Obesity is considered a pandemic and childhood obesity is considered one of the most serious public health challenges of the 21st century by WHO. The medicalization of childhood obesity is a clear example of the medicalization of risk. It is believed that the obese child is more likely to have high blood pressure, elevated cholesterol or of becoming diabetic already in childhood but also in adulthood. The medicalization of childhood obesity is characterized by: a) a large amount of research and promotion, real vehicle of the system of medicalizations about childhood obesity: the entire life cycle of the child is kept under control and medicalized, from pregnancy to breastfeeding, from food choices for physical activity. In this context, the medicine towards medicalization of excess weight in children come mainly from health professionals and major Food Companies. The present paper shows the first evidences about the comparison of health promotion programs on childhood obesity in Europe from the European Charter on counteracting obesity (2006) to the most recent Vienna Declaration on Nutrition and Noncommunicable Diseases in the Context of Health 2020 (2013) made by Institutions, health professionals and European Food Companies.

RADKIEWICZ, PIOTR* (Polish Academy of Sciences, Piotr.Radkiewicz@psych.poznan.pl)

At the beginning of XXI century Europe is subject to the internal integration on a scale having no historical precedent. In the widespread opinion the very important factors facilitating the process of integration should be sought in a historical-cultural reality of a kind of common European identity as well as in a redefinition of the risk area. The risk area is the basis of any program, its interest, promotion, real vehicle of the system of medicalizations about childhood obesity: the entire life cycle of the child is kept under control and medicalized, from pregnancy to breastfeeding, from food choices for physical activity. In this context, the medicine towards medicalization of excess weight in children come mainly from health professionals and major Food Companies. The present paper shows the first evidences about the comparison of health promotion programs on childhood obesity in Europe from the European Charter on counteracting obesity (2006) to the most recent Vienna Declaration on Nutrition and Noncommunicable Diseases in the Context of Health 2020 (2013) made by Institutions, health professionals and European Food Companies.

Does the Great Recession impact inequality of educational outcomes? Although contributions on the effects of the global crisis on a number of social aspects have started to emerge (e.g., Grusky et al., 2011), little is known about how inequality of educational attainment is affected by macro level trends such as changes in the economic cycle or in unemployment rates. This paper aims to elucidate the interplay of family background, educational expectations (conditional on cognitive skills) and the economic context. Our main research question is, hence: has the impact of family background on offspring’s educational outcomes become stronger because of lackluster economic growth?
Using pooled data from TIMSS 2003, 2007 and 2011—an international survey project of competences among 8th grade students—we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variations in the context conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining the effect of the global financial crisis on educational expectations, we take a look into the future of educational inequalities.

Our results confirm the existence of systematic cross-country regularities and suggest that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence of family background on educational trajectories is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamic, some would even say ambiguous, conceptualization of CSR stems from its socially constructed nature which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper traces the spotlight on the business side of the discourse on CSR. The paper shows how Philippine companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The paper looks at thematic changes in Philippine business CSR discourse from the 1970s to the present and found an increasingly explicit presentation of a business case for CSR over the past four decades.

Reported Premarital Sex: Explaining India's Gender Divide

The popular media tell us that the Indian premarital sex rates have risen sharply in recent decades. On closer examination, these reports appear to misrepresent the data. Local surveys have been portrayed as national. Research on one age group has been reported as if it covered multiple decades. The only multi-decade national survey to ask detailed sexual history questions is National Family Health Survey (IIPS, 2006b). Confining the analysis to sexual and marital history of men and women at the age of 24, it is possible to draw appropriately comparable samples of respondents from this survey representing different age cohorts based on year of birth. This shows no clear increase in the level of reported female premarital sex over time. For male respondents the rate rose from a low of 2.4% for those born in the period 1962-66 to a high of 6.9% for those born in 1977-81. The discussion below suggests some social forces that may have reduced the level of female premarital sex, but these do not explain why the reported rates are not symmetrical between men and women.

Challenges of a Global Sociology: Centers and Peripheries in the Geo-politics of Sociological Theory

Debate about the possibility of building a global sociology has gained increasing importance in recent years. In dialogue with works that argue in favor of post-national sociologies as well as literature that criticizes the hegemony of the theoretical perspectives of the so-called centers, this article articulates the idea of global sociology. The main sustained theoretical hypothesis is that the national experiences must be understood as bearing the potential of making important contributions to stimulate the theoretical discussion about sociological theories and concepts formulated in the centers. By mobilizing some sociological concepts such as public sphere and right to the city, originally formulated in centers, we suggest that peripheral sociologies could contribute to broaden theoretical formulations. In this sense, the theoretical construction of sociological theory must involve an equal dialogue between sociologists from the center and the periphery in order to construct a global sociology.

Deviance and Camouflage City: Sexual Deviance and The Construction Of Invisible Urban Spaces In Post-Revolutionary Tehran

This study is an attempt to expand on the relationship between sexual deviance and urban space in the context of post-revolutionary Iranian society. It focuses on Tehran, a major metropolis where gender segregation and heterosexual norms in the form of family institution appear to dominate societal norms. But this study instead offers an ethnographic account on various "sexual deviant" practices including homosexuality, transvestic fetishism, sadism, and necrophilia in diverse city spaces to shed light on a hidden world in post-revolutionary Iranian urban life. The notion of "camouflage city" underscores the complex relationship between embodiment and city space and argues how behaviors deemed "sexually deviant" in Tehran continue to undergo illumination for concealment through heterosexual normative practices sanctioned by the Islamist normative discourses. The study specifically looks at transsexual practices both in terms of everyday and institutional life in the context of changing state official and public perceptions of sexual deviancy. It also looks at how such practices tend to resist the representation of a particular cultural space of a distinct urban space where everyday sensibilities become fused with ways sexual deviance is practiced and made (in)visible in shifting daily/nightly life situations. In the final section, the study theoretically examines deviancy as performative act which is always spatial practice and that it involves a de-labeling process to destabilize the societal norms whose infraction instigates sexual deviancy.

Mobile Media, Digital Divide and Social Movements: The Case Of Iran

This study attempts to offer a theoretical interpretation of the political and social dynamic of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of texting, photographing and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimagine the public in affectively contentious ways. Yet the emotive is not "irrational," but a distinct mode of being present in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. The mobile media practices, along with its close connection with online social media, during the 2009 demonstrations, I argue, foster embodied engagements through distinct camouflage practices, largely hidden from the official order of state surveillance. However they do so in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. Asian Migration Policy: A Comparative Analysis

This paper addresses migration policy of major receiving countries in Asia from a comparative perspective. The paper identifies seven interwoven, underlying features that underscore the edifice of migration policy in the region. The study elaborates these salient features with an emphasis on three major international migration flows: low-skilled labour, skilled labour and student. Despite each individual country’s policy-making initiatives that prioritize one’s own national needs and interests, this paper reports that migration policy converges in core principles
and practices throughout the region and the exclusionary principles accentuate this convergence in Asia migration policy.

Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances. Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant households. These two-way surveys are complemented by participant observations and focus group discussions.

Institutional Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasupahan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (Company/ concession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutions created a clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasupahan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

Cluster Dependency,Social Capital and Social Innovation : Insights from the Engineering and Plastic Clusters in Chennai, South India

In most developing countries a focus on the development of MSME or Micro,Small and Medium enterprises is evident. Operationalising this goal in the Indian context has involved a conscious planning which has been adopted not only to strengthen existing enterprises, but also to create ‘clusters’ of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters -the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters -engineering and plastic in and around the city of chennai,south India. The city however is well known for its automobile clusters. Significantly different in size, technology used and labour utilised, these ‘clusters’ have ‘innovative’ practices to mobilise labour/access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nevertheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of the environment where they are located. As most of their labour is unskilled ‘social capital’ in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on insights obtained from a sample survey of these clusters. Questions raised include How do they ensure continuity of labour? How do they access capital and technology? How do they sustain production and marketing? Essentially the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlight the innovative practices at the workplace in a developing country like India in the context of MSME.

The Poverty in the Midst of Plenty: The Case of Fisher People

The urban poverty being widely discussed among the discourse on urbanization and poverty, the present paper attempt to shed light on the pockets of poverty in the urban area with specific reference to coastal belt and among fisher people. The fisher people living along the coastal belt are subject to all urban poverty problems notably of housing, water and sanitation, health and education. Their living environment is of poor quality and social security measures unsatisfactory. This is in spite of facts that they live in permanent settlement regions i.e. the coastal areas are skilled laborers in marine fishery defying the general conviction that urban poverty has direct linkages to migration and unskilled labour. The paper is based on the data from the census of households in the coastal wards of Thiruvananthapuram Corporation, urban local body in Kerala. The fisher people dwell in the coastal belt are generally backward in terms of basic amenities and socio-economic conditions. The coastal belt of urban area is also not an exception. This paper highlights backwardness of fisher people in the survey area in education, health, basic living amenities like water, electric power, and clean living environment. Does the Corporation need to usher in more inclusive programs, efficient management, and delivery mechanisms? Do policy makers and implementing personnel be sensitized for fair and judicious practices? These are some of the pertinent questions addressed in this paper.

Re-Establishing the Nexus Between Sustainable Development and Disaster Risk Management: Exploring the Scope and Challenges in Stakeholder Participation

The stakeholders involved in sustainable development are also involved in risk and disaster related activities. Disaster situations bring together multiple stakeholders. This is one of the complexities of disaster response and management in general in which many actors ranging from public to private come into play. Governmental agencies create new roles to respond to disaster needs. Similarly,
non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organizing relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved.

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and projects. The process of repeated learning after disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states place on issues of vulnerability. It is therefore important to address issues of development during disaster reconstruction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

**Economic Globalization and Feminization of Labor: The Case of Domestic Servants in India**

This paper discusses the consequences of economic globalization for women in India. It analyzes the neoliberal policy frame from a gender perspective to bring out the impact of economic globalization on the women's work. Economic globalization has generated new sources of livelihood and opened up new vistas of opportunities for women in the informal and unorganized sector. The paper suggests that the negative impacts of neoliberal ideology have negative impacts on women such as feminization of labor as well as poverty, low-income, exploitation and health hazards. In India, the number of women has increased more in labor-intensive, informal and unorganized and casual job sectors, besides the huge number of those educated women who are working as low-wage laborers in the market. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle-class families have shifted their burden of home management to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female laborer of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex, the lack of education, employment and economic opportunities and inequitable inheritance laws, the cultural and gender norms restricting women’s sexuality and prevent them from availing themselves of information on sexual and reproductive health and unwillingness of government to publicly discuss the empowerment of women in gender relations and sexual practices. The negative impacts of neo-liberal economic policies have often failed the large segment constituted by the women in India. There is therefore the need to institutionalize regulations and structures for working women in social relations and sexuality practices in a patriarchal and historically male-dominated society of multiple hierarchies like India.

**Examining Child Mobility and Transport: Challenges for Theory and Practice**

The paper provides an outline of the ways in which general theoretical concerns in the Sociology of Childhood relate to child mobility and transport. This paper raises a number of questions and urges the need for more thought and research into how transport can offer transport experts and decision makers. The argument proposed here is that the study of children and childhood is incomplete unless mobility and transport issues are located in an understanding of the complexities and varying realities of children's everyday life. The paper (1) examines children's social representation, identifying and placing within South Africa’s transport and inter-ventions, and (2) the extent to which these frameworks incorporate national data on children's daily transport and mobility activity patterns. This paper also contributes to the growing scholarship on the social perspectives on child mobility. This emergent field has occurred alongside the child rights movement and shifts towards evidence-based policy development and practice interventions. Consequently, contemporary mobility and transport discourses promote the idea of transport as a public good and human right and this implies that all citizens' interests and needs are of equal importance. Yet, within the sector there is still a bias towards studying the impact of child mobility on adults' mobility, their daily lives and schedules with children's voices, experiences and needs remaining obscured. This empirical marginality and invisibility fuels knowledge gaps and generates a passive, univocal and constrained view of children. It certainly impedes the development of child-centred and participatory transport policies and interventions.

**International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India**

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 along with his Holiness the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore.

After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their Union city education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces. They are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are about the religious group but their religion is facing a competition from western influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

The study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to new social spaces. The paper tries to examine the gendered changes.

**Gender Segregation in Hospitality Sector – Extent and Consequences**

Hospitality is one industry in which women are preferred and are found in large numbers. However allocation of roles, responsibilities and privileges in hospitality organisations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process. Disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender-based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be occupied by their male counterparts. It is the women staffs who are made to face and absorb the idiosyncrasies of the clients, who are mainly strangers, requiring them to work under stress, strain and risk. The findings further indicate that the extent of segregation appears to vary significantly with the size and sector of the establishment and the negative implications of such segregation appear to be more marked in smaller private establishments.

**Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin**

There has been an unprecedented increase in opportunities for migration form India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethno-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of culture conflict, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women's support networks to address issues of gender based violence.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

Microcredit and Poverty Alleviation In The Mexico Contemporary

Microcredit as strategy for poverty alleviation grows stronger in the last decades of the twentieth century, from successful experiences in different parts of the world, both in developing countries and the developed, numerous studies beginning to emerge about microcredit; however these studies are mostly empirical. Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in overcoming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, addition, of creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the governments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called “Opciones Productivas”, which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary system.

Responsabilidad social y su impacto en la sociedad

Como bien se conoce la responsabilidad social es un modelo de gestión que está siendo aplicado por las empresas y organizaciones a nivel mundial. En este proceso de incorporación de políticas, acciones y estrategias de responsabilidad social en organizaciones de tipo público, privado y del tercer sector es preciso entender el cambio que estas acciones ocasionan no sólo en la propia empresa, sino también en la sociedad y en particular en sus grupos de interés o stakeholders.

Para poder explicar las variables de impacto, presentaremos el caso de estudio realizado en el contexto peruano. Para esto presentaremos resultados de la investigación desarrollada para el IDIC de la Universidad de Lima, sobre los casos de tres organizaciones que tienen presencia en el Perú, como son: BBVA- Continental, Petróperu y Caritas del Perú.
HACIA LA CONSTRUCCIÓN DE UN MODELO ECOLÓGICO DE SALUD DESDE LAS CIENCIAS SOCIALES.

Resumen.

Vivimos en un mundo en donde las relaciones causa y efecto han dejado de ser insignificantes, la capacidad de reciencia del planeta ha venido disminuyendo con el paso del tiempo, de ahí las fuerzas productivas a lo largo de estos últimos treinta años que a diferencia de décadas anteriores las consecuencias son cada vez más importantes sobre la calidad de vida y diversidad ecológica del planeta; en la re- unión del club de Roma, se advirtió a los líderes mundiales la necesidad de poner límites al crecimiento debido a las posibles consecuencias irreversibles que su acción traería sobre la vida en el planeta, especialmente sobre los más jóvenes. Fenómenos como el calentamiento global, la escasez de agua, la perdida acelerada de biodiversidad, el aumento de la violencia e ilegalidad serían realidades pre- sentes de no asumir límites y formas de distribución justas frente al crecimiento. Frente a esta situación las ciencias sociales han encontrado nuevas perspectivas sobre salud pública, individual y colectiva, que sin embargo no han logrado una adecuada conceptualización de las relaciones salud/enfermedad, especialmente porque el paradigma mecanicista, newtoniano y el dualismo mente/cuerpo no ha sido su- perado completamente en dichas perspectivas teóricas que si bien abogan por una comprensión holística y relacional de los fenómenos sociales vinculados a las relaciones salud/enfermedad, no son suficientes para comprender de mane- ra adecuada estos fenómenos. Ellos no permiten comprender la complejidad de la “trama de la vida” las complejas interrelaciones existentes entre ecosistemas, especies y sociedad. Ante esta situación vale la pena preguntarse ¿qué nuevo paradigma, qué nuevos conceptos y maneras de estudiar la realidad se necesitan para solucionar la situación por la que atravesamos en el mundo actual?

Palabras clave.

Salud/enfermedad, crisis ecológica, mecanicismo, modelo ecológico.

Does Violence Begets Violence? Evidence from Mexico

One familiar argument to explain violence rates is the common sense affirm- ation that violence begets violence. Imported from the biological sciences, this organic metaphor is well rooted in the descriptive explanation of crime. However, theempirical evidence around this supposition is quite scarce. A typical combina- tion of the “violence begets violence” argument with the lack of proper empirical evidence is easy to find in countries dealing with recent outbursts of criminal vi- olence. This is the case of Mexico where the recent trend of criminal violence has been explained with a wide array of arguments including the spread-contagion argu- ment. This one in particular has gained presence among the media and policy makers. Moreover, this assumption is being increasingly used to justify the design of prevention programs where significant amounts of public resources are being invested. In view of this, this paper presents the results of a study on the empirical validity of the hypotheses behind the “violence begets violence” assumption. For my research purposes I have selected a set of relevant hypotheses on the conta- gion of violence to verify its empirical validity for the case of México. With a combina- tion of different quantitative techniques I have analyzed homicide rates at the local level for the city of México from 1990 to 2010. The results of this work will throw light on the empirical pertinence of the contagion of violence hypotheses, and it will help to inform public debate and public policy about the characteristics of criminal violence in México.

Placing Food and Nutrition Security: The Co-Production Of Land, Dietary and Livelihood Relations In Four Sites Of Northern India

Patterns of land distribution in association with local agro-ecological conditions play crucial roles in shaping the dynamics of food and nutrition security in the global South. The relevance of the local is highlighted in this paper, which exam- ines the differences existing between four rural communities in northern India. Using evidence from 389 in-depth household interviews, the paper identifies the connections which exist between household assets, nutritional outcomes, and livelihood strategies. The paper argues that the considerable differences found by the study between case study communities, such as soil fertility, agriculture, and the importance of processes of local social embeddedness in determining food and nutrition security outcomes.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
sociological accounts; (2) characteristics of their networks of connections that encourage and enable their work, and then contribute to its dissemination; and (3) features that give performative strength to their narratives. The study is based on works written by these authors and others, and interviews to the authors themselves and other members of the network of production and dissemination. The analysis considers relations between local and global production of knowledge and discuss approaches such as those who assert the existence of epistemic dependency and epistemological obstacles for the production of knowledge in peripheral or semiperipheral countries.

Uncontested Science and Boundary Work: The Conceptualization and Measurement of Poverty in Chile (1987-2013)

This paper addresses the social scientific construction of the poverty in Chile, whose measurement is coordinated from the State, being of great relevance for the design of social policies and programs, and to monitor government action. The currently applied theoretical and methodological construction remained uncontested from 1987 to 2012. Despite that long period in which the measurement was a tightly sealed black box, there were many aspects that could have been questioned; the questions theoretical and political and peripheral or semiperipheral countries took place regarding this process. As a result, the Chilean government appointed a committee with the task of making changes in it. A first goal of the presentation is to study the factors that led to that great stability of the instrument, in spite of significant socioeconomic changes that long ago made changes advisable. Special attention is given to: (1) the origins of the measurement, in which the Economic Commission for Latin America (ECLAC) participates in an outstanding way and transferred a methodology developed for the whole region of Latin America; (2) the boundary work made by experts involved in the measurement; (3) the circulation of this epistemic construction between academic centers, state institutions and the public sphere, all of which strengthen its character of reality and hinder its questioning. A second objective is to analyze how the 2012 controversy was generated and developed. Attention is given to the intertwining of political and scientific concerns and to the rhetorical handlings associated to the boundary work done by rival factions. A third objective is to analyze the outcome of the controversy, in which the scientific demarcation is still used to hide political dilemmas and complex normative choices. The study gathers information through interviews and document reviews, and by following key players in their participation in the controversy.

Gender Inequality in Higher Education: A Study of Girl Students of Conventional Courses in Nasik, India

Keywords: Gender inequality, Higher education, Girl students, Nasik India

Gender discrimination in developing world is a crucial reality. In modern times women are performing exceptionally well in different spheres of activities. The problem of gender inequality still prevails in all spheres of life. Though Indian constitution has granted equality to women in principle, in reality majority of Indian women are facing the problem of inequality and discrimination.

The paper tries to focus on gender discrimination in higher education in India where the situation is paradoxical. On the one hand girl students are performing very well in all faculties of education, many of them are topping the merit lists, the situation is paradoxical. On the one hand girl students are performing exceptionally well in different spheres of activities. The study is based on interviews and document reviews, and by following key players in their participation in the controversy.

Abstract

As god is a creator of flora and fauna, a woman is a creator of family which leads to society and Nation. The Indian society considered women as weaker sex. Such sociological and cultural traditions have kept women dormant for quite a long time. Despite of all hurdles Indian women stand tall from the rest of the crowd and are applauded for their achievements in their respective field. The aim of this study is to discuss the issues regarding women entrepreneurship in Kanpur. Different stakeholders are playing pivotal role in women’s economic development. This paper is mostly based on Primary secondatory data and some observations as and when require. The paper talks about the status of women entrepreneurs and their competitive skills in world of business environment. Skill, knowledge and adaptability (SKAs) in business are the main reasons for women to emerge into business ventures. The paper also focuses on the problem the women face in front of women during setting up a business enterprise and running in the competitive world. Some issues related to lack of financial support, availability of resources as well as support of stake holder etc. are major barrier in development of women entrepreneurs in India. It will also suggest the way of eliminating and reducing hurdles of the women entrepreneurship development in Kanpur.

The consequences of beef production for the environment have been a hot topic in recent years. The myriad of issues raised include: the copious amounts of methane released into the atmosphere by cattle, the large quantities of water and feed used to sustain cattle, and the amount of oil that is used throughout the commodity chain in order to produce such large quantities of beef. However, environmental discourses are often confined to industrial processing systems in industrialized countries. This paper shines a light on the unique environmental context of beef production in Southern Africa and the impact of conservation policies on producers in Southern Africa. Specifically, the paper will explore the unique interplay of cattle rearing within an arid and semi-arid environment, the environmental issues relevant to smallholder and pastoral systems of production, and the issues that emerge from the interaction of livestock and wild animals.

**Open Your Own Data - Creating Individual High Value for Little People from Big Data**

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas.

Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - “know yourself” - you could generate more individual value when approaching the company. With full awareability of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual's own interest.

**Children’s and Preschool Teacher’s Photographs of New Preschool Architecture: Issues of Participation and Interpretation**

Children's and preschool teacher’s photographs and experiences of new preschool architecture

Kim Rasmussen

In an ongoing project (2013-2014) about children’s and preschool teacher’s interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the physical and social environment. A numbers of photo-elicited interviews with the preschool teachers had been held over the summer too. These actions have created increased awareness of the relationship between the physical and social environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, inspired from action research, new childhood sociology, phenomenology, is to create knowledge (on basis of experiences, narratives, observations/field notes, photos/visual knowledge) about the preschool environment, which might qualify the discourse of kindergartens and the new architecture.

The architecture in new childcare-institutions breaks on several points with the former idea of “kindergarten” (small environments with an emphasis on domesticity, development and play). The new preschools in Denmark are bulky, contains many children (some more than 200 children), and are highly transparent (wide use of glass in both interior and exterior walls). The new architecture is based on (neoliberal) ideas of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another
is how the buildings are “lived” and coded/decoded (Bernstein) and experienced by the participants.

The paper and presentation will focus on issues of interpretation, visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the asymmetry between children and adults: preschool teachers play a key role in the interpretation of children’s photos, while it is difficult to invite and involve children (2-5 years) to interpret their own photos and words.

Public Sociology and the Impact Agenda: A Case Study

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying ‘impact’ (in accord with the current neoliberal agenda demanding accountability and ‘value for money’). The concepts ‘public sociology’ and ‘impact’ are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalizing impact in a research project that demands the deep, and unwavering, involvement and commitment of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the ‘messiness’ of the demonstrable ‘impact’ mirrors that of the research process itself, and the pursuit of a ‘public sociology’ in this context conflicts with dominant characterisations in the literature.

La Strada Network As an Example of Transnational Mobilization Against Trafficking in Women

My presentation will explore mobilization around trafficking in women for the purpose of sexual exploitation in the Central and Eastern Europe (CEE). I will focus especially on the La Strada Network (LS) that is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking movements on the national level as well as internationally.

This network because of its roots as a cooperation between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activism networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists from Netherlands and CEE.

Secondly I will give a closer look to the framing of trafficking by the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location to the actor, the views on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way particular LS members manage to reconcile a moderate framing of trafficking with the core of their understanding of public sociology. For example, the Dutch activists are more likely to present trafficking as social problem, while the Polish activists are more likely to interpret it as a problem of individual choice and responsibility.

Can Trade Unions (Be)Come Environmental Innovators?

Thinking of environmental movements in the 21st century, trade unions are not the organisations that come to mind. They are more likely seen as part of the problem creating environmental degradation, not as part of the solution. However, especially since 2006, when the first international trade union assembly on labour and environment took place in Kenya, many unions across the world have acknowledged the need to incorporate environmental issues into their agendas.

Based on two research projects investigating environmental strategies of trade unions in Brazil, India, South Africa, Sweden, Spain, and the UK, as well as those of international unions, we will present some issues that characterise trade union’s environmental engagement.

To take environmental issues on board the unions need to transcend their present focus on workplace concerns and reinvent themselves as social movement unions. We are especially interested in the role of individuals in this transformation process. From which societal backgrounds do environmentally engaged trade unionists come and what are the conditions which enable them to change trade union practices? What kind of social networks and relations to employers and governments are favourable to develop environmental policies of trade unions and what are the barriers for such transformations?

Climate Change is a global issue and thus has to be tackled through cross-country and also inter-union alliances. However, unions are very different in terms of their histories and collective memories, political background, forms of organisation, and sectoral interests. We will discuss the impact of such differences on the unionists’ positions regarding Climate Change and the strategies developed towards addressing it and their relations to other organisations (e.g., unions and government).

Pre-Marital Rituals in Contemporary France: Inventing a New “Tradition”?

In 1960s France, marriage was an obligatory stage of couple and family formation and the marriage process followed a clear-cut pathway that remained rela-
tively uniform from one individual to the next. Newly formed couples went out together - without living together - for two years on average. During this period, the future spouses presented their partner to their families, often through an official celebration of their engagement. While more than half of all marriages at the time were preceded by an engagement, the practice then declined. In this paper, the focus is on engagement since the 1970s. Has the practice disappeared, or do couples still choose to become engaged? If so, who are the fiancés of the 21st century? The actual content of the engagement process will then be analysed. Are family networks becoming increasingly autonomous, in the sense that engagement is no longer a direct concern of the parents of the future spouses? If so, are they replaced by friends, or is the engagement a more private affair?

Last, our attention will turn to a new form of pre-marital ritualization, namely “bachelor” or “bachelorette” parties, often seen as a “tradition” by the persons involved. We will examine the emergence and spread of these rituals among the social groups that practice them in order to test the idea that parties have now replaced formal engagement.

We will use the initial findings of the “Study of Individual and Conjugal Trajectories” survey conducted by INED and INSEE in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It includes a specific set of questions on rituals for detailed studies of engagement and bachelor/bachelorette parties.

This paper presents the new survey on couple formation in France. It was conducted by the National Institute for Demographic Studies and the National Institute of Statistics and Economic Studies in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It follows on from two previous studies on couple formation. The first took place in the late 1950s and concerned persons who married in or after 1914. The second, in the 1980s, focused on persons who were married or in a consensual union. The economic, legal and social context has changed dramatically since these first surveys were conducted: fewer people are in couple relationships, time spent in education has increased, more women are in employment, divorce is more common, and new forms of union – including the PACS civil partnership – have emerged, along with new ways of finding a partner, such as online dating for example.

The new study aims to update our knowledge about the lives of people with a partner, in a family of origin, alone, from youth to old age. We will use the initial findings of the “Study of Individuals and Conjugal Trajectories” to show how this new survey will shed light on continuity and change in couple formation and living arrangements, and also reveal how attitudes to couple relationships have evolved by age and by cohort. In this way, we would like to promote future collaboration and develop new opportunities for comparative research.

Gender Socialization of Youth in the Family

India is the second most populous country in the world, with over 1.2 billion people (2011 census). According to the provisional figures of the 2011 census, the youth population in the country including adolescents is 550 million. This phenomenal rise in the youth population has made India the youngest nation with a demographic dividend appearing to be a reality. Socialization of young in the family is very important. The process of learning the social expectation and attitudes associated with one sex.

Socialization of a person starts from the family. Gender socialization is the process of learning the social expectation and attitudes associated with one sex. Gender socialization is the process of learning the social expectation and attitudes associated with one sex. Gender socialization is the process of learning the social expectation and attitudes associated with one sex.

The sample of 600 students is selected from undergraduate and postgraduate students. The questionnaire is designed as a tool of data collection. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad. This paper is an empirical survey of young students of Ahmedabad.

The study reveals that socio-cultural factors are important in gender socialization. The study indicated that there is a significant effect of gender socialization in the family on the young. The study also shows that there is quite a good relation between patriarchal system and inequality of socialization. The study makes a number of recommendations for action.

Navigating the Myanmar–Thailand–Malaysia Border: The Escape Strategies of Burmese Refugees from Chin State, Myanmar, to Battle Creek, Michigan

Forced migrants who flee their home countries as part of a mass movement face significantly different realities than ‘refugees’, as conventionally understood and legally defined in the West. Forced migrants typically lack secure legal status and access to any form of welfare system. Additionally, because they lack social structures that support international migration, they often engage in ‘step-migration’. Before arriving at their final destination, they move to nearby countries where they can obtain assistance from other migrants, employers and smugglers who are absent in their native communities. Scholars who study forced migration and/or illegal migration focus especially on how migrants use resources at their points of origin or destination or both, but they always overlook the actual border-crossing experience of these vulnerable migrants.

Based on twenty-one biographical narrative interviews with Burmese refugees in Battle Creek, Michigan, in 2012–2013, this paper examines how illegal border crossing from Myanmar’s Chin State to Thailand and then to Malaysia (and later to the United States) after migrants are accepted as refugees by the UNHCR in Malaysia is a migration strategy rather than an ‘end state’ and, among other factors, is related to the enormous difficulties of migrating legally to Malaysia. The paper examines how border-crossing (which requires clandestine agents and smugglers for crossing and documentation) and ‘irregular migrant’ status – defined as the lack of legal residence in a nation-state – as essential components of forced migration, which is no longer related only to labor migration and is an expensive, much longer process. Thus, drawing on the concepts of increased border control, stricter immigration policy and definition of citizenship by nation-state, this paper considers the agency of Burmese migrants and raises the question of whether their ability to migrate ‘irregularly’ can be regarded as a resource in the particular context of forced migration.
Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women’s safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers who perform intimate labor—domestic workers and night nurses—seek to navigate physical and “moral” risks as they move between their homes and their place of work.

To Violate with Impunity: Legal Constructions of Marital Rape

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender-based violence everyday, law has not proved to be an efficient mechanism to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. ‘The Protection of Women from Domestic Violence Act 2005’, does include sexual abuse within the definition of domestic violence, yet it does not clearly criminalize marital sexual assault. On the other hand legislations on ‘rape’ including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of ‘marital rape’. This paper attempts to understand such exemption of “marital rape” from Indian legal lexicon.

Legal constructions of “marital rape” is traced through analysis of legislations on “rape”, observation of cases at two Mahila Police Stations (All Women’s Police Station) at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women’s groups patriarchal notions continue to influence legal understanding of “marital rape”. Patriarchal and parochial notions such as “wifely duties”, “marriage as property”, “divine ordinance” and others are invoked to justify the exemption of “marital rape”. It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far from adequate. There is therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against “marital rape”.

Raycheva, Lilia* (St. Kliment Ohridskiy Sofia University, lilraycheva@yahoo.com)
Tomov, Mariyan (The St. Kliment Ohridskiy Sofia University, Bulgaria Case Study: The Challenges of the 2013 Social Protests in Bulgaria

The contemporary technologically determined information and communication environment is not only facilitating users’ participation in the process of generation and dissemination of content, but is also creating new opportunities for democratic citizenship. A variety of texts on new communication characteristics (Carpenter, Castells, Deuze, Fidler, Friedman, Jakubowicz, Jensen, Lash, Patriarche, Todorov, etc.) offer multiplex approaches to this phenomenon, elucidating the interrelations between the audiences, the traditional and the social media.

The proposed text will discuss some major political and social implications of the new modes of the audiences viewed through the prism of the media activism in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose – for sustaining the democratic standards. On June 14, about 10,000 people summoned spontaneously via the social networks to protest against the Parliament for the non-transparent appointment of a controversial media mogul as a head of the State Agency of National Security. Although the Parliament withdrew the appointment immediately, since then (nearly three months) hundreds of activists are every day out in the streets protesting against other controversial measures of the new government. Both events enjoyed extensive mainstream media coverage.

The aim of the proposed research is to answer the question in what ways the ongoing audience transformations challenge the contemporary media mix in Bulgaria.

Raymo, James* (University of Wisconsin, jraymo@ssc.wisc.edu) Carlson, Marcia (University of Wisconsin)
In spite of an enduring attention for ethics and morality, the interest of sociology for human rights is recent, although lively and prolific. Power, violence, domination, the idea that “Whoever says ‘humanity’ wants to betray” (Carl Schmitt), have been at the core of critical sociology much more than the analysis of subject’s capability to struggle for human rights through social movements and everyday personal choices. Hence, not only positivistic tendencies have brought to mistrust towards the issue of rights, but critical and emancipative sociology as well – from Frankfurt School, to Foucault, Bourdieu and others – has been sceptical towards the topic of human rights. Indeed, a sociology of human rights is related not only to ethics, social justice and social inclusion, citizenship rights and critique of discriminations, but also to a sociology of the acting subject. A full sociological understanding of the issue of human rights needs as well a reflection on subjectivity in a pluralist, multicultural and globalized society. After a philosophical phase during which the concepts of subject and subjectivity have been criticized, deconstructed, reduced to the immanence of situated practices, the rise of the issue of human rights in the international sociological debate and in social movement studies highlights again the centrality of the problem of subjectivity (and humanity) in social theory. The aim of this presentation is to analyse the connections between contemporary sociology of human rights’ movements and sociology of subjectivity.

Post-, Trans-, or De-Nationalization? Fine-Tuning Political Identifications Above and Beyond Nation-State Allegiances

The literature on emerging global identifications tends to use ‘post-national’, ‘trans-national’ and ‘de-national’ as convenient synonyms. However, these terms are better employed to single out distinct forms of disalignment of political identification from historically solid national identities. The paper describes these forms one by one and illustrates ideal-typical contents and conditions of such diverse configurations of detachment from nationhood in practices and attitudes. The empirical part of the paper draws on a 8,500 cases survey and 160 in-depth interviews with EU citizens living in six different countries (Denmark, Germany, Italy, Romania, Spain and the UK) as part of the EUCROSS project (www.eucross.eu).

Capitalizing on Nigeria's Demographic Dividend

Nigeria is the most populous country in Africa and the eighth most populous country in the world, and thus whether or not it realizes its potential demographic dividend is highly important. Nigeria is entering a period of potentially rapid economic growth due to the increase in the working-age population—the so-called demographic dividend. At first glance, Nigeria’s age structure appears promising, with a large cohort of young people entering adulthood (and, presumably, the labor force) while fertility rates are presumably falling. The dependency ratio suggests that the working-age population will support the dependents (children and elderly) of the population, and in fact produce a surplus. In order to do that, however, working-age adults must be employed. Unemployment has declined since 2003, but most of that decline is due in agricultural work, which is relatively unproductive and ecologically sound. Unemployment rates remain high across nearly every region and every subgroup in the population, but with Nigeria’s resources and oil wealth there is potential to invest in some creative forms of education, training, and job creation to realize the potential demographic dividend. Moreover, Nigeria’s mortality and health indicators continue to lag far behind other countries as well. Life expectancy lags severely, due to the HIV/AIDS epidemic as well as other infectious diseases, and suggests a need for investment in public health infrastructure. Without a healthy population of workers, Nigeria cannot attain the demographic dividend.

Becoming Each Other: Interculturalisms, Grassroots Resistance and Cultural Creativity in Post-Colonial Trinidad and Tobago

In addition to the overarching context or grand narrative of ethnic competition and contestation over cultural space, resources and recognition in multi-ethnic Trinidad and Tobago, there is also a little tradition of working class and grassroots interculturalisms and structural convergences taking place at the same time. In this paper, I examine cases of subordinate level interculturalisms that occur below the surface, often with little conscious awareness by the majority of the society. These include the often unnoticed adoption/adaptation by all members of the society of common aspects of religious practice, language, food, music, styles of being, and celebration of special days. I argue that Trinbagonians construct and perform the narrative of plurality as well as that of hybridity or creolisation accepting the dissonance and contradictions as part of the everyday complexity of life. So while a grand narrative of difference and ethnic competition prevails the two major competing collectivities - Afro and Indo-Trinidadians are becoming more and more like each other.

Race and Patriarchy: Gender and Migration in South Africa during and after Apartheid

Apartheid was not only a racial project, but also a patriarchal project that encouraged family separation. By design, black men and women in South Africa had different experiences under the apartheid regime, although many times they did not follow the strict patriarchal and racial laws. There is not much good historical data about gender differences in migration in South Africa, so I use a unique data set (2000 South African Migration and Health Survey) that includes the life histories for a nationally representative sample of the black population to investigate the impact of apartheid policies on both men’s and women’s past and present migration patterns. Overall, I find that both women and men became increasingly likely to move over time, both during after the apartheid years and that women were more likely to move with their families, contrary to conventional wisdom and unlike migration patterns in other contexts. Women may not have moved at the same rates as men, but this paper gives evidence that despite apartheid’s intended effects of family separation, both women and men were moving as families. Gender and migration patterns are relatively understood, especially for historical populations, so this paper has the potential to add to our understanding that suggests that the intercultural and current gendered migration patterns, particularly in South Africa.
Modernity Reconfigured, or, Empire and the End of Habermas Versus Foucault

Central to debates in social theory about the relationship between modernity and critique has been the opposition, variously constructed, between Foucauldian and Habermasian perspectives. Particularly in the 1980s and 1990s, and into the 2000s, these iconic figures stood for differing positions on the nature and purpose of human rationality, the workings of power in modern (and perhaps post-modern) capitalist societies, and the meaning and purpose of “critical theory.” As many papers and advanced course syllabi show, the opposition itself became a tool for thinking about democracy, capitalism, violence, and so on.

However, this opposition was underwritten by a surprisingly similar theoretical narrative of modernity informed by a comparative-historical sociology of national states and economies, and this narrative is in important ways incorrect and incomplete, for it excludes empire and colonization from its causal stories and cultural interpretations. A reading of the explicit and implicit historical sociologies of Foucault and of Habermas is presented, highlighting these absences. The paper then explores the recurrence of this absence in other theories of modernity or modernities, including Wittrock and Eisenstadt.

What, then, is the alternative? Too often, alternatives are themselves presented in terms informed by “Habermas versus Foucault,” modern versus postmodern, etc. In an effort to resist this tendency, instead of proposing a new all-encompassing position, this paper examines how three concepts that are simultaneously analytically and normatively would shift in their meaning and use, if we were to incorporate the sociology of empire into our understanding of modernity and critique. First, the relationship of the concept of power to the concept of instrumentality or instrumental reason is reconsidered. Second, the concept of fantasy, and the possibility of a hermeneutics of modern fantasies, is explored. This leads to a final reflection on the concept of modernity itself.

Overcoming Institutional Barriers: The Relationship Between Basic Human Motivations and Immigrant Integration Across European Societies

Research on the incorporation of immigrants into host societies has paid particular attention to the question of who is most likely to integrate, by distinguishing between individual, country of destination, and country of origin effects. Most of these debates have largely overlooked the question of why some people are more likely to integrate. In this study, we analyze integration at the micro-level by identifying what basic human motivations lead to greater socioeconomic success, cultural adaption and political participation. Social psychological research has identified four higher-order universal human values that are consistent with specific types of motivations: self-transcendence (motivation = social justice), conservation (motivation = social order), self-enhancement (motivation = self-esteem enhancement), and openness-to-change (motivation = creativity and independence of thought). Although each exists in every culture, there is much variation in regards to the distribution of these values within and between countries (Schwartz & Bardi, 2001). In this study, we posit that immigrant integration should depend on whether immigrants have the same values and motivations that are dominant among native residents. Moreover, we expect self-enhancement values in particular to be strongly correlated with integration. Yet, because immigrants are more likely than native-born citizens to experience discrimination, we expect this motivation to be more important for immigrant outcomes than for natives. Furthermore, we hypothesize that the relationship between these values and integration will be strongest in societies that have additional institutional features that make immigrant integration more challenging (i.e. weaker welfare states, societies without multicultural policies, and societies without inclusive immigrant integration policies). To test these hypotheses, we analyze the 2002-2012 cumulative file of the European Social Survey, which includes the Schwartz’ Portrait Values Questionnaire in addition to a number of social and political and attitudes and behavior.

Welfare Magnetism within Public Opinion. Evaluating Welfare Opinions Among First and Second Generation Immigrants

Invoking the metaphor of the magnet, an oft-heard concern about the sustainability of the welfare state is that generous social welfare provisions serve as an important pull-factor in immigrants’ consideration of their preferred country of destination. With their accumulated social risks, immigrants are on average more likely to claim welfare benefits, fueling the idea that such generous provisions reverse migration flows. If this concern could be addressed, then the analysis of attitudes towards social welfare programs among immigrants would reflect such magnetism effect, namely that immigrants would exhibit stronger pro-welfare attitudes compared to the non-immigrant population, particularly in countries with higher per capita spending. To evaluate the extent to which immigrants reflect the idea of welfare magnetism, we analyze the 2008 ‘Welfare Attitudes’ module of the European Social Survey, fielded in more than 20 countries. This survey allows us to untangle the extent to which self-interest motivations determine welfare attitudes among immigrants equally as they do among non-immigrants. Further, we evaluate if pro-welfare attitudes are a function of the size of the welfare state immigrants reside in. While our analysis indicates that immigrants are indeed slightly more pro-welfare than the autochthonous population, it also shows that their welfare attitudes are an imprint of the welfare opinions of the majority population of the country they are living in. We conclude our contribution with the implications for the future of the welfare state, the theory of welfare magnetism, and the consequences for public policy.

Subjectivity and Social Change In Social Struggles In Mexico

Mexico is a key country to look at and analyze the forms of struggle and the projects of other sorts of life that are being put into practice in the Global South. The experience of Zapata autonomous communities (since 1994), and the situation in Atenco and Oaxaca in 2006, the processes of self-defense of villages in Guerrero and Michoacan, and other numerous indigenous struggles, whether rural or urban that are taking place in Mexican territory have been configured as a point of reference for the development of a new social imaginary in both the Latin American continent and other places around the world. In addition, these struggles have contributed a path to the development of new mobilizations in Mexico and also in Latin America, mainly led by social subjects that have outweighed the North-centered analyses of collective action and also the traditional conception of social movements. In this paper, we will present a proposal of analysis regarding social struggles taking place in current Mexico, from below and from the point of view of the leaders. Our starting point is the Latin American literature on social movements and the ethnographic work carried out by the authors in various social protests in the country in the past decade. Among our purposes, we aim to analyze how in these struggles people reinvent and re-code non-institutional forms of doing politics in relation to collective needs and desires.

With this paper we attempt to contribute to the construction of a dialogue between the experiences of struggle in the Global South and the Global North, where the starting point are not the theories far from social subjects nor their geographical location, but instead the everyday political practices of people.
Employment is one important aspect for societal participation as well as social well-being. Besides providing a living, employment gives access to benefits entitlements in case of unemployment or retirement, but it also provides social prestige and social recognition.

Vocational rehabilitation, as an instrument of the German social welfare state designed to support societal participation, aims at (re)gaining employment for people with disabilities. Due to a lack of data, there is little empirical evidence on the degree and quality of labour market integration of vocational rehabilitation in Germany.

Based on a three-wave panel survey of the Institute for Employment Research on vocational rehabilitation and the life course, our research focuses on rehabilitation in the financial responsibility of the German Federal Employment Agency (FUA), who require reintegration into the labour market. These people already have several years of working experience, but cannot continue their prior occupation due to health problems and thus, mainly participate in further training, retraining and/or informational measures. We analyse employment transitions and respective determinants for the re-entry into the labour market and the sustainability of employment using event history analyses.

Results show that two third of the population obtains (mostly unsubsidised) employment only a few months after vocational rehabilitation and on average stays employed for almost three years. The transition in employment is highly determined by structural factors, but also by the type of measure attended during vocational rehabilitation. Integral measures, like e.g. employment subsidies, are most successful for the placement in employment. Surprisingly, the type of disability does not play an important role in labour market integration, but the subjective well-being appears to be of high significance for both the transition in and the sustainability of employment. Those who report a (very) bad health condition have significantly worse employment chances and thus, reduced chances of social well-being.

**The Transformations of the Nation State As Challenges to Sociological Theory**

The great changes the world experiences in recent decades have had profound consequences for nation states. Yet, the impact of such changes has been under theorized. This theoretical defect makes it difficult for us to contemplate the prospects of the historical fusion between national solidarity and state authority. Relevant as the criticisms directed to methodological nationalism were, their further implications remain poorly explored, giving marginal to misplaced assessments of the future of the nation caught between the global and the local. In the paper I discuss two issues that bear a direct impact on the changed ways we conceive of the nation-state today: (a) the emergence of the idea of civil society and its consequences for nation states; (b) the idea of nation state as a third ideal type of societal resource organization.

I argue that sociological theory must take into account the two aforementioned cultural-ideological changes to be able to provide sound guidance to empirical research on the future of the nation. I conclude with the argument that contributing to account for the cultural ideological changes in the way society sees the interactions between authority, interest and solidarity today, sociological theory will also contribute to a better understanding of the prospects nation-states confront.

**Billiomedia: Journalism Ethics and Ideology in the Age of Open Participation**

Throughout the world, news is becoming a more open, collaborative project. In “We The Media” (2004), David Gillmor re-imagined journalism’s role in society as a joint conversational process achieved by citizens and professionals. Later, the term “Participatory Journalism” was conceptualized by journalism scholars in order to transcend the citizen vs. professional journalism dichotomy.

“Participatory journalism” has been discussed in recent years in various contexts. First, there’s the cultural change defined as “convergence culture”: the gathering, filtering and editing of news produced by professionals transformed into a participatory culture of news in which the audience became “users” or “producers”, and arguably achieved more control over news content, production and distribution. Second, is the social erosion of journalism as a profession: its boundaries, its gatekeeping function or the ideology and ethics which accounted for journalists authority, legitimacy and autonomy. And lastly is the Marxist view of the ramifications of these developments: digital serfdom or exploitation manifested in user-generated content, precocious labor patterns (freelance contributors and news aggregation sites) and cultural work.

Despite overwhelming print circulation numbers, subscription base and advertising revenues, Japanese newspapers experience a steady decline in profits,

**Public Transport in Times of Individualization**

Public transport is recognized by policy makers as a main tool in the combat against greenhouse gas emissions, and a key factor in sustainable urban development. Yet in Stockholm, the European Green Capital of 2010, systems for private transport are given a significant portion of space and funding in policy making and regional development plans. A recent prognosis shows that by 2050 Swedes will be far from reaching its zero-emission climate target for road traffic, given hitherto decided measures. This implies a gap between the rhetoric and set targets, and the physical plans made to reach these targets.

This paper is focused upon transport policy strategies for facing and responding to climate change in second modernity, and how modernization pressures are reconciled with sustainable development in policy for urban transport. As a major driver for policy changes, the second modernity has resulted in a step further towards individualization and a step back for the collective planning of the first modernity. How do the second modernity and sustainable development relate to each other and how do they affect urban transport policy? An assumption is that the mechanisms of the second modernity encourage “light” private, flexibility-enhancing solutions over those heavier collective solutions laden with distributive justice that the 1987 Brunntdals Report promotes, making weak sustainability or ecological modernization more attractive as a policy direction.

I will relate Stockholm’s urban transport policy to the regional development plan, to consider how policy relates to modernization and how well the theory of second modernity can explain the gaps between targets and prognosis for emissions. My hypothesis is that ecological modernization is a way to reconcile modernization and sustainable development, and that a bias towards modernization results in gaps between sustainability targets and the effects of plans made.

**La Crise Racontée Par La Télévision Française**

Cette communication se présente en forme de décryptage et d'analyse, sur une période d'une année, des programmes de la télévision française (grandes chaînes historiques, TF1 et France Télévisions) concernant la représentation de la crise selon deux catégories d'émissions : fictions télévisées d'une part, et émissions de débats politiques, d'autre part, illustrant et légitimant conjointement un discours de l'intégralité.

S'agissant des fictions télévisées (séries et téléfilms), sous réserve de quelques notables exceptions qui donneront lieu à un éclairage spécifique, le modèle régulièrement dupliqué ignore la crise, en ne représentant que des milieux sociaux qui y échappent. Les exclus, lorsqu'ils apparaissent font figure d'accidents individuels. La télévision publique n'apparaît pas, à cet égard, fondamentalement différente de la télévision privée. L'exemple emblématique, de la série quotidienne Plus belle la vie (France 3), alors même qu'elle a la vertu d'illustrer les grandes questions sociétales du temps présent (racisme, homophobie, ex-méthéméthéméthémé, problèmes familiaux...) ne parvient parmi ses personnages ni chômeur, ni ouvrier, en claire opposition avec les séries britanniques comparables. Les inégalités de représentation y apparaissent bien comme des inégalités de classe.

Des tendances comparables caractérisent, selon d'autres voies, les émissions de débat public et économique, nombreuses sur les chaînes publiques : la première traduction d'inégalités concerne les experts et « intellectuels » invités, quasiment toujours les mêmes, fondant la distinction entre une minorité « visible » et la majorité des « invisibles ». Et ces mêmes experts partagent le même discours néo-libéral d'appréhension de la crise, imputée à l'inadaptation des salariés aux nouveaux principes du marché du travail.
Recently, major newspapers began developing participatory platforms such as Asahi Shimbun’s “Billimedia”. Newspaper reporters from the Asahi were also encouraged to open specific Twitter accounts, converse with the audience and debate with their peers and competitors on-line.

Albeit limited, these actions are transforming the culture of news production, gathering and gatekeeping functions. Based on Japanese reporters interviews, my research focuses on these newly emerging participatory practices and the challenges they present to professional ethics and ideology. Employing concepts as user generated content, social curation or big data manipulation, Japanese reporters attempt to redefine professionalism in order to reclaim their credibility and jurisdiction at a time of crisis and uncertainty.

Muslims Social Exclusion in Canada and France: Does National Context Matter?

This paper compares the experiences of Muslim minorities in three contexts: France, Quebec, and English Canada, and in so doing helps illuminate a number of issues of significance to current debates on immigration and multiculturalism, including the role of public attitudes, national integration 'models' and advantages of transnational 'networks' of immigration. Based on interviews with French Muslim journalists and personal accounts of previous diaspora experiences in Quebec and Toronto, this paper provides a window to understanding the French Muslim experience, and to the variations in attitudes across different social contexts within which the participation of Muslim minorities are decreasing.

Transborder Disaster In The Progressive Era

What can disaster teach us about diaspora? What can diaspora teach us about disaster? This paper explores two early 20th-century disasters in the U.S.-Canada borderlands. One, the Halifax Explosion of 1917, took place in a region that sent migrants south to the United States; the other, the Salem Fire of 1914, mostly affected French-Canadian immigrants to the U.S. and their descendants.

Each disaster illuminates experiences of migration and diaspora. The Salem Fire—which started at a rickety patent-leather factory and spread through the tenement district, eventually rendering 18,000 homeless or jobless—shows the relative unimportance of the Franco-American diaspora to the lives of its members. Contrary to what the historiographical literature would have us expect, Franco-American survivors mostly stayed near Salem, going neither to other New England centers of the diaspora nor back to Quebec. Local and regional communal organizations did little fund-raising or relief work. In contrast, the Halifax Explosion—which began as a fire on a munitions ship, killed 2,000, and left about 25,000 homeless or jobless—shows the importance of the Nova Scotia diaspora. Nova Scotian migrants to the “Boston States” donated money for relief and through their donations built a transnational political community that sought to influence relief and recovery efforts.

Likewise, attention to diaspora and migration can help us better explain the experience of disaster. As Erikson (1976) and others have recognized, displacement is a key to understanding of disaster. Prior “displacement”—that is, migration—means that the household per person electricity usage declines not only when household members increase, but also when intergenerational household members live together; (2) “age effect” and “retirement effect” can be found that female over 50 years old live in a household can increase household per person electricity consumption, and all the other age-gender-specific group live in a household can reduce household per person electricity consumption, especially for male at the age of 30-40; male consume less electricity in household than female at all age group, except for age 10-20. Energy policy makers can benefit from better understanding of these effects.

The Statistical Construction of Alterity: Governing National Population By Numbers in France and Germany (1860-1900)

This paper is aimed to contribute to the history of statistics as science but also as a way of knowing (Foucault 2004). This abstract explores the role of official statistics in the nation building process in the second part of the 19th century in France and Germany. Following the analyses of Desrosières and Foucault the study asks how science produced “imagined communities” (Anderson 1983) by using and constructing statistical categories on migration. By doing that official statistics contributed to produce differences between national and foreign populations, which both aim to be governed differently.

In the first step I will argue that the historical development of official statistics in the 19th century in France and Germany led to its use in both countries as a governing tool to administrate population, but in different national ways. In the second section the paper recontextualizes and deconstructs the statistical categories of foreigners and citizens, to show how official statistics took part in the historical process of nation building.

Scientific journals (Journa de la Societé de Statistique de Paris, Zeitschrift des deutsches statistische Denkmalen) between 1860 and 1900 form the empirical basis of the study. About 160 articles on migration statistics have been qualitatively analysed in order to sketch the statistical discourse about migration as well as the discursive construction of German and French nations by statisticians.

The author gratefully acknowledges the financial support of the Scientific Commission of the IEP Grenoble, the Doctoral School SHPT of the University of Grenoble and the Potsdam Graduate School.

Behind the Label: Always Fairly Traded?

Since Fair Trade entered the mainstream market, a label symbolizing the quality of being “fairly traded” has mediated between the producers and the consumers instead of the more direct relationship existing when fair trade was an alternative trade organizations business. With the lengthening and a larger opacity of the commodity chain, the label is supposed to give information and a guarantee to the consumers about the conditions of trade offered to the producers. A system of standards and certification has been developed to deliver the label.

On the other side, as the literature on Fair Trade demonstrates, the corporations have developed multiple strategies to occupy the promising market niche that fair trade represents, through favoring competing labels that induce consumers’ confusion or being themselves certificated by the fair trade institutions for a small part of their purchases.

Based on a case study in the Sierra Madre de Chiapas, South of México, the paper pretends to demonstrate how a single label, the Fair Trade International label (or FLO), covers (or hides) very different and opposite realities on the side of production and supply: on one side, autonomous cooperatives of coffee peasants, that have sold under Fair Trade conditions to Alternative Trade and Fair Trade organizations in the North for long time; on the other side, producers organized and financed by one of the largest coffee trade corporations, engaged in a multi-label strategy in order to occupy all market niches, that buy up their coffee to be sold under the FLO label.

Intergenerational Coresidence and Electricity Consumption: Age Effect, Retirement Effect and Scale Economies Effect

Many studies have found that, even in the most modernized urban areas in China, intergenerational coresidence still account for a large proportion. Intergenerational coresidence, low retirement age, high female labor participation rate can make the household activity and the related energy consumption patterns different from western countries. In this paper, we analyze the impact of inter-generational coresidence on energy consumption. Taking electricity as an example, we find that there are significant differences between intergregational coresidence household and single generation household. electricity usage of single generation household is much higher than other intergenerational coresidence household. The step variance in single generation is much larger than others. We pooled data from the Chinese Family Panel Studies (CFPS) and used OLS regression model to decompose “Age effect”, “Retirement effect” and “Scale economies effect”.

The decomposition model shows that (1) the presence of “Scale economies effect”, which means that the household per person electricity usage declines not only when household members increase, but also when intergenerational household members live together; (2) “age effect” and “retirement effect” can be found that female over 50 years old live in a household can increase household per person electricity consumption, and all the other age-gender-specific group live in a household can reduce household per person electricity consumption, especially for male at the age of 30-40; male consume less electricity in household than female at all age group, except for age 10-20. Energy policy makers can benefit from better understanding of these effects.
Elites of São Paulo and Their Varied Relationships with Public Space

The paper examines specific areas in São Paulo where elites cohabit with poorer populations and investigates the different ways they mediate this physical proximity. Our findings indicate that the relationships emerging from these dynamics vary from complete appropriation of public space by the elites to negotiation with other cohabiting social groups. Until the 1970s, São Paulo’s elites lived in the center of the city. Although they were one of the actors in the metropolitan’s macro-segregation configuration, the local literature traditionally emphasized the formation of urban peripheries inhabited homogeneously by poor populations. Recently, however, both quantitative and qualitative research has eloquently pointed to heterogeneous living spaces in São Paulo, indicating that portions of the elite have scattered throughout the metropolis, while others have stayed in the center.

The elite’s varied choices of housing location since the 1980s led to different impacts on public space: some of the groups have closed streets with gates and walls, others have abandoned sidewalks, and so forth. At the same time, some of the groups that stayed in the center have not materially sealed off contact with other social groups. Therefore, our aim is to understand how elites view contact with other populations and which role public space plays in the establishment or other social groups. Therefore, our aim is to understand how elites view contact with other populations and which role public space plays in the establishment or other social groups.

We take three methodological steps: (a) using Geographic Information System, we select areas that are inhabited by the 10% richer extract of the population according to the 2010 Census data, provided that these areas also contain poorer populations; (b) conduct and analyze in-depth interviews with members of the elites and label them into groups according to shared lifestyles, as well as socio-political and economic insertion; and (c) proceed to describe the relationship each elite group establishes with neighboring populations, focusing on the role of public space.

Mobility Policies in São Paulo: Redistributive Strategies Towards the Public Transport

The paper focuses on a redistributive strategy that attacks poverty on one of its aspects—the impaired access to urban resources, specifically to mobility. It investigates two locally-designed São Paulo policies aimed at redistributing road space towards the public transport to make bus users travel faster and at lower costs. While Brazil has been redistributing income towards the poor through a federal Conditional Cash Transfer policy, its poorer metropolitan inhabitants are still submitted to lesser-quality urban services, mobility being one of the most critical. Analyses of the 1987, 1997 and 2007 Origin/Destination survey conducted in the São Paulo Metropolitan Region show a positive and significant correlation between higher incomes and automobile use. According to the same data, travel time for public transport users has been, on average, double the time it takes for car riders to move in the city. Automobiles take up more than 80% of road space in rush hour in São Paulo.

Data indicate that the two policies investigated here have redistributed road space and travel speed towards buses. The Sistema Intergigado (2001–2004) aimed at implementing a BRT (bus rapid transit) network while introducing an integration system that allowed fixed-fare multiple-bus riding. The Dá Licença para o Ônibus (current administration) has implemented more than 200 kilometers of exclusive bus lanes and claims to have reduced travel time on these lanes by half. Both policies suffered from political and institutional setbacks, as the paper will detail.

The role of transportation in accessing other urban-life goods has been eloquently described as crucial by European literature. Research on the subject has been scarce in the Global South, however. With empirical data on mobility in São Paulo, this paper aims to make a contribution to the research agenda on strategies that go beyond the redistribution of income.

REUNGOAT, EMMANUELLE* (SAGE-Université de Strasbourg, Emmanuelle.Reungoat@molix.univ-paris1.fr)
The Image of Male Immigrant in Radical Right Parties' Discourses: A Case Study on the French National Front

Based on a qualitative study (semi-structured interviews with party executives, analysis of public speeches, parties' programmes) and using iconographical analysis of party posters, this paper describes the construction of the threatening male immigrant in the discourse of the main French radical right party "Front National" in the recent years. Analyzing how the otherwise is constructed offers ways of understanding the symbolic boundaries of the national community drawn. Immigrants are also presented as 'traitors'. This criticism for three reasons: they come from specific cultural backgrounds which cannot be integrated into the French one, male immigrants especially are connected to delinquency and represent a threat for the welfare state.

Their cultural background is principally characterized by religion. FN leaders draw a strong –often implicit- link between immigration and a risk of "islamization" of the French society. If FN executives avoid direct criticism, Muslims are associated to "communitarianism" and events from the news are used to stigmatize them. Those immigrants cannot be assimilated and hence represents a threat for national identity, and for European culture defined by Christian legacy.

Male immigrants are related to insecurity and "gang leader", systematically associated to poor suburbs(subjugated by delinquency). Legacy of colonialism and animalization can also be observed since male immigrants are described as primitives, brutal, uncivilized people living in "ghettos" dominated by the "law of the jungle". Since the leadership of the new president, this image has been reinforced by a criticism of their authoritarianism and violence against women in order to reach new women voters.

Unemployed, benefiting from social and health assistance, ready to welcome their families and many children, male immigrants are taking advantage of the French welfare state. Based on an opposition to cosmopolitanism and multiculturalism, the risks of being dominated by an overwhelming number of illegal immigrants and asylum seekers are constantly dramatized in FN discourse.

On Weather Disasters and International Migration: Empirical Model and Worldwide Forecast to 2060 Under Business As Usual

Weather Disasters (WDs) have played a role in promoting internal and international migrations in a number of episodes, but it is unclear if they play a systematic role in migration. This paper provides a step in this direction by developing statistical models that anticipate the potential for heterogeneous migration responses to disasters and policy levers that might modify these responses. The unit of analysis for our models is the country pair- or dyad-year and we employ panel data for bilateral migration flows between 190 countries, from 1980 to 2009. We use the estimated model to develop a conservative forecasts for the total number of people that might migrate worldwide due to WDs as climate change progresses to 2060, assuming all else remains the same. Finally, we examine implications of our findings for illegal immigration, the possibility of violence between native and residents in destination countries, and adaptation and mitigation policies.

Competitive Edge of Filipino Teachers in Selected Countries

Recent history tells us that a number of Filipino teachers have extended their territorial milieu in teaching from the Philippines to various countries of Asia, the Middle East, and North America. This paper examined the global movement and experiences of Filipino migrant teachers vis-a-vis their competitive edge in the global labor market. It looked into the standards and requirements for teachers of receiving countries vis-a-vis the qualifications of the Filipino teachers as a result of institutional competencies of Teacher education Institutions (TEIs) in the Philippines. Most importantly, it explored as well the phenomena of gendered migration. As the Philippines looks forward to be more competitive, it is important to analyze the nuances of what makes a Filipino teacher globally competitive. Results of this research could be a good benchmark for improving the quality of teachers that the country produces.

There were four important migration phenomena about Filipino Teachers that were explored in this paper. First, it surveyed the migration and employment profile of teachers who usually worked in abroad as teachers. Demographic and socioeconomic profiles were also dealt with in this paper. Second, it analyzed the experiences of teachers as regards their motivations in working abroad, finding and applying for teaching jobs, teaching experiences, and adaptation and adjustments in a foreign country. This part was highlighted by competitiveness level of teachers and their perceived losses and gains while teaching abroad. Teacher's competitiveness was indicated by their salaries, promotions, incentives and other benefits received due to their services to the host institutions. Third, the standards and required competencies among teachers from home country and receiving country were analyzed. Lastly, this paper examined as well the competitiveness of Filipino teachers using gender lens.

Macro Conditions of Class and Micro Patterns of Social Interaction: The Problem of Studying Labor Migrants’ Discontent in the Time of Economic Instability

Paper to be presented at the XVIII ISA World Congress, Research Committee on Sociology of Migration, RC 31

The paper aims to focus not only on the limited control over migrants’ external situation in host societies, cultural discrimination or accessibility to legal protection, but to examine the problem of migrants’ everyday life practices in their uncertain condition, specifically in the time of economic instability. We try to conceptualize this emergent experience within the framework of the sociology of emotions and labelling, which is understood as a long-term process, (a) determined by the structural conditions, (b) created by and transmitted through the everyday social interaction, and (c) capable to result into collective action. This analytical move allows us to study ‘discontent’ at both macro- and micro-levels without losing its specific content.

In terms of theoretical and methodological foundations the research is orientated toward ethnographic institutionalism. We try to provide theoretical groundings and empirical evidence to justify an approach that link the micro experiences with the macro institutional arrangements through the detailed studies of migrants’ everyday life practices.

The data come from the three longitudinal field research Projects jointly supported by Vietnamese state foundation (2008-2010), CARI - Greece (2010-2012), and Russian state foundation - RGNF (2013-2016). The field researches dealt with everyday life practices (including “alternate practices”) of transnational labor migrants in Athens, Greece and St. Petersburg, Russia.

Constructing the Virtual and Material Public Spaces: The Cases of “We Are All Khaled Said” Facebook Page and Tahrir Square during Egypt 2011 Revolution

Social movements use urban spaces for their representation. They demand a spatial setting for their full effectiveness. However, spatiality of social movements has entered into a new phase since the mid-1990s. The prevalence of the Internet as part of the daily lives of people has challenged traditional theories of social movement and political public space. Recent revolutions and social movements in the Middle East and North African countries, the Arab Spring, has lead to a reaction to the economic crisis and austerity programs in governments in different parts of the globe have created a new phase of research on the relationship between online activism and social movements. Scholars focus more on the role of social networking sites (SNS) and try to articulate their contribution to social movements. This essay has argued that Hannah Arendt’s concept of public space can contribute to the definition of material and virtual public spaces in contemporary social movements. By investigating Tahrir Square as a material public space and ‘We Are All Khaled Said’ Facebook page as a virtual public space during the Egypt 2011 revolution, this essay has studied the relationship between these spaces and the events of the revolution. It has shown that Arendt’s concepts of action and speech can theorize the virtual and public spaces of the Egyptian revolution.

children is worth closer analysis as it may fall beyond the categorizations usually applied to adults. To this end, a mixed methods research project with 245 children attending different primary schools in Portugal—one private school targeted at upper class children and one state-sponsored school located in a working class area—was developed. The results revealed significant differences by school and household typology.

What Makes Low and High Income Families Apportion Their Children's Education and Care to Early Childhood Education?

Why do families apportion their children's education and care to Early Childhood Education? Are there motivational differences between low and high income families? Prompted by these questions, research was carried out on four families—being 2 low income families and 2 high income families, who enrolled their children in Early Childhood Education in Brasilia, Distrito Federal, Brazil in 2013. Two interviews were held with parents addressing both family and Early Childhood Education topics. Using the concept of family arrangement (FONSE-CA, 2005) as a basis—which apart from the nuclear family, encomasses several other family structures and the idea that Early Childhood Education in Brazil is not only the parents’ but the child’s, one can observe tendencies towards change in the standard of education for children aged 0 to 3. Previously exclusive to the family environment, the trend now considers environments beyond the domestic parameters without considering the family a bearer of any social pathology (ROSENBERG, 1995). The care and education process is neither natural nor exclusive to families. Given this scenario, it is possible to highlight some reasons for this change; like alterations in peer relationships, modifications in the perception of children aged 0 to 3, universalisation of education in an institutional context—prior to mandatory formal education, co-responsibilisation of the State in care and education as well as socialisation processes beyond the family environment. This research discusses the reasons behind families apportioning their children's education and care to Early Childhood Education and seeks to pinpoint explanatory categories for the changes in the standard of education and care of young children. The final intention is to identify motivational convergences and divergences between low and high income families.

Religion As an Important Factor in the Composition of Ethnic Identity in Ex Yugoslav Countries

In many countries religion is one of the most important factors in the composition of ethnic identity. Balkan is one of the regions of the world where ethnic identity was made by religious belonging. That was obvious during the 1990-ies breakup of the state when federation disintegrated by its religious and national borders. The religious border was especially important in case of relations between Serbia, Croatia and Bosnia and Herzegovina. The fact was obvious given that all these main religious groups speak the same language today and they have some origin. The most important difference among them was religious. Almost all Croats are Roman Catholics, all of them who declare themselves today as Bosniaks are Muslim and almost all Serbs are Orthodox.

Music As a Factor of Social Cohesion: At What Conditions?

Music as a factor of social cohesion: at what conditions?

Music is often considered a universal language. As the most abstract of all arts it can easily be listened without considering the language as a boundary to its appreciation. As every artistic expressions is connected with a given social context, but also music has a code belonging to a certain relation to language and its sound. Each social context has a unique relation with imagination and the role of the arts in such context is the outcome of such peculiar relationship. Besides cultural and aesthetic values, every artistic expression has a potential social function: art and music can create a sense of belonging improving social cohesion as well as its contrary; art can also contribute either to the change of cultural taste opening the way to new social order conceptions, or confirming traditions and identities. Moreover, music as culture can play a crucial role in the process of understanding cultural dynamics acting in a given place. According to the results of a field research carried out in a trilingual land: “Music culture and social function of music in Alto Adige”, this paper will go through a possible typology of the social role of the music, as well as the relation between language and music starting from the different repertoires, traditions and pedagogies in the three different languages (Italian, German and Ladin). Is it possible to trace a social relation to music according to the different traditions and values? Is it possible to understand the culture of a place also through its music choices? Is music a generation factor of cohesion or a culture factor of cohesion? Can music preferences be influenced by the dimension of a society/community and its dominant language?

Workshop: Stolen Bodies, Reclaimed Bodies

Project Re•Vision is a Canadian Institute for Health Research funded research project that uses arts-based research methods (digital storytelling and drama workshops) to dismantle stereotypical understandings of disability and difference that create barriers to healthcare. We have completed two years of our project and have generated an impressive archive of over 70 digital stories from people living disabilities and differences and healthcare providers. The project emerges from a representational history of disabled people can largely be characterized as one of being put on display or hidden away. People living with disabilities and differences have been, and continue to be, displayed in freak shows, medical journals, charity campaigns, and as evil or pitiable tropes in novels and films. At the same time, disabled bodies have also been hidden in institutions, hospitals, group homes, and generally removed from the public eye. In his essay from which we borrow our title, Eli Clare writes, “just as the disabled body has been stolen, it has also been reclaimed” (2001). In our proposed session, we screen and analyze a selection of digital stories on visible and invisible differences made through Project Re•Vision. We examine the ways bodies and experiences of difference are reclaimed in these films, which reveal the complexities—the pride, shame, pains, struggles for rights and wellness, and joys of community—of living with disability and difference. By pairing and sharing stories made by individuals and health professionals with experiences of and encounters with disability and difference, we examine how our project helps to blur boundaries and breakdown barriers between the disabled and non-disabled worlds. The interweaving of these stories encourages reflection on how failure to fit with ablest standards of normal might open up other possibilities and deepen appreciation of the uncertainty and ambiguity that is the basis of life.

On-Line Communities, Real Life Social Networks and Mental Well-Being in Senior Citizens: Results from a Two-Wave Survey in Three European Countries

It is widely assumed that going on-line and joining on-line communities will boost well-being and quality of life in senior citizens. However, the quantitative empirical evidence on this issue is scarce. Many studies either utilize a qualitative design or suffer from methodological shortcomings (e.g., cross-sectional design, small sample sizes).

This paper reports results from a two-wave survey which has been conducted as part of the Third Age Online-Project (TAO) in the Netherlands, in Germany and in Switzerland. The research aimed at analyzing the psychosocial consequences of going on-line and of joining social media. In the first wave of the survey, more than 3,000 participants could be recruited, and were then categorized as either ‘onliners’ or as ‘offliners’. The questionnaire contained sociodemographic variables, real life social inclusion variables and Internet usage variables. Mental well-being was assessed using the ‘Mental Health Index – 5’ (MHI-5). Logistic regression models were used to analyze associations with Internet usage and with mental well-being. After one year, the same participants were again approached to provide data for the second wave of the data collection. 670 on-liners provided sufficient data that could be matched with the wave one survey. Logistic regression models were again utilized to find out which variables from wave one would serve as predictors of wave two outcome indicators (mental well-being, real life social inclusion).
The results of the wave one data revealed that senior on-liners were very well socially included and had a high level of mental well-being. However, in the longitudinal analyses, Internet and social media related variables did not predict mental well-being and social networks. It was concluded that going on-line and joining on-line communities may, at best, help to maintain quality of life and social networks rather than enhancing seniors’ psychosocial conditions.

Verbal Aggression Against Health Care Staff - Mixed Methods Study

Clinical staff in various settings has to cope with aggressive behavior from patients and visitors. In recent years, physical aggression has received a lot of attention and many prevention programs are available throughout Western societies. However, verbal aggression against health care staff is much more prevalent than physical aggression.

This paper reports on a mixed methods study which was conducted in the following settings in Germany: mental hospitals, forensic hospitals, acute care hospitals, nursing homes and residential homes for mentally ill residents. Eight focus group interviews were conducted with a total of 74 staff members (nurses, physicians, psychologists and nursing assistants). The interview guide contained questions about any kind of verbal aggression which had been experienced, about the differences between physical and verbal aggression and about the coping strategies of health care staff. Subsequently, 1,053 staff members from the various participating settings in a survey which focused on the frequency of verbal aggression and on the severity of aggressive acts.

The results revealed that verbal aggression is a very common phenomenon among health care staff. The following types of verbal aggression were identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff. 16 percent of staff identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff.

Currently, prevention programs in healthcare institutions are focusing mainly on physical aggression. This focus needs to be altered by teaching staff how to cope better with verbal aggression.

Religion in the Public Arena in Southern Europe: Comparing/Contrasting Italy, Spain and Portugal

Observers of religious phenomena often tend to lump together Latin countries with Catholic roots – Italy, Spain and Portugal – excepting France, usually considered a separate case, a model of the secular State and of the society which characterizes it. Perhaps this is because there was in their past an epoch in which Catholicism exercised a hegemonic role in society, based on a quite normative ecclesiastical magisterium, over a widespread national network of parishes and a population totally exposed to clerical influence, after the pattern of militant commitment capable of getting a grip on the most dynamic and vital social sectors.

Indeed, the these countries – in which Catholic culture is still prevalent – follow different paths through advanced modernity, and these can be seen in the forms assumed by the relationship between religion and civil society. In Italy, that relationship has in recent decades undergone three key moments which have paradoxically restored the Catholic church and its world to the centre of the public stage. This development was by no means inevitable, as is evidenced by the examples of Spain and Portugal who – although sharing analogous dynamics – have reached outcomes different from those of Italy. Drawing on evidence from an extensive analysis in the framework of the GERICR (Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux project, the paper compares (and contrasts) three Southern European countries by analysing the evolution of the relations between religion and public sphere.

Ridgeway, Cecilia* (Stanford University, ridgeway@stanford.edu)

Cecilia Ridgeway: Framed by Gender: How Gender Persists in the Modern World

In an advanced industrial society like the United States, where an array of processes work against gender inequality, how does this inequality persist? Integrating research from sociology, social cognition and psychology, and organizational behavior, Framed by Gender identifies the general processes through which gender as a principle of inequality rewrites itself into new forms of social and economic organization. The book argues that people confront uncertain circumstances with gender beliefs that are more traditional than those circumstances. They implicitly draw on the too-convenient cultural frame of gender to help organize new ways of doing things, thereby re-inscribing trailing gender stereotypes into the new activities, procedures, and forms of organization. This dynamic does not make equality unattainable, but suggests a constant struggle with uneven results. Demonstrating how personal interactions translate into larger structures of inequality, the book offers a distinctive analysis of the troubling endurance of gender inequality.

Structural Coupling of Financial Markets and Media Coverage - the Case of the State Debt Crisis

In our project we focus on interdependent processes between financial markets and media coverage during times of financial turmoil. The main goal is to identify explanations for price movements on financial markets that are beyond the comprehension of crisis as a problem between the state and the market. Thus, it is not the question whether there is too much or too little market regulation, instead we emphasize the importance of information processing on financial markets and the subsequent entanglement of financial markets with mass media.

From a systems perspective, these processes are part of the structural coupling of two social systems, which perceive and implement new information, but only through their own systemic logic.

By examining the structural coupling we reveal patterns and causalities that are crucial for the understanding of financial market coordination through mass media products and vice versa. Especially the so called “state debt crisis” and its media coverage can be empirically viewed as the cause for major changes in the configuration of the financial markets. During that process state bonds get more and more volatile, deviating from the century old long-term investment cycles. No longer are interest payments the only way to gain profits with bonds, instead, short-term speculation becomes possible due to the heavily pending bond prices of crisis states like Greece, Portugal or Spain. The starting point for those fluctuations strongly correlates with the international media coverage about the possibility that states can actually fail financially. As a consequence, traditional evidence of financial stability like macroeconomic indicators or debt ratings have no measurable impact after the crisis on the increasing bond volatility. The process underlying this development is that media publications are much faster and already incorporated in the market prices when the reactions of states or rating agencies get published.

Riede, Felix* (Aarhhus University, fr.riede@cas.au.dk)

Towards a Science of Past Disasters

Extreme climatic events are forecast to become more frequent in the future. This contribution argues that the past may hold clues to efficient, cost-effective, and culturally sensitive adaptations to and relief measures following such events. It is widely recognised that disasters emerge in the interplay between extreme geophysical events and the human communities affected by them. Whilst detailed knowledge of a given event is critical in understanding its impacts, an equally thorough understanding of the affected communities, their economies, ecologies, religious structures, and how all of these have developed over time as is regarded as important. Many extreme events leave methodologically convenient traces in the archaeological record. This contribution focuses on two volcanic eruptions that have significantly affected Europe – the eruption of the Laacher See volcano (Germany) in the 13th millennium BCE, the eruption of Thera (Greece) volcano in the early 17th century BCE and the eruption of Vulcán Ilopango (El Salvador) in the 6th century CE – to illustrate the power of a quasi case-control comparative method for examining vulnerability and impacts in the near- and far-fields of these eruptions. Although issues of data resolution often plague the study of past disasters, these limitations are counterbalanced by the access to unique long-term information on societies and their material expressions of livelihood, as well as a similarly long-term perspective on the critical magnitude/frequency relation-
ship of the geophysical trigger(s) in question. By drawing together aspects of di-
sasters science, archaeology, volcanology and historical sociology, this contribu-
tion offers a programmatic statement and methodological roadmap for a science of past disasters that can make historically informed, evidence-based statements on general processes of cultural adaptations to climatic processes and events, and on contemporary vulnerability and impact from a deep time (historical and prehistoric) perspective.

RIEDEL, SASCHA* (University of Cologne, riedel@wiso.uni-koeln.de)

Drawing a Line Between Immigrants and Transmigrants

The changes of international mobility are apparently visible in all immigration
countries of the world. Today's migratory movements challenge classical concepts of labour- or forced migration theories. The pattern of permanent immigration lost its long lasting predominance in describing individual changes of location be-
tween countries. One of the most influential competing concepts in migration literature constitutes the idea of transnationalism. In this approach, individuals engage in lives, cultures, and activities in more than one country to the same extent. Although Germany is one of the main immigration countries of Europe, quantitative studies seizing the relevance of this conceptually new phenomenon are scarce. This is mostly due to the lack of data as the appropriate identification of transnationals requires multi-sited, mixed methods approaches with specific, often non-randomized, sampling procedures. But what can be done if there is no such data at hand? This study tries to answer this question by presenting and discussing strategies of quantitatively operationalizing transnationalism with existing, secondary survey data.

In this respect, the primary objective of this paper is to discuss the strengths and limitations of a strict distinction between transmigrants and immigrants in contrast to a more continuous definition of transnational temporalities. To this end, the research is arranged in three stages:

In a first step a multi-item measurement is developed in order to distinguish between immigrants and transmigrants in the most unambiguous manner possi-
ble. In contrast, the second step aims at accounting for gradual differences in the individuals' ways of living. To this end, a transnationalism index is constructed. Finally, results of bi- and multivariate analyses on the adaption of immigrants and transmigrants in Germany are presented. The paper closes with prospects for the future research of transnationalism.

Children: Pleasure or Pain? Effects of Parenthood on Subjective Well-Being

Against the background of numerous public and academic debates on de-
ciding birth-rates and problems of reconciling professional work and family life, the present research addresses the association between children and subjective well-being. Most people believe that parenthood should make us happy. Notwith-
standing, happiness research suggests that children are not important for the well-being of people living in contemporary western societies: Children might at most have a small positive effect on parental well-being. However, a closer look at existing research reveals that some studies report positive effects of paren-
thood on subjective well-being while other studies report negative effects.

The present research aims at contributing to the explanation of this variation in children's effects. Therefore, on the one hand, social ecological theory, we identify sev-
eral factors on individual level, couple or family level, and societal level that might affect the association between children and subjective well-being. The respective hypotheses are proved by means of multilevel modeling and structural equation modeling using individual data from 30 countries participating in the European Value Study 2008/2009 and couple data from a project covering three countries (Austria, Germany, Switzerland).

Results illustrate that both, factors on individual level as well as factors on so-
ciety level moderate the association between children and subjective well-being. On individual level, among other factors, the stage in one's life (age) proved to be relevant. On societal level, the welfare state based childcare system and dominant family values seem to be most important. In addition, individual level factors and processes on couple level mediate the association between children and subjective well-being. For example, the strain resulting from childcare that women feel directly affects men's subjective well-being via relationship conflict perceived by men. Findings are relevant to potential future parents (timing of first birth, divi-
sion of work) and welfare states (childcare policy, existing norms).

RC42-712.6

RIEDEL, BERNHARD* (University of Vienna, bernhard.riederer@univie.ac.at)

Parenthood and Subjective Well-Being within Couples: The Division of Work, the Relevance of Mutual Appreciation, and the Role of Partner Effects

Sociological and psychological theories point to parenthood as means to per-
sonal development and social embeddedness, discuss its function for societal integration and highlight its meaning in structuring people's lives and providing purposes in life. But the widespread belief that parenthood promotes happiness and satisfaction with life seems to be contradicted by a bulk of research discussing problems of reconciling professional work and family life. Quantitative studies primarily report negative effects of children upon parental well-being and qual-
itative research often highlights that especially women are confronted with an additional burden and the second shift at home.

Current research argues that children have both, positive and negative effects on parental well-being. Analyses conducted by the author with data from the Euro-
pean Value Study 2008/2009 reveal that individual factors (e.g., the stage in one's life) as well as societal conditions (welfare state policy, dominant norms and val-
es) contribute to variation in children's effects. But consequences from parent-
hood directly affect the couple and the relationship between spouses. Therefore, effects of children on well-being and life satisfaction should also be dependent on the spouses capability of mutual perspective taking, and their support for each other.

The present research uses data from dual earner couples with young chil-
dren to analyze the mediating role of (a) the division of household work, child-
care tasks, and professional work, (b) positive and negative spillover from work to leisure vice versa, (c) the appreciation spouses and (d) relationship conflict. In addition to actor effects, partner effects are also considered. Results are in line with the qualitative research that points to the im-
portance of giving and receiving gratitude. Furthermore, the quantitative findings support what A.R. Hochschild wrote: "If men share the second shift it affects them directly. If they don't share, it affects them through their wives."

Life Strategies of Families in Marginalised Urban Neighbourhoods: Dealing with Social and Educational Inequalities

Migration families often face challenges in Europe: unemployment issues, low income and the threat of poverty as well as an unequal education system, where children and young people are disadvantaged and consequently, their access to higher education and job perspectives is limited, hindering their chances and op-
portunities with regard to participation in society. These families frequently live in urban areas strongly influenced by migration movements and faced with pro-
cesses of marginalization.

In our research project (within the framework of a larger, European research project), we focus on life strategies of families in marginalized urban neighbour-
hoods in Germany. Migration families frequently form a family project, and family an import-
ant resource in dealing with educational, job-related and social challenges. In our theoretical approach, family members are seen as actively dealing and negotiat-
ing with societal circumstances and social meanings (Wacquant 2006). Their strat-
egies are analyzed, taking relevant explanation contexts into consideration, which shape each person's scope of possibilities (Holzkamp 1998). Our research project aims to transcend beyond the deficit-oriented perspective without neglecting the social and societal challenges families have to deal with (Riegel/Yildiz 2011).

In this paper we will present analyses from biographical interviews, group dis-
cussions, and ethnographic data, on how family members describe and interpret educational pathways and which life strategies can be observed. We analyze bi-
ographical meanings and dynamics within a family and with regard to experienc-
es centered on education, an area accentuated by the intersections of migration, class, gender and generation. First findings show that family members develop strategies and creative pathways to deal with challenges posed by everyday racism and the education system, using unconventional ways to negotiate solutions for structural challenges, demanding participation and inclusion. The ambivalenc-
es of these strategies - dealing with processes of inclusion and exclusion – within circumstances of social inequality will be discussed.

RIEGEL, VIVIANE* (Goldsmiths University of London, viviane.riegel@terra.com.br)

A Reflection on the Main Challenges of Comparative Research on Global Consumption Studies

We face several methodological challenges once we are involved with compar-
itive research. The scope of study to its phenomena demands a dialogue with writers from different nationalities, theoretical and methodological affiliations,
whose interests converge to collaborate in the comparison of different contexts. Specifically, the main discussion when comparing different contexts is whether to discover an underlying grammar to social life which is applicable globally, or to pay attention to the detail of local differences.

The complexity of social research on global consumption studies can be understood from the idea of a complex system that combines both issues related to the idea of a global culture, as well as specific characteristics concerning local contexts. Following Law and Mol (2002) ideas over complexities in social studies, it is necessary to face multiple domains and the complexity related to consumption practices that are research objects for sociological today.

Comparative research on global consumption studies faces a changing significance of empirical research, as it happens with contemporary social studies. This means that traditional methods, and the most conventional ones are increasingly dated research methods, which are unlikely to provide a robust base for empirical sociologists. And the future of sociological theory is going to be a more complex one, to get involved with a 'politics of method', renewing their interests in methodological innovation, mixing methods and renewing critical reflection (Savage and Burrows, 2007).

Following this methodological discussion, the goal of this study is to discuss the main challenges of comparative research on global consumption studies, considering both the hypothesis of a global consumer culture (Ritzer, 2004) and of localization/ heterogeneity of consumption practices (Featherstone, 1991). In order to present these challenges, I am going to analyze three different research projects focused on global consumption practices that aim to compare the reality of these practices in different countries.

RIEGEL, VIVIANE* (Goldsmiths University of London, viviane.riegel@terra.com.br)

Global Consumer Culture: A Theoretical Discussion Between The Centrality Of Consumption In The Contemporary Society And Its Possible Localizations As A Result Of Cultural Differences

How can we understand the theoretical discussion concerning global consumer culture? Is it possible to affirm that such culture exists as global representation, central to contemporary society? Or should we consider possible localizations of consumption practices as a result of cultural differences from different individuals? Early in modern social theory, consumption has been object of discussion and, with the advent of postmodernist theory, its centrality has become a tonic in social analysis. Further, contemporary studies presented mainly two different perspectives: the centrality of consumption in society or localizations of this practice according to cultural differences. In order to understand global consumer culture, this paper proposes two theoretical discussions: the centrality and local perspectives.

In the first perspective, there is a rationale that begins with modern social theorists, and their focus on production systems (Marx, Weber, Smith), and that moves to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or demonizing this practice. Postmodernists have detailed this critique in order to understand the structure of the consumer society (Baudrillard, Bauman, Lipovetsky), with consumption as the central practice of contemporary life. This centrality would also explain earlier studies that demonstrate the capillarity of consumption, not disjointed from the production system, but as a continuum that can be translated as proscription (Ritzer).

The second perspective, present in most contemporary studies of consumption (Bourdieu, Campbell, Featherstone, Miller) has tried to steer a middle course between the idea of a complex system that reconciles pessimistic classical theories with a recognition of the fact that consumption is not only indispensable, but also a domain in which people can express themselves positively in our society. They develop the notion of a consumer culture that refers to norms, values, and meanings associated with a society dominated by consumption. In this culture, there is the possibility to localizations and the development of individuals with their respective differences.

RIESS, JOHANNA* (BIGSAS, johanna.riess@gmail.com)

Internet Usage and Socio-Cultural Change in Nairobi/Kenya

Through technical improvements and cheaper access the Internet in Kenya is becoming more and more important. For many years mainly internet cafés have been the most important source for Internet access. Nowadays there are more and more people who own a private Computer/Laptop or use their working place to access the Internet. But the most important change is the rapid spread of mobile use of the Internet in Kenya.

The Kenyan Internet- and Mobile phone market is growing fast and it cannot be ignored any longer that this Kenyan society is changing. On the streets of Nairobi you can find Internet cafés nearly everywhere and you can pay nearly everywhere with M-Pesa. Mobile phone shops, repair services for computer and mobile phones and private computer colleges are an integral part of the road infrastructure.

The second perspective of the research is the usage of the Internet in some different areas in Nairobi. One cybercafé was in a big shopping mall, the second in the city centre and the third in the so-called slum area Mathare. The inequalities were obvious but it was also very surprising how widespread the Internet already was and how different the people used it.

Another aspect of the presentation will be the function of Facebook before, during and after the Kenyan election in March 2013. During the post election violence in 2007/2008 over 1100 people were killed. Everybody was watching the election 2013 with worries and tension. After the results were announced everything remained more or less peaceful on the streets but on Facebook there started an ethnic war with words.

Housing and Built Environment in Shrinking Cities: The Role of Housing Vacancies

Housing and built environment in shrinking cities: the role of housing vacancies Dieter Rink1, Anngrét Haase1, Chris Couch2, Robert Krzyżtopłki1, Katrin Großmann1

Contact: dieter.rink@ufz.de
1 Helmholtz Centre for Environmental Research – UFZ, Leipzig (Germany)
2 John Moores-University, Liverpool (UK)
3 Silesian University, Katowice (Poland)

Across Europe, since the late 20th century, urban shrinkage has become a normal pathway of urban development for many cities. Shrinkage results in a mismatch between supply and demand of built structures, urban space and infrastructure. Urban shrinkage impacts on almost all areas of urban life, one of them is on housing markets and the built environment. Typical for shrinking cities is a situation of disinvestment, since revenues from investments in housing are uncertain or improbable. The consequences of disinvestment in housing markets are undermaintenance, lack of modernization, housing vacancies and abandonment with subsequent physical decay. Mostly this concerns not the whole territory of a shrinking city, but distinct areas. What areas of a city are affected is dependent from the specifics of the respective local markets, the same is true for the concrete impacts on the built environment. The paper addresses specific problems related to vacancies, how they are perceived, what are typical impacts on the affected neighbourhoods and what are strategies to deal with.

Based on the European project “Shrink Smart”, different shrinking cities in Northern, Central and Eastern Europe will be dealt with related to different housing markets. The paper draws on research undertaken within the EU 7 FP project SHRINK SMART (04/09-04/12), grant agreement no. 225193; www.shrinksmart.eu.

The paper uses empirical evidence from Liverpool (UK), Leipzig (Germany) and Bytom (Poland).

Rethinking Localism in the Global Risk Society: The Ethics of Care and Coals of Anxiety Confronting Gas Fracking in Lithuania

Rethinking Localism in the Global Risk Society: The Ethics of Care and Coalitions of Anxiety Confronting Gas Fracking in Lithuania

Focusing on the global dimension of risk society, Ulrich Beck has made a case that earlier social and economic formations are increasingly replaced by the world risk society where risks and uncertainties are no longer bound by particular locales, but are distributed globally. To conceptualize this new political organization, Beck and others have developed the notion of cosmopolitization that refers to the emergence of new alliances and social movements that challenge and transform the nation state and its institutions. At the same time, scholars have also underscored the growing significance of localist movements that are actively promoting regional and national sovereignty agendas, while working to unplug from global economies and political infrastructures. The purpose of this paper is to articulate the connection between these two contradictory processes by employing conceptual tools developed in the scholarship focusing on political and ethics. Building on the work by N. Noddings, E. Kitay, and J. Tronto, we argue that care as a justification for political action links particular constellations of actors to coalitions organized through anxiety concerning particular issues or emphases of particular pursuits of disembodiment” by J.Zinn and “discourse coalitions” by M.Hajer). As a case study, we focus on the case of resistance against gas fracking in Zygaicai community in western Lithuania, to highlight the ways in which the groups frame their civic and environmental anxiety under conditions of uncertainty “in-between” of calculable risks and inaculable social anxiety translated into bioethical care and specific sub-politics pertaining to local economic, political and environmental context. This case study and theoretical accounts connect local and national sub-politics with similar cases in Europe and elsewhere around the world.

UN-Learned Lessons of Fukushima and Chernobyl: From ANTI-Nuclear Nationalism Towards Nuclear “Renaissance”?

The year of 2011 marks both the Fukushima disaster in Japan, and a one-generation time distance from the nuclear disaster in Chernobyl in 1986. Does it also mark any new emergent – perhaps more reflexive, inclusive and participatory modes of nuclear power in CEE countries? Have these expectations of participatory governance materialized in new structures and modes of more inclusive decision-making? This paper examines these questions by addressing the public controversies around new and old nuclear power facilities in divergent post-Soviet societies, particularly Lithuania, Belarus and the Ukraine. What are the lessons (if any) reflected in the public attitudes and public policies in terms of participatory governance of nuclear power, in the EU new members, whereas the others are still characterized by rudiments of totalitarianism? Have they triggered environmental, climate and energy policy change towards more inclusive, participatory mode stemming from possible social trauma? By contrast, this paper concludes on the basis of empirical evidence from Lithuania, as well as neighboring countries and the processes point to the opposite direction. This direction is geared towards privatization of the public domain, towards new forms of state-private oligarchy in the nuclear power sector, epitomized by the establishment of LEO LT nuclear power conglomerate in Lithuania. Instead of any new off-springs of participatory governance, as paper indicates, there are tendencies of the opposite. Inter-twined with the recent nuclear power “initiatives” by Russia and Belarus, these tendencies could be described as leading towards emergence of a nuclear “renaissance” as some observers have termed it. Is this “renaissance” a reflection of public attitudes towards energy security in the period of economic crisis? Or is a more general tendency of societal neglect of the Fukushima and Chernobyl lessons vis-à-vis globalizing uncertainties in the fields of economy, ethno-centric politics and climate change?

tries. Fingers were pointed at formula companies, policy makers, grandparents, fathers, and health care providers for posing barriers to breastfeeding. The report focused on the heroic efforts NGOs and other actors can make to “empower” poor women to make the “right” feeding decisions; however little recognition was given to women as possible heroes. Rather, women were portrayed as either victims of their environments or ignorant villains doing the wrong thing.

In this talk, I will explore the implications of legislating women’s bodies as a solution to structural problems, as well as the problematic structural barriers posed to women being able to do what they are told to do. By exploring the Indonesian success story and the framing of breastfeeding campaigns, I aim to demonstrate how breastfeeding promotion can be both empowering and detrimental for women. I will conclude with a possible way forward drawing on an ethic of care and a praxis of humility.

Labour Precarity and Other Structural Forces Affecting Migrant Workers’ Health: The Case of the Undocumented Workers in Ontario, Canada

This paper will discuss the ways in which the labour dynamics that have emerged in the agricultural production in Ontario during the last decade have been organized in particular forms of precarity that affect the physical and mental health of the undocumented migrant workers and other workers of precarious status (UMW and MWPS) that are employed in such industry. Likewise, it will analyze how this phenomenon of labour precarity, along with legal and linguistic barriers; fears of deportation; and perceived forms of racial subordination in the local health institutions, have prevented the workers from seeing and receiving medical services. Finally, the paper will discuss some of the ways by which the workers have contested the social forces affecting their health, and will offer some reflections on why such forms of collective action haven't been entirely successful.

This paper draws upon the analysis of twenty in-depth interviews with UMW and MWPS, as well as upon field notes generated as part of a sociological, ethnographic research carried out in Ontario, Canada.

Capabilities and Missing Users: Progress In Gender Analysis In Transport

The paper uses a normative framework of transport justice to recognize the link between mobility and “capability enhancement” as articulated in Sen’s writing and as existing in communities and/or institutions of transport (Bezyar, 2011; Caudill, 2004; Martens, 2012). Transport justice reveals the mode of thinking and institutional mechanisms behind a nation’s transportation planning and delivery systems (Vasconcellos, 2001). Itman (2012) to elucidate how and why particular social groups (e.g. low-income women and minority communities) often face the brunt of negative impacts of public transport investments in terms of access and transport-related burdens of poor safety and environmental standards.

“Gender” is a key analytical concept used alongside transport justice to address a set of policy concerns to show how particular understandings and values of “gender” influence the construction of categories of analysis in transport and spatial planning (Levy, 2013). Empirically, the study documents the needs and perspectives of urban transport users in Davao City, Philippines as related to their access, or lack thereof, to transport and their access to employment, education and services. These findings are contrasted with the realities of power and politics of the gender as a category of analysis in the field of transport (Bezyar, 2011) (Creed, 2004) link between mobility and “capability enhancement” as articulated in Sen’s writing.

Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals’ willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the World Values Survey. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate between the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Road To Revolution and Egyptian Youth: Findings From The Value Surveys

The Arab Spring that began in late 2010 captivated the world’s attention, particularly in Egypt with the uprising that began on January 25, 2011 in Tahrir Square and ended Hosni Mubarak’s reign as president 18 days later. Before December 2010, protesting against repression and injustice was risky and often seen as futile. El-Ghobashy (2011) argued that it was when the main protest sectors of the first decade of the 2000s finally came together, united in their demand for “bread, freedom, social justice”, that Mubarak was forced to resign. Both the media and scholars alike have noted that youth were some of the key players in the uprisings in Egypt and across the Arab world. Because of this recognition, Moaddel and de Jong (forthcoming) argue that it is necessary for scholars to move beyond anecdotal evidence and instead consider the young age structure of Arab countries to empirical research that documents the role of youth in the Arab spring. This includes shifting sociopolitical and cultural values over the past decade that led to the desire to mobilize for change. In Egypt, while the role of youth as key-
ganizers of the January 25th uprising has been clearly documented, their changing values over the decade preceding the uprisings have not. This paper will examine how sociopolitical and cultural values that reflect the three demands of the January 25th uprising—bread, freedom and social justice—changed among Egyptians in the decade preceding 2011 and whether Egyptian youth exhibited attitudes that were more supportive of these goals than the rest of the population. We will use data from nationally representative value surveys conducted in Egypt in 2001, 2005 and 2008 to address our research questions.

Multinational Companies, Social Responsibility and Human Resources Manager

This communication analyzes the situation of six multinational companies’ policy of “social responsibility” and of “sustainable development”. The purpose of this communication is to define how these companies, especially the subsidiaries, are socially responsible and take into account environmental issues. This exploratory and qualitative study is based on the analysis of official discourse of six firms and those of human resources managers. We highlight different types of “social responsibility”, the “stakeholders” that are taken into account by companies and the methods used to achieve the policies of “sustainable development” and of “social responsibility”. Our purpose is to show, beyond the official discourse, which roles the subsidiaries play and which autonomy they have in their policies’ implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new “social responsibility” and, conversely, if the new management involves the emergence of a new social responsibility. We will show that the types of responsibility, shown through the web site and in the HR discourses, are “ethic” (stands for the respect of the values, the standards and the requirements that stakeholders find fair) and “economic” (focuses on the production of goods and services). Those classifications depend on the firm’s sector.

The Human Resources can be more regardful for the legal aspects or for the political aspects, especially in crisis situation. The human resources play different roles and highlight different priorities: respect of fundamental values, actions of the subsidiary that are presented as models, transparent communication, gather the employees around values and projects.

The Embedded Economy and National Income Inequality

The ubiquitous growth of national income inequality in developed and less-developed countries has raised major concerns among academics, policy-makers, and the general public. In response to this trend, researchers have offered a multitude of explanations for the persistence and growth in national income inequality (see Guiso, Sapienza, and Zingales 2009). One category of explanations for the rise in inequality is an increase in the returns to human capital, particularly education. The rise in inequality has been accompanied by a rise in the demand for higher educated labor, which in turn has led to increased earnings premiums for college graduates. To analyze the relationship between human capital and income inequality, this paper analyzes a panel dataset of 37 countries over the period 1960-2000. The main finding is that the rise in education inequality was accompanied by a rise in inequality at all levels of education, including high school and less-educated workers. The rise in inequality is also accompanied by a rise in the demand for higher educated labor, which in turn has led to increased earnings premiums for college graduates. The World Has More Leisure! so What?

The sociology of leisure (and leisure studies more generally) were born amid confidence that leisure would continue to grow and become a larger component of people’s lives. This confidence has proved justified. Leisure has grown in time, spending on leisure goods and services, and hence participation rates in many leisure activities. Meanwhile, researchers have identified and distinguished the various ways in which leisure plays a role in people’s lives. Apart from re-creation – restoring body and mind to states fit to return to other social roles – leisure can enhance well-being (or ill-being), it can be a source of social bonds and belonging, identity, and capabilities that enhance performance in other social roles. However, this paper argues that the sole sense in which its growth has made leisure functionally more important is economic – as an object of investment and consumer spending, and as a source of employment. The paper explores the implications for leisure’s additional functions, and its future in the twenty-first century.

Youth and Leisure in Europe in an Age of Austerity

Despite young people’s above-average risks of unemployment in most countries, the evidence to date suggests that young people’s leisure has remained largely austerity-free. This is explained not in terms of historically novel features of the recession itself, but in terms of changes in youth’s leisure that occurred in preceding decades with the lengthening of the youth life stage, the advent of new leisure industries based on the latest information and communication technologies, and changes in the pattern of class inequalities. The evidence indicates that it is child-rearing households whose leisure has proved most vulnerable during the recession, which has implications for leisure socialisation during childhood, which will have lifelong consequences.

Focus On Fukushima: The Iaea’s Response To Fukushima As a Focusing Event

What does it mean for the Fukushima disasters to be a “focusing event”? A focusing event provides a “little push” to bring a problem onto the policy agenda. It acquires its power by aggregating harms in a short timespan and large number (Kingdon 2003; Birklund 1997; Downs 1972). Some scholars use the term to describe the event itself, while others locate causal power in the symbol surrounding the event (Wallace 2009). I focus on this second method of focusing events after IAEA. I argue that the IAEA had similarly divided advocacy coalitions in safeguards and security, and that the policy areas still underwent dramatic policy change after a focusing event. My paper investigates to what degree policy change occurred in IAEA’s safety responsibilities in response to Fukushima. Preliminary research shows that some change did occur, especially relative the IAEA’s limited power compared to states. My paper will also examine how and why change occurred, paying attention to the advocacy coalitions in competition hypothesis, theories of framing, as well as to internal bureaucratic competition and the political economy theories. The empirical analysis of the 2010-2011 case study of the IAEA’s response to Fukushima will show that the managers are able to shape the events of focusing events as much the literature suggests the media and policy entrepreneurs can do in other contexts.

Virtual, Augmented or Real? Ageing Research in an Era of Spatial Technologies

Population ageing has become the demographic phenomenon of the twenty-first century. Developed and developing countries are experiencing significant growth in the total number and proportion of their populations who now qualify as ‘aged’. The rise and rise of ageing as the new ‘crisis’ in population theory and policy should not be a surprise since it is the inevitable result of more than a century of active policy interventions on the object we know as population. Consequently we are experiencing a lag between the phenomenon of ageing and our conceptual and analytical understanding of ageing across multiple knowledge domains. The science of ageing remains highly developmental ranging from key
Concepts (what are age and ageing?) through to the aetiology of the dementias and their impacts on aged care resourcing. Our societies are struggling to catch up with the consequences of two centuries of efforts to manage population. While spatial studies of ageing have been researched for several decades, these have largely remained particular to geography and to some interdisciplinary cross-overs such as geographical gerontology. In the meantime, spatial technologies have developed at a staggering pace. Goodchild coined the term ‘giscience’ in 1992 to flag the fact that many disparate spatial endeavours now constituted a shared scientific domain of activities, practices and theories. We now take for granted the capacity to spatially enable quantitative and qualitative data and to visually map, describe and inquire on outputs. We address the implications of the digital paradigm by investigating how ageing research will be altered through four key constructs of the digital era: simulation; visualisation; spatialisation and; representation. We illustrate these emerging issues using work we have conducted on population ageing phenomena in Australia and internationally which utilise spatial technology to engage with ageing in augmented, virtual and ‘real’ research encounters.

ROBINSON, KERRY* (University of Western Sydney, k.robinson@uws.edu.au)

Schooling the ‘Vulnerable’ Child

Based on qualitative research with children (aged 4-11), parents, and educators, as well as historical socio-cultural discourses, this paper explores the relationship between ‘goodness’, children’s highly regulated access to knowledge of sexuality and the constitution of children as ‘vulnerable’ subjects. Incorporating a post-developmental framework and drawing on Foucault’s concepts of governmentality and power/knowledge, this presentation highlights how censorship and moral panic, reinforced through discourses of childhood innocence, operate in communities, families, schooling, and within children’s peer groups, to define and regulate ‘normative’ childhoods and adulthoods. I argue that regulating children’s access to knowledge and knowledge production – associated with sexuality in particular – essentially in the name of protecting ‘childhood innocence’, operates to inscribe children as ‘vulnerable’ subjects.

This discussion frames within an examination of children’s sexual subjectivities – how children have been discursively constructed as sexual subjects, how children view and constitute themselves as sexual subjects and how children regulate the sexual subjectivities of their peers. Children actively engage in making meanings about sexuality and relationships from the limited information (often misinformation, stereotypes and myths) that they receive – bits and pieces of information of which they try to make sense. In order to help counteract children’s vulnerabilities and to build strong ethical and respectful relationships early in life, children’s access to knowledge, to open and frank conversations about sexual subjectivity, and the nurturing of children’s agency are critical.

Everyday Masculinities and Extreme Sport-Re-Thinking Methodologies

Everyday Masculinities and Extreme Sport: Re-Thinking Methodologies Victoria Robinson

This paper considers the taken-for-grantedness of everyday masculinity in relation to a UK research project on sporting masculinities (Robinson, 2008 and 2013). In this study of rock climbers some participants found it hard to reflect on their experiences in gendered terms. However, some participants were able to be open about and critically engage with such processes, which can be seen to constitute ‘masculinity’ or ‘masculinities’. This was partially due to the ‘extreme’ nature of many aspects of the embodied and emotional rock climbing experience, as extreme for example as death as a climbing partner or the need to trust another man, sometimes literally, with their life, entailed that taken-for-granted aspects of masculinity had to be renegotiated or rethought in the aftermath of moments of great sporting intensity or crisis. This paper will reflect upon such patterns and, in so doing, re-visit some general methodological issues, for example, on the insider-outsider status of the researcher. The paper will also be informed by a consideration of the author and her auto-biographical position to the research both during and after the study.

KORBER, MAILYS (Université de Lausanne)

Unemployment and Precarious Occupational Integration: The Unequal Distribution of Risk. The Case of Switzerland

Labor relations have undergone significant changes over the last decades. Job precariousness and work precariousness weaken assured and stable occupational integrations. These changes challenge rigid, continuous and foreseeable concept of occupational career (the choice of a profession, training, labor market integration, promotion and retirement), and question both material and symbolic recognition that are linked to professional activities. Facing this rise of uncertainties, we first analyze how unemployment periods impact job recovery in terms of 1) level of individual and household income 2) job quality (job and work precariousness) 3) social mobility (using social stratification schemas: CAMSIS and CSP-CH), in order to determine if people know stability, improvement or deterioration of their situation. We then identify how particular groups of people are unequally exposed to these three potential forms of changes, and particularly in terms of nationality, sex, education, age and presence of children in the household. The relation between these variables and the observed effects are analyzed with a logistic regression that includes interactions between the dependent variables.

We use longitudinal data from the Swiss Household Panel (SHP) between 1999 and 2012. The SHP is a yearly conducted centralized CATI panel survey which started in 1999 with slightly more than 5,000 households, representative for the Swiss resident population.
This article discusses the diffusion of the Participatory Budgeting (PB) as exemplary practice of governance and urban planning. In a context of democratic openness and strong needs of urban infrastructure, the PB was implemented for the first time in 1990 in Porto Alegre, as a local policy to meet demands for a more equitable distribution of public resources. In the following decades, the PB has spread among other major Brazilian cities like Belo Horizonte, Recife and São Paulo. The local democratic innovations linked to such experiences has crossed national borders and reached different social, economic and political contexts such as Montevideo, Buenos Aires, Lisbon and Berlin. Currently it is estimated that there are about 1000 PB's around the world. Several factors explain this global spread of the PB such as the synergies within the World Social Forum and its legitimacy as a good practice by international organizations. However, after more than twenty years of its setting up, in what extent this practice conceived in the context of the global South has contributed to the establishment of a counter-hegemonic model of urban governance? Focusing on a paradigmatic experience, the PB of Belo Horizonte (Brazil) – one of the most enduring and on two occasions honored as Best Practice by UN-Habitat –, we intend to answer this question and critically discuss the recognition, promotion and dissemination of the PB as model for urban governance under a general context of neoliberal politics.

Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events

‘Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events’
Mega-events, including sport mega-events like the Olympics and FIFA World Cup, have increasingly been studied over the past decade or more (e.g. Girginov ed. 2012, Tomlinson and Sugden 1998). This growth of mega-event studies as an interdisciplinary field has included an area of social scientific and sociological work (Roche 2000, Horne and Manzenreiter eds. 2006, Hayes and Karamichas eds. 2010, Foley et al 2012, Hiller 2012). This paper argues that the further development of the sociology of global mega-events and their implications for social inequalities requires the further development of a ‘contextual’ approach to event analysis. This approach is concerned with what will be referred to as, on the one hand, ‘event-immanent’ or ‘backstage’ contexts, and on the other of ‘trans-event’ contexts, or ‘legacies’ (Moragas et al eds. 2013). The paper is concerned with the heuristic utility of a ‘spectacle’-based perspective on mega-events (Kellner 2010). This perspective is useful as far as it goes. However, the paper will argue that a ‘spectacle’ perspective is, nonetheless, essentially limited and ultimately unhelpful in relation to the sociological exploration of aspects of sport mega-events which are centrally important in understanding their general social nature, their long-term significance, and their implications for social inequality. Rather, drawing on work including my book ‘Mega-Events and Modernity’ (Roche 2000) this paper argues that these aspects require an extended perspective on which is extended in this paper to non-spectacular (e.g. backstage and long-term) features rather than spectacular features of sport mega-events. The paper will illustrate this argument in respect of the case of the London 2012 Olympic mega-event.

Local Responses to Globalising Processes: The Use(s) of Pharmaceuticals in Maputo, Mozambique

After the explosion of the pharmaceutical industry and the beginning of pharmaceutical mass production in the mid-twentieth century, these technologies quickly started to be disseminated all over the world, making them also available in poor countries. As widely discussed, globalisation involves both processes of standardization and hybridization. If it is true that medicines are nowadays part of the materia medica of all societies through the development of multinational companies, there resources assume a large variety of meanings and particularities within different contexts, and the way these instruments are engaged in local practices vary significantly. This paper is based on an ongoing research about medicines’ consumption patterns in Mozambique, which aims to understand what dynamics of pharmaceuticalisation are emerging in local consumption cultures. The project focuses on local responses to these globalizing processes, directing the main attention at lay practices and conceptions towards pharmaceuticals and their relation with other options, such as traditional herbs or other substances. Medicines constitute a privileged object to analyze lay conceptions and practices towards biomedical technology, due to their intrinsic characteristics that not only enable a private and individual consumption, without the presence or vigilance of a health professional, but also increase the perception of certain commodities as health related or not – as something that can be managed. In a context where traditional medical systems co-exist with biomedicine, the main questions that arise are: How is lay knowledge about pharmaceuticals constructed and how does it shape social practices? To what extent are pharmaceuticals’ consumption patterns in Mozambique changing towards the modern trends of therapeutic, preventive and enhancive consumption? The findings presented in this paper result from the conduction of individual and group interviews to community members and health professionals, as well as from a household survey applied in Maputo.

Glorified Taboo: Teacher-Student Sexual Relations In The 21st Century

Teacher-student sexual relations, whether consensual or abusive, is a taboo topic of discussion in our culture and one that has seen much media attention in the 21st century. In particular, there has been a surge in reported incidents with a female teacher involved. It leaves one to wonder if sexual relations portrayed in various digital media via news, music, and films, have had a major influence on how normality of such relations are perceived by society. To what extent does society glorify this taboo via digital media while punishing through legal means? After analyzing written works, forty-three popular songs, fifty films, and various tate laws that contain an element of teacher-student misconduct, statutory rape, or a very large gap in age difference, I sent out a questionnaire via SurveyMonkey, com and Facebook that asked adults if they had heard of relationships that were not limited to one teacher conclusion alone, I propose to establish a national requirement for teachers to take one course that introduces them to a well-rounded perspective on this serious social issue with the intent to reduce such professional misconduct.

The DNA of Happiness and Satisfaction: Comparison of Logistic Models in 44 Countries

The focus of this article is the causation and possible models of Happiness. Thinking on Happiness takes us above the individuals to the complex social spaces generated by social interaction. In that way we are able to move beyond the classical points of view of material satisfaction from economy or the psychologist grounded well-being. We specify the social dimension of Happiness with indicators of social interaction and social action. We propose a basic general model based on three dimensions: Love, Money and Health. We contrast this general model in 44 countries with data from the fifth wave of the World Values Survey. Given the close relationship between Happiness and Satisfaction, we want to test two rival models to explain Happiness and Satisfaction separately. In order to do it, we use binary logistic regression with its standardized coefficients. We discuss in detail possible explanations for these social spaces.

The statistical analysis of logistic regressions and their standardized coefficients are the raw material for the conceptual and material construction of a complex relational system between countries, between models and between countries and models. This approach leads us to a sort of DNA definer of social models of Happiness and Satisfaction. We use the Social Network Analysis as a way to explore the existence of different explanatory structures and their features. We conclude that, despite the close conceptual relationship between Happiness and Satisfaction, the explanation of Happiness is more complex and accurate. Love is a necessary condition for Happiness while to explain Satisfaction material and volatile aspects as Health and Money are more relevant. That points to a differ-
ence dimensionality in which to be satisfied depends on components of Happiness much more than Happiness needs Satisfaction. They clearly are different social phenomena.

Constructing Transnational Polynesian Identities: Soldiers, Sportsmen and Illegitimate Masculinities

For the small Polynesian island states of Tonga and Independent Samoa, their biggest export is labour – their people. Six out of ten Tongans and Samoans are born outside their home countries. In a climate of transmigration and globalization Polynesian men are sought out as sportsmen, heavy manual workers and standover men. They also have the highest over-representation of any racial group in the US military. This paper argues that contemporary Polynesian masculinity has been externally constructed through the physicality of Warrior in a colonial and post-colonial context and questions whether internalization of this representation as a "regime of truth" leads to an embodiment of race, class and cultural identity that is inherently informed by the physical. Through this lens of heightened and exaggerated physicality, acceptable expressions of Polynesian masculinity are readily acknowledged through work and sport. However, its illegitimate expression - as gang member - is less understood. Polynesian gangs have an extremely high profile in New Zealand and are now the fastest growing ethnically-identified gang population in the United States. Proportionally, this population group is progressively over-represented in the penal systems of the countries. This paper will explore how this narrow range of acceptable masculinities, when combined with increasing socio-economic marginality, contributes to low civic engagement and greater interface with agencies of law and order. As conventional employment opportunities are reduced for unskilled labour, more young Polynesian men are at risk of being drawn into gangs and are likely to engage in other forms of criminal behaviour. This paper will therefore discuss how popular perceptions of Polynesian strength and aggression, so valuable as sporting commodities, are regarded as threatening and violent outside of sporting domains. Interviews were conducted with 48 Polynesian men aged 18-60 in two studies.

RODRIGUEZ MORATO, ARTURO* (university of barcelona, rodriguez.morato@ub.edu)

Assessing the Value of Art in the Culture Society

Nowadays it is widely recognized that due to the great expansion of the arts sphere during the XIXth century and the concomitant increase of the influence that the art paradigm exerts into other fields of practice culture and the arts have taken on a central strategic role in contemporary society. This is particularly visible in big cities today, to the extent that there we can speak of a culture society in the making, a new social configuration structurally dominated by culture (Rodriguez Morato 2012). As a result of these changes, since the late nineties and during the first decade of the new century the idea of creativity, which is closely linked to the arts from its origin, has gained a lot of prominence in the urban discourse, both political and academical, all over the world. From different perspectives and through different concepts, such as creative city, creative economy, creative class, or creative cluster, this attention to creativity has implied a new view on the relationship between the arts and society, and at the same time a renewed interest in assessing the value(s) of art for society. In this paper we will consider the ways in which this assessment is currently being carried out, through the aforementioned concepts and others, as well as through specific analytical strategies used in the grey and academic literatures, and the data, statistical or otherwise, produced for that matter.

Fasting Centers in Contemporary Japan As an Expression of Alternative Medical Care

Along with the modernization process in the Meiji era, Japan adopted the Western modern medical system. Although this remains the dominant paradigm in contemporary Japanese medical science, traditional health methods like (japanized) Chinese medicine and martial arts physical therapies that existed prior to the introduction and prevalence of Western medicine have continued to be practiced to different degrees. In addition, new alternative healing practices from other cultures have also been introduced in the country, and the The Japanese Society for Complementary and Alternative Medicine is functioning since the late 1990s. From this diversity, new forms have developed which combine traditional notions of health, Western modern medicine and imported CAM methods. This presentation will introduce the case of fasting centers, providing a description of their notions and practices. Next, the discussion will situate the development of these alternative facilities in social context. It will also point to changes in the representation of their therapeutic proposals, reflecting the dynamics of globalization (such as the spread of CAM and new spiritualities), as well as the impact of local factors (like the Aum Shinrïko affair).

Desafios De La Adaptación Para La Prevención De Desastres En México

La vulnerabilidad social se incrementa en condiciones de variabilidad climática asociada con el cambio climático antropogénico; los desastres asociados a fenómenos hidrometeorológicos ocurridos durante el siglo XXI en México nos dan la oportunidad de cuestionar teóricamente conceptos tales como "eventos extremos", "lluvias atípicas", pero principalmente “desastres naturales”, que de- forman la realidad desde las ideologías tecnocráta y naturalista.

El fracaso del desarrollo sustentable, dio lugar a la irrupción del cambio climático como uno de los efectos más perjudiciales para la humanidad, sobre todo para los sectores excluidos, sobrevivientes de la pobreza, en los territorios donde la vulnerabilidad social es más evidente. Ello a nivel nacional, moviliza y estructura diferentes estrategias y alianzas con diferentes actores de la sociedad civil.

Con base en los postulados internacionales de adaptación y reducción de riesgos de desastres el gobierno mexicano ha asumido formalmente compromisos para diseñar y ejecutar políticas y programas orientados a fortalecer la resiliencia comunitaria, sin embargo las decisiones privilegian la resiliencia institucional, con énfasis en las políticas de protección civil, orientada a la atención coyuntural de emergencias, desatendiendo la prevención de desastres como eje de política pública. Recientemente el Plan Nacional de Desarrollo 2013-2018 define los lineamientos programáticos en materia de cambio climático, sin incluir la adaptación y la crisis de vulnerabilidad nacional.

Los desastres plantean el desafío de reducir la desigualdad social como premisa para también reducir la vulnerabilidad y los riesgos a la población. Se propone trabajar investigaciones futuras con las experiencias populares de autogestión social y comunitaria, mismas que requieren apoyos institucionales y académicos para consolidar procesos de planeación popular del territorio, fortaleciendo las capacidades locales para mejorar la calidad de vida y la preparación colectiva frente a los riesgos asociados a cambio climático, con experiencias en comunidades de los estados de Tabasco, Chiapas, Veracruz y Guerrero.

ROELSGAARD OBLING, ANNE* (Copenhagen Business School, gr.ioa@cbs.dk)

The Insecure Attachment of the Organization Theorist: Present Day and Past Responses to Health Care Scandals in the NHS

In this paper I present a dramatic health care system collapse and scandal in the UK, I analyse the story about appalling suffering of a large amount of patients at Mid Staffordshire NHS foundation trust between 2005 and 2008, and the subsequent public inquiry in 2013 of the Stafford hospital and the trust’s professional staff and directors. On this background, I discuss present day response to the scandal and show how this response departs from a preoccupation with operational truths, such as world-class management, regulatory transparency and openness, and culture of compassion. I argue that organization studies and work that critically reflect upon the context in which clinical malpractice occurs have been largely absent from this discussion. This is peculiar since the scandal seems to be an open invitation to organization theory and organization concepts to take on a life and role in the discussion. In addition to this, I argue, the scandal invites organization theorists to contribute to a discussion of how we choose to organize treatment and care of vulnerable citizens in our society. To follow this line of thought, I revisit the work of Isabel Menzies Lyth (1959, 1988) and central analyses of The Tavistock Institute of Human Relations (Jaques, 1951; Trist and Bamforth, 1951; Rice, 1958; Winnicot, 1958). I scrutinize whether, in light of the hospital scandal and the numerous failures of care, these classical endeavours add something to present day theorizing on organizations and how we think about and approach the activities and relations of organisations. To conclude, I argue that classical organization theory in the early Tavistock tradition provides us with old new ways of thinking about and acting upon contemporary scandals in the NHS.

Transparency & Visible (Dis)Order: Surveillance and the Riots

This paper links the UK riots of August 2011 to citizenship and the subject through the lens of risk and resilience. It suggests that the rhetoric of respon-
sibilisation and observational techniques/tactics in response to the riots reveal a moral ordering of the ‘legitimate’ citizen/subject at odds with the rhetoric of inclusive resilience. The visibility of the disorderly citizen was used to objectify the ‘risky subject’; turning the riots from a societal reaction (to the negative impacts of neoliberalization) into wanton criminality inherent to the ‘worst 100,000 families’ in Britain. This paper situates the disorderly and ‘risky’ citizen/subject within a critical reflection on risk, order and surveillance. It is argued that a complex interplay of thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

Protest, Conflict, and Class Struggle in South Korea: Two Cases of Urban Redevelopment in Incheon

South Korea has suffered from major economic dislocations under the pressures of globalization, marketization, and economic restructuring particularly since the Asian Financial Crisis of 1997-98. Labor responded in the last decade with a wave of labor militancy that receded with the decline of the labor movement and a period of labor peace during the recent economic crisis. At the meantime the public has asked for more welfare spending. Throughout the period, though, there has been sustained resistance to capital in the form of protests against urban redevelopment. In recent years, urban protests have even taken a similar form to labor protests, with both involving sustained occupations and a common protest culture. This study reviews the recent trends in resistance against domestic and foreign capital and then looks at the specific cases of housing protests in the Kayawa and Dohwa neighborhoods of Incheon. In both cases, a lower-income community was displaced by landlords seeking profit by building more expensive housing in a pattern common throughout Korea despite plenty of housing stock that could be rehabilitated at lower cost. The capital drive to redevelop housing in spite of a collapse in the luxury housing market, and a lack of affordable housing. The course of the occupations and protests are re-viewed and linked to broader issues of class conflict in Incheon and South Korea.

Being a Housewife – Is It a Traditional or Progressive Female Gender Role? Understanding Gender Role Constructions in a Transcultural Russian-German Research Setting

This paper is based on a PhD project investigating the au pair migration from young Russian women to Germany. Two aspects of this project will be discussed: 1) What kind of biographical research design may be employed in a transcultural research setting and 2) how does this design help to reconstruct the socio-cultural constructiveness of social categories such as gender. The methodological design of the research project consisted of data collection with biographical narrative interviews mainly done in German language (to lesser extent in English or Russian with interpretation). Data were analysed by the method of sequential analysis with a group of researchers, who belong to German and Russian backgrounds, enabling the reconstruction of cultural specific social categories. Concerning the question of gender this project depicts how this category not only in everyday thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

Every case shows which specific tasks are delegated to the au pair and which according competencies are expected of the au pair. At the intersection of ethnicity/nationality and masculinity the male au pair is constructed as a suitable worker for families with sons. Alike the broad discussion about the importance of men for socializing male children, male au pairs are hired when the male parent is absent and expected to fulfill the position of the au pair portrayed as a value of intercultural education. At the same time offering low waged work within the own household is legitimated as providing life chances to a young person from a less developed country. Biographical interviews show that male au pairs often feel overburdened by the expectation to be a male role model and report to feel pressured into adjusting to the families cultural/individual routines instead of pursuing their own lifestyle.

« Je Fais Ce Que Je Peux » : Les Pratiques d’accompagnement Et Assistance Aux Pauvres Au Chili

Cette contribution porte sur les politiques contemporaines d’assistance au Chili. Plus spécifiquement, sur l’analyse des pratiques d’accompagnement psychosocial à familles vulnérables. Ce travail est le résultat d’une enquête ethnographique réalisée au travail de visite d’ambassadeurs sociaux à Santiago. J’interroge les enjeux de la pratique assistentielle contemporaine ainsi comme les limites d’action tant des intervenants comme des sujets assistés dans un contexte d’intervention précaire et précarisée. Cette politique a été associée à la nouvelle vague de politiques sociales inspirée dans l’approche de la Banque Mondial : « la gestion du risque social ». Elle aspire à articuler des mécanismes de transferts monétaires conditionnés (« Conditional Cash Transfer Programs ») avec des pratiques de traitement de type assistentiels et promotionnels. À partir d’un approche de genre, l’analyse va se concentrer sur la gestion et le gouvernement du social au niveau local, notamment, à partir de la configuration socio-spatiale des rapports assistentiels (entre assistants et assistés), je propose discuter les formes de circulation et de transfert des contraintes liées à la gestion assistentielle (bureaucratiques, administratives, financières) entre les familles et les intervenants et voir comment les mécanismes d’adaptation des uns, mettent en tension les autres.

Social Psychology of Relationships of Domination in Hegel, Nietzsche and Fanon

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper explores the writings of G.W.F. Hegel, Friedrich Nietzsche and Frantz Fanon on the dynamics within relationships of domination and subordination. Although the three authors held quite different political perspectives, there are commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the subordinate involved in such relationships. Nietzsche and Fanon also discuss the role of resentment and the importance of physical coercion and repression in maintaining and then undermining domination. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three writers concur that the destruction of the inequality is an inevitability.

The Financialization of Housing and Spatial Segregation: New Frontiers in Brazilian Cities

Urban space plays a crucial role in the contemporary processes of capital accumulation, which is essential to analyse transformations on social housing policies and their impacts on patterns of socio-spatial segregation in the cities. More than mere effects of the financialization of the world economy, changes in the production and consumption of urban space have figured as driving forces of a new economic order, characterized by deep connections between financial markets and real estate.

Cities in general and the housing sector in particular have not only become fertile fields for commoditization of social needs and expansion of market relations, but also mobilized as guarantees for the control of financial assets. Social housing was not the sub-sector to be affected firstly by such phenomena, which has gone further where the expected rates of return are higher such as corporate buildings or luxury residences. However, it stands as a terrain of strategic relevance for business due to its large scale.

In this context, rather than ways of providing social rights, housing policies have been progressively conceived as means of opening new frontiers of financialization in low income residential markets. Like in many other countries, this is the case of “Minha Casa Minha Vida” program, the main housing policy implemented in Brazil, which subsidize homeownership to low income households.

With the protagonist role of private developers in the formulation of social housing projects, their spatial dimension are conditioned by cost calculations made by economic agents seeking to maximize profits. Without taking into account urban policy goals, the definition of the projects’ location is mainly guided by the criteria of the cheapest land available - generally also the most precarious and risky. As a consequence, social housing projects are reinforcing historical trends of segregation and gentrification of the poor in Brazilian cities.

Lone Mothers and Long Hours. Work-Family Conflict In The Everyday Lives Of Lone Mothers In Sweden

The gendered nature of the struggle to integrate caring, family and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the capabilities approach, which emphasizes that the options of an individual depend greatly on institutions and relations with others. Drawing on 38 in-depth interviews with lone mothers from different social backgrounds we explore i) how the proper balance between motherhood and paid work is conceived of, ii) the institutional and relational factors that influence lone mothers’ opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. Results show that paid work is integral to good motherhood to all mothers regardless of social class. They also show that lone mothers typically experience work-family conflict. Occupational family conflict is characterized by the need to reconcile paid work and family depend on employment conditions, accessibility to social support networks, the role of the absent father, household composition, and access to public childcare on irregular hours. In the case of middle class mothers, blurred boundaries between work and family life and late meetings restrict opportunities to attain work-family balance. For working class mothers, temporal employment, irregular working hours and low earnings are significant constraining factors. Reducing working hours, negotiating working schedules, and asking relatives and friends for help are examples of strategies used to reduce work-life conflicts. Reducing travelling time between the job and the home by moving from one place to another, and moving closer to relatives to increase the chances to get practical support are other examples. While middle-class women typically used flexi-time at work to alleviate conflicts between different responsibilities, several low-income mothers changed jobs in order to improve their situation.

