gender, level of education, type of employment).

The aim of this paper is therefore to go one step further by focusing on the differences which exist within the immigrant population, particularly in matters of administrative status. The hypothesis tested here is that the category established from the 2003 FQP survey is a key contribution in this area. They have shown that Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliberal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the ‘waves of democracy’ and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various fundamentalists from Moslem Brotherhood to Enhada-which were ill equipped to shepherd a modern economy. But without having experience in actual gov- ernance as opposed to critics w/o power they did quite poorly. However dismay the short term, and it may get worse, structural factors interlock, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to un- elected ‘presidents for life’. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption and corruption, autocracies and independency and democratic self-governance, but 2010, 2011 and 2013 will also be used. The Work – Family Interface Among Dutch Navy Personnel and Their Spouses

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

MODAK, MARIANNE* (Haute école travail social & la santé, marianne.modak@eesp.ch)

Inequalities Between Men and Women in Social Work

Inequalities between women and men stem from the assignment of the “care” work to women in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices denote two different ways of conceiving the place of “care”. “Care” is a stake in the context of the active social state, because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work– the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by paucity of measurability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.
Living Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguérôu, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds, especially African backgrounds. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding work usually live a major obstacle to young people’s entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion leaders still view education in South Africa as a patchwork as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and the pedagogical methods adopted to teach them, schooling is not a pleasurable experience for the children coming from disadvantaged backgrounds. Thus the need towards the eco-tourism in the state so that the tourist potential can be optimally realised that too, on the sustainable basis.
MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. There are numerous luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focusing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization viewed as refugee and forcibly displaced families. Moreover, much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013: Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased even more significantly in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far. We use microsimulation models for evaluating the impact of reforms on the poverty reduction effect of the tax-benefit system. We compare the effect of the tax-benefit system are evaluated in comparing policies chosen in the 1990s depression and post 2008 recession. We have estimated the counterfactual poverty rates during 1993-2013 by using the SISU microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have lowered the poverty risk rate. Changes in taxation had a considerably larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the levels in 1993 and the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

The Evolution of Language-in-Education Policy in South Africa

During the apartheid era, South Africa’s language in education policy was ideologically driven by racism and the desire to suppress the indigenous languages of the majority of South Africans. The policy was fiercely resisted and led to unprecedented episodes of collective violence.

In post-apartheid South Africa, the language-in-education policy takes into account the socio-linguistic reality of South Africa's multilingualism and bestows upon the individual the right to choose his or her own language of learning and teaching.

The political climate in South Africa underwent dramatic changes with the unbanning of political organizations in 1990. A new policy, emphasizing multi-lingualism, evolved. The sociolinguistic reality of multilingualism in South Africa was eventually recognized. The new Constitution of the Republic of South Africa (Act 108 of 1993), which was hammered out and forged by South Africans of all political persuasions, reflects the linguistic diversity of South Africans and recognises their right to exercise their freedom in choosing their own languages. Constitutional Principle XI provides that “The diversity of language and culture shall be acknowledged and protected, and conditions for their promotion shall be encouraged.”

In the presentation, I intend focusing attention on the apartheid language policy in schools in South Africa. The major thrust of the paper will be devoted to sketching the genesis and evolution of a new language policy for schools in post apartheid South Africa.

The Declining Relevance of the Environmental Nation-State

The Environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalization of the environmental state), 1980-1990 (state failure and neoliberalization debates/pressure), 1990s (redefinition and legitimation of environmental states internationally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

Assessing the Measurement of Science Knowledge in the Wellcome Monitor Surveys: An Item Factor Analysis

The Wellcome Trust Monitor Surveys (2009 and 2012) are fielded to two samples: adults (aged 16+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with bio-
medicine. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35-49 and 50-64). For low scorers, the reverse pattern holds true, and for young people, 14-16 year olds are high scorers rather than the reverse. A possibility is that a given scientific item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate science knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subpopulation. The second stage is to look at evidence for DIF/measurement non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

Examining the “New Normal” and Inequity in the Housing Transitions of Young People in Canada

In Canada, young people’s housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the “new normal” in the transition to adulthood. However, young people from lower class backgrounds, those who leave home before finishing school, or who exit child welfare systems at the age of majority, often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on young housing transitions and the housing policy environment. The second part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these young people depend upon and interact with housing markets, services and supports, and discuss how these types of housing trajectories contribute to the structuring of inequality over the course of the transition to adulthood.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

Included By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland

The language of diaspora communities and minorities can be considered as a broader-making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority- or diaspora language media can as well function as mechanisms or barriers of border creation, border maintenance or inclusion.

The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodeships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as “German minority” partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belongings?

My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self, and do which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how is it possible, if German is positioned as “mother tongue” which is “to be learned first”.

WG01-887.1

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland. The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border.

The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households’ relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of income redistribution. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household’s relative income. This research fills a gap in the literature because there are surprising few studies that examine inequality by both family structure and education, and even fewer that examine relative income cross-nationally and longitudinally.

Our analysis of the data using cross-national ordered logit regression analysis provides a better test of structural vulnerability theory because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

Rethinking the “Exploitation of Self-Realization” Model in Japan

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honda has called the same problem the “exploitation of Yarigai” (the word “Yarigai” refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “exploitation of self-realization” has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and reliance, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “exploitation of self-realization” model.

**Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany**

**Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.**

Since the 1980s, social movements scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact. Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation and solidarity among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

**MONFORTE, PIERRE** (University of Leicester, pm260@le.ac.uk)

**The Symbolic Representation of Borders in the Protest Against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants**

**The Symbolic Representation of Borders in the Protest against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants.**

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be found across countries in Europe.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed. This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

**Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stressors, and Mental Health in Older Japanese Adults**

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stressors, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey of Living Conditions (CSPLC) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, marital status, and equivalized disposable household income), disease (the five responses chosen by each group), psychosocial stressors (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stressors of “one’s education/long-term care,” “disability” of family members, “income/family budget/debts,” and “motivation in life” were found to be significantly related to mental health. In young-old men, equivalised disposable household income, working status, and the psychosocial stressor of “one’s job” were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalised disposable household income, eye diseases, lower back pain, and the psychosocial stressor of “relationship with family.” In old-old men, the psychosocial stressor of “relationship with family” was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of “relationship with family” were related to mental health.

This paper was funded by a research grant from the Ministry of Health, Labour and Welfare (H22-seisaku-shitei-033). We thank Kenji Shibuya and Hideki Hashimoto for their academic support.

**New Forms of Participation in the Social Welfare in the City of Barcelona**

A new form of intervention is emerging in local welfare systems. This new way requires a change of attitude and involvement from citizens, public authorities - at all levels - and private organizations. It can be defined as a "social innovation" in the sense of the implementation of an idea that is new and that breaks with the prevailing routines and structures in a given system or setting. "Social Innovation" is widely used from many academic, political and social perspectives. No wonder that, in a context of uncertainty and transformations, becomes essential to search for new policies. In particular, in the field of social welfare the experimentation of new policy proposals and social practices has begun in a lot of countries.

In this paper will analyze new participation forms in the field of social welfare in the city of Barcelona from the theoretical perspective of social innovation. The research is the result of work carried out within the European research project WILCO (Welfare Innovations at the local level in favour of cohesion).

The paper has three parts. First, there is the discussion of the concept of social innovation and proposes a methodology to use them. Secondly, following the conceptual and methodological proposal presented, discusses one policy of the City Council of Barcelona, the program: “Citizen’s Agreement for an Inclusive Welfare”. This program is an example of Social Innovation that increases the capability of the citizens to face social challenges and opportunities of this municipal policy for new models of work on local Social Welfare.

**MONTALVAO, ARNALDO** (Capes Foundation, montalvao@ufmg.br)

**The Interplay Between Work and School Outcomes Among Adolescents in Brazil: The Role of Prior Orientations and Aspirations**

In Brazil and other developing countries, empirical evidences usually suggest that the participation of children and adolescents in the labor market tends to hinder educational outcomes (academic performance, high school graduation and dropout, etc.) and, therefore, lead to inequalities in educational and occupational status over the life-course. However, a body of research argues that the interplay between work and school: 1) depends on the intensity (hours) of work;
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created a net set of institutions allowed to control the imperial power. In the same way the tragic experience of the II World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is one of three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable not to be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing relationships with regional and local administrations.

“Ethnic Relations Between Gypsies and the Majority Populations in Spain during the 21st Century”

Since their arrival on the Iberian Peninsula during the beginning of the 15th century, the Gypsy minority is one of the most relevant “other” ethnicities in Spanish society. According to the Gypsy Secretariat Foundation, between 750,000 and 1,000,000 Spanish Gypsies live in Spain. The ethnic minority’s history in Spanish territory is characterised by a singular and intense cultural integration, a course of relative ethnic homogenisation, a sense of having a strong collective identity, and a widespread social marginalisation. This paper analyses the relationship between the political and economic frameworks in Spain after it became a democracy, and the context of interethnic relationships between the Gypsies and the majority population and the applicability and metamorphosis of the sense of collective identity among the Spanish Gypsies in recent years.

Two axes of analysis will be laid out;
1. in the context of interethnic relationships: The fragmentation and progressive sense of differentiation of the identification of identities among Spanish Gypsies derived from the extensive process of urbanisation and transformations of political, social, and economic conditions after the 1970’s.
2. in the context of intra-ethnic relationships: The process of mobilisation and collective action of the Gypsies during the 80s and 90s and continuity of a strong sense of ethnic boundaries during the 21st century.

This paper forms part of the doctoral thesis of the author, funded by the Spanish Government (Subprogram FPI-MICINN) as part of the Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux (GERICR) research program.

Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security of older people, in the pursuit of the goal of quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interchangeable (healthy, productive, successful ageing, ...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

Transnational Aging in Mexico. the Experience about Elderly Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de envejecimiento de estas personas, todos estos dos grupos y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han regresado de ese país a sus lugares de origen (Guanajuato y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración en el periodo de retiro laboral, los cambios en su identidad y el apego al lugar, redes sociales y prácticas culturales.

La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

Policy Advisors and Scientists’ Mental Models Of Policy-Making: Validating An Elicitation Method

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals’ mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists’ mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists and policy advisors supported evidence-based policy (risk management and scientific authority mental models), while policy advisors supported more community-oriented approaches (political and community acceptability mental models). Network analysis of the influence diagrams supported these results: the majority of policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more influential and connected. We triangulated these results with the quantitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. Our examination suggests policy advisors’ mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and what they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative labor more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition...
Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second generation Peruvian high school and college age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth’s parents’ experiences in Japan play in shaping the youth’s ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (hāfu, Nikkei, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is often seen as an expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as gajin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

Flourishing Under Pressure: Islamophobia, Resilience and Muslims in Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously emerges with racism. In this paper, I consider the effect of the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia and the need to withdraw from public and social spaces but, perhaps more crucially, from participating in institutions, out of fear of being discriminated against. Thus, it will be apparent that the Islamophobia that some say exists because Muslims refuse to ‘integrate’ is actually a factor in discouraging Muslims from ‘integrating.’ The situation is more nuanced than this though as I will argue that despite Islamophobia, Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown more resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in combattting Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to being a Muslim as a term, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.
Political satire programs on television are experiencing a small boom in democratic societies. One of its themes is the economic crisis star, centered in ridiculing not only the protagonists but also in their victims, explaining what were the causes and what could be the ways to tackle the crisis. Through humor, these programs reach millions of viewers, presenting serious issues of political community with a re-directed open-ended migration of travellers seeking self-development and exciting adventure.

New Factors of Social Differentiation in Local Rural Communities

The paper addresses the social consequences of proliferation of innovation practices in local rural communities. Particular attention is paid to the susceptibility of different rural social groups to mastering innovations in the fields of production, consumption and leisure and to the impact of proliferation of information and computer technologies on social differentiation processes.

The paper is based on the results of the sociological surveys of the processes of proliferation of and familiarization with innovation practices in local rural communities conducted by the Institute of Agrarian Problems of the Russian Academy of Sciences in one of the Russian regions (Saratov’s oblast) in 2010-2011 with personal involvement of the author.

Despite the remaining differences between the city and the countryside in terms of availability of modern opportunities and technology, rural residents are increasingly active in mastering innovation goods and practices. The advancement of modern technology per se does not cause the existing differences to blur, but, on the contrary, gives rise to new forms of differentiation, notably to “digital inequality” not only between the city and the countryside, but inside local rural communities as well.

The analysis of the empirical data allowed:
- identify the features of propagation of individual innovative practices, high-tech goods and services in local rural communities;
- identify the principal social groups, differentiated by frequency of use of innovative practices in the fields of production, consumption and leisure;
- make a comparative analysis of the quantitative and qualitative characteristics of these groups, their life and work strategies;
- propose ways to provide equal access to the new knowledge and skills required for mastering new technologies to different social strata and groups of rural population.

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns. This paper is based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Petit and Hook, 2005). However, few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the family life cycle in diferent local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in diferent contexts (Fessler, 2004).

In the context of challenges posed by diferent work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across diferent groups of women in the way that contextual factors shape their labour supply. In particular, we propose to develop a qualitative-normative perspective on how women's education partly explains diferential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with diferent categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

MORGAN, CHARLIE* (Ohio University, morganc3@ohio.edu)
The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the image of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members confound legal status with nationalism, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the social boundary that defines the group they are fighting against as the symbolic boundaries are used to create the social boundaries between the average Utah citizen and undocumented immigrants. It is the accumulation of symbolic boundaries that defines the social boundary.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions.

The centrality and compatibility of religious beliefs with organ donation varied between ethnic/ faith groups and generations. Although few regarded organ donation itself as a moral issue, religious scriptures there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain separate for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus opposing our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.

Transformation of Public Housing Policy and Its Impacts on the Residents in Japanese Suburbs

A lot of critical debates relating to Japanese suburb (ageing, juvenile delinquency, absence of local identity, etc.) have not made inroads into the myths of a homogeneous and stable space populated by non-foreign residents from the middle classes. However, with installation of the ‘precariat’, driven out of the city center by gentrification on one hand, and with transformation of Japanese public housing policy on the other hand, a new face of the suburbs appears: public housing for insecure populations (old people living alone, handicapped people, single-parent households) or semi-public housing hired by companies for their temporary workers including precarious foreigners make it a space of exclusion characterized by high heterogeneity in the whole range of “wasted lives” (Bauman, 2003) is concentrated. It is a very-known fact that territorial fixation is one of the major difficulties for the people of segregated districts, who are not able to “escape” from there (Wacquant, 2007). But that should not make one forget another difficulty; that is the difficulty of not being able to stay in one place, by having to be constantly moving. Because staying in one place also means settling down (establishing a family, sending one’s children to school, having regular dealings with neighbors as a member of the local society, possibility of borrowing money from banks, etc.). On the basis of a survey in the Tokyo suburb area, this paper examines the impact of those changes on (semi) public housing residents, especially where they go and how their lives are changed by their movements.

MORI, IPPEI* (The University of Tokyo, chatchan777@gmail.com)

Correcting Errors without Undermining Students’ Individuality in the Classroom

Classroom education is an institutional interaction meant to transmit the knowledge considered “right” by our society to children. However, recently in Japanese schools, emphasis has been placed on respecting students’ “individuality.” How are educational interactions organized to accomplish these seemingly incompatible tasks? We intend to answer this question in this paper.

We analyze video data of a lesson on national language in a Japanese first-grade elementary school classroom from the viewpoint of ethnomethodology and conversation analysis. We focus on the organization of “correction” and “repair” in conversation. Correction is applied to errors of utterance, and repair, to inaudibility or incomprehensibility of utterance. According to Douglas Macbeth, correction and repair often cooperate in classroom interaction.

Based on the above, we can rephrase our initial question as follows. As teachers must teach “right” knowledge, they must correct students’ “wrong” knowledge. However, this correction threatens to undermine students’ individuality. How can teachers organize the process of correction so as to avoid this undermining as much as possible?

The results of our analysis are summarized as follows. In the analyzed video data, a student read out his imaginary story. There were two errors in the story. His teachers corrected these errors without undermining the student’s individuality; on the one hand, by conducting “repair” with use of a preference for affirmative answer (=implicit correction) instead of explicit correction and, on the other hand, by configuring a cooperation of correction and repair in the order of “repair-applause-correction.”

Toward the Post-Colonial World Connections: Relativizing the Eurocentric Social Movement Theories to Assemble the Citizenship Beyond Nation-States

This presentation examines the Eurocentric social movement theories from contexts of the genealogies of decolonization, demilitarization and anti-development movements on Okinawa Island. Okinawa has its history of the marginality

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibutansa) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-panic artifact by the US-Japanese homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoy, Kokichi, 2006, Shokoiku no Shari, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to the role of school systems that work in partnership with local communities, as the closed nature of the public education system has factored criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interactions with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grandchildren, and family and friends? How do their neighborhoods and friends influence the forming of expectations and views for the future? The empirical core of the analysis is the qualitative data derived from semi-structured in-depth interviews with couples aged 65 and over in Denmark and Japan. The interviews are ongoing and will be concluded by February 2014.

Transnational Mobilities in Europe: ‘Living Apart Together’ and Gendered Outcomes

Historically women have been associated with immobility and passivity, for a long time invisible or regarded as dependents rather than migrants in their own right, their migration tied to migration of men. Restrictions to autonomous wom- en’s mobility still persist in some countries or they facialize their stigmatization at some stage of their itinerary because of the capacity to be mobile is sometimes easier available to women than to men because of labour demand in specific eco- nomic sectors. Being a woman becomes even an advantage so they increasingly become mobile family breadwinners, sometimes pioneering migration even in societies with traditionally male dominated patterns of migration. Women are therefore exposed to contradictory pressures, relating to their double role: as breadwinners, requiring emigration and absence and that of family carers habitually assuming physical presence in the vicinity of those they care for. They are therefore typically the first ones blamed for the social costs of migration and the disruption of a gender order.

While for both men and women crossing of borders can lead to more autonomy and challenging of established gender norms, more opportunities in using the acquired social capital within a broader migratory space, it can also lead to new dependencies and reinforce existing gender boundaries and hierarchies. Gender order seems resistant to change in migration, even in situations of apparent re- versal, when women become main breadwinners. Rather than speaking in terms of gains and losses this presentation looks at the ways contradictory outcomes are negotiated. In several examples of transnational mobility, it will be shown how the gender order is challenged, apparently preserved, but also how ‘handicaps’ are turned into advantages and traditional patterns relied on in pursuit of own objectives.

MORRIS, ALDON* (Northwestern University, amorris@northwestern.edu)

W.E.B. Du Bois was one of a handful of scholars of the 20th century with a sustained global impact on sociological, literary, and political knowledge. In this paper, Morris will draw on evidence from his forthcoming book with the University of California Press to demonstrate that Du Bois was the founding father of scientific sociology in the United States, that is, American scientific sociology was founded in a segregated black university by a black man. This paper disconfirms the accepted wisdom that American scientific sociology was founded solely by white sociologists in elite white universities. This paper will explore the methods Du Bois pioneered and his novel theorizing that laid the foundations for subsequent sociological analyses. The paper will offer an account of the dynamic forces that generate scientific schools of thought and that undergirded knowledge production in social sciences during Du Bois’ era.

Negotiating Safety in Relationships: Children’s Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Aus- tralia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenom- enology, ethics of care and dialogical ethics.

The aim of the study was to hear children’s voices in primary care research about children’s safety and resilience in the context of family violence. The re- search questions sought to understand children and mothers’ perspectives on children’s safety and resilience; establish how children’s safety is realised in the context of family violence and determine how children’s voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’. Informed by the model, implications for policy, practice and further research will be considered.

MORRIS, BRIGIT* (University of New South Wales, brigitmorris@yahoo.com.au)

Moving Through Space

Spaces in urban geography are rich with signs and symbols related to nation- al as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantanamo prison. The second work is Doris Salcedo’s 2007 work, 6 y 7 Noviembre. Salcedo installed a sculpture over the Palace of Justice building in Colombia’s capital city, Bogotá. The work remembered the events of 6 to 7 November 1985 when militia stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create affect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effectively brought into the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

'I Have to Help and Improve Their Life': Young People’s ‘transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The results explain the ways in which boundaries between childhood, youth and adulthood are blurred, by exploring young people’s past and present experiences of school and work, and their anticipated futures. The paper uses descriptive statistics to show trends in leaving school, and then draws on qualitative longitudinal research from a series of case studies to explore children’s experiences of leaving school and why. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as ‘dropping out’ fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental shocks. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people’s choices and trajectories. The paper questions the utility of the concept of transition and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

MORRISON, IAN * (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates have emerged within the context of a restructuring of the nature of nation and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic conception of the nation. The dechristianization and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ related to the measures adopted to promote this conception of such a nation. Of particular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The present paper examines the manner in which these two seemingly oppositional arguments can be presented within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

Modern Moralities? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grandparents/parents, and children. For example, there is clearly a rapid process of marketization taking place, with consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Thus, three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived as bringing risks to children. Vietnamese young people themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, employers and - express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for remembering. While there is a general agreement that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggests that the LHC performance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAPI. However, studies using self-ad- ministered LHC on youth sex behavior argued that LHC can be used also used in self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family tMes panel study) between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of residen- tial moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental involvement and are more likely to have parental expectations that positively affect children. The second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and 422 of their G3 children age 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Donahue’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”?: Translating IE Research to Community, Government and Academics in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct phases were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interviews, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.

The Micro-Politics of Poverty and Inequality: Implications for the Real “Hidden Abode of Production” in South Africa

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remain undeniably high. The dominant narrative by most South Africans is “awukho umsebenzi” and “asinamali” – there is no work and we do not have money. South Africa’s transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neoliberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success, poverty and inequality persist.

High levels of unemployment and inequality that followed South Africa’s entry into the global economy have shifted the focus of survival and economic activity from the factory to the household. In the absence of an effective welfare state, the poor have retreated to the household and adopted diverse livelihood activities. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of
* denotes a presenting author. Abstracts are organized by first presenting author's last name.
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use become a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy - to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg’s inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a ‘vacuum of belonging’ (Gotz and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, disease, street children, criminals and their victims (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Youth Policy in Ireland and India: A Comparative Study

Current youth policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource’. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has taken place within Europe there has been little research which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, interests, ideas and international environment. It examines the major ‘factors and actors’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, economy, culture(s) and other economic and social conditions. However there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidiarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one's non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to parents. On the other hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does “family crisis” mean to the parents of a non-heterosexual child?

Previous research on parents’ reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben-Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child if their own parents to whom they have disclosed their identity have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

MOSELLON, AIDAN* (University College London, aidan.mosselson.11@ucl.ac.uk)

Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg

In academic literature, urban regeneration is more often than not treated as a code-word for gentrification or dismissed as a term developers use to sugar-coat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannesburg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and context sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu’s notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision. Cities are part of broader social contexts or milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
research revealed that mothers of a non-heterosexual child were especially afraid of the collapse of the family they created (i.e. "family crisis"), while father did not present such narratives. Mothers react strongly to the "family crisis" due to traditionally given gender roles, in which they are expected to be more accountable for family affairs. Yet interestingly, these gender roles also influence mothers to overcome the "family crisis."

Contentious Politics and the Global South

Referring to new challenges in the study of contemporary social movements, Tarrow claims that "To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them" (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the "West", and a more transgressive in the "Rest", leaves out many issues around which movements in the Latin America have been contending.

However, attempts to explain the particularities of Latin American social movements have led to the development of specific theories, treating the region as sui generis (Costa 2010). Thus, in the analytical openness and systematic character of the framework Contentious Politics lie its main virtues: it invites for dialogue and results in a collective process of knowledge construction. It has a serious limitation for that purpose, as Bringle (2011) objects: instead of its claimed epistemological turn, "Contentious Politics" is an ontological movement, a change on what to study (action and structure, relational dynamics by mechanisms and processes), and where the social turn is yet to come, by the incorporation of epistemologies from the Global South.

This paper attempts to contribute to this challenge, based on claims raised by Latin American scholars and movements, organized in five elements: the spatiality of contentious politics, in particular subaltern strategies of place based identity building; the commodification and the coloniality of knowledge; the potential of contemporary peasant and indigenous movements; the social question as a cross-cutting issue; legal mobilization based on non-individualist conceptions of rights.

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological. As secularization of the "holy alliance" of social scientists and church and religion decays, in a supposedly nonlinear process of undetermined duration, sociologists and anthropologists take upon themselves the task of managing the remnants of religion, according to the parameters of modernity. Due to their lack of an elaborate theology concerning sin and guilt, the AfroBrazilian religion has become the object of explicit and enthusiastic approval from leading names in social science departments all over the country. On the other hand, scholars of international reputation (Brazilian and at times foreign) have contributed to give the cults a systematic theology supposedly based on originally tribal African religious ideas. The movement has been called the "holy alliance" of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in "sciences of religion" that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrariwise, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal church and other large religious community as authoritarian and intolerant of all forms of individual diversity.

Fighting GM Crops in Argentina and Brazil: Global Constraints, National Opportunities?

When one looks at current figures, in which Brazil and Argentina are, respectively, the second and third world’s biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and keep revolving around the issue are difficult to visualize. However, the adoption of the technology has been disputed for almost two decades. A major difference was the capacity of Brazilian movements to jeopardize the interests of the pro-GMOs coalition; they had to wait for a decade until soybean production had been converted to GM seeds, what took four years in Argentina. This created a widespread recognition of a controversy over GM crops in Brazil, what never happened in Argentina.

There are many other factors differentiating the cases, but also similarities between them. Frames were similar; because movements participate in transnational advocacy networks, where frames circulate. Different from many conflicts in the Global North against GMOs, in these countries there were not only issue-oriented groups, but also identity politics, as peasant movements were important actors. The so-called "Camposina frame" “food sovereignty” is very prominent.

A major difference lies in the organizational bases and forms for resisting GM crops. The great power of the Brazilian movements lies in the building of a sustained campaign among environmental, consumer rights, agro-ecology, human rights and peasants groups. A coalition was formed with dissident scientists, allies in local agencies and politicians. They engaged in legal mobilization and developed a strong communication front as early as 1999, with a weekly newsletter and a blog. None of these factors are found in the Argentinean case.

The belief that by acting together there was a possibility of affecting social change makes a crucial difference: Argentinean activists perceive more global constraints to their fight, whereas Brazilians perceive more national opportunities to theirs.

The Protestant Ethic Thesis before Weber: Forerunners in France and Brazil

It is well known that the "Protestant Ethic" thesis had existed for quite some time prior to Max Weber’s own formulation. Some specific cases of anticipation of the thesis are represented by Émile de Laveleye and Napoléon Roussel, in the French speaking world of the 19th century, and, in the same century, by Brazilian writers Tavares Bastos, E. Carlos Pereira and a certain number of missionaries of English and North-American background who worked in Brazil, like Zachary Taylor and others. Even details of Weber’s thesis, concerning, for instance, the emphasis on the consequences of sectarianism ("Sektentum") are present in mid 19th century Tavares Bastos’ work, and of course in Roussel’s who wrote in Portuguese, or even knew he had existed. While such forerunners do not necessarily reach the same level of theoretical, indeed of theological refinement as does Weber, they view adhesion to Protestantism (albeit, at times, in a rather cultural and secularized sense) as a necessary condition for modernization and economic development. A common source to Weber and, on the other hand, the forerunners, may have been Hegel’s Lessons on the Philosophy of History which, directly or indirectly, did not take long to reach Brazil and, of course, France. Weber’s own formulation of the thesis seems to represent a largely secularized version of a tenet of Protestant apologetics. Again in largely secularized terms, this is still, in early 20th century, a fully living, indeed burning issue in both France and Brazil, being but a continuation of the Kulturkampf, the culture war, which has for so long opposed the Protestant and Catholic conceptions of society and modernization.

The Challenge of Sociology of Language: Living in Society, Living with Words

Nowadays, « sociology of language » is explicitly identified in the research groups within the I.S.A. Although sociological associations all over the world don’t seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to « sociology of language ». The cause is probably that it is difficult for sociologists to work on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonic principles of Saussure for whom language has to be studied beyond the social context ; it is significant that a scholar as influential as Thomsky still follows the « saussurean dichotomy » and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain things are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
realities is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language itself? Or should we try to persuade the sociologists that all sociology is necessarily a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

Homogenous or Not?
Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japan’s 1980s and early 1990s’ dramatic shift towards universalist-particularist orientation; the content analysis undertaken indicates a diversity of newspaper editorial positions along progressive-conservative and universalist-particularist continua, with the Asahi the most progressive and universalistic of the four publications surveyed. While relative unanimity of opposition to the A-bomb is found, the analysis indicates that nuclear arms were opposed for a variety of motives which could be characterized as either universalist or particularistic. Further differentiation is observed on contextual issue positions such as aid for hibakusha, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City
This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and normatively disparaging construction – of urban informality exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy property interests employ the attribute of informality to stave off “Third World” settlements and enable a “First World” lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent “informality” takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite.
Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosing of the urban elite in “gated communities” is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-world urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interactions between those private urban developments and surrounding marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

Network Analysis For Discovering Political Conflict In Standardized Interviews
This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftists or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

Active Citizenship and Rights Awareness Of Roma In The Czech Republic
The goal of this paper is to question the reasons for low participation rates of the Czech Roma in political and civil society organizations considering such participation is theoretically perceived as crucial for excluded minorities’ empowerment. Issues related to active citizenship and rights awareness are somewhat low on the public agenda compared to other issues of social inclusion. Although most Roma face discrimination, there is no mobilization process that would lead to significant empowerment when it comes to political or civic engagement. The Czech government in its annual Report on the State of Roma Community in 2007 defines as one of the 3 priorities of Roma integration the human rights dimension focused on equality and protection from discrimination. However there have been no Roma political parties either in national, regional or local elections therefore there are no Roma representative in the Czech Parliament or any other elected body. Furthermore, the Czech Statistical Office does not desegregate votes by ethnicity, so it’s not possible to say how many Roma vote and for which political parties. However, there have been rumours in media about Roma selling their votes to some parties. Such rumours have not been confirmed before the court but further damaged the public image of Roma and possibly discourage their participation. There are 52 civil society organizations concerning in various ways Roma related issues. It is hard to divide them into Roma and other civil society organizations since often bigger civil society organization have special Roma programs and often employ Roma. It’s noteworthy that Roma organization the Association of Roma in Moravia came out of a Roma political party, the Roma Civil Initiative. There are other Roma organizations in the field of media and culture.