Military Careers, Family and Private Dilemmas

Work and family are two the most important areas of life for most people. Although these areas are traditionally viewed as separate areas of sociological study, and have occupied different fields of research. Today, the characteristics of these social institutions in contemporary society reinforce the need to discuss the relationship between work and family in the context of the social sciences, and very particularly in sociology. Interest of study that is even more evident in the field of the military profession, given the specificities associated with her, and also by the changes in society and the military.

A significant number of studies have enlighten the impact of military life on families, considering that the circumstances of risk, frequent mobility, long absences, uncertainty etc. products remarkable effects not only in military service personnel, but also in those who are close to them. Family and the military organization have in common the fact of being extraordinarily demanding in ties, energy and total dedication. Using the terms of Segal (1988), the “greediness” of both institutions may lead to conflicts between the family and the military realm, that migrant domestic workers do under restricted conditions or as sent means of coping and dealing with the constraints. The aim of this paper is to compare the trajectories of man and women military personnel coming from the same promotion of officers formed at the Portuguese Military Academy. Specially, we will be seeking to map their expectations regarding couplehood and parenthood before and after the military career, in terms of the family and the professional projects. In methodological terms, the main data will be supported on depth interviews in the form of life stories applied to the first promotions of officers that included women.

Patterns of Migration, Working Conditions and Organizing in Globalized Care Work

The 100th Session of the International Labour Conference in 2011 concluded with the passage of the International Convention on Domestic Workers, which recognized the “significant contribution of domestic workers to the global economy” that is “untold and invisible, and is mainly carried out by women and girls, many of whom are migrants or members of disadvantaged communities”. The convention serves as an important initiative to develop a broad understanding of the work and conditions faced by domestic workers and to lay the foundations for organizing such workers. Drawing from recent NGO studies and reports, this paper offers an overview of the carework transformed to globalized care, which includes the state regulations of specific countries that increasingly restrict the movement and labor choices available to migrant workers; the complexities and inequalities inherent to traditional notions of women’s work; and the economic, ethnic and social dependence of domestic workers’ work. The aim is to explore the organizing potential of the domestic worker movement to build a global network of solidarity.

Age, Gender and Migration Status on the Labour Market – A Case for Accumulation of Advantages and Disadvantages

The analysis addressed in the presentation will show the situation of the older workers from the perspective of their minority status, namely belonging to the group of migrants, as well as from the perspective of gender. We will present the problem of the accumulation of certain advantages and disadvantages during the life-course of individuals with regard also to their socio-demographic characteristics. The questions this presentation will answer are the following: Are there significant differences in labour market outcomes between the workers with migration background and the workers without migration background? Do these differences increase with age? What is the impact of those two dimensions – age and migration status on one of the labour market outcomes, namely the wages? and finally, what is the role of gender in determining the changes in employment status?

The analyses in this paper draw on data from the SOEP (German Socio-Economic Panel) which is a representative, interdisciplinary, and longitudinal survey of the German population. For our analyses we apply the SOEP data from 1991 to 2011, distinguishing between population with and without migration background. To investigate wage differences between individuals we use the methodology developed by Oaxaca and Blinder (1973).

In the empirical analysis we have found that initial disadvantages in education of men with migration background cumulate across the life span resulting in large differences in wage outcomes. In the case of women the wage differences between women with and without migration background have a pronounced negative development. Furthermore, the wage analyses reflects that wage differences between individuals with and without migration background are due to their different endowments and not an effect of direct discrimination.

Emerging Patterns of Intergenerational Inequality in the Housing Market: The Shifting Position of Younger People in Cities in Europe and East Asia

Across the developed world, market forms of housing provision and consumption were increasingly promoted towards the end of the last century. While state intervention and de-regulation combined in diverse ways in different contexts, the assumption pervaded that increasing numbers of new households would move into owner-occupied housing, stimulating urban economies and restructing housing sectors around more marketized and privatized practices. This was expected to make urban housing markets more efficient and reduce the necessity for subsidized rental sectors. In context of the global housing booms and the Global Financial Crisis that followed, however, transformations in urban housing sectors have had a number of unexpected corollaries. One that has become particularly prominent in some cities is the divide between younger and older cohorts in terms of access to, and movement through housing markets. Timing of independent household formation and entry in the housing market, as well as access to wider family housing resources, have become increasingly important in shaping patterns of inequality both across and within different cohorts of urban residents. In this paper we explore intergenerational inequalities in a number of European and East Asian city contexts, with a focus on how housing market structures are reshaping housing careers, family formation and socioeconomic conditions among younger adults. The purpose of the East-West axis of analysis is to illustrate different manifestations of housing sector neo-liberalization as well as the more or less common outcomes in terms of spatial and economic polarization within and across different generations.

The Success of the Populist Message Explained

Populism has become a regular feature of many liberal democracies. As a result, various studies have focused on the upsurge of parties that employ a populist discourse. However, comparative studies of populism mainly focus on one
specific form of the phenomenon: right-wing populism. Other forms of populism, such as left-wing populism or liberal populism, have received far less attention in comparative research. This paper conceives of populism as a set of ideas that can be combined with every political ideology. Moreover, it is assumed that political parties can employ the populist set of ideas to a larger or lesser extent. As such, populism becomes a matter of degree: parties – on both the left and the right – can be more or less populist. This raises the question as to how the success of the populist message can be explained. Why and under which circumstances do citizens vote for parties that employ a populist discourse? In order to answer that question, I focus on both micro-level explanations (socio-demographic characteristics and political attitudes on the individual level), and macro-level variables (corruption, social inequality, party system polarization and the electoral system). The paper combines the results of a computer-based content analysis of election manifestos with the European Social Survey (2002-2010). By means of multi-level analyses, conducted in 15 Western European countries, it is assessed how the success of parties that employ a populist discourse can be explained.

**Skills Exchange: The Politics of Collaboration and Co-Production**

This paper identifies the ethical and methodological significance of this project and discusses the productive blurring of the overlap between arts and visual research practice.

**Skills Exchange: Urban Transformation and the Politics of Care**

This was a collaborative art and social research project that took place over 6 years. It investigated the elderly in the city, relations of care and the civil spaces available for older people to participate in. The project from a notion that artists, researchers, older people, care-workers and others might exchange their skills, and, in this process, alter roles and relations through processes of creative exchange. The Exchange challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. These methods were orientated towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes art works and social initiatives, opening events and manifestations in addition to interview transcripts and social mappings, each oriented towards the cultural and socio-political changes groups hoped to enact.

**This Is Not a Toolkit: Reclaiming Critical Evaluation of Participatory Arts**

This paper argues that 'evaluation' is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. In considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the 'norms' and 'forms' of evaluation. The histories of and motivations for evaluation include a governmental impulse to culture as a resource that can be put to work as part of a wider global project of managing social change (Yudice 2003, Bennett 1995) and a genuine desire to learn from and improve the effectiveness and possibilities of arts-based social interventions. This paper argues that in the current policy context evaluation has become a technocratic 'hoop' for arts organisations to jump through in well-rehearsed relations through processes of creative exchange. Skills Exchange challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. **Work after Retirement or Work Instead of Retirement?**

Work after retirement or work instead of retirement?

In Europe the problem of population aging has aroused much worry. The debates on aging populations in need of care, consuming lots of resources, have been common. Consequently, the raising of the retirement age has been one of the themes in the discussion. There is strong opposition against increases in the retirement age. Therefore, alternatives are needed. There are also spontaneous developments which affect the retirement age debate. One alternative which has been tested is the elimination or raise in the upper age limit for retirement. In Finland people may retire already at 63 or 65, but they have to retire at 67 or 68. This upper limit could be raised to 70 without much protest, or eliminated completely.

Another new development is the combination of retirement and (paid) work. This work has involved very quiet changes and was driven by cultural policy, instrumental and accountability. In contrast this paper argues that the value of evaluation, however, lies in the opportunity it offers for critical and reflexive learning. This paper offers examples of critical approaches to evaluation based on a method of participation action research.

**Between Rhetoric and Reality: Shari‘a and Neo-Liberal Multiculturalism in Australia**

Abstract

The past decade has been characterized by attacks upon and critiques of multiculturalism. This has been particularly the case in Europe, where in the context of the European sovereign debt crisis a politically driven, anti-multicultural conflagration has spread at rapid pace. It is clear that multiculturalism in Europe faces
immense political challenges from its opponents, many of whom currently constitute ruling governments. Leaders and or opposition parties in Switzerland, Germany, The United Kingdom, France and the Netherlands have made strong public statements against multiculturalism and linked this rejection to the presence of Muslim populations. Banting and Kymlicka note that even though multicultural policies remain in place in many of these nations, the delegitimation of this word multiculturalism is not just a change in discourse, but jeopardises the very conditions under which multicultural policies can actually work. It would be easy to consider that in this context, multiculturalism has a dim future.

This paper, based upon extensive research conducted for an Australian Research Council funded study examines the ‘retreat from multiculturalism’ in Aus traalia through the debate about sharia, legal pluralism and Islamic finance. It offers important insights into the dimensions of a new neoliberal multiculturalism in Australia.

Biography
Joshua M. Roose (j Roose@uws.edu.au) is a senior research officer of the Religion and Society Research Centre at the University of Western Sydney, Australia working on an Australian Research Council-funded study examining sharia and legal pluralism in Australia and the United States. In 2013, he served as a visiting scholar and researcher on the same project (with Professor Bryan Turner) at the Committee for the Study of Religion at City University of New York. He is also a co-convener of The Australian Sociological Association (TASA) “Ethnicity, Migration and Multiculturalism” thematic group with a focus on religion and multiculturalism.

Muslim Elites in the Neo-Liberal Sphere: Implications for Citizenship and the Future of Islam in the West

In recent years there has been a vast array of studies examining Muslims in Western contexts at the level of radicalisation, impacts of negative representations and civic engagement. However, little research has examined the emergence of Western born Muslims into the elite professions that are central to the operation of the neo-liberal free market and that serve as a central location of economic and political power. Less research still has examined how this ‘new Muslim elite’ is shaping citizenship amongst Muslims and the future of Islam in the West (and the tensions this produces with traditional Muslim community leadership). This study aims to reveal important empirical and theoretical insights into these developments. Significantly, this study shifts the focus from the ‘Muslim question’ to how Muslims are actively contributing to a Muslim Solution.

This paper is based on findings from a three year project (2012-2014) funded by the Australian Research Council and conducted by a multidisciplinary team (Law, Sociology, Criminology and Political Science) from the University of Western Sydney (UWS) and City University of New York (CUNY). Empirical research was conducted in the global cities of Sydney and New York with Muslim attorneys, Islamic finance specialists, Imams and community leaders. The study aims to explore the intersection of sharia and the secular legal system, as well as gaining a broader into how sharia’s shapes the daily lives of observant Muslims.

ROSA, HARTMUT* (University of Jena, hartmut.rosa@uni-jena.de)
The Temporality of the Good Life: Resonance As a Key-Concept in Critical Theory

The modern reality of ethical pluralism implies that we cannot define the substance or content of a good life. However, perhaps it is possible to identify the temporality, or at least some of the crucial temporal aspects of a good life? The paper sets out to explore just this. In the first part, it identifies three time-levels that have to be brought in ‘resonance’ or coherence within a life: The temporality of everyday life, the temporality of a life-time or (biographical) time, and the temporality of one’s age or epoch (historical time). In its second part, the paper seeks to establish the argument that the good life is achieved through a mediation between singular ‘moments of resonance’ (as opposed to situations of alienation) and stable ‘axes of resonance’ that allow for such moments. The crucial point here is that the presentation of such axes of resonance require a certain level of security and stability that is potentially threatened or undermined in an era of incessant social acceleration.

While moments of resonance are rare and shortlived, what subjects need are stable and reliable ‘Axes of Resonance’ which give access to such experiences. In modern society, such axes can be love and the family, work, but also nature, art and religion. I will explore these ‘Spheres of Resonance’ by contrasting them to ‘Spheres of Alienation’ which mirror the former and might be on the rise in a late-modern world governed by the imperatives of speed and competition.

ROSA, CESAR* (IIT-Chicago-Kent College of Law, crosado@kentlaw.iit.edu)
Can International Framework Agreements Facilitate Transnational Labor Cooperation?

Marx & Engels predicted that globalization would lead workers of the world to unite. Indeed, the world economy is today “global.” However, globalization seems to have hurt workers’ organization as labor unions have lost membership and influence almost across the board. But in the past decade global unions have even been able to persuade more than 100 multinational corporations employing over 8 million workers to sign so-called international framework agreements (“IFAs”). At a minimum, all IFAs must commit to the “core labor rights” of the International Labor Organization (“ILO”), to wit, the right of freedom of association and effective collective bargaining, the right to be free from discrimination at work, the right against compulsory labor and the right against the worst forms of child labor. Could Marx & Engels have been correct, after all, about an international formation of workers acting in a class-conscious way for fundamental social change around the world? After doing empirical field research for about 6 months in Europe and the U.S.A., I do not think that IFAs yet signal a significant and new labor upsurge. First, I found out that the mostly German, Nordic, and French labor organizations seem to determine the specific meanings of the IFAs. These specific national labor organizations broker the IFAs and the relations that give IFAs meaning and life. In this sense IFAs are not truly “global.” They have important national roots. Second, unions across economic sectors seem to have conflicting interests. No brokerage seems to mend those ruptures, leading some global unions and their IFAs to clash with others. The paper concludes by arguing that the ILO may help to broker these conflicts to propel IFAs forward.

Communicating the Challenges of Climate Change Adaptation in the International Red Cross and Red Crescent Movement

The paradigm of climate change adaptation (CCA) plays an increasingly important role in various forms of civil society organizations (McLaughlin 2012; Hall 2013). The International Red Cross and Red Crescent Movement discussed the topic of climate change as a humanitarian challenge for the first time in 1999. The foundation of the Red Cross/Red Crescent Climate Centre (RCCC) in Den Haag in 2002 institutionalized this new organizational commitment to address climate change induced challenges in disaster preparedness and the securing of livelihoods. Today, CCA is being discussed as a cross-cutting issue in humanitarian
Innovative Strategies to Cope with Climate Change Across Time

Men in Palestine

Talking about Sexuality in Order to Deal with Discrimination? Gay Men in Palestine

In our paper we will present our assumptions, that are based on several case studies, about the interrelation of these self-presentations and self-definitions with the hegemonic discourse about male homosexuality, or non-normative sexualities more generally. Further, we will discuss the idea that these interviewsee, who are in a position of outsiders (in the sense of Norbert Elias) in Palestinian society, are talking more openly about internal conflicts inside the Palestinian community than other interviewees.

In our paper we report on a project analysing the emergence of a grassroots social movement dedicated to direct action against the root causes of climate change. The project investigates the dramatic turn in climate politics that occurred in the mid-2000s. Engendered by mounting evidence of climate change, and by the recognition that the scale of international action under the United Nations Framework Convention on Climate Change, and rejecting the pragmatism of professionalised non-governmental environmental organisations, this grassroots-based political movement launched a radical programme for climate action from below. Through public protests, civil disobedience involving direct actions, counter summits, and deliberative events that created a sense of community, solidarity and personal political agency, climate activists sought to translate climate science into politics. The climate movement sought to build a political vision and the political capacity to challenge the elite politics of climate change, the ‘climate pragmatism’ that had dominated climate politics for more than a century. The legitimacy of the carbon-intensive economy. The paper explores this significant moment, when a radical climate politics introduced a new dynamic to the landscape. The authors are to publish this work in 2013 as an ethnography of the search for climate agency, based on the authors’ involvements in the climate movement and in-depth interviews with climate activists from 2007 to 2010. Focusing particularly on the climate movement in Australia, a country reaping the economic benefits of the coal and gas boom, the book charts both the possibilities and pitfalls revealed by the upsurge, interpreting it as a prefigurative moment for an anti-systemic climate agency.

Imperialism In a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

Imperialism in a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

National currencies, especially paper notes, are emblems of the nation-state and its power. This paper builds on these literatures to explore iconic representations of Canada's Aboriginal Peoples in its monies, using examples of colonial and (ostensibly) post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada's imperialist, colonialist legacies are a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives.

When 150 becomes 100: Conversions and Denominations in Grocery Shopping

When 150 becomes 100: Conversions and Denominations in Grocery Shopping

This paper explores two aspects of expatriate money practices with Russian rubles, focusing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currencies like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing ‘sticker shock’, a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of price and value for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish krona – talk of curious conversion negotiations under a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handy conversion to assess prices, but also adjusting to new arithmetic based on
different monetary denominations, even when the base unit may be the same. I will argue that conversions are slowly adjusted to better match not official rates of currency conversion, but notions of worth and value that are linked to available denominations of money at ‘home’ and abroad.

Ethnographic Studies Approaching Violence and the Transaction of Illegal Drugs in Montevideo, Uruguay

The present work is a result of a process of ethnographic investigation that took place in three different social locations: the downtown area (with a population comprised by homeless teenagers and young adults); a peripheral suburb location in Montevideo (focusing on consumers of cocaine paste base); and, prison (within a system created for people with no criminal records). The focus of this study discusses the social interrelations and the transactions of illegal drugs. Given the general assumption that the foundation of social interrelations is exchange itself, the case of an exchange that occurs within an outlawed background will be debated - an illegal market which is necessarily (re)producing violence - a market that is illegal due to the fact that those merchandises are considered non-legal by itself, the case of an exchange that occurs within an outlawed background will be considered by the focus of this section conformed by homeless teenagers and young adults); a peripheral suburb countries in the development of national community-based care models, but new institutional care, particularly for recipients with lower levels of disability (OECD, 2005). Countries without extensive formal community-based care systems such as structure toward a more conversational structure. As a new – and still largely unexplored social function.

The large diffusion of social media platforms, togheter with the diffusion of mobile connectivity, has generated, during the last few years, a growing amount of real time production of user generated content. This broadband phenomenon is even more interesting when comes to crisis related communication. During crisis events traditional mass media communications might be slower less efficient and less accurate than user-generated information. This is why, over the last few years, we are seeing a growing number of research projects aiming at using these data for rescue operations or other civil protection activities. We are facing this kind of data from a different perspective. Within this paper we will claim that – within specific circumstances – user generated communication will act surro- (Luhmann 2000) by applying the same operational selection between information and non-information. In addition we will claim that, as soon as the initial conditions disappear, user generated communication will evolve into a new – and still largely unexplored social function.

To support our thesis we will use Twitter data collected during the first five hours after the earthquake that struck Emilia Romagna region in Italy on May 20th 2012 monitoring the #terremoto hashtag. By focusing on the first 5 hours of the Twitter stream we have been able to detect the early user-led phase of the phe- nomenon, showing which type of users has been the first to fill the information gap and, by then, what happened until the early morning when traditional media came on stage. We will show how in this time span it is possible to observe how specific social network analysis metrics (Bruns, Stieglitz 2012) evolve from a specif- ic mass media like structure toward a more conversational structure.

In and out of the Mass Media System: Crisis Microblogging in a Social System Theory Perspective

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being re- produced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-orientated, inter- view-based long-term study “The Mediatized Home” analyzing the integration of the different internet-based ICTs into the everyday lives of 25 (heterosexual) cou- ples over a period of over 5 years. The findings show that due to a technological framing, inequalities in internet use and skills are especially tied to gender roles and practices. Although the technological framing and thereby these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings.

CASE STUDIES RELATING TO THE EFFECTS OF NEW MEDIA TECHNOLOGIES ON SOCIAL INEQUALITY

Where Participation is Negotiated: New Media in Everyday Life

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being re- produced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-orientated, inter- view-based long-term study “The Mediatized Home” analyzing the integration of the different New Media Technologies into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that inequalities in internet use and skills are especially tied to gender roles and practices. Although these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples, which is evidently affecting the use of internet-based ICTs.

In order to understand the ways in which internet-based ICTs interact with questions of social inequality, it is crucial to ask for its latent implications. Our study shows that looking at everyday life from a domestication perspective allows us to not only identify latent implications of internet-based ICTs, but also to un- derstand how they unfold their effects on social inequality.

ROTKIRCH, ANNA* (Finnish Family Federation, anna.rotkirch@vaestolitto.fi)

Unions and Childbearing: Converging Gender Roles in Finland
One distinguishing trait of Finnish fertility during the last decades is the increase in the proportion of families having three or four children. We study how socio-economic status (SES) and numbers of unions relate to above-average (3+) parities among Finnish men and women across age cohorts. In previous studies of wealthy low-fertility countries, both male SES and number of unions has often been shown to increase fertility, while their effect on women is mixed or negative. We use the FINNUNION data, a 11% sample of all Finnish-born persons resident in Finland during 1970-2010 and covering the fertility of age cohorts 1930-1960. It includes data on coresidential unions and marriages, childbearing and central sociological indicators of the index persons on an annual basis. It also includes sociodemographic indicators and childbearing history of all partners in marriage or cohabitation of the index person.

Results show that across all male cohorts, higher social status increases the proportions of 3+ children. There is no comparable clear trend among women, although the negative effect of female education on higher parities diminishes over time. Interestingly, the gender differences appear to diminish among younger cohorts. We discuss reasons for the shift towards gender equality in mating patterns in families with many children.

Plural Modernities and Post-Western Sociologies: Individuation in Europe and in China

In a context of plural modernities we have entered in a period of Post-Westernization of epistemology and construction of the construction of situated knowledge. We are in the midst of a “global change" which is distant from previous changes and their ephemeral nature and which appears to be a turning point in the history of the social sciences. In this communication we will consider the diversity of epistemic injustices and reticular dominations, the emergence of Post-Western sociology through the dialogue between European and Chinese sociologies; finally we will be focused on theoretical continuities and discontinuities between Chinese and European sociologies through the analysis of the process of individuation in Europe and in China. The concept of the individual is not very highly developed in Chinese sociology, whereas it has assumed a central position in European sociologies. On the other hand, various theories of the ‘guanxi’ have been developed; some Chinese sociologists advance the ‘we’ is produced, on the one hand, by guanxi, which delineate the particular boundaries of the ‘self’ in the construction of the individual, and, on the other hand, by categorisations, identifications and social affiliations. Over the past 20 years or more, it has been interesting to observe that in European sociology, and particularly French sociology, the contemporary individual, whether he appears uncertain, reflexive or autonomous, lies at the heart of sociological thinking, whereas he is scarcely visible on the Chinese sociological scene. This phenomenon highlights the affirmation of the process of individuation as a process of civilisation – in Norbert Elias’s sense of the term – and shows that, whereas in the past it was social structures that sustained the individual and the level of reflexivity was consistent with the social structure. We would consider discontinuous continuities and continuous discontinuities between Chinese and European sociologies.

WG01-896.3

ROULLEAU-BERGER, LAURENCE* (CNRS, Laurence.Roulleau-Berger@ens-lyon.fr)

Sociologies and Methodological Cosmopolitism

Methodological reflection in sociology is linked to the development of the Western society which saw its birth. If the process of pluralisation of contemporary societies questions even the idea of society as a narrative attached to that of modernity, and in particular that of European modernity, European thinking has continued through methodological nationalism to see itself as universal mediator of the other narratives (Chinese, Indian, African, Brazilian and so on). Certain forms of scientific hegemony have marked the development of sociological thought. The most pressing task, however, is to produce methodological cosmopolitism in which continuities and discontinuities, connections and disjunctions are constructed between different places in the world and potentially capable of bringing to light the multiplication of “regimes of alterity”, the different ways of being with Others. The Others became a major methodological and epistemological scientific issue. Here, a methodological cosmopolitism is based on a multisited ethnography of recognition, in which all Others are regarded and recognised with their experience, their competence, and his fluctuating, reversible and varied identities anchored in a diversity of locations and temporalities. Methodological cosmopolitism is a way to access to the multivocality and the polyphonies of the plurality of narratives. Here methodological cosmopolitism allows for a universal sociology, which means integrating different points of view, which European, Asian, American and European sociologies share together. We propose to create a transnational intermediate space of knowledge in sociology by favouring an harmonisation between different theoretical, epistemological and methodological traditions from Asia, Europe, Africa, North and South America and Arabic countries. Methodological cosmopolitism is related to a conceptual space based on the articulation between a critical sociology and a pragmatic sociology where structural processes, collective and individual action, interaction orders are thinking together in different places in the world and different temporalities.

ROUND, JOHN* (Higher School of Economics, j.round@me.com)

KUZNETSOVA, IRINA (Kazan Federal University)

The Comprised Mobility of Moscow’s Labour Migrants: States of Exception in a Super-Diverse City

While Moscow is a super diverse city with between 4-5 million of its population international labour migrants, the majority from Central Asia, and despite the state recognising their economic importance, levels of integration and tolerance are extremely low. This paper argues that increasing xenophobia and unclear legislation forces many migrants to live and operate within shifting states of exception, ensuring a precarious everyday which impacts greatly on their mobility. While ofte used to describe migrant camps this paper argues that the state of exception concept applies to Moscow as a whole as even documented migrants are prey to state officials and, increasingly, its citizens due to the uncertain everyday life that implicate legislation creates. Thus migrants share informal knowledge about the safest places in the city and the routes around it which reduce their chances of interactions with the police. Furthermore, migrants are forced into informality by their employers and landlords refusing to register their documents correctly, increasing their vulnerability and denying welfare access. Compounding this, while it is extremely unclear who can demand a migrant’s documentation they are routinely stopped by the police and increasing numbers of the public, with groups such as ‘Moscow Shield’ proclaiming themselves as the city’s protectors. This ensures that migrants wish to spend as little time as possible in ‘public’ spaces to reduce the risk of confrontation, punishment and violence. For many their spatialities of Moscow are reduced to their work places and accommodated spaces and there are very few places where integration occurs. Through the work of Lefebvre and de Certeau the paper then addresses how migrants develop informal tactics to ‘cope’ with these everyday realities and carve out spaces of the city for themselves.

JS-80.6

ROUND, JOHN* (Higher School of Economics, j.round@me.com)

The Precarized Everyday of Moscow’s Labour Migrants: Rising Xenophobia and the Migrant As a Political Subject of Disgust

Since the collapse of the Soviet Union Moscow has positioned itself as a global city (re)built on the profits of its energy boom and the efforts of, currently, over four million labour migrants, the majority from Central Asia. For too many migrants endure an extremely precarious everyday as they are forced to live in what the paper describes as a city wide state of exception, within which legal frameworks protecting migrants are ignored or misinterpreted to the benefit of the market. Many migrants who desire ‘legality’ are forced into illegality by their employers and landlords refusing to register their documents correctly, increasing their vulnerability. Based on in-depth qualitative research this paper explores the human rights abuses that labour migrants experience, ranging from arbitrary fines by the police, a total disregard for their workplace safety to xenophobic attacks. The research demonstrates that migrants are simultaneously visible and invisible to the state, as for the latter the legal uncertainty denies them access to welfare and a voice within the city but they are visible for exploitation both in terms of their labour and the political capital gained from their presence. Migrants, the paper demonstrates, are constructed as ‘illegal’ regardless of their documentation status and politicians, pandering to growing nationalist sentiments, castigate the migrant body (in all meanings of the word) as ‘diseased’ or ‘criminal’, to be seen as separate from the rest of the city. This feeds into xenophobic attitudes making migrants even more vulnerable with, for example, voluntary groups emerging to check their documents as they are seen as a danger to the city. Drawing upon the work of Lefebvre and de Certeau the paper concludes by exploring how migrants develop informal tactics to try and negate these problems to ensure their general well being.

“Equality and Challenge: The Case of ‘Lysistrata’ in Ancient Greek Drama”

This paper concerns with the successful revival of the ancient Greek drama through the study of “Lysistrata” by Sophocles. The educational and recreational character of the ancient Greek drama gives the audience messages for

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
equality, a notion useful in building sound personalities, ready to participate in a democratic state. In this paper I will present the analysis of “Lysistrata” through the mask/prosopoeia of the ancient Greek drama. The results were acquired after going through and studying elements from a variety of sources, such as masks form pottery, bas-reliefs, sculptures, frescos, statuettes and texts. Aristophanes, who is considered to be the best ancient Greek comedy writer, was well aware of the social problems faced by the Athenian republic during and after the Peloponnesian War and thus felt challenged to present these problems through his writings. One famous persona he made up was “Lysistrata”, an audacious, vivid, power-lustful. “Lysistrata” is taught in philosophy schools and played in theatres around the world. The messages conveyed involve idea of the equality, peace, reconciliation, dialogue, human rights. The educational activities deriving from the ancient masks presented masks could take the form of articles, lectures, e-lectures, workshops, interactive programs, videos etc.

ROVENTA-FRUMUSANI, DANIELA* (Bucharest University, danifrumusani@yahoo.com)
Epistemological Standpoints and Steps in Social Sciences. Intersectionality in Gender Studies

Human and social sciences are the subject of a long lasting confrontation between the ideal-type standpoint of the researcher's neutrality and the inevitable subjectivity in everyday life situations, between positivism and subjectivism. As a result of these paradigmatic oppositions, we encounter a cleavage between statistical quantitative methods applied to experimental data, “objective methods”, and qualitative from a contextual point of view.

Since 1980's, in information and communications sciences but also in management and gender studies, we are talking about the reliability of qualitative methods, the role of experience, memory and standpoint. The objectivity is actually non-achievable, so the subjectivity must be assumed, explored, transferred. Feminist studies (sociological first, then communicational, discursive, historical) are designed to reveal the women's perspectives, as the feminist approaches had been ignored over the centuries. The main operator for the methodological change was the women's testimony through methods like life story, narrative analysis, and ethnography. What makes a quantitative or qualitative approach feminist is that the female change was the women's testimony through methods like life story, narrative analysis, and ethnography. It will be improper to talk about the exclusion of the intersectionality of problematics, and ethnography. As a result of these paradigmatic oppositions, we encounter a cleavage between statistical quantitative methods applied to experimental data, “objective methods”, and qualitative from a contextual point of view.

With this new orientation towards a “situated knowledge” (see D. Haraway), with the triangulation of methods and the intersectionality of sociological parameters, the traditional separation between the subject enconisseur and the object to be known is abolished and the group or community perspective can replace the neutral, individualizing perspective.

La Dimension De Genre Dans Les Organisations

La visée de cette intervention c'est de s'inscrire dans l'histoire des efforts entrepris pour éradiquer l'arbitraire, l'injustice et la discrimination envers les femmes en utilisant l'arme de l'information. Pour faire avancer la cause de l'égalité, il faut d'abord arrêter de considérer le poulbois des inégalités, rendre visibles leurs causes et leurs effets, comprendre le degré de leur résistance et les implications de leur persistance. En dépit des modifications de jure (loi contrairement à la discrimination de genre-2002 pour la Roumanie), de facto les changements arrivent plus lentement. L'inégalité de genre reste une caractéristique majeure de la société globale et par voie de conséquence de la Roumanie postcommuniste aussi.

Dans les sociétés contemporaines marquées par la désindustrialisation, la production et la reproduction, le marché et la famille sont moins séparés ; ils deviennent des espaces où le sexe, la race, la classe se confrontent afin de donner une signification et valeur nouvelle au travail. La crise (de la production, du travail, de la famille etc) entraîne des travaux temporaires, ce que des chercheurs féministes appellent du travail féminisé (moins payé, moins valorisé, etc.) c'est pourquoi on parle de féminisation de la pauvreté (accentuée par la crise).

Même si les femmes ont investi dans presque toutes les professions, la ségrégation sexuée du travail demeure une réalité qui se traduit notamment par la persistance de l'inégalité salariale et symbolique (ce que l'on va prouver par les vingt entrevues en profondeur avec des femmes appartenant à des professions, catégories d'age et de leadership différentes).

Suffering and Aesthetic Identification in Cosmopolitan Cinema

Looking at specific film examples of cosmopolitan cinema, this paper is concerned with both theorizing and probing how different modalities of aesthetic identification with the suffering hero – sympathetic, cathartic and ironic – are consequential for the ways in which the viewer is capable (or not) of detaching herself from the immediacy of the emotions underlying her identification (e.g. compassion, sympathetic tears, tragic emotion, estrangement) and rise to moral judgment and reflection about what is represented. It is through the fictional exercise of the imagination that audiences are invited to identify and empathize with the fate of individual characters and to consider the moral implications of their suffering in their worlds. If fictional characters can become ‘real’, personalized and tangible as subjects experiencing pain, it is also because the suffering ‘other’ is perceived not as a distant object of pity but as a fully-fledged subject just like ‘us’. We will see that some modalities of aesthetic identification with suffering characters have the potential to trigger cognitive linguistic deliberation- and, therefore, new cultural meanings of suffering. - in a discursive ethical space where a range of interlocutors - audiences, filmmakers, creative personnel and critics – enter into conversation with each other about what constitutes human dignity and its violation. It is argued that cosmopolitan cinema challenges the idea that suffering is ‘unrepresentable’ by personalizing suffering and bringing its visual presence before us in ways that verbal representation cannot.

ROKE, DAVID* (University of Western Sydney, d.roke@uws.edu.au)
Changing Society, Changing Sport? Social Diversity, Citizenship and the Sporting Nation

Sport is routinely evident as a key signifier of nation around the world. But in Australia the unusually elevated place of sport in ‘official’ and popular national culture means that questions surrounding sport, citizenship and national identity have an especially deep resonance. For example, sport is more prominent in the public information for Australia's citizenship test, and more closely connected to its characterisation of national cultural identity, than in equivalent documentation of comparable countries such as Canada and the United Kingdom. Key national sports events are also protected for free television viewing by the world's most rigorous “anti-siphoning” regime in the name of safeguarding “events of near nationwide importance and cultural significance” from less accessible subscription television platforms. Affinity with sport, and to the nation through sport, is likely to be less secure as global population mobility alters the demographic composition of Australia's citizenry. It is for this reason that its most dynamically diverse region, Greater Western Sydney (GWS), was selected as the primary research site for a current project addressing sport's relationship to cultural citizenship in Australia.

GWS has an estimated resident population approaching two million, with almost a third born overseas and of non-English speaking background, approximately half of whom arrived in Australia during or after 2001. With almost forty per cent of residents speaking a language other than English at home, over a half aged below thirty five and approximately a fifth in low income households, GWS is a highly appropriate context for exploring the process of ‘nationing’ through Australia’s sporting system and its relationship to socio-cultural inequality and exclusion under conditions of advancing globalisation. The paper reports on this research-in-progress, and analyses the preliminary findings of its qualitative exploration of the sport-nation-culture nexus.

"State-Formation From Below": Social Movement Of The Dam-Evices and ‘Legal Transformation’ Of The State In Maharashtra (India), 1960-1976

Dam-evices' movements in Maharashtra have a long history. Peasants in Maharashtra fought the first struggle against dams in early 1920s, which opposed...
the Mulshi dam built by the Tatas. Significantly, this is the first known move- 
ment organized by the dam-affected persons in India and throughout the world. 
However, for various reasons, this movement failed. From 1960 onwards, the 
dam-evictees' movements in Maharashtra have been largely fulfilled by the 
state. Moreover, these movements of the peasants have considerably trans- 
formed the structure of the state in Maharashtra. As a result of their mounting 
resistance, Maharashtra government mooted the first rehabilitation law in India, 
in the year 1976, which was further amended and replaced in the year 1986 and 
1999. Though the movements of the dam displaced still continue to operate in, 
in this paper, I review and analyse the initial period of debates against the dist-
ance towards aging society, how does age matter to deviance and to social 
values, liberal values (2.4% of the total number of ideas), environmental values, 
junior competition, they demonstrate significant meaningful references for the un-
versal preferences. Although people in mainland China and Hong Kong share 
the same culture, they are under very different political and economic systems. We 
shall also study induced homophily: the type of homophily produced by the 
The moral economy** of paternalism. reflections from the congolese copperbelt 
Once the most important mining enterprise of Congo-Zaïre, famed for its out-
ward paternalism, the Gécamines – the former Union minière du Haut-Katanga, 
nationalized in 1967 – went into a steep decline in the 1990s. To address the sit-
uation, the World Bank advocated, in the early 2000s, the sale of company assets to 
private investors, and the company’s gradual transformation into a public entity. 
Unlike the company’s paternalistic poli-
cy (the company as a benevolent father, the workforce as a unified community, 
the individual worker as a responsible, Christian, pater familias, and so on) came 
to be more and more put into question. Nevertheless, as some examples will 
make clear, these models, or norms, continue to influence workers’ expectations – 
and to be used as a reference – in their relationships with public authorities, 
with their wife and children, with (former) colleagues, and with non-Gécamines 
workers. At a more general level, the paper suggests that, far from being limited to 
ex-Gécamines workers, this paternalistic “moral economy” underlies the rela-
tionship that most inhabitants of the Congolese copperbelt have with wage work 
and institutional employers. To avoid conflicts with workers, local communities 
and public authorities, the mining companies that came in Katanga during the last 
decade have but no choice to take such expectations into account. By doing so, 
they contribute to the emergence of a new form of paternalism, distinct from the 
one developed by Gécamines in the 20th century.

Markets in Life Itself: Transnational Surrogacy in India As Intimate Labor

Are the babies born through commercial surrogacy commodities or are they gifts? Based on interviews with seventy surrogate mothers and thirty-one egg donors who live in Bangalore, India, and twenty families who reside in various parts the U.S. and Australia and have engaged in surrogacy in Anand, Delhi, and Mumbai, I pose three interrelated questions:

1. What roles do surrogate mothers make of the commodification of their pregnancies? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?
2. If the newborn baby is a gift to the commissioning mother residing in India or elsewhere, then what is the ongoing relationship between surrogacy donor and the mother as gift-giver and commissioning parents as gift-receivers?
3. Conversely, if pregnancy is wage labor, then how does one make sense of the baby as commodity, a product of market pregnancy?

Beginning with Titmuss’s seminal *The Gift Relationship*, where he endorses the virtues of blood donation in the UK versus the demerits of blood distribution as a commodity in the U.S., the social circulation of bodily fluids, tissues and organs is well examined (Rabinow,1999; Schepers-Hughes and Wacquant, 2003; Waldby and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1967), I ask whether these on the commodification of the proceeding?”

Social Innovations for Sustainable Consumption – a Typology for Their Political Promotion and Further Development

The current political debate in Europe ascribes importance to social innovations in regard to the transformation toward a sustainable society. Social innovation refers to utterly diverse phenomenon like citizen’s communities, cooperatives, transition towns and intercultural gardens, new forms of participation as well as user- and consumer-driven innovations. In regard to consumption there is the hope that carbon-intensive and non-sustainable patterns will be transformed towards more sustainable practices. However it is often not clear how to understand the term social innovation – most definitions esteem fall short because they are not different from usual economic definitions or rely on an obsolete idea of technique trying to mark a difference between social and technical innovation. Before looking at sustainable consumption one has to answer questions about the mean of social innovations, which are the criteria for the observation and analysis of diverse innovative consumption phenomena.

These questions are currently investigated by the project “Sustainable consumption by social innovation. Concepts and practice” funded by the German Federal Ministry of Environment and the Federal Environment Agency. Hereby 30 cases of social innovations within several consumption fields are closely investigated.

This paper presents considerations on the understanding of social innovation as the base for a typology of social innovations for sustainable consumption, which will be introduced. Social innovations are understood as novel social practices which differ from former routines, constitute solutions for social problems, and entail far reaching structural changes in society. Beside these structural effects of social innovations one has to consider the dynamic of change processes to make up criteria. An essential result of the analysis is the identification of five types of social innovations (do-it-together, strategic consumption, community based consumption, do-it-yourself, new offers for consumption), which are the basis for political intended promotion strategies and strategies for further development of the change agents.

The Influence of Political Inequality in Vulnerability to Natural Hazards: An Analysis of Selected Mexican Municipalities
The susceptibility of different territorial units to be affected by natural hazards has been usually associated with the nature of the hazard itself, together with the socio-economic conditions of the local population. However, the political conditions that underlie planning and emergency response are usually overlooked. We argue that vulnerability varies in relation to the political inequalities regarding law enforcement, effective planning, land use control, environmental knowledge and resources availability among different territories in response to hazards; and these inequalities would significantly influence vulnerability outcomes of municipalities subject to similar hazards. This paper reviews the debates of political inequalities and their spatial effects. It also discusses the differences in vulnerability outcomes in different territorial units in Mexico, associated with such inequalities, from a qualitative comparative approach.

Participación Social Ciudadana. Reflexiones Desde El Pensamiento Comunitarista De Amitai Etzioni

La participación ciudadana, desde la aparición de las Tecnologías de la Información y la Comunicación (TIC), ha experimentado una radical transformación. Las teorías clásicas sobre participación social y creación y desarrollo de comunidades, se encuentran con el reto de adaptarse y contrastarse con los nuevos fenómenos de desarrollo tecnológico. Internet y las herramientas 2.0 tienen en común la participación colectiva mediante procesos de colaboración e intercambio con otros usuarios. El cambio de mentalidad que supone esta nueva forma de comprender y utilizar Internet desarrolla interacciones peculiares. Los individuos establecen relaciones de rol y las redes personales se convierten en lo más importante, creando comunidades antes inosuscipientes.

Esta comunicación se centra en el estudio del pensamiento de Amitai Etzioni, uno de los principales investigadores sociales sobre la creación y desarrollo de comunidades, y pone en relación su pensamiento clásico sobre participación con sus aportaciones recientes a la luz de las nuevas posibilidades de participación ciudadana.

Cycles of Contention Post-Apartheid: A Challenge to Current Theory

Since 2004 South Africa has been undergoing a wave of protests predominately led by the unemployed within South Africa’s impoverished townships and informal settlements. This protest wave reached a peak in 2012 where it has been estimated there was an average of three protests a day (IRIS, 2012). Furthermore, there has been a discernible rise in industrial unrest with an increasing number of wildcat strikes occurring as workers choose to take their demands outside organised trade unions and collective bargaining processes. The intensity of this movement and the hostility of the State to it was tragically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a wider global cycle of contention. This paper uses the South African experience in order to challenge Tarrow’s theory of cycles of contention in order to advance social movement theory from a Southern perspective. It will be argued that Tarrow’s framework, and social movement theory more generally, pays insufficient attention to the specificities of capitalist development. This paper seeks to expand social movement theory and the analysis of popular protest through an examination of the specificities of capitalist neoliberal development and how this has shaped the working classes post-apartheid. The paper will demonstrate how this greater emphasis on the role of capitalism within social movement theory has much to contribute not only to the understanding of protest and social movements in South Africa but also for the analysis of the global cycles of contention.

Independent Cultural Centres As Amenities in Urban Regeneration

This paper reports results of a research project on 15 independent cultural centres around Europe. These specific sites, promoting culture and arts and related industries, have often acted as “urban pioneers” in their neighbourhoods, converting spaces considered “difficult” in size or because they are listed properties. The centres involve combination of different creative actors and action. They are professionally managed, and agree that visionary leadership is essential to succeed. They are usually organised as independent associations, but require acceptance and partnering of cities, often as owners of the properties. However, not all of them are dependent on subsidies, even in the form of land rent, but illustrate other examples how to organise such activity.

The paper discusses the role of independent cultural centres in urban regeneration. The current literature acknowledges both the supportive role of such activities in place-making and providing spaces that the market otherwise does not, but also highlights the paradox that if a development becomes commercially successful, rising rents may lead to their displacement, which eventually also lessens the character of the whole area. This study argues that instead of transitional activity in a particular property, planners should consider independent cultural centres as new kind of civic activity supporting heterogeneity and mix in changing urban areas. This use of vacant spaces should be conceptualised as amenity—non-profitable venue that has broader significance for area’s atmosphere and liveability.

It’s Climate Change, Stupid! the Role of Think Tanks in Maintaining a Knowledge Divide in Climate Politics. Evidence from Germany, the United States, Japan, and South Korea

‘Global environmental inequalities’ are often used synonymously for the asymmetric tragedy of the commons problem posed by anthropogenic climate change: polluters (mostly countries in the developed world) are less affected and more capable to deal with the consequences of global climate change than the less industrialised countries in the global south. An important aspect of this problem is the rejection of national responsibilities or the outright denial of climate change by important emitting countries.

The consequences of environmental degradation and climate change can be felt directly at the local level. In contrast, public awareness as well as an understanding of the complex interplay of local and global aspects by national electorates is highly dependent on the production and distribution of scientific knowledge. While the production of relevant knowledge is institutionalised at the international level (e.g. IPCC), national level knowledge production and modes for distributing it to political elites and the wider public differ considerably. To empirically test the impact of diverse patterns of knowledge production and distribution on ‘climate scepticism’, I will focus on the influence of environmental Think Tanks. Think Tanks are said to provide applied research and impartial advice as well as political advocacy in ‘scientific disguise’. It’s therefore important to analyse their network ties to government authorities and among each other in order to estimate whether they are part of an epistemic community or forming advocacy coalitions instead. Linking the findings for selected countries (Germany, the United States, Japan, and South Korea) with the theoretical framework of differing ‘knowledge regimes’ helps estimating the consequences of an unequal access to and the distinction between a biased and a more ‘neutral’ presentation of scientific findings for national climate politics and international burden sharing alike.

Fathers, Welfare and Gender

This paper examines macro-level social policy influences on national variations in men’s roles as fathers across different ‘worlds of welfare’. It begins by identifying a paradox. On the one hand, the paper illustrates that the mid-1970s represented a historical turning point in social policy responses to the changing nature of fatherhood. On the other hand, national variations in the social politics of fatherhood have been largely overlooked by comparative welfare state analysis, with the notable exception of Hobson & al (2002), who proposed a typology of ‘policy regimes and fatherhood regimes’. The paper addresses this paradox by exploring fatherhood regimes in different social contexts. Further work by Orlof (2011) identified the idea of a continuum of ‘two worlds of father roles’, typified at one end by the gender-egalitarian ‘father friendly’ regime in Sweden and at the other end by the targeted regime in the USA, which impacts most forcefully on a residuum of non-maintenance paying fathers. The paper concludes by discussing whether and how welfare states served to erode the patriarchal power of fathers during what Thernborn (2004) identified as the long process of ‘de-patriarchalisation’, and by considering to what extent we are witnessing a feminist backlash in new discourses of re-patriarchalisation.

Consuming Cuteness: The Visual Code Of Youth In Kawaii (cute) Fashion Subcultures

The kawaii (cute) fashion subcultural scene of Harajuku, Tokyo, presents a complex visual sphere in which youth produce and circulate images through the consumption and design of clothing products. This paper examines the power that the image can have in bringing together young designers and consumers. Using visual data from Harajuku and qualitative interviews with key cultural producers, it unpacks the idea that aesthetics in fashion subcultures can be used to signify wider thematic worlds in the subculture. This paper aims to revive the use of semiotics in the study of fashion subcultures, working under the Birmingham Centre for Contemporary Cultural Studies' premise that there is resistance within fashion subcultures which is symbolic and counter hegemonic. It also integrates a discussion of cultural industries to map out how these images and their related mythologies are produced and circulated in the subculture. It combines the literature from these three fields to examine the ways in which kawaii fashion subcultures engage with residual and emergent social cultural forms, particularly pop culture. Youth in kawaii fashion subcultures claim images of childhood, and arrange them into a system of signs mediated through fashion styles as a form of symbolic resistance to hegemonic norms of Japanese adulthood. The clothing of kawaii fashion subcultures allows for self-transformation, as prints, motifs and textiles are used to signify individual identities and collective dreams centered around cuteness and passive doll-like archetypes. The streets of Harajuku become a public theatre in which participants act out these identities, utilizing a complex code of cuteness to communicate 'authenticity' to other subculturalists.

Population and Forest Land Use Cover Transition: The Case of Brgy.Puting Lupa, Mt. Makiling Forest Reserve, Laguna, Philippines

Theoretical propositions about the adverse impacts of population growth to the natural systems have found grounding in many empirical-based literature since the environmental discourse became global. Neo-Malthusians predict ecological destruction when there is unrestrained population growth coupled with advancement in technology and increase in per capita affluence in a society. When industrialization in Calamba legitimized by local and national policies materialized, the Makiling Forest Reserve (MFR) became vulnerable to on-site and off-site environmental pressures. In 1990, the University of the Philippines Los Baños (UPLB) was vested exclusive jurisdiction, control, and administration over MFR and in the following years, adopted a ‘participatory’ approach to management. Chronologically following the implementation of these policies is the abandonment of agricultural clearing by the state-owned forest land near the MFR buffer zone in Barangay Puting Lupa. Results of this study show that forest land use transition occurred in MFR-Calamba characterized by first, deforestation and forest land conversion to agriculture, then to gradual forest recovery. Spatial analysis of the 1993-2002 Calamba land cover shows that forest cover increased by 18%, agricultural land use decreased by 49.9% while built-up areas expanded by as much as 79%. Albeit forest land regenerated through time, land cover changed from forest species to agroforestry specifically in Barangay Puting Lupa. While industrialization is associated with increase in population and eventual environmental degradation, this study suggests that there are other socioeconomic elements that interact compatibly with each other to arrive at a different scenario of forest regeneration. Seemingly contradicting but synonymous commitments of policies of the university and of Calamba among other socioeconomic factors have a synergistic effect that amounts to the improved forest land use cover change in the MFR buffer zone in Barangay Puting Lupa despite increase in population and pressures of industrialization.

Labor and Populist Politics in Ukraine

This paper looks at the labor movement in Ukraine by considering two types of workers’ power (as defined by Wright): structural, resulting from their position within the economic system; and associational, contingent on the ability to form collective organizations – unions, parties, workers’ councils or community organizations. Silver’s observation that the role of workers’ associational power is growing in the XX1st century and that therefore perspectives of the labor movement are conditioned on the broader political context, requires us to extend the definition of associational power also the alliances between labor and political movements. This paper discusses consequences of alliances between Ukrainian workers and various political projects since the break-up of the USSR, focusing or programs do not focus on stimulating women's critical consciousness and their capacities to articulate their interests invidually as well as collectively. It’s indicated that women's roles as economic actors are being positioned as instrumental roles, not substantive/transformative ones. The main root of this issue refers to the weakness of local government commitment and capacity which can not be separated with the national agendas on economic development. And the agendas might be based on economic assumptions (blinders) that tends to disadvantage women's conditions as well as positions. It’s has been reflected from several regions in Indonesia.

Referring to Chaferetz (1988), empowerment as structural transformation efforts – which only possible if local (also national) economy policy responsiveness to women's economic right. In term of relation between state and women, the other crucial issue is to enhance or to empower women's commitment as well as their capacities as a collective/interest group. This paper also raises women’s strategy for organizing and enhancing their economic roles at local level.

Key words: Women's economic participation, local economic empowerment, institutional or structural transformation, women's collective action.
in particular on the growing support for populist demands of nationalization of key industries and natural resources, voiced in particular by a right-wing populist party “Svoboda” as well as by the Communist party. The paper questions long-term perspectives for the labor movement if populist politics take on a right-wing flavor, and a left-wing populist alternative is lacking. Furthermore, it discusses the role that these engaged social scientists can play in evaluating labor movements alliances with various political projects and in strengthening workers’ associational power.

RC11-199.2

RYAN, LYN* (Macquarie University, Australia, lyn.ryan@mq.edu.au)

Ageing, Ageism and Discrimination

In Western society our populations are ageing, and even developing nations are showing increases in elderly populations. This is due to declining fertility, advances in medical and health care, leading to greater longevity, immigration rates not keeping up with ageing, and also the Baby Boomer generation began to turn 65 in 2011. Older age is an inevitable part of life but some people use stereotypes of older people to discriminate against them due to their biological age. People hold views about ageing people which are not consistent with their views about other people and this forms the basis of prejudice, discrimination and ageism. While respect for elderly people has been a prominent part of Asian cultures which upheld Confucian principles, respect for the elderly has not been given such a prominent place in the history of Western society or its discourse. Issues around egregious abuse, such as violence and financial abuse have been commanding the attention of most social science researchers studying the maltreatment of older persons since the late 1970s. The more subtle, everyday experiences of disrespect, which arguably is a precursor to more notorious forms of abusive and violent behaviour; or respect which, arguably, can prevent such abuse from occurring, are less researched. Therefore, respect for elders is defined and disrespect versus respect, ageism, personhood and the quality of life of elderly people are all discussed.

Society categorises older people into socially constructed age groups. It is important to recognise that while age has a biological meaning, income, work and retirement construct groups and meanings about age that may reflect negatively on older people and, therefore, lead to experiences of disrespect amongst our older population.

The Doctor-Patient Relationship and Type 2 Diabetes: What Can We Learn from a Cross-National Comparison of Three Qualitative Datasets?

Background: Evidence suggests that higher levels of patient involvement results in more beneficial care. Patient involvement can be higher in long term conditions, such as type 2 diabetes, where self-management is important. But we need to better understand what happens in the shared decision process and which factors contribute to the inherent inequalities. In this paper, we explore models of doctor patient relationship in three qualitative datasets from Germany, Spain and the UK. The data were originally collected to explore the experiences of patients with type 2 diabetes. Lay summaries are published at www.krankheitserfahrungen.de, http://www.dipex.es, www.healthtalkonline.org.

Methods: A secondary analysis of the datasets using a two strand approach. First, a thematic analysis of the individual datasets to identify models of doctor patient relationships, and examine what factors may contribute to these models. Second, a comparison of these findings to identify similarities or differences across the datasets in order to enhance our understanding of shared decision making.

Results: Early analysis suggests the importance of a trust within the doctor-patient relationship and an enduring paternalistic model in the management of diabetes. While UK patients may suggest some partnership working in the way they articulate their self-management, in practice, they do what the doctor tells them. In contrast, German participants emphasize a desire to preserve a certain level of autonomy. This was most obvious with eating and weight management, where participants reported enjoying pleasures that their GPs regarded as unhealthy. In Germany, Spain and the UK, doctors have to work with patients to make changes in their lifestyles and this can be a challenge.

Conclusions: While management recommendations of diabetes are largely standardized, patient experience and expectations may differ according to cultural and national peculiarities. Interestingly, a paternalistic model is not necessarily experienced as a contrast to self-management.
es in the number of Vietnamese in comparison with official statistic data. So in Russia according to 2002 census number of Vietnamese made 26 thousand people, however, study results suggested 100-150 thousand people. Part of Vietnamese is “veiled” by integration process.

Based on the methodology developed by the authors, assessment of extent of integration of the Vietnamese migrants in host countries was given. The technique is based on allocation of integration components of Vietnamese in host countries, namely civil, economic, ecological, social and psychological, religious, cultural integration. Research was conducted in Russia, Ukraine, the Czech Republic, Hungary and Poland by interviewing scientists, representatives of government, business, they were offered to put points from 1 to 10 to each component.

Results showed that integration proceed differently. Vietnamese are most integrated in the Czech Republic and Hungary. According to experts, total score made 50 points out of 60 possible. State policy in the Czech Republic and Hungary was directed to prepare the need for integration of Vietnamese in society through development of integration programs. In Hungary and the Czech Republic much of the Vietnamese citizens received citizenship in host countries, they became citizens. The success of economic integration is associated with high entrepreneurial activity, professional qualifications and access to the labor market of Vietnamese. Much less successful is integration of Vietnamese in Russia and Ukraine, civic, environmental, and socio-psychological component integration is low there. Evaluation of Russia is 40 points, Ukraine is 34 points.

Over the past few years, neither Russia nor Ukraine has developed mechanisms for integration of Vietnamese. Bureaucracy, absence of standard and legal base strongly complicated integration process.

Higher Education and the Labour Market: A Polish Perspective

The structural conditionality of normal sciences, including state ideologies and financial support, is essential for the structure of higher education. The system’s transformation in Poland, based on the neo-liberal ideology, involved the dependent development model not only to the economy but also to science, with its dramatic decrease of expenditures. This reinforced a negative selection of the scientific cadres, who, by the inter-generation transmission of values and norms, were unable to adopt the traditional scientific ethos. The official ideology tends to strengthen the professional qualifications and activity, traditional values and norms, and access to the labor market of Vietnamese.

The urgency to implement educational reforms is stressed by various international organizations. One of the promulgated aims of these new educational projects is bringing up global citizens.

In recent years the concept of “global citizenship” came into a broad use in European and American educational and public discourses. However, its meaning remains blurred, and its content is interpreted very broadly.

The development of education in the globalization context poses a lot of questions, being quite a challenge for scholars. The analysis of such new trends as integration processes in education, the growth of educational migration, the involvement of international organizations and NGOs, and the education policy of national states leads to referring to the seemingly established concepts of particular features of education.

The concept of education for global citizenship captures in what way this new understanding of citizenship and identity is interpreted in pedagogical discourse. Global citizenship is treated as a social engagement with the voluntary obligations undertaken, and priority is given to civil rights of the individual. It still stays unclear in what way state educational system as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.

It still stays unclear in what way state educational system as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.

Besides for many educational institutions and so called international students the engagement in “global citizen” educational programs is only a pragmatic tool to improve economic chances in the global educational and job markets.

Against the State-Centered Model of Social Policy: The Moment of Schäffle in the Sociology of Durkheim

Emile Durkheim, one of the founders of sociology, started his academic career in an interdisciplinary struggle. He refused Spencer’s self-interest based conception of society in the Division of Labour in Society, and rejected psychological approach for social studies in the Rules of the Sociological Method. But in order to acquire the institutional independence of sociology from neighbouring intellectual fields, he had to fight in another battlefront other than against economics and political science on the concept of citizenship, nation and state.

In order to reinterpret the sociology of Durkheim in a broader interdisciplinary context, focusing on the moment of Schäffle is a helpful clue. Albert Schäffle was a German Staatswissenschaftler, economist, forerunner of sociology, and staunch opponent of authoritarian socialism. Durkheim reviewed the main work of Schäffle, the Construction and Life of the Social Body in his earliest academic article, and endorsed Schäffle’s attack against state-directed socialism thereafter as in the Suicide and the preface to the second edition of the Division. The protest against the hypertrophic tendency of state bureaucracy is not a mere manifestation of political adherence of Durkheim, but a careful strategy to define sociology as a distinctive science in the light of historical and intellectual circumstances of the epoch.

That was the time Durkheim was contending for sociology when French government embarked on implementing modern social policies. By contrast to free market policy favoured in the 1880s, the turn of the century France welcomed state-led intervention measures originated from Imperial Germany under Bismarck. The concern of Durkheim over the state-centered model of social policy and his alarm for the peril of individual liberty under the authoritarian regime is a theoretical response to the ongoing transformation of the state and society and to the state-oriented social thought at the time in France.

Changing Patterns of Spending on Leisure? Case of Finland, 1998-2012
In the 2000s, the landscapes of leisure consumption have changed dramatically in the Western societies. Many traditional industries such as tourism, sports, and cultural activities continue to flourish. In addition, the new information and communication technologies (ICTs) have become widely adopted in everyday life. Access to ICTs is often considered as essential while at work, home, and even when spending free-time outdoors. As the alternatives for productive leisure activities have increased, we have also witnessed a trend of narrowing population disparities in the consumption patterns. Against this development, it is possible to argue that engagement in various leisure activities has become more versatile and less connected with individuals’ socio-demographic background. But does this assumption also apply to older consumers, people living outside urban and densely-populated areas, economically less well-off people, single parents, and the less educated population segments? Or, is it possible to argue that the expenditure patterns of the many disadvantaged population segments have changed differently from those of the better-off segments during the past decade? The paper examines temporal changes in leisure consumption by examining Finnish household expenditure patterns between 1998 and 2012. The data are derived from nationally representative set of household budget surveys (N= 17,412). Empirical analyses will concentrate on money allocation on cultural services, books and magazines, and household media and technology. In particular, structural disparities by educational level, economic background, age and life-stage, gender, and place of residence will be compared.

How Can Decision-Makers Cope with the Heterogeneity of Values in Public Innovations

In the last two decades the concept of innovation has been taken from Schum- peters logic of competition at the market to the public sector. In the private sphere the making of profit is essential, and added profit can be seen as added value. For the public sector this is much more complicated, and it has been a large debate about the concept of “public value” since the publication of Moore’s book “Creating Public Value” (1995). Values in the public sector can both be inputs (public ethos) or some sort of outcome (efficiency, improved quality etc.). But both for input and outcome there will be a heterogeneity of values. Beck Jørgensen & Bozeman (2007) are mentioning a “universe of public values”. In the invitation heterogeneity is understood as the “coexistence of different rationales”. We will argue that different set of values can be seen as different rationales. Creating new and innovative solutions in the public sector is part of the struggle for power in society. Different actors will use different parts of the “universe of values” to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about “public values”, but especially on the case-studies in our edited volume “Framing innovations in Public Sector Services” (Fuglsang, Rønning, Enquist (eds.) (Routledge Oct.2013))

RØNNING, ROLF* (Lillehammer university college, rolf.ronning@hil.no)

Innovation in Nordic Elderly Care

Innovations has for some decades now been seen as the engine for success in the competition at the market. Now the concept of innovation has made its way into public sector and even into elderly care. This paper is about the efforts to innovate elderly care in the Nordic countries.

In many European countries there is a worry about the demographic changes in the population. The declining fertility rate and numerous cohorts from the after Second World War baby boom fading out of the labor market, are a challenges both for the pension system and the economy, as well as for the caring system. The challenges of the caring system are the focus for this chapter, especially the need for labour, or caring hands. The diagnosis is that too few people have to care for too many frail and elderly. Even if the Nordic countries do not have the most challenging rates between the generations, a caring deficit is seen as a growing and upcoming problem. In 2050 20% of the population is expected to be above 70 years, rising from 10% which is the situation today.

Most attention will be paid to the Norwegian situation. Because of the fortunate economic situation in Norway, the country has probably been able to maintain a (Nordic) model with a strong public responsibility to a larger extent than their neighbors. Attention will be given to three of the main paths to innovations of the elderly care in the Nordic countries, we have labeled them privatization, use of caring technology and extended use of voluntary work.

The paper is meant to be a “state of the art” paper, summing up the experiences so far, and reflecting on possible paths into the future.

*The Changing UAE Family*

Emirati families have been changing since the advent of oil and wealth. However, the recent socio-economic shifts in the society have affected the family on many levels. What the UAE family has endured recently in term of outside and inside pressure due to globalization is probably not comparable in many parts of the world. In no other country has the proportion of foreign nationals in a society been boosted so high in such a short time as in the UAE. As a consequence, Emiratis are not even the largest national group in their own country, and have had a hard time trying to sustain a culture among a continuously growing pool of foreigners. As communities from around the world have mushroomed around national families in both the public and private spheres, UAE households have turned global within. Although one could make comparisons with families in other Gulf States, the UAE’s pioneering economic model and speed of change have had an unprecedented impact on the globalization of families.

This paper focuses particularly on women in the family (mothers and daughters) who are considered the gatekeepers of culture and social wellbeing. It looks at Emirati women and the challenges they are facing in their daily life, on them from different parts of the society and the state to perform a role becoming increasingly difficult. The paper looks into such difficulties using a combination of quantitative and qualitative data gathered from National families of Zayed University students.

*Mapping Filipinos’ Knowledge, Understanding, and Actions on Climate Change*

A recent Climate Change Vulnerability Index identified 16 out of 170 countries as extremely vulnerable to climate change; of this set, the Philippines was ranked sixth (Maplecroft 2010). Despite advancements in technical strategies to adapt to the impact of a changing global climate, understanding the complex socio-behavioral dimensions of climate change remains a challenge.

Using the data from a survey module on climate change commissioned by the World Bank and implemented by the Social Weather Stations (First Quarter 2013 National Survey), the study aims to know: (1) What factors shape Filipinos’ awareness and knowledge on climate change? (2) In a more qualitative sense, how do they conceptualize or understand the effects of this phenomenon? (3) What factors affect citizens’ participation in efforts to address climate change? Do awareness and knowledge actually translate into tangible efforts?

Correlation analyses reveal significant relationships (moderate to strong) between awareness and knowledge on climate change and these variables: locale (higher among urban dwellers), socio-economic class (higher among upper class and educational attainment (higher among those with greater education). Climate change resonates to average Filipinos as a public health issue. When asked to identify the effects of climate change, half of them cited “increased incidence of illnesses”—significantly greater compared to other responses such as degradation of nature resources, ozone layer depletion, and rise in sea level. Participation in efforts to mitigate climate change is higher amongst those who are more aware and knowledgeable of the issue. There exists very weak relationship between awareness on climate change and participation. However, there is moderate evidence to support that those with more extensive knowledge on the impact of climate change also have greater tendencies to participate in actions on climate change.

*Social Inequality, Power Legitimacy, and the Future of Democracy in the MENA Countries*

In spite of their relatively similar religious, cultural and linguistic foundations, the MENA (Middle East and North Africa) countries consist of a diverse set of particularities in terms of their geography, socio-economic structures, human capital, and political institutions. As far as their governments and governance are concerned, they have traditionally been authoritarian and autocratic regimes. Such governments have ruled autocratically and suppressed pluralism, limiting or totally denying fundamental societal, economic, and political
rights. This state of affairs has created widespread social disparities and injusti-
tice, a freedom deficit, and stagnation in the area of democratic change. In other
words, a policy of social inequality that has come to be taken for granted. The
ruling elites have been able to hold on to power ruthlessly by means of various
manoeuvres. These have ranged from violent repression and the superficial prac-
tice of democratic simulacra to corruption and "enlightened authoritarianism".
Global democratic change, and the visibility it has gained through the new media,
has given people, especially the rising middle classes, the impetus to give voice to
their grievances. In consequence, they have started expressing their disenchant-
ment with the political status quo, in its place, demanding democracy and social
equality. This can be seen in the emergence in 2011 of social movements in nu-
merous MENA countries, otherwise known as the "Arab Spring". This paper aims at
analyzing some of the main patterns of inequality that prevail in the MENA
region and also their socio-cultural and economic origins. In addition, the paper
will aim at assessing how and why demanding the process of democratiza-
tion may be in the context of the social and cultural complexity of the existing
structures and their present legitimacy in such societies.

SABRE, CLOTHILDE* (Hokkaido University, csabre@hotmail.fr)

From Matsuri to Anime Convention: The Experience of Festivals and Contents Tourism in Japan

For foreign tourists, festivals are mostly associated to cultural events that pres-
ent a colorful and picturesque image of a different and exotic culture. This work is
then an attempt to question new forms of tourism, in order to draw a parallel
between festivals and other types of gatherings that attract foreign visitors. This
study is lying on the idea that tourism is made significant by a specific imaginary
of the visited place. The travelers choose and comprehend their destination and
its culture through the picture they have before and during the trip, a picture elaborated
through experiences. When enjoying festivals in a foreign country, tourists can see a concretization of their imaginary about the culture they discov-
er, and sometimes, participating to the event, they feel immersed in that exotic
universe.
The aim of this presentation is to show that this process is also at work in the
case of contents tourism, when the travelers experience media pilgrimage (i.e visiting places with significance in media narratives, Couldry 2005), guided by a
fantasy built on pop culture and media references. Taking the case of Japan, this
comparative study intends to show the similarity between the experiences of
traditional festivals and pop culture events. In addition to data collected among
French tourists in Tokyo, fieldwork will be conduct during specific events in 2014.
Then, some traditional matsuri will be compared to events like the Comic market
in Tokyo or the Toyako Festa in Toyako (Hokkaido). The Sapporo snow festival,
that mixes playful aspects of traditional festivals and pop cultural influences, will
also be investigated. So, the analysis will question the structural similarity be-
tween these tourist experiences, in order to examine what extent contents tourism
renewes cultural tourism

SABRE, CLOTHILDE* (Hokkaido University, csabre@hotmail.fr)

Nature and (pop) Culture Tourism in Hokkaido

For more than a decade now, the worldwide diffusion of Japanese pop culture has
been analyzed as a soft power phenomenon, questioning the consequences of
this success on the international image of Japan. Many studies have examine
whether or not Japan is really gaining positive influence than contents exports,
while the Japanese officials acknowledged the idea of coolness associated to the
country, consequently launching the "cool Japan" campaign. In the field of tourism,
many initiatives have been taken to enhance contents tourism. Foreign travelers
can now find information and activities about manga, animation, video games and
so on, and some areas have been renewed and rebuilt to attract these tourists,
Akibahara (Tokyo) being the main example. The idea of pilgrimage has been used
to characterize the trip to these “sacred places”, as the Japanese national Tour-
ism Office delivers information about what is called “seichi jinrei” or “pilgrimage
to sacred places” (http://www.mto.go.jp/ja/en/depth/cultural/pilgrimage/index.html;
http://tokumomedical/kpjvisitjapan). In that context, Hokkaido is a specific case, considering the traditional tourist activities in the island. The place is famous for its landscape and its countryside, with tourism linked to nature and outdoor sports (hike, ski). Nevertheless, some locations are considered as tourists for other reasons, linked to pop cul-
ture. For example, the success of two movies, Love letter and If you are the one,
attracted Korean and Chinese tourists in Hokkaido, with many visitors who want
to discover the places where the movies were shot. Then, the aim of this presen-
tation is to question the possible shift from nature tourism to pop culture tourism
in Hokkaido, through the comparative example of Japanese, Asian and Western
tourists. The notion of soft power is also going to be examined as a means to
influence image and meaning of sites.

ny is estimated (Aftenakis, Maior 2010). Additionally, the problem of fluctuation in the geriatric care sector causes a competition about qualified personnel among care-providing organizations. Other sectors already use the idea of organizational commitment to keep their employees. The basic concept of commitment (Allen, Meyer 1990) distinguishes three components: affective, continuance and normative commitment. These components are not mutually exclusive but rather coexist. So far no specific study has researched the concept of commitment considering the specifics of geriatric care. This paper is based on preliminary results from a qualitative research project looking at this topic from an inner-organizational perspective. As geriatric care in Germany is provided by non-profit organizations as well as for-profit organizations both types will be looked at.

Results from interviews with elderly-home managers give an overview of problems about keeping qualified employees. The range of instruments, which are already used by organizations to strengthen organizational commitment and problems in everyday work, will be illustrated. In addition determining factors, which restrict human resource management in the geriatric sector, are identified. Besides general factors also organization-linked factors are included.

Furthermore, results from problem-centered interviews with elderly care nurses provide reasons and conditions for why they work for their current organization. These results will be set into context with the Allen/Meyers organizational commitment model to specify the three commitment components in the context of geriatric care.

Finally a guideline based on the research results is presented. It will help organizations in the geriatric care sector to strengthen the organizational commitment.

Dioxin Risk Controversy in Japan

In this risk society, we are confronted to many kinds of environmental risk and involved risk controversy. Whether the risk is small or large, we have right to choose that risk or not. But we sociologist should try to grasp the quantitative size of the risk to analysis the discussions of scientists or experts in the public sphere. So I try to propose the sociological analytical method of symmetrical scientific controversy through the case study. The case I focused in this paper is Dioxin risk controversy in Japan.

Dioxin had caused a great deal of public concern in the 1990s. It was exhausted from industrial waste incinerators and municipal waste incinerators all around Japan. People around the incinerators started anti-pollution movements. And some of dioxin researches in Japan helped them and measured the exhaust of dioxins in environment. At last those movements resulted in the enactment of anti-dioxins law. However, risk studies in Japan consisted that dioxin’s risk is not so large, according to their own risk comparative studies.

On the context of environmental movement, this kind of risk studies may be often criticized; “they are political.” But in many cases it is not clear how it is political and on what point it is political. In this study, I analyzed the scientific paper of risk studies and compared those of dioxin researchers. As a result, several assumptions were found in the “scientific” paper of risk studies. Especially, average values they used are different from that of dioxin researchers. We can say this is political. And we have to pay attention to the point that this is not derive from the risk study, but it is from the attitudes of risk studies. This distinction is important in the debate in public sphere. Symmetrical analysis can make this distinction possible.

Abstracts are organized by first presenting author's last name.
The Impact of Sentencing Decisions about Similar Cases and Others’ Opinion on Sentencing Decision

In 2009, Lay judge system started in Japan. Under this system, lay judges and professional judges determine guilty of crimes and sentences to the convicted criminals. After the determination of introduction of this system, some scholar have explored how that decision making is done by psychological experiments –mock trial study. However, the research which employed this method focused on private lay judges’ decision, not outcomes after deliberation. It is due to the difficulty of conducting mock trial study with deliberation.

Of course, the results of this research are useful when thinking about modification of trial procedure. However, the determination of sentences to the convicted defendant is done privately, but is done through deliberation by lay judges and professional judges. In this paper, the impact of information which is given to lay judges is examined. In trials and sentencing deliberation, lay judges look graphs about past similar cases. This is basically shown in the form of graph of distribution, and it has powerful effect on lay judges’ sentencing decision. In a psychological experiment, the impact of that graph and participants’ opinion about how useful that graph is and how respectfully we should treat that graph are explored. In addition, there might be conflicting opinion with regard to sentencing outcomes by other lay judges. In the same experiment, reactions to those different opinions are also examined. This psychological experiment did not include sentencing deliberation itself, but due to that experiment, some important aspects about sentencing deliberation can be explored.

In this paper, the results of the psychological experiment are shown. Then, some practical implication about trial procedure is discussed based on the results. Especially, to incorporate general public opinion into judicial system is one of the goals of Lay Judge System in Japan. Therefore, the results are examined from this perspective.

The Demographic Transition and Subsequent Transitions: The Case of the United States

The United States has experienced major demographic shifts throughout its history. Like many other developed countries around the world, the traditional demographic transition associated with declining mortality and declining fertility has spawned subsequent demographic transitions. These transformations have included the urban transition, the marriage transition, the household transition, the aging transition, and the race/ethnic transition. Of these transitions, the two most prominent at the beginning of the 21st century are the latter two—the aging transition and the race/ethnic transition. Indeed, population projections suggest that the Latino population will more than double from 50.5 million in 2010 to 111.7 million in 2050 compared to a 5 percent decline in the white population from 196.8 million to 186.3 million during this period. These major demographic transitions will have major impacts on demographic, social, and economic trends in the coming decades and in many ways is likely to lead to varying experiences between the United States and those of other developed countries. The implications of these trends in the future of the United States will be discussed.

The End(s) of Diversity: the Struggle Between Nationalism and the Hyperdiverse City

In the framework of the FP7-project Divercities, we investigate how urban policies deal with hyperdiversity in the city. As the largest city of the Flemish region, Antwerp is an interesting case because of the electoral success of Flemish nationalist parties on the one hand and the diversity of its population on the other hand. While extreme right-wing Flemish nationalism has long been relegated to the opposition, a moderate Flemish nationalist party recently came to power in Antwerp. Based on a critical discourse analysis of policy documents and interviews with policymakers, we compare past and present integration policies regarding immigrants in Antwerp. This comparison illustrates how urban integration policies have shifted away from multicultural to assimilationist policies. Serving nation-building ideals rather than the pragmatic inclusion of immigrants in the city, the nationalism assimilation policies seem to be ill-equipped to deal with the increasing hyperdiversity in the contemporary Western-European city.

Context specificity of stratifying factors is often alluded, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu’s ideas on cultural consumption and leisure practices were lucky in this respect. Due to their centrality for the late XX century sociology of culture and stratification, and general framing that they have supplied French social science, their applicability has been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low leisure activities find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu’s concept to the Russian context. We Bourdieu’s general aspect of this notion, which to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste. Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu’s work, but in largely the same vein, produce results better fitting with his concept within this context. As Bourdieu’s general aspect of this notion, which to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

The Academic Empires: The World-Society Argument and Colonial Legacies in the International Student Migration System

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This paper tests the world-society theory by applying it to data on higher education students’ migrations between countries. The expectation derived from WS theory is that (a) the migration flows will demonstrate rapid diminishing or already minimal levels of clustering (b) that particularistic cultural-institutional variables (e.g. common language, similar institutional structures caused by belonging to common political units) will have minimal or diminishing significance in predicting size of student flows. Volume of international student migration between pairs of countries (UNESCO statistics) in 1998-2012 is used to reconstruct the flows system. Network measures were calculated for each of the years to observe the dynamics of student migration system. For evaluating significance of culturalinstitutional variables, negative binomial regression with historical experience of belonging to common political units was used for probability of massive institutional import since wide literature on international migrations argues that institutional (especially educational system) and transport infrastructures, which were established to connect imperial centre and the colonies in order to get steady flow of raw materials, reproduces imperial language use as well as certain type of dispositions and identities. All this evidence gives only limited

Empirical Measurement of Integration & Cohesion

The Daasanach in the border regions of Ethiopia, Kenya, and the South Sudan have fought with neighboring pastoral groups, viewed as "enemies", for more than a half-century. The Daasanach claim that their primary motive for going to war is the demarcation of masculinity, allowing men to be recognized as "brave" by community members. Various cultural mechanisms praise the "brave man" who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the youth are drawn to the destructive power of the automatic rifle, and their behaviour is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to "renounce war". Two main types of experiences contributed to such decisions. First was the bodily (including "physical" and "mental") pain of war, such as being gored by a bull or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanach during the course of a war. In wartime, the unity of "we Daasanetch" could break down under the violence. Many persons who "renounce wars" said, "I became cowardly" as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.

SAHA, SUHIRITA* ( Presidency University, suhiritasaha@gmail.com)

5 Pm-10 Pm: Interrogating Domestic Inequality

William J. Goode proposed rightly that world revolution toward industrialization and urbanization has led to the change in family pattern from extended to nuclear families. Yet, this uncertainty can be also viewed as flexibility which is typical or even beneficial in the life of many young people. Talcott Parsons emphasized that in the absence of extended kinship ties, nuclear family has become important in the respect that it meets two major societal needs: socialization of children and satisfaction of emotional needs of family members namely husband, wife and dependent children. Modern nuclear families and their members i.e. husband and wife are not handicapped by multitude of obligations often conflicting to extended relatives and can take full advantage of occupational opportunities. Demands of modern industrial life and more recently globalization have brought about many changes in the way in which traditional gendered roles and division of labour was constructed. Women today are empowered, independent, working in the public space along with the man. But what we need to interrogate at this juncture is how far the division of labour and responsibilities between spouses inside family space become gendered?

All young people had ambitions, but that how much, and for what attainments, needed to be explained. Only recently have researchers begun to pay more attention to the significance of youth's uncertainty about what they want to do later in life. Some researchers have referred to this as aimlessness or role exploration. This paper is about how people go about keeping cool in Metro Manila.

SAHAKIAN, MARLYNE* (University of Lausanne, marlyne.sahakian@unil.ch)

Changing Food Consumption Practices Among the Emerging Middle Classes in Metro Manila

This paper will present preliminary research results from an ongoing research project that considers the dynamics of food consumption among the middle class-es in Bangalore and Metro Manila, including consumption patterns, practices and policies. Asia is often seen as the center of gravity for the "new consumer" phenomenon, where a rise in affluence can translate to consumers who enjoy better diets, private transport, throwaway products, and fashionable versus functional clothing (Myers and Kent 2004). The focus of this paper is on Metro Manila and the emerging middle classes, who may not necessarily be experiencing "better" diets, but where there does seem to be a trend towards 'organic' and 'local' food consumption practices among some people. This paper wishes to highlight the emergence of organic and/or local food and composting as entry topics for environmental concern, as well as the influence of globalization on environmental initiatives.

One main finding is that changes in food consumption practices are not only related to a rise in affluence, but to changes in other practices, such as changing the location of your home, joining a new workplace, or the employment of a domestic worker. Specifically, a change towards organic food consumption seems to be motivated by different set of reasons, not directly related to environmental concerns. Our research project and who have decided to adopt this kind of diet claim to do so because of health reasons, proximity to certain markets, as well as the influence of tourists abroad. Looking upstream at organic farming and further downstream at composting, people engaged in these new practices had all been 'elsewhere' and brought new ways of doing back with them, upon returning to the Philippines. The significance of demonstration projects towards more 'sustainable' practices will be discussed.

Becoming Cowardly: Automatic Rifles and the Change of Bodily Experiences in East African Battlefield

The Daasanach in the border regions of Ethiopia, Kenya, and the South Sudan have fought with neighboring pastoral groups, viewed as "enemies", for more than a half-century. The Daasanach claim that their primary motive for going to war is the demarcation of masculinity, allowing men to be recognized as "brave" by community members. Various cultural mechanisms praise the "brave man" who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the youth are drawn to the destructive power of the automatic rifle, and their behaviour is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to "renounce war". Two main types of experiences contributed to such decisions. First was the bodily (including "physical" and "mental") pain of war, such as being gored by a bull or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanach during the course of a war. In wartime, the unity of "we Daasanetch" could break down under the violence. Many persons who "renounce wars" said, "I became cowardly" as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.
ing body of research in ‘sustainable consumption’, tackling the related themes of air-conditioning consumption patterns, practices and policies, as well as the potential for change. Research was conducted among three socio-economic groups: households based in low-income housing, the growing middle classes in new housing developments, and affluent households based in gated communities.

As a backdrop, the paper provides information on the environmental impact of household electricity consumption, in relation to economic and population growth. The history of cooling practices and air-conditioner manufacturing is also briefly discussed. The central theme of the paper is how current practices are tied up with a catalogue of innovation, from nocturnal living, formal Voluntary Risk Taking and Individual Emancipation

- dressing fashionably. The material dimension of air-conditioning is discussed, specifically in relation to ‘west is best’ housing trends in Metro Manila: certain housing styles may be lacking in the need for artificially cooled air for years to come.

General trends in the region will no doubt contribute to an increase in air-conditioning consumption, yet current consumption patterns are not homogeneous: how people go about keeping cool in Metro Manila varies greatly. This paper considers what the future might hold for keeping cool in one of the hottest regions of the world – both in terms of economic development and temperature levels. The conclusion provides insights, which may be relevant to other mega-cities in the region.

SAHED, IMAINE SAHED* (EHESS/Cadis, imaine-s@hotmail.fr)

Voluntary Risk Taking and Individual Emancipation

Background: In France, the important proportion of teenagers who develop a repeated consumption of cannabis, tobacco or alcohol consumption worries the security and public health authorities. The consumption practices among young people are recognized by both social and scientific discourse as a risk behavior. Many scientific researches try to explain why they develop a health, social and penal risks behaviors. However, very little one has analyzed the way that experience of consumption is lived by youth. How do teenagers perceive their consumption behavior, what meanings that they attach to their behavior?

Methods: In order to apprehend the subjective experience of drugs consumption, we have led a qualitative investigation. We carried out 42 biographic interviews with twenty-one girls and twenty-one boys between seventeen and twenty years old. They live in Ile-de-France. These interviews have permitted us to apprehend some of their concerns about their consumption experience and analyze the dynamic by which the have developed the substances use.

Results: The public health categorization on consumption by youth does not tally with what happen in reality. The perception of the teenagers on their consumption moves away from the epidemiologic categorization. The drugs use means to the participants festivitities or conviviality. Moreover, teenagers, who are currently looking for an autonomous identity, develop consumption, not to oppose to their parents or social and penal norms, limits. We observe that if the youth people develop the consumption of cannabis, alcohol and tabaco it is especially to build a personal and individual identity. It is in a context of individual emancipation (Kaufman, 2004) that we consider voluntary risk taking is part of individualization process.

Conclusion: There is a contrast between the collective and scientific perception and perception of teenagers on drugs consumption. Voluntary risk taking is a subjective and positive experience which responds to his quest for identity

SAHOO, DR. UMESH* (school of social sciences, S.R.T.M University,Nanded, ucsahoo11@gmail.com)

CIVIL Society and Development Perspectives

Voluntary action is an age old phenomenon in the Indian social landscape. In the past, say before colonial era it was embedded with cultural view, traditional values, social ethos which commonly atomized as humanistic, idealistic commonly act as bridging the gap of unjust social system. But in recent years, especially with the implementation of liberalisation, globalisation and privatisation, the formal Voluntary Organisation (VO) is emerging as key players in the plan development process initiated by the government. Currently, they have acquired as ‘third sector’ for innovative approach, flexible structure, ability to reach the unreach, dedicated, committed, capacity to mobilise the local initiatives. In light of such scenario, a study was conducted to comprehend voluntary organisation’s application of own ideology, autonomy and accountability in implementation of various development programs under domain of child development, women empowerment and natural resource management supported by national and international aid agencies in the backward Marathwada region of Maharashtra State, India. The overall findings states that the development programmes are not demand driven rather supply driven through voluntary organisation which mostly eluded own independent vision, values, autonomy in planning and implementation; commonly adhere to financier agenda, policy prescription and governance. Similarly, the experience, ideas, views, knowledge, of target groups and specific needs of the region is hardly considered while operating the programs. Such one side approach, in fact, lead to over look inherent raising inequality, regional disparity, abject poverty, rampant casteism, growing exploitation, gender inequality, etc of the region. The VO as a ‘catalytic’ agency is largely lost in addressing these vital social issues and follows sectoral approach which do not encompass the entire fabric of human development system within which they live and survive, thus, fall short of bringing justice and ending unjust social system.

Moroccan Emigrants, Ethnic Minorities and Development in Morocco: From Marginalization to Driving Force of Social Change

This paper explores the relation between emigration and empowerment of Moroccan indigenous groups from the regions of Souss and Rif. It is based on semi-structured interviews conducted between September 2012 and January 2013 with six migrant community leaders engaged in transnational activities between France and Morocco, participant observation within a French-Moroccan NGO, as well as semi-structured interviews with three government officials and three migration scholars in Morocco. Regions inhabited by indigenous minorities, the Amazigh, in the North (Rif) and in the South (Souss) of Morocco, were essential sources of emigration in the 1960s and 1970s. These regions were particularly suspected of political unrest and large-scale emigration offered a safety valve as men left the country in significant numbers and began to send remittances back home (Lacroix, 2005). A few decades later, the engagement of diaspora-led NGOs and diaspora activists, in a role in the reconfiguration of power relationships in the Moroccan political and institutional landscape. As many Moroccans emigrated from the most economically disadvantaged and politically marginalized regions, their engagement in development initiatives has called into question existing policies and role of the state. This paper makes the point that Moroccan communities abroad have undergone a process of political empowerment, from the marginalisation that characterized indigenous minorities in Morocco to the activism of NGOs in the diaspora. Without necessarily building upon ‘ethnicity’, but simply by supporting their regions of origin, these emigrants brought about social and economic change to their communities and regions. It is therefore argued that diaspora activism needs to be taken into account in the analysis of democratisation processes in Morocco. Research findings are presented in the broader framework of migration and transnationalism studies, and more specifically draw on earlier contributions on the Moroccan diaspora (Belguendouz, 2006; Iskander, 2010; de Haas, 2006; Daou, 1997, 2011; Khachani, 2008).

SAHRAOUI, NINA* (London Metropolitan University, n.sahraoui@londonmet.ac.uk)

No Hours Guaranteed, No Pay Secured, No Employment Rights: The Social Implications of the Rise of Zero-Hours Contracts for Black, Asian and Minority Ethnic Women in the UK Labour Market

This paper addresses the social implications of an increasing use of Zero Hours Contracts (ZHCs) in the UK, and its specific impacts on Black, Asian and Minority Ethnic (BAME) women. Women on ZHCs have no set number of hours and therefore their income is not secured; furthermore they often have no sick and no holiday pay. The nature of this contract takes away rights related to dismissal as employers can simply reduce the number of hours to zero but still keep workers ‘on call’. In summer 2013, the use of ZHCs in the UK attracted media’s attention after the Chartered Institute of Personnel and Development estimated that 1 million workers were concerned. A sharp rise in the implementation of this type of contract was observed in recent years, especially in the care sector in the context of the privatisation of public services and the commodification of care.

The paper explores working conditions under ZHCs in the care sector and aims at shedding light on how precariousness and precarity affect in particular BAME women. The analysis also draws on earlier studies on vulnerable and precarious work (TUC, 2008; European Foundation, 2010; McKay et al., 2012), ethnic penalties (Heath and Cheung, 2007; Raymond and Modood, 2007), as well as care regimes and gendered work (Pfau-Effinger and Rostgaard, 2011; Dahl et al., 2011; Si cassi, 2013; Pfau-Effinger and Rostgaard, 2011). The existence of BAME women in precarious work is informed by historical structural causes, as evidenced by responses to the 1960s and 1970s, as well as care regimes and gendered work (Pfau-Effinger and Rostgaard, 2011; Dahl et al., 2011; Si cassi, 2013; Pfau-Effinger and Rostgaard, 2011).

Development Induced Protests in Contemporary India: Response from the State and Civil Society

The issue of forced human mobility has been receiving much attention from the government, policy makers, civil society organizations, activists and academia in contemporary India. Social scientists interpret forced human mobility as involuntary migration and internal displacement. The desire to take control over a certain territory and its resources becomes a cause of conflict which forces its residents to leave their current homes. The most visible are displacements associated with conflict over resources or antagonisms based on ethnic background. In the case of development-induced displacement or conservation-induced displacement, territory becomes an arena of specific conflicts between the interests of the public or private sector and the needs of people displaced or affected by particular development decisions. Development-caused displacement is often associated with conflict over resources which have led to landlessness and consequent problems.

The paper attempts to analyze the contemporary Indian society and development-induced displacement from a class-gender perspective. The lower one on that ladder, the greater the negative impact of changes introduced in their lives without their consent. The marginalised communities especially Dalits and tribals feel it more than the others do and women among them are the worst affected. They are deprived of the resources that were basic to their survival and are denied access to education, health services and nutrition. It forces them to deny their children right to childhood and to a decent adulthood. Women are deprived of the freedom they had. Development cannot be real till such failures are remedied and its benefits reach those who pay its price.

Democratization of Art Production and Voicing Subversive Vision of the World

Tunisian youths are experiencing new form and styles of art production. This is especially true for rap music ans graffiti. Facebook and you tube networks are the predelected means of diffusing the products. One can see in this a wave of democratization of the production of art which sappers the old rules of ranking popular and mass arts. In the other hand, the content of these products are more and subversive especially after a massive youth participation in the revolution which did not keep a real change. This widespread disappointment enhanced practices of anger and refusing. A subversive imaginaire is more and more inspiring the youth vision of the worl. Authorities are facing these new manifestations of the youth rebellion with police controle of the scences of shows, trials... Is this a new style of telling the crisis ? Why does the social narration of inequalities take this form?

Spousal Violence Among Rural Women: A Sociological Study in North-East India

Spousal violence is a grave challenge to a happy marital life. When proclivity of violence takes place in dyad relationship, it crushes the bond of family. Therefore, spousal violence has been considered as one of the most serious social problems throughout the world. Hence, this issue has a sociological significance. The theoretical arguments regarding spousal violence can be classified into different categories. But in this study specific focus has been laid upon wife-battering only. This paper seeks to know the nature of violence and to find out the causes and consequences of spousal violence in rural areas of North-East India. Apart from these two objectives, awareness and knowledge of the victims towards legislatice measures to save them from spousal violence have also been investigated with proper method. The field of the study concentrates around a village namely Gooskata in North-East India. Keeping in view the objectives of the study, basic information about spousal violence was gathered from 100 married women out of 208 households of Gooskata village. The data were collected purposively and in this context accidental sampling procedure was followed. The findings of this study have revealed that rural women of North-East India have been suffering spousal violence. The relationship in between the husband and wife became more crucial and complex in rural areas, but it is also true that most of the violence have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.

Leisure in Spiritualism: Alien to Mole-Folk

The present paper intends to make a comparison between the male and female members of the Marwari community in terms of their participation in socio-religious gatherings. Marwaris are known to have two religious sects: the first comprises idol-worshippers, like the Agawals, Maheshwars and Oswals, and the second, the non-idol-worshippers, like the Jains. Active involvement in religious gatherings is a commonplace characteristic of the Jains and this particular custom is seen improving social relations both within and outside the community.

The role of Marwari Jain women is noteworthy in this context. For most of the time they are found tied to their apron with little or no association outside the threshold. Obtuseness of husbands also adds to their misery. In such circumstances, religious organizations, mostly named ‘GOSTIS’ prove beneficial in venting their shriveled up emotions to other female peers and building ties with them. These women, irrespective of any predisposition, regularly gather in such meets, where through prayers and incantations (precisely, chanting of ‘Samayak’) some remarkably pleasant time is spent. Often, such assemblages are followed by refreshment at a member’s place, where children of the member families also participate. Inter-generational ties are thus strengthened with such initiatives taken predominantly by these women.

Men, however, remain aloof from such settings and only partake when their ‘Guruj’ visits at any juncture. Marwari women thus, enjoy an upper hand in all
cases relating to spiritualism, and enjoy this authoritative position as it gives them the opportunity to spend their leisure in a healthy manner. A considerable demarcation thus separates the Marwari men and women in connection to their notion of leisure in spiritualism and this is what this paper intends to throw light upon. A detailed survey-work has been undertaken with some in-depth interviews to represent this field as accurately as possible.

SAITO, HIRO* (University of Hawaii at Manoa, hsaio@wcfia.harvard.edu) Two Visions of Cosmopolitics

This paper explores how Ulrich Beck's world risk society theory (WRST) and Bruno Latour's actor-network theory (ANT) can be combined to advance theory of cosmopolitics. On the one hand, WRST is good at illuminating how relevant political actors interact with each other to deal with global risks while negotiating the two logics of politics, cosmopolitanism and nationalism. On the other hand, ANT is good at showing how scientists participate in the construction of global risks and helps to elaborate how science and politics are intertwined in cosmopolitics. By combining the strengths of WRST and ANT, it becomes possible to examine simultaneously the tension between the two logics of politics and the co-constitution of science and politics, both of which, I argue, are crucial for theorization of cosmopolitics. The proposed synthesis of WRST and ANT also forces sociologists to critically reflect on their role in cosmopolitics and envision a new form of critical theory.

SAITO, MAYUKO* (Japan Women's University, mayu0415@gmail.com) Nation Consciousness and "Multiracialism" of the Singaporeans: Focusing on the Concept of "Racial Difference" and Their Interactions

Singapore is well-known as a 'multi-racial' society, but then, how they form their identity as Singaporean? Considering this problem, 'multiracialism' becomes an important concept in making 'Singaporeans'. However, its purpose is to make 'racial differences' obvious and emphasized. Therefore, how do people create Singaporean consciousness in these kind of society?

The aim of this research is to study this problem by using free talking interview and observation data carried out by the speaker. We can say that the government of Singapore reinforces the 'races' in order to make differences among 'races' highly visible by emphasizing the differences among the 'races'. In Singapore, differences among 'races' are visible even though people from different 'races' interact with each other daily. Moreover, a sense of community or even of being a 'Singaporean' begins to grow and maintains; at the same time, differences among 'races' are maintained.

SAJA, SRINIVAS* (BITS PILANI Hyderabad Campus, srinivassaja@hyderabad.bits-pilani.ac.in) Rainfall Variability, Coping Strategies and Livelihoods: Case Study from Godavari Basin, India

Natural resource-dependent rural households are likely to ensure a disproportionate burden of the adverse impacts of climate change -- droughts, famines, floods, variability in rainfall, storms, coastal inundation, ecosystem degradation, heat waves, fires, epidemics, and even conflicts. In some parts of the world, these effects may already be in play with potentially disastrous consequences for the poor. Reliance on subsistence agriculture means the impact of stresses and shocks (such as droughts or floods) are felt keenly by rural poor people, who depend directly on food system outcomes for their survival, with profound implications for the security of their livelihoods and welfare.

Variability in rainfall had been plaguing the farmers of Andhra Pradesh during the recent past resulting in crop failure and indebtedness. It would be important to find out the coping mechanisms that are being developed by the farmers to deal with variability in rainfall and the support being provided by the government. In some parts of the state, farmers are opting for cultivation of commercial crops instead of food crops as they are finding better returns from these new types of crops which could lead to issues like food security and loss of livelihood for certain communities.

This paper focuses on identifying livelihood adaptation strategies of cultivators in Nizamsgar project, where farmers developed new water sharing mechanisms and brought about changes in farm practices to deal with rainfall variability.
Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consists of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their workplace, upon the recognition of birth experience. Our results indicate high housework frequency of the husband decreased their first birth hesitation. On the other hand, positive recognition toward birth experience is influenced by the support in the workplace. Smooth communication with both family and workplace members is a possible solution. These findings advance our understanding of how Japanese companies can take specific measures to improve low fertility.

The Effects of Using ICT on Work-Family Life: An Empirical Study Based on the Work-Family Border Theory

One of the features of ICT use is greater alleviation of time and location restraints in communications. Although positive effects of ICT for improving work-family life have been reported, much of the ICT literature stresses negative effects on work-family life through increased extra work. Sakamoto and Spinks (2011) found that a higher degree of using ICT tools directly related to higher work-family conflict of Japanese workers. This study explores the effective mediating factors that can reduce the negative impact of ICT use, applying work-family border theory to measure the concepts and propose hypotheses.

Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their workplace, upon the recognition of birth experience. Our results indicate high housework frequency of the husband decreased their first birth hesitation. On the other hand, positive recognition toward birth experience is influenced by the support in the workplace. Smooth communication with both family and workplace members is a possible solution. These findings advance our understanding of how Japanese companies can take specific measures to improve low fertility.

Work and Private Life of University Professors in Japan and Positive Action Taken By Japanese Universities

This presentation will examine the work and private life situations of female and male university professors in Japan, and offers some examples of positive or affirmative action taken by Japanese universities and discuss its effectiveness.

In Japan, the ratio of female researchers is low, as is the case of other countries. In 2011, just 13.6% of university professors (full professor, associate professor, lecturer, assistant professor) were female. From around 2006, the Japanese government started a positive action policy to increase the ratio of women. The government grants subsidies to offer about 10 universities each year for three years. The universities offer support centers for women, gender equal office, childcare centers and so on.

The presenter has worked in one of the gender equal offices as a staff member. My observation there and a questionnaire research for university professors are the main data source of the presentation. First, the presenter will discuss their work and private life situations. Many researchers have shown that male productivity tends to be higher than that of females. However, the results show gender does not differ in scientific productivity when we control other variables. Next, they have specific marriage patterns. For example, many female professors tend to be single or have partners who are professors. Many couples live separately. However, women tend to shoulder domestic work and child rearing, as is the case with other occupations.

Many universities have set the goals of numbers or ratio of women and introduced many types of positive action. The presenter will show examples of them and discuss effective ways to support both sex and foster gender equality in universities.

Renewable Energy: A Study of Oyankuswade Wind Park, India

Man has been using the wind for sailing ships, for pumping water and for supplying electrical power for a very long time. The increasing concern for environment and the high price of oil have made generation of electricity from the wind a realistic alternative. The question today is whether the costs and other disadvantages of oil and nuclear power have reached the point where wind generators developed by modern technology can be considered to be competitive.

The wind power in India began in 1990 and has significantly increased in last few years. India has installed high capacity wind jammers to exploit wind and converts it as wind energy for its socio-economic inclusive development programme. As on 31 January 2013 the installed capacity of wind power in India was 19564.95 mw.

Maharashtra state has the second position in wind energy in India. The first wind power project in the state was installed at Jamsande in Sindhuv district in 1986. Vankuswade Wind Park is located on a high mountain plateau at 1,150 m. above the Koyana reservoir near Satara which is Asia’s biggest wind power project. There are some issues like land acquiring and local perceptions. The attempt has been made to explore the situation which will help to solve the issues of conflict in future. The paper presents the overall situation of Vankuswade Wind Park, its need as well as ground level perceptions in Satara district of Maharashtra, India

Role of Dalit Mahila Vikas Mandal Against Femalefetiches in Maharashtra, India

Strong preference for sons over daughters exists in the Asian countries and Indian subcontinent. The female fetishes over the last four-five decades have distorted sex ratios at birth in several Asian countries in general and in India particularly. Foetal sex determination clinics have been established all over India in the last two decades. There are studies on the outcome of an intensive abuse of pre-natal diagnostic techniques for sex selection in India. Parents tend to be calculative in choosing the sex of the next child and the decision is based on the birth order, sex sequence of previous children and number of sons. The misuse of medical technology in India is resulting in reinforcement of patriarchal values as professional medical organizations seem to be indifferent to ethical misconduct.

Medical researchers pitted against the medical community and profession since then the contribution of sex determination tests (SDT) to the rising sex ratio has been vigorously debated. While urban feminists demanded legislation against SDT, some social scientists felt that SDT had little impact on sex ratio.

The paper presents the assertive action by ‘Dalit Mahila Vikas Mandal’, a social organization which was established in 1990 in Maharashtra. Female fetishes were done by medical fraternity have been exposed by this organization through sting operations carried out in Maharashtra and Gujarat state. The shocking facts found during the field work carried out by the author are also presented in the paper.

SAKATS, MIKE* (University Campus Suffolk, m.saks@ucsc.ac.uk)

Professional Turf Battles Vs. Inter-Professional Collaboration: Their Impact on Inequalities in Health and Social Care in the UK

From a neo-Weberian perspective, it is argued that professions have long competed with each other in turf battles to enhance their respective positions in terms of income, status and power from the viewpoint of their professional self-interests. Using illustrations drawn from health and social care in the UK, it is argued that this has come at a substantial cost to both the user and the wider public - and has in particular exacerbated existing social inequalities. This paper outlines the growing trend for inter-professional collaboration in health and social care in the UK. Although there can be downsides to greater inter-professional working in relation to such issues as the complexity of communications and supervision arrangements, there are many positive generic reasons for such engagement – from creating a more satisfying work role for the professionals involved to enhancing the service given to the user. This paper specifically asks questions about the benefits or otherwise of inter-professional working in terms of social inequalities. In so doing, it acknowledges that inter-professional collaboration can take a number of forms. It also again draws on examples from health and social care in the UK to support its general argument that inter-professional collaboration can make a significant impact on social inequalities, not just in the UK but more globally.

Broken Promises. Temporary Labour Migrants’ Experiences of Working Conditions and Social Security in Finland

West European countries, including Finland have started to recruit more labour migrants to low-income sectors in hope of a partial solution to the consequence of rapidly aging working population. This paper demonstrates how highly skilled labour migrants from non-EU member countries face social disqualification in their efforts to become part of the Finnish labour market. Particularly, African and South-Asian male workers find mainly cleaning or dish-washer jobs despite their academic background. Our study explored the temporary labour migrant’s experiences of acquiring opportunities to working rights and social security. The results show that the majority of the interviewees had been reluctant to look for information either due to the fact that they were working only temporarily in Finland or due to their week bargaining positions. The information of recruitment, working rights, the Finnish taxation system, and of the Finnish social security rarely reaches the labour migrants. These features can partly be explained by labour and migration policies, and by the natives’ strong creation of ‘otherness’ between the native Finns and the non-white foreigners. In the analysis an intersection of gender, ethnicity and class has been applied to describe the unequal and sometimes precarious position of the labour migrants. The research material consists of documents, memos based on ethnographic observations and of seventy-eight semi-structured interviews, of which forty-nine were conducted among cleaners, bus drivers, and seasonal agricultural workers.

Re-Creating Mutual Belonging: Filipino Labour Migrants’ Local and Transnational Practices Between Finland and the Philippines

This paper demonstrates the unequal embeddedness of transnational Filipino labour migrants in the Finnish and Filipino society. My study of Filipino labour migrants’ working and living conditions in Finland explored the migrants’ adaptation strategies in their efforts to become integrated in the Finnish society and in staying in touch with the ones left behind. The analysis showed how the integration of Filipino labour migrants to their new host society is influenced by their adaptation strategies, such as of the migrants’ local and transnational practices and contacts. The active participation in sociocultural and religious practices helps the Filipinos to find their way of being in Finland without losing their contacts to the Philippines. The migrants’ adaptive strategies strengthens the Filipinos ethnic identity and its mixture, their ethnic belonging to an ethnic minority community in Finland as well as to the transnational community. These two communities should not be perceived as two opposites but as dual sites of mutual belonging consisting of a hybridity of transnational and ethnic collective identities. At the same time, the migrants’ opportunities to become familiar with the Finnish society and to learn the Finnish language have been vague. There is a risk of segregation from the Finnish society if the Filipinos do not become familiar with the Finnish language and culture. The research material consisted of open-ended interviews conducted among twenty Filipino cooks, nurses and cleaners and of memos based on ethnographic observations.

Mysteries of the Discourses That Encourage Cooperation. Ver.2

Mysteries of the discourses that encourage cooperation. Ver.2
- Another important constant number on the human societies added to "Dunbar's Number":
  Yoshihiro Sakurai
  (Kagoshima University)
yoshiosakurai@gmail.com

[Introduction] We found some phenomena after 3.11 which had almost not been expected earlier. I would like to have attention to a phenomenon of "speakers advocating cooperation".
[Methods] I use a multi agent simulator. The structure of the pay-off of the game is composed by a kind of 'social dilemma' in her neighborhood, and other orientations with their costs. Each agent has a strategy which has two kinds of output values; [act cooperatively / act not cooperatively] and [speak to advocate cooperation /not speak]. There is also another parameter, threshold for speaking to advocate cooperation parameter. Each agent will speak to advocate cooperation with 'a cost'; when and only when the 'cooperative actor rate' of her neighborhood is UNDER her 'threshold for speaking to advocate cooperation' parameter.

[Results/Conclusion] I tried to check whether "speaking to advocate cooperation" or "not speaking to advocate cooperation" has effects on the cooperators rates in the whole universe. The results are in Fig.1. Next, I tried a parameter survey on how values of the 'neighborhood radius' have effects on the cooperators rates. I did 100 trials where the 'neighborhood radius' were randomized with equal probability from 0 to 130. The result is in Fig.2. As the figure shows, in the cases that the 'neighborhood radius' ranges from 10 to 25, the 'cooperators rate's seem to be distinctly high. It seems that there is a 'threshold value' around 25 by which the 'cooperators rate's are discriminated between being high and being nearly zero. I think that these models are interesting in several points. We will discuss some at our conference.
Materials and methods: the variables in the model proposed by the pilot study have been reviewed on the basis of the individual data available in the information systems of the local actors. They have been used for defining evaluation models based on the characteristics of the individuals, with the same techniques used in the pilot study. As a case study the municipality of Genoa, whose population is among the oldest in Europe, has been taken into account.

Results and discussion: The passage from regions to individuals in a large municipality confirms the validity of the model for people 65+ years old. ADL disabilities are the main disability dimension with highest association with the worsening of the SE condition, also due to the effect on the social relations dimension. The public strategies seem to better protect individuals and families, with the help of the informal network of support for the family care. The indicators in the models could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could extended wherever these kind of data are routinely collected.

Think-Tank Networks in Mexico and How They Shape Economic and Political Reforms

Think tanks, broadly defined as public policy research organizations, have proliferated in North America. In the case of Mexico they are a relatively new phenomenon associated to the retreat of the state from the economy. However, they have rapidly built networks which play a key role in coordinating elites in the country in order to influence the public policies and strategies promoted throughout the past two decades, in particular those associated to NAFTA and the reforms this agreement has entailed. This paper analyzes the most important characteristics of Mexican TT, who controls them, the networks they have constructed in the past decade, the strategies they pursue to influence policy-making, the most influential ideological orientations and the extent to which the Mexican TT network is linked to a regional or international network. I argue that the landscape of TT has undergone a profound transformation in the past years leading towards: (1) an increasing presence of independent TT and private consultancy firms that undertake not only research on public policies, but executive and legislative lobbying too; (2) a more challenging advocacy role of academic and business TT that actively participate in the media and multiple fora to build consensus around; (3) a notable reappearance or fading away of former state research centers, particularly those promoting developmentalist goals; (4) the concentration of state research in autonomous public agencies requiring very specialized information; and (5) new and more complex forms of collaboration and cooperation between business affiliated, academic and other TT, national and regional. Formal network analysis will be carried out in order to examine the patterns of connections between TT, their centrality and the tensions or divisions emerging from the ideologies they espouse or from the technocratic knowledge produced.

Research on preschool education and day-care programs is gaining momentum since the discovery of its potential to reduce social inequalities in education and development. Much of this research relies on case studies to measure mid and long term effects of preschool attendance on academic performance and school transitions. In this paper we adopt a broader focus and a comparative approach by exploring the extent to which early (pre-primary school) child stimulation can reduce background differentials in learning outcomes across 28 countries from the Americas, Asia and Europe.

Particularly we seek to unveil the relative impact of direct parental involvement and preschool education, as different ways of child rearing, on educational disadvantages that stem social origins, and the extent to which this applies to all the countries in our sample. Are the effects of both practices (institutional vs. parental) similar across countries? How do institutional characteristics of the educational system affect performance at this stage? To answer these questions we use PIRLS 2011, an international data source clustering students of primary education (4th grade) across countries. PIRLS provides a standardized measure of reading literacy among 4th grade students. We estimate random-constant and random-slope multilevel models to assess the effect of the type of child care adopted by families, including institutional versus direct parental involvement, on educational attainment. The model structure will be extended to include country fixed effects and triadic interactions between the two main predictors to disentangle the potential for a broad range of outcomes across national contexts. The results could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could extended wherever these kind of data are routinely collected.
In the Philippines, there has been some amount of talk and, fortunately, some amount of action too, about climate change. We ask: What is being said and done about climate change in the country? How is climate change being framed and acted upon? Why are these developments unfolding the way they do? How do these discourses and practices reflect and influence sociocultural dynamics? The paper presents voices, views, and vignettes from the country. It attempts an understanding of these realities by drawing from social constructionism, critical discourse analysis, and social movement theory.

Managing NGOs for Older Persons in East and Southeast Asia: Lessons and Good Practices from the Field

The paper reviews the roles and experiences of non-governmental organizations for older persons (NGOs-OPs) in East and Southeast Asia. It is based on case studies of selected NGOs from Hong Kong, Japan, Korea, Indonesia, the Philippines, Singapore, Thailand and Vietnam. The study finds an increasing number of NGOs-OPs present in the region, working in diverse areas of service delivery, education, research, training, and advocacy. Community-based older persons' organizations or senior citizens associations are also becoming more active, with some organizations going beyond social and recreational activities, and venturing into policy advocacy and other areas traditionally served by non-community-based NGOs. Most NGOs are taking on multiple roles simultaneously, e.g., adding advocacy to their other programs, while a few are beginning to focus on a specific target group, activity, or service. On the organizational and management side, NGOs-OPs are also becoming more accountable and are taking creative and innovative steps in meeting the challenges of management. To be sure, NGOs-OPs need to address important gaps, notably the lack of capability-building at the community level, the lack of follow-through in policy implementation, and the need to solicit critical, hopefully constructive feedback from the older persons they are serving. Nevertheless, like the older persons they are working for and with, NGOs-OPs themselves are getting more active and growing wiser with age.

An Experimental Study Of The Relationship Between Knowledge, Attitudes and Recycling Behavior In Iran

It is often assumed that knowledge and attitude about the recycling will engage in recycling behavior. We used data from a survey on Mazandaran province, Iran in 2013 to investigate this premise. A survey method was utilized to examine neighborhood change Database spanning the years 1990-2010 are used to investigate census-based measures of gentrification. Systematic social observation of select neighborhoods using photography will also be used to document change visually, with an emphasis on commercial storefronts. This research seeks to integrate cultural and spatial analyses into demographic methods to ask how their combination can better assess the contours of neighborhood change. The three central research questions are: 1) Do traditional demographic measures (i.e. race and class) adequately capture the phenomena of change? 2) Why do neighborhoods experiencing gentrification seem to look similar to each other and utilize the same semiotic tropes? 3) What are the physical indicators of neighborhood change and how are they involved in symbolic boundary construction between old and new residents?
processes, namely to consider the “specific strategies of representation and com-
modification and the context in which they are represented” (2000:21), or the crit-
ics to the regressive aestheticization of politics (and economy) by the politicization of art (W. Benjamin, 1985).

We will analyze the use of these strategies in the practices of artists, entrepre-
neurs, experts, dwellers and their conflictual context - involving real estate boom and heritage practices (Pereira, 2010; 2013); the formation of gated communities (Caldeira, 1997) and the resistance against them (ibid., 2012). How they give new meanings to identities, places, revealing the tensions and complementarities be-
mongeorgeanne thinking between the public and the political dimension of art and problematize the construction of a singular public space: a heterogeneous urban landscape and a democratic political sphere, both institutional and non-institutional (Arendt, 1991; Habermas, 1984) in the city of São Paulo. We will use the methodology of visual sociology (Ferro, 2005), problematizing it in an interdisciplinary approach.

Can Outsourced Workers Organize? a Case Study from the Philippines

This presentation will detail an attempt by outsourced workers in the Phil-
ippines to form a labor union. These workers are in the “knowledge process out-
sourcing” sector, meaning that they possess significant human capital and do skilled tasks for firms of the Global North. The case immediately presents two puzzles. First, given the many structural barriers known to impede unionization by outsourced workers in the Global South, how did a union campaign emerge? Second, why did this unionization attempt ultimately fail? My ethnographic re-
search inside the outsourcing facility provides answers to these questions. Rep-
resentation struggles were initiated by highly-skilled workers and in response to new, driving tactics on the part of local management. The latter were reacting to pressures put upon them by their Western clients. The unionization campaign appeared to have caught local managers by surprise, and throughout it they were very concerned to keep news of it from reaching the government, the press, and Western clients. In short, employees possessed significant structural and work-
place power in their attempt to gain recognition. Ultimately, however, it was local management’s inability to harness greater associational power that led to the de-
feat of the union. One general implication is that studies of labor in global supply chains should theorize and examine empirically the vendor-client relationship. In these supply chains, vendor firms and client firms have different interests and resources.

Foxconning Science: The Globalization of Academic Publishing

This paper presents ethnographic work done inside an outsourcing firm in the Philippines. This firm is part of the emergent knowledge process outsourcing, or KPO, field. It contracts with publishers wishing to outsource such work as copy-
editing, typesetting, authorial communications, and more. Most major scientif-
ic publishers now contract with such firms. I present evidence that the nature of these outsourcing deals forces suppliers to adopt despotic tactics to standardize their work. Suppliers lack basic knowledge of the overall field of production (in this case, academic publishing), and so judge themselves against unknown compet-
itors. They compete on price, rather than quality, and so continually engage in various “low road” techniques of management. Most notably: wage suppression, the “driving” of workers, and forced overtime. I conclude the paper by discussing at length one incident that provides a prism into the entire labor regime: a union-
ization dispute that took place at this facility. Global pressures induced worker resistance which was then channeled into a unionization campaign. But ultimate-
ly management was able to defeat this campaign by mobilizing local networks and traditions. In this case, global and local forces collided to control the hidden work-
ers in the new global production of science.

Changes in Status, Reconfiguration of Identity, the Case of Educators in the French Youth Justice System

In the aftermath of World War II, the French Youth Judicial Protection Service (YJPS), responsible for the rehabilitation of young offenders, gained its autonomy from the prison administration, and became an autonomous agency of the Min-
istry of Justice. The YJPS now employs 8500 people, of which 4500 are educators. The latter, trained in a division of the YJPS, have the exceptional feature of bene-
fitting from French civil servant employment status. For a long time, this protective
employment status has been interpreted as a sign of distinction and prestige. Represented by the YJPS national union (YJPS-UN), created in 1947, the YJPS edu-
cators have cultivated this prestige by demonstrating their unconditional attach-
ment to the political purpose of their administrative agency: the construction of a justice model based on the rejection of youth imprisonment. However, in the 1990s, these educators became subjects of a new ideological shift, which requires the implementation of punitive-orientated policies. This has changed the interpretation of their employment status, less perceived as a sign of prestige, than considered as an instrument of subordination to these new policies. The le-
gal obligation for the YJPS-UN, remaining firmly wedded to the progressively becoming marginal-
ized. A growing number of educators are turning to a more conventional trade union, attached to the promotion of working conditions rather than defending their professional identity of the profession. By depicting the differences between these two forms of activism, which we name ‘identity’ versus ‘utilitarian’, we will analyze how a “new professionalism” has emerged among YJPS educators, and is symbolic of a general weakening in the symbolic status of this professional group.

RC29-505.3
SALLÉE, NICOLAS* (University of Montreal, nicolas.sallee@umontreal.ca)

Rehabilitation and Punishment. a New Model of Rehabilitation in the French Youth Justice System

According to recent research in policy transfer studies, youth justice systems across the Western world are taking a “punitive turn” (Muncie, 2008), marked by the emergence of a new “culture of control” (Garland, 2001). This process is particularly significant in the United States and Great Britain, however it appears that other European countries are following suite (Bailieu & Cartuyvels, 2007). A closer look, however, reveals complexities: the level of youth incarceration, a commonly adopted indicator of punitive; differs considerably between coun-
tries. The French youth justice system, analyzed in this paper, does not escape these complexities: since 2002, the youth incarceration rate is decreasing, while the content of political discourse and legislative changes seems to fuel the in-
crease of a new punitiveness (Bailieu, 2008). To understand this apparent par-
adox, we will describe how political injunctions aimed to “get tough” on young offenders, are translated and reworked, at a lower level, through the activity of the administrative agency responsible, in France, for the functioning of youth cen-
ters: the judicial Protection of Youth (JYP). This analysis will allow us to highlight the crystallization of a new model of rehabilitation under constraint. First, using quantitative data, we will describe the increasing use of semi-closed youth facili-
ties as an alternative to prison. Tied to the development of new prisons for youth, supposedly “rehabilitative” (Chantreije & Sallée, 2013), this evolution is changing less the level of confinement than its meaning. Formerly perceived as anti-rehabili-
itative, confinement is now legitimized as an inseparable feature of rehabilitative processes. Second, we will analyze knowledge production practices, particularly child psychiatric and psychological knowledge, mobilized by the JYP to support this legitimation process. This paper will defend the idea that this new knowledge underpins old disciplinary recipes, and symbolizes the growing concern surround-
ing, in France, the institutional fabric of socialized individuals.

The Relationship Between First Principle Production in Brazil and the International Demand

The following research approaches the criticism of the production system of knowledge in Brazil, focusing on a laboratory of Theoretical Physics which works with First Principle Model (FPM), order to analyze the institutional dilemma and the relationship between the laboratory and the central spaces of knowledge produ-
cation, linked to this research area. The production of science, how is the current in Social Studies of Science and Technology, demand an articulated network of elements which sustain and make circulate the knowledge production produced inside the area. In the FPM case, the space of production and circulation is very peculiar, since the production involves upgrades in the computers’ servers when a new version of software is released, the lab does not spend much money on the other hand, the circulation occurs within the specific circle in physics, because the pro-
duction not necessarily will become a product since the experimental relevance does not always happen. And yet we have the relationship between central spaces of central places of knowledge production, understood basically by The Us and Europe which influence the content and the decisions of productions inside the laboratory. The methodology of this research consists of an interview which re-
searchers and analysis of published material for one label of FPM which is related to a Brazilian University. With the following research, we aim to contribute for the debate about the production process of knowledge, bringing reflexive elements about the role of Brazil in the production of FPM knowledge.
The Notions of Otherness and Critical Construction Sites: Theorizing Professional Boundaries within

This paper is about social and symbolic boundaries (Lamont & Molnar 2002). The aim of this paper is to suggest a theoretical way to understand constructions of ‘Otherness’ within professional boundaries. I draw on the empirical case of the doctors with immigrant backgrounds in the Swedish medical profession and use the notion of critical construction site by Cornell & Hartmann 2007. In order to bridge the gap between structure and agency the study started with a review of the Swedish research literature in order to see how ethnicity, ‘race’ and ‘Otherness’ had been received in research. In this review I found that ‘Otherness’ is often something that is ascribed to patients and not doctors. I then went on reviewing the professional debate around the issue of doctors with immigrant backgrounds in Sweden I found something I theorized as underlying assumptions of ‘the Other’. This ethnic ‘Otherness’ was not about doctors’ ‘ethnicity’ nor about ‘race’ instead it had to do with that the doctors had immigrated and was perceived as something table and predetermined. This notion of ‘Otherness’ was later also found in interviews with doctors with immigrant backgrounds. In the interviews I expectedly found stories of discrimination, prejudice and even racism but I also found stories of agency, and coping strategies where the ‘Otherness’ they were ascribed with was used a way to construct their role in the Swedish health care system; to take care of patients with immigrant backgrounds. The paper argue that as doctors with immigrant backgrounds seem to be using a primordial definition of the ‘Other’ in circumstantial ways in order to find their place within the Swedish medical profession which I argue, is a critical construction site.

The Other Doctor: When Professional Boundaries Conflate with Notions of Ethnic ‘otherness’

The paper suggests that field of Sociology of professional groups need to consider social position theory in order to theorize boundaries of ‘Otherness’ within them. The paper is based on some of my concluding remark from my dissertation where I interviewed medical doctor with immigrant backgrounds in Sweden about their feeling of belonging to the Swedish medical profession, among other things. The thesis is that the medical profession in general and the Swedish medical profession in particular have been successful in controlling the number of new doctors that are accepted to Swedish medical schools. Sweden has also experienced and increased in doctors with immigrant backgrounds working in the Swedish health organization. In my interviews with these doctors they often told me about something that could be understood as hierarchies within the profession on the basis of ‘race and ethnicity’ and ‘race and Otherness’. I have chosen to theorize this as ‘ethnic Otherness’ as it seems to have to do with that they are ascribed with ‘non-Swedishness’ than about what ‘ethnicity’ they have. These divisions I argue are linked to ideas that can be found in EU legislation, in the Swedish research on multiculturalism and the Muslim world, while also questioning (and reconstructing) the conceptual debates in social theory and cultural studies. This research program paralleled a larger sociological trend that privileged a comparative perspective in the exploration of modern developments and dilemmas in the West, East Asia, and the Muslim world, while also questioning (and reconstructing) the comparative perspective itself, to the extent it focuses on parallels and diversities more than on the complexity of entanglements (which are as much cultural as they are economic and political) between articulations of Western modernity and concurrent developments in the Muslim world. The paper will argue that while the sociology of Islam benefits from a comparative perspective and a corresponding theoretical revision of Eurocentric postulates, it cannot be completely satisfied by them and should place its endeavors in a more explicit context of exploration of not just parallel and multiple, but of contending modernities. This field of study has thus the potential to unsettle evolutionary concepts of modern society even more than purportedly anti-Eurocentric approaches and immanent critiques of modernity within social theory are able to do. This specific potential of the sociology of Islam is implemented by questioning the comparative perspective itself, to the extent it focuses on parallels and diversities more than on the complexity of entanglements (which are as much cultural as they are economic and political) between articulations of Western modernity and concurrent developments in the Muslim world. The suggested path is to take charge of what is specific to Islam and Muslim actors and re-think the parameters of Western-centered modernity without exceeding in any anti-essentialist implication, which if pushed too hard (e.g. as many scholars and analysts are doing under the impact of the recent and ongoing revolts in the Arab world) would bring us almost back to square one, i.e. to an absolutization of state Western parameters of political, economic and cultural modernity.

One of the tangible signs of growth in Metro Manila, a Philippine mega-city of about 11.7 million people, is the proliferation of condominiums. A condominium is a form of housing tenure whose cost of land is prorated due to multi-story building and which makes it possible for many people to live closer to the workplace and shopping centers. This paper lays out the proposition that the condominium is both medium and outcome of technological innovations that either stimulate or stymie sustainable consumption. Technological innovations embodied in the design of spaces and rules of condominium living provide the material setting that defines interactions and images relating to inhabitants’ consumption of technologies in the home and consequent social constructions of sustainable consumption. The paper focuses on social practices relating to the use of information, communication and entertainment technologies as well as domestic technologies by condominium-household members. The take off point is a body of data and insights from key informant interviews, direct observations, and secondary data analysis.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In a LGBT community, some says the number of lesbians is less than that of gay men, bisexuals in Japan. It is partly because in Japan LGB are quite invisible in every day life in Japan, except on TV shows. And it is strange to see a lesbian or a woman who can be seen as an FtM (Female to Male) transgender. However, we hardly see invisible in every day life in Japan, except on TV shows. It is not strange to see a lesbian or a woman who can be seen as an FtM in Japan. The transition to gender identity is implicated in how the elderly Filipino older persons understand the phenomenon of aging.

**Does the Transition to (grand-)Parenthood Change Intergenerational Relationships?**

Existing studies suggest a close relationship between the presence of grandchildren and intergenerational relationships. For example, studies on grandparental involvement in parenting show that the birth of a child increases opportunities for associative solidarity between generations as well as it increases the demand and supply of functional solidarity, both with regard to material help or childcare as well as information and advice. This, in turn, may also result in increased affective solidarity. But it might also operate in opposing directions: If the demand for intergenerational solidarity meets supply from the grandparental side, this may enhance the existing intergenerational relationship; in case of incongruency, the event may result in increased intergenerational conflict or detachment. Yet, more research is needed on how intergenerational relations adapt to the new family structure and needs of family members after the generational transition. Past research mostly concentrate on the presence of grandchildren regardless of their age, consider only one direction (parents or grandparents perspective), or are analyze cross sectional data. The present study examines the transition to first parenthood and the associated development in intergenerational relations over a two year period concerning various dimensions of the Bengston-Silverstein-solidarity-model. The German Family Panel (pairam) is chosen as the appropriate data set to addressing the research question, including reports from both perspectives, gathered in 2010 and 2012. Using difference score regression, N=7,163 dyads were analyzed. The analyses suggest an increase in the frequency of contact and practical support only from the elder to the younger generation. No changes were found for financial transfers. Regarding the frequency of conflicts, the generational transition has a decreasing impact.

**Invisibility of Sexual Minority “Women” in Japan**

There are no existing laws that either discriminate against or guarantee the rights of sexual minorities. In Japan, boys and girls are for and against because they are not so many lesbians in Japan. Why do they appear to be fewer “lesbians” than gay men? Do most of them recognize themselves as “bisexual”? In their presentation, I will compare interviews of sexual minority men and women focusing not on “the number” but the invisibility of the sexuality of women in terms of three points; the first is their different experiences when coming out, the second is a sexual double bind, and the third is ambiguity of sexuality which is beyond description in binary categories (ex. homosexual and heterosexual). By introducing narrative, I will discuss how these elements make it difficult for “women” to talk about their sexual orientation and sexual identity.
organizing is the future, once that challenges the boundaries of nation-states in
of one country and with migrants of other nationalities. Indeed, migrant worker
more direct involvement of migrants on issues that impact them; for more con-
migrants who congregate in the churches for the worship service. Off and on the
Church/faith-based migrant formations that are spread out around the country .
“membership” knows neither boundaries nor time limits .

In the Gulf Co-operations Countries (GCC) countries where organizing of workers
-local or migrants - in whatever form and orientation is almost a taboo, there
is no stopping the migrant Filipinos from organizing cyber communities . Their
“membership” knows neither boundaries nor time limits .

Fastforward, 4 decades later, we see an expanded and varied landscape of mi-
grant communities. In Hong Kong, migrant domestic workers are joining and form-
ing their unions and merging into coalitions of different migrant nationalities .

In the Gulf Co-operations Council (GCC) countries where organizing of workers
-local or migrants - in whatever form and orientation is almost a taboo, there
is no stopping the migrant Filipinos from organizing cyber communities . Their
“membership” knows neither boundaries nor time limits .

In other nations such as Taiwan, what is feasible are support groups such as
Church/faith-based migrant formations that are spread out around the country.
Every Sunday, these formations touch base with more than a thousand Filipino
migrants who congregate in the churches for the worship service. Off and on the
pulpits, migrant issues are raised, activities and campaigns are undertaken.

Increasingly, the networks and ways of organizing migrants pave the way for
more direct involvement of migrants on issues that impact them; for more con-
solidated actions and responses and for support and solidarity between migrants
of one country and with migrants of other nationalities. Indeed, migrant worker
organizing is the future, once that challenges the boundaries of nation-states in
more ways than one .

Building Global Worker Communities: The Case of Filipino Migrant
Workers

Building global worker communities: The Case of Filipino Migrant Workers
Filipinos overseas are not wanting of associations or organizations to belong to
wherever they may be.Commonplace are social organizations around common
professional-organizational, also based on geographic regions or ethnol-
guistic origins in the Philippines to name a few. These formations are meant to
provide support to the members, enhance their profession, religion/faith, eth-
nolingusitic identities and the like. Rarely do they get in conflict with the laws
and policies of the host countries; neither were they inclined to have sustained
campaigns critical of policies in the Philippines.

After the revolutionary events it is possible to appreciate a transformation in
the uses of public space in downtown Cairo. That is it no longer surprising to
see in public walls –even those of Cairo’s administrative Mogamma building or
private homes – political graffiti represented this transformation, and connect
the public space both as a site and instrument of revolutionary struggle. This
transformation takes place against the backdrop of urban planning that sought
to limit the availability of open spaces in which citizens might congregate, and
the development of gated communities for the wealthy that, along with exclusive
parks, constitute a privatisation of space . During last years, often these globalized
spaces are remade by creating local and regional ties and design features that
were not anticipated by the planners. The appropriation of public space –squares
and streets–by youth groups for different uses that which it was conceived and
planned, have become in physical manifestations of a different Egypt. This
different Egypt has roots in the understanding, production and living experience
of public space of the traditional cairoenca and ashaybata –informal neigh-
borhoods- where, also, the young people even has a significant role. Their living
experience or urban space in the quarter permits to transform the public in a
comunal space in the cosmopolitan areas that they transit. In this paper, I try to
present the different manners of living both, the cosmopolitan and traditional
urban spaces by youth groups.