Segregation Of Roma Children In The Czech Educational System
One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities one half, of Roma children have never received education in these types of schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s access to education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose a child with disorders in order for it to be placed in a special school) in terms of improving their diagnostic methods and their work with socially disadvantaged children. In April 2010, the Czech Ombudsman concluded that the disproportionally high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which are used to place children in special schools, this paper will seek to change the discriminatory practice I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some...
of the Czech citizens from the education process and what are the main consequences of such approach.

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people’s transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people’s choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of community, culture and food supply, and a deteriorating environmental and ecological condition? What effects, if any, will this have on land quality, use of resources and food security?

While private property is strongly engrained in the socio-cultural experience of farmers, as well as corporations, their definitions could collide when those of the former relate to identification of time and place and those of the latter relate to profit and exploitation. Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? If so, what are the implications for land use and management in this context?

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatized in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift.

By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests of mind the broader public and the disadvantaged, in particular.

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Haryanvis of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with different reference and denial. In the other hand, the embedded centrifugal mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as ‘inferior others’. These women are facing a position of paradoxic hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society, which can be expected by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to engage the leaders of non-profit organisations themselves in the research process. The paper draws on earlier work on the hybridisation of social housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences of state, market and civil society. This method involves collation of responses to scaled surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up deep interviews to explore and interpret the meanings of their responses.

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatized in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the white-collar influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

RC36-624.1
MUNIA, RAFAEL* (Waseda University, ndebud@hotmail.com)
Resistance or Alternative Alienation?
This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the rigidity of its job-hunting system, the curriculum of homogeneity and individuality suppression that begin in the school and echo in society, the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of imagined structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness, that is characteristic of the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individuality and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the oppression of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what the youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born
The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of outmigrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education. Moreover, the decrease in the out-migration rate is less pronounced for the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

MUNOZ-GOY, CELIA* (University of A Coruna, munoiz@udc.es)
Effect of Economic Crises on Work Orientations Among European Countries
An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing focus on intrinsic, self-actualization views in detriment of the expressive work orientations, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression-. The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental views. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors.

The Influence of Linguistic Inequality on the Vitality of Two Otopamean Languages of Mexico: Chichimeco Jonaz and Tlahuica

In this paper we explore the influence of linguistic inequality on the vitality of two related Otopamean languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish. First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyzé and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants represents the second biggest Japanese descent group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. Sushi and sashimi awakened the curiosity of Brazilian people and the presence in Brazilian territory. One of the important aspects of this culture is the presence in Brazilian territory. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal goals. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship. These values suggest an alignment with the Japanese culture. The research analyzed the influence of cultural factors, such as food, on the Japanese culture and how it is perceived by the Brazilian consumer.

Smart City, Surveillance City: Ubiquitous Computing, Big Data and Urban Life

'Smart cities' combine ubiquitous computing and urban management, and are characterized by pervasive wireless networks and distributed sensor platforms from video surveillance to meteorological stations, monitoring flows from traffic to sewerage and providing information in real-time or in anticipation of risks. These have extended from small projects for example, shopping / business communities with integrated building control systems combining fire detection and crowd flow monitoring or other kinds of customer tracking, through larger but temporary initiatives like the command and control systems established for sports mega-events, to permanent whole-city initiatives like Rio de Janeiro's Smart City, sponsored by IBM.

Although largely civic, corporate and managerial, these schemes have strong influences from police and military sources, from crime mapping and predictive policing models, to new forms of urban warfare involving forms of distributed sensor platforms, and computer analytics, to enable forces to get a 'clear picture' of the complexities of the urban landscape and its inhabitants. In some cases in the USA, these have come together in overt ways, for example in the new 'Domain Awareness' initiative in Oakland, California, which extends an existing port security project way beyond the maritime 'domain' into the surrounding city, combining military and conventional civil government.

Drawing on work in science and technology studies, media studies, sociology, geography and surveillance studies, this paper considers the smart city as the archetypical urban form of the ubiquitous surveillance society. The paper considers the place of human rights in a broad sense, not simply privacy but also equity and access to services and justice, and the ability to flourish, in cities in which flows of people are managed like goods or natural resources and asks whether such rights can be 'guaranteed' in any meaningful way, or will be written out.

Locating Police in the Global City: Community Safety Development in Tokyo

Local policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the 'command centres' of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particularly in a large, traditional Japanese urban space, surveillance is still undergoing an uncertain transition in the encounter with global neoliberal capitalism.
There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and displacement of wide areas. As a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying ‘damages’ would classify victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers’ involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study. What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

Knowledge Workers’ Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neoliberalistic logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects’ education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Semenza, 2012). Which relation does it hold between educational levels and possibility of effectively developing knowledge workers’ competencies and skills? How do knowledge workers represent and face their precarious conditions?

Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 and 30, have been collected in reference to the transitions between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts.

The research inquires on the one hand the risks of depauperation of knowledge and deskilling of highly educated young workers; on the other hand, the strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers.

In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as “independent and professionals”, though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types.

Some research questions will be under study:

- What is the effect of educational attainment of men on their fertility?
- Is it different for men in consensual unions and in direct marriages?
- In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers?

Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

Knowledge Workers’ Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neoliberalistic logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects’ education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Semenza, 2012).

Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized ties in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

Position of Women in Sociology or Female Founders in Sociology

Sister’s founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even though there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle’s distinction between male/female, according to authoress Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, religion and tradition. Logic of dominance and its old objectification, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalestream, independent man vs. independent women, Aristotle’s mysoegy.
Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This shift is several factors for language shift to take place language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational development and needs of the society. Moreover, this kind of existing rigidity in attitudes towards language use and emotionally motivated views might cause problems in the long run for society in getting education or employment opportunities. Language policies has made mandatory use of Malay in education, use of the English language at different levels with power and efficiency, use of mother-tongue languages in education and mass media as far as possible. The present day generation prefers training in job-oriented, application and practice oriented education, so they are forced to shift from their mother-tongue to the national language or English for specific purposes. This is because of the restricted use of their own languages. The present day use also reflects the shift from spoken Tamil to English as the home language of the Tamil community. So, this paper emphasizes the social relevance of the sociolinguistic research that is more concerned with a developing community, especially their language use. More so are the language policy activities in order to approach the problems faced by that community in formal domains of language use.

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Successful reintegration into the home country begins in the host country (Kathleen Newland and Aaron Terrazas, 2009). Children are usually not reckoned as vulnerable when migrating with their family. Parents and common people often think that moving temporarily to a developed country will give no distress. However, the true problems have arisen both in integration and reintegration. Indonesian children of migrants have to encounter challenges and inequalities when practicing cultural and religious norms in a country where those are different or do not exist. The interview with Indonesian moslem children revealed a fact that they felt a little “different” when their Japanese friends asked about why they were fasting. Meanwhile, in the reintegration, most of them experienced the phase of silence when they did not feel belong to the society while they know they should. One respondent had experienced an unsuccessful reintegration when his school became one terrifying place because he was bullied for his unreadiness to face language and cultural challenges. He remains friendless until now. In the findings, it is revealed that parents usually claimed that there were no significant problems in both phases. They were all worried only about getting a school and financing the children. While, some children showed the opposite behaviors, telling that their parents did not know their feelings. Some even felt traumatic in migrating to Japan. All children deserve to have a safe place wherever they are in the world. This issue should be well-addressed by parents, schools both in Japan and Indonesia, and endorsed by the government policies to properly support these children in undergoing the adaptation phases, especially the underestimat-
ed reintegration.

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Contesting Chinese Capitalism

As the developmentalist goal of catching-up with the West is gradually achieved, will China's political economy begin to gradually converge on an Anglo-Saxon (neoliberal variety of capitalism)? Or, in contrast, will the 'China Model' of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades?

This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideological battle to define China's national development strategy in the 21st century.

Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different hegemonic visions for China's future:

First, the ‘neoliberal’ vision which proposes to further liberalize China's economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the ‘authoritarian socialist’ vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the ‘liberal democrat’ vision which combines a faith in markets and a distaste for state own-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy – it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominantly positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of "Blockupy", a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women's reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather they are challenged and reinterpreted in ways that support mothers' participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

The objective of this report is to discuss how Japanese young people relate to music based on "A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness," a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool. Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as "job-seekers," "jobless people who have a desire to work, but do not seek a job," and "jobless people who do not desire to work." Then, we compared the economic and health conditions of jobless people to those of working people.

The study findings suggest that the proportion of jobless people who have a desire to work increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male "jobless people who do not desire to work" were most likely poor or suffering from a mental illness. For women, however, "job-seekers" and "jobless people who have a desire to work" were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's medias? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

Costs For Survival

The necessary cost to continue the life increase year by year. It is said a baby weighs in Japanese assume a debt 7 million yen's back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility. But responsibility of people, never aware of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = (welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance), for Incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages' example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand and that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded as unfair. Historical and institutional contexts in each country frame citizen's perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen's life differently according to one's industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap
by analyzing what determines “what amount of income people think that they should earn.” To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of ‘just income gap’ between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the leisure experienced by these women is not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their boarder cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty. It etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring “a better life for all”, it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic services, such as water and electricity. Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indentured by other means. Growing from illegal reconnections and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles forced the municipality into its own series of policy formulation processes in response. This paper will explore the culminating of these processes in the City of Johannesburg’s most recent indigent management policy, which, it will show, puts forward a “pro-poor approach” that brings together a targeted model of partly de-committed access to services for those identified as “the poor”, that are nevertheless delivered within a system that is run along market principles overall. It will argue that the nature of this differentiated system perpetuates inequality even though it might address poverty by encouraging a particular form of life for those identified as “the poor”.

Examining the Impact of Health and Housing on Poverty Among Older Australians

As with most OECD countries, the Australian population is ageing. It is predicted that by 2050, over 20 per cent of the Australian population will be aged 65 and over, compared to 13.4 per cent in 2010. The Australian retirement income system is heralded as an exemplar of the World Bank’s three tiers approach, with the means-tested government-funded age pension complemented by occupational pensions subsidised by taxpayers. Home ownership is also widespread among the current generations of older people (‘the fourth pillar’) and the government provides a range of additional supports to those in old age, including provision of health and aged care services. Existing studies indicate that Australia performs below the OECD average in terms of poverty, defined narrowly in terms of income, but these studies ignore the critical role that home ownership and health care provisions play in maintaining a decent standard of living for older people. This paper compares a range of alternative approaches to addressing this gap and demonstrates that perpetuating the conventional income approach by taking account of the role of housing wealth, housing costs, health costs and health needs in affecting the poverty rates of older people – relative to general living standards and relative to the risks facing other demographic groups is inappropriate. The paper highlights the roles that poverty beyond the conventional income approach by taking account of the role of housing wealth, housing costs, health costs and health needs in affecting the poverty rates of older people – relative to general living standards and relative to the risks facing other demographic groups is inappropriate. The paper highlights the roles that poverty beyond the conventional income approach by taking account of the role of housing

The Centrality of Housing Tenure: Further Perspectives on the Lives of Older Public and Private Renters in Australia

Recent estimates indicate that around eight out of ten older Australians are homeowners, with 70 per cent outright homeowners. Much research has focused on exploring the implications of this high rate of homeownership. However, research on older public and private tenants has been limited. This paper is part of an ongoing investigation exploring and comparing the life circumstances of older public and private renters and the centrality of housing tenure. It is based on in-depth interviews with older renters in the private rental market and in public/social housing and a quantitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and characteristics of the neighbourhood and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers’ strike at the Honda plant in 2009. In Prilco, an auto part plant of the Toyota in Combatore, and in the Graziano Transmission unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. These strikes were remarkable in the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the factories, and hence stood apart from other workers’ campaigns inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.

NAITO, ASAO* (Meiji University, naitoao@kisc.meiji.ac.jp)
From Analysis of Jjime (Bullying) in Japanese Schools to Constructing Theories of Psycho-Social Orders

In this paper, we examine jjime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This paper provides us with the functional equivalent of Philip Zimbardo’s experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, jjime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of jjime can be ascribed to the psycho-social order imposed on the students’ everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of countermeasures against bullying in school, (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

Clarification and Visual Representation of Concept of Power

Key Words: two ways of inference about power, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power

During the last decade, discussions about concept of power became unnecessary complicated and confusing. Some arguments on power such as one of M. Foucault are “philosophical-sociological” theory rather than empirical-sociological theory. This state of affairs resulted in confusion about concept of power among students of sociology. In addition to this, there is not much effort to visually represent concept of power so that students may conceptually and easily understand power. Therefore, there is a need to reorganize and clarify concept of power. The purpose of this presentation is fourfold. First, two ways of inference about power will be suggested; a “prospective way” that indicates “power as potential” and a “retrospective way” that indicates “power as an effect on the outcome.”

Second, a “situation-process” model will be suggested to understand power conceptually. In this model, an actor means a person (or a group), structure means symbolic systems, social rules such as customs and laws, and organizational structure in addition to physical structure. Situation means a state in which persons or groups are placed in. Process means interaction processes and communication modes.

Third, “conceptual formula” on power will be suggested as below:

- Simple Power = (power resources {knowledge}) * communication skill
- Interaction power = (power resources {knowledge}) * communication skill

Fourth, a visual diagram on power will be made to make it easy for students to understand concept of power.

These four, i.e., distinction of two different ways of inference, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power, will enhance understanding of students about power.

The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result. The mangrove ecosystem is established only in the limited area and is of one valuable one to support biological diversity. The Guinean mangrove forest has the value as “an economic forest” producing firewood. Therefore it is important natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the mangrove activity flocks from the foreign country as the urgent matter. However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. To understand it, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.

Positive/Negative on Leisure: From the Perspective of the Difference of Enjoyment and Pleasure

This presentation aims to examine positive / negative on leisure we participate in. In the examination, we hopefully apply flow theory described mainly by Csikszentmihalyi. he has found out the significance of intrinsically Reward leading to Enjoyment, as the case in the case studies such as rock climbing everyday work. This study distinguishes the positive from the negate, applying critically flow theory. The main issue is the difference of Enjoyment and Pleasure. According to Csikszentmihalyi, enjoyment is useful for the growth of self. Pleasures useful just for keeping the order of self, it exists just on time. On the other side we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand Pleasure when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective of the growth of self, we can take positive parts in leisure. So is the chance which we create Enjoyment.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating Enjoyment.

Women On Top: The Temporal Status Of Gender In Elite Professions

The recent growth of women’s integration into “high-status” professions over time has been documented around the world, but stark variation exists across fields of education, government and corporations. However, while there has been much focus on women’s labor force participation generally, the literature surrounding hubs of elite workforces is more fragmented. As a result, we lack a holistic view of the experience of gender in high-end professional spaces where women continue to permeate in new and diverging ways from the past. There is of course important research that explores the experience of women in specific industries and organization types, but there remains a need for more studies using comparative frameworks. For instance, across the world, most governments have far less than 50 percent of women members making critical decisions in their countries. In corporations globally, women have progressively taken over greater numbers of high-status positions, but case-study research has continued to be dominated by men. While industries in each country have unique drivers of inequality, common mechanisms lead to the overwhelming lack of women in high echelons of professional organizations cross-nationally. In this paper, we provide a meta-analysis of existing literature describing the mechanisms that perpetuate gender inequality within and across international professions. Building on existing sociological research examining gender in the legal profession, consulting and academia, we ask: (a) What kind of changes have we seen over time in these elite professional spaces? (b) How are these changes different from findings in the labor force more generally? (c) What does this emergence say for how we think about inequality and stratification in these professions more generally?

Effects of Wives' Relative Resources on Husbands' Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands' gender role attitudes among dual-earner couples with children are associated with their wives' relative resources, namely, income, employment status, and educational levels. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives' economic contribution to the family income exceeds their. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives' educational levels or managerial posts are higher, wives' incomes will be higher. The wives' higher incomes are associated with the husbands' more egalitarian gender role attitudes. However, the wives' educational levels or managerial posts are not directly associated with the husbands' gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives' social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands' gender role attitudes concern wives' provider roles within the family, but not with their wives' social roles in public. Second, it is speculated that the smaller the difference between husbands' incomes and their wives' incomes, the lower the level of husbands' tendency to adopt traditional gender role attitudes.

The Self Measuring Radiation Movement for Alternative Food Networks  
This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990s, the localized agro-food movements have spread in several countries; the United States, European countries and East Asian countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation. On March 11, 2011 East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the winter of 2011, so many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author's participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the members can judge the level of radiation by themselves based on their own experiences. They can share not only the data of radiation but also the information about how to minimize the effects of radiation. Finally the implications of this study for AFNs will be discussed.

The Making and Unmaking of the Global Social Movements in the Japanese Sixties  
Predominant scholarship on the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create anti-political movements during the 1960s and 70s based on the Japanese Anti-Vietnam War movement, which created alliance with the movements in the First World Western societies and the Japanese New Left that were influenced strongly from the Third World revolutionaries and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shapes the distinct characteristics of the global movements.

The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens  
In the literature of comparative politics, there is a growing interest on the causes and consequences of the intra-party democracy such as the adoption of primaries for the leadership selection. This paper examines the dynamics and the developments of intra-party democracy in the main political parties in Japan and its impact on citizens’ political participation and partisanship, based on the newly constructed comprehensive dataset on the party-leader selection in Japan.

This paper consists of three main sections. The first section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature.

The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan.

The third section then investigates the impact of the intra-party democracy on the citizens’ participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens’ party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

Mutual Cooperation Due to TFT Strategy Observing Fixed Number of Cooperative Players  
Reputation theories that give a solution to 2-persons Prisoner Dilemma have a common assumption that all players observe what happened in all other players. However, the assumption that a player has to observe all others seems to be unrealistic. To overcome this problem, Nakai and Muto (2008) proposed us-Tit For Tat (TFT) strategy that requires a player to regard another player who did not cooperate with himself/herself and his/her “friends” as a friend, and they showed emergence of a mutually cooperative society. They assume that the us-TFT player doesn’t have to observe all other players and observe him/herself and his/her friends. However, when all players become mutual friends, they observe all other players, and hence us-TFT suffers from the same weakness of previous studies. To solve this, we propose a new us-TFT strategy with which a player observes a small fixed number of other players. The players to be observed are selected based on how cooperative they are toward the us-TFT player. We performed evolutionary simulations with ALL_D, ALL_C, the us-TFT etc and found emergence of a mutual cooperative society. Especially, in case that the number to be observed is two, mutual cooperation is the most likely to emerge. Therefore, it is concluded that mutual cooperation can emerge without observing all others and it is a new finding. In addition, we examined what mechanism works. The takeoff begins when a player changes into an ALL_C player by an accident. After that, there appear two groups, in which the ALL_C players and us-TFT players such as the ALL_C player is positioned at center of the network, and us-TFT players surround the ALL_C player. Therefore, the network looks a star-like one and grows into a mutually friendly network.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably "cosmopolitan" film, My Nightingale (Washaki no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan's ethnic-nationalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existing in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria's slogan of gozoku kyōwa (peaceful co-existence of the five nationalities) and deko rakudo (heavenly place of virtuous rule) as simple political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repressioniveness and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children's Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from the health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCVC), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpenetration between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disabilities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazardous area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.
Involvement in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of re-organization under the tourism context their bead adornments or their "traditional" appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons' social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of convections -- the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, which comparing caste group, has effect.

The Effect of Education on Society Reconsidered: Positive and Negative Consequences

This research investigates both positive and negative effects on society of more people seeking and achieving a higher educational level. For individuals, the result of greater educational achievement has been well studied and documented. However, what is not always clear is how each country attempts to address this issue. Taiwan and Japan share many similar historical backgrounds. This study clarifies (1) how caste system causes individual relative deprivations in contemporary Nepalese society, (2) how these deprivations effect on subjective well-being, and (3) the role that the traditional higher caste group's advantages play in the non-metropolitan areas with the fast-paced demarcation of geographical units in turn become the principle for partial deauthorization of supposedly rigid boundaries and incessant inclusion of different senses of belonging.

There has been a presupposition in the explanation of ethnicity as sub-groups of a nation-state that there exist persistent, if not fixed, boundaries between these groups. Many scholars have postulated that the modern nation-state imposes homogeneous notions of groups that people eventually accept, resulting in rigid social demarcation within the population. The case of Betawi ethnicity, the "Batavian Indigenous" who emerged as a creole in the colonial setting, illustrates a distinct contradiction to such conventional wisdom. Betawi people basically accepted the state-sponsored definition of ethnicity, yet they emphasized the similarity rather than the difference between cultural features of different groups and those of "Betawi culture" officially defined by the government, so that people of different group-consciousness could tolerate each other within one broader category. The category of Betawi has come so far as to subsume those of foreign origins who were once labeled as non-Indigenous/inlander and excluded from the category of Indonesian Nation/Bangsa Indonesia. Today this ethnicity exhibits the potential for delegitimizing the persistent and exclusive human classification of "inlander" or "Bangsa Indonesia" which has long been promoted and imposed by colonial authority, as well as by authoritarian rule.

Such notable tolerance to otherness cannot sufficiently be explained by the sole fact that Betawi started off as a creole. The presenter investigates the origin of this tolerance by describing Betawi’s genesis as Creolization, where different groups are intermingled and fused; and the group's vicissitude under state cultural policy as Amalgamation, where various ideas of group-consciousness are reorganized and reconsolidated under a broader singular category. The transition of Betawi ethnicity instantiates a paradoxical consequence: universalistic rhetoric of difference that the state used with construction of the fast-paced demarcation of geographical units in turn become the principle for partial deauthorization of supposedly rigid boundaries and incessant inclusion of different senses of belonging.

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOS) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequilities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them, such as the physical environment and the economic circumstances on a temporary basis. The data used in this presentation will be documents on GOs/ NGOs’ activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Social Care at Japanese Snack Bars

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called “mama”) by customer is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day's hard work.

Most of the customer is married and belong to companies. They go to Japanese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It’s possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more incinerator. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Principle. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators to realize In-Ward-Waste-Disposal was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of incinerizationism as the policy paradigm in waste management, while the sitting became stagnant when the urgency eased as the economy became sluggish and the influence of incinerizationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequity began.
Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new conceptual grounds technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag still behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. To do this, a study traces that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough research for cross-border interview inquiry is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State about “Viet Kieu”, including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them as an part of Vietnamese community. In doing so, the researcher will interview “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefits from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and local-ly-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-

**Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries**

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the mainstay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by small holdings, low technology, little value addition and mass scale food losses. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened 'Agricultural Transformation Agenda' which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-à-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that characterizes the improvement environment. The paper concludes by observing some disturbing signals associated with the policy.

**The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)**

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (“anchors”), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multiactor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The paper will explain the scope and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

NAUDET, JULES* (Centre de Sciences Humaines (MAEE/CNRS), julesnaudet@hotmail.com)

DUBOST, CLAIRE-LISE (ENSEAE)

**Corporate Interlocks and the Specificities of Indian Capitalism**

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc, with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative typology.

This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSU); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 691

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:

1° The 1991 liberalization policies had an impact on the shape and density of networks.

2° Networks are still very much shaped by the stakes the State has in PSU companies.

3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.

4° Connections between firms are likely to be structured by caste and family networks.

5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

NAVARRO, PABLO* (University of Valencia, pablo.navarro@uv.es)

**Social Objects As Tokens for Social Eigen-Behaviors**

This paper puts forward the concept of 'Social Object'. A 'Social Object' would be a sort of imaginary hanger (or better, an imaginary hanger shared by a community of social individuals) which works as a referent consistently targeted by a particular family of social actions and interactions. This set is somewhat fuzzy, and it would be made up by the actions and interactions that satisfy—to some acceptable degree—such social object. For instance, the social object we call 'greeting' would be the 'hanger' or 'imaginary shared referent' of the (fuzzy) set of actions and interactions which satisfy that specific object (namely, which accomplish an acceptable greeting) in a given situation. That set of actions and interactions would include those solving (accomplishing) the act of greeting in that situation, and would exclude those failing to do so. In other words, a social object would be the ontological assumption that enables and orients our interactive success (or our interactive failure, in case we misfire and act in a way unacceptable for our interactive partners).

The notion of ‘Social Object’ is cognate to the conception of physical objects as “tokens for (eigen-)behaviors”, put forward by Heinz von Foerster. From this viewpoint, objects are not realities independent from our actions, but assumptions that guide the cognitive and practical processes of the subject—a subject who “constructs” such objects through his actions. Different types of societies are structured by means of different kinds of social objects. And the sort of social objects that are emerging as typical of today’s global society are Social World-Objects (namely, social objects which define their dynamics as unitary systems on a global scale). Many of those Social World-Objects are being generated within and by the Internet.

**Gestión DEL VALOR E Identidad De La Mujer Mexicana**

Los procesos de agencia y resistencia de la mujer mexicana se dan dentro de una cultura de la oralidad que configuraron un modelo centro-europeo-norteamericano; pero las nuevas condiciones de la globalización planetaria hacen que se generen perfiles que rebasan esta primera clasificación por lo que habla:mos de una “cuarta mujer”, después de Lipovetsky (1997), que responde a las categorías de contemporaneidad y en tránsito de construcción.

La cuarta mujer en tanto sujeto sostiene posiciones de liderazgo que van más allá de la división del trabajo y sí establece soportes de sus propuestas de vida como un sistema decisional dentro y fuera de la pareja. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades como un sistema decisional dentro y fuera de la pareja. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades.

Las desigualdades de la cuarta mujer están delineadas por tres estructuras que obedecen a la educación, productividad y empoderamiento que configuran un perfil estadístico del comportamiento social contemporáneo; el ir sorteando las diferentes construcciones de esos tres sistemas la hacen una mujer flexible, educada, ocupada económicamente y con pretensiones de empoderamiento en base al éxito profesional. Es capaz de regresar a valores como la maternidad, pero busca embarazarse sin requerir de la presencia permanente del hombre; es una “mujer emancipada”, “dueña de sí misma y de la situación”; sin embargo, las condiciones de resistencia a los peligros de regresar a la tercera mujer hacen que, tal vez, se transformen en negociaciones con la pareja. En este proceso...
This paper examine violence against women emanates from the social hypothesis of superiority of men over women. Insubordination of women legitimizes gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

**Prevent or Cure ? – the New Philosophy of Health Care**

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographic changes and particularly - aging of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system: illness, basic health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn't be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment.

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its implementation in the health care systems. The crucial significance is to specify the determinant of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.
similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

Financialization and (Global) Class

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global “market culture”, emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a “global financial class”.

Defence and Security Policies in the EU: From Decision Making to Political Culture

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European “Security Research” activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in “civil” security. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

Cynical Vs Empathetic Worldview Schemas and Fairness Perception

This research explores the contrast between cynicism, as a component of Kwok Lewis human social axioms construct, and a more empathetic or altruistic view of the social world. As such it looks at the contrast between what game theorists call “zero-sum” perception and “positive-sum” perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, it seems to capture a critical dimension in human social worldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The research explores ‘cynical’ and ‘empathetic’ orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to undergraduates in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

Emerging Dimensions of Senior Friendly Built Environment in Aging Societies

The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimension, summarise buildings in a way that is relevant to the residents’ quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the feeling of well-being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Stewart 1998, Duffy et al. 1996), 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home), 6. Orientation – Disorientation – Confusion regarding place, time, personal identity, or social situation – is common among people with dementia (Cohen & Weisman, 1991). 7. Sensory simulation is concerned with the different elements of sight, smell, hearing and touch. 8. Conflicts between different building users (because senior care housing is not only a living setting but also a staff’s working place). 9. Participation and contributions of older people.

The objective of the presented method is to compile a comprehensive view of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.

“No Time like the Present”: Lessons Learned on Timeliness of Disaster Donations

In the aftermath of each disaster, material goods flow into the disaster affected area. Given with the intention to help survivors, the influx of items often generates situations which the community faces as a “surplus” or, in other words, an over abundance of items that are inappropriate, difficult to sort, costly to transport or store, and challenging to distribute. This paper takes a closer examination of one contributing factor to the problems associated with the disaster management process: the timeliness of donations. Drawing interviews following several disasters events that struck the United States in 2012 and 2013, as well as interviews following Hurricane Katrina’s devastation in 2005, this study explores the extent to which donation supply is often incongruous with donation demand. Lessons learned from these disaster events suggest the need for a system that accounts for the progression of need in affected communities.
The social and logistical pressures on organizations to accept non-priority items are discussed, as are the benefits reaped by organizations that employed time-lines of donations management.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in many shrinking cities all over the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) outmigration was driven by factors that affected predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Thses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical characteristics are impacts of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5.6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income fragrments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing development and interventions on socio-spatial structures). The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, decision-making-structures) of/and original specifications (planning-procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments’ and housing policies’ potentials to better the attendance of intense urbanisation-processes observed internationally.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with children in the labor force participation have the greatest poverty reducing effects in high-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labour force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001, four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per day and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industries and sectors with large demand (Mallach/Brachman 2013). The objectives of the study are to present the social and logistical pressures on organizations to accept non-priority items and to discuss, as are the benefits reaped by organizations that employed time-line...
Most important. The reasons for these differences are discussed in the paper, and ventures for further research are outlined.

**Just Generational Welfare Contracts and Poverty**

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often “implicit” generational welfare contracts that are embedded with social policies? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

**Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?**

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union’s Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches that take a life course perspective and the risk of ‘policy crowding out’ in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

**Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors**

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors’ life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
However, little is known what the effect of such policies is: Do policies which favour the traditional marriage family increase marriage rates and stability of marriage families? Do policies with a focus on single parents, patch-work families etc. accelerate the trend to more instable family relations? Do social policies as an alternative to family security increase cohabitation and divorce rates? The analysis is based on official national statistics for OECD countries and covers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

Family Support and Quality of Life: Structured Ambivalence As Bridging Concept Between the Individual and the State

The relation between family support and the welfare state as providers of support has been extensively researched in Europe. Most studies thereby focus on the quantitative dimensions, e.g. who provides how much support to whom. Existing research is descriptive in nature and rarely based on a sound theoretical frame. A qualitative dimension that might contribute to the theoretical frame, however, receives little attention, e.g. what motives for providing support to one’s kin, and what is the effect of providing support on one’s quality of life? Using the Survey of Health, Ageing and Retirement in Europe data with 16 European countries, differences in the effects of family support on the quality of life of people aged 50+ are analysed by applying hierarchical linear models with random effects and cross-level interactions.

The concept of structured ambivalence as a link between micro (individual behaviour) and macro (cultural and institutional context) is used to explain these differences. Structured ambivalence is thereby defined as discrepancy between individual behaviour and contextual factors and assumed to reduce quality of life. Our findings show that support providers’ quality of life is not only shaped by individual circumstances, but by cultural norms and social policies. Structural ambivalence lowers QoL, e.g. when family members do not live up to prevailing family expectations and obligations. Doing so, we provide a fruitful application of structured ambivalence as theoretical concept as well as new insights in the relation between social policies, individual action and quality of life.

Introducing Technologies in Africa. Between Appropriation and the Challenge of a Trojan Horse

Current studies on the introduction of technological innovations in Africa underline that we observe a process of appropriation. This is in line with the hypotheses of the science and technology studies (STS) claiming that the development, use and understanding of technology has to be seen as a social process between people and (technological) ‘actants’. The findings from mostly anthropological studies focus in the same way as STS on the change of technologies according to the social conditions of their use and emphasize the influences of the local context on the technology. Up to this point STS seems to produce in Africa similar results as in the Global North (or the industrialized societies). However, the introduction of innovations in Africa is characterized by a dynamic process that is in the other way characterized by the question how to shape the technology itself. The use of specific technologies may change the behavior and expectation of the users, too. Modern technology also incorporates basic ideas of modernity like the mastering of nature. Once new technologies are used they may act as a Trojan horse of modernity. In Giddens terms the behavioral changes are consequences of modernity. Therefore, technological innovation as a social process takes effect in two ways it shapes the technology but also the users. Which way these changes take is an open question. STS has shown that the development and application of technologies is a social process. When we use this approach outside the Global North we have to admit that the concept that technology itself plays an important role. We have to put more emphasis on the notion and function of ‘actants’.

The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy

Debates on processes of democratization create the impression that the middle-class and/or the civil society are the drivers of democratic change and the backbone of democracy. Seen from this perspective either these groups fight for democratic change or once they have a basic political freedom they will quasi automatically take possession of democracy. This was the expectation in the USA before the Iraq invasion (what we may call the “Rumsfeld Utopia”). However, we have learned that in Iraq, after the Arab spring and in many countries that under-went processes of democratization during the 1980s and 1990s there was no automatic process towards democracy. In these transitions the middle-class played an important role and many of the civil society associations, social movements and especially their political leaders had a middle class background. But the political groups and the leaders that opposed the ideas of a liberal democracy also had middle-class roots. At least in Africa and the Middle East the middle-class based civil society represent competing concepts of socio-political order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic rule (or socialism in Latin America). The claim for democratic elections may be used to legitimize any of the socio-political orders.
based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI surveys (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as ‘a new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording’s electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

Mainland Chinese Sex Workers in Hong Kong: Multiple Forms of Inequality Both in their Past and the Present

Purpose: This research aims to understand the lives and views of sex workers from Mainland China working in Hong Kong.

Design: This research appropriates the theoretical tools of Pierre Bourdieu and uses an ethnographic approach to explore the issue Hong Kong, including expert interviews, interviews with sex workers, participant observation and field documents.

Findings: Results point to gender inequality and various other forms of oppression weaving together to form the past and current experiences of sex workers in Hong Kong from a Mainland Chinese background.

 Fighting Against Youth Unemployment: The Hong Kong Experience

Purpose: This research examines the role of youth employment programs aiming at fighting against youth unemployment and proposes plausible solutions to remedy and improve the present policies and practices in dealing with the problems. The proposed measures are: 1) Formulating a long-term youth employment policy to provide youth with appropriate training in occupational knowledge and skills; 2) setting up a centralized system to strengthen the information and communication network of the territory's labor market in order to facilitate youth to seek employment resources and assistance; 3) building up closer collaboration between the voluntary service sector and the business sector in order to look for more pre-employment training opportunities, chances of temporary employment, full-time job possibilities, community participation and financial support; and 4) using multiple methods to fight against youth unemployment.

and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa's reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender perspective has been put into place and operates in all the realms of government. A lack of funding, human resources' constraints and insufficient co-ordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematic at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women's participation in the STI system in South Africa. South Africa has an aging, predominantly white male scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country.

**For Our Children's Future: Inequalities in Rural Development in Vietnam**

The previous literature on Vietnam's growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Dō Mīi initiative set up by the central government to transform the rural communities into urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is being grounded on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza. This research is being developed by a team of the Violence and Citizenship Research Group of the Federal University of Rio Grande do Sul, beginning in January 2013 and expected to end in December 2014. The aim is to comprehend and explain the dynamics of production and exercise of the violences within police institutions based on the power relations amongst men and women. The focus on such a male and use-of-force oriented space is still not well framed in gender studies. The dimensions of analysis cover working conditions, the career of police officers, and the institutional violence of the ambient. Therefore, the study uses mixed methods, specifically, surveys are focus group involving 13 states in Brazil. The fieldwork is pointing out many challenges for the insertion of women in the Brazilian police forces. The working conditions and environment show that the institutions were not properly adapted, as demonstrated by the lack or pre-cariousness of spaces for women, like bathrooms or accommodation. Regarding the career, many limits related to the professional development can be perceived as well. The data from focus groups also allows for the identification of institutional violence based on daily practices, which sets, sometimes, situations of moral harassment.

**The Shape of Selves to Come: Selfhood without Sexual Difference**

What can the historical persistence of gender tell us about possibilities for future selfhood not defined by gender? Is a more purposive way of being possible that is not reliant on the restrictions of binary sex/gender and if so, how? This paper continues work that proposes that a particular dominant mode of thought (or ethos) about the self and others maintains compulsory sex/gender. This is an ethos of oppositional difference and closure. I extend this theoretical work here to the practical consideration of what a post-gender and queer mode of thought and being, not premised on difference and closure, might look like. Drawing on a combination of Simone de Beauvoir's existentialist ethics and Judith Butler's ontological and normative impulses, I propose that a non-oppositional, non-gendered alternative mode of thought and being is ontologically possible or potential (although not inevitable). I sketch the ontological justification for this, and then move on to more practical implications for social life. This considers what this ontological picture means practically for attempting to re-form identity or self-hood according to more rejection of the closed and open-ended ethos. I argue that it would entail a particular ‘queer’ subjective mindset, an inexhaustibly reciprocal approach to relationships and the identity of others and sexuality, and enabling social contexts that foster these. I demonstrate how some of these are already apparent in certain queer social practices. I consider how such social practices may ensure efficacy in their intend-
China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities with different living conditions and examine the issues between the system and actual reality for workers. Finally, we'll suggest ideas for how existing issues could be resolved.

**Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases**

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well promised the Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS- agricultural sciences, economy, sociology and others- are far from providing effective knowledge in order to solve the problem. If these observations are correct, than the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian systems theory but limited to African cases. 

(1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

**Rights in the Absence of Recognized Status- Challenging or Reinforcing the Rightlessness of Irregular Migrants?**

This paper starts from the assumption that efforts to counter the rightlessness of irregular migrants can be divided into two broad categories. A first strategy seeks to secure rights through a shift of status - i.e. through regularization- while a second strategy aims at securing access to a number of basic rights (often conceptualized as human rights) for all residents regardless of their legal status. Demands for provision of medical care and schooling, as well as ability to access public space without fears, all fall within this latter category. Scholars have conceptualized these claims as an instance where the internal border controls of states are being challenged. This reading stresses the transformative potential of this kind of demands with regard to current citizenship regimes. However, it is also possible to read this strategy as insufficient in the sense that it leaves irregular migrants in a permanent state of exclusion. Hence, the implication of the second strategy remains disputed. Should it be understood as a component in a strategy to undermine border control? Or, rather, to entail the reinforcement of rightlessness and the consolidation of a divided society? Providing irregular migrants with a number of basic rights- while withholding access to full membership- can be seen as integral to the creation of a precarious labour force. Drawing on insights from the Swedish debate about irregular migrants this paper seeks to address these questions. The analysis is guided by the assumption that political demands needs to be analysed contextually as their intervention and implication differ historically and spatially. In accordance with this the paper seeks to provide an account of the specificities of claims-making on and on behalf of irregular migrants in different context with a focus on how this relates to different regimes of citizenship and border control.

**Migratory Work/Family-Practices On a Precarious Labor Market**

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and (endeavor to) achieve accountability and stability within their form of life planning. This session's three thematic lines hence are in very fine accordance with the way I approach my investigation.

My current research concerns mainly Polish construction workers who are commuting between Poland and Denmark in order to improve their life conditions. Following the collapse of the Soviet Union many Eastern Europeans during the 1990s began to work (illegally) in Western Europe utilizing the tremendous gap in wages between the two former totally divided economies. Following the 2004 EU enlargement workers from the former Eastern bloc obtained legal access to the entire EU labour market. In Denmark some 50,000 mainly Polish workers are working primarily in construction, farming, cleaning and other low-wage sectors. I follow groups of construction workers at work sites and in their families (in Denmark as well as Poland), in order to understand the complex relationships between migrant work and family life. Since I regard it paramount to understand this bottom-up outlook also in a more overall perspective, my material concurrently consists of interviews with representatives from organizations in Denmark as well as Poland and moreover with politicians on both national and EU level.

In other words – relating to the two poles of scholarly stand mentioned in the session abstract – I am interested in strategies and mechanisms of migratory knowledge (and everyday life as a whole), but regard it equally essential to understand how this is reproducible and must be understood as an element in maintaining societal cohesion.
Neighbourhood Effects on Migrant Youth’s Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naive OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Neighbourhood Socialisation of Youth’s Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilients respond relatively more adaptively and flexibly to situational demands, whereas both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers’ and undercontrollers’ work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilients’ work commitments are not influenced. In turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents’ unemployment is unlikely to be socialised by the neighbourhood context. Furthermore, undercontrollers’ work commitments and unemployment and overcontrollers’ work commitments are influenced by the neighbourhood, while resilient remain unaffected. This finding is in line with the idea that resilient are better able to cope with environmental demands, while overcontrollers and undercontrollers are more likely to be affected by their environment.

Polish in the Hague: The Stories of Long Term Migrants

Different sources estimate the Polish population of The Hague around 5% of the city’s inhabitants. Images portrayed in media and by politicians give the impression that this group is a cause of social unrest and negative stereotyping is common. In this paper the stories of migrants themselves are told. They live, work, and have started their families in The Hague. The respondents have all lived in The Hague for more than five years; most of them migrated before Poland be...
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

Space, Time and Symbol in Urban Indonesian Schoolboy Gangs

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habits of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt’s (1993) argument about the conditional and compensatory nature of collective masculinity. Second, school plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (jenggas) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

Using Local Cultural Forms To Talk To Youth In The Global South

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is veivosaki-yoga, which in Fijian literary parlance means ‘within dialogue or conversation’. The term veivosaki connotes a neutral sense of conversation and dialogue rather than storytelling. Yoga literally means ‘useful or worthwhile’. By engaging in veivosaki yoga, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of nongkrong (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom nongkrong is their preferred leisure practice with age peers. Nongkrong is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like talanoa research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

Discovering Ideological Codes in the Professional Work of Daycare Personnel

During the last decades there has been a tremendous growth in the enrolment rates in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention; the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children’s cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardised mapping and personal ‘stomach feeling,’ some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

The Practice of Control in Risk Activities

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this shift in focus on control, participants in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

Legalizing Internet Piracy through State-Invented Religion? a Case Study of the Swedish State's Acknowledgement of the Missionary Church of Kopimism As Religion

In 2011 the Swedish Kammarkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopism (Det missionerande kopismsamfundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

Network of Support Centers for Gender Equality in Greek Armed Forces

The paper presents the analysis of data from a research project for gender equality in Greek armed forces. The legal framework of gender equality in armed forces as well as the operation of the network of support centers under the funding of the European project “Artemis – Equal” will be presented.

The specific goals of these support centers were: the recording of inequality problems which take place in the armed forces, the provision of the information of interested parties about legislation and the official procedures in order to face the problems, the information about similar cases and good practices and finally the most important goal is Psychological, legal and Social support.

A Discourse on Transnational Crisis of Legitimation

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in reponse to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite often carried out by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or misconstrued) as acts of “terrorism”.

Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people’s practices while referring to the transnational migratory chains in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary labors under the foreign trainees’ system. We focus on these trainees, called ‘Kenshusei/ Jisshusei,’ at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism,’ in parallel to ‘actual transnationalism’ and ‘ideal-transnationalism.’ While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required to construct international transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators,’ regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on concepts of the nation-state and (civil) society as the decisive points in sociology. It is the conception of society beyond the nation-state along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture--the Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women’s culture that it is part of. Specifically, through an analysis of (text and images) of female-oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from “Johnny’s Entertainment” were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendships and relationships of mutual trust between the members of the group are represented frequently. “The day of idols” include events at school and coming of age ceremonies, friendships, and family are occasionally depicted, and the physical contact and conversation are made to look like expressions of homosexuality.

Situations that consist of silly tomfoolery and play by these idols are usually constructed as acts of “terrorism”.

Polynmodal Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse “anti-nuclear”, by relating various points at issue with anti-nuclear forces. After Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has started from ten years before. 12 sets of wind power have already worked now.

The results are following: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes become wide, and they have various motivations for the investigation, not only environmental consciousness, but the commitment to windmill and the expectation for a dividend.

If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movement.

Re-Entering the Labor Market after Childbirth Among Japanese Women

This study explores the women’s working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated this issue. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women’s career after they get the job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (IPSC). This study uses data collected from 1993 to 2008.

Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe clear movements have the backing of public opinion?

It is found that the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movement.

Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of “no immediate danger,” others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, there have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrand 2012), is an important sites where laypeople’s experience, knowledge, and logic are contested and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skepticism of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Yamamoto Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around anti-nuclear policy, and how such online discursive space may have ramifications to the transformation of political in Japanese society.

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades, with the rise of the dual-earner model, the provision of household labor has undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether or not to outsource specific house-hold tasks. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations from a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household chores is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision making of these households and how they make decisions about outsourcing household tasks and how these decisions are influenced by their personal, social, and economic situation. The paper analyzes the determinants of outsourcing decisions and how these decisions are influenced by their personal, social, and economic situation.

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management, and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage protection. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become active participants in tourism discourse that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guangxi in the Yao village of Huaili. Given the emphasis of the project on a community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community’s view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape its identity as a living heritage tourism discourse that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. Co-Location Problem

Working couples in general face a “co-location problem”. Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. Several research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outbalanced more easily. However, with the rise in women’s employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couple types. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasizes the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

Institutionalizing ‘Living Heritage’: Ecomuseum Development In Rural China

Blurring Work-Home Boundaries and Their Impact on Work-Home Conflict and Enhancement

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even the discourses important to this has been their recognition of the need for these tendencies is an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internet, cell phones and laptops, which make it possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact? Data for this study were collected through an online survey among employees in the electronic, automobile, petrochemical and electronics sector (n=321, response rates between 65 % and 95.5 %). Work-home/work-home conflict and enhancement were measured using the four scales of the Survey Work-home Interaction—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to nonwork permeability (e.g., “I am also available during my free time for work concerns (e.g., via cell phone)”). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both enhancement scales. We finally discuss the implications of these results.

Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguities. Based on surveys and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs’ strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist’s prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sens-making-theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (whose responsibility is it to discontinue), prioritizing ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome). I conclude with recommendations for how to support appropriate discontinuation in primary care settings, including updating guidelines to explicitly acknowledge patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome).

Re-Building a Conservation Organization: The National Trust for England and Wales in the 1960s

The growth of conservation organisations was one of the more striking features of post-war social change in Britain. With their roots in late Victorian and Edwardian ideas of preservation and conservation, the membership of these organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making them the two largest conservation organisations in Europe. The increasing size of organisations like the NT and RSPB has given them greater influence as lobbyists in their dealings with policy makers at both the national and supra-national level. It has also, however, generated difficult questions about their relationship to their mass memberships and their internal forms of governance. In particular, it has forced these large conservation organisations to confront the nature of their organisational souls and to ask what kind of organisations they are and what kind of organisations they might become. In this paper, I focus on the National Trust and the soul-searching undertaken by the organisation in the late 1960s. As the organisation grew, disputes about the purposes, policy and management of the Trust emerged. These concerns prompted the NT to conduct a review, drawing on evidence from both inside and outside the organisation. Led by Sir Henry Benson, the subsequent Benson Report of 1968 proposed significant reforms to the organisational governance of the Trust, including the relationship between its ruling council, its full time officials, its volunteers and its members. The paper reflects on the source of these organisational reforms within existing management thinking and organisational theory and the model of organisational governance which the Report proposed, considering the family resemblances between the NT’s re-built organisational structure and that of other ‘conservation bureaucracies’.
objective of this communication is to present the GENIND project and its main results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

Geographies of the European Spring: The Case of #Spanishrevolution

Along the week prior to the past local and regional elections in Spain celebrated on 22nd May 2015, many Spanish citizens took several places to denounce political corruption and national economic situation that are determining democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the eternal Two Spains have bumped into themselves. This paper will show how the so-called #Spanishrevolution of the present history of Spain which is just urban, modern and young Spain has raised their voice against the rural, traditional, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spanishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to live in their country houses without showing any sign of entrepreneurship, awaiting the arrival public subsides mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the #SpanishRevolution is a cry for the modernization of Spain.

Le Travail Migrant Temporaire Au cœur De La Dynamique De Centrifugation De L’emploi Vers Les Marchés Périphériques Du Travail: Une Perspective Canadienne

La communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l’essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail: 1) les travailleurs agricoles saisonniers émergés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS); 2) les aident domestiques émergés dans le cadre du Programme des aides familiaux résidants (PFR); 3) les travailleurs temporaires dits “non qualifiés” émergés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une “armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — “externalisables”, tout en préservant d’une plus grande “flexibilité” du capitalisme existant “qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment les travailleurs migrants temporaires ont également été instrumentalisés lors de la récente réforme de l’assurance-emploi au Canada. Nous montrerons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclaircissement d’un régime de travail de type universeliste, ultimement, nous montrerons qu’un “processus d’externalisation, la logique de flexibilité place le travail migrant au cœur d’une dynamique de précarisation par la centrifugation de l’emploi vers les marchés périphériques du travail.

Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have triggered a “jobs’ centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance of unions to re-focus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Noiseux 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different “industries” i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Comeau (2005). It will first examine elements of contextualization regarding the state’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’S ac tivity. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. In particular, the pro-referendum campaigners highlighted the signal effect of the legislation as a means to contain the “Islam threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims.

This paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a “conspiracy” of the far right political parties to “subjugate” the Muslim population.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly focused on eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it.

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched or-
explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existent in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significance from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

Social Movement Transformations in the 20th Century: Japanese Experience

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan. Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively dormant. Japan was the first to witness huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s. Why did Japan, as non-western democracy, experience such a huge transformation in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and perceptions toward social movement.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less performanced-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of organizing professionalism (i.e. medical professionalism that includes organizational and managerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, competency models, such as the CanMEDS model for medical professionalism, hybrid professionalism tend to focus on the other two. The rise of ‘organizing professionals’ is not characterized by a decrease in opportunities for organizing medical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

Although the trichotomy of the world-system often is specified in terms of processes of each stratum, particular cases provide the world division of labor, an increasing number of studies specify and define such strata in relational terms. Parallel to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations. However, even though the semiperiphery has a distinct role in world-system analysis, such with several scholars focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel heuristic that identifies dependency and dominance in core-periphery structures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, have its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and otherwise, the core and the periphery? Using pre-determined core-semi-periphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the internal context from which the trichotomy stems, i.e. world-system analysis.

Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in the universities. Gender equality in the higher education sector is still unrealized: Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have taken into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between heterogeneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These unforeseen consequences arise out of conflicting institutional logics and were never intended by any of the institutional actors involved.

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel WS anti-Sys-

tem etc. Its breakdown was fuelled by promises of anti-communist counter-elites and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as “detour from periphery to semi-periphery” (Ivan Berend). After two decades of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the trans-

tabilism, economic (shock therapy) or political (revolutionary removal of paternal involvement) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor politological explana-

tions are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (con-

tinuation, resolution, revolution and innovative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers' roles have been adapting over the last three decades financial provisioning remains the essence of ‘good’ fathering and the work schedules associated with fathers' employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers' and mothers' employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the ways parents' organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father's involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, gender differences in facilitating influences which shape paternal leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grip on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anonymity and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanist and tolerance. However, these measures are justified on the basis that terrorism ideals are clearly at the ultimate concern. Terrorist groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the entcultration of humanist ideals can serve to arrest the violence surrounding terrorism.

Investigation Social Factors Influencing on Educational Opportunities Among High School Students of Tehran

This study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran. Reproduction theorists believe that strong solidarity exists between family background and the level of access to the educational facilities.

Network analysis theory holds that inequel transfer of resources and opportunities leads to unequal educational opportunities. This means that people have unequal opportunities in achieving social possibilities and maintaining relationship with who control the resources like information and bureaucratic influence, which makes the educational opportunities unequal. Having information of school programs, education and job consultation, friends in upper economy section would be some good examples.

The survey method and questionnaire technic used for this study. The sample volume is 300 and the sampling method is cluster-sample. Cronbach’s α has been used for reliability and 78 percent is result. According to research data, Tehran school are run 5 ways: heyat-e-omanaye, people specimen, governmental specimen, non-governmental and normal governmental.

In recent years, normal governmental schools that had more facilities or better quality of education became heyat-e-omanayee or governmental specimen. Low-income families have problem to access appropriate schools while upper class can register to better schools by using their connections network and affording the school fees. Stepping up in socio-economic class leads to increasing educational sensitivity level of parents, as well as increase in communicational kills of students and boosting up their educational motivation also dire need for access, resulting in educational progress and reducing inequal educational opportunities.

Continuing the recent trend will bring about depriving of talented students in low-income families from proper educational facilities. This will deprive the society from part of the nation’s talent. Moreover illiteracy and semi-illiteracy portion of society will lead to subsequences such as inefficency, crime, disorder and in security.

Social Stratification and Inequality in Japan

Social Stratification and Inequality in Japan

Silvia G. Novelo y Urdainia

ABSTRACT

When one examines the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a special place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (sakoku). By focusing on the Japanese migratory phenomenon from a historic and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21st century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: The Sociology of Japan in the Post-Globalization Era.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The nikkeijin, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world-Meiji age- and the consequent development of a colonialist mindset and territorial expansion.

Will the nikkeijin of Latin America be able to overcome the deplorable mentality of sakoku and become the solution to the serious demographic problem that Japan is facing?

Key words: Sakoku, Japanese xenophobia, Nikkeijin, Americas, Japanese migratory phenomenon.

Post-Disaster Literacy of a Japanese Local Community

More than two years have passed since the Fukushima Dai-ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will overcome the disaster, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered an escalated sense of the unknown and unexpected fostered a flow of touristism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Akiby City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens’ civic education is carried out. What is more, this paper provides what Charles Tilly called the “repertoire of collective action,” in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome some of the risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as “Notes of the Fatherland”, “Business”, “Knowledge”. One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the “Notes of the Fatherland” was the first in the Russian sub-faculty, which had participated in the creation of generation of sociologists. In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2-nd Petrograd State University. Only in 1916 was an attempt to create a “Russian Sociological Society name M.M. Kovalevsky”. The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: “In Russia the interest in scientific sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible”. Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher's Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers’ engagement could influence on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in this field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured on mission abroad, both in terms of these constructions, and the ways in which they manage and negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

Locating the Materiality of Music Artefacts

This paper aims to restate issues of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hipher of iPads, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite musics, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the Tohoku tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg. “My house is located at altitude but the 1st floor was flooded.”). But in the process of regional development, this risk awareness changed (eg. “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor”).

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate to the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

Title: Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women’s access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women’s higher education enrollment changed over time in the context of higher education system develop-
opment, transition, and expansion? How are men and women distributed across higher education? Which fields of study remain predominantly female (or male)?

The study then proceeds to explore the persisting patterns of gender segregation across different academic and professional fields of study, and considers their meanings from the perspectives of women’s labor market participation and the shifting forms of marriage, childrearing, and other family dynamics. It argues that we should take both labor and marriage market forces into account in order to understand women’s agency to make their own education and career trajectory choices.

A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-

Climate change has received growing attention in both political and public areas, and now has become one of the most pressing environmental issues. The presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPEN. This project explores characteristics of decision-making process around climate change policies and the Japan team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to corporate analyses between companies and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word “Wa”, which means “harmony”, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty first century. Accordingly, many of nation states have shown a great interest in developing wind energy. However, when wind farm construction project is proposed involving local places, different interpretations, values, and meanings are expressed about the environment. How do people perceive physical space co-creation? Anti-social behaviour understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain social space and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can we analyse and reframe such a social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociouphilic character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

Single Motherhood and Anti-Social Behaviour Outcome in Children

Family disruption through divorce and separation is increasingly becoming a common phenomenon in many sub-Saharan African countries. A few studies have documented the trend, patterns, determinants and effects, yet, much of the effect on children has not been as well documented as in the more developed countries. In particular, the effect of family disruption on children’s involvement in anti-social behaviours has remained largely speculative. This study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population in 2010, 1.6% for ever married women aged 15-49 in 2003, there are indications from the media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This paper utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children’s involvement in anti-social behaviour. The major research question was: are children of single mothers more likely to be involved in crime than children in intact homes? The mean age of the respondents was 29 years (sd = 7.8). Of the 237 inmates who responded to the question on mother’s marital status, 60% had mothers currently in a union, 18% were from homes disrupted by divorce or separation and 22% had mothers who were widowed.

Preliminary analysis showed that mother’s marital status was significantly related to involvement in any type of crime and the odds of being involved in stealing or armed robbery, violence-related offences and other forms of crime was higher for inmates whose mothers were divorced or separated than for those whose mothers were currently married or widowed. Increasing education and high-wage opportunities for women is recommended.

Socio-Demographic Factors Affecting Women’s Fertility Preferences in Nigeria

This paper examined socio-demographic factors associated with fertility preferences of women in Nigeria. Women of reproductive age in the country prefer more children than men and women’s preferred family size is close to children ever born for women aged 40-49. The country’s population is currently estimated at 174m, with the current 2.8% rate of natural increase and Total Fertility Rate of 5.7, Nigeria will be the third most populous country in the world by 2050. The overall aim of this study was to contribute to research, for more effective fertility-related policies and programmes in the country. Socio-demographic factors examined as independent variables were age, marital status, education, religion, husband’s desire for children, level of autonomy measured by final say in certain household decisions, number of respondent’s siblings, number of respondent’s co-wives, age at first birth, and age at first marriage. Dependent variable was reproductive preference measured by a single indicator - ideal number of children. Nigeria demographic and health survey 2008 women’s individual recode dataset was used. Result of multinominal regression analysis showed that the odds of pre-

WG03-912.3

Territorial Behaviours As The Regulators Of Interpersonal Space

Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable ‘mapping’ of such types of behaviour or social environment. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain social space and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can we analyse and reframe such a social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociouphilic character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.
ferring 6 or more children significantly declined with decreasing age, rising edu-
cation, non-Catholic Christian affiliation and husband's desire for more children. Higher autonomy significantly increased the likelihood of wanting less than 6 or more children, having or not having siblings and co-wives were not significantly related to reproductive preference for 5 instead of 6 or more children. Age at first birth and age at menarche significantly raised the likelihood of preferring 5 or more
children instead of five. High fertility in a country like Nigeria is-rooted in cultural
beliefs about children and number, pre-natal control measures should be target-
more at women's attitude to large family. If Nigerian women's reproductive
preferences decline, overall fertility level in the country will also decline.

The Extent of Socio-Economic Factors and Its Influence in Mental
Health Condition of the Sixth Batch EPA Nurse and Care Worker
Candidates

The migration of skilled workers such as health care workers has been inextric-
ably linked with globalization process. Although migration can be a stressful
event for migrants (Stillman et al, 2006), people migrate to improve their well-
being through an expansion of economic and social opportunities. This research
aimed to figure out the extent of socio-economic background and its influence in
mental health condition of the sixth batch EPA nurse and care worker candidates.
A six-pages long questionnaire has been distributed to 42 nurse and 106 care
worker candidates, during pre-departure orientation. Questionnaire contains of:
socio demographics background (education, age, gender, education degree, socio
economic status), degree of preparation to migrate, degree of knowledge about Japan,
japanese language proficiency satisfaction with pre-departure Japanese
language training program, motivation to go to Japan and number of social sup-
port. The General Health Questionnaire (hereafter 'GHQ') was used as a marker of
mental health status of the respondents.
The result of this study indicated that the 6th batch EPA candidates indicated
healthier mental health in care workers than in nurses (p<0.05), being younger
(p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unem-
ployed at the time they applied for the job (p<0.05), having better degree of
knowledge about Japan (p<0.001) and having larger number of social support
(p<0.001). While language proficiency, satisfaction with pre-departure language
training and degree of preparation to go to Japan, had no significant correlation
with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates mostly
influenced by socio-economic status of the candidates prior to the depar-
ture to Japan. It can be noted also that sufficient number of information as well
as social support must be provided for maintaining a good mental health status
before leaving for Japan.

Politics of Representation of the Workers' Movements in Indonesia

The paper will discuss the politics of representation of union and different cat-
ergories of its constituency in the post authoritarian Indonesia. Amidst the pres-
sure of labor market liberalization that erodes the union power in the workplace,
union starts to develop the strategy of community unionism and tries to play a
broader political role through local electoral politics. The purpose of such experi-
ence is aimed for mobilizing broader support to increase union political bargain-
ing, this in turn providing a base to continue the struggle for workers' rights.