New Configurations of Informal Work in Brazil: Besides the
Informal, Short of Rights

This work aims to examine the non-wage based labour relations and under-
stand its implications for the State and Society. These kinds of labour relations
have been referred to as “informal” or “non typical”. In this sense, they have been
viewed academically and politically as lacking or unviable. However, it is true from
the perspective of the traditional labour in-
stitutions (Unions, State, and the juridical forms of labour regulation) these
labour relations are aliens and cannot be characterized but for absence of the key
attributes that traditionally have defined labour, in the context of political and
economical changes that took place in the past decades, these labour relations are
an important part of the accumulating history and have generated new field of
conflict and have been trying to get politically organized, building identity
and pushing forward with their agenda.

The first part of the work focus on understanding the theoretical and politi-
cal implications of the non wage based relations for labour relations in general.
On the second part, we try to understand the emergence of this new reality and
the development of new political subjects with their own agendas and identities.
However, although these labour relations and its workers are not informal, they
still not recognized in their relation with the State as having rights

The Solidarity Economy and the Social Struggles in Brazil: The
Right to Associated Labor

One of the most important examples of a collective subject rising in the public
arena in Brazil is the Solidarity economy, which for several years has been sharing
itself as an autonomous social movement. In this process, it has been trying to
build new social rights for Associated Labor. It is a description and analysis of this
process that this work intends to develop.

With this objective, it starts by rebuilding the history of the Solidarity Economy
in Brazil, taking that despite its long history and connection with the Brazil-
ian social struggles for more than a century, it is only in the last thirty years that it
has assumed a new configuration and new meanings as a result of the social and
political changes that took place in Brazil after the eighties.

The second part of this work focuses on showing how the Solidarity economy
today has become a new social, economical and political reality in the Brazilian
society however; the subjects of the Solidarity Economy still lack the institutional
recognition of its rights.

Lastly, we analyze how the subjects involved with the Solidarity Economy have
been for years mobilizing and requesting the rights to Associated Labor and have
achieved some successes in this process such as the creation of the National Sec-
retary of Solidarity Economy and the approval of laws for the Solidarity Economy.
As a result, the analysis of this movement in Brazil demonstrates that there are
no natural rights but rights are political constructions consolidated from processes
of social struggles that aim to expand democracy and transform society. It is some
of these political agendas that we try to explore in this work focusing on showing
the arenas where the struggles and debate around the development the right to
Associated Labor take place.

From Hara to Midam: Public Spaces of Youth in Cairo

El presente trabajo se sustenta en el desarrollo de proyectos de investigación
desde 2004 a la fecha del Cuerpo Académico Diseño y Cultura de la Universidad
de Guanajuato, integrado por investigadores de diversas áreas (diseño, arquitec-
tura, biología, educación, derecho) los cuales están enfocados a la divulgación
de conocimiento en los niveles de preescolar hasta posgrado en el Estado de Guana-
juato. Los productos realizados integraron el multimedia como punto de partida
para ampliar la divulgación del conocimiento hasta interactivos para PODCAST y
IPOD, actualmente se están llevando a cabo propuestas de hipermedia con la fi-
nalidad de utilizar la cultura tecnológica para incrementar el número de usuarios .
La idea de implementar las nuevas tecnologías surge como respuesta a las
modalidades de educación abierta y a distancia que actualmente se han consti-
tuido en una herramienta en la que no existe la coincidencia espacio-temporal
entre alumno, contenido y profesor como tradicionalmente ocurre . Por tanto,
dentro del diseño de los materiales de apoyo se considera el uso de los medios
de comunicación alternos como los PODCAST que se han convertido en objeto
de uso común entre los estudiantes, así como la audioconferencia, que permite
la comunicación sincrónica e interactiva con el apoyo de imágenes para optimizar
el logro de objetivos. La utilización de estos recursos tecnológicos aumentó el
número de receptores significativamente en los años 2010 a 2012 situación que
a impulsado el desarrollo una metodología que integra las fases de concepción
de ideas, desarrollo de estrategias educativas en simuladores, determinación de
parámetros multimedia, y desarrollo de prototipo.

Usabilidad Del Multimedia y La Hipermedia En México

La Divulgacion Del Conocimiento a Traves De Lo Gadgets. Caso:
Usabilidad Del Multimedia y La Hipermedia En México

The idea of implementar las nuevas tecnologías surge como respuesta a las
modalidades de educación abierta y a distancia que actualmente se han consti-
tuido en una herramienta en la que no existe la coincidencia espacio-temporal
entre alumno, contenido y profesor como tradicionalmente ocurre . Por tanto,
dentro del diseño de los materiales de apoyo se considera el uso de los medios
de comunicación alternos como los PODCAST que se han convertido en objeto
de uso común entre los estudiantes, así como la audioconferencia, que permite
la comunicación sincrónica e interactiva con el apoyo de imágenes para optimizar
el logro de objetivos. La utilización de estos recursos tecnológicos aumentó el
número de receptores significativamente en los años 2010 a 2012 situación que
a impulsado el desarrollo una metodología que integra las fases de concepción
de ideas, desarrollo de estrategias educativas en simuladores, determinación de
parámetros multimedia, y desarrollo de prototipo.

Coffee, Certification Schemes and Standards in the Reshaping of Sustainability Markets, Tracing Global-Local Tensions
In the last fifteen years, certification schemes and the standards they enact for producing sustainable products have become one of the most important strategies for enhancing sustainability into commodities (such as coffee) market. Similarly, certification schemes are introducing important changes in the governance of agriculture systems. Such transformations have been the focus on a wide set of works that critically highlight how certification schemes are embedded into a neoliberal governmental regime as well as the social and economic conditions in the context of a moral economy. Although many of these approaches isolate technical and social dimensions as separated realms relatively less attention have been put on how certification schemes are enacting sustainability in terms of trust, a key element in the material shaping of any differentiated market.
Following Buschi (2011) contributions on standards, enacted in the Certification schemes (Van Der Kamp, 2012), and trust I explore how certification schemes can produce two version of it in two different locations. First, trust as consistency in the International Coffee Organisation (ICO). Here I describe how certification schemes are designed to produce trust in the market related to the transparency and the consistency of coffee production according to international environmental standardised criteria. This trust, then, is limited to the boundaries of a certificate. Second, I describe the experience of a small coffee roaster and retailer with certification schemes in the UK. J. Atkinson & Co. What emerges there is a concept of trust as trustworthiness. Certification schemes are framed in terms of coffee relationships, these involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

Caring Responsibilities and Gainful Employment in Middle Age: A New Population Based Study in Sweden
The Swedish welfare model is based on the premises 1) the society, not the family, has the main responsibility for care, and 2) all adults are gainfully employed, from the time of employment until retirement. Sweden has a high proportion of women in the work force, also in their 50-60ies. Nonetheless, it is estimated that about 70 percent of all elderly care is performed by relatives. This study is a mixed method study and focus on caring responsibilities for elderly parents or other family members. An enquiry was made during spring 2013, of a random sample of 6000 individuals 45-66 years old (61.1% responses) and interviews from 40 carers in various caring situations has been made. It focuses weather the caring responsibility have any impact on paid work, maintenance and everyday life as well as their experience of public care, possibility to leave job and payment for care. Theoretically the study is connected to feminist welfare research. Of central value is to analyse gender, class, ethnicity and age. Early results shows that over 40% of the respondents give help and 30% of women and 27% of men, help and old, disabled or ill family member at least once a week and 15% of women and 12% of men help daily or several times a week. Care affects life in different ways: feeling mentally and physically exhausted, having difficulties to focus on work, less time for leisure. More women than men have made changes in their working life in order to manage the situation. Corresponding to 7% of women and 4% of men 45-66 years in population we can see that 100 000 women and 50 000 men has made changes in their working life; reduced working hours, stopped working, take early retirement as a result of caring.

Work-Life Balance. Welfare State, Family and Caregiving in Japan and Sweden
Japan and Sweden share comparable situations. Both countries have a high and growing part of elderly in the population and high ambitions to handle the needs for care, even if they have different conditions when it comes to organization and financing. Still the family is the main care giver for the elderly in both countries. This makes it interesting to compare and highlight the effects of care for family caregivers.
Until the early 1990’s the Japanese policy on eldercare was based on the family as the main caregiving unit. In 1989 a ten year plan for institutional and home care marked a policy shift. Though family support was added into the Japanese system, cash reimbursement to family caregivers was not included, a deliberate decision, when the National care insurance was implemented in 2000, to secure that municipalities would not choose to lean on family carers instead of developing formal care services.
Japan has a long policy on elder care, in which the formal services constitute the base and family care the supplement. The economic crises, during the 1990ies led to cutbacks in the formal care and since then there is an increased focus on caregiving services of families, and the Swedish government have support development of carer support. Despite eldercare being a societal responsibility the share of family caregiving has increased while the economic support to next of kin has diminished.
We are comparing results from a survey in Sweden and from secondary data in Japan on the perspective of family carers. In Sweden women and men give help to about the same degree. However, if we look to the consequences of family

Global Cities Making Policy or Policy-Making for Global Cities?
Everyone acknowledges that cities have become increasingly important in the world economy. But there is much confusion about what this means for how they are governed. A natural assumption is that the central-city governments of the central-city municipalities in a global city-region are becoming more important for urban policy-making. But, unless the boundaries of such a municipality corresponds to the whole city-region (however defined), which is highly unlikely, then the central-city municipality will be quite incapable of responding to the most important policy issues, especially those relating to urban sprawl. The result in many countries is a search for the perfect municipal structure to enable effective city-region policy-making.
But what is forgotten in this kind of analysis is that, if city-regions are becoming relatively more populous in relation to small towns and rural areas, then our national and sub-national legislatures are becoming increasingly debarred by urban voters. In countries with one dominant city (France, England) and in federations and countries with strong devolved regional legislatures, urban policy for city-regions will not be made at the municipal level, whatever the municipal boundaries and structures might be. We are used to hearing that “all politics is local.” What we need to consider is the likelihood that “all politics is urban.”
Although examples will be drawn from around the world, particular attention will be paid to the Toronto city-region (the Greater Golden Horseshoe) and Ontario, the Canadian province in which it is situated. Despite Ontario’s vast territory, two-thirds of Ontario’s population lives in the Toronto city-region. Ontario’s politics is urban politics. Although the main argument of this paper derives from my 2008 book, The Limits of Boundaries: Why City-regions Cannot be Self-governing, the paper modifies the analysis in light of recent developments.
Oil-Drilling in Arctic and Ecosystem-Management Plan of the

In the High North, The Barents Sea has large resources of petroleum and sus-
tainable populations of fish. The international challenge lies in implementing the
conservation of marine biodiversity, at the same time managing sustainable ex-
ploration of natural resources in the Arctic region. The Norwegian government
has tried to solve conflicts of interest by the making of a large scale ecosys-
tem-based national management plan for The Barents Sea and Lofoten Islands.
The national goals are sustainable use of petroleum, fishery resources and con-

*Youth in Social Transformation Through Education*

India, known as a country of youth, with the potential to help build a stronger democracy through social entrepreneurship. There is a need of enthusiastic and pro-active youth for any transformation. They need a balance while addressing country's growth and social issues.

Education is a progressive approach for transforming society. Existing education policies has many shortcomings. There are many discriminatory practices applied at ground level. However, despite this adverse situation the young generation is engaged in creating an atmosphere for change in rural Maharashtra, India.

Idea of bringing changes in the mainstream of education has been established. But, due to distress & seasonal migration of deprived sections of the societies with family, education of students gets affected badly. Some experimental learning centres such as SAKHARSHALA for sugarcane workers and PASHANSHA-LA for stone crusher workers have been started for the education of deprived communities.

In tribal area, language is a big issue which cuts masses from education. In Gadchiroli (Indian Village), youth started translating the formal text books in Gondi, a colloquial tribal language, which was successful, and tribal students continued in schools that there are three modes of moral reflexivity that have various implications for charitable giving, moral obligations and civil society. First, moral conventionists, who value familial and social networks, use charity events as an opportunity to socialise and to have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society.

The paper draws upon an ESRC-funded investigation into charitable giving that involved 41 semi-structured interviews with men and women of working and middle-class social backgrounds, mostly white interviewees. Each interview lasted on average 2.25 hours, divided into two parts: the first part asked the interviewees to recount their life history, describing the twists and turns in their lives, their personal goals and their everyday practices, and in the second part, they recalled significant acts of giving and volunteering, describing their feelings and motivations.

**SANGHERA, BALIHAR** *(University of Kent, b.s.sanghera@kent.ac.uk)*

*Everyday Morality and Moral Concerns and Their Implications for Charitable Giving in the UK*

This paper examines how individuals are morally evaluative beings, who interpret the social world in relation to things that matter to them, and how charitable acts are embedded in their lives with different degrees of meaning and importance. The paper offers some criticisms of the Bourdieusian theory on giving, which depict individuals lacking reflexivity, emotions and disinterestedness. Drawing upon various literature that view individuals as evaluative beings, I will suggest that there are three modes of moral reflexivity that have various implications for charitable giving, moral obligations and civil society. First, moral conventionists, who value familial and social networks, use charity events as an opportunity to socialise and to have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society.

*Social Justice, Liberalism and Philanthropy in the UK*

This paper examines how charitable and community foundations as normative institutions relate to issues of social justice, legitimacy and accountability. We will argue that grant-making foundations use their resources to support basic liberties and to assist the most disadvantaged groups in society, pursuing a liberal conception of social justice and equality. But there are some tensions and limitations, partly arising from their historical legacy, internal features and structural positions within the polity. Foundations tend to have UK-focused mission statements, operate with minimal accountability, have parastatic endowment and sources of philanthropic donations, have privileged and conservative trustees, and face pressure from the right-wing media. To achieve a Rawlsian liberal form of social justice, foundations have to change their institutional practices and routines, aiming for justice and a socialised and democratic production system, rather than regulating economic and social inequalities.

The paper draws upon an ESRC-funded investigation into philanthropy that involved 34 semi-structured interviews with executive directors or senior project managers of charitable and community foundations and grant-makers. Each interview lasted on average 1.5 hours, divided into two parts: the first part asked the interviewees to describe the history of their organisations, and to outline their current strategic themes and priorities; and in the second part, they explained the use of the concept ‘social justice’ in their organisation. In addition, further interviews were conducted with sixteen participants from the first round either via Skype or emails to collect extra information.

* Becoming Kathoey Prostitute: Voices of the Excluded*

Labeling as deviant has long been imposed difficulties on those who take up Queer gender identity in some ways depending upon to what extent they have technology of self. Even though rainbow movement strives and wins some social space for certain acceptance especially in terms of human rights, still discrimination is reproduced in both private and public spheres. The main argument in this paper is that vicious cycle of inequality prevails. This makes the issue of Queer identity complicated and chains it with an extended long winded problem arisen in the concept of “mobility people”, who are in a state of to maintain their life. Many of them, then, take this path. By listening to their voices and stories using narrative approach, themes from narrative analysis can be concretely emerged to reveal the social conditions framing Thai Kathoey towards it. All in all this paper has a strong desire to propose policy recommendations to attain a total equality goal and to cherish a non-discriminatory process of social diversity inclusion in the society.

*Increased Precarity and Widening Disparity of Youth Transitions, and Inclusion in the Labour Markets*

The Youth Cohort Study of Japan (YCSJ) was a major programme of longitudinal research undertaken to monitor transitions from school to work in Japan from 2007–2011. The first survey was undertaken when respondents were aged 20. The respondents, who were selected nationally through random sampling, were
followed up annually for five years. The achieved sample size and response rates of the YCSJ are as follows: 1678, 40.2 % (2007); 1361, 82.0 % (2008); 1141, 86.2 % (2009); 1009, 90.7 % (2010); 891, 88.3% (2011). Based on the datasets of the YCSJ, we explore four main topics in this paper.

First, we analyse youth transitions to work, documenting the increasing pre-
carity of youth labor markets. Here we have used indices such as low income, irregular jobs, and unemployment, to examine the extent to which vulnerable situations in youth labor markets have expanded. Second, we investigate which cohorts are more likely to become precarious. Against precarity indices, we found key variables of disadvantage in relation to individual attributes, family socio-econ-
nomic backgrounds, residential area, and current jobs were relevant to risk fac-
tors with statistical significance. Third, we consider forms of disparity in working
conditions including work content and developmental opportunities. Here we
find that there remains a significant structural disparity between genders and
amongst transition types in working conditions.

Fourth and finally, we investigate the mechanism of inclusion in the labour mar-
ket. We find amongst most of the transition types, irrespective of gender, that de-
mands for high commitment to work – such as acceptance of long working hours
and heavy responsibility – has increased every year despite an apparent disparity
in many aspects. We propose two key factors to enable inclusion in labour with
high commitment: discretion and participative involvement; and positive human
relationships in the workplace.

SANO, MAYUKO* (Fukuoka-prefectural university, sanomayuu@fukuoka-pu.ac.jp)
Economic, Social Change and Son-Preference in Nepal

The purpose of this study is to clarify the promotion factors of son-preference, such as the neglect of female child, trafficking of girls and the interruption of the female fetus, in Nepal. According to UNDP (2010), the number of the “missing
women” in Nepal is estimated to be about 0.1 million. Republica, local newspaper,
29 Nov 2012 reported that the female population is 2.3 percent less than male
in the 0-10 year age group in the latest census.

In this study, the findings of the ongoing research implemented in seven dis-
tricts in Nepal, during March 2012 –Mar 2014, will be shown. The questionnaire
survey of 1500 men and women both married and unmarried 18-80 year-old
were selected based on a multi-staged random sampling technique. The data will be
analyzed by modified framework of sustainable livelihood approach. This frame-
work consists of three components such as livelihood assets, policy institution
process and livelihood outcome (Chambers and Conway1992). This leads to an-
alyse consequences among these three components. Livelihood assets, further-
more, consist of financial capital, natural capital, physical capital, human capital
and social capital.

Former studies reveals the correlation between the property (financial capital,
natural capital), relatively high educational level (human capital) and son pref-
session (Clark2008; Banerjee2012; Republica 2012). In this study, the correlation
among social institution such as family structure, 5 capitals and son preference,
will be analyzed, in addition to the former studies.

As the result, following three findings have been verified; (1) Even though luck
of some of capitals, those who has variety of network does not tend to be son
preference, (2) Even though abundant in capitals, those who has female family
member who preference, (3) Those who have female family member who
preference, (2) Even though abundant in capitals, those who live in extended fam-
ily, during Mar 2012 –Mar 2014, will be shown. The questionnaire sur
politics investigation, home language, and experience of discrimination on the identity formation
in the theory. This paper concludes by highlighting the impact of ethnic concentra-
tions to the engagement of young female in violent and in criminal activities.

Unequal Identities: The Attainment of National Identity and Ethnic
Identity Among Children of Immigrants in Canada

Despite growing interest in “the new second generation,” quantitative analyses
on the psychosocial adaptation among non-white offspring are limited, especially
in Canada. This study addresses this gap by assessing the impact of ethno-racial
characteristics among children of immigrants on the establishment of self-la-
belled national and ethnic identities using a nationally representative survey, the
2002 ETHNIC DIVERSITY Survey. Results from binary logistic regression suggest that
while white children of immigrants are more likely to form national identity, eth-
nic identity is more likely to be established among their non-white counterparts.
While this is consistent with the segmented assimilation theory, the study also re-
veals that the level of parental education does not explain the results, countering
the theories that involve a dominant approach in Brazil.

The involvement of women in violent actions and criminal activities is growing
in Brazil. Even though, sociologists are not given an adequate attention to this is-
</div>
strategies used by those living in favelas to deal with this reality, having their own perspective as the starting point for our analysis. The narratives of children aged 6 to 8 years old were collected through a discussion on drawings about their families and their communities, and then submitted to the discourse reconstitutive analysis as proposed by Gabriele Rosenthal and Bettina Völter. The biographical narratives of two generations of three families were constructed and analyzed according to the approach proposed by Gabriele Rosenthal. The results showed that using this kind of "insider" approach enables access to new elements for the interpretation of violence experiences, in which the roles of victims and perpetrators are not very and always well defined.

**SANTOS-HERNANDEZ, JENNIFER** (University of Puerto Rico, jennifer.santos@gmail.com)

**Social Vulnerability to Disasters in Puerto Rico: An Outlook of Evolving Structural and Behavioral Forces**

The study of social vulnerability to disasters has generally focused on understanding how social stratification relates to disasters and how social forces can create the possibility of a hazard to become a disaster. Ben Wisner and his colleagues assembled a working definition of social vulnerability as they were studying the famine that unfolded in the Sahel from 1967 to 1973. In the book At Risk: Natural Hazards, People's Vulnerability and Disasters (2004), Wisner and his colleagues defined social vulnerability as "the characteristics of a person or group and their situation that influence their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard". Their definition includes the difficulties and chances that people may encounter as they mitigate, prepare for, deal with, respond to, and recover from the impact of a natural hazard. However, there is no firm definition of social vulnerability. Rather, it can be considered as an evolving concept. Despite its focus on process, applications of the concept of social vulnerability in research often fall short in capturing the elements and dynamics of social vulnerability. This research uses Puerto Rico as a case study in which social vulnerability is conceptualized as stemming from evolving structural and behavioral forces. This research presents a dynamic situational approach to social vulnerability and explores how the practice of emergency management may impact, address, or fail to address the needs of impoverished marginal communities and their contrasting perceptions. The findings provide insights that could assist emergency management practitioners and disaster researchers and practitioners working in the areas of marginality, development, emergency management, bureaucratic change, rationalization, decision-making, and policy making.

**Personal Networks and Changing Openness Toward Immigrants:**

**Social Network Analysis Measurement Versus Traditional Survey Instrument of Personal Networks**

Recent literature underscores the surprising integrative role of the family (DiPrete et al., 2011). The growing heterogeneity of families produce family based social networks that are less segregated on a number of dimensions than other social circles. Heterogeneous family networks might favor changing norms and more open attitudes. The aim of this paper consists in comparing two instruments measuring family networks and in testing their predictive power on norms and attitudes such as the openness towards immigrants. In MOSAICh2013 survey, including both ISSP modules 2012 and 2013 in Switzerland, respondents were asked to answer to two distinct personal network instruments. The first one has a classical survey format and consist to interview respondents on the proportion of immigrants in their family network, on the frequency of contact with the immigrants in their family network and on the quality of their relationships with them. The second instrument follows a social network analyses perspective, letting respondents define themselves the boundaries of their family network, asking about several characteristics of the networks members, such as their nationalities, and finally measuring the complex web of relationships between network members. Results are discussed from the perspective of the strengths and weaknesses of both approaches.

**Green Capitalism and the Global Environmental Policy-Planning Network**

The Rio+20 conference that took place in June 2012 confirmed the hegemony of green capitalism to address the global environmental crisis. Supporters of the "green economy" believe that putting a price on ecosystem services will allow to internalize environmental costs into the capitalist process of production. In the case of climate change, this involves the creation of greenhouse gases emissions trading markets. For their part, critics of green capitalism describe this process, including carbon trading, as the commodification of nature and as a new system of accumulation by dispossession that mostly benefits large corporations with little effect on actual greenhouse gas emissions.

Corporate-led policy-planning groups such as the World Business Council for Sustainable Development or the Global Climate Forum have long been active to promote carbon markets and green capitalism. In this paper, I use a purposive sample of eleven such policy groups as an entry point to explore corporate involvement in the field of climate and environmental politics. At the level of organizations, the analysis of board interlocks reveals the structure of the environmental and climate policy network that links the corporate sector, the NGO sector and the transnational state, and emphasizes the mediating role played by policy-planning groups. At the level of individuals, the linkages between members of the global corporate, political, and scientific elites involved in producing and maintaining environmental knowledge suggest the green capitalist class fact, whose ascendency nevertheless remains highly uncertain.

**School Divide and Social Fragmentation in Mexico**

Inequality seems to be endemic in Mexico. After a decade of moderate economic growth and improvements in some social indicators, the country continues to show very high levels of social inequality. In a context of contradictory trends, a new model of "unequal inclusion," is emerging. Privilege and deprivation exist side by side, ignoring each other and even tacitly accepting each other. Inequality has taken a qualitative leap towards fragmenting the social structure through spaces of inclusion that are not only unequal, but also socially and culturally distant. This paper will explore the contribution of educational segmentation to this broad process of social fragmentation. Access to education in Mexico has increased substantially in the past few decades. Between 1990 and 2010, basic education coverage became almost universal, and the average years of schooling of youth age 25 to 29 increased from 7.9 to 10.2. In addition, there were several constitutional reforms that extended compulsory education, most recently, in 2011, making it compulsory until the age of 12. But, parallel to this process, the educational system has experienced a deep fragmentation. Thus, privileged children and youth attend the same private schools, have more and better resources for learning at school and at home, and receive an education of higher quality and greater variety. Among poorer groups, children and youth also attend socially homogenous schools, but with a more precarious infrastructure and fewer pedagogical resources to support students that come from homes with little social or cultural capital. The consequences of this segmentation are not limited to educational achievement; they extend to school experiences and the meaning of education. During a qualitative fieldwork, interviews and focus groups with privileged and disadvantaged youth in Mexico City, this paper explore the consequences of this process in terms of social fragmentation.

**Transcending Frontiers: A Contribution to Overcoming Instrumental Rationality in Our Relationships with Nature and with One Another**

Environmental sociology is uniquely positioned to analyze the relationships between humans and nature and expose the societal factors that lock our civilization into carbon dependence; it can also analyze why the issue of climate change is becoming increasingly politicized and divisive. Moreover, it can examine how social inequalities—ubiquitous in this era of unemployment and economic decline—compound environmental crises and aggravate the suffering of the most vulnerable. This paper argues that the social and environmental hierarchies prevalent in the world today can be meaningfully analyzed using the theoretical framework of instrumental rationality. In a nutshell, using instrumental rationality means applying the means of reason short-sightedly to solve a problem without considering the larger context—burning fossil fuels to fulfill most of our energy needs is a prime example.

Instrumental rationality has been linked to the drive for self-preservation and using this link as a conceptual tool can offer new insights: The first insight is that—paradoxically—we often hurt nature because we are (partially) from nature; the second insight is that our drive for self-preservation can be easily fused with an apparent and shallow (instrumental) rationality, leading to a substantially irrational state of mind which is very dangerous for nature as well as for other human beings.

The challenge then becomes to find ways to overcome instrumental rationality and this is the main purpose of this paper. It is an arduous task and one that needs to be assumed urgently to help us decouple from the unsustainable path we currently follow.
Until about ten years ago forest had ever been the primary source of income for the community living in the surrounding area of the Halimun-Salak mountain, West Java. This situation has been changing since the government launched the new regulation that prohibited people to get anything from the forest because the area was designated as forest conservation. Since that time the community has been experiencing a decline in their standard of living, especially who were only had the forest as their source of income. Besides, for many years, the community has only been provided by inadequate basic infrastructure (i.e. health, education, transportation) that supposed to be the government’s responsibility. The situation becomes increasingly critical when the people knew that there was a multinational company that has been exploring geothermal energy within the conservation area which has further caused anxiety and uncertainty in local people livelihood. The latest development seemingly has been overlooked by the local government since it has not been taken any significant action to help the people. Moreover, the conflict between local people and the MNC sometime has been raised as critical issues for the economic or political interests of certain actors in the community. Pressures to the company have been increasing since the government regulation stated that the company should perform the social and environmental responsibilities. Based on the ongoing research in the area of Halimun-Salak mountain, this paper analyzes the relation between state, market and society (Martussen, 1997) that might be applied in the case of the production of mun-Salak Mountain, this paper analyzes the relation between state, market and society (Martussen, 1997) that might be applied in the case of the production of mun-Salak Mountain, this paper analyzes the relation between state, market and society (Martussen, 1997) that might be applied in the case of the production of mun-
The aim of the paper is first to present the institutional framework concerning the role of participative action in Greece. The institutional foundation for cooperatives and unions is primarily set by Article 12 of the Greek Constitution, while specific laws provide the role of Social Cooperatives in Greece. After a short analysis of the legal framework the paper will examine the main sectors of activities of NGO's and other bodies (organizations) that belong to the civil society, especially those acting in Athens.

More specifically this paper examines the schemes of the municipality of Athens to promote specific policies and voluntarism in order to contribute to the solution of problems that vulnerable social groups, who live in the city of Athens, face. An emphasis is given both to Law 4071/2012, which concerns the possibility of local authorities to set up social supermarkets, and the possibility of collaboration between local authorities and NGO's and other bodies (organizations) that belong to the civil society, especially those acting in Athens.

In what concerns the practice, we suggest policy makers to pay more attention to the expertise legal requirements for NGO candidates.

Cultures, Strategies, and Organizations for Mobilizing Social Movements: Divergence and Convergence Between Social Movements and Labor Movements

There have been few comparative studies of social movements and labor movements. Social movement studies have examined the conditions, development, and outcomes of social movements using various theoretical frameworks. In contrast, largely driven by Marxist and post-Marxist theories, labor movement studies have often focused on whether and how workers have organized themselves as a coherent force—i.e., as a class. In brief, in labor movement studies, workers' movements have often constituted a sub-topic of the study of class, and the ways workers have organized as workers. But how exactly do these two movements differ? Or what do these movements share? By examining a Japanese social movement, the protest against the revision of the U.S.-Japan Security Treaty (commonly referred to as the 1960 Anpo protests, named after the acronym of the treaty in Japanese), this paper explores divergence and convergence of movement cultures, ideologies, and strategies, and the organization of social movement and labor movement groups. I compare two groups that participated in the 1960 Anpo protests—the Bund, a new left student movement group that became prominent during the 1960 Anpo protests, and a new left faction of the Osaka Central Telegraph union that became prominent among new left labor unions in the 1960s. This paper argues that despite similarities in ideology between the two groups, external constraints on their organizations shaped different strategies for mobilization. Furthermore, the two groups never merged nor worked together, although they explored possibility, despite their common political goals and similar ideologies. This was due to intergroup culture differences, as well as problems with mutual trust acting as a wedge between them. The empirical data collected from interviews, for instance, show that while knowledge was a key issue for mobilizing student movements, trust was a key issue for organizing the workers' movements.

Alternative Art-Production Networks in Lower Manhattan in the 1960s-1970s: An Organizational Account of the SoHo's Gentrification

This paper deals with an early period of an artists-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo's gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolical and institutional boundaries of art districts. These former studies contributed to examined that the artists' spaces and their aesthetic images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo's gentrification: alternative arts-production-networks in downtown also critically contributed to construct physical and symbolical bases there.

In order to explore this issue, I will focus on artists' activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourishing of art museums and commercial galleries in urban areas. These artists' strategies and organizational forms of art productions contributed to the emergence of art production-networks in downtown. Analyzing the arts-productions-networks in downtown in the 1960s and 1970s, this paper focuses on especially collaborative galleries and alternative spaces. These alternative arts venues were critical aesthetic bases in SoHo.
Historical Overview of Migratory Flows Between Brazil and Japan

This paper will present an historical overview of the migratory flows between Brazil and Japan. The first part discusses the immigration of Japanese to Brazil at the beginning of the 20th century. During this time, their presence in the country sparked a heated debate among the politicians of the Brazilian elite as to whether or not they should be accepted. The Japanese were labeled as “not white”, an undesirable state according to the eugenistic policies of the time. At the same time, Japanese government closely accompanied the entire migratory process, helping to establish the Japanese immigrants in Brazil. In the second part, I will focus in the inverse route, upon the ending of the 20th century and beginning of the 21st century, when Brazilians of Japanese descent began to migrate to Japan. They were favorably contemplated in Japan’s 1990 immigration reform law, a factor which contributed to the increase of the population, especially during the first half of the 1990s. From that time on, the Brazilian presence began establishing itself and consolidating social networks within the host country, losing sight of its original temporary expectations and intensifying the flow of people moving between Brazil and Japan. However, after more than two decades, the Brazilian population in Japan began decreasing in 2008. At this time, the world financial crisis resulted in a rising unemployment and one third of the Brazilians in Japan returned to Brazil. They are facing great difficulties as they try to reinsert themselves into a new or different social and cultural reality in their own homeland, encountering problems in linguistic and educational fields as well as the local labor market.

The Meaning of the International Marriage in Korea

Nowadays in Korea, international marriage has increased since 2000 rapidly. Increase in this international marriage is not the change of the marriage from the influences of globalization. Because Korean people have protected their blood principle rigidly for a long time. It is a big change increasing to international marriage in Korea, and it is shaking now family value from the bottom.

In this report I ask why has international marriages increased in Korea rapidly these days? Also, who and why do people choose an international marriage? I pay attention to the change of the marriage and the family in Korea today and intended to consider the meaning of international marriage.

This study developed the result of the data analysis of the census (1995, 2010) that I analyzed before. In the former analysis, I compared the change that was in the marriage form with the census of 1995 and 2010 according to sex, age, and educational background. The result implies from the rapid increase of international marriage today in Korea that it is due to the increase in high educational background of the woman from the 1990s and the economic power drop of the man from the late 1990s. Based on these findings, I will include variables such as economic activities state, occupation, occupational position and compare and contrast according to the man, woman and combination of couples who chose international marriage using census data. Furthermore, I will use the “dynamics statistics data” and cast the education level between the couples who married a person from a different nationality, the variable such as the nationality of the partner and consider the meaning of the international marriage in Korea these days by clarifying the sociodemographic characteristic of the couple who choose to international marriage.

Expulsions: When Complexity Produces Elementary Brutalities

The past two decades have seen a sharp growth in the number of people, enterprises, and places expelled from the core social and economic orders of our time. This tipping into radical expulsion was enabled by elementary decisions in some cases, but in others by some of our most advanced economic and technical achievements. I use the notion of expulsions to go beyond the more familiar notion of growing inequality, and get at some of the more complex pathologies of today's global capitalism. It brings to the fore the fact that forms of knowledge and intelligence we respect and admire are often at the origin of long transaction chains that can end in simple expulsions.

The talk is based on Saskia Sassen's forthcoming book Expulsions: Brutality and Complexity in the Global Economy (Harvard University Press 2014)

Wandering Career Paths Among Japanese Youths: An Analysis of Jgss Life Course Study

In Japan, there had been a standard life model that many youths follow. Once students entered the labor force, their full-time employment was virtually guaranteed until retirement. Since the mid-1990s, however, many young Japanese did not (or were unable to) follow this standard life model. Increasingly, Japanese youths have started their careers as contingent employees. For many younger adults with unstable careers, incomes did not grow, and thus the gap between regular employees and contingent employees expanded. In addition, for many Japanese, marriage and childbirth became no longer an ordinary path of life.

The goal of this study is to illustrate diversified career paths of Japanese youths and investigate the causes and effects of the career paths. The Jgss Life Course Study contains detailed life history, including educational background, work experience, marital record, with a national sample of men and women aged 28 to 42. Mixtue modeling with longitudinal data was employed to classify Japanese career paths. In this model, retrospective data were treated as if we collected types of respondents’ employment each year.

Food Sovereignty and the Solidarity Economy Alternative

This paper explores the relationship between food sovereignty and the solidarity economy. It brings out the extent to which food sovereignty as an attempt to address corporate control of food systems, engender adaptation to and mitigation of climate change and ensure popular control of food systems embraces and articulates with the solidarity economy. The solidarity economy in this paper is not understood as a codified definition but rather a transformative practice emerging from below with an emancipatory utopian dimension, a new conception of community power and a commitment to deepening democracy. This exploration is carried out through the prism of two case studies. The CECSOSA worker cooperative movement in Venezuela and its attempts at popular control of a food economy and the emergent food sovereignty movement in South Africa.

SATO, AKIHIKO* (Fukushima University, tsoo@sa2.so-net.ne.jp)
Structure of the Issues Surrounding the Nuclear Accident Evacuees: What Has Been Revealed While Supporting Town Meetings

Since August 2011, "Tomioka sub group" of the Sociology Study Group of Large-scale evacuation (representative YAMASHITA, Yusuke) has been conducting interviews with Tomioka town residents in Fukushima Prefecture that were forced to evacuate from their home town due to the Fukushima Daiichi nuclear accident. While supporting town meetings organized by stakeholders, we recognized the following issues clearly:

1) Problems that evacuees have faced are complex and very extensive.
2) However, those issues are not correctly recognized by policy makers.
3) Therefore, the present policy does not effectively relieve the affected people.
4) As regional restoration plans were decided hastily, the problems of the affected people deteriorated.
5) The problem of Japanese legal system which surrounds local autonomy is behind such issues.
6) In addition to these issues, it is not possible to deny the existence of public opinion to boost the seriousness of these problems.

As these issues are caused by the deviation between the premise on current reconstruction policies and problems that nuclear accident evacuees are facing, the situation might lead to collapse of the current policy and municipalities. In order to improve the situation, the following initiatives are required: survival and continuation of the affected communities, feedbacks from communities to decision makers by way of the town government, and long-term policies that take account of the lifestyles that vary as time goes on.

Women’s Empowerment Beyond ‘Smart Economics’: A Transnational Feminist Perspective

Since the economic crisis of the last decade, integrating women into development has become the major ‘smart economic’ strategy. UN Women states that ‘equality means business’ and the year 2012’s World Bank report set gender equality as their top priority. Today, in the global South, Northern private corporations, like Coca Cola, aim to empower women in their value chains or at ‘the bottom of the pyramid’ by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming ‘ethically’. Critical feminist scholars separately argue that each approach may be functional to structural inequalities. However, from a comparative perspective, both approaches involve women in market-oriented activities, see women as caring mothers and responsible consumers and frame investment in women as ‘smart economics.’ In order to strengthen existing analyses, ‘ethical consumption and southern livelihoods’ were presented thus far separately by feminist scholars, should be studied together. Such a study will, necessarily, be transnational and will draw on the theory and methods of both those who study the Northern consumer society (e.g. lifestyles and marketing) and those who focus on low-income societies (e.g. sustainable livelihoods).

This paper uses a transnational feminist perspective to examine existing feminist literature in a comparative study of the practices through which women generate livelihoods and the lifestyles women produce through their participation in Northern corporation led market-oriented development activities. This paper links inter-related constructions of mothers in the North and South in order to generate and test the foundations necessary to later study empirically if and how market-led corporate sponsored ‘smart economic’ development approaches obscure and/or transform structural inequalities in the name of women’s empowerment.

SATO, HIROKI* (The University of Tokyo, hiroki@iss.u-tokyo.ac.jp)
Atypical Employment in Japan

The aim of this panel session is to outline the changing practice of the Japanese employment system. The Japanese system has been classified as an "organization-oriented", the key feature being the security of long-term employment within the same firm. The main feature of the Japanese industrial relations system is the enterprise union, which appears to have reinforced the employment security. The Japanese practice of offering new recruits work straight after completing their education enables students to immediately begin their work-life as ‘regular employees’.

The Japanese employment practice, however, is also faced with different employment practices of other countries due to globalization, and it is becoming more difficult to maintain the high level of job security for various types of work in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

Shifting Risk Perception after Shocking Events: Counter-Terrorism in the United States and Energy Policy Change in Germany

Risks are not objective "facts" that are directly experienced. Our risk perception not only changes in social and political contexts but is also mediated through pre-existing cultural patterns. By investigating an American and a German case, we would like to show how shocking events bring about decisive shifts in our risk perception and governance and how specific cultural patterns frame those shifts. In both cases, a minimal risk ceased to be a mere theoretical possibility and turned into a real "threat" which imposed a political "necessity" to act. After 9/11, the hypothetical "ticking bomb scenario" became a matter of national security that justified US-led wars, US detention and interrogation policies as well as extensive global surveillance. The anticipated threat of terrorists in possession of biological or nuclear weapons had to be averted – whatever it took. Similarly, the shocking accident at the Fukushima nuclear plant following the big earthquake and tsunami of March 2011 caused a profound impact on nuclear energy in Germany and changed the government policies. A "residual risk" (Restrisiko) of nuclear energy, which had thus far been regarded as controllable by means of science and technology, became an allegedly life-threatening danger to be eliminated at all costs. But these discursive and political shifts cannot be thought of as a direct consequence of these events. It is rather the specific framing of events in particular national contexts that leads to shifts in risk perception and governance. This is particularly clear in the German case: the recent energy policy change was mediated through a discursive pattern of nuclear resistance, which is deeply rooted in the German political culture. Similarly, the American response to 9/11 was shaped by national memory and popular culture, for example "Pearl Harbor", the "phantasm of bioterror" and the "law-defying hero".

SATO, SHIHO* (The Norwegian School of Sport Sciences, shiho.sato@nih.no)
Health Discourse, Ruling Relations and Work Knowledge

Research in Institutional Ethnography (IE) has increasingly shown how institutional discourse frames the way individuals think and act within their everyday practices. For example, Luken and Vaughan provide compelling evidence that state-affiliated organizations created a discourse about family housing that structured parents talk and actions concerning their living arrangements (2006, 300). This further highlights those ruling relations that served to organize parent’s daily life.

This presentation will argue that an analogous case can be made in relation to modern discourses involving the use of ‘health’ and ‘physical activity’. It focuses on the case of rural female workers who live outside the mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
is to explicate some of the ruling relations that organize work activities in relation to women's health in these different cultural settings.

A key resource for this research is the concept 'work knowledge'. 'Work' in IE points to anything that requires time and effort, that is conducted under specific conditions with specific resources and which may need to be thought about. This view helps the institutional ethnographer stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the kind of work and physical activity that they engage in. I further demonstrate how in these rural communities and the kind of contributions that women make in these environments. My aim will be to show how work is largely absent from these females lives but that physical activity is central for how they conceive of their work and health.

A key resource for this research is the conception of 'work' found in institutional ethnography. In IE 'work' points to anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about. This view of work helps researchers to stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in such rural settings work, health and physical activity are interconnected and not isolated as in their urban counterparts. The importance of a healthy lifestyle is then a product of the physical activity that is part of their overall work life and is not derived from sporting activities or government policies and recommendations.

SATOH, KEICHI* (Akita International University, ysatoh@aiu.ac.jp)

Japanese Climate Change Discourse Coalitions

The presentation shows the Japanese discourse and discourse coalition on climate change based on the content analysis of main newspapers. For the analysis, our Japanese Compon team engaged in the following: (1) To follow historical changes to the discourse, we sampled articles from 1985 to 2006 from one of the largest progressive national newspapers, Asahi Newspaper. (2) To analyze in more detail the structure of the current discourse, we used two other main newspapers in addition to Asahi newspaper for articles published between 2007 and 2009, the Nikkei economic and Yomiuri conservative newspapers. The results of our analysis indicate the characteristic features of the Japanese discourse on climate change. The majority of articles do not cover the views of skeptics with regard to the existence of the climate change problem. In addition, there appears to be an overall agreement within Japanese society on the need to save energy. The main flow of the discourse is along the lines of how climate change is framed within the broader context and measures to be taken. One side of the discourse coalition, which is primarily lead by the Ministry of Economy, Trade and Industry, and industrial sectors frames the problem in the context of energy itself. Accordingly, this coalition essentially pursues the improvement of energy use efficiency through voluntary action and the shift to nuclear energy sources. The other coalition, led by the Ministry of Environment, a progressive newspaper, and NGOs—though their coverage in the media is limited—recognizes the need for a more structural change toward a more sustainable market and industry. Historically, this coalition gradually imported policy ideas from other countries, such as green tax, emission trade, and feed-in tariffs, some of which were introduced by the DPJ government between 2009 and 2012.

Infrastructure for a Post-Nuclear Society: From the Survey on Japanese Civil Society Organizations in Nuclear Energy Policy Domain

Despite the unclearness of the Japanese government's attitude toward the future of Japanese energy policy, I will argue in this presentation based on the empirical research results that the condition for the post nuclear society is emerging in the Japanese civil society.

Keiji Takeuchi, a journalist at Asahi newspaper, states in his book that in order to create a nuclear society, supports from both institution and public opinion are needed, and he continues, that of importance is the existence of the civil organizations which continually appeal to the publics and connect citizens with...
understanding of factors influencing CE drug use. They support the assumption found for the severity of side effects, social recommendations about using CE environment that strongly disapproves of these drugs decreased it. Regarding the achievement this amplification increased respondents' willingness to use CE drugs. A graphic controls were also measured.

-Selected disciplines and German universities. Via a factorial survey, respondents brain capacity by using an extended version of the Rational Choice Theory (RCT).

Drivers of and obstacles to the non-medical use of prescription drugs to augment production labor . In such a dilemma, what kind of compromise do housewives have? To clarify the question, I paid attention to “Sakka-san” and their group who are not only housewives but also making and selling handmade goods which are fabric accessories, leather crafts, woodworks, knits, etc. I investigated the reason of the only housewives but also making and selling handmade goods that are fabric production labor.

The aim of this presentation is to clarify and better understand the relation between production labor and reproduction labor. I focus on Japanese housewives who make handmade goods and sell these. Since enforcing Basic Law for a Gender-Equal Society at 1999, the Japanese Government switched a “kind treatment” policy to the housewife and has aimed at making women work force. But it is difficult to continue working due to not only the heavy burden of parenting but also the unsupport system of raising children.

Cognitive enhancement (CE) via pharmaceutical agents has been intensively recovered from a disarray with measuring radiation level. Consequently, they widened the context of the nuclear energy related issue and broadened the connection between civic life and policy. Thirdly, those organizations discuss the policy based on data and information and sometimes collaborate with public sectors, which are crucial criteria for the post nuclear society. Fourthly, however, a coalition between the organization of experts and they succeeded to set a clear enemy such as the government and TEPCO, but they do not share the concrete image of post new clear society.

Loud Rebels: Politics Of ‘Revolutionary Women’ In Kyrgyzstan

Drawing upon Bourdieusian class analysis and Andrew Sayer's ideas on social class and lay normativity, this paper explores how class, emotions and moral worth shape everyday politics in southern Kyrgyzstan. The research paper focuses on so-called ‘revolutionary women’ (also derogatively referred to as OBON - Otryad Bab Osobogo Naznachenii (Women Units for Special Purposes)), who have emerged as a visible and vocal political group, often engaging in protests and sit-ins. The study shows how this group of stigmatized women capitalizes on their limited symbolic capital as ‘elderly mothers’, class emotions (such as shame, anger and resentment) and moral worth and egalitarianism to counter the neoliberal policies and domination in all spheres of life. The paper argues that class and moral sentiments are an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data collected in southern Kyrgyzstan that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

Why Class Matters In Kyrgyzstan: Everyday Experiences, Class and Moral Sentiments

Contemporary Central Asian literature on society and politics face two significant problems: first, an absence of class analysis of everyday practices; and second, reductionist accounts of human agency that are devoid of moral emotions and deliberations. Drawing upon Bourdieu’s class analysis and Andrew Sayer’s ideas on social class and lay normativity, this paper examines class and moral sentiments among poor rural migrants and working and middle classes in southern Kyrgyzstan. The paper will focus on how different groups (such as rural Kyrgyz migrants and the so-called ‘revolutionary women’) view each other and negotiate claims for economic resources and recognition. I will also discuss the ethnicized violence between ethnic Kyrgyz and Uzbeks in June 2010 in Osh in terms of class and recognition. I will argue that subjectivities and identities in Central Asia are class-based and cannot be reduced to ethnicity, class, and localities. Furthermore, moral sentiments and evaluations are examined as an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

Comparing Climate Policy Networks in the Germany and the UK

This paper compares, contrasts and accounts for the different outcomes of the climate policy networks of two western industrialised nations: Germany and the UK. Both are generally considered to have undergone changes in their environmental policy discourse from end-of-pipe solutions to more integrated forms of environmental management associated with ecological modernisation. Yet the two countries differ in terms of their climate policy networks. In Germany, the most influential policy actors are drawn mostly from policy arenas, industry and science. This is typical of what we might expect under conditions of ecological modernisation. In the UK, in contrast, the most influential actors represent either government or quasi-governmental institutions or the NGO sector. The UK has probably the most ambitious climate change legislation across the world, instituted in the Climate Change Act (2008), which calls for cuts in carbon dioxide of 80% on 1990 levels by 2050. However, little serious effort is underway to make headway towards achieving the targets. Thus, climate policy in the UK represents what one might anticipate given the nature of the policy network: the presence of strong advocacy coalition calling for large-scale cuts in GHG emissions, but one that has relatively little influence compared to climate policy networks in Germany, less ambitious targets for reducing emissions and a set of more disparate and fragmented ways to tackle climate change and the different roles played by different actors in the policy network. The study shows how this group of stigmatized women capitalizes on their limited symbolic capital as ‘elderly mothers’, class emotions (such as shame, anger and resentment) and moral worth and egalitarianism to counter the neoliberal policies and domination in all spheres of life. The paper argues that class and moral sentiments are an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data collected in southern Kyrgyzstan that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

Handmade Housewives: Between Production Labor and Reproduction Labor

The aim of this presentation is to clarify and better understand the relation between production labor and reproduction labor. I focus on Japanese housewives who make handmade goods and sell these. Since enforcing Basic Law for a Gender-Equal Society at 1999, the Japanese Government switched a “kind treatment” policy to the housewife and has aimed at making women work force. But it is difficult to continue working due to not only the heavy burden of parenting but also the unsupport system of raising children. Therefore women cannot help being a housewife through a birth. In other words women hold dilemma between the difficulty to participate in production labor by child care and the pressure which they should do production labor. In such a dilemma, what kind of compromise do housewives have? To clarify the question, I paid attention to “Sakka-san” and their group who are not only housewives but also making and selling handmade goods which are fabric accessories, leather crafts, woodworks, knits, etc. I investigated the reason of the act why they produce and sell goods through the field work to them. As it turned out, it might be the act from the gender division of labor at first, but they transcended that unawares and present the new way of labor to us.
The Changing Profiles Of Inequality and Exclusion In Australia

Despite evidence that income inequality has increased and is of community concern, Australian policy makers have emphasised their commitment to the Fair go' but recent features in political debate, reflecting the fears of a voter backlash in the face of reforms that involve losers as well as winners. Both major parties favour ‘growing the pie’ over ‘dividing up the slices’ yet fail to recognise that even a larger pie must be distributed fairly. Establishing how inequality has changed is complicated by definitional changes that have undermined the comparability of income distribution data, and the confusing picture portrayed by public opinion data on attitudes to inequality provides little guidance about how much actual redistribution (as opposed to how little inequality) the community is prepared to support. The emergence of social inclusion as a policy priority has given new impetus to the need for redistribution policy to incorporate the concern for social exclusion, although this relationship is poorly understood conceptually and inadequately documented empirically. This paper draws on a range of survey data to examine recent trends in different dimensions of economic inequality and social exclusion in Australia. Attention focuses on how the profile of social exclusion varies across the income distribution, on the extent and nature of exclusion-inequality itself, and on the way that these two measures (in isolation and in combination) and the subjective well-being of those affected. The paper will conclude with some reflections on the implications of the emergent of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

Contesting Time and Space in Istanbul: Differential Civic Activism in Urban Development

The paper explores the re-appropriation of urban space as a practice of collective contestation against established frames of time and space in urban policy making. Crisis and uncertainty in the governing of urban form have showed the spillovers of a rational model of spatial organization, based on long term future prediction of city growth and supply-oriented urban policy making. Civic society and urban users have been generally regarded as customers or users of urban space, which sometimes become choreographed practices of cooptation. We argue that contemporary urban policy making are too much framing urban agency as a ‘governmentally designed object’, through preconstituted notions of space and time despite few attempts to enable self-organization. These linear models of space and time are evident in consolidated policies of urban development, that compartmentalize collective action into rigid boundaries of intervention and programming timelines. The paper explores the features civic political activism as a practice of opposition against these space-time frames in urban policy making. It defines urban activism as the creation of ‘differential time-space frames’, driven by the objectives to manipulate ‘time’ and ‘space’ of urban intervention. These borders constitute the major coordinates of contested urban agendas. The paper discusses how practices of creative resistance are targeted at governmentally defined time-space borders and underline that emerging conflicts lead to specific problems, which we call of spatial disaggregation. Evidence suggests that frames are not driven by preconceived policy frameworks, but emerge as responses to specific policy decisions. This paper concludes with some reflections on the implications of the emergent of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

ICT As a Communication Tool for Older People (aged 80) in an Urban Area

While ICT (Information and Communication Technology) has been spreading dramatically in Japan, little is known about how seniors use it as a tool to communicate with non-relatives.

The authors conducted interviews with residents (aged 80) of Suginami City, Metropolitan Tokyo, in October and November 2013, regarding communication with non-relatives. A total of 513 people responded.

About 60% of the respondents met and spoke with “friends” and “people they have known from childhood”; men were more likely to do so than women. In all types of relationships, a conventional phone was the most popular choice as a usual communication tool, followed by “letter” for “people they have known from childhood”, as well as “face-to-face meeting” and “cell phone” for “friends” and “people in the group they are members of.” In all types of relationships, 10% of the respondents chose “e-mail.” Men were more likely to send e-mails from a computer.

In North American urban sociology, there is great interest in how the faster communication, resulting from the increasing availability of affordable and efficient transportation and ICT, affects interaction among individuals. As the usage of ICT becomes more common among seniors, the ways the very old persons communicate with others are also expected to change.

SAYÃO LOBATO COPPETTI, CAROLINA* (Ministry of Social Development, carolocoppetti@gmail.com)
Social Policies and Political Identity: Analysis of Bolsa Familia Program in Brazil

There are few studies analyzing how policies impact on political identity construction. Following the cognitive approach in policies, recent studies show that State actions creates new social actors: individuals that become beneficiaries but who didn’t constitute their identities in relation to the State before. Therefore the State is a space of cultural and symbolic production, where new identities are constructed and new political lessons are learned.

The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contents that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policy designs. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, govern and public approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way beneficiaries understand themselves and their space in the political sphere.

This paper analyzes the social construction of image between beneficiaries from the national conditional cash-transfer Bolsa Familia Program in Brazil as a dimension of the political identity. It analyses the role of the State, the media and social representation. The research examines effect of family structure, household socioeconomic well-being and elderly chronic quality of life that measured from chronic illness. The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Findings shows that the elderly who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and lonesome when compare to those who live in extended family. Family support is more likely depending on household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would to receive government need to have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elderly, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.

This people are not a homeless person. They are Thai. But they may lose their household registration form.
A New Middle Class? Challenges for Inequality in an Emerging Country

The changes in the contemporary world have been quick and frequent, particularly in countries considered as emerging nations. They have an impact on the living standards and consumption, creating new social groups, resulting from those dynamics. Recently in Brazil, the debate on the emergence of a new class "average" gained relevance and academic crossed the borders, having an enormous impact in the public arena. Some economists define this "new middle class", from their income. While recognizing the importance of this element in the study of inequalities, the concept of class demand more complex analyses that include socio-occupational factors, as well as perceptions, values, expectations and worldviews regarding personal projects and processes of distinction.

As the task of studying multiple and varied dimensions of social life can not be restricted to a specific focus, either theoretical or methodological, we have been working with quantitative and qualitative methodologies. The work we propose to present is based on the fieldwork we carried out in Rio de Janeiro with individually who fall into the two groups that we are defining "traditional middle class" and "new middle class". Our goal is to understand their trajectories, as well as, their projects for maintaining or improving their live conditions in the future.

Multilevel Climate Governance In Europe: Are Cities Undermining Nation-States Role In Climate Policy?

Global environmental problems are increasingly showing the nation-states lack of will, as well as their inability, to take the path of sustainability. Climate change is probably the best example of the downsizing role of the nation-state in the pursuing and diffusion of environmental policies and actions. That's the case in Europe, where the European Commission is becoming a global leader in this field, and, at the same time, an increasing number of cities and regions are getting involved in climate governance. Furthermore, climate initiatives like Covenant of Mayors are showing how sub-national and supranational institutions interact with each other by circumventing national governments. Starting from these considerations, this paper presents an empirical study on the involvement of Italian cities in the Covenant of Mayors, a multi-level governance perspective, its aim is to understand the role of the nation-state with respect to that of a supranational institution like the European Commission. Our results show that the inaction of the Italian government in the past years related to environmental and climate issues, as well as the proactive role of the European Commission, explain the massive participation of Italian cities in the Covenant of Mayors. The Italian case is paradigmatic, to the extent that of 5000 signatories of the Covenant, half of them are Italian. However, even if the role of Italian cities in climate and energy sectors is shifting from that of policy-takers to that of policy-makers, and that what it means to be the "state" is being reconfigured and contested, the nation-state remains a key actor, notably with respect to national policies that can foster and strengthen local and global climate actions. Nation-states scope and powers remain crucial in climate policy, and the day when local institutions take their place in the environmental domain still seems distant.

The Standardized Transition to Parenthood: How Standardized Practices Produce Gendered Subjects at the Transition to Parenthood

The transition to parenthood in Austria is constituted through a set of standardized practices that includes medical care, legal processes, public discourses on women's health and decisions around public aid affect every pregnant women and most of their partners. In Austria the transition to parenthood leads to more traditional role configurations and to an increase in unequal distribution of labor. However, women in Austria are in general highly educated, have full access to the labor market and value and demand gender-equality, it seems crucial that throughout all levels of education women experience a retraditionalization of gender roles during the transition to parenthood. A focus on standardized practices is a sufficient way to show how even highly educated, career oriented and bread-winning women become non-working mothers. The lack of employment returns to education: Because education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

Using data from the German Microzensus 2006-2009, we show lower educational employment and income returns for first and second generation Spataussiedler as well as persons of Italian, Greek and Turkish origin as compared to native Germans. Results of simultaneous conditional quantile regressions show similarly stark percentile and median differences for first and to a lesser degree also second generation immigrants. Missing language skills and social capital seem unlikely candidates, given the equal pattern of differences for different percentiles. Yet, these differences in educational returns are largely accounted for by the larger degree of undereducation among persons of immigrant origin. The results also show that lower returns to education have two sides of a coin: The returns to education are lower, but the lack of undereducation are less disadvantageous. If education counts less, so does its lack.

We Have Never Been Individuals – New Materialist Ethnography

In 2011 I finished an ethnographic project on the transition to parenthood from the perspective of new materialism (Schadler 2013a, 2013b) and started another empirical project on definitions of family from this perspective. My talk will summarize the theoretical principles and onto-epistemological foundations of these theories and how they are transformed into an apparatus (Barad) that act as a tool for actual empirical research. I will also discuss how the researcher, research and a research field are established within this process. Theoretically we can perceive the researcher as a subject acting on a filed, but the researcher is becoming with and figured with it during research. However, this process is also producing research outcomes, which are therefore not a product created by the actions of the researcher, but a part of the practice of researching. The researcher is formed as the part of the practice that assembles outcomes and provides them in writing and talking to research communities.

In particular I rely on the work of Karen Barad, Rosi Braidotti, Donna Haraway and Stefan Hirschauer. In my talk I also want to provide information how I derived a concrete method of analysis from the principles of new materialism. To collect data I used interviews, observations, documents and self enactments. For an analysis I developed a coding process, that reconstructs practices and the establishment of the boundaries, which separate components/participants in order to make them perceivable. The consequence is an ethnographic transcription of the figurations of interest (e.g. becoming parents) and the worlds they are becoming with. The researchers' tools become an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the "object", while we study how the object is figured.

Ethnic Inequalities in Educational Returns: Overeducation, Language Skills and Social Capital

According to existing studies, the persistence of ethnic inequalities on Western labour markets is largely due to ethnic differences in educational attainment. Empirically less important, but socially more relevant are differences in educational returns: why is education less beneficial for immigrant minorities in meritocratic societies? Apart from taste based and statistical discrimination, we argue that missing language skills and a lack of social capital could explain why immigrants and their children cannot make full use of their education. For income, we additionally argue that "lagged" consequences of lower employment returns to education: Because education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

The All-Pervasiveness of Racism in Germany: Difficulties and Challenges in Addressing Racism

Racism is a societal imbalance relationship which structures social order, with social practices of difference, the construction of social groups and social meanings and inclusions and exclusions.

When looking at the mechanisms, attributions and manifestations of racism in Germany, global, European and national “lines of tradition” and histories of racism have a powerful effect. If one speaks about racism in Germany, its specific expressions and effects, the history of racism in Germany needs to be taken into consideration.

Studies show that racism today is institutionalised. For example in state employment agencies with regard to social security allotment or in institutions of education and social work and in the actions of professionals (Melter 2006, Fläm 2007, Gomollia/Radke 2007).

The focus of this paper will be on a reconstruction of a racist normality in Germany, constantly present as a societal relationship in the every day life of people to whom a migration history is attributed, as everyday occurrence and manifest-ed in normalized practices of differentiation, isolation and exclusion. The analytic perspective of this paper will be on the subjective experience and interpretation and consequent strategies of action and negotiation of young people, whose everyday life is negatively impacted by racism.

In the international context of the conference it will be interesting to discuss with other researchers different theoretical visions to normative orders of racism and their influence on today's understanding of and acting on racism in the world.

The research presented in this paper is based on group discussions, and problem-centred interviews with eight young adults (age 14-20). Part of the data was collected during a 4-day workshop with young adults with a migration background, where reflections and discussion about experiences and strategies among participants took place.

The Belgian Health Care System. General Practitioners and Medical Specialists

9/30/2013

The Belgian health care state: general practitioners and medical specialists

Prof. Dr. Rita Scheipers, Centre for Sociological Research (CeSo), KU Leuven, Belgium.

Klein (2000) described the health care state as different from the welfare state because among other reasons, the medical professions are service professions with high specialized knowledge and also because of medical technology is advancing rapidly and creates demand.

In Belgium, the sickness funds play a crucial role. (In modern terminology, the purchase of care).

The paper will briefly introduce the role of the sickness funds in Belgian health care. Then, the attention will be focused on the professionalization processes of doctors in medicine, surgery and gynecology. (Original title in 1849). Specialization processes started already in the 19th century but the coming into prominence of medical specialists started after the second World War, together with the introduction of obligatory health insurance (1944). The already existing rivalry between ‘general practitioners’ and medical specialists became very prominent. A sort of solution was reached at the end of the 20th century. In the meantime the position of general practitioners has improved.

Life-Course Influences on Paid Work Beyond Retirement Age: Quantitative and Qualitative Evidence

Work post retirement age is on the rise in many Western countries. Our contribution aims at shedding light on the factors driving post-retirement work in Germany and the UK. Our perspective is cross-sectional, but will nonetheless focus on individual life-course influences on post-retirement work. Regarding these influences, two intertwined areas can be distinguished: influences connected to the employment history, and influences connected to the family and the personal network.

As to employment histories, they shape the ability, the opportunities and the desire to work beyond retirement age in different ways. However, the underlying patterns are not unidirectional: On the one hand, interruptions and non-standard employment are related to lower old-age incomes and a potential higher desire for additional income in old age – a relationship that is at the same time differentiated by the specific institutional setting. On the other hand, a continuous employment career, especially in higher occupational classes, seems to be connected with better employment opportunities in old age and a stronger work identity. The latter relationships are also mediated by family histories. Additionally, family histories and personal networks also constitute important independent influences.

The contribution will first present quantitative evidence on these relationships, based on the English Longitudinal Study of Ageing and the German Ageing Survey. In a second step, evidence from qualitative interviews with working pensioners from the UK and Germany will be presented. This evidence helps to elucidate the (complex) subjective mechanisms behind some of the quantitative relationships. The interviews suggest that the experience of work beyond retirement age is overall positive, with paid work being seen as a way to do something meaningful, to stay in touch with other people, or to structures one's day. In the final discussion these results will be connected to the country-specific debates around work in old age.

SCHIFF, CLAIRE* (Université de Bordeaux, claire.schiff@u-bordeaux2.fr)

Naming and Framing the 'problems' of Minority Youth. a Comparative Analysis of Teachers' Discourse on Ethnic Difference in Europe

To what extent are teachers’ perceptions of ethnic minority students influenced by the national framework of majority-minority relations and the educational tradition prevalent in their particular country? The paper will address this question using some of the result from the E Dumigro comparative project on focus groups and Roma minorities and secondary-schooling which was carried out in nine western and central European countries. By adopting an analytical framework informed by comparative education research, it will analyse how teachers in the various countries approach the “problems” of minority students and the arguments they put forth in order to explain the situations and attitudes of these students. Different dimensions of alterity (racial, cultural, social, linguistic) and the labels used by teachers to name minority students, as well as the arguments put forth to make sense of the difficulties and challenges they encounter in schools with high concentrations of ethnic minority, vary widely depending on the national and to a lesser extent the local context. While in certain situations, such as those encountered in Germany or in most of the Central European countries, teachers emphasise divergences in cultural and educational styles between minority families and the dominant group, in other contexts, such as in France or in the Scandinavian countries, school personnel downplay such issues, focusing rather on minority students’ disadvantaged socio-economic backgrounds or on their particularities as bilingual students. The paper will underscore how much the frameworks for discussing, explaining, and resolving difficulties in school based inter-ethnic relations vary between countries. For this reason the experiences of minority students offer insight into the cultural traits of the majority society, since they reflect both the national history and institutional frameworks of minority-majority relations and the manner in which student-teacher relations are conceived within the particular society.

Nato’s Quest for Greater Operational Effectiveness: Concordance Theory and Civilian-Military Personnel Relations

Many defense organizations are comprised of both military and civilian personnel working towards the realization of defense goals. Civilian personnel in defense organizations often work closely with their military counterparts. The issue of civilian-military personnel collaboration within defense organizations is an important issue that affects both operational and organizational effectiveness.

Personnel collaboration also has significant impact on civil-military relations theory. Civilian and military institutional separations has been the hallmark of the civil-military relations field since the post-World War II era. Focusing on the need for greater collaboration among civilian and military personnel in defense organizations challenges the traditional focus on separation. Objective civilian control does not exist at all levels of the civil-military relationship spectrum. The reality is that civil-military relations may call for broad institutional separations as well as more fluid and collaborative roles within defense establishments. Personnel relationships in defense organizations, often warrant more integrative dynamics and directly affect the development and execution of military strategy as well as operational and organizational effectiveness. Enhancing collaboration between military and civilian personnel points to a theoretical model, such as concordance theory, which embraces broader institutional separations as well as cultural conditions requiring more flexible civilian and military relationships. This presentation is created within the context of a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative.

SCINDLAUER, SANDRA* (Bauhaus University Weimar, sandra.scindlauer@gmail.com)
The Alienation of Public Spaces by the Homeless

Since the 1970s, German researchers have turned their back on the topic of homelessness. As a result, Germany has neither a universal definition, nor an official statistic on the amount of homeless people living in the country.

Today, most German cities are facing a significant lack of affordable housing. Additionally, the borders of the EU have been opened towards Eastern Europe (2004 and 2007). In the hope of jobs and wealth, Eastern Europeans flock to Germany. However, a lot of them fail to fulfill their dreams and end up homeless as they are not eligible for German welfare. Hence, the number of homeless people being visible on the public spaces of German cities increased constantly in recent years.

As the cities are afraid that the ascending presence of homeless people contradicts the consumer climate (especially in pedestrian and representative areas), they are seeing themselves forced to act. In contrast to the USA, where the cities usually follow a containment strategy, the method of choice in Germany is the displacement and decentralization of the homeless. During my presentation, I would like to focus on one of the most subtle ways to achieve these goals: structural modifications and installations which aim to prevent the “alienation” of public spaces by the homeless and other undesirable groups. I would like to complement my remarks with a discussion on how these actions are being implemented and justified by the cities and why people who do not belong to the “target group” are not able to decode their function.

People say that public spaces are a reflection of the society. The stepwise exclusion of unwanted persons from public spaces not only creates a distorted picture of the reality; it also calls a fundamental characteristic of modern democracy into question. We are talking about participation.

SCINDLER, SETH* (Humboldt University of Berlin, schindse@hu-berlin.de)
Governing CO2 Emissions in Delhi, India: The Clean Development Mechanism and the Informal Recycling Sector

There is a consensus among policy makers that climate change must be addressed through global governance frameworks based on the measurement and reduction of CO2 emissions. This ‘carbon control regime’ at the global scale requires contributions from municipal governments whose task it is to enforce its implementation locally. Scholarly research on metropolises in the global South tends to focus on policies aimed at adapting to climate change, and this research has ignored the role of informal sector workers who collect waste to make it fit for recycling. This paper seeks to contribute to a growing body of scholarship focused on the efforts of municipal governments in the global South to mitigate CO2 emissions. I examine the impact of the UNFCCC’s Clean Development Mechanism (CDM) on solid waste management in Delhi, India. The main argument of this paper is that the CDM has contributed to the emergence of an environmental urban governance regime based on calculating and reducing CO2 emissions. This data fetishism obscures the relatively high recycling rates achieved by Delhi’s large informal sector, which is ubiquitous but difficult-to-measure. This has justified a dramatic shift in Delhi’s waste management strategy, as plans to build sanitary landfills have been abandoned in favor of waste-to-energy incinicators, three of which have been approved by the CDM. This policy shift has precipitated conflict over the ownership and control of waste between small-scale informal enterprises and large formal-sector enterprises, and it relocates value from the labor of informal-sector waste collectors to waste matter itself which is required for the operation of waste-to-energy plants. I conclude that the overriding principle of this emergent governance regime is capital accumulation rather than the mitigation of CO2 emissions, and its inability to incorporate extensive informal environmental management systems calls into question its overall effectiveness.

SCHELL, WILLEM* (Erasmus University Rotterdam, Schinkel@fsw.eur.nl)
Climate (f)Acts. Climate and/or The Social

This paper investigates the ways in which ‘climate’ can be considered as social assemblage. It does so by showing how climate facts and factors have often been construed as climate acts and actors. This is illustrated by considering three ways in which climate has historically been construed in relation to the social. The first is to consider climate as a causal (f)actor. Climate is a relational web that is the space in which life unfolds. The second construes climate as medium of relationality. This has been prevalent from classical authors such as Hippocrates and Ovid to modern authors such as Monesqueu, and has persisted up until the origins of modern climate science. This is illustrated with historical examples. The second construes climate as an enrolment assemblage. Here, climate becomes an assemblage of various heterogeneous (factors) working together with human actors to produce what we now call climate. This is illustrated in this paper using data from an ethnographic field study among paleoclimatologists. The third way to consider climate as a social assemblage is to construe climate as medium of relationality. In this view, inspired by authors ranging from Watsuji Tetsuro to Tim Ingold, climate is a relational web that is the space in which life unfolds. The paper concludes by illustrating climate as medium in a speculative way, arguing that this conception implies a significantly different social ontology from that which has characterized modernity.

SCHELL, WILLEM* (Erasmus University Rotterdam, Schinkel@fsw.eur.nl)
The Art of the Other. the Paradox of Universality in Western Conceptions of ‘Japanese Art’ (1860-1940)

The era of the rise of modernism involved the emergence of art as an autonomous and universal category. This paper argues that, given the universal claims of this category of art, it is an expansion to Asia in general and Japan in particular. This expansion, shaped through various orientalist categories of ‘Asian’ or ‘Japanese’ similarity and commonality as juxtaposed to ‘the West’, helped to provide
plausibility for modernist conceptions of art. It universalized the category of art by giving it a global meaning both in spatial and in temporal terms.

At the same time, this universalization meant that cultural hierarchies informed by western hegemony were threatened. This paper looks at the ways in which the proliferation of different cultural identities has been influenced by the unique situation of art and the particularization of the concept of 'art'. This 'paradox of universality' involved a differentiation between on the one hand particular, local, traditional and most often historical realizations of what was nonetheless a universal category of art, and on the other hand its truly modern and advanced contemporary realizations of universality.

At the height of the modernizing movements in the west, Japan proved to be the site of an 'exemplary expansion' of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as a set of autonomous and potentially universalized entities.

Goffman claimed that we perform certain roles for certain audiences and attempt to keep these audiences separate. However, on Facebook, audiences become mixed in the form of diverse 'friends' potentially consuming the multimodal messages shared on the platform with their social media. Scholars have speculated on how identity performances on Facebook can be influenced by social, cultural, and individual factors. The analysis focusing specifically on gender identity performances on Facebook suggests that individuals use the platform to display their identities in a way that reflects their preferred social identity. The data I use to attempt to answer these questions come from a representative survey on Hungarian high school students (aged 14-18), from focus group interviews as well as from focus groups on Facebook profiles of members of the same nationality and age group.

Preliminary analysis of the data suggests the existence of a variety of strategies used to construct gender identity performances on Facebook. The analysis focusing on gender identity performances on Facebook suggests that the on the one hand, strong peer group pressure, but, on the other hand, affordances of Facebook are also used to break away from traditional constraints of femininity. Goffman, Erving (1959) The Presentation of Self in Everyday Life. Garden City, New York: Doubleday

SCHLEICHER, NORA* (University of Applied Sciences, nschleicher@bkf.hu)

Impression Management for Diverse Audiences: Identity Practices on Facebook

In my presentation, I pose the question: how can we apply the concept of impression management as outlined in Goffman's (1959) seminal work to the context of social media? How does the social behavior of Facebook users in this particular social context influence users' identity performances? My argument is that Facebook is a platform that offers more freedom and agency in constructing their 'fronts' and allows for more diverse and potentially subversive identities. I employ data from a focus group interview, as well as from discourse analysis of Facebook profiles of members of the same nationality and age group. Preliminary analysis of the data suggests the existence of a variety of strategies used to construct gender identity performances on Facebook. The analysis focusing specifically on gender identity performances on Facebook suggests that, on the one hand, strong peer group pressure is exerted, but, on the other hand, affordances of Facebook are also used to break away from traditional constraints of femininity.

WEINMANN, NICO (University of Kassel)

Two Crises, Two Cycles of Contention. Workers' Protests in Western Europe in Comparison

The paper compares two cycles of labor unrest and its relationship to capitalist crises in Western Europe. In the first cycle, spanning around 1968, workers were able to mobilize high power resources and to push for wage increases and new institutional rights on the plant level. However, the offensive phase of the Western European workers' movement was eventually stopped by the crisis of 1974/75, thus raising unemployment and weakening labor's workplace bargaining power. As a consequence, since the 1980s, Western European trade unions lost members and faced increasingly complicated economic and institutional conditions. With the global financial crisis 2008, a new cycle of labor unrest has started, and the nature of social conflict has changed. First, the uneven and combined development of European integration has led to a spatially uneven distribution of workers' protests. While countries such as Germany and Austria are characterized by low protest activities, social unrest in Southern European countries has increased significantly. Also, workers' repertoire of contention seems to have changed throughout the crisis period: In the current wave of conflict, forms of "non-normed conflicts" such as plant occupations (“bossnapping”) in France and riots (London, Stockholm) have soared, indicating not only the severe consequences of the crisis but also trade unions’ growing representation gap. The paper draws theoretically on the “Jena power resource approach” and empirically on a database on social conflict (JenaConDa).

The Worldwide Outlook for Children: A Model for Monitoring and Studying Children’s Rights?

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. It may serve as a tool for performing rights research, particularly for investigations of experiences and subtitles of indigenous youth. WOC is designed for use by scholars to policy makers to young people, and will be available in multiple languages. WOC is a useful resource for identifying, understanding, and explaining young people's experience across the world. WOC presents vast evidence about children, including indicators of their physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. WOC will raise awareness as well about indicators of children's wellbeing that are not yet available for many countries. As such, WOC may be instrument for identifying what we do not already know about young people's wellbeing, rights, and interests. Over time, WOC will work from a global perspective to share information regarding young people's wellbeing, rights, and interests.

SCHMEECKLE, MARIA* (Illinois State University, mhschmce@ilstu.edu)

The Worldwide Outlook for Children: A Web Resource of Young People’s Wellbeing, Rights, and Interests

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. WOC is available to social scientists who seek to identify, understand consequences of, and explain disparities and inequalities young people experience. WOC presents evidence designed for use by everyone, from scholars to policy makers to young people, and is available in multiple languages. Recent innovations in the Sociology of Childhood have focused attention on children as active agents with interests and perspectives worth knowing about. The study of children's rights and the UN Convention on the Rights of the Child has led to a greater focus on children's rights and on many aspects of their wellbeing. WOC demonstrates how social scientific evidence can sharpen our awareness about the variety of structural disadvantages children experience worldwide and the countries and regions in which multiple disadvantages and inequalities exist. Among different resources, WOC presents evidence of children's physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. As sociologists learn more about children's legal and informal rights, interests and aspirations, psychological wellbeing, social interactions, choices, levels of resilience, and spiritual beliefs, we become aware of much more that we want to know about young people and the range of inequalities they experience from a global perspective. During this presentation, we will discuss methodological challenges and substantive gaps in global knowledge of children's wellbeing, rights, and interests, and how we might move forward to develop more comprehensive and holistic understandings. We will consider how measurement, theoretical, and cross-cultural questions challenge sociology's ability to grasp outlooks for young people worldwide.

The Influence of Real Life and Online Peer Groups on Caring Fathers at the Transition to Parenthood

While the transition to parenthood is still linked to a retraditionalisation of gender roles, a small but growing number of fathers aims at taking up an equal or major share of care-work, and reduce their work hours or take parental leave to do so.

Our analysis of in-depth 20 interviews with fathers-to-be, bulletin boards and website shows how those fathers reflect, organize and perform this work within structural conditions (in Austria) still favor breadwinning fathers. Our data derive from two different pieces of work: a study on fathers on parental leave and a study on the "gendered transition to parenthood" (within the consortium FamiliesAndSocieties, funded by the European Commission FP-7).
Contacts to other fathers that are or have been in the same position play an important role for those “new fathers”. Some fathers already have access to other caring fathers within their peer group. Some try to find contact to other fathers through the use of new and social media. They attend “new fathers” groups on facebook, are members of bulletin boards that are crowded mainly by fathers, or use blogs focusing on the fathering process. On these sites, they often share their opinions, the everyday obstacles they encounter being stay-at-home fathers, or happy times and events with their children. In our talk we explore how those communities help fathers to maintain their role as caring fathers, with sometimes hostile or non-encouraging environments. The ability to share their experiences interplays with their wellbeing, their persistence against structural disadvantages and adverse comments, and the quality of the father’s relationship to the mother and the child.

Sociotechnics of Economy

Joachim K.H.W. Schmidt
Sociotechnics of Economy

Revisiting my sociotechnically informed economic theory on autonomous humans (Göteborg 2010), Onati and Athens (2B11), not any longer based on Capital, Market, etc., as done by mainstream economists who failed for several hundred years. Mainstream theories have been spatially based, time only occurred as space-time as well as objects as measurements within space, and humans only as objects like game pieces. - My present paper will enlarge the common Factors of Productivity, traditionally Land, Labor, and Capital, by Time. Autonomous humans are characterized by Time as duration of their life which they have again and again to invest in portions as resource for their reproductive survival. An economic theory ignoring real time must fail, cutting out some hours of being sold for inauthentic slavery work. Excesses of present financial markets condemn the inefficiency of traditional economic theories responsible for such perversion. - Sociotechnics as empirical science designs and implements institutions, and these going concerns are dramatically changing; we move out of an age predetermined by analogues Greek ideology focusing on the origin of reality, analogously conceived closed spaces, cf. Plato’s Parable of the Cage, without time and movement, becoming manifest in positions, prohibiting time and movement. Greek world: A GIVEN one circling around positions. In opposition to this autonomous humans succeeding to leave Platonic Confronted with a digital reality, and experience themselves as homeless, being asked to construct their >homes< themselves by way of computation. Greek-Western institutions must necessarily be replaced, since nearly all passed down institutions of analogous Greek-Western world prove inadequate in present digital age, including presently still prevailing economic theories. In digital age social life will not any longer turn around positions, but will happen in networks in which being will be replaced by relation.

The Cultural Influence on Social Intuitions

The Cultural Influence on Social Institutions
Joachim K.H.W. Schmidt, Berlin/FRG

Social institutions are culturally predetermined, the going concerns of people express beliefs in way of reality-perception. Cultures are different round the globe. Diversity of cultures contains a gigantic richness of human resources. Cultures actualize in human relations via common actions, and/or communication. Every culture has developed an own language for its communication. Western language, especially Anglo-American languages, have presently become globally dominant, including Western civilizing culture which they embody. - The powerfulness of Western languages is subject to Greek ideology, its assumed fiction of the subject matter (Foucault) . The concept will be presented in interplay of theoretical considerations and empirical results that derive from a current research project about the transition preparations in school and mentoring projects (school to work transition). I will specifically focus on schools because they are major institutions for the organized production of subjects. Mead and Strauss described the different processes, phases and social interactions that shape identity/the individual. On this perspective, identity is a constant course of action and interaction between different concerned actors, things and the work of the individual on the integration of the plent "me" to a self. This process can be conceptualized as a trajectory of the subject that helps to study this ongoing transformation. The trajectory concept allows the analysis of two perspectives. On the one hand all the situated and participating actors and (inter-)actions come into focus. On the other hand the perception and experience of the subject in this process can be understood. Intertwoven with these practices of the self are typical historical knowledge formations of the subject itself. In contrast to the pragmatist process perspective Foucault offers such a historical conceptualization about the emergence of the individual. This includes sensitivity towards questions of power and their productive effects in specific institutions. Linking pragmatist concepts with a discourse approach will enable a balanced theoretical conceptualization of individuality in modern societies and elaborate analytical tools for research.

Fukushima and Media Discourses on Traditional and Future Nuclear Energy

This paper presents results of a collaborative research funded by the European Fusion Development Agreement, consisting in an international comparison of media coverage of fusion and fission energy in three countries (Germany, Spain and Portugal) and in the English language international print media addressing transnational elite, from 2008 to 2012.
The analysis showed that the accident in Fukushima in March 2010 did not have significant impact on media framing of nuclear fusion in the major part of print media under investigation. In fact, fusion is clearly dissociated from traditional nuclear fission energy and from nuclear accidents. It tends to be portrayed as a safe, clean and unlimited source of energy, although less credited when confronted with research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fission is portrayed as a hazardous source of energy, expensive when compared to research costs of renewables, hardly a long-term energy option, susceptible to contribute to the proliferation of nuclear weapons or rogue military use. Fukushima accident was consistently discussed in the context of safety problems of nuclear power plants and in many cases appeared not as an isolated event but rather as a reminder of previous nuclear disasters such as Three Mile Island and Chernobyl.

The analysis suggests that the public discourse on fusion is constructed mainly around research challenges, clamberous events and scientific and technological achievements, rather than energy policy debate, climate protection or future economic compensations of fusion research.

Collective Action, Trust and Robust Innovation: The Case of a Regional Network of Research-Groups

Cooperation between working groups with heterogeneous disciplinary backgrounds is an important phenomenon for modern sciences. It stems on the one hand from an urgency in expertise and technology needed to answer fertile research questions, to succeed in scientific competition and on the other hand it is required by many forms of research-funding. The contribution focusses on a special form to deal with both: an enduring network between research-groups, which realizes different lines of research and funded projects in a remarkably successful way. Success hereby not only means that they get funded, they also managed to create highly relevant findings in a robust way (Ferrary/Granovetter 2009).

The case study concentrates on the phenomenon of emerging project-networks to enable flexible and also enduring, reliable collaboration between heterogeneous actors (e.g. Windeler/Sydow 2001) but conceptualizes it as one of the actualization of collective action. Within a practice-theoretical perspective (Giddens 1984), we can describe the latter as collective agency, as differences in praxis done collaboratively in a highly bounded way towards an end collectively framed. The first part of the presentation explores different roles collective action between heterogeneous actors play in the episode of robust innovation in the network during 2005-2013.

The second part focuses on trust as a specific quality of network-relations that makes it possible to actualize these lines of collective action between research-groups. It shows the importance of trust-relations in different sub-populations of the network for the network as a whole and its robust ability to produce relevant findings. In the end, the study can provide a more detailed picture of the emergence of a specific bundle of trust-relations through a cycle of efforts in making robust innovation.

Dilemmas and Politics in Chicago: The Theory and Practice of Addams, Alinsky, and Obama

This paper uses the city of Chicago as a site to explore the work of three celebrated community organizers and intellectuals: Jane Addams, Saul Alinsky, and Barack Obama. All three faced similar challenges across one hundred years of helping people in Chicago, particularly the struggle to help others in a city controlled by powerful elites who reinforced racial, gender, and class inequality. And all three individuals, each in their own unique way, got "stuck" and became political as a way to continue to move forward and continue to make change. How are we to make sense of each individual's efforts to negotiate the tensions between community and politics? This paper draws on the work of Robert Merton and John Dewey and Amos G. De Voe to develop a theoretical framework for making sense of dilemmas and political action in community organizing. It uses this framework to analyze the work of Addams, Alinsky, and Obama as they tried to help others in Chicago. The paper also provides an element of historical sociology, showing the previously overlooked legacy of practice and ideas running from Addams, through Alinsky, to Obama.

On Professional Ethics of Medical Doctors Working for the Pharmaceutical Industries

The formalization and codification of professional ethics has always been a central element of the professionalization of professional groups and a legitimization of professional autonomy. In case of employers and market shifter's the anticipation of ethical standards by individual professionals is sociologically explained with the process of professional socialisation and integration into the epistemic and moral community of the profession. In the paper consequences on the concept of professional ethics associated with dimensions of economisation in the field of professional work are discussed. It is referred to empirical findings of a study on highly specialized medical doctors working for the pharmaceutical industries.

Do Tertiary Dropout Students Really Not Succeed in European Labour Markets?

Tertiary education has been expanding hugely over the last decades, so that tertiary dropout students will constitute a growing distinctive group in future labour markets. University dropout is regularly discussed as a ‘negative’ indicator in terms of reinforcing socio-economic inequalities and being a sign of university inefficiency. However, research on actual career trajectory of dropout students is virtually non-existent. Using data from the 2011 Programme for the International Assessment of Adult Competencies (PIAAC) this study first validates the uncommon self-reported measure of dropout used and compares the percentage of adults with tertiary dropout experience between OECD countries. Second, we examine whether tertiary dropout is a permanent decision as a considerable part of adults with dropout trajectories. In a third part, we investigate characteristics of adults with dropout experience. Finally, we estimate the effect of dropout in terms of their employment status and success of entering managerial professions comparing results of logistic regressions and propensity score matching taking individuals’ socio-economic and demographic background, work experience and cognitive skills into account. Results indicate that consistently across countries dropout is repeatedly a ‘positive’ indicator in the labour market. This is first due to the fact that the dropout decision is often not a permanent one as well as that for those adults who do not reenrol into tertiary education labour market chances are better than for equally educated adults in about half of the countries examined.

How the Prison System Affects the Health Care System

United States incarceration rates have increased fivefold in the past four decades, placing untold pressures on other social institutions. Using state- and individual-level data, this article tests whether the number of former inmates affects the functioning and quality of the health care system. The aggregate-level results show that a within-state increase in the number of former inmates is associated with growth in the uninsured population, more frequent use of emergency rooms per capita, and a decline in the supply of hospital beds. Similarly, states that incarcerate more people also report fewer ambulatory visits per capita, fewer mammograms, and lower levels of essential diagnostic tests among diabetic Medicare enrollees, all indicators of a lower overall quality of care. Similar processes are evident even when examining behavioral outcomes in individual-level data. Results from a nationally representative survey, show that individuals residing in states with a large number of former inmates report more unmet need, lower utilization, and lower quality care. These patterns are found even among those far removed from the prison system, including women, the insured, and the well-educated. The implications of broad spillovers from the prison system to the health care system are discussed.

Comparison of legal aid in Belgium, France and the Netherlands: do remu-
neration systems influence the evolution of contentious mass?
Frédéric Schoenaers, Kathleen Adelaire, Christophe Mincke, Laurent Nisen, Jean-François Reyneart
In Belgium, the current system of remuneration for legal aid causes dissatis-
faction both among government authorities and lawyers. In addition, the adoption of the “Salduz law”, which allows any person heard for the first time by the police or a judge to be assisted by a lawyer, is going to weigh on the use of the legal aid. Legal aid has experienced strong growth in recent years in Belgium (+229.26% of closed cases between 1998 and 2011). It is useful to observe whether this growth is present in other European countries. We selected France and the Netherlands. This contribution presents a comparison of the modes of organization of legal aid in the three countries as well as of the modalities for financing it. Secondly this contribution aims to compare the evolution of the mass of disputes benefiting from legal aid. We see that beyond the differences between the three countries, the use of legal aid is constantly growing. We will attempt to provide an interpre-
tation of this fact by mobilizing the following explanatory factors: higher income limits allowing more people to access to legal aid with a strengthening effect due to the current economic crisis in northern Europe, a better information of the citizens (by media or advertising by lawyers), a new “grammar of responsibility”, a phenomenon of juridisation, the development of new public policies and the development of new “rights.”

Detainee and mother... What is the Situation in Belgium?
Frédéric Schoenaers, Marie-Thérèse Casman, Stéphanie Linchet, Salim Megherbi, Laurent Nisen
University of Liége - Belgium
In recent years, the penitentiary institution seems to be changing. Following constant criticism from all origins (European Parliament, Council of Europe, Euro-
pean Court of Human Rights, International Observatory of Prisons), Belgium has adopted in 2005 a “Principle of Law” about the prison administration. The second goal of the paper is to propose a methodological approach to images as a symbolic strategy to confront and def er conflicts and discomforts in everyday life.

Labour Market Returns of Higher Education Drop-Outs: Human
Capital or Signalling?
mirte.scholten@mzes.uni-mannheim.de
In Germany, around one fourth of all first year students leave university with-
out a degree. While reasons for drop out are well examined, the consequences are rather unknown, especially in terms of labour market outcomes. This paper aims at identifying differences in school-to-work transitions between tertiary ed-
uca tion graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary ed-
uca tion. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. We also examine in which way the lack of formal qualifications can be compensated by alternative resources like social cap-
ital. In this article, we study the probability of entering the labour market. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about social capital to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with
vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. The acquired human capital however, can be better translated into labour market returns by those with better social capital. We therefore conclude that social networks are an important compensation strategy for a lack of credentials.

SCHOLTEN, MIRTE* (MZES/Mannheim University, mirte.scholtzen@mzes.uni-mannheim.de)

School-to-Work Transitions of Higher Education Drop-Outs: Human Capital or Signalling?

Graduates from tertiary education have good labour market perspectives but it is not well examined yet how the career perspectives of tertiary drop out differ from those of graduates. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. The focus will be on the different returns of different educational levels. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. Especially in economic crises we expect that tertiary education drop outs will have huge difficulties in entering the labour market as jobs are scarce and the competition is hard. In a first step we study the probability of entering the labour market and job search durations of the different educational levels. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about economic crises to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. In times of economic prosperity job search durations of tertiary graduates and non-completers are the same, while tertiary education completers fare better in economic crisis.

SCHOLTZ, HANNO* (University of Konstanz, hanno.scholtz@unifr.ch)

Debating Alternative Conventions and Defying False Friends: The Concept of Crisis in the Rational Choice Theory of Institutions and Historical Social Change

Although the term „crisis“ seems to be ubiquitous, there are historical phases when it more abound than in others. For the years since 1989, or the 1930s, the term has (in most parts of the worlds) a higher importance than for the 1950s and 1960s. This can be understood from the fact that these times are phases in which institutional change is both going on and being prepared.

In rational choice perspective, institutions are added game elements in the game structure of human interaction, and they have both conventional and normative aspects. This perspective allow to study institutional change as characteristically depending on the complexity of organizational interaction: Independendent organizations allow for early and smooth institutional change, as in the case of changing family concepts. However, there are cases as economic regulation, where organizations act in strong interdependencies and finding a new institutional setting becomes a question of social debate while the performance of old institutions derrades: These are crises. In crises, many solutions are discussed, including those with biased consequences and „false friends“ for which lower adaptation costs go together with a lower long-run adequacy. Hence sociological imagination and the deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and desastrous consequences for solving crises. For the problem of the economic regulation of industrial society it can be said that unexpected consequences of the disaster (i.e. experiences of modern warfare) did probably the larger part of preparing the Post-War solutions. For the case study of introducing non-smoking policies, that was not the case. The currently greater degree of population access to information may explain the difference, giving rise to the hope that sociological imagination in the general public may add to solving the current transition problems.

RC16-279.12

SCHOLTZ, HANNO* (University of Fribourg, hanno.scholtz@unifr.ch)

The Two-Step Nature of Modernity

Over the last decades, the discourse over the end of industrial society and the coming of a second modernity has found evidence in recent phenomena that resemble parallels between 1860 and 1945, as globalization, economic crises, democracy, violence, social inequality, and global shifts in resource distribution. An understanding of the mechanisms behind these phases of crisis would be socially helpful since it is rather probable that the current one has not yet ended. The rational choice theory of institutions offers the tools to do so, but has not yet been applied to this question. The proposed paper (part of a larger book project) intends to fill the gap.

The paper develops a model of the two step nature of modernity by concentrating on the following arguments: 1. Modernity increases the availability of resources. 2. This results in changes in information relations, i.e. between positional and situation-specific information. 3. Multi-actor decisionmaking has two focal points of either relying on positional (domination / authority) or on situation-spe
cific argumentation / deliberation (argument). 4. A rational-choice understanding of tradition and modernity hence equates the two with applying the two focal points. 5. Not all games of human interaction are created equal, since organizations offer social structure and the transformation of situation-specific in positional informa
tion. 6. Hence an intermediate phase arises, with authority within and argument between organizations. This modelled intermediate phase is equated with the historical phase “industrial society”.

Additional arguments analyze the nature of institutional innovations in the transitions between the phases, allowing for the confrontation with empirical evidence and for the prediction of upcoming institutional changes.

SCHORCH, MARÉN* (University of Siegen, maren.schorch@uni-siegen.de)

The Hidden Patients - a Qualitative Study on Informal Caregivers in Germany

Regarding the aged population, we also detect a parallel growth of age related illnesses like dementia, Alzheimer’s disease or the like. In many countries world-wide, the majority of care for people suffering from these illnesses is realised at home by informal caregivers – their spouses, family members or close friends – due to cost or personal reasons. Often, the caregivers themselves are also at an advanced age. Both, elderly and still working-age family carers bear the heavy physical, psychological and emotional burden of taking care of their beloved ones at home. They are then at increased risk for psychical and physical morbidity like depression or burnout and can be described as our society’s “hidden patients” (Schulz & Beach, 1999). The contribution will present first findings from a sociological qualitative study (observation and open interviewing) with this special group of elderly, informal caregivers in a rural area of Germany (Siegen and surroundings). The study is part of a larger, international and interdisciplinary research project called TOPIC (The Online Platform for Informal Caregivers), funded by European Commission and the Federal Ministry of Education and Research with partners in Vienna (Austria) and Troyes (France). First observations focussed on the everyday activities and routines within the households and underline the above-mentioned challenges for the informal caregivers in respect to time, energy and attention. Beyond that, the caring persons expressed the need for help in our talks, and not only in terms of financial assistance as often proposed by social institutions, but also for information and emotional support. This point is especially interesting from our point of view as we observed some people’s difficulties to express their feelings respectively their own needs.

Looking for a Balanced Treatment of Successive Generations: What Can Social Policy Learn from Perspectives on Sustainable Development?

This paper argues that social policy scholars have good reasons to engage with the literature on sustainable development when analysing the challenges of how to make polices and welfare states sustainable when analysing the challenges of how to make polices and welfare states sustainable when analysing the challenges of how to make polices and welfare states sustainable when analysing the challenges of how to make polices and welfare states sustainable when analysing the challenges of how to make polices and welfare states sustainable. While many analysts have discussed the need to ensure the sustainability of welfare states and concerns for future generations, they rarely spell out the conditions for achieving welfare sustainabil
ity or provide an adequate theory of what such sustainability involves. Attempting to address these shortcomings, the paper asks what the scholarship on social policy can learn from perspectives on sustainable development.

In a European context, current debates on the need to create sustainable welfare states and how to promote sustainable development both raise difficult issues of intergenerational fairness and governance problems including tensions between economic or welfare state policies and political legitimacy. The mantra is: “for a better future, citizens must make sacrifices today!” Thus, the proposed paper is premised on the view that these areas intersect in important ways. However, they also differ, since generally questions about the welfare state are treated as problems of social/economic policy while debates about sustainable development put both economic and environmental issues at the centre. Hence, linking the rich literature on sustainable development and the notion of sustainable welfare states, promises to bring new conceptual and empirical insights into the debate about welfare state futures.
The paper first introduces the notion of sustainable development. Next, we discuss how we can enrich the conceptualisation of welfare sustainability by taking on-board a broader sustainable development perspective. In addition, we ask how we might transform this improved definition into operational indicators that can be used to monitor progress towards sustainability. This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative research project on the regulation of VAW.

Young migrants unsuccessfully claiming refugee status may be ‘tolerated’ in Germany. This specific legal status positions them in the host society on the border of citizenship and non-citizenship. Whereas VAW at universities all around the world is a recognized problem in Germany it is still silenced. This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative research project on the regulation of VAW.

Legal Status and Inequality: Young Tolerated Refugees and不再被容忍的年轻难民

This paper focuses on the impunity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem and most prestigious universities have implemented measures to combat this phenomenon, in Spain it is still silenced although first steps have demonstrated the need for researching this phenomenon. The paper “Gender-based violence in Spanish universities” funded under the Spanish National RTD Program (Valls, 2006-2008) was pioneer. For the first time in Spain, a questionnaire with 1083 students, 13 in-depth interviews with professors and university staff, and 16 communicative daily life stories with students on this issue were conducted. The results, similar to international numbers, show that a high percentage of the participants knew someone or have suffered some kind of situation of VAW at the university. Besides, it evidenced that people supporting the victims of VAW become “second order victims”. This research was crucial in breaking the silence on VAW in Spain.
ish universities and has also suggested evidence-based actions to fight against it. Once the results had been presented on a national level, universities increasingly started implementing actions to address VAW, asking for research support for. As a result of this process some faculties have introduced protocols for cases of harassment. This is also due to the political impact of the results since the Law for effective equality between women and men (Spanish Government, 2007) obliges all public offices to establish procedures on cases of harassment. Even if there is still resistance to changing these dynamics, the article in the Spanish law for equality is an important step to challenging the dynamics of gender, power and knowledge at Spanish universities.

Preventive Socialization from Zero Years

In this paper, we present the violence prevention programs implemented in Schools as Learning Communities. These schools have been analyzed under the INCLUD-ED project (FP6 of the European Commission) and are outstanding for the great results in very diverse social areas going beyond positive academic results. Research on violence against women (VAW) highlights that patterns linked to it are included in the socialization processes. The results presented here stem from research on preventive socialization that emphasizes the social character of love and the attraction towards violence (Gómez, 2004; CREA, 2010-2012). According to this research line, the existence of a mainstream socialization that promotes the mode of attraction linked to violence implies the need to socialize from early childhood in attraction to relationships that reject any kind of violence. Socialization in accepting violence that can lead to future VAW is prevented. According to a common analysis of violent actions in early childhood such as a bite is considered as an emotional expression and as a consequence the victim is forced to receive a kiss from the perpetrator as a sign of excuse and forgiveness. These actions socialize in the acceptance of the violence and set the bases for future gender violence. Zero tolerance of violence from zero years is the premise to socialize into relationships without violence and to ensure the development of childhood free of violence. In this line, in Schools as Learning Communities any kind of violence is rejected and children are socialized in this general rejection of violence and learn to avoid violent behaviors. They also learn the values of respect towards others and to insist themselves in being treated with respect. Consequently Schools as Learning Communities contribute to preventing the mainstream socialization in attraction towards violence.

Globalized Management Practices and Local Cultures

The paper will give an overview of management practices in different world regions based on the existing literature in the social and economic sciences and case studies. One of the main questions will be: What is the future of “management”? The global discourse on management focuses on the principles of the market that have been introduced in all spheres of social life through university programs and organizational strategies, government policies, and personal counseling literature. This knowledge is produced, distributed, and consumed by social actors in the South, North, and East. These forms of disciplinary knowledge have contributed to the creation of a world controlled by managers and management technologies.

One of the most important societal influences in the last quarter of the 20th century was this growing importance of the management discourse. There was a spread of the idea of management from large firms to the professions, NGOs, the public sector, and the daily lives of social actors. This management discourse consists of a social language and practices that global players produce in the socioeconomic world. This discourse is so widespread today that it seems difficult to escape its grip.

This paper gives an overview of its increasing propagation in non-western societies. One aspect of this research is: How do groups cope with the global discourse? The attraction linked to violence implies the need to socialize from early childhood in attraction to relationships that reject any kind of violence. Socialization in accepting violence that can lead to future VAW is prevented. According to a common analysis of violent actions in early childhood such as a bite is considered as an emotional expression and as a consequence the victim is forced to receive a kiss from the perpetrator as a sign of excuse and forgiveness. These actions socialize in the acceptance of the violence and set the bases for future gender violence. Zero tolerance of violence from zero years is the premise to socialize into relationships without violence and to ensure the development of childhood free of violence. In this line, in Schools as Learning Communities any kind of violence is rejected and children are socialized in this general rejection of violence and learn to avoid violent behaviors. They also learn the values of respect towards others and to insist themselves in being treated with respect. Consequently Schools as Learning Communities contribute to preventing the mainstream socialization in attraction towards violence.

Christian Enclaves, Freedom of Education and the Quality of Time: Contested Secularity in the Netherlands

The Netherlands are highly secular – only one third of the population being a church member; euthanasia and same sex marriage are broadly supported; against recurrent religious opposition. In some areas though, one finds an almost reversed religious/secular setup: In the Dutch ‘Bible Belt’ orthodox reformed groups strongly influence the organization of public life. Here it is not about accommodating religious minorities – rather, given the majority relations, Christian legal traditions and the structural pluralism of Dutch secular order, these places practice religious counter publics. At the same time - due to e.g. population mobility – these places are changing, thereby becoming contact zones (Pratt, 1991) of religious and secular lifestyles. Central sources of conflict are Sunday rest and religious schools. The secular-religious divide becomes more complex with regards to non-western migrant populations and their (socio-economic) integration. These secular-religious conflicts help discussing two central questions regarding the public sphere in religiously diverse countries: 1) what are (competing) notions of the public and how are they related to religious/secular history and 2) in what way can the state allow for multiple publics without failing to maintain social cohesion.

I discuss the conflict around Sunday openings and religious schools with regards to a changing Dutch secular model. Further I sketch how local contexts become arenas for conflict over secularity, and how these conflicts differ according to context. Based on my empirical findings I discuss the relation of secular models with religious/secular majority relations as well as the functioning of contact zones in stigmatizing secular identity formation.

Transforming Struggles: Organizational Modes, Mobilization Outcomes, and Occupy Wall Street

Encampments at Zuccotti Park and elsewhere have been violently dismantled, the mass media spotlight moved on, the spectacle stopped. Fissures between different tactical and organization approaches widened. Yet, the mobilization continued through manifold spin-offs, ranging from Occupy Sandy, which provided rapid relief in response to a devastating hurricane, to groups such as the Alternative Banking Working Group, which worked on new policy proposals, and Strike Debt, which developed new kinds of direct action. Although Occupy Wall Street inspired public debate and imagination, there are hardly any tangible policy achievements while recent data point to even further increasing socio-economic inequality. Assessments of the leaderless, General Assembly-based organizational form were divided over whether these were the essence of a prefigurative politics for real change and attracting participants or whether the lengthy, consensus-requiring deliberations prevented tactical efficiency, liaisons with large unions and NGOs,
and negotiations with the political establishment to win concrete legislations. What lessons can be drawn from the Occupy experience so far? How can social movement theory help to explain the rise, fall, or metamorphosis of the mobilizations? How do existing theories need to be revised in light of the new empirical experiences and the challenges ahead? Multi-method focus on the experience in select cities shows not only enormous local variation but also varied modes of connecting sites of struggle. The paper concludes with a discussion of options for future action.

SCHULZ MEINEN, HAIMO* (University of Hannover, h.schulz-meinen@ish.uni-hannover.de)

Bothering Pays for Sociologists

Bothering pays.

Segmentary societies bear inequality. All of them. Urbanized even more. Cities have proven to be inequality carved in concrete and stone. The more abundance of material culture, the more inequality. Chiefs in tribes have to bother.

They remain chiefs only if they impress bothering and solving conflicts. Bothering gues even the smallest tribe.

Todays large scale social units call themselves 'modern' to claim their qualitative difference to chieftoms and the like. Here, nobody even considers an end of inequality, it is purely unthinkable as necessarily linked with the total dismissal of the material abundance (which could and should be achieved, plans have been made).

More, bothering has become a specialized task, a branch, a profession. Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother. This is why we bother about inequality - sometimes. Have a happy conference!

Social Movements and the Political Invention of Future. Considering Recent Argentina

During the 1990’s, neoliberal policies drove Argentina to huge transformations of the state, economy and labour. The process left a large number of poor and unemployed people and concluded with a monster crisis in 2001. During that time, there was a very important change in the field of social movements. As a consequence of the neoliberal policies, labour movement (which has been the most important movement in whole country contemporary history) diminished roughly its statistical presence in social mobilization. This happened in 1993 and in 1996 a new kind of movements grew up. That was the case of territorial movements, established in the poor neighbourhoods and small towns in a few provinces. They were composed mostly by unemployed, who asked for elementary rights and reduced their life - chances. The paper examines the resulting alienation of ‘misfits’ and the ways they resist and change authoritarian hierarchies in a globalizing world.

Culture and Morality: Intercultural Interactions during Military Deployments

In peacekeeping and training missions foreign soldiers come in close contact with the local population. How do they experience this intercultural contact? To whom extend do they experience a conflict between their moral principles and the moral principles of the local population? To what extend are (some of) these principles culture specific or are universal moral principles violated? And what does this imply for military missions in different cultural contexts, such as the Kunduz Police Trainings Missions?

We focus on the close relation between morality and culture in military deployments. The main issue in this paper is twofold, namely theoretical and practical. The first one considers the relation between morality and culture according to leading theories on these concepts. The second one is about the extent to which military personnel experience the relationship between morality and culture (whether or not conflicting) during their deployments as described in literature. We study these issues on the basis of research data collected during and after military deployments.

Global Garlic and Its Labor Consequences

This paper investigates the dynamics of China's integration into global commodity chains and a simultaneous race to the bottom. I explore this globalization-labor topic with a case study of garlic. Even in the garlic kingdom, the race to the bottom is visible.

1) China took off as the global exporter of garlic around 1982 and has been the dominant exporter since then. In 2009, 84 percent of the globally traded garlic came from China.

2) China's 2002 adherence to WTO allowed it to export to previously closed or high-tariff markets such as the United States. In 2002, China surpassed Mexico in capturing the U.S. market.

The race to the bottom began with North-South competition. As the U.S. economy continued to contract, firms sought even cheaper labor, moving significant parts of the production process to Asia. Such moves threatened to undermine Mexico's export of NAFTA. This capital mobility unleashed a race to the bottom in labor standards and working conditions. It is not possible for every nation to be a net exporter: one country's gain is another's loss. Although they do not initiate the race, governments become complicit because they, as much as foreign investors, want to hold onto their “competitive advantage” of cheap labor, lax working conditions, and lenient environmental regulations.

The South-South competition is reflected in the shifts in trade and investment flows. China's export and foreign investment gains and Mexico's losses are not simply those of two nations acting independently.

Labor conditions are oppressive, but firm owners, processors, exporters, and governments are not alone in their responsibility. 'Bottoming out' is a response to global importers who search for better prices.

In this research I investigate the conditions of garlic workers in China and Mexico as they relate to U.S. producers and the import market.

From Statistical Category to Social Category: Organized Politics and Official Categorizations of ‘People with a Migration Background’ in Germany

Social scientists disagree over whether it is acceptable for states to collect statistical data on the racial or ethnic composition of their populations and thus institutionalize these differences. Seeking to reconcile normative concerns with political desires to combat discrimination and reduce social inequality, some countries, like Germany, have chosen the ‘migration paradigm’ (i.e. using place of birth and parents’ place of birth to focus on the act of international migration) over the ‘ethnic paradigm’ (i.e. using phenotypical markers and/or cultural and linguistic links to a particular national group) as a ‘color-blind’ measure of difference. However, while much attention has been paid to categorizations deriving from survey and census variables, debates abound whether and how to measure immigrant-labeled population differences often ignore other processes of categorization operating at the nation-state level, such as interactions in the arena of organized politics. In this paper, we expand the terms of the debate by examining the relationship between statistical classifications and their mobilization in political interactions, in order to examine the validity of the distinction between the ‘migration’ and ‘ethnic’ paradigms in population statistics. The category of persons with a migration background (‘Personen mit Migrationshintergrund’), which was introduced in the German microcensus in 2005, serves as our case study. Drawing on a qualitative content analysis of 60 parliamentary documents originating in the years 2005 to 2013, we show that the way the migration paradigm is deployed by representatives of the state differs from the statistical categorization: it is implicitly ethnic, with strong class associations. Insofar as the social categorizations created by elected representatives out of statistical categorizations facilitate the construction of a stigmatized past and a future they may be of personal and material – not just symbolic – consequence to individuals thus categorized.

SCHWARZ, CHRISTOPH* (Frankfurt University of Applied Sciences, schwarz@e-mail.de)

Educational Policies and Questions of ‘Inclusion’ in the Middle East: The Case of the Palestinian Refugees

Palestinian refugees are the only ethnically defined refugee group worldwide that has an UN organization dedicated exclusively at its needs: the UNRWA (United Nations Relief and Works Agency), whose mandate originally was limited to a three year relief program for the 750,000 Palestinian refugees who in 1948 fled the territory of Mandatory Palestine. By now, UNRWA offers aid to the third generation of those refugees, which, due to the demographic development, today comprise almost 5 Million persons.

Regarding questions of inclusion and educational policy, UNRWA represents a unique case: financed by Western governments, the agency has set up 700 schools in the West Bank, Gaza, Jordan, Syria, and Lebanon, thereby providing free education to almost 500,000 children and youths – separated from the respective national school systems, and drawing on a staff of 22,000 teachers who are mainly refugees themselves. The international debate on inclusion has also had its repercussions in UNRWA, and in January 2013 the agency presented its own concept of inclusion. However, because UNRWA is officially an aid organization without a political mandate, the paper does not explicitly broach the issue of the social exclusion (and victimhood to violence) of their clients in the “host states”.

This presentation aims at depicting an outline of the paradoxes of UNRWA as an organization when it comes to “inclusion”; excerpts from interviews will illustrate the biographical relevance of UNRWA education and the exclusion of Palestinian refugees.

SCHWARZ, CHRISTOPH* (Frankfurt University of Applied Sciences, schwarz@e-mail.de)

The Only Constant Thing Is Change? Education, Adolescence, and the Need for Innovation in Late Modernity

Educational policies in many countries increasingly aim at preparing pupils for a globalized world of permanently accelerating social change; the ideal type of subjectivity they produce is a skilled, self-employed entrepreneur, flexible enough to adapt both life plan and identity to the always changing needs of global markets. For a sociology of education which aims to analyze all aspects of these contradictory processes, a socio-psychological concept of adolescence offers an interesting perspective: here, adolescence is considered the life phase most directly associated with individual change as well as social innovation. Educational institutions in the classic modern nation state aimed to contain and channel the dynamics of adolescence by offering youths a “psycho-social moratorium” (Erikson) or “potential space of adolescence” (King). In contrast to rituals of initiation in traditional communities, modern nation states thus made use of the innovative potential of adolescence. Following debates about education in Germany and other European countries it seems that on the one hand adolescents are expected to be “innovative”, while at the same time curricula demand an always increasing workload and integrate working and learning more intimately or anticipate work environments, which makes it more and more difficult to consider high school any kind of “moratorium” – especially as it is a decisive phase for social mobility.

I want to present and discuss several theses regarding the relationship between educational institutions and the dynamics of adolescence, both in Western and (de)colonized societies.

SCHWARZ, ORI* (Bar-Ilan University, ori.schwarz@gmail.com)

The Symbolic Economy of Authenticity As a Form of Symbolic Violence: The Case of Middle-Class Minorities

In contemporary societies, the language of authenticity has become central to the organization of work, manners, social ties, and most interestingly: social and moral evaluation. The paper explores how the ethic of authenticity informs symbolic economies of worth in Israel and the US. These new symbolic economies differ from Bourdieu’s: mastery of legitimate practices and dispositions may indeed enhance the social worth of some actors, but also devalue other actors, whose those class habitus and identity are considered ‘inauthentic’ independently of their performance. Based on analysis of wide empirical literatures on raced and classed identities in Israel and the US, the paper explores how this symbolic economy transforms advantages social class minorities. While dominant ethnic groups monopolize the symbolic recognition of authentic middle-classness, middle-class members of dominated ethnic groups are at risk of being accused of mimicry (‘acting white’, ‘Ashkenazisation’). This also applies to second-generation middle-class actors: following the racialization of class culture, their deeply entrenched middle-class tastes and dispositions may be suspected as inauthentic. While dispositions are often acquired in classed contexts and their distribution is hence class-based, the recognition of authenticity often follows race/ethnicity lines. In some cases, middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Far from being a form of oppression, the ethic of authenticity as a form of symbolic violence is thus also a form of empowerment.

Submit, Exit or Change: Strategies of Coping with Generational Order(s) in a Transition Society

This paper aims at conceptualizing problematic conditions of transitions to adulthood in the Central Asian country of Kyrgyzstan. Previous research in Kyrgyzstan has revealed that the social order in this society comprises a strong age and gender hierarchy. Such restrictive generational order shows as well in my qualitative study of young Kyrgyz adults. Respondents describe experiences of inter- and intrapersonal conflict when their freedom of choice (concerning study subject, marriage partner, lifestyle) is confined by their parents. While this can be said to match Kyrgyz traditions and notions of “collectivistic” culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyz people cope with such conflicts in a variety of ways which I divided into three categories: “submit”, “change” and “exit”. The first category refers to strategies with which the young make peace with the situation they are in (i.e. say to match Kyrgyz traditions and notions of “collectivistic” culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyz people cope with such conflicts in a variety of ways which I divided into three categories: “submit”, “change” and “exit”). The first category refers to strategies with which the young make peace with the situation they are in (submitted to the power asymmetry of the “moratorium” – especially as it is a decisive phase for social mobility). Beyond that, I would like to discuss which implications such patterns have for the potentials and barriers of social change in a so called “transition society”.

Identifying Sensitive Questions with Non-Reactive Methods

Sensitive questions result in misrepresented responses and identifying those questions is crucial for social and political research. Several factors have been identified to influence the decision whether or not to ask sensitive questions. Using para-data as non-reactive data should reflect the uncertainty and the perceived social desirability while answering the questionnaire. By tracking response change and page change in addition to item non-response and response latencies, the researcher has a powerful tool to reveal exceptional response patterns in web surveys. In practice, these methods can also help to cut costs of further surveys that are usually used to identify sensitive questions and they can also show problems with wording and too high cognitive effort in earlier stages.

Non-reactive methods such as measuring response latencies and event tracking adds information to be analyzed without adding load to the respondents. Such events are filling the questionnaire, or changing the page and selecting or changing an answer option. Tracking these events not only by time, but with multiple answers over time per item, we process the complete questionnaire instead of leaving the black box untouched, which is between handing out the form and getting the (final) responses. In this way it is possible to reveal answers of first choice, response change and page change as event types besides response latencies and the order of completion.

The para-data from a web survey is compared to data from a questionnaire about the perceived social desirability and threat of disclosure of the questions used in the former one. The response patterns uncovered by the event tracking should correlate with these sensitivity measurements. Sensitive questions should have, in addition to the occurrence of non-response, a) higher response latencies, b) multiple page views, c) more response changes and d) lower intra-item correlation between the first and final answer.

The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across 21 European Countries

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. During the last two decades a whole set of EU and national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While there are seen as separate, the first addressing discrimination, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

We will address this lacunae by looking at the impact of work, family and gender equality policies on vertical occupational sex segregation. The study starts with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 21 European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, female concentration at the lower end might be less affected.

The social sciences and humanities (SSH) funding schemes of the European Union (EU) framework programmes are the largest of their kind in Europe (Kastriotis 2010). The larger EU policy context has had direct impact on EU SSH research policy and indirect impact on national research funding strategies. Setting the agenda of research policy takes place on two levels in the European Union: first, the definition of large thematic priorities, funding instruments, rules of participation and the overall budget available to the different domains are defined in the multi-annual EU Framework Programmes. Second, the precise topics, research questions and favoured approaches are defined in the regularly updated work programmes.

The paper will discuss how the agenda is set in EU SSH research policy and in particular focus on the role of the Treaties (Rome, Amsterdam, Maastricht, Lisbon) in framing SSH research policy since FP4 (1994-1998), when a SSH priority was first introduced. It will be shown that the (geo)political landscape of Europe and the degree of European integration has first limited and later facilitated SSH subjects. It will also consider how changes, first in discourse and later in governance, affected practices of stakeholders (researchers, research associations, funding bodies) and public participation in setting the agenda for the SSH. The process of setting the agenda is understood on the one hand as a social practice of knowledge production, in the sense that setting research priorities and especially defining more precise calls for proposals on a political level also influences the approaches and results of SSH research. On the other hand it is understood as a form of political bargaining, where public and stakeholder participation is taking place in the political sphere. The research relies on existing studies, interviews with commission officials and national contact points, participant observation and document analysis.

Leaning Towards The Middle? Collective Manifestations Of Normative Beliefs In Developed Countries and Their Implications For Developing Countries

There is a vast and ongoing debate on the middle class in the field of political sociology. Undoubtedly, studies on its role and functions should not be restricted to developed societies as the global importance of developing countries (with emerging middle classes) will definitely be growing.

We would like to take up this understanding by contributing a piece of ground-work research that focuses on the middle class in comparatively developed countries because it may serve as some sort of ‘reference frame’ for an improved understanding of socio-structural driving forces perceptible in developing countries.

With these preliminary reflections in mind, we use data of the International Social Survey Programme (2009; module "social inequality") in order to compare perceptions and evaluations of stratification realities and aspirations. On the basis of five distinct types of stratification, respondents of 26 primarily European countries were asked for their assessments regarding the current and the desired social position of their respective social groups. By performing multinomial logistic multi-level regressions we identify individual- and country-level determinants.
Concerning stratification realities, gender, age, education and (subjective) socio-economic status prove to be significant predictors. On the country-level, the objective socio-structural shape (income-based percentage of lower, middle and upper class), the GDP per capita and social expenditure (as a percentage of GDP) turn out to be relevant. With regard to stratification aspirations results indicate that respondents in the majority of countries under study opt for a society with a broad middle segment – in fact, irrespective of any stratification realities. Thus, context effects impact solely on perceptions of stratification realities, whereas we observe a universalistic preference for the ‘middle class society’.

In our review, the choice towards the middle class in developed countries may improve the comprehension of mental mechanisms and orientations in developing countries.

Le “Libre Choix” Des Patients Dans Une Relation Plurielle Et Diachronique

Le droit des usagers au « libre choix », tel qu’il est formulé dans la loi du 2 janvier 2002 en France, semble sous-tendre que les patients s’inscrivent dans une relation duale avec les médecins au sein de laquelle ils seraient des sujets singuliers, rationnels et autonomes dans leurs décisions. Les travaux sociologiques ont cependant montré d’une part que la réalisation de ce modèle bute contre des obstacles notamment liés à des positions de classe, genre et âge des patients et aux situations de crise qu’ils rencontrent ; d’autre part que les maladies sont rarement vues par leurs parcours de soins mais souvent aidés par des membres de l’entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous raisons donc l’hypothèse que les décisions de soins doivent être analysées dans le cadre d’une relation plurielle autour du patient, qui questionne la voix du chapitre de chaque acteur.

Par ailleurs, les choix théoriquement révocables à tout moment, ce qui invite à les analyser de manière diachronique.

Notre recherche porte, dans ce cadre, sur les décisions de primo-entrée en hospitalisation à domicile (HAD) et de sortie du dispositif. En fort développement en France sous l’impulsion des pouvoirs publics, l’HAD est censée constituer une solution économique pour les finances publiques et répondre au souhait des patients, en France sous l’impulsion des pouvoirs publics, l’HAD est censée constituer une solution économique pour les finances publiques et répondre au souhait des patients.

Le “Libre Choix” Des Patients Dans Une Relation Plurielle Et Diachronique

Border Regimes in the European Neighbourhood: Is Their Multilevel Negotiation Possible?

Tensions between securitisation and cross-border interaction have been a major focus of European border studies – particularly as a result of human suffering and deaths of “sans papiers” attempting to enter the EU from the South and East. Perceptions of a Fortress Europe and a unilateral imposition of border security regimes in many ways challenge the European project of cross-border and regional partnership with its neighbours. As part of the negotiation of such regional partnerships (e.g. within the scope of the European Neighbourhood Policy - ENP) security and border management have been defined as policy areas conducive to “co-development” and, to an extent, “co-ownership”. Yet it is unclear to what extent a true multilateral and multilevel process along these lines has materialised or is indeed possible under present circumstances. The paper will explore the evolution of new border regimes between the European Union and its eastern neighbours. It investigates the negotiation of border regimes between the EU and Russia, Ukraine and Moldova, we will identify to what extent the co-ownership and/or co-development of border policy has been possible. Do EU and its neighbours indeed share common interests in terms of border-related issues, including security? We will also investigate the extent to which local development concerns have been considered as part of negotiating such border regimes and the possibilities for greater local participation in future.

In the Middle or in a Muddle: Socio-Cultural Politics and the Indian Middle Classes

The state of middle class culture and politics in India is complex and often contradictory. While many among the estimated 200 million middle class have embraced a modernist economic and social mobility over the past 20 years, large numbers of salaried professionals in government service and small companies have seen their status and incomes decline relatively over the same period of time. As such, we see notable schisms within the middle class: the new rich and the entrepreneurs as compared to traditional salaried workers; the middle classes in India’s many regional towns, as opposed to those residing in vast urban metropolises; and differing cultural outlooks from generation to generation, region to region. Interesting political differences are also evident with many of the “traditional” middle classes, for instance, exhibiting a cultural conservatism while holding politically progressive views. Based on extensive research among the Indian middle classes over the past 15 years, I contend in this paper that the middle classes are not homogenous, are deeply divided politically and culturally but nevertheless they remain significant as brokers of political and cultural change within India. Examples drawn from Kolkata and Darjeeling in West Bengal will be the basis for the discussions in this paper.

The Paradoxical Politics of South African Labour: Unions and the Fight Against Precarity

As neoliberalism has undermined formal wage work across the global South, labor scholars have increasingly turned their attention away from organized and formally employed workers and towards the growing sections of the “precariat”. A large literature has blossomed examining the politics of precarious, informal, and non-organized workers. Behind this precarious turn in labor studies is an assumption that these workers will be the primary source of a new labor politics that looks beyond issues of wages and working conditions and towards broader questions of livelihood and social reproduction. However, in South Africa, while precarious workers’ movements have remained disparate and unorganized, formal workers unions have taken up a range of issues—such as a universal national health insurance, a basic income grant, and land reform—that constitute a new politics of the precarious. This is surprising given that many of the policies that unions advocate would involve the subsidization of precarious workers’ livelihoods by the minority of formally employed organized workers. In order to explain this paradox the paper draws on nationally representative household survey data as well as one year of field work in three rural areas and one major urban center. The data show that the decline of formal wage labor has led to an increasing social and economic interdependence between large sections of South Africa’s precarious and formally employed workers. The case shows the importance of understanding the ways in which the rise of precariousness has reshaped not only work, but also workers’ house-
holds and broader social lives. It also shows the role that “old” organizations can play in the “new” politics of labor.

The Triangular Relations of Society, State, and Market in the Context of the Processes of Contestations Between Globalization and Decentralization: A Sociological Perspective

This paper gives a general description of the triangular relations between Society, State, and Market from a Sociological Perspective. Within the context of this triangular relations, a major challenge facing contemporary Indonesian Society will be explained, which is the social problem of Poverty and Social Exclusion. Before understanding these triangular relations between Society, State, and Market as a conceptual analytical tool for explaining poverty and social exclusion, there are several important caveats to be addressed. These important caveats are related to the relations between Nation-State, and Nationalism within the context of the processes of contestations between globalization and decentralization (democratization on the local level). The discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. The paper is based on primary data using qualitative methodological approach and a specific case study from Indonesia.

SEDA, FRANCISIA S. S. E.* (University of Indonesia, savierio09@yahoo.com)
When There Is No State

The Decentralization processes in the context of this case study have not yet resulted in a more flexible and decentralized structural relations between the Central Government and the Local Governments (both at the Provincial and at the Regency Levels) generally and also specifically in the Industrialization Strategy in The Oil and Gas Sector (1999-2009). The triangular relations between State, Market, and Society are fluid and internally fragmented within each pillar and externally contested between the three pillars.

Inclusive policies by the local governments have not yet been effective and efficient in targeting the most marginalized and socially excluded members of the local communities. The local governments need to have a clear and more affirmative policies focusing on the local communities welfare, including immigration policies. The MNC (BP) Programs need to take into reconsideration the categorization of DAV and IAV local communities and the internal fragmentation within these communities.

The relations between the local communities and the local government are not as strong as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, so far only the IAV local communities have done so against the MNC (BP). At present, there is no indication yet of any process of social movement in the making of the local level.

The condition of no real role carried out by the State in the context of decentralization and industrialization strategy in West Papua can be traced back to several factors. These factors are the relations between natural resources and development, the process of decentralization, and the specific nature of the BP Tangguh Project in The Bay of Bintuni regency.

Getting (in the) Sack(ed), Gender Domination and Male Honor

Three years ago an American college girl presented a sort of replica of an academic essay evaluating like a professor would do to his/her students her male sexual partners means and performance (some were commended, others rather not). It got out of hand in no time. With considerable discomfort building up (in the networks she was implicated in), soon she was forced to apologise to everyone involved, namely her sexual partners, and remove her outrageous paper from public sphere. What was so ignominious about her conduct, one might ask. In other words, what contemporary Lebenswelt aspects particularly of manlihood where unsettled by miss Owen's doing? Was it simply a matter of a diffuse moral economy that cursors women whom tell/brag too much about their sexual activities and deeds or the rejection of the "experienced woman"? We, of course, think not. Based on interviews with men and women of different ages, in this paper we'll be presenting the core idea that unbearable intimidation (or what made miss Owen an unusual troublesome/frightening figure) comes from the special kind of power her classifying assertions conveyed. Party reversing/disputing the rousness of this argument goes along with the categorisation of experienced women as " sluts" and the like, we shall argue that any woman with a history of multiple sexual partners constitutes a threat to men's ontological security, unintelligible unless one spotlights the social production of man's honour as "proven virility", that is, someone capable of taking possession both physically and symbolically of his partners. That woman might even overturn male's domination agency. The "mature" woman, who knows the ways of the world through bygone practice, carries a comparative index enabling her to "grade" her lovers manhood. "She can and does tell," a (discursive) condition to halt man's possession and, therefore, a possible tenure-taker of gender relations.

What's in a Dreamed Profession? Training to Become a Football Professional Player

The last few years have witnessed a widespread (with greater impact in side-line countries like Portugal) dissolution of the virtuous relationship between the type and level of education, profession, remuneration and social status. This still is has favoured young people to look for alternative life pathways. In Portugal, schools of football are playing a relevant part in this shift. Mainly concentrated in the big cities (Lisbon, Oporto), they respond to the training solicitation of an increasing number of young males. At the base of this solicitation is the fact that football has recently been subjected to social reconfiguration and symbolic (re)valorisation, concerning diverse dimensions besides professionalism; creation, ideation and mediation are also drawn in.

In this paper, we shall be looking into the subjectivities of male youngsters training to be professional football players. By which meanings do they qualify football? What role those meanings play in the construction of their identities? How is the process of transition to work they face? How is transition to adulthood affected by their football stake? Answering these questions lead us to examine three analytical dimensions: 1) dream production pathways: how is the idealization order of the profession socially produced and experienced; 2) dream accomplishment pathways, namely the social circumstances that involve the transformation of the dream into a project; finally 3) dream professionalization pathways: specifically focusing on possibilities of matching between the dream, the project and the realities of professional performance.

The main hypothesis we'll be discussing is that the choice of football is, at the same time, a strategy to extend and to accomplish a fulltime identity that often is not allowed to be expressed within the more conventional professional spheres; and a decision that shows new ways for young people to cope with uncertainty in transition to the labour market and to adulthood.