The paper concludes with recommendations for caregivers and policy-makers
that take account of the elderly as increasingly forming this emerging economic
hub of rural areas, rather than viewing them as economically dependent.

Let Go and Remember. Collective Memories and Narratives of
Mass Violence in Finland

Due to its inexpllicable and inconceivable nature, mass violence causes a con-
siderable sense of insecurity, the impacts of which are felt far from the center
of the incidents. They extend out to those who are indirectly affected, and
even people who are not personally disrupted by the events. Bystanders to these
incidents are involved in the process of making sense of violence and death
through collective memorialization practices and narratives recounting the
incidents. These practices provide a sense of community while also being a source
of conflict. Should the community remember and memorialize the incident, or try
to forget and move on? In this presentation I explore the bystander experience in two school shooting
incidents in Finland that occurred in 2007 and 2008. The analysis is based on qual-
itative interviews with residents of the targeted communities – people who vicar-
iously experienced the shootings. The presentation is especially focused on how
these bystanders formed memories of the incidents and recounted their personal
experiences in the interviews. To understand how the bystander experience is con-
structed through collective practices, I examine the collective narratives, rec-
collections, and emotions shared in everyday interaction and the media. Public
memorialization, such as attending vigils and contributing to spontaneous memo-
rials, is identified as a defining feature in the bystander experience.

From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This
meant I give up professional activities for specialized UN agencies and become a
full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to
a rural community with 8,000 residents. As I traveled from east to west, I entered
a community where I never lived and where I knew no one. A new socio-culture
came into view as I saw road signs cautioning drivers about a United Nations
take-over of the country. My new responsibilities would be complicated by this
time. In order to care for my parents, I would be forced to employ my
sociological imagination while also drawing on all skills I learned while working,
living and traveling alone in more than fifty countries.

This paper uses participant-observation as its methodology and, thereby,
draws on extensive notes documenting this transition from international profes-
sional to caregiver. It discusses methods used to organize support and outreach
beginning with the few adult children who also became caregivers for elderly par-
ents. It also highlights the medical responsibilities for the two, and the challenges
to better nutrition leading to improved health, I used the internet for overcoming obstacles to quality care as well as to address legal remedies for limiting their financial exploitation in this rural
community.

Some of my findings may be shocking, but most surprising is the revelation
that the elderly are not dependent in this rural community; to the contrary, they
form the hub of economic activity and income for a wide range of entrepreneurs.
The paper concludes with recommendations for caregivers and policy-makers
that take account of the elderly as increasingly forming this emerging economic
hub of rural areas, rather than viewing them as economically dependent.

Predators, Parasites and Ambulance Chasers: Financial Exploitation Of The Elderly In Rural America

This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents - predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double the profit from work for the elderly relative to other age groups. So the parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

NYKLOVA, BLANKA* (Charles University in Prague, nyklova@email.cz)

Stumbling over Emotions When Researching the Czech Feminist Scene

Since the fall of state socialism in what is today's Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s., Czech Women's Lobby, Czech Women's Union) and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene's representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tendencies and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.

A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian native title processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that ‘the tide of history’ had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content of the claim itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analysing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

O’CONNOR, PAT* (University of Limerick, Pat.oconnor@ul.ie)

Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions

This paper identifies key elements facilitating/inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multi-level phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that underpin the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group Shirito no Ran in Tokyo, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeer-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirito no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

OBINGER, JULIA* (University of Zurich, julia.obinger@uzh.ch) 
Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan’s societal norms but also its hyper-privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experienced with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the use of public space, they introduced a countercultural infrastructure of small “autonomous zones” in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before “Occupy” even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnavalesque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homeless rights to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalism and deliberate externality to the mainstream social and political institutions. Tackling this seeming contradiction, my paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of “social movements” in Japan on the basis of concepts like subpolitics, prefigurative politics, and DIY-politics.

Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. The OFW community is expanding its use of social media in communicating among families with OFW members.

The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process of communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media and internet is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults, we address the following questions: (1) What are the forms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in

Care Regimes and De-/Familialization in Asian Seven Societies

As the first page of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women’s employment, changes in family life and welfare reorganization are the reasons behind people’s growing concern on care. However, these phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies the background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care diamond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialization, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the societies under consideration. The main findings are:

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.
2) The role of the market is increasing dramatically in most societies.
3) People’s expectation of consumption of products and services is increasing in many societies.
4) Socialist countries are showing different paths from other countries.

The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

From Cultural Globalization to Aesthetic Cosmopolitanism

‘Cosmopolitanism’ is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday cultural consumption (Cicchelli and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, reference and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

This perspective enables a reformulation of the question of “distinction” (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivoresm (Peterson, 1996), or individual pluralism (Lahire, 2006). Second, it calls into question the “social distinction”, through the reconstructions of boundary factors which mark new lines of fragmentation in young people’s cultural universes (October, 2010). This talk will address these questions through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender identity and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capitals, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males' wages go up and females' wages fall.

Japanese Brazilian Migrants' Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnational theory that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants.

In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist ethnic or national categories is rather essentialist and a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist labels about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objectives: To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method: A narrative interview that was conducted in 2009 with a male hemophilic in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concealed his hemophilia, HIV, and HCV status after receiving ‘notification of HIV’ status, because of prejudiced and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after ‘two hospitalizations for the side effects of interferon treatment’, he quit his job, because he had experienced “a sense of crisis about revealing his hemophilia status,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different ‘medical institute’ he talked about his illness experience and revealed his HIV status. Here, he was “accepted by professionals.” This was a turning point for him. Revealing his status enabled him to work flexible despite his condition. However, he faced new difficulties caused by ‘confusion about his multiple roles as a patient and a medical worker’. This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

ODASSO, LAURA* (Université Libre de Bruxelles GERME, laura.odasso@misho.fr)

Intermarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. “Intermarriages” refers here to couples formed by a European Union citizen and a “Third Country National” (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy of EU citizen and TCN), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization [Strik et al., 2012; Hajjat, 2010] display an overlapping of these categories [Groenendijk, 2006].

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of “otherness” according to the configurations in which the members of these couples act [Saska et al., 2011].

Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” [Delcroix, 2013; Apitzsch et al., 2008] allows understanding the effects of categories as citizenship, denizenship [Bosniak, 2001] and dis-citizenship [Wodak, 2013] on these families and the
The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue State today faces with ecological and social problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man's activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggra-
ved stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

ODHAV, KIRAN* (SASA, kiran.odhay@nwu.ac.za)
Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Afri-
ca, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three organizational complex that foreshadows particular insti-
tutions. There is the enlightened context of sports practices, and there is the resis-
tant context that sees forms of resistance against such 'elitism' of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even S.A. sport is competitive, it’s organizational base is low, universities see a growth spurt in sport through private-public understandings (e.g. ‘Varsity Sport’), and thus the changing the nature of the public university from a position outside of its traditional core or academic work, even though there are taught courses and modules in sports related fields (Sport Science, Human Movement Science and the like). Most of these are predominantly natural science and functionalist oriented, though there are exceptions.

The paper will examine the trajectory of one or more of these sports types at (a) particular institution(s) in South Africa, in the three dominant sports of this country, i.e. soccer, cricket and rugby from which a comparative perspective can be gained. While sport remains non-core to most universities globally, it has shift-
ed somewhat on the ground, particularly with elite sportspersons emerging from that level. Various forms of elite sport thus need to be studied in terms of the forms they assume in different university contexts.

Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly
linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality edu-
cation/ learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (RCEs) selected from East and Southeast Asia) and the educational/ learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent translation of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative edu-
cational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environments for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.

Experiment Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, Actiz, the Utrecht University of Applied Science has carried out an Experiment of Workplace Inno-
vation for Elderly Care to develop a new innovative organizational design that
is intended to improve the quality of care, work efficiency, and BrabantZorg, a
care large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar process in their own organization. The experiment was finished in the summer of 2013.

The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work-floor and need to reflect upon
their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

OFFERHAUS, JUDITH* (University of Cologne, judith.offerhaus@gmail.com)
The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. How-
however, this paper shows that human capital acquisition during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psy-
chological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individ-
ual differences in the Big Five and Locus of Control beyond socio-economic mark-
ers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Eco-
nomic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled. In a second step, I apply random-effects logistic panel regression models to 39,633 observa-
tions of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model specifications. Con-
trary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impact training, whereas the training effect of Consci-
extiousness is more complex. I also show, regarding reverse causality, that fur-
ther training does not lead to significant changes in psychological functioning. I
conclude that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize other psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.

**Coping with the Ageing Society?: Migration of Care Workers to Japan and Taiwan**

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performs the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia.

OGIDO, ROSALINA* (Faculdade de Medicina PUC, roigido@pucsp.br)

**The Working Mother and the Access to Childcare**

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three long-term networks among schools and employers (Rosenbaum and Kariya 1989).

We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers’ hiring decisions, rather than students’ vocational skills or academic achievement. Moreover, the result doesn’t confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded (Granovetter 1985) in the labor market.

OGASAWARA, MIDORI* (Queen’s University, himawarimido@nifty.com)

**Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan**

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of “social sorting” sheds a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone’s benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. In spite of its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and those watched. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers’ own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interlace society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interlace society.

OGAWA, KATSUNORI* (The University of Tokyo, shu165384@gmail.com)

**Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market**

The purpose of this study is to investigate how employers evaluate high school graduates and choose whether they hire graduates. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers’ preference and employers hiring decisions by using partial observability probit model (Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicitly. Using a nationally representative data, we analyze how high school graduates’ attain their first jobs. Previous studies have shown the importance of economic fluctuation has a stronger impact on demands of general skills which translates into more fractured transition patterns.
were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working period, is a difficulty common to working women and, unfortunately, it remains current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

OGINO, MASAHIRO* (Kwansei Gakuin University, ogino@kwansei.ac.jp)

Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of past-present-future, straight-line perception of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of time. Modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women’s Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigerian women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of reproductive health issues as their prerogative, issues in which the compliance of their wives is taken for granted. The study employed the women’s data from the 2008 NDHS to examine the relationship between women’s decision-making autonomy and exposure to mortality risks. Given that the study was interested in the risks of maternal mortality in the country, the analysis was restricted to only the women who had at least a birth in the last five years (preceding the survey). A total of 27,893 women interviewed nationwide in the 2008 NDHS, met the inclusion criteria. The analysis was done at univariate and bivariate levels. Also, using logistic regression models, multivariate analyses were performed to estimate the odds ratios for each of the predictor variables in the models. The study shows that 36% of the women did not make a single antenatal visit to a hospital during the duration of their last pregnancy; as many as 63% did not deliver in a health facility (government or privately owned); and about 60% did not deliver with the assistance of a skilled provider. After controlling for the confounding influence of some other independent variables, the study suggests that the “authority” of women in household decision-making gives them a voice that is heard in the house and ability to initiate moves to obtain healthcare without necessarily waiting for “administrative clearance” from adult males within the husband’s family.

Social Historical Context Of Health and Illnesses Attributes In West-African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of over-dosage; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedic model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. Without mincing words, in order to effectively treat these illnesses, remedies must be both material and spiritual that is (herbal remedy and amulets Vaughn, Jacques & Baker (2009). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate tie between cultural beliefs and health beliefs.

Students’ Learning and Career Choices in the Vocational Course of a General High School in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school. Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground. There is still a serious problem that must be addressed here. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education. The aim of this research is to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient specialist skills, but because that can take more academic classes compared to students in a vocational high school, more of them are able to enter college or vocational technical schools. By revealing how the actual practice in this kind of school affects students’ learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

OH, HAK-SOO* (Ins Labour Policy and Training, m1zuk1cheon@yahoo.co.jp)

Change of Employment Structure and New Labour Movements in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practices is faced with growing demands for reform. It becomes more difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on shrinking union membership and its bargaining power in Japan.

OH, HELEN* (Sogang University, helenoh1@daum.net)

Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government's attempt to deal with bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. Schoolteachers and policymakers hope for "deviant" families to transition into a "normal" condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as "deviant." In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as "normal" in the healing program, but this is a context outside of school. Therefore, after they complete the course of the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of normality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

RC42-716.1

OH, HELEN* (Sogang University, helenoh1@daum.net)

Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of normality (i.e., the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of normality (i.e., the psychological threshold when transitioning from one stage to another).

This study examines the importance of such factors that may contribute to and account for the transition of a harmonious parent-child relationship. Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

To answer the question what factor influences most positively on harmonious parent-child relationship during the process of child's future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

RC22-397.9

OH, SEIL* (Sogang University, ohseilsj@gmail.com)

Religion, Trust and Public Society in the United States

Social integration beyond constituents’ diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jürgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into question. Therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

This study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation); (2) cognitive types of belief (including images of God, New Age interests), (3) ideologies (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnosticists, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<.05). Neither religious pluralism nor moral liberalism appears significantly related to religious experiences. Religious experiences (religious pluralism, moral liberalism) do not significantly relate to trust in immigrants whereas spiritual/mystic experiences lead to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

Cross-Border Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No.1 on the Internet hit list in Korea and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998~2004, meanwhile Internet has rapidly proliferated in 2000s, young users shared manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industries, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existing fandom and extends throughout the new-media as Attack on Titan can indicates. Moreover, this phenomenon has observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Honoguri-dango.

Recently, Japanese culture can be seen through formal platform IPTV or Internet contents-store besides pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is necessary to improve interface with new-media diverse contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.
Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care workers from abroad in order to fill the shortages of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care especially in the case of the Japanese government's project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation to research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan's EPA project based on the research team's various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard recruitment and employment system for border-crossing nurses and care workers.

Influence of Childcare Experience on Women's Dietary Habits: Analysis of Public Opinion Poll on Health

In Japan, food and people's eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children's unhealthy dietary habits has arisen. Furthermore, some studies have found that mother's food consciousness or dietary behavior affect the related dietary habits at home. However, few empirical studies have examined the correlation between women's dietary habits and whether they have children or not. This study examines the effect of childcare experience on women's dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children “eat all three meals” more regularly but are not conscious of “avoiding eating snacks.” Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a high standard of living. The result revealed the following points. First, women equate childcare responsibility with nurturing children to discipline them rather than caring for their children's physical health. Second, childcare experience has both positive and negative effects on women's dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women's dietary habits.

Social Exclusion and Health Outcomes of Single-Mother Households in Japan

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has found negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow-up.

Structure of Cultural Rejection

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals' perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified groups correspond with individuals' perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

The Relationship Between Financialization and Accounting Standards: A Japanese Perspective

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is reconsidered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japan has reexamed the role of financialization standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

A Comparative Study of Effort and Examinations in Japan and England

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.” It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture reflects the concept that natural gifts are unequally distributed, which also underlines cultural focus on effort. In this paper, we will discuss the similarities and differences in these two societies’ approaches to effort and examinations.
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific working in lower paid work, in casualised sectors of the economy. Not while surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was sourced from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment practices, no identification card for operatives, improper dressing, lack of adequate accommodation. Also, some of the consequences of the above includes lack of good governance, marginalization/frustration of public officers and diversion of public funds. Moreover, it is recommended that in order to win the war against corruption, there is need to reduce government involvement in all economic spheres as well as improving accountability and transparency in financial disclosure. This will eliminate opportunities for corrupt dealings.

What Is Diagnosis? : Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan

Background: A nationwide study reported that 6.3% of normal class students seemingly had developmental disorders. These students or children in Japan called as “kininaru-kodomo” or children with special care needs. However, there is no legitimate definition of children with special care needs. Therefore, its relationship with professionals’ viewpoints is ambiguous according to the professionals’ viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2019) and Citation Information by NII (1991-2013) were systematically searched. Participant observation was conducted at multiple parent organizations. Moreover, narrative data was gathered through a key informant interview. These theoretical and fieldwork data were analyzed to hypothesize the relationship between the term’s concept and the presence of medical diagnosis.

Results: A literature review revealed that medical professionals used the term of “kininaru-kodomo” as the synonym of children with developmental disorders. On the other hand, teachers of preschools and primary schools regarded them as children with troubles in group actions regardless of the presence of diagnosis. However, the tide of medicalization had occurred in schools and a public health nurse stated that preschool teachers asked municipalities to pick up the troublesome preschoolers as a possible case of developmental disorders at an infant medical checkup. In a medical professional’s perception, “kininaru-kodomo” was considered a children who could not be diagnosed because of their normal intellectual ability. Moreover, the distinction between “kininaru-kodomo” and normal children was considered blur.

Conclusion: The hybrid concept analysis demonstrated the arbitrariness of the application of the diagnosis of developmental disorders to children with special care needs. Making a common definition of “kininaru-kodomo” is necessary to keep any professionals from overlooking the care needs of children with or without developmental disorders.

Young People with Debt Problems: Uncertain Transition to Adulthood in Finland

Gaining financial independence is a part of becoming an adult in Finnish society and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18–25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems start to accumulate and what kind of specific debt problems young people are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19 many debt problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source eventual escalation of debt problems, and new concerns have arisen on unpaid debt. Finnish young people cannot gain adult responsibility within economic independency, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV's agency in managing the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: 'cultural immunity' and 'rights-based' discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, 'modernisation' and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma, individually and collectively. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants' reconstructions of HIV through narratives of 'injustice' and 'neglect' are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

OKTEM, PINAR* (independent researcher, pinaroktem@gmail.com)

Reconstructions of HIV and Its Stigma through Biographical Narratives of People Living with HIV in Turkey

The paper aims at exploring the subjective perception of living with HIV and its stigma through the biographical narratives of people living with HIV (PLHIV) in Turkey. Primary data were generated with 24 PLHIV, following biographical narrative interpretative method (BNIM) and with 32 key informants, including doctors and civil society workers providing services to PLHIV.

Biographical narratives of PLHIV are analysed to understand the implications of the discursive structures around HIV/AIDS in Turkey for PLHIV’s construction of social identities. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV-stigma.

PLHIV’s biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma is being reconstructed through PLHIV’s interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of ‘the state’. The paper focuses on three types of narratives, with respect to these three milieus: Narratives of ‘uncertainties and distrust in medical profession’, the ‘positive reconstruction of being HIV-positve’ and the narratives of ‘injustice and neglect’ reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.

Pharmaceuticalization and Social Inequalities: An Examination of Problems Relating to Depression in Japan

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been en-换来した薬物による医薬品化が、社会不平等を加速させている。こうした薬物による薬物化は、医療機関の利用者の増加に伴い、社会的不均等問題を重複させることになった。これにより、精神保健戦略は、両国とも重要な課題である。なお、医薬品化の現状とその問題点について、以下の図表が示されている。--denotes a presenting author. **Edgewise Community: Real Estate and Asian Settlers in Tokyo**

After the latter half of the 1980’s the number of Asian people has increased as “new comer” in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called “edge-wise community.” Edge-wise community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents’ motives in acquiring the housing and in having relationship with the network and other surroundings. Especifical focus on the functioning of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes (1931): Chicago School third term, in his research of “Chicago real estate Board” housing land and building dealers are classified in five groups. In this report, combining both Hugh's classification and the reporter's classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to “cooperative channel” centering housing land and building dealers in “edge-wise community,” improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

**The Medicalization of “Depression” Across the Globe**

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical mask placed on mental illness. Yet, little data exist to show whether individuals across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what attributions they make when they encounter symptoms.

There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

The paradox is that home ownership does not exclude housing deprivation. The hypothesis is that households’ social class plays a role in enabling owners to combine home ownership and well-being.

On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergences in access to ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home ownership may be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

**Social Mix in Deprived Areas: A Solution to What?**

Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers’ expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should develop bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment.

“Cultural Toolboxes” of Mental Health Care: Depression and Public Construction of the Set of Appropriate Responses in 17 Countries

Central to understanding illness behavior is an understanding of how the public constructs what constitutes an illness and what are appropriate responses to potential illnesses. However, we know little about these cultural toolboxes of scripts, schemas and habits for depression. Here we ask: How do individuals’ construct the meaning and response to a set of behaviors that are consistent with DSM-IV diagnoses of major depression? And, how do individuals’ past experiences with mental health problems shape these patterns? Using data from the Stigma in Global Context – Mental Health Study (SGC-MHS), we examine how nationally representative samples of individuals in 17 countries label and suggest what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.
in limiting the negative effects. The effects as regards developing resources have been more disappointing, both at the neighborhood level and in terms of interaction. It is possible that these latter effects need more time to make themselves felt. Or, perhaps, social mix is at most effective to curb vicious circles, but not to be "automatically" a source of virtuous circle.

Representations of the Social in Digitalized [and Cyber] Domains of the Non-Dedicated

The paper is a part of the Author's project focused on creating new kinds of the natural by the social. The main thesis is that the social creates autonomy of the natural. Communication is abounding with symbolisations enough to force out traditional perception of the natural as something external. Civilization and culture are abounding with symbolizations enough to construct the autonomous natural. Up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author analyses presages of constructing of the natural as representations of the social. The natural becomes an autonomous domain of the social because it does not create the dedicated. The dedicated has been a kind of exaggeration, exemplification, and preservation of meanings. Creating—the natural individual human beings are not referred to any non–verifiable external. Physical, digital, and cyber acts of creation of the natural are representations of the social and they are not participating in something given as unknown. In other words, acts of [self–]lunecovering are connected with acts of [self–]creation of social subjects.

The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be marked by rejections of the dedicated and it will be directed towards creations and constructions of the natural. An individual human beings become autonomous—as non–dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non–dedicated absorption will re–define—but without reference to ethics—Socrates' cognitive valuation. The subject is the reason.

Handling Money in Close Relationships in Young Family Households in Poland

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Poles who constitute the “free market generation.” Young adults aged between 18–35, who were growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

In order to show the social context in which young family households’ monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions (“common knowledge” and ‘taken-for-granted’ issues) about money in young family households and on identification of language patterns related to the issue.

The research has identified money and “monetary rules” as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare be provided by a grandmother and be rewarded financially by her daughter working full-time? How many bank accounts should a cohabiting couple open: one that is provided by a grandmother or one that is provided by a grandfather? How many bank accounts should a cohabiting couple open: one that is dedicated for household expenses? With a wide range of existing patterns related to the monetary practices in young family households the paper focuses on the process of rules establishing in the making.

OLESEN, ANNETTE* (University of Southern Denmark, ool@sam.sdu.dk)

Ex-Prisoners Debt: An Indirect Criminal Risk Factor

Studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path. However, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. According to the Danish Administration of Justice Act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, DNA-tests, technical and accompanying investigations etc.). Denmark is the only Scandinavian country, and the only country in the European Union, who does not take the income level of the convicted into consideration, when calculating the legal costs. Nor do they have a common practice of remitting convicted’s considerable legal costs.

Thus, we must regard most ex-prisoners in Denmark as highly indebted to the state. The ex-prisoners debt is generally understood as causing financial problems, but legal regulation, as an unintended consequence of the indebtedness, is still poorly explored. My research is based on interviews and follow-up-interviews with 41 ex-prisoners. The interviews and follow-up-interviews have been carried out in Denmark during a 2.5 year period. In–depth insights into the ex-prisoners’ indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay–profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners’ farther from the legitimated socio–economic advantageous affiliations because of their debt to the state.

OLESEN, ANNETTE* (University of Southern Denmark, ool@sam.sdu.dk)

The Al Capone Method in the Danish Police

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti–gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method combines monitoring and registration of high–risk–profile gang members. According to my research the method in general has an impact as desired by the Danish Government. However, research has not yet shed light on the unintended consequences associated with the method in a Danish context.

Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow–up–interviews with 16 gang members, carried out in Denmark during a 2.5 year period. Additionally, the underlying basis of the research consists of a 2.5 year long Copenhagen Police Project.

The (re)invention of the Al Capone method in the Danish police force is based on a close interdisciplinary cooperation with the Tax Authority, Prosecuting Authority, Danish Financial Supervisory Authority, Danish Bar and Law Society, Public Prosecutor for Serious Economic Crime, Ministry of Justice, Ministry of Foreign Affairs, Danish Business Authority a.o. The interdisciplinary cooperation manifest

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video,
recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dy-
ing from a gunshot inflicted by a regime related shooter during protests against
the fraudulent Iranian presidential election. Neda almost instantly became a
transnational injustice symbol representing the unjust nature of the Iranian re-
gime. The case of Neda is interesting for social movement scholars for a variety of
reasons, including the role of new media and the power of photography and
citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptual-
as well as methodological questions about the transnationality of transnation-
amal movements. Because while Neda's televised death, motivated various activist
organizations and interest organizations to act and criticize the Iranian regime,
the activities around the Neda injustice symbol was much broader. Apart from
activists, three categories of actors in particular were vociferous and active: poli-
ticians/political parties, media, and networked citizens all expressed outrage and
demanded action on the basis of the facts.

This propels us to ask how we can best conceptualize the activities surrounding
Neda's death. Was it a transnational social movement – or something else? In the
paper I argue that it was in fact a social movement. Accordingly, I contend that the
defining element of a movement is not the actors involved, but rather the kind
of action expressed. I therefore propose that this understanding social move-
ments may be especially pertinent in a transnational context where information
circulates rapidly and where actors are increasingly networked, connected, and
visible and able to engage in numerous and often different political issues at the
same time.

On Policy-Making and Legitimation of the Law in Contemporary
Pluralistic Society

The paper’s aim is to discuss the substantive dimension, quality and content of
current law-policy making and socio-legal legitimation of law in present-day
highly mobile, complex, multiethnic society. A special focus will be devoted on the
coupling of the epoehal crisis of formal-official State-nation law and the rising dif-
ferentiation of social and legal sub-systems. Most relevant problematic variables
related to the current situation on the basis of the present paper.

The quest for new models of citizenship and representative related to traditional
value-oriented identitary patterns and interests will be considered. The paper
will be also interested in the social movements as one of the components for the
legitimacy of the law-policy making and socio-legal legitimation of law in present-day
society.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with
worrying consequences on the health of its citizens. In fact, the current economic
situation threatens to undermine all dimensions of well-being of a population.

The situation is still ongoing, the timing and outcome is impossible to predict, but
that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin
et al., 2010; Cylus et al., 2012; Artazzoo et al., 2004) and data made it possible
to substantiate the effects of unemployment and increasing poverty on health
inequalities.

In this paper we will try to verify the consequences of the economic crisis on health
in Italy, what is the state of health inequalities and what are the risk factors
for proximal (material, psychosocial, occupational, environmental and behavior-
al), most affected by the economic situation.

Using data by “Health for All Italy” will rebuild the health status of the Italian
population in the last 10 years to demonstrate the changes and estimate the con-
sequences of the current crisis, and increase social inequalities.

In time of crisis it is even more necessary to ensure access to health services,
especially to the weaker member of society, since the health needs may grow
rapidly. Moreover, given the particular situation and conformation of Italy will
place the focus on geographical differences between the north and south of the
country.

The first results show that, indeed, in recent years are increasing cases of sui-
cide and depression, and all diseases related to the area of mental health (Costa
et al., 2012). Health outcomes that are affected by an economic crisis ranging
from subjective health, physical health, mental health and may vary in relation to
socioeconomic status and place of residence.

Generational Change and Persistence: Gender Equality in the Life
Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemoc-
ratization have strongly impacted relational and material conditions of low-class
families. Acute transformations took place especially in the realms of mother-
role participation, market, division of domestic labor and domestic violence throughou
the last decades, as reflected in the life course of women. This paper presents results from
qualitative research with two or three generations of women in urban, low-class families in Brazil. The interviews were conducted with several families as part of two research projects in recent years.

The reconstruction of women’s life stories and biographical self-presentations
will highlight the reproduction or transformation of social patterns against the
backdrop of new socioeconomic configurations and social policies. This recon-
struction will trace, on the one hand, the changes in the perception of women’s
role in society as it relates to gender equality. On the other hand, it will be
discussed how women experience their embeddedness in family structures as
influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in
Southeast-Brazil will be presented. The analysis of the narrative interviews, fol-
lowed by a reflexive-reconstructive biographical method, focuses on how the in-
terviewed women define their life course between opportunities and constraints.

This is seen in close relation with the social developments taking place around
the subjects, as postulated by the biographical policy analysis. The research results
can also cast a light on different patterns of generational intercontingency found
in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition
Paradigm: Empirical Research and Normative Philosophy in Axel
Honneth’s Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important pro-
ponents of a theoretical paradigm for the social sciences centered on the idea
of “recognition.” This notion has, of course, entirely different meanings in the vari-
ous contexts in which it is called upon. In Honneth’s specific case, it is of decisive
importance the fact that his theorizations around the centrality of recognition
relations for human self-realization are rooted precisely in the negative expe-
diences of denial of recognition: disrespect or misrecognition. Despite the more
than twenty years that separate us from the publication of Honneth’s Struggle for
Recognition, however, it seems that the theoretical genesis of this important book
has not yet been grasped in its full potential for understanding today’s modern
societies and for a revitalization of the social sciences in general, and of Critical
Theory in particular. This is due, as I see it, to the misreading of Honneth’s works
as much as to the author’s insistence on making the philosophical work of Hegel
the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated
the formulation of this recognition-theoretical critical model, aside from the Hege-
lian works from the period of Jena: namely, the sociological and historiographical
studies that convinced Honneth of the undeniable moral character of social strug-
gles, that is, the American and especially British Quaker, W.E. Burgh Class-
ifies that flourished in the 1980’s. This influence reveal a closer relation between
Honneth’s work and empirical social research than is made visible in his books. I
argue, finally, that this connection is a most fruitful one and that Honneth, how-
ever, partially abandons it in his recent works – despite its precise meta-theoretical
formulation under the name of “normative reconstruction” in his latest book, Das
Recht der Freiheit (2011).

Indicators for the Social Impact of Social Sciences and Humanities
Research: The FP7 IMPACT-EV Project

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor research impact have been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itinere and ex-post) and comparison of the impacts from SSH research, taking into account the strong quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition -from a seven decades hegemonic party rule to a right wing government- Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral fraud and social unrest. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was part of this trend.