Understanding How We Learn

Students in South Africa face a series of challenges when making attempts to process information from the teacher and write tests in the classroom. One of the key challenges that has been identified for students is the mismatch between level of education and testing methods. Large numbers of learners of all races and socio economic backgrounds find themselves receiving poor results on exams. This paper seeks to address the reasons why students perform poorly, and how this poor performance can be corrected through a clinical approach. As such I have developed a programme that is currently being trialled in South Africa. This programme seeks to 1) understand the learners style; the attention span; the memory bank as well as the way in which learners process information. Individual programmes are then designed and the results have been very successful. This paper will present the detailed findings of 10 students that have completed this programme.

Mobilising Migrant Workers in the South African Post-Migrant Labour Regime: Precariousness, Invisibility and Xenophobia

The critical role played by the migrant labour system in allowing formidable levels of accumulation in core sectors of the South African economy (mining, agriculture) has been documented extensively over the past 30 years (First et al. 1972, Burawoy 1976, Legassick & Wolpe 1976, Arrighi et al. 2010, Crush, 2007). The mobilisation of this migrant workforce from within and beyond South African borders and its critical role in the emergence of independent Black unions in the
unions have learned to incorporate environmental concerns in their campaigns. This presentation describes some successful red-green alliances in Latin America, exploring the implications for labor strategies more broadly.

*Maintaining Identities of Distinction in Taiwan through the Foregrounding of Linguistic Abilities*

In his seminal work *Distinction: A Social Critique of the Judgment of Taste*, Pierre Bourdieu demonstrates how the cultivation of taste serves to reproduce class divisions in society. In this talk, I argue that class divisions are similarly being reproduced in Taiwan today based on proficiency in languages of wider communication — particularly English. After discussing the mechanisms by which identities of distinction (or any identities, for that matter) are produced in interaction, I will present interview data from a longitudinal multi-case study illustrating how this process of practices and performance indexing dominant ideologies plays out in Taiwanese society. The study's multilingual Taiwanese participants repeatedly point out instances in which they have distinguished themselves from those around them through their use of and (relative) proficiency in English (and to a lesser degree, French). For these participants, images of themselves as more worldly and sophisticated than their peers started to be nurtured quite early in life through tuition classes and private tutoring, and from that point on, they continuously struggled to maintain these identities of distinction, often resorting to performativity to foreground their linguistic practices. These participants, however, viewed their differentiated status as something precarious, for accompanying their repeated reports of attempting to stand out through English use was a frequently expressed anxiety about the fact that their English abilities alone might not continue to adequately differentiate them from others, particularly in the employment arena, as more and more Taiwanese gain English proficiency.

*A Paradox of Coercive Power: Institutionally Founded Power Relationship and Rationality of Action*

Reviewing the literatures on social power, it is found that so many different kinds of power concept as well as measures of magnitude of power have been proposed. Hence, without an appropriate specification of power concept, no meaningful analysis is possible. This research focuses on the coercive power which is defined as follows; an individual A is wielded a coercive power by B when A is forced to choose an action x which she/he would not choose if B's action were somehow different. In other words, B forces A to choose x by preparing a punishment to A's non-x choice. (Strictly speaking this is "negative" coercive power. There is also "positive" one in which B prepares a positive sanction to A's choice of x.) This concept of coercive power involves individuals' rational choice. A is forced to choose x because it is her/his rational choice under a given situation.

It is frequently supposed that a power relationship is asymmetrical in which the power holder and the power subordinate are fixed. If A is the power subordinate in relation to B in one situation, this asymmetrical relationship applies to other situations. Especially, if the relationship is institutional, that is, it is institutionally stipulated that B is entitled to control A's action by preparing a punishment to A's normatively deviant action, B is identified as the power holder in relation to A.

However, there are paradoxical cases in which the presumed subordinate A can control B's sanction schedule in such a way that B does not punish A's deviant action. This happens because B also has to choose the sanction rationally. This study shows the mechanism of this paradox and analyzes mathematically the conditions that this paradox emerges.

*Income Disparity Among Elderly People in Japan: Life Course Factors on Retired Life*

With societies being increasingly aged, the inequality among the retired population should be more focused in stratification study. My previous study (Seiyama 2009) had analyzed, using 1995 SSM data, the reason for the larger income disparity among the elderly in Japan to some extent, but there were two serious defects in the data: that is, people aged more than 70 were excluded and the information on income sources including pension were not available. This is a new analysis on the income disparity among the elderly, based on a new nation-wide survey conducted in 2010, headed by Shirahase, with effective 6,442 respondents from
50 to 84 years old population, comprising various stratification variables such as income source. The main results are: (a) in Japan the income of the male elderly is mainly composed of working income and pension, while capital income is quite negligible. (b) Gini coefficient within age group is larger for the groups aged 60 or more than for two groups of 50%, mainly because of the fact that for the elderly the proportion of those with only meager income is large. (c) After 65, the main source of income becomes pension (more than 2/3 of total income), though exceptional cases are blessed with significant amount of working income (mainly administrative or self-employed.) (d) The overall income inequality among the retired reflects the inequality in pension. (e) The main factors on the pension inequality are education and occupational career characteristics at working age, but controlling for the latter the effect of education is largely reduced. (f) The important occupational career characteristics are the size of company and the experience of executive post. (g) Because the single earner family model had been prominent for the cohorts of our survey respondents, a basically similar conclusion is derived for household income.

Labor Relations, Neoliberal Agri-Food Policies and Disasters in Japan

This paper probes the issue of changes in the agri-food labor structure under neoliberal globalization. Employing two cases from Japan, the paper documents the displacement of independent farmers and their replacement by hired labor. This process, it is argued, was accelerated by the implementation of neoliberal policies and by the effects of natural and human made disasters that affected Japan in recent years. More specifically, this work illustrates: (1) the manner in which neoliberal agri-food policies engendered changes in agri-food labor relations; (2) the characteristics of new forms of labor relations under neoliberalism and 3) the specific alterations of labor relations that occurred in the aftermath of recent disasters in Japan. In the first of the two cases presented, labor relations in farms controlled by the transnational corporation, Dole Food Company, are illustrated. The second case analyzes the neoliberal agricultural reforms in the aftermath of the March 2011 earthquake. Also considered in this case are labor relations in the fishing sector and the responses of fishermen to the neoliberal reforms of the sector.

CEDAW As an Instrument to Foster Women's Political Equality in Central and Eastern Europe?

All countries of the Central and Eastern European region adopted the Convention for the Elimination of All Forms of Discrimination Against Women. Its implementation in these countries can be seen not only as a fulfillment of economic growth but also as one of the mechanisms of democratization. Based on the comparative analysis of the official country reports and information delivered by non-governmental organizations the impact of CEDAW on the implementation of gender equality in new European democracies will be assessed. The special attention will be devoted to the problem of the enhancement of women's political rights in Central and Eastern European democracies. What it means to implement the provisions of the CEDAW concerning political and public life in these countries? Can there be seen progress in their implementation? Is the Convention (and if yes, in what ways) used by women's organizations in order to demand institutional measures to strengthen women's representation in political institutions? Is CEDAW a point of reference for those who argue for legal changes – including gender quotas and zipper system – to help increase women's political representation? Is the Convention a tool used by these actors who engage in supporting women deciding to be politically active both on local and national levels? What are the similarities and differences between the countries of the region in implementing the Convention and its promotion as a tool of effective social change leading to women's political empowerment?

Modernity As Tragedy. Adam Ferguson on the Decline of Community

Adam Ferguson was one of the major figures of the Scottish Enlightenment. And he was rightly credited as a precursor of modern sociology. For instance, Ferdinand Tönnies famous distinction between “Gemeinschaft” and “Gesellschaft” strongly resembles passages from Fergusons seminal “Essay on the History of Civil Society”. The difference between a German and an Anglo-Saxon semantic of community in mind, it seems paradoxical that especially the romantic German idea of community has been heavily influenced by Ferguson. His conception of an authentic civic life had a high impact in the German tradition of social thought and social criticism, and it is only a slight exaggeration to say that he was one of the inventors of an emphatic idea of political community. Ferguson also anticipated central features of the critique of modernity known by Karl Marx and Max Weber. In contrast to his contemporary friends, most notably David Hume and Adam Smith, he emphasized the political perils and the dangerous dynamics of modern market society. Modern society rests, according to Ferguson, on an increasingly powerful state, the expansion of the division of labor and a weakening of the community in favor of self-interested behavior. Consequently the public sphere and the sense of political community dissolves. The paper will examine Fergusons concept of community, his conjoined critique of modern society and its semantic of alienation. The tragedy of modern society lies in its dialectical process of liberation. This process leads to individualization and it has an alienating tendency: in the name of individual freedom, people become "gear wheels in the machine".

Foodsharing - A Contemporary Way Of Converting Perishable Food Into a Common Good

The paper discusses foodsharing as an controversial issue and thereby focusses on the role of a smartphone application which has recently been launched in Germany.

Foodsharing seems to fit perfectly into the sharing economy. A debate about food waste in affluent societies has created a new public mood concerning the discussion about the ethics of food thrown away. A foodsharing app has been introduced in 2012. The app is sponsored by the German Federal Ministry of Food, Agriculture and Consumer Protection (BMELV) and promoted by the prominent filmmaker Valentin Thurn („Taste the Waste“). It enables consumers to announce surplus food in favor to be shared with other peers. Consequently the public sphere and the sense of political community dissolves. The paper will examine Fergusons concept of community, his conjoined critique of modern society and its semantic of alienation. The tragedy of modern society lies in its dialectical process of liberation. This process leads to individualization and it has an alienating tendency: in the name of individual freedom, people become "gear wheels in the machine".

Selke, Stefan* (Furtwangen University, ses@hs-furtwangen.de)
LifeLoging – Consequences of Tracking The Self and Transforming It Into a Digital Self

Today life data is archived and presented publicly in networked digital media. The term “lifelogging” subsumes digital media systems and devices, as comprehensively as possible, traces of human behaviour and put them into long-term storage. Four types of lifelogging can be distinguished: 1. Health Monitoring, 2. Human Tracking, 3. Digital Memory and 4. Sousveillance. Lifelogging is a marked attempt to break the boundaries of human existence by means of digital media. According to the most prominent advocates in this field it demonstrates the increasing belief in numbers and data and therefore could be called a neo-empiristic movement.
However, the complete recording of one's life brings up new questions about personal information management and emerging inequalities. Cases studies of methodological, epistemological and social aspects of lifelogging already show fundamental concerns about the relationship between one's own life and the data set created by liflogs. Critics warn that people using lifelogging and producing large amounts of information, will soon become unwitting subjects of surveillance.

The critical discussion of lifelogging refers to the theory of “shifting baselines”. Three main shifts have to be considered: 1. From subject to object (loss of individualism), 2. From action to function (loss of autonomy or agency). 3. From privacy to post-privacy.

“Technoapartheid”, “over-diagnosis”, the standardisation of human behaviour, the emergence of new social norms and the shame punishment of deviant people are examples of new inequalities caused by extensive lifelogging. Against a backdrop of research projects on media of the future and empirical data, this paper discusses lifelogging as a controversial issue, focusing on the role of recently developed digital devices. Even if related developments in the area of lifelogging are not yet in the public domain, important questions about shifting boundaries are emerging and need to be discussed.

Aged Population and Social Disability in Rural South India: The Social Exclusion and Inclusion Perspective

Aging is a natural process that begins at birth, or to be more precise, at conception, and continues through one’s life and ends at death. With prolonged human life, reduced mortality and fertility rates due to recent developments in science and technology, aging has become a global phenomenon in the 21st century. World Health Organisation (WHO) views aging as a privilege and a societal achievement. This process started in developed countries and slowly shifting to developing countries like India with increase in number of graying population. Elderly life is considered or assumed as a burdensome life, full of struggle, illness, depression, exploitation, abuse etc. Traditionally, the joint family took care of the aged but rapid urbanization and the migration of persons from rural to urban areas have created a vicious situation. In the absence of the ability to earn, and within the limits of community support, in the form of kinsmen or the extended family, the aged are rendered destitute. It is also evident from Indian data that 40% of the elderly live below the poverty line and 90% are neither covered by any state pension nor have any family to take care of them. Increased rate of survival beyond 60 years have implications for financial burden from both family as well as state.

Social disability is the unproductiveness, redundant and social maladjustment to the environments. This paper aims to understand the socio-economic inequality that exits among the elderly population and causes social disability. Also it exposes the determinants of poverty and discrimination among elder people in the study area. And analyze about the social, economic and psychological problems experienced by old persons and advocate an action plan for effective implementation of welfare, care and support of the aged populations in the study area as part of social intervention.

SELSTAD, LEIF* (University of Stavanger, leif.selstad@uis.no)
International Tourists at a Japanese Festival

The paper concerns the experiences of international tourists visiting a traditional festival in Japan. The festival, Tsukuda Ōmatsuri, is a shrine festival held every third year in August in an old neighborhood in Tokyo, and attracts thousands of spectators and tourists. I have had the privilege to observe this festival for thirty years. Over the years the festival’s relationship with tourists has changed. At one time during the 1990’s, when the local area was threatened by urbanization, tourism was encouraged to boost political support and protection. Once the area avoided demolition, the crowds of tourists were seen as disturbing to festival performances, and the festival was no longer advertised for tourism. In spite of this, tourists continue to visit the festival in great numbers, mostly Japanese, but to some extent also international visitors. Contrary to expectations, the tourism was not to promote the festival or encourage tourism has not diminished its value as a tourist experience. People appreciate the lessened crowds and heightened authenticity of getting closer to local performers and events. Also the few international visitors who come feel that they get a better understanding of the festival with lesser crowds. This raises the question if tourist events such as festivals have to be completely adapted for tourism in order to be enjoyable for tourists. It is often forgotten that small banter and incidental events may be as memorable for tourists as well rehearsed performances. As long as safety is preserved and conflicts are avoided, tourists can relate to limited information about an event and still see it as a great experience. In fact, such partial and ad hoc knowledge may be the norm rather than exception when tourists take part in special events; matters may still run fairly smoothly and provide good experiences.

Construction of Solidarity through Language Mode: Sociocultural Approach to Internet Discussion Forum

The situation of social inclusion could be considered as situation of ‘entering’ into community that brings the sense of individual/collective solidarity. The virtual community and internet forums could serve as example to follow and investigate that mechanism as the Internet provides a social space in which people can construct participation in different types of social groups (Mann and Stewart, 2000). These groups could construct sub-cultures (Williams, 2006) or small cultures (Holliday, 2004). The culture of each community is based on members’ lived experiences in various communities. Digital community has some specifics in forms of participation, social status of participants, modes of identity and behavior, etc. (Mann and Stewart, 2000). Researcher do not have any cultural medium and language reveals. Nevertheless these disembodied forum participants pass their subjective meanings and solidarity moods by digital texts as cultural markers and construct different forms of social (virtual) solidarity. So the mechanism of forum solidarity could serve as a source for analyzing the nature of solidarity through linguistic approach.

This empirical research was based on the discourse features of messages posted to several Internet discussion forums (mainly ‘knowledge of practice’ forums – medical, tourism forums and political solidarity forums in Russian-language blogs). The message texts were classified into three types (Morrow, 2006): problem messages (advice messages and thanks messages, and salient discourse features of each message type were described and analyzed in terms of discourse function. “Thanks messages” in this case were interpreted as the first linguistic sign of virtual solidarity.

That result turned author to the discussion of the notion of ‘emotional climate’ in new social media as the ‘intermediary between social structure and agency’ and as ‘a deeper structural reaction on political and social inequality’ (Alice Baker, 2013).

mour markets is proposed.

More than forty years later we reconsider the relevance of Internal labour mar-
ter theory (Doeringer, Piore 1971) from a contemporary perspective. The stra-
tegic use of core-periphery has shifted towards market-mediated employment
relationships and affects indifferently high and low-skilled sectors.

This issue is part of the wider socio-economic debate on inequality associated to
labour and ranking and sorting process in labour markets (Granovetter, Tilly 1988).

Many European countries have undertaken reforms in order to increase flex-
ibility. From this perspective the framing refined by Varieties of Capitalism (VoC)
literature has been evolving, as companies situated in different countries -facing
the global competition- seem to be adopting similar employment practices.

Recent studies (Herrmann 2008) showed the ways by which firms can compete
circumvent pragmatically their own rigidities though functional equivalent practic-
es, by using different forms of contracts or depending on the required skills from inter-
national labour markets. Firms seem to be doing what their institutional contexts
do not encourage.

We consider new forms of division and distribution of labour between firm-
based and market-based labour force and their social implications, from the key
point that skills and competences are crucial factors of productivity and compet-
itive.

Following Streeck’s contemporary Durkheinian interpretation that “economic
efficiency is to an extent conditional on the effective enforcement of social con-
straints” (Streeck 1997) we aim to better understand if there is a sort of collecti-
wareness of the reduced social value of work or if, in alternative, companies are
implementing new and still unclear cost-effectiveness strategies.

HOSSAIN, DR. MD. ISMAIL* (Shahjalal University of Science &
Technology, ismailscw@yahoo.com)

Gender Justice in the Global Manufacturing: Where Does It Stand?
an Evidence from Garment Industry of Bangladesh

Globalization of production has yielded contradictory consequences to the lives
of women workers who question about gender justice. Supporters argue that
globalization ensure gender justice because it brings positives changes to lives of
women workers’ in various forms, like, expansion of employment opportunities
leading to income earnings (Barrientos, 1995; Razavi, 2001; Kabeer, 2004), break-
ing patriarchal bond (Lim, 1997), growth of self-awareness about rights and duties
and participation in collective bargaining association (Gills, 2002), shifts in gender
roles and value structure, reconfiguration of the public-private and production-re
duction dichotomies (Unni, 2002). On the other hand, critics reject the claim of
economic benefit of women; rather state that it is pushing women into more vul-
nerable situation than they were before (Boserup, 1970; Elson and Pearson, 1981,
1997; Nash and Fernandez-Kelly, 1983; Acker, 2004; Caraway, 2007). They argue
that working conditions and labour rights in global factories are characterized
by unjust labour practices, such as insufficient wages, extremely long working
hours with minimum compensation, lack of occupational safety and health, little
access to maternity and childcare benefits, arbitrary punishment and workplace
assassination, absence of union and low workers’ participation, presence of forced
and compulsory labour, persistent or increasing exploitation. Based on inter-
eviews from Garment factories in Bangladesh, this paper explores that gender justice is yet to achieve at the global factories following the concep-
tual framework of social justice by Amartya Sen (Sen, 2009). This paper concludes
that labour justice can be ensured if all local-global actors (state, employers, em-
ployees, corporations, NGOs, consumers’ groups) play responsible and ethical
role towards unfortunate workers.

SEMI, GIOVANNI* (University of Torino, giovanni.semi@unito.it)

A City, Two Neighborhoods, Ten Years: Observing Gentrification
before and during the Crisis

In gentrification studies most of the empirical literature draws on in-depth
analysis of single case study or on multi-site comparative analysis having time as
a fixed variable. This paper aims at introducing and problematizing the time di-
rection for comparative analysis. The paper we propose here is based on a double
fieldwork in two neighborhoods of Torino, Italy, known as Quadrilat-
ere Romano and San Salvatore, that have been facing gentrification from the early
Nineties up to recent times, following one another as subsequent targets of public
interventions and market dynamics. The time-span of more than ten years allows
us to face some major conclusions on the overall regeneration of the city of To-
rino, the role of gentrification in the remaking of the central city and the effects of
the financial crisis on households, commercial activities and the image of the city.

The data are qualitative, mostly fieldwork notes, interviews and observations.

The contributions of this paper are both theoretical and methodological. On the one hand, it offers new understandings of fourth-wave gentrification phe-
nomena in a peripheral Western country such as Italy, on the other hand, it adds
further knowledge on multi-site longitudinal and qualitative analysis. Moreover, we
will provide evidences from a city that have long been the one-company town
of Italy, hosting FIAT and IVECO industries among others, and it is now betting
on cultural economy, tourism and entertainment as new path of re-development
after hosting the Winter Olympics games in 2006.

Do We Stay or Do We Leave?: The Views of UJ Students with Regard
to Living in South Africa

This paper focuses on UJ students’ views on remaining or leaving South Africa.
This is based on the degree of trust students perceive the government of being
worthy of and the degree of engagement in the affairs of the country students are
prepared to expend in the context of perceived threats to SA citizens. A survey
was conducted in 2011 on the basis of a stratified random sample of 1214 un-
dergraduate students on all four UJ campuses. The data is analyzed in terms of a
typology that considers the extent to which people either respond to real or per-
ceived threats on the basis of trust in the government’s ability and willingness to
protect their interests as citizens and the derived trust in the future of the country
or from a position of distrust in this regard. On this basis they could furthermore
either engage the threatening reality or disengage from it altogether. The paper
analyzes the extent to which patterns can be identified among different groups
of UJ undergraduate students with regard to the four possible responses that
emerge: Trusting engagement, trusting disengagement, distrusting engagement
and distrusting disengagement. The paper concludes by briefly considering the
possible implications of the four responses for the long term stability and pros-
perity of South Africa.

Mediating Workplace Bullying

This paper will be exploring the nature and dynamics of workplace bullying
with a view to identify important requirements for mediatory interventions to
resolve bullying related issues within the workplace. In order to achieve this, an
analysis of the characteristics of the workplace bully, the impact of the bullying
behaviour on the victim and the organization, as well as the enabling organiza-
tional environment will be done. Possible mediatory interventions in this context
will be explored in terms of the following dimensions: On a micro-level, require-
ment for more constructive mediation between the bully and victim will be analysed.
On meso-level, bullying awareness workshops and skills developing workshops
to deal with workplace bullying will be explored. On macro level, management
participation and policy related interventions will be analysed. Reference will be
made to the South African situation.

Future Urbanisms: Technology, Science Fiction and Extrapolated
Cities

An unavoidable dilemma of looking into the future is demonstrated by our
pondering whether to filter reality through Google glasses (smart phones, tablets
e.tc.) - providing data about location, proximity and resources - or to resist this
new temptation to stream information and explore the reality of our environ-
ment. Technology has two sides, providing new social possibilities such as digital
art and communications, while taking away the need to go shopping in person.
The importance of science fiction in our consideration and construction of futures
is illustrated through E.M. Forester’s short story titled ‘The Machine Stops’, written
in 1909, which describes a future for humanity based upon a complete reliance
on technology, and predicts the internet. The story serves as a warning of a future so
close that it is fully reliant on technology that humanity is disabled. Science fiction utilises
several methods to extrapolate possible futures and identifies both the obvious
relationship between urbanity and imagined futures, and the distinction between
approaches based on extrapolation and fantasy. The process of extrapolation
based on existing socio-material realities provides an avenue to work with the city
as an open-ended system. This paper will demonstrate how ‘systemic diagram-
ming’ (Sengupta and Liss moves, 2012) can be used to extrapolate ‘potential’ futures
providing a frame of reference for current actions and future speculations. Just
as in science fiction the methodology is based on empirical socio-spatial findings (knowability), technological projection, epistemological growth and speculation regarding potential tangents and tipping points. The ability to act positively towards desirable futures is deeply embedded in possibilities of change, identifiable trajectories and an acknowledgement of the fact that cities and society continually transform. By positioning urban change in context of resilience (Walker et al., 2004)(Holling, 1996), adaptation and assemblage (DeLand, 2006), potential urban futures become the space of socio-spatial speculation and resultant action.

SENOO, ASAMI* (Osaka University, smilee1027@gmail.com) “What I Want to Do” As a Form of Strategy to Survive on the Job-Hunting Process: The Case of Japanese University Students

In Japan, university students are facing challenges to get a job today. For example, only 60 percent of university graduates can find a full-time job now. Many quantitative researchers conducted researches on job-hunting for university students to understand how social structure impacts the job-hunting process. These studies pointed out that the labor market requires university students not only to have a better educational background but also to have higher motivation, like “yaritaikoto (what I want to do)”, because the labor market requires them to work for other reasons besides money. However, no one has analyzed how the word “yaritaikoto” has been used by students.

My research aims to describe the job-hunting process for Japanese new graduates by analyzing the use of word, “yaritaikoto.” I conducted interviews with 11 students who were in the middle of job-hunting activities. Each person was interviewed two to four times between February to July in 2012. Using Goffman’s “warm-up” and “cool-down” theory (Goffman1952) as an analytical framework, I shall raise the following points. First, they used the word “yaritaikoto” to warm themselves up to get into job-hunting mode; however, many of them failed in job competitions. Second, they let themselves cool down their “yaritaikoto.” Third, they changed the meaning of “yaritaikoto”, interpreted it and warmed their “yaritaikoto” up again for the next competitions. Therefore, students have to continue to change their “yaritaikoto” during the process until they get a job. It is hard for them, however, to deny their “yaritaikoto” and adapt to the job market. Students need the competitiveness to win in job competitions but not in their real lives, which means, interestingly, that they are not able to meet the expectation that the labor market has for them as long as they use the word.

SEO, MIWON* (École Hautes Études Sciences Sociales, miwon. seo.ceng@gmail.com) Consolidating Patients’ Rights in South Korea: The Case of the Breast Cancer Patients’ Movement

The promotion of patients’ rights and quality care have been rapidly spreading in South Korean hospitals since the 1990s. The most conspicuous method spreading these two concepts has been the breast cancer patients’ group. This paper will treat the evolution of the breast cancer patients’ movement since 2011, focusing on an organization that claims to represent female breast cancer patients in South Korea, the Union of Korean Breast Cancer Patients (hereafter UKBCP). Established by Korean women with breast cancer, the distinctive characteristics of the UKBCP will be presented and analyzed; these characteristics derive from the birth of patients’ self-help groups promoted by biomedical professionals in university hospitals.

My theoretical approach is indebted to the present scholarship on the sociology of individuals, particularly Danilo Martuccelli’s work on subjectivity(2002) and the theoretical framework of Health Social Movements (Brown, Zavestoski et al., 2005). In my analysis, I will refer to materials collected from different sources: web information provided by the UKBCP, participant observation and in-depth interviews.

The study will lead to a better understanding of objectives and strategies of the UKBCP. My hypothesis is that the heteronormative femininity has developed with the current regime of breast cancer. In this perspective, I will further examine the impact the regime has had on the biomedical world and the life of patients. I will also explore actions specifically concerning the rights claimed by patients and amenable context already rivaled by the disease of breast cancer, which resonates with the cultural and political characteristics of reframing a South Korean welfare state and particular elements constituting the subjectivity of breast cancer patients.

RC34-591.1

SERCOMBE, HOWARD* (University of Strathclyde, howard, sercombe@strath.ac.uk) Youth Work in the Context of a Global Sociology of Youth

This paper explores how modern youth work has arisen through the social construction of "youth" as a delineated category of adults through a range of key processes. The youth category is created through the exclusion of this group of (biological) adults from the workforce and their incarceration in age-streamed cohorts in educational institutions. This is systemically supported by a scientific discourse of adolescence that resides clearly within a deficit paradigm with a wide range of associated cultural artifacts to disempower young people. The elimination of relationships with older adults and the exclusion of young people from economic life feeds and maintains youth cultures while simultaneously marking young people out for prejudicial and discriminatory treatment. The resulting eco- nomic dependency in young people, their incoherent social role, the emergence of distinct youth cultures and the generation gap provides the groundwork for disproportionate public fear rooted in young peoples’ "otherness", and the "social problem" of youth is created and maintained.

This leads to simultaneous and contradictory pressures for the control and containment of young people and for their social and economic participation and agency. This occurs in a social context by class and other contradictions, the technological and industrial transitions involved in the collapse of 'heavy' modernity and the emergence of more 'liquid' forms, and by globalization, including global modernisation and the globalisation of capital. Youth work emerges in the flux of those contradictions. The paper explores the responsibility for youth workers to partner with young people to manage and challenge the conditions of their disenfranchisement and to find compensatory processes which facilitate young people's renewed agency.

Serna, Miguel* (University of the Republica, miguelpsj@gmail.com) New and Old Path to Economic Power: Social Origins and Recruitment of Managing Elites

The transition to the new century in Latin America display several changes and challenges. Democratization processes had to overcome multiple economic and political crises, left turn over and new economic growth cycle. Despite of Uruguay is a small country has high human development and outstanding democratic legacy in Latin America. As well as many countries during the last decades had many political and economic changes.

Economic globalization in the last two decades modifies the structure of economic power and impact into business elite integration. On the one hand, the increasing influence of the transnational companies rose to new managing elites. Corporate elites are based on cultural capital background, enterprise abilities and specialized knowledge, university management professionals, social global networks. On the other hand, the traditional entrepreneurs recruited through family prestige and inherited capital, exclusive business membership and local networks linked to political power. Moreover, the left turn over in Uruguay had several consequences on recruitment of management elites based on trade union and political capital background.

The study inquires about recruitment processes and careers of senior managers (CEO, MD). The paper identifies business elites’ relationships (social origins, family, education, work, leisure time) and political networks. The study researches
100 senior managers’ biographies of the majors companies (private and public sector) in Uruguay. The study is based on biographical and prosopographical methodologies - obituaries, curriculum vitae, social networks-. Miguel Serna Phd. Crisis and Challenges for Families Facing Global Diversity and Inequality - Can Families Still Function As Educators in Multicultural Societies?

The paper presents a research study on the sociological and educational impact of global cultural diversity on the role of families as educators. Specifically, it presents the field work and findings of qualitative research, involving educational settings in which innovative methods have been developed to include families from diverse cultures as educators in their children’s educational process.

The study’s outcomes include methods of facilitating an authentic dialogue between families and educators, a creative model for the incorporation of family traditions and narratives as enrichment resources for the school curriculum, developing curricula, and conducting educators training sessions. The study’s findings demonstrate that an effective partnership forming between the family and the educational framework, which relates to the child’s cultural world improves the learning process. It is enhancing the children’s scholastic achievement, building families’ resilience thereby promoting equality among families, helping the family to regain its leadership role and culturally assigning responsibility for strengthening their cultural identity and their self-esteem. The study’s conclusions show the contribution of families’ multiple intelligences to the child’s development and to the school’s success in achieving its goals and the educational agenda. Therefore, such school-family collaboration has the potential to minimize the risk of crises in the family’s structure which commonly include social changes such as the loss of parental authority, the man/father changing status in a democratic society, children acting as the parents’ translators, different social norms, conflicting values with society, adaptation of migrating families to new realities etc.

It also encourages acquiring formal education as a vehicle for minimizing inequality and enabling social mobility. The paper will present studies conducted in a widely diverse type of families and schools in Israel along with innovative educational programs developed, tested and implemented during and after the study.

SERRA, HELENA* (University of Lisbon, ISEG-SOCIUS, helenamrserra@gmail.com)

Managerial Doctors: Medical Technocracies Revisited

Across European countries, the relationship between professionalism and managerialism indicate new emergent configurations of hybrid professionals and mixed forms of governance in health care. Studies concerning Portuguese case (Serra, 2010; Carvalho, 2012; Correia, 2012; Kuhlmann, et al. 2012) show a specific situation due to the power the medical profession stills to exert over health regulation. Definitively, doctor’s influence on state regulation seems to counter the dynamics that have been described in sociology of professions and organisations, which point out the increasing criticism of medical autonomy, the growing managerial control over medical authority and the state regulation of medical procedures.

In Portugal, the control of technologies is an example of the intersection between state and medical regulation. Serra (2010) had already described different systems of governance based on the physician’s technical skills in a given medical area of expert knowledge (medical technocracies); systems in which medical experts are in control and where decision-makers are selected on the strength of their degree of skill and qualifications.

Also, the need for public investment coexists with the relative inability to maintain the state’s regulation over the effective control of medical technologies. For hospitals and medical specialties in particular, the domination of a technology is important insofar as it boosts the self-regulation mechanisms of the profession whilst also allowing the organisation to attract investment that brings greater financial sustainability. From the notion of medical technocracies (Serra, 2010) the aim of this paper is to look to key question of technological dependence and the control of management instruments by medical profession, which allows medical procedures to meet the demands of the SEs – economy, effectiveness and efficiency (Rhodes, 1994) and, simultaneously, boost the self-regulated professional power, defined as medical technocracy. To a certain extent, it is the increasing introduction of NGP criteria that strengthens medical technocracy.

SERRA, MICHELA* (RC47 Social Classes ab, serromikela@libero.it)

The Movimento 5 Stelle (M5S) Between Populism and Direct Democracy

This article presents a study on the Movimento 5 Stelle (M5S), founded in Italy in 2009 by the comedian Beppe Grillo. The elections of February 2013, established the success of this movement that with a result of 25.5 per cent, has placed 163 members in Parliament between Deputies and Senators.

The Movimento 5 Stelle promotes initiatives to bring citizens at the center of public life through practices of direct democracy, while underlining the crisis of representation of the traditional political parties.

The study is aimed at understanding the political, social, cultural meanings of this movement and in particular it examines the way in which its members oppose and are distinguished by the traditional parties, in facing and developing interventions through participation and direct democracy in the fields of interest of the movement, namely energy, water, waste collection, connectivity, social services.

The Movimento 5 Stelle will be analyzed through three dimensions: the space represented by the online Beppe Grillo’s blog, the online and offline meet-up tools and the institutional places. The work is also interested in showing the controversial elements of the movement in relation to the presence of a charismatic leadership, the intolerance towards dissenting voices, the emphasis on the democratic nature of the network, as well as some populist features such as the opposition people versus elite, the simplification of the social and political reality.

This study suggests an interpretation of the Movimento 5 Stelle as a controversial political and cultural movement that in some ways can be considered populist.

Strategies of Mobility Among Romanian Roma and Its Contribution to the EU Citizenship

The Spanish RTD project “TRANSROMA. Strategies of mobility, return and transnational practices between Romanian Roma people” funded by the Spanish Ministry of Science and Innovation from 2012 to 2014, is aimed at analyzing strategies for mobility and return and transnational economic and political practices developed by the Romanian Roma in Spain and Romania. While the EU is defining a common political strategy for their inclusion, the Romanian Roma population has been involved in episodes of European history have deeply questioned the effectiveness of anti-discrimination legislation and the preservation of freedom of movement among EU citizens, as well as basic principles of living together and social cohesion. The economic recession and the scarce scientific knowledge about this group have reinforced the stigmatization and infringement of fundamental rights, ignoring their contribution to the societies of origin and destination. From a transnational vision that goes beyond methodological nationalism, this paper aims to present some of the results obtained by this RTD project. Specifically it aims to provide new scientific knowledge on migration processes such as circular migration and transnational spaces of the Romanian Roma, and analyze how they contribute both to origin and host societies and the process of construction a EU from the bottom up where the basic rights and living a reality for all its citizens.

Privileging the Postcolonial: Emerging Epistemologies in the Sociology of African Religions

Privileging The Postcolonial: Emerging Epistemologies in The Sociology Of African Religions

(Religious Migrants and Marginality in South Africa)

For more than a decade South Africa has seen an enormous influx of migrants from across the continent. Significantly, these migrant communities have visibly impacted the fabric of South African public culture through language, economy, ritual and religion. In the context of South Africa, Ethiopian Orthodox Christians and Nigerian Pentecostals have respectively devised strategies for navigating their distinct national and religious identities. These strategies offer a lens through which to examine how such groups variously mediated their distinct transnational identities through the reconfiguring ritual and liturgical practices.

Thus I ask, to what extent do such practices reduce the migrants’ marginality. In particular, I am concerned with how migrants’ religious practices produce new forms of knowledge.

In examining how the embodiment of ritual practice relates to the everyday experience of the migrant, I propose that we turn our gaze and our method to

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
the reading of the migrant body as site of knowledge production in the African context. Situating my sociological practice in the context of postcolonial theory, I draw on the work of Donna Haraway (body in performance and resistance), Bryan Turner (corporalization) and Frantz Fanon (lived experience of the black body) to analyse the various ways in which bodies are regulated, managed and disciplined. In this way, migrant bodies also serve as sites of resistance – sites for the production of new epistemologies.

Quiet significantly, the case studies of the Ethiopian Orthodox and Nigerian Pentecostal migrant communities, point to the multiple ways in which the religious body in ritual performance also act in resistance to the muting and governing practices of social exclusion, xenophobia and nationality, while simultaneously forging transnational identities.

Redefining Gender Reform in Indonesia: Oligarchy and Exclusion of Marginalized Women

Gender reform is regarded as a precondition for democratization since it results in women's empowerment. In Indonesia, gender reform implicated in gender mainstreaming policy and affirmative action policy which assure women across classes, ethnicities and ages as significant beneficiaries of democratization that is currently taking place in the country. This study examines the impacts of gender reform policy toward marginalized women. Using Banten, a province headed by a women governor, as a case, this study employed a qualitative method (i.e. FGD and in-depth interviews) for its data gathering strategy. This study indicates that gender reform has not yet contributed to the transformation of marginalized women to have a better living. This study contends that women are not a homogenous entity. Their gender identity intersects with class, ethnicities and other identities. Accordingly, women have various interests and regard gender reform as opportunities in different ways. Hence, the practice of oligarchy done by women elites has confirmed the heterogeneity of women based on their intersectional identities. Therefore, gender reform policy promoted by the Indonesian government, does not necessarily benefiting all women citizens in equal basis.

SARDO, SULASTRI (University of Indonesia)

The Limits of Ethnic Politics in Indonesia: A Case Study of Riau Politics

Revitalization of ethnic identity has signified the implementation of Indonesian decentralization and democratization. It is marked by competition over political and economic resources among ethnic groups at the local level (provincial and district levels). The dominant ethnic group utilized ethnic politics to control over political power. This study examines the impacts of ethnic politics in Riau-Sumatra, an Indonesian province, after more than 10 years decentralization. The Malay as the dominant ethnic group exercised ethnic politics through various channels including in the political, economy and socio-cultural domains. The study employed a qualitative approach. The results found that cartel politics, fragmentation of Malayness, and the weak of local activism in Riau has weakened the strategy of ethnic politics that previously promoted by the Malay ethnic group. Thus, local politics dominated by coalition among elites regardless their ethnicity. Political party and access to economic resources became the main influential factors in Riau politics. This coalition has caused the gap between elite and non-elite groups. Hence, political activism involved only the elite and excluded non elite citizens (both Malay and non Malay). Meanwhile, heterogeneity of Malayness has fragmented the ethnic group and caused the lack of solidarity among Malay in employing the ethnic politic strategy in local politics. This study illustrates class as an important dimension in the way the ethnic politic works at the local level. Thus, ethnic politics has benefited elites regardless their ethnic background and been positioning the lower class at the margin. The findings argue that political cartel, fragmentation of Malayness, and the weak of local activism have caused the limit of ethnic politics.
Literature's cognitive function does not, however, limit itself to representation-
knowledge and alternative or utopian world models. Literature is not a mere
description of society; it also shows how people experience their lives in society
- or how they experience society's economic and political structures that cannot,
as such, entirely be an object of literary description.

Consequently, literature is a fruitful research object for the sociology of knowl-
edge and the study of ideologies. Likewise, it can be utilized as a documentary
material in social-historical research.

Aspects of successful aging have become common media messages as older
adults make up a greater proportion of national populations. These seniors s typ-
ically know the dangers of smoking, poor diet, obesity, and high blood pressure
but often lack motivation to make appropriate life style changes. Motivating and
empowering older people to be active and healthy, even with support from family
and community, is a challenge. Seniors in Motion (SIM), a non-profit fitness facility,
was established in Denton, Texas, U. S. A. to implement an intervention program encompassing physical fitness, education, and family and community
support. Building on results of a feasibility study conducted in 2007-2008, SIM
participants were given the opportunity to sign up for ongoing research designed
to assess individual progress and program effectiveness. Since September 2009,
over 300 participants have completed one or more of the following: initial assess-
ment, Senior Fitness test, completed World Health Organization's Quality of Life
survey, and other follow-up reassessments. Comparisons of muscle strength,
joint flexibility, gait performance and body composition have been made over at
least a 6 month period for all participants. Most indicators measuring the
muscle strength and flexibility showed significant improvement. Most seniors
reported an increased in the time they devoted to several different types of ex-
ercise activities and related to the home, while reducing the time devoted to
sedentary activities. Most seniors reported a more active and higher quality of life
and less sedentary lifestyle than at the initial assessments. Beyond making people
stronger and more flexible an unanticipated bonus was the spirit of kinship and
community that grew out of the seniors continuing participation. The opportunity
to engage in meaningful social contact provided many a most powerful antidote
in the battle against health problems and their frequent companion loneliness.

Impact of Long Distance Commuting on Israel and United States
Couples’ Satisfaction

An important shift has occurred in employment related mobility. Long distance
commuting has become an option to permanent migration. Details on voluntary
long distance time-extended commuting participants’ practices and consequenc-
es for partner relationships were gathered from 2010 to 2012. Quantitative and
qualitative data were gathered from a non-probability convenience sample of 434
respondents in Israel and 130 in United States (U. S.). The static-group compar-
sion research design dictated gathering comparable respondents from both com-
muting and non-commuting couples to better assess the impact of commuting.
Deficit and resilience theoretical perspectives guided assessments of commut-
ings impact on couple satisfaction. Commuters versus non-commuters charac-
teristics, commuting patterns, and initial assessments of impact of commuting on
couples’ satisfaction (Landesman & Seward, Forthcoming) provided the basis
for further analyses and findings. Commuting had the greatest negative impact
upon couples’ satisfaction among women in Israel. Among the indexes construct-
ed, respondents in non-commuting couples in Israel reported significantly higher
satisfaction with communication, division of labor, and involvement with children
when compared to respondents in commuting couples. Among U. S. respondents
only involvement with children index follows this pattern. Israel and U. S. women
plus U. S. men in non-commuting couples had significantly higher satisfaction
index scores than those in commuting couples. Frequency of commutes during the
year in the U. S. had a negative impact on overall couple satisfaction. Satisfaction
with communication and division of labor indexes explained about a third of
the variation in the satisfaction index in Israel and U. S. samples. In Israel the time
spent in leisure activities index was also a significant predictor. Data limitations
identify avenues for further research.

Model of Happiness In The Former USSR Countries

The phenomenon of happiness being studied by scientists from different fields
of science, the concept of “happiness” is multifaceted and polysemantic. Happi-
ness is determined not only satisfaction of primary human needs for food, cloth-
ing, shelter and security, but also in meeting the spiritual needs, the internal state
of the person. At the same time happiness can be characterized by opportunities
for citizens to participate in public and political life of their country, attached to
the masterpieces of world culture, the possibility of complete rest.

In this work will be presented comparative data from sociological surveys con-
ducted in framework of the project HITT-CIS - Health in Times of Transition, it
is an international research project supported by the Seventh Framework Pro-
gram of the European Union (FP7-Health). Field works were conducted in 2010,
across nine former Soviet Union countries: Armenia, Azerbaijan, Belarus, Georgia,
Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine. The objectives of this re-
search were to study the conditions of lifestyle, health, social well-being, political
views and their relationship. A total 18,000 respondents were surveyed by standard-
dized personal interview. Sample represents the population at the age of 18
years or older, also represents distribution by region and type of settlement.

Results of the regression analysis will be presented, where the dependent vari-
able is subjective feeling of happiness, measured on a ten-point scale, as well as
influencing variables - number of variables, including not only the socio-demo-
graphic characteristics, but also the level of satisfaction with various aspects of
social and political development of countries.
and HITT-CIS - Health in Times of Transition, conducted in 2010. These international research projects were supported by the European Union Programs. Field works were conducted across nine former Soviet Union countries: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine. The objectives of these researches were to study the conditions of lifestyle, health and well-being, political views, and trust to government and state institutions. A total 18,000 respondents were surveyed by standardized personal interview. Sample represents the population at the age of 18 years and older, also represents distribution by region and type of settlement. The following tables are presented in connection with qualitative development, satisfaction with economy development, healthcare, social protection, civic activity, political views, life satisfaction and feeling of happiness. Data will be presented by countries in comparison 2001 and 2010 years.

_Changing Nature of Conflict in Post 2014 Situation and Its Implication in South Asia_

Pakistan emerged as the frontline state during the Cold War era and especially Afghan conflict (1979 – 1988). Pakistan remained the focus of attention during this time. After the 9/11 and later in war against terror, Pakistan again became part of this new war. But the nature of country's involvement in both wars was totally different. In the mean time during 1989 to 2001, Pakistan developed its own parallel agenda to play at different fronts simultaneously. But that policy miserably proved faulty, resulting killing of more than 45,000 civilian and 3000 soldiers and police officials in the same decade. This paper analysis Pakistan's future policy in the post 2014 scenario and how it plans to move forward. Will this policy be helpful in resolving conflict or it would further sharpen the existing conflicts. Paper also focuses how regional and international factors may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of global and especially regional peace.

_War, Conflict and Human Rights Violation: New Debates and Discourses in Pakistan_

Eventual aim of human beings is to have a peaceful society where human dignity and human rights are well respected. But during the war and conflict times situation totally rejects the concept of the such values and norms and especially in situation where conflicts persists for decades on asymmetric pattern. Situation becomes more complex in those cases where states provide covert support to the non-state actors to further toe their agenda. Pakistan's military developed nexus with the jihadist with the financial backing of other countries, but eventually the jihadists are now haunting the patron itself. Now conflict between militants and state has turned to situation that where the level of violence has reached to new zenith. In this situation, abuse of human rights from both sides becomes a very common issue. But due to protest of civil society bodies and judicial activism at least debate on human rights violation is being taken place on paper. Human rights organizations and judiciary are pursuing the agenda of missing persons and other sensitive situation vigorously. Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.

_Who Participates in Encompassing Protests and Why Does It Matter? Israel and Spain in 2011_

In Spain and Israel in the spring and summer of 2011, multiple demonstrations each mobilized hundreds of thousands of participants in the framework of Occupy-type protests. The Spanish _indignados_ (15M) and Israel's social justice movement were instances of an unusual variety of protest, labeled “encompassing” because it combines massive mobilizations with high levels of public support. Such encompassing does not necessarily imply society-wide solidarity, but may instead be based on what are in effect multiple parallel protests in which some social sectors are under-represented or even altogether absent. This paper reports analyses of national sample surveys carried out in both countries, showing the effects of political cleavages and other social divisions on the passive and active engagement of individuals in these instances of encompassing protest. For Israel only, these conventional sources are supplemented by data collected via mobile phone signals, which make it possible to paint a reliable portrait of the social, cultural and political characteristics of demonstrators.

_Hoping for More: Renewing and Redeveloping Public Housing without Marginalizing Low-Income Residents_

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace troubled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have been redeveloped into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to projects that attempt to preserve a substantial majority of units for low-income households. The research thus provides a new framework for identifying and categorizing mixed-income developments in terms of how income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together roughly equal proportions of low-income and high-income families into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly all low-income communities.

_to Foster the Spirit or to Secure One's Future_: Competing Models of Field of Study Choice Among Middle-Class Students

The growing interest in horizontal stratification has led researchers to recognize qualitative differentiation in the choice of academic fields of study (FOS), mainly along the lines of professional and non-professional fields. Still, adopting either rational action theory or Bourdieusian perspective, most researchers still evaluate FOS through their future utility, and accordingly assume a calculative or strategic choice process. This portrayal may reflect the stratifying effect of higher-education as its ongoing professionalization. Nevertheless, higher-education and choice are associated with autotelic and expressive cultural ideals, such as the ideal of ‘pure knowledge’, the model of liberal-arts education and models of choice as an expressive action. To date, these ideals and their relationship with FOS choice have been mainly overlooked.

Drawing upon ‘culture as tool-kit’ perspective, I argue that when choosing FOS, students use dominant cultural perception of higher-education, as models through which they make sense and assign value to their choice. Accordingly, I show how the choice of professional or non-professional fields, reflects two distinct cultural models of higher-education and choice.

This paper is based on in-depth interviews of middle-class students from professional and non-professional fields. In light of a review of cultural representations of higher-education, two ideal-types of FOS choice are elucidated. The first, draws upon the ideal of acquiring knowledge as a tool for the future; characterized by a calculative FOS choice; and a utilitarian approach towards studying. The second, draws upon the ideal of knowledge for its own sake; characterized by an expressive FOS choice process and an autotelic approach towards studying. Moreover, all students experienced their choice as a tradeoff between the two models - between success and personal authenticity. These findings support recent challenges to current line of explanations, and their implications for present and future research are discussed.

Health Needs of Jewish Immigrants in the U.S. and in Israel and Faith-Based Opportunities to Address Them

Introduction: Jewish immigrant needs vary from both other Jews and other immigrant groups because of differences in group characteristics, context of re-
ception, and home country life. Although Jews are a longstanding religious U.S. minority, there is a paucity of research on recent Jewish immigrants and their health needs.

Objectives: 1) What are the health needs of recent Jewish immigrants in the U.S and in Israel? 2) How do these needs vary by home country and how do they compare to non-Jewish immigrants? 3) What are the findings' policy implications for faith-based interventions and how do they vary between the U.S and Israel?

Methods: Adult Jewish immigrants were surveyed as part of the randomized U.S. New Immigrant Survey data set and the Israel National Health Survey. The surveys included extensive health, religion, immigration, and other demographic variables. Outcome measures included health status, health behaviors, chronic diseases, and mental health. Univariate and bivariate analyses were performed. Variations by ethnicity were analyzed and outcomes comparisons made between the U.S and Israel and with non-Jewish immigrant groups. Over 25 key informant interviews with faith-based and Jewish community leaders in the U.S and in Israel were then conducted.

Results: Health needs were identified and variations were found in health outcome measures by key religious, immigrant and demographic factors, with implications for faith-based interventions such as synagogue programs. Opportunities for widespread faith-based interventions suggested by these findings and the informant interviews will be discussed, spotlighting contextual variations by denomination, home country and host country.

Conclusion: Opportunities may exist for faith-based health interventions among immigrant Jews by leveraging the social and religious capital in this under-studied community. Efforts to target Jewish immigrant needs by faith communities and take their varying characteristics into account, including country, are important.

Religious Capital and Addressing Latino Immigrant Health Inequalities in the U.S

Background: There is much evidence linking participation in an organization with health outcomes, more than the relationship of faith outside of a religious organization with health. For example, church attendance is the measure of religiosity most often linked with better health outcomes. While some attribute the religion-health connection to social capital, there is insufficient attention to how aspects of religion itself can also be a resource contributing to the health of members of a religious community through religious capital. While it has primarily been used in other contexts, religious capital can be an important resource for health. There is a paucity of both theory and evidence, however, in understanding how religious capital may be related to positive health outcomes and, in particular, how it can affect inequalities for vulnerable populations such as immigrants.

Objectives/results: To fill this gap in the literature, this study draws from theoretical concepts in the field of sociology to examine whether religious involvement is associated with better health status and health behaviors among Latino immigrants, with potential to reduce health inequalities through increased religious capital. The study will describe in detail the theoretical framework for religious capital, with relevant constructs explained. Quantitative evidence supportive of the theory will be brought from multivariate analyses the author performed of over 1000 Latino immigrants from the randomized New Immigrant Survey (NIS), controlling for demographics, as well as from a review of the literature to support the study's thesis.

Conclusion: Religious involvement can be related to better Latino immigrant health because of religious capital found among churchgoers. As a result, opportunities may exist to leverage widespread church-going already taking place by Latinos to reduce inequalities by creating faith-based interventions which draw upon this religious capital.

Teaching Across Borders: Making Local-Global Connections in Sociology Teaching

In recent years, there is a growing awareness that teaching sociology should include topics related to globalization. While a limited number of authors provide important suggestions for sociological curricula, we feel that there should be a more systematic approach to introducing theories and concepts of globalization in sociology classes. In this paper, we present our strategies of teaching about globalization in sociology. We understand globalization as a series of significant changes in social relations due to interconnectedness of the world. We look at different economic, political, social, and cultural connections between different countries and locales. We developed class activities to examine each dimension of globalization. By analytically emphasizing economic, political, social, and cultural flows of globalization, we want our students to see how different institutions and actors initiate, cooperate, and negotiate transnational connections within each sphere.

One Country Two Realities: Work Values of Jews and Muslims in Israel

This study examines work values of 909 Jews and 219 Arab Muslims, (or Palestinians that have Israeli citizenship). The respondents are a unique sample since there are few studies on cultural values and no studies on work values, which compare different ethnic religious groups who have been living in the same country/land for more than a century and shares a long ethnic conflict. The findings reveal a significant difference between the two ethnic religious groups regarding the importance of all life domains and in most of the preferred work goals and the regression analysis of the main demographic variables cannot explain these differences. The MD5 of Jews and Muslims also demonstrate different perceptions and internalization of work values among the two ethnic religious groups. The value-ve gaps can be explained by the cultural differences (individualistic Jewish culture vs. collectivistic Arab culture), by high degree of segregation, by the employment discrimination and primarily by the Israeli-Palestinian conflict.

Global Dis-Connectedness of Labour: ‘Living Well for Less’, Class, Race and Trafficking in Human Beings in the UK

By reflecting upon the impact of the current recession on the continuing commodification of migrant labour in Europe, this paper will contribute towards the sociopolitical exploration of the re-emerged tensions and ‘dis-connects’, along the lines of race, class and gender, between people who produce and people who consume, between those who profit and those whose reward for their back-breaking labour is just enough to get going. It will question how the neoliberal optimism of production, circulation and consumption operate within the context of inflated racist, sexist, Islamophobic and anti-immigration rhetoric, and how they serve to legitimise and normalise the continuing dismantling of the welfare state and labour market de-regulation to accommodate the governing ideology of our times: ‘living well for less’.

As a result, opportunities may exist to leverage widespread church-going already taking place by Latinos to reduce inequalities by creating faith-based interventions which draw upon this religious capital.

SHARMA, NANDITA* (University of Hawaii at Manoa, nsharma@hawaii.edu)

Categorical Divisions: The Hostilities Between ‘Indigenous’ and ‘Immigrants’ As a ‘State Effect’

Nationalist politics has increasingly become one of the main ways that people constituted as ‘natives’ have attempted to overthrow colonial domination. Together, the state language of ‘sovereignty’ and the national language of ‘self-determination’ have shaped notions of identity and have tended to anchor such identities to particular places. All this has figured into how contemporary ‘indigenous’ nationalisms have staked their claim to a place within a global system of national states. Over time, a stark delineation between “Natives” and “non-Natives” has been asserted. Today, a growing number of scholars who identify as indigenous, as well as those who position themselves as their allies, portray all “non-Natives” as colonizers. In this paper, I examine how a nationalized politics of decolonization has come to mark “Natives” and “migrants” as mutually antagonistic positions. Focusing on such politics of place in the national states of Canada and the United States, I question the conflation of processes of colonization with those of migration. I historicize such politics within their social, political, economic context by looking at the continuation between colonial state practices and contemporary indigenous nationalisms. I also contrast contemporary indigenous nationalisms with other political strategies of decolonization, particularly politics.
Making Housing Affordable for Urban Poor- Approaches Adopted in India

Housing is one of the basic necessities of an individual. However, the dream of having a house remains distinct for than one-third urban population. They remain marginalised in terms of civic services, housing and other socio-economic parameters. The cost of this marginalisation is very high and many studies have shown that it may be up to 2-5 times of the formal system.

By 2030, an estimated 5 billion of the world's 8.1 billion people will live in cities. About 2 billion of them will live in slums, primarily in Africa and Asia, lacking basic services, unsecured tenure, congestion and surrounded by desperation and crime. In India, the urban housing shortage has been estimated as 18.78 million, of which almost 96 per cent pertains to urban poor. Affordable housing has been considered as the only option to meet this challenge. A Task Force on "Affordable Housing for All", constitute by the Government of India, Ministry of Housing and Urban Poverty Alleviation, defined affordable housing in terms of (a) multiples of household income; (b) size of the tenement; and (c) percentage of household income, in case of rented accommodation.

3.0 Approach of this Paper

This paper will address the following issues, in the perspective of earlier discussions:

1. The need for a multi-pronged strategy for housing delivery to all sections of the society. This includes housing delivery system, target group and housing typology.
2. Incentives and subsidies to make housing within the reach of target group and mechanisms to retain the ownership. Right policy instruments for subsidy transfer are needed to make people shop for their dream house, without any restraint on size or location.
3. The access of urban poor to sources of institutional lending.

SHARMA, VEENA* (Indian Institute of Advanced Atudy, vsharma136@gmail.com)

Equal Leisure in an Unequal World

Equal Leisure in an Unequal World Though the globe today is characterized by deep and different layers in in terms of capital accumulation and resource appropriation, the leisure experience may display a different type of demarcation – one that may have the possibility of enriching different social groups if they drew from each other. Societies in which leisure has come to be characterised by the consumption of the fruits of production individuals may appear to be bound by a stimulus-response mode of leisure behaviour. What should be 'done' during 'leisure time' is fed into the psyche through media pressure and socialisation resulting in activities that may or may not be self-enhancing even thought they feed into the leisure industry. In conventional understanding of leisure, there continues to be a simplistic dichotomy between work and leisure and 'free and occupied' time as though these were easily separable categories. In this same layered global society there are groups of people who still live with values that recognize the organic unity of all things, are aware of a sense of continuum, as a movement from matter to spirit and vice versa, and see an interconnectedness of all things.

As a result there arises a tendency to respect the environment and other beings. The 'leisure' of such societies need not be time abstracted from other day to day activities but a mindset that characterizes the whole. The presentation will look into the possibility of interaction of these segments on each other so as to enable a more holistic attitude to the environment and to other existents on earth.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s_sharonova@mail.ru)

The National Russian Model of University in the Era of Academic Capitalism

The transformation of the national model of Russian university is under the influence of academic capitalism. The very same academic capitalism born in the depths of the neo-liberal capitalism. The basic principles of the neoliberalization fully implemented within the transformation of national educational systems:

- the creation of conditions of accumulation of capital and power of the economic elite;
- the denial of a nation, and therefore the promotion of the idea of the dangers of government intervention in the economy (in this case is to minimize the interference of the state in education);

- promoting free and stable functioning of the education system is not in general, and of its individual elements (schools, institutes, universities, etc.).

In Russia, and in other countries, this leads to the destruction of national educational systems. Yet Durkheim said that in society there are many cultures of each of them has its own education system. Simmel argued that cultural diversity enriches the world community. However, the implementation of neoliberal policies in the field of education under the slogan of "globalization" ignores the law and seeks to simplify the interaction between the educational systems in order to achieve clarity and transparency of market exchange. Author analyzes the existing features of Russia: the trends that are happening as a result of the modernization of the education system that implements neoliberal principles and creating academic capitalism. Virtually all non-liberal utopian promises of the project, in practice, lead to quite the opposite of the expected results.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s_sharonova@mail.ru)

The Spiritual Capital As a Fundamental Element Of Cultural Capital

Cultural capital is usually regarded as a mechanism of influence on personality. Largely contributed to this study Coleman, although Bourdieu introduced the concept of a theoretical understanding of capital varieties. He was interested in the convergence of social, cultural and economic capital. We propose to focus on the cultural capital of both the qualitative characteristics of the state of society. The problem is that in the presence of cultural capital as a funded system of values, it enriches the face of society, society degrades morally. Any cultural capital based on traditional religious values. This does not mean the broadcasting of religious themes in works of art, although it excludes, but rather a philosophical position of artists and researchers, through which the public receives the interpretation of events, their assessment of a certain value-regulatory system of coordination. This attempt is part of the historical construction of a new element of cultural capital. Qualitative state of society, its morality depends on the amount of spiritual capital, which he occupies in the field of cultural capital. A striking example of how the degradation and spiritual revival of capital in society can serve as the processes that took place during the last century.

SHAW, VIVIAN* (University of Texas at Austin, Vivianshaw@utexas.edu)

Energy and Identity: Women, History, and Anti-Nuclear Social Movements in Japan

Since March 11, 2011 (3/11), some Japanese citizens have responded to the ongoing Fukushima nuclear crisis by staging large protests against the use of nuclear energy in major metropolitan areas. Within this revival of anti-nuclear collective action, scholars and global news media have argued that the prominent role of women, who have been observing leading “tent city” occupations in Tokyo and organizing rallies in other cities, signals an important event with potential implications for the changing status of gender in Japanese public politics.

Applying a historical frame to the contemporary case of women’s leadership in post-3/11 activism, this paper challenges a simplified narrative of feminist emergence, instead arguing that contemporary anti-nuclear politics must be read as part of a longer context of women’s organizing in Japan throughout the twentieth century. Moreover, this history of social movements also reveals important divisions within Japanese women’s movements across lines of race, coloniality, and citizenship. In this paper, I deconstruct the concept of “anti-nuclear” and examine how this politics converges with other histories of post-war women’s collective organizing, particularly examining the roles of Japanese women in the related histories of peace and anti-militarization social movements.

In arguing how gender has politically and rhetorically functioned as a method of organizing Japanese public politics, I challenge notions that Japanese women, in the context of social movements, should be viewed simply as a formation of collective identity. Rather, the different meanings of women’s identities within these cases suggests the importance of reading Japanese women’s social movements in relation to various political contestations at the “local” and transnational levels and moreover, in terms of what they are able to signify about race, coloniality, and citizenship.

Nationalism in the USSR: Historical and Comparative Perspective

The late 1980s and early 1990s were characterized by the sudden rise of nationalist movements in almost all Soviet ethnic regions. It is argued that the rise of political nationalism since the late 1980s can be explained by development of cul-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
tural nationalism in the previous decades, as an unintended outcome of commu-
nist nationalities policy. The Soviet political and cultural nationalism is studied in
historical and comparative perspective. All ethnic regions are examined through-
out their entire history of the Soviet Union (49 regions, 1917–91), using a structural
equation modeling approach. This paper aims to make at least three contribu-
tions to this field. Firstly, it is a methodological contribution for studying national-
ism: a ‘quantification of history’ approach. Quantitative values are assigned to
historical trends and events. Having constructed variables from historical data, I
use conventional statistical methods like SEM. Secondly, this paper contributes to
the theoretical debate about the role of cultural autonomy in multiethnic states.
The results challenge the concept of ‘cultural autonomy’ as solution to intereth-
nic conflict. Cultural nationalism matters, it indirectly reinforces political national-
ism. Concessions in the cultural domain failed to stop the growth of political
nationalism in the late 1980-s. Finally, the paper statistically proves that the break
between early-1990s Soviet and Stalinist nationalities policy explains the entire Soviet
nationalities policy. In fact, the late Soviet nationalities policy was inherited from
the Stalin’s rule period. This finding revealed in other studies now gets statistical
evidence.

RC34-598.2
SHEN, JIE* (Chinese University, jie.shen@hotmail.com)
Chinese Youth’s Post-Materialist Values in an Era of Multi-
Modernity

Today’s China’s society is in a compound of multiple dimensions of time and
space. China’s modernization are late and exponential onset. When the mainstream
direction of China’s social development is manifested as the transformation from traditional society to modern one, the developed West-
ern societies that have completed the modernization goal constitute the envi-
nromental conditions affecting the development of China’s society. As a conse-
quence, China’s society more clearly than ever in the history is at the same time,
being affected by three dimensions of time, or, put another way, in the present
there are three dimensions of time – traditional, modern, postmodern – coexist
in the same space.

If so, although the total direction of social psychological changes in the course
of China’s modernization is the transformation from the tradition to modern-
nity, this is not intended to preclude the possibility that the present Chinese social
psychological changes will present a more complex pattern than in any previous
eras and societies.

Just as using Inglehart's two important theoretical tools – scarcity hypothesis,
socialization hypothesis can attest that when China entered the take-off stage of
its modernization, changing from a society of scarcity to one of prosperity, the
spiritual world of the social members is undergoing rapid and profound changes,
along with gradual improvement of their hierarchy of needs. It is Chinese youth
who first shows these changes. In China, the post-materialist values have begun
to emerge in people born in the 1980s, and have further manifested by
these groups born in the 1990s.

Occurrence and development of the post-materialist values among Chinese
young people will definitely lead to changes in their activities of daily life and ways
of social participation, and to affect the appearance of China's society especially
when they enter the society in an all-round way.

SHEN, JING* (University of Toronto, jing.shen@uleth.ca)
The Value Of Mixed Methods: How Does Certifiability Of Job
Requirements Determine The Channels Of Job-Person Matching?

Using qualitative collected in three representative Chinese cities and quantita-
tive data drawn from the 2003 China General Social Survey, in this study I have
built up a theoretical framework to understand the interdependence of formal and
informal employment channels. I argue that a job-person matching process
should be understood from a dual perspective of the employer and the job ap-
plicant. From the employer’s perspective, requirements for certain job positions
are composed of two parts, namely, certifiable and uncertifiable qualifications.
The variation in the relative importance of these two types of qualifications deter-
mines that employers’ recruitment strategies vary from formal channels only, to
formal-informal joint-channels, and then to informal channels only. From the job
applicant’s perspective, quantitative analysis shows that an applicant’s pre-hiring
resources—human capital, political capital, and social capital—match up with the
targeted employer’s expectations of both certifiable and uncertifiable qual-
ifications in a successful job-person match. By articulating the three typical sce-
narios of employment activities, I highlight the great importance of joint formal
and informal employment channels. I argue that studies on employment need to
take a formal-informal joint-approach, instead of focusing on formal or informal
employment channels alone.

Two Decades of Educational Expansion in Taiwan: Social Equity
Concerned

During the past two decades, Taiwan experienced a movement of expansion
of senior secondary education and higher education (the expansion in brief), in
the meantime the entrance system of higher education institutions and senior high
schools has changed accordingly in response to the open enrollments demands
from the public.

One of the causes of the expansion was to achieve social equity in terms of of-
fering more educational opportunities to those students from the disadvantaged
groups. However, until 2013 even though the gross enrollment ratio of upper
secondary education and tertiary education reached 98.33% and 84.43% separ-
ately, those students with disadvantaged background were still left far behind
with their counterparts from better family background in terms of educational
achievements, such as being admitted into the academic senior high schools and
universities with good reputation.

The central argument here is the increase of senior high schools and higher
education institutions (HEI) actually enrolled more students from the disadvan-
taged groups. The central argument here is the increase of senior high schools and HEI
in terms of preference and various ability requirements, still made the social eq-
ity an unfilled dream.

The paper examines the expansion, first through the reveal of the statistical
data illustrating the extent of the expansion; then through the investigation of the
distribution of the differentiation and stratification of senior high schools and HEI
in terms of preference and various ability requirements, still made the social eq-
ity an unfilled dream.

“Need-based distribution” and “fairness in the long run” were characterized as innovations by some teams and enacted under certain conditions. Secondly, I examine three organizational factors that contribute to these differences: the incentive system of each organization, the hierarchy of each team, and finally the constraints and opportunities each team faces inside and outside of the organization. Depending on the organizational circumstances of each team, certain discourses about authorship prevailed while others were impeded, generating systematic differences at the organizational level.

Exploring Reactions to Risk and Uncertainty in the Context of Smoking and Lung Cancer

Research examining the sociology of diagnosis has demonstrated how the provision of a clinical diagnosis from a health professional can promote identification of illness or disease, facilitate behaviour change, and enhance adoption or resistance of illness identities (Jutel and Nettleton, 2011). Further examination of such frameworks could contribute towards achieving a richer understanding of health communication compliance, thus enabling better management or avoidance of ill health and disease.

The current study examines such frameworks within the context of a Stop Smoking Service (FagEnds, Liverpool) and the study has been designed to replicate a recognised model of diagnosis. However, rather than a clinical diagnosis, smokers receive a personalised lung cancer risk assessment – essentially providing them with a diagnosis of uncertainty. The primary aim of this study will be to ascertain whether provision of personalised lung cancer risk information alongside health advice, will enhance smoking cessation.

This mixed-method paper will disseminate the findings of a randomised controlled trial consisting of ~300 smokers, in which the control arm receive generalised lung cancer risk information and the intervention arm receive a personalised lung cancer risk assessment, using the Liverpool Lung Project risk model (Cassidy et al., 2008). It is anticipated that provision of personalised lung cancer risk information may encourage behaviour change i.e. smoking cessation and long-term maintenance of this change at six-month follow-up. In support of the aforementioned quantitative survey, qualitative interviews will also be conducted with a selection of participants (N=30), which aims to provide further explanation as to the impact of receipt of a diagnosis of uncertainty and the subsequent behaviour and attitudes of which it may entail. Overall, it is anticipated that the findings will contribute towards our understanding of the sociology of diagnosis and may help to inform the development of future health risk communications.

SHERWOOD, JUANITA* (University of Technology, Sydney, Juanita.Sherwood@uts.edu.au)

Complex Trauma a Conduit for Inequity

Over the last century we as citizens of a united world Nation have been appalled by the atrocities that have been meted out to our brothers and sisters living in all corners of the world by their enemies or colonisers. Similarly we have been moved by the grief and loss of survivors of climatic disasters that frequent living in all corners of the world by their enemies or colonisers. Similarly we have palled by the atrocities that have been meted out to our brothers and sisters.

The Mental health profession has sought ways to assist those who have experienced these deep life-changing terrors. Trauma has been an event that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market’s inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market is distributed across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

SHESTAKOFSKY, BENJAMIN* (University of California, Berkeley, bshestakofsky@berkeley.edu)

The Triangular Market: Reworking, Reproducing, and Repairing an Online Marketplace

The Internet has revolutionized how consumer goods are bought and sold in the United States. Yet the market for local services – semi-skilled or skilled professionals hired by consumers to perform a service – still operates largely as it did before the emergence of the Internet. I will present preliminary findings gleaned from 19 months of ethnographic research at a firm aiming to do for the local service sector what Amazon has done to retail. The firm planned to create a venue in which buyers and sellers of local services would be connected more efficiently than ever before; in so doing, the company hoped that each party, in pursuing its own self-interest, could create a better world for all involved by making it easier for consumers to hire local service professionals than ever before.

My research reveals that tensions continually arose in the market because, rather than creating a horizontal relationship between buyers and sellers, the firm had created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market’s inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market is distributed across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

Maternal Health in Rural India: Consequences For Gender Inequality

Maternal Health in Rural India: Consequences For Gender Inequality

Shakuntala.C.Shettar

Dharwad – 580 003
shakuntalashettar@gmail.com

Abstract
Maternal health is a critical topic in global development. Maternal ill health and deaths impacts families, communities and societies and has far reaching effect across socio-economic strata. Despite recent data showing a positive turning point in the battle to keep mothers alive through pregnancy and child birth, the maternal mortality rate are still high in India and significant gender-based health disparities remain in India. With limited access to education and employment, high illiterates and increasing poverty level in India making health improvements for women exceedingly difficult. Female disability is especially in attributable to maternal causes and maternal deaths. The present paper is an effort in understanding maternal health and care in rural parts of Karnataka.

The objectives of the paper are to know the status of maternal health and consequent problems and also to analyze the socio-economic factors that act as barriers to access good health facilities. The data for this paper are based on the complete birth histories collected from the 200 ever married women age 20-49 years, selected from 4 villages of Dharwad district in Karnataka.

The findings suggest that inspite of the Government’s efforts in improving maternal health in rural India, women have been suffering from health problems resulted from complications during pregnancy and child birth and also anemia and malnutrition. Hence the existing health facilities need to be strengthened to improve such health problems of pregnant women.

Key Words: Maternal Mortality, Maternal Health, Autonomy, ANM, Sex and Gender, Gender Inequality.

the economic and fiscal decentralization, central and local governments essentially understand the devolution of social policy and its impact on welfare politics. Given the current institutional framework from the perspective of central-local relations is employed to understand how some party supervisors who evaluate their political performances. The specific political accountability of the Chinese government officials also holds accountable for their policies mainly to their superior policy in China, an authoritarian state often viewed as capable of implementing policies which renders welfare institutions resilient even under the pressure of permanent conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in nature, namely: inter-ethnic, religious and resource conflicts. This paper have been the epicentre of several interlocking conflicts. The north of Nigeria is agrarian, and urban areas are the centers of these conflicts. Though many of the conflicts are widespread, the northern region appears to have been the epicentre of several interlocking conflicts. The north of Nigeria is characterized by three major types of conflict, which are different but interrelated in nature, namely: inter-ethnic, religious and resource conflicts. This paper focuses on resource use conflict between farmers and pastoralists which can be explained by a variety of factors including scarcity of resources, growth in the population of herds and humans, the political economy of land use and asymmetry in power relations between the two resource users. The paper argues that historically the control of political power has vacillated between the two resource users. In the past, pastoralists were politically powerful in many states in the African savannah and Sahel including northern Nigeria; and hence, had access to land and land based resources for their livestock. In the contemporary dispensation, sedentary crop farmers are the politically dominant and “landed” group, and have often made it difficult for the pastoralists, the “landless” group, to access land and land based resources for their livestock. There is thus a fierce contest for environmental resources between the two resource users, mediated by power relations, and often resulting in violent conflict. The paper concludes that though scarcity of resources is often considered as a key explanatory variable in resource use conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in the “unequal world” of farmers and pastoralists in Northern Nigeria.

Blame avoidance and credit claiming are two popular concepts for explaining the politics of welfare retrenchment in the mature welfare state. They indicate the crucial impact of electorates in competitive democracies on the policymaking that renders welfare institutions resilient even under the pressure of permanent austerity. This article modifies these concepts for the politics of social policy in China, an authoritarian state often viewed as capable of implementing reforms without difficulties. I argue that this view is far from reality as the government officials also hold accountable for their policies mainly to their superior party supervisors who evaluate their political performances. The specific political institutions in China namely entail different mechanisms that influence the logic of blame avoidance and credit claiming, and accordingly, the politics of social policy from those of Western democracies. To explore this aspect, an explanatory framework from the perspective of central-local relations is employed to understand the institutionalization of social policy and its impact on welfare politics. Given the economic and fiscal decentralization, central and local governments essentially follow different logics of blame avoidance and credit claiming when it comes to expanding or dismantling redistributive social policy and social service: Central government tends to claim credit by setting up social policies whose financial responsibilities rest on the shoulders of local governments, or avoid blame in case of dismantlement by passing the buck to local cadres responsible for implementation. Local governments, by contrast, avoid blame by either delaying or selecting implementing policies dictated by the center. They can also claim credit by experimenting with new policy models that may find nationwide application later. Health reforms and social service for migrant workers are used as two examples to illuminate the driving force behind the politics of social policy in China.

Forced Migrants and Their Connection to Their Homelands: A Case Study of Inter-Country Adoptions and Cultural-Discursiveness in Second Modern Transformation in East Asia

The forced migrants, as Castle (2008) noted, have dramatically grown in number in relation to the changing global order. One of the causes of forced migration we should take note of is the trafficking of people across international boundaries for the purposes of exploitation, which includes the children expected to fill the “vacancy in a family” through inter-country adoptions. Meanwhile, human security counts on culture as having an initiative role in establishing the stability of permanent peace. The Hague Convention insists that it is in the “best interest of the child” to keep the inter-country adoptees in touch with the culture of their origin. However, some Korean adoptees have found themselves in another situation. Their culture transformation has been such that they perceive themselves as having been “forced to be separated from their biological mothers and relinquish their Korean nationality.” This has led them into forming a global movement that demands legislation of the Dual Citizenship Act and rights for unwed mothers in Korea.

The objective of this research is to show the process how the forced-migration groups that here will be referred to as inter-country adoptees from East Asia, came to be the subject in a cultural-discursiveness of “second modern transformation (Han and Shim 2010),” which incorporates global risks, individualizations and cosmopolitizations. In particular, I will examine the reasons why the adoptees can be counted as forced migrants while referring to the Korean adoptees’ statements in the movements. I will also draw attention to their values and social capitals acquired in the Western countries and their influence on Asian traditional cultural beliefs through the movements, which could be a potential to reform the social structure. Based on this discussion, I will make an implication on their leading roles in the second modern transformation in East Asia.

Japanese “Solidarity” Experience: A Suggestion for Polish Disaster Preparedness

The paper suggests effective use of the socio-political culture of “Solidarity” as a potential basis for disaster preparedness in Poland from the perspective of Japanese experiences.

Poland holds a cultural tradition known as the Solidarity Movement, whose potential for mobilizing society continues to this day. Through a unique mechanism of self-organization, it unifies individuals with diverse interests and beliefs to concentrate the impact of different regions and local communities; the “subjectivized” activities of Polish citizens attained its primary aim of a change in the country’s political system at the end of the 1980s, while presenting its operative revitalization in the face of prolonged European economic crisis in the 21st century.

Crucially, Japan’s disaster experiences, especially those of the Great Hanshin-Awaji Earthquake (1995) and the Great East-Japan Earthquake (2011), show the rise of its own solidarity. In the two contrasting disaster-hit communities, i.e. Kobe City and the rural Tohoku Area, activists call for the mobilization of the cultural tradition of“ Bonds (Kizuna)” These bonds have been functioning not only in the first phase of collective euphoria, but also in the long-term process of building social subjectivity and community rehabilitation to see the rise of sustainable civil society after disaster situations.

Through the lens of Japanese experiences, the paper suggests a conscious and structured socio-political culture of Solidarity in the approaches of disaster policy in Poland, due to its lack of preparedness despite frequent damage from different natural and human-caused catastrophes including flooding. By analyzing cases of cooperation among Japanese citizens, social organizations, and local as well as national governmental institutions, the paper presents the option of transferring Polish Solidarity experiences from the field of polarized politics to that of potential disaster policies to fortify Poland’s future resilience.
Japanese* Approaches to the Music of Frédéric Chopin

The paper examines the "Japanese" understanding of the music of Frédéric Chopin as it appears in the narrative discourse of Japanese pianists who have studied in Poland and France.

The works of Chopin occupy an unbounded position in Japanese music institutions for their accomplished artistry in piano techniques. Musicological studies show that having quickly appeared as crucial in concert repertoire of the first years of the 19th century, Chopin became an icon of "Western" culture to which the "civilized" Japanese should aspire. Japanese music universities came to emphasize the importance of his technically demanding works, e.g. Etudes, Ballades and Scherzos while mostly neglecting Mazurkas and Waltzes.

The paper sheds light on critical thoughts regarding "Japanese" education held by some of the country's contemporary musicians who have formulated their professional identities vis-à-vis "French," "Polish," or "European" traditions of Chopin's music. Semi-structured interviews with Japanese pianists who have studied in France and Poland are put through a method of critical discourse analysis that draws upon structuration theory and allows effective inquiry into an agency's narrative in the face of established institutional discourse.

What is the general view on the teaching of Chopin's music nurtured in Japanese music institutions? How does it affect individuals' approaches to Chopin's works? How do pianists confront or develop the "Japanesses" of their performances after education in France or Poland? What are the renovated "Japanese" elements in the understanding of Frédéric Chopin's music after study in Europe?

Analysis conducted under the umbrella of such questions attempts to reveal several things including pianists' recognition of "delicate" Japaneseness resonating with Chopin's works, notable critique on the "Japanese" pursuit of sophisticated techniques extracted from the fuller universe of Chopin's music, and the unique refurbishment of a sense of nature through the performance of Mazurkas.

Tohoku Quake (11 March, 2011) . Actually these cases mean that many people do feel something unfavorable and unsafely suspicions for nuclear radiation of agricultural foods made from Tohoku Area can be engendered by information asymmetry as the market for 'Lemons'. And I can conclude that the emergent cascading of socially restrained buying trends of agricultural foods made from Tohoku Area and these trends are still often observable anywhere ever since the Fukushima Nuclear Disaster of the Tohoku Quake (11th, Mar. 2011). Certainly, this social phenomenon is rational to understand the social anxiety and unsafely suspicions of naive people for nuclear polluted contaminations within foods. Of course, these safety matters were temporally, but how consumers still feel unsafely sentiments now.

In this concern, I presume that these social trends are underlying in the information-asymmetry as the market for 'Lemons'. And I define this presumption as an agent-based model on social cascading, social uncertainty, networked market disjunctions and percolation process. As results of simulating runs, I clarified my hypotheses and these are possibly actualized in configured conditions. Namely I can conclude that the emergent cascading of socially restrained buying trends of agricultural foods made from Tohoku Area can be engendered by information-asymmetry as the market for 'Lemons', and its networked market is also crucially ruled in the percolation principle. Finally, I will show these details and discuss the relatives.

Intimate Economies of Rehabilitative Work: Policing Sexuality through Wage Labor and Re-Education through Labor in China

This paper begins to theorize the intimate labor regimes of the "rehabilitation industry" in China. It examines the collusion between transnational interests, the state and the market through two types of vocational training programs for sex workers in China. In China, state-sanctioned rehabilitation through labor (RTL) programs serve as mandatory sanctions for prostitution offenses. At the same time, American evangelical Christian missionaries recruit sex workers to work as jewelry makers, and label them as victims of human trafficking to transnational consumers and activists. These programs aim to generate economic alternatives to labor migration and sex work. However, the focus on labor training and re-education as the animating force of social mobility ignores the complex labor, gender and ethnic hierarchies that exist within the intimate labor industries. Opening the black box of this new industry, my work will investigate the connections between the local and global and question the optimism around the transformative potential of "good work."

This paper is based off 28 months of ethnographic participant observation at an evangelical Christian vocational training center in Beijing, China, and pairs this with preliminary analysis into the historical and contemporary practices of rehabilitation through labor in China.

Current Crimes and Major Issues of Policing in Japan

The number of reported crimes has been decreasing since 2002 in Japan. However, the Japanese society faces some new crimes, including cybercrime, domestic violence, and stalking. The Japanese Police are now struggling with these new crimes and constructing new rules and practices to deal with them. Current policing and countermeasures against these new crimes in Japan will be illustrated.

«Cellular Globalization» and Communicative Inequality

In view of high speed of development and inculcation of the new informational technologies, growth of consumerism, space globalization in the contemporary societies the high level of social dynamics remains. At present the world community experiences increasing influence of the informational and communicational technologies. At the beginning this changes weren't very visible, but now we already don't imagine our life without social networks and connection which is available constantly. Our friends are increasingly not real people, but simulations. New trends of world development, their orientation on an innovation and modernization create the conditions for new social phenomena formation, one of which is communicative inequality. Communicative space is constantly changing, and with the emergence of advanced communicative technologies new vectors of its formation are formed. Between those who have the technical capacity and the necessary educational level for using the Internet and those who have no such possibility the border lies. The new mobile communication potential influence the individuals’ behavior. Communicative inequality develop in the new telephony using and in obtaining information from a variety of sources including the media which price isn’t available for wide range of customers. Recently they gap between rich and poor in the sphere of information has become more and more conditioned by the technological characteristics, when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

A Sociological Approach to Varying Treatment Outcomes of Complementary and Alternative Medicine

Social sciences of medicine have not given much attention to the variations in the real-world treatment outcomes of CAM situated in different social contexts yet. This neglect is surprising, because the wisdom has long existed in social sciences of medicine that the effects of medical interventions are significantly influenced by social and cultural circumstances. Along with this neglect, a problematic view seems to be revived and reproduced among the medical science community that any deficiency or efficacy in the treatment outcomes of acupuncture and herbal medicine is attributable to the characteristics of the treatment in itself detached from its medical and social environments. However, the limitation of this view becomes clear when acupuncture or herbal medicine of the identical quality and design leads to varying treatment outcomes in different trials sites. As a way to consider these puzzling variations and to propose a sociological explanation of the varying effects of acupuncture and herbal medicine, this paper examines systematically how divergent treatment outcomes are in acupuncture and herbal medicine in Japan, U.S. and how they are related with the social environments of these medical interventions. In particular, this paper highlights the significance of coordinating these CAM treatments with the mainstream biomedicine at multiple levels in order to get tangible health care benefits. It concludes the necessity for the interdisciplinary studies on the social determinants of the effects of medicine and the inter-cultural medicine and cultural competency.

Family-Related Risk Perception and Individualization in East Asia

Based on a survey research conducted to citizens of three capital cities of East Asia, Seoul, Beijing, and Tokyo, this paper is aimed at comparing the family-related risk perception in the three cities with a perspective of individualization theory and a typology of risks developed for East Asia. More specifically, it is aimed at revealing how the citizens of the three cities feel about the recent changes in the family such as divorce, low fertility, decrease in the parent’s role in home education, isolation and suicide of the elderly, individualist tendency, decrease in mutual help in the family, and conflict in the property distribution. The research questions are as follows: First, how do the citizens of three cities perceive about the various family-related risks? Second, what influences the family-related risk perception? As to the first question, it turned out that perception of the first modernity-related risks are higher in Beijing, while that of the second modernity-related ones are higher in Seoul and Tokyo. As to the second question, it turned out that not only the family-related macro changes as revealed in law and policy changes and statistical indices in the area of fertility, divorce and marriage, but also individualization turned out to be significant. This suggests that the three cities seem to be in different stages of development and that the three cities have both the first modern and second modern risks.

At the end of the Cold War, he indicated that his position was different from that of anti-communism. He insisted that the end of communism should not be admired, and he also suggested that capitalism would extend indefinitely. Although Bell was close friends with Irving Kristol, who was nicknamed "the godfather of neoconservatism," and funded The Public Interest with him, they conflicted politically and ideologically after the presidential election of 1972.

In 1977, Bell articulated his three positions: "socialist in economics, liberal in politics and conservative in culture." He tried to transcend the binary oppositions peculiar to the Cold War through his idea of "trinity." This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neocorporatism.

About World Championships in Athletics and TV Broadcast
This study examines changes in the nature of Japanese TV broadcasts of the World Athletics Championships from 1997-2013 using a qualitative methodology. Specifically, the study examines the changes in the Tokyo Broadcasting System coverage between the 1997 Athens event and the 2013 Moscow event. The results indicate that TV broadcasts became more professional from the point of the Berlin event in 2009. Up until the 2009 Berlin event, broadcasts featured much screaming-like behaviour from television commentators such as Yuji Oda. However, the screaming-like broadcasts decreased after the Berlin event and the screaming of Yuji Oda was not seen in Moscow in 2013. In addition, the nicknames of the players were not used in the Moscow TV broadcasts. This may be due, in part, to the request of the Japan Association of Athletic Federations to the Tokyo Broadcasting System to eliminate the use of nicknames. The nature of live coverage of sports events varies according to different events. In addition, they are determined depending on whether or not there are Japanese players involved, and depending on whether or not there are star "foreign" players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

Why Does Inequality Keep Rising In South Korea?
This paper explores the rise of economic inequality in South Korea, focusing on changing income distribution of individuals and families after financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual's wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual's wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. In addition to impacts of globalization, under the post transition era, such as fast aging of population and family dissolution, partly associated with neoliberal economic reforms, have contributed to the drastic rise of family income inequality in the 2000s.

Rethinking “Medicalization of Death and Dying”: Explications
through Examining Japanese Case

What does “medicalization of death and dying” precisely and really mean? This
paper tries to focus on the medicalization of death and dying, and tries to show
1) the historical processes of the social transformations surrounding death and
dying in Japan, and then 2) theoretical reconsiderations concerning the concept of
medicalization itself.

Medicalization of death and dying has been customarily and representatively
meant to be “hospitalization”. The radical change in the place of human death
recalled the sense of something familiar being lost, and the medical-hospital en-
vironments coupled especially with the high-tech medical treatment in the 1970s
have long been viewed as something unfamiliar, unhuman, and even anti-human.
Cultural interpretations regarding this process as “denial of death” or “pornog-
raphy of the bodies” have been presented, and prepared for the
seemingly backlash movement tentatively called the de-medicalization. However, what
does these medicalization and de-medicalization really mean?

Japanese situation could present strategically suggestive one, partly because it
is the healthiest aged society and partly because it is also the most densely crowd-
ed society with medical facilities. It seems to follow that the medicalization of
death and dying would advance most in Japanese society. The situation is compli-
cated. The health policy have tried to de-medicalize/de-hospitalize the aged, and
promote nursing home care and community care ever since 1980s. The people in
general wish for sudden death, or for natural death in home, and both of them
share in common one element: with lesser medical interventions. It is both in-
teresting and somewhat paradoxical. Interesting, because the directions aimed
seem to be converged/de-medicalization. Paradoxical, because the intentions fun-
damentally diverge between the two.

This paper tries to contribute to broaden the scope of the discussion of medi-
calization empirically, and to enrich it theoretically by reexamine the validity of the
concept of medicalization.

Human-Billboards: The Commodification of Invisible People

According to Zygmunt Bauman, since mid-20th century modern society has
been experiencing a gradual shift toward a “consumer society”, whose main char-
acteristic is the transformation of consumers into commodities. In this context,
the objective of consuming is to grant social status to individuals, who worth as
much as they are able to consume. Bauman posits that people consume to invest
in their own social affiliation. By consuming, individuals become a more valuable
commodity, recasting themselves as products capable of drawing attention and
standing out from the monotony and dull invisibility of ordinary things. Those who
do not have enough resources to consume are considered invalids, commodities
that will never be noticed or coveted, and that can only resign themselves to their
invisibility. However, by analyzing Brazilian human-billboards, this study intends
to show that even those individuals are salvageable in the world of consumption.

In the city of São Paulo (Brazil), legislation has established several restrictions
on advertising placement in order to avoid visual pollution. The real estate sector
has circumvented that legislation by using the so-called “human-billboards”: men
and women from under-age to elderly who remain standing for periods up to 8
hours without breaks and regardless the weather, in corners of upper middle
class neighborhoods with signposts hanging in their necks. For this job they are
paid under 10 dollars a day, with payment discount if their supervisor finds them
sitting.

In principle these people would be considered “invalids” in the society of con-
mumers. Nevertheless, they end up being “recycled” and become functional to it.
The case study intends to reflect on how the society of consumers absorbs the
dysfunctions that it produces itself. In this case, people’s invisibility is not equiva-
lent to death: it is also turned into merchandise.

Discourses in the Magazine “Keisetsu Jidai”: The Popularization
Process of Higher Education in Postwar Japan

At a time when it was called the “examination hell” in postwar Japan, the mag-
azine KEISETSU JIDAI was popular among students that take the entrance exam-
ination in higher education.

It has a history of more than eighty years, but this time, how the magazine has
changed?

The purpose of this study is the analysis of magazines in the 1950s-1960s. I
would like to declare that KEISETSU JIDAI has a function of career guidance
through the late 1950s. The tendency changed subjects, contributors, quantities
of the magazine, and their consciousness. It’s mean to liberate students from some
superstitions. A practical learning and a scientific method was directed to solve
problems. In particular, the issue was a difference between urban and rural areas,
which have dates and skills of an entrance exam. Some difficulties confronted
them, conflicts and barriers surrounding the higher education, such as
gender difference and economic issue.

This study may suggest a new history about the severe competition in school
entrance exams.

The Effect of Environmental Education at School and Home on
How Students Behave Towards the Natural Environment in Japan

Several studies on the factors that promote pro-environmental behavior have
found the importance of environmental education. A number of environmental
educational programs that aim to nurture ethical behavior towards the environ-
ment have been developed worldwide. For example, in Japan, some students in
a junior high school take part in diving programs to study marine environments.
The aim of this study is to examine the effect of environmental education at
school and home on students’ pro-environmental behavior. In November 2010,
we conducted a quantitative survey of all third-year students and their parents at
all the junior high schools located in the city of Minamata, Japan. Pollution has had
a severely detrimental effect on the health of the residents of Minamata since
the 1950s, and the disease caused by pollution has come to be known as Minamata
disease. The negative experiences with pollution have led to the implementation
of various interesting environmental education programs in all the junior high
schools in the city.

The analysis of the results indicates the important factor that effects on
the pro-environmental behaviors of students: It was their perception of the con-
tributions their parents made to address environmental challenges, instead of
the actual contributions or behavior of the parents. The pro-environmental behavior
that the parents took had a mediating effect on the way students’ perception on
their parental contributions to the environment. The results also indicate that experi-
ence-based environmental education, such as related volunteering activities at
school, promoted students’ pro-environmental behavior significantly more than
classroom-based environmental education that focused on knowledge creation.
However, classroom-based environmental knowledge creation remains critical
because it provides an opportunity to influence pro-environmental behavior through the discoveries and the surprises by learning.

Career Strategies and Spatial (im-)Mobility Among Skilled Migrants Between Asia and Europe: The Role of Gender Power Dynamics in the Work-Family Interaction

This paper aims to unravel the gendered career strategies of skilled migrants in Germany’s financial and academic sectors, which are being developed not only in tandem, but also often in negotiation, with gender relations in the family. Much of the current scholarly effort in the field of skilled migration and mobility has concentrated on the principal migrant and work-related context, treating the family as a rather secondary, separate and essentially ‘female’ terrain. Drawing on participant observation and interviews with highly skilled mobile workers from Asia, this paper shows that these two terrains, work and family, are closely interrelated in building skilled migrant workers. Germany has lately joined the “global war for talent” to seek out highly skilled migrant workers, but although the number of skilled women entering through Germany’s skilled migrant regime may in fact be small, the experiences of migrant, dual career couples show that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. The overall aim of this paper is to show the contrasting—and often gendered—strategies devised by highly skilled couples, which can widen our understanding of the role that the family plays in international skilled mobility.

SHINOZAKI, KYOKO* (Ruhr University Bochum, kyoko.shinozaki@rub.de)

Conceptualizing Spatial Ambivalence Among Migrant Academics: The Dimension of Temporalities in Understanding Career Strategies

Highly skilled migrants are often deemed to have ‘mobility capital’: extant studies have shown that for career advancement they mobilize the capacity to be spatially mobile across borders, on their cultural, social and economic capital. In policy, too, the debate around “gain and retain” has popularized the construction of mobile skilled migrants. In fact, Germany, the country which this paper focuses on, has been widening its channel for skilled and highly skilled migration streams and opened a route for long-term and permanent settlement for migrants entering through its skilled migration regime. This new, skill-tiered migration governance has rewritten the established understanding of German citizenship, based on “Selecting by Origin”. Recent scholarship has brought about a nuanced understanding about spatial mobility capital and its negotiated nature, by considering the work-family interaction. While these studies put forth ambivalence and gendered power dynamics in realizing career aspirations among highly skilled migrants, I argue that less attention has been paid to the temporal dimension in capturing spatial ambivalence and career strategies. By focusing on migrant academics in three German cities, this paper analyzes their career temporalities, which is influenced by three temporal points in their own and family lives: past, present and future. However, rather than treating these three ‘points’ in isolation from one another, I want to make sense of them in a continuum, that would together affect migrant academics’ decision/entrenchment to stay or move on, or to remain dual career couples. Drawing on a quantitative survey and problem-centered interviews, I aim to demonstrate that the temporalities intersect with, and give meaning to, locally specific experiences along the social division of race/ethnicity, gender, country of origin, and age in the workplace, family, neighborhood and local administration. In addition, I will discuss the strengths and challenges in using these methods.

Between Freedom and Neglect: Community-Based Approaches and Neoliberalism In Policies For Asylum Seekers In Australia

Policies regarding asylum seekers in Australia have changed frequently since the late 2000s. The federal Labor government that came into power in 2007 decided to abolish the notorious policies of the former conservative government, namely, the “Pacific Solution” and Temporary Protection Visa (TPV) scheme, both of which aimed to reduce the numbers of Irregular Maritime Arrivals (IMAs) and violated their human rights. On the other hand, the Labor government maintained the problematic policy of mandatory detention for asylum seekers, and therefore sought to develop “Community-based” approaches for asylum seekers to argue that the government guaranteed their human rights. Thus, the Labor government developed the Community Detention program and expanded the number of asylum seekers who were issued a Bridging Visa E (BVE) and released into local communities. While human rights lobbies and refugee service providers tended to welcome the policy change because it released asylum seekers from detention centers, the advancement of the Community-based approaches was also a response to the need to bring down the high costs of the existing asylum seekers policy. In other words, the Community-based approaches for asylum seekers can be recognized as a segment of the neoliberal reforms of Australian social policy. In this paper, I will examine the details of the Community-based approach to asylum-seeker policy in Australia from 2007-2013, using policy and discourse analysis from a sociological point of view. I suggest that the policy aimed to promote freedom for ethnic minorities can result in their neglect when the discourse of neoliberalism and spatial management are utilized to justify the policy.

Dynamism Among Japanese Railway Fans: Transition of Taste in the Dimension of Hobby

In this paper, I intend to examine “shumi” (Japanese word for “hobby”) in contemporary Japan, unraveling its mechanism and dynamism. “Shumi” is composed of three aspects: “onomuki”, taste, and hobby. “Onomuki” is a Japanese word for a concept of aesthetics in the nature. Taste is a concept of value judgment. Hobby is a concept of enjoyable activities. In sociology, taste and hobby have been researched, far depicting how the concept of taste has been regendered in the concept of hobby in a class society. However, it is necessary to study this matter from the perspective of hobby. Railway fans have been chosen to conduct the survey for the purpose of this study. This is because they participate in activities that are rich in variety, as well as complexity. According to some surveys, there are around 20,000 serious railway fans and roughly from 1.5 to 2 million casual fans. A distinguished characteristic is that although the age distribution is widely covered from under 10 to over 90, at least 80% of them are males. Also, based on my field research related to railways, conducted from July 2009 to October 2012, railway fans have been found to enjoy various kinds of activities, which are not limited to competitions, such as “Agon” that Gallois refers to. Focusing on Bourdieu’s theory of “champ”, or “distinction”, I examine the new framework to analyze the conceptual interaction between taste and hobby. Specifically, I introduce “games” as the sub-concept of hobby, revealing that each fan transitions between values to different realms within the dimension of hobby. Thus, I aim to show the possibility that interaction taste and hobby takes place in a non-class society.

SHIPUNOVA, TATIANA* (Saint Petersburg State University, shhtspb@yandex.ru)

Fundamental Paradoxes of the Theory and Practice of the Criminal Law

The “crisis of punishment” as well as negative phenomena of the modern system of justice determines to the ideological handicap. Let’s focus only on two mainframe ideas. Understanding of the social justice. Social justice is a measure of public benefits from laws and other regulators based on an agreement which establish and maintain the life order of individuals and institutions. This order promotes the survival and development of the society, as well as provides integration and decent life of its members. The “decent life” is a compilation of all the benefits proclaiming in modern society: freedom, equality, social security, etc. Therefore the justice system should be aimed primarily at preventing crime, restoration of the rights and rehabilitation of the victims, and only then – on the prosecution, punishment and / or rehabilitation of criminals. Economic pragmatism of the “social protection” concept. The concept of punishment stakes on the state control based on a quality management underlining efficiency and effectiveness. In this regard, in Western societies are widely discussing concepts of “safety” and “protection”. However, they are discussing without an analysis of what, in fact, should be protected. So “relatability” becomes symbolic notion and goes back to the “retribution”, in which still should expect the permanent solution of the problem, it is necessary to decide from which perspective we should evaluate its quality. From producer’s perspective? But what exactly it produces: improvement of criminals, retribution, or citizens’ safety? From consumer’s perspective? But who is consumer: prisoner, society, State? From market’s perspective? But what are the objectives of the government regarding to prisoners, actual and potential victims, or crime policy? These estimates could differ, as well as the answers to the questions. The elimination of these paradoxes could fundamentally change the concept and practice of the law in modern society.
SHIRATORI, YOSHIHIKO* (Kobe University, yshira@lit.kobe-u.ac.jp)

Intergenerational Transfer within Families from the Perspective of Social Inequality in Japan

As in Europe and the US, Japan's ageing population, and the accompanying generational imbalance, has become one of today's most pressing social policy issues. My paper principally examines the relationship between social and private intergenerational transfers in Japan. I will discuss how intergenerational transfer within families takes place, and whether this process contributes to expanding inequality between families.

I focus on three kinds of private intergenerational transfer: co-residency, remittance, and asset inheritance. In particular, I intensively discuss different directions of transfer, both from parents to children, and from children to parents. The aim of my research is to identify similarities in determinants of all three types of intergenerational transfer, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People's Living Conditions (CSLC), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-Age and Elderly People (PSMEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. The survey, with a sample size of 6,442, includes detailed information on financial and care support between parents and children, and on household assets and savings.

According to my preliminary results, the meaning of co-residency has changed.

The elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic support to younger family members. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

RC19-338.3

SHIRAHASE, SAWAKO* (University of Tokyo, ssiraha@lit.u-tokyo.ac.jp)

Intergenerational Transfer, Social and Private, in Japan

Largely because of generational imbalance, the ageing population of Japan is one of the most urgent topics in social policy. My paper principally examines the relationship of social and private intergenerational transfers in Japan. I analyze two kinds of data. The first is that of the "Comprehensive Survey of People's Living Conditions (CSLC)," which was conducted by the Ministry of Health, Labour and Welfare, and the second is that of "National Survey of Living Conditions among Middle-Age and Old-Age People in 2010."

The public pension system, which produces social transfers from the younger to the older generation, can be regarded as a form of intergenerational re-distribution. I first examine the extent that public pensions limit poverty among the elderly in Japan as a way to gauge the impact of public transfers in improving social equality. The main research question here is the extent to which public pensions reduce the risk of poverty as the generational imbalance worsens.

I study two-fold private transfers, co-residency and remittance. In Japan's welfare society, the family has played a critical role in providing basic economic security to its members. The elderly have secured their economic well-being through co-residency with their off-spring. I examine how private transfers across generations, as in co-residency and remittance, have taken place. My second research question is whether such transfers have been enhanced by political aging. According to my preliminary result, the meaning of co-residency has now changed: the elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic well-being to the resident younger generation. Private transfers divide society rather than re-distribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

Family Supports and Insecure Work: The Politics of Household Service Employment in Conservative Gender Regimes

In the late 2000s Austria and Germany introduced policies aimed at expanding the employment of household services in order to support families in their ability to reconcile work and family. Both sets of policies targeted the use of a particular form of marginal part-time work, to make formal employment relations more attractive to households. The effect however, has been to constitute household service work as insecure low wage work, and to introduce new lines of inequalities between working women. While neither the Austrian or German reforms have been successful in bringing informal work in private households into registered employment, they have strengthened the traditional path of women's labor force (re-)entry into part-time work, while creating large differences in the forms of part-time work taken up by and less skilled women. These two worlds of women's employment meet directly in private households, largely as the result of family support policies, and are one of the ways in which the modernization of conservative welfare contexts with strong male breadwinner models are creating new class–based inequalities between women. The findings suggest the need to pay more attention to the employment conditions and new risks in drives to formalize and expand personal and household service work, now an explicit aim of European employment policy.

SHIRE, KAREN A.* (University Duisburg-Essen, karen.shire@uni-de.de)

Gender Dynamics in the Dualisation of Coordinated Market Economies

Recent research about growing inequalities in some of the most protected employment economies has pointed to the dualisation of employment conditions originating in the expansion of non-standard employment and the deregulation of social protection coverage for significant segments of the workforce. This paper will focus on bringing the gendered dynamics of dualisation in Germany and Japan, and show that dualisation is not novel, but rather deeply rooted (1) in the failure in both countries to pursue social and family policy changes in strong male bread-
winner models of employment and (2) well established occupational segregation of work by gender. As a result, class-based inequalities have become more salient, though these were considered less relevant in the coordinated market economies. In Japan, the expansion of temporary and part-time labor over four decades has exposed women and less educated youth to market-based employment systems, at the expense of better educated and older cohorts of the male core workforce. German policies and practices designed to protect skilled male workers in manufacturing have failed to transfer to occupations performed mainly by women, while sub-forms of part-time and temporary work have deepened the divisions between men and women in non-standard employment.

PRES-1.2  SHOJI, KOKICHI* (University of Tokyo, kokshoji@nifty.com)  
Messages to the World from Japanese Sociological and Social Welfare Studies Societies

SOCI-980.1  SHOJI, KOKICHI* (University of Tokyo, kokshoji@nifty.com)  
Sociology of, By and for Sovereign People: Towards a Truly Global Sociology

A truly global sociology can be created as an overcoming of the civil society paradigm. The bourgeois, rich citizens, conquered the globe with their enterprises of ‘one share, one vote’ principle, guarded by their absolutist and nation states, and colonization the most parts of the world. On the other hand, these citizens were forced to open the door by the American and French Revolutions, and to concede repeatedly by the universal suffrage movements of workers, ethnic minorities and women, to enlarge democratic societies of ‘one person, one vote’ principle. The paradigm has been formed and reinforced in this process. The colonized peoples, resisting this forced paradigm, have transformed it to open perspectives toward truly democratic societies, though being troubled by dictatorships caused by development and the military. Most peoples have now the sovereignty, although they have been trampled out by those who have suffered from their privilege. From their standpoint, the people’s will has not been rightly reflected on the governments even in advanced societies because of their imperfect election and party systems, while the world economy has been controlled by their corporate and globalized enterprises. The advanced societies have not been sufficiently democratized, so that most of the citizens still remain actually substantially as subalterns. Rejecting any academic imperialism and not being afraid of multi-versalism, we must create a sociology to democratize all national societies and the international society. For this, we need not only a political sociology to promote the right reflection of the people’s will on the government, but also an economic sociology to facilitate peoples’ non-profit enterprises and organizations such as co-operatives, trade unions and others. A cultural sociology, integrating these political and economic ones meaningfully, will sublate the old paradigm onto a new highly qualified democrati-c society paradigm.

RC25-449.3  SHOJI, HIROSHI* (National Museum of Ethnology, hirshoji@idc.minpaku.ac.jp)  
Is a Multilingual Mind Possible for the Japanese?

Japan has been conceived as a highly monolingual and monolingual society by both the Japanese and others. Monolingual policy was strengthened particularly after the WW II, when Japan was forced to abandon all its overseas territories. Ignoring the existence of indigenous Ainu and migrant language speakers, Japan has been devoted, by means of educational and administrative institutions, to integration of its people around the national language, Japanese, and Japanese culture. Mass media played equally important roles. The myth of Japanese homogenity has probably helped to create and reinforce the national feelings, and was supposedly advantageous for Japan’s economic development in recent decades.

Japan’s monolingual regime was thus brought into being, through political, social and ideological circumstances. One could get by with Japanese language only in almost all places and situations. No one had to worry whether a customer, authority, employer, employee, neighbor or even stranger on the street might understand Japanese.

Dark sides of monolingualism began to reveal themselves with growing globalization, particularly since the 1980’s, although some were already recognized before. One of the most familiar examples has been the modest English capacity of the Japanese. It was widely believed that with an almost absolute lack of contact with foreign languages, learning foreign languages was not simply realistic. Yet, even now, in the midst of globalization with many contacts with foreigners, and many reasons to communicate with them, the people’s perpetual efforts to learn English have not brought notable results.

The problem perhaps is more deep-rooted. Does a conceptual monolingualism underlay the Japanese mind? In the presentation I will relate Japanese conceptual monolingualism to lingua-behavioristic phenomena, and consider if there are any signs of breakthrough in the present society out of the monolingual cul-de-sac.

RC22-390.7  SHIVELY, KIM* (Kutztown University of Pennsylvania, shively@kutztown.edu)  
Investing in the Afterlife: Inequality, Charity, and Hopes for Salvation in the Hizmet Movement

As Turkey’s economy has liberalized over the last 20 years, economic inequality has intensified and become a major focus of public concern and discussion. A response to this inequality has been an increase in the number of charitable non-governmental organizations, including faith-based beneficent groups spearheaded by upwardly mobile, pious Turks who seek to “do good” for society as a form of religious devotion. One such religiously oriented Turkish philanthropic association, the Hizmet (“service”) movement, is organized by followers of the influential Islamic teacher, Fetullah Gulen. Based on ethnographic research among members of the Hizmet movement in Turkey and the United States, this paper will demonstrate how Gulen’s teachings on economic activity and social responsibility suggest that a path to salvation for the wealthy emerges from the plight of the poor. More specifically, the movement has promoted an idea that individuals (and may serve as a type of worship) which the believer gains God’s reward in the afterlife. However, this conversion of economic success into religious merit depends on the believer’s intentions (niyet), in that economic activities are recognized as worship only if the believer maintains the proper spiritual disposition toward God. This includes the acknowledgment that a person’s economic attainment is only partially attributable to the individual’s own efforts, but ultimately it is God’s blessing (ihlas) that is responsible for success. Reciprocally, an affluent individual should repay God’s beneficence with material beneficence to society through zakat (alms-giving) and other charitable activities organized by the Hizmet movement. These charitable acts will potentially earn him that philanthropist a place in heaven. Such a notion that the wealthy rely on the needy for salvation serves to reinforce inequality, even as the effects of that inequality may be mitigated by acts of pious benevolence.
Governments around the world are endeavouring to work out how to meet patients’ expectations regarding universal health coverage. Even wealthy nations such as Australia that formally enjoy universal health coverage experience gaps and inequities in access to health care. Not all patients enjoy an equal capacity to choose. Inequities in access to care, long waiting times for surgery and increasing out-of-pocket expenses are creating a divide in healthcare between those who can afford to pay either out-of-pocket or via private health insurance, and those who cannot. The aim of this project is to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

The study is informed by a critical discourse analysis of selected Labor and Coalition Federal policy texts to examine how patient choice is spoken about, shaped and enacted at the federal level in Australia. The content of speeches and statements regarding patient choice was accessed through the database services of the Commonwealth Parliamentary Library. The sample comprises speeches and statements pertaining to health policies made by Prime Ministers, Ministers of Health, and Opposition Leaders and Health Spokespersons.

Critical discourse analysis reveals the core policy messages that emerged during the Howard Coalition (1996-2007) and Rudd/Gillard/Rudd Labor (2007-2013) governments. Our study compares and contrasts Labor and Coalition policies in relation to access to healthcare in order to explicate the underlying assumptions regarding patient participation and choice within the context of universal health coverage.

**Is There an Emerging Transnational Advocacy Network in Opposition to Weaponized Drones?**

The use of unmanned aerial vehicles (UAVs) or drones by the United States for carrying out targeted killings in territories throughout the Middle East, South Asia, and Africa has by now become a routine, but controversial, American counter-terrorism practice. In recent years, these drone strikes have been regularly denounced by human rights organizations and have also drawn the critical attention of United Nations special rapporteurs on account of the civilian casualties such attacks frequently cause in apparent violation of international norms governing the use of extrajudicial force. Perhaps just as significant, however, in continuing to resist the normalization of drone warfare, has been the increasing activism of a variety of like-minded norm entrepreneurs involved in the production and dissemination of knowledge about its legal aspects and realities created on the ground. Volunteer lawyers representing victims/survivors of drone attacks have been pursuing litigation in different national jurisdictions, most notably in the United Kingdom and in Pakistan, to identify liable parties and publicize their alleged complicity. Concurrently, the epistemic community of international law scholars and practitioners has been engaged in public intellectual debates concerning the legality and morality of drone warfare, while investigative journalists have (often at their own peril) continued to document attack incidents and play a significant role in bringing these facts to public attention. This paper explores whether, and to what extent, these separate, yet complementary, initiatives may be indicative of an emerging transnational advocacy network opposed to the use and proliferation of weaponized drones.

**The Democratic Peace Debate: Theory and Fact**

The concept of a Democratic Peace (DP) is a major theoretical strand within International Relations (IR). Depending on precisely how democracy is defined, the number of wars between such states over the last two centuries varies from zero to a handful. Moreover, democratic states have never fought on opposing sides in a general war involving all, or nearly all, the great powers. Such a record cannot be claimed by any other form of government – monarchies, Communist and authoritarian states have all fought against one another. The only zone of peace that is grounded in a shared political system is that of liberal democracies. In a field in which there are relatively few empirical regularities of even modest strength, it is a primary task of IR scholars to be vigilant in validating or invalidating the findings. Thus, DP provides an almost perfect focal point to grapple with contentious issues involving theory in IR. First, DP will be differentiated from the liberal (or Kantian) peace, a concept with which it is often conflated. Second, the main debates about theory within IR that DP helps to illuminate will be discussed. These debates can be categorized as follows: 1) Rationalist vs. Realist (paradigm debate); 2) Quantitative vs. Qualitative (methodology debate); and, 3) Methodological Unity vs. Methodological Pluralism (philosophy of science debate). Hence, concerns about theory-building in IR (as reflected through DP) are delineated: defining variables, confounding of variable effects, and fleshing out causal mechanisms that connect the variables to each other. The position taken here is that methodological pluralism is a pre-requisite and, furthermore, such a flexible and wide-ranging approach should also prove highly beneficial for delineating real-world connections.

Inequalities of Gender, Violence and Dehumanization in Multiple Forms in a Conflicting Cultural Values Outlook in Pakistan

This paper provides a theoretical framework of understanding, experience and struggle of gender and pursuit of women rights concerning inequality, violence and dehumanization, and how multiple forms of such disparities overlap and interrelate with social categories and cultural values. The paper’s main theme will be a theoretical inquiry into the way violence is conceptualized in relation to the conflicting cultural values in traditional and modern theories. Theoretically and methodologically the paper will be designed so as to allow the interpretation of maltreatment of women with reference to sexual and gender options concerning violence, class, and discrimination in the background of conflicting cultural values. It will focus on Pakistani society since it got its independence in 1947 and build its argument on previous research conducted among indigenous groups in Pakistan. It will be discussed here that an examination of multiple forms of inequalities of gender, violence and dehumanization in the lives of women in Pakistan, the interpretation would be that of a society surrounded with violence. Central to this theory is the idea of violence, accounts of the ways Pakistan women find themselves between being modern women and traditional women to illustrate the limits of the dichotomy of the theories of traditionalism and modernism. This paper will focus on the rights of the women who suffer from violence and dehumanization. These rights will include socioeconomic rights of getting jobs, social security, health facilities and shelter. In the end the paper will give a model of gendered approach for rehabilitation of the women who have faced such inequalities considering into view the legal Act against women victimization in Pakistan.

Crisis of Labour: Macro- and Micro-Level of Social Analysis

The report focuses on the phenomenon of labor crisis and its macro- and micro-level analysis.

At the macro-level labor crisis is a transition to a postindustrial society; one of its features is a weakening of the need for hard work for industrial production. Labor in its classic sense is a thing of the past. Due to globalization, the processes of labour mobility across countries and the emergence of the international labor market play an important role in the contemporary world. And at this level the study focuses on the problems of prospects of labor as an activity, changing the nature of work, etc. Therefore a researcher faces new challenges such as: identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of priority in the lifestyle and day-to-day activities.

At the micro-level, labor crisis can be described as a particular person and/or a family living in terms of increasing tensions of life and the growth of its pace. With changing strategies in the field of labour and employment on a global scale and due to the prospect of joining the conditions of flexible/part-time/freelance job the real work schedule of large numbers of people is becoming more and more intense.

In the center of our attention is the dichotomy of liberation from rigid labour and labour dependence, which more people around the world suffer from.

Students’ Educational Achievements or Practicing of Citizenship: Disjunction or Alternative

Countries that are striving to upgrade their education most of the time take part in international educational projects such as PISA (OECD) and TIMSS, PIRLS, or CIVED/ICCS (IEA). Moreover, the participation in educational comparisons of students’ achievements is a country’s response to the onslaught of new requirements to account for school performance. Usually they have taken up some form of external evaluation and permanent monitoring of students’ achievements. The mandatory and regular use of testing tools exerts the pressure on students who are imposed now to much more intense effort than in past decades. Consequently, many activities praised at this stage of individual development, i.e. contacts with peers, community endorsement activities have to be abandoned or reduced. This side effect of new accountability practices of educational institutions can be shown on the aggregate level of countries and on the individual level (students).

Frequently scholars meet either students of good grades but socially passive or socially active students who have poor educational achievements. IEA Internation Civic and Citizenship Educational Study 2009 provide the empirical foundation for this conclusion and these data will be first of all discussed.

Sociologists look for social consequences of new educational accountability practices. The most visible effect is the widespread and paid by parents supplementary training in post-school hours. The school neuroses and school violence accompanying the educational process despite reforms can be related to the new accountability practices. To compile the full list of these consequences is the task for sociologists. Authors have some additional hypotheses about these consequences. The main question, however, is whether the formal education can be in the same time effective and non-oppressive for students.

L’accompagnement Des Mobilités Résidentielles Des Salariés à L’épreuve De La Crise : La Perte D’Efficacité D’un Dispositif De Conciliation Des Trajectoires Professionnelles Et Personnelles

On verra comment le contexte économique de la fin des années 2000 en France a remis en cause ce dispositif. La fragmentation et la désorganisation financière du « 1% Logement » a joué un rôle, mais aussi le changement de comportement des employeurs eux-mêmes qui exercent une forte pression à la baisse sur les prix des prestations. Dans un contexte de ralentissement économique général, et donc de recul des mobilités géographiques liées à l’emploi, les prestataires adoptent eux-mêmes des pratiques commerciales de plus en plus agressives qui mettent progressivement au second plan l’accompagnement des salariés à proprement parler.

L’évolution de l’accompagnement des mobilités géographiques des salariés en période d’austérité se fait donc au détriment des salariés les moins bien dotés, en particulier les travaux des tâches d’arbitrage entre vie professionnelle et vie privée. Elle les resserre sur des choix plus tranchés, par exemple entre l’immobilité et le sacrifice de la vie personnelle et familiale. On verra cependant que le contexte d’austérité est aussi propice aux tentatives d’innovation de la part des salariés mobiles, notamment par le recours à la multilocatilité résidentielle.

Building a Hybrid Culture in Multinational Military Operations: The Perceptions of Eufor Peacekeepers on Collaboration and Negotiation for a Better Information Sharing

Building a Hybrid Culture in Multinational Military Operations: The Perceptions of Eufor Peacekeepers on Collaboration and Negotiation for a Better Information Sharing

Information sharing describes the exchange of data between various organizations and people. A hybrid culture based on collaboration and negotiation may pave the way for better information sharing within an organization. In the meantime, the nature of the organizational work is changing with the help of globalization, technological developments, complexity and today’s sophisticated social and political problems. To remain competitive and to gain an advantage of these developments by solving conflicts effectively (Hocker and Wilmot, 2009), some new “multinational collaborative work arrangements” are being established both in civilian and military multicultural working environments. These working environments are also in place for military multinational military operations (Pedersen et al., 2001). In fact, if the cultural diversities are being managed well, an organization can use advantages of this situation. In this case, the concepts “collaboration” and “negotiation” have become much more vital to manage the intercultural process effectively, to prevent some misunderstandings and create a better information sharing between the partners.

The research questions of this study are:
How diverse military groups in a multinational military operation are united under one umbrella to achieve a better information sharing?

What are the similarities and differences in definitions of “negotiation and collaboration” across different cultures?

How to create a “third-hybrid culture” in multinational military operations?

The methodology of the study is based on qualitative research methodology. An interview to explore these research questions -designed by the writer while he was the Chief of Capacity Building Department at EUFOR in 2012- was applied face-to-face to 55 peacekeepers of 13 different countries within EUFOR Peace Operation in Bosnia and Herzegovina between April-October 2012. The gathered data will be analyzed by “content analysis” method to find out the answers to research questions and to propose strategies on a better information sharing within the light of the findings.

From ‘Absent-from-Home Father’ to ‘Committed Father’: Changes in the Model of Fatherhood in Poland and Role of Mothers-‘gatekeepers’

The current situation of fathers in Poland is an excellent example of the gap between the one hand - the level of social expectations, and on the other hand - everyday practice.

Social expectations have tended to climb as a result of the promotion of a new fatherhood model, extensively discussed by the media and by experts, which has led to the creation of new social patterns and a new model of ‘the father’. The majority of news, radio, and TV programmes present the idea of the committed father, involved in childcare in a very positive way, as an opportunity for men to benefit from developing close relations with their children.

In the same time, Polish fathers rarely get involved in dealing with children, do not spend as many time with them, do not decide on matters that are important for children, etc. The question is: why?

There are many reasons for that, one of them is the attitude of some Polish mothers which could be described as ‘Gatekeepers’.

Many of mothers admit that the fathers of their children are able to look after children, but they treat them as if they were children themselves. They claim that men need detailed instruction, and when faced with a task of taking care of a child, the mother has to prepare everything for him. Due to this, many women prefer to have fathers ‘under control’ even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously ‘push men away’ from children, because male commitment threatens their identity as built on being the mother, and thus the sole caregiver and expert in children’s affairs.

The main purpose of my presentation is to describe the situation of fathers in the context of mothers’ attitudes and behaviors.

Community Responses to Drug Related Violence in Mexico

The violent conflict that emerged in Mexico –due to drug trafficking and the Government’s response- has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuernavaca and Jiutepec in the state of Morelos, Saltillo and Torreon in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees –men and women- from lower middle class neighborhoods. Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens’ rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens’ linkages to public security and justice institutions. These changes are expressed in perception of insecurity, fear of violence, social ostracism, and social embeddedness of powerful groups of organized crime have weakened community organization and collective action to face the more violent scenario. As a result, the main strategies to prevent or cope with victimization reported by the interviewees refer to individual behavior, family isolation, and the weakening of community networks.

“If you were a man, you would be a captain”: Observations, Strategies and Experiences of a Woman Anthropologist Among The Military In Brazil

This presentation aims to explore the relationship between the researcher and the researched perceptions in ethnographic approaches of the military in Brazil, showing methodological features and general practices in this field, together with observations from my own background and experiences of research in military organizations from southeastern and north of the country. The way the military reality is classified and arranged, is to some extent, revealed in contacts between anthropologists and military personnel which are initially marked by the experience of the anthropologists’ perception as “civilians”, i.e. “outsiders” of the “military world/environment”.

There are a lot of positions and relations being built and acquired in the development of research, that refer to the poles “military / civilian”, and that, far from being fixed categories, reveal themselves as relational and contextual regarding the observer’s position as researcher (Castro & Leirner, 2009). By addressing issues such as women in the Armed Forces and military families in my studies, this paper aims to capture the entry in the fieldwork into units that are military academies in relation to other garrisons, as border platoons in the Brazilian Amazon. I will present the strategies for approaching and contact, positions acquired in the research context, my experience as a researcher, and “friend of the Army”, and extend the reflection to the gender issues that permeates my research trajectory.

How Is Time Organised By and for Babies?

By and large, time studies have been carried out in the sociological area, concerning in theoretical as much as methodological aspects when analysing time use by adults in contemporary western societies. However, research on time use by children is still incipient and until now the main topics addressed refer to daily socialisation experiences (Larson and Verma, 1999), the differences in time use considering social class and gender differences (Carvalho and Machado, 2006), the child’s cultural life in urban and rural areas (Christensen and James, 2008) and the comparison between activities developed over different decades (Cruz and Teixeira, 2008). It is important to emphasise that such research only considered children over 6. For this reason, the present undertaking seeks to understand time use by and for babies under 12 months old, and hence complete the gap found in studies based on this age range. Firstly an instrument to record daily time use was elaborated, for completion over 24 hours in observation of both baby and parent. This instrument was used twice - once on a weekday and the other on a weekend. Interviews were later carried out with the parents in order to further explore the information recorded. The sample comprised two babies - one girl and one boy and their respective parents. If on the one hand, babies receive recurrent external determinations leading us to understand time as an instrument of social regulation (Elisas, 1998), despite such interventions they also determine their own time use on the other.

Sweeping Floor and Building Identities: Centrality and Contradictions of Paid Work for Women in Brazil

The XXI Century Brazilian Society has undergone some transformations in its gender roles and labor relations, including women’s work. Inserted in this context, this research presents a retrospective of Brazilian women’s struggle for the conquest of their labor rights and interprets these changes empirically. We conducted a comparative case study on two organizations - one public another private - Higher Education in the South Region of Brazil, with women that work in a cleaning sector for at least five years. We sought to understand how these women construct their identities at their social space of work and at home, as housewives. The data were collected through semi-structured interviews and focus group. It was found that for these women, the paid work has a centrality that builds contradictory feelings and actions. At first glance, the work promoted financial independence and increased self-esteem of these women. On the other hand they have experienced an invisibility as citizens and a lack of recognition of their activities in the organizations and at home. The consequence of this process was been a conflict in the construction of their identities as workers and as housewives.

The Role of Small Cooperatives and Communitarian Agents in Brazil: Strategy of Action to Sustainable Food Security and Struggle Against Poverty

Food security understood as a process that goes beyond the production and access to food, has been an important topic of discussion in the Central Countries as well as in the Developing Countries. FAO, UNESCO and Local Governments have pressed for the guarantee of the right to food security and a sustainable development. However, many of them has not been succeeded because of the disregard for local knowledge, great bureaucracy and a lack of involvement by the local population. In order to face this reality in Brazilian Society on XXI century, this proposal aims to identify, disseminate and replicate possible actions undertaken by organizations and agricultural cooperatives, and local agents and leaders who are focused on the preservation of food traditions and enhancement of capabilities and local knowledge. These possible actions can create a favorable environment for the use of social technologies, with low cost and community participation. The research has been done in the South Part of Brazil, through a qualitative perspective, using the techniques of interviews, workshops and participative diagnostics including visits to cooperatives and small towns. The data will be systematized in the form of booklet, video and articles in order to stimulate new actions in other regions and countries.

A Spatial Analysis of Residential Segregation By Race and Income Gap in a Brazilian Metropolitan Area

Inequalities between White and Black people are known in many countries around the world. It affects, for example, the income, educational and health outcomes having multiple causes, as discrimination, composition variations and forms of segregation. Therefore, this paper proposes to analyze the residential segregation pattern by race for the Metropolitan Area of Belo Horizonte, the third bigger in Brazil, and its variation related with racial income gap. The choice for this Metropolitan was made, once bigger Metropolises, as São Paulo and Rio de Janeiro, was already analyzed; but the techniques used here is not generally applied, due to being the first time that racial information are in universe questionnaire of census. Then, to this goal, data from 2010 Brazilian demographic census are analyzed through spatial analysis techniques, as “spatial lag” and “spatial error”, adding a spatially lagged variable, differently of some “aspatial” indexes currently used - as Dissimilarity Index, for example. The main goal is to show that residential segregation by race exist on Brazilians Metropolises, unlike the greater part of the literature claim the opposite, pointing socio-occupational status as unique cause of segregation. The results show a large concentration of White people in the center of Metropolis, while Black people are in the periphery. Indeed, there is some overlap between household income and racial distribution on urban space, but is not only this that explains the existing segregation. Therefore, the proposal is to discuss how residential segregation conforms this Metropolitan Area, and how it is related with income gap between White and Black. The conclusion shows that residential segregation by race exist in this context and has relations with racial inequality in Brazilian Metropolises.

The Unequal Distribution of Employer-Provided Training. Empirical Findings and Sociological Conceptualisations

The aim of this paper is to analyze learning and training opportunities, and participation in employer-provided training (in-company training, in-service training, personnel training). Which employee groups are trained the most? Who are those who do not participate in workplace training at all and who lack the learning opportunities? Employer-provided training has been theorized mainly by economists (e.g. Gary S. Becker, Human Capital; Jacob Minzer, 1962). On the job training: Cost, returns, and implications.) In economical literature employer-provided training has been conceptualized as human capital. Today when skills are the most important single asset an employee has in the labour market, sociological theorizing on employer-provided is needed. How should employer-provided training be conceptualized and theorized in relation work place hierarchies and class structure? What kind of capital workplace training is (e.g. Bourdieu)? The question is about class based skill strategies.

In international comparison the participation rate in employer-provided training is very high in Finland. What is typical for Finnish workplace training is its uneven distribution among employees. In the long run the participation in employer-provided training has grown. However, the differences in participation between levels of hierarchy (social classes) have been remarkably persistent. The differences have not diminished in 30 years.

The empirical data used in the study are The Adult Education Surveys by Statistics Finland. Adult education surveys study not only participation in education and learning and skills among the adult population; in addition, they produce data about people’s opinions and experiences of adult education, their motivations and willingness and need to participate in it, and obstacles to and preconditions for it. The data from the survey are based on face-to-face interviewing of a sample of more than 5 000 people. The survey 2012 was a part of a European co-operative project coordinated by the Statistical Office of the European Communities.
workers in various parts of the world. I deploy a theoretical perspective that sees historical capitalism as a system characterized by ceaseless change—“all that is solid melts into air”—and therefore as a system that is recurrently making, unmaking and remaking working classes on a world scale. The paper traces how various capitalist “fixes”—spatial, technological, product and financial—reshaped working classes locally and globally in recent decades; strengthening some, weakening others; creating challenges and opportunities. The paper develops several arguments that can be found in embryonic form in Forces of Labor. One, the combination of technological and financial fixes has been destroying livelihoods faster than it has been creating new livelihoods, leading to a generalized crisis of subsistence for workers, and a crisis of legitimacy for capitalism. Two, the profitability of the financial fix results almost entirely from the redistribution of income from labor to capital. Redistribution was key to resolving the 1970s crisis of capitalist profitability, but at the cost of an intensifying crisis of legitimacy. Three, financialization, crisis of legitimacy and hegemonic decline go hand-in-hand. We are at the end of the neoliberal era and of the era of US world hegemony. Thus, the geopolitical terrain is critical for understanding what is to be done, including the prospects for labor solidarity across borders and state divides in the very unequal world bequeathed to us by centuries of world capitalist development.

Reshuffling of the World Proletariat

A Reshuffling of the World Proletariat
The transformation of historical capitalism over the past several decades has resulted in a “reshuffling” of the proletariat and proletarian movements on a world-scale. In my previous writings, I focused, among other things, on how the rapid industrialization of parts of the global South has led to the emergence of large new working classes in formerly-existing classes. The existing working classes in China are the latest manifestation of this dynamic process of capital mobility and new working class formation. These writings focused on the “active industrial army”. Another important dynamic underlying the contemporary reshuffling of the proletariat is the secular trend toward increasing capital intensity, and thus the growing mismatch between global labor supply and demand. As such, a deep re-theorization of the concept of the reserve army is imperative—a concept which is both critical to but distressingly unelaborated in volume 1 of Capital. This paper seeks to contribute to this task by theorizing (1) the distinction between, and the relative historical weight of exploitation and exclusion in the development of capitalism; (2) the ways in which capitalist accumulation has depended historically on the externalization of the costs of reproduction of labor and nature, and therefore some of the ambiguities of exclusion; (3) the unevenness of these processes in time and space, and the resulting deep divisions within the world proletariat along lines of gender, race and citizenship; (4) the ways in which this unevenness is reflected in the patterning of world labor unrest in recent years; and (5) the implications of all this for moving toward a post-capitalist world system which guarantees a decent and secure livelihood for all.

Placing Panethnicity: Performing Arab Space on Sonnenallee

The multicultural Berlin district of Neukölln is home to a large number of very diverse foreign-born and migrant-background residents. Some 140 nationalities make up 40% of the population in 2010. Among the migrants least welcome by the dwindling, sometimes xenophobic, native German majority are the asylum-seekers from the Middle East. Unlike their Turkish neighbors, the Arabic-speaking refugees from Lebanon, Egypt, Syria, Afghanistan, Iran, and other countries in the region have a precarious foothold in Berlin. Establishing a small business, even if it is unprofitable, demonstrates self-sufficiency to the authorities. Ironically, immigration laws partly account for the “parallel societies” so deplored by the likes of Thilo Sarrazin, who characterized Turkish and Arab immigrants as lacking “a productive function, except for running fruit and vegetable business.” This research looked into the ethnic enclave of distinctively Arab businesses and institutions clustered around a segment of the five kilometer long artery, Sonnenallee. These businesses do not sell fruits and vegetables, but rather goods and services that demarcate a specifically Arab space. The Arab businesses are frequently engaged in illicit or off-the-books activities to make ends meet in an economy from which they are formally excluded. Based upon field work and interviews with shop-keepers and customers, religious and ethnic association leaders and members, government officials, and Turkish competitors who cluster along a different Neukölln street, I report on the place-making activities of Arab Berliners. I find this street offers “ outfile” public space for Arab political and cultural expression, the forging of “pan-ethnic” community. Beyond common Arabic language, this street offers “safe” public space for Arab political and cultural expression and the government officials, and Turkish competitors who cluster along a different Neu-

New Experiences of Inclusion: Affirmative Action for Blacks and Natives in Brazil

After several decades of black social movement struggles for rights in Brazilian “racial democracy”, it was recognized by the nation-state the practice of racial discrimination in the country, as well as affirmative action as a policy to correct inequality. In this scenario, the passage of Law 12.711 on Affirmative Action, in 2012, presupposes a set of substantive changes that alters the access to public high education in Brazil. To understand the social context that has led to the math which shall hand education on racial and ethnic relations as well as African and African-Brazilian history and culture for school system requires analysis of the democratization process of the Brazilian State. This paper focuses on three aspects: 1) the change in state policy related to inclusion of blacks, native population, and poor people; 2) the impact of these actions in the academic debate; 3) the role of black social movement in this process. The research fieldwork gathers the legislation that have changed the normative field in relation to the ethnic and racial issues after the Constitution of 1988; collects official data on the expansion of blacks, natives and poor people to public high education; and review the literature on racial affirmative action and black social movements producing a typology of the arguments.

Filial Piety Expectations of Older Adults in Urban and Rural China

Due to declining fertility rates and growing life expectancy, China will have one of the world’s oldest populations by the middle of the 21st century with more than one in three individuals over the age of 60. Reductions in family size—the result of the one-child policy in urban areas and 1.5-child policy in rural areas—will also lessen the dependency ratio adult children who currently serve as the backbone of the elder-support system. Although China’s older population is still predominantly rural, little is known comparatively between urban and rural elders in terms of filial support expectations and the factors that may differentially drive the strength with which filial piety is cultivated and exhibited by older adults. This presentation will make use of 2012-13 pilot data from the Chinese General Social Survey of Aging, a national study of older adults (60+) in China that yielded 1,126 individuals about evenly divided between urban and rural locations. Questions in the survey about filial expectations concerned whether children should be financial providers to their parents, whether children should live close to their parents, whether children should live with their parents, and the special obligation of sons to insure the old age security of their parents. Descriptive and multivariate statistics will be presented to determine if aging in urban and rural China is truly a tale of two family types and identify the social, economic, and health factors that may be responsible for any differences detected.

Crime Control in São Paulo/Brazil: Military Police and Criminal Justice System

This paper discusses the State actions of crime control in São Paulo State/Brazil in the last decade. We seek to analyze how institutions and State agents engaged to crime control and criminal justice management are affected by the emergence of new “criminal organizations.” An expressive growth of the incarceration rates, and the increase in the number of prisons, is linked to the emergence of the “Primeiro Comando da Capital – PCC”, bringing a new dynamic to the relations inside the world crime. Research (under data collection) has identified two main strategies of crime control to face the new crime dynamic: i) a militarized combat based on lethal confrontation leaded by the Military Police against supposed criminals and ii) a classic judicial control producing both imprisonment for specific population and low rates of punishment, especially for homicides and police violence, showing the high selectivity of the penal system. Two empirical cases exemplify each strategy mentioned, and allowed to describe some of their characteristics. First data indicates some affinities between classic crime control and police violence.

SIM, CHONKIAT* (Showa Women’s University, simsimshowa@swu.ac.jp)
Slow Birth and Fast Growth of a World-Class Post-Secondary Education in Singapore
This paper examines the background and strategies behind the slow start but fast expansion of a world-class post-secondary education in Singapore and presents an overview of its current trends and future directions.

When Singapore gained its sudden independence with its separation from the Malaysian Federation in 1965, one of the legacies of the British colonial heritage was its low investment in its social infrastructure: schools and teacher training. This is reflected by the low literacy rate of 73% in 1970, and a high 83% of population aged 25 years and above having qualifications below secondary level even in the year 1980, based on data released by the Department of Statistics.

However, this small city-state transforms itself from an entrepôt to an industrialized economy, rapid school construction and large scale teacher development were initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least post-secondary education were about 56%, 32% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010.

Apart from expanding enrollment at the post-secondary level, Singapore also had to shift its efficiency-driven education to an ability-driven one in the past decade, to respond to growing educational aspirations among the young and the deep impact of the digital knowledge-based era. This paper will conclude with a discussion on the new challenges, opportunities and measures to adapt to the ever-changing landscape of post-secondary education.

The Forbidden Discipline: The Impact of the Pinochet Dictatorship on Chilean Sociology and Sociologists

In 1972, during the height of Allende’s presidency, Santiago de Chile hosted the Conference of the Latin American Sociological Association (ALAS). The conference would not return to Chile for 41 years, until September 2013.

At the time, Chile was the Latin American center of social scientific exchange and collaboration (Franco, 2007). Besides, Chile’s path towards socialism and its changing society attracted many sociologists from Latin America and overseas. This golden era of Chilean sociology immediately came to a halt with Pinochet’s coup d’état on 11th September 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociologists and sociology as leftist ideology, with many having to migrate to save their lives (Barrios and Brunner, 1988; Brunner, 1988; Garretón, 1997, 2005). At the same time, with the forceful implementation of neoliberalism in all areas of life under the guidance of the Chicago Boys, neoliberal economics became the queen of the social sciences, leaving little space for what seemed to be ‘ideology’ and thus the production of accepted knowledge in the social sciences. This paper studies the fundamental transformations of Chilean sociology and sociologists’ lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship altered sociology and sociologists’ lives: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

This golden era of Chilean sociology immediately came to a halt with Pinochet’s coup d’état on 11th September 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociologists and sociology as leftist ideology, with many having to migrate to save their lives (Barrios and Brunner, 1988; Brunner, 1988; Garretón, 1997, 2005). At the same time, with the forceful implementation of neoliberalism in all areas of life under the guidance of the Chicago Boys, neoliberal economics became the queen of the social sciences, leaving little space for what seemed to be ‘ideology’ and thus the production of accepted knowledge in the social sciences. This paper studies the fundamental transformations of Chilean sociology and sociologists’ lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship altered sociology and sociologists’ lives: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

SIMBÜRGER, ELISABETH* (Universidad de Valparaíso, elisabeth.simburger@uv.cl)

In this paper we investigate how Brazilian women’s participation in transnational feminist networks and the UN Conferences on Women and Brazil’s ratification of CEDAW have profoundly shaped the two most recent waves of the Brazilian feminist movements: third wave of the 1980’s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women’s movements. The third wave of the Brazilian feminist and women’s movements encompasses the civic participation of Brazilian women in the transition from a military dictatorship to a democratic regime as well as participation in the transnational women’s movement and Brazil’s ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of women’s concerns through public policies for women; the creation of executive and managerial organs for such policies at the national (the national Special Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism – currently reflected in the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimate a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism...
operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalization the local and localizing the global should be at the center of both feminist activism and scholarship.

SIMON, KARL-HEINZ* (University of Kassel, simon@icser.de)

Referring to Actors in Change Processes

From the very beginning the role of the actor was an important concept in cybernetics. Whereas classical approaches, first-order cybernetics, kept up to externalize the actor, second-order cybernetics try to include the actor into the (material or epistemic) feedback loops. In first-order cybernetics the definition and adjustment of goals in control behavior is not part of the control structure. Only the activities of an actor in changing the actuating variable (stellgröße) are included. Second-order cybernetics a much broader picture of the interactions between problem, feedback loop, and goal-seeking processes is drawn. In social system theory the concept of the observer plays a similar role. Complexity is increased by introducing 2nd and 3rd order observers when trying to explain social situations.

The role of actors is an important issue in sustainability research and politics. Suggestions for agency alternate between appeal to individual, concerned people, maybe therefore they don't experience bitter emotional self-alienation.

SIMPSON, JEREMY* (University of Sydney, jsim9083@uni.sydney.edu.au)

Remote Management as Risk Management: Enclavisation in Afghanistan

The paper presents an analysis of ‘state-building’ intervention and civil-military practice in the context of global terrorist-related and conflict-related risk. The paper is based on qualitative field research conducted in Afghanistan, and in particular focuses on the international intervention ‘at two levels’. The paper first considers ‘state-building’ intervention as management of the global risk of terrorism, or of conflict-related regional instability as continuous with global terrorism. At the level of everyday practice, the paper considers the intervention operations of both civil and military organisations as in part driven by management of the risks of operating in a high-risk environment. In this the paper brings together Shaw’s concept of risk warfare (2005) on the military side with Duffield’s concept of the fortification of development aid (2010) on the civil side. Practice in both cases converges on a risk-averse model of intervention emphasising risk governance and remote management, with extensive and expensive devolution of implementation to local and private contractors on the civil side, continuous with use of private contractors and local proxies on the military side. Evidence for egalitarian distribution of risk, a condition central to sociological models of risk such as ‘risk society’, is limited. Risk-averse ‘enclavised’ intervention operates as a barrier to local and civil populations, whether as inadvertent civilian casualties of military operations, or as populations excluded from, or marginalised in, urban spaces that have become enclaves for international organisations. This model of intervention is potentially counter-productive, as it increases local connectivity and local dependency of the state and institutions of governance, and thereby to the significant expense of the apparatus of ‘enclavisation’ and remote management, notably for infrastructure and private security provision. The paper concludes by considering possibilities for a less risk-averse and more locally owned model of intervention in conflict-prone spaces such as Afghanistan.

Self, Otherness and the Israeli Sociology

The paper concerns the question of identity construction in Israel and offers to regard the early Israeli sociology as a source that articulates and reflects its transformation. By focusing on the late Prof. S. N. Eisenstadt’s sociological language, its use of myths and prevalent national narratives, the paper examines how self and otherness are formulated in the academic study of society had become an advocate of a specific discourse in which Zionism – the main ideological framework of the time - had enjoyed a hegemonic position. The paper therefore explores how sociological knowledge, built from this ideological ground, projected the ideal image of society and propaganda the notion of a collective “we”. To illustrate the centrality of this identity politics in the Israeli sociology, the paper examines its use of myths and prevalent national narratives, the paper examines how the relation of the early Eisenstadian sociology to the question of the Arab-Jews as its study case. It argues that the sociological view of Arab-Jews of the early 1950’s was crucial in shaping the ideal border of identity. Given that the Arab-Jews (Mizrachi) were not seen, from the hegemonic viewpoint, as “Israelis” (a coherent part of the in-group) and not exactly as Arabs (the ultimate “other” in the Zionist discourse), a new barrier-category had been created - that of the
"Other within", Seen from an orientalist perspective, the sociological description of the Arab-Jews had engendered a negative reflection of these communities. At the same time it paved the way for a contrasting and a more "legitimate" model upon which the ideal Israeli archetype could be defined. The main endeavor of this paper is to show how an Israeli "legitimate" identity has been constructed in the context of the sociological analysis in a way that strengthened the political legitimacy and bolster its national inner logic.

SINCLAIR, GARY* (University of Stirling, gary.sinclair@stir.ac.uk)

Music As Leisure in the 21st Century: The 'sportisation' of Music Fandom

The term ‘sportisation’ (Elias and Dunning, 2008) is used by figurationalists in a general sense to document the development of rules and regulations for previously chaotic games (e.g. boxing and football) into the commercialised, controlled ‘sports’ that occupy such an important position in modern society. King (1997) focuses on the role that commercial forces, in particular the introduction of modern all-seater football stadiums, have had on the emotional management and masculine identities of sports fans. This paper readdresses the focus on leisure (in this case music fandom) in the figurational sociology of sport and leisure, charting the impact that ‘sportisation’ processes and marketplace influences have had on the live music experience of heavy metal fans.

Drawing from a three year study of heavy metal subculture which incorporated data from participant-observation and interviews, this paper examines how transformations in modern music ‘arenas’ has significantly diminished the quality of the live music experience. This is encapsulated by the problematic issues raised in terms of emotional management and identity projection that that fans have experienced in the context of such transformations. In particular, focus is attributed to the importance of the heavy metal rituals (moshing, crowd-surfing) which have previously been facilitated in ‘controlled’ environments that allowed for the ‘de-controlling’ of emotions and exaggerated displays of masculinity. Following the changes in such subcultural spaces, particularly the increased seating in large music venues, the strategies used by fans to re-conceptualise ‘established’ notions of masculinity within the scene and to demonstrate their heavy metal identity are explored.

Focus Group Interview As Research Method inside the Military

In the proposed paper I would like to focus on the several dimensions, as shape, establishing and duration of relationship between different groups in the military institution perceived in the context of chosen research methods. The starting point of the paper is the reflection on the use of Focus Group Interview as a tool for qualitative research in the Polish Armed Forces. The history of use of FGI starts in military studies in Poland begins in the mid of 90. XX c. FGI as a method was used in the research mainly focused on the issues of women in the service, conscripts and lowest rank professional soldiers. The social process, that is activated as a result of use of FGI includes the re-creation of social relations and identity construction in the group of respondents of given kind. In the case of marginalized targeted groups, the situation of research creates an friendly environment, where the process of building a positive group definitions appears. The reality of the research and its consequences may form the forum for the subordinated and/or marginalized group in the institution. In this context it influences the social actions and processes inside the institution, finally affecting the organizational culture of the military.

SINDRESTEAN, ALEXANDRA* (University of Vienna, alexandra.sindrestean@univie.ac.at)

Developmental Logics Beyond the Divide

Developmental projects have been the common denominator of the post-1945 global order irrespective of political dividers and divergent economic systems. Whether we look at the emerging postcolonial states of the South, state socialist Europe of the 1970s and 1980s, the post-Apartheid policies directed at industrializing ‘homogenous’ national spaces were adopted across the globe. However, by the 1970s this model showed signs of exhaustion. At the time when ‘Limits to Growth’ came out in 1972, the Romanian state was implementing a new strategy for economic progress: it had negotiated with IMF and EBRD the ‘developing country’ status in order to facilitate foreign-debt financed investments and embark on export-led growth.

This paper aims to shed new light on a particular kind of developmental continuum in an effort to question the wide-spread assumptions about the relationship between local variations and global structural constraints, namely the tendency in terms of explanatory frameworks to emphasize only particular local specificities, and to ignore external factors for certain socio-spatial formations. Drawing on extensive fieldwork in a Romanian Danube-riparian port city, I argue that it was the contingency of the 1977 earthquake that turned the city and the surrounding region into a laboratory for a new kind of developmental logic. After the downfall of the socialist regime in 1989, the very same region became yet again part of a new understanding of development. In accordance with pre-accession criteria for EU membership, Less Favored Zones have been established in 1998 in order to attract foreign direct investment through long term tax exemptions.

Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize ‘contingent development’ as a way to look into improvement schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.

Beyond the Stereotype of ‘Slum’: A Sociological Study of a Slum in Amritsar (India)

The slum in a city is considered as a poor area and it is assumed that all slum dwellers are alike. The present paper is an attempt to study the micro level discourse related to the issue of inequality within a slum. Inequality has been studied at various levels: such as national, regional and city, but not within a slum. A slum, like a city, is a heterogeneous entity, in which various categories of poor people share the same space and dwellings. The findings suggest that there are clear-cut inequalities among the slum dwellers in social, economic and political spheres.

Urban Inequality and Health

This paper is a modest attempt to underline the urban inequality and its impact on health. It describes the health implications of social inequalities within city. It also describes the health problems from which low-income groups in urban areas suffer more than richer groups including those that are not linked to poor sanitary conditions and those that are more linked to relative poverty and thus the level of inequality than to absolute poverty. Study on the health of rich and poor households within cities show the much larger burden of disease, injury, and premature death that low-income groups face. Most of this burden is easily prevented because it is a result of their unequal access to homes which have provision for piped water, sanitation, drainage and garbage collection, and adequate health care. Thus with this we can say that health inequality never been an independent phenomenon. By using health and social impacts of urban inequality as a focal point of the discussion, the paper also intends to provoke thought on some of the fundamental issues of human development trajectories.

Role of New Communication Technology Initiatives (NCTI) in Bridging the Digital Divide: The Case of a North Indian State

Communication technology includes the hardware equipment, organizational structure and social values by which individual collect process and exchange information. The new communication technology (NCT), such as satellites, cable, television, wireless telephony, the internet, computers, laptop, iPod, have certain characteristics that are similar in some respect of those of both interpersonal communication as well as mass communication. This NCT, also called as new media, has the characteristics of both interpersonal and mass communication. Information exchange via the new media is interactive, meaning that the participants in a communication process have control over, and can exchange roles in their mutual discourse. The present paper is aimed to explore the role of NCT in bridging the gap created by the forces of globalization in developing countries like India by focusing on a NCTI launched recently by the state government of Uttar Pradesh i.e. Scheme of distributing laptop to every undergraduate student who took admission in the year 2012 or later in any college/university of the state irrespective of their social background. A cluster sample (N=399) drawn from a PG college of Western UP includes both the males and females. The study indicates that the representation of females was relatively high in all social categories. About half of the respondents were having their own mobile phones. The tendency of keeping mobile phone was low among the students of upper castes. The study indicates that the representation of females was relatively high in all social categories. About half of the respondents were having their own mobile phones. The tendency of keeping mobile phone was low among the students of upper castes.

RC04-85.1

SINGH, PARLO* (Griffith University, parlo.singh@griffith.edu.au)

Critical policy studies adopts a discourse analytic approach to policy research, drawing specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panoptic surveillance principles), and subject positions; and the Bourdieuan concepts of field, capital and habitus. A core aim of critical policy studies is to analyse the ways in which supranational organisations, such as the OECD, increasingly regulate official national curriculums given their role in the development, administration and reportage of tests which are ‘closely linked with the debate about national standards’ expressed as comparative performance on basic mathematics, scientific and literacy skills (Tyler, 2010: 145).

However, moving from such theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro-level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein's sociological theory of education. This approach, Bernstein (1975: 119) observed, distinguished his ‘particular corpus of work from that of Foucault or Bourdieu’.

This paper undertakes three tasks. Firstly, it critically reviews the literature that has compared and contrasted the sociological approach of Bernstein to Bourdieu (Maton, 2008; Harker and May, 1993, Hasan, 1999) and Foucault (Diaz, 1984; Tyler, 1990). Secondly, it explores the potential of Bernstein for political economy research, specifically the knowledge codes underpinning supranational, national and local school curriculum models, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula) in a democracy.

Thirdly, it tests the usefulness of Bernstein's theory of knowledge codes to analysing policy enactment around standardised national testing drawing on examples from two contexts, namely Queensland, Australia and New York, New Jersey, USA.

SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

Totally Pedagogised Societies. Sociologies of the Pedagogic Communication of Knowledge

Basil Bernstein (2000: 365) asks: How real is the contemporary pedagogic panacea? And then suggests that a new sociological project might focus on the diverse spaces, generating both claims for changes in knowledge forms and displacement of and replacement by new forms, creating a new field of knowledge positions, sponsors, designers, and transmitters’ (2000: 368). Bernstein's ideal has been the springboard for an analysis of: (1) the intellectual field of the new sociology of education (May, 2013; the new sociology of education); (2) the possibilities of a social realist project on knowledge (Moore, 2013) and geographies of knowledge (Pasias & Roussakis, 2012); (3) the transformation of teachers’ work (Robertson, 2013) and teacher professionalism (Beck, 2012); (4) the bio-politics of education and health policies (Evans, 2012); and (5) lifelong learning and new apprenticeship discourses (Gerwitz, 2008; Poulet, 2010).

Our paper aims to build on this work in two ways. First, we undertake a meta-analysis of the research literature drawing on Bernstein's concept of the totally pedagogised society, as well as literature forging a new direction for the sociology of education on the basis of Bernstein’s work. Second, we distinguish between (1) knowledge codes – the structuring of curricula and (2) pedagogic codes – the structuring of specialised communication for teaching. In so doing, we propose an alternative intellectual trajectory for the sociology of education. Specifically, we are interested in analysing new modes of global governance through pedagogic communication devices taken up in a range of formal and informal agencies to construct 24/7 spaces of learning, particular modes of learning engagement, and pedagogic identities. Our objective here is to simply lay out the possibilities for developing a sociology to examine new modes of pedagogic governance and the new spatial and temporal configurations of new pedagogic modes (see Tyler, 2001).

Globalization, ICT and Professional Education in India

The process of globalization has posed new challenges in every sphere of societal, economic and cultural life of both the developed and developing societies. The transnational mobility of professionals has been increased in last two decades throughout the world. The professional education in India is also under process of transformation as a result of the pressing demands of globalization of professions. Apart from the existing professions, new categories of professions with new work ethos and work atmosphere have been emerged. The professional education in India also needs to transform in order to compete at the global level. It also demands the homogenization of certain basic elements of the professional education on the one hand and a thrust to include the context of the socio-cultural milieu of the given society on the other. As the professional education requires huge financial resources, the quality of professional education and institutions varies between and within the developed and developed societies. The poor countries have invested more on the expansion of basic professional manpower rather than on the post-secondary professionals particularly in the field of education and health looking into their pressing development needs. The rich developed countries, however, have focused more on the expansion of post-secondary professional manpower in order to stop outsourcing from their countries. In India, however, there have been expansions of both the basic professional training as well as of the post-secondary professional education. E-learning therefore is an essential component of professional education in the globalized unequal world. The present paper analyses the various dimensions of intricate relationship between globalization, ICT and professional education in post-globalization era.

Relating Colonial Encounters in the Straits Settlements: From Self-Governance to Institutional Regulation

The interface between non-Christian religions in the colonies and the British Empire has attracted considerable scholarly interest and produced by now exciting social science and historical literature from all corners of the globe. In comparison to the rich and nuanced African and Indian material, one struggles to find similar works on the former British colonies in Southeast Asia. This paper attempts to redress this imbalance by turning the gaze to the religious landscape of the Straits Settlements, an administrative unit of British colonial initiative under which these rather diverse and scattered geographical entities were united between 1826 and 1945. I demonstrate that the adopted method of dealing with the religious pluralism of colonized populations was an adherence to the broad articulated principles of religious tolerance and non-intervention, but which often could not be followed through in practice. Through the 19th century, the colonial context in the Straits Settlements was not, by and large, detrimental for expressions of non-Christian religiosity. The absence of restraints and control in this arena, undoubtedly, enabled expressions of non-Christian religions and facilitated their early institutionalization in this region.

I thus argue that from the mid-19th Century onwards, the colonial context in the Straits Settlements was ‘enabling’ for religious communities in the Straits Settlements. We see in these times a vigorous sense of religious solidarity and community, witnessed in intense institution building and founding places of worship, cultural and religious organizations across Hindu, Muslim, Christian, Buddhist and Sikh communities. However, by the early decades of the 20th century, this ‘liberal’ attitude was supplanted by a new vocabulary of regulation, supervision and administration of non-Christian religions. With this shift, new institutional structures, laws and mechanisms were established for managing non-Christian religions in the Straits Settlements signaling a move away from self-governance towards greater institutional regulation and supervision.

Institutional Conflict Settlement Field in Brazil: Four Levels of Justice System

The paper proposes an interpretation of the operation of the State conflict settlement field in Brazil. It takes the perspective of disputes among corporations, knowledge and practices that take part of this field. A reflection on the Brazilian case proposes the coexistence of at least four conflict settlement logics (or four interaction levels) to which correspond hierarchies of rituals, proceedings, persons, types of conflict and places. The study is based on eight years of ethnographic approach in courts and State informal services of justice. The observation on ordinary courts proceedings, informal courts, extra-judicial techniques, formal and informal police proceedings (including illegal ones) leads to an analysis of the co-existence and disputes in a field that produces unequal treatment of the citizens.

Intergenerational and Life-Course Determinants of Upward Mobility

Offspring originating from families with fewer socioeconomic resources are in a generally greater risk of ending up in lower social positions and attaining lower educational qualifications. Also life events in early adulthood may have an effect on socioeconomic attainment. These effects, however, may be weaker among those with higher compared to lower parental background.

This study examines the intergenerational and life-course mechanisms of upward mobility. We observe which life-course characteristics in early childhood (such as educational attainments, unemployment, living arrangements, marital status and health) decrease the risk of entering upper non-manual social class among those who originate from other social classes. Second, the contribution of factors indicating parental resources is analyzed in order to find out whether higher parental background protects from the effect of risky life-course characteristics.

The longitudinal register-based data-set used in this study are a representative 11 % sample of the whole Finnish population. We follow a birth cohort born between 1977 and 1987 till a full-time follow-up from adolescence till the age of 30+ offers a chance to estimate the processes of accumulating disadvantages among individuals and households. Analyses will be conducted in event history model framework. Our objective is to broaden the perspective on intergenerational transmission of inequalities by describing the life-course mechanisms of occupational attainment in more detail.

Childhood Inequalities in French Speaking and Anglo-Saxon Sociologies

Childhood inequalities in French speaking and Anglo-Saxon sociologies According to academic traditions or sociopolitical context, the issue of inequalities in childhood has been addressed in different ways. The French speaking sociological discussion has been quite specific compared to the Anglo-Saxon. Those differences will be presented and discussed. Paradoxically, it is in putting aside the question of democratization and inequalities of opportunities that the child emerged as an actor in French speaking sociology, on a first step. As in the French context, the “Republican Universalism” has been the main reference, childhood inequalities have been mainly studied in the context of social stratification. On the other side, in the Anglo-Saxon context, diversity has been the main reference, priority being given to problematics as gender or ethnicity. We intend to examine how do those differences influence the way childhood inequalities are studied and how these categorizations are transformed, and their intersectionality addressed.

La question des inégalités de l’enfance s’est posée de manière différente suivant les traditions académiques et les contextes socio-politiques. On s’interrogera sur la spécificité du contexte francophone, par rapport aux contextes anglophones. Paradoxalement, c’est dans un premier temps en se dégageant des problématiques de démocratisation et d’égalité des chances qu’est apparu l’enfant comme acteur sur la scène sociologique francophone. Le poids de l’universialisme républicain a amené à reposer la question des inégalités dans un régime d’interprétation différent du contexte anglo-saxon où les questions de la diversité s’imposent pour penser ces inégalités, qu’elles soient posées en termes de classes sociales, de genre ou ethniques. Dans quelle mesure la prise en compte de l’enfance remet- elle en jeu ces problématiques ? En quoi penser les inégalités à cet âge de la vie oblige à affronter certaines catégorisations et inversement en quoi penser les inégalités donne une vision différente de l’enfance et des enfants ?

Projection of Family in Representation of Intellectual Youth in Russia

Russian demographic health should be based on development of positive trends in fertility, marriage and family relations of young generation of the country. Considering that the generation born in «new» Russia, characterized by new ideas about life strategies, value orientations, enters in reproductive age, it is important to assess similarities and differences between role of families and children in this generation representations regarding previous historical period. The study aims to determine specifics of modern marriage and reproductive behavior of young people receiving professional education in Russia. This group of young people is more demanding to high standards of living, thereby extending these requirements to sphere of marriage and family. This specificity necessitates more detailed study of their attitudes and motivations in marriage and reproductive behavior. Identification of possible limits of marriage and family and reproductive student’s attitudes is scientific problem of this study.

In 2012-2013 Center of Social Demography and Economic Sociology, Institute of Socio-Political Research conducted a survey of students in higher and secondary educational systems. The study was conducted in form of distribution questionnaire prepared by the Center. The survey was conducted in the cities of Central, North Caucasus, Urals and Volga federal districts.

The study had a multidimensional nature, and it is focused on identification of general and specific issues of reproductive behavior of most educated part of Russian society to clarify the state family policy for more effective implementation and stabilization of demographic situation in the country. On this basis, were selected areas (subjects) to conduct the survey, which allowed us to identify the specifics of students ideas and their reproductive and matrimonial intentions between metropolis and provinces, between different regions of the country, between subjects of different types of administrative-territorial formations.

Social Work Discretion between Professionalism and Managerialism in Denmark

Professionalism and managerialism are important and conflicting concepts in the study of professionals working in public service organizations. By focusing on street-level social workers and social work discretion, it is possible to see how welfare-to-work policies are practiced as well as how organizational guidelines frame discretionary powers. This paper seeks to account for how management organizes, supervises and seeks control over social work discretion. The paper also addresses how management influences the discretionary powers of social workers in a Danish municipality working with clients who are unfit for work or labour market due to health problems. In Denmark the local municipal job Centre delivers services related to welfare-to-work. Here values, interests and policies, transformed into rules and regulation, meet the concrete practices of welfare-to-work service inside the specific street-level organization. This is a fundamental democratic process of implementation. It makes discretion inevitable and crucial as professional judgments and decision making, determines the client’s eligibility to benefits and need for special attention or intervention before returning to work. Here professionalism is institutionalized in bureaucratic organizations. Hence the social workers must control clients’ legal access to sick leave programmes and at the same time deliver individualized services to promote the workability of the client in order to help them become self-supporting after sick leave. As well as examining how social work discretion is made possible in the job centre, the research behind the paper discusses the issue of new forms of professionalism emerging in social work. In the light of policy changes and reforms of welfare services a new type of social interventions towards people on sick leave is demanded. This can place pressure on the street-level organization to develop new or more professionalism.

The Rule of Law in the Globalizing World. Polish Investors Abroad

According to the famous argument of Max Weber, emergence and establishment of the rational legal order and formation of law-based political authority present important factors which explain rapid economic growth. These theses of Weber, as it is believed, are relevant till 2007: a 20-year follow-up from analytical embedded European (or broader - Western) legal cultures and mentalities, characterized by the high value of the rule of law. Therefore processes of “new comers” west-
ernization are often conceptualized as “learning” i.e., as formation of pro-legal cultures based on an unquestioned value of the rule of law. Empirical research on the Polish investors abroad put in question such simplistic views. Firstly, in the light of this research, the processes of learning are much more complicated, multidimensional and multidirectional. Secondly, the state and its agencies play here an important role - both in form of protection of rights and interests of domestic actors (national markets), and in form of protection of rights an interests of investors abroad (rights and interests of its citizens and companies). Therefore, the rule of law in a globalizing world presents a complicated negotiation game not only of values, but also of interests, between strong and weak agents, private and public.

Risk, Rumour, Radiation: Japan’s Nuclear Catastrophe and the Politics of the Apolitical

This paper analyzes the particularities of the Japanese approach to risk communication around radiation after 3/11. Radioactive contamination in Japan was first measured and its results published by the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the Japan Atomic Energy Agency on March 14, 2011, three days after the Great East Japan Earthquake ravaged the country. In the following weeks, various groups hacked Geiger counters to enable collective radiation monitoring, resulting in a higher degree of granularity of data available to the affected population. Still, while the provided data was more transparent and comprehensive than that which had previously been made publicly available, the groups made few attempts at interpreting the data for the public. Why should their actions be complementary to, rather than antagonistic to, those of the government and TEPCO and that they therefore should not be seen as political.

The paper explores the role of digital media and technology in altering the production of and access to vital information after disasters.

A Global Sociology of Value and Values: How to Move beyond the Analytic of Capital?

Many theories adopt the metaphors of capital to explore power (e.g. Bourdieu), and to analyse personality (via human capital), or action (via rational action theories), leading some sociologists to suggest that not just capital but the capital analytic has subsumed all areas of life. The relationship between quantification and qualification has been complicated further by the incursion of calculation (via algorithms) into many aspects of our daily life. Whilst, no doubt, capital behaves according to its own logic, finding new lines of flight, converting affects such as sentiment and suffering into value, making multi-culturalism marketable, generating new forms of bio-capital, and making many of our actions subject to the logic of calculation (academic writing for instance), why should sociologists do likewise?

If we only understand the world from the perspective of capital relations what do we miss seeing? Are there any values remaining or remained? How do we understand the relation between value and values?

The Motivations of the Opponents of a Social Memory Implant. the Re/Building of the Royal Castle in Poznań (2010-2014)

In 2010 began the re/building of the Royal Castle in the city of Poznań, which was demolished in 1796. The process, which was initiated by the Committee for the Rebuilding of the Royal Castle arouses strong controversy. The builders of the castle are accused of falsifying history (it is not sure how the building looked like before being taken to pieces) and destroying the original remains of the old castle. However, the committee was able to reach both political and social support for the re/building and collect money for this aim.

Due to a very long absence of the castle in the urban space and lack of any confidence when it comes to its outlook, the object which is being built can be called an implant of social memory. An implant of memory is an object, which function is to construct a particular knowledge of the past, becoming the carrier of this knowledge through its own form – imitating forms of ancient objects, buildings etc.

The speech will be devoted to the motivations of the people who publicly criticize the re/construction process and take part in different protests against it - the opponents of the Committee for the Rebuilding of the Royal Castle. There will be presented strategies with the help of which those people explain their engagement in the protests and their resistance to the re/building process. Conclusions will be presented on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

Architects and Urban Planning

This presentation discusses to what degree the architect profession is able to define what counts as relevant knowledge in urban development and urban planning processes, based on material from Norway. Urban planning is a field constituted by numerous actors/stakeholders representing different knowledge traditions implying that they do not always speak the same language. However, in order to handle environmental problems, transport and other infrastructure and land use, multidisciplinary knowledge and cooperation between different sectors are required. In Norway, the architectural profession has long had a key role in urban planning and positions as heads of urban planning administrations have been a power base for architects. However, architects’ judgments and forms of knowledge are no longer hegemonic and their power base is thus weakening. This is partly caused by an increasing proportion of planning propositions (like zoning plans) prepared by private actors. Moreover, local authorities increasingly seem to depend on private funding to accomplish housing and infrastructure projects.

SKOGHEIM, RAGNHILD* (Inst Urban & Regional Research, ragnhild.skogheim@nibr.no)
Architecture As a Hybrid Profession

Hybrid organizations and professions are characterized by conflicting goals, which may cause tensions. For architects, such tensions are typically between art and market, and between ideal and practical views, and preferences and claims from clients/principals and others. Although market dependence is intrinsic in the role and history of the profession, this still seems to cause tension for architects. When dealing with this tension, some architects are quite pragmatic and accept and adjust to prevailing conditions. Other architects are more uncompromising and insist that creativity requires freedom from external constraints. Particular architect “heroes” espouse autonomy and distance from the service part of the profession. This may seem like a paradox as architects more than most other professionals depend on, and have to adjust to, the power, wealth, favor and money of their clients.

Rockefeller Foundation’s Role in Promoting Social Sciences in Interwar Czechoslovakia

This paper discusses the place of geopolitical concerns in the policy of the Rockefeller Foundation towards social sciences in Czechoslovakia between the two world wars. The RF provided scholarships for Czechoslovak social scientists (around 35) and sponsored social science work at various Czechoslovak institutions. The scholars supported by the RF were sociologists, lawyers, and economists, both German and Czech-speaking. Their individual focuses displayed wide variation: several perished during WWII, others escaped and became recipients of displaced scholars grants, still others were exiled after 1948, a handful joined the Nazi and later the Communist structures. Only those who chose emigration produced academic work of some importance. The dominant geopolitical concerns were reflected in the effort of the RF to maintain a balance between German and Czech scholars and institutions supported or in promoting research in areas that were expected to contribute to maintaining the stability of the Czechoslovak state or Central Europe such as unemployment and social welfare, interethnics or the so-called Danubian studies. Key among Czechoslovak institutions in social sciences that received support from the RF was the Social Institute, affiliated with the Ministry of social welfare, the incubator of innovative ideas that directly influenced Czechoslovak social welfare legislation and policies. RF also funded a large research project on the suburbanization of Prague that became the first major empirical study in Czech sociology while another study on German-Czech relations could not materialize due to the dismemberment of Czechoslovakia. The RF made a significant contribution to the development of empirical social research and social policy in Czechoslovakia, but the overall impact of its funding was virtually eroded by adverse geopolitical conditions and turbulent political developments in the period 1938-1948.

The Elusive Code: Anomalous Cultures of Civil Society

This paper attempts to add new evidence and theoretical insight to the literature on the structures of civil society inaugurated within cultural sociology by Jeffrey Alexander and Philip Smith. It argues, first, that unlike the US case, the codes of civil society in ethnically heterogeneous places are the product of multiple external oppositions which can, in certain cases, result in alternative or contrary codings. For instance, some currents in the Czech, Polish and other Slavic nationalisms in the 19th century construed the Germans, their principal “other”, as rational and efficient, taking pride to the contrary in being emotional and unpractical. Second, the paper shows that civil societies are fragmented and the general code of civil society is appropriated differently by different social groups whose interpretation of the basic binaries is dependent on their particular social experience as well as their relative position to other groups. For example, as pointed out by Marada, Buchowski and other authors, the cultural codings characteristic of the heirs of the anti-Communist dissent in East Central Europe are in some aspects, including the role of formal procedures and professionalism, completely at odds with the codes reserved by Western-style social movement organizations. With its roots in a conspirative underground community this dissident culture doesn’t code personal ties and secrecy as counter-democratic. On a general level, the paper argues for a more historically-oriented approach to the study of cultural structures of civil society that recognizes that the generalized codes are embedded in congruent interpretive traditions and, as such, are unstable, contested and often ambiguous.

Medical and Legislative Gatekeeping in ART: Narrow Trajectories in the Realm of Miracles

The techniques of assisted reproduction have the potential to free us from the bodily limitations and open the physical reproduction to people who would not conceive without medical intervention. The access to this type of treatment is regulated by numerous ways, both formally and informally. Reproductive medicine, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients. The Czech long tradition of infertility treatment, wide network of infertility clinics, competitive success rates and liberal regulation of the ART regarding the range of procedures allowed, became one of the most popular destinations of reproductive tourism. On the other hand, there is a strict regulation of the access to the ART based on the characteristics of patients such as their age, marriage, and partnership. Reproductive medical policy, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients. The paper connects this utility function with time investment in friendship network and, as such, is unstable, contested and often ambiguous.

Causes and Consequences of Time Investment in Friendship Networks: A Dynamic Analysis of the Polish Panel Survey PolPan 1988-2013

Time investment in one’s friendship network depends on the utility function U = log(y)\((\sum_{i=1}^{n}Q_i)\) that people maximize, where q is the social tie parameter (between 0 and 1) measuring the i-th actor’s taste for bonding with friends, and Q refers to all other leisure-time activities. In the theoretical part of the paper, we connect this utility function with time investment in friendship network (I) assuming that the numbers of friends and the density of their contacts are crucial for the amount of time that people actually spend with friends. The Polish Panel Survey PolPan 1988-2013 contains information on how frequently respondents meet with friends (I, our main leisure-time variable), numbers of friends (N), density of their contacts (D) and several socio-demographic characteristics of respondents for the period of measurement (t) and earlier periods (t-1, ..., t-5, where the period-units are 5-year waves of the POLPAN study). In the empirical part of the paper we examine main determinants of time investment in one’s friendship network, focusing on family formation and careers. We show that time investment, as well as the change in number of friends and the change in density of contacts among friends, depend on marital status, number of children, and number of people in the household. In addition, we confirm previous findings that having friends with entrepreneurial experience increases people’s chances of establishing their own businesses, independently of the number of potential bridges between friends. The paper concludes with a discussion on meeting friends as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

Hazard Vulnerability and Housing Inequality after the Tuscaloosa, Alabama Tornado: A Critical Analysis of Rebuilding Efforts

The tornadoes that struck Tuscaloosa, AL and surrounding areas on April 27, 2011 caused tremendous destruction to both residences and businesses. The highest levels of damage occurred among low-income residences, both single and multifamily. In this paper, we apply hazard vulnerability theory to the rebuilding of Tuscaloosa. Hazard vulnerability theory focuses on how social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We extend this perspective into the recovery process, particularly on the availability of low-income, multifamily housing approximately two years after the storm. Data from multiple sources, including interviews, surveys, and city records, demonstrate that low-income, low-income populations were more affected than student populations, the economic advantages of building for student populations (i.e., “disaster capitalism”) have outweighed the social responsibility of rebuilding residences for low-income individuals. We conclude that low-income residents of Tuscaloosa were doubly vulnerable to natural disasters; not only were they more likely to be living in structurally flawed housing before the storm, they were also left out of the rebuilding process after the tornado. We discuss some of the potential consequences of the reconstruction of Tuscaloosa, and propose suggestions that can limit social inequality in the rebuilding process for Tuscaloosa and other cities that have been harmed by natural disasters.

Professional Knowledge and Expertise

Professions are according to Abbott the most important way expertise is institutionalised in modern societies. Sociologists have studied the characteristics of professionalism as well as the role of professionals in society. Even though an abstract knowledge is considered a core if not the core characteristics of professions, sociologists have examined the characteristics of professional knowledge used in occupational practice only to a limited extent. In this paper I discuss important contributions within the literature on expertise and argue that some of these perspectives are highly relevant to complement sociologists’ understanding of professional knowledge.

While sociologists have emphasised that abstract knowledge acquired in higher education is an important characteristics of professionalism, practical training and professional knowledge is found to be the most important prerequisite for entry into the literature on expertise. Sociologists do not deny the need for practical training, but tacit knowledge is a somewhat mysterious term often considered as opposed to abstract explicit knowledge. Based on questioning why knowledge is tacit, Harry Collins (2010) distinguishes between three types of tacit knowledge. This distinction opens up for a more nuanced perspective on the relationship between tacit and explicit abstract knowledge. His perspective also imply that explicit knowledge play an important role in the development of expertise and transmission of knowledge.

Professional work is characterised by uncertainty. Inspired by Collins different types of tacit knowledge, I distinguish between three types of uncertainty that have significant importance for the reliability of professional expertise: 1) Explicit uncertainty related to uncertain knowledge; 2) Cognitive uncertainty related to...
We consider democracy as an instrumental value. It appears to be effective and naturally arises when society reaches sufficient consent in regards to basic values (one God for everyone, nation, person, society, etc.). When such agreement does not exist, a dictatorship provides the minimum order in a society. For example, dictatorships of Cromwell, Napoleon, Stalin, Pinochet, etc. There is no consent regarding basic universal values in the modern world. Hardly a man and his rights will be recognized as the highest values by billions of people in the near future. The policy of Western countries aimed at their promotion, leads to anarchy and violence. Therefore it is difficult to expect peaceful expansion of democracy on a global scale. Today's biggest task for social scientists to reveal basic values in regards to which mankind can come to the consent.

Top Water and the Public Policy

Water is the source of life on the earth and the driving force of human development. The diamond-water paradox presented by A. Smith shows the underestimated economic value of water. However, it has its social value that can be viewed from a human dimension perspective.

The knowledge of how citizens perceive the drinking water is essential to understanding the political, economic, technological context of the public policy. According to sociological survey, 82% of citizens in Saint-Petersburg are not satisfied with the quality of tap water. These figures demonstrate, that despite the fact the city water is cleaned by ultraviolet and has biomonitoring system to meet the high requirements of international water standards, there are some hidden issues explaining this situation.

SPb water is a nexus of generations inhabiting this place: it keeps the memory of past times, preserves the spiritual fabric of the society and gives an incentive to new generations for further development. However, the industrialization has destroyed this consciousness. The growth of scientific knowledge has enabled experts to make a strict distinction between bad natural water that had adverse effects on people health and good filtered water that had the status of paid public services.

It is believed, SPb water is rusty and dangerous to drink, because city officials take bribes and do not provide the modernization of water infrastructure system in time. Public dissatisfaction takes the form of disagreement with the public policy. It prompts citizens to buy bottled water sold by water transnationals, although it is the same tap water, in fact. As a result, SPb water market is showing 12% annual growth.

Basing on the citizens' concerns on the water problem, one can construct the Index of tap water as an indicator of the level of public confidence in the public policy.

Daily Practises of Home Making and Belonging Among Owner-Occupiers and Tenants in a Disadvantaged Neighbourhood in the Netherlands

In this period of globalisation daily practises of local home making and feeling at home are considered important. In order to illustrate such practises the focus of this paper is on a street in a disadvantaged neighbourhood in a Southern city in the Netherlands. In this street tenants and owner-occupiers with a different ethnic background - including native born - are interviewed and observed. In this natural laboratory, the street was divided into clusters; those with only tenants, those with only owner-occupiers, and those having a mix of both. This offers insight into the role class and ethnicity play in the homogeneous and mixed micro-settings and its impact on physical and social practices of home making and belonging/ feeling at home. Therefore attention is paid to narratives and the informal organization of different living spaces, territory-making activities, and practices in the different domestic clusters. This shows that the domestic space can be experienced as a vehicle of intimacy and sociability and in other clusters as encouraging alienation. Such practices can also takes place in the same cluster, resulting in mechanisms of inclusion and exclusion which in turn go together with boundaries between public, private and community spaces.

Future Of Democracy In The Modern World

Democracy is one of the ancient forms of social self-government, which possesses many advantages and democratization of a society is a progressive process. However, today mass media spread illusory ideas about democracy as the terminal value which presence will provide the peace and well-being on the Earth. Relying on this illusion, Western democracies, headed by the USA, stimulate democratization process in the world, using ideological, political, economic and military means.

However, the facts of real history disprove this illusion. Democratic states are not less aggressive, than authoritarian ones. Athens, Sparta and Rome, all European democracies during epoch of colonialism and the USA (during all its history) were aggressive.
incite these practices: wills to discern and direct consumption habits; ambitions to inscribe structured meanings upon somatic territories; and desires to better identify, verify and assess corporeal components. An emerging confluence of biovisual imperatives, practices and flows are placing unique demands on embodied subjects, specifically concerning (a) the control, ownership and arrangement of personal information deriving from bodily interference, and (b) the types of performative exertions and authentication protocols that are now routinely requested and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshy topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivation effects at the phenomenological level. Subjects become accustomed to externalizing interior confidences and revealing subjective states in the form of informatic particles (Foucault 1988). In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

**Civilizational Discourse and Models Of Modernity In The Meiji Revolution**

During the Meiji revolution, Japanese writings on international arena, Western empires and the Western tradition nourished a discourse on civilization. At the same time, Japan's civilizational works also reflected debate on models of modernity. Over the course of consolidation of the Meiji regime, deep engagement with different foreign traditions produced an exceptionally intense phase of inter-civilizational discourse and the conflicts around political perspectives expressed by the popular democracy movement of the 1870s. In the urban public sphere and the popular movement, Japanese intellectuals actively interpreted and relativized the cultures, religions and ideologies of other civilizations against a native cultural core. The famous Meirokusha publishing house and its journal Meirokusha set in train historically and culturally specific processes of translation of Western thought which included translation of the concept of 'society' it intended and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshy topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivation effects at the phenomenological level. **Debating Civilizations: Sociology and The Inter-Disciplinary Field Of Civilization Analyses**

In the early twentieth century, civilizations analysis combined perspectives from anthropology to archaeology through to world history. Founding thinkers in sociology contributed greatly to this inter-disciplinary field. In a phase that stretched from Weber, Durkheim and Mauss to Sorokin and Elias, a ‘classical era’ of civilizations analysis generated a program of research problems that was productive in critical and interdisciplinary ways and limited in scope and vision in other ways. This field was lost as a suppressed tradition during the postwar institutionalization of disciplines. This paper will examine what was gained for sociology in the early traditions of civilizations analysis as well as what was displaced when it subsided. Potential paths for renewal of multidisciplinary scholarship involving sociology will be sketched out based on the controversy over the scope and vision of civilizational analyses in the work of Benjamin Nelson and S.N. Eisenstadt. The paper will also identify intrinsic limitations in latter-day approaches.

**Understanding the Impact of Major Life Events on Young People's Academic Achievement and Post-Schooling Careers**

Instability and conflict are pervasive features of the transition from adolescence to young adulthood, as young people learn to manage an expanding array of academic, social and familial commitments. Recently, theorists of inequality have suggested that young people's exposure to such uncertainty during this time is potentially exacerbated by broader processes of individualisation and social change, placing them at heightened risk of marginalisation. In this paper we test this proposition with respect to young people's academic achievement at the end of high school. Our results indicate that such events had a negative influence on young people's secondary school exit scores which, at a time when university participation has become the norm in most Western societies, can adversely impact the quality and scope of young people's post-schooling careers. We also find that this cost is distributed unevenly across the student population, with the performance of (typically wealthier) private school students, and students living in urban areas, less affected by such events than the performance of public school students and those living in non-metropolitan and regional areas. Finally, we review the implications of these findings in light of this contemporary debates about individualisation, uncertainty, and inequality in young people's educational and occupational futures.

**Sexually Explicit Material, Scripting, Simulacra, and Sexuality - Theorizing the Changing Landscape of Learning about Sex**

This paper explores the relationship between the marked increase in availability of sexually explicit material in the U.S. that accompanied widespread high-speed internet, sexuality, scripting theory, and the concept of a simulacrum. The data are from open-ended interviews with 51 young adults about their experiences as adolescents learning about sexuality in the United States. Participants reported viewing sexually explicit material online as adolescents to learn about sexual behaviors and sexual interaction, often before participating in those behaviors. The ways adolescents referenced sexually explicit material, both amateur and professionally produced, in order to learn about sexual behaviors represent a significant departure from historic means of learning about sex. This development is best understood as presenting a new level of sexual scripts, intermediate scripts, within the model developed by Gagnon and Simon (1973). Participants’ descriptions of viewing video examples of sexual behaviors revealed they provided the intermediate script that was more specific and personal to the participant than a cultural scenario, yet did not involve direct interaction as with interpersonal scripts. This learning by viewing sexually explicit material prior to engaging in sexual behaviors approximates the concept of a simulacrum. Adolescents referenced representations of sexuality and then modeled their own behaviors on those representations. These theoretical concepts of an intermediate script and simulacra, are useful for understanding the shifting landscape of adolescent sexuality. As all aspects of our sexual world continue to be increasingly recorded, viewed, and represented, these concepts may contribute to developing theories of sexuality applicable to other populations.

**SMITH, MICHAEL*** (McGill University, michael.smith@mcgill.ca)

**Cumulative Disadvantage and Gender Differences in Early Career Earnings: Evidence from Canada's National Graduates Survey**

Over the last several decades women have entered educational programs in lucrative fields like law and medicine. England (Gender and Society, 2010) has argued that, in the US, the effect of this has been to narrow the gender earnings gap in the upper part of the educational distribution and to reduce the aggregate gap. Women in Canada have also entered the legal and medical professions in large numbers. One would expect to see a similarly declining gender pay gap between the better educated. In fact, the evidence on this suggests a more complicated evolution of gender pay differences. Statistics Canada's National Graduates Survey has collected data on field of study of successive cohorts of university graduates (at approximately five year intervals) and, then on labour force status, earnings, and family status two and five years after graduation. This makes it possible to (a) determine the raw gender differences in pay both across cohorts (the
first cohort analysed graduated in 1986, the last in 2000) and, within cohorts, the changes in the differences after graduation; (ii) to determine the extent to which field of study continues to cause a gender difference in pay; (iii) the factors other than field of study that cause a gender difference in pay, including family responsibilities. The paper reports i) analysis of the effect of gender on labour force status, focusing on status likely to subsequently increase pay; ii) consecutive cross-sectional Oaxaca-Blinder decompositions within and across cohorts; and iii) panel analyses within cohorts. The results suggest that, even within this highly educated sample, in the short period after graduation, women tend to cumulate a number of experiences that contribute to a widening gender pay gap.

Did Rising Inequality Cause the Recent Financial Crisis?

One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (Fault Lines, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratched up risk in the financial system which, vii) in the case of the financial institutions mortgage holders, Rajan provides little evidence in support of this interpretation. This paper addresses the following questions. i) Did incomes stagnate or decline in the lower part of the income distribution in the decades leading up to the crisis? ii) Did distributional conflict cause the liberalization of credit in the form of sub prime mortgages? iii) Was it the provision of mortgages to low income house buyers that caused the boom and subsequent bust in house prices. iv) To what degree was increased risk in the financial system caused by policies encouraging the issue of sub prime mortgages? On the whole, the evidence raises doubts about the rising inequality account of the financial crisis.

Did Rising Inequality Cause the Recent Financial Crisis?

One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (Fault Lines, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratched up risk in the financial system which, vii) in the case of the financial institutions mortgage holders, Rajan provides little evidence in support of this interpretation. On the whole, the evidence raises doubts about the rising inequality account of the financial crisis.

On Dry Othering

Existing theories of Othering can be thought of as ‘wet Othering’. They focus in metaphorical and material ways on the slimey and ambivalent. In such theories othering is associated with intense emotional reactions. Those perceiving the ‘Other’ feel intense hatred, disgust and dread. This paper introduces the new concept of ‘dry othering’. This involves a completely different logic. Those doing the Othering feel - or are believed to feel - nothing at all. The victim of Othering is a mere object to them - one that does not evoke emotional responses. The logic of action is not symbolic as in wet othering but rather overly-instrumental. Victims of this kind of Othering are traumatized not by an awareness that others think they are disgusting and enjoy their humiliation (an emotional response) but rather by realizing that they are mere objects to the Otherer (who has no emotional response). Social theory on the gaze is used to make sense of this situation. The theory is illustrated with reference to accounts of unethical medical experiments, Alien abdication narratives, animal attacks, torture and serial killing.

The Urban Fabric, Repair and the ‘Good Enough’ City

This paper considers the work that repair might do in mending and smoothing over matters of inequality between the physical city and the small acts of human care. Repair can seem inconsequential in the face of the global risks that menace the modern city and the brutal conditions, exclusions and exploitation that some of those cities are home to. Yet a humanist sociology might be sympathetic towards piecemeal and everyday activities which aim to put right, one step at a time, things gone wrong - deviant occurrences, ugly moments when life in the city breaks down or does not play out as we might want it to. Ken Plummer's recent call for a sociology of hopetakes this line, insisting on the need for a ‘down-to-earth pragmatism of empathy, justice, kindness and care’ and inviting sociologists to ‘think small in a big way’.

Something similar - thinking small, in a big way – can be found in the writings of human geographer Thrift, though differently inflected. Thrift directs attention to mundane activities of urban care and maintenance – street cleaning, roadside repair, emergency call-out – and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the physical – palpable, material, mute - fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift's thesis neglects this history.

Gap Years, Cosmopolitan Cultural Capital and Transnational Justice

This paper considers if gap years are a cosmopolitan endeavour. It draws on a qualitative study of the online travel narratives of young people from the UK who blog about their year out between school and university. The analysis focuses on the bloggers' representations of people and places as 'different' in their travel stories. Volunteering overseas as part of a gap year is often promoted as a way for young people to become 'global citizens', and independent travel as a way to have 'authentic' inter-cultural experiences.

Can such gap years build a transnational sense of justice, or are they simply a way for already privileged youth to claim they are doing something 'worthwhile'? Gap year students gain personal benefits, which I conceptualise as 'cosmopolitan cultural capital'. This suggests they may be primarily concerned with self-interest rather than a commitment to the Other.

While young people may have good intentions, I argue that the way the bloggers frame their gap year stories tends to reproduce dominant meanings and values, and are shaped by historical legacies and structural forces. Their narratives also contain instances of more reflexive engagements with difference and diversity, however. Drawing on these findings, I consider the future prospects for gap years as an agent of positive social change. I suggest how young people might be encouraged to critically engage with wider issues of global justice before, during and after taking time out overseas.

The Role of Assistive Technology for Personal Care Activities of Daily Living to Enable Families to Care for Relatives with Dementia in Their Location of Choice

The UK's National Dementia Strategy objectives include: i) ensuring that people with dementia live well (whether in their own home or in a care home) and ii) a call for more research on the role of Assistive Technology (AT) to address the social care needs of people with dementia (PWD) and their carers. This research focussed specifically on AT for personal care Activities of Daily Living (ADLs); bathing and washing, dressing and grooming, toileting and continence and feeding tasks. Examples include: raised toilet seats, easy-use tap heads, and easy-grip cutlery. Such AT is now provided by some Local Authority Social Services in the UK. This research aimed to determine the extent to which PWD and their familial carers were provided with AT for personal care ADLs by formal social care services, or sourced by themselves, and utilised whilst they lived at home in the community. The same individuals were also assessed whilst living in a care home for their AT use for personal care ADLs. Furthermore, the study examined the role AT can play in enabling those caring for a relative with dementia to make choices about their location of care (particularly, whether the use of AT could delay an institutionalisation decision).

An in-depth multiple contrasting case study design explored perceptions and experiences of formal (care home keyworkers) and familial carers of care home residents with a clinical diagnosis of dementia on AT use for personal care ADLs. The results lead to ascertainment of the difficulties and preferences carers of PWD have when attaining, using and maintaining AT and its contribution to the quality-of-life of such individuals. This method also enabled comparisons and similarities between individuals residing in different geographical locations to be compared and establish whether inequality in AT provision exists in the UK.

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle

Rising Class Conflict, Resilient Communist Party-State: Interpreting the Chinese Puzzle

Alvin Y. SO and Yin-Wah CHU**

After the collapse of Maoist socialist regime in 1978, China has experienced rising social equality and class conflict. Within a short span of 40 years, China has transformed itself from one of the most egalitarian to one of the most unequal societies in the world. With the rising social inequality, it is only natural that rising social inequality is accompanied by rising class conflict. The number of "mass incidents" has skyrocketed from 8,700 in 1993 to more than 200,000 in 2011.

What is surprising is the fact that despite the explosion of class conflict and civil unrest, the Chinese communist party-state is highly resilient and is not under any threat of regime change. There is no large-scale national labor protest, no violent peasant rebellion, and no robust democracy movement to challenge the legitimacy of the communist party-state.

The aim of this paper is to interpreting this Chinese puzzle of resilient party-state in the midst of rising social conflict from the workers, peasants, and the middle-class. Why the rising social conflict and civil unrest did not lead to any political instability and regime change, like it did in other post-socialist societies?

This paper argues that the Chinese communist party-state has done an excellent job in managing the class conflict among the workers, the peasants, and the new middle class in the Chinese society. Indeed, the Chinese party-state not only wanted to stay in power, but it also was able to formulate and implement all sorts of developmental policies propelling the rise of China at the turn of the 21st century.

‘Housing-Based Welfare? Empirical Perspectives from the UK

Economic crisis, fiscal austerity, conservative policies and the new demographic of ageing societies have given rise to the idea of ‘asset-based welfare’ as a key complement of the UK’s shrinking welfare state. For instance, concerning elderly care, retirement and education, housing wealth has become central to family welfare inequality challenges the potential for housing to form an ‘asset-based welfare’ system. The affluent have various assets to engage in the provision for their own and their children’s welfare with no need to resort to the welfare embedded in their home. For marginal homeowners, relying on housing wealth might result in spirals of debt and drop them out of homeownership whereas long-term tenants are least able to afford alternative welfare provisions. Yet, numerous participants pursue (re)-active strategies of ‘housing-based welfare’ by traditional routes – building up housing careers in order to live rent-free and eventually downsize – or increasingly by letting out buy-to-let or inherited property. However, given variations in housing wealth across regional and local markets, between ‘boom-and-bust’ cycles, and across socioeconomic groups and age cohorts, positioning housing at the core of an ‘asset-based welfare’ regime should be questioned. In this paper, we scrutinise people’s views and strategies towards what might be paraphrased and the ‘asset-based welfare’. What are the opportunities and challenges for positioning housing welfare as a base for family welfare for different cohorts and socio-economic groups? By analysing 100 in-depth interviews with homeowners (with or without mortgages) and social and private tenants, we conclude that socioeconomic circumstances, housing tenure, households’ housing stocks and housing costs and the housing welfare system. The affluent have various assets to engage in the provision for their own and their children’s welfare with no need to resort to the welfare embedded in their home. For marginal homeowners, relying on housing wealth might result in spirals of debt and drop them out of homeownership whereas long-term tenants are least able to afford alternative welfare provisions. Yet, numerous participants pursue (re)-active strategies of ‘housing-based welfare’ by traditional routes – building up housing careers in order to live rent-free and eventually downsize – or increasingly by letting out buy-to-let or inherited property. However, many of these participants are unsure of the potential of ‘housing-based welfare’ in the long term since they have ‘no crystal ball to look into the future’ in order to manage complex personal, familial and societal risks; this, in turn, reinforces social and familial solidarity.

‘Why Should I Trust You?’ an Empirical Investigation of Determinants of Trust and Distrust in Romanian Post-Socialist Urban Society

Trust is a key factor in the development of collective action, and thus in the performance of communities, institutions and society. Seminal scholarship has given the social virtues of trust and to a lesser degree those of caution. Consequently, scholars have expressed concerns regarding the social ‘legacy of distrust’, which have negatively influenced processes of democracy and development in the post-socialist states. While quantitative measurements of trust have become standard in cross-national surveys, in depth qualitative research has remained exceptional but helpful. By employing a mixed-method design of cross-national analysis of secondary data and qualitative examination of 69 in-depth interviews in a post-socialist city, this paper investigates the determinants of (dis)trust in post-socialist Romania. The analysis draws attention to the intertwined social and rational origin of trust and distrust. Findings show that institutional trust has risen from post-Maoist China to the toleration and limitation and freedom to express opinions. However, institutional trust has remained low due to perceptions of widespread bribery and favouritism – not necessarily experienced but reinforced through social learning and the media – and to a general discontent with some institutions, particularly the police, the political elite and the judiciary. Conversely, interpersonal trust has been rapidly declining though
it had not entirely vanished and has remained generally confined to families and
bounded groups. By growing social distrust, people have reacted to the increas-
ing social inequality during the post-socialist transition and its associated figures of
the insular individualist and predatory capitalist. This does not invalidate the
thesis of 'socialist legacy of distrust', but significantly adds to it. Data quantifica-
tion suggests that the effect of increasing social inequality during transition is six
times stronger than the effect of persistent communist legacies on current levels of
social distrust. This has important policy implications, which are outlined in
this paper.

Relations Between Individuals at Work in a Contemporary Context: Necessary Changes in Communication in Organizational Context

Companies organize themselves around objectives that seek the maximum re-
turn to its shareholders or founders. However, when forming the individuals in a
group to which these goals are achieved, dreams as well as desires and ambitions
emerge. Typically, subjects align with organizational interests in the expectation that
their own goals are also achieved, existing three important issues in these work-
ing relationships. The first question relates to the symbolism of the “notion of
work”. The second issue reinforces the role of work in social relations. Despite
all the discussions involving the centrality of work (OFFE, 1989; BAUMAN, 2008),
it still remains one of the central points of life. The third issue concerns the lack
of work, the possibility of unemployment and frustration as reality (BALDIESERA,
2010). The subjects experience these conflicts and tensions of force paradoxically
(BALDIESERA, 2010; KUNSCH, 2012).

Some factors explain this movement transformation in communication directed

to employees: a new technological context (social networks); new relations
between people and organizations, caused, for example, a new employee profile
and fewer permanent links with companies, besides the existence of an internal
environment of conflict and tension. Employees need time to develop relationships
and coherent narratives in their experiences within the organizations, but in a world
where the future is already the day and tomorrow, in a fragmented environment, focused on project exe-
cution and flexibility, employees are not allowed to develop strong relationships
(SENNETT, 2009). Communications directed to employees will be impacted. The
safety at workplace, employment and career in one organization is re-
placed by employability. The needs of the organizations are more important than
the needs of its workers. The imperative of aligning organizational strategies can
find counterpart in the desires of the individuals in the organization. As profes-
sionals working in this field, communicators must understand those changes and
challenges.

Decentralization: From the Constitution's Dream to Reality

This paper aims to analyze the decentralization of public policies in the state of
Ceará, Brazil, as supported in the Federal Constitution of 1988. The decentral-
ization agenda, mobilizing social and institutional players, proposed the partaking
of decisions during the elaboration and management of public policies in order
to strengthen and expand citizenship bonds. The establishment of structures for
the arbitration and recognition of organized sectors within civil society bolstered
the public sphere for the discussion and negotiation amongst various social and
institutional segments. This allowed in specific circumstances for a communal
protection area, focused on project execution and the promotion of a shared political
and civic culture were weak due to of the lack of institutional support from the
local, state and Federal government. However, the dilemmas that emerged during
the self-organization and creation of representation instances closer to the social
actors have strengthened the local democracy.

Gender Attitudes in the World of Work: Cross-Cultural Comparison

The paper deals with factors determining work-related gender attitudes. With
the spread of emancipative values the difference between gender roles becomes
vaguer but is still strongly dependent upon country characteristics. While values
are usually regarded as factors impacting socio-economic behavior, my research
underlines a less explored aspect: they are themselves formed and changed in the
process of economic interactions. The objective is to assess the role of education
and job characteristics among factors determining gender attitudes in different
types of countries. More specifically, I focus on the interaction effect between ed-
ucation and employment characteristics on micro- and macro-level. Female labor
force participation rate and ratio of female to male tertiary enrollment are used
as the indicators of female involvement in labor market activities. The 5th wave of
World Values Survey (2005-2008) serves as empirical base. The targeted group
of population is the employed. Multilevel regression modeling is used. According
to the results, work-related gender attitudes vary considerably by country. Edu-
cation is a stronger predictor of gender attitudes than occupation and job char-
acteristics. At the same time the higher occupational status and intellectual jobs
and jobs with higher independence lead to more egalitarian gender attitudes. On
the other hand, the higher the labor force participation rate and ratio of female to male tertiary enrollment, the more egalitarian are work-related gender
attitudes in the country. In the countries with the higher women's involvement in
education and labor market activities education and job characteristics impact
gender attitudes to a lesser extent. Furthermore, there is less difference in female
and male gender attitudes in such countries.

Rethinking Citizenship in a Post-National Constellation

Classical citizenship was understood as a status attributed to all those who are
full members of a national state. Around the inclusion in this status and its expan-
sion with new rights many social movements have fought their struggles. Howev-
er, internal inequalities that have survived in many countries led some authors to
suggest the existence of a hierarchy of citizenship. In other contexts, the mobi-
ity of people has reinforced fears and xenophobia, and consequently the citizen-
ship is becoming there increasingly the legal basis for demarcating boundaries
of inclusion and exclusion. New discursive semantics, such as communitarianism
and postcolonial studies, react claiming for singularities on community bases to
define belongingness previously expressed by citizenship and nation. The text
deals with the question how the notion of citizenship could be extended to main-
tain its relevance today.

Ribeirinho Communities: Identity and Social Cohesion in the
Brazilian Amazon

This article aims to observe the general processes of identity construction and
social cohesion of the ribeirinho communities of Combú Island, an Environmental
Protection Area, located on the left bank of the Guamá River, near the city of
Belém, in the Brazilian Amazon Forest. These populations are concentrated along
the rivers due to the lack of means of rail and road transport, using as a prima-
ry means of travel inland waterway vessels. In this sense, they are considered
part of the so called ribeirinho communities, descendants of indigenous people
and also the region of northeastern migrants coming from the great droughts in
the Northeast in the late eighteen century and large integration projects in the
Amazon from the twentieth century. This indicates that the interaction between
ethnicity and multiculturalism is that this migratory movement qualify as social
construct, in other words, individuals are not the region's natural, but are adapted
to the conditions and integrate historical, social and cultural inheritances with
indigenous, colonial and migratory people. Thus, we propose to present some
reflections on identity and social cohesion present in this part of the population
of the Brazilian Amazon. Ribeirinho Communities are a blend of simplicity and
complexity and based on social characteristics and demographic dynamics, we
present the way of life of these different communities, through the relationship
between territory and identity. The intention of this paper is to open a range of
new interpretive possibilities on these communities, with no claim rule out pret-
ent analysis or establish universal truths.

Professionalizing Armed Forces in Africa: No Easy Game. Why Not?

In this paper we focus on recent attempts of the international community to help African nations to professionalize their armed forces towards proper and effective capacities in dealing with new security threats all over the continent. One of these programs is the US-led African Partnership Station. In the framework of this program, the Netherlands Navy has launched a project called African Winds 2013, in which seven West-African countries were visited to train themselves and host-national militaries, particularly marine and navy forces, in: diving, hydrographic research, amphibious landing operations, illegal fishery policies, boarding procedures aimed at anti-piracy measures, economic development, etc. In this paper an assessment will be given of those activities, based on field work at sea and evaluations by the participants themselves. There will be a connection with previous research on training and educating young African cadet-officers in Western military academies. Both endeavours will be analyzed on the basis of mixed-methods military sociological research.

Rôyama Masamichi’s East Asian Cooperative Community Theory

Rôyama Masamichi’s East Asian Cooperative Community Theory. While I was conducting the long-term project “Northeast Asia’s Transnational Space”, I was interested in the problem of when and how East Asia became identified as a unit. Soon, I became interested in the way that ‘East Asia’ is called and requested.

To approach the task, I have been interested in East Asian Cooperative Community (EACC) theorists such as the philosopher Miki Kyoshi, economist Kada Tetsu, and international politics scholar Rôyama Masamichi, and I will mainly talk about Rôyama Masamichi in the presentation.

The core of Rôyama’s EACC Theory is a region or regionalism. I would like to talk about the issues related to regionalism in the relationship between East Asia and the world, which is the relationship between particularity and universality, speaking in the abstract. I will divide Rôyama’s regionalism into three aspects based on universalism.

First, it is the attempt to escape from the international universal order caused by the Marxist theory issue.

Second, it is the attempt to make ‘East Asia’ into a meaningful region, emphasizing the special identity of East Asia.

Third, it is not that the regionalism of the EACC is a particularization of the world order but that the EACC itself constructs a universal world order.

Lastly I will wrap up my paper by discussing following 3 topics. 1)Japan’s leadership position 2)Horizontal regional order vs. Vertical intra-region order 3)The fact that the vertical intra-region order, which was attempted by Japan through the ship position

Women, Disaster and Challenges: A Case Study from Iran

During the past decades, Iran’s natural disasters such as earthquakes, droughts and floods have caused a considerable loss of human lives and livelihoods, environmental damages and the destruction of economic and social infrastructure. Although 49.6% of Iranian population are female but gender analysis has been ignored in the most national reports and surveys related to different aspects of disaster management. This study aimed to highlight the challenges of women before, during and after natural disasters and to investigate the capacity of Iranian women to reduce the consequences of natural hazards. Data collection was done by the interview with affected women of Varzaghan and Bushehr earthquake (2013, 2012), field observation, and review of related documents as well. The findings indicated that although the investigated women were affected more than men but their needs and problems were not identified sufficiently. On the other hand, women vulnerabilities were highlighted more than their capacities and capabilities in handling the disasters. In conclusion, it is important to consider women participation in all phases of disaster management (mitigation, preparedness, response and recovery). Gender analysis with localized/standardized analytical tools can be suggested for future studies.

A Comparative Approach on Migration in Post-Communist Societies; The Case of Albania in East-European Context

The post-communist transformations in Central and Eastern Europe represent an interesting example for comparative studies: a number of countries began this transformation from the same starting point (1989), following more or less the same common goal of moving towards democracy and liberal market economy, and EU. Based on the comparative method Brezinski predicted twenty years ago (as it was later confirmed with surprising accuracy), the historical calendar of those countries (the article “The Great Transformation” 1993), given an example of ‘thinking comparatively’ and foreseeing the future.

This paper is regarded with the hypothesis: Albania is an excellent laboratory for studying comparatively the new migratory process. The collapse of the socialist system was viewed with concern by many policy-makers in Western Europe who expected their affluent countries to be flooded by immigrants. Yet, this fear did not materialize and post-communist East-West migration was rather moderate. The only exception is Albania, whose emigration displayed features of an exodus. No other country has been so affected by migration, in such a short period of time like Albania has. It is confirmed that 34.2 percent of the Albanians have immigrated in more than 30 other countries, while the world migrant average is about 2.7 percent. And including the migrants that have spent a considerable lengths of time abroad, and have made their return back to the country, than we have a country in which more than half the population has experienced migration in the last two decades. This paper is an attempt to give a comparative answer to the question: “Why so many Albanians have migrated in such a short time, quite different from the other ex-communist countries, i.e. the countries with the same historical fortune?” In Albania, quite different from other countries, migration is shaping the society...

The Strange Case of Soviet Sociology: A Goffmanian Analysis of a Failed Discipline

History of the Soviet sociological movement is an intellectual puzzle. Sociology of science routinely identifies success in academic world with gaining intellectual recognition (Mertonian version) or boosting credit through manufacture of “facts” (constructivist version). Soviet sociologists enjoyed enormous popularity at the time of its emergence (1960s), survived political prosecutions, and continued its expansion after Perestroika with its leaders attaining status of disciplinary cult figures. A commemorative tradition developed with most prominent figures leaving autobiographies. A whole industry of hagiographic literature emerged. All evidence of success was present; at the same time, Soviet sociology left no intellectual legacy: neither theories nor empirical findings from the Soviet times are circulating today, the only book from this period still in press and widely cited is a methods textbook (by Yadov), and authority of its leaders has been never translated in international space. This talk will try to explain political hardships of Soviet sociology, the past and present admiration for its leaders, and oblivion of substantive results of their work by applying a concept of “dramaturgical formation” inspired by Goffman's work. Any research deals with secrets, but these secrets can belong to different social spheres: do they shape the society…

The (Im)Possibilities Of The Politics Of Solidarity: Human Rights Defenders Discourse, Humanitarian Aid Dynamics and Transmigrants Experiences In Mexico's Transit Assistance-Based Places

Mexico has the most transited migratory corridor in the world. The complex migratory flows transiting the country—mainly Mexican, Central and South American—have historically been perceived as economic and male. Scholars have noted as problematic the categorisation of the ‘labour migrant’ as being exclusively voluntary. It has been demonstrated that framing agency through simplified understandings of voluntary and involuntary movement cannot easily capture the realities of movements along the Mexican corridor. Identification using legal categories such as ‘illegal’ migrant end up demarcating and ‘invisibilising’ individuals eligible for protection. The securitisation of borders and criminalisation of migration throughout the 20th century, led by the global north, has intensified and has added further fuel to the fire. Protection has still not been clearly delineated for the undocumented and seems to be eclipsed through the criminalisation of migration. Incidents such as death, rape, kidnappings and other types of abuses faced by transit migrants have opened up the debate among key human rights stakeholders on solidarity and protection. Human rights defenders have established shelters, humanitarian aid, led manifestations, caravans and campaigns in solidarity with the migrant among other activities and services. These forms of solidarity have been predominately presented by human rights actors to the Mexican government through human rights and humanitarian visa appeals for migrants to transit the country. These appeals and other forms of emerging humanitarian aid dynamics are occurring outside the refugee protection regime. Also the majority of human rights defenders are non-state actors—albeit there is reliance on states for the implementation of human rights. The purpose of this paper—based on extensive qualitative research in transit-assistance-based places—is to explore what kind of contribution the politics of solidarity has in reshaping the transmigrant subject; focusing on key human rights defenders discourse, humanitarian aid dynamics and transmigrants experiences.

Complexity Art: A Pattern of Transdisciplinary Emergent Properties

Transdisciplinary intersection has been defining new fields of research and practice in humanities and arts, in particular in contemporary art, to incorporate nature as the object of its aesthetics, scientific and technological search. We should know that the emergence of an object far from equilibrium confronts us with a domain that needs to be explained in terms of the complexity of its nature in conjunction with other domains with which it interacts. This is the origin of this proposal to consider the art of complexity as a pattern of emergent properties with the potential to offer a space for sharing research corpus with other fields. This allows to systematize its object and find a common space for collaboration with science and technology. Faced with this challenge, and the call from SEAD, the Author describes her experimental and empirical creative practice in the art of complexity. This kind of art is characterized by the use of scientific research method, observation and experimentation through trial and error and the formulation and analysis of findings that lead to a body of systematized hypothesis. Dynamic experiments based on direct experiences draw the link of complexity to natural sciences and to emerging fields of image and data records. Based on this new way of thinking about disciplines the research opens new opportunities in various scenarios that lead to recontextualize art, creating a theoretical body that binds science and technology. These findings can rebuild art, giving it a new aesthetic epistemological conception with emerging applications in areas around water sciences, mathematics, chemistry, physics, artificial intelligence and new fields to be defined. Finally, the paper identifies problems, supporting mechanisms and actions for a global strategy that encourages transdisciplinary collaboration work between arts and science. This work was supported by the National Science Foundation under Grant No.1142510.

Beyond Bourdieu: Dialogic Modernity and Social Change

Beyond Bourdieu: Dialogic modernity and social change

When Wright met working class people who read Joyce, Dostoyevsky and Wolf he said “this confirms that Bourdieu was wrong with his concept of habitus”; ten years before Habermas had engaged with one of these persons in a debate on human rights, while most of the audience had laughed at a non-academic linguistic register. The radicalization of modernity recovers the foundations of the first modernity and transforms the frame of reference on the basis of dialogue. Dialogic modernity includes the social actors in the development of critique by redefining, in dialogue with sociologists, the moral grounds of a plural society in which we can today live together. Habermas stresses the potential of communicative action through the intersubjective recognition of criticizable validity claims; Wright envisions social change through the analysis of real utopias. The structured and structuring structure that defines “habitus” cannot explain the cultural practices and taste developed by the working class people who attend the dialogic literary gatherings. They transform and create new cultural capital that challenge the structuralist determinism and demonstrate possibility in the transformative dialogues of dialogic modernity.

Involvement in Physical Leisure Activities in Low Income Households

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

This paper will focus on: (1) how parents in low income households conceive, experience and handle their possibilities to participate in physical leisure activities and sports in their local communities, and further 2) what impacts these conditions may have on children’s participation in physical leisure activities.

The data material consists of qualitative interview from a strategic sample of pools as belonging to low income households. Both Norwegian and non western immigrant households are represented in the sample.

The overall findings showed that the involvement in physical leisure activities was strongly restricted by lack of economic capital both for the parents and the children. Most of the informants were single mothers, and they had no resources to give priority to their own wishes for participation in fitness- and leisure activities. The children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

Women’s Work and Reasons for Absence from Work

The equal opportunities for women in the Scandinavian labour market have been improved the last decades. But in terms of caring tasks in domestic life there is still a way to go, and therefore it is a challenge especially for women to combine the two spheres. During the period 1980 to 2009 the sickness absence among men in Norway has been relatively stable while the sickness absence among women has increased 70%. Women’s higher sickness absence rate is not simply a result of the two work places. As the women have to give priority to their own wishes for participation in fitness- and leisure activities, the children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

The data material is responses from a postal questionnaire sent to Norwegian long term sick listed women with mental illness or musculoskeletal diagnoses, and in-depth interviews with a sample of long term sick listed women with the same diagnosis.

The overall findings showed that women’s sickness absence has to be understood as a combination of demand, control and social capital both at the work place and in their private lives. Persons with high social capital both at the work place and in their domestic lives have the best prospects to return to work. Single mothers often have low social capital in both spheres, and they are the most vulnerable group. The political consequences for reducing women's sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women's burdens in the private sphere.

SOLIS, PATRICIO* (El Colegio de México, psofaris@colmex.mx)
Recent research in Mexico shows that the risk of suffering precarious work conditions is significantly higher among the youth. This situation has aggravat-
ed after the economic recession of 2008-2009. On the other hand, educational research indicates that the returns of education have decreased, thus rising la-
bor market vulnerability even among those highly educated, who used to have a 
secured access to top-level occupations. These trends might suggest that labor 
market hardship has emerged as a widespread phenomenon among the Mexican 
youth, irrespectively of socioeconomic background and educational attainment. 

Bus is this actually the case? 

In the paper we explore this question by analyzing the early occupational tran-
sitions of a representative sample of 2,900 men and women between ages 18-19 
who responded a retrospective survey on educational and occupational trajecto-
ries in Mexico City. We focus on the effects of socioeconomic background, edu-
cational attainment, and family events on four occupational transitions: the entry 
into the labor force, job shifts between jobs, exits from the labor force, and reen-
tries into the labor force. Using event history analysis models, we devote special 
attention to the competing risks of entering into service class positions, interme-
diary occupations, and what we define as “low quality” occupations. 

Results confirm, as earlier research has suggested, that a significant number of 
young individuals initiate their occupational lives in “low quality” occupations, and 
many stay there in subsequent job shifts/reentries. Also, risks of labor disqualifi-
cation are significantly high among those with higher education. However, these 
risks remain closely associated to socioeconomic background and educational 
attainment. In this sense, far from replacing or blurring traditional inequalities by 
socioeconomic background and educational attainment, the rising labor market 
vulnerability of the youth in Mexico mounts onto these inequalities, reinforcing 
their negative effects.

SOLIS, PATRICIO* (El Colegio de México, psolis@colmex.mx) 

Youth Parental Emancipation in an Unequal Society: The Case of Mexico 

The paper analyzes the housing transitions of young Mexicans from a social 
inequality perspective. Mexico is the most unequal society among OECD coun-
tries. The calendars of marriage and childbearing are significantly different across 
socioeconomic strata, with surprisingly low ages at marriage and first child among 
those coming from disadvantaged families. Migration (both internal and to the 
United States) has become a frequent event in the lives of young Mexicans seek-
ing job opportunities. In this context, residential emancipation may follow very 
different patterns among youngsters coming from different social backgrounds. 

The paper will look at these differences by characterizing emancipation in asso-
ciation with marriage and childbearing. Although these transitions are obviously 
related to emancipation, the association is not universal: many newly-wed sons 
and daughters remain living with their parents. Others move out before entering 
into marriage. Thus, a proper characterization of emancipation must take into 
consideration the different life course pathways that emerge from taking into 
consideration the occurrence, timing, and sequence of this transition in combina-
tion with other family events. 

Once these patterns of emancipation are identified, I will analyze their inci-
dence and determinants among socioeconomic strata, taking into consideration 
the association with trajectories in other domains, and specifically with occupa-
tional events/trajectories. The aim is to explore whether early occupational uncer-
tainty relates to different emancipation pathways. 

The analysis will be based on data from the EDER 2011, a recently released re-
retrospective biographical survey that covers the educational, occupational, residen-
tial, and migration histories of 2,900 Mexicans of three birth cohorts. The survey 
reports the ages of occurrence of all the events considered in the analysis. It also 
includes a family module on family background, thus allowing a thorough 
exploration of the association between socioeconomic origins and emancipation.

raulso@gmail.com) 

PLANTER PEREZ, KARLA* (Universidad de Guadalajara- 
Centro Universitario de Ciencias Sociales y Humanidades, 
karlaplantar@yahoo.com.mx) 

Modernidades Múltiples: La Experiencia Tapatía De La Modernidad Del Fin De Siglo 

Modernidades múltiples: la experiencia tapatía de la modernidad del fin de siglo. 

Responsable: Héctor Raúl Solis Gadea y Karla A. Planter Pérez 

De carácter diacrónico intentará captar, a través del análisis de la memoria, la forma en que se ha modelado la experiencia de la modernidad en Guadalajara. 

Objetivo general del proyecto: llevar a cabo un análisis, entre distintos grupos y 
sectores sociales, de la forma en que los tapatíos asumen las transformaciones 
de la vida moderna, se adaptan a ella, o las asimilan, entablando procesos de 
negociación del orden social. La perspectiva de trabajo parte de la premisa de que 
no existe una ruta única, ni una forma única, de entender la modernidad, sino 
múltiples posibilidades para definirla y dotarla de sentido. Cada grupo social tiene 
distintas opciones a mano y las aprovecha o construye dependiendo de una serie de 
condiciones de orden material, cultural y político. Aspectos como la religión, 
la educación, los valores heredados, la clase social, el grupo de edad, la situación 
de genero, etcétera, son clave para determinar el tipo de adaptación/negociación con 
respecto al proceso de modernización que se vive. 

Método, el proyecto pretende utilizar diferentes técnicas analíticas, entre las que 
se encuentra la encuesta en cursiva la que no se va a presentar en esta presentación. 
En este sentido, la exploración de los lenguajes, la observación, el análisis documental y la 
exploración fotográfica. 

Normalmente, los estudios de valores no logran captar aspectos más profun-
dos de la vida social, como los comportamientos reales y los sentimientos, los 
cuales son elementos cruciales para una adecuada interpretación de los valores y su 
ificado. Un abordaje como el nuestro es más útil para lograr una comprensión 
única más cabal de este tipo de fenómenos sociales.

Gender Bias in Higher Education- Study on Indian Universities 

Owing to higher priority assigned in successive Five Year Plans, Higher educa-
tion in India has witnessed phenomenal expansion, with establishment of num-
ber of State and Central universities, Institutes of advanced studies, and numer-
ous private and deemed universities. Pay scales revised to bring them on par 
with other prestigious services in public and private sectors, rendering it highly 
sought after sectors of employment. It encompasses graded disciplines and pos-
tions with differential status, recognition and rewards. It is hypothesised that, 
distribution of academic positions and allocation of disciplines could be deter-
mined by the social forces and extraneous considerations among which gender 
is an important variable. The paper addresses this issue in the context of Indian 
universities in which the number of women faculty is on the steady rise in the last 
two decades. Data collected through interview of 362 women faculty members 
from 23 South Indian Universities reveals that, gender segregation of academic 
disciplines and positions are discernible with concentration of women acade-
icians in soft disciplines as well as at lower academic positions. The hard core 
 disciplines applied disciplines, being where the faculty could be more visible, receive more 
research grants, claim consultancy and patents have predominantly male faculty. 
Even in terms of cadre composition, the proportion of women faculty decreases 
with successive higher academic position. Study further reveals that, even among 
women academicians religion, caste and rural urban background are pertinent 
in determining the patterns of segregation subjecting women faculty to double 
discrimination.

SOMASEKARA REDDY, J* (V V Puram Evening College, 
jsreddy25061959@gmail.com) 

Limitations of ICT in Inducing Inclusive Growth 

India has been viewed as a leading player in the field of Information and Com-
munication Technology (ICT) and as an emerging economy wedded to the policy of 
Welfare State has been adopting and harnessing ICT for inclusive growth through 
diverse policies and programmes. Education, health, agriculture, transportation, 
production, government, and such other sectors that facilitate empowerment of 
masses have come to employ ICT for enhancing their efficiency and performance. 
However, the inherent socio-cultural milieu and demographic constraints that 
have been the bane of development process in India is assumed to have come in the way of successful implementation of these ameliorative schemes. The 
so-called “digital divide” that gets accentuated by the preponderance of rural 
masses, the information “haves” and “have nots”, lack of ICT infrastructure in far 
flung and remote rural areas, hesitation among the masses in adoption of new 
technology coupled with aspiration deficit, have rendered these schemes exclu-
sive, rather than inclusive in impact and as such its vision of emerging as a vi-
brant knowledge society appears to be a distant reality. Emphasis on application 
and adoption of ICT in the process of development appears to have divisive and 
polarizing implications, leaving the people for whom the process is meant even 
more excluded. The paper seeks to analyse these developmental efforts in India 
based on the analysis of evaluation reports on various welfare and amelioration 
schemes submitted by evaluation and monitoring agencies.
**Correlates of Prestige Grading in Medical Profession**

Professions come to be arranged in a hierarchy based on their functional importance in the Society, which in turn determines their prestige, authority, rewards and sometimes even their autonomy. Traditionally, professions represented homogeneous groups of people sharing common traits in terms of knowledge, skills, values, status and rewards. But of late, owing to growing complexity of professional knowledge systems, increasing specialization, adoption of advanced technology in their practice and ever increasing diversity of services expected to be delivered by these professions, intra-professional heterogeneities and as such distinctions appear to be on rise with professionals coming to be graded within professions on professional and non-professional considerations. The paper explores these developments in medical profession in India, wherein medicine as a profession has made significant advances. A survey of 550 medical professionals in South India reveals that medical profession is a highly stratified entity with practitioners being segregated and graded on the lines of specialization, level of specialization, branch of medical practice, sector of employment, size and technical sophistication of hospital, institution from where professional credentials are obtained, length of practice and the like with rewards and recognition in commensuration, giving rise to inequities and exclusions within medical profession. Further, non-professional variables such as class, caste, religion and gender, by themselves, are not as much responsible as the professional variables stated above for the existence of different values and value priorities in medical profession although they appear to be associated with opportunities for entering into higher prestige sections within medical profession.

**Technology Driven Inequities at Work Place in India**

Indian work organizations, both in service and manufacturing sectors, have brought about significant restructuring and refinement of operations through adoption of new technologies that has become imperative and indispensable for survival in the highly competitive globalizing world. These developments are assumed to be having significant long term implications for the work organisations reaching in terms of skill up gradation, composition of workforce, restructuring of organisations and work process involving huge capital expenditure. This rationalisation process has also implications for workforce in terms of increased wage differentials owing to emphasis on skill, absorption or replacement of workers with skills no longer required as well as adjustment with changed work culture. The findings based on a study of 41 service and 36 manufacturing establishments across three States in India indicate that higher skill requirements have rendered workers obsolete and their tools redundant. The adoption of the so called “skill biased” technology is found to be having significant implications for variations in wage inequality both within and between industries. While workers with higher skills obtained through formal courses are being inducted, the older obsolete workers are on the verge of being expelled through diverse schemes of compensation or are being absorbed in the barely required unskilled cadres at considerably lower wages. This phenomenon is more marked in private sector service industries compared to public sector manufacturing establishments. As a result of disappearance of moderately skilled workforce, these organisations are found with skill polarisation and heightened wage inequalities.

**Social Context As Mediator Between Values and Well-Being**

Ed Diner (2009, p. 66) claims that individuals attain subjective well-being (at least partly) while moving toward an ideal state or accomplish a valued aim. Shalom Schwartz (1994, p. 20) defines values as “desirable transhistorical goals, varying in importance, that serve as guiding principles in the life of a person or other social entity”. Consequently happiness occurs after needs are fulfilled. Therefore people are happy when their values are “right”, that is, attainable in given social, cultural and economic context. Sagiv & Schwartz (2000) have also argued that people are likely to experience a positive sense of well-being when they experience the same values that prevail in their environment, when they inhabit an environment that allows them to attain the goals to which their values are directed.

The purpose of this paper is to evaluate relations between basic human values (or desirable subjective goals), socially differentiable environments undermining or supporting the value priorities in question and subjective well-being. Multi-group and multilevel structural equation models are used to accomplish this task. Data from the fifth round (year 2010) of European Social Survey is used.
media can cause responses in segmented public spheres of the World Wide Web. Vice versa, content that is produced in blogs, wikis or social networks can become part of new coverage in the mass media. In addition to the public of mass media, some authors argue for the existence of a ‘personal public’ constituted by the World Wide Web. In the personal public sphere, actors use different rules of production and distribution compared to the public sphere of analog offline media. Both forms of public sphere, however, are connected with one another. It is therefore reasonable to describe today’s public discourses as transmedial discourses.

The concept of transmedia requires a change of perspective from single media and their use for social processes, to communicative networks consisting of different media in convergent, networked arrangements. It would be unreasonable to assume that discourses are only constituted through the web; this would not correspond to media practices in everyday life and would give the impression that there is a gap between online and offline media practices. I narrow my focus to online discourses as a way to investigate more thoroughly a highly important part of media practices. In my paper I place my focus on digital network media, first and foremost on the Internet, which can be characterized as a central point of reference for media convergence. I would discuss if and how public spheres are changing through the Internet.

Decline, Crisis or Change? Professional Status and Knowledge Authority Among Danish Doctors and Teachers

A common way to address the poor outcomes of public policy, for instance in areas like health care and education, is to blame policy failures on the loss of respect for professional authorities. No one today respects a primary school teacher as they used to do fifty or sixty years ago, and patients now focus on their own rights and google searches rather than the doctor’s orders. If not more, these are at least common narratives in public debates about professionals and why the decline – or even crisis - of professional authority is at the root of present problems. This paper aims to go beyond the narratives and investigate decline, change and restructuring of professional status and knowledge authority since 1950. Taking the Danish primary school teachers and medical doctors as cases, we explore how the scientific profession has changed (or not) and over a sixty year time span. More precisely, we explore both the development of professional status in a general sense of a societal status hierarchy, and in a more narrow sense, understood as the professional authority vis-à-vis other professional groups, clients and the society.

While notoriously difficult to measure, not least going back in time, we hope to be able to assess possible changes through a combination of various data sources. Besides socioeconomic data about salaries and education, we mainly analyze status and authority through a comparison of professional selfperceptions and narratives as presented in magazines distributed within the professions.

Explaining the World of ‘Big Data’: Global IT Consultancy and Reshaping of Policy Knowledge in South Korea

This analysis of the process through which South Korean government produced policy knowledge for ‘Big Data’ policy demonstrates a certain actor’s - global IT consultancy - intervention upon it. The gap between an actor’s cognitive capacity and the complex, thus unobservable world gives birth to a number of institutions producing knowledge, especially which not only describes the world, but ‘perform’ as the inter-subjectivity among actors for their reflexive adjustments, thus have ‘performativity’. Given this, the article explores how the knowledge offered by global IT consultancy converted the Korean government’s attempt to describing the sociotechnical world of ‘Big Data’, and examines how the intervention persisted. The present STS scholars’ arguments on performativity starting from Callon’s account of economic actions have demonstrated how a certain way of explaining the world forms the frame among actors while overflowing from the outside of the frame is pervasive. The performativity scholars emphasized continuous maintenance and re-arrangement of the explanatory devices, and successively showed how they were suppressive and unchangeable.

Nevertheless, this article suggests that the knowledge from global IT consultancy can still be performative even when the devices and their arrangement are increasingly deemed questionable and replaced by other ways of explanation; overflowing does not necessarily mean the weakened frame. At first, as Korean government introduced a school of public management, the concept and application of global IT consultancy to explain the changing sociotechnical environment, the concept of market transactions gradually substituted in the policy knowledge the past concept of cooperative relationship for contriving creative usage in which citizen take the lead. Even though such explanatory devices were questioned for their naive worldviews and once having excluded concept of ‘citizen’ overflowed, market model still persisted and ‘citizen’ was only taken as potential sources of lucrative data. The finding suggests our understanding of performativity of knowledge can be extended.

Social Conditions for Japanese Immigrant Attitudes Toward Institutional Elder Care

Although elder care remains within the family sphere in Japan, Japanese immigrants in the U.S. are bound to have distinctive pathways to determine whether to utilize formal care services from the native-born. Japanese immigrant women who are inter-racially married to American husbands experience complex adaptation processes throughout their lives as they encounter social conditions that differ from Japan. This research investigates of their attitudes concerning institutional elder care utilization as they relate to social conditions.

We conducted and analyzed in-depth interviews with 31 immigrant Japanese women between the ages of 40 and 84. We found that these women had acquired the norms of independent living through cultural acculturation, ultimately leading to their preference for non-family-based care. This paper focuses on the social structural conditions that facilitated this choice. We found four factors influenced the women’s attitudes toward the utilization of institutional elder care: 1) family living arrangement discouraging family care for elderly, 2) potential family conflicts between the caretaker and the elderly relative, 3) economic class, and 4) supportive cultural attitudes towards formal elder care and institutional availability. These factors tend to influence immigrant Japanese women’s preference for institutional elder care over familial care.

“Rubber Rice Bowls”: Work and Family for Women Entrepreneurs in Post-Socialist Rural China

The three decades of China’s market-oriented reform since 1978 have brought about an increasingly deregulated and privatized rural economy, which posed new opportunities and challenges for women to balance work and family. This study focuses on a unique group—women entrepreneurs—who were neither the Maoist “iron girls” nor the cheap laborers in capitalist workshops. Drawing on interviews from two coastal villages in Jiangsu and Zhejiang provinces collected during 2004-2010, where rural industries and petty entrepreneurship had become an important economic engine, this study finds that women, although under-represented compared with men, had played an active role as entrepreneurs. Based on life histories of 8 women entrepreneurs, this study finds women entrepreneurs found their “rubber rice bowls” satisfying due to its flexibility and potential rewards, but also challenging because of the increasing risks and competition. Such entrepreneurial dynamics led to various patterns of work-family balance among women entrepreneurs, which could not be summarized under the traditional gender norms or the socialist egalitarian ideology.

The Korean Webtoon As a Reflection of Society

Since 1990, the technology of digital media has been constantly developed in Korea, and the digital media became popular among the general public. With the emergence of the social network service(SNS), people increasingly expressed themselves with visual images, such as photos, icons, animated characters, etc. The new digital media expanded the scope of communication between people and visual images. Webtoon is the new genre of cartoon as the result of digitalization. Webtoon enables readers to easily access and to easily participate in the process of webtoon making. The stories of webtoons show social experience in ordinary people’s daily lives. Webtoon readers become participants who share their own thoughts with webtoon artists and also create amateur works. Thus, the familiarity of webtoon increases. It is a remarkable big change in the history of Korean cartoon; thus, this research will discuss how webtoon influences people experience of seeing and interpretation. To do so, this research will study webtoon as a contemporary process of webtoons by the artist, Pui Kang who is the leading webtoon artist in Korea, and analyze how the artist communicates with readers. Also, this research will show the different responses caused by media switching

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
From webtoon to film. Today, webtoon makes changes on the ways of storytelling and positioning visual images and of interacting with readers. Also, the Korean webtoons are more broadly spreading overseas, such as France. With its increasing popularity and easiness to reach the public, webtoon is regarded as a driving force to boost the field of Korean cartoon industry.

The Impact of Adult Children's Out-Migration on the Elders' Psychological Well-Being in Rural China: Does Gender Matter?

This study examined the impact of adult children's out-migration on the psychological well-being of old Chinese parents left behind in their rural villages. Using data from two waves of the Longitudinal Study of Older Adults in Anhui Province, China, analyses showed that, controlling for personal characteristics and resources, the out-migration of children reduced the psychological well-being of their parents, particularly among older fathers. However, the transition to coresidence with an adult child buffered the negative impact of daughters' out-migration on the psychological well-being of older mothers. These results suggest ambivalent feelings on the part of older parents when their adult children migrate out of their home villages for work or marriage. However, there is an important gender divergence in the adaptation to the out-migration of children. Mothers benefited from entering into a traditional multi-generational living arrangement when their daughters migrated; comparable fathers suffered from worse psychological well-being following entry into such an arrangement, presumably because living with children increased their dependence. It is concluded that a complex gender interaction needs to be considered when examining the consequences of dynamic intergenerational family processes in China.

Use It or Lose It? the Impact of Grandchild-Caring on Grandparents' Cognitive Functioning in Rural China

Using the data from the waves of the survey “Well-being of Elderly in Anhui Province, China” conducted in 2001, 2003, 2006, 2009 and 2012 respectively, this study examines the impact of grandchild-caring on Chinese rural grandparents' cognitive functioning through constructing multi-level growth curve model. The results show that, comparing to the low intensity care for grandparents, high intensity care has protective effect for the grandparents' cognitive aging, however, the effects of high intensity care depend on the age and gender of grandparents. The grandparents' cognitive aging are protected by the high intensity care for grandchild-caring. The adaptive functioning of grandparents are benefited from intensive care; and this gender difference tends to be widened as aging. These results support the hypothesis of "use-it-or-lose-it", and imply the significance of gender roles and norms in the Chinese rural families.

Multiracial Parents and the Intergenerational Transmission of 'Race' and Belonging

In both popular culture and academic discourses, being 'mixed' is becoming increasingly ordinary in Britain. While there has been growing research on mixed race children and young people, very little is known about how mixed race people racially identify and socialize their own children. Many adult mixed individuals have now become parents - prompting the fascinating question of how they, as parents, think about the racial identification of their own children. Parenthood engenders a child's racial identity and the 'right' socialization of children. What may such socialization bode for the future and significance of racial categories and boundaries in Britain? Are mixed race parents adopting post-racial attitudes and practices, or is there evidence of intergenerational transmission of racial thinking and identification in these households? How do parents think about the relationships between 'race' and racial difference, national and regional forms of belonging, and family lineage/ancestry? These questions are pressing, especially in light of recent research which does not necessarily privilege 'race', or which examines the meanings and experiences of 'race' in connection with other axes of identification and experience.

Based on a Leverhulme research grant, this exploratory study investigates the ways in which mixed race parents think about and communicate ideas and practices concerning racial identities and racial difference, and is suggestive of how they foster their children's (and their own) sense of belonging in the wider society. This research draws on interviews with 60 multiracial individuals (parents) in both urban and suburban regions in England. A qualitative approach is crucial in critically examining not only racial categories/terms, but also trends reported about multiracial people in large scale data sets, especially those in the US.

Educational Mobility in Three Generations: Single-Parent and Grandparent Effect

This study examines the educational reproduction of American families in multiple generations. The key question is how grandparents’ education contributes to the educational success of grandchildren, and how the grandparent’s effect differs for single- and two-parent families. The grandparent effect works through both intergenerational socialization and mobility processes, because grandparents’ education first affects whether parents have any children and how many children they have, before grandparents proceed to influence the educational mobility of their grandchildren. Analyses build upon the mobility and demography model used in Mare and Song (2012), and draw on empirical evidence from the Panel Study of Income Dynamics. Recent researchers and policymakers alike have expressed a growing concern that single-parent family is responsible for the growth of an “undereducated” class in America. This study investigates whether or not grandparent effect contributes to the growth of the undereducated class from single-parent families in the grandchild generation.

Through Thick and Thin: Ecological Modernization in Thailand's Electronics Industry

Electronics manufacturing in Thailand has undergone substantial transformations over the last two decades, including with respect to technological environmental innovation. Business conditions in Thailand have been mostly challenged during this period, as the country has weathered multiple changes of government, mass mobilizations, torrential floods, and uncertain institutions. Situated at the lower end of global supply chains, electronics manufacturing in Thailand has persisted through this period, even if not entirely thriving. Driven by growing international regulation of hazardous materials and waste electronics and the greening of global supply chains early in the new millennium, technological environmental innovation in the industry has proceeded. Drawing on field research conducted over two decades in Thailand, as well as available data, this paper addresses the causes and consequences of those transformations, including such questions as: How have these changes come about? What roles have domestic and international exogenous (market, regulatory, environmental) and endogenous (industry, firm, labor) forces and dynamics played in technological environmental innovation during these two decades? What has changed and not changed in electronics manufacturing in Thailand as a result? In what ways has electronics manufacturing in Thailand become more environmentally friendly since the beginning of the new millennium? The paper concludes with a discussion of the implications of the experience of Thailand's electronics industry for social theories of technological and environmental change, including Ecological Modernization Theory.

Is Improvisational Theatre Really Improvised?: The Inherent Structure in Improvised Performances

The purpose of this presentation is to clarify the meaning of “improvisation” in modern society and the function of “formats” in improvised performances, and also to discuss the significance of improvisational theatre in modern society.

Improvisational theatre, often called impro, is a form of theatre that has no scripts or pre-planning. It was systematized in Britain and the United States in the 1950s and used to train actors, and also developed as a performance genre in its own right. Gradually, it spread to various countries and is now used in various other fields, such as school education, business, and community development.

Today, the concept of “improvisation” in itself attracts considerable attention, and there is a tendency for people to regard it as a panacea for various problems. For example, it is viewed as a way of heightening our ability to live through unpredictability and challenges.

In our research, we first investigated discourses about “improvisation” in books and websites to clarify the meaning of “improvisation” in modern society. This revealed that “improvisation” is explained using highly positive concepts such as...
as “freedom”, “flexibility”, and “resilience”, which are contrasted with the concept of the “structure” of society.

Secondly, we did fieldwork in The Laboratory School of Improvisation, which is an impro group that carries out impro performances and workshops in Japan, and interviewed its members. We found that when improvising on stage, the performers don’t express ideas freely in their own separate ways. They embody and share “formats” which constitute the explicit/implicit manners and rules of impro. In short, “improvisation” has paradoxical properties. Though “improvisation” is represented as a concept that frees us from social “structures” and enables us to create stories with others flexibly, performers in fact acquire freedom by means of “formats” when practicing impro.

Is Rise of China a Threat or a Chance? a Comparative Analysis of Determinant of Perception on China in Korea, Japan, and Taiwan

The rise of China has been discussed in different area of social sciences, but it is still rare for sociologists in East Asia to address this issue. International dimension of social development in East Asia is, however, necessary and indispensable part in sociological argument and the recent rise of China is one of the core parts of such international dimension. Comparison of Korea, Japan, and Taiwan in terms of their attitudes toward China provides us with a lot of sociological insights. Comparative analysis of expatriates’ guanxi-building in China tells us that Korean expatriates are more aggressively estabishing guanxi network than Japanese and Taiwanese counterparts. Our recent international collaborative research suggests that perception of “political risk of China” is different from Korean businessmenn and Japanese/ Taiwanese businessmen.

This paper tries to conduct exploratory analysis of Korean, Japanese, and Taiwanese perception of the rise of China in comparative perspectives. More concretely, two research questions will be approached in this paper; namely (1) How people in three societies evaluate influence of China, and (2) Who are most concerned about the influence of China on their society, by using AsiaBarometer 2006, which is the only one dataset that enables us to compare Korean, Japanese and Taiwanese views on China in connection with other important socio-economic variables.

Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that “perceived” relation is important in discussing the issue of the rise of China.

The Nexus Between Collaboration, The Internet and Productivity: An Empirical Study Of South African Science

Prior research has investigated the relationships between collaboration, connectivity and the publication productivity of scientists. Most of this research has been conducted in either the developed or developing countries where internet connectivity has been either well advanced or at the other end of the continent. Investigations in countries that fall in between these two extremes are rare. Conducted among scientists and academics in South Africa, this study is aimed at filling this gap. Interviewing academics and scientists (n=204) from the sampled institutions, the paper presents details of how the above three variables are interfaced with each other in the South African scientific system which has become a strong contributor to science. The study also, from the policy point of view, brings out the features of scientific collaboration that exists in South Africa with its variations between the two sectors—academic and research.

Cultural Capital In Movement: On The Dissolution Of Traditional Educational Codes By Educational Policy and Social Movements Among First Generation Academics In Germany

Barriers to educational advancement are often described in the literature. In this connection, authors mainly refer to Bourdieu’s concept in which a lack of suitable cultural capital is often a barrier to the educational advancement of children from non-academic families. Acquiring such capital, in accordance with this theory, is an essential prerequisite for success in an advanced educational career. Bourdieu paints a rather pessimistic picture of the chances of acquiring such capital. Codes of the milieu of origin survive, mediated through habits, and continue to hinder educational advancement.

This paper aims at comparing educational advancement in three generations in Eastern and Western Germany—that is, first-generation academics in the 1950s, the 1960s and the 1970s—a total of 89 biographical narrative interviews were conducted. Many cases were found to corroborate the Bourdieusian concept. At the same time, however, it was also apparent that there are also many knowledge and social mechanisms that contribute to the dissolution of culturally transmitted codes, and thus modify the “value” of the hereditary cultural capital in a given social stratum. To illustrate this, we will present a hermeneutic case reconstitution after Rosenthal that can be attributed to the type “social movements”. This case study will serve to illustrate the extent to which reforms in society and educational policy have led to a shift in cultural codes, and how such reforms can favor educational advancement.

The Growing Women's Labor Market Participation and the Persistence of Inequality Between and Among Gender in Brazil

The last decades of development in Brazil have fostered a significant increase in women's participation in paid work in both the formal and informal sectors. Looking into the significance of women's growing labor force presence, this paper raises a number of questions to investigate to what extent women's paid labor impacts inequality between gender (men and women) and among gender (women on the basis of class). We address that main issue by looking into the connections between women's paid labor and unpaid labor and two main factors - the sexual division of labor in the family, and the labor legislation and social policies concerning maternity leave and child care. Analyzing data from the 2012 national survey data (PNAD) from the Brazilian Census Bureau, we show that women's transition to paid labor in Brazil has been taking place without a significant changes in unpaid labor related to the persistence of the traditional sexual division of work in the family, and b) adequate policies geared to socializing responsibility for child care. We argue that a more equitable division of domestic work and children rearing in the family, as well as more inclusive social policies on parental leave and child care provisions are crucial to improve the balance between work and family (benefitting not women only, but men and children as well), and to foster equality between and among gender in the labor market and in the public sphere.

The Income Inequality In Mexico: Dynamics At The End Of XX Century

The Income Inequality in Mexico: Dynamics at the end of XX Century

The purpose of this study is to analyze the evolution of the income inequality in Mexico considering two elements: the dynamic of labor income and wage and the general productivity in the economy. I consider that is important to contrast the level of income inequality and the structural conditions which produce macroeconomic instability, the slumps of economics and the inflation. The income inequality in Mexico is part of the socioeconomic historic unequal. After the reduction in inequality during the 1960s and 1970’s, the exhaustion of the regime of accumulation by substitution of imports, and the crisis of the bureaucratic-corporative regulation, were reflected in a greater concentration of income, accompanied by structural heterogeneity, technological inequality and

The Right of Women to a Free Violence City. a Case Study about Public Transportation in Mexico City

According to Women Human Rights, the government of the Federal District has
made significant efforts, particularly recognizing that gender violence hurts the
principle of respect to human dignity, makes difficult the participation of women in
similar conditions and slows down the whole development of countries in po-
litical, social, economical and cultural life, on January 29th 2008 the Law Access
of Women to a Violence Free Life’ is approved for the Federal District, through
which it is agreed that women have the right to live a life free from any kind of vi-
olence. In the framework of this law, the Institute for Women designed a program
to prevent, support and punish sexual violence against women traveling on public
transport in the city through actions aimed at promoting the rights of women, law
enforcement and citizen oversight. This program includes various activities such as:
Modules Care and Reporting Sexual Abuse cases in the Subway Public Transport System, Program “Athena” which is an exclusive service for women and
separation of men and women in the Metrobus, Light Rail and Subway Public Transport System.

In this way The purpose of this paper is to analyze the effects of actions to
prevent sexual violence that have been in public means of transportation: in the
practice of daily mobility, in the perception of transport security, and feminine
representation. The main hypothesis suggests that government actions in public transportation
contribute to the generation of spatial justice, and with it in the exercise of
the right to the city as a human right for women. Nevertheless, on the other side
we hypothesize that the program intervention has generated paradoxical effects
because they help to reproduce traditional representations of feminine and mas-
culine in the city.
the implementation of the Concentrated Solar Power (CSP) in the Sahara Desert is intended to support our reflection about the potentialities and contradictions of such initiative. Once these solar plant projects are destined to provide not only Middle East and North Africa (MENA) with "clean energy", but also approximately 16% of the European energy demand by 2050, it seems urgent to consider the geopolitical transformations that the "desertec project" could unleash. We are inclined to think that such enterprise would indeed change the geopolitical meaning of the Sahara Desert and thus contribute to balance the political relationship between European and MENA countries. Although it is not likely that the marginalisation of countries of the UMF are going to become "equivalents" of its European counterparts, it is probable that the export of solar energy can diminish the political asymmetries between North and South. It is also crucial to reflect whether the "political instability" of the MENA countries can impose barriers to the accomplishment of the idea, especially because "Desertec" was conceived before the so-called "Arab Spring".

The Articulation of Japanese Culture in the Global Era: The Case of Japanese Small-Type Coastal Whaling

After the whaling moratorium had come into force in 1986, the Japanese government as well as anthropologists and social scientists tried to establish "small-type coastal whaling" (STCW) as a new category within the International Whaling Commission (IWC), Japanese coastal whaling has a long tradition dating back to the 16th century. Even today whaling is socially, culturally and economically important in the whaling towns as Taiji. However, the articulation of whaling as Japanese culture was not successful. A comparison of the Japanese and the Greenlandic articulation strategies show: Despite of many similarities of the coastal whaling, the Greenlandic whaling is still perceived because of conflicting relations between professional and managerial interests. The placement professionals are exposed to a systematic self-control which assesses the counselling and the placement of job seekers not only by technical and professional criteria, but always by the success of specific strategies along the internal organizational accounting system. The contradictory effects of extensive accounting practices on job-placement officers and the organisation we will show in our paper.

Osoyombo, Omojolou* (University of Lagos, Lagos, Nigeria, ososonyombo@unilag.edu.ng)

Policing and Crime Control in Contemporary Nigeria: An Agenda for Reform

Crime and insecurity are major challenges of contemporary Nigerian society, with the barrage of various forms of criminal behaviours, including: terrorism, political violence, ethnoreligious and communal violence, unbridled corruption, politically-motivated assassinations, murder, violent crimes, kidnapping for money, and robbery. Efforts by security agents to solve the problems have not yielded the desired results. The inability of the Nigeria Police to effectively tackle the
problem has made people to question the capacity/competence of the police, and also casting aspersions on the quality of governance. Recently, the military was drafted to support the fight against terrorism. In response to the problem, some ethnic militia have sprung up, with some serving as “local police” in communities. Nigeria currently operates a unitary/centralized policing system, but there have been calls for the establishment of state police – separate from the federal police. Increasingly, communities and individuals do not wholly entrust their security to the police, and there have been local community actions against crime, including street barricades and the restriction of vehicular and pedestrian access at certain times. While the informal policing outfits have been playing positive roles with security control, the relationships between them and the police have not been entirely cordial.

Drawing from recent challenges, issues and experiences with the war against crime and insecurity (including terrorism), this paper discusses the policing and security system in Nigeria, as well as the relationship/boundary between the various security units. Suggestions are made for more effective policing in Nigeria, including greater collaboration/partnership between the formal policing system and the informal policing structures. The paper also advocates greater collaboration between the police and the public for a more successful campaign against crime in Nigeria.

Transnational Trajectories? Studying Nation and Citizenship in East Asia
Despite sociology's increasing engagement with global processes, the relationship between global/transnational studies and cross-national, comparative studies remains a question, both conceptually and methodologically. This paper inquires into this relationship through an empirical focus on the transnationalization of nation and citizenship in East Asia. Unlike the common practice, by transnationalization, I do not simply refer to the advance of explicit transborder regimes (e.g. the World Trade Organization and the European Convention on Human Rights), or social formations “spanning borders” (e.g., migrant networks). Rather I offer transnationalization as an analytical node to capture the diffusion of non-nation-specific, universalistic frameworks, models, and standards, and the engagement of nationally located actors' (states, social movements, professional organizations, and individuals) with such frameworks to orient their actions and strategies. This view locates the nation-state and a variety of national actors within their broader transnational environment—in an analytical sense these two levels are inseparable. Densely organized at the national level and beyond, education policy is highly susceptible to transnational isomorphism. The analysis of the post–World War II school curricular reforms and content (particular focus on Japan and China, in comparison with European developments) shows that national educational systems in East Asia increasingly assume a globalized society, and the role of active and able citizens and nations in making this society. In so doing, they systematically insist upon the “distinct” contributions of the nation and its citizens to the good of the wider world. Yet, as the nation (and its uniqueness) is expressed fiercely, the policy reforms that affirm transnationally difficult, common models of social order. Nations as “imagined communities” and individuals as citizen acquire commonalities across societies. The assertiveness of the nation (divergence), as well as its progressively common imaginary (convergence), is linked to its transnationalization.

SPAARGAREN, GERT* (Wageningen University, gert.spaargaren@wur.nl)
Environmental Agency and Power in the Global Network Society
Over the past two decades, practice theories as developed by Anthony Giddens, Theodore Schatzki and Elizabeth Shore amongst others, moved center stage in the sociology of sustainable consumption and everyday life. Practice theories offer an attractive third way in between individualist/value driven) and determinist (technology driven) models of environmental social change. In this paper, we explore in more detail the two modalities for analyzing the reproduced social practices as put forward by Giddens (1984) and Shove (2012) in particular. First, when discussing practices as performances or as strategic action, we explore how specific lifestyle groups with particular ‘green’ portfolios or competences participate in the practice in order to make the practice and their lifestyles more sustainable. We show that the environmental dimension of (consumption) practices can be crucial for attracting new practitioners to the practice since they expect gaining emotional energy (Randall Collins, 2004) from participating in the process of simultaneously greening the practice and their lifestyles. Second, when discussing practices as entity and as part of an institutionalized set or nexus of practices, we focus on the process of strengthening or weakening the connections between different practices. We argue that the concepts of power as put forward by Manuel Castells (2009) can be used to illustrate the interrelationships between practices and thereby the key dynamics of environmental changes in the global network society.

Sorting Snorers: Straight Path to Treatment?
The medical model can perpetuate and itself be perpetuated—or be challenged—by stereotypical conceptions encountered on the Internet. In this rich case study of snoring and obstructive sleep apnoea (OSA), we examine internet searching as a complex actor-network comprised of actors and actants such as the searchers themselves, search engines, web-pages, and the organisations behind the pages, all contributing to lay pre-diagnosis of OSA. Socially preconceived typical OSA suffers include age, gender, and weight. Overweight middle-aged men are expected to have sleep apnoea, whereas skinny young women are often not. Through situational analysis of the conceptual intersections between participants recruited on the basis of either being snorers, or being the partner of a snorer and website pages, websites, and website providers, the study closely examines the generative forces arising from engagement or ill-fit with the disease-based model as encountered during an internet search. Situational Analysis is used to model the actor-network on both individual and aggregated levels to gain insight into the complexity of the medicalisation of snoring and OSA and its relationship to the actor-network. This paper examines the internet search as an emergent yet increasingly powerful and pervasive source of influence, shaping conceptions regarding who can snore, who can have OSA, and who and how therapies for snoring can be accessed. Using Situational Analysis as a starting point, we have developed a novel data visualisation technique particularly suited to representation of both human and non-human actors and actants involved in the internet search and pre-diagnostic endeavours, and to visually represent conceptual tensions (medicalisation and non-medicalisation; snoring and obstructive sleep apnoea; male and female; old and young and so forth) within the overall actor-network.

SPEL, CHRISTAL OGHOGHO* (University of Helsinki, christal.mudi-okorodudu@helsinki.fi)
Scums Of The Earth: A Critical Analysis Of ‘Humanness’ In Host Society from10 Life Stories Of Poor Immigrants In Johannesburg, South Africa
This paper critically examines the question “at what cost do we establish national borders as the criterion for valuing others? What are the consequences to ourselves; the selves that ultimately places humans above their animal counterparts? It thematically but critically examines the ‘we’ that have ascribed an identity to ‘migrants’, labelling them as not fit for support and care. Adorno T, argued that identification limits both the scope and facets of the subject to the desired level only. However, the reverse is also the case, whereas identification limits the scope and facets of the identifier within a box, from which he cannot break free to explore his unlimited ability to create the world he desires. In this sense, by identifying migrants and in particular poor and unskilled migrants as ‘undeserved’ and ‘disenfranchised’, we have by extension confined ourselves to a box from which we cannot break through, to dream and create a functional and successful society that includes the unwanted poor and unskilled migrants.

Using narratives from 10 life story interviews with poor African immigrants in Johannesburg, South Africa, the article examines the host society via the harsh experiences of the immigrants. The article argues that there is a new form of societal enslavement and poverty; it is the poverty of our humanity. I believe that the lived experiences of unwanted immigrants will be an important platform from which to examine the inherent paradoxes of contemporary humanism as exhibited by host society. Also, it is of practical relevance to apply Habermas’s critical theory of society to a location in Africa; A continent that is in the throes of awakening self-emancipation from colonial dominance in order to create its own history in a more self-directed manner.

SPELCE, LYNDEL* (University of Sydney, lspce8013@uni.sydney.edu.au)
Between Institutional Oppression and Spiritual Liberation: The Female Ordination Movement in the Catholic Church and its Utilisation of Social Media
The female ordination movement within the Catholic Church is a dynamic and forceful example of the paradoxical binary of institutional oppression and individual liberation operating within the contemporary religious sphere. Proponents of this movement are seeking justice and gender equality in the face of the system.
atic patriarchal oppression of women within the Catholic Church. This radical and pioneering international movement is struggling for recognition as a legitimate religious formation as it campaigns for a more inclusive and accountable Catholic Church. The female ordination movement thereby provides a fertile conduit for examining how religion can both oppress individual freedoms and also be used to mobilise political, social and spiritual liberation from institutional disempowerment.

This paper will utilise critical discourse analysis of various social media outlets and webpages to elaborate on the institutional oppression and spiritual liberation which lies at the heart of this religious group. Drawing on feminist theology and a feminist epistemology, this paper will explore the effectiveness of social media in connecting women across the world who are facing institutional religious repression and who are seeking support from likeminded faith believers. Through critical discourse analysis, this paper will find that social media is used by groups involved in the female ordination movement such as The Catholic Network for Women's Equality, Women's Ordination Worldwide and The Women's Alliance for Theology, Ethics and Ritual, to subvert the dominant attitudes towards women within the Catholic Church and to provide an alternative form of religious expression for disaffected Catholic women. These groups are thereby able to mobilise women into a solitary international religious formation which empowers women who have experienced suppression or subjugation from the Roman Catholic Church.

**UK Maternity Services ‘Risk Culture’: Is the Professional Status of Midwives ‘At Risk’?**

UK maternity services, accounting for a significant proportion of National Health Service litigation claims, are increasingly regulated by ‘risk management’ standards. Such standards, aimed at improving the safety of maternity care and reducing litigation, inevitably associate childbirth with risk, and the control of professional behaviour in managing such risk. The growth of this ‘risk culture’ within maternity services poses significant threat to professional status claims.

This paper presents findings of a Doctoral ethnographic study observing the real-time impact of the ‘risk culture’ within an English National Health Service maternity department. Litigation and subsequent increasing regulation has fuelled the social construction of a ‘risk discourse’ surrounding maternity care. Aligned with the assertion that modern society has become increasingly risk averse (Beck, 1992), professional anxiety regarding risk has provoked socialisation among doctors and midwives that control over the childbirth process promotes risk minimisation. The stereotypical medical interpretation of risk, based upon fear of uncertainty and pathophysiology, has consequently permeated all aspects of pregnancy and childbirth. This in turn has led to the subscription of the ‘biomedical model’ as the prominent paradigm in managing maternity care, fuelling control, intervention and the ‘medicalisation’ of childbirth. Such ‘medicalisation’ has cemented doctor-led, intervention-laden management firmly within modern childbirth, with midwifery-led, naturalistic childbirth becoming an ever-decreasing occurrence. A professional identity crisis has ensued amongst midwives in that the role of the midwife in the 21st century is in a state of flux, raising concerns for the professional status of midwives within future childbirth provision.

The ‘risk culture’ in the UK has provoked significant inequalities between the professional status of doctors and midwives within modern maternity care. The role of midwives as autonomous practitioners in normal childbirth is eroding; therefore, the ‘risk culture’ in the UK placing the midwifery profession at risk of deprofessionalisation?

**SPERANZA, LORENZO** (University of Brescia, speranzo@ijs.unibs.it)

**Doctors’ Narratives**

Doctors’ Narratives

Doctors’ Narratives. As illness narration is a means to gain direct access to the subjective aspects of illness, so utilization of doctors narratives in which they portray themselves is important in order to understand who physicians really are. Making a distinction between the motivations behind their choice and the manner in which physicians perform their profession, the author tries to decipher the ‘black box’ of medical identity. He does so using 40 qualitative, in depth interviews with doctors within various branches of different ages and professional placements. The narratives so collected appear strikingly similar to those of doctors in flesh and blood from other parts of the world or to ‘imaginary’ doctors created by the fantasy of great writer - doctors (Bulgakov, Cheov, Celine, Conan Doyle, Cocteau, Moliere, etc.). Perhaps even the sociological choice of trying to understand the profession through biographical tales reveals more than a point of intersection with the “narrative” approach in medicine: to make a proper anamnesis, both clinically and sociologically, it is necessary to collect a good story, as only this can tell us not only the what, where and when, but also the how and why.

**SPILLMAN, LYN** (University of Notre Dame, spillman.1@nd.edu)

**Symbolic Violence and the Limits of Domination**

Theories of power highlighting the complicity of subordinates in relations of domination typically assume their prior engagement in agonistic fields structured by that domination. Building on recent arguments for a cultural theory of interests (Spillman and Strand 2013) this paper examines the limits of the complicity assumption, and the implications of those limits for the concept of symbolic violence. I argue that cultural processes inherent in field formation as “autocatalysis” (Padgett and Powell 2012), as well as in dynamics of center/periphery relations within fields (Shils 1975), and in Hirschman's (1990) theorization of actors’ exit options, all set limiting conditions on subordinates’ meaningful participation in agonistic fields, and thus help specify the conditions for symbolic violence.

**Portraits of Juvenile Prostitutes: Reconsidering the Mainstream Trafficking Victim Narrative**

The dominant narrative of prostitution in public media and even much scholarship equates sex work with trafficking – giving rise to the ubiquitous expression “sex trafficking” – and portrays sex workers as women and girls who are kid-napped, sold, and violently coerced into a life of slavery from which they need to be rescued. This narrative has been much sensationalized and set as the basis for rigorous criminal legislation against alleged traffickers (i.e., pimps) and clients, as well as reflecting the hegemonic media attention and policy influence of “new abolitionist” feminist scholars and activists who oppose pornography and prostitution as exploitative degradations of women. A bitter divide exists between these abolitionists and “sex worker advocate” feminists, who maintain that sexual commerce is not simply a story of victimization, that sex work can and often is, consensual and empowering, and that sweeping anti-trafficking policies are misinformed by exaggerated, sensationalized statistics. The ensuing “Sex Wars” have suffered from a lack of empirical evidence about the nature of sex work among those who engage in it, and the paucity of data is especially prevalent among juveniles, presumably the most vulnerable (and likely victimized) population. This study examines the experiences of 19 juvenile street prostitutes – twelve girls and seven boys – working in Las Vegas, Nevada, using in-depth interviews conducted between February and March 2012. We investigate the circumstances of these adolescents’ sex work, including age, gender, race, childhood experiences, pathways to prostitution, involvement with pimps, and abuse. In addition to using entry narratives to explore the pathways to sex work, we go beyond simply describing why juveniles become prostitutes and examine the ways that their lives contrast with other traditional narratives about gender and sexuality, race, social arrangements, and economic consumption, all of which speak to harm reduction needs for all street prostitutes.

Party on the Ground and Candidate Selection in France (1969-2013): The Story of a Difficult Inclusion

Political parties are still today the main actors in the political recruitment in France. Most of the French parties use a mixed system, which involves the local members and the national organization. In general, the final decision is taken at the national level by a national selection committee, an organization that is not known for its transparency. The selection procedures have thus always been considered the “black box” of the political parties. But, today, the political parties are confronted with the challenge of democratization for these procedures. The expansion of democracy goes mainly through direct participation from the party members. So, an increase of the party member’s power within the party is a typical response for democratization. But, if the party members are more and more included in the decision-making of the selection, the problem is that the decision of the party leaders does not always match with their choice.