In the democratic transition -from a seven decades hegemonic party rule to a right wing government- Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral fraud and social unrest. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In the middle of the election campaign the student movement #yosoy132 emerged. It claimed the defense of democracy and faced the imposition of the old-regime candidate, due to his intrinsic web of complicity. The movement, originated in private universities and extended to the public, could articulate the demands of social justice and democratic liberties. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was part of this trend.

The differential impact of this movement on the national politics and media democratization, based on the previously discussed, is in the present debate contradictory. These are the aspects that will be developed in this paper.

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

OMENMA, J. TOCHUKWU* (University of Nigeria, Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)

This paper is premised on the nomination of 17 council chairmen (not Chair-women) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party's policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive, and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political 'godfather' and women under-representation in municipal politics in Enugu state since 1999.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of 'unfavorable inclusion' suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of the social categories of people within a society. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In fact, employment has become a conveyor belt that drives people to these institutions. We will argue that identifying the social institutions that propagate deprivation of capabilities and functioning as the target of social policy transcend the limitations of social exclusion and inclusion debate.

Transformation of Framings of Seafood Sustainability Certification Schemes

International sustainability certification schemes have been widely accepted at industries and markets partially because of their common basic structure represented by transparency, science-based measurable standards, and third-party auditing. In result such certification schemes provide alternative regulatory mechanisms beyond borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly for the purpose, the framings of each scheme shows gradual transformation corresponding to criticisms. Drawing on three different international seafood certification schemes namely Naturaland’s organic seafood, Marine Stewardship Council and Aquaculture Stewardship Council, this paper analyzes the transformation of framing of seafood certification schemes in which each scheme incorporate knowledge other than scientific ones into standards and structure of scheme. In other words, it is a new function in certification framing to achieve fine balance between credibility and critical mass.

Comparative Sociology of 11 to 18 Examinations in Thailand, England, and Japan

This paper proposes a comparison of 11 to 18 examinations and the changes they have undergone in Thailand, England, and Japan. This has valuable significance as a focus of Comparative Sociology; this series of examinations has had common and persistent importance in various societies, which makes them an appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the socio-cultural network concept, that there are profound similarities and differences in the changes in 11 to 18 examinations in these areas. These results will reveal a process that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations for Comparative Sociology. It combines qualitative and quantitative methods, not by simple mixture but by close connection. Through this innovation, the Comparative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal tension that sociologists face between science and literature.

Reconstructing Sustainable Communities through Mutual Help Networks in East Asia: A Comparison of Mutual Help Networks in Japan, South Korea and China

One way that man has maintained society throughout history is through networks of mutual help. The purpose of this paper is to show that such traditional mutual help persists in East Asia, but has been transformed in the transition to modernity and has contributed to the development of both South Korean and Chinese modern society. Mutual help in these two societies is compared with the already well-studied Japanese case. The phenomenon is divided into three categories. One is reciprocity in helping to plant rice and re-roof houses by exchanging labor. The second is redistribution. In exchange for the right to get goods from a common store, local people have the obligation to maintain a common pool of resources. Finally, unidirectional help refers to support in funeral and wedding
ceremonies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions has continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999. There are inadequate number of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Survival rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.). This study aims to find out post earthquake impact of disaster on children up to their adult ages. Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher's classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

The Second Group of Keban Dam Studies in Upper Part of Fırat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later on similar to many projects in the world. However, there are ongoing high dam projects in many countries on the neck of many rivers and river basins. Kariba, Aswan, James Bay I-I, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focuse of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues.

The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project And recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Fırat Basin. The findings will be discussed separately. A specific patterns for identified natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

The Competency of Midwives in Independent Practice: Their Supporting Mothers' Autonomy in Childrearing

The objective of the present study is to clarify the competency of private midwives through examination of how midwives help mothers gain autonomy in childrearing. An empowerment approach was used as a conceptual framework. This research was conducted with midwives working at three facilities. Data were obtained by observing each encounter between mothers and midwives; that was realized by about the 30th week of mother's pregnancy to 3 months after their delivery. In addition, the midwives and the mothers were interviewed. Data were analyzed by qualitative and inductive analysis. Recorded data were coded and categorized, and a total of 7 categories and 39 subcategories were extracted. The results showed that midwives build relationships of mutual trust with mothers; empowering mothers through psychological and educational support and helping them to be independent. The competency of midwives in independent practice could be classified into the following five types: 1) based on mutual trust, the midwife builds a relationship with each client to facilitate friendly interactions as a healthcare provider; 2) the midwife evaluates situations and assesses the skills set of each client; 3) the midwife becomes close to each client and provides individual assistance; 4) the midwife provides reliable techniques in various situations; and 5) the midwife offers information beforehand to prepare each pregnant woman to become a mother and then supports the new family after birth.

International / Military-Public-Private Cooperation in Disaster Relief | Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the viewpoint the MOD and JSDF. First, it was discovered that there was considerable room for improvement in the areas of U.S.-bilateral and joint operations in the event of a large natural disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Cooperation with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster kept them from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake. A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.
The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called “organization theory” forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue “rational strategies” under “structured conditions” defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

ONODERA, HENRI* (University of Helsinki, henri.onodera@helsinki.fi)

Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak’s Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called ‘Arab revolutions’ in 2011. Some attribute the young protagonistic role of more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people’s activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

ONOUZUKA, KAZUHITO* (Waseda University, kazuhito.onouzuka@aoni.waseda.jp)

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck’s concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of ‘outsiders’ across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. Beck’s argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that boundaries between insiders and outsiders are constantly being erased and redrawn, ultimately his model of cosmopolitan modernization aims to locate alternative forms of ‘withness’ (or being together with fellow citizens) and thus shares basic traits of nationalism. To this end, this presentation firstly examines Beck’s concept of reflexive modernization by focusing on the changes in territorial formations, individual conceptions, and the linear growth model. Secondly, this paper critiques Beck’s concept through a specific focus on critical discussions of social space developed by Urry and Harvey. By building on these insights, this paper argues that socio-spatial conceptions that represent ‘outsiders’ need to be re-examined in relational terms. Specifically, this paper proposes Harvey’s idea of relational space as a way of taking into account the shifting and emergent boundaries of inside/outside and self/other that characterize the ‘uncontrollable’ social environment. Finally, the paper further suggests an integrated, socio-spatial perspective for understanding the dynamic tensions within ‘cosmopolitan modernization’.

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the effects of the conflicts on the women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the regions. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (HFNs). Being HFNs is a harsh reality for many parts of the Niger Delta region and Nigeria due to the death of a spouse in the conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impas- sive observers of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women’s vulnerability to conflict and conflict resolution.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and imprinted its characteristics. These industrial estates established by local and foreign investment. Therefore, these industrial estates require a large pool of low-paid workers who are inevitably employed on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. This paper explains the mechanism of heightened mobility of community members, and describes the community around Jakarta mainly based on my own door-to-door survey of 659 suburban households. This data revealed that almost all of the residents (83.9%) are newcomers. The people who had lived there before building the industrial estates have already moved, so the activities of the old neighborhood associations (called *Rukun-Tetangga* / *Rukun-Warga*) have almost stopped. Nevertheless, 62.3% of newcomers still join *Gatong-Royong* (traditional mutual assistance activities) and 32.6% of them are involved in religious (Islamic) activities. This implies that people are trying to search for new ways to enhance social unity, away from the old community structure.
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalGAP and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the regulatory risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislators through donations. Thus limiting the national Government's possibilities to foster social development.

The paper presents results from a study that identifies some of the social factors that influence the possibility of a population's involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of these communities when facing health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsic interaction of organizational dynamics, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimation are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a trilemma of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

Fukushima Nuclear Disaster and Theories of Tort Law

The Fukushima Nuclear Disaster brought widespread and long-term damage, which forced traditional theories of tort law face with many difficult challenges. According to the case law, a wrongdoer should compensate any damage claimed by his/her victim, if the victim can prove that the wrongdoer's act was a legally sufficient cause of such damage. However, certain types of damage from the Fukushima Nuclear Disaster are not fit into the traditional theories of damage. For instance, how to calculate non-pecuniary loss suffered by an evacuee followed by the governmental instruction? As of August 2013, 81,300 residents (28,800 households) were still restricted their access to their home in varying degree. Among them, 24,800 residents (9,200 households) have their houses in the areas where the annual integral dose of radiation is expected to be 20mSv or more within five years and the current integral dose of radiation per year is 50mSv or more. How to calculate their fear during the evacuation? How to calculate their undesirable life in their temporary housing? How to calculate their loss of hometown? How to calculate their unemployed life in their temporary housing? In addition, statute of limitations put another hurdle for the victims. Moreover, the government liability is called into question. Some victims have filed lawsuits against the TEPCO and the government, even though the Dispute Settlement Center for Nuclear Disaster Compensation was established to assist the victims. Thus, in my presentation, I will discuss the recent developments of tort law after the Fukushima Nuclear Disaster.
OSAKI, HIROKO* (Tokyo Institute of Technology, osakih.aag@mv.titech.ac.jp)

Moralistic Trust and Rationality: The Individualization of Trust

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin (1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous literature has suggested that trust in relatives, friends, and voluntary and professional association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people's actions. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association members create trust to members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral values is rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative-analyses based on the questionnaire survey data in Japan.

The Migration and Development Nexus: Gender Insights

Research on development and migration has mostly stemmed from an economic concern (assessing the volume, cost and contribution of remittances to national economic concern (assessing the volume, cost and contribution of remittances to national economy), but the death and destruction by 1946 had dramatically escalated. He visited the children of the children he had saved thirty years ago, but the death and destruction by 1946 had dramatically escalated. He visited thirty-five countries in less than two months, collecting famine information that worldwide. Hoover, his name synonymous with relief in Belgium and Poland, the chair of the Famine Emergency Relief Committee, and Hoover eagerly embraced the challenge, announcing via radio that half a billion people faced starvation worldwide. Hoover, his name synonymous with relief in Belgium and Poland, became an expert on famine relief thanks to his previous experiences of famine relief in his home countries but now started plummeting after WWII to record starvation levels. After war's end in Eastern Europe, the Soviet Union, China, and India, more people succumbed to starvation than during the violent conflict. As Winston Churchill proclaimed within his infamous “iron curtain speech, 1946 had become “this period when famine stalks the earth.” At the same time, President Truman considered this foreign aid as a “solemn obligation.” To fulfill this obligation, Truman appointed former President Herbert Hoover, who became an expert on famine relief, to succeed the Marshall Plan.

VINKENBURG, CLAARTE | (VU University Amsterdam)

Social Networks, Networking, and Ethnic Group Membership in a Talent Pool

Even among highly educated professionals, minority ethnicities are disadvantaged relative to dominant ethnics in access to organizational resources, power, and rewards. Social capital is an important factor in reproducing such disadvantages, as minority ethnics have less access to and reap fewer benefits from social networks. While the general positive relationship between social capital and career success is well established, limited research has been conducted on how social capital is acquired following organizational entry, and how this process is affected by social group membership. Focusing on the relationship between social capital and social group membership, we collected longitudinal social network data among a diverse talent pool of ten trainees of one of the large urban municipalities in the Netherlands. Data collection started on the first day and continued throughout the first three months of employment. Survey items addressed occasional or recurring contacts based on work-related advice, non-work-related advice, and friendship, resulting in indicators of network size, centrality, and homophily. We followed the development of social capital within the closed network of trainees and their potential open networks with all municipal employees. Also, we conducted semi-structured interviews with each of the trainees after their first year of employment to explore individual networking behavior (building, maintaining, and using social network contacts), and matching career experiences in terms of their access to opportunities and career support. Preliminary analyses suggest differences between dominant and minority group members in terms of network structure, networking behavior, and career experiences. By combining quantitative data on network structure and qualitative data on networking behavior, we address the common critique that focusing on structure and omitting agency fails to enhance our understanding of how practices and behaviors serve in ultimately (re)producing differences in network structures and their consequences.

Canadian Immigrant Women Engineers’ Work Life: Experiences and Change

The number of women in engineering, in Canada, is growing, yet men and Canadian-educated women engineers continue to outnumber immigrant women engineers especially at the upper level of the profession. For the last 10 years, the majority of immigrants to Canada have been mostly comprised of highly educated, internationally trained professionals, many of whom are women. Many of these women hold university degrees in engineering and other academic disciplines and almost all of them have work experience in their professions. Yet few immigrant women engineers are reentering their profession in Canada and only a handful of them advance in their career, despite a decade long effort by Canadian educational institutions, the Canadian government, and Ontario’s engineering regulatory body to involve more women into the profession.

This paper introduces the analytical complexities that I will examine in my doctoral research whose theme is an intersectional analysis of the changing experiences of immigrant women engineers in Canada, from various educational, ethnic/race/national origin and social class backgrounds. Based on life history interviews, completed by statistical and other research literature, this paper proposes research which will explore influential social and environmental factors that have
shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity/birthplace, and class relations which considers changes or their absence over time.

"New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities"

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory training aims at giving participants an insight into the armed forces that will look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with several facilities. The SAF and the SPES share 50% of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training. The paper assesses the effectiveness of this new and original project.

Comparative Analysis of Regional Governance

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional variations of managing resources for porcelains conditioned by different ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region.

Comparative analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19th century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

Healthcare Information-Seeking Behavior of Evacuees after the Great East Japan Earthquake: A Qualitative Interview Study

**Background:** The Great East Japan Earthquake devastated the northeast Japan on March 11, 2011. This disaster was characterized by the combined effects of the massive earthquake and tsunami, and the nuclear power plant accident caused by the tsunami. Approximately 300,000 people had to remain evacuatees still today (May 2013), having fled to other areas throughout Japan. Subsequently, these evacuatees have faced various health problems. Building the evacuees' confidence with healthcare resources is an important task. This study ascertains the process of healthcare information-seeking behavior of evacuatees to restore the access to these resources.

**Methods:** Semi-structured interviews were conducted with 11 participants. They had been staying in City A in Kyoto Prefecture since the disaster and were recruited through an organization that assists evacuatees. The interviews were conducted between September and November 2012. Data were analyzed using the constant comparative method of qualitative research.

**Participants:** The participants were nine women and two men aged 30–82 years (median = 49 years). Three categories were emerged from the interview data: (a) seeking healthcare information from people around, (b) barriers to connect with others, and (c) community formation. The evacuatees had formed relationships with the people from whom they sought healthcare information. In the early stage, community formation was hampered by overreaction to personal information protection by the local government. Women who had left their families and fled with their children out of concern for radiation damage found it particularly difficult to communicate with others. They were finding various opportunities to connect with others and committed to community formation.

**Conclusions:** The evacuatees developed relationships with people in their new neighborhood, and sought healthcare information to restore their access to these resources. Assistance with community formation among evacuatees has arisen as a new issue of public health.

Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called “Terasu.” These reforms was intended to enhance the lawyer’s access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead's study on the quality of legal aid lawyers in U.K. One of the

---

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women’s participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety. In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports. Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the “Environmental Agriculture Policy” (EAP). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher. Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Master status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought severe conflicts in rural area to challenge local governance in which government and industries frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries frequently. In such cases river pollution can be seen as a symbol of the unequal relationship between the government and local governments and farmers. One hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a "structure" to be changed by any institutional reform. However, there are no effective approaches to deepening the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-itai disease caused by untreated industrial wastewater under rapid economic growth in 1950s to 70s, it reminds us a series of laws by victims with their supporters were followed by institutional reform for pro-victims. However, such laws succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although institutional reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting "dialogue and cooperation" as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of “community roundtable meetings” in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by “micropolitics” among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

Gender Pyramid Politics: Trends of Global Changes

Gender Pyramid Politics: Trends of Global Change

Nowadays in the contemporary world the gender pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place. At the same time we can speak about some changes in the presented social scheme. Over the past decades, some states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women’s rights has not existed, and the women themselves do not consider their political advancement as “the social breakthrough.”

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can’t be noticed.

In this regard, the following questions rouse great interest: What are the social, cultural and legal reasons caused this situation? Does the economic aspect of the pyramid change with the political advancement of women or is the stay of women in the authority only the question of formalism? What are the prospects of gender equality / inequality in the epoch of globalization?

OWENS, ANN* (University of Southern California, annowens@usc.edu)

Subsidized Housing and the Concentration of Poverty in the U.S

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

LOWENBERG, RICHARD* (Unaffiliated artist, lowenberg@designnin.com)

SARC (Scientists/Artists Research Collaborations)

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well established, international electronic festival called ISEA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support by the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no pathway for SARC’s ongoing programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sc world as it develops at breakneck speed. What are the dangers art-sc collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science? Should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science?

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; and in the context of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government’s environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council’s target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and internet hubs are, for instance, now part of our everyday scenarios. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society will face this challenge. Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by attempting to ‘re-engineer’ the ways in which electricity is provided to so-called end-users: for example, voltage reduction. Focusing on the proposed socio-technological aspects of these solutions, this paper discusses how engineers conceive of the problem of ever-increasing carbon emissions, investigating the framework and assumptions about socio-technological provision and usage. This includes, for example, an analysis of how transformation processes in energy systems are understood and configured. We will present our findings from interviews with engineers who are involved in a large-scale European research project that seeks to offer a solution.

Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan

According to Japan’s National Police Agency, 30,133 businesses were reported to act in sex industry in Japan in 2012. The number of CSWs are estimated to amount at least a few hundreds of thousands. Japanese Anti-prostitution law establishes in 1956 prohibits paid sexual intercourse. As a result, many kinds of sex work which avoid this law have been created. Most of them offer a variety of sexual services except for sexual intercourse, such as “Fashion health” and “Image club”. But there also exists sex work which includes “unpaid” sexual intercourse, such as “Soap land”. In soap lands, CSWs have sexual intercourse with their customers who have their own free wills, not as a part of service, though it is an unspoken agreement that sexual intercourse is included. We conducted semi-structured interviews with 17 CSWs who work for a soap land in Tokyo mainly in order to study the psychological tendencies and problems. We found that all of them had experienced other kinds of sex work not including sexual intercourse before they began working for the soap land and that they liked a soap land job best. Despite a lot of social and psychological disadvantages due to sex work, they gave more importance to advantages. It can be said that Soap land is illegal, but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about “Should prostitution be made legal?” in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law systems. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In A Racist Public Discourse?

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take our concept, he thinks that the concept is essentially impersonal representation. The sign is a system preceding the individual’s birth and given by the social environment. Not until he thought abstractly by the sign did a man become a human being. The purpose of this presentation is to discern the role of language which we use to recognize ourselves and others, and the phase of the sociality and individuality which language has. With this intention, I’ll compare the category theory of Bergson with Bergson’s language criticism. Human being differs from animal in that he uses language. The man synthesizes the special, the individual and the by the reason, and he thinks by means of universal forms. He can understand the empirical things in the framework of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Bergson emphasizes that it is given by society. A concept is a society’s concept. He thinks that the concept is essentially impersonal representation. The sign is a system preceding the individual’s birthand given by the society. Not until he thought abstractly by the sign did a man become a human being. Bergson, a contemporary of Durkheim thinks that the self is socialized itself, and the soul of the society is imminent in the language supporting our thinking. But Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incomensurable with all something else. In opposition to it, he considers that what is gotten by the analysis of the outside

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state.

In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a region of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a ‘pro-mining’ coalition against environmental protesters, developing common strategies and tactics against the protests. The intensity of conflicts between the environmental protest movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In those cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant party in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

OZEN, HAYRIYE* (Attilim University, hozen@atlim.edu.tr)
Radical Left Wing Groups and Environmental Mobilizations in Turkey

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations proved decisive in the generation of these grassroots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

What Does Gezi Park Resistance Mean in Turkish Democracy?

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the protesting voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained preeminence. Consequently, wide-spread populist dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force.

Gezi Park protests were an expression of the ‘pluralist’ anxieties and democratic hopes of the people.

Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non-pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.

Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.
Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian-ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de-nominations and Churches in Europe, including the Orthodoxy Church as it is well demonstrated by the huge success of the Pentecostal Church of the Nigerian past-tor Sunday Adelaja in Ukraine.

Regulation: The Third Party in the Transformation of Patient-Professional Relations

Regulatory arrangements have the capacity to codify elements of the relationship between patients and professionals. They can articulate the expectations that patients can reasonably have of their treating health professional, and also provide a mechanism to notify and address instances where defined standards of professional practice are not met.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates the analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia’s eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflected in the legislative requirement for community members to sit on all decision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of single register of practitioners that provides improved transparency with patients now able to directly access information about the registration status and qualifications of their health professionals.

The Culture of Women’s Soccer in Senegal: Reconciling Dissonance Among Representation

What does it mean to be a “footballeuse” (a soccer player) in Senegal? In Senegal, women’s soccer is more than a game; it is a counterculture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the “footballeuse” culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how this dissonance creates perceived dilemmas in the experience of the footballeress around questions of identity and religion. My analysis explores these dilemmas and demonstrates how these women reconcile inconsistencies among cultural representations by constructing new flexible meanings of femininity. Finally, drawing on Jacques Rancière’s theory of dissensus, I show how the “footballuses” in Senegal use this space of dissonance to claim a stake in society, to break the current order of governance, making the practice of women’s soccer in Senegal profoundly political. Data was collected through nine months of participant observation, 40 in-depth interviews as well as analysis of secondary sources such as print, online and televised media.

Bitcoin: Network Based Currency and Its Self-Organizing Emergence

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are created and administrated decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists within a computer based network. Bitcoins are created and administrated decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in many countries. It became very important after MasterCard, Visa, PayPal and other tried to block WikiLeaks from money transfers obviously because of political pressure by the US-government.

Powers of Ms. Deputy Secretary-General

More than 10 years ago André Gorz argued that the use of the term “knowledge edge” society would only make sense if one were able to demonstrate that relevant radical changes in society somehow related to changes in the handling of knowledge in society. Such a demonstration concentrated on the area of democ-
The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPON) which set out to examine Europe’s position in the networked global economy and the implications for policy. TIGER - Territorial Impact of Globalization of Europe and its Regions.

Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state/regional level.

The authors identify two intersecting spatial processes in European APS-gener- ated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-re- gions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

Positive Aging and Leisure: Role of Healthy Ageing in Healthy Ageing of the Elderly in India

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines health in a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity’. Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related condi-

tions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypothesis constructed to direct the study are:
1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in the health of an elderly person.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sam-
ping. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:

Health has two broad parameters, mental health and the physical health. Type of the leisure activity affects the mental and physical health differently. Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

La Transferencia Tecnológica Como Problema Político En América Latina

La transferencia tecnológica como problema político en América Latina

Una de las cuestiones que viene causando importantes polémicas en la región latinoamericana, es el establecimiento de alianzas estratégicas internaciona-
les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el deterioro de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de cooperación en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciban la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

What Are the Opportunities for Social Investment in the Continental European Welfare States?

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways. In the early 1990s, the Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist childcare support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for late life.

Vienna’s labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

Informalization of Labour: Recent Trends in India’s Urban Economy

Informalization of labour: Recent trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come
out in last twenty years, which depict the miserable working conditions of India’s informal sector workers. While workers in the informal sector contribute a considerable amount of output to the country’s GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world’s labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles. This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

*Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka*

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially provide and addresses the impact of the class on the students. The author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers’ career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students of similar age; an opportunity to re-identify one’s own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

*Cyberspace and Cross-Cultural Relationships Online*

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride industry. It is generally assumed that, when women from developing countries turn to intermarriage dating sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the fact that women are seeking ‘intimacy’ in online contexts? Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue relationships online and why intermarriage dating sites appear to be displacing other ways of meeting foreign partners. It draws on in-depth online and offline interviews with 24 Thai women who have experienced online intermarriage on the internet. The research shows that the emergence of ICTs and increased accessibility of the Internet in the context of globalization and transnational networks allows women to consider a wider set of possible lives and partners than they ever have before. Although some women might be confronted with dilemmas or stereotypes of seeking cross-cultural relationships online, almost all of the women interviewed perceived intermarriage websites as an important channel leading them to meet and fall in love with Western men in the Internet era.

**PANDEY, URGASEN** (College Agra University, nc.pandey@gmail.com)

*Delivering Quality Education in Global Era*

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to high-skill value-added manufacturing and service industries. Education has also played a particularly important role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the key points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic structures and the global economy, and the glue that binds them. The second was to provide an assessment of the ways in which each country can progress towards the goals of successful engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth task was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as ‘victims’, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.

*Voting Behaviour Among the Youth in Malaysia*

Malaysia’s 13th General Election held on 5 May 2013 was one of the most exciting General Election in Malaysia’s political history. The result showed that the ruling party (National Front) and the opposition coalition (People’s Alliance) contested closely in the 222 Parliamentary seats. Although the results showed a rather status quo in favour of the ruling party, the opposition coalition managed to capture 99 seats to 89 of the national government side. In the 12th General Election while the seats obtained by the ruling party reduced to 133 from 140 seats. This paper examines the young voters’ voting patterns to determine the significant of this bloc of voters as both coalition parties were trying to get this inscrutable voters, comprised 40% of the electorate. 12,912,590 registered as voters and the 40% belong to the 21 to 39 years old age group. Before the election, almost 65% of them were labelled as ‘fence sitters’ who were mostly non-partisan and were seen as the deciders. National Youth Survey by The Asia Foundation indicated that the political thinking of the youths in Malaysia are not static but have changed accordingly. This new shift allows this paper to discuss the position of the youth in Malaysia’s 13th General Election which party benefit from their role and whether youth were the decisive factor or kingmakers in Malaysian politics as reflected before the General Election.

*The Right to Exams: Examining China’s Citizenship Transformation through a Petition Campaign in Beijing*

Market reforms in China beginning in the late 1970s have initiated the transformation of China’s citizenship regime by restructuring the triadic configuration of relations between the state, the market, and an emerging civil society. The gradual erosion of that institution which defined and structured China’s bifurcated citizenship—the hukou system—by market forces is increasingly shifting the responsibility of distributing resources from the state to the market. Yet insofar as the dissolution of the hukou system is incomplete, the access to certain resources, such as higher education, remains legally restricted by the hukou system. Using the petition campaign of a group of internal migrants in Beijing seeking the rights of their children to sit university entrance examinations locally as a site of active practice and contestation of citizenship, I examine the nature of the emergent citizenship regime in China and its implications for the future. I observe that although the claims of the migrant parents in Beijing are substantively similar to claims that have historically been made by other internal migrants in China under the socialist era, the logic behind such claims and the ways they are being negotiated have changed. I argue that China is transitioning from a collective-based regime and the global economy. The second was to provide an assessment of the ways in which each country can progress towards the goals of successful engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as ‘victims’, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia's largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between A Thai company and Tesco PLC, the world's second-largest retailer after Walmart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate withline worker reps. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an in-depth analysis of the struggles confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the producers. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009, dubbed "the world's largest funding platform for creative projects" (http://www.kickstarter.com/). A platform in which producers of any kind (films, games, music, art, technology) can ask donations for creative projects, Kickstarter puts the power in the consumers' hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems simple, yet it is rife with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the 'backers' (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on uncompleted projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or individual creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are also analyzed to provide a larger picture on the effectiveness of a possible future of consumer-sponsored production.

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the relationships between immigrant integration in voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solidly based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policies toward immigrant participation and civic integration.

The Creation of Peaceful Neighbors and Calm Swedes

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shoving Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of "neighbors war against neighbors", in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of an atmosphere of trust. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining toposcopic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

The Day after: The Effect of Diary Timing on Time Data Analysis

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random household-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

From the Global South to the Globe: Pathways to Participatory Budgeting
Participatory Budgeting in the US: The Role of Key Actors in Shaping Turnout

Participatory budgeting (PB) has largely been studied in the context of the Global South, with particular attention given to the case of Porto Alegre. In 1989, the city of Porto Alegre in southern Brazil implemented the world’s first PB system, which was a remarkable statistic for a practice that has been associated with grassroots mobilisation and which holds the potential to reconfigure existing power structures within capitalist democracies.

In this paper I consider the diffusion pathways for PB, in terms of both the information networks that spread the idea, and the support environment that makes its implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between whoparticipates and the engagement of civil society and the state. The aim is to identify the factors that drive the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

In the US, PB has taken place. For example, events such as the World Social Forum, where Chicago established the US's first experiment in PB in the city's 49th birthday. Global South, with particular attention given to the case of Porto Alegre. Only in recent years has PB begun to gain traction in the United States (US), beginning with Chicago's 49th birthday in 2009. While the PB projects in the US resemble in some respects the familiar structure of Porto Alegre, the many unique contextual factors suggest that the American experience of PB is likely to be quite different. A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as well as the expansion of associations in civil society. As PB moves north from the Global South, how is it being adapted, and how does outcome vary?

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between whoparticipates and the engagement of civil society and the state. The aim is to identify the factors that drive the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

The international educational evaluation programme PISA analysis the variances of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social backgrounds can be overcame. In the PISA framework educational opportunities are distributed equally if the student's education is independent of their own family background. Based on PISA reports one can have a detailed picture about the school integration of migrants, the factors which have impact on their educational outcomes.

It is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some countries the results are presented following the (regional) minority language of test (e.g. Belgium, Spain, Canada), however a comprehensive analysis of native national minorities is failed.

Using PISA databases one can gain some relevant information about national minorities' school outcomes (in at least 20 countries). By a cross-tabulation of the language spoken at home and of the language of test (state language or minority language) one can distinguish at least three main student groups: minority students who learn in their mother tongue (language spoken at home: minority language), minority students who learn in state language, and majority students (who learn in majority language, of course).

Having these student subgroups one can test two basic research questions: 1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.
The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of “overmanagerialization of academic work” (Todt, et al 2013). Academics’ programs that continue to engage on programmatic issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. “Internationalization” of programs has become a buzz idea that most universities in North America are pursuing, but the question remains “What kind of internationalization? And who is benefiting from this process?”

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an “international Youth Right project” during the past two years. The author discusses the steps taken to textually transform the “realities” of the everyday experience of youth advocating for the protection of their rights into textual instruments of control -financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different “project managements processes” required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

SEMI*SIS Y Procesos De ConstrucciınN De Significado EN La Prensa Digital Colombiana

The adaptation of the media to the dynamics of globalization have repercussions on the processes of production of information. The transformations have propiciated forms of interaction, communicative, sustained in the values of the globalization. This way of constructing the significance has distinctive effects that result in the interlocution and the forms of communication that allows the participation in the social and political of the university.