This paper looks at how political parties have responded to the demands of more democracy, using France as a case study, with an empirical study of the evolution of intra-party democracy in the candidate selection. The aim is to identify the impact of the introduction of more intra-party democracy and the difficulties for the different party strata to deal with it. Therefore, we have systematically reviewed contemporary and historic party statutes and internal rules document from the left-wing party and the right-wing parties since their creation from 1969 to 2013. The analysis from political parties through their internal formal rules allows to understand how the party on the ground is, at least formally, included in the selection procedure. This will be illustrated by semi-structured interviews. Current party leaders, members of parliament, party secretaries were among those interviewed.

Motherhood Fatal Illness Narratives: Death Awareness and Biographical Reinforcement to Restore Continuity

Within a broader context of medicalisation, dying and death in Thailand remains a distressing and taboo topic, let alone being studied sociologically outside the medical realm. However, there seems to have an increasing demand to comprehensively understand various dimensions of dying and death as the institution of medicine is moving towards excellence. Illness narratives, reflecting patients’ experiences, could plausibly open new approaches in medical education, practices, and management.

This study illicits illness narratives from mothers of dependent (very young age) children who have recently been diagnosed with cancer. The social identity of motherhood, widely perceived to be self-sacrifice and a sole responsibility of the women themselves, makes the situation of sick mothers even extraordinary. Illness narratives of these dying mothers should be capable of revealing processes and mechanisms in which motherhood as a personal and social identity interacts with the fatal illness in a personalised context and hence produces (1) experiences and conceptualisation of illness in terms of causes, treatment, prognosis, and especially awareness of their death based on gender and moral discourses of being a mother in Thai society and (2) accounts of embodiment and suffering and its implications on daily management of this disruptive event.

An initial round of talks regarding life history with 5 participants (aiming at least 10) tends to suggest that motherhood is an ultimate source of inspiration which helps reconstructing meanings of fatal illness through an unconventional pattern of death awareness rather than vice versa. Death awareness of these mothers is unfolding through a complex relationship between information and knowledge of cancer as a fatal but common illness disclosed formally through their interactions with physicians and informally through lay perspectives and the emotions of being ill and feeling ill. This kind of awareness stimulates their determination to survive and thereafter an adherence to treatment.

Disentangling Disease Stigma: Conceptual Counters and Methodological Challenges

This paper briefly examines the core social science literature surrounding stigma in general and disease stigma in particular to explore the social matrix that shapes it and excludes the People Living with HIV/AIDS. The multiplicity of social science approaches for understanding the correlation between social stigma and exclusion, either resort to the trap of functionalism or in the individualization of...
the problem or argue for a unidirectional cause and effect relation. The conceptual
inflation in the field of stigma research also confined the strategies to counter
the stigma within the vicious circle of exclusion limiting the scope for out of the box
social engineering. This paper argues for a multidimensional understanding of the
stigmatisation process that addresses the functionality without functionalism and
without resorting to excessive individualization. It is vital to distinguish between
what we can call HIV/AIDS stigma, and what we should call HIV/AIDS related social
exclusion. How the linkages operate; uni/multi-dimensional? It is also important
untar the unravel the social process operating at different levels of reality and how
the old inequalities play a significant role in producing and reproducing the new
forms of social exclusion where the Right to Live is under threat. The paper calls
for an integrated paradigm for understanding the social process of stigma and
exclusion and try to explain the dynamics of stigma within and outside the matrix
of micro-macro versus subjective-objective axes of social reality. The empirical
exploration with this framework requires a re-examination of the existing meth-
odological practices in stigma research.

Inequality and Inclusion in Primary Health Care System in India: An Interstate Analysis

The trajectory of primary health care system in India is at crossroad with the
gradual withdrawal of state from health sector. However, there are efforts to re-
vamp the organisation and delivery of health care in rural areas with the intro-
duction of National Rural Health Mission (NRHM) in 2005. Within this context the
present study tries to analyse the internal differences in health care outcome in
India and its relation to the social determinants of health. Secondary data anal-
ysis showed that there are wide inequalities existing between different states in
terms of various indicators of health development. The state of Kerala stands
out in terms of its achievements on major indicators and often hailed as kero-
la model of health development, whereas the state of Assam performs lowest in
most of these indicators. However the state of Assam is the only state in India,
which included health as one of the basic right to its citizen. A secondary analysis
combined with an ethnographic field work in these two states revealed that the
inequalities between these states and within the states are complex and a unitary
model of inequity determinants fail to answer the complexity. Thus the social
health determinants models needs to be re-looked from the vantage points of

A Multilevel Model of Organization and Network Change

According to one vision organizations are more likely to establish network ties with
partners having similar operational experiences (homophily). A second vi-
sion suggests that interdependent organizations connected by network ties are
more likely to assimilate each other's knowledge and develop progressively more
similar portfolios of internal activities (assimilation). The internal structures of or-
ganizations can be represented as networks of interdependent portfolio items.
These intra-organizational networks are nested in networks of organizations and
influence the homophily and assimilation described above.

In this paper we try to establish which of these two visions best describes the
dynamics of collaboration (measured as patient transfers) and organizational change (measured as change in specializations) in a community of hospitals. We
estimate new developed stochastic actor oriented models (SAOMs) for multilev-
el networks which specify how inter-organizational relations affect organizational
decisions to change the portfolio network of internal organizational activities by
adding or abandoning activities. At the same time, the model allows joint exami-
nation of how the common affiliation to internal activities affects decisions to
change network terms of patient sharing relations between partner
hospitals. We innovate over existing studies of network dynamics in that we
estimate newly developed stochastic actor-oriented models (SAOMs) for multilev-
el networks which specify how inter-organizational relations affect organizational
decisions to change the portfolio network of internal organizational activities by
adding or abandoning activities. At the same time, the model allows joint exami-

Social Dining As a New Urban Food Community

A new form of communal meal where total strangers eat together, often in
intimate or homely settings, has become increasingly popular in urban environ-
ments. This phenomenon has been dubbed 'social dining' and encompasses meal-events where the social aspect of dining is paramount. In a time where the
communal meal par excellence – the family meal – is under threat social dining
might be a new way of creating commensality. This paper seeks to develop an
understanding of social dining and examine its cultural and economic implica-
tions and discusses reasons for its apparent popularity. Examples of social dining
include weekly communal meals at regular restaurants; arrangements where un-
familiar people cook and eat together; or the now global 'Restaurant Day' where
people set up 1-day restaurants in their own home. To understand the phenom-
emon of social dining we outline different cultural and economic characteristics of
the meal-events, such as whether it is arranged by professional or amateurs, who
the money is transacted, whether it is a shared everyday meal or a special
event. We argue that its popularity relies on four different factors: 1) The dining
events are arranged through new social media or the internet that easily facili-

The Precariat: From New Dangerous Class to Class-for-Itself

Neoliberalism, stemming from the musings of the Mont Pelerin Society after the Second World War, meant a model of liberalization, commodification, individualism, the privatization of social policy as well as production, and – least importantly – the systematic dismantling of institutions and mechanisms of social solidarity. From the late 1970s onwards, it meant the painful construction of a global market system, in which the globalization era was the disembodied phase of the Global Transformation, analogous to a similar phase in Karl Polanyi’s Great Transformation. In both cases, the disembodied phase was dominated by financial capital, generating chronic insecurities and inequalities. But whereas Polanyi was analysing the construction of national markets, the Global Transformation is about the painful construction of a global market system.

One consequence has been the emergence of a global class structure super-imposed on national structures. In order to move towards a re-embedded phase, it is essential to understand the character of the class fragmentation, and to conceptualize the emerging mass-class-in-the-making, the precariat. This is a controversial concept, largely because traditional Marxists dispute its class character. However, it is analytically valuable to differentiate it, since it has distinctive relations of production, relations of distribution and relations to the state. It is still a class-in-the-making rather than a class-for-itself. But it is the new dangerous class because it is a force for transformation, reacting both labourist social democracy and neoliberalism. It has a distinctive consciousness, although it is this that holds it back from being sufficiently a class-for-itself. It is still divided, being at war with itself. However, it has moved out of its primitive rebel phase, and in the city squares around the world is setting a new progressive agenda based on its insecurities and aspirations.

A Precariat Charter: From Denizens to Citizens

This paper discusses my new book, *A Precariat Charter: From Denizens to Citizens* (2014), which builds on key arguments from my 2011 book which introduced the Precariat as an emerging mass class, characterized by inequality and insecurity. A Precariat Charter discusses how rights - political, civil, social and economic - have been denied to the Precariat, and the importance of redefining our social contract around notions of associational freedom, agency and the commons. The ecological imperative is also discussed - something that was only hinted at in my 2011 book but has been widely discussed in relation to the Precariat by theorists and activists alike. By taking debates about the Precariat a step further, I further examine the kind of progressive politics that might form the vision of a Good Society in which such inequality, and the instability it produces is reduced.

Public Access to the Unorthodox Sacred Via Portuguese Urban Spaces

Drawing on numerous interviews carried out in 2010, this paper focuses on the popular culture surrounding a medical doctor famous for helping the poor, Dr. Sousa Martins, who died over a century ago in Lisbon. Because of contested rumors of Sousa Martins’ having been Freemason and having committed suicide, he is unlikely to ever be canonized within the Catholic Church, and the cult of devotion surrounding him exists completely outside of the church’s authority. The popular devotion towards Sousa Martins involves thousands of Portuguese of all ages whose numbers appear to be growing. Devotees believe that Dr. Sousa Martins can cure their illnesses, find jobs and homes for them, and even conduct ‘spiritual surgery’ on them to remove cancer. Despite the fact that the Church does not condone this devotion, the cult is enabled - and its ritual activities organized - by three public spaces within and near Lisbon (his statue, his tomb, and his home-converted-museum) in which devotees can openly ‘communicate’ with Sousa Martins to ask for his help (especially medical cures), bring him offerings, and leave gifts of thanks for miracles performed. The fact that this devotion has no organizing institution also means there is room for active individuals to guide it in particular directions. Such individuals include a charismatic female medium, a seer-turned-writer who has written numerous popular books on Dr. Sousa Martins, and the owner of a kiosk selling cult objects, who has invented rituals for communicating with the doctor which she tells to her customers. This paper will explore the importance of the public spaces through which devotees communicate with Dr. Sousa Martins, how this complicated takes place, and how these public spaces connect to charismatic Christianity and other, more private spaces such as sessions with spiritual mediums who claim to be able to communicate with Dr. Sousa Martins.

Development and Inequalities in Post-Socialist Countries: Comparative Perspectives

The main purpose of the paper is to explain some differentiations in the levels of social capital and socio-economic status between the inhabitants of post-industrial cities in Central and Eastern Europe.

In accordance with the sociological literature, two components of social capital will be considered: trust and social networks. Socio-economic status will be analyzed by level of education, monthly income, and job situation.

The main thesis of the paper is that in the post-industrial cities of Central and Eastern Europe access to social capital is not highly associated with the socio-economic status of inhabitants.

The empirical basis for the paper is a database from surveys carried out in selected post-industrial cities of Poland, Russia, Hungary and Lithuania. In each of the above countries one city was selected in order to conduct a survey of representative samples of inhabitants between the ages of eighteen and seventy.

The empirical investigation was carried out in the year 2012 with the financial support of National Centre of Science in Poland.

New Cognitive Perspective in Survey Research Methodology. Comparative Results from Georgia, Russia and Poland

Applications of the cognitive psychology theories analyze the bias in survey research limiting the meaning of the term “cognitive” to cognitive functioning of peoples’ minds. Cognition should be understood in a broader sense because it is determined not only by intellectual capabilities of people but also by their socio-social background as well as by their values and attitudes. Although it is obvious that achieved education is an inferential indicator of intellectual capabilities of a person, thus his or her cognitive abilities, it is not that obvious that intellectual capabilities are determined by social background and social experience of the people and that their perception of survey situation depends not only on the abilities buy also on the attitudes. If respondent has never experienced democratic form of government and, in addition, does not have a theoretical knowledge about what democracy is, he/she cannot really express his/her attitudes to democracy. And, of course, his/her intellectual capabilities have something to do with the ability to express attitudes toward democracy but their effect on quality of response cannot be limited to strictly cognitive processes that are involved in answering the survey questions because this depends on the attitudes as well. Our approach assumes that socio-social background, political knowledge and experience as well as political attitudes of people affect how they understand public opinion polling and, finally, affect the quality of answers. The comparative data were gathered in Poland (2010), Georgia (2013) and Russia (2012). The aim of analysis was to find to what extend political attitudes and experience determine the perception of public opinion polls and quality of answers. Significant differences have been found between attitudes and survey behaviors of Georgians, Poles and Russians.

Trust and Democracy in Different Post-Communist Societies: Poland, Russia and Georgia Comparison

The subject matter of the paper is a comparison of political trust (that consist the fundament of political stability) and democratic attitudes in three very different post-communist countries: Poland, Georgia and Russia. Poland is exceptionally different from the two other because of a very strong democratic tradition while neither Russia nor Georgia have such a tradition and experience but they differ in terms of their political culture and present political aspirations. Differences of political trust are analyzed in their relations to attitudes towards democracy. We are particularly interested in analyzing social differentiation of trust in political system and in particular political institutions in the three countries. We would like to answer the question what are the segments of their societies that might be considered fundamentals of social stability and development towards legitimized democratic system. We would like to find out what are the determinants of democratic attitudes, especially their relation to political trust in the system as a whole and theirs' institutions in countries with different traditions and different pace as well as direction of transformation. The main question is, what are the differences between those three countries in terms of the level of political trust and democratic attitudes, what are the differences in relations between the two, and what are the differences in social composition of those who trust the political system and support the democracy and those who do not. That is especially important because of the differences in existing systems. The attempt to answer these questions is made by analyzing the results of survey research conducted on nationwide random representative samples in Poland in September 2010, in Russia in March 2012, and in Georgia in August 2013.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Across the developed world, population ageing has coincided with rising living standards and expectations in retirement. Since the 1980s this has led to growing concern about the sustainability of public pension systems. Australia has been held up as an example of prudent fiscal management, as it looked to fund retirement income through compulsory private savings. This supplemented Australia’s flat-rate and means-tested public pension system, also supported by widespread home ownership. The shift to private pensions has made individual workers more reliant on lifetime savings and on benefits accrued through the tax system rather than direct benefits. We examine the intergenerational implications of this trend towards greater financialisation of retirement incomes by analysing cross sectional data from the Australian Bureau of Statistics. Given the significance of the Australian model to international debates, we discuss the potential long run international implications for inequality in retirement of this experience.

The (In)Stability of Disorder Across Time and Space? a Spatio-Temporal Analysis of Physical and Social Disorder and Fear of Crime in the Netherlands

Whereas the occurrence of physical and social disorder across the urban landscape and the explanation of the observed spatial patterns have long preoccupied criminologists and urban sociologists, relatively few studies have looked at the spatio-temporal patterns of disorder patterns in order to account for a spatio-temporal perspective. Elucidating the (in)stability of spatial patterns of disorder and fear of crime is especially important for the model of urban development known as the Broken Windows Thesis, which posits that physical and social disorder, if unabated, lead to heightened fear of crime, reduced informal social control, and eventually a rise in more serious crime.

The present contribution is a spatio-temporal cluster analysis of physical disorder, social disorder, and fear of crime in the Netherlands based on the Dutch Policy Population Monitor survey survey covering every municipality and in the Netherlands. By aggregating the individual survey respondents of each commune, we constructed a municipality-level longitudinal dataset spanning twelve years. We perform geovisualization and spatio-temporal clustering analyses of Dutch municipal survey data in order to determine whether there are significant local differences in physical disorder, social disorder, and fear of crime and whether these spatial patterns persist over time. In addition, self-organizing maps serve to classify individual municipalities into clusters of similar spatio-temporal type across the Netherlands. Finally, we test to what extent this “data-driven” typology of municipalities accounts for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized “developmental sequence” linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across the centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation for scores of leisure activities, which are preferred by one or the other, are coordinated with the Islamic calendar, appeal to particular cultural and traditional values, and contribute to the cultural foundation for scores of leisure activities, which are preferred by one or the other. Not only the Islamic calendar, but also the Islamic text and Islamic art have had a strong influence on the leisure activities of the Middle East.

Shaping the Romanian Identity. the Nationalist Discourse of the Orthodox Romanian Church

In a Europe increasingly secularized, Romanians trust the church is high and growing. According to the World Values Survey 1999-2000, 47.9% of the Romanian has high trust in this institution while only 2.7% is the opposite. Also, except Malta, the highest percentage of Europeans who believe that religion is very important in the stability of democracy and in their interplay with fear of crime is recorded in Romania (51.3%). We can say that we are witnessing, in the XXI century’s Romania, a true renaissance of God (Le revanche de Dieu, Q. Kepel et. du Samuel Huntington).
Analyzing the academic literature (Bryan Wilson, 1998, Steve Bruce, 2002, Rob Warner, 2010, Pippa Norris and Ronald Inglehart 2011, etc.) one can note the following explanatory factors of this phenomenon: the degree of modernization and economic development, human security and the feeling of vulnerability to risks, political repression during the communist and nationalist discourse of the Orthodox Church.

The purpose of this paper is to identify – in a longitudinal and transversal discourse analysis – the proximity between Orthodox Church and national ideas. We will try to prove that in Romania, as well as in other Eastern European countries, religious nationalism was a constant, regardless of the political regime. We illustrate the previous statement with a quote from Dumitru Stăniloae, one of the most respected theologians in Romania: "Romanian nation is biological-spiritual synthesis Dacian elements, Latin and Orthodox Christian (...) Orthodoxy is an essential prompt, caused by violence, terrorism, hosts inability or unwillingness to provide security, career wise outposts, with hardship bonus pay, got an addition. Foreign Service, body and health. Coupled conceptions of diplomat representational body for fostering local networks, mutual assistance, trust and local participation – particularly during leisure activities, for fostering local networks, mutual assistance, trust and local participation – particularly during leisure time activities as well as interactions in (semi-) public spaces and how both contribute to community building and social inclusion among residents.

In order to rich our epistemic goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We base our research on Serge Moscovici’s social representation theory (1961).

The purpose of our study is to identify and explain the imagine of the Este-Europeans in Western-Europe political discourse and to find out if, under the displayed tolerance one can find the premises for a stereotypes transformation of the Stranger into the Enemy.

In order to rich our epistemic goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We base our research on Serge Moscovici’s social representation theory (1961).

STEIGEMANN, ANNA* (Center for Metropolitan Studies Berlin, anna.steigemann@metropolitanstudies.de)

Shopping For Community - Local Businesses As Features Of Social Inclusion?

Increased ethnic diversity, a high degree of differentiation in income and education levels as well as lifestyles and related the socio-spatial changes have changed not only residential and commercial neighborhood structures, but also the range and level of local interactions and leisure time activities - with wide implications for neighborhood coexistence and interethnic relations.

As one result the social cohesion of inner-city neighborhoods and their residents is often seen as vulnerable. Whereas some of these problems are addressed by numerous neighborhood management programs, sociology still needs to pay more attention how shapes local interactions, i.e. everyday social contacts and connections between and among various groups of residents, how these affect local social capital.

So far, the great majority of research on this topic has focused on narrow and well-integrated primary relationships among neighbors in residential settings and assumes a loss of local social networks.

But these studies have mainly neglected the comparatively loose and unprecedented everyday interactions, particularly during leisure time activities as well as interactions in (semi-) public spaces and how both contribute to community building and social inclusion among residents.

Likewise, researchers have not given sufficient attention to the wide range of functions local small businesses and their employees play, including those which yield aspects of supply, sociability, local service and employment.

Claiming that shopping streets are significant places for forming proximity relations, the impact and meaning of shopping as both, leisure time and supply activities, for fostering local networks, mutual assistance, trust and local participation will be empirically assessed with the case of an exemplary shopping street in Berlin.

On the basis of on-spot observations and interviews with store owners, employees and customers, the paper presents empirical findings on the ways in which local shopping represents an important socially-in- or excluding social practice that affect wider urban structures of inequality.

STEIN, ARLENE* (Rutgers University, arlene@rci.rutgers.edu)

Performing Transgender Authenticity Through Video Diaries

Growing numbers of young transmen (female-to-male transgender persons) in North America are choosing to publicly narrate their body modifications and transitions to a public audience online. This paper considers two genres of such videos: (1) videos that document breast binding (minimization) and (2) videos that narrate the process of top surgery (breast removal). It examines recurring themes in such videos, as well as the public comments they elicit. The paper speculates as to why individuals would choose to narrate such seemingly private acts in such a public fashion. Toward that end, I draw upon feminist theories of embodiment, media analyses of self-branding and authenticity, and analyses of female masculinity and sexual boundary-making.

I consider the relationship between such videos and other forms of "self-branding," such as reality television programs, and a genre of YouTube videos in which
teenage girls narrate their consumer practices. I argue that transgender videos play a double role as personal and collective identity work, affording individuals the possibility of enacting a transgender self, and also participating in the act of community-building via new media, in the context of post-feminism, the medicalization of gender, blurred public/private boundaries, and late capitalism. Turner (1996) suggests that economic transfigurations characteristic of postindustrial capitalism have changed the meanings of the body for individual social actors. Once the site of ascetic control and discipline, the body is now the locus of pleasure, leisure, and consumption. Not a fixed biological given, “the body can indeed be reconstructed and refashioned to bring about profound changes of identity, including changes of gender” (21). While these transgender video autobiographies do in fact exemplify the malleability of the body, I suggest that they also display the enduring importance of ascetic control and discipline.

STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

Auguste Comte, Altruism and the Critique to Political Economy

Altruism is now a current concept among economists and sociologists. When Comte coined that word in 1850 he viewed to oppose a new spring of action to the selfish one that was, according to him and many other social observers, flourishing in the industrial society. While focusing his attention on the opposition between egoism and altruism, an opposition deemed to be the “great human issue”, Comte was not merely pursuing the elaboration of his own system of thought with the so-called “positive approach” and the development of the religion of humanity (Système de politique positive (1851-54). He was also pushing further the critique to political economy that he had exposed in the 4th lecture of his Cours de philosophie positive (1830-42).

Comte’s theory of altruism is a central point of his religious credo but it is also a critique to the political consequences of the spreading of political economy altruism that gave birth to a large debate. The topic is thus perfectly fitted to a history of the relations between sociology and economics.

The first considers how selfish behavior or egoism came to be considered as a major threat endangering the functioning of the industrial society, by Comte and those who were worried by the diffusion of egoism. Then, the second part summarizes the methodological critiques set forth in the Cours before connecting this critique to the economic content of the Système and the concept of altruism. The last part contrasts Spencer’s view of altruism to the one held by Comte and, how French political economists reacted, defecting the moral value of their science.

RC23-419.10

STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

The Great Performation: Economic Design Versus Social Design

There are now a significant number of studies done on the performativity of economics — to use Michel Callon’s words — according to which economics as a science is actually not describing the state of economic affairs, but performing its own principles about the functioning of the economy.

The topic of this communication is to suggest a larger view of the performative thesis in combining Callon’s and Polanyi’s approaches. In his Great Transformation (1944), Polanyi explained how much political economy contributed to the creation of the market system; however, he added that there existed as well counterforces protecting the society from such market system. Accordingly, the communication claims that there is a “Great Performation” at work. With the development of design economics, matching markets, economists are able to create market institutions that perform economics; but, on the other, alternative principles of exchange are as well designed in order to perform gift-giving behaviors. This side of the performance of social sciences through the creation of institutions of exchange has been taken into account.

The communication will first explain how Callon’s and Polanyi’s views can be combined to understand the role of played by social sciences, whether economics or sociology, in the functioning of this “Great Performation”. Then, the communication will explain how the different forces are actually at work, first in the domain of financial transactions, second in the domain of politics and social movements, third in the domain of human body parts. This part of the communication will be based on the current studies done on financial markets (notably by Donald McKenzie) and on my own work on organ transplantation.

Whatever Happened to Japan’s Radical Left?

In the early postwar period Japan developed two major parliamentary left political parties, the Japan Communist Party (JCP) and the Japan Socialist Party (JSP). Each was supported by labor union federations and other affiliated organizations,

which mobilized for social movement activities on many issues. By the late 1950s, an extra-parliamentary New Left emerged among university students. The first group broke from the JCP-dominated national student federation to form an independent Communist League, and a second independent student group developed out of Trotsky study groups on various campuses. For over a decade, the student-based New Left played a major role in social protests alongside Old Left parties, labor unions, and other civil society organizations.

During the late 1960s and early 1970s, Japan experienced a New Left protest cycle that paralleled those in Europe and the United States. It concerned very similar issues and had a similar trajectory of escalation of violence followed by strong state repression, which ended the protest cycle and drove the most radical elements underground or into exile. However, unlike the radical left in many European countries and the United States, the radical left in Japan has been largely invisible since the 1970s and is only now becoming somewhat more visible.

Based on long-term fieldwork, this paper will trace the Japanese radical left’s evolution into an “invisible civil society” that continues to engage in social movement activity, but has had little impact on mainstream Japanese political agendas and action repertoires. The analysis will examine internal conditions within the movement and its interaction with the larger Japanese social and political context, including public fear engendered by the escalation of violence, the rigid employment structure that permanently marginalized radical activists, continuing state counter-measures against the radical left, and the gradual dismantling of the support base for left political parties.

Relational Art and Managing Emotions

One of many intentions in art is to examine and portray emotional processes and social relations of the artist and other peoples’ emotions in different situations. The “traditional” artist carried a need to explore personal relationships or to portray emotions in social interaction at a distance. The relational aesthetics that has been of great significance since mid 1990 is oriented towards peoples’ social and emotional experiences in different contexts (Bourdieu). The relational artists’ ambition is to intervene in social situations and to find ways to visualize, communicate and reflect on the social exchanges that occur in these situations. The artist wants to problematize the existing emotional rules that occurs (Hochschild) and explore and process emotions such as hidden shame in Thomas Shiefs sence and the contribution to the restocking of emotional relations.

The purpose of this paper is to examine how the relational artist uses his/her artistic skills to intervene in and influence social communities and to understand what happens to the emotions expressed in these coherences. The aim is also to investigate what happens to the artists’ creativity and artisticity in an outward relational artistic work. How can the artist establish a constructive relation between his/her artistic identity and the social and emotional involvement in others doing emotional work? The paper also aims to explore how theories of emotion can contribute to an understanding of creativity as a dialectical relationship between individual and collective moments for art based on symbolic interactionism and micro sociology. The empirical material for the study is interviews with artists involved in artistic projects in workplaces in Sweden but also the study of non-institutionalized forms of relational aesthetics.

Dignity and Capabilities: An Approach to Human Development CANCELLED

To promote the full exercise of Human Rights it is necessary to have a comprehensive notion of dignity worthy of inclusion in the social, political and economic relevance of human development without losing sight of the notion of respect to personal identity, local context and cultural identity, all of these contemplating the importance of allowing social actors to become, by themselves, the ones who develop a capacity to construct quality of life, sustainable development and the overcoming of the other social problems. By explaining the situation in this way, it seems that the Theory of Capabilities gives the best solution, specifically the contribution made by philosopher Martha Nussbaum in which a capabilities list proposes that individuals with a full flourishment of capabilities would be able to become key actors in guaranteeing the fulfillment of Human Rights focusing on human development.

Recalling what has not been described above, it is not surprising described above, it is not surprising that the UN (United Nations) has given such attention to the Theory of Capabilities as a promising strategy to achieve the Millennium Development Goals (eradicating extreme poverty, achieving universal primary education, promoting gender equality and empowering women, reducing child and maternal mortality, ensuring environmental sustainability, etc.) However, and this is the main goal of this paper’s analysis, it seems like the implementation of Nussbaum’s Theory of Capabilities would make the UN’s action for social assistance, promoting Human Rights and...
of activity they tended to be treated as separate, disconnected projects and there was little evidence of strategies to link and enable wider system innovation.

An analytical and practical framework was developed in order to facilitate the clustering of projects around clearer areas of system innovation. Social network analysis involving stakeholder participation was carried out to assess the prospects for system innovation and plausible transition pathways up to 2020 in each partner city. The results showed major differences in the prospects for transition in different arenas. It also showed the emergence of key integrating non-technological innovations in different cities with the capacity to play a key role in making transition happen.

Beyond Piracy: The Materiality of Digital Objects and the Consumption of Copyright

With the growing use of digital technologies in media consumption, companies around the world have experienced a new frontier in providing goods and services to a wider range of consumers. Despite the elevated success of digital distribution of cultural objects like music, film, video, games, and books, the issue of illegal access and distribution of copyrighted materials has become a widely identified social problem. Economical, legal and criminological practices have largely dominated research on the topic of digital piracy, identifying and analyzing it in legal terms. Issues with these approaches arise as assumptions are carried forward in exploring and explaining these practices, resulting in their failure to identify this matter as the development of online consumption. By identifying this limitation in the literature, this paper sets out to create a conceptual model in approaching the study of digital piracy. Bridging the perspectives of cultural sociology with science and technology studies, my approach identifies the root of consumption practices in the properties of digital objects. Integrating the theoretical approach of cultural materiality, I explore how the conceptualization of digital objects as “dematerialized” dismisses important sociocultural dynamics of both the attributes of digital objects and the architecture of online services.

In identifying the importance for a ‘digital materiality’ perspective in research on digital piracy, I explain how the form and structure of services and goods results in the development of expectations and desires leading to the consumption of copyrighted material. The resulting conceptual approach speaks to a number of possible consequences regarding how we define and understand Internet technologies. The inclusion of cultural materiality to digital content also provides a new perspective on how previous sociological definitions of materiality have been limited to a particular conceptualization of physicality.

Sociologists and the Labour Movement: Between East and West

Sociologists and the labour movement: Between east and west

While a tradition of creative engagement between worker intellectuals and academic researchers in Western Europe has been documented recently (cf. Stewart and Martinez Lucio, 2011) a similar trajectory in Central and Eastern Europe remains largely unexplored. The contrasts and continuities between both regions forms the core of this paper. We examine and compare the different historical experiences of worker intellectuals and the academy in Poland and the UK, indentifying the re-emergence of a pattern of engagement not only within traditional sectors of the working class but also among the new, precarious workforce, including migrant workers (UK) and agency workers (Poland). We argue that this engagement can be characterised on the basis of different and historically dependent patterns of institutionalisation of the sociology of labour in these countries. Moreover, this in turn can be derived from the fate of the historical relationship between labour (in its different forms) and organic intellectuals. We draw examples from the experience of union organising and workers in the UK and Poland amongst new and emerging workplaces where the tradition of labour movement activity has been historically weak (or nonexistent).

The authors are either directly or indirectly participating in FP7 Marie Curie Initial Training Network Programme “Changing Employment”. This is providing a novel opportunity to link international funding opportunities in such a way as to foster cooperation between labour and academia.

Breaking the Ignorance Contract: White South Africans’ Recollections of Complicity and Collusion with Apartheid

It has become a commonplace joke in South Africa that one cannot find any white South African who admits to having voted for the Apartheid government. White South Africans tend to produce accounts of their past that present innocence, or at least, ignorance of how their privilege was premised upon the disadvantages and oppression of black South Africans. Focus groups were conducted with white South Africans who lived in South Africa during the apartheid years, and we asked our participants to engage in conversations about their racialisation into whiteness. They were invited to reflect on a) what they in fact did know, b) what they chose/preferred not to know, and c) what they now feel they legitimately can claim they did not know about the system and how it impacted the lives of black South Africans while holding their racial privilege in place. Drawing on the emergent field of epistemologies of ignorance, the paper investigates the costs and rewards of breaking faith with “the ignorance contract” that holds white collusion with racial privilege in place. I explore some of the complexities of dealing with the shame and continued self-interest that inhibits the admission of complicity.

Bringing Family Demography in: Class Variation in Family Behaviors and the Implications for Inequality Patterns

Stratification research focuses, traditionally, on the role of families as providing the life conditions for future achievements and opportunities. Studies have highlighted the importance of family structure and family behaviors (e.g., assortative mating) in producing and reproducing inequalities, class position and life chances. Recent changes in family patterns point attention to the interplay between social class and family demography, which is not yet fully incorporated in stratification research. Changes in family behaviors, including family formation and dissolution, fertility patterns and parenting practices, and the economic behavior of women are not uniform across social classes. Studies emphasize the importance of family structure (e.g., the vulnerable position of single-headed families); the economic consequences of divorce or the effect of homogamy on inequality among families. Recently, more attention is given to the contribution of family behaviors (e.g., assortative mating; differential fertility) to the general level of inequality.

In this paper I highlight the importance of class disparities in family behaviors and their consequences to the life chances of individuals. I emphasize in particular the important role of women’s educational attainment plays in determining family behaviors, and the various consequences of class and family interaction to the economic disparities between families and gender inequality within families in particular the gender division of paid and unpaid work. Recent studies, for example, document a higher risk of divorce for the lower classes. Similarly, women’s education is related to their work activity and the formation of dual-earner families. These differences further deepen disparities between families and individuals that grew up in different types of families located in different class positions. Taking class variation in family behaviors into account is necessary in order to understand the direction of inequalities and how different policies and institutional arrangements may alleviate them.

Cheating Among American University Students: A 30-Year Follow-up Study and a Comparative Study with Chinese University Students

Cheating is an increasing problem on college campuses, made even easier by the advancement in technology which has increased access to information. Furthermore, we are seeing a shift in attitudes toward cheating as well as a change in the definition. Faculty are reporting changes in cheating behavior. This current study reports the results of a 30-year follow-up study on cheating at an American university (Vandehey, Diekhoff, and LaBeff, 2007), as well as comparisons with a comparable sample of Chinese university students. Our findings indicate both cross-cultural differences but also similarities in cheating behavior and attitudes. Chinese students reported a higher incidence rate of cheating on exams, and a greater tendency to neutralize (i.e. justify) cheating. A factor positively correlated with American students cheating is a characteristic related to a cohort effect currently labeled the Milennial Generation or Generation Y students. Our results also point to factors that may be effective in preventing cheating.

Children’s School Achievement and Educational Aspirations: The Role of Parents’ Peer Group As Social Capital

Parental educational aspirations for their children’s educational careers have been found to be affected by the students’ school performance. Some available evidence suggests that parents with lower status background are more susceptible to the detrimental effects of poor school achievement. However, explanations for this phenomenon have not been empirically tested yet. We hypothesize that the aspirations of parents with lower social status are more reactive to constraints because of being embedded in less ambitious social contexts and are, thus, less endowed with social capital. These hypotheses are tested with data from the Mannheim Educational Panel Study (MEPS, where participants are primary-school parents in Germany. Firstly we found strong net-effects of the level and temporal development of the children’s grade-point average on the parents’ educational aspirations, which strongly decreases with increasing parental educational level. Secondly, aside from the children’s academic achievement, the average aspiration level in the parents’ egocentric network is found to exert significant net-effects on the parents’ educational aspirations. Thirdly, the aspirations in the peer group moderate both the effect of the level and temporal development of the children’s grades on the parental aspirations: Parents with high aspiration contexts are less willing to adapt their aspirations in view of their children’s poor educational performance. Fourthly, the compositional difference in the peer group’s aspiration level between families with different educational status explains their different willingness to adapt their ambitions to their children’s achievement reality completely. Thus, a positive attitude toward education in the parental social network serves as a protection against detrimental effects of poor school achievement and as intergenerational social capital for their children. These results are not consistent with a simple version of a rational-choice explanation of social capital utilization.

How Media Cultivates Body Perception and Sexual Attitudes: The Effect of Television, Magazines, Video Games, and Internet

In the late 1960s, George Gerbner developed cultivation theory to understand how exposure to television shapes individuals’ perceptions, particularly violence in the real world. Research using cultivation theory consistently showed that heavy television viewers were more likely to perceive the world as more violent, even after controlling for negative experiences involving violent situations. Gerbner later extended cultivation research to sex-role stereotypes and sexuality (Gerbner and Shanahan, 1972).

Using cultivation theory, the current study explores how different types of media influence individuals’ body perception and sexual attitudes. The media studied are television, magazines, video games, and internet. The sexual attitudes studies are acceptance to hooking-up (casual sexual encounter) and rape myths. For the current study, we collected data from undergraduate students at an American university, using an online survey. The data indicate that body perception and sexual attitudes differ by media type consumed. More specifically, we find that (1) controlling for gender and self-esteem, exposure to television, magazines, video games, and internet is negatively associated with individuals’ evaluation of self body image, and that (2) high exposure to television, magazines, video games, and internet correlates to more mythical sexual attitudes and sex-role stereotypes. We will discuss the implications of the results and provide suggestions for improving self body perception and eliminating sexual myths.

Debating Canadian Climate Change Policy: Policy Networks and Discourse Coalitions in National Media News

The news media serve as an important forum for public debate among key actors and organizations involved in climate change policy networks. We examine national news coverage of climate change policy debate in Canada during 2007-2008, which is a peak period in national climate change news coverage. We use a discourse analysis approach to answer four questions: Who are the central organizational actors who appear in national news coverage? What are the central discourses about climate change in national news coverage? How do these central organizations cluster around shared agreement over key climate change discourses? How do these central organizations cluster around shared opposition to key climate change discourses? By answering these research questions, we see how the national media and key news sources attribute responsibility for addressing climate change, and define the political responses that should be implemented to mitigate or adapt to climate change. We also gain insight into the ways that organizations align around particular policies and ways of understanding climate change, resulting in discourse coalitions, as well as rifts in climate change policy debate.

Old Harry and New Media: Environmental Movements and the Oil-Tourism Interface in the Gulf of St. Lawrence

Over the past two decades, offshore oil development and tourism have gained importance within the political economy of Atlantic Canada. In the province of Newfoundland, these sectors represent alternative models for living with and making use of coastal environments. While environmental movements routinely mobilize against oil projects like the Alberta oil sands, Enbridge pipeline, or Keystone XL pipeline, there has been an absence of critical engagement by environmental movements in relation to offshore oil development in Newfoundland. However, recent proposals to open up oil exploration in the Gulf of St. Lawrence, where Old Harry and New Media, in the St. Lawrence National Park, has sparked resistance from environmental movements and has brought the tourism-oil interface into sharper focus. We draw on internet ethnography of key websites and web 2.0 content, as well as interviews with core members of environmental organizations, in order to better understand how environmental movements are for intervening in environmental governance and shaping the oil-tourism interface in the region. Our analysis shows that environmental organizations use websites and web 2.0 applications to make productive use of the tensions between different political and ecological scales. These new media technologies and environmental movements important tools for insertion themselves into the oil-tourism interface and defining offshore oil development as both environmentally and socially problematic.

How to Avoid “Normal” Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process

This communication aims to describe how two high-risk organizations are operated, i.e. nuclear power plants and railway operation system. These technologies are so complex that ambiguous situations often arise. Organizations’ response to uncertainty usually relies on procedures. Despite a huge amount of technical documents, applying a procedure is not such an easy task to perform. The procedures must fit the situation and help to make sense (Weick, 1995) of it. As they appear, “normally disturbed situations” (Journé, 1999) seem to be quite unique. Due to systems’ complexity, the process may be in different phases, workers teams may be available or not...Thus coping with technological complexity and uncertainty implies operators to make “difficult tradeoffs and decisions about how much risk is acceptable and even how to measure the risk” (Levenson et al., 2009, 240). Rather than focusing on major failures, the communication zooms on day-to-day activities, on how operators make technical decisions that try to encompass all the demanding issues of high-risk systems (safety, system availability, workers’ safety, environmental protection, etc.).

Both organizations studied are characterized by a strong technical and social division of work: high-risk systems operators turn to be specialists in their field (production, safety, maintenance, etc.). Yet, these specialists are interdependent regarding the organizations’ functioning: organizational reliability thus relies on various interactions between humans and technical constraints. How much risk is acceptable and how to measure the risk? Our empirical results describe in depth the nature of arrangements and negotiations made within and between occupational groups to articulate the work. To increase decision-making rationality, professionals communicate with each other. They develop argumentation and explicitation practices to make their point visible and to contribute to the collective bargain about technical decisions that have to be made. In sum, a major way to cope with complexity relies on communications performed in situation, especially during technical points-of-view confrontations.

STOLL, FLORIAN* (University of Bayreuth, Germany, stollflorian@gmail.com)

Future Visions in Social Milieus Among the Middle-Class of Nairobi and Mombasa – Empirical Results and Theoretization of Future Concepts

In this paper I will focus on own research on future visions in the middle classes of Nairobi and Mombasa. These results will be the basis for a theoretical interpretation of these views on future. The various future visions among the different social groups (=milieus) in the middle classes of these two Kenyan cities point at certain social developments and can thus be interpreted as paradigmatic tendencies in the present society. While the social context of the milieus and their future visions might reflect global tendencies like forms of urbanisation they are at the same time highly local as they are adaptations to specific conditions - as the term 'glocalization' (Robertson) suggests.

Different social milieus in the middle classes of Nairobi and Mombasa have certain lifestyles and related future visions which reflect different tendencies of the contemporary social world. Kenya is a very interesting case study as the country has undergone considerable change and an increased integration into global structures in the last 20 years while it is still a developing country. Especially the differences in future orientations of East Africa’s dynamic economic centers Nairobi and the old multi-ethnic and religious city Mombasa can reveal a variety of future references. Thus I will demonstrate by paradigmatic examples how future orientations of milieus in urban Kenya reflect specific social developments and how they can contribute to the theoretical interpretation of sociological future concepts. This way the paper even tries to (re)construct social theory from a specific perspective of the Global South.

STOLL, FLORIAN* (University of Bayreuth, Germany, stollflorian@gmail.com)

Social Milieus in the Middle-Class of Nairobi – Lifestyles, Attitudes and Future Visions Beyond Homogeneity

One of the key questions in the debate on (political) orientations of middle-class citizens is how these groups develop their attitudes. To answer this it helps to consider political positions in their heterogeneous sociocultural contexts among the different groups of the middle classes. As an example I will take a look at some social milieus, their lifestyles and their future visions in the middle-class of Nairobi – with a look at milieus in Mombasa as a contrast.

The reconstruction of milieus in the specific context of Kenya ’s capital aims to demonstrate how a variety of factors influences the lifestyles of Nairobians and that there are heterogenous groups with different lifestyles in the middle income strata.

Future visions are an excellent indicator for lifestyles and corresponding orientations of milieus to see how they integrate these visions into their daily practices. E.g. in Nairobi developed over the last decade a milieu of Young Urban Professionals between 20 and 35 years who have a consume oriented lifestyle and who are bound to the city. They are usually not driven by religious or traditional values. Their oriental insights and future visions differ a lot from groups who are strongly led by religious affiliations, (neo-)tribal values or by connections to the country side.

So this paper will provide a sketch of exemplary milieus, their life styles, their living conditions and their future visions. Another relevant question might be how different milieus look for solutions or demand different actions concerning the threat of Islamist terror group Al Shabaab whose last attack shook Nairobi in September 2013. All aspects mentioned will contribute to draw a complex picture of the different social milieus in the Nairobi middle class and their divergent lifestyles.

STORM, INGRID* (University of Manchester, ingrid.storm@manchester.ac.uk)

Morality in Context: A Multilevel Analysis of the Relationship Between Religion, Governance and Values in Europe

The exact relationship between religiosity and moral values is understudied, and it is so far unclear what the process of secularisation means for the morality of Europeans. Attitudes to religiosity and the visibility of religion, must be seen in light of whether religion’s presence in the public sphere strengthens moral communities and identities, or merely highlight moral differences.

From Haidt’s (2012) moral foundations theory and Norris and Inglehart’s (2004) existential origins theory, we know that religion is associated with traditional and conservative values as well as low levels of political and economic development. One question is whether religion can act as a substitute for well-functioning secular authorities where these are absent, or if it simply has an additional effect on morality that is independent of the quality of governance. Another question is whether the relationship between religiosity and morality changes as the average citizen becomes less religious, and as religious diversity increases.

Using data from four waves of the European Values Study (EVS) 1981-2008, we analyze attitudes to personal autonomy and self interest in a multilevel model of 48 European countries. Results show that religiosity is most associated with moral values that concern personal and sexual autonomy, that individual religiosity is more associated with morality in countries with high levels of religiosity and that religious context is only negatively associated with self-interest in countries with low quality of governance.

Included But Still Not Equal? Board Interaction and Gender Segregation

Abstract

Included but still not equal? Board interaction and gender segregation

Norway was the first country in the world to pass legislation specifying gender representation on company boards of directors. The Norwegian Parliament passed a new regulation in December 2003 that required at least 40 percent of each gender on company boards. Before the reform, law opponents claimed that the new women directors would not be able to, or allowed to, participate fully in board decision-making; instead their role would only be window dressing. Based on a questionnaire sent to all directors in public limited companies in 2009, the article studies this allegation.

Results show that women directors report less ability to influence board decisions than men directors. Moreover, women to a lesser extent feel they are part of the inner circle on boards, where such phenomena are perceived to exist. These tendencies also hold when we control for a lot of other independent variables such as board role, ownership interest, number of directorships and occupation. Hence, the he quota regulated boards show tendencies of hierarchical gender re-segregation.

Wearing the Veil: Hijab, Islam and Job Qualifications As Determinants of Social Attitudes Toward Immigrant Women in Norway

Immigrant women are a particularly vulnerable part of immigrant population. In this paper we analyse negative attitudes toward immigrant women in Norway. We focus on immigrant women’s formal job qualifications, their religious background and wearing of Hijab—the headscarf that is sometimes used by Muslim women. Using survey-embedded experiments (N=1250) we are able to analyse the net-effects on attitudes of job qualifications, Islamic religious background and Hijab. The results show that natives have more negative views of Muslim women that wear a Hijab, but that the negative effects of Hijab are reduced when a woman wearing it has higher education. With a single exception, the results also show that Muslim background in itself (i.e., without Hijab) does not have any strong effects on attitudes of natives toward immigrant women. The results are discussed with a point of departure in cultural threat theories and current socio-economic situation in Norway.

Provincializing Postsecularism: Critical Reflections On New Western Civil Religion

This paper aims to denounce the provincialism of the European postsecularism, considering that an insufficient pluralism was often invoked by European Union in order to justify the cultural failure of her integration’s process. The Post- secularist orientation risks, if applied without an adequate sociological and inter- cultural reflection, to become new civil religion. In the first part I will bring up the consequences of this critical reflection on the actually relation between State and religion in the specific context of Italian society, lacerated between a public secularism and a private Christianity. In the second part, I will try to apply to the European postsecularism, as discursive regime of the European identity, two critical hypothesis emerged from the Post-colonial Studies: the suggestion to “Provinc- ialize Europe” and the critic to her “Cultural Hegemony”. Provincializing Postsecu- larism does not mean, of course, repudiate or abandon secularism, but thinking about how to renew it. In Italy the transition to post-secularism can not be seen as an automatic historical transition, but also as a case of translation: translation of plural memories, religious tradition, desires of believers. In the third part, I appeal to the hermeneutic tradition of Paul Ricoeur, trying to connect a new translation of postsecularism to a new phenomenology of the Italian believer, hoping that the recognition of the religious pluralism can contribute to the constitution of a lay European political community.

STRECKER, DAVID* (University of Jena, david.strecker@uni-jena. de)

How Market Economy Did Away with Violence: A Liberal Story and The Ugly Truth of Contemporary Slavery

The history of power and violence in modernity has traditionally been conceptu- alized within a nation state-framework and along notions of centralization: While socially dispersed in pre-modern times, power and violence had later be-
come increasingly concentrated in the political realm. In the course of functional differentiation, the core feature of modern societies, a state apparatus developed which organized positions of power and ultimately monopolized the legitimate use of violence. Violence, thereby, more or less disappeared from all other social spheres which turned into arenas of predominantly peaceful cooperation. With regard to its process, this pattern was facilitated by the alleged irrecircumstances of market transactions: Contractual relations and trade are premised on trust and, thus, do not allow for manifest violence in the economic realm. Accordingly, it has been claimed that capitalism was the driving force behind the abolition of slavery. However, violent labour relations have not ceded to exist. In fact, contemporary slavery is a pervasive phenomenon subjecting millions of people to privatized violence. This papers aims at making sense of this situation by discussing the relative merits of the claim about capitalism's civilizing effects on labour and relating it to contemporary slavery from the perspective of a world society shaped by economic globalization and the transformation of state authority.

The Transition from School to University: Pressure and Coping in Catalonia (Spain)

In this paper I present results from a study about university transitions in Spain. Young people face uncertainty, precariousness and discourses that individualize structural problems currently in most Western societies. Spain suffers, moreover, from the severe effects of economic crisis and high unemployment, accompanied by severe cuts in the education system and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplifying the sample with first-year students from underrepresented groups. I selected and analyzed several of the focus group interviews and the documentary method including elements of intersectional analysis.

The end of school is characterized by uncertainties and pressures, especially related to being admitted to the chosen studies, the study choice itself and fears not to be successful in university – both, academically and socially. Students experience these pressures differently and show varying strategies to handle them, whereas their personal characteristics, structural dimensions and representations interact. I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

Creating a Gift-Based Sphere of Exchange in Greece

Background: A large number of groups all over the world are creating alternative, utopian visions of a world governed by non-monetary economies based on bartering and gift-exchange. Both the perceived lack of solidarity in market economies as well as the daunting existential situations people are facing in terms of poverty provide the ground on which such visions of solidarity economies are exploding today.

The TEM scheme in Volos: The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war; cutting the trade relations between Greece and the Middle East) and the effects of the austerity policies (creating a lack of disposable income in the official currency). In Volos, a non-monetary distributive system came into being in 2010 with the installation of the TEM scheme. Connecting time-banking, a complementary currency model and free bazaars, citizens of Volos are trying to realize an alternative economic system.

Contradictions and Challenges: However, the contradictions of this real-world application of a solidarity economy are not to be neglected. Ethnographic accounts of gift-based economies suggest a high degree of social control and mutual distrust in gift-economies. National states as well as the mainstream market economy are fearing the potential bypassing of commercial law and tax obligations. Social groups that are able to produce economic value (think children, disabled, non-skilled) are at risk of being even more marginalised. Furthermore, it is likely that the TEM scheme only provides an alternative sphere of exchange rather than replacing the mainstream economical and societal model.

The case study that will be presented shows how citizens enact a social utopia and the contradictions and pitfalls they are facing while doing so.

Feminist Theorizing of Intersectionality

This paper arises from collective work within the 5-year Swedish Research Council project, “Feminist Theorizations of Intersectionality”, organized within the GEXcel College for Advanced Transdisciplinary Gender Studies (Örebro-Karls- stad-Linköping Universities), with a specific focus on the equality architecture, and in part from the EU FP6 project QUING.

The whole larger project examines intersectionality as a central concept in contemporary gender studies, in relation and dialogue with the diverse, and sometimes conflictual, theoretical and political stances in feminist debates. The project is designed against the background of the rich and diverse feminist traditions for theorizing of intersectionality, but it is also informed by the tensions between these traditions.

This paper analyses and compares how equality architectures (Walby, Armstrong, Strid, 2012, Social Politics) in Europe are restructured and challenged by the developments related to intersectionality and diversity, and the implications of the restructuring for theories of intersectionality. It links concepts of equality and intersectionality to policy frames and frameworks. It examines how the challenges of intersectionality are reflected and dealt with “on the ground”, in practical equality architectures on national and institutional level, e.g., in governments and universities, and the implications for gender equality and for the quality of the gender equality architecture. It takes the merger of equality institutions in European countries as case studies and analyses the implications of the mergers for theory and practice.

Preliminary conclusions based on previous research (Walby, Armstrong, Strid, 2012, Social Politics, QUING) suggest that even though the quality of the architecture may have improved by the inclusion of multiple inequalities, there may be a reduction of quality in terms of resources. For theory, preliminary conclusions suggest that intersectionality as mutual shaping (Walby, Armstrong, Strid, 2012, Sociology) may be a more successful approach to theory and practice than the often-prioritised mutual constitution.

Uses Of Social Theory In Comparative Religious Studies: Assessing Chi-dester's Social Redescription Of Religion In South Africa

In analysing “sociality” (the formation of inclusive or exclusionary collective identities), “materiality” (gendered bodily performances of rituals, sensory experiences and the desire for material objects) and “exchange” (communist or capitalist economic exchanges in rituals of gift-giving and expenditure) as three aspects of religion within local and global contexts, David Chidester has used the social theories of Durkheim, Bataille, WEB Du Bois, Weber, Marx-Adorno-Horkheimer, Benjamin and others. The purpose of this paper will be to assess what we have gained from Chidester’s use of such social categories to redescribe religion in South Africa within a global context, by relating Wild Religion: Tracking the Sacred in South Africa (2012) to his preceding oeuvre of twenty years, particularly Savage Systems: Colonialism and Comparative Religion in Southern Africa (1996) and Religions of South Africa (1992). In line with the aim of this panel I will, in assessing Chidester’s social redescription of religion in South Africa within a global context, reflect on the legitimacy of using etic vs. emic emic categories.

Competing Narratives of Modernity and Muslim Middle Class in India

Competing Narratives of Modernity and Muslim Middle Class in India

The last decade has seen an increased interest in the “phenomenal rise of the Indian middle class”. With economic liberalization since the 1990s, the entering of multinationals into the Indian market and the simultaneous process of a rapidly growing transnational media and consumption culture “new economies of desire” have developed. Boundaries between ‘traditional India’ and the ‘modern West’ has been broken down and a new national self-image as a modern global player has emerged. Public Indian discourses typically make a correlation between the growing middle class and the national pride of modern India. While increasing consumer choices, and western connote values are important symbolic markers of middle class membership, the latter is linked to an expressive and confident af-

Emergence of the Interns’ Collective Actions

This paper looks at the protests at both collective and individual levels taken by student interns in Chongqing in the summer of 2013. Drawing on a 5-month participant observation of the protesters’ school life and their internships in the electronic manufacturer YD, this article examines the favourable factors, features and outcomes of the interns’ collective actions. The author first argues that the KMT officially banned the use of Taiwanese-dialect? Even more curious, why did Taiwanese-dialect cinema manage to rise in the 1950s while the émigré regime on one hand had to maintain legitimacy domestically, and fought against the Communist Party of China (CPC) to win over overseas Chinese on the other. The unexpected success of Taiwanese-dialect cinema was turned into KMT’s asset to secure overseas Chinese support, and hence the dialect filmmaking was tolerated. After discovering other ways to win over overseas Chinese, the KMT manipulated regulations on filmmaking and initiated a national language campaign to stigmatize the usage of Taiwanese dialect, all of which led to the demise of Taiwanese-dialect cinema.

The Representations of Disabled People in Elementary School Textbooks in Post-War Taiwan

Existing literature has primarily investigated the representations of class, gender, ethnicity, and sexuality in textbooks. However, few studies focus on the representation of disability in the education system. This paper uses content analysis to explore the frequencies, categories, naming and portrayal of disabled people in elementary school textbooks in Taiwan, from 1952 to 2003. From a disability studies’ viewpoint, we explore the ableism ideology in the textbooks. First, disabled people are underrepresented in the textbook. The disabled people represented in the textbooks were mostly people with physical disabilities; people with mental illnesses were ignored. Second, the naming of people with disabilities change from “the disabled” to “disabled people” to “disabled people” or “disabled persons”. Third, people with disabilities were usually viewed as “the other,” who needed to be helped or who inspired “normal” people. Fourth, disability was defined as an individual problem instead of a social problem. Finally, disabled people represented in textbooks were mostly voiceless. There was no discussion on the world view of disabled people or disability, and there were very few discussions addressing the diversity and multiculturalism of disabled people.

The Commodification of Education and Labor in China

This article reveals the mechanism involved in the mutually complementary commodification of education and labor, and the results of this commodification. Emphasizing institutional factors, this article argues that the state plays a dominant role in the combination of the two types of commodification. It also scrutinizes the impact of this dual commodification on student workers—deskilling, alienation, fragmented social lives, and industrial injustice—as well as their response.

Contesting Hegemonic Language through Films: A Study of the Vicissitudes of Taiwanese-Dialect Cinema

This paper examines the cultural warfare over national languages through investigating the rise and fall of Taiwanese-dialect cinema, which was identified as a counter-hegemonic project against the monolingual ideology in Taiwan. How did Taiwanese-dialect cinema manage to rise in the 1950s while the émigré regime officially banned the use of Taiwanese-dialect? More curious, why did the dialect cinema suddenly die out ten years later? In this paper, I will argue that the Taiwan’s émigré regime intentionally resisted KMT’s language policy through skillfully acquiring overseas capital to produce dialect films, which were highly popular among overseas Chinese in Southeast Asia. In the climate of Cold War, the KMT on one hand had to maintain legitimacy domestically, and fought against the Communist Party of China (CPC) to win over overseas Chinese on the other. The unexpected success of Taiwanese-dialect cinema was turned into KMT’s asset to secure overseas Chinese support, and hence the dialect filmmaking was tolerated. After discovering other ways to win over overseas Chinese, the KMT manipulated regulations on filmmaking and initiated a national language campaign to stigmatize the usage of Taiwanese dialect, all of which led to the demise of Taiwanese-dialect cinema.

 Noborét Elías: Figuration as a Solution of Problem of Society of Individuals

One of the questions that Norbert Elias tries to resolve in his work–either explicitly or implicitly–is the issue of the relationship between the individual and society. Elias critically assesses two resolutions to this issue that sociology offered in his time, namely the Weberian conception of individualism that postulates the human individual as the starting point of sociological thought, and the Durkheimian concept of holism, which considered society as a whole as the starting point, giving regard to holistic, supra-individual social facts. Elias considers both of these solutions one-sided and unsatisfactory, and in his conception tries to supercede them. His strategy is close to that of Georg Simmel before him. It consists in highlighting the “third” that lies between the individual and society, which connects them. Simmel calls this third “Wechselwirkung”. Elias speaks about “figuration”. In this paper, we consider how successful Elias’ strategy is, its positives and its shortcomings.

Mosque associations represent the social and organisational core of Muslim religious life in Germany. Their primary goal is both the practice of religion and the transfer of religious knowledge to its members, irrespective of their specific shape (e.g., organisation affiliation, ethnic composition, etc.). More recently, sociologists draw attention to the increasing multifunctionality of the mosque associations, which also offer leisure activities and courses with an orientation towards the German society, like e.g. German language courses. Previous studies and my own research suggest that this development is a result from both internal changes (demographic change, unemployment among members) and changing expectations of their environment, which are closely linked to the widespread integration debate.

Therefore, a closer look on the expectations of the environment reveals a paradoxical situation. On the one hand Muslims are expected to open up for the German society by offering services which go beyond religious activities and support the socio-economic advancement of their members. On the other hand authorities and other urban actors are sceptical about additional services within the mosques as they fear that the infrastructure might increase segregation of the Muslim population and thereby endanger integration.

The present paper examines how mosque associations deal with the conflict between their own plans and the contradictory expectations of their urban environment. I have conducted case studies about mosque building conflicts in several cities of North-Rhine-Westphalia. The empirical findings are based on expert-interviews with representatives of Muslim communities and churches, neighbourhood associations, administrations and politicians. Furthermore, I have analysed newspapers and different documents (statutes, city council records, declarations) and I did participant observation in council meetings and neighbourhood assemblies. A case comparison shows, from the bottom-up perspective, how different actor-constellations and local systems of relevance affect the development of the local Muslim organisations.

In Japan, the number of people who moving to rural areas (or the countryside) from urban areas (or metropolitan area) is currently increasing. In this presentation, I will examine this phenomenon by using the idea of "lifestyle migration", and then discuss the relationship between the decision to migrate and enhanced quality of life.

In foreign countries, "lifestyle migration" means moving to elsewhere in search for a better way of life (Benson & O'Reilly 2009). This idea is associated with a new form of international migration, unlike the case of internal migration in Japan. However, "lifestyle migration" occurs as result of self-reflection among these migrants, and consequently, this idea can be adapted to describe Japanese who move to rural areas from urban areas in Japan.

Searching for a better way of life by moving to the countryside relates to quality of life. For example, in my research at Chichibu area in Saitama Prefecture, I found that some migrants engaged in farming, but they often visited the nearby urban area where they engaged in consumption activities. Meanwhile, some people chose to keep working in Tokyo. That is, a sense of "the better way of life" differs according to each migrant. However, moving to rural areas had a positive impact on the health and mindset of migrants; in the countryside, they could achieve balance between work and leisure. Notably, they do not move for the sake of work or leisure alone, but aim to control both. In my presentation, I will attempt to consider the relationship between "lifestyle migration" and quality of life through a case study of migrants who moved to the countryside in Japan.

Changes in the family relations were also notorious. The family model characteristic of the 1950 decade lost importance, substituted by a new model, whose members are not only defined by sex and age criteria. This change was not, however, linear. It summed up the coexistence of tradition and modern values with nowadays-individual values. Some of these changes can be seen in the declining marriage and fertility rates and increases in co-habitation and non-marital unions. Parallel to this, there was an increase in the number of divorces and a decrease in the only male breadwinner family. There was also an increase in the number of families with a female head, not restricted to low income groups. It is important to mention the impact of the new female role in the society in these family changes. Increase in the women's schooling, decrease in fertility rates and the female participation in the labor market influenced in a significant way the family relations.

The main objective of this study is to analyze urban families in the last 50 years, using data from the Brazilian Demographic Census. The analysis consider different dimensions: the impact of changes in gender relations with respect to familiar responsibility, effects of family income, status of marriage/union, the age and schooling of the head of the family and regional inequalities.

In spite of the changes in the family arrangements, it is worth mentioning the maintenance of the family ties in the Brazilian society. These changes in the Brazilian families are though more complex than the changes in the developed countries due to the strength of patriarchal values that might be a deep-seated characteristic of the Brazilian culture.

Resident of Iitate-mura in Fukushima prefecture, located within 30 to 50 km radius of TEPCO's Fukushima Daiichi nuclear power plant, got their first instruction to evacuate 42 days after the earthquake, and they began to evacuate in mid May. In the evening of March 15, just 4 days after the accident, the radiation level measured in front of the town hall of the village showed 44.7μSv/h. So the majority of villagers stayed in the village where the radiation was level was high, for over 2 months. Why was their evacuation delayed? There are two reasons behind this delay. First, although the Japanese government enlarged the evacuation zone from 10 km radius to 30 km radius shortly after the accident, most of Iitate village is outside the 30 km radius. Second, village authorities set priority on protecting and sustaining the major industries and jobs in the village. Whether this decision was appropriate should be put to review. Now the villagers are in an even more difficult situation, being unable to draw a plan to rebuild their lives while the government is avoiding any observation. In my presentation, I will attempt to consider the relationship between "lifestyle migration" and quality of life through a case study of migrants who moved to the countryside in Japan.

The Role of Family Caregivers and Their Working Lives: Convergences and Divergences Between France and Japan

This paper presents the method and results of a comparative research on family caregivers and their professional trajectories in France (Ile de France) and Japan (Osaka).

The aim of the research is to chart two kinds of trajectories in a person’s life: professional and of caregiving, and to examine their interdependence. In the current context of the prolongation of life expectancy, a person can provide care several times in different periods of life, or care for more than one person in parallel at the same time. The care provided may be for different causes of frailty. It is therefore important to look into the temporality and the global view of the caregiver’s life without limiting the study to a certain type of frailty.

We rely upon a sequential analysis of data on caregiver's trajectories. We also collected on care networks developed around the caregiver by individual participating in the care, including care for the caregiver. The typologies of professional trajectories are analyzed in relation with variables such as socio-demographic characteristics of the caregiver and care-receiver, types of care networks, etc.

The starting point for the analysis is the question whether or not these care networks develop because caregivers engage in informal care work. The analysis will thus present the methodological questions that arise for an intergenerational and gender perspective on the development of care networks.

The data analyzed in this paper were collected through a two-part mail and in-person survey of 630 households in two peri-urban, low-income, informal settlements in central Texas. The survey documents housing conditions and needs in these communities where a significant portion of the population is Hispanic, elderly, and low-income. Analysis of the survey data interrogates the links between chronic illness and poor dwelling conditions in an aging population. To better understand the intersections between aging, health and low-income, we collected data on reported problems with the dwellings and self-built housing we analyzed detailed data on respondents’ efforts to achieve compromise will broaden our understanding of the multiple meanings of leisure—and social life.
the last two decades, the academic interests about the relation of local politics and gender have been on rise and policy-makers who are aware of this fact have been paying serious efforts to bring local actors to the front to increase women's political involvement. Since the 2000s, Turkish government has charged the various branches of politics, including the municipalities and mayors in the scope of this research, in enhancing women's participation particularly in local politics. However, recent studies and statistics reveal that neither the number of women at local level politics have been increased either these responsibilities have been fully acknowledged by the local actors in Turkey.

It is assumed that, as women representatives, female mayors would contribute to increase women's political participation in local politics and be more assertive to fulfill the related responsibilities to support women's involvement into local political relations. Thus, in the case of 2009 local elections in Turkey, this study aims to find out to what extent female mayors can contribute in enhancing women's political involvement at local level. In that regard, this research will try to analyze the related discourse and activities of female mayors who were selected in 2009 local elections in Turkey by in-depth interviews.

The Controversy: Family Separation and the Immigration Law in the U.S.a

This study examines whether the Courts in the United States are recognizing the provisions of the UN Convention on the Rights of the Child as an international customary law even though it is not ratified by the U.S.A. Drawing on multiple primary and secondary sources, including the work of scholars and legal professionals the article explains the deportation of parents and discusses the family separation through immigration procedures and human rights approaches. The article then presents the results of recent court opinions, and compares court decisions. It concludes that some courts have made significant progress toward family integrity and for the best interest of the child, however some court decisions rejected to recognize the Convention and gave priority to the State interest and deported numerous parents even though their children are citizen of the U.S.A. On the other hand, this article also identifies a need for further improvement, which can be accomplished through the contributions of national and international organizations.

Care Migration in Asia: A Comparative Study

As some countries in Asia develop economically and experience major demographic challenges such as persistent below-replacement fertility, the issue of immigration and care provisions emerges. It is particularly important in the Asian context where people have to rely on the market in the absence of effective welfare state. This Asian situation is called “liberal familialism.” In this paper we try to answer the following questions relating to care migration by drawing on data from China, Japan, South Korea, Taiwan, Singapore, Thailand, and Vietnam: Whether and how care provision is mediated by international migration or internal migration? What are the working conditions – are the migrant care workers documented or undocumented? Are they protected or covered under the local employment laws? To what extent are they allowed to immigrate to the host countries? What are their ethnicities and nationalities? What is the history of employing care workers in different countries – for childcare and/or for elderly care? What are the primary sites at which care is provided (for example, in the households via marriage migration or in institutional spaces via healthcare migration)? What are the challenges faced by sending countries and receiving countries? Finally, what are the ways in which care migration relates to various forms of social stratifications in Asia – in particular, gender, class, ethnicity, and urban-rural inequalities?

Lateral Networks of Homeowner Associations and Civil Society Building in Urban China

Civil society organizations are crucial for the development of civil society, because these organizations teach citizens democratic practices on the one hand, and constrain the power of the state on the other. Recently, lateral networks of homeowner associations are being formed in many Chinese cities. While not being recognized by the authoritarian state or even faced with potential political risks, these networks are playing an ever more important role in facilitating homeowners’ collective actions to defend their private property rights. Existing literature tends to understand homeowners’ collective action as a reactive response to counteract the powerful real estate developers and their management agencies in a precarious housing market. But based on interviews, participant observations, and online discussions of the lateral networks of homeowner associations in Beijing, Shanghai, and Guangzhou, this study argues that these networks are proactively adopted as important infrastructures for the development of civil society in China. Driven by the ambitions of promoting the development of civic organizations in China, the activists use homeowner associations as the most practical way to make such attempts. They not only deal with immediate material interests concerning housing and neighborhood management, but also strive for the participation of member associations on a regular basis and for the protection and promotion of civic activities. This paper attempts to explore homeowner activists’ motivations as well as their strategies and tactics to establish and run such lateral networks. It has profound implications for state-society interactions and civil society building in contemporary urban China.

Pro-Growth Coalitions and Homeowner Activism – a Comparative Study in Shanghai and Taipei

Middle-class homeowners, whom one would expect to be the gainers of China’s urbanization, have formed one of the most important new social groups such as aged groups or other social groups such as relocated households or migrant workers. The reality of how these groups start collective actions – petition, litigation, sit-in demonstration – to uphold their private property rights. Existing literature tends to understand homeowners’ discontent as a result of the immature housing market, the deceitful real estate developers and their management agencies, and the non-independent legal system. While focusing on immediate causes, existing studies neglect more important structural factors that contribute to homeowner activism. By adopting a comparative study – based on documents and interviews – in Shanghai and Taipei, the author argues that different levels of state intervention in housing-related disputes lead to different dynamics of homeowner activism. In Shanghai, the local states are in de facto land-owners and play a dominant role in planning, relocating, and leasing the land to the developers. They build close relationships with the developers. When housing disputes emerge, the local states are motivated to intervene and ally with the developers considering the fact that they have substantial interests involved. This explains why more often than not homeowner activism in Shanghai directly targets the government and proceeds in a non-institutional manner. But in Taipei, the local states are mere regulators in land development processes. Individual land-owners initiate the redevelopment projects and negotiate with the developers. Housing disputes in Taipei are usually dealt with through negotiation or courts. This study offers a new perspective to understand increasing homeowner activism in Chinese cities. It also has profound implications for state-society interactions and urban governance in contemporary China.

International Migration of Nurses from India: A Case Study of Delhi Nursing Colleges

This paper examines the extent of potential nurse migration from India and their causes, types and nature. Methods: Apart from empirical study, the research also relies on secondary sources. The study is based on the response of 48 potential migrant nurses from Delhi.

Discussion: India has been and will continue to be an important source country of nurses for the developed countries in the light of emerging shortfall of nurses in the major destination countries in the future. Under the current scenario, it may be presumed an annual out-flow of 8-10 thousand nurses from India. However, in spite of the fact that the country has a stock of 1.6 million registered nurses, there is an additional requirement of 10 lakh nurses to fulfill nurse-population ratio of 1:500. The current nurse-population ratio stand at 1:1100 compared to the health needs of the country average of 1:150. Therefore, India needs to make double effort to produce nurses for meeting both domestic and international demand by creating a vast and sustainable infrastructure for the production and training of nurses.

Policy suggestions: First, improving the availability of data on migratory flows of nurses from the country. Second, a detailed analysis of alternatives available for procuring and filling up the vacant posts in the shortage areas on the one hand, and identifying and targeting the surplus areas for international recruitment of nurses on the other. Third, twinning programmes between organizations of both source and destination countries. Undertake programmes of research, staff exchange, staff training and support, and flow of resources to source countries. Four, preferential treatment for migrant nurses for immigration in the destination
country and facilitate return as per the willingness of migrant nurses, and finally, signing of nurse-mobility partnership agreements with the important destination countries, such as, UK, USA, Middle Eastern countries, Ireland and Australia.

Public-Private Partnerships and Micro Health Insurance Schemes in India: A Sociological Perspective

This paper is an attempt to look at the socio-economic features, and health seeking behaviours of the lower income group and their involvement in the functioning of the micro health insurance schemes. The model micro health insurance as a mechanism of social capital was examined its strength to create a good “health for all”. In other words, it focuses on the importance of public (government) intervention to create a feasible health care systems with the partnership of private both for-profit and non-for-profit sector, so that, the micro health insurance schemes profitable for the vulnerable sections of society. More precisely, practicable schemes for better health can be created by the intensive involvement of public and private, by which willingness-to-pay for health can be possible by the lower income groups.

Despite increasing acknowledgement that social capital is an important determinant of health and overall well-being, empirical evidence regarding the direction and strength of public-private linkages in the developing world is limited and inconclusive. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of experiences with different health financing methods.

Currently, the health sector is unable to meet the growing needs of the population and is severely financially constrained. The study estimates the impact of the program on trust and cooperation in rural communities. Rashtriya Swasthya Bima Yojana (National Health Insurance Programme) is the government initiative to provide quality health facility to the lower income groups. It is important to emphasize that the study does not separate the direction of causality between trust and cooperation. The analysis treats both aspects of social capital equally in the impact study public and private inter-linkages for better health facilities of the Indian society.

Ordinary Sociologists

Until the 1990s the sociology department of a public university in Indonesia strengthened their college teaching staff by recruiting college seniors with good academic achievements as part-time teaching assistants. After obtaining their bachelor’s degrees in sociology some of these sociologists would continue to teach on a part-time basis while waiting for an opportunity to be recruited as a full-time faculty member. For most of them, however, the wait was in vain, among other things because there were very few vacancies available, and also because the eligibility standards for becoming a full-time faculty members were gradually raised. After teaching part-time for a number of years – while, in some cases, working towards a masters’ degree -- most of them finally sought and obtained full-time employment at other public or private higher education institutions, where they continue to teach sociology.

The practice of recruiting college students as teaching assistants was eventually discontinued. Factors such as centralization and bureaucratization within the university, the tightening of recruitment criteria for teaching staff at colleges in compliance with national standards, and the application of efficiency criteria forced the department to abandon its policy.

This paper, a case study of sociology teaching, describes the biographies of a selected sample of former teaching assistants in sociology – their social backgrounds, present social statuses, academic performances and careers. The life history data are based on depth interviews with informants who were part-time teaching assistants recruited in the 1990s, are still working as academics at institutions of higher education outside their alma mater, and are still teaching sociology. Data for the study are also based on interviews with on-campus resource persons, and on the examination of relevant documents.

less couples, indicating that the meaning of parenthood and the norm of child-
birth have changed in the post-Confucian agrarian era. The burden of child care
and education has exacerbated couples’ motivations to become parents, particu-
larly among dual-income families. However, childless Koreans may not be a ho-
genous group. Some couples remain involuntary childless due to infertility, and
others simply delay having children. In this study, we categorized childless
married Koreans into three groups, voluntary, involuntary, and delayed, and ex-
amined the factors associated with each group.

Data came from 553 childless married Koreans who had been married at
least for three years using quota sampling in metropolitan Seoul. We conducted
multinomial logistic regression to identify the individual, attitudinal, and marital
factors associated with participants’ membership in each of the three childless
groups using involuntary childlessness as a reference group. Both the voluntary
and delayed groups were more likely to perceive advantages of childlessness, to
put less importance on religion, and to have less intention to adopt a child. How-
ever, other factors were differently related to the voluntary and the delayed groups.
Specifically, attitudinal characteristics were significant among the voluntary group
while marital characteristics were significant among the delayed group. The vol-
untary group was more likely to have negative attitudes toward parenthood and to
report a lower ideal number of children compared to the involuntary group.
The delayed group was more likely to be dual-incomers and to report a shorter
length of marriage compared to the involuntary group. Our findings suggest that
childless couples may not be a homogeneous group in Korea. It is worth noting that
there are differences in attitudes towards parenthood and marital characteristics
depending upon the childless groups.

US Retirement Migration to the Philippines: Reasons and
Explanations for Later-Life Migration

Studies of retirement migration in the United States often focus at the national
level, and there is comparatively little information about the retirees who cross
international borders in their search for new homes. Retirement migration flows
are unusual in that the late-life migrants select destinations in less-developed
countries, contrary to the general pattern of migration from poor to rich coun-
tries in search of jobs, higher incomes and a better standard of life. This study
has examined the reasons for retirement migration from the United States (US) to
The Philippines using data collected from different locations in The Philippines.
A non-random sample of 141 US retirees was surveyed. The findings identify
four major reasons for migrating to Mexico: financial circumstances, the natu-
ral environment, a sense of community and friendship, and finding life/sexual
partners. While these relocations contradict much taken-for-granted and popu-
lar knowledge about migration patterns around the world, they have important
implications for the ways of life, social relationships and welfare of the migrants.
More in-depth multidisciplinary studies are needed to increase understanding of
this evolving phenomenon.

A Longitudinal Perspective on Quality of Life in Times of Crisis:
Switzerland from the 1990s to Nowadays

During the past twenty years Switzerland experienced three major recessions
and periods of economic slowdown: the prolonged and deep economic stagna-
tion of 1992-95 – the country’s most pronounced recession of the post-war pe-
riod – and the comparatively mild two recessions of 2002-03 and in the wake of
the global financial economic crisis of 2008-09. During these periods of economic
crisis, unemployment and poverty increased, particularly during the crisis of the
1990s, when unemployment soared from its previously extremely low level.
The proposed paper aims to explore the consequences of recessions and economic
downturns on various dimensions of quality of life by comparing the three histor-
ic periods of economic stagnations.

In order to analyse how quality of life has evolved since the early 1990s, we
use various longitudinal databases, notably the Swiss Labour Force Survey (SLSF,
available from 1991 onwards), the Swiss Household Panel (SHP, available from
1999 onwards), and the Swiss Statistics on Income and Living Conditions (CH-SILC,
available from 2008 onwards). Various indicators of quality of life, poverty, depriva-
tion and inequality, as well as of subjective well-being will be calculated in order
to measure and compare quality of life during different recession periods. Our
empirical analysis will explore the impact of economic crises for different popula-
tion and inequality, as well as of subjective well-being will be calculated in order
to measure and compare quality of life during different recession periods. Our
empirical analysis will explore the impact of economic crises for different popula-
tion groups as well as for various quality of life domains (objective and subjective
indicators). First results suggest negative crisis impacts on quality of life and sub-
jective well-being particularly for specific vulnerable population groups.

Being Dad or Mum? about Traditional Parental Roles from the
Perspective of Polish and Swedish Fathers

Parenthood must be concerned as one of areas within which reproduction of
gendered practices occurs. In my paper I will try to show how Polish and Swedish
fathers understand traditional parental roles, how they perceive biological and
cultural differences between motherhood and fatherhood and how they think
about gender equality within the household. My paper is based on 52 in-depth
interviews conducted with Polish and Swedish fathers in 2012 and at the begin-
ing of 2013. It is a part of broader research project on fatherhood in Poland and
Sweden. Interviews concerned men’s experience of parenting and are analysed in
the institutional and social contexts of both societies. In my opinion these con-
texts are extremely important here. Stereotypical roles of fathers and mothers
are strongly connected to cultural patterns of masculinity and femininity. Beside
that Polish and Swedish societies provide, through family policies, completely
different conditions for having children and differently approach the problem of
work-home balance. Unsurprisingly, these have an impact on how men define
father’s and mother’s roles. Among Polish fathers there is a tendency to look at
it with more conservative and traditional approach. They are convinced that it is
impossible to cross biological differences between motherhood and fatherhood
and that the father is rather regarded as mother’s helper or additional carer.
Whereas Swedish fathers are more eager to question imposed by society patterns
of behaviour. Sometimes they really struggle with stereotypical gender roles to
be more involved in family sphere and try to redefine traditional fatherhood. Ob-
viously these attitudes have an impact on everyday fathering and the way family
problems are treated. Fathers’ perspective is important here, since without their bigger
involvement in family life, gender equality cannot be achieved in other areas of
social life.

Prosper Or Deteriorate : Modern Millennium’s Path To Happiness
The rise of community in Asian care provision

Theories of civil society sometimes assume or praise a civil society as being independent from the state, in which citizens, by communicating their opinions freely, cultivate their power to claim oppositions and/or propose alternatives to governments and other governance institutions. However, in Asian countries, governments themselves have intervened in cultivating civil societies in the modernization processes. For example, in Japan, the Meiji, Taisho and Showa governments tried to bring up a civil society in order to catch up with western modern nation-states (Garon 1998). The neighborhood association, chōnaikai, originates in such a government's effort to organize a cooperative civil society. Recently, even in many countries including advanced welfare states in the west, the governments have become more relied on the voluntary/community sector to deliver care to the elderly and/or children. Partly because of the financial constraints combined with changes of demographic structures, the role of volunteer/community work becomes more important to sustain lives of vulnerable people. The introduction of the social model of care (as opposed to the medical model) seems to have legitimized this trend. 

This paper tries to grasp the weight of voluntary/community sector in care diamonds in Asian societies. It outlines common features as well as differences among Asian societies in the structures of community care provision, and it also investigates how governments promote community care through regulations and incentives. Through these inquiries, it tries to explore whether and to what extent the community sectors contribute to de-familiarization of care in Asian societies.

Why Did the “Blue-Green Coalition” Develop in the Case of Minamata? an Analysis of the Struggles of the Union and Social Movements Against Chisso

From the late 1960s to the mid-1970s, there was an upsurge of social movements against industrial pollution. Victims of pollution diseases as well as local residents organized anti-pollution movements and opposed the construction of pollution-prone plants in their neighborhoods. Reactions of labor unions to these social movements were indifferent or even hostile. Some enterprise unions supported activities of residents against pollution in principle but withdrew their support when the latter's actions, such as filing lawsuits against polluters, came in direct conflict with the interests of unions and their firms. Other unions at firms that caused industrial pollution stood on the management side and took confrontational attitudes toward local resident social movements.

The paper explores the factors contributing to the formation and development of this “blue-green coalition”, by focusing on the relationship between the enterprise union of Chisso (the SNU) and social movements of pollution victims and their supporters. When it became clear in 1968 that organic mercury discharges from Chisso's Minamata plant caused Minamata disease, the SNU became actively involved in supporting Minamata disease patients and formed cooperative relations with social movement groups concerned with Minamata disease. The paper examines how the struggles of Chisso as their common opponent in their respective struggles and to mobilize the union's resources effectively in cooperation with social movement organizations in the struggles against the company.

Re-Reading “The Loss Of Meaning In Death” By Shun Inoue

In this presentation, we will reconsider the English translation possibility of death. “The Loss Of Meaning In Death” of Mr. Inoue Shun. What is the “post-war(Seattle) Japanese society” for Mr. Inoue? We would like to discuss the description “can be understood in the cognitive level” or “feeling”. Because, the question to the “Meaning in Death”, was written while clearly reflected the feeling and experience of Mr. Inoue himself to the “post-war(Seattle) Japanese society”. In another word, “post-war Japanese society” could show us many possibilities.

In addition, as for the “normative level”, developing interdisciplinary sociology between literature. Mr. Inoue is the only one scholar who manage the subject of analysis sociological knowledge itself “feet” it, because can contribute to the “accumulation of results beyond the generation of sociological research”.

Sociology of knowledge, Inoue advocates, social consciousness theory, or cultural sociology we do not have to limit the domain of Mr. Inoue's theory. We believe in the wake of this presentation, we would like to appeal widely, the contribution of Inoue for the world aging society.

Do Older Women without Work Experience Participate Less? Life Course Analysis Using the Jages Data

Background

Social participation, such as being a part of community groups is key. Although social participation in older age may be defined by cumulative experience throughout one's life course, many older Japanese women today have never worked outside the home. As work experience can help expand social interaction and social networks, it is possible that women who have never worked do not participate in social groups as actively as those who have.

Methods

The Japanese Gerontological Evaluation Study (JAGES) is a social epidemiological survey of a community representative sample of functionally-independent individuals aged 65 and older. In 2010-11, responses were received by telephone from 123 people in 31 municipalities across Japan (66.3% response rate). Social participation was measured by monthly or more frequent participation in any one of six types of social groups (business, volunteer, senior, sport, community, and hobby). Using logistic regression, four models were tested on 41,966 to 44,272 women with a valid response for each outcome variable: whether lack of work experience in older Japanese women is associated with (1) less social participation, (2) less social interaction, (3) less frequent interaction with friends, and (4) fewer friends.

Results

Controlling for age, equivalent income, family structure, years of education, and health conditions, lack of work experience throughout life was associated with a 21 percent lower likelihood of participating in groups, 25 percent higher likelihood of having less social interaction, and 12 percent higher likelihood of having few friends. The association between lack of work experience and lack of group participation held for all income levels and age groups.

Concluding remarks

Lacking work experience appeared to lead to less social participation later in life. Work experience can develop better social skills and more extensive social networks, contributing to more active social participation in older age.

Beyond Duality and Heteronormativity: Gender Display and Manipulation in Japanese Yaoi/BL Narratives

Boys Love (BL) in Japan refers to commercial fiction and fictional media by and for heterosexual women that focuses on male-male erotic/romantic relationships. These works are more popularly known in other countries as Yaoi, a Japanese term often used as an umbrella category that can encompass various Japanese subgenres of male-male erotic/romantic fiction by and for women. The past decade has seen the emergence of studies of Yaoi/BL that have focused on gender and sex as analytical categories. Such scholarship is important in under-standing fan-based cultures, production and consumption. However, a conflation of gender, sex, and sexuality at the analytical level in Yaoi/BL impedes further theoretical development. By making a clear conceptual distinction between these intertwined notions as distinctive analytical categories, this paper attempts to clarify Yaoi's achievement in the (un)conscious feminist agenda among Japanese women. The study examines nearly 800 commercial Yaoi/BL novels written in Japanese, which were chosen based on a certain sampling method. Through descriptive statistics based on and textual analysis of the samples, as well as interviews

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
with professional Japanese female writers, the paper first identifies some important features in the contemporary Yoji/BL texts such as transgression of sexual norms, subversion of gender fixity, renewed definitions of masculinity and femininity, and highly context-dependent sexual orientation of protagonists. By doing so, I argue that Yoji/BL has made it possible for Japanese heterosexual women 1) to transgress normative gender dualism, sexual acts and sexuality at least at the level of discourse; 2) to use men's images not only for their empowerment but also for their own gratification as agent of desire. This is a significant step forward from early Yoji works that focused upon getting affirmation from others and fleeing from patriarchy.

**To be or Not to be, That Is the Question: The Bifurcation Approach of the Japanese State and Identity Formation of Koreans in Japan**

Koreans in Japan present an important case for understanding the nature of the interconnections between race, nationalism, and ethnic relations. All too often, studies of these phenomena center on Western cases or on cases where non-Western racial minorities move to Western states. In this paper, however, I examine these inter-relations within Northeast Asia. The Zainichi Koreans or old-timer migrants in Japan (who are already in the fourth generation) must face what I call a 'bifurcation approach,' which makes a strict distinction between the Japanese and the non-Japanese based on nationality in the management of ethnic/racial diversity instituted by the Japanese state and society. In Japanese, the concepts 'race,' 'ethnicity,' and 'nation' are virtually indistinguishable. The formulation race = ethnicity = nationality = culture is essential to the Japanese conceptualization of what makes one Japanese. Moreover, under the Japanese sense of nationhood defined along exclusively ethno-genealogical lines and nationalistic multiculturalism, minority cultures have become fossilized owing to state sponsorship of the dominant Japanese culture. As a result, Zainichi Koreans—who have significantly become acculturated to and share a similar phenotype to the mainstream Japanese—have been racialized and constrained in their formation of hyphenated identities such as 'Korean-Japanese.' Based on interviews with Zainichi Koreans, this paper demonstrates how they negotiate the shoals of race, nationality, and ethnicity in order to survive in a deeply racialized state and examines their collective identity-formation under circumstances in which they have to live by hiding their ethnic origin with a constant pressure to 'impersonate' being Japanese.

**SUZUKI, MAYA*** (Tokyo University of Foreign Studies, mayasuksuzki@gmail.com)

**Challenging Law and Justice from below: The Public Interest Litigation (PIL) Movement in the Dalit Community**

In this paper, I examine protest movements of the marginalized Dalit community (formally known as Untouchables) in contemporary India from a case study of Balmiki (a sweeper caste). In particular, I explore the political aspects of caste before focusing on the caste-based quota system, known as "reservation," which is a part of India's affirmative actions. This paper is organized around two significant issues. The first is the formation of a "new" identity among the Dalits through saint worship, which poses the following question: Why has the community embraced saint worship? The answer to the question lies in their religious choice to worship a saint, which gives them a sense of dignity and empowerment, and helps in the construction of a collective identity among members.

The second issue is the implications of caste-based identity politics. Since the late 1980s, an important factor Indian politics is the shift to a multiparty system and the rise of identity politics. With an increase in equality and social justice, marginalized castes have risen to challenge existing policies and demand an equal share in state resources.

I found that the success rate for the implementation of the reservation policy for the benefit of the lowest castes was significantly low. The distribution has been uneven among the targeted groups. Moreover, the results of my fieldwork revealed that most people tried to hide their caste. However, a number of them also affirmed that they created an order to obtain the benefits of welfare schemes and protect their rights by challenging the judicial system through Public Interest Litigations (PIL). This paradoxical response explains why caste identity has become more positive and assertive, which has led to the politics of difference in contemporary India.

**SUZUKI, MIKAKO*** (Keio University, mikako0308@gmail.com)

**The State of Neoliberalism Criticisms in Japan: Why the Discussion on Cosmopolitanism Does Not Gain Steam in Japan**

As economic globalisation progresses, a wave of neoliberalism is sweeping across the world, demanding states and societies to render a variety of modifications. Such a phenomenon has been analysed, described, and criticised extensively worldwide. Japan is no exception; criticisms toward neoliberalism are said to be forming a major trend in Japan.

However, such critiques are slightly different from those toward neoliberalism in other parts of the world. Worldwide criticisms toward neoliberalism often lead to discussions on global transformation and cosmopolitanism, whereas such a connection is almost never made in Japan. For example, David Harvey, the author who disputes neoliberalism in his worldwide bestseller A Brief History of Neoliberalism, expresses in Cosmopolitanism and the Geographies of Freedom published in 2005 his empathy with De Sousa Santos' (2005) idea of 'subaltern cosmopolitanism'—Harvey finds hope in the movement to form a cosmopolitan solidarity by amplifying the voices of the victims of neoliberalist globalisation that exists worldwide. Ulrich Beck (2008) also criticises the trend, stating that state politics are reduced when the state neoliberalistically prioritises adaptation to global market competitions; he argues that becoming cosmopolitan is the realistic future for states.

As seen from the above, a global trend is seen in the inclination to progress from criticizing neoliberalism to promoting a cosmopolitan transformation. However, neoliberalism criticisms in Japan rarely lead to the discussion of cosmopolitan transformation. One of the reasons for such a difference is that neoliberalism criticisms in Japan are rarely discussed solely in a global context because they have historically evolved as arguments of inequality which often focus on changes in the socioeconomic structure in Japan. Therefore, this report will provide an overview of neoliberalism criticisms in Japan, describe their characteristics, and explain why the criticisms have strong national characteristics without having been placed in the context of cosmopolitanism.

**The Formation Process for Civil Society in Northeast Thailand: From the Social Research of Two Villages**

This paper on village civil society (prachakhom) as the basis for the emergence of civil society and development in Thailand's northeastern region is the result of the social research supported by Grant-in-Aid for Scientific Research by the Ministry of Education, Culture, Sports, Science and Technology(MEXT) of Japan from 2005-2007 and 2008-2010.

In the twenty-first century, the discussion of the idea of civil society (prachasangkhom) and people's participation began to develop in Thailand. In many forums, Thai scholars proposed a range of ideas and opinions that directly link development with civil society. Furthermore, there has been various research on the development and possibilities for shaping the civil society movement.

In our social research, we concluded that prachakhom was the foundation of the formation process for Civil Society. Prachakhom as a gathering of people has been an integral part of Thai society, while the civil society movement was a new idea derived from the West. In this paper, I intend to analyze the two types of prachakhom, both a grassroots type and a top-down type in response to government policies, using quantitative and qualitative data from the case study of two villages in Northeast Thailand.

**The Effects on Self-Consciousness of Junior High School Students in Japan Depending on the Fact That They Have Boyfriend/Girlfriend or Not**

The purpose of this study is to make clear the significance of a boyfriend or girlfriend for junior high school students in Japan. For this purpose, I firstly investigated the determining factors of having a boyfriend/girlfriend, and then clarified the fact that one has a boyfriend/girlfriend on their self-consciousness. As a result of this analyses, I got following two findings. First, there are various factors which determine whether junior high school students have a boyfriend/girlfriend or not, and the factors differ according to each student's gender. Furthermore, the levels of academic accomplishment of the school also make a difference. Second, when I analyze the effects of that fact on their self-consciousness, it is necessary to consider not only the very thing that one has a boyfriend/girlfriend or not, but also if she or he is likely to have a boyfriend/girlfriend. This analysis suggests that a success in love for girls in junior high has a more complex meaning compared with that for boys.

Divorce Studies in America and Japan

This paper aims to suggest ‘Good Divorce’ comparing divorce studies in America with divorce studies in Japan. The divorce rate in the United States has continued rising since the end of World War II, and one out of four couples married at the same time, as remarriages has also increased, ‘step family’ is now rare in America. A new sociological concept, ‘bicultural family’ advocated in “The Good Divorce” (1998) by Constance Ahrons has become generalized. On the other hand, the divorce rate in Japan has continued rising as well as the United States. And these are almost caught up with the rate of divorce in the United States.

In this paper, we will introduce divorce studies and works developed in America since 1980s and in Japan since 1990s. First, we will discuss the history of divorce studies in America and Japan. ‘Nuclear family’ advocated by Talcott Parsons is certainly universal, but not absolute at all. Second, introducing the discussions in “The Good Divorce” and “We’re Still Family” by Constance Ahrons, we will describe divorces in America. On behalf of ‘nuclear family’, it is found how the concept called ‘bicultural family’ became to come up. Third, introducing Atsuko Okano’s various discussions on divorces, we will describe divorces in Japan. About divorce circumstances of America and Japan, some common points and differences will become clear. Finally, through both divorce studies, we will suggest what should be done to be ‘good divorce’. ‘Good divorce’ means ‘to keep your family together when your marriage comes apart.” We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

Sociological Theory after September 11, 2001 and March 11, 2011

This paper aims to rethink theoretical foundations in sociology comparing American sociology after September 11, 2001 with Japanese sociology after March 11, 2011. Although some ‘empirical’ sociologists in America described and analyzed attacks by terrorists on September 11, 2001 and American society after 9/11, almost ‘theoretical’ sociologists kept silence. However, Jeffrey Alexander, a leading American theoretical and cultural sociologist, has interpreted sociological theories and American society of and after ‘911’ from a post-Paresonian point of view. On the other hand, although some ‘empirical’ sociologists in Japan have described Japan. Now after the Japan earthquake and Tsunami on March 11, 2011, almost ‘theoretical’ sociologists within the Parsonian and Post-Paresonian tradition in Japan have kept silence.

In this paper, I will suggest that theoretical foundations for the sociology after 911 and 311 should be established on Jeffrey Alexander’s theoretical and cultural sociology, and civil society. First, I will discuss that new sociological theorizing including the sociology of 911 and 311 should be multidimensionally reconstruct-ed on the metatheorizing by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Munch. Second, I will argue that new solidarity can be founded on cultural sociology and civil society advocated by Jeffrey Alexander keeping a philosophical foundation of multidimensional sociological theorizing. Finally, it will present what should be done to reconstruct Japanese sociology multidimen-sionally after March 11, 2011.

SUZUKI, TETSUTADA* (Japan Society Promotion of Science, tetsutada2006@ybb.ne.jp)

Constructing Identities Across Borders: Case of the Istrian-Italian Diaspora in Trieste

In the last two decades, the accelerating speed of globalization has challenged the modern notion of state borders. Rather than the fixed line of a sovereign state, state borders are viewed as a dynamic interplay between territorial organizational and local social communities. This locative identity evidence is evident in the border regions of Europe wherein extensive cross-border cooperation and interaction transform a border from a geopolitical “territorial line” to a socio-cultural “contact area” of neighboring societies. On this basis, people living in borderlands have new resources and opportunities to construct or safeguard their identities.

This study examines the construction of a “We” consciousness by the Istri-an-Italian diaspora, who suffered from national conflicts and mass exile after World War II, and emigrated from their native homeland Istria (formally Yugoslavia) to settle in Trieste, a border city in Italy close to the Slovene and Croatian borderers. We follow the identity construction of this diaspora by specifically us-ing the case of national celebrations when cross-border interaction collides with national manifestation. Our data is based on fieldwork conducted in Trieste on the procedure of how commemorative events are organized by local authorities and these exile groups, focusing on the practices and discourses on the ways to selectively use certain historical pasts, “We” and “the Other” relations, and forms of recognition.

The results indicate that two opposed identities have emerged within Italian diaspora communities: pro-Italian national identities and multiethnic regional identities. Whereas the former tried to produce a national image through patro-nic ritual performance and victimization of exiles, the latter tried to reconstruct regional identity in relations with Italian minorities and local authorities in Croatia across nations and borders. In the following discussion, different forms of identity are associated with not only the capacities of the diaspora but also the local and transnational opportunities available to it.

SUZUKI, TOMIHISA* (Momoyama Gakuin University, tomi3@sakai.zaq.ne.jp)

“Intellectuals” in Gramsci’s Prison Notebooks: An Active Relationship As A Key Concept

In Prison Notebooks (written between 1929-35), Antonio Gramsci (1891-1937) – an Italian Marxist theorist – reconstructed the notion of intellectuals in the process of reconstituting the Marxist “class” concept. What are “intellectuals” in the theoretical world of Gramsci? And how did Gramsci theorize intellectuals and their roles in modern society? My presentation first introduces how Gramsci and his work have been studied and contributed to sociological theoretical research in Japan and then illustrates how his writings in his Prison Notebooks located intelлектuals and active relationship constructions. Content analyses of Prison Note-books reveal that the logical foundation for his understanding intellectuals was the reconstructed concept of “man” or human being which was formed by active relationships. This study shows Gramsci’s belief that there was no “man” who was not intellectual; therefore, all the human beings are indeed the intellectual. Yet, not everybody plays the socially organizing functional role of an intellectual. The active relationships of the ordinary people most of the time have individual characteristics; on the contrary, intellectuals create and engage in socially active relationships which have an impact on the economic, social, cultural, and political field. Therefore, I argue that Gramsci advanced Marx’s social class theory by focusing on intellectuals and their hegemonic social engagements in which the socially active relationship plays a crucial role in society. This paper contributes to our sociological understanding of Gramsci, his theoretical roots, and commonalities with the Marxist and other theoretical traditions.

Visualization of SNS Communications Concerning Radiation Risk from the Fukushima Daiichi Power Plant

In this presentation, I visualize people’s communications on a Social Networking Service (SNS) concerning the risks of radioactive pollution stemming from the Fukushima Daiichi power plant accident. The data consists of the communica-tion log from a regional SNS that was launched by the residents of Iwaki City, Fukushima Prefecture, after the accident. It contains text from diaries and com-ments written by the SNS members and information about who made comments to whom. The co-occurrence network of words derived from the text data reveals the members’ concerns about radiation risks. Comment relations are expressed as a form of social network that shows the structure of the human relationships on the SNS. The co-occurrence network of SNS content can be integrated and analyzed concurrently to show the development and interaction of the members. This paper introduces the co-occurrence network of SNS and shared concerns and the social networks in the SNS. The SNS members expressed various concerns, including radiation measurement, influence on health, food safety, and so on. Based on their concerns, they created diaries in the comments section. Through the founder of the SNS had the highest degree centrality, the mediator of the clusters was a different member who sometimes mediated members with opposing opinions. A member who had a scientific background occupied a leadership position in a particular cluster but did not play a role in mediation. This suggests that a sympathetic attitude is more important than scientific knowledge for risk communication among ordinary cit-izens.

Honor or Fear? Relationships Between Scientists and Experimental Animals in a Japanese Laboratory

Attachment and detachment, and honor and fear with which scientists and technicians treat their experimental animals is a paradoxical aspect of everyday practices of Animal Experimental Room in a medical Lab in Japan. The scientists kill, or tweak the genes of these animals for their research with the very same hands they used to caress and feed these animals under their custody. In Japan, some scientists even fear that the spirits of the sacrificed animals may come back to haunt them. Holding rituals to appease their spirits is a common practice.

Gesa Lindemann has argued that neurobiologists’ attitude of experimental-animal treatments are seeing them as “conscious organisms” to “technical artifacts”, or even “organisms being merely alive” as their experimental progresses (Linde-
Japanese way of honoring the animals killed for scientific research has been known for “offering a ceremony” for dead animals (Kuyoo). This paper pays attention to not only to the ceremony but also everyday caring practice in the laboratory.

Thus, I discuss how scientists and technicians affectively commit to experimental animals. Inspired by Science Studies scholar Casper Brun Jensen and the sociologist Anders Blok (Jensen and Blok 2013), who developed Actor Network Theory through Japanese techno-aminism, I explore new dimensions of contemporary Japanese techno-science.

**Does Men’s Involvement in Family Planning Threaten Women’s Reproductive Rights?: A Case of Kurdish Rural-Urban Migrant Women in Turkey**

This study discusses the issues of men’s involvement in birth control in Turkey. An argument is based on our research of Kurdish women’s experiences of contraceptive practices. Data were collected by in-depth interviews with forty women in a low-income rural-urban migrant neighbourhood in an East Anatolian city Van between February and July in 2008. In Turkey, fertility rate has managed to near-replacement levels in recent years yet the use of traditional method, that is, withdrawal continues to be among the highest in the world. Recent studies suggest men’s direct practice (practising withdrawal or using condoms) and indirect (influencing women’s use and choice of contraceptive method) involvement in birth control. Meanwhile, women’s participation considered that their husbands should take more responsibility in family planning because of their experiences of failing contraception and seeing those women who successfully limit their births with the help of their husbands. Based on our case study, this presentation discusses a paradox of men’s involvement in birth control and asks explorative questions that whether men’s involvement risks women’s reproductive rights or whether feminist politics should support men’s involvement for the sake of women’s health if women can practice birth control more effectively by men’s involvement.

**Globalisation and Rural Women’s Paid Work in Turkey: A Case Study of the Production Chain of Rapana Venosa**

This study examines the production chain of *Rapana Venosa* (veined raja whelk) and the socioeconomic statuses of women factory workers in this process. In rural areas of the Black Sea region in Turkey, women often participate in non-agricultural production. The production of veined raja whelks is one of the sectors which rural women are especially employed. Veined raja whelks are “marine invaders” which migrated from Far East Asian seas to the Black Sea by ballast water in the 1940s. Today, they are considered to be threatening the Black Sea’s ecological balance due to severe competition and consuming many other marine species. In the context of globalising marine ecosystem and multinationalising agrifood production, raja whelks began to be exported from Turkey to Japan in the 1990s. While the prevalent method, *alganma* dredging, is known to be harmful for the reproduction of many native species, the exportation of raja whelks is hoped to reduce their ecological pressure in the Black Sea and create employment opportunities for rural women. This study explores the use of rural women’s labour in the global production chain of raja whelks between Japan and Turkey. The research was conducted in two phases. In the first phase, women workers’ socioeconomic statuses were investigated through in-depth interviews with women workers of whelk-processing factories in two Middle Black Sea villages. A research in the second phase was conducted in summer 2012 in Tokyo and data regarding the production chain were collected mainly by interviews with an importer, a manufacturer and a retailer. Research findings suggest that the global *Rapana Venosa* production bears many characteristics of informal economy. The production bears many characteristics of informal economy. The production bears many characteristics of informal economy. The production bears many characteristics of informal economy. The production bears many characteristics of informal economy. The production bears many characteristics of informal economy. The production bears many characteristics of informal economy.

**The Importance of Class for Understanding Racist Discourses: A Comparative Study of People with Different Positions in the Swedish Class Structure**

In research, and especially quantitative research, the working class is often singled out as more xenophobic than other classes. However, it appears that the working class has actual relationships with “immigrants” to a larger extent. Rather than determining which class is the most xenophobic, the aim of this paper is to discuss the relevance of dominant theories about class and racism in relation to empirical findings, and more specifically to interrogate why and how class may be important for understanding people's use of racist discourses in different social contexts. This paper is based on an ongoing research project that focuses on the relationship between people’s class positions and their practices towards people that they construct as “the other”, as “immigrant” or “ethnically different”. The empirical findings consist of qualitative interviews with (1) people working with class positions living in an more socioeconomically favorable area. Both areas are located in one of Sweden’s largest cities.

In the paper, I discuss both social psychological theories that focus on people's desire for a positive social identity and other theories, mainly Marxist, that are based on people’s position in the relations of production. The paper argues that which discourses, that are available or are seen as reasonable, are conditioned by people’s different class positions. This also means that the reasons behind people's use of racist discourses and the meanings these are filled with need to be understood in relation to the diverse – class conditioned – social contexts in which people live.
**Interconnected 21st Century and the Decline of Traditional National Security System**

Traditional national security system has been definitely one of the crucial pillars for Western statecraft paradigm since Westphalia Peace agreement in 1648. Especially in last two centuries the main task of sovereign state was how to protect own citizens and territory from foreign (military) threats with strategic concepts like deterrence and retaliation are. It was very clear the national power was based on physical and natural resources, industrial production as well military capabilities. The national state was practically the only reputable actor in international relations for many scholars like Fukuyama this historic development was ended with the end of Cold War, I think the crucial revolution began with modern information and communication technology already mid of former century. Consequently till the end of millennium we got interconnected society with borderless, lightly regulated and largely anonymous online environment which has been rising to new strategic domain. At the same time security as a concept was changed by possible interconnection and new non-state actors like individuals, corporations, (cyber) terrorists, organized crime and autonomous actors appeared as important international players. That makes traditional national-based security system incapable to prevent all security incidents occurring in cyber as well physical space. In spite of the merits of measures to protect society against new kinds of security threats, national security policy makers therefore have to accept a certain level of vulnerability and redirect their focus to recovery and resilience, the ability to restore a state of normalcy after disruption. The primary security objective is effectively mitigating the impact and quickly restoring the original situation. For that purpose traditional very rigid national security should be redesigned into more flexible crisis management and knowledge integrating system with capability to collect all societal skills and potential convenient for ensuring security in interconnected semi-transparent world.

**Contractual Gift-Giving As a Functional Hybrid: The Case of Gift-for-Sex Exchanges in Russia**

Ideal typical forms of capitalism ('cold' profit orientations) and gift-giving (the 'pure gift') can be found to illustrate the crucial aspects we assign to these concepts. Yet these two concepts blend together extensively, especially in practices of instrumental gift-giving. In particular, ‘contractual gift-giving’ is a particularly ‘pure’ hybrid form of exchange, as it is more formalized, and thus more rationalized and predictable than other forms of market exchange. Strong experimental evidence of this hybrid practice can be found within compensated dating practices.

Using the case of contractual gift-for-sex exchanges in Russia, the empirical basis of this paper is a rich body of recently collected (2010-12) data, including online content analysis of dating websites and discussion fora, face to face interviews, and a quantitative survey. Multi-method results demonstrate that the two sides of the contractual gift ‘hybrid’ exchange form interact so that both maintain key aspects of their conceptual purity, yet in a way that allows translation between them. In particular, the gift form is unique in its ability to bring symbolic relations (such as love and romance) into market exchange as commodities through involving them in contracts. While the ‘purity’ (altruism) of such gifts is indeed removed/unveiled through their availability on the marketplace of ‘sponsorship’ and compensated dating, the gift nonetheless maintains its valence of care, general welfare, and love for practitioners. The features of this contractual gift form are analyzed in the context of the post-socialist economic transformation in Russia, focusing especially on the subjective incorporation of market logics and language into everyday life and the recent materialistic and partial sexual revolution in Russia.

**The Loneliness of Many? Investigating the Roots of Urban Russian Loneliness**

Much early sociological work on cities has focused and the connection between city life and urban estrangement. A host of modern maladies are proposed to have higher concentrations within cities: to include alienation, anomie, and the ‘blassé’ attitude. As a result of these and shifting forms of social cohesion in urban spaces, we should also expect to find a higher prevalence of loneliness within urban environments. Cross-country research on the effect of urbanization shows loneliness rates to be much higher in Eastern than in Western Europe. Russia is therefore an ideal place to investigate loneliness.

Using Russian WVS data from 2012 on the question of loneliness, I attempt to find the mechanisms through which the urban loneliness effect occurs by also controlling for other relevant factors, such as social engagement, alienation, and values such as individualism/collectivism. In particular, I am interested in the way that individualist values mediate loneliness, either by catalyzing or mitigating its effect, and I expect that this mediation effect is different in cities, with ‘urban values,’ compared to rural areas. I compare four samples: one metropolitan (Moscow), one city (Tambov), a non-urban sample (Russians living in settlements of 100,000 or less), and Tatarstan (city and non-city). Results confirm several important hypotheses. Notably, nearly all loneliness effects in cities are mediated by individualism, collectivism, in stark contrast to loneliness in non-urban areas. In particular, I find that individualists in Moscow are more lonely if they have children, likely because family isolates them from the types of ties they would prefer (with friends, associations, and wider networks). For collectivists, this effect is reversed. Like-wise, collectivists in a smaller city (Tambov) are more lonely if they are involved in more civic organizations, likely because this involvement is compensating for a lack of the ties they idealize (family).

**Locating the Media Discourse of Climate Change Policy Network in India 2007-2010**

This paper explains the framing of climate change in Indian newspapers. With its economic growth, India has become a major contributor of greenhouse gas emissions and has a major role to play in any global cooperation to reduce emissions. Yet India's rhetoric and concerns about climate change differ from other developing and developed countries. India is the world's largest democracy, but it has a weak state that lacks levers of control over its society and economy. Consequently, the distinct framing that India’s newspapers give to climate change concerns, not the need for new government policies, but the need to convince and mobilize civil society.

**Trust Me If You Can: Trust As Strategic Tool for Decision Making to Deal with Ignorance and Uncertainty in Contaminated Sites of Germany and India**

In this paper we will investigate the role of trust in decision making process under ignorance and uncertainty. Classical approaches to risk analysis are based on statistical calculations dependent on hitherto known variables. This research study examines the knowledge for risk calculation is limited then the decision making of experts as well as ‘lay’ persons are dependent on their individual and intuition-based trust. Based on newly emerging sociological theories of ignorance, this paper involves two field studies: redevelopment of contaminated sites in Germany and mitigation of groundwater arsenic contamination in India. Interestingly, in both the cases knowledge on groundwater processes is limited. Processes of cleaning-up in Germany usually are confronted with contaminations that had not been identified in investigation activities. Unexpected surprises by the actors often are taken as normalcy. In the Eastern Indian region, concentration of arsenic in groundwater increases due to geological processes in succession of a decreasing groundwater level, caused by human activities. So, today’s clean water may be poisonous by arsenic tomorrow. This creates a situation of ambiguity and confusion. Stakeholders (from policy makers to local inhabitants) have to take various pertinent decisions based on trust in individual, group or system. From the existing sociological literature the paper explores various dimensions of trust involved in decision making for both experts and non-experts.

**Physical Activity and Quality of Life Among Chinese Cancer Survivors**

Cancer is the leading cause of death among Asian American populations in the United States (CDC, 2013). Asian Americans are actually reported to have lower cancer deaths compared to non-Hispanic Whites. Consequently, more Asian Americans will survive cancer diagnosis and live a longer life after treatment. It has been shown that physical activity at modest intensity can significantly im-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
prove the side effects of cancer treatment, quality of life among cancer patients, and breast cancer mortality. Although research on exercise has grown in quantity and quality (i.e., more RCTs) during last decade, most available studies recruited primarily Caucasian samples and were based on smaller sample sizes (Pekmezci & Demark-Wahnefried, 2011). Thus, these findings are not able to be generalized to non-Caucasian subgroups, such as AAAs. Furthermore, exercise patterns vary with different cultural traditions. Intervention strategies such as aerobic exercises, resistance training, and Yoga which have demonstrated positive impacts might not be applicable to AA cancer survivors because most Asians will be more inclined to use Tai Chi over Yoga for their exercise routine. Thus, more research is needed to study the unique cancer experience of various racial/ethnic groups.

This paper examines the linkage between physical activity and quality of life among Chinese American cancer patients and survivors. It is hypothesized that more physically active cancer patients and survivors are reported to have higher quality of life (QOL). Data was collected from self-report surveys of 55 Chinese cancer patients and survivors. In addition to basic demographic characteristics, weight status, medical history, two standardized scales are used to measure quality of life (SF-36) and physical activity (CHAMPS). Currently, we are conducting the data analysis and a manuscript based on the results of the data analysis that will be completed in the spring of 2014.

Navigational Capacities For Youth Success In Adversity: A Sociology Of Southern Youth

The global South has for too long relied on global North contexts and theories in the sociological study of youth and youth development. These Northern approaches have centred on US-driven positive youth development focused on dynamic systems, risks and protective factors, and the UK-led socio-cultural approach addressing youth agency, resistance and cultural reproduction. This paper asks two key questions towards a comparative consideration of the sociology of youth: Who are Southern Youth, and in what ways are their lives the same as, or different to their Global North counterparts? And what new tools and language are required in order to make visible these similarities and differences and so bring Southern youth out of the invisibility of current hegemonic youth studies?

Substantially, it offers an alternative nascent framework, that of ‘navigational capacities’ to research and frame a sociology of Southern Youth. Navigational capacities are suggested as specific socio-emotional and material capabilities required in supporting youth contexts of adversity that support these. These, rather than skills, are learnable and are available to young people in the pursuit of success, where success is postulated as the capacity to (1) exert individual agency; (2) obtain, create and invest capitals in their primary proximal contexts of engagement; (3) recognize and analyse the ways in which interconnecting distal contexts such as institutions, practices and policies exert influence to oppose and enable agency; (4) see the way in which power operates through identity markers to restrict participation, and perpetuate domination and poverty; and (5) practice collective agency for civic participation and life cycle transitions. In this regard, the notion of navigational capacities draws together the best emancipatory elements of both the dynamics systems and socio-cultural approaches to youth studies, and has the potential to make visible (‘deinvisibilise’) the lives of Southern Youth.

SWENSON, DONALD* (Mount Royal University, dswenson@mroyal.ca)

Gender Marble Roles in an Ecumenical, Covenant, and Charismatic Christian Community

Marital gender roles and religion continue to capture the landscape of much sociological research in families. A significant amount of research has emerged in investigating how Promise Keepers, a movement whose primary locus is in Evangelical-American Christianity. Much of the critique of the movement focuses on language such as: “the last gap of patriarchy,” the “first backlash of patriarchy,” “soft-boiled masculinity, sphere of anti-feminist backlash,” “hegemonic masculinity,” “an essentialist retreat from progressive gender relationships,” and the Promise Keepers embracing the centrality of the political within the faith community.

Against this backdrop, this paper presents empirical evidence from a 350 member Ecumenical[1] Covenant[2], Charismatic[3] community named “Alleluia” in Augusta, Georgia, USA. Husbands are expected to lead, protect and provide for their wives and children. They are called to be leaders in their marriages and could be seen to reflect the images portrayed above in regard to the Promise Keepers. However, with data based on interviews from randomly selected cases (36) and 300 members of 350 who provided quantitative information, a very different story of leadership is presented.

The husbands model their leadership on a kenotic style of headship. This consists of leaders which is humble, empty of self-interest, sacrificial love (agape), a detachment from status privilege, gentle, meek, kind and self-effacing. They are to love their wives as “Jesus loves the Church,” and wives are to respect their husbands.

From the interviews, both of men and women, this was the common story. Regression analysis of measures of gender roles shows significant correlations with a wide variety of measures of religion.

Constructing Asia: An Emerging Model of Migrant Labor Exportation

This article explores how global forces are reshaping the form of labor migration in the region. China has become an important influence reshaping the Asian region through increased foreign direct investment (FDI) in public construction projects such as roads, railways, and ports. As Chinese companies expand operations overseas they often bring their own workforce, exporting hundreds of thousands of Chinese migrant workers. These workers migrate under the umbrella of Chinese multinational companies and represent a fast-growing form of labor export migration called “project contract migration.” This expansion of project contract migration represents an important form of temporary migrant worker programs which are generally governed by either labor brokers and/or bi-lateral agreements among states, and are characterized by receiving countries only accepting immigrants under “strict functional and temporal limits” (Castles, 2004: 23). In contrast, China’s emerging labor export model is an example of multinational corporation-led migration with a new twist. Historically, multinational corporation-led migration has taken the form of high-skilled professionals being relocated from developed nations into developing countries (Findlay, 1990; Stahl, 1991) while China’s multinational companies are exporting both high and low skilled workers.

According to China’s Ministry of Commerce the number of Chinese workers sent abroad has risen from about 2,000 in 1979 to around 6.5 million in 2013. Roughly 812,000 of these overseas Chinese workers are now employed by Chinese companies in the form of project contract workers, and if we include illegal or undocumented migrants, these numbers would double. This article focuses understanding why Chinese multinationals are importing their own laborers instead of using local labor. I argue that this emerging model of labor exportation creates a kind of extraterritoriality that allows Chinese multinationals to evade national and international regulations designed to protect worker and migrant rights and increasing worker control.

SWIDER, SARAH* (Wayne State University, ssvider@gmail.com)

Engaging the State: Informal Worker Protests in China

In China, the rise of precarious and informal work is closely linked to the processes of migration and urbanization. There are roughly 150-200 million migrant workers, representing between 15-17 percent of the total Chinese population (Chen 2010). By 2009, sixty percent of all urban employment in China was informal (Huang 2009): most of this is precarious work and a majority of these jobs are filled by migrants. Informal work is performed outside the purview of the state, and it is labeled precarious because these jobs do not provide employment stability, are low-wageed and lack social protection.

This paper explores informal worker protests in China. I look at two different groups of informal workers; construction workers and street vendors and find that the salient issues for each group are different. The most salient issue for informal construction workers is non-payment of wages and among street vendors it is the unfair treatment by local urban para-police called chengguoan. I explore these two issues and the resulting protests by analyzing the ways that their relationships with the state, the organization of their work, and different integration into urban spaces shape their organizing and protests efforts. I detail the major characteristics of these protests and argue that that these informal workers (and their protests) represent more of a threat to the government and the Communist Party of China compared to historically more integrated and structural protests by formal workers.

SWINDE, JEFFREY* (University of Michigan, jswinde@umich.edu)
The Developmental Hierarchy Cultural Schema

In everyday conversation, popular media, and scholarly work, terms like the “Third World” or “developing countries” are often contrasted with the “First World” and “developed countries.” These terms imply that there exists a cultural schema of a developmental hierarchy of societies. How prevalent has this schema been throughout history? Drawing from cognitive anthropology, I argue that in general the terms people use are indicative of specific cultural schemas. This is especially the case with terms that refer to societies’ position on a developmental hierarchy (e.g., “developed” versus “developing countries,” or “advanced” versus “primitive societies,” etc.). Using the Google Books N-gram Database, I analyze the usage of over 80 such terms by year, measuring their relative frequency in all books written in English from 1700-2008. I then combine this quantitative approach with historical data and other work, constructing a historical narrative of the developmental hierarchy cultural schema over the last three hundred years. The terminology of the developmental hierarchy has been prominent throughout the time period examined, though it has experienced significant changes. During the eighteenth century, developmental hierarchy terms gained popularity as the ideas of social evolutionism expanded. Notions of sovereignty and capability eventually challenged social evolutionary ideas in the beginning of the twentieth century, leading to their demise. In their wake, modernization theory quickly became prominent, bringing a new set of developmental hierarchy terms, institutionalized by the founding of various international organizations in the mid-twentieth century, modernization theory reinvigorated the developmental hierarchy cultural schema by shifting the object of development from societies and peoples to that of the nation-state. The developmental hierarchy cultural schema has exercised considerable power in organizing the way people classify societies.

SYKORA, LUDEK* (Charles University , sykora@natur.cuni.cz)
From Chicago to Los Angeles: Western Concepts and the Study of Post-Socialist Cities

Post-socialist cities have been omitted from disputes on global urbanism. However, the insights gained from the study of their dramatic transformations can provide important suggestions for the international urban studies. The paper first introduces the key features of post-socialist urban transformations placing them within the context of contemporary global urbanism. The paper specifically discusses the development in cities, which developed during particular different political regimes and socio-economic conditions. Their urban landscapes reflect multiplicity of socioeconomic logics and are characterized with a high level of socio-spatial hybridity. The western models that assume relatively stable relations between the principles of urban development and resulting socio-spatial patterns are not capable to capture the nature of cities in radical transformations. The paper then discusses the relevance of “western” concepts for the study of post-socialist cities. It is framed within the paradigmatic evolution from Chicago to Los Angeles schools of urban studies. The paper argues for the recognition of a multiplicity of urban logics and urban structures intertwined within urban landscapes of transforming cities. Relating long term development paths and contemporary path-shaping practices, paper documents that concepts from both schools are relevant for the understanding of post-socialist cities. Finally, despite the present urban landscapes of post-socialist cities can be seen as different from cities in other world regions, there are striking similarities. The paper argues that despite historic and cultural specificities in local contexts, contemporary urban development is conditioned by the universalistic driving forces of urbanization embedded in a globally spreading capitalism. The hybrid coexistence of different socio-spatial landscapes can thus be only temporary as the most dynamically developing urban areas related to global capitalism gradually displace the original urban patterns. The theories and concepts developed in the social context of capitalism thus have high relevance for contemporary global urbanism.

Gambatte Ikô : Negotiating Identity and Belonging at a Japanese University Women’s Kendo Club

This paper draws on an 18-month ethnography at a Japanese university women’s kendo club and examines the concept of seishin (spirit), and how it is embodied throughout the process of doing one’s best for the group. Gambatte ikô (Let’s do our best together) expresses the personal commitment to endure hardship in order to achieve a group goal. The strengthening of seishin can be attained through enduring physical, mental and emotional hardship alongside others, where the hardships are embedded in the club’s demanding training, work obligations, and hierarchical relationships. As such, seishin training takes place on all levels, in a variety of situations, encouraging the holistic development of club members. Seishin development can be goal of membership and its embodiment can be advantageous as it promises to equip members with the resilience necessary to fulfill their gendered roles as capable, exemplar models of society. Arguably, for female club members developing significant relationships takes precedence over the development of seishin. In time significant relationships with other members became my reason for being and the primary source of motivation to engage in seishin training.

SYMKOVYCH, ANTON* (National University of Kyiv-Mohyla, a.symphovsky@gmail.com)
Safety in the ‘House of Certainty’: The Question of Violence in a Ukrainian Prison

Prisons are potentially volatile places. This paper draws on ethnographic research in a medium-security men's training prison to discuss the nature of a relatively low level of physical violence in a Ukrainian prison despite the low staff-to-prisoner ratio. It attributes this phenomenon primarily to the informal structure of prisoner society, and the central role of its illicit normative code of prison life. I explore how the legitimacy deficit of the Ukrainian State and its legal system, together with often anachronistic and unreal official prison rules and limited staff presence render the unofficial prisoners' behavioural code the guarantor of the peaceful co-habitation. I demonstrate that despite discriminative against certain prisoners and instigating mutual and self-surveillance, these informal arrangements were deemed by most prisoners more just and legitimate than the official ones. Whilst this informal structure was inseparable and entailed harsh punishments for violations, it, to some degree, controlled and limited arbitrary violence and established a 'house of certainty' (Foucault, 1975). Furthermore, I argue that despite the official antagonistic stance towards the ‘inmate code,’ prison authorities heavily depended on the prisoner-controlled informal structure to both keep the prison orderly and safe and maintain uninterrupted industrial production. I then discuss the implications of the recent and current changes in Ukrainian society and prisoner profile to the maintenance of safety and order in national prisons. I posit that the intricate power-balance present in the prison has relevance beyond Ukraine because it represents a microcosm of the interaction between powerful legitimate and illegitimate interests, where the vested interest of both is profit (industry) and order (status quo).

ZSAFLASKI, MAGDALENA* (University of Alabama at Birmingham, zsaflam@uab.edu)
HIV Stigma in U.S. Faith Communities

Stigma remains a significant barrier to HIV prevention/treatment in African American communities. Religious congregations, especially black churches, have been called to address HIV stigma. Social forces such as religion may create reinforcing stigmatized conditions that predispose individuals to HIV infection and limit their ability to access HIV testing and treatment. However, scientific evidence examining the concept of HIV stigma and its effects in religious communities is limited. Our work is guided by the concept of stigma as “a social and cultural phenomenon linked to actions of whole groups of people.” This approach emphasizes the need to examine social structures and processes and enable communities to move from individual-level perceptions to collectively identify and act upon negative stereotypes and discrimination against the stigmatized. Our multi-method study examines HIV stigma in faith communities from the perspectives of congregations, community members, and people living with HIV. We collected and analyzed data from interviews with faith leaders representing a theoretically diverse sample of congregations; interviews with HIV-infected individuals; and, town-hall meeting-generated ideas about faith-based strategies to address HIV. We used predictive modeling of factors linked to welcoming/alienating attitudes on the part of congregations, as well as content analysis and concept mapping to qualitatively assess the concept and extent of HIV stigma present in faith communities. In congregations, stigma was often attached to the perception of individual moral guilt of infection. Homosexual orientations as most stigmatized, followed by injection drug use, heterosexual relations, and mother-to-child/healthcare-related situation. Some HIV-infected individuals reported feeling alienated in congregations because of stigma/discrimination. Finally, community stakeholders identified reducing stigma as the most important strategy to address HIV in their faith community; however, the feasibility of this strategy was questioned. In the analysis, we triangulate/discuss the findings to explore the concept of stigma, its consequences, and potential stigma-reduction strategies in faith-based settings.

Nativity, Religiosity, and Mental Health in the United States

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using a representative sample of U.S. adults. Dysthymia was modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments: higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood) of developing dysthymia over time in the total sample. Further analyses will examine the differences in the effect of religiosity between the foreign-born and the US-native populations and discuss the findings in the light of acculturative stress and religious coping perspectives. Public health implications will also be addressed.

Young Chechen Refugees in Europe: The Role of Gender and Religion

The presentation focuses on two intertwined factors that shape immigrant incorporation in today's Europe: religion and gender. It draws on an empirical study of young refugee women from Chechnya (Russian Federation) residing in Germany, Austria, Poland and Belgium. It aims to explain the relationship between women's religious identities and gender practices while considering the significance of their pre-migration childhood experiences of living in a war-torn society and refugees' living conditions in the receiving societies. The study examines two topics, which have dominated debates about incorporation of Muslim immigrants and their children in European societies: 1) new forms of religiosity among Muslim young women and 2) transformations of women's roles in immigrant families and communities. It focuses on Muslim immigrants from Eastern Europe who have received little scholarly attention as opposed to communities originating from Maghreb or Turkey. That is despite having gained a considerable presence in Europe since the early 2000s. Muslim citizens, most of them from Chechnya, have been among the most numerous groups of asylum seekers in Poland, Austria and Belgium for almost a decade now. The numbers of Chechens applying for asylum in Germany in 2012 and 2013 have also risen sharply. The data collected in Germany, Austria and Poland reveal remarkable intergenerational differences in adaptation strategies of Chechen women. A significant number of young women in these countries are adopting more conservative gender practices and embracing new religious identities that are perceived as alien by the women of the older generation. The study in Belgium examines the validity of these findings in a different institutional environment. Compared to the other three countries, Belgium offers recognized refugees an easier access to citizenship and provides more inclusive educational environment for young immigrants.

The EVS provides insights into the ideas, beliefs, preferences, attitudes, values and treatments in Europe.

Also seeks to answer the practical question whether the institutionalisation level in-vitro fertilization: Do they think that it is a stigma to become a parent without sexual intercourse or do they consider it as a possibility to help people to experience parenthood. The previous studies have already indicated that respondents' gender, age, educational level and religious background determined whether they supported 'fertility treatments': younger, more educated and non-religious respondents more likely to support assisted reproductive technologies.

Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using a representative sample of U.S. adults. Dysthymia was modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments: higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood) of developing dysthymia over time in the total sample. Further analyses will examine the differences in the effect of religiosity between the foreign-born and the US-native populations and discuss the findings in the light of acculturative stress and religious coping perspectives. Public health implications will also be addressed.

Young Chechen Refugees in Europe: The Role of Gender and Religion

The presentation focuses on two intertwined factors that shape immigrant incorporation in today's Europe: religion and gender. It draws on an empirical study of young refugee women from Chechnya (Russian Federation) residing in Germany, Austria, Poland and Belgium. It aims to explain the relationship between women's religious identities and gender practices while considering the significance of their pre-migration childhood experiences of living in a war-torn society and refugees' living conditions in the receiving societies. The study examines two topics, which have dominated debates about incorporation of Muslim immigrants and their children in European societies: 1) new forms of religiosity among Muslim young women and 2) transformations of women's roles in immigrant families and communities. It focuses on Muslim immigrants from Eastern Europe who have received little scholarly attention as opposed to communities originating from Maghreb or Turkey. That is despite having gained a considerable presence in Europe since the early 2000s. Muslim citizens, most of them from Chechnya, have been among the most numerous groups of asylum seekers in Poland, Austria and Belgium for almost a decade now. The numbers of Chechens applying for asylum in Germany in 2012 and 2013 have also risen sharply. The data collected in Germany, Austria and Poland reveal remarkable intergenerational differences in adaptation strategies of Chechen women. A significant number of young women in these countries are adopting more conservative gender practices and embracing new religious identities that are perceived as alien by the women of the older generation. The study in Belgium examines the validity of these findings in a different institutional environment. Compared to the other three countries, Belgium offers recognized refugees an easier access to citizenship and provides more inclusive educational environment for young immigrants.