The corpus of this research are the print of the pages web of El Espectador and the newspaper Semana. The corpus is composed with the articles from 2008 - 2013, and the news that is referent with the social and political of Colombia.

This study intends to analyze career pathway of youth who graduated college/university in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the transition across school locations. In order to analyze it, Korean Labor and Income Panel Study data collected in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labor market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth’s work careers is different by firm-size and occupation. For example, youth who graduated from provincial college/university get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college/university prefer entering the labour market to apply for a job although it is unstable job. In contrast, youth who graduated from Seoul college/university prefer applying for a job to entering second labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college/university have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul male group and Non-Metropolitan areas female group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided for group characteristic.

Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support

Very low fertility is regarded as a serious social concern in South Korea. Korean government has contrived diverse policy approaches to provide various incentives for reproductive behaviors. More or less, the public response to low fertility tends to be basically individualistic framework of rational choice and assumes that reducing the constraint and cost for reproduction would increase fertility rate. In this regard, the new government of president Park Geun-Hye pledged to provide financial support for child birth and education more extensive than ever before. Setting aside the question whether the promise could be fulfilled given the limited budget, this study aims to discover the characteristics of family changes and the impact of individual policies on fertility change in South Korea.

The fertility declines have proceeded in complex rationalities on which people felt responsible for their own destiny and family, such as the Malthusian ethical check. But also the strong desire for material well being and preferred children's success contributed to the strict birth control and ignorance for unwanted births.

Life History and Family Changes in Korea and Japan

This study examines important factors of the life history of the elderly in Japan and Korea. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elder people's own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family origin, education, experiences of adolescent, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders' willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elderly. Modern construction of patriarchal family and its change are compared. In regard to the period of childhood and the youth, the mixture of kinship and modern rearing, gendered education, and influences of imperial war and Korean war, diaspora and repatriation were investigated. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, period of high economic growth, mixed relation with extended and nuclear family were interpreted.

In the interplay between the individual adulthood and the social development through the 1960s and the early 1990s, and discusses its implication for social change and the subsequent fertility decline in South Korea.
Social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconomic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

'Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters'

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject on those who purport to be their masters. With this reformulation of Spivak’s classic question from 1988, set alongside the anthropology alluded to by a version of James C. Scott’s book title from 2008, the paper focuses on the subaltern’s alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of ‘power over...”) and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised ‘over’ them.

How can a ‘power to...’ be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of India, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zuebravel’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes toward sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens’ deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring men’s interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Australia and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected real improvement in economic support ratios. The results show that mortality improvement has the greatest effect on support ratios in Japan and in East-Central European countries. Anticipated mortality improvement is of far lesser significance to Northern and Western European and English-speaking countries. The paper discusses the dependency of the estimated effects of mortality improvement on support ratios on assumed levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It develops a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help explore their various transnational engagements from the experience of transnationalism with multi-sited fieldwork in Palestinian localities. The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daiichi nuclear reactor failed in the face of natural disaster and subsequent tsunami. This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It develops a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help explore their various transnational engagements from the experience of transnationalism with multi-sited fieldwork in Palestinian localities.

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It draws specifically on two year ethnographic comparative study of religious communities in France and India. Across the cases, middle-class and elite practicing Muslims, respectively, as well discuss religious traditions and their implications. This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It draws specifically on two year ethnographic comparative study of religious communities in France and India. Across the cases, middle-class and elite practicing Muslims, respectively, as well discuss religious traditions and their implications.
"He Is Not Clean:" an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores how the social and political institutions of the modern state's security agencies shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting "collaborators" (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents' reputation, and support for the physical expulsion and even violent death of alleged "informers." City residents experience political informing as a form of "symbolic death" that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predicament of former "collaborators" who were relocate by the state's security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state's security apparatus in shaping emotional relationships and responses among targeted people.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the 'Bologna process'. The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four- to six-years courses - to a new sequential system of bachelor/master/doctoral programmes. These bachelor/master reforms have been accompanied by the introduction of long courses ('Ciclo Unico'), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelors are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT 2011 'Survey on the transition to work of University graduates' to examine the early labour market returns of young graduates from bachelor's, master's and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor graduates enjoy a more prestigious and rewarded occupations than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master's programmes.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being exposed in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women's Health: Indian Perspective

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk period in their lives are early childhood and reproductive years. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assist in the proportion of moderately skilled workers by automated systems for highly skilled sections of workforce. Another outcome of this development is the steady decline in proportion of moderately skilled workers by automated systems for highly skilled sections of workforce.

The objective of the project is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

Globalisation, Technology Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is the steady decline in proportion of moderately skilled workers by automated systems for highly skilled sections of workforce. The objective of the project is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon'ble Supreme Court, all the citizens are to segregate the garbage at source.

The waste generated in Kolhapur city per day is 150-165MT. The contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for making biofertilizers. But as the company went into liquidation, this project was closed in July 2011. KMC had given a contract of collection and transportation of solid waste to Ramkey Group Pvt. Ltd. from 20th Nov 2007 to 15th August 2013. But the contract was ended by the KMC in June 2011 as the company was not lifting all the waste from the city.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon'ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon'ble High Court.

The centralized collection and processing has been failure and created enviromental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e., the drift toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to misgivings of western industrial technologies and their non-sustainability. Noteworthy that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations that are based on traditional and indigenous knowledge systems and thereby transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable grassroots innovations and their resultant technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable grassroots innovations and their resultant technologies. Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGO) in which they have taken plethora of initiatives following both top down and bottom up approaches. Some of these (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a social, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives. It is an attempt to understand the phenomenon as a social movement at all and the applicability of different theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha had been very much supportive to make the movement wide spread. And at the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols” aims to investigate the existence of Chineseness in Thai society focusing on the structural patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese traditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God’s Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation relate to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes. Risk-based self-regulation is enacted through top-down, i.e. offering a central management vision that can then ‘colonize’ other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance:

- in the funding structure of the public accident insurance (classifying companies into risk groups)
- in research priority setting and prevention campaigns of mutual trade associations
- in inspection strategies of the Lander (risk-rationalizing the use of limited control resources)

These fragmented and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misconceived form of risk governance. To enlighten this blind spot, this paper examines the role of territorial self-regulation by the sixteen Lander in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going econom-ic crises are widening the gap between upper and lower strata of urban societies further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of demarxialization and community-oriented police practices in urban areas (1) where mi-nority people live. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continen-tal European Civil Law societies can be observed very clearly as a common de-nominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

PAVLOVA, ELENA* (University of Saint Petersburg, pavlova@mai.siru.edu)

The Struggle Against Injustice: Towards an Alternative Theory of Normative Power

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of interna-tional actor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinctive as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hofp 2002, Laclau 1991, Torfing 1999, 2005) and taking the EU as the model case, it then looks at the normative as-pacts of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic discourse, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.

PAWLUSZ, EMILIA* (Tallinn University, emilia.pawlusz@gmail.com)

In Search for Collective Identity. the Production of Estonianness By Means of Choral Singing in Contemporary Estonia

This presentation explores the role singing and performance of national song plays on the (re-)production of Estonian national identity (Estonianness). Starting from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern Europe, most scholars have assessed Estonian nation-building as being preva-lently ethnic (Latvin 1998, Mole 2012). In particular, choral singing tradition that emerged in the 19th century around a vocabulary of historicism is interpreted through the prism of nationalism (Bohland 2011). This paper initiates a critique to the above ap-proach by introducing three new dimensions: globalization, Europeanization, and multiculturalism. Informed from a structuralist constructivism (Bourdieu 1989) it combines analysis of social structures and institutions with perceptions of in-dividual social actors. The main focus is on power relations incorporated into singing as a tool for identity production. In particular, it will be explored how the singing tradition responds to identity tensions between ‘ethnic Estonians’ and ‘non-Estonians’, namely Russian speakers who constitute 26% of the population (census 2013). Considering singing tradition (1) in a network of social spaces – national and supranational, as well as (2) from the joint perspective of individual experiences and objective structures such as the state, allowing us to examine collective identity building mechanisms in post-socialist context in a nuanced and less deterministic way.

The Immigrant Childhood in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is dis-tant from the essential idea of the childish being, and expressed in different ways across the history in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open social construction has been expressed in different ways across history and in different migrant communities.

The study is based on semistructured interviews to migrant children aged 8 to 15, and by participant observation in state offices of rights protection, and in an ONG, the social intervention hinders and/or provides that integration.

Finally, the investigation concludes that migratory trajectories and diverse social factors (such as gender, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrant generations living in Chile.

PAYA Y PASTOR, ALICIA* (Université Lille 2, CERAPS, aliciapaya@hotmail.fr)

Doing Social Sciences on the Military Field: A Special Operation?

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations – and their effects - between:

- the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)

- the researcher's academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher's social position during his/her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the "specificity" of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland's most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers. Issues of the Irish Times were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network.

Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors who hold the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodologies to the local accomplishments of the social with a Marxist insight into people's active participation in extended social relations that can 'overpower' and implicate them in wider 'ruling' relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography in Ireland of student-equity practices in Australian higher education, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith's focus upon texts and discourses within ongoing and daily interactions, I seek to elucidate within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possibilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

BISSELL, PAUL (University of Sheffield)

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology has argued for a medicalising of agency, there is a need for a critical approach to the medicalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not 'know their place' in a hierarchy, and detailed knowledge of the exact positioning was sparse. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women's bodies and homes. Most striking was a discourse of legitimacy - an often painful discourse, where all aspects of dependence were disavowed and self-reliance valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism, often expressed colloquially, using the language of therapy. It is manifest in the holding of the self to impossible standards of non-dependence, and through the "othering" of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants in the absence of available, alternative explanations for inequalities.

PEARCE, TOLA* (University of Missouri, Columbia, pearcei@missouri.edu)

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

My interest in the wellbeing of women in Africa comes from a longstanding concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalization. The data come from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors’ lives. I take my lead from Sassen’s (2006) use of the term ‘capabilities’ and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which women’s economic and reproductive roles were central. With colonization, women continued to work, but with less public assistance than men. Independence brought the promise of increased services: health, education, electricity, etc. However, the quality of life declined and development policies have enabled both the state and spouses to capture women’s roles as providers. The paper assesses work environments and the women’s position within the economy. Globalization is, for example, destabilizing former negotiations on responsibilities for children (eg. school fees). Under mounting stress women appear to look to individualized solutions to problems. A major focus for them has been religion.

Book of Abstracts 751
The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has not been readily available. It has led to the emergence of clinics of alternative medicine such as homeopathic centers, acupuncture facilities, and chiropractic hospitals. The purpose of this paper is to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and is therefore widely spread in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients’ trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2007 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbalet 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that situated trust in the alternative encounter comprises relational, bodily as well as material aspects.

PEDERSEN, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)

The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospitals are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: “KRAM screening & intervention”, that is registration and detection of patients’ so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals at present in the Northern part of Denmark, eventually all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

PEDERSSON, ANDERS* (University of Gothenburg, anders.pedersson@lir.gu.se)

Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered. In my investigation of the relation between criminology and sociology in post-war Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the Swedish political discussion on crime. Then levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. An analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinarity and interdisciplinarity. It problematizes the relation between sociology and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

PEDERSON, TOMAS* (Wayne State University, Pedroni@wayne.edu)

Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region’s largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infrastructure, and governance. While such deployments are framed as both inevitable and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished Black and immigrant residents.

My paper analyzes Detroit’s neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in the=None Suburbs of Detroit to demonstrate the ways in which nostalgia for the city among suburban whites, rituals of place-making, and their intersection with the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region’s resources, cultural representations, and power.

Performance Consumptions, Sleep Management and Risk Perceptions

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about “healthy lifestyles”, sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement. The investigation that shapes consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentize organizations differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weigh between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the internet. What transnational experiences may signify for a music culture, which travels between places and spaces, are discussed through case studies. Bolivian/ Andean urban folk music and the way it contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of identity formation are not just the result of local identities but will be described. Aspects about relationships between Andean popular music, Latin American music and Bolivian music, stardom and audiences are addressed.

Questions about defining identities and mixing influences are considered. I also try to show how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as how relationships between the local and global music culture and new as well as old identities, articulated on the internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces and a sense of belongingness in cultural activities of diaspora.

Farewell to the Heuristics of Fear? the ‘affirmative’ Turn in Environmental Social Theory

Some of the most interesting developments in social theory are presently occurring at the cross-roads of environment and technoscience scholarship. The paper aims to interrogate two especially salient, and remarkably overlapping, trends. The first one is the return of ‘materiality’. This trend has been around for some years especially in the form of an expanding ‘sociology of practices’. Yet more recently new forms of ‘naturalism’ have been flourishing, which mark a sharp break with the long predominance of cultural/discursive constructivism, without reverting to traditional realist cases. Significant examples come, more than from environmental sociology strictly speaking, from post-structuralist orientations in STS, philosophical anthropology and feminist theory, which converge on accounts of the reality of matter in terms of fluidity of organic and inorganic life or of the multiplicities of human encouns (post-humanist) nature. The second trend is a reworking of the implications of risk and uncertainty. Whereas, for years, awareness of socio-environmental complexities led to a plea for ‘technologies of humility’, now an emerging tendency is for taking ‘braver’ standpoints by which, if uncertainty cannot be avoided, then it has not to be feared but rather it has to be ‘lived’. This is signalled by burgeoning narratives and techniques of vision, anticipation and resilience, for example as regards ‘nanofutures’, human enhancement and climate change. If the ‘heuristics of fear’ has been for decades the trademark orientation of most environmental social theory, this turn towards ontology-focused affirmational theories asks for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obscures a major socio-political, perhaps even an anthropological, transformation?

TG04-952.4

PELLIZZONI, luigI* (University of Trieste, pellizzoni@sp.units.it)

Ontological Struggles: New Materialisms and the Challenge of Impotence

According to Giorgio Agamben, the most deviuous operation of power today is to achieve over our potentiality – what we can do – but over our impotence – what we can not do. Following this insight the paper interrogates the recent turn in cutting-edge social theory from cultural constructionism to new forms of materialism and naturalism. On one side the emancipatory import of deconstructing traditional accounts of knowledge, reality and subjectivity is questioned for its eventual ineffectiveness against domination and inequality. On the other, cultural constructionism is deemed incapable to account for the materialities emerging from technoscience advancements. Traditional ‘negative’ modes of critique are replaced by ‘affirmative’ orientations which celebrate the dynamic, vital, agential, ever-changing character of the organic and inorganic world, and theoretical endpoints ask for reflection. Are we in front of a much-needed renovation of most environmental social theory, this turn towards ontology-focused ‘affirmational’ theories asks for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obscures a major socio-political, perhaps even an anthropological, transformation? The paper analyzes new materialist standpoints, with special reference to feminist and post-Marxist positions, focusing on two problems. First, as overwhelemed by technoscience’s ‘success’, new accounts of matter and subjectivity rely heavily on the former’s, hardly normatively neutral, images and metaphors. Second, the growing replacement of ‘being’ with ‘doing’ implied in new ontologies, suggests we are confronted with a most accomplished expression of the operational paradigm that underpins Western metaphysics. As a consequence, emancipatory puissance and dominating pouvoir are increasingly blurred in an ontological politics which seems today the ultimate terrain of social struggles – as testified by actual difficulties in distinguishing neoliberal human enhancement programs from new materialisms’ post-humanist pleas. Fighting inequality and domination, it argued, entails pointing to the opposite direction to much human imagination, i.e. towards impotentiality. The paper discusses the indications provided in this regard by Agamben and Adorno.

Eating Organic, Growing It Yourself

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security. In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers wildly use chemical inputs without proper skills and State control.

Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is normal. It is what they produce or source locally in the village. Instead, their important questions are about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient in terms of production surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

**Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia**

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 35% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their traditional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agricultural activities i.e., vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

**PENG, ITO** *(University of Toronto, itopeng@chass.utoronto.ca)*

**Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific**

In the recent decades, changes in economic structures and women’s shift into paid labour have strained the family’s capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The result—“care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a “care drain” in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

**The “New” Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion?**
"If You Have a Giving Heart": The Framing of Post-Disaster Need and Donations

The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguín-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman's (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationality and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has taken on a new context for youth labor participation and mobility. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduate workers, and by a dual youth policy discourse of promoting the enterprising subject and protecting the ‘at-risk’. Based on a study of the life experiences of young rural-urban migrant labor workers (n=20) and university students (n=31) in Cambodia in 2011-2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an altered structure of inequalities broadly tantamount to the emerging working and educated middle classes.

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence”, “gender identity”, “gender equality” among others appear everyday in mass media. Such discourses proliferation cannot be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream. The area of knowledge we now call “gender studies” was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this epistemological, theoretical and methodological renewal. Therefore, in this paper I am looking forward to: 1) exploring the origins of the category “gender” as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).
The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organizational frameworks in which local sociologists have tried to set their professional and academic identity. Third, it presents some data from a research that focuses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974. It had an early and successful professional insertion, linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sectors. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.

**Emotional Control in the Financial Marketing**

In the scope of a major research program about emotional normalization in the contemporary capitalism, I would like to focus on the emotional normalization of the financial investor. By analyzing Behavioral Economics texts about the emotions of the economic man in the financial market, I pretend to show how this bibliography: 1) explains economic crises as consequences of emotional based decision taking, a irrational behavior of the economic subjects responsible for breaking the market equilibrium; 2) normalizes emotions of the investors and offers self control techniques; 3) teaches how to predict and to use the emotional conduct of others investors to obtain economic profits. This bibliography, recognizing the investor as a emotional being, converts emotions in a professional competence that requires previous training to develop human capital. In this way, emotions are regulated and subordinated to a economic logic.

**The Potential of Telecare/AAL Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany**

The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to ‘ageing in place’ in two regions in Poland and Germany with a particularly high share of older people – the Małopolska region surrounding the city of Cracow and Upper Lusatia (“Oberlausitz”) to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people.

This research analyzes the potential of telecare/AAL technologies for improving older people’s quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL applications in older people’s homes. In the Małopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business idea”, the highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the presence of temporary and dominating discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on the one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

The Values Of Scientific Ethics: A Way To Face Inequality

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subjected to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitiveness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the social commitment to the individual, communities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researchers from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Duller et al, 2103) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers’ everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers’ work relates to the influences and interests of others by tracing the constitution of social relations disclosed in relations that emerge between teachers’ perceptions of practice and their enactments. In doing so, the being of the social comes into view.

IE’s recognition of being in practice is acknowledged. To better understand the impacts of this ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger’s (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers’ work.

Analysis of research data offered by practising teachers, confirmed textual me- diation in everyday practice revealed, too, teachers who practised circumspectly. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

*Women’s Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries*

This paper examines the critical relationship between women’s education and infant mortality. This relationship is a key to the demographic transformation of the global South. This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationship between women’s schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women’s education influences infant survival in the global South. The study extends the evidence that the most powerful societal covariates determine the relationship between infant mortality and women’s schooling, are income poverty, child health services and breastfeeding. Women’s education explains 30–40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance. This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women’s education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global South.

*The Making Of Obedience To Authority: From Binet To Asch To Milgram*

The design of Milgram’s Obedience to Authority can be traced back through Asch’s classic experiment on conformity to Binet’s experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experimentation which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, “Are you really sure? Is it not the next line?” In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects recently shown. It revealed that the students performed this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet’s two experiments in his classic study of conformity to groups. The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch’s group conformity and Milgram’s (1974) researcher/experimenter prodding the teacher/learner “to please continue” and “the experiment requires you to continue.”

Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between "old" members and experts proposing other resources and legitimacy.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of a less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intra-extra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately usable without being "real" members. Second the concurrence of intra-extra party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

The main objective, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can't be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habitus. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of dropouts, blue-collar jobs. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are attending and applying for prestigious higher educational programme at local private universities despite the low progression possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a socio-geographic effect on higher educational choices that makes it possible to talk about a socio-geographic habitus, collective in the same way as class-habitus but also unique in relation to other geographic areas. In this paper this is discussed in relation in in-depth interviews with students representative to the above described group.

Internet Chess and Chat As Interaction Order

Abstract. While playing Internet chess and at the same time using a rudimentary chat function with fixed lines, I have also been observing the chess and chat as a rudimentary interaction order. In this paper I will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Erving Goffman. My point of departure is that individuals interact with each other whenever they meet, but under different circumstances and those circumstances condition the interaction. The paper aims at answering the following research question: How can the interaction order that is developed on an Internet chess site be understood given that the social interaction between the chess players is restricted to the game itself and to a rudimentary chat function? The paper contains a detailed description of the chess play and the chat function at an Internet chess site. What possible interpretations can, for example, be made of one player to offer the chess game with a draw? And, how can one understand the expression “Oooops!” in the chat given the different contexts that present themselves in a chess game? And, finally, how can one use Goffman’s division between expressions given and given off to understand the two mentioned and other interaction situations in Internet chess?

The Ontology Of The Global City-Regions

The ontology of global city-regions.

The global world is made of hundreds of city-regions interconnected and networked. Yet the ontology of the global city-region is still to be defined.

It includes a different substance than the XX° century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global than in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomerating substance of the global city-region is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory.

The transferece of Macau’s administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the mid-80s and 90s of the XIX century the end of a migratory experience in a very specific context, frequently characterized as being almost ‘colonial’.

Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants
who settled in Macao in the beginning of the XXith century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this new political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the colonial period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - it is our purpose to analyze and compare their migration experience (in social-economic, cultural-symbolic and identity terms) highlighting the continuities and changes observed.

Portuguese Youngsters on the Move after the Macao's Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2-calculator and its items on self reported behavior were used to estimate households’ carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the "Schwartz value inventory", people's perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or "milieu" segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different "social milieus", i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

PETERSSON, FRIDA* (University of Gothenburg, frida.petersson@socwork.gu.se)

The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients' lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals’ talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyze a number of key concepts used in everyday clinic practice. For example, at the clinics, "drug-free" and "drug-abuse" are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a "drug-free", "normal" life with methadone, as long as it is distributed by the clinics and ingested according to the staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as "drug abuse", legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staffs’ arguments or “narratives of resistance”.

Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.

The research question is: "Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?"

The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the construction between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

High Quality Education: Globalization and Problems of National Educational Systems

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the educational systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia.

While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)

Abstract

The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty and finally with mobilization or innovative types of development. But today, under the influence of globalization, we can state a convergence of educational systems in Russia and in the United States within the paradigm of a pluralistic educational system. Russia moves away from anat, political monism to political system's pluralism which facilitates it to the political system of the United States.

World experience of the recent decades shows that in this area a flexible system of control (often direct and indirect in the form of influence) should be conducted where there is no rigid centralization and where the balance of government, regional and local education programs is necessary. Particular sensitivity should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless - very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

The Impact of Contractual Relationships to the Identity and Values of Religious Organizations – a Pilot Study in Sweden

Part of the growing impact of new liberal economic market rationality is an increasing demand of religious organizations to establish partnerships or contracts with the state. Deregulation and liberalization of (public) welfare services in Sweden during the 1990s resulted in greater attention to civil society as a resource in welfare provision. While the previous state-based welfare model advocated financial solidarity and equal rights to welfare services, the new marked-based model is based on the idea of the individual's right to freedom of choice and accepts different individual financial capacities. From being advocates for a comprehensive welfare system for all, religious organizations are presently invited and enrolled as contracted parts of a system accepting inequality in welfare provision related to the financial capacity of the individual. Indications from previous research show that tensions between their identity and the implicit values of contractual relationships are a significant source of conflict for religious organizations which at an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for toning down the religious profile or a demand for accepting values in conflict with its core values. This paper discusses the short term and long term consequences for religious organizations identity and freedom by entering into partnership or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religion in a European Perspective (WREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.
Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focuses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical life plans for aging.”

The interviews show the profound impact of anti-aging on the individuals’ biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness.

Within the reconstruction of the significance of anti-aging for the interviewees’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

PFIAU-EFFINGER, BIRGIT* (University of Hamburg, pfois-effinger@wiso.uni-hamburg.de)

Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? And how is it possible to explain cross-national differences? The paper introduces the theoretical approach of the “gender arrangement” of the author as an explanatory framework for cross-national differences. This approach emphasizes the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actors’ constellations and action, which form the societal structure for the structures of care work in a society.

The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European countries. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of women’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.

PFIAU-EFFINGER, BIRGIT* (University of Hamburg, pfois-effinger@wiso.uni-hamburg.de)

Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with regard to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

Welfare states have established new, paid forms of semi-formal and formal care work within the family household. This change has led to an erosion of the boundaries between the two spheres. These new forms are also connected with a new type of social rights. It is argued that in order to capture this change appropriately, changes in care work can no longer be viewed as a shift within a dualistic model; as a shift from private to public care, or as a formalisation of care. Instead it must be understood as a multidimensional change.

In the paper, a conceptual approach for analyses will be introduced. Moreover, it will analyse the development of the new forms of paid semi-formal and formal care. In particular, childcare and care for senior citizens are scrutinised in a cross-national comparative perspective. Finally also it will explain the development with social change and cultural change.
Over the past decades social inequality has grown in France, as in many other countries. Paradokically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to inventclever arguments and slogans to describe the structure of French society. However, these substitute discourses were soon gai-said by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had its consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

Women’s Empowerment As a Determinant of Fertility Change in Southeast Asia

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries also experienced rapid fertility declines long before the socio-economic development. This presentation suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women’s empowerment has not reached a consensus. Women’s empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women’s empowerment includes the percentage of women’s education in relation to man, percentage of female labor force participation, proportion of female in parliaments, and percentage of women’s holding manager’s positions. At individual level, women’s empowerment can be measured by women’s educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women’s empowerment. Most studies have been looking at women’s empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women’s empowerment and the framework of relationship between women’s empowerment and fertility changes will be reviewed. Furthermore, the current situation of women’s empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women’s empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women’s empowerment plays a role in the region’s demographic change.

Social Inequality & Academic Achievement Gaps in Developed Countries

International comparisons of cognitive skills suggest that equitable educational performance is as just important as high performance. Therefore, minimizing achievement gaps between wealthy and poor students is important for countries’ economic growth (Hanushek, et al. 2008; Coulombe and Tremblay 2006). Even within high-income countries that share similar levels of economic development, socioeconomic-based achievement gaps vary in size and shape. Nevertheless, the direction of these achievement gaps is consistent—with wealthier students having both greater opportunity and greater achievement (Hampden-Thompson and Johnston 2006).

This study offers a cross-national examination of the relationship between socioeconomic achievement gaps, societal-level inequality, and the role of social safety nets in reducing inequality in both income and cognitive skills. The cross-national variation in income inequality, social safety nets, and academic achievement gaps facilitates a direct examination of societal-level factors that are hypothesized to be important in determining the shape and size of country-specific achievement gaps.

To create country-level measures of income inequality, social safety nets, and achievement gaps, we use data from the OECD Programme for International Student Assessment (PISA) as well as the Luxembourg Income Study (LIS). In an attempt to draw comparisons between countries at similar levels of economic development, we restricted our analyses to 26 countries that belong to the World Bank high-income group (World Bank Country Classification 2013) and also participated in both PISA and LIS.
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper will explore the implications of these developments for theoretical work on social class in later life. The consequences arising from this include: the importance of divisions operating within generational and related social groups. The core social relationships in old age. The consequences arising from this include: the importance of divisions operating within generational and related social groups. The core social relationships in old age. The consequences arising from this include:

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground to a halt during the 1980s and have continued to be affected by a combination of austerity and accelerated globalisation. The paper will examine how a combination of globalisation and long-term economic change is re-structuring core social relationships in old age. The consequences arising from this include: the weakening of the idea of generations as a meaningful unit of analysis; the emergence of new political and social identities in later life; and the growing importance of divisions operating within generational and related social groups. The paper will explore the implications of these developments for theoretical work in the sociology of ageing.

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often perceived as a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thévenot 1986, 2006) to elaborate a Māori world of food. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?” In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

Austerity and The University In Britain

Austerity and The University In Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst there has been a sustained governmental policy to increase the participation of 18-to-30 year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participation in EDL actions provides young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of()bracketing in which legitimate political discourses defer to the social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumventions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has swept the political system, the paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘reconcile all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3).

PILLAY, KATHRYN* (University of KwaZulu-Natal, pillaykat@ukzn.ac.za)
“Nation Under Siege from Foreigners”: Exploring Notions of Belonging and Exclusion in Post-Apartheid South Africa

South Africa finally became a democratic country in April 1994 after the first ‘free and fair’ general elections took place. A commitment was made by the ANC led government to ‘non-racialism’ based on a Constitution which was inclusive of all the ‘races’, accepting shared citizenship. In this paper I contend that even though the democratic state acknowledges South Africans of Indian descent as part of the national discourse, and continually affirms ‘their’ part in the national democratic revolution, it nevertheless still perpetuates the notion of essential ‘differences’ between ‘peoples’ which originated in colonialism, was entrenched further after the formation of the Union, and legitimised through various policies during apartheid. Even though the Population Registration Act (PRA) was repealed, the racial categories that were reproduced and legitimised by the Act still exist. ‘Race’ then continues to be an axis around which South African society revolves. I argue that the continued ‘race’ classification through legislated and bureaucratic guises perpetuate racialisation and ‘race thinking’, which is evident in self-perceptions and the perceptions of ‘others’. The argument is demonstrated by empirically examining how South Africans of Indian descent are homogenised and labeled as a separate and distinct group, and in addition how they are perceived as ‘a people’ or ‘community’ with fixed and essentialised identities and ultimately ‘belonging’ to another country, to which they could easily ‘return’, as evidenced by calls to ‘go home’ issued at various points in time during the post-1994 democratic era. Empirical evidence will be provided to reveal how, as a result of this perpetuation of difference based on ‘race’, similar processes of othering and ‘anti-Indian’ sentiment, reminiscent of the political eras prior to democracy, persist in public and popular discourse in contemporary South African society, and is exposed at various junctures.