Art Against Racism. Works By Santiago Sierra As a Voice Against Racism

In my paper I would like to present an artist who is socially engaged and whose works refers to very important social issue – exploitation of workers and cheap work force. Santiago Sierra, born in 1966 in Madrid, is the best known contemporary Spanish artist, who lives and works in Mexico City. Main topics of his works are: critic of capitalism, underpaid labourer completing menial tasks and immigration. It is said that he get involved in social engaged art when he realised how little money get Mexican workers for performing gruelling work. His social background also has a big influence on his work, because he comes from a working-class family.

In my presentation I will discuss some of Santiago Sierra works, which can be understood as statement about (or rather against) racism. As we consider racism as invention of modernism we can also see some direct link between racism and capitalism, cheap labour force and illegal immigrants. We can also easily match those factors: being subjected by racism is often connected with being illegal immigrant who delivers low paid menial work. Furthermore, as we can learn from Loic Wacquant that racism has always been a convenient excuse to justify exploitation of some groups of people. Almost every economic system needs some resources to exploit to exist. Especially capitalism. In capitalism racism has its economic function: it lowers cost of production and stabilizes hierarchy. Similar functions also have illegal immigrants, who are necessary in the system, because capitalism still needs people to complete menial tasks for small salaries. Employing illegal immigrant for lower wages may be justified by racism – they are no us, they are foreigners, they not equal to us.

SZYMANSKA, AGNIESZKA* (Adam Mickiewicz University, agnieszka_szymanska@vp.pl)

Concept of Artistic Brand As a Tool for Analysing Art World

Social construction of artistic reputation and artistic success have been an important issues in sociological research from many years now. In my paper I am going to present the idea of artistic brand as a tool for analysing art world and construction of artistic career – mainly the careers of contemporary visual artists.

Artistic brand can be a person (artist, gallery owner, collector, curator, critic) or an institution (gallery, museum, art fair). The most important criterion for distinguishing the artistic brand from non-branded artist or institution is its recognition by the representatives of the various spheres of social life. I separate three spheres of social life in which artistic brands can be present: art world, media and ordinary social life. In every of those three spheres could exists different artistic brands, which are also constructed and sustained in different ways.

Phenomena that have recently occurred in the art world (development of conceptual art, separating the artist from the art work, the lack of clear criteria for evaluation works of art, professionalization of the art market) made that artistic brand have gain an importance in the art world. Artistic brand simplify the complexity of the art world, improve the decision making process, add value to the art world product. Artistic brand is a guarantee of quality, a mean of communication with customers and agents. Brand is also a tool of negotiating rules in the artistic field, a tool for building hierarchy in the art world and a tool for building artistic field autonomy towards other fields.

As the exemplification of my conception of artistic brand I am going to present the outline of my research project concerning the in-depth analysis of the presence of artistic brand (contemporary visual artists and institutions dealing with contemporary art) in Poland.
The Conditions for Sustainability. Complexity, Social Learning and Integrated Climate Governance in a Warming World

This paper introduces the concept of the ‘Conditions for Sustainability’ and reviews some of the main conceptual approaches dealing with the relationships between complexity, social learning and global environmental change. The aim is to produce fresh theoretical insights and to outline an operational synthesis to better understand the types of interactions, ways of knowing, and required feedbacks that influence the production of socio-ecological complexity and affect our structural conditions and learning capacities to cope with accelerating global change. Social learning is understood as the only possible means to overcome current cultural constraints for a rapid societal transformation, and to provide the kinds of fair and quality of life development pathways that may allow humanity a dignified way out of the present unsustainability predicament.

In particular, my approach uses an ecological sociology perspective based on a further operationalisation of the SEIC conceptual model (Tabara & Pahl-Wostl, 2008) and focuses on the case of the integrated governance of climate change. From a non-dualistic standpoint, I look at the agents’ interactions and social-ecological systems dynamics in complexity production and their implications for social learning and transformation. Such analysis is carried out in a relational mode within and between the following social-ecological components and systems: 1. Structures, rules and institutions (S). 2. Energy and resources (E). 3. Information and knowledge (I) and 4. Cumulated socio-ecological change (C). It is argued that such a framework can provide a more robust theoretical understanding of the required conditions for a global sustainability transformation and support Integrated Climate Governance (ICG) policies and options.

Hijab Blogs As Explorative Media-Based Spaces of Social Recognition

Hijab blogs as explorative media-based spaces of social recognition

As studies have shown, women with headscarves are faced with discrimination and prejudice in their everyday lives. This becomes clear in professional settings and when job hunting in particular, as the Senate Administration for Integration and the Anti-Discrimination Office in Berlin have demonstrated. (Senatsverwal- tung für Integration, Arbeit und Soziales (Hrsg.), Mit Kopftuch außen vor? Berlin, 2008). Some explanatory approaches in the literature trace this back to a strong storyline in the media. Veiled women are thus perceived as less attractive, less intelligent and less educated, as suggested in the study by Yusr Mahmud and Viren Swami. (Mahmud Yusr/Swami, Viren (2010), The influence of the hijab (Islamic head-cover) on perceptions of women’s attractiveness and intelligence, in: Body Image, p. 30-93).

In Western culture in particular, the hijab is seen as a symbol of traditionalism, a lack of individuality (uniformity) and religious fundamentalism. On this basis, my study deals with “hijab-style” blogs as areas of recognition/areas of exploration. In these platforms, recognition is realised strongly via technical-media and aesthetic exploration. Using selected examples of “Islamic blogs”, which young Muslim women use as a platform to present and document “Islam stylings”, the meaning of such media platforms for aesthetic and social recognition is examined. As part of this, the presentation focuses in particular on the role of body/dress/image for the constituting of “the self” as aesthetic configurations of social visibility.

Renegotiating the Definition of GMOs: Stakeholders’ Viewpoints on “New Breeding Techniques”

We are witnessing development of various new breeding techniques which cannot be regarded simply as genetically modified. For example, genome editing techniques, such as ZFN and TALEN, are techniques which delete some sequences of DNA without leaving any trace of the gene modification. In this case it is very difficult to identify whether this modification is made in an artificial way or just naturally occurred. As of the techniques called as reverse breeding, novel genes are inserted to induce certain genomic transformation at an initial stage, but the novel genes are removed from the final product (null segregant). Here it is open question whether the final product should be regarded as GM or non-GM.

These techniques are actively being developed by venture business companies and universities. If the products created using these techniques are regarded as non-GM by regulatory agencies, seed companies, such as in the area of vegetable and flower, would willingly adopt these techniques to develop new varieties. In contrast, once their products is categorized as transgenic, regulatory cost and prejudice in their everyday lives. This becomes clear in professional settings

A Critique of the Use of the ‘Neet’ Category

In OECD countries, the problem of young people not being in education, employment or training (the so-called “NEET”) has been frequently raised in the political and social fields since the beginning of the last crisis.

On the basis of empirical data collected in Switzerland within the framework of the NCCR Lives project (http://www.lives-nccr.ch/en), we shall first attempt to understand what the use of the NEET category is founded upon: we shall show that it is based on two tenets. One is of a social nature, founded upon the fact this age group is the most affected by unemployment; the other is of a moral nature, resting on the idea that any unemployment at all in this age group is a problem. We will show that the field of political controversy around these tenets has clear borders (Bourdieu, 2012) and that it mostly centres on whether various measures should be imposed or not, whilst there is complete agreement on the category itself.

We will then show that street-level bureaucrats dealing with youth unemployment endorse the official normativity about NEET. 44 out of them have been asked to identify and precisely describe these situations that they consider as emblematic of their interventions toward unemployed youth people; hence, more than 150 such situations have been collected and allow investigating how the past, present and future stages of the beneficiaries’ life course interact within them. The data show that the normative figure is the employed adult and that they see NEET as people in need of socialization.

In conclusion, we will show that the NEET category is founded upon a linear and androcentric representation of the life course (education-training-employment-retirement) (Levy, Gauthier, & Widmer, 2006) which not only subsumes very different social universes into chronological categories (Bourdieu, 1984, Yates & Payne, 2006), but tends to deny the importance of power relationships founded upon age.
Language As a Zombie Category of Sociological Theory

The aim of this presentation is to discuss how sociological theories have dealt with language.

Many theories in sociology regard language as the most fundamental institution of social life. These theories suggest that the same language is shared intersubjectively by people, which in turn enables them to understand subjective meanings. This idea has become a market trend since the 1960s in relation to Max Weber's interpretative sociology, and is found, for instance, in Peter Berger and Thomas Luckmann's phenomenological sociology, Harold Garfinkel's ethnomethodology, and Jürgen Habermas's theory of communicative action. However, Weber himself, who lived during the formative period of the German nation-state, had consciously avoided the hypostatization of speech community linked to social contract and individualism. He embraced the universality of the Western civil-society, and shaped his theory on the principle of individualism. For him, a speech community prior to individuals was only superficial. The method of understanding that he proposed was based on the rational calculability.

The idea of an intersubjectively shared language cannot be axiomatic, because intersubjectivity, as pointed out by Niklas Luhmann, is incompatible with subjectivity. Even when the same language is shared by people, the language of the majority that creates a macro-association amongst people is based on its standardization by a nation-state. A linguistic sociology that presupposes the sharing of language is possible only in the assumption of a "nation-society" by methodological nationalism. Hence, it is debatable whether a nationally constructed language can be given the status of a natural language of the life-world. Historically, the theoretical idea of sharing a language was in prevalence during the cold war period, when nation-states were relatively stable. In sociological theories, language is one of the zombie categories that carry the residue of such "nation-societies."

Language As a Zombie Category of Sociological Theory

The first form of images of suffering is based on visual media such as photography and paintings, which represent specific individual and collective cases in aesthetic and documentary logics. A second form of representing suffering is based on numerical data and indicators and takes the form of lists (e.g. statistical tables with country-specific data in alphabetical order, rank-ordered lists (e.g. the Under-S-Mortality-Ranking), and graphical forms (e.g. world maps). Especially this second form preserves an observer's perception and theorisation, as it not only integrates numerical and graphical elements but moreover two distinct logics: simplification and complexity in transforming social phenomena into data and data into images representing social phenomena. I will discuss firstly the line of complexity running from simple listings to positioning to visually transforming data; and secondly, the line of simplification by which all three forms transform the complexity of social phenomena into visual clarity; a process in which diverging interpretations are hidden behind visual representation, and ambiguity and interpretative openness is transformed into graphical decididity. I will conclude by linking the visual analysis back to semantic representations, as images of suffering are embedded in discursive frames through which their meaning is shaped, enacted, and specified. I will present the change of discursive frames with regard to the constitution of children from objects of humanitarian action to bearers of human rights, to human capital, and human potential; and the consequences of these shifts in meaning for the representation of suffering in visual forms.

Westernization or Hybridization?: Restructuring Japanese Hegemonic Masculinity in Globalization

During the economic growth period, a form of masculinity attained a hegemonic position in Japanese society, that is, salaryman. The Japanese can easily build up a mental image of a typical salaryman as, a man who works for the same company for life, being protected by career-long employment and a seniority system, and throws himself into the role of the breadwinner leaving domestic duties to his wife. Until the 1990s, majority of Japanese people approved the idea of gender division of household labor and Japan's economic conditions at the time could afford to provide a large part of people with such lifestyles. Hence, male-domi- nated regime in Japanese society in the second half of the 20th century has been legitimized thorough a masculine ideal characterized by preoccupation with work to provide for a family rather than violence or physical prowess.

In the age of globalization, however, any local gender orders cannot be isolated from the world and the hegemony of a locally-dominant form of masculinity is always threatened not only by local conditions but also by economic, political and cultural struggles in a global scale. Based on in-depth interviews with Japanese men in two different social contexts, the paper explores the conditions of restructuring salaryman masculinity in terms of the world gender order. First, the encounter between different local hegemonic masculinities in a transnational arena is examined, showing the cases of businessmen working at subsidiaries of Japanese-affiliated companies in Australia. Then, the impact of contemporary globalization on a local gender order is considered by looking at the gender practices among middle-class men to keep up their hegemonic positions, being confronted with globally-expanded feminist agendas and neoliberal economy which undermine the basis of male-dominated Japanese society. Finally, we will discuss how ongoing reconstruction of hegemonic masculinity is associated with multiple social inequalities.

Recovery or Redevelopment: An Examination of the Long-Term Socio-Spatial Transformation of Earthquake-Affected Neighbourhoods in Bhuj

This paper examines long-term socio-spatial transformation of historical urban neighbourhoods in the earthquake-affected city of Bhuj. The research draws upon archival review and field data collection in this city ten years after the massive earthquake of 2001. The paper first examines the recovery programme and plans for reconstruction at different scales of city, neighbourhood and individual buildings, with a particular attention to housing reconstruction policies. It then encounters changes in the built environment of two neighbourhoods in the old fabric of the city across time; from the pre-earthquake condition, to the disaster time and ten years after it. Changes in the social environment of these neighbourhoods are investigated through the examination of interviews with the pre-earthquake residents of the two neighbourhoods. The juxtaposition of the narratives of those who stayed in the neighbourhood and those who opted or had to leave it demonstrates the contested meanings of recovery. The paper discusses how socio-economic trends, the disaster and its impacts, as well as post-disaster interventions of different actors played a role in such transformation. It is discussed how these influences are manifested in the still changing built environment and how these manifestations are in turn perceived by the residents of the two neighbourhoods. The paper concludes by drawing lessons from this case study to inform future urban planning efforts following major urban disasters.
Perhaps the most underestimated influence on the latest generation of Canadians is the impact of technology on Millennials' intellect and interaction. While some scholars advocate for increased integration of technology into personnel training and communication, others warn against the potential for the dissemination of privileged CF information. This tension is not easily allayed by statistical evidence: Millennials' use of technology is nearly as likely to abuse technology as they are to use it effectively. Like other epichal transformations, the advance of technology is ineluctable. This Canadian Forces must prepare for the integration of a generation who has fully integrated modern technology into their day-to-day operations. Not only has technology reshaped the methods that Millennials use to execute tasks and communicate, but it has profoundly reshaped their cognitive abilities, their expectations of experience and their access to information. The trouble arises when the ambitions of the programs exceed the awareness of the users; prompting crises in privacy and security. This review examines available literature and the colour and texture of water, the delicate or abundant of aquatic species in the river are some of the common visual experiences described by the locals as indicative of pollution. What emerges is that local people have a broad conceptualization of river pollution. The values of a healthy river that are important to local people also the physical environment surrounding it. Specifically, the concrete grey walls and straightening of the Klang River for flood mitigation schemes and transportation routes were viewed by the local people as a form of pollution. They expressed a deep concern regarding the physical transformation and modifications of the surrounding riverscape from ‘natural’ to ‘unnatural’, which consequently affect their visual experiences and overall sense of place. In conclusion, the concept of place is central to this paper. It is a useful concept to allow the emergence and the self-reproduction of the functionally specific differentiation in Luhmann’s theory. It shall be confirmed that various kinds of forms employed as symbols are so connected with “health as symbolic media” as to allow the emergence and the self-reproduction of the functionally specific communication of care work.

TAJUDDIN, NOR AZLIN* (International Islamic University, norazlin.taj@gmail.com)
The Meaning of Urban River Pollution and Sense of Place: An Ethnographic Study of the Klang River, Malaysia

This paper is based on a PhD research, which investigates values, beliefs and practices associated with two polluted rivers in urban settings – the Klang River in Kuala Lumpur, Malaysia, and the Torrens River, South Australia. However, this paper focuses on the findings from the Klang River ethnographic data. Theoretically, the concept of place is central to this paper. Findings suggest that in the urban setting where rivers have been increasingly polluted and modified, and as a consequence whose water is not suitable for direct contact, the visual faculty plays a prominent role in determining the state of the river. From the perspective of everyday users, what constitutes pollution depends significantly on what can and what cannot be seen with naked eyes. In particular, objects (such as rubbish) intermingling with river water, the colour and texture of water, the delicate or abundant of aquatic species in the river are some of the common visual experiences described by the locals as indicative of pollution. What emerges is that local people have a broad conceptualization of river pollution. The values of a healthy river that are important to local people also the physical environment surrounding it. Specifically, the concrete grey walls and straightening of the Klang River for flood mitigation schemes and transportation routes were viewed by the local people as a form of pollution. They expressed a deep concern regarding the physical transformation and modifications of the surrounding riverscape from ‘natural’ to ‘unnatural’, which consequently affect their visual experiences and overall sense of place. In conclusion, the concept of place is central to this paper. It is a useful concept to allow the emergence and the self-reproduction of the functionally specific differentiation in Luhmann’s theory. It shall be confirmed that various kinds of forms employed as symbols are so connected with “health as symbolic media” as to allow the emergence and the self-reproduction of the functionally specific communication of care work.

TAK, MINHYEOK* (University of Otago, minhyeok.tak@gmail.com)
Betting with the Enemy: Changes in Sports’ Attitude Towards Sports Betting

Match-fixing in sport has emerged as a serious and widespread global problem. However, international sports organisations have tended to adopt an ambivalent approach towards the issue. One the one hand, they deal sternly with match-fixing itself as seen in their common ‘zero-tolerance’ policy. On the other hand, the sports betting industry that brings about match-fixing has now been accepted as a reliable business partner. These conflicting approaches to match-fixing and sports betting industry frame match-fixing as a matter of individuals’ morality and ethics, instead of structural aspects that drive individual players to becoming involved in match-fixing. Interestingly, this dramatic shift in sports organisations’ attitude from vigilance to trust towards the sports betting industry appears to have been driven by monetary motivations. As FIFA President Sepp Blatter saying “match-fixing” because “what matters in football is the money for sport”. This presentation briefly discusses various measures that international sports organisations are currently adopting to tackle sports betting along with the limitations of these measures. While in the early 19th century the football association in England struggled to protect their sport and players from dangers of the betting industry, this presentation raises a question whether today international sports organisations try to protect their business partners including licensed bookmakers from non-partners such as players in danger.

TAHANASHI, AKINARI* (Kyoto University, ilanycva@gmail.com)
On the Function of “Symbolic Media” in the Process of Functional Differentiation

It is one of the most important contributions which Niklas Luhmann has made toward the thesis of functionally differentiated society to indicate the roles of “symbolic media” in concrete temporal events of the society. Medium/Form-distinction is the theoretical device introduced by Luhmann for the purpose of analysis of Form-functioning in auto-poietic and information processing systems (including meaning-processing communicative ones). In short, it is necessary for meaning-processing systems in general, communication systems in particular that they constitute any appropriate distinction between Medium and Form and symbolize objects in the environment as Forms through Medium to operate and observe them.

We focus on this distinction of Medium/Form. This presentation shows how Forms in Luhmann’s terms, which mean distinctions with asymmetry between the two sides, and as symbols in the reproduction of the communication in which they are adopted. And we deal with “health as symbolic media” for an instance so as to elucidate the significance of this theoretical device for empirical researches. In concrete terms, we will take up a case study about care work for people with physical disabilities in Japan in order to scrutinize the validity and the applicability of the thesis of functional differentiation in Luhmann’s theory. It shall be confirmed that various kinds of Forms employed as symbols are so connected with “health as symbolic media” as to allow the emergence and the self-reproduction of the functionally specific communication of care work.

TAHANASHI, FUMIKO* (University of Oxford, fumiko.takahashi@gmail.com)
Integration and Segregation - Teachers’ Attitudes Toward Ethnic Culture and Identity of Immigrant Children in Japan

This paper investigates how the Japanese schoolteachers think about immigrant children’s ethnic culture and identity by conducting interviews with the twenty-five schoolteachers for immigrant children in Tokyo.

For the immigrant children, school is the first-entrance to Japanese society. It plays a significantly important role to determine how they participate in Japanese society. In both cultural aspect and social aspect, the interaction with teachers is an important process for children to negotiate and develop his/her ethnic identity. For Japanese society, school is a window to look at Japan in the future in terms of how they can integrate the increasing immigrant children and develop ethnic relations.

It finds out that (i) most of the teachers expect both adaptation and maintenance of the immigrant children; following the Japanese social rules and norms in public, while maintaining their traditional culture at home, by knowing that those social rules are not culturally neutral, and (ii) they separate the immigrant children by expecting them to maintain their ethnic identity and culture, for example “Chinese in Japan” or “Filipino in Japan”, rather than “Chinese-Japanese” or “Filipino-Japanese” based on their ethnic and cultural national identity, while they also integrate the immigrant children by treating the immigrant children equally under the name of “the students in my class” or “residents in the city”.

This case study provides a valuable insight into the discussion of immigrant integration and multiculturalism. I discuss how the theory of multiculturalism is interpreted by the ethnic majority in a society where they recognize the different dimensions of culture and national identity is strongly ethnic and cultural, but not civic.

TAHANASHI, HIDEAKI* (Niigata Rehabilitation Hospital, hideaki.takahashi@aiko.or.jp)
A Shortage of Medical Doctors Due to Uneven-Distribution in Location and Specialty Needs Interprofessional Collaborative Practice in Health and Social Care in Japan

A shortage of medical doctors has been pointed out in last 20 years in Japan, but it has been more apparent after 2009, when two more years of a new compulsory clinical training added, after six years of medical education and successfully passed the medical licensure examination in Japan. A number of practising doctors per 1,000 population in 2009 was as follows: Norway 4.0, Germany 3.6, OECD 3.1, UK 2.7, USA 2.4, Japan 2.2, Turkey 1.6 and Chile 1.0. The highest number per 100,000 was 286.2 in Kyoto and the lowest 142.6 in Saitama, in 2009.

Causes of the shortage in Japan were as follows: advancement of medical science, specialisation of health and social care professionals, increase to participate in private practice, increase of woman doctors, longer time to talk with patients, change of patients’ consciousness to right, concentration of doctors to cities, decrease of practising doctors in pediatrics, and obstetrics.

Meanwhile, average life expectancy has extended as follows: 1921-1925: m 86.41, f 86.41 (years).
Various needs of elderly people in health and social care could not be solved by a single profession, such as medical doctors. Many symptoms in health care occurred in the elderly, such as senile dementia, metabolic syndrome, hemiplegia, dysphagia, fragility fracture and dysuria, could be better treated by a team of multiprofessionals. Health care outcome such as average and/or healthy life expectancy may not be always correlated with a number of doctors.

In order to improve QOL of service users, a paradigm shift is needed in strengthening competencies of health and social care professionals for interprofessional collaborative practice, to develop a comprehensive health care network a community, consisting of three community-based powers on health care, work, and education.

Method: We conducted a semi-structured qualitative study in 2013. The interviewees were 23 married men, who were volunteers, and 28-58 years old. Twelve men lived in Niigata, 5 in Hyogo and 6 in Kagoshima. The majority of them were members of the Japanese Trade Union Confederation and participated in our questionnaire survey in 2012. The rest interviewees were recruited through the personal relationships of the field investigators.

Results: We have identified a few of new factors to promote the household work participation of married men in Japan. A married man would have positive intention to participate in the household work, if he thinks as follows: he could take the power to decide the principles of his family life (modern patriarchal hypothesis); he could manage the household economy (family economy management hypothesis); and he has clear memories of the experiences in home economics education classes (home economics education hypothesis). In the near future, we will look into these hypotheses by analyzing the data of questionnaire survey in 2012.

* This study was partly supported by Health Labour Sciences Research Grant of Japan in 2012 and 2013. Dr. Ayako Kuramoto, Kagoshima Prefectural College, is a member of this study.

| Despite that work family balance (WFB) has been addressed as an important policy issue in Japan for over a decade, Japanese employees, especially those with children, appear to have more difficulty in reconciling work and family life compared to their counterparts in advanced European welfare states. In fact, there seems to be in Japan a wide agency and capabilities gap between policies and practices, and between entitlements and a sense of entitlement to make claims for WFB. From our empirical study of working parents in Japan, we have witnessed that barriers in workplace organization and the socially endorsed working time regimes have made it difficult for the vast majority of workers, especially men with small children, to exercise their rights for WFB (Takahashi et al. Forthcoming).
| Based upon the above findings, we turn to Japanese employees working in EU countries where WFB is considered to have been better achieved. The main aim of this study is to explore whether these men's perceptions and attitudes towards WFB have been transformed by living and working in a different country, viz. a context constituted by a different social system, work environment, organizational culture, and the like. |
| Face-to-face interviews with Japanese men with children under 13 years old, mainly working for Japanese enterprises in Netherlands (13 persons), Germany (13 persons) and Sweden (10 persons) were held in August-September 2013. The preliminary analysis shows that the different social institutional settings seem to have enhanced their WFB; the majority of the interviewees report that they have more time to spend with their family and with themselves than they did in Japan. |

Social Quality in Cross-Cultural Media and Public Debates: Implications for Public Policy for Social Empowerment
This research begins a discussion by examining distinctive features with Japanese discourse on quality of life addressed by decision-makers of public policy. It will be questioned how the media and public debates have addressed the safety and quality of life in post-3.11 Japan. The main focus of this research is on various ways of manifesting citizens' well-being, including freedom from violence in private life, as a point of start of social empowerment. In the post 3.11 world it seems more important to take into consideration the intersectionality of various factors concerning social quality, whenever we attempt to seek proper public policy response for nurturing social empowerment. It will be studied which social indicators have been referred to and/or ignored by Japanese media, and in which manners non-Japanese media has been approaching the issues on well-being. In domestic debates Japanese media and governments tend to be selective with data sources and indicators, excluding substantial among of information on those risks and issues such as radiation risks, well-being of vulnerable citizens as well as transparency in decision-making, i.e. governance risk. In brief, this research will ultimately attempt to enhance our understanding on scientific relevance of comparative studies of social quality and empowerment.

Peter Singer and the "Why be Moral" Problem
The aim of this presentation is to point out the fatal flaw in Peter Singer's thinking by analyzing his discussion about the "Why be moral" problem. Peter Singer is one of the most influential ethicists today. He studies theoretical ethics and also engages in social practices in order to address moral issues like animal rights, bioethics, environment problems, etc. The "Why be moral" problem has been one of the topics he is passionate about since his master's thesis. "Why be moral?" has two meanings: "Why should we be moral?" and "Why should I be moral?" The former means, "Why do societies need moralities?" The latter means, "If societies need moralities, why should I accept them?" This problem is connected with the discussions about civil societies because it also asks us whether civil societies are necessary. Ethicists submit some valid answers to the former question but no ethicists have submitted answers to the latter. Peter Singer tries to answer the latter. In his opinion, the ethical life is better than the unethical life because ethical people can realize the consistent meaning of their life but unethical people can't. In other words, ethical people are happier than unethical people. So we, individuals, should be moral. This answer is invalid. For example, there are people who are satisfied with being egoistic. Therefore he fails to solve the problem. This is the fatal flaw in his argument.
Some say trying to solve the "Why be moral" problem is nonsense, worthless or useless. In fact, even though we don't solve the problem, we can do many social practices. Nevertheless, solving it is important for Singer because his opinion is too radical to accept for ordinary people. That Singer doesn't solve the problem becomes an excuse for people not to act morally.

Increased Involvement of the Disabled in Welfare Policymaking
There is increasing emphasis on participation by disabled people themselves in the process of formulating policies for the disabled, both in Japan and abroad. One of the most recent examples of this trend took place in Japan; in 2010 the government set up the “Committee for Disability Policy Reform”, forming it in such a way that more than half of the members were directly concerned with the issue (people with disabilities and/or their family members), to discuss reformation of policies for the disabled, and to develop dialogue and cooperation with them. The aim of this report is to identify the conditions for successful advocacy that promotes the participation of disabled people in the field of welfare policymaking. I will review and compare the advocacy of organizations consisting of disabled people in reference to Esping-Andersen's welfare regime typology. The discussion covers the organizations' history, fundraising strategies, ways of participating in the policymaking process, relationship to the government, as well as their role and influence.
My research results are as follows; disability organizations are actively participating in policymaking both in the Scandinavian countries, classified into the social-democratic regime, and in the United States, the liberal regime. However, there is a difference between the two cooperative relationships with the government: in Scandinavia, welfare policymaking is carried out with strong support from the government, and thus always runs smoothly. In the United States, on the other hand, it is often carried out amid a tense relationship with the federal or state government, and because of this, there are cases in which it is not smooth. I will add analyses of Japanese cases classified into the conservative regime, and examine the universal conditions and problems requiring distinctive solutions that can be found through the participation of the disabled in every country.

Vulnerability of Functional Systems in Societal Transformation: On the Case of Political System
Populist political movements indicate the weakening of formal political processes. Today's advanced information society provides influential channels to get popularity and political momentum. The theory of functional differentiation predicated the autonomy and unity of each functional system. But, through mass media and the internet, populists can stimulate a societal emotion and mobilize it. We can observe, at least in Japan, a bifurcation of two political processes. On the one hand, there are formal and traditional political processes. Various interest groups support political parties as their representatives (or agents) in the political arena which adjust their interests. On the other hand, there is an arena of political communication in which various political groups are contesting to get societal resources. Now, political system becomes increasingly vulnerable (or sensitive) to opinions in this second arena. This arena of political communication could bring a risk (e.g. of political extremism). But, it could also bring a chance (e.g. to achieve an ambitious consensus on social reform for sustainable society). One way or another, we can describe this situation from the point of view of social systems theory. Niklas Luhmann defined a resonance of social system as a reaction of social system to its environment in accordance with its structure. I will slightly redefine the concept of resonance to describe a societal resonance. That is, a resonance of social system is a reactive reproduction of communication in accordance with its structure (g. e. g. meta). So, we can regard agendas in this second area as societal structures which catalyze societal resonances (communications). And, the problem is how societal communications affect trajectories of functional systems. The case of politics will be suggestive for this problem.
Policy makers such as European Commission, UK, and Japan are now interested in happiness as a policy tool. Happiness is normally measured by a likert scale. The comparison of happiness scale needs common understanding of happiness. However, happiness distribution can be classified into three types: normal, skewed and twin-peak. For example, the distributions in Japan and Hungary are skewed and twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply question about ideal happiness. Some twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply question about ideal happiness. Some

Quantitative survey was conducted in Japan, Thailand and Philippines. It included questions about their current happiness on a 0-10 scale and ideal happiness. Adjusted by ideal happiness, the distribution was skewed distribution similar to Nordic countries. The survey’s result confirmed that distribution of happiness embodied the difference of ideal happiness.

Others’ Happiness: New Evidence from Four Asian Countries

If individual pursuit of happiness forced others’ happiness lower, happier would not be a good concept to evaluate the progress of a society. We can call the society a “selfish happiness society”. However, if happiness is more interpersonal, the balance between pursuit of individual happiness and other person’s happiness may make society lead good direction. In particular, we now face many issues related to sustainability. Balance between economy, society, and environment and balance between current generation and future generations are keys for our survival. We can call the society a “social happiness society”. Thus, the concept of “social happiness” is much more important in our society. However, effect of a person’s perception about her own happiness and others’ happiness on her happiness is not clear. Therefore, it is worthwhile for us to explore if a person who takes care of or pays attention to others’ happiness is happier. I analyzed the relationship by using a survey in Japan and confirmed that other person’s happiness makes us happy (Takahashi, 2012).

Similar to the survey in Japan, surveys conducted in Thailand and Philippines in 2013 included questions about general happiness and interpersonal happiness. Using these dataset, the author can test this interrelationship between individual happiness and other person’s happiness. Even after controlling other important factors such as age, income, job and marital status, persons who reported that those around her were happy and she made those who were most important to her happy are happier than others. From the result, the author can conclude that other person’s happiness makes us happy at least in Asian countries.

Identifying and Reducing The Anti-Japanese Prejudice By Koreans In Job Hiring Decisions

We investigated the level of prejudice that contemporary Koreans hold toward contemporary Japanese because of the Japanese military’s victimization of Koreans during the colonial and social psychological mechanisms that might alleviate the negative feelings and attitudes held by the contemporary Koreans toward the contemporary Japanese. The Korean participants were asked to evaluate a pseudo-job candidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of the candidate were manipulated to see if these manipulations would affect the participants’ responses. Based on theories of intergroup conflict, social identity, and the collective guilt assignment, we hypothesized that: 1) the Korean participants would endorse the Japanese candidate more when he is portrayed as a bilingual (speak only Japanese and English) than when he is portrayed as a bilingual (speak only Japanese and English) and 2) the more collective guilt the Korean participants assigns to the Japanese candidate, the more negatively the candidate would be perceived in terms of his personality, which would result in less endorsement to hire the candidate. The results confirmed the hypotheses. Possible implications and suggestions for future studies are discussed.

TAKALA, MERVI* (Finnish Centre for Pensions, mervi.takala@etk.fi)
Loss of a Spouse As a Poverty Risk

The death of a spouse is one of the most stressful changes in one’s life. Spouse’s death increases the morbidity as well as mortality of widows and widowers. The explanation is the lack of social support because the family is generally regarded as a primary source of support. One important aspect is also what happens to the income after the death of a family breadwinner. All these three factors - physical, psycho-social and financial - have a substantial impact in widows and widowers wellbeing. In Finland after the death of a family breadwinner the income of the surviving family members consists of widow’s and orphan’s pension. The initial pension and the basic amount of the orphan’s pension paid from the national pension scheme are paid regardless of income. The survivors pension paid from the earnings-related pension scheme comprises the surviving spouse’s pension and the orphan’s pension. A child of the deceased will receive an orphan’s pension until the age of 18. The survivor’s pension act came into force in 1967 so pension related system is in national pension in 1969. Both were reformed last in 1990.

In this study we use register data of statutory pensions. Roughly 282,000 people were paid survivors’ pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men’s share of the pensions is 17 percent. Most of the surviving spouse’s pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 per cent live under poverty line whereas of all pensioners under poverty line live 22 per cent. Right after spousal loss the income in family decreases about 20 per cent compared to pre-loss income.
Association As a Tool or As a Principle?: The Reception and Usage of the Concept of the Association in Postwar Japanese Modernization Theory

How the association could be legitimized was a key question for French Sociology, because the French Revolution prohibited not only old corporations but also new voluntary associations in order to establish a Modern Society.

For some sociologists, "Association" was theorized as an alternative to market society, for some legal scholars, the state was defined as a contract of association, in order to submit State Power to Civil Society's control. In either case, the basic principle of association was the union of different peoples to accomplish their common purpose.

Comparing the French case, this paper focuses on the place of the association in Japanese Modernization Theory. This theory stressed the liberation of individuals from traditional ties, rather than Civil Society's independence from the State.

As a result, first, the association was understood as one type of secondary group, which is contrasted with the local bonding community, and not as a principle for the society as a whole.

Second, the association was not considered to contribute to the Modernization Process. In Japan, Modernization took the form of individualization in the free Market Society.

Today, Japanese society has been thoroughly modernized in that sense; individuals are free from tradition and customs. Paradoxically, engagement with local community activities has been revalorized and is considered to be an individual choice. Tradition became one of the resources that create the voluntary association relationship.

These situations seem similar to Giddens' "Reflective Modernity" in appearance. However, today the Japanese regard the association as a tool for solving problems, not as a principle of society that unifies different peoples for the good of the community.

Retracing this history, we would like to critically examine why we have understood the association as a tool, rather than a principle, and how this understanding affects today's policy.

Association As a Tool or As a Principle?: The Reception and Usage of the Concept of the Association in Postwar Japanese Modernization Theory

This study investigates hegemony of American banks and corporations in the making of Japan-U.S. relations in the period between 1920 and 2008, using the framework of Neo-Gramscian approach and sociological state theorists and referring to primary and secondary sources. In the period, three specific forms of hegemony have crystalized with "internationalization of capital", accompanying cooperation and conflict with Japanese counterparts. The three forms of hegemony are liberal internationalism around high finance and corporate liberalism (embedded liberalism) undergirded by Fordism, state intervention and Bretton Woods, and neoliberal globalization. According to the form of hegemony, the period is divided into five terms. The first is the post-First World War. Wall Street bankers formed the alliance with Japanese bankers through the investment in Japan and Versailles-Washington system. The second is the term between mid-1930's and 1945. Great Depression destroyed liberal internationalism, and the conflict between Japan and the U.S. finally led to the war. In Japan, national industries like steel supported expansion of sphere of interest, which clashed against American "garden area" design. In the U.S. New Deal and war mobilization formed the coalition that supported corporate liberalism. The third is the term between 1945 and 1971. American corporations and banks formed cooperation with Japanese counterparts through the investment in Japan and Japan-U.S. alliance in the cold war. Japanese leaders supported corporate liberalism, but the catch-up broke Breton Woods. The fourth is the term between 1970's and early 1990's with trade conflicts, during which American international banks rose, formed neoliberal globalization, and increased the investment in Japan. In Japan, multinational corporations rose through FDI in the U.S. after Plaza Accord. The fifth is the term between mid-1990's and 2008. American banks and Japanese corporations shared neoliberal globalization, increasing mutual investment in Japan and the U.S. Neoliberal globalization finally, however, faced the crisis.

Transitional Pathway from a Temporary Migrant Worker to a Permanent Resident: Narratives of Filipina Live-in Caregivers in Canada

With the rapid growth of the Tagalog (Filipino) speaking population, recent demographic changes in Canada has been directly affected by the pattern of global female migration and the subsequent arrival of these women's family members.

In particular, a specific foreign temporary worker program, known as the Live-in Caregiver Program or LCP, explains the current population growth of this visiting and migrant worker category.

This study aims to understand the social constraints on female migrant workers through examining everyday experience of Filipina live-in caregivers in Canada. The paper particularly focuses on the transitional legal pathway from temporary to permanent residency. The study of the transitional pathway of migrant workers uncovers the social process of inclusion and exclusion of migrant workers and their family members by states. Furthermore, this social process is highly gendered and racialized experience because vast majority of the applicants under the LCP are females from the Philippines.

The Nagano Olympics: Impacts on Local Community

This study aims at demonstrating the impacts of Sport Mega-Events (SMEs). In Japan, some studies on environmental or fiscal impacts caused by SMEs have been studied. However, few studies address the concrete impacts in a specific area and local community, nor try to investigate the long-lasting effects.

In recent years, the International Olympic Committee (IOC) has attached a high value to 'Olympic legacies'. However, there are two main concerns regarding the IOC 'Olympic legacies'. First, these legacies are mostly based on positive effects for the host city/nation, the National Olympic Committee (NOC), other sport-related organizations, and for the IOC itself. Secondly, the 'Olympic Games Global Impact' project, launched by the IOC in order to improve the evaluation of the overall impacts is completed within 2 years of the event, and is much too soon to measure the legacy. This study argues that it is important to conduct research for a prolonged period of time in order to capture not only the positive aftereffects of the SME but also to address negative aspects thereby ensuring a more complete understanding.

This study evaluates different aspects of SME impacts through a case study of Hakuba village (Japan) which hosted the Nagano Olympic Games in 1998, and Hakuba are discussed in detail. The analysis in this study is based on the questionsnaires and interviews conducted with people from the community itself and on a variety of statistical data.

Citizenship of Long-Term Migrant Filipino Women in Japan: Impacts of Positions in Japanese Families

This paper will argue how the citizenship of long-term migrant Filipino women in Japan is defined and negotiated in the dominant social structure. Regardless of the status of "sexual citizens," or long-term legal membership based on sexual relations with Japanese citizens as Parreñas (2011) argues, sociostructural locations for these women have been stratifying, particularly between married women and mothers of Filipino-Japanese children. Based on census and qualitative data, stratification is primarily due to the process through which these women are or are not included into Japanese families, which embody the dominant racial and gender structure of Japanese society.

On the one hand, married women increasingly exercise their agency in not only the family and workplace in Japan but also in a transnational civil society. Despite their exclusion from formal political citizenship, some substantially exercise transnational citizenship by being involved in transnational activities across Japan and the Philippines, which lead to their positive recognition. On the other hand, solo mothers of Filipino-Japanese children tend to face difficulties accompanying marginalization and poverty. The number of Filipino solo mother households has been increasing along with the rise in the number of international divorce. Many of them cannot help but depend on social welfare because of limited access to the workforce. In addition, the increase in the number of divorcees suggests that the status of married women and that of mothers are in a continuum, although they seem to be at opposite ends of the spectrum.

This study argues that the stratification among women shows how inclusion into a Japanese family provides the most available means to ensure security among these women living in a dominant racial and gender structure.
Making Irregular Migrants Vulnerable: A Tangle of Biopolitics and Morals in Japan

This paper examines the changes in the irregular migrants’ situation in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

Giorgio Agamben (1998) theorized that biopolitics, as a function of sovereignty, operates to define the included and the excluded, the latter of which is called “bare life.” Some studies regard irregular migrants who are legally excluded as living a contemporary “bare life.” However, other studies have criticized Agamben’s argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract broad public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms. The labor shortage and Japan’s self-recognition as a major power at the time.

However, since around the turn of the century, reactions to irregular migrants have dramatically changed. Their presence has been linked to security issues, and they have come to be regarded as “criminals.” Immigration authorities collaborated with the police in launching a large-scale crackdown, which ended the daily lives of irregular migrants. At the same time, however, the legalization of irregular migrants was promoted based on moral values. At present, sovereignty, connected with moral values, mainly defines the included and the excluded among irregular migrants.

Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

Mobility, Diaspora & Contact Zones of Australians in Japan

Niseko, Hokkaido, a famous ski resort, has become a popular ski destination for Australians since 2001. It is located in the northern part of Japan serving both domestic as well as international ski tourists. Among foreign travellers to Niseko, Australians are one of the predominant groups of visitors. With the large number of Australian visitors, the area has been transformed into “Little Australia” where Australian pubs, shops, and English signs are becoming elements of the city’s landscapes. This paper will consider this flow of Australians to Niseko and its impacts in the local community through different theoretical concepts and shed light on nature as well as significance of such community under nexus of Australia and Japan.

A Moment of Recognition and Unity in Diaspora: Multi-Spatial Formations of Kurdish Music in Germany

Immigration from developing countries to Europe is often experienced not only as a social downward mobility but also as a cultural depravation. In the context of Turkish migrant in European countries, their musical activities have drawn attention as struggles in discrimination: effort for transmitting cultures to the next generation in informal spheres, where indigenous European people are rarely to be found. Furthermore, the development of the welfare state system in Germany has played a vital role in the institutionalization of the link between reproduction and capitalist economy by locating families/communities within the national economy, in other words, governing reproductive activities, as exemplified by the setting-up of the welfare state system. Economic restructuring influenced by neoliberal principles in recent years, however, has eroded the foundation on which families and local communities can function as agents of reproduction. The experience of particular acute problems to the Japanese state where a high degree of the welfare state system’s dependence on the productive activities, as exemplified by the setting-up of the welfare state system.

This research focuses on the developing process of the local food culture in shrinking cities. It is located in the northern part of Japan serving both domestic as well as international ski tourists. Among foreign travellers to Niseko, Australians are one of the predominant groups of visitors. With the large number of Australian visitors, the area has been transformed into “Little Australia” where Australian pubs, shops, and English signs are becoming elements of the city’s landscapes.

How to Tackle the Vacant-House Problem in Shrinking Cities: The Cases of Japanese Local Governments

Japanese society, with the progression of depopulation and rapid aging, is faced with the vacant-house problem in both urban and rural areas. It is being recognized that vacant houses are an urgent issue to be tackled by Japanese local governments. How to reduce risks associated with vacant houses (accidents caused by building collapse and risks in fire and crime) to promote residential population and local resilience. The purpose of this research is to clarify the characteristics of local governments’ actions against the vacant-house problem in urban areas into the following two types:

1. Enforcement of “municipal regulations for controlling vacant houses”
   - In 2010, Japan’s first municipal regulation against vacant houses was enforced in a city of suburban area of Metropolitan Tokyo. This action was a response to an increase in the number of destroyed houses. More than 40 cities have enforced similar regulations since then, and the number is further increasing. This tendency is especially prominent in local governments facing severe economic conditions, suggesting that how to control vacant houses has been a potential and serious problem. Main actors are local governments and the house owners. More specifically, who bears the demolition costs of aging houses is the point.

2. Management of “vacant-house banks”
   - It is a challenge to local governments to introduce vacant houses, which have not been valued in private housing markets, to public information networks to promote their effective use. There are various types in the management of “vacant-house banks” by local authorities. Diverse actors including NPO are involved in this type. Because renovation of vacant houses costs a large amount of money, those actors are seeking to form a partnership with each other and to explore effective methods. Generally, not only reducing vacant house-associated risks but increasing values of local resources is aimed.

Re-Urbanization and the Local Food Culture: The Case Study of Central Tokyo

This research focuses on the developing process of the local food culture in central Tokyo. Regeneration of the central district promoted to develop the local food street and a local food identity. The purpose of this research is to analyze how the urban regeneration deepened the local food culture.
This research area called ‘Tukishima’ is located in the water-front area adjacent to the urban center. The Water-front mega-projects in the 1990’s opened new large business/commercial district on the reclaimed island which attracts international and domestic tourists. The new subway lines were constructed through Tukishima, the number of tourists come to Tukishima increased. The traditional local shop owners in Tukishima changed their business, they opened special local food restaurants. This special local food called ‘Monja’ used to be a common afternoon snack for working-class children here. About 60 Monja restaurants made the distinctive street of local food. Many tourists come to eat it at lunch time. After lunch they go sightseeing and shopping at the water-front. Tukishima became a popular tourist spot. This is the first impact of urban regeneration on Tukishima.

The second impact of regeneration is the boom of building super high-rise condominium towers. Tukishima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Tukishima is gentrified, and new residents enjoy to eat Monja as a traditional local taste.

The third stage of regeneration is about to begin. Tokyo has been chosen to host the 2020 Summer Olympic Games. The venue is very close to Tukishima, high-rise tower residences can see games from their windows. The price of condominiums goes up. Local food will be popular to visitors. The new era of Monja is about to start.

Challenges for Healthy Eating: A Cross-Cultural Study of Conceptions of Eating Among Young Adults in Urban Australia and Japan

In the early 21st century when bio-medical view on health and medicine dominates global discussion on “healthy eating”, most guidelines and recommendations are primarily concerned with fulfilling nutritional requirements and avoiding or limiting the intake of undesirable substances. They are motivated by the prevalence of chronic diseases such as cancer, cardiovascular diseases and obesity in modern society. Consequently, cultural ideologies around “healthy eating” are being constructed around these rationales. Beyond food intake, some studies and public health policies assert further that commensal eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

I argue that the bio-medical approach mentioned above is often individualistic and overlooks unique socio-cultural contexts of eating and living in a local community such as commensal eating, culinary culture, history, lifestyle, and food supply chain. I explore the construction of “healthy eating” among young adults in urban cities of Australia and Japan through 71 in-depth interviews conducted during 2012-2013. I examine holistic aspects of eating by including contextual aspects of commensal eating. My research suggests that commensal eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

In conclusion, this study identifies dynamics of eating contexts in different cultures as challenges for healthy eating promotion in the modern society.

How Japanese Male Narratives Are Made up?

We have recently researched Japanese university students’ sexual lives for a few years and published as a book in Nov. 2011: “talking about sex with college students’ sexual reality through interviews for gay students’ sexual reality at the research and described how much they suffer from their lives. After the book published, I used that as a textbook in some universities. Then I happened to meet some gay students. The more I collected their narratives as a gay, the more I questioned why they so suffered from their sexuality are. I noticed a paradox of the narratives as a gay or that of ‘gender identity disorder’; the more they talk, the more they are suffered. I wish I could suggest some case studies of their narratives what is to against ‘male narratives’ from their words and why they suffered from such unimportant miss much from their identities.

Who Makes the Stories, Medical Professionals or Patients?

I am really interested in the arguments which should save patients more ‘narrative based medicine’ or ‘narratives in Medicine’? In my point of view, carers including medical professions should more focus on patients stories about their illness and life. When patients’ narratives are controlled by medical professionals, even if it had been for ‘medical treatments’, patients are controlled by others. That might means one’s life is possibly controlled by medical stuffs which are strongly connected medical governance in their country. For instance, ones narratives about “How to die” or “how to give birth” should easily connected to economical point of view in one’s country through the conversation with medical stuffs that should be controlled by systematic medical standards. I may contribute to you a session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illness in Hokkaido, Japan. Patient’s narratives are strongly controlled by medical stuff indeed in Japan. This should be the result of ‘Narrative Medicine’ had been done after the 1980’s. I think Japanese narratives makes another chance to live more successfully. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self-help group. I will supply a small material for the argument who is to draw patient’s narratives.

The Great Recession and Unemployment Among Brazilian Immigrants in Japan

The economic recession which occurred during the period from 2007 to 2010 led to a massive growth in unemployment among workers in many countries. Conversely, it is important to note that the gap in unemployment between immigrants and native-born population differ markedly across nations. In particular, in Spain and Portugal, unemployment rates among the foreign-born increased much more than those among the native-born whereas in several other countries, there were few divergences between these two groups with respect to unemployment growth over time. This cross-national variation appears to depend on institutional arrangements of the labour market structure, industrial relations and employment policies.

Japanese labour market has been characterised by a higher level of employment security for regular workers. However, increasing global economic competition has forced the labour market to become more flexible and has thus led to rapid growth in the number of non-standard workers. During this period, immigrant workers who came from Asia and Latin America have been incorporated into the sector of non-standard employment. They can be easily dismissed during the time of economic slowdown because of their nature of employment contract. In fact, many immigrants became unemployed during the recent financial crisis.

This study focuses primarily on Brazilian immigrants in Japan because Brazilian workers represent typical cases of the precarity of employment status among immigrants in Japan. Approximately 80 per cent of Brazilian workers have been employed as temporary workers by temporary help agencies. Because of that, the growth of unemployment after economic crisis was considerably greater among Brazilian workers than among Japanese workers. This study addresses the question raised in one of what resulted from the study. I will investigate the effect of human capital and assimilation, employment status and industrial sector on their likelihood of unemployment during the economic crisis.

Sociology of an Immigrant Between Borderlines: An Intellectual Biography of Hiroshi Saito

This paper examines the intellectual biography of the Japanese-born sociologist Hiroshi Saito (1919-1983) by considering the dilemmas and impasses lived by him. Our goal is to explore the relationships between his personal trajectory and his academic work, mostly devoted to the subject of Japanese immigration in Brazil. As well as the majority of Japanese people who emigrated to this country in the first half of the twentieth century, he worked as a farmer in the cotton fields at the State of São Paulo. In search of better opportunities, Saito moved to the capital, influenced by the hands of the already well-known professor Donald Pierson. He became the first Japanese immigrant to build a successful academic career in Brazilian sociology. The analysis focuses on the strategies he developed and the political positions he defended between the 1940s and the 1950s in order to confront both the political repression of Brazilian State, on one hand, and the Japanese ultranationalist groups, on the other. Moreover, we seek to demonstrate that the author played a crucial role for the institutionalization of the studies on the Japanese immigrants in Brazilian social sciences, being himself one of the pioneer researchers on this subject.
Do the Small Firms Give Advantages to Female Employees?: Firm Size Effects on Taiwanese Women's Career Choices

This study examines whether the difference of firm size influences job career of females in Taiwan using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. Well-known explanation for this is that the industrial structure composed of large number of small-and-medium sized enterprises (SMEs) and family business provide women with flexible working conditions. However, existing studies testing firm size effects on a woman's career, have failed to reach a consistent result. To eliminate possible problems providing the inconsistencies, this study limit the objects of analysis to female employees with regular salary, excluding self-employed workers and workers of family business without payment. Also, previous studies usually treat job change and job turn over separately, but in this study those two actions are simultaneously analyzed in a discrete-time multinomial logit model.

This study tests mainly two hypotheses: female workers in small sized firm are able to (1) enjoy flexible working conditions by negotiating with their employees and (2) accumulate better skills which are useful for a labor market than their counterparts in large firms are. Dependent variable is employment choice, which have 4 categories; "continue the same job", "change job in SMEs firm", "change job in large firm" and "leave from working". Main independent variable is a dummy variable indicating working experience in SMEs and interaction terms SMEs dummy and event dummies standing for marriage and childbirth. The result indicates that women who have working experiences in SMEs are more likely to have uninterrupted working careers than those who have experiences in large-sized firms.

Abstracts are organized by first presenting author's last name.

Do the Small Firms Give Advantages to Female Employees?: Firm Size Effects on Taiwanese Women's Career Choices

This study examines whether the difference of firm size influences job career of females in Taiwan using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. A Mathematical Model of Status Hierarchy

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years, Gould proposed a groundbreaking theory of status hierarchy. Using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould's model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players must pay in executing their attachment strategies. Here we extend Gould's model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould's model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. Our main result is to show what is called "the relationality of social status". Specifically, we show that an individual's status is entirely determined by the individual's relative quality in the social system. This observation contrasts with that of Gould's model in which an individual's status is dyadically determined. Our model can be considered as a type of network formation model having broad applicability.

Remembering and Resilience after Traumatic Social Loss: A Multicultural Perspective

A challenging realm for Global Sociology is the cross-cultural thinking and processing of the experiences of collective remembering after mass social trauma and post-traumatic resilience across cultures and generations. In this presentation we will develop a theoretical and applied multi-cultural framework for working on the intersubjectivity of memory, with a focus on the unprocessed dimension of social experiences of traumatic loss, building on the latent, private, intimate individual and cultural aspects of experiences of collective memory and transmission. We will also work on the concept -building on Halbwachsian work of “undercurrents of memory,” incorporating the more recent concept of “moral injury,” a contemporary development out of the post-traumatic stress literature. This line of grounded theoretical research, developed by collaborative efforts by the authors over the last decade, explores the underlying conflicts of the unresolved past as they are woven into the fabric of contemporary cultures, the effects of unprocessed experience lying in the undercurrents of collective memory, often excluded or absent from the public narratives of memory, but which paradoxically retain a profound intersubjective and cultural presence, until they finally push their way into the public realm. Social studies of collective memory need to include this realm of the unprocessed (latent but present) experiences and trajectories.

The authors will develop a joint conceptual approach to look at individual/community and cultural traumatic remembering, and the resilience of certain memories, over time. Applied research cases will include Southern Cone political authoritarianism, the Japanese American incarceration experience in the US as well as the Japanese memories of the 3.11. Great Tohoku Earthquake.

Food Regimes and Food Import Dependency: An Analysis of Jamaica's Food Imports, 1950-2000

This paper uses food regime theory to analyze the changes in Jamaica's food imports in order to explain how it became so heavily dependent on imported food. It argues that food regime theory has a bias toward production and food exports; it tends to focus on the drivers of the food regimes: First World states and transnational corporations, along with the New Agricultural Countries, the food commodity complexes change. In turn, the types of foods imported by Third World countries also change. However, once a country becomes import dependent for a particular type of food commodity, it is very difficult to go back to self-sufficiency. Thus the evolution of food regimes creates a cumulative food import dependency feedback loop and more kinds of food. One element of food regime theory which does focus on consumption and food imports into the Third World is the analysis of how the US PL480 “food aid” program changed Third World diets, undercut Third World agriculture, and created food import dependency. This paper expands on that analysis and uncovers additional mechanisms through which food regimes tend to create food import dependency in small Third World nations.

A Mathematical Model of Status Hierarchy

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years, Gould proposed a groundbreaking theory of status hierarchy. Using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould's model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players must pay in executing their attachment strategies. Here we extend Gould's model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould's model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. University competition for international excellence centers faculty research productivity (measured by indexed publications, research citations, etc.), global rankings, and international recognition. This presentation analyzes internationalization and research development in Chilean universities as a spatial reorientation of faculty work, knowledge, and subjectivity. Since Pinochet’s dictatorship, Chile’s neoliberal reforms intensified everyday competition in a free market and declining welfare state. Following the regime’s political repression, universities’ knowledge alignment with popular subjects changed to creating practical, neutral knowledge through technocrats. More recently, Chilean university policy reformers have turned to World Bank and OECD logics to increase research productivity and rankings.

I theorize globalization as a “spatial rationality” that attributes causal powers to space to create efficiency, utility, and normative ideas of “the good” that catalyze particular actions and subjectivities. Rhetorics of globalization’s economic demands have made the “common sense” norm of “productivity” a prescription for national, institutional, and individual well-being. Technologies of visualization (e.g., rankings) and cosmopolitanism incite faculty to compete as entrepreneurs, a spatial reorientation that secures theory, methods, and research networks of the Global North as norms for knowledge production for faculty from “peripheral nations.”

I present themes from interviews with twenty faculty across fields at two top Chilean universities: (1) Faculty describe becoming self-managers, securing grants, publishing in ISI journals, and participating in international networks, creating new privileges and inequity; (2) At ASU has become prominent, increasing the described losses: research regulation, publishing status, and diminishing space to participate in national debates; (3) These constraints produce alternative knowledge projects, such as using grant funds to create digital platforms for public exchange or indexing long-existing Chilean journals to legitimize “expressions that expand our social imaginary.”

This is not a simple narrative of research homogenization, domination, or resistance, but of how crisis ordinaries creates new spaces, subjectivities, and knowledges.

I Miss My Mum and Dad: Children’s Well-Being and Parents’ Job Migration In Estonia

Estonia is a fast-developing country, which has experienced many societal and economic changes after regaining independence in 1991. Although there has been many positive developments, the global crises has influenced the lives of many people in Estonia. One of the most recent developments is a growing job migration out from Estonia. According to Statistics Estonia since 2010 the number of people who have migrated out from the country has been increasing. As of 2012 it has doubled compared with previous years. Negative net migration together with negative reproduction rate has been the main indicator influencing drop in population of such a small country. Another tendency that is poorly studied is the well-being of children whose parents have gone abroad. In some cases they are living with their parents, but in relatively the same number of cases they are being left behind with one parent or if mother and father both leave, other relatives take care of the children. There have also been cases where children are left just by themselves without any proper care, in some cases just older children taking care of their younger siblings. Aim of the current study is to analyze social and psychological well-being (life satisfaction, personal well-being and relationships in school and at home) in group of children who are left behind by one or more parents and to compare the findings with control group – children who are living together with their parents in Estonia. For the analysis most recent data is used from the Jacob’s Foundation survey Children’s World (data collected in autumn 2013). Altogether 3000 children from Estonia are studied, covering the ages 8, 10 and 12, around which is the most vulnerable age in sense of psychological and social attachment and challenges of growing up.

The Gender Gap in STEM Majors: Evidence on the Gender Belief Hypothesis from Taiwan

Why are women underrepresented in science, technology, engineering, and math (STEM) fields in college and work? Drawing on an unprecedented range of survey data, this paper builds on a parallel line of research by Shauman (2003) and many others (such as gender difference in math ability and the pipeline hypothesis) for the gender difference in college majors. Survey-based research has yet to explain much of the gender gap. Drawing on experimental studies, Ridgeway and Smith-Lovin (1999) develop a concept called cultural beliefs in gender (gender beliefs). Using survey data to corroborate the experimental results, Correll (2001) argues that gender beliefs result in biased math self-assessment (MSA) and MSA explains why females are underrepresented in quantitative majors. Yet, upon close scrutiny, her results actually show that MSA is at best a minor source of the gender gap. Interestingly, Cech (2011) shows that professional role confidence, as a form of gender beliefs, can explain the gender gap in persistence through engineering majors in college. This seems to indicate the causal importance of some gendered cultural and psychological mechanisms may well be at play.

This study re-examines whether gender beliefs can explain why more men choose the science track senior high school and STEM majors in college. We draw on the core panel of the Taiwan Education Panel Survey (TEPS), a large and representative sample of first year junior high school students in 2001. In general, students’ gender beliefs early in high school explain a minor portion of the gender differences but parents’ gender beliefs when children were early in high school explain substantially more—about a half of the gender gaps. Taken together, the two beliefs explain most of the gender differences and the residual gender gaps become insignificant. For the first time, then, survey-based results can provide a simple and direct confirmation of the gender belief hypothesis.
Therefore, the United States’ State Children’s Health Insurance Program (SCHIP) requires that all residents belong to either the national insurance system or the state SCHIP agenda.

Information System (GIS) mapping, and to discuss the future universal health insurance agenda. Based on qualitative interviews of 100 women in Jakarta that will be conducted in the latter half of 2013, we will examine how the changes brought about by the Reforms movement have affected family life. We are interested in if and how radical social changes affect family life, or does family life remain stable in times of turmoil? We are focusing on Jakarta because it is a microcosm of Indonesia with people from the different ethnic and regional groups represented in the city. Also, the impact of the policies of the New Order and its subsequent demise would be strongest in the capital city. Jakarta is a metropolitan city of the South except a few, however completely neglected this framework, where the discussions were focused on different sets of issues.

One Health Concept and the Uninsured in Japan

Objectives. The purposes of this research are to: provide a general overview of Japan’s universal health insurance coverage system, to examine the social factors that explain the rise in the number of uninsured individuals using Geographic Information System (GIS) mapping, and to discuss the future universal health insurance agenda.

Background. Due to its universal health insurance coverage system, Japan’s health and medical services are among the world’s highest quality. Japan’s system requires that all residents belong to either the national insurance system or an employer-based insurance system. However, total population coverage is not the reality. In Japan, 18.8% of households with national insurance fail to pay their premiums, and those who fail to pay their premiums for 12 months become uninsured, including the children in these households. In fact, a Japanese government survey (2008) revealed that more than 30,000 children under the age of 16 are uninsured.

Analysis and Discussion. One key social factor that explains the rise in the number of uninsured individuals is the increase in labor mobility, which was expanded by the 1985 Worker Dispatch Law and its legal amendment. In addition, the 2008 economic crisis increased unemployment and the numbers of unstable and low-income earners. Currently, one in three workers is a non-regular employee, and the wage gap between regular and non-regular workers is growing.

GIS analysis indicates that the uninsured rate by prefecture is related to the unemployment and urbanization rates in those prefectures. Big cities, such as Tokyo, offer a range of job opportunities; however, the cost of living is high and upward economic mobility is difficult, so many low-wage workers forego paying their insurance premiums. The number of uninsured children is a crucial issue. Therefore, the United States’ State Children’s Health Insurance Program (SCHIP) should be evaluated for its use in Japan.

pline under the nation-state building period. In order to illustrate the kaleidoscopic intellectual landscape, my paper divides into three parts:

Firstly, I will depict the general history of Chinese anthropology and the logic to facilitate the sociological and anthropological knowledge as a discipline “seeing like a state” before 1949. The Chinese anthropologists and state had to face up with two theoretical problems: the expansion of the nation-state building in China (1911-1949): the one is to construct a stable Chinese Nation (Zhonghua Minzu) community by which the modern state can identify itself and stand up to the external Others; the other is to mentally and physically develop and reform the country. Second, I will interpret how the academic circles and intellectuals of sociology and anthropology co-relate with the nation-state building projects from 1911 to 1949. Huang Xianfan (1899-1982), Wu Wenzao (1901-1985) and Lin Chunsheng (1902-1981)'s academic lives can vividly signify how and why different intellectual trajectories jointly push forward the Chinese sociological and anthropological knowledge. And I will close read their academic writings to show how the geopolitical facts impact their choice to produce the sociological and anthropological knowledge about understanding Chinese nation-state, and ask the questions how Huang's learning from Tokyo Imperial University combined with the understanding of Chinese social realities made him a scholar of sociology and anthropology different from the nationalists, how Wu and Lin went to different discipline-training track and settled their knowledge in China and Taiwan. At last, I will give opening conclusion on dealing with the relationship between the geopolitical gain/production of the knowledge and the practice of the knowledge in modern China.

**An Intertemporal Comparative Analysis of Japanese Xenophobia Between 2009 and 2013**

Japan is one of the most ethnic homogeneous countries in the world; however, Japan is also in the midst of rapid globalization with increasing numbers of foreign nationals living in Japan. Therefore the grassroots right-wing movements have spread and radicalized in recent years. But the causes and mechanisms of rapid growth of xenophobia in Japan remain unclarified.

The aim of this presentation is to reveal factors of xenophobic attitudes in Japan, especially the effect of social events. I analyze two survey datasets which were collected in 2009 and 2013 all over Japan. Between 2009 and 2013, Japan has experienced terrible diplomatic problems like Senkaku/Diaoyutai Islands dispute against China and also economic recovery seems to be caused by “Abenomics”. The hypotheses on relationship between social events and xenophobia are as below. The first one is the influence of “East Asian geopolitics” (Higuchi 2012) on Japanese xenophobia especially toward Chinese and Koreans. Japan has territorial disputes against China and Korea. There are also political debates on the understanding of history in the period of Second World War. This hypothesis assumes that those conflicts have negative effect on Japanese attitudes toward China and Korea. The second hypothesis is the realistic conflict theory (Sherif 1966 etc.). From this perspective, in the time of economic depression, competition between immigrants and native citizens over limited resources are intensified, therefore xenophobia toward foreign residents are also escalated. If this theory is correct, the relations between respondents’ socio-economic status and xenophobia can be weaken from 2009 to 2013. Because in 2009 Japanese economic suffered in economic downturn precipitated by the Lehman Brothers bankruptcy, but “Abenomics” seems to show signs of economic recovery in 2013. I will confirm those hypotheses by using Multi-group Structural Equation Modeling.

lems is quite primitive. Although the values of sport for people with mental health problems have been recognized, the support systems for people with mental health problems in terms of sports activities have yet to be well explained. Nevertheless, Tanaka et al (2013) found that those 5 nations have developed sport for people with mental health problems over the last two decades.

Methodology: Meta-analysis, a questionnaire and semi-structured interview methods were employed. To deeply understand, this study utilises the policy frameworks such as advocacy coalition framework to describe characteristics, and similarities/differences of sport systems in those nations.

To shed light on the complex interplay of structure and agency in shaping recovery journeys, a synthesis of the Capabilities Approach (Sen, 1999, Nussbaum 2001 and Hopper, 2007) and Intersectionality Analysis (Walby, 2007 and Anthias, 2006) was developed as an alternative framework. Repeat ed-in-depth life history interviews were carried out with twenty two Chinese peo ple who have received a psychiatric diagnosis, recruited from three cites in the En gland. Findings showed that participants strove, sometimes cautiously, to retain and exercise agency to move from patienthood to personhood. Their journeys were shaped by social inequalities demonstrating that targeting social ine qualities is essential for facilitating and nurturing meaningful recovery. Drawn on the findings in the case study, this paper will illustrate in what ways the medicalisation process enhances or hinders the (re) development of capabilities. It will also discuss about the use of the Capabilities Approach and Intersectionality Analysis in exploring the social conditions for meaningful recovery.

The Role of Tourism Companies in Forming Ethical Tourists: Case Studies of Tourists from China to Japan
The increase in Chinese tourists overseas and its socio-cultural and economi cal influence are of interest worldwide as well as in Japan. While many agents in the tourism industry that attract Chinese tourists, the conditions of tourism between China and Japan are unstable, especially under the influence of political the relationship between the two countries. Further, media outfits tend to create a negative image of Chinese tourists. This article focuses on the social and cultural interaction of tourists from China to Japan, particularly, the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in recent years. This study will examine the daily everyday practices of tourism companies from their role in forming ethical tourists, but not limited to their practices of producing alternative forms of tourism. Two case studies are examined. First is the case in which tourism companies teach their clients tourist ethics. In China, the government has recognized the importance of "tourist civilization," and in relation to this, I present a practice of "moral education" in tourism companies. I point out how they teach social and cultural order effectively in accordance with appropriate practices in Japan. The second case involves visits for inspection or training, which is a dimension of socio tourism. In China, mobility for tourism is relatively strictly restricted, and consequently, many people with experiences of touring abroad support the instruction or training of visits under business visas, which tends to include sightseeing. I point out a type of development of social tourism that is not an alternative form of mass tourism.

TANG, ELIZABETH* (International Domestic Workers Network, elizabeth.tang@idwn.info)
Building a Global Domestic Workers’ Movement: The History, Strategies and Activities of the International Domestic Workers Federation (IDWF)
Formally launched in 2009, the International Domestic Workers Network aims to develop an effective global network of domestic workers. In the past campaign for the ILO Convention 189 for domestic workers, the IDWN coordinated and actively supported campaigns and activities of domestic workers at various levels, to enable them to speak for themselves and take leadership. Now that the ILO C189 has been achieved, we need to build a strong organization of domestic workers to ensure that countries around the world ratify the convention and national policies and laws are put in place to deliver real gains to domestic workers on the ground. In October 2013 the IDWF will hold its inaugural congress in Uruguay. In this paper we will discuss the history, strategies and activities aimed at building a strong democratic organization that can effectively protect domestic workers rights and change power relations in society to promote gender equality and human rights.

Recovery and Social Inequalities: The Use of Capabilities Approach and Intersectionality Analysis in Exploring the Social Conditions for Recovery
‘Recovery’ has become a dominant discursive feature in the UK mental health policies. Under the neo-liberal context, the mainstreamed recovery services tends to promote individualistic recovery strategies. Such policies and services fail to address the structural inequalities that give rise to distress and mental ill-health or place sufficient emphasis on the diversity of inter-sectional inequalities among service users that shape recovery journeys. This paper critically engages with the concepts of ‘recovery’, based on a case study of Chinese mental health service users in the UK which explores how structural factors, such as class, gender and ethnicity, contribute to their diverse recovery journeys.

Non-Normative Female Sexualities in Asia, and Singapore?
In the literature concerned with the globalisation of gay identities, same-sex desiring women in Asia have come under increasing attention for two reasons. Firstly, as evidence countering universalising Western assumptions of what it means to be a global gay or lesbian. Secondly, as a response to the tendency to lump lesbians and gay men together under the generalised rubric ‘queer’, which is dominated by research on gay men both in Western and non-Western contexts. Ethnographic monographs on female non-normative sexualities have therefore appeared in many parts of Asia, including Japan, India, Thailand and Indonesia. But the case of Singapore has been significantly missing in the literature. Why has Singapore been left out of an important queer Asian critique? This paper discusses the missing case of Singaporean women who love women. First, I explore the ways in which a queer Asian scholarship runs the risk of being constructed and produced through an Orientalist area studies approach, which inevitably leads to the omission of ‘modern’ Singaporean and Singaporean lesbians. Second, I suggest that taken-for-granted images of local middle-class lesbians can appear, in the eyes of an Orientalist, as ‘just like’ the hegemonic Western queer, a thoroughly globalised version alienated from her indigenous region. Are ‘modern’, middle-class Singaporean lesbians merely another instantiation of the homogenising global gay identity, and hence ineffective as material for an Asian queer critique? Finally, the paper gestures towards a ‘postcolonial LGQ’ approach to comprehend the complex, contradictory and contingent sexual subjectivities of lesbians in Singapore. Using empirical material on lesbians in Singapore, I demonstrate the ways in which Singaporean lesbians re-queer hegemonic concepts of homosexuality and argue that their sexual lives and practices are crucial moments of reconfiguration and transformation, and not mere reception, of what it means to be ‘modern’ global lesbians.
Intercultural Training Program as a Mechanism of Raising the Individual Level of Competition

Seventy people representing five regions, and 32 countries were involved in the research. 25 expert interviews and 6 focus-groups were conducted by the researchers. Most contrast patterns of cultural clashes were observed in the interaction between the citizens of St. Petersburg and the representatives of western and eastern cultures. The strategies of acculturation of the people with diverse origins are very different. The representatives of Western Europe and the USA tend to believe that their difficulties in adaptation result from low standards of local people and Russian social environment. Newcomers from far eastern countries make enormous efforts to understand the motives guiding the local people’s behavior, and try to adjust to the context of local culture. Africans tend to conceal their problems. The main problem of their adaptation is the lack of local people’s tolerance resulting from physical and cultural differences. Weighing pros and cons of living in St. Petersburg the African migrants try to focus on positive aspects and push up negative sides. As for the citizens of the CIS and former Baltic republics (Estonia, Lithuania, Latvia), the process of their adaptation is the easiest one, because they speak fluent Russian, have been visiting St. Petersburg since childhood and do not feel enormous cultural differences. However, the lack of notable differences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants from the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

TANGALYCHEVA, RUMIYA* (St. Petersburg State University, rimma98@yahoo.com)

Sociological Study of the Cultural Differences in Korean-Russian Mixed Marriages

According to Korean statistics in South Korea 90489 marriages between Koreans and foreigners were registered. The share of marriages with Russians was 835, among them 523 marriages between Russian women and Korean men. For the present study of the cultural differences in Korean-Russian mixed marriages the method of semi-structural interview was selected. This method gives a good opportunity to gather the necessary information and to interpret the object of research. The empirical research was conducted in Seoul, South Korea in 2010. Ten Russian women in the age from 19 to 31 years old, married the citizens of the Republic of Korea, participated in the study. Following the opinions of the respondents, the most difficult thing in family life in mixed Korean-Russian marriages is the difference in habits with their husbands, but also in communication with husband’s relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival “Chusok”) when crowds of relatives gather in parent’s home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenarios of children’s socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participated in the research were in their so called “honeymoon” period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

Social Cleavages Caused By Radioactive Contamination of Food and the Environment: The Case of Fukushima

The nuclear disaster in Fukushima has inflicted devastating damage to agriculture and food of Japan in many respects. I will give an overview of the social cleavages caused by the first, the social stratification due to social capital and organic agriculture was tremendously damaged because the regional circulation of organic matters, one of the most important characteristics of organic farming, was broadly contaminated by radioactive substances. Many consumers particularly concerned about food safety have stopped buying organic foods not only grown in Fukushima but in surrounding areas. Despite the fact that radioactive substances remaining in soil were not transferred to agricultural products, most of the consumers have not yet come back to the farmers. The fall of the reputation of organic agriculture is also worth mentioning that the cultural context of ethnic relations and global influences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants of the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

Mapping out the Educational and Future Trajectories of the Children of Internationally Mobile Families

Children’s education and future career trajectories are of paramount concern for many transnational families. Educational concerns impact upon whether and when families decide to move internationally together or stay apart. This paper focuses on teenage and young adult children of Asian and African backgrounds with experience of multiple international moves with their families due to their parent(s)’ job placement, while others are sent overseas by their parents to one or more countries on their own for educational purposes. Decisions about their schooling are tempered by their parents’ and their own economic, social and cultural capital in the context of national and international economic and cultural inequalities (Bourdieu 1986). This paper highlights the way pragmatic considerations about education and economic futures intersect with the ambivalence that young people feel about their transnational upbringing and identity, as well as the way they imagine ‘home’. Given that international mobility is the norm for the young cohort I studied, their experiences offer significant insight into the complexity of transnational family lives and its impact on children.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

HIV/ Aids Among Adolescents in Brazil and France: Similarities and Differences

In order to analyze the Aids epidemic in France and Brazil, particularly among adolescents, a critical review of literature, official documents and on-site verification of services for sexual and reproductive health for adolescents was held. The concept of vulnerability and its categories were used as theoretical basis of this study. Inclusion to France and Brazil provides an overview of the number of Aids cases in proportion to its population. In France there was a continuous decline in the incidence of this disease from 1998 onwards; in Brazil, the decline started in 2002,
but there was a rise in cases in 2008. Both countries offer universal access to ARV medication for those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, in particular of multiple discrimination, among victims, and a high inertia and action on behalf of decision-makers lead to the reproduction of social mechanisms responsible for discrimination.

To make healthy lifestyle choices from among a set of given possibilities is not always easy. One needs proper background knowledge ensured by education or provided by professionals trained for lifestyle counselling. The Health Promoter qualification within the Recreation Organisation and Health Promotion Bachelor education offered by the University of Szeged, Juhász Gyula Faculty of Education, Institute of Physical Education and Health Promotion (Institute) makes professionals competent in creating a “health map” for individuals – in the family, in the workplace - including physical and mental status and lifestyle elements (leisure, nutrition, time management, environment) and build personalized (individual and community level) counselling activity, health promoting actions, campaigns and projects on identified needs. With his/her knowledge in the socio-demographic determinants of unequal opportunities and the means and “language” of addressing and approaching different social groups this professional can bring the best out of life opportunities and life chances to promote healthy choices. This presentation will introduce the audience into the unique skills, knowledge and competencies the above professionals possess and the ways they can be the most effective promoters of lifestyle – with useful leisure highlighted – in an unequal world.

Anti-Nuclear Movement Discourse in the Countries of so Called “Nuclear Renaissance”

Since the first half of 2000s the world society has been observing the expansion of national nuclear energy programs in a number of countries, also called by nuclear power industry as ‘Nuclear Renaissance’. This development has been accompanied by the contemporary trend in public opinion showing positive attitude towards nuclear energy. The striking is, however, that this situation occurs in the countries with the history of significant anti-nuclear movements, e.g. Sweden. The revival of nuclear energy programs, public opinion favouring the expansion of nuclear energy and the experience of anti-nuclear movements in the past are the points of departure for this study. The constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, the national nuclear power strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Daiichi. This paper explores the extent to which these turning points become part of the anti-nuclear movement discourse.

In terms of methodology this study is based on discourse analysis.

Multiple Discrimination: Personal and Institutional Perceptions, Impacts, and Actions

This paper investigates the phenomenon of Multiple Discrimination in Hungary, with special attention paid to cases of intersectionality based on ethnic origin. The research unfoils those mechanisms that lead to multiple discrimination in the field of job seeking, hiring, and employment. The phenomenon of multiple discrimination is studied, on the one hand, from the perspective of decision-makers representing public and private employment agencies; on the other hand, from those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, in particular of multiple discrimination, among victims, and a high inertia and action on behalf of decision-makers lead to the reproduction of social mechanisms responsible for discrimination.

Education for Lifestyle (Leisure) Counselling in an Unequal World (Szeged, Hungary)

Max Weber’s lifestyle model emphasizes the role of life opportunities, life chances and choices. Life opportunities provide the conditions for choosing one’s lifestyle. Life chances are the chances of actually realising the given values. For realisation it is the social environment that ensures the structural prerequisites. Opportunities, chances and choices in everyday life mean that people have a free choice within the wider or tighter boundaries provided by their social environment and related social pressure. At the same time, lifestyle is not only a dependent of one’s social position, but it also plays a considerable role in designating one’s position in the social structure.

Considering Looking: Political Spectatorship Distinct from Action

From museums commemorating genocide to human rights organizations issuing fundraising pleas, photographs of violence are a frequent means of calls to political action. Representations of suffering as a result of political violence invoke a theoretical trajectory that connects looking at images of suffering to actions undertaken in response to what is seen, culminating in a broader political change. This trajectory is also taken up in the models of spectatorship developed by contemporary visual theory, such as that of Ariella Azoulay. Attending to the assumptions and fantasies embedded in this broader trajectory, this paper reveals difficulties with Azoulay’s argument for the political uses of photography and brings the possibility of such a politics into question. Alternatively, Jacques Rancière’s theory of spectatorship provides a starting point for conceptualizing looking as an activity distinct from direct involvement in the looked upon scene. This paper will argue for a modest approach to looking, as a space for political and ethical imagination, rather than as the first step in enacting a response or mounting a campaign for change. If spectatorship is unmoored from the trajectory to which Azoulay and others have confined it, then the political potential of photography requires reconsideration. I ask: If spectatorship does not necessarily lead to action, what is left of looking as a political practice? If given space distinct from action, how might practices of looking open up possibilities for appreciating the political dimensions of suffering?

Tools of Violence, Traces of Memory: Photographic Identity Cards and the Visual Narration of the Rwandan Genocide

Photo identity cards played a crucial role in the politics leading to and the perpetration of the 1994 Rwandan genocide. The identity cards and their portraits now figure prominently in Rwanda’s national memorial sites as both evidence of the racist politics that culminated in genocide and as commemorative images. Attending to the interpretive shift prompted by the material transformation of bureaucratic portraits into memorial images, this paper will examine the complexities of using portraiture to memorialize mass violence. To critically examine the politics of transforming bureaucratic portraits into commemorative images, this paper draws on Ariella Azoulay’s ontology of photography, which presents photography as an ongoing event capable of continually deriving alternative interpretations from the unfixed meaning of the photograph. By approaching the identity cards and their portraits through this relationally-focused ontology, this paper provides an account of the ambiguity present in the different uses of the photographs, focusing on the portraits’ repressive and horrific capacities and attempts to stabilize their political meaning in the development of Rwanda’s post-genocidal narratives. While the Kigali Genocide Memorial Centre exhibits works to re-appropriate identity cards and their portraits for memorial ends, I contend that the changes to the photograph’s material conditions cannot produce a fixed or stable interpretation.

Ciclo De Imagenes y Alteridad Migrante: Antropología De La Imagen ‘brazuca’ En La Cinematografía Contemporánea

CICLO DE IMÁGENES Y ALTERIDAD TRANSFORMATICA: ANTROPOLOGÍA DE LA IMAGEN ‘BRAZUCA’ EN LA CINEMATOGRAFÍA CONTEMPORÁNEA

El presente trabajo intenta producir una interpretación sobre las estructuras de las focalizaciones discursivas en las imágenes utilizadas en el cine mundial contemporáneo, retratando el universo de las realidades brasileñas singularizadas en los juegos de escena entre Brasil y los brasileños mas medios expuestos en las películas ibero-americanas. A partir de una serie de imágenes relacionadas con la producción cinematográfica sobre Brasil y los brasileños en el cine ibero-americano, se pretende observar los procesos de transmisión de imagen y la confección de la exofobia “brazuca”, articulados en los contextos operativos de los sistemas de reconocimiento y adopción de las prácticas de interpretación contrastantes de los exóados migratorios a los países europeos. Las imágenes relacionadas con Brasil y los brasileños, son vistas a la luz del debate sobre las construcciones del imaginario de los brasileños en el exterior, con el objetivo de observar las intensificaciones recientes y las dicotomías discursivas sobre los lugares de fundación de colectivos migratorios y los extranjerismos tópicos del país mediático. En este sentido, el trabajo explora el impacto de la exclusividad de imágenes de referencia que adornan y dan fuga a una serie absoluta de etnocentrismo y representaciones monolínicas donde Brasil y los brasileños son conducidos e intensificados de forma urgente dentro de la cinematografía ibero-americana reciente.

Mainstreaming Flood Risk Reduction By Enhancing Better Risk Governance in Japan

Mainstreaming disaster risk reduction into the development process is a key focus area of disaster risk management after Hyogo Framework of Action (HFA). For a country with cultural and local traditions, the concept of mainstreaming DRR into development but actually few achievements were attained. The paper focuses on the case of Shiga Prefecture in Japan, which successfully established the basic policy of integrated flood risk management including flood risk information provision, land use regulation and restriction of new construction in the flood prone areas. Over a decade efforts to communicate with key stakeholders, prefectural congress of Shiga finally approved the basic policy in March, 2013. The paper divides the entire process into four phases: starting phase with city government officers, public meeting to make directions of the basic policy and give the ownership of the policy to the public, professional workshop to establish the basic policies, and administration workshops to overcome the difficulties to implement the policy in the real world.

Since one of the authors was involved deeply in the process, the paper investigates the reasons for the success based on data taken through internal observation, document analysis and interviews. In the case of the Shiga precedent, gradual inclusion of the stakeholders looks successful. Opinions and concerns related to flood risk management were widely discussed and the collected concerns and opinions were used to develop policies. If the river authority cannot handle them, stakeholders were expanded by including other stakeholders with a capability or authority to present solutions. Comparing with the risk governance framework of IRGC, the process in Shiga Prefecture is examined whilst the implications for mainstreaming disaster risk reduction will be presented.

Gender and STEM: No Shift Required

In the past thirty years, several waves of opportunity have come successively closer to realizing Pappert’s vision of a world in which children can self-actualize and the creators of technology. Each wave, starting with Logo, has had strengths and limitations and while some have had considerable reach (FIRST Lego League, for example), none have as of yet become fixtures of childhood. Now, part of the opportunity that comes with a switch from a STEM to a STEAM or Science, Technology, Engineering, Arts, and Mathematics (STEAM) perspective is the chance to build foundations for female—and more widespread male—participation in computing on a wide, humane platform in which the outside world is involving, inviting and discovering rather than persuading, cajoling and selling. In particular, recent tools associated with the Maker or DIY (“Do It Yourself”) movement have the potential to increase embodied, craft-oriented performance-focused behavior. Girls (and a range of boys) can now create inexpensive, personalized, crafted objects that cause them to rub elbows with technology and technological thinking without having to first (or ever) label themselves as one of “them,” the kind of person that actually likes technology. They can tinker, both with creations and identity. They can develop skills which will help them no matter what they go on to do, and their relationship to those skills can change over time. The crucial opportunity, ironically, lies in the relative unimportance of the technology in defining the students’ projects. Supported by the National Science Foundation under Grant No.1142510

Scientific Criticism in the Dispute over the Risk of Radiation Exposure

This study examines the role of scientific criticism in the dispute over health effects of exposure to low-level radiation, focusing on the situation in Japan after the Fukushima Daichi nuclear disaster. In radiation-related fields, it has usually been difficult for environmental movements to establish and utilize a network of scientists who provide a scientific basis for the movement, because of the strong connection between government officials promoting nuclear energy and scientists in these fields. Considering these difficulties, I will examine what enables
scientists to maintain an objective distance and conduct academic research with possible critical implications for the existing policy.

On the basis of a document analysis of historical materials and in-depth interviews with the people involved, we found a remarkable difference between scientific fields regarding research resources available for outsider scientists. In the field of dosimetry, many citizen groups measured doses of radiation using their own dosimeter, which enabled them to urge the government to adjust their policy of decontamination. However, in epidemiology, it is difficult for critical scientists to conduct large-scale surveys; therefore, they have concentrated on assessing and criticizing Fukushima Prefectures’s "Health Management Survey."

We also found a complex relationship between academic research diversity and political mechanisms for constructing a unified view. Occasionally, articles in international journals express different views; for example, one uncovers the possibility of health effects caused by very low-level radiation and another denies it. Even though the academic discussion has not yet been completed, the International Commission on Radiological Protection (ICRP) has taken the position of creating a systematic regulation; consequently, the diversity of academic research has diminished. To maintain diversity in the circulation of scientific knowledge, we need alternative ways to organize critical scientists and the results of their research.

TATTSIS, NICHOLAS* (University of Athens, nicholas.tatissis@gmail.com)
Television As a Global Kaleidoscope: Multiple Socio-Cultural Realities within a Paramount Political Reality

In recent years, due to a number of factors like the severe global socio-crisis, the citizens of countries like Greece search for information through foreign media. Thus, globally broadcasting corporate or state television channels, (i.e. BBC, CNN, France 24, Al Jazeera, Russia Today, CCTV News), became very popular. This paper attempts to discuss these channels’ (re)representations as alternate sources, focusing on three levels. First, the formative one: They all (a) use English for oral and written discourse; (b) follow standardized forms of Western broadcasting; (c) utilize the media cosmogony of our epoch. Second, the substantive one: (a) Operating within a ‘global village’ framework, they function in their ‘public sphere’ without hierarchies; (b) They manage to create ‘mediated events’, authenticating and explaining by participating actors and professional experts; (c) Cultivating a sense of identity, they connect individual life-worlds with project-ed ‘world views’. Third, the conclusive one: (a) While documenting issues from ‘multiple socio-enatural realities’ (i.e. ecology and business), with a presumed undisputed factuality, they express a ‘paramount (political) reality’. (b) This ‘reality’ is a ‘noematic construction’ which reflects core values from a channel’s ethnocentric perspective with a long historical tradition. Any interpretative scheme they provide derives from this perspective. (c) Thus, foreign channels offer planned images, which hide the impact of political ideology in (un)official ‘translations’, becoming improvisations with inauthentic color schemes on the screen canvas.

The critical question remains: Are those media nothing but a kaleidoscope for the world audiences to (re)live with fictional innocence our modern epic, or do they provide unintentionally another “agora” for the democratic forum of “a global civil society” as its needed debating orators in the new “polis”?

A Study of Women's Roles in Rural Livelihood Improvement: A Case Study of Yamaguchi Prefecture in Japan

This study aims to identify links between internal and external factors, where women farmers developed an important role in rural life improvement. In a sparsely populated and aging society in Yamaguchi Prefecture, western Japan. In Japan the rural livelihood improvement program was started in 1949 in response of the Agricultural Improvement Promotion Law of 1948, by the Ministry of Agriculture and Forestry. The program was introduced in order to create self-reliant farmers, particularly women farmers. Livelihood extension workers (all women) were hired as prefectural government officers to encourage rural development.

They made up groups of women to encourage extension activities. The groups carried out intensive rural life improvement activities. There were three phases of rural life improvement as follows. The first phase, from 1948 to 1965 aimed to alleviate poverty in rural areas. The second phase, from 1965 to 1988 focused on the betterment of daily life in times of rapid economic growth. The third phase, from 1989 to present day, created employment opportunities through grass root activities.

As a result, the women’s self-confidence improved and they became self-reliant farmers. The prefecture employees were the driving force behind this progression. The program was officially ended because of an amendment to the Agricultural Improvement Promotion Law in 2004. However rural life improvement has continued at grass roots level by the women, who still work in the farming communities.

Now women in the older generations carry on creating employment opportunities through agriculture business and tourism so that younger generations can live in rural areas in the future. What’s more, they maintain close relations with retired prefectural workers who helped them in the past.

This study focuses on this development model, as a positive strategy which could be implemented in other rural areas.

Media Coverage and Stakeholders on Climate Change in Japan

Climate change has become a serious problem facing from global society in the 1980s and the 1990s. It is a wide range subjects domain over science, economy, and politics. Although numerous attempts focused on consequences of climate change or effectiveness of policies. However, there are few reports on social acceptance of climate change. In Japan, What kind of frames is used in climate change? Which political stakeholders are mainly joined and how connected?

For this purpose, as a part of international comparative study of Comparing Climate Change Policy Network (COMPON Project), this project media analysis for articles of Japanese newspapers by using common methods among society cases of the project. In this project, we created climate change article database by searching for keywords of “Climate Change” or “Global Warming”. Then we counted articles and extracted issues and stakeholders on climate change from the database.

In conclusion, this data suggest that (1) Coverage amount is linked international agreements (like Kyoto Protocol) and political international events (G8 and COP). (2) Issues have shifted to “domestic - economy” policies in 2000s from international contributions or sciences in the 1990s. (3) The corporate sector and government come up a lot, but civil society actors were found to be less. (4) After the Great East Japan Earthquake of 2011, interest in climate change has fallen sharply.

The Relationship Between “Global Meanings” and “Local Meanings”: A Case Study of Protests Against the Construction of the “Kaminoseki Nuclear Plant” in Iwai-shima, Yamaguchi Prefecture

How do global social movements relate to local social movements, and in what way does the former influence the latter? This presentation examines the relationship between “Global meanings” and “Local meanings” considering two analytical frameworks on social movements: cultural theories of social movements and the new social movement theories.

Cultural theories of social movements pursue the “construction process and the source of meanings” (Nomiya 2002). On the other hand, the new social movement theory pursues the construction process of “collective identities” (Melucci 1996). In other words, this perspective highlights the fact that movement groups and participants construct ideas through the various interactions between them.

This paper aims to discuss the buying behavior of the female segment with respect to the consumption of products with ecological appeals ("green products"), in the post-modernity, through the subject area of green consumption. The sample includes 100 surveyed women of Generation Y. For this study, we conducted a qualitative, exploratory research, with field survey using structured questionnaires. The interviews were held in January 2013, at the exit door of malls in Rio de Janeiro. The theoretical basis of this study are the concepts proposed by Bauman, Cancini and Lipovetsky. The data discussion reveals a women of Generation Y as a reflection of a society that expresses the concept of a individualistic and consumerist ethic.
as ‘human capital’ (Apple, 1998) they are sorted into two ideal types; compliant ‘worker-consumers’ and ‘market rejects’; those that are disposed to poverty, or in the most extreme cases face a direct and expedited channel from the school to prison. The paper debunks the meritocratic myth to argue that the school-to-workplace pipeline has bottle-necked as neoliberalism desiccates jobs. The school to-workplace line is no longer only routed to the industrial workplace, but rather prisons have become the relief valve, filtering off the already marginalised poor into carceral warehouses.

**Mental Health and Illness and Workplace Harassment**

Even though every person is protected against harassment and discrimination in areas defined by Alberta’s Human Rights Citizenship and Multiculturalism Act, The Canadian Charter of Rights and Freedoms and the Canadian Human Rights Act, general types of harassment or bullying are not prohibited in Alberta, so this qualitative analysis examines the avenues to resolve harassment issues within the context of Alberta Public Service in Canada. The goal is to achieve a healthy workplace for every person. The ‘harrassed worker’ has been explored within a psychiatric framework, so the paper searches for an appropriate framework namely labour code, union grievance, legal remedy or medicalization of deviant behaviours in the workplace.

TAZREITER, CLAUDIA* (University of New South Wales, c.tazreiter@unsw.edu.au)

**Imagining Futures in Paper Homes. Ambivalence, the ‘Politics of Becoming’ and the Everyday Life of Temporary Immigrants**

This paper asks whether changes in the patterns of migrant mobility have been accompanied by, or indeed have generated, the affective register of ambivalence as a way of coping with life as temporary, nomadic and often unwanted peoples. Migration is increasingly temporary in nature, with an attendant loss of access to the channels of full incorporation to formal citizenship and belonging. As a result, immigrant experiences are in the process of being turned inside-out, with the channels of belief and identity politics (Honig 2009), the paper argues for a more holistic conceptualization of leisure time and space, otherwise confined to the workplace. Ambivalence can be conceived as a rational response to the uncertainties faced by immigrants: temporary and precarious work; second-class citizenship; marginality and invisibility. At the same time, ambivalence can also be understood as a more widespread emotional response, observable under the conditions of late modernity. The paper argues that the ambivalent, or postmodern leisure, is to be seen as being complementary to an individual’s line of work. However, a number of scholars question whether this is the most fruitful path of gaining insight into leisure and occupation. Philipson (1963), Roberts (1981), Kelly (1983) and Te Kloese (1985a) believe a family or household approach to the leisure industry to be more productive, which means that this field should be directed at the social context of leisure on a micro and macro level. The social context of leisure refers to the primary life domains of leisure and family life – which are embedded in the wider context of society, both institutionally and socio-spatially. The question is how far the above is valid for migrant behaviour being an important part of (family) leisure life. The family tourism market is arguably more important now than it has ever been (Southall 2010).

An empirical study on family and leisure was conducted in the mid-nineteen nineties (Te Kloese 1996).

Part of the data of that study haven’t been analysed before. Those data were focused on tourism behaviour, the holiday(s) chosen, if any; the activities undertaken during the holiday; the organisation of the holiday; task sharing between husband and wife. Traditional and modern-individualistic families were distinguished.

The concept of the problem statement is as follows: how do (partners from) families behave in time and space with regard to holiday making, and are these inequalities related to their origin? (urban – rural; low versus high status; caring role; and gender?) We used data from diaries and from extensive interviews with husbands and wives.

In this paper the main findings of that analysis will be presented.

TE RIELE, KITTY* (Victoria University, kitty.teriele@vu.edu.au)

**Conundrums for Policy and Practice Regarding Vulnerable Youth**

Many youth related policies and institutions are aimed at supporting vulnerable young people to prevent problems from arising, to catch problems early, and to assist young people who are experiencing problems. Identifying some young people as vulnerable (or ‘troubled’, or ‘at risk’ – the terminology varies) rather than providing such services for everyone enables limited resources to be targeted to those who need them most.

This poses several conundrums. First, selecting some young people for special attention creates the dual risk of stigmatising some and excluding others. However, not singling them out may lead to further disadvantage. This creates a need to find the provision of services for young people. Secondly, determining which young people warrant what kinds of support and when is a fraught issue. The criteria for such ‘triage’ are rarely clear-cut. At the policy level, this challenge focuses especially on which priorities to highlight in public announcements and through funding. At the practice level, enactment of policies may affect how and to what extent programs are advertised, and who is considered eligible. How such decisions are made impacts on individual young people who are targeted (or not) and also impacts on their community and wider society. Getting this ‘right’ is important in terms of equity, social cohesion, cost-effectiveness and the quality of life of young Australians.

The presentation will engage with these conundrums by not only exploring how and why certain young people are identified as vulnerable in relevant policy, but also the policy-practice nexus and the potential impacts of such challenges.

‘Rooted Cosmopolitanism’ or ‘Politics of Becoming’; A Thick Convergence?

This paper proceeds from a grounded understanding of cosmopolitan values as ‘rooted’ in particular experiences and ways of life, yet assumes those same values to be generalisable – as human rights. ‘Rooted cosmopolitanism’ speaks to an aspect of human rights, namely its relationship to the nation-state form. Though historically and culturally framed entitlements and claims occur predominantly at the level of the nation-state.
It is likely to be widely accepted that ethical reflection by professional workers, such as teachers, is of benefit for improving equity and social justice in society. More controversial, however, is whether formalized codes and principles are helpful. In this presentation I begin by analysing critiques of formal frameworks for procedural ethics: both professional codes of ethics and guidelines for research ethics, especially of the datasets and social science research. Specific concerns relate to the restrictiveness of codes, the impact of codes on undermining professional deliberation, and a lack of cultural relevance. I draw on Nancy Fraser's framework of social justice to relate these issues to considerations of inequality. I conclude that in order to use non-maleficence and justice as well as ethical resources through Fraser's lenses I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics frameworks internationally (respect for persons / autonomy, beneficence / non-maleficence and justice) as well as ethical resources through Fraser's lenses of redistribution, recognition and representation. I conclude that in order to use ethics for equity, we need to carefully weigh up the potential impacts of formal, procedural approaches and more informal pedagogical approaches.

TECHOUYRES, ISABELLE* (ANTHROPOLOGY OF FOOD
WEBJOURNAL, i.techouyres@orange.fr)
When Food Aid Supports Local Farming: Towards a Sustainable Solution? Case Study in France

In Europe an increasing number of people require the assistance of food aid organizations which are now run and funded by NGOs. Access to fresh quality foods gets difficult, impacting people health. This contribution is an original on-going case study assessing the impact of an innovative food aid supplying mode supporting small local farmers. Besides developing links between urban consumers and local producers, it reveals the current conditions shaping the creation of fair and sustainable markets. This case study is based on the pluralistic intervention research ECOPALE in partnership with the ANDES (national association for food aid) which has set up in 2012 an innovative short supply channel for fruit and vegetable for solidarity grocery retailers in the western regions of France. Objectives are to increase fresh fruit and vegetable consumption among food aid recipients and support local farmers by buying their products at sustainable price via a pre-order system. The intervention also includes cooking workshops and visits to farms. The network of local farmers is organised by a coordinator in charge of deliveries to food aid outlets.

We will focus on the diverse constraints: creating links between shops and farmers who are spread over a large territory; the articulation between support to farmers in a difficult situation and regular supply in quality fruit and vegetable; meeting consumers' expectations. We'll also assess necessary adaptations and the sustainability of the system.

Fieldwork (including participant observation) follows the lines of global approach, including the diverse protagonists involved: farmers, solidarity food outlet staff, recipients as well as financial and political partners, representing institutions involved. The original methodology, combining interdisciplinary perspectives (anthropology, epidemiology and economy), offers finer understanding of what is at stake. The analysis should highlight the favourable conditions for the viability of such a project.

Intergenerational Coresidence, Support Transfers, and Psychological Wellbeing Among Older Persons in Myanmar, Thailand, and Vietnam

We analyze data from 2011-2012 nationally representative aging surveys from Myanmar, Thailand, and Vietnam to examine the associations between coresidence with adult child and proximity of children in influence the psychological wellbeing of older persons? 2) To what extent are support transfers from children associated with elderly mental health? 3) Do support transfers from children fully account for the relationships between parent-child coresidence and older persons' psychological health? 4) How do the associations between intergenerational coresidence, support transfers, and elderly mental wellbeing vary across the three societies? The mixture of commonalities and differences in political systems, cultural underpinnings, kinship systems, levels of development and degrees of population aging that characterize Myanmar, Thailand, and Vietnam render the comparative analysis particularly interesting. While there are many similarities that living arrangements of older adults are related to their psychological outcomes, most research focuses on the effect of living alone versus living with others, which may or may not include an adult child. Less is known about the effects of coresidence with an adult child and how and why coresidence confers different psychological benefits.

The second part of the presentation reflects on my experience teaching a module on ‘professional ethics’ in a pre-service teacher education course in Australia. Rather than pre-determining codes or principles for students to adopt, I started with a Smørgåsbord approach, offering various ethical theories and materials. These were resources for students in order to construct their own ‘professional ethical toolkit’. I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics frameworks internationally (respect for persons / autonomy, beneficence / non-maleficence and justice) as well as ethical resources through Fraser's lenses of redistribution, recognition and representation. I conclude that in order to use ethics for equity, we need to carefully weigh up the potential impacts of formal, procedural approaches and more informal pedagogical approaches.

Religion, Migration, and Human Trafficking: Experimental Evidence From Grassroots Practitioners

This study investigates whether faith-based organizations are making an impact in preventing and caring for the victims of human trafficking and prostituted women. This study assumes that human trafficking is closely linked with migration which often causes prostituted women to be trapped into sexual slavery. This study critically suspects that because human trafficking is closely linked with organized syndicate and criminal organizations, faith based organizations remain on the sideline of social engagement into the public sphere. This study executed an in-depth interview with particular faith-based organizations working among prostituted women to probe whether these organizations are actively engaged in combating human trafficking in their own respective area of ministry. This study utilizes critical questions to test whether there are indications of participatory engagement of these organizations in partnering with government agencies or the civil society. This study finds out that faith based organizations are driven by their passion to see victims and prostituted women transformed by the power of the gospel. This observation is based from the following evidences that faith-based organizations, despite the danger and risk involved, are actively engaged in providing various interventions and aftercare services for the victims fueled by their religious convictions and values. It was evident from the study however that migration, whether it is legal or not, is a mechanism of organized syndicates to deceive and betray victims of human trafficking. Also, it resonates to the study that combating human trafficking in local and international level requires corroborative network and engagement of faith-based organizations to non-government organizations and government agencies such as legal and justice experts. This study suggests a theological framework in which faith-based organizations adopt and suggests ways on how to mobilize Christian churches to combat human trafficking in the local and international context.

Democratic Upset and the 15-M Movement. The Social Basis of the Political Crisis in Spain

Recent years have witnessed a great diversity of mobilizations in authoritarian political regimes (Arab Spring, Colours Revolution) and consolidated democratic societies (Europe, North and South America). Driven by the consequences of the economic crisis, the implementation of liberal economic programs in different social spaces, the perseverance of significant democratic deficits, the visibility of various social actors, and others with a low level of previous political mobilization occupied the public space to show their discontent. The reasons are complex and, therefore, it is difficult to find a unique explanatory array that can be applied in all cases.

The Spanish case has served as an example to other subsequent mobilizations and although there are peculiarities, due to the depth of the economic crisis, it also presents similarities with other cases mentioned. The aim of the paper is twofold. Firstly, deepen in the reasons that activists and sympathizers of the movement 15-M consider as mobilization triggers: the immediate consequences of the economic crisis and people responsible for it, the politicians’ behaviour and its role in the crisis, the functioning of democratic institutions, the elements that limit, condition and/or indicate democracy, and the crisis of the political link between representatives and citizens. Secondly, to analyse the contributions and proposals of 15-M claiming for a more democratic process, as well as the results and impact of the mobilization. The following data will be used: 1) the survey of the CIS (Center for Sociological Research) to the Spanish population on the 15-M movement; 2) eight focus group sessions and ten individual interviews with activists; and 3) the results of a survey carried out by the INJUVE (Spanish Youth Institute) on social and political attitudes on the 15-M based on the answers of 1,100 young people aged between 15 and 29 years old.

Persistent Invisible Inequality in Education: Sociology of Education and Gender Studies in Japan

Japanese sociology of education has a long history. Women and education and gender issues in education have borne some of the main topics in the sociology of education since the 1980s. This presentation traces the transformation of feminist discourses in education in Japan, focusing especially on the hidden curriculum of socialization through class stratification, and gender order penetrated in Japanese society deeply, while following the main issues of sociology of education since the 1980s to the present.

European and Latin American Higher Education Between Mirrors

Higher Education systems all over the world have gone through deep transformation and extraordinary expansion. In Europe, major transformations in higher education and in the impact of the subject and served as limits to justly resulted mainly from the implementation of the so-called Bologna process. The main goal was to establish a European Higher Education Area which allowed an increase in international competitiveness, attractiveness and comparability between European higher education systems. Evaluation of results and consequences of the Bologna process has been largely depended upon the evaluators’ perspective. At the political level, it is easy to conclude that the Bologna process has been successful since it allowed greater integration and harmonization between the various education systems of the 46 participating countries. However, at the institutional and local level, the response is more cautious due to the great variety of contexts involved.

In Latin America, timing was different since this was the first region were neoliberal policies were put in place, after Pinche’s military coup in Chile in 1973. Several authors described the end of the 20th century in LA as the “lost decades”. The beginning of the 21st century brought with it important changes to the scene. The election of progressive governments in some LA countries gave way to policies which favored redistribution of wealth. At the same time, in some countries, with robust indigenous communities, their cultures were granted political and social recognition and intercultural policies were developed. It is not meaningless that it is precisely in LA, where the first neoliberal experiment was carried out, that the search for alternative policies and the construction of other rationalities were undertaken. This paper presents the results of a research project developed by the Network RIAPE, comprehending 31 universities from 21 countries of EU and LA, funded by the ALFA Programme through 2010-2013.

Institutional and Peoples’ Response to Cope with Growing Urban Challenges: A Case of Women’s Participation and Leadership in Poverty Alleviation in Chandigarh

Chandigarh has distinctly implemented urban poverty alleviation (UPA) scheme called SJRSY unlike other towns in the region. The women as ‘change agents’ are leading various UPA activities in the city. The self help groups have been formed by the local and for the women who not only catalyze other women members but other women in the poor clusters to join the skill formation training programmes for setting up self employment ventures to earn the livelihood and also to strengthen urban community development networks etc. Three major women based activities i.e., ‘Learning on Wheels’, ‘eco-friendly Handbags’ manufacturing budget and ‘Women SHG’s’  are under a women’s leading. Changing Leadership and bringing change in their Community have recently won the prestigious ‘HUDCO Best Practice Award to Improve The Living Environment’. The new pattern of community leadership is emerging among the poor women. There is a positive individual response to the UPA activities in the city which seems to empower the poor women. The Municipal Corporation has formed a dedicated Cell with adequate staff to implement SJRSY and other UPA schemes. There seems to be democratic strengthening through enhanced participation and leadership of poor women in local decision making in implementing UPA program. They are able to articulate the voice and choice of disadvantaged women in a better way. The local participatory initiatives have multiplier impact on socio-economic conditions of the poor women. There is negligible poverty and better service provisions. The emerging pattern of women participation and leadership in Chandigarh is a positive step towards UPA, inclusive urban society, women empowerment, also coping with growing urban challenges. There are many success stories of emerging trend of women participation and leadership in UPA in Chandigarh which have been documented by the author for the paper.

The Transformation of Youth Attitudes to Economic Success in Japan

The purposes of this study are to reveal the transformation of youth attitudes to economic success in 2000s in Japan, and to consider the youth under unequalizing in the society which has the legacy of equality. Though the Japanese society is often seen as an egalitarian, in the Western societies, it has being transformed to an unstable society with liquidity and disparity since the end of the 20th century. Particularly the situation of youth employment was becoming worse and has not recover after the bubble economy from mid-and-long term perspective. In this situation, the social challenge is how to recover people’s motivation not just current economic gap.

In this study, we analyze the quantitative data which was collected in Suginami (Tokyo) and Kobe in 2002 and 2012 by the Japanese Youth Study Group. Respondents aged from 16 to 29 were randomly sampled.

Major findings of our first analysis are summarized as follows: First, the percentage of young people who think of “individual effort” as the most important factor of economic success is little different between 2002 and 2012. Second, in 2012 the percentage of young people who think of “individual talent” as the most important factor of economic success is about 10% less than that in 2002. In contrast, in 2012 the percentage of young people who think of “family environment”
as the most important factor of economic success is about 10% more than that in 2002. This difference can be contemplated that economic success for the youth are transformed from the individual matter to the social matter. This may mean the penetration both of the sense of inequality and the awareness that this matter should be treated publicly, not personally. In the presentation, we will discuss the impact of this transformation on the Japanese society and youth.

The Pragmatic Social Theory of Sign in Shunsuke Tsurumi

While most critics may agree in applauding Shunsuke Tsurumi (1922- ) as one of the most influential intellectuals of post-war Japan, no one has recognized him as an eminent sociologist. The aim of this presentation is to show some sociological implications of his thought and methodology. His works should be categorized as sociology of culture and cultural studies. Shuneeke Tsurumi's interest is in the life of ordinary people and in "pragmatism in Japan". He focused on a lot of cultural things, especially writing practices of elementary school children (TSUZURIKA-TA), comics and KARUTA (a Japanese alphabet card game). His notions on the so-called "research of mass" aim not only to find the roots of the resistance to the government and bureaucrats, but also to criticize the conventional, scientific, or professional intellectuals and sociologists. Sociology can't read and find the potential hidden behind the unwritten words and thoughts of ordinary people, people who express themselves through work, games, talking, rhymes and poems, and art. He named such practices as "marginal art"(Tsurumi [1960]1991). The influence of these implications are widespread in contemporary Japan, but sociologists such as Keichichi Sakuta (1922-) and Shin Inoue (1938-) are the first to share and acknowledge the methodology and importance of Tsurumi's work.

In my presentation I'll reconstruct Tsurumi's practices and works into "the Pragmatic Social Theory of Sign" through the reconsideration of his studies regarding the development of pragmatism in the US and Japan and his analysis of Japanese popular culture.
Reactions to the shooting death of unarmed seventeen year-old Trayvon Martin in February 2012 and the not guilty verdict in the trial of George Zimmerman in July 2013 could be heard throughout the United States and around the world. In Al Jazeera, Susan Abulhawa, a Palestinian writer, wrote, “The contempt, the disregard, and the disrespect for the black body runs through this whole case. It runs through this country and transforms itself to adapt to the times.”

On August 12, 2013, U.S. Attorney General Eric Holder announced that the Justice Department would work with the Department of Education, “to confront the 'school-to-prison pipeline' and those zero-tolerance school discipline policies that do not promote safety....but instead lead to the criminal justice system. Reactions to the death of Martin and the announcement of a new approach to the disciplining of youth are acknowledgements of the systemic use of violence to control people of color in the United States. While many accounts of the Martin/Zimmerman case have focused on race as a central theme, some have pointed to race as it intersects with gender and/or class. A narration that resonates with an audience, thereby providing a kind of truth. Intersectional analysis complicates a narrative, but it also provides a nuanced view of societal violence/power as well as a vantage point from which to exercise agency and bridge the research/practice gap. Using content analysis of media from around the world, we identify multiple ways in which the Martin/Zimmerman case has been narrated, focusing on intersectionally-framed accounts that along with race point to gender—as masculinities deployed—and/or age—youth/adult to make sense of the violence. Statistical data on incarceration in the United States will be used to show the relevance of the narrations to the school-to-prison pipeline.
rupt our humanity and sociality. While, simultaneously, we are being presented with a modality of equipmentality (Heidegger, 1962; Dreyfus, 1991, 1992; Verbeek, 2005) from within the frenzy of technological activity, which paradoxically inures us in our sociality and sociability. This contention is carried through to its articulation in Castell's (2000, 2001) theoretical substantiation of the Network Society in the Information and Internet Age with a view to opening up and tracking into specific transformational dynamics of the new modalities of the social, economic, technological and the global. The aim behind which is to consider in which ways the Internet-based transformations offer themselves up as nodal points that gather overlapping and sociability in the `virtual world'. And by contrast consider the ways in which the latter dimensions of social being as predicated upon individualism are scattered throughout the labyrinthine `cyber world'. Taken together the paper seeks to think through how both moments of gathering and scattering are recast in the new global informational-intellectual division of labour as mirrored in the `Digital Divide'. We close this line of thinking by reflecting on South Africa as engaged in this Internet-based New Global Network, with its ambivalences and consider the incorporation of Developing Countries into the new global order as a function of new social inequalities and subject positions that are emergent and made manifest in one of its forms as `Scatterings' of the `Digital Divide'.

THELEN, LIONEL* (European Research Council, lionel.thelen@ec.europa.eu)

The European Research Council...An Open Door For The Sociology Of 21st Century?

The European Research Council is the most recent and most successful Funding Body created by the European Union. Why successful? Because it allows the funding of single research teams in all fields of Science (up to 2.5 million EUR for a 5 years project) and it is the sole EU funding body directed by a Council of top-notch Scientists.

The author is for more now than 5 years the Scientific Coordinator of the so-called SH2 Panel, bringing together 15 panelists – from Sociology but also from Anthropology, STS, Political Science, Religious Studies, Law and Communication Studies – in charge of evaluating between 120 to 200 proposals.

The way the ERC assesses proposals - singularly in Sociology – is quite peculiar and tends to blur boundaries between disciplines.

The evaluation procedure is done in 2 steps and, at step 1, each proposal is given to 4 reviewers. The latter are, frequently, not specialists from the main proposal's discipline. It follows, from that, debates among them not only about the excellence of the proposal but also about its relevance in confront with its subject, hypotheses or methods.

This fruitful interdisciplinary debate 1) helps panelists understanding each other point of view while bringing them, in most cases, to a consensus decision about any given proposal; 2) gives interesting hints about the various paradigms in use in disciplines apparently close from each other; 3) raises a lot of questions about the fact that some disciplines seem more “successful” than others and 4) allows to grasp at best that having reviewers from different disciplines can have paradoxical effects for interdisciplinary proposals.

Such a debate is undoubtedly helping outlining the main features of Sociology as a discipline increasingly aware of the need for a “good” set of its own boundaries and, by extension, of the other social sciences’ ones.

Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany

Since the 1990s, two distinct processes of marketization in long-term care provision can be found in Sweden and Germany. First, professional long-term care services were restructured inspired by ideas oriented towards New Public Management. Second, tax deduction policies were established to create a new mix of (ir)regular domestic and professional care services. Despite the international character of the development, the existing structure of professional and (ir)regular domestic services at the beginning and the approaches selected, their effects on the infrastructure and on the situation of care (and domestic) workers differ significantly between both countries. In both countries, research findings indicate – however country-specific - patterns of a worsening of working- and employment conditions of care workers embedded in distinct processes of hierarchisation among care workers. The paper aims to compare pre-existing service structures, policy approaches, their effects on service restructurings and the situation of care workers. A comparison, it will reveal and explain the effects of country-specific policies and restructurings on processes of hierarchisation among care workers.

Conceptually, the paper combines international comparative research on care policies and marketization and intersectional approaches developed within sociology to relate the effects of marketization to the emerging patterns of inequalities within the care work force based on gender, social class (training levels and positions) and ethnicity. Empirically, it will include documents and laws, literature review and representative statistics to analyze policy changes and existing- and changing infrastructure. Findings of a German-Swedish research project on the situation of professional carers with approx. 600 care workers in each country, will be used to reveal the country-specific restructurings and processes of hierarchisation within formal care provision, which is complemented by research on the developments within domestic service provision.

AUTH-981.1

THERBORN, GÖRAN* (University of Cambridge, gt274@cam.ac.uk)

Göran Therborn: The Killing Fields of Inequality

This is a theoretical as well as an empirical book. Theoretically, it sorts out the differences between difference and inequality, it sets out a moral argumentation for why inequality matters, it presents a multidimensional analysis of inequality, and it lays bare the mechanisms of equalization as well as of inequality.

Empirically, the book is global in scope, historical in depth and multidimensional in range, analyzing life expectancy, health and body measures, and existential recognition, rights, and respect, as well as income.

It also tries to answer three puzzles: Why have the Northern welfare states failed on vital inequality? Why has existential egalitarianism been so (relatively) successful in the past fifty years? What is the connection between the concurrent inter-national convergence of income and rising intra-national inequality?

The book ends with a discussion of the world politics of (inequality and the possibilities reducing inequalities.

The Killing fields of Inequality Polity, Cambridge, 2013

THEVIOT, ANAÏS* (Université de Bordeaux, p.thevio@gmail.com)

Des « Cyber-Résistants »? Résister Aux Pratiques Militantes En Ligne Au Sein Du Parti Socialiste

Encore marginal au début des années 2000, Internet s'est propulsé sur le devant de la scène politique française lors des campagnes sur le traité établissant une Constitution pour l'Europe de 2005 et lors de l'élection présidentielle de 2007. Cet attrait grandissant pour les technologies est particulièrement visible lors des campagnes électorales où les candidats se livrent une véritable « course politique virtuelle ». Les adhérents sont fortement incités par l'institution partisane à utiliser le web dans leurs pratiques militantes, si bien que certains en arrivent à militer uniquement sur Internet.

Helen Margetts parle de « cyber-parti », aux sens où un parti tendrait à se détacher des structures traditionnelles et des modes de communication en face à face et privilégierait la machine sans intermédiaire humain (Margetts, 2006). Le PS serait-il en train de se transformer en « cyber-parti » ; tendance déjà amorcée en septembre 1998 avec la création d'une section virtuelle, Temps réels ? Ou reste-t-il fortement ancré dans des modes d'organisation traditionnels, réduisant les pratiques numériques à des actions de diagnostic ?

Notre analyse se base sur un questionnaire diffusé auprès des militants PS (n=504) afin de dégager le profil sociodémographique du « cyber-militant » et du militant traditionnel. Nous verrons qu’au-delà de personnes âgées ou incompétentes sur la Toile, il existe de jeunes militants revendiquant les vertus de la militance sans l’intermédiaire de l’écran, préférant « le contact humain, au cœur même du socialisme » ; ou de façon plus modérée, se refusant à utiliser certains types d’outils numériques.

Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany
Simultaneity of Seeing and Doing in Wayfinding from an Ego-Perspective. Eye-Tracking and Video Analysis As Tools of Visual Sociology

We examine eye-tracking data that stem from an interdisciplinary user study that aims at evaluating different cartographic methods for indoor navigation maps (cartography) and at exploring social practices of orientation (sociology). In order to collect data we have been conducting social field experiments every year since 2009. Participants’ task is to find their way from the ground floor of the university’s main building (starting point) to the rooftop (goal) as fast as possible. To accomplish this challenge, they are asked to use specially designed maps that they should rate afterwards.

Each year, we broaden the range of our methodological instruments and test their usefulness for analyzing spatial practices. Among the instruments we are currently mixing are: different cartographic methods, surveys, ethnography (both participant and non-participant observation), photography and eye-tracking. To use eye-tracking devices for data collection gives us the opportunities (1) to visually document an ego-perspective of participants’ experiences during the way-finding process and their use of the maps, (2) to capture the focus of their gaze and (3) to record simultaneously what they said and heard during the way-finding task. To combine all of that is not possible with any other data collection technique.

To analyze the data we used the video analysis method (Tuma et al. 2013). It includes the selection of relevant scenes, transcription (visually and in written form), their interpretation and the presentation of results.

In this paper we want to present some of our results, show how we got there and discuss what worked out well and what problems we had in applying this approach.

THIJSSSEN, PETER* (University of Antwerp, peter.thijsssen@ua.ac.be)

The Potlatch of the Young, the Paradox of Excessive Intergenerational Solidarity in Aging Welfare States

In this paper a new theoretical model is applied to a research field that is somewhat fragmented, namely that of intergenerational solidarity in aging societies. Inspired by utilitarian considerations many scholars tend to problematize the lack of commonality and reciprocity characterizing intergenerational exchanges. As some generations are longer old and more numerous they may receive excessive support of the younger generations, especially in a democratic setting. However, in reality there is limited empirical evidence of intergenerational conflict and theoretical explanations of this paradox are dim. An integrated and dynamical approach that incorporates Durkheim’s solidarity theory, Honneth’s intersubjective theoretical explanations of this paradox are dim. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing the driving force of intergenerational solidarity. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing the driving force of intergenerational solidarity. Therefore, we are led to question the role of the legal rule in order to understand the survival of intergenerational solidarity in aging welfare states. Our integrated approach is inspired by a cyclical model of solidarity (Thijssen, 2012). According to this integrated model in a prefigurative culture where the status of the young has risen dramatically, the empathetic identification of exchange is the driving force of intergenerational solidarity. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing excessive transfers may be counterproductive because they may erode the empathic underpinnings.

THOEEMMES, JENS* (CERTOP, CNRS, theoemmes@univ-tlse2.fr)

Intra-EU Mobility: Posting As Permanent Organization Of Poor Labour

An employee is legally considered as “posted” when working temporarily in a member state of the European Union other than its usual workplace. However, the temporary, neutral and legal status of posting tends to conceal the very nature of the process: organizing permanent mobility from south and east-European countries to the richer states, exerting of pressure on local bargaining standards (social dumping), giving legal appearances to illegal practices, underestimating the massive character of the phenomena. These are at least the first results of a transnational French-Portuguese research programme in the construction sector. For a sociological perspective, the question stands whether the legal rule of “posting is challenged. We distinguish here three different ways.

1) The first challenge is the existence of differences between legal and social rules. In fact the legal component is not opposed to the social component of the rule. It would rather be two sides of the same rule. There is not a peaceful legal side of posting and another conflicting social side.

2) The second extension of the legal rule we want to deploy to our research concerns the social regulations of conflict, agreements and collective action. They combine legal initiative, jurisprudence, the actions of the Labour inspection, the tribunal but also the initiatives of the workers themselves, the unions and employer organizations.

3) The third shifting from the legal rule is related to networks. The first element concerns the Portuguese community in France. Posting that is based in large part on channels mounted on the initiative or with the help of employers who are former Portuguese employees. The second element of networks relate here to interpersonal relationships. Indeed, recruitment in Portugal is often effective because a friend or a colleague did already work for the same company.

Expectant Parents, Expecting Perfection: Constructing Down’s Syndrome in UK Antenatal Care

In the UK, expectant parents are offered screening for Down’s syndrome, an incurable chromosomal condition, as part of routine antenatal care. Drawing on an ethnography of two antenatal clinics, I explore how the prospect of Down’s syndrome is interpreted and negotiated by healthcare professionals and expectant parents during screening consultations. The potential diagnosis of Down’s syndrome, despite the condition being recognised by professionals as “compatible with life”, is confined within universalising discourses such as “risk”, “problem”, or “abnormality” which not only construct Down’s syndrome as a deterritorialized pregnancy outcome (the common vernacular of risk, in particular, becomes synonymous with danger or threat), but also imposes a collective category which masks the considerable variation of the condition. By drawing attention to the mundane interactions and materiality (e.g. booklets, posters, architecture) of the clinic and by considering diagnosis as both a category and process, I capture how the potential diagnosis of Down’s syndrome in antenatal care is produced and what role this play in the work process; and how careers are developed and maintained within the occupation.

By focusing on the variation in development, demand, supply and deployment of skills the paper will highlight the heterogeneous nature of the modern graduate labour market as well as outline a renewed sociological understanding of graduate labour.
el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; revaluar los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; reestructurar la actividad turística a partir de una nueva escala de valores basada en la equidad, la ecoeficiencia y la simplicidad; reconstruir la actividad turística abriéndola la posibilidad de redistribuir los espacios de proximidad y así ayudar a una redistribución de los recursos mediante una actitud de cooperación; reducir los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo examina las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se benefician mutuamente sin incentivar el crecimiento y la acumulación.

Reification: Reconstruction and Extension Of a Concept

This paper will seek to reconstruct the concept of reification and extend it along three different social-theoretic lines. I argue that reification needs to be seen not simply as a reduction of human relations to relations between things, but that it also constitutes a deep pathology in the capacity of individuals to conceive of the pathological nature of the social relations themselves, reification constitutes, on my reading, a cognitive defect within the thinking subject and therefore as a pathology of epistemic, cognitive, and evaluative capacities of subjects. This renders them unable to perceive and understand the true nature of their social being and, as a result, they come to distort the social and material world of nature around them. The depth of reification therefore leads us to an explanatory model of why individuals are susceptible to accepting forms of social power and domination that do not serve common public ends. There is, I suggest, a social ontology that is barred from our world-view due to the defective nature of reified thought. I take this theory to move against contemporary forms of Critical Theory such as Habermas and Honneth to bring us back to the more radical impulse of the Critical Theory tradition through a reworking of reification.

Women and Aging: Appearance and Age Appropriateness

Evidence suggests that Baby Boomer women may ‘do’ ageing differently to previous generations (Calasanti and Slevin, 2001). To date, there has been only minimal research considering Australian Baby Boomer women’s embodied experiences of ageing. Drawing on data from semi-structured interviews and personal journals from 28 Australian women aged between 55 and 81, this paper explores the ways in which women’s presentation of self was strongly informed by notions of appropriate dress, grooming and even behaviour for older women. Often these ‘rules’ were taken for granted, and connected to broader ideas of ‘doing’ normative femininity and presentation of self.

This paper will consider the women’s motivations for doing this ‘appearance work’, and the impacts this had on their sense of self. While their endeavours were largely informed by established norms of female beauty and ‘appropriate’ dress, they were also conditioned by these norms and acceptance of the ageing process. Competing discourses, such as ‘resisting age’ and ‘being yourself’, were also apparent, and these processes of contesting and disputing appearance norms will also be considered.

Art As Acute Action: Art and Articulations of Public Concerns in the Wake of 3.11

In the wake of the immense earthquake disaster that struck Japan on the 11th of March 2011, a myriad of art-based projects were conceived and shaped instantaneously as a response to the issues and concerns faced by people in the affected areas. Responding to the acuteness of the situation, artists and art professionals – alongside various other social actors – turned their practices towards aiding the disaster-zones. In doing so, artists started shaping their artistic practices according to the realities faced by North-Eastern Japan, in close cooperation with those affected and other actors involved in disaster support. I suggest that such disaster-driven art projects can be fruitfully viewed through Bruno Latour’s concept of matters of concern, and the wider theoretical context of Actor-Network Theory (ANT). With the notion of matters of concern, Latour allows for the analysis of new hybrid formations, prompted by public concerns and crisis-crossing the spheres of art, activism and disaster relief. Analyzing specific artistic projects, I argue that this approach enables one to follow the practices and movements at stake as hybrid undertakings, which serve to publicly articulate, and thus give cultural shape to, the multiple concerns triggered by the disaster.

Figurative Methods: Towards ‘Bridging the Gap’ Between ‘Transition’ and ‘Cultures’ Research

The study of ‘youth transitions’ has consistently highlighted the persistence of class influences on life chances and opportunity. The study of youth cultures has had a more troublesome and fluctuating relationship with class. The foundational subcultural studies and more recent work continuing that tradition has been critiqued for (among other things) over-romanticising working class practice; finding ‘resistance’ everywhere; and having an unhealthy focus on the ‘spectacular’ while disregarding ‘normality’. Work done on the loose concept of ‘post-subcultural’ studies (including ‘scenes’ and ‘neo-tribes’) has been criticised for giving too much heed to fluid notions of identity, ignoring structural constraints; and over-romanticising ‘choice’ in consumer culture. In general, youth researchers have tended to focus on ‘people like us’ or young people for whom we have empathy. There has not been a lot of work on what I would call the more ‘mundane’ end of youth cultural practice. By utilising Tyler’s ‘figurative method’, this paper proposes that tracing the use of terms such as ‘bogan’ or ‘hipster’ can enable an understanding of the ways symbolic violence is disseminated at the same time ‘class’ tends to equate with middle class ennui. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant symbolic and moral struggles. This can help bridge the gap between ‘transitions’ and ‘cultures’ research and work towards ensuring that youth researchers do not unknowingly reproduce unhelpful stereotypes. Further, figurative methods can enhance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justices, symbolic and material inequalities and moral economies.