Institutional Contradictions and the Organization of Emergency Management

This paper provides an institutional analysis of Australian emergency management from the early twentieth century to the present and highlights the institutional contradictions that generate conceivable barriers for effective organization. Building on the literature in organization and management theory that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerges in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state.

elation. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphers, consistent with the public discourse around the existence of the so-called “Mission Sucre”. This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many “Aldeas Universitarias” that opera throughout the country's regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, État et citoyenneté; Manuel Castel, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often makes oneself feel as economic domination. In their search for such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper focuses on tactics devised by homeless people living in the area I’m engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of “free” food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).

Leisure and Family : A Mutually Supportive Relationship

W. H. Davies in his lovely poem ‘leisure’ states the wonder of a life worth living where one has no time for leisure, where we are so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand beside the boughs and stare as long as sheep or cows. No time to see, in broad day light streams full of stars like skies at night. A poor life this if, full of care we have no time to stand and stare.

The loneliness and isolation of an individual has been a persistent theme in twentieth century. We were all born social and need company to live a happy and fruitful life. The institution of family has been with us with a set of cultural patterns that springs from sharing and caring in leisure hours by way of interaction and interpersonal communication.

The loneliness and isolation of an individual has been a persistent theme in twentieth century. We were all born social and need company to live a happy and fruitful life. The institution of family has been with us with a set of cultural patterns that springs from sharing and caring in leisure hours by way of interaction and interpersonal communication.

City is that human beings find time to catch up with family and friends during their tea and lunch breaks. Hence they need to find time to cultivate and nurture their relationships and it is all about effective time management.

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.
This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed media reports and online media (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants’ movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw complementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

Piotrowski, Grzegorz* (Södertörn University, grzegorz.piotrowski@sh.se)

Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggre- gate of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissonant movement slowly shifting to (neo)liberal positions and loosing the touch with the workers base as well as with young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way.

The popularity of these youth movements partially lay in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing forward. Moreover, this subcultural-political connection seems to have an impact on today radical movements making them mostly a young people’s domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/12, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements’ publications (printed and online) collected over the years.

Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinian social science system (institutions, agenda, researchers’ profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country.

In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentina’s scientific field is currently featured by a dynamic, predominantly public and professionalized system that has witnessed a geometric growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefitted from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:
1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences;
2) the structural heterogeneity of Argentina’s scientific field, featured by the split between CONICET and the public university system;
3) the national and international circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.
4) There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
be divided into four groups: communities of general orthodox theme, communi-
ties where the main content is presented by the quotations of revered fathers
and modern members of clergy, and also parables and cautionary tales, issue-re-
lated communities (question to priests, for youth, family, devoted to beneficence,
etc.), and at last territorially united communities (the communities of bishoprics,
youth orthodox dioceses, etc.).

Each orthodox group in VKontakte and its own unique target audience on the
basis of which the group administration chooses content: by format (articles, news,
fillers, quotations), by form (text, photo, audio, video), by the functionality of
VKontakte social net (discussions, meetings). In orthodox communities VKontakte the model of social interaction ‘online-of-
line’ is actively developed. Within the framework of this model the participants
of communities are informed about offline events running (rapidly erected tem-
ples buildings, beneficence, meetings with interesting people, etc.) via VKontakte
functionalities (messages, meetings). Due to communities participants high degree
of loyalty the information about future events is spread by ‘virus’ method by the
means of likes and repost system.

The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to the
end of the last century and the very beginning of the 21st lead to some radical
epistemological changes at the crossroads between communication sciences
and sociology. This paper on one side reconstructs the key paradigm shifts in
system theory from the whole/part one (P1) to the system/environment one (P2)
and then to theautopoeitic paradigm shift (P3). Kuhin normality was rather
unlikely in systems theory and still the key global economical, technological,
social challenges of our times required revolutionary shifts. The other side of this
paper is essentially focused on theorizing a fourth paradigm shift which selects
the fragments of the late XX century epistemological debate turning them in
a systematic (in the Mertonian meaning of the term) redesign of the concept
of system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it.”

(Barash 2008: 25) “Some increase in plasticity is to be expected […]. It represents the extrapolation
of a trend toward variability already apparent in the baboons, chimpanzes and other cercopithecoids what is really surprising however is the extreme to which it has been
carried. Why are human societies this flexible?”

RC09-176.6

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)

“Hypercitizenship” and the Evolution of a Global Identity

The idea of the citizenship moves from the consideration of autonomous agents
and global events eventually converging by means of autoopoietic systems.

This work reframes the topic of the reconfiguration in the evolving social sce-
narios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a
multidimensional and multipolar convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic
attitude of those areas in which capitalism is turning into turbogenic capitalism.
Its main features are the following: Cosmopolitan, scientific, societarian and en-
trepreneurial.

The Hypercitizenship concept is focused on the fact that communication about
key challenges of our times is increasingly meaning communication and public
understanding of science and technology for governance and policymaking on a
global, global and cosmopolitan scale.

From this point of view, law becomes one of the ala carte products to be
bought by browsing a global “cathologue” (Mundus) surfing on a technological
global platform (Globus) of which the internet is the best metaphor and which
can be seen as the most important platform for convergence developments and
as a driver of several, key, changes. This new media platform is cosmopolitan and
glocal while the mass media often still fall into the methodological nationalism
trap. Indeed, the emerging scenarios are more and more shaped by supranation-
al (UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s….) entities and by
new localisms which cannot survive outside a global network.

Thus, the emerging glocality is witnessing that the “national state” citizenship is
too big -bureaucratically speaking-, but too small -in competitive terms-, to be
strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the glocal age is
rising, which we refer to as “Hypercitizenship”.

Central Bank ‘Independence’

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crisis occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an ‘unfair game’, as Hyman Minsky said years ago. This paper investigates ‘independence’, not only as a sociological misnomer, or a form of central bank ‘dependence’ on what financial markets think (as Fed members say) but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes behind which lie coalitions of interests that defend the status quo ante. So far few effective oppositions have risen to urge a firmer path for the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms’ bluff; in contrast the Bank of Japan is under some ‘control’ by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment has been the less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habitability of housing and urban space should be provided allowing ageing in place as long as possible. Under the senior population in Chile have focused in providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering than more than 80% of seniors in Chile own their homes (SENAMA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mobility figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues.

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. (Direct observation of performance of Basic Activities of Daily Living, (BADL), focus groups regarding findings and dimensional evaluation both of users and spatial conditions), Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and architectural design mostly related with height, presence of uneveness or lack of elements.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified [in ways not specified] as leading national social thinkers, though there are also some cases where the contents of national journals [identified as such in ways not specified] are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a ‘national’ sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine's Report, Digital Infrastructure for the Learning Health System, calls for 'weaving a strong trust fabric' among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understood, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust – fidelity, competency, integrity, and global trust – and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among healthcare providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal healthcare. Most feel that the health system is adequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). Discussion: The public's trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Understanding the nature of the public's skepticism and uncertainty about the risks and benefits to themselves and their communities of interest can inform future development of information governance and data brokerage.

Concepts and Practices of (Counter-)Democracy in the 2010s: Movements

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists. Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four key dimensions of democracy can be isolated in young activist's discourses: direct democracy, responsible democracy, argumentative democracy and protest democracy. Direct democracy at the local level is notably connected to experimentation in horizontal and participatory deliberation processes as well as by mediating leads to stress citizens' responsibility, whether in their consumption practices (the local transition movements) or in monitoring elected representatives and civil servants (often mentioned in Russia and in Brazil). Argumentative democracy is mobilized by committed experts, who trust in the impact of rational and well-developed arguments and popular education. Finally, many activists insist on protests, popular movements and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of these three forms of counter-democracy and responsible democracy. Taken together, they offer concrete ways forward for a multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

PLOWS, VICKY* (Victoria University, vicky.plows@vu.edu.au)

Reducing or Reproducing Inequalities? Ethics and the Researcher's Role in Negotiating Power Relations Between Young People

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young research participants (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for youth researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001). For youth researchers concerned with and committed to challenging issues of injustice and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth club over a 12 month period, I analyse the basis of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people's agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflexive engagement with ethical issues as they emerge in the research journey (Sime 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

Cosmopolitan and Essentialized Socialities in Transnational Spaces

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several countries. These two forms of sociality are new and encompassing character-istics of access and non-access to the resources of different contexts-of-inter-action in different places and societies because they merge both, the two basic forms of culture contact (adaptation or differentiation), and social relations of reciprocity, trust, collaboration, and exchange. This presentation will show that the Chinese Singaporean's explanations of their practices (or lack of practices) of these forms of accounts for how they perceived of changes in their own char-acteristics, in the dominant cultural characteristics of their transnational spaces, and of the cultural characteristics of processes of globalization that the Chinese Singaporean were carriers of. Emphases are on the role of the cosmopolitan cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan socialities in their contexts of work and friendships in Hong Kong with English-speaking people who were form the West, and Asians who had lived in the West; and ‘cosmopolitan’ work socialities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans mostly maintained essentialized socialities in their families, and they were largely excluded from the (differently) essentialized socialities of local Hong Kong people, propelling them—paradoxically, to more highly values cosmopolitan socialities with other non-locals in their contexts of work and friendships.

The Models of Orthodox Christian Parishes within Post-Soviet Russia: The Influence of Social Environment

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are variegated and have own features demanding on different factors (mainly of territorial and administrative character).

The sociological researches within Kashirskoe and Nikolosy deaneries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. “The churches with elderly communities unclosed in soviet period”. The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parish in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants: those who were in the church in soviet times and those who came there in post-soviet period;

2. “The parishes with constantly varied community” are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;

3. “The churches in holiday villages with cottagers communities” and “The guest church”;

4. “The parishes with the community of “the active” are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;

5. “The parishes of specific destiny”. There are parishes which are known for their unparalleled features, as for instance one of Sati-Nov-Russkoe of Nikolosy deanery: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church apse with background of luxurious houses raised around and even its own parish tragedy - the murder of a priest.

POHN-WEIDINGER, MARIA* (Institute of Sociology, maria.pohn-weidinger@univie.ac.at)

‘seduction: A Pattern of Interpretation’

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically; an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real – and fantasized - potential of their National Socialist parents to annihilate experienced by children. The biographical case construction I want to present concerns the life story of a woman born in 1928. Her socialization took place in a family with National Socialist values and within Nazi institutions, and she experienced sexualized violence as a child, by her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be the interpretative pattern of ‘seduction’, which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of ‘seduction’ allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

Asian Prosperity and Inequality: Gains and Injuries of Success

During the past decade or so, the Asian region has experienced rapid growth and expansion. While rising prosperity has led to poverty reduction, social inequality has also widened within and across societies. This paper will interrogate and differentiate the drivers of growth and inequality and its varying consequences to different income groups in the region. In particular, a sizeable lower middle class is fueling the growth of urban economies. By examining the differential gains of economic success within and across income classes, particularly among the emerging middle class, the paper characterizes the intersecting/intertwining social injuries of prosperity, poverty and inequality. In doing so, the paper extends the understanding of injuries of income inequality from the physical to the social and political.

Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region’s high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region’s challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

Cellular Globalization and the Environmental Awareness in Rural Communities

A multidisciplinary team of social scientists (sociologists, economists, social geographers and demographers from main Moscow universities under the auspices of the Society of Professional Sociologists) works in the Russian region of Kostroma. With its background of luxurious houses raised and even its own parish tragedy, the region’s asset of traditional rural ‘solidarity in despair and poverty’, towards recognising wealth as a value. Against this social background one can indicate the growth of rural communities made up of the migrant residents from big cities who decided to move out of megapolis in order establish a new environmental Utopia based on the value of ecological balance and downshifting. In the countryside “new re-settlers” combine their basic professional work through Internet and telecommunications, they make use of all modern commodities of life, they travel much on business—they are on the move or in the condition of ‘liquid mobility’. Those new ‘infocommunication settlers’ (ICS) exemplify a much higher degree of social solidarity and vitality as contrasted to the deteriorating solidarity of the traditional population of the region. Is this an early evidence of the forthcoming general turn to ‘infocommunication ruralism’ in the spiral trajectory of social change?

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voicehovsky-Kachalov Estate Project in the Vologda Region and the Ugory Environmental Project in the Kostroma Region

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the “Abramovich’s case” is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyzes the visual indicators of the “Manor Khvalevskoe” - restored by the famous financier Yuri Voicehovsky-Kachalov (“Standard Bank”), the family estate of the 19th century in Kostroma in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region, which is on wealth than in the past. But the most advanced villagers already realize the significance and value of the ‘old style’ living. A new migration force is about to radically change the profile of local community life but tends to preserve diverse ‘indicators’ of old times. The dramatic crisis of urban life enables sizeable groups of middle-class professionals and IT-experts to consider moving to environmentally balanced areas in the North of Russia.
Informality and Policy Making: Evidence from Post-Socialist Spaces

Informed by participant observation in public places, informal interviews and a large scale survey this paper explores the way informal practices may impact on policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a “culture of corruption” to introduce the concept of “(non-) state socialism”, defined as a system for redistribution of welfare based on human interaction and irregularity. By replacing state agency where and when this latter is ineffective or absent. (Non) state socialism refers to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiating of corrupt practices: those harking onto a state role (like fiscal fraud or bribing) and those harnessing the citizen directly (trafficking, narco-trafficking). Although both “illegal” the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regularizes itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

Renegotiating Social Policy through Informality: A Post-Socialist Perspective

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation at the formal and informal level of social and welfare policies in post-socialism.

Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialisation one. As a result, research has been preoccupied with possible areas of interventions, and steps to take, in order to speed up this convergence. This assumption has been challenged by an emerging body of literature that, starting from a post-structuralist perspective, suggest that development patterns may differ geographically and historically and that there are alternatives to the modernisation paradigm.

Gathering evidence from case studies (Estonia, Lithuania, Russia, Romania, Ukraine, Uzbekistan) a mix of ethnographic methods and national surveys designed by the authors this paper suggests that: 1) citizens unable to use traditional channels of access to welfare services do not imply automatically lack of welfare tools in that society. By organising themselves, citizens may be able to create parallel structures securing welfare without necessarily passing through the state. In this the paper will start from Polanyi’s (1968) distinction between pre-modern and modern economies to critically analyse literature on the lack of structures and social capital in post-socialist spaces.

The 1978 World Cup in Argentina, from within Its Political Prisons and Clandestine Detentions Centres

Situated at the crossroads between the study of political repression and the media coverage of a sports event, this paper focuses on the reception of Argentina’s 1978 World Cup among those who were imprisoned in clandestine detention centres, in a political context that some have described as state terrorism.

Our examination of testimonial accounts from the oral archive Memoria Abierta has shown that a number of survivors who were illegally imprisoned during the World Cup recall and express feelings about this event. While we expected concentralional spaces to be fully hermetic and insulated from outside information - as total institutions (Goffman, 1961) -, we observe, in contrast, the precariousness and ambiguous conditions which the prisoners accessed and either celebrated or scorned football and nation. Indeed, rather than having been censured or concealed by the repressors, the World Cup, as a national festivities and media event, was to some extent integrated to repressive practices.

We will discuss a number of situations evoked by the survivors in which the World Cup and its media broadcast intervene in the power logics of military personnel and their relationship to the inmates (better described as “disappeared” in the case of clandestine detention centres). We will also discuss the effects of the “informal porosity” of the total institution in the inmates’ experience. Our paper will be centered on the subjectivity of social actors: their opinions, expectations, and causes of suffering. We will also discuss the limits of such an attempt to reconstruct these positions, given the passage of time and the counterintuitive nature of this international sports event.

Pathways to Citizenship (inclusion) and Conflict (exclusion): Employment Relations in Migrant Workers’ Workplaces in Belfast, Edinburgh and Wroclaw

The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wroclaw – two economic centres in the then post 2004 migrant destination countries. Northern Ireland (NI) and Scotland became net in-migration countries in the early 2000s. A significant share of their migrant population is composed of workers from Poland – a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers’ subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with variant shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy.

The research is set in several political economy contexts of new immigration destinations. Being part of the UK, Scotland and NI share many features of liberal welfare states and liberal economic systems but at the same time NI has been characterized as retaining strong elements of Keynesianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The study is funded by the European FP7 Marie Curie Training Network “Changing Employment”. Website: http://www.changingemployment.eu

Poma, Alice* (UPO and EEHA-CSIC, alice.poma@gmail.com)

Feeling Intensely and Changing Radically: How Emotions Felt in Protest Lead to a Cultural Change

The aim of the paper will be to present our proposal of analysis that links the emotions felt in protest and the transformations of consciousness and behaviour considered as outcomes of the protest.

Aware of the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest, in which people decide to take part in the struggle and define themselves to it, changing their way to see the world and their relationship and bond with other people in a process that leads to transformations of consciousness and behaviour and, finally, to their empowerment.

Based on previous empirical research where we have studied different experiences of movements, protest and resistance in Spain and Mexico (indigadistas, #yosoy132, two Oaxaca’s women collective, Mexican anarcho-punk movement and a few resistences against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-structural literature cannot perceive. The methodology that we have

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
developed throughout our research is based on in-depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

POMA, ALICE* (UPO and EEHA-CSIC, alice.poma@gmail.com)
Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riaño valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

PONGNON, VOGLY NAHUM* (Universite de Brasilia, lygov@yahoo.fr)
Images des latino américains dans la direction de la composante militaire de la MINUSTAH (Mission des Nations Unies pour la Stabilisation en Haïti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thought directions, with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the "imagined Haitian nation."

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commer-
An “Area Studies” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas has become a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connections between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions a less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6th Division of the Ecole des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Des articles issus de la presse quotidienne et hebdomadaire française sont ainsi étudiées à travers la méthode de l’analyse du discours. Nous tentons par la suite de mettre en évidence les liens qui s’établissent entre des catégories d’individus et les actions et les caractéristiques qui leur sont attribuées.

Nous observons ainsi que l’individu handicapé est celui qui bénéficie d’une protection et dont les performances sont souvent observées par le dispositif. Au final, la personne n’est plus proprement dite déficiente. Elle est “en situation de handicap”, mais elle est capable de s’autodépasser, devenant de cette manière un membre de plein droit de la société néolibérale.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproductive health of women in three countries (Canada, Pakistan and Indonesia) and the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negotiating ideas about sex and reproductive health between three generations of families in the province of Newfoundland in Canada. The oldest grandmother participant was born in 1910 and the youngest granddaughter in the mid 1980s, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

He Héros Handicapé Ou L’autonomie Comme Norme Généralisée

Le point de départ de cette communication est donné par l’existence d’une double manière de présenter le handicap et surtout des personnes handicapées à travers les médias. Les individus y apparaissent le plus souvent comme des victimes ou des héros, les hypostases intermédiaires n’y trouvant qu’une place réduite.

Dans cette présentation nous retenons donc la figure du superhéros associée au handicap. Ce personnage est souvent apparié et donc pourvu d’une prothèse lui permettant de dépasser ses propres limites. Une image de l’homme réparé et/ou de l’homme augmenté y est construite tout en partant de la réalité des dispositifs techniques de compensation qui encouragent la performance et l’autonomie.

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil (Sao Paulo and Rio de Janeiro) and (2) a focus group, a cultural analysis of 51 young with the same socio demographic characteristics, conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member’s strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it’s hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions and mobility rights, both temporary and permanent) and the individuals who are involved in the transnational family practices. Second, the predominance of the network’s approach (informal connections, remittances, individual strategies)
 overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a posteriori perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and paternity are essential. Also, we must include the contributions of gender studies, in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

PORTILLA, HILDA JOYCE* (University of Ottawa, hiportilla@hotmail.com)

"Transnational Families" Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for “unskilled” workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants’ activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families’ lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

Encrucijada Latinoamericana en Bolivia: El Conflicto del TIPNIS y Sus Implicaciones Civilizatorias

El presente ensayo busca interpretar las implicaciones civilizatorias que venimos presentes en el conflicto del TIPNIS (Bolivia), resaltando la importancia que para el caso de Bolivia y las luchas territoriales, social, ambientales tiene el desarrollo del conflicto del TIPNIS. En la primera parte se hace un análisis de los múltiples espacio-tiempos que están implicados en el conflicto. En segundo lugar se centra el análisis en las actuales presiones desde dinámicas socio espaciales, especialmente de ampliación del capitalismo en frentes de expansión e invasión, que constituyen tensiones territoriales sobre y alrededor del territorio y territorialidad de los pueblos indígenas del TIPNIS. El estudio resalta el papel de los movimientos sociales bolivianos en la configuración de las nuevas luchas políticas emancipatorias en el mundo ancladas a los conceptos claves teórico políticos como territorio, autonomía, autogobierno, buen vivir, madre tierra, derechos de la naturaleza, estado plurinacional comunitario, resquebrando la antigua lucha por la tierra en una otra clave teórico-política, distinta de la liberal y/o marxista. El ensayo destaca la importancia de entender las profundas dimensiones que el TIPNIS nos plantea para tomar las decisiones que están en juego, y que constituyen toda una encrucijada en el continente, el mundo y también para los gobiernos progresistas que intentan empujar cambios en la actualidad.

Incivility and Disorder in Urban Public Space of the Czech Republic: Normativities and Instrumental Interests

The paper focuses on the changing definitions of incivility and disorder in urban public spaces of the Czech Republic. After the fall of the totalitarian regime in 1989, the notion of urban public space as a site of social interaction, negotiation and conflict appeared, first legally defined in 1990. The following years saw a process of negotiation of the limits of acceptability in urban public spaces. The terms disorder and incivility were employed by various actors, including courts of justice, local municipalities, activist groups, NGOs and the media, to define acceptable conduct and exclude undesirable elements from the newly emerging public spaces of Czech cities. This paper focuses on how the meanings of disorder and incivility were defined in the process. Two perspectives are identified in the discourse: (a) normative perspective, identifying the notions of disorder and incivility with respect to values of public order, safety, health and others and (b) instrumental perspective, whereby the notions of disorder and incivility are employed by various actors to promote their particular interests in the conflicts over the use of public space.

Out of Control and out of Sight: Defining Deviance in Czech Shopping Malls

This paper presents an empirical study of how deviance is defined with respect to sensory experience in Czech shopping malls. The rise of shopping malls is one of the most important recent developments in Czech cities: the first mall was opened in Prague in 1989. In the following years, there were over 70 shopping malls across the country, making it one of the world’s fastest developing countries in this respect. With this development, an idea of a “new public space” came to be prominent, with strict rules of conduct and social control based on surveillance and exclusion. The paper builds on a large body of empirical evidence, including interviews with mall management and developers and interviews with homeless people, in order to understand how deviance and deviant behaviour is defined in these new consumption spaces. It will be argued that visual appearances play a key part in the prevention-based regulation and control over mall space. The data show that, in the dominant representations of deviance, visual cues are conflated with the potential of uncontrollability, which is seen as a threat to the order of the mall space. The definitions of undesirability, applied to groups such as the homeless, are built on visual images and are associated with specific types of conduct. The rules of acceptability are, on the one hand, vague and open to interpretation by the security staff, and, on the other hand, tailored to exclude groups which, by their appearance, are considered prone to undesirable conduct. This conduct is often defined as a sensory disturbance to the image of the mall.

The i-sation of society and post-secularism: towards new inequalities?

In Jameson’s classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritzer wrote about the McDonaldisation of Society which refers to the permeability of (what Weber made reference to as) rational bureaucracy into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of ‘denationalised’ capitalism, and that with the help of new i-technologies, this penetration of rational bureaucracy has filtered further from everyday life to our personal biographies. Linking these two theories, this paper will present the argument that we are going through a process of i-sation of society (1) in which capitalism is not only dominating our outer life (e.g. global capitalism) but our inner life as well through its expansion on the internet facilitated by various i-technological applications and (2) in which the McDonaldisation process has now been normalised and religion has been standardised. This paper will address the new inequalities at hand in this i-society, its impact on Habermas’ project of post-secularism, and will project the role that various religions will have in supporting and/or countering this process.

but one important issue has been legal change. The introduction of no-fault di-
vorce in the post-war years contributed to the rapid increase in divorce, and more
recently the idea that same-sex marriage will be sanctioned by law has stirred up
significant public controversy.

Debates around the legal recognition of same-sex marriage and other related
matters such as gay adoption, have been highly charged in the public sphere. The proposed paper seeks to examine
whether the inclusion of religious and spiritual arguments in the public debate
on same sex marriage positively influences, as Habermas claims, the democrac-

Political Decisions in the Area of Public Security and the Action of
Death Squads: The Case of the Violence Crisis in 2012 in São
Paulo, Brazil

This purpose of this communication is to present our findings of an original
research that is being conducted at the Center for the Study of Violence of the
University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the
public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected
from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations – hooded men, shooting their victims from a motorcycle
or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the
organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions,
around which a dynamics of action-reaction seemed to be installed. For now, our
main hypothesis is that previous political decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings
between members of the State of São Paulo Military Police and members of the
PCC (First Capital's Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying phenomena as well as the
routines and different sources of tensions surrounding the politics of truth com-
misions that are currently convened in Brazil by systematically cataloguing them
and presenting reports from their public sessions and interviews with commis-
ion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions
in Brazil did not occur at the onset of the emerging democratic regime. Instead,
they are such as the megaphone phenomenon, appearing in the context of an already mature
democracy, and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff in
May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-

petrated by its own agents during past military governments (1946 to 1988), but
does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxiliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
orical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

Ranking Regimes, “World Class” Universities, and the
Impoverishment of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are
highly ranked according to their “impact factor.” A world-wide movement has
pushed scholars to publish in English-language journals, to the detriment, we
argue, for intellectual life at the national level. We first document evidence for this
pressures then discuss the consequences of funding mechanisms and research
assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest
in the new managerialism and the introduction of “metrics” exercises; 3) the
pressure and finance of commercial scholarly publishing, which takes advantage of
the preceding developments by charging high prices to maximize profits; 4) de-
cisions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.

The Overseas Chinese Population in Circa-2011

In circa-2011, there were over 40 million Chinese people living outside China
(broadly defined). We discuss the data on the overseas Chinese; we show their
distribution among the world's countries and regions. We discuss their patterns
of change in past decades. We present recent data on the larger of the non-Chi-

ese diasporas to enable us to better evaluate the significance and importance of
the Chinese diaspora. We discuss the major patterns of previous Chinese emigra-
tions. Then we present our data on and analyses of the overseas Chinese around
2011. The overseas Chinese population in the world in 2011 is larger than the
population of Poland and Canada, and almost as large as Argentina. The Chinese
diaspora is the third largest in the world, behind Ireland and Germany. The over-
seas Chinese continue to have important and significant influences in many host
countries and are certainly not an inconsequential population.

The Residential Segregation of Homosexual Households from
Heterosexual Households in Metropolitan Areas of the United
States, 2010

Residential segregation is a major area of research in demography and sociol-
ogy. Most of the research has focused on the segregation of racial/ethnic minori-
ties from the majority race/ethnic group in cities of the United States and several
other countries. Few if any analyses have dealt with the spatial segregation of
sexual minorities from the majority. In our paper we analyze homosexual-to-het-

eresosexual household segregation. There is a void in the literature about the ex-
tent to which gay men and lesbians are residentially segregated from heterosex-
ual households. There are some studies of “gay spaces” and enclaves, but most
are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves
and political force and activism. There are no systematic empirical studies of met-
ropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and
lesbian households are residentially segregated from heterosexual households.
Our paper addresses this void. We use two dissimilarity measures of residential

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
segregation with the same-sex partnering data from the 2010 U.S. census to cal-
culate segregation scores for the 100 metropolitan with the largest homosexual
populations. We show that there is a sizable amount of residential segregation
between these two groups. We also show that gay male households are more
segregated from heterosexual households than are lesbian households. And we
show that the level of segregation varies positively across the metropolitan areas
with the size of the gay male and lesbian population. Our research contributes
to the general literature on residential segregation by focusing on a non-racial
minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in
Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends
in disparities in education following the traditional patterns of inequality
along gender, generation and geography. Magnitude and recent trends in in-
equality vary across regions and countries. Educational differences by genera-
tion indicate the speed of change in human capital formation over time and we
identify different patterns of educational transitions that are closely connected to
societal, educational and cultural contexts. We focus on pathways from female
disadvantage to gender equality and new forms of inequality. The closing of gen-
der gaps is typical mostly of developing countries, where recent gains in educa-
tion have diffused broadly since the 1970s. In the southern state of Bavaria, im-
plementation is just beginning; indeed, the law's intents are being subverted by
government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of
institutional persistence and change: power-based, legitimacy-based, utilitarian,
and functional. This analysis contributes to the theoretical literature on institu-
tional persistence and change: power-based, legitimacy-based, utilitarian,
and functional. This analysis contributes to the theoretical literature on institu-

Becoming Worldly: Developing Global Cosmopolitan Perspectives
On Diasporic Homeland Tours

Diasporic tourism—structured group tours to natal, symbolic and ancestral
homelands—is a growing industry where globalization, migration, leisure and the
symbolic economy converge. Using ethnographic material from three diasporic
tourist populations, this article examines the process of narrating a collective self-
hood through diasporic homeland tourism. While tourists travel through space
to homelands in order to travel through time and discover ancestry, they also
move in scale by claiming membership in a global community. Framed within the
theoretical intersection of tourism and diaspora, this comparative project reveals
the utility of cosmopolitanism—as a category of practice—for domestic displays
of identity and community.

No One “Likes” Sandy: Facebook and Post-Hurricane Recovery In
Long Beach, NY

Technologies, like social media sites, have made it easier to communicate and
capture the “ephemeral” cultural artifacts found during periods of upheav-
aland change (Stallings 2006). However, due to its relative newness, social me-
dia’s role in recovery efforts after natural disasters has not yet been thoroughly
explored. This report adds to existing literature and demonstrates how social
media technologies supported and facilitated localized recovery efforts and me-
memorializations from below in Long Beach, New York. The Long Beach Hurricane
Information Facebook page, created by two transplants to keep out-of-towners
informed has since morphed into a virtual bulletin board that provides support
and information for local residents. Residents both near and far see this site as
a place to share information, organize local responses, and importantly remem-
ber. Referencing their personal memories of Long Beach, posters reference local
symbols and sayings to perform solidarity and community in this virtual space.
This site bears witness to the resiliency, frustration, and strength as well as the
shortcomings and failures of institutional recovery efforts. While they struggle to
rebuild, they work together; defined and connected by the “Long Beach sand in
their shoes.”

Persistent School Segregation or Change Toward Inclusive
Education? The Convention on the Rights of People with Disabilities
and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UN-
CRPD) was ratified in Germany in 2009. Article 24 requires that nation-states im-
plement an inclusive education system. This ambitious goal poses great challeng-
es for institutional reform as special education systems can facilitate—or
hinder—inclusive education. Germany is one of the countries worldwide that, to
achieve the UNCRPD’s goals, must transform its highly segregated education sys-
tem. In fact, for decades Germany has maintained one of the most differentiated
and segregated education systems in Europe. Inclusive education contradicts not
only contemporary special education structures, but the entire highly-stratified
general education system, addressing a core conflict in German education policy.
The consequences of segregation, such as social assistance receipts over the life
are dramatic even if they have not often been calculated.

Thus, this neo-institutional analysis examines both the barriers and the reform
mechanisms that impact the implementation of the UNCRPD in a decentral-
ized national context. German federalism guarantees the sixteen Bundesländer
authority over educational matters; however, ratified human rights conventions
demand fundamental reforms regardless of regional policymaking preferences
and priorities. Based on historical process-tracing and expert interviews (with pol-
icy makers, administrators, scholars, and advocacy groups), we contrast “leader”
Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive educa-
tion has diffused broadly since the 1970s. In the southern state of Bavaria, im-
plementation is just beginning; indeed, the law’s intents are being subverted by
government actors, exhibiting considerable backlash.

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies. This paper seeks to analyze through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show how the scenario of informal practices until the eighties and that part of these practices are reaprearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of formalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows that these practices have been selectively allowed by local administrations to ensure certain forms of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a ‘Commons’ Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption. This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies for ensuring its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logics. These experiences demonstrate the limits of technological innovation in moving towards a post-carbon society. Urgent changes in how socioeconomic activity is organized are also claimed.

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamentar y members, and activists in both countries have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political gains or social movement gains have women been able to make on these issues and what strategies have they devised to deal with these challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as ‘a problem’ at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women’s state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies’ focus seems to be more the increase in domestic violence, and less on issues of women’s unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands

Based on ‘Netherlands Employer Work Survey’(NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in The Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management.

Workplace innovation is defined by Pot (2011) as "the implementation of new and improved combined interventions in the fields of work organisation, HRM and supportive technologies. Workplace innovation is considered to be complementary to technological innovation". Taking this definition, which is rooted in the ‘theory of modern sociotechnology’ (De Sitter) and ‘the job demands - control model’ (Karasek), as a point of departure, we constructed a Workplace Innovation Index that consists of the following characteristics: ‘active jobs’ (flexible but tailor-made employment relations), ‘employee voice’ (dialogue and autonomy), ‘flat organisation’ (limited hierarchical levels and teamwork), and ‘innovation orientation’ (openness to renewal and seeking new knowledge externally). The relationship between this WII-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined. Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation and its outcomes has been sparse. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in the UK and Japan.

In this paper, we consider the extent to which there is a higher level of grandparental childcare in contrast, in countries where there is a balance of public expenditure in favour of youth, whilst age-divisive policies set up the intellectual and political debate as a matter of intergenerational tension.

Both are wealthy, advanced democracies, with old and ageing populations, facing prolonged austerity. Yet in many cultural, political and institutional respects they are quite different and have historically combined different modes of governing in the interests of social welfare. The UK emphasises free will, individualism and market solutions, whilst in Japan, the emphasis is on balancing free-market thinking with some sense of social responsibility and community, along with calls for reforms of existing collectivist policies, all in the context of strong traditions of intergenerational solidarity and filial piety.

We conclude how and why this policy prescriptive language has emerged in both countries, what purposes it is serving, and what the consequences might be for the distribution of resources in later life. We then consider analysis of each country in comparative perspective, highlighting factors that contribute to differences or features that transcend national boundaries. We conclude that publicly framing the allocation of financial resources as a matter of intergenerational conflict masks inequalities in the social distribution of resources within all age groups that arise with the increased marketisation of late life welfare.

You Are a Dark Person after All

In the 1960s I visited one of the racially mixed primary schools in the Netherlands. Half of the 200 pupils were second generation Moluccan children, whose parents felt forced to leave their home country in 1951 in the aftermath of the decolonization of the Dutch East Indies. Some forty years later I recorded the lifestories of 35 of my former classmates. This paper will focus on the extent to which the native Dutch, as members of the ethnic majority, and the Moluccan-Dutch, who perceive themselves as second generation political exiles, identify with Dutch society. More specifically, it will analyse how their accounts tap into but also resist dominant discourses of race, ethnicity and culture. While the stories of the native Dutch contain a range of images of the ‘other’, from special or pitiful to unsettling or inferior, and often express concern about the ability or willingness of ‘foreigners’ to adapt to Dutch culture, the Moluccan accounts appear to be devoid of any imagery of immigrants as ‘other’, as well as any concern about cultural integration. On the other hand, while most native Dutch empathise and emphasize that they consider Moluccans to be part of ‘us’, the Moluccan accounts testified that, due to their different culture or outward appearance, they cannot but identify as ‘other’.

Being Active as a Route to Health and Happiness

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One of the main consequences of recognizing such a transition is that the health policies of rich nations have incorporated a concern to promote ‘healthy lifestyles’ and a personal sense of ‘wellbeing’ with the ultimate aim of reducing mortality and morbidity rates across the life-course.

One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what ‘activity’ is and what might promote its effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.
emulated family breakdown, loss of land, environmental degradation, increase in debt, etc. This notion therefore suggests that migration will result in ill-being of rural dwellers. This paper explores the implication of migration on well-being of return migrants in the Northeast of Thailand. This paper argues that while migrant leave their village in seeking material wealth, they continue to maintain a high value on bonds and relationships to their natal village. The bonds they have to their rural village limited their objective wellbeing, because of low returns of agricultural and low wage works in rural. But the limited seeking material wealth through migration on the one hand also enhances or fulfils their subjective wellbeing. This study also found that the rich seems to be experienced higher happiness after returning to the village, while the poor do not experience subjective wellbeing in the same manner.

Key words: wellbeing, migration, the Northeast of Thailand, Development

[1] The data is drawn from the research project titled “Personalizing the Middle Income Trap”. Members of this research includes Jonathan Rigg, Ann Le Mare, and Buapun Promphakping.

**PRUISKEN, HENRIK*** (Bielefeld University, henrik.pruisken@uni-bielefeld.de)

**Locus of Control and Cumulative (Dis-)Advantage in the Labor Market**

The relationship between Locus of Control (LoC) and occupational outcomes has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities leads then to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of "Fixed-Effects-Models" I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase in an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

**PRUISKEN, HENRIK*** (Bielefeld University, henrik.pruisken@uni-bielefeld.de)

**The Effect of Inequalities within Families on Work-Values of Adolescents**

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents' development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach, the present paper investigates to what extent the sibling constellation and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social comparisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a "de-identification" is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (GSOEP) for the years 2000-2011. In the GSOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of "Sibling-Fixed-Effects-Models" I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase in an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

**Neoliberal Rationalities in Vocational Higher Education**

The increasing function of universities as institutions for mass education might affect democracy and the universities' contribution to society. Students as choice-agents need to be involved in these processes. This paper scrutinizes how students' practical considerations for future choices in education and occupations correspond to policy objectives of socially productive educational choices. These objectives currently follow neoliberal rationalities regarding how to divide the responsibilities between the state and its citizens. In this context, choice-agents have to learn to identify themselves as economic subjects able to cope with economic transformation.

The aim of our research is to examine the correspondence between educational policy objectives and students' educational choices in practice. The research questions are: What extent students' choice-views and motives reflect a (neo-)liberal instrumentality? Is there a resistance against such rationalities in students' actual choice-strategies? This issue is empirically investigated via a semi-structured questionnaire (n=840) with students from 14 vocational Swedish Human Resource programmes in higher education. The case of higher education programmes was seen relevant, since weak professional university programmes tend to stimulate rationalities amongst students that ritualise the role of education in terms of its formal credentials. Vocational programs are also a significant growth sector in higher education, with large proportions of non-traditional students.

What is unclear, however, is whether these forms of education reinforce a desired policy ambition with regard to instrumental choices in education. These are policy rationalities that are questioned in the paper from a critical semantic approach indicating that the policies fundamentally rest on manipulative powers where human agency is forced into instrumental decision-making. The results of the study point to patterns where students tend to resist instrumentality and integrate their decisions in education as reflexive and relative autonomous personal projects in relation to the recognized social powers of the labour market.

**Interrelation Between Organizational Trust and Organizational Innovativeness from a Context Perspective**

The paper explores the interrelation between organizational trust, which is defined as an attitude combined from affective and cognitive components (McAllister, 1995), and organizational innovativeness, an organizational capability to create new ideas, experiment and engage in creative processes and which is operationalized as a five-dimensional construct consisting of product, market, process, behaviour and strategy innovativeness (Wang and Ahmed, 2004). We study the interrelation from the perspective of innovation context and take Lithuania as a case of a low innovation context and Finland as a high innovation one according to the Innovation Index 2013. The research question is whether different components of organizational trust can result in different organizational capability to engage in creative and innovative processes.

The empirical data for this study were collected by means of a standardised electronic questionnaire from 3 organizations in Finland (n=719) in 2011, and so far 4 organizations in Lithuania where a survey is still carried on since 2012 (current n=536, survey to be completed December 2013). Based on preliminary findings of regressional analysis, the emotional component of organizational trust has a much more significant effect on organizational innovativeness than cognitive one. Its affect on the dimensions of behavioral, process and strategic innovativeness exceeds its impact on market and product innovativeness. These findings imply that creativity may be malpracticed in organizational setting and more self-purposeful rather than result-oriented.

The research findings will have theoretical implications concerning the role of emotion to organizational innovativeness, discussing the need for golden mean thinking. From a managerial perspective, potential risks arising from high organizational trust and certain dimensions of organizational innovativeness will be discussed considering the innovation context.

**Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion**

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only Integrating action of the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

Social Implication of Inequity in Higher Education; A Comparative Study of Formal and Non-Formal Mode of Education in Andhra Pradesh of South India
*A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India
*Dr. P. Koteshwar
Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important of higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in the post globalized era developed and developing countries initiated established institutions of higher learning across the world. In this consequent the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means, India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society. However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers
A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn’s production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers' suffering from work pressure, anxieties and desperation at an unprecedented level.

Communism Revisited: A Third World Perspective
As an idea or philosophy, Communism died in the West when the mature form of capitalism didn’t succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it. Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn’t vanish but this didn’t put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an Idea of History.

There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state. Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Capitalism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.

The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-class political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as minimalist (or neo-feudalist) mechanisms of interaction.

Within this picture that emerges may help to explain the phenomena of globalization in terms of growth, competitiveness, development and democratization of decision-making processes of their political systems (by implementing, for example, inclusive decision-making practices supported by the use of new technologies of information and communication).

The aim of the contribution is therefore a general reflection on the political culture of the Italian political elites and its “weight” in shifting the impact of globalization from a potential added value for both national and local development to the actual practical loss of competitiveness of the whole system.
essay *The Gift*, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g., Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift of ceremonial gift exchange needs to involve some generosity and thus at least be guided by the ideal of the pure, absolute gift, if it is to avoid being turned into sheer market exchange. And, from the other way around, even the gratuitous giving in pure loss seems to presuppose at least a minimum of reciprocity – insofar as the gift is accepted by the givee – if it is not to remain illusory, utopian, and abstract.

The reports on a theoretical and historical research project comparing two contrasting social movements that shaped China's immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966-76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China's international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directed to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

QUAH, SHARON* (National University of Singapore, sharon.quah@nus.edu.sg)
Reconfiguring Personal Communities In A ‘Divorce Biography’

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and policy discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decay and focuses instead on the way individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call ‘a divorce biography’. These spaces include the ways in which individuals terminate an unsatisfying marriage, decides on the terms of divorce, copes with the crisis, organises one’s personal relationships and makes plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choices navigating around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be cumulated into a common source database for building even longer, denser, and geographically more complete trends. The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given the variety of languages, question and questionnaire formats, and other design properties of the individual surveys. The database presently comprises more than 800 time/country samples from 32 European countries or regions and covers almost all years from 1986 to 2010. Analyses aim to establish the presence or absence of particular national and supra-national trends, identify aberrations of samples from trend patterns and investigate possible methodological factors behind such aberrations. Further, the analysis may eventually contribute to answering such questions as what the effects of different response formats, sampling design, administration modes etc. on reported average attendance levels are.

QUANDT, MARKUS* (Leibniz Institute Social Sciences, markus.quandt@zges.org)
Understanding Patterns of Political Participation – Are National Borders Natural Borders?

Different modes of political participation are often seen as expressions of the loyalty and attachment each individual has to the society that people live in. Institutionalized, formal participatory behaviors such as voting or petitioning are understood to signal compliance, support and trust for the political system, non-institutionalized behaviors such as boycotts or participation in demonstrations are understood to signal conflict and risks for social cohesion. Obviously, the likelihood that respondents report certain behaviors depends – besides respondent-specific incentives and opportunities for such behaviors found in their home society. For comparative studies this means that we have to expect cross-national variation in the measurement properties of scales for political participation, even for substantive reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

Genre Et Vieillissement : L’expérience De Femmes aînées Immigrantes

Cette communication présente certains résultats d’une recherche qualitative menée auprès de 90 femmes aînées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les aînées immigrantes sont rarement traitées même si le rôle de grand-mère (échanges de services, liens avec les petits-enfants, impact de l’éloignement géographique) (Attias-Donfut, 2008; Phillipson, 2002; Treas et Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche visait à comprendre l’expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternelité, rôles comme aînées dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise –égalité, contestation de discrimination, de solidarité). Les femmes aînées immigrantes rencontrées lors d’entretiens de groupes appartenaient à trois générations (65-74 ans, 75-84ans, 85 ans et plus), sont originaires de différents pays (Haït, Cameroun, Japon, Roumanie, Liban, Égypte, Croatie, Colombie, Chine, Portugal, etc.) et ont des parcours migratoires et de vie variés. Dans le cadre de cette étude du processus d’immigration et genre, nous montrerons que la trajectoire migratoire de ces femmes amène des changements et/ou des ajustements dans le sens qu’elles se font de leur place, à la fois dans la société et dans la famille, de même que dans leurs pratiques concrètes. Ainsi, chez certaines, la migration est un facteur de déstabilisation (isolement, repli sur soi, vulnérabilité) alors que pour d’autres, elle est un facteur de « libération » des pressions sociales et familiales vécues dans le pays d’origine, voire d’émancipation.

NOTE: if possible, my preferred format is poster, but if not, it is ok with oral presentation.

Regulation of Private Expenditures in Cross-National Perspective

Over the past decade, health spending in many developed countries has grown faster than gross domestic product, leading governments to search for alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on both population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater governmental regulation of the private insurance industry.

This paper will examine this hypothesis with the Health Insurance Access Database (HIAD), by demonstrating the variation over time, by health service and...
The problem of Gestión in the Soft Industry

The ponencia se orienta a dar respuesta, en base a un estudio de caso en la industria del software, a la pregunta de qué manera las organizaciones, los gerentes y los trabajadores lidian con las tensiones relacionadas con la innovación. ¿La hipótesis es que dadas las características del trabajo en esta industria, ocurre una fuerte diferenciación de conocimientos y con una fuerte autonomía que, como los trabajadores, su gestión no puede apoyarse solo en las estrategias de los empresearios o gerencias de RRHH, teniendo éstas que articularlas con el componente “humano”. Estas nuevas modalidades de gestión por ende deben tener como eje central la construcción de relaciones sociales en la organización. Esto conlleva, una fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad.

Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y articulan tres dimensiones problemáticas:

1. normativa: Supone dar cuenta de la construcción de normas internas desde una perspectiva amplia que considere tanto las normas formales como las informales, las reglas autónomas como las de control, las normas jurídicas como las de tipo ético. Esta dimensión es relevante en un mundo que parece poco estructurado en relación a otros sistemas productivos. b) performativa: Esta dimensión tiene relación con el concepto de eficiencia, de su construcción in situ. En ella cobra relevancia la distinción entre los conceptos de productividad, más acorde al mundo industrial, y de performance, más acorde a la dinámica del sector.

Cognitiva: Refiere a la reflexividad que emana de la organización normativa y la dimensión performativa aportando una mirada dinámica de los procesos de gestión. Importa en esta dimensión la construcción social del conocimiento y las identidades construidas en torno al mismo.

Transformaciones y Retos De La Función Social Del Académico
En El Marco De Las Reconfiguraciones Del Conocimiento, La Universidad Y Las Políticas Educativas

El trabajo se desprende de un proyecto de la Red de Estudios Sobre Instituciones Educativas (RESIEDU) todavía en proceso denominado: “Modos colectivos de producción de conocimiento de los académicos en Universidades Públicas Estatales”. Parte de 3 ejes problematizadores enmarcados en la sociología del centro-lavado de la sociedad y sociología del académico, éste último abordado tanto en su vertiente individual, como en su vertiente colectiva.

En este marco analizamos el papel evaluador que la política educativa confiere al estado, bajo el discurso de calidad y profesionalización de la planta académica mexicana, y la manera que impacta en los procesos de gestión institucionales y las dinámicas de los propios académicos y grupos de investigación. El abordaje empírico se llevó a cabo a partir de acercamientos cuantitativos por medio de un cuestionario aplicado a 630 académicos de 49 Universidades Públicas Estatales en México, y acercamientos cualitativos a partir de grupos focales y entrevistas en cuatro universidades mexicanas de los estados de Hidalgo, Chiapas, Tamaulipas y Jalisco. A partir de los hallazgos, se discute el papel de los académicos en las nuevas reconfiguraciones del orden mundial, en el que el mercado va teniendo un papel cada vez más protagónico. Se analiza la manera en que la función social de la ciencia y la función social de la universidad, presentan nuevas configuraciones que impactan en una redefinición de la función de los académicos. Se concluye con algunas interpretaciones de las tensiones que enfrenta el académico entre lo individual y lo colectivo; tensiones entre las demandas sociales, empresariales y del estado que ponen en entredicho su función social; tensiones entre sus formas de organización al interior de la institución (departamentos, academias, cuerpos académicos) y al exterior (redes, colegios), entre otras, y se enfatiza el papel y los retos de la política educativa en estos procesos.

**Guidelines for the Creation of Laws and Intuitions in Order to Eradicate Poverty in Mexico**

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty.

The situation is different in Mexico when we try to reuse some transcendental aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the right to a decent salary, the right to housing, and social welfare in general.

So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

Accordingly, all the citizens have the same constitutional rights and obligations.

According to the extractive politics volatile. Our study of these less visible struggles over redistribution and political discourse in the claims over resource redistribution and political representation seeks to provide new perspectives to the prevailing forms of environmental governance and the contestations regarding them.

**Contested Claims over Space: Discourse and Politics Among Fishers and the Oil Industry in Mexico**

This paper examines hybrid forms of resource governance and the involved struggles over space and subjectivity among coastal fishers, the Mexican government and the state-owned oil industry in Tabasco, Mexico. The analysis builds on the study of contested claims over rights to off-shore space in an area established as a security measure exclusively for the use of the oil industry by the Mexican government in 2003. The study is based on research material collected during intensive ethnographic fieldwork among coastal fishers, government actors and oil industry representatives in Tabasco in 2011 and 2012.

The study focuses on the “how” of hybrid mechanisms of resource governance, with particular interest in the strategic use of legal measure, corporate social responsibility programmes and political discourse in the claims over resource space. The research takes part in post-Foucauldian theorizations of space as social arena, constructed in political frictions between private capital, state, society and nature.

We argue that fish-oil governance in Mexico operates as a combination of different logics and technologies that work towards the displacement of fishers as legal subjects from politics and their subjection to ideologies of entrepreneurship. Simultaneously, the multiplication of transnational actors in the oil industry’s CSR programmes provides a new political venue for the continuance of the fishers’ subjection to clientelist arts of governance while it makes the identification of accountability and responsibility diffuse. In this context, the fishers’ resistance is constructed through individual networks and opposition to mechanisms of self-responsibilisation and through fragmented political resistance which keep the extractive politics volatile. Our study of these less visible struggles over resource redistribution and political representation seeks to provide new perspectives to the prevailing forms of environmental governance and the contestations regarding them.

**Posibilidades EN La Base De La Pirámide**

Los estudios sobre la base de la pirámide se han centrado, de forma tradicional, en comprender las causas estructurales de la pobreza, así como sus aspectos psicosociales. México lleva a cabo numerosas campañas para apallar los niveles de pobreza en el país, desde los programas OPORTUNIDADES hasta la “Cruzada contra el hambre” y las de las instituciones y el gobierno e interesadas en los aspectos estructurales de la pobreza y en el impacto comunitario.

Este paper propose a visión alterativa a la percepción dominante en México de la situación de la pobreza basado en los estudios realizados por C.K Prah- alid. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionan dignity y empoderamiento a las familias de bajos recursos.

Este paper propose una metodología en tres fases:
The article combines literature from political science, development theory and social psychology to discuss the relevance of procedural justice to the achievement of sustainable development goals. Participatory environmental governance is framed as contributing to the fulfillment of the equity ambitions of sustainable development. However, there is a tendency within environmental governance to depoliticize environmental issues and decision-making, for example by making participation conditional and by linking strategies of sustainability with the perceived neutrality of bureaucratic regulation. A depoliticized governance process can create situations where controversial issues of ethics and justice are obscured or even avoided; watering down basic functions of democracy, such as representation, dialogue, and accountability. Scholars argue that marine governance has been severely neglected by the social sciences and has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

The theoretical discussion in this article is illustrated by drawing on empirical material from two case studies of marine nature reserves establishment in Sweden and a case study of ENGO participation in regional marine environmental governance platforms managing the Baltic Sea. Interviews with different actors address how procedural justice affects legitimacy of decisions made on the back of this process. Furthermore, based on the material, unequal distribution of various resources affects the perceived balance of justice between actors in favor of more resourceful actors as participants and agenda setters. The findings show that actors' ability to act upon opportunities given by society seems highly dependent on the actors' access to different kinds of resources/capacities. Weak or even weaker actors may risk getting ignored, neglected, manipulated or even abused.

The "Age Complex" in Childhood Studies and the Limits of a Politics of Age

The present work discusses the significance of age as the cornerstone notion which has historically embodied studies of children and childhood. Naturalized as a handy indicator of change along the life cycle and inherently simple as a political tool of power, age has, nevertheless, allowed for scarce questioning concerning its own epistemological conditions of possibility. For instance, can age de-or re-construct the evolutionary temporality in which it was initially conceived? How can age divisions and differences be re-constructed in view of emancipatory ideals of children? Hasn't age contributed to an under-socialized notion of children? Modern childhood owes its origins to the emergent historical importance given to human differentiation along the life course, a principle which came to preside over the formation of organisms, individuals and societies. Chronological age became the index which testified to socially and biologically relevant changes against the backdrop of an individual's identity. How human differentials along the life course should be signed, predicted and legitimated become an accomplishment of age taxonomies or life stages. Studies of childhood emerging in the second half of the twentieth century, like sociology and anthropology, problematized the contextually unbound nature of age changes and its reifying effects and age's subjectivities. Did the reformulations that were taped by age were brought to converge, although age, as an explanatory concept, was not entirely overcome lurking beneath the constructionist efforts to understand childhood and children. Age constitutes, then, a "complex" given its overall adherence to modern as well as contemporary perspectives of childhood studies. Problematizing age points in the direction of inquiring about the nature of the disputes and conflicts of age-related social groups and the limits of such a politics of age.

Ambiguous Collectives - Creative Workers and Their Integration in Urban Space

Looking at people working in the areas of arts, design, architecture, fashion, multimedia, communication and consulting, it is hardly possible to identify a more or less homogeneous "creative class" (Florida 2002) that would contribute to the competitive advantage of urban regions by producing cultural values apt to create a distinct identity in the global competition. From our point of view, they rather form ambiguous collectives that are continuously reconfigured by the transformation of urban space.

As Marazzi (1997) argues, the organisation of cooperation in post-Fordist labour organisation passes from wage form to space form. Creative workers have a peculiar function within this process, because they help to transform urban space into a source for economic production and organisation. They do so by assigning symbolic value to cultural peculiarities of quarters, by exploring the limits between private and public space, between working time and leisure time, between economic interests and cultural values. Creative workers enact the game of exploring these limits as essential part of their professional and cultural identity. Yet, as stated, this form of "identity" is ambiguous, since it indeed may function as a driver for gains in social distinction, for accumulating cultural and social capital (Bourdieu 1997), but distorts and veils real differences in income and social security.

We will refer to two phenomena regarding creative workers' use of spaces: 1) the founding of common spaces like office communities and 2) the organisation of protests against the structures of the social insurance system. This enables us to show a general picture of minimal assistance from the state and a reliance on extended families to take care of individuals. Although there are indications of social security mechanisms in African countries including pensions and family allowances, these may be partly or solely carried by the private sector. However, the current democratically elected South African government developed a multitude of policies and acts in place to support people at risk (e.g. poor or abused people), but these target individuals. In the draft White Paper families at risk are identified, but policy makers are unclear on how to match support to such families with the realities. The Latin American family policy examples, such as Progresar (launched in 1999 in Argentina), Violence- and Child Solidario (implemented from 2002 in Chile), did not find support with the South African government. This lack of support for these types of policies is not entirely clear but the principle of expected counter performance (such as progressing in school) did not seem to find favour. Instead, idealised notions of nuclear families are put forward in the draft White Paper but here alternative policy directions will be suggested.

Will Family Policy Development in South Africa Free Itself from Ideology?

The aim of this paper is to give an overview of South African family research and to recommend how family policies can match these realities. The South African national department of social development published their draft White Paper on Families towards the end of 2012. This White Paper is believed to be a precursor of family policies to follow. Historically the apartheid government placed the bulk of family care on the shoulders of the extended family but there have been various indications for decades that this burden cannot be carried by families alone. An analysis of African countries, unlike welfare states from the North,
to address the question if the need for collective organisation is necessarily subordinated to the capitalisation of cultural production via the valorisation of city quarters in terms of real estate prices, or if shared spaces are an opportunity for enhancing participation in the shaping of urban environments.

"Serious Leisure": Film Festivals As Techno-Audiovisual Capital

Author: Rosario Radakovich

Film festivals are considered as part of a “serious leisure” for the audiences. Most of them are considered as a “distinct” cultural activity, also an specific “techno-audiovisual” or “techno-cultural” capital (O’Keefe: 2009). Film festivals give audience the opportunity to be part of an specialized knowledge, a creative and innovative environment—with film-makers, cultural journalists, et-, be included in premières, and be part of the atmosphere of contemporary global culture. (Stinger, 2001).

As a result, audiences expect festivals provide a certain “quality guarantee” in order to show to the friends and family the value of this prestigious activity. According to De Valk (2006) festival audiences use the experience as evidence of cultural capital in conversations between friends and family. In this context, what are the forms of “serious leisure” associated to audiovisual cultural capital?

This paper will analyze the case of the International Film Festival in Montevideo organized by Cinemateca Uruguay, in order to explore the consumption of film festivals as a “serious leisure” in Uruguay. The methodology includes personal interviews and focus group study with film festival “selected” audiences. The results are part of a research about uruguayan audience cinema, developed in the Information and Communication Development Program in the Universidad de la República (PRODIC UDELAR), with an interdisciplinary research team between 2013 - 2015.

RADFORD, LORRAINE* (University of Central Lancashire, lradford@uclan.ac.uk)

Domestic Violence, Coercive Control and ‘Riskv Parenting’

This paper will consider the concept of risk in relation to parenting in the context of domestic violence. Since the ‘discovery’ of violence in families in the nineteenth century and the ‘re-discovery’ associated with the birth of second wave feminism in the 1960s, definitions of ‘violence’ and ‘child abuse’ have expanded in high income nations. In the UK the official definition of domestic violence has been changed to include the concept of ‘coercive and controlling behaviour’ defined as ‘an act or a pattern of acts of assault, threats, humiliation and intimidation or other abuse that is used to harm, punish, or frighten their victim’ and ‘a range of acts designed to make a person subordinate and/or dependent by isolating them from sources of support, exploiting their resources and capacities for personal gain, depriving them of the means needed for independence, resistance and escape and regulating their everyday behaviour’. In this paper, Starks' (2005) concept of coercive control will be applied to fathering in the context of domestic violence. Child care after separation or divorce has become a gendered political issue. The implications of applying the concept of coercive control to fathering for equality, safety and justice in managing violence and risk in post separation relationships between parents and children will be discussed.

RADFORD, LORRAINE* (University of Central Lancashire, lradford@uclan.ac.uk)

The Victimisation of Childhood – Understanding Children and Violence

The media and campaigning organisations have influenced public perceptions of violence and young people by focusing on rare and sensationalist events such as homicides, extreme cases of child abuse and young people orchestrating riots from smart phones in inner city areas. Representations of children and young people as either ‘victims’ or ‘villains’ has consequences for their wellbeing – their experiences of violence are misrepresented and over simplified, fragmented accounts of the causes and consequences hinder progress in policy and practice. Taking a feminist approach to the sociology of childhood and drawing on recent research findings, this paper will consider what is helpful to know about the risks of abuse, neglect and violence when working with children and young people.

Key questions addressed will be:

What is known about the prevalence and impact of abuse, neglect and violence in the lives of children and young people today?

What are the gender and age related risks? Who does what, to whom? What are the risks to children and young people at different ages from different perpetrators? How much abuse and violence is committed by children and young people? Is the world a more dangerous place where children experience more violence and commit more violent crime than ever before?

Are adults fears about and responses to child abuse and children’s violence part of the problem?

What are the challenges and opportunities we face in putting children’s experiences of abuse, neglect and violence and their rights and agency at the centre of thinking and practice?