Global Reflexive Hipsters Vs. Local Abject Bogns: Towards Understanding Inequalities in Youth Cultures

This paper looks at terms like ‘hipster’ and ‘bogan’. Using ‘figurative methods’, analysing the ways these terms are operationalised towards working class people in dia and popular culture can enliven global comparative youth sociology. These floating signifiers enable distinction to be performed while eschewing the very notion of class. Both terms are mostly used as a pejorative towards various youth culture tastes. The hipster is a global figure used in many English speaking countries. It tends to be equated with middle class ennui. Rather than (just) seeing class as a reflexive irony that sees the term used in a quite playful way. On the other hand, the bogan is a specifically Australian term but has relations in other countries that denote a similar class position such as ‘char’, ‘white trash’, ‘red neck’ etc. Through processes of symbolic violence, the ‘bogan’ has rapidly become a prominent cultural folk devil in Australia. For Skeggs, ‘some people call the classifications and characteristics of race, class or femininity as a resource [hipsters] whilst others cannot because they are positioned as them [bogans]’ (my additions). These figures are indicative of the ways class is made and of the ways the boundar- ies between them, both local and global, are fuzzy sites of cultural conflict. As precariousness becomes normalised for even the well-educated middle classes, these figures also serve to highlight processes of global social change as they illustrate new forms of class based anxieties. The ‘bogan’ and terms like it tap into middle class insecurities producing forms of ‘downward envy’ (Everingham) and ‘disgusted subject’ (Lawler). The ‘hipster’ plays a dual role: it represents a kind of clown that allows the middle class to both ‘reflexively’ laugh at itself alongside an ‘avant-garde’ and somewhat sheepish recognitional of the ‘cruel optimism’ (Berlant) of consumer culture.

Segmented Social Capital and Ethnic Diversity in the Work Place

Work places employing many highly skilled and low skilled migrant workers and members of ethnic minorities are interesting focal points for investigations of the potential build-up of social capital along and across ethnic and national lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure, interaction and formation of social relations between different employees depending on the composition of the work force, the work tasks, working conditions etc. Work places representing these different work force structures in which workers may build-up social capital encompassing members of other social and ethnic groups in their networks. However, so far research has paid insufficient attention to the way in which social capital formation among immigrants, ethnic minorities and locals in the work place is influenced by issues such as race and class. Nevertheless, we may expect differences in relation to social capital forma- tion depending on the composition of the work force (highly skilled vs. low skilled workers), working conditions (permanent vs. temporary jobs), ethnic origin (western vs. non-western background) etc. This paper addresses research questions such as which is the impact of increasing ethnic diversity among the employees on social capital in the work space? In which ways does social capital formation differ depending on whether the employees at the work place are highly skilled or low skilled as well as on racial and ethnic origin? The analysis will be based on interviews with 49 employees from three highly ethically and nationally diverse Danish work places. One of these sites employees many highly skilled migrant workers while the two others primarily employees low skilled workers, including low skilled immigrants and ethnic minorities.

Men, Masculinity, Travel and Tourism: Emerging Themes and Future Directions

While the implicit masculine position of the tourist gaze has been identified and problematised, understandings of specific male tourists has often failed to engage with the gendered notions of independence, adventure, embodiment and ‘risk’ which underpin much tourism experience and practice. Drawing on the author’s own ethnographic study of British stag party tourism in a Polish city, the paper will draw out key themes emerging from in recent debates about the positioning of masculinity in the complex social interactions fostered by tourist mobility and the creation of new and developing tourist spaces. Through observ- ing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into wider notions of how masculinities are negotiated through embodied, relational, performances within tourist spaces and through tourist practice. In particular, the notion of masculinities being increasingly fragmented and pluralised must be reconciled with the apparently straightforward and taken for granted ‘hyper-masculinity’ commonly enacted during the stag tour weekend. The paper suggests that the emergence of such male bonding rituals which are frequently based around excessive inebriation, transgressive behaviour and disinhibition illustrate the convergence of numerous emergent strands in men’s lives. As such, sociologi- cal knowledge of the stag tourism phenomenon is a pertinent catalyst to wider discussions of themes relevant to the critical study of men and masculinity. In conclusion, the paper will suggest various future directions for the study of tourism and masculinities.
What is the recent development of environmental movements (EM) in the North in response to the institutionalization and globalization of environmental issues and the speeding up of climate change? How and to what extent do activists link EM issues with those of global social justice? This article will present preliminary results from a 4-year research project titled "Environmental movements in a globalizing world: transformation and/or institutionalization?" in a pioneering study of the EM in Sweden, Denmark, and the Netherlands from 1990, Jamison et. al. showed how the development of the EM linked to national political traditions and to different strategies adopted by each state in dealing with social movements. 20 years later, we analyse and compare the current development of the EM in Sweden, Denmark and Japan. In all three countries, the EM face the challenge of global politics as parts of relatively strong national political consensus cultures. In Scandinavia, the EM is increasingly focusing on climate change, while parts of the traditional movement seem to be in decline. Local mobilization has given way to intensive networking and interaction on the global level via internet forums, websites and social media, a development that actualizes and articulates the idea of climate justice. The Japanese EM is comparatively weaker, but since Fukushima, the issue of nuclear power is giving rise to new movements and to heated debates regarding its pros and cons in fighting climate change. While the nuclear accident has pushed the climate issue to the background, it has also stimulated interest in energy and public debate regarding democracy and the fair distribution of risks in relation to energy.

Changes in Social Interactions in Reform-Era Urban China

The pattern of social interactions represents social divides and inequality. The homophily principle suggests that people are likely to interact with others of the similar sociodemographic, behavioral and intrapersonal characteristics (McPherson, Smih-Lovin and Cook 2001). As resources are differentially embedded within networks, social interactions represent the hierarchical structures of the society (Lin 2001).

Tonnies (1887) argues that the industrialization changes the pattern of social interaction from Gemeinschaft (community), interactions based on kinships, to Gesellschaft (society), interactions based on education and work. It was confirmed by much empirical work documenting a decline of intergenerational interactions (Cherlin 2012) and an increase of marriage patterns based on education and work (Kalmijn 1998).

We examine the changes in the general pattern of social interactions in the reform-era urban China – a nation with strong cultural traditions regarding kinship ties and one that has experienced rapid economic and industrial development over the past several decades. Using the position generator from two social networks surveys collected in 1998 and 2005, we aim to answer two questions: First, is economic reform associated with interactions less based on kinships and more on occupations? Second, does the pattern differ by gender?

Changing Pathways To Adulthood In China: Urban-Rural Divides, 1982-2005

Pathways to adulthood have been increasingly diversified in the United States and Western Europe in the economic globalization (Buchmann and Kriesi 2011; Shengnan 2000). The standard, tight, sequential pathway to adulthood (Heers 1990) has been altered, or even inverted (Buckner and Mayer 2003). These patterns are divided across the socioeconomic line: while most middle-class youths postpone the transitions, an increasingly proportion of working-class youths no longer follows the sequence of education, full-time employment, marriage and parenthood (Kalmijn 2010).

Little is known, however, about how economic change affects the life experience of the youths in the developing world. This analysis aims to fill the gap, using reform-era China as a case study to examine how the pathways to adulthood have changed from 1982 to 2005.

It will also examine the urban-rural difference. In these twenty-three years, China has experienced a noticeable increase in the urban-rural income gap (Sicular et al. 2007). The urban-rural divide arguably contributes substantially to the increasing income inequality in China (Zie and Zhou 2013). Therefore, it is both theoretical and substantial interesting to compare the pathways to adulthood between rural and urban youths, and explore the relative contributions of each institution (i.e., school, labor market, and family) to the difference.

To answer these questions, this analysis uses three censuses (1982, 1990 and 2000) and 2005 inter-censal survey. Instead of examining one transition at a time (Gong and Zhou 2007), the analysis incorporates education, work and family transitions simultaneously. Methodologically, it will treat each census as a synthetic cohort, and will use the entropy index to measure the level of heterogeneity in these pathways (Russell 2005) and the bootstrap to test the statistical significance. It will also use de-composition method to examine the institutional contribution to these changes. (References available upon request).

The Power of Media Communication: How Propaganda Techniques Used in Advertising Influence Japanese Women

Media, as a communication tool, has a great impact on society. From the traditional simplex communication tools such as T.V., radio, newspapers, and magazines, to the most current bidirectional communication tool, the internet, media has a great amount of influence on society. Media is a powerful tool that can influence a country’s policies, shape public opinion, and even set the standard for societal norms. Consequently, research has shown that media outlets use propaganda within advertising. Advertising agencies skillfully manipulate female emotions, in order to create and bolster a perpetual culture of consumption. As a result, this directly contributes to gender inequality.

The primary purpose of this paper is to analyze how media propaganda influences females in Japanese society and the impact it has on their lives. Additionally, this paper will detail how media outlets use propaganda techniques, which have proved to be implications to female identity. This greatly affects how females view themselves and their roles within society.

Social problems including, excessive consumption, identity, and gender inequality, are viewed as generalized social problems. These social problems are often ignored or downplayed by the mainstream media. This paper will engage in a historical analysis, to include the studies that have been conducted, concerning media propaganda on women in Japan.

Although, the news media is supposed to report objectively, studies have shown that notion to be false. The news is often skewed to serve the interest of the power elite. As a result, the news media often reinforces the dominant social ideology. In Japan, the dominant ideology is largely male-oriented. Similarly, this paper argues that the propaganda techniques used by advertising agencies, even as a byproduct, serve that same purpose: to maintain a male-dominated power structure in society.

Gender Segregation in the German Vocational Training System

Transitions from education to work are known to be particularly smooth in Germany. This is mostly attributed to the "dual system", which combines firm-based training and vocational schooling (Müller/Gangl, 2003). In the dual system trainees spend 2-3 years in a company as apprentices and acquire firm specific skills. Both firm and apprentice thus invest in the training which leads to a mutual commitment and a high probability that the apprentice is taken over by the company after training.

However, the German vocational training system does not only consist of the dual system but also of school-based vocational training. In these schools, the contact to potential employers is limited and the curriculum is not firm-specific. We therefore expect that the transition from education to work is less smooth for trainees from school based vocational training. They should face a longer transition period and/or more job mobility.

As gender specific occupations coincide with the type of vocational training, training types are highly gendered in Germany. Women are more likely to enter school based vocational training. We therefore expect that their pathways into employment are less straightforward. The lower firm-specificity of their skills and the lower commitment of employer and employee should also lead to higher job mobility.

We use the German National Educational Panel Study (NEPS). This dataset consists of detailed retrospective lifestyle information about educational and occupational biographies of approximately 11,000 individuals. We examine transition patterns of German women and men after completion of their vocational training and assess how much of the gender differences in the duration of the job placement process and early career mobility can be attributed to the type of training.

Political Participation and Procedural Utility from a Gender Perspective: Activities in Neighborhood Associations in Japan
Political participation and participation in the community is often associated with higher levels of reported subjective happiness, but in the case of Japan a negative correlation between activities in neighborhood associations among female members was found by Tiefenbach and Kohlbacher (2013). The current study uses data gained from an online monitor survey (n=1600) conducted in September 2013 in Japan to get a better understanding of the relationship between happiness and participation in the community. A special emphasis is put on the sources of procedural utility (competence, autonomy and relatedness) as well as on voluntariness and loneliness as moderators and mediators of the effects of participation on happiness. Preliminary results suggest that participation in the community leads to higher or lower levels of happiness depending whether it is conducted voluntarily or not. In either case, participation leads to lower levels of loneliness, which in return has a positive effect on happiness. Finally, the sources of procedural utility can be linked to higher levels of happiness, but significant gender differences can be observed.

Historic Preservation of Significant Cultural Sites in Taipei-Comparing 2 Case Studies in the Aspect of Cultural Heritage Management

Cultural heritage management has traditionally been concerned with the identification, interpretation, maintenance, and preservation of significant cultural sites. The public face of CHM, and a significant source of income to support continued management of heritage, is the interpretation and presentation to the public, where an aspect of communication with govern- ment and the public is therefore a key competence.

The thesis focuses on 2 sites in the city of Taipei, Taiwan. Both targeted case studies are defined as art spaces of cultural property organized by Taipei City Gov- ernment. Spot-Taipei Film House, built in 1926 with a southern colonial architectural style during the colonial period, was originally the residency of the U.S. Ambassador. Once closed due to Pacific war and reopened for the residency of the U.S. Ambassador under the rule of Republic of China. It had faced another closed due to U.S. changed its diplomatic recognition to PRC. Tsai Jui-Yueh Dance Research Institute, built in 1920, was a Japanese style house for the residency of the Japanese Governor. The later owner Ms. Tsai Jui-Yueh, a dancer who was edu- cated in Japan during the Japanese colonial period, had settled her dance studio in the dwelling, held a 24-hour-long creative activism to save it from demolition by the later ruling government of KMT. This paper will look at Taipei city gov- ernment’s action toward the two historical buildings. How did the two dwellings process their way to become cultural heritage? The difference movements repre- sent the interpretation and preservation of the space. Additionally, the thesis will review how the two culture heritage presents themselves to the public as well as the spatial reinterpretation of Taipei citizen.

'standpoints': Attitudes to Global Justice Among Young People and Youth Workers in Ireland

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues.

Young people's views ranged from the very knowledgeable, critically aware and insightful to the uninformed and apathetic, with the majority in between these two positions, showing some limited knowledge of global issues or relationships but an appreciation of their relevance and a willingness to explore them further. Youth workers (particularly but not only those with direct development experience) for the most part showed a high level of knowledge and awareness of global issues and relatedness, and of the links between the global and the local. There were however considerable divergences of opinion among them as to the inter- pretation of certain key concepts, including 'global justice' itself.

Some young people gave examples of actions they had taken themselves in response to global issues and concerns (for example decisions about where or what to buy, or issues around employment), but respondents on balance felt relatively ineffectual with regard to such issues. While the youth workers were much more likely than the young people to say that they thought they could make a personal difference to the world works, there were very different views of how this could be done; and the researchers noted that workers commonly spoke in terms of what they could or should do in response to development and global justice issues rather than describing what they had done or were currently doing. Overall the research sug-gests that there is a high degree of ambivalence regarding the nature of global justice, the operation of key, related concepts such as power and agency and the relevance of these to youth work practice.

Cuando La Participación Ciudadana Argentina Tomó La Palabra

La adopción en 2009 de la Ley de Servicios de Comunicación Audiovisuales constituye un paso muy importante en el proceso de democratización de los me- dios audiovisuales argentinos. Frente a un sector audiovisual fracasado (construi- do sobre el decreto-ley n° 22.285/80 -adoptado por el gobierno de facto de 1976-), esta ley se presenta como el punto de partida de la tentativa de reconstrucción del sistema audiovisual e instaura un nuevo modelo audiovisual democrático,

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
multicultural, pluralist, inclusive and respetuoso de las misiones de servicio público (los pueblos originarios, ocupan un lugar privilegiado en este nuevo sistema audiovisual).

By primera vez el debate legislativo argentino implicó una participación ciudadana digital sin precedentes. Mas de 300 organizaciones sociales, sindicales y cívicas y mas de 12,000 personas (inconformes con el modelo audiovisual en vigor) participaron, desde el 2004, a esta discusión a través de foros y debates con el objetivo de lograr un consenso institucional y social. Como resultado de esta iniciativa ciudadana llamada “Coalición por una radiodifusión democrática”, se elaboró en julio 2008 un texto de 21 puntos que fue tomado en consideración por los legisladores argentinos. En este contexto, el activismo de las movilizaciones sociales orientado a participar al proceso de transformación del sistema audiovisual se vehiculó a través de la utilización de las redes sociales.

Esta que ley debió afrontar una fuerte resistencia del sector privado y que pa-dece hoy en día las consecuencias de un sistema político-jurídico antinómico (frente a su eficacia como consecuencia de su judicialización) sigue siendo el centro de movilizaciones sociales generadas a través de la red. El objetivo de esta comunicación es de presentar esta experiencia argentina, de entender esta participación en la esfera pública, de analizar la fuerte expansión del uso de las TIC en diversos sectores de la sociedad (en especial: los pueblos originarios).

Identidades Políticas y Culturales. Entre La Crisis Económica, Mediatizaciones y Tecnologías

Esta ponencia tiene como objetivo presentar los avances de una investigación que estudia los procesos constitutivos de las identidades políticas y culturales en relación con las actuales formas de implicación y participación de los sujetos en el contexto de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Los resultados aquí presentados contribuyen al conocimiento de la constitución de identidades desde una perspectiva que se centra en los actores que se relacionan con un sistema político-jurídico antinómico (franco) y las consecuencias de una mediación tecnológica en las formas de participación en la esfera pública.

Al mismo tiempo, se propone presentar reflexiones sobre las prácticas culturales del fin de analizar las características más sobresalientes de la interacción de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Workers Who Organize in the Public Square: A Comparison of Mexican and U.S. Informal Worker Organizing Models

The growth of informal employment in Mexico and the United States cries out for solutions. For informal workers, unprotected by existing laws, this requires developing new and distinct organizing strategies, and building alliances. Our study uses case studies of organizing of informal workers who contest over the use of public space in the two countries to understand this process in comparative perspective.

Our central questions are:
- What forms does this organizing take in the two countries? How and why are these forms different between the two?
- How do informal worker organizations formulate and implement their strategies, and how do they target and develop alliances, in the two countries?
- What is the role of worker identity in these organizing processes?

Our analysis undertakes two case studies grounded in interviews and participant observation: day laborers in the US, and street vendors in Mexico. It is a bit unconventional to carry out such a non-parallel comparison of different sectors in the two countries, but we have chosen to examine these two informal groups because the literature suggests that they are the most advanced instances of informal worker organizing in each country. We will need to take the sectoral differences into account in explaining differences in strategic direction and degree of success, but choosing the two most advanced cases should give us leverage on our central questions.

In our case studies, we will examine national-level organizations, but our main focus will be on day labor organizations in Los Angeles California and street vendors in Mexico City, Mexico. These respective cities not only house the greatest concentration of these groups of workers, but are also the home base of the leading national organizations representing these trades.

Beyond Mannheim: Conceptualising How People ‘See’ and ‘Do’ Generations in Contemporary Society

It is sometimes argued that generation has been hollowed out as a sociological concept outside the family context, yet it continues to feature prominently in policy debates, media discussion and everyday talk. The solidarity, conflict and ambivalence frameworks continue to be widely and usefully applied, but are unable to capture the complex ways in which we perceive and enact generation within and across the family and societal spheres. This paper seeks to develop a more grounded conceptual framework for both characterising and explaining the evolving notion of generation. We view generations as dynamic and varied reflections of how people relate to family members, their own cohort, and groups in wider society. The paper draws on qualitative primary data collected in the course of several recent projects pertaining to intergenerational relationships and the life course; it also draws on learning from the application of this data with final-year undergraduate sociology students who were engaged as an interpretive community to examine ways of ‘seeing’ and ‘doing’ generation. Far from outdated, generation emerges as a still-relevant concept that encapsulates the meaning of family relations but also perceptions of how material resources, period effects and the welfare state context shape lives in contemporary societies.
"Common sense" arguments for participation in movements like the environmental movement often refer to grievances, or beliefs, as key factors that give rise to participation. However, structural analysts have demonstrated that neither discontent nor ideology are sufficient conditions to explain social movement participation. Rather, while discontent and beliefs might help to define those who might potentially be mobilized, individuals need to be connected to other movement participants in order to become active. We explore the relationship between social network ties and participation in the Canadian environmental movement. Data are from a self administered questionnaire, collected from nation-wide probability samples of environmental organization members. We find that ongoing participation is positively associated with ties to individuals in a range of environmental organizations. This effect is net of positive effects for identification with the movement, and the respondent's NEP score, on participation. Past participation is the strongest statistical predictor of network embeddedness. Thus we argue that both "social selection" and "social influence" effects are in play. People develop ties through their participation, and are more likely to participate in new activities because of their ties. We further examine the mechanisms underlying these patterns, and discuss practical implications of these insights.

Social Media Use for Contentious Politics: Facebook-Activism Against Imposed National Education Curriculum in Hong Kong

This paper examines the use of social media for the protest against the "Moral and National Education" curriculum in Hong Kong. Employing media content analysis and archival research, it explores how social media, used to facilitate grassroots movement organizations and stimulated cyber-activism among atomized users in practice. On 30 August 2012, a local student organization – Scholarism – went on a hunger strike. Occupying the public area in front of the Headquarters of the Hong Kong Government, members of Scholarism protested against the controversial curriculum imposed by the Education Bureau. In the subsequent days, tens of thousands of people joined the protest. Nine days later, the government succumbed to the pressure and retracted its plans. While new information and communication technologies provide the technical infrastructures for organizing movement campaigns and protests, various uses of new media configurations offer flexible mechanisms for people to take part in contentious activities. During the occupation protest, Scholarism eagerly employed Facebook technologies to coordinate collective actions and mobilize participants. At the same time, numerous users made active use of Facebook to communicate about the movement, forge social networks, produce alternative knowledge, and create innovative protest activities. As diverse actors simultaneously undertook online activism, the patterns of their computer-mediated communication facilitated the emergence of counter-publics and the development of movement practices and culture. Borrowing insights from the growing theory on computer-mediated social movement organizations and individual users, and permitted alternative forms of civic engagement for democratic participation.

TIRADO, RICARDO* (UNAM, tirrado@unam.mx)

Blood Sacrifice, Instant Celebrity, Organization and Mobilization

The paper deals with cases in which almost unknown persons, because of a tragedy, suddenly jump from anonymity to the civil sphere converted in celebrities with great capacity for civil intervention. These celebrities owe their instant fame to the fact that they are closely related to the victim of a bloody tragedy: the kidnap and murder of a child, a wife or a husband.

The paper will concentrate in these aspects:
1) The casual birth of a new (involuntary) celebrity, because of a bloody tragedy.
2) Scandal, annoyance, desperation, and new tragic stars in the media.
3) The re-edition and impact of the old myth of sacrifice, blood spill and redemption.
4) The effectiveness of the myth that tragic death of an innocent victim is a sacrifice and sacrifice should be useful and deserve compensation.
5) The great impact of bloody sacrifice symbol. Bloody sacrifice and "con science crisis" (Habermas).
6) The great possibilities of social action and intervention of some of these people.
7) The different strategies, goals and routes of social action.
8) The discovery of the possession of an unknown new great "magic" like power.
9) Amazement and improvisation of the action of the new celebrity
10) Why some of the co-victims can develop social leadership and others don't?
11) Resources for the mobilization of this mythical power.

12) The process of diminution or transformation of these leadership. The empirical base of the study relay in the cases of some co-victims who lose in Mexico their relatives by criminal actions, and which after the event, they lived a quick process of transformation into sociopolitical leaders who, after a short time since their loose, create organizations, to call huge mass mobilizations and to question severely the incapacity of the government to display public security to the people.

Secondary Education in South America: Analyzing Expansion Dynamics in Argentina, Brazil, Chile, and Uruguay

This investigation examines the secondary school expansion process in four South American countries (Argentina, Brazil, Chile, and Uruguay) from its origins at the end of the nineteenth century to present day. The objective is to compare the processes of growth that these countries share while contrasting their specific characteristics in order to identify patterns in secondary schooling in national contexts of late modernization. This study begins by conducting a statistical analysis that allows for a subsequent description of how varying factors specifically influence each national context.

Secondary education expansion systems emerged in these countries due to a combination of modern educational models and distinct cultural "figuration" within each national context. These consolidated "national education matrices" derived from the particular blending of four elements: society, state, market, and education. Chile, Argentina, and Uruguay have had highly centralized educational systems typified by mass primary education, whose aim was to culturally homogenize the population, and an elitist and selective secondary education. On the other hand, educational expansion in Brazil has been much slower, characterized by development of productive forces and industrial advancement.

Secondary education expansion began to intensify in the 60s and has undergone strong transformations in recent decades. Chile and Argentina decentralized their educational systems. The former converted into an unequal market directly correlated with students' socioeconomic levels, while the latter is clearly a fragmented system in terms of the population's economic and cultural characteristics. Uruguay maintains a centralized, public, and secular model, which, at the secondary level, has expanded at a slower rate over the last several years. In Brazil, secondary education has experienced a strong democratization process due to a political order pushing them to reach standards consistent with the leadership role that it has acquired at both the regional and international level.

TODEVA, EMANUELA* (University of Surrey, e.todeva@surrey.ac.uk)

Business Network Theory and the Role of Country of Origin

Business networks are recognised as the new organisational form of doing business, where cooperation and competition take place simultaneously, where the interdependencies between firms co-evolve through complementarity of skills, assets and capabilities, and inter-firm relationships thrive in the form of long-term repetitive exchanges and alliance membership. The theoretical and empirical literature is very rich in assertions about the benefits from networking and the positive impact of alliances and cooperation on firm performance, on supply chain integration, on dissemination of innovation and on learning and development of individual firms. Business Network Theory represents an eclectic body of theorising that focus at three distinctive levels – the level of actors' attributes, the level of dyadic and multilateral inter-firm relationships, and the level of overall configurations of multinational business networks, or multinational business operations trespassing firms' boundaries and countries' borders.

Traditional concepts of international business theory, such as ‘country of origin’ could hardly explain the complexity of resource flows that take place on a global scale. While research on Asian multinational firms demonstrates clear evidence of distinctive patterns of governance and investment strategies, ‘country-of-operations’ has become a more dominant concept that can explain global collaborative strategies.

The paper presents a new argument that global supply chains and commodity chains, or multinational business networks in a number of industries exhibit a common characteristic, where the regulatory environment in countries-of-operation induces similar strategic behaviour.
TOE, TEXTUR (Japan Society Promotion of Science, toe@socio.kyoto-u.ac.jp)

Mothers’ Use of Terms Referring to Their Child in Japanese Conversations: A Conversation Analytic Perspective

This study examines ways mothers refer to their child in conversations in Japanese from a conversation analytic perspective. Conversation analysis is a method-ology to examine real-time interactions from the perspective of the participants themselves (Sacks, Schegloff, and Jefferson, 1974). Person reference has been among the major topics of conversation analysis since the seminal work by Sacks and Schegloff (1979). Studies have shown that forms of reference can do a special interactional work other than referring to (a) person(s) (Schegloff, 1997; Stivers, 2007). For instance, oh (2010) shows that Korean speakers use a quasi-pronoun based on the distal demonstrative ce (‘that over there’) in referring to a co-present third person in order to distance themselves from the referent. In this study, I focus on the kind of interactional work mothers are doing when they use different expressions to refer to their child in conversations. My data were collected at two Kosodate Hiroba in Osaka, Japan. Kosodate Hiroba is a place where mothers of a very young child spend time watching their child and enjoy conversations with other mothers and staff members, often sharing their problems in child-raising and getting advice from them. I found that the unmarked form of a mother’s re-ferral to her child is either the child’s name or kono ko (‘this child’), neither of which does anything more than refer to the child. By contrast, the mother’s use of kono hito (‘this person’) to refer to her child makes a special interactional work. For instance, mothers recurrently make reference to their child with kono hito when they complain about the child. I argue that the expression kono hito makes a complaint more easily recognizable because the word hito (‘person’) conveys that the referent has independent thought and is difficult to control even for her/his mother.

Improving the Quality of Volunteer Web Panels: Evaluating Propensity Score Adjustments Methods for the Leisure Panel

With the rise of the Internet more and more data are collected via volunteer panels. These panels are not based on probability mechanisms and hence inferences are difficult to make. Post-survey adjustments techniques such as propensity score weighting are often used to improve data quality. However, which methods work best and which variables need to be taken into account differ per survey. In an attempt to structure methods of post-survey weighting techniques for the volunteer Leisure Panel, different weighting methods are evaluated as well as different weighting variables, such as behavioral, attitudinal, lifestyle, and socio-demographic variables. Results are compared to outcomes of a propensi-ty-based panel (LISS Panel) and figures from Statistics Netherlands.

Investigating Response Quality in Mobile and Desktop Surveys: A Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales

Mobile devices have smaller displays, touch screens and different methods of navigation compared to desktop computers. This may limit the amount of information that can be placed on a mobile phone screen and it can also affect how a survey is comprehended and completed. The most traditional rating scales in Web surveys are made from radio buttons. Radio buttons require quite a lot of space, which is scarce on mobile devices like smartphones. Thus, only a limited number of response options can be presented simultaneously. Otherwise, respondents have to scroll to see all response options which may bias ratings. Visual Analogue Scales (VAS) are operated by point and click: respondents move the mouse arrow to any position on the line and after clicking the mouse button a marker (e.g., a cross) appears at the very position. In contrast, slider scales have a handle visible directly on load of the Web page. Ratings are done by drag and drop. Both scales can either be implemented as continuous rating scales, or as discrete rating scales where only a limited number of different responses can be given. A continuous implementation is especially valuable if respondents use mobile devices like smart phone where an efficient use of space is required. A comparison is needed of radio buttons, VAS, and slider bars to see how they affect data quality on mobile phones compared to regular desktop completion. Finger navigation on mobile phones is less precise than mouse navigation on desktops. This could result in selecting the wrong (not intended) answer option in radio buttons. Slider bars or VAS might be more efficient in selecting the intended response option. The usability of question formats is conjectured to be related to the number of scale points.

Alien Money: A Cultural Sociology Of The Ecuadorian Dollarization

Over the past two decades scholars have extensively addressed the influence of money on the formation and consolidation of national space. After the launch of the European Monetary Union (EMU), though, their interest has increasingly focused on the struggles over the definition of who should belong in a currency community and what cultural credentials countries should exhibit in order to gain their ticket in. What happens, though, when countries surrender their own cur-rencies, severing the link between national identity and the currencies circulating in its jurisdiction? How do they manage to hold onto such alien currencies? The literature has not fully addressed the social struggles and the cultural mediations that take place under such circumstances. By focusing on the full dollarization Ec- uador has experienced since 2000, and therefore by addressing a case that comes close to an ethnmethodological breach of our expectations about what curren-cies should be about and how they should relate to their own societies, I hope to shed new light on the relationship between money and national space. The study of societies that take up foreign currencies as their own, even when these belong to countries they might not necessarily sympathize with, may shed some light on the factors and processes that sustain the legitimacy of currencies, especially in situations where the money becomes alien to the national identity. This case has implications for how we understand alien monies, national spaces, and legitimacy in such situations as the current Eurozone crisis.

Undrinkable Coke? Corporate Scandals, Civil Society and Cultural Difference

Over the past two decades corporate (mis)behaviour, scandals and accidents have stirred passionate debates around the world over the limits of corporate practices. By shaping public opinion over this issue, civil societies have sustained the action of those agents of civil repair, both outside and inside corporations, who have sought to resist and correct corporate malpractices. So far, social move-ment scholars have explored the cultural resources that social actors tap into for the purpose of mobilizing public opinion over these issues. Impression management scholars, on their part, have looked into the verbal accounts by which corporations seek to defend their legitimacy in public. Very seldom, though, have analysts accounted for the deep cultural metrics of legitimacy on which actors on both sides draw in public debates to win the support of their fellow-citizens and, when they have, they mostly focused on the discursive structures that un-differentiate the actions of civil society. In this paper I will focus on a scandal that had a far-reaching impact on international public opinion about Coca-Cola and that hit Coca-Cola as a result of the accusation against its local bottlers in Colombia for using illegal paramilitary groups to intimidate, threat-en and eliminate some vocal trade-unionists. I will show that the participants to the public debate in Colombia over the role and responsibility of Coca-Cola drew from two alternative discursive structures that contributed to orient local public opinion: the liberal discourse of civil society and the corporatist discourse of the hacienda.
This paper focuses on self-referentiality in the mental models of stakeholders as a factor that shapes these issues. The institutions held by the actors are seen to organize in a nested mental model: the three levels of socio-technical landscape, socio-technical regimes and the innovative niche (Geels 2002) are seen nested holons or SESs.

This paper is based on case studies in Finland. The case studies are focused along two projects: one cancelled retrofit of a coal power plant and one case of urban mediators in the field of crime prevention. The theoretical discussion will be informed by an empirical study on young Kurds’ negotiations of belonging in Finland. The case study shows that young Kurds’ negotiations of belonging in Finland are more analytic purchase to grasp the underlying mechanisms of policy-making. The method takes large text corpuses of policy documents, plans, scenarios, roadmaps, preparatory text and the like, and analyzes the flow of concepts, phrases and blocks of text as later documents inherit bits of earlier documents. The analysis proceeds by looking at relative frequencies of words and phrases in documents through a measure called term frequency-inverse document frequency, and translates this into two networks: the document-document network which describes how conceptual usage is inherited between documents and the concept-concept network describes courses or network areas of concepts that are used together and start to institutionalize in the political language.

The paper demonstrates the method through an analysis of energy policies in Finland, and how various technologies, policy tools, and conceptual usage has changed over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.

By Whom Do You Want Your Wallet to be Found in Ethnically Diverse Neighbourhoods?

The claim that ethnically diverse living environments drive down social cohesion between and within ethnic groups, remains disputed, despite abundant empirical tests performed all over the globe. The Netherlands have proven to be an intriguing test site for this so-called ‘constrict proposition’, as numerous studies – using different operationalizations of ethnic diversity and social cohesion, different data, performed in different time era and defining macro-level geographical units differently – reached rather similar conclusions: in general, ethnic diversity does not erode social cohesion. That said, some empirical tests have proven the opposite to be true, particularly amongst the issue of trust in ethnic minorities. Trust in co-ethnic neighbours is often lower than trust in non-neighbours.

To answer these questions through analyses of the Religion in Dutch Society 2011-2012 dataset, supplemented with unique GIS-data. Our dependent variables are so-called wallet items in which we systematically varied the ethnicity of the target of trust (co-ethnics versus outgroup members) and the location of the target of trust (neighbours versus non-neighbours). We introduced spatial thinking into the diversity-cohesion discussion and investigated to what extent the impact of ethnic diversity depends on the definition of the neighbourhood (administrative units within the Netherlands) and on the geographical scale of these units. We applied spatial regression techniques and multi-level models to test our hypotheses.

Isolation of Children Who Leave Social Care Facilities

On the basis of the results of a qualitative study in a children’s self-reliance support facility, this presentation will discuss the reason why children, who leave social care facilities, become isolated. In Japan, the social exclusion of children who have left these facilities has been a pressing topic. However, the relationship between the purpose of social care and the lives of the children who leave these facilities has not been sufficiently discussed.

The study was conducted in a children’s self-reliance support facility (called “2” in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: First, even children who overcome a particular issue while living in the facility may regress to their previous behaviors depending on how they leave the facility. Second, children, particularly those who serve their time and leave the facility, are often compelled to choose between returning to their families and living independently. This problem is caused by a severe shortage of institutions that provide aftercare to children who leave such a self-reliance support facility. Third, although all staff members want children to depend on them when they confront difficulties after they leave the facility, in some cases, the children are sometimes reluctant to do so.

TOIVANEN, MARI* (University of Turku (Finland), mario@utu.fi)

“Belonging” in the Study of Younger Generations of Migrant Background

This study analyzes the purchase of the concept of “belonging” to study identity formation among younger generations of migrant background. It is argued that “identity” has more usage as an empirical concept, whereas “belonging” provides more analytic purchase to grasp the underlying mechanisms of inclusion and exclusion that inform young people’s identity formation.

The theoretical discussion will be informed by an empirical study on young Kurds’ negotiations of belonging in Finland. The qualitative study looks at how young Kurds narrate their belonging in terms of various mechanisms of inclusion and exclusion, including institutional arrangements and racialized discursive categorizations. The broader theoretical premises of the empirical study lie on transnational identity, intersectionality and narrativity, and the theoretical discussion leads to question the analytical edge of “belonging” and how it addresses the questions of who gets to belong and who does not. The case study shows that young Kurds construct a sense of belonging in terms of the discursive construction of national belonging and “otherness” in the Finnish context. The racialized boundaries of “Finnishness” echo in their narrations and position them as the “other”, namely the “immigrant”, “refugee” or “foreigner” on the basis of their darker embodied signifiers.

The Impact of Community Size and Characteristics on the Articulation of a Doubled Security and Social Dimension: The Case of Urban Mediators in France

In France, an increasing number of local authorities have developed programs focusing on “urban mediators”, which aim to reduce insecurity within districts referred to as deprived areas. These individuals make the rounds in such districts to ensure a calming presence for inhabitants as well as to speak with them. This street intervention allows mediators to meet with various persons distant from public services, such as drug addicts, juvenile delinquents, victims of domestic violence, or immigrants facing integration problems. This demonstrates that such interventions include security and social dimensions at the same time: The mediators intervene not only with persons who “cause” insecurity but also with those who suffer as a result of it. Therefore, they differ, on one hand, from the police, whose actions consist mainly of repression (Roché, 2004) and, on the other hand, from social workers, who intervene mainly in the long term as a result of requests. These features led us to question the way the characteristics of different districts can influence the respective importance given to both dimensions (security and social) of the mission. The fieldwork and the analysis of archived documents since the year 2010 show that this action can be classified not only according to the degree of the municipal coordination but also to the community size (larger or smaller), the networks which the municipality has with other actors, and the social status and cultural background of mediators. This communication will reveal the impact of the principal coordination on the articulation of these two dimensions in the process of construction of partner networks around the question of the insecurity, and the interaction between urban mediators and inhabitants.

The Process of Children's Socialization in a Group

This presentation will discuss the process of children's socialization in a group. Although the socialization of children has been one of the most important research topics in sociology, the concrete aspect of it is still uncertain.

The study was conducted in a children's self-reliance support facility (called 'Z' in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110 min. The results reveal the following: (1) In Z, living with a group is optimally used to treat, care for, and socialize the children. In particular, their rank in their relationship, which is based on age or phase of treatment, plays a very significant role. (2) It is important to note that such a rank is not permanent. As the upper-class children leave the facility, or when a new child enters the facility, the rank shifts. (3) Moreover, the children do not uniformly experience the reconstruction of these ranks. Rather, it is an individual experience.

As indicated above, living in a group and experiencing the construction and reconstruction of ranks in their relationship take very important role in children's socialization. This process can be interpreted as the process of 'role-taking' in group dynamics. Moreover, such 'role-taking' can be regarded as a type of anticipatory socialization that occurs after children leave the facility. I will conclude by discussing the implications of these findings for the field of sociology.

TOMALIN, EMMA* (University of Leeds, e.tomalin@leeds.ac.uk)
Gender, Development and the 'De-Privatization' of Religion

'Poverty has a female face' in many contexts, which has been exacerbated by the recent global economic crisis. Amongst the range of actors that have responded to declining levels of welfare support by the state are 'faith-based organizations', and international donors and agencies increasingly recognize these as significant 'development' partners. This 'turn to religion' within mainstream development policy and practice has taken place against the backdrop of a perceived 'religious resurgence' or 'de-privatization' of religion, which casts doubts upon earlier predictions that secularization and modernization are two sides of the same coin.

From a 'gender and development' (GAD) perspective, the 'rise of religion' coupled with declining levels of state welfare provision presents a threat to gender equality and women's rights. The preference for 'secularism' amongst numerous women's rights activists and GAD practitioners is no secret, and has been promoted as the best route for securing equality, freedom and security for women globally. Therefore, it is crucial to view the recent 'turn to religion' by mainstream development actors through a gender lens. This is not only because women are more vulnerable to poverty, but also because 'religions have a male face' (see also Tadros 2010; Tomalin 2011).

This paper examines the future of the 'secular' in the light of theories about the 'de-privatization' of religion and the implications this has for gender equality and women's rights, which are central to GAD. Currently, understandings of religion that influence mainstream development policy and practice rely upon frameworks for analysis that are outdated and unhelpful for addressing the above concerns. Focusing upon examples from South Asia, I will demonstrate that distinctions between the religious and secular, the private and public, and the idea of a clearly defined 'true religion' are unhelpful in addressing contemporary questions around 'gender, development and the de-privatization of religion'.

A Study of Policing the Protest in Japan: Effects for Social Movement Organizations and Arrested Activists

Historically, Japan has a long history of emigration. There are around one million Chileans living abroad. However, in the last decades immigration to Chile has accelerated. Immigrants from Perú, Ecuador, Bolivia, Colombia, China and Korea confront a hostile and racist society. The largest of these groups is formed by Peruvian migrants. About 130000 Peruvians live today in Chile. Of these, 60% are women, many of whom end up working as domestic servants. Peruvians have become a large group among domestic laborers, in particular as live-in domestics. Although the levels of education of Peruvians are higher than those of Chileans, they are consistently pressed into low paid work with little protection. By using a netnographic methodology I investigated how racism, that has historically casted mestizo Chilean women in the role of ‘nasas’, today’s Peruvian women into the homes of wealthier families as domestics, regardless of the levels of education and skills they bring with them at the time of immigration.
This study investigates the policing for social movements in Japan. Compared with other countries, a few studies empirically examined the policing in Japan. In 60s/70s movements, over 5,000 activists were captured by police. Though arrested activists had dramatically decreased since 1970s, policing still have an impact on social movement organizations (SMOs) and participants in Japanese political activism. In this study, the author conducted the research aiming the effect of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: Interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing is relatively not violent, but the period of detention is extremely longer than other countries. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person. On the other hand, seized participants face to the crisis collapsing their career as a student, businessman, housewife, and other roles in their usual life. Participants received a wound in not their bodies, but their minds. On the other hand, seized participants face to the crisis collapsing their career as a student, businessman, housewife, and other roles in their usual life. Participants received a wound in not their bodies, but their minds. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person.

On the other hand, seized participants face to the crisis collapsing their career as a student, businessman, housewife, and other roles in their usual life. Participants received a wound in not their bodies, but their minds. On the other hand, seized participants face to the crisis collapsing their career as a student, businessman, housewife, and other roles in their usual life. Participants received a wound in not their bodies, but their minds. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person.

From the interview and network data, the author cleared that policing becomes a barrier for participating and continuing the social movements. Once the participants are arrested, some activists avoid taking part in and continuing the social movements. SMOs have to spend their money and time to release the arrested person. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person.

Heart Transplant Recipient Identities: Between ‘a Patient’ and ‘an Individual’

This study explores how heart transplant recipients’ (HTRs) post-surgery chronic conditions affect their identities, consisting of the roles of ‘a patient’ and ‘an individual’ in everyday lives. HTRs need lifelong medical treatment to control their immune systems. After overcoming heart disease through transplant operation, HTRs tend to think of themselves as individuals, while doctors see them as patients. Therefore, the experience associated with lifelong chronic conditions presents a difficult challenge for HTRs regarding their identity.

Three key theoretical concepts can inform the subjective experience of the lifelong chronic conditions: biographical disruption, narrative-based medicine and identity reconstruction. These concepts address issues of stigmatization of chronic conditions, loss of self, and reconstruction of identity following a heart transplant.

The participants for this study were recruited through ‘snowball’ sampling. Inclusion criteria required individuals age 20 and over who had undergone a heart transplant operation more than one year before the time of the study. Nineteen Japanese HTRs were interviewed by using semi-structured face-to-face interview techniques. All interviews were recorded and transcribed into a simple text. Interview data was thematically analysed.

The results of this study show that HTRs do not simply face an issue of ‘loss of self’, but reconstruct identities between ‘a patient’ and ‘an individual’ through experiences of stigma. HTRs’ identity reconstruction process is primarily influenced by the location of the surgery, its duration, and the presence or lack of fund-raising support from the public. Depending on these conditions, recipients tend to experience ‘stigma’, which can be categorized as ‘enacted stigma’ or ‘felt stigma’. Their stigma experiences are attributed to their relationships with doctors, family, friends, and the public. HTRs tend to experience ‘felt stigma’ than ‘enacted stigma’.

This indicates that HTRs’ distress may be internalised; apart from the medical support of immune control, they may not receive enough support.

Repoussées Par Le Travail Ou Attirées Par La Vie Privée ? L’inactivité De Jeunes Diplômées En Italie

La montée du tâche d’activité à intéressé les femmes de tous pays occidentaux depuis l’après-guerre. Les femmes en Italie ont encore plus tardivement et plus difficilement accédé à un emploi. Encore aujourd'hui, et encore plus en les années d’après la crise économique, la composante de femmes qui travaillent ou qui sont prête à le faire est beaucoup plus basse que dans les autres pays d’Europe même parmi les plus jeunes et le plus diplômées. Le recours à des explications culturelles est nécessaire mais insuffisant. Les femmes qui travaillent ou qui sont prête à le faire sont surtout en difficulté parce que leurs activités sont invisibles et non valorisées.

The research investigates a high number of dimensions, nevertheless some of them (motivations, domestic life’s organization, role identification) allow to identify at least four different types: grateful housewives, aged women, who choose domestic life according to their traditional image of the family and firmly claim the value of their choice as well as a major social appreciation of the role of housewives; tailored housewives, aged women, who share a less traditional picture of the genders’ roles, has been employed and “adapted” to domestic life without represent themselves as only “housewives”; forced housewives, mainly highly educated by labor market, are active because of stigmas who experience domestic life as a sort of punishment and do not represent themselves as “housewives; temporary housewives, generally younger and highly educated women who, considering the uncertainty of their professional life, invest in their family and consider their role of wives and mothers as moratorium, waiting for more favorable times in the labor market.

The Coordination Mechanisms of Organizational Routines: A Case Study on a Free/Open Source Software Project

How might distributed, peer-production organizations that rely on the Open Innovation paradigm sustain task specialization and achieve effective coordination in the absence of formal hierarchical control? This question is increasingly relevant because a number of production processes are being shifted from the physical to the virtual domain. Traditionally, scholars identified in organizational routines the building blocks of coordinated action in organizations. In this paper, we draw on the evolutionary perspective of organizational change (Nelson and Winter, 1982) to investigate the emergence and change of organizational routines in the context of distributed, peer-production communities. We argue that change emerges endogenously from the specialization of production processes - which we define as ordered sequences of actions linking problem-solvers and problems within organizations. More specifically, we investigate how routines emerge dynamically from the dual association connecting individuals (or “problem-solvers”) and tasks (or “problems”) in organizations. In particular, we ask: How do organizational routines (structured sequences of actions) emerge, evolve and persist despite the demographic turnover of participants and the ever changing character of organizational problems? To answer this question we run newly developed class of Relational Event Models on the entire sequence of actions undertaken by software contributors on source code. We apply the entire sequence of actions undertaken by software contributors on the GitHub server, a very large Free/Open Source Software (FOSS) project. By examining directly the micro-level, socio-temporal interdependencies generated by individual actions performed by problem-solvers, we find that self-reinforcing processes underpin the endogenous coordination of a decentralized production community, by fostering task specialization, learning mechanisms. Different types of activities can coexist and be coordinated over time in a decentralized decision environment. Our analytical goal is to show how sequences of interdependent problem-solving actions become embedded in temporal sequences of relational events, which then trigger
specific self-reinforcing mechanisms that provide the social infrastructure sustaining the production of F/OSS.

Case Studies on Working and Organizing of Domestic Workers in China

The number of laborers involved in informal employment is 163 million, which contributes to 58.85% of non-farm employment in urban areas. In order to analyze the social solidarity of informal workers, the article takes the domestic workers as a case study to reveal the working condition of informal employment, as well as its possibilities of organizing. We found that there are at least four workers’ solidarity types, labor NGO, trade Union, self-organization or grassroots organization and the internet. These social solidarities have different organizational culture, strategy, function and activities and play different role.

Age of Transition to Parenthood Among Married Adults: Social Determinants and Gender Difference

Using retrospective life history data from the 2008 Chinese General Social Survey (CGSS) and event history analysis, this study investigated the timing of transition to parenthood for both adult males and females for marriage cohorts spanning from 1965 to 2008. Within the neoclassical economic and second demographic transition frameworks, we expect that there will be a trend toward delayed childbearing and a lengthening of the duration between marriage and first child bearing across the cohorts. However, we found that a shortening trend of marriage-first child interval across cohorts, and the more recent cohorts are more likely to transit into parenthood net of other effects. We also found that higher educated people are more likely to transit intoparenthood earlier than those who have primary or no education. We speculate that the trend in China contradicts the tendency for delayed parenthood in Western countries due to the resistance to change the traditional childbearing norm of “earlier parenthood after marriage.” This is because child rearing is an issue involving extended families, rather than couples’ own independent decision. Under the one-child policy, extended families can pool more human and financial resources that they utilize for childbearing. We also speculate that increasing intimacy between newly married couples in the more recent cohorts contributed to this trend.

An Institutional Approach to Autonomous and Connected Cities: Ostrom’s Distributed Metropolitan Governance

Global cities are the economic and cultural centres in the world. They compete with each other for a number one status on various lists. International accessibility is essential for a city’s ranking and for its ‘supply’ of people, goods and resources, putting a city’s position in the international network of airports and harbours and in the international economy high on the political agendas of national and local governments.

Cities are constantly searching to improve their performance. Specialized planning models support city governments to deliver the various public goods and public services that are expected from them. More integrated models, such as the airport region and urban metabolism models, emphasize the tensions between international connectivity and local liveability. The extent to which current institutions are capable of managing these tensions is questioned by stakeholders. They search for institutional structures supporting the delivery of the public goods promised, with a prominent position for questions of scale. Technological developments have made these questions more urgent. The fast developments in the field of renewable energy technology, smart grids and electric vehicles call for redefinitions of rules and roles of consumers, producers, citizens, local, provincial and national authorities and of the public goods delivered to them.

In this paper, we address the search for institutions that match today’s challenges by using the theoretical framework of distributed metropolitan governance as developed by Vincent and Elinor Ostrom. With this institutional approach, we explore current urban governance challenges in the Netherlands. To sustain their competitive position in the global network, Dutch cities strive to become resilient, self-organising and self-governing. We will explore how institutional mechanisms as consociationalism and pillarization, as identified by Lijphart, which have proven to be able to bridge conflicting values, are still relevant for a renewed conception of distributed metropolitan governance.

Possibilities for New Forms of Resistance in the Neoliberal Era: Unification of All Rights Movements During Tekel Workers’ Resistance in Turkey

The working class has become overwhelmingly disorganized in the neoliberal era partly due to the attacks on legal and institutional grounds of trade unions and partly due to the transformation of working class itself. Dialectically enough, the current phase of capitalism is pregnant with new crises and forms of resistance as the result of increasing precarious jobs, jobless growth, insecurity and extreme commodification. Under these conditions, unions are faced with altering their strategies. A possible formula is to organize unemployed and precarious workers as well as workers around counter-hegemonic united front a non- hegemonic defence of collective rights (right to water, rights to transportation, right to shelter, right to decent work etc.). This study provides an historical account of a working class protest which took place in 2009-2010 in Turkey. It argues that this protest foretells the possibility of unifying all rights movements under an expansive struggle for collective social rights. June 2013 mass protests in Turkey also show that the sense of injustice is becoming stronger and felt increasingly by those who are subordinated to all sorts of unequal power relations.

A Scientific Controversy Across the Channel: Unemployment Theories, Sociology and the Rise of Mathematical Statistics in the Early 20th Century

In the early years of the 20th century, on both sides of the Channel, social reformers were struggling to define what « unemployment » could be. Political economy, sociology and social statistics were mobilized in the process of shaping the novel category. Defining unemployment scientifically seemed to imply that the unemployed should be enumerated otherwise transformed in solid figures. Various statistical devices were imagined in both countries for trying to solve that same puzzle, but quite different scientific languages were mobilized: William Beveridge used the language of political economy (1909), Max Lazard that of Durkheimian sociology (1909), and Arthur Bowley the new tools provided by mathematical statistics (1912).

An argument developed in professional journals between Lazard and Bowley, who doubted of the statistical techniques the other one was using: Lazard had calculated an occupational unemployment rate, Bowley an index-number of the variations in the volume of unemployment. In order to describe this controversy, one can use the notion of « national scientific styles » and observe how tools circulate between British statisticians and French ones, through the International Statistical Association and an intense exchange of literature. The limited reception of the correlation coefficient among French statisticians raises an interesting general issue of the conditions of the circulation of knowledge.

Accounting for the difference between Lazard’s and Bowley’s formalisations implies analyzing sociologically what they were designed for and the relations that were being established between scientists and the users of their knowledge in the respective labour administrations. In both countries, a close relationship between scientists and administrators conditioned the development of abstract statistical forms that could be applied to formalizing a new social issue and contemplated public policies: in France unemployment insurance by industries, in Britain public works providing jobs when an unemployment crisis would be looming.

TOPALOV, CHRISTIAN* (École Hautes Études Sciences Sociales, topalov@ehess.fr)

Network Analysis and Spatial Analysis Combined: The Case of Reform and Philanthropy in 1900 Paris

Historical monographs on specific spheres of social reform are many when it comes to the late 19th and early 20th c. in the largest industrialised countries of the time – it was a « progressive era » for all of them. Every monograph points out that a good deal of the characters involved were simultaneously present in many other fields of reformist action – e.g. public health, housing reform, work relief, « protection » of women and children, prison reform, social science, etc. This invites scholars to cross the boundaries of specialisation and study reform and philanthropy as a possible unified field of action, interaction and sociability. This can be done through network analysis: voluntary associations used to-pub-
lish reports and lists of leaders, members and supporters – by making the names of their followers public they increased the legitimacy of the cause.

This circumstance made it possible to collect complete lists of members of 106 reform associations, totaling 17663 people in 1900 Paris. Two directories of Paris charities have been added to the data base, i.e. 1346 charities and 2060 people. Sources permit to follow the address of the charities and most of the individuals. A GIS was set up that allows it to locate every address on the street plan of Paris (as of 1888). This material is exceptional by its quantity and systematic character.

Using the data base, we can separately and simultaneously consider both social and spatial links : the affiliation of people to the same institution, the residence of people in the same building or neighbourhood, the co-presence of two institutions at the same address.

The paper presents the most interesting results and discuss the methodological solutions that had been developed for combining social and spatial analysis, and facing the problems related to the bulky character of the data.

Negotiating Normalcy – Self-Narratives of Troubled Young People

Young people’s risk-taking is in most contemporary societies a matter of concern. Research on troubled young people who have been placed in out-of-home care shows that these young people more often than other young people are involved in risk-taking behavior such as excessive drug use. What is rarely investigated, however, is troubled young people’s own ways of understanding their risk-taking behavior in the context of their everyday lives. This paper analyses the role of excessive drug use and its influence on young people’s self-narratives about their everyday lives. The young people’s drug use experiences continuously inform their perceptions of what they consider a ‘normal’ youth life and thus how they negotiate their self-narratives accordingly. This paper is based on 15 in-depth interviews with young people at age 18 who in their childhood have been placed in out-of-home care and have experiences with extensive drug use. Drawing on theories of stigmatization and normalization the paper demonstrates what the young people conceive as a normal youth life is influenced by their drug use experiences and troubled childhoods. Their risk-taking behavior thus challenges their wish to create meaningful and coherent self-narratives and the result is often the creation of fragile self-narratives based on subtle negations of what they perceive as normal.

Historic Environment as an Opposing Element to Inequalities

Taketomi Island in Okinawa Prefecture is one of the outer islands near the southwest border of Japan. Its islanders have suffered two-fold inequalities for years. The area of Okinawa Prefecture was a small independent nation until 1879. This nation was defeated by Japan and subsequently annexed by the national government. Afterward, mainland Japanese, especially uneducated ones, began to regard these islanders with contempt as defeated people. Another source of inequality occurred on the island, which was peripheral even during its era as a small nation; the people of this small nation considered Taketomi islanders as non-cultured people. This tendency continued even after Taketomi’s incorporation into Japan.

However, the “historic environment” that Taketomi islanders have preserved and created through an active movement in the last 30 years has changed their dismal situation dramatically. Preserving historic sites did not affect the situation in a classical way, but it elicited widespread discussion of common shared values and examination of the daily lives of islanders. As such, Taketomi residents have created peculiar historic environments, which attract many visitors and tourists.

Critics of Time in Modernity By Yusuke Maki

This presentation thematizes the series of works of Yusuke Maki, which is the pen name of Munesuke Mita. He is one of the most prominent sociologists in Japan. In this presentation, I would like to focus on the works of Yusuke Maki, and to define their significance and limitations.

For the aforementioned purpose, first of all, I will try to consider Yusuke Maki’s series of works as a unified process and in which his project of critics about “time in modernity (characterized as irreversibility and linearity; Newton’s absolute time)” has been gradually deepening. Maki’s critics of his initial works were based on Marxism, or strictly speaking, on theory of reification. For example, in Gendai seisakusho Sonotetsu-Kouzou (Existental Structures of Contemporary Society) (1977), Maki carefully examined Marx, and in Ningen-Kaishou-no-Riron-no-Tameni (Toward The Theory of Human Liberation) (1971), he criticized the difficulties of an

The Network Dynamics of Status Construction: An Agent-Oriented Modelling Approach

Social Status is broadly understood as the position in a social hierarchy that results from accumulated acts of deference. In this paper we conceive the emergence of status as the result of active processes driven by dynamic network dependencies. We suggest that status hierarchies are produced – and reinforced – by the accumulation of acts of deference all happening at the dyadic level. We adopt Stochastic Agent-Oriented Models (SAOM) to examine the micro-foundation of status ordering by looking at dyadic relations of deference and by linking mechanisms of status emergence and reinforcement to testable dynamic network patterns. To this purpose we develop and test a model of status allocation that accounts for the unfolding of dyadic acts of deference as well as the resulting status dynamics in a group of individuals. We provide empirical evidence for our model using a longitudinal dataset that we have collected on a cohort of students enrolled in a professional management degree. We report empirical evidence that status hierarchies can be conceived as partially ordered sets structured by a tendency toward asymmetry and transitivity as well as perpetuated by status competition among the higher-ranking actors. We also confirm the results of previous work showing that both a socially endogenous inference mechanism (underlying the effect of an actors’ previous deference position on their future deference rewards) and a socially endogenous investment mechanism (underlying the feedback loop between status and performance), contribute to the self-reproducing and self-reinforcing character of status hierarchies.

Navigating the Institutional Context in Late Life: The Function of Social Capital in Chilean Older People

Some authors indicate that we should understand the macro processes affecting the social relations of older people in the context of the ‘accentuated modernization’, which makes reference to the loss of influence of traditional social structures and communities in individuals’ lives and the greater responsibility that the individual has in shaping her or his life course. This description is in line with what has been defined as ‘individualization’ of modern society. In an individualized society individuals must constantly make decisions to conduct their biographies, which are no more—or at least not only— constrained by traditional and unquestionable assumptions and values. However, these biographies do not completely rest in free decisions because individuals can and must choose within the guidelines and norms imposed by the state, the market, law, education, etc. in order to manage risk. Some variants of this theory have mentioned the importance of personal ties in developing countries since they operate as key resources to be re-embedded into society and even as a central mechanism for social inclusion. Taking some elements of the New Institutional Analysis we analyze the current Chilean social policy on aging and in-depth interviews with Chilean people of 60-70 years old living in the city of Santiago, I examine how older people use their personal relationships to navigate their institutional context. I investigate whether the social policy on aging is related to the needs and resources of the older population and how individuals solve the gaps using the social capital embedded within their personal networks. This social capital can be used, for instance, to access to different types of support that are not provided by the policy instruments and to obtain help and information to negotiate with the public organizations.

Social Capital in Late Life: The Case of Chilean Older People

Chile is experiencing an accelerated process of population aging. People aged 60 and older currently constitute 13% of the population. This proportion is projected to reach 28% in 2050. In this context, some questions have raised about the quantity and quality of older people's social capital due to the decrease in family size and changes at the level value related to more individualized societies. The theory of individualization proposed by Beck and Beck-Gernsheim states that in today's society people are less bounded by traditional forms of representation and control. At the level of interpersonal ties, this means that family members would relate to and help one another because they 'want' and not because they 'must' do so. However, the latter does not necessarily implies negative consequences on older people's social capital, but rather it may produce a change of scenario. That perspective can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing and/or complementing family resources with other types of ties (e.g., friends, neighbors and/or state).

Gender and Education: Differences and Similarities in the Trajectories of Young Men and Women

The preliminary results of a longitudinal study, which has surveyed the same individuals at 13, 17 and 21 years old, indicate that there are convergences and divergences in the practices and attitudes of young women and men. Young women do better in school but, at the age of 13, they also report more depressive symptoms. On the other hand, at the age of 17 and 21, the trajectories of youngsters of both sexes are reshaped showing divergences in some respects and similarities in others. Accordingly, young women's initial educational advantages may not have promotional effects, culminating, sometimes, in early interruptions or corresponding, afterwards, to precarious experiences in the labour market. Drawing on a theoretical framework which combines an intersectional gender approach with sociology of education, this presentation seeks to explain youngsters' trajectories and the differences and similarities found. In order to do so, we will analyze the ways in which the trajectories of young people are influenced by factors, such as social background and class, parenting styles, networks of sociability, leisure-time, subjective well-being and physical and mental health, body image and risk behaviours. These relationships will be analyzed with descriptive and multivariate analysis.

EP1Teen, the study on which this presentation is based, was launched in 2003-2004 by the Institute of Public Health of the University of Oporto (ISPUP) and collects data from individuals who were born in 1990, in a total of 2 943 research participants. When the study began, respondents were 13 years old and attended the public and private schools in Oporto, which is the second largest city in Portugal. With the collaboration of the Institute for Social and Political Science of the University of Lisbon (ISCSP), a new wave will be carried out in 2014 when the youngsters will be at the age of 24.

Cash for Care Schemes and Older Migrants: Perspectives from Needs Assessment Practice

The ethnic and cultural diversity of older care recipients around Europe has increased over the past decade posing new challenges to the elderly care sector. In some parts of Europe, requests for cash for care schemes have increased as a result of the fact that the elderly care services that are offered by different welfare states are believed to be ill-equipped to meet the needs that this diversity creates. In this presentation we will explore how care managers who perform needs assessments for elderly care handle increased requests for cash for care schemes from migrant families. This presentation will address how they experience these requests and the challenges that they face when handling them within the course of needs assessment regulations in Sweden. The data is comprised of 12 focus group interviews with 60 needs assessors from seven municipalities in Sweden and 202 case documents (101 concerning cases with older migrants and 101 with older Swedish-born). The material has been analyzed through thematic analysis (focus groups) and content analysis (case documents). The findings show that the needs of older migrants is challenging especially when one is dealing with late-in-life migrants’ requests for cash for care arrangements. The fact that these migrants’ care preferences are very different from the individualist care understandings that lay at the core of needs assessment regulation in Sweden poses numerous challenges to needs assessment practice. The challenges are augmented by the fact that these migrants’ younger relatives lack a foothold in the labor market and regard the formalization of their informal caregiving duties through these schemes as a potential source of income. The presentation will problematize the taken for granted assumptions about care that lay at the core of Swedish need assessment practice and the understandings of filial obligation from which care managers depart.

Resistance to New Technologies: The Information and Communication Technologies Case in Spain

This paper adds to the debate of Marshallian economic-industrial sociology and the reintroduction of Beccatini's Industrial Districts theory. It aims to situate - within the context of territorial development - a Local Agri-Food Systems (LAFS) perspective, which highlights the profound relationship between food and territory, as well as the importance of collective action, rural agro-industry, local know how, the environment and food quality, among other issues. The paper is divided in three parts: the first part addresses the theoretical-methodological development from a sociological perspective, but one that incorporates other disciplinary resources such as rural geography, anthropological complexity sciences and agronomy, all of which enable and form part of a LAFS perspective. The second part of the paper contrasts case studies from Mexico and other Latin America countries that were undertaken as part of research project funded by the Mexican National Council of Science and Technology (Conacyt), the National Autonomous University of Mexico (UNAM) and the European Union (EU). The final part of paper concludes that LAFS can potentially contribute solid arguments to implement public policies for territorial development that would enable rural peasant families to earn higher incomes and help overcome rural poverty.
data bank, we will also provide empirical evidence from a study about Spanish citizenship which have used both qualitative methods (with in-depth interviews and focus groups) and quantitative methods (using a representative survey). Finally, we will consider the consequences of this new explanatory approach to the use of ICT and the digital divide has for the processes of social exclusion in contemporary information and knowledge societies.

Trust As Indicator of Social Consciousness in Russia
Social consciousness has always included many indicators: results of activity, needs, motives, values, interests and other indicators. Among them the significant place takes up the trust, which always reflects one of the main forms of comprehending existing social relations, and at the same time, level of knowledge, awareness and evaluation of the ongoing changes in the socioeconomics.

Role and place of trust in this sphere were studied in process of All-Russian comparative research of 1989 and 2012. The main goal was the comparison between the situation in the last period of Soviet time, when the market relations were beginning, and situation in Russia after 25-year realization of these reforms.

Data of this study showed, that there are the different tendencies in the development of trust. In connection with the division of levels of social organizations - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.

This study showed that on the level of Russian society the trust to political, social, economic institutes to a great extent decreased. On the regional level the trust has the contradictory character in depending on situation in region: the reach or poor, agricultural or industrial, political activity and ethnic specifics.

Trust in enterprises depends from the forms of property - state or private, municipal or public company.

On the personal level the trust has increased and played the leading role among the kinds of trust existed all over the places.

Party Membership in Turkey and Members’ Participation during Local Elections in 2014

Party membership in Turkey and members’ participation during local elections in 2014
Scholars agree that since the 1980's there is a widespread disengagement from parties and party politics especially in many long-established European democracies, both at the electorate and voluntary party members’ level. They also agree that decline both in terms of numbers and members’ activities depends on different socio-economic and political factors explained by supply-side and demand led explanations.

This study is intended to present an overview of party membership levels and of participation in party activities during the local elections which will take part in March 2014 in Turkey. In this presentation we will evaluate “Party and membership decline” thesis and observe the current situation in Turkish case since 1980's. We will compare the number of party membership by using the official data which are registered in the Supreme Court of the Republican Attorney Generalship and observe the fluctuations or decline in each 5 years period between 1983-2013.

According to the scholars, there is a decline not only in numbers of the members, but also in members’ levels of activism in long established democracies. In order to see and understand the current levels of activism of the members, we will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. We also plan to discuss the results of the survey and see whether there is a decrease in member’s level of activism. Some issues guide our survey: Firstly socio-economic and demographic characteristics members have. Secondly why citizens enroll in parties and the third how they participate in party activities and to what extent they use new information technologies as participation methods during local elections in 2014.

Screening the 2001 G8 Summit in Genoa: An Italian Cultural Trauma
The paper is based on some results of a research project started in 2012 on the attack of the Diaz school in Genoa by the Italian police during the 2001 G8 summit. The school building was the temporary headquarters of the Genoa Social Forum. On July 21, 2001, shortly before midnight, mobile divisions of the State Police attacked the buildings. The police indiscriminately attacked the building’s occupants, resulting in the arrest of 93 protesters. During the raid the police violently attacked those who were in the school, injuring 82 people out of a total of 93 arrested. 63 arrested were taken to hospital and 19 were taken to the police station of Bolzaneto, where they were tortured. According to Amnesty Internacional these events represent: “The most serious suspension of democratic rights in a Western country since the Second World War”. The raid resulted in the trial of 125 policemen. However, none of the accused police officers were punished, due to delays in the investigation and incompleteness of Italian laws under which torture is not recognized. The design of the research includes 50 depth interviews to the victims, to the victims’ relatives, to the journalists, to Genoa citizens and to policemen of the State Police of Genoa. Moreover, it includes an analysis of all the cultural and media artifacts related to this case. In this paper the focus will be especially on the relation between cinema and the representation of this event in the national public discourse.

“Diaz. Don’t clean up this blood”, a 2012 Italian-French-Romania film directed by Daniele Vicari, focuses on the attack of the Diaz school and on what happened in Bolzaneto. It is based on the testimonies and reports from judicial processes. The paper analyses how the film reconstructs the event.

Old Managerialism and New Professionalism? Social Professions Vs. Healthcare Professions

The aim of the paper is to discuss the tensions between the managerial and the professional logics, both at the theoretical and the empirical level. Original evidence comes from two qualitative studies (interviews) carried out in the Turin area: one on different occupations engaged in social work, and the other one on professionals engaged in healthcare-social team work. We move from a discussion of the nature of the managerial logic, seen as a complex puzzle stemming from both classical organizational theory (Scientific Management) and from the new institutional economics (Public Choice). Our findings suggest that in social work an “old” version of managerialism has been implemented, in which the managerial logic is reduced to hierarchical control. We then analyze professionals’ strategies adopted to cope with managerialism, as they result from ours and other studies on social workers and healthcare professionals. One strategy (cooptation) stands as a non-zero sum game in which professionals act proactively to include managerial tasks within their activities and shows that the managerial and the professional logics can be reconciled, though social workers seem to be less eager and/or less capable to adopt it than healthcare professionals. The significance of this for a new concept of professionalism is finally discussed.

Tuva Ethnos As a Large Social Group of Makrosociety

By empirically study, we found that Tuva ethnics, as a social group in the transition to market economy in the early 21st century has preserved their traditional ethnic values: caring for children and family-related communications, hospitality. In value orientations, especially in the female population, education is estimated highly enough. National feelings are characterized by high grades of love for Motherland and its people, Mother Nature and local Culture. Power relationships (relationship of management and submission) among the people of Tuva - is an
expression of respect, humility and tolerance for decision makers, particularly expressed in the male population. Family relationships are characterized by respectful and caring relationships between family members: husband and wife, children, close relatives, respect for elders, tolerance and civility.

One of the leading trends in the experimental work in social psychology: it is - the organization and conduct of scientific research projects, scientific field trips, “Categorical perception of facial expressions of racial characteristics”, “The specifics of communicative and cognitive processes of the Tuva Todzha people”, Congress “Steppe Civilization - 2004, 2009, and in 2012.” Human consciousness: traditional government patterns of life in the context of today’s world: the holding of international and regional scientific conferences, research projects, seminars, workshops, have now become a tradition in the region and identify the problems of society, groups and personalities. Search, comparison, mediation scholars, practitioners in the modern period of development of society and groups, with the position of the cultural and historical context, research approaches enrich the process of social cognition, similarity of the world in a globalized world, the design and interpretation of environmental social reality of Tuva ethnic.

**Medical tourism as national economic development in Asia: comparative case study of Singapore and Thailand, versus Japan and Taiwan**

Medical tourism development has been put on the national economic development agenda by a number of Asian countries in the last fifteen years. Beginning with the forerunners of Singapore, Thailand and Malaysia, subsequently other countries, notably India, the Philippines and South Korea, joined the fray. Most recently, Japan and Taiwan also declared that they would promote medical tourism. The governments of these countries seem to share a common policy goal in developing medical tourism, i.e. to increase foreign exchange earnings, expand medical and other ancillary services, and generate employment opportunities. However, each country has developed different strategies in targeting specific niches in the international healthcare markets. In this paper we compare state strategy scholars, practitioners in the modern period of development of society and groups, with the position of the cultural and historical context, research approaches enrich the process of social cognition, similarity of the world in a globalized world, the design and interpretation of environmental social reality of Tuva ethnic.

**Revisiting the Boy Who Cried Wolf: Tornados and the False Alarm Effect**

While the origin of the story is not clear, the 1867 publication of Aesops Fables brought “The Boy Who Cried Wolf” into the homes and hearts of many families. The story is simple and the message clear. It tells of a shepherd boy who lies to his community about a dangerous wolf to make people run to his assistance for his entertainment. The moral of the story is “if you don’t tell the truth people won’t believe you when you need them to.” Its appeal is massive and cultures around the globe use it to extol the moral virtues of truth, honesty, and honor. It is somewhat unsurprising then that building on the very same logic, academicians and practitioners have long debated the “cry wolf” or more often the false alarm effects of warnings. The question is simple: Are we somehow acting like that little boy and “crying (insert some weather phenomenon)” too often. Using a playful reference to the original fable, this analysis breaks down the key moral elements of the classic story and reinterprets their connection to current tornado prediction and patterns of risk perception as a way to help illustrate the range of complexities in need of targeted scientific research. We go on to provide some judicious and quantitative analysis of not only what works in the case of false alarm, and behavioral response to a series of tornados that occurred between 2007 and 2010. Contrary to most existing research, we do find a statistically significant false alarm effect among other important predictors. Conclusions discuss the importance and limits of these results and suggest further research needs.

**The Impact of Social Segregation on Educational Achievement in France**

Social and spatial segregation is increasingly present in debates on urban policy and in the analysis of the phenomena of violence among young people. In recent years the extent of social segregation among French secondary schools is mainly due to a greater social polarization in some urban areas. There have been little studies about social segregation mainly because of the difficulties to build a set of relevant methods and measures. The aim of this paper is to provide various measures of social and spatial segregation in order to assess the links between segregation, competitiveness and educational achievement.

**Internet-Mediated Cooperative Norm Setting: In Search of Institutional and Organizational Success Factors**

Norms are an essential mean of any social group, organization or society to solve the problems of social life and to accomplish common goals. In a lot of social contexts norms are the results of formal processes, in which representatives, authorities or experts develop and impose norms on their recipients (e.g. parliamentary legislation or acts of authoritariae imposing of norms in organizations). Current developments show an increasing demand for direct involvement in the process of collective decision making. The demand for direct participation is mostly justified with reference to democratic ideals, but there are also empirical evidences that the “quality” of norms increase if affected individuals take part in their development (Ostrom 1990, 2009). With the term “internet-mediated cooperative norm setting” we (a research group located at the University of Düsseldorf /Germany) define a process of drafting, discussing and deciding on norms that are designed for a group and in which all members of this group can participate in.

For a successful implementation of an internet-mediated cooperative norm setting two challenges are to be met: First, the individual contributions must be aggregated to an outcome. Second, people need to be motivated to take part in a process which might eventually be longsome and cost-intensive. If these challenges can be solved, is dependent on context factors like the institutional embedding and on design factors like the forms of participation and the modes of decision making offered.

In this contribution, I will first outline the concept of an internet-mediated cooperative norm setting. Second, I will present a framework for the analysis of the institutional design. Third, I will present results of an empirical evaluation of a project of internet-mediated cooperative norm setting which was realized in the summer of 2013.

A large survey of young people in Queensland, Australia, indicates the majority believe that climate change is occurring, that the planet is warming because of greenhouse gas emissions and that anthropogenic global warming poses a serious risk to Australia. Parental education has an important influence upon the development of environmental attitudes among young people, with the children of tertiary educated parents much more likely than others to be concerned about planetary warming. A strong gender divide is also apparent, with young women consistently more concerned about 'the environment than young men are. Political party identification has an important influence upon environmental concerns even among these 16-17 year olds, with young conservative party identifiers far less likely than Greens or Labor identifiers to believe that global warming will pose a serious risk in their lifetime, after controlling for beliefs in human induced climate change. The party identification findings point to an emerging support base of young Australians for parties that adopt a progressive stance on climate change among.

Growing separation and divorce rates have shaped the image of the family in the new century. As a consequence of this development, parents are increasingly at risk of becoming single parents or of living separated from their children at some point in their life courses. Despite the fact that the share of lone fatherhood has increased in some countries, the overwhelming majority of children co-reside with their mothers after separation. Thus, non-resident fathers have become a growing group in all European countries. This raises the question of how the relationship between the child and the non-resident father develops after separation. The contact that these fathers keep with their children is a policy relevant issue which has been intensively addressed in prior studies for English-speaking countries mainly. We add to this research by investigating the determinants of father-child contact after separation in Germany.

Vocational education plays an important role in Switzerland. Two thirds of all assistant students (n=953) have chosen to continue their education at the vocational tertiary level. Over the last decade tertiary vocational education has been newly established on two levels: the ISCED 5A-level includes universities of applied science, the ISCED 5B-level professional colleges, which have lower entry requirements. Tertiary vocational education has thus become more differentiated but also more stratified. Previous research has shown that highly stratified systems are more selective and lead to more social inequality. A high degree of differentiation, on the other hand, facilitates labour market entry also for low-achieving individuals (Shavit et al. 2007, Pfeffer 2008; Kerckhoff 1995). Whether this also holds for the vocational tertiary-level has, to our knowledge, been rarely investigated. Against this background - and by using the large group of vocational healthcare students, our paper examines whether access to the ISCED A and B-level of tertiary-education differs by social background, gender and academic achievement.

The analyses are based on a longitudinal survey of a full sample of healthcare assistant students (n=953). The data were collected at two time points: (1) at the end of upper-secondary (apprenticeship) training and (2) one year after its completion. Educational choices were analyzed using multinomial logistic regressions. Results show that access to the more stratified and thus more selective ISCED 5A-level education depends more strongly on social background and gender, facilitating the transit for men and students from affluent families. Academic achievement plays a similar role in the transition to both options. Given that access to ISCED 5A-level education seems to increase social inequality, future research should ask how entry barriers, particularly for women and individuals from lower social origins, may be lowered.
The effect of income on health behaviors and health outcomes.
The role of poverty as an added detriment to health.
The effect of health on socioeconomic achievement.
Methodological issues:
  - Getting adequate retrospective data to measure childhood illness and injury in surveys of adults.
  - Improving subjective health assessments through anchoring and other techniques.
  - How useful are biometric measurements, including blood and saliva samples, in general population surveys?

In the first instance, race was an invention of Western imperialists who sought to justify their conquest of land and people, and racial thinking accompanied the capitalist accumulation that eventually engulfed the globe. Today, the philosophy and science of race has expanded beyond its role as justification and has become an important factor in human behavior and social dynamics.

Resisting Against the Narco-Machine: An Analysis of the Mexican Movement for Peace with Justice and Dignity

Violence in Mexico has increased exponentially, especially since the decision of former president Calderón to start the ‘war on drugs’ in 2006. During the six years of the Calderón government (2006-2012), victims of the narco-war were treated as simple numbers, ‘collateral damages’ of a necessary war to protect the ‘security’ of the Mexican people. The Movement for Peace with Justice and Dignity (MPJD) emerged in 2011 to expose the inconsistencies of the war against drug-trafficking, criticize the official discourse of the government and the media, and restore the dignity of thousands of victims of the narco-machine. Even if the MPJD represents one of the most important movements emerged in Latin America in the last decade, there has been a considerable lack of academic attention, in particular outside of Mexico, towards its practices and its achievements.

held in the West provoked fierce street protests, the summits held in Russia are widely and critically discussed online. Some intellectuals actively resist being complicit in the entrepreneurial discourse in their work and alternative discourses emerge. These discourses emerge by way of petitioning authorities. The lack of regulations regarding the predicament of evicted citizens; the absence of a program for the preservation of the cultural heritage of the city; an urgent remapping of the so-called “guarded zones” to accommodate the summits-related pressure to have enough vacant lots; and “a mess” (the metaphor of one of the interviewees) instead of systematic and logical administrative law-making—all these factors contribute to an increased “client-patron mentality” among active citizens. By “client-patron mentality” I mean the active citizens’ and political activists’ reliance on petitioning as the way for themselves to be heard and to get things done. Whether it is the only effective means to prompt the patrons to share a piece of the state budget pie or a quite efficient way to engage more public into discussions, petitioning prompts us to more closely look at the ambiguities behind genuine citizen participation.

TRUBINA, ELENA* (Ural Federal University, elena.trubina@gmail.com)
The Dialectic of Rationality and Irrationality of Urban Growth in Post-Socialist Urban Development and the “Classic” Capitalist One

It was during the 1970s that urban studies scholars began to analytically investigate the dialectic of rationality and irrationality related to urban growth. These pioneering analyses were a response to the early stage of the post-Fordist transition of the Western economies and the emergence of consumption-based economic development. Having admitted “the general irrationality of the present urban system” (1978: 329), Molotch described the American urban system of the second half of the twentieth century, in which cities retained relative autonomy from the central government. For his part, David Harvey called cities “the irrational rationalizers” within the capitalist mode of production (1976: 112) and demonstrated why “the capitalist laws of accumulation” remain, for the time being, the only known laws of history. While both scholars emphasize a recurrent reconfiguration of urban alliances in order to cope with difficulties in financing the development of cities, Harvey, in his later work, described how neoliberal urban policies were in line with the central state via neoliberalization of the state itself. Drawing on these path-breaking scholars, I argue that it is an irrational rationality which unites post-socialist urban development and the “classic” capitalist one. Today it is neoliberalism that figures as the global political rationality. It promotes market logic across all spheres of life. Part of this rationality is the expansion of state institutions. These act to broaden their administration into the practices of all societal spheres. Urban growth machines in Russia and elsewhere have embraced neoliberal policies and promoted global, market-led urban development. Since these processes have recently unfolded in the context of the global financial crisis, the growth machines often go away. Yet this does not impede authorities at any level from investing, symbolically and economically, in the new iconic projects—by continually putting forward the rhetoric of efficiency and growth.

Education and Future Well Being of Latin American Adolescents

Latin America has shown great progress in average education attainments during the past few decades. An increased participation of women in the education system occurred together with this education expansion. On average and in most countries, there are more girls attending school at all educational levels than boys. Women’s participation in post secondary education is also higher than men’s. In spite of this regional panorama favorable for women, there still are educational challenges to be confronted. This higher educational level achieved by women is not being reflected later in their labor market insertion. Young women have a lower labor participation rate than men, higher unemployment levels, and a labor insertion in less protected sectors (with higher levels of informality, less productive, and with worse income trajectories).

Although this paradox is probably associated with labor markets’ historic discrimination factors, this paper seeks to identify elements from the education system that help to explain this fact. It concludes that although access barriers to the education system have been overcome by women, there is still a lot to be done in relation to the mechanisms that perpetuate the traditional socialization forms. That is, the process by which unequal and discriminatory gender stereotypes are still formed within the teaching-learning process, interfering with the prospects of equal labor opportunities. The paper also takes into account the gender differences within the reasons for aborting school early and how that impacts the design of appropriate social policies.

Disaster Capitalism and the Chilean Earthquake and Tsunami of 27 February 2010

TRUMPER, RICARDO* (University of British Columbia, ricardo.trumper@ubc.ca)

This paper addresses the earthquake and tsunami that hit Chile in the early morning of 27 February 2010. It assesses the economic recovery of the central state and the private and public press, and the large economic conglomerates to discursively, politically and economically profit from the catastrophe despite the weaknesses that appeared in the neoliberal state’s ability to prepare for the earthquake and for mitigating its consequences. It shows that a discourse of anomic and chaos fuelled by the press allowed for criminalizing the population, in particular the poor, and for occupying militarily vast regions of the country. It also discusses the deployment of charity as a means for the large monopolistic companies that dominate the Chilean economy to advertise their products and clean their images tainted by their practices during decades of neoliberalism. It finally addresses the resilience, solidarity and resistance of the population.

Reconfiguring Outer Space Policy: Vulnerabilities and Responsibilities in Humanizing the Universe

Space exploration programs launched by emergent spacefaring countries such as China and India, together with private attempts to democratize space for the
masses (e.g., space tourism offered by Virgin Galactic) are growing quickly despite difficult economic times. These processes together with the increasing technological apparatus at the geostationary orbit are deemed as examples of the ‘humanization of the universe’ (Dickens and Ormrod, 2007). That is, the many ways humans may affect non-human cosmic bodies (e.g. potential environmental impacts of space exploration). Space and its exploration are subjects with ‘contemporary resonances in popular culture, frontier capitalism, and the restructuring of superpower status in the coming century’ (Parker and Bell, 2009: 4). In this paper we aim at critically reflecting about some of the future consequences of space exploration by unpacking and extending the concept of planetary protection. This concept, located in space policy literature, is mainly confined to risks of biological contamination when transporting objects and people to outer space. We identify its primary limitations such as the damage caused to non-biological features and address some of its shortcomings through a multidisciplinary approach with a critical reading of the sustainable development literature. The paper suggests that there are a variety of important reasons for expanding the concept of planetary protection to include contemporary ethical approaches to the environment that will enable mitigation of possible future impacts.

From Play to Career: Redefining the Value of Cultural Practices

Japan’s transition into the 1990s was marked by the collapse of its bubble economy, putting an end to the seemingly unstoppable growth and prosperity that had come to characterize the post-war context. As social and economic structures began to change, so did their articulation with culture - a process which participated in slowly redefining the role and the importance of said culture inside of contemporary Japan. Although questions pertaining to culture had most often concerned themselves with the Japanese identity in identity (in early policy makers and academicians now turned their eyes to Cool Japan, and its potentially profitable popular culture. Indeed, even though it became increasingly difficult for young adults to find regular employment and adhere to social scripts, their leisure practices and culture in a social and economic context perceived by participants as uncertain, and in which value has become an increasing concern; be it for Japan’s economy, to better understand opportunities and constraints linked to access and participation in said practices, and for contemporary selfhood in general.

THE DISCIPLINE OF CHOICE. How students ‘choose’ further education in French priority education zones

Through an intensive, participant and longitudinal ethnographic fieldwork conducted during 6 years, this paper raises the issue of further education’s choices of French highschool pupils in priority education zones (“Zone d’Education Prioritaire”), in the northern outskirts from Paris. Studied pupils statistically concentrated in the city of Paris, but less likely to have academic and professional opportunities. This zone has faced difficult challenges since the riots and has generated effective and consensual typifications categorizing the banlieue youth and its commitment with delinquent activities. Those typification associated to these teenagers - mainly separating the ‘good ones’ who are going to school and the ‘bad ones’ who are hanging around on street corners - does not only suffer from a very biased empirical material but also fails to explain the social, symbolic and economic significance of juvenile delinquent practices. The key separating outsiders from insiders on this particular topic is the way time is - or is not - taken into account. Outsiders do not consider delinquent activities within an historical and biographical process but as an illegal and immoral activity to be eradicated. On the opposite, listening to insiders allows us to understand that illegal activities have to be understood in relation to social trajectories and, hence, have to be considered as significant and inclusive moments rather than othering and calculating the states of being. Unveiling behind this issue is a wider reflection about the way the French society has structured the relationships between its ethnic and social minorities and ‘the majority’. Focusing on 3 cases allow to contemplate ‘dense’ ethnographical material which appears to be a potent sociological strategy to deconstruct engraved typifications. This paper is issued from my latest book: Des copains et des hommes. Trajectoires de ‘jeunes de banlieue’, Paris, Buchet-Chastel, 2013.

Globalization and Higher Education in India

The globalization is a process which is now transforming every sphere of our social, cultural and political life both in the developing and developed countries. Transnational flow of the capital, commodities and people is an essential feature of the globalization. This creates homogenization of higher education although...
in a very limited sense to enable the mobility of the potential population of the countries who opened their economy for global trade in last few decades. This requires the standardization of the education system in terms of content and quality of education throughout the world. In India, the system of higher education is highly fragmented and stratified and produces students of different qualities. A large number of students having different social background and different type of schooling up to secondary level also vary in their educational attainments as well as in their career graph. They usually fall short to the national and international standards. Only few institutions of higher learning have the capacity to produce the students who have potential to compete in the global job market. Thus, globalization poses a new challenge to make necessary structural and qualitative changes in the institutions of higher learning in order to cope with the changes taking place in the globalized economy of the country. The present paper analyses various dimensions of the intricate relationship between globalization and higher education in a developing society like India.

Exchange and Life Satisfaction: Intergenerational Reciprocations in East Asia

Exchange plays a key role in affecting level of well-being. This study aims to develop a fundamental typology of exchanges across generations. By focusing on exchange of finance and household services between adult children and their parents (and parents-in-law), four types of exchanges can be identified: balanced, credit, indebted, and self-reliance. We then investigate if different types of exchange affect life satisfaction and marital satisfaction. Empirical data are drawn from the East Asian Social Survey, which allows a comparative study of Japan, South Korea, Taiwan and China.

Land Grabbing in Taiwan: The Crisis of Food Security and Land Justice

Since the 1980s Taiwan has adopted liberal economic policy and given up the principle of food self-sufficiency. The importance of agriculture had decreased and the land had been seen as valuable asset rather than the means of production. These changes together contribute an over-dependence on imported food in the local market and the loss of food sovereignty of the consumers and farmers. As a result, the food self-sufficiency rate has been extremely low in Taiwan (33%), far lower than China (95%), France (122%), the U.S. (128%), and even Japan (40%). In recent years, the implementation of neo-liberalism in agricultural policy has further worsened the practices of farming and the ways of land use in the rural areas. Since several local governments aim to promote rapid development in the high-tech industry, many farmers and rural residents have been forced to leave their farmland and assets. Over the past decade, Taiwan has consequently lost 4,000 hectares of farmland per year and totally lost 109,652 hectares in the last 30 years equated around 12% of farmland. In reality, the legalized land exploitation which in the name of scientific and industrial park and various developmental projects could be seen as a new form of land grabbing. In this paper, we present two case studies and explore how the recent land exploitation has changed the agricultural practices and social context in the rural areas and the long-term effect on the food security of the whole society. The two cases cover the events and outcomes which have happened in Dapu District of Miaoli County and Siangshihao of Changhua County, the former representing the form of anti-land-grabbing and the latter of as anti-water-grabbing one. Finally, we will attempt to discuss the impact of land grabbing on the food security and the possible citizenship aspires to food sovereignty.

Genetic Science in Identity Making: The Rediscovery of Taiwanese Origin and Ancestry

The global development of genetic science and technology has it's various manifestations in different local political and cultural contexts. The government of Taiwan began to support the development of biotechnology by funding projects during the 1980s, when this country underwent dramatic transition from authoritarian rule to democracy, emergence of ethnic politics, and conflict of national identity. After the rule by martial law ended, scientific research on the origin and the genetic background of Taiwanese began to emerge in the 1990s. Taking for example the research findings and scientific discourse of the team led by Professor Marie Lin, M.D., widely known as “the mother of the research of Taiwanese blood,” my article aims to explore the particular process of co-production between genetic research and identity politics in Taiwan. Since the 1990s, she has devoted herself to revealing the mystery of the origins of the ethnic groups in Taiwan by finding scientific evidences of blood attributes and genes. Based on the research findings of her team over the recent two decades, Lin argues that 1) 85 percent of Taiwanese have aboriginal genes; 2) the Han Taiwanese people (Hoklo and Hakka ethnic groups) are mainly the descendants of the Yue people from southern China; 3) a major part of blood attributes of the Han Taiwanese people is derived from plain aboriginal people and 4) aboriginal peoples in Taiwan have multiple origins. These arguments pose a radical challenge to the dominant Chinese nationalist ideology of the period of the authoritarian rule, which is still lingering on now. My article analyzes how the genetic research on Taiwanese origin and ancestry represented by Lin and her team's has been shaped by social, political, and cultural factors in the context of democratization and ethnic identity. My analysis also shows clearly how science and politics are mutually constitutive.

Effectiveness of Information Influence: Features of Measurement

Moscow is overloaded with outdoor advertisement that's why analysis of advertisement campaigns efficiency becomes an extremely actual matter. We use tracking to solve a lot of research tasks, such as determination of the population percentage attracted by any advertisement, correlation between advertising images kept in mind and number of brands or company names recognized, poster attractiveness for target groups of any products or services, etc. In spite of considering reliable measurements, regular sociological surveys in this sphere were only conducted in England and Australia. Espar Analyst Research Agency has conducted the first monthly tracking surveys in the outdoor advising market in Russia. The objects of its research are advertising posters within the territory of Moscow and the matters are brands and companies.

The goal of the research is to determine an efficiency rate of an outdoor advertising campaign. Efficiency means here the rate of poster penetration and brand recognition. This goal may be achieved in case if the main task of measuring general parameter for evaluation of each outdoor advertising campaign's efficiency is resolved.

The following factors shall be considered in the analysis of the data obtained:
- number, type and location of advertising media;
- duration;
- other media used for advertising the brand;
- creative solution;
- advertised product category.

One of the most important results of tracking campaigns is an opportunity to form a limited indicator basis for each group of products and services, which would allow to compare the campaigns and bring their characteristics into correlation with average indicators for different product categories or formats used. Such surveys are aimed at renewal the empirical basis of social sciences, which study the influence of different format advertising images of human consciousness that is extremely important when the so called visual culture is developed.

Quality of Life As Local-Global Reflection

The changing world exacerbates so many contradictions of economic, social and environmental issues what affects the quality of life of the inhabitants of modern cities and villages. This kind of problem is especially perceptible for the most vulnerable socio-economically disadvantaged groups such as young people and the elderly.

Finding this approach, according to which a QoL refers to a comprehensive well-being, that takes into account the various aspects of human life, the Department of Sociology of Russian State University for the Humanities conducted research using questionnaires in October 2012 and September 2013. It represented the adult population and distinguished four main studying groups: youth, senior citizens, urban and rural population of different age groups.

In the result, we obtained not only an idea of the self-perception of different socio-demographic groups representatives in relation to the assessment of individual aspects of life (personal economic status, social status, personal security, availability of education, social welfare and medical services, maternal and child welfare, employment, leisure etc.), but also identified mechanisms to increase self-perception of QoL.

The first one (objective) defines QoL as a result of combinations of different statistics. The second model is based on affirmation that the real sense of QoL is reflected in subjective feelings of individuals, which are formed on the basis...
Regional Development and Social Inequality in the Age of Globalization: The Case of Taiwan

Modern societies all face a fast-developing and fast-changing global world. Recent development of tighter connection among Asian countries, especially with Chinese economy has brought significant impacts on the regional development and local life of these countries. It is expected that the emergence of the Pan Asian economy might have changed the class structure and social distributions in Taiwan. The paper proposes to study the changes of Taiwan’s social class as well as occupational structures during the last twenty years. Further analysis might show the extent of the restructuring of Taiwan’s occupational structure. In addition to occupational structure changes, this paper will also focus on the trend of economic development. To compete with other economies, Taiwan government has pursued a series of large-scale urban development and regional reorganization, during the years of fast globalization, which might have caused an unbalanced development among regions and skyrockets the housing price in urban areas and thus further exacerbates the income inequality. I will analyze both macro and micro data to test the hypotheses whether the regional development either in a national scale or within the national territory has affected the degree of social stratification in terms of social classes and the inequality of distribution.

Keywords: Class Structure, Social Inequality, Regional Development, Globalization

Inclusion Or Illusion: The Romance and Reality Of Integrating Students With Special Education Needs In Hong Kong

Integrating students with special education needs (SEN) into ordinary schools is a widespread movement towards “Education for All” in many developed countries. In principle, a shift from allowing students with disabilities to be educated in segregated special schools to providing them with opportunities to be educated in ordinary schools is justified on educational and normative grounds. Following the proclamation of the Salamanca Statement as advocated by the United Nations, the Hong Kong Government initiated a pilot project in 1997, and promoted a whole school approach to integrated education in full scale starting from 2004. Despite its goodwill on the part of the Government, many difficulties and problems have arisen along the moves towards greater inclusion in the Hong Kong education system. For example, the practices of integration education are under criticism as many students with SEN are not properly cared or taught, and some are even bullied by fellow students. Provision of sufficient resources and support to ordinary schools or teachers is another matter of grave concern. Teachers also face problems in maintaining classroom discipline and ambivalence in meeting the competing demands of academic excellence on the one hand and equality and inclusion on the other. Inclusive education is one of the most controversial education policies in Hong Kong. The progress of inclusion will be examined in the dimensions of access (the extent to which students with SEN attending mainstream classes); acceptance (the extent to which all students contribute to and achieve in terms of academics, social and emotional development. Values dilemmas and paradoxes resulted from the integrated education measures will be examined with a focus on accommodating diversity, quality, equity and fairness, as well as reducing or enhancing social inequality.

Digital Inclusion or Digital Exclusion? The Second Order Divide in Taiwan

The study of digital divide has shifted its focuses from unequal access to ICTs to the second digital divide that addresses the inequality resulting from the different ways people use ICT technologies. This study explores the differences in ICT usage patterns and of ICT usage in the information society. The results suggest that despite of the closing gaps of ICTs access across groups and declining usage gaps in basic internet activities (e.g. information searching, communication, entertainment), persistent or widening gaps are found across groups in intermediate and advanced internet activities, such as usages of online finance, e-government and civic engagement. These results imply that social inequality might accelerate in the information society for those well privileged groups take uneven advantages of ICTs. Therefore, although controversies exist with regarding digital divide, the Internet still has the potential tools to deepen social divisions.

The Biomedicalization of ADHD in Taiwan

ADHD (Attention Deficit/Hyperactivity Disorder), the most common mental disorder among children and adolescents in Taiwan, does not seem to be as controversial in terms of its entity, diagnosis and medical safety among local professionals as it is in some Western countries such as the United States. This is not to say that Taiwanese psychiatrists uniformly embrace the biomedical model of ADHD. However, alternative paradigms and practices of psychiatry are excluded from the public sphere and discouraged by the National Health Insurance. Besides, the strategic alliance among psychiatrists, teachers and parents for dealing with various learning difficulties effectively justifies the medical framework of children’s deviant behaviors. By analyzing the archives of the professionalization of Taiwanese psychiatry, and by conducting interviews with psychiatrists, relevant mental health professionals, teachers, and the main parents organization, I unravel the interrelated processes of the development of the medical subspecialty, the publicization of health services and the medicalization of education, in order to elaborate that the biomedicization of ADHD in Taiwan is not a necessary achievement of advancement in psychiatry, but a co-production with various social and political conditions. In particular, the “biomedical evidences” and “gearing to the international norms” constitute the driving rationality and emotion of the professionalization of Taiwanese psychiatry in a latecomer context; moreover, as a late-developing medical specialty, Taiwanese psychiatry lacks a sufficiently powerful legacy of the psycho-dynamic approach, which dominated Euro-American psychiatry before the 1980s and has thus far provided competition for the biomedically approach. Furthermore, Taiwanese child and adolescent psychiatrists are too few in number to encourage multi-paradigms. Therefore, although controversies and alternative practices concerning ADHD exist, they do not originate from the psychiatric in-group and thus find it difficult to shake the mainstream practices. Consequently, the biomedical discourses and treatment of ADHD have been stabilized and reproduced in Taiwanese psychiatry.
Women Academics Under Crisis: A New Field for Reflexivity

Research data show that the present economic crisis has worsened women's position in society. New categories of women become vulnerable to the impact of this crisis. To the traditional categories of vulnerable women (migrants, single-parent families, women victims of domestic violence, unemployed young women etc.) are now added women coming from middle and upper-middle class ladders of society (women entrepreneurs, women of high educational and employment credentials, women owners of big properties etc.). Women belonging to these new categories seem to be threatened by the risk of status degradation and the risk of impoverishment.

This paper focuses on the impact of crisis on women of high credentials. Such is the case of women academics that work in universities and research centers in Greece, a category of women of hitherto recognized social status and established high position in social hierarchy.

Our presentation is based on qualitative data coming out of the living experiences of women academics facing the impact of crisis in their professional and personal life. Initial results indicate the gravity of the present economic crisis as it expands also to include women holding highly privileged academic positions in the social hierarchy. Authority measures have not only diminished the income of academic women but also have enormously affected their living standards and worsened their working conditions. Moreover it is to be noted that the economic crisis seems to have brought into surface latent aspects of social crisis resulting from pre-existing social transformations which in turn also affect academic women’s lives.

Thus our attempt is to develop a reflexive account on the living experiences of women academics as well as to discuss the impact of the present economic crisis on processes of women's downward social mobility.

Young People in Social Disadvantage: Opportunities and Threats in Local Environments

The arguments advanced in the proposed paper are based on the analysis of data concerning the means and ways of combating social exclusion of young people in social disadvantage at local communities by means of suitable educational and training programs.

In fact, in an era of globalization of economic and social relations, the employment structures may not be understandable on the basis neither of the model of "technocratic advancement" nor of the model of "specialization". If such is the case, there is an urgent need for the employment of other forms of "capital" in order to combat marginalization of those young people that suffer multiple social disadvantages. The question is how detached are modern societies from traditional forms of education, training and employment especially under conditions of austerity. Another issue for serious consideration is whether local environments possess new capacities for training and job opportunities for young people in social disadvantage. It is to be discussed also whether the local versus the global (i.e. in the sector of enterprises) may possess more opportunities than threats in combating unemployment and exclusion.

Sakyadhita and the International Movement for Gender Equity in Buddhism

During the 1980s, the glaring discrepancies between opportunities for women and men in Buddhist institutions and societies caught the attention of a small group of women living in different countries and practicing in different Buddhist traditions. Communicating by post, they decided to gather to discuss what could be done to address these inequalities. In 1987, at the conclusion of this first gathering in Bodhgaya, India, an international association of Buddhist women called Sakyadhita was founded. Since then, Sakyadhita has received scant attention from the academic community, but the consequences for women in Buddhist societies have resounded around the world. For twenty-five years, Sakyadhita has organized a series of biennial conferences and issued numerous publications that have educated Buddhists in the new global ethic of gender justice. The path to gender equity in Buddhist communities and institutions has not always been smooth, however. Consciously or unconsciously, entrenched interest groups continue their efforts to maintain the imbalance of power that disenfranchises women.

This paper explores how a small grassroots movement to improve conditions for college and undereducated women, especially nuns, has grown into a global movement to challenge inequalities on a structural and institutional level, recounting landmarks in the history and development of Sakyadhita and the international Buddhist women’s movement from its inception until the present. In the first section, I describe the objectives of Sakyadhita and the key personalities who have helped propel the global movement for gender equity in Buddhist societies. Second, I explore the setbacks and obstacles that Buddhist women have faced over the years and continue to face in their struggle for gender justice today. Third, I trace the major achievements of the international Buddhist women’s movement precipitated and explore potential directions and strategies that Sakyadhita has mapped out for the future.
TSUBOTA, KUNIO* (Meiji University, Japan, kuniornoome@yahoo.co.jp)
A Study on the Costs and Demand for Foreign Nurses/Care Workers in Japan – from the Angle of Hospitals and Care Facilities

Many consider that the international migration of nurses and care workers is driven by economic factors. Wage and cost differentials should work as a ‘push factor’ in sending countries and a ‘pull factor’ in receiving countries, though rules and regulations may partly hinder it. Japan opened the gate for foreign nurses and care givers under the Economic Partnership Agreements for the first time in 2009. It was anticipated that application and entry would rise sharply because wage gaps with other Asian countries remained high and the rapid aging of Japan’s society badly needed more nurses and care workers. However, the actual entry of such personnel has been on a declining trend in recent years, despite government efforts for reducing entry barriers. This study has attempted to analyze the pull factor, i.e. the economic costs that accrued in the hospitals and care facilities based on a survey conducted. The analysis revealed no statistically significant correlation between the economic considerations and the willingness to hire nurse candidates, implying the existence of non-economic reasons for the reduced entry of such workers. For the care givers, economic considerations seem to have had some impact on the willingness of care facilities to receive ad- ditional foreign workers. It would be imperative for the government to address institutional impediments for the nurses and pay more attention to the economic incentives for the care facilities in order to increase the number of foreign nurses and care givers in Japan.

Organizing Immigrants in Rural Areas in Japan: Case Studies of the Tsunami-Devastated Areas

This study examines the process of organizing immigrant groups in rural areas in Tohoku, Japan, especially the 3.11 tsunami-devastated areas. In recent decades, Japan has witnessed the entrance of many more immigrants. Along with this influx of newcomers, their relationships with Japanese society and their social mobility have drawn attentions. Although previous studies tend to focus on the cases of labor-intensive economic activities in urban areas, few studies have been conducted with a focus on the immigrants in rural areas that lack a concentration of immigrant populations, such as the Tohoku region.

Many of immigrants in the Tohoku region are female immigrants as spouses of Japanese nationals, who are mostly dispersed throughout small towns and villages. They tended to be marginalized from their local society and given the limited understandings and supports from the local government.

The Great East Japan earthquake that devastated many areas of the Tohoku region seriously affected these immigrants as well as Japanese nationals. The disaster and its aftermath consequently led them to form groups to help support each other and to change their social surroundings. How did they attempt to grapple with the difficulties after the disaster? To what extent did their organizational efforts contribute to changing their relationships with their local society? With a focus on these questions, this study analyzes the process of organizing immigrants in the Tohoku region. The findings from my interviews with the actors and participatory observations suggest how they obtain resources inside and outside their community on the recovering process after the disaster, and the social issues they face to continue living in rural society. This study contributes to considering the possibilities and issues of ‘bottom-up’ approach for immigrants to change their social surroundings in rural society in Japan.

Healthy Aging and Concerns Among Japanese Elderly People

Background: Japan is facing an unprecedented aging society. In 2011, 23.3% of total population in Japan was elderly people 65 years old and older. One third of the population in Japan will be at least 65 years old in 2035. Healthy aging is a crucial key for public health and society in Japan. However, under budget limitation of social security, policies and frequent policy changes have posed a great uncertainty and concerns on that elderly population. Given these circumstances, we conducted questionnaire surveys in 2010 to examine concerns in this age group. Method: In 2010, we sent questionnaires to university graduates 65 years old and older randomly selected from lists of graduates from 11 universities. The questionnaires were open-ended and asked them to write any concerns that they had about health care, health policy, health systems and their future. Results: We received 331 (Age 73.18±4.43) responses. Among those who responded, 84.9% (281 respondents) said that they had concerns. We conducted text analysis (PASW Text Analytics for Surveys 3.0.1) and extracted keywords from their Reponses. The keywords that were extracted frequently were; Doctor, Hospitals, Health care, Japanese Government Policies, Expensive, Health care cost, Medical expenditure, Doctor scarcity, Prevention, Health insurance system for those 65 years and older, Quality of care, Long term care and others. Discussion; In this study, many elderly people in Japan have concerned about health care expenditure, health care systems and health policies. This may be caused by frequent policy changes and uncertainties due to frequent administration changes such as uncalenese of a raise of out of pocket payment rate from 10% to 20% for elderly people under budget constraint in Japan. Correct policy-making and determination are necessary for healthy aging by removing concerns from this vulnerable population in Japan.

TSUGE, AZUMI* (Meiji Gakuin University, tsuge@soc.meijigakuin.ac.jp)
Discussion of Factors That Drive Regenerative Science and Assisted Reproductive Technology

One of hottest ethical arguments in regenerative science is whether creating human eggs and sperm from IPS cells or ES cells should be permitted. Then whether to permit these eggs and sperm to be fertilized and to develop into babies. In 2012, Japanese scientists created primordial germ cells, which can develop into germ cells, both sperm and eggs from skin cells of mice. Another team in Japan has also created mouse sperm and egg cells from IPS cells and used them to obtain young mice within the past year.

A guideline of Ministry of Education, Science and Technology in Japan requires prior notification of all efforts to generate sperm and egg cells from human IPS cells, but fertilization is prohibited. Two teams have already started the research.

We would like to consider the issue by logical steps through analyzing narratives of scientists and patients in assisted reproductive technologies. First, we would like to focus on how scientists explain the necessity for the research. What is purpose of the research? What do scientists recognize as advantages and disadvantages? Second, we would like to consider how patients in assisted reproductive technologies react to the news. What do they think about the technology and ethics? Third, we would like to show what a council which regulates the technology discusses. Through interviewing scientists in regenerative medicine and patients in fertility treatment, and analyzing conference minutes of the council, we will point out the driving force and the justifiable reasons of regenerative science and assisted reproductive technologies.

Changes in Friendship Relations of Japanese Youth

This study aims at revealing the changes in friendship relations of Japanese youth. In their everyday life, friendship relations are becoming more and more important.

According to a recent report “In response to questioning about when they feel their life is fulfilling, the largest percentage of Japanese youth answered “When I am with friends or companions” (74.6%)”. This is also the largest percentage among the other five countries (South Korea: 58.1%, U.S.A.: 64.7%, U.K.: 45.1%, France: 68.2%), and that have basically increased from past years (1977~78: 50.1%, 1983: 59.2%, 1988: 62.0%, 1993: 70.8%, 1998: 74.0%, 2003: 72.5%, 2007: 74.6%). But in recent years, there are some interesting changes. The percentages giving “When I am by myself without being annoyed by anyone” (13.8% in 2003 to 19.8% in 2007) increased over the previous survey. (Naikaku-fu, 2009, “The Japanese YOUTH :In Comparison with the Youths of the World, A Summary Report of the Eighth World Youth Survey”, http://www8.cao.go.jp/youth/english/ worldyouth-e/html/mokui-e.html).

This is so complex situation that is difficult to be understood, and our recent research also shows the same situation.

In this study, there are two ways of approach. Firstly, I would like to review the hypotheses about the changes in friendship relations (e.g. the dilution hypothesis, the selective hypothesis and the homogenization hypothesis). Secondly, I would like to analyze the quantitative data, and reveal the present situation and the changes. The data was collected in Tokyo and Kobe in 2002 and 2012. Respondents were randomly sampled. Their age ranges from 16 to 29.

In conclusion, it is revealed that the number of friends are increased but the diversity of that is reduced. It suggests that the friendship relations of Japanese youth have been homogenized.

Exonaming the Chain Relationship from Initial Contact to Classical Music to Socio-Economic Status Via Music Preference

This paper examines the effect of the initial contact to classical music on the music preference, and the effect of the music preference on the socio-economic status, in Japan. Especially, as in Bourdieu’s reproduction theory, whether people’s “orthodox” music preference from family affects their income is examined.

A questionnaire was handed to 2,000 audiences of Saito Kinen Festival in 2012. 594 audiences answered. The questionnaire included the questions of initial contact to classical music, preferences to 20 composers, and household income.

By latent class analysis of the initial contact, four types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences.

By latent class analysis of the composer preferences, five types were found: (a) shallow listeners, who do not know many composers, (b) orthodox maestro devotees, who love Orthodox maestros, (c) hardheaded devotees, who love orthodox maestros but dislike contemporary composers, (d) overarching lovers, and (e) contemporary music lovers.

Crossing the types of initial contact and the types of music preference, the following was found.

1. Those with vague initial music experience tend to be shallow listeners.
2. Those who are affected by family do not have a particular preference.
3. Those who had eye-opening experience are not shallow listeners.
4. Those who received various effects are not shallow listeners, not hardheaded, but overarching lovers.

OLS of the equivalent household income reveals the following. Those whose preferences were affected by family tend to have higher income than those with eye-opening experience. The orthodox maestro devotees have higher income than those with vague preference or hardheaded. However, as seen above, there is not an effect of family on orthodox preference.

Therefore, we should conclude that there is no clear evidence for the chain relationship in Japan.

Food Aesthetics and the Unintended Construction of Civility in Peru

Peruvian food had always had important elements that connected it to national identity. However, in the last 10 years, food has acquired new—meanings that pertained to a strong sense of national pride, and new understandings of what it means to be Peruvian, which are reflected particularly in media and politics. In Peru’s biggest city, Lima (where 35% of its population live), culture and cuisine reflect the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony. In this paper I argue that, in great part, the “aesthetization” of food in Peru—a focus on aesthetics rather than just on flavor—was pivotal to the transformation of its social meanings during the mid-2000s. In the early 2000s, chefs and tourism operators considered this process of “aesthetization” essential for the promotion of Peruvian food and, consequently, for the promotion of tourism and the increase of economic revenue to Peru. An unintended consequence of the success of this process was that the newly named “novo Andean” cuisine became a central element of an invigorated Peru.

By latent class analysis of the initial contact, four types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences.

The Current Situation and Future Tasks of Community Service Actions Conducted By Local Sport Clubs in Shikoku, JAPAN

In recent years there’s been impressive growth in sport team volunteering to local community service. The purpose of this study was to examine the current situation and future tasks of community service actions conducted by local football clubs in Shikoku, JAPAN. A survey was conducted using interviews, questionnaire and fieldwork from July in 2011 to July in 2013. Data of the questionnaire were collected from a sample of 104 clubs, while the return rate was 49.8%. The main findings were as follows: 1) About twenty percent of local football clubs conducted local community service actions, 2) human communication related to unity of sport competition and promoting mutual friendship was important to local football clubs. It was facilitated by local football clubs to have human network closely related to local community, 3) sixty percent of local football clubs intended to continue or start the local community service actions. There were discouraged factors of the local community service actions, while members of local football clubs didn’t know what to do. Moreover they didn’t have enough methods to conduct the local community service actions. This indicated that the share information and financial aid could seed potential local community service actions and 4) local community service actions deeply related to proper leader and frequency of practice. It was quite important to have good connections with outside the club like sponsor or football school. It is necessary to examine the assessment of people living in local community and differences of income between local football clubs.

TSUTSUI, JUNYA* (Ritsumeikan University, junya_tsts@nifty.com)

Constructing Social Cleavage Indicators Using the Mixed-Effects Model

This study examines how we can construct national indicators by analyzing comparative surveys using mixed-effects (ME) model. ME model, also known as multilevel analysis, is usually understood as a method to analyze nested data. Few studies pay attention to its unique ability to estimate individual (or random) effects.

Estimating individual effects, country-specific effects in the case of national comparison, using ME model has two distinct advantages that existing methods do not have.

One is that we can “estimate” indicators with statistical confidence, not just “compose” them by adding up or averaging relevant figures. This merit addresses the problem of composing indicators using unbalanced comparative data. A comparison of attitudes between a country with sample size of 1,000 and one with sample size of 10 would be questionable if we just calculate means of several attitudes for both countries, because the value of a country with small sample size lack reliability. Estimating individual effects using ME method can avoid this problem by introducing “shrinkage estimator”.

Another merit of ME estimation is that we can eliminate the effects derived from the residual composition among countries. An indicator value of attitudes or happiness could be different because of different distributions of social groups such as gender, age, and classes. Also, simple averaging of different level of attitude among social groups can suffer from bias, because one social attribute (such as educational background) correlates with others (such as age or gender). ME method can deal with this problem because it uses linear regression technique.

This study applies ME model to compose “Attitudinal Divide Indicator” (ADI). ADI can be interpreted as indicating how an attitude toward government roles differs by social groups. A country with high ADI can be understood as a country where there is a sharp divide of opinion among people.

Intergenerational Reciprocity in Intergenerational Support in Japan

Intergenerational familial support is a fundamental aspect of family relationships. It has critical effects on the welfare of family members and reflects the distribution of social capital in the family. This study focuses on the elderly providing non-monetary support to their adult children, and assesses how their own parents’ support has affected their propensity to provide caregiving to their grown children. While directly reciprocal relationships in intergenerational support between parents and their children have been reported in the U.S. and Japan, we tested for the presence of indirect effects from parents to grandchildren in Japan.

The main research question is: Do the elderly who received more support from their parents tend to give more non-financial support to their adult children?

Models are examined with data from the National Survey of Middle- and Old-aged People’s Life conducted in August 2010. The sample consists of 5,648 elderly people who were 50-84 years old with at least one child over 18 years old. To detect the indirect reciprocal association between from-parent-to-respondent support and from-respondent-to-children caregiving, some regression models are applied. The outcome variable is the number of types of non-monetary support that respondents gave to their first child within the year prior to the interview. The controls are socioeconomic status of the respondents and their first children, and the support exchanged between them.

We found that receiving greater non-financial support from parents raised the propensity to offer caregiving to children, after controlling for other relevant factors. This result offers some rationale for the indirect reciprocity model of intergenerational support.
Rebuild a Trust Relationship Between Doctors and Patients--Informal Exchange in Chinese Health Sector

Trust lies at the heart of effective patient-doctor relationship. Chinese health sector is facing a trust crisis between patients and doctors as shown in the rising numbers of conflicts and denunciations. In seeking an accountable health care, patients widely employ informal exchange by giving gifts and red-packets to doctors, seeking connections and acquaintance relationship (guanxi) to get health care. The gift exchange and guanxi networking involve the cultivation of emotion (rening, guanxi, the emotional feelings of indebtedness and obligation), through which a trustworthy relationship is emergent and negotiated. However, in the changing moral context of China today, trust is very fragile amidst the inherent uncertainties of medical care. The individual efforts of gift-exchange and guanxi networking sometimes could not secure a trustworthy relationship, and patients frequently become the targets of defrauding, extortion and abuse of power. The paper, setting the context in the post-socialist China, shows how people experience rising uncertainty in daily life and to secure a trustworthy doctor-patient relationship. It is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more works to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

TUMA, RENÉ* (Technical University Berlin, rené.tuma@tu-berlin.de)

Comparing Different Styles of (Vernacular) Video Analysis

The paper presents the outcomes of a project that focuses on activities of interpretation of video recordings. The interpretation/analysis of visual data is not only performed within sociology but in a growing number of professional fields and everyday situations ("Vernacular video analysis") [1]. My presentation draws on a focused ethnographic study of interpretation practices. I have done ethnographic fieldwork in three fields and recorded practitioners at their interpretation work. The three fields each highlight different aspects of interpretation work.

1) Police Work the identification of actors and their ("criminal") actions is the police officials’ main concern, in
2) Football Training: the aspect of instruction is most important and in
3) Market Research: the interpretation of eye tracking video is distributed and organized via means of information technology.

By itself reflexively applying Videography [2] onto the practices of video analysis I am able not only to study those three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography that allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

regulations and implementations, which have led to the displacement or eviction problem of the urban poor. This analysis will also cover the accompanying laws, media to analyze the changing discourses of prominent actors on the housing renewal areas will be utilized together with a comprehensive study of the leading operas, land owners, professionals, and the leading media. These discourses try to reproduce as well as state expenditure on housing. Those housing areas also served to decrease the cost of alization necessitated low-paid labor force in industrial establishments located in the 1950s in Turkey, exemplified in the case of Istanbul. After 1950s, the import-substitution industri-alization necessitated low-paid labor force in industrial establishments located in a few cities, including Istanbul. The governments directly or indirectly supported the development of informal housing areas, which served to decrease the cost of reproduction as well as state expenditure on housing. Those housing areas also helped building survival strategies for the urban poor through embedded social networks and mutual help mechanisms.

Since the mid 1990s, the vision of Istanbul as a center of international finance and tourism has guided the new urban policies, based on the development of real-estate and construction sectors. Therefore, urban regeneration/ renewal practices have become the major tool of urban policies, leading to an intensified pressure on the housing areas of low-income population in central locations. In the last decades, this pressure was coupled with disinformation and stigmatiz-ing discourses, prevalent among the members of a hegemonic urban coalition, consisting of central and local governments, state institutions as well as develop-ers, land owners, professionals, and the leading media. These discourses try to legitimize the clearance of those informal housing areas by stigmatizing the inhabitants as “invaders” or “criminals”. In this paper, the findings of the research made in six urban regeneration/ renewal areas will be utilized together with a comprehensive study of the leading media to analyze the changing discourses of prominent actors on the housing problem of the urban poor. This analysis will also cover the accompanying laws, regulations and implementations, which have led to the displacement or eviction of disadvantaged segments of population in most cases, as well as social move-ments for the right to housing and the city.

This paper aims to evaluate how discourses and accompanying interventions on the housing areas of the urban poor have evolved since the 1950s in Turkey, exemplified in the case of Istanbul. After 1950s, the import-substitution industrialization necessitated low-paid labor force in industrial establishments located in several cities, including Istanbul. The governments directly or indirectly supported the development of informal housing areas, which served to decrease the cost of reproduction as well as state expenditure on housing. Those housing areas also helped building survival strategies for the urban poor through embedded social networks and mutual help mechanisms.

Since the mid 1990s, the vision of Istanbul as a center of international finance and tourism has guided the new urban policies, based on the development of real-estate and construction sectors. Therefore, urban regeneration/ renewal practices have become the major tool of urban policies, leading to an intensified pressure on the housing areas of low-income population in central locations. In the last decades, this pressure was coupled with disinformation and stigmatizing discourses, prevalent among the members of a hegemonic urban coalition, consisting of central and local governments, state institutions as well as developers, land owners, professionals, and the leading media. These discourses try to legitimize the clearance of those informal housing areas by stigmatizing the inhabitants as “invaders” or “criminals”. In this paper, the findings of the research made in six urban regeneration/ renewal areas will be utilized together with a comprehensive study of the leading media to analyze the changing discourses of prominent actors on the housing problem of the urban poor. This analysis will also cover the accompanying laws, regulations and implementations, which have led to the displacement or eviction of disadvantaged segments of population in most cases, as well as social movements for the right to housing and the city.

In the sociology of globalization there has been much talk of porous borders, the effects of the international flow of labour, legal pluralism, the fragmentation of civil society by multiculturalism, and the decline of state sovereignty. America however appears as ever to an exceptional case. After 9/11 and the Patriot Act, there has been considerable emphasis on the securitization of society as a whole. The focus of national security is echoed in the agenda of the Republican Party which has opposed the naturalization of illegal migrants, supported a hawkish foreign policy, warned against the dangers of creeping Sharia, and rejected cuts to the Pentagon budget. Despite its ideological opposition to big government, the Tea Party has driven the GOP further to the right over national security and defence expenditure. While the rightward drift of Republican Christians is consistent with traditional millenarianism and Christian Zionism in America, it is reinforced by fears of American decline. Confronted by economic weakness foreign policy now faces a dilemma: isolationism versus confrontation. The foreign policy of Chris-tian conservatism in the United States was famously captured by Sarah Palin in her recommendation ‘Let Allah sort it out’. Despite the cultural divisions, there is however little evidence of any post-Westphalian erosion of American state sover-egignty.

A large literature documents the deleterious economic consequences of incarceration. But little is known about the consequences of incarceration for household wealth, an indicator of economic wellbeing that may be especially important to the survival of low-income families for whom incarceration is common. In this article, we use individual-level data (from the Fragile Families and Child Wellbeing Study) and state-level panel data (from 1985 to 2005) to examine how incarceration is associated with asset accumulation and asset loss among formerly incar-cerated men, their romantic partners, and their communities. Results from the individual-level data, which pay careful attention to the social forces that select individuals into incarceration, document that incarceration is negatively associated with vehicle and bank account ownership among men and that these associations are concentrated among men who previously held such assets. In addition, the economic consequences of incarceration spill over to the romantic partners of these men, especially those living with men prior to their incarceration, who report a lower likelihood of home and vehicle ownership. Results from the state-level data document that incarceration rates diminish homeownership rates among Blacks and, in doing so, widen Black-white inequalities in homeownership. Taken together, the results show that the considerable collateral consequences of incarceration may increase inequality in household wealth.

Online environments, which cover broadly all websites, are a pervasive part of many children's lives today. More than 90 percent of children and young people in America and Europe use the online environments as a daily part of their everyday life and particularly focus on the opportunities and risks of the online environments. As a result of our study, we found five types of perceived effects that represent opportunities and risks: learning and socialization, sense of community and empowerment, antisocial behavior, overuse and threat to security. To our informants, the online environments represent a new form of community and friendship, which helps children to maintain their social relationships. There are positive effects of the online environments, such as enhancing the users’ sense of community, social capital and learning (e.g. Wellman et al. 2001). On the other hand, the online environments may also have negative effects, for example, the opportunity to act anonymously causes misbehavior (Livingstone et al. 2011).

The paper explores the role of online environments in children's everyday life. By analyzing 27 interviews with Finnish children aged 11-13, parents and teachers, we compare the viewpoints of both children and adults. We analyse the self-perceived effect of online environments on children's everyday life and particularly focus on the opportunities and risks of the online environments. As a result of our study, we found five types of perceived effects that represent opportunities and risks: learning and socialization, sense of community and empowerment, antisocial behavior, overuse and threat to security. To our informants, the online environments represent a new form of community and friendship, which helps children to maintain their social relationships. There are positive effects of the online environments, such as enhancing the users’ sense of community, social capital and learning (e.g. Wellman et al. 2001). On the other hand, the online environments may also have negative effects, for example, the opportunity to act anonymously causes misbehavior (Livingstone et al. 2011).

industry and the civil society have intermingled giving rise to many theoretical interpretations that underline the professed radical change of universities and sciences. Of these theories, the current article focuses on the triple-helix of university-industry-government relations. The model claims that intensified interaction between university, industry and government has given rise to a new kind of research, which not only seeks to advance knowledge but also tries to attain commercially viable products. As a normative policy model, triple helix might be transforming into analysis certain understanding of the developmental role of scientific research. The present paper summarizes the major viewpoints of this theory and reflects on the commentary given to it. To better understand the various aspects of the model, it also analyses the model's distinct theoretical status and claims that it is ambiguous, as it combines three types of sociological theory, i.e., diagnosis of an era, general sociological theory and research theory. After assessing the status of triple helix, the paper contributes to the discussion about the model by probing different theoretical avenues that research associated with the concept might proceed. Of central importance here is systems theory by Niklas Luhmann, as major protagonists of triple helix have frequently used his ideas in discussing the model. The current paper draws concepts from Luhmann's theory to specify ways in which empirical research associated with triple helix could be made more responsive to the multi-functional and internally contradictory character of the contemporary research university.

The Challenge of Cultural Gerontology: New Directions, Critical Perspectives

This introductory paper will explore the principal intellectual and social developments that underlie the emergence of cultural gerontology. Opening with a critical review of the sources and scope of the approach, it will trace from where these new impulses came, the theoretical traditions that inform them, and the challenges they present. The paper will draw together the key themes informing the forthcoming Routledge Handbook of Cultural Gerontology.

New Approaches to Inequality Patterns in Education Science and Childhood Sociology

New approaches to inequality patterns in education science and childhood sociology

From a perspective that considers children as social agents we analyze how socialization- and learning environments are designed, processed and have an influence on children's self-orientation and autonomous learning. By using an interdisciplinary approach that combines sociological and pedagogical theories different dimensions of the 'self' are put into the center of attention. Thereby we aspire to gain new insights into causes of inequalities.

This article uses data provided by the (longitudinal) study "SEBI - Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environments of Primary School Children". First quantitative results of the ongoing study assessed the importance of parenting for children's self-confidence in primary school. A perceived parental interest in the own personality – associated with parental interest in the child's specific hobbies, activities and interests - can be seen as central for the academic self-concept. However, a perceived parental emphasis on efforts for the child's academic success does not have such a significant effect. Further, these findings could not be related to social class or ethnicity, which makes a difference to common findings of the majority of socialization studies. Thus, this study contributes to an extended view on inequalities in education by focusing on different socialization practices in families and institutions and how these interrelate to the child's academic self-concept and performance. The perspective gained by these findings can be supplemented by qualitative interviews concerning aspirations, parental practices and children's perspectives on school and family life with parents and children across various social backgrounds.

Based on this multi-method way of proceeding we aim to identify different patterns of inequality in socialization related to the self as a central variable. In how far this is a track worth following will be shown by presenting relevant data.

Consolidation of Russia and Characteristics of Russians' Identities

Under conditions of globalization the national identity takes on special significance. Globalization creates unprecedented opportunities for the cultural convergence, expansion of the communicative space, lifestyle enrichment. However it causes many challenges and destructive tendencies, including a trend which is by far the most dangerous - identity crisis. A nation's identity is an integral aspect of the national identity, which is realized and interpreted in a broader context of post-war geopolitics. Four categories of thinking, comparing themselves and the world, trying to understand the general and the particular in their identification characteristics. Problems of transformation of Russian identity assume ever greater importance. They mediate the future of the country, its ability to face the challenges of modern world as well as to carry out cultural, economic, social and political modernization. The images which will dominate in mass consciousness will affect the prospects for civil society in Russia, the functioning of political institutions, the social climate of the society. At the same time the Russians' perception of themselves, of their own place in the world and of the effects it has on the formation of political, social and cultural orientation, which mediates the mass sense of place and role of Russia in the modern world, people's attitude to the Western countries, institutions and values.

Geopolitics, Identity Politics and Sociology in Taiwan, Hong Kong and Singapore

The paper compares the traditions of sociology in Taiwan, Hong Kong and Singapore based on a systemic bibliographic review, and relates the findings with the identity politics of the three places which reflect their respective roles within the triad of international relations that are considered essential to defining the domestic sociological tradition were reviewed: domestic journals or paper series, writings about domestic history of sociology, normative-epistemological debates, and edited collections of domestic social studies. To make sense of the findings, the concept “domestic disciplinary identity” was developed with three forms of 'subjectivities' distinguished: domestic disciplinary subjectivity, the degree to which sociologists of a particular locale were considered (or acted) as if they belonged to one bounded community; domestic empirical subjectivity, the degree to which a geographical territory was seen as others' approximate epistemological subject; and civilizational subjectivity, the degree to which sociologists perceived that they belonged to a culture distinctive from the Western civilizational frame in sociology. The patterns are further associated with the post-War geopolitical statues and identity politics of the three places: the 'imposed Chinese nationalism' in Cold-War Taiwan and its challenge from the rising indigenous identity after the 1980s; the 'colonial denationalisation' policies in Hong Kong and the ambivalence toward the union with China in 1997; the ‘multi-racial nation making’ project in Singapore following its unexpected independence in 1965.

an social activists and oppositional politicians into self-questioning why they had failed to stage a rally at a comparable scale in recent years—even with the help of internet. The question calls for a comparative analysis of this incident and other internet-facilitated social movements.

Drawing from literature review, interviews and some participant observations, this paper surveyed the existing practices of internet-facilitated social movement in Taiwan—a young democracy known for its strength in constructing and communicating technologies. Four ideal-typical categories are identified and discussed: (1) online activism of conventional advocacy/concern groups, (2) communication platform for mobilization and public debate, (3) social networking site for mobilization and public debate, and (4) online activism of conventional advocacy/concern groups. The paper concludes that web 2.0 technologies can help to understand why Active Ageing campaigns are widely utilized. This study ends with suggestions for re-thinking the meaning of Active Ageing campaigns and if the elderly are hence empowered or exploited.

How to Include Material Elements in the Analysis of Life Stories? Applying Actor-Network Theory to the Analysis of Autobiographical Narratives on Alcohol Dependence

Often the aim in the analysis of life stories is to identify cultural meaning structures that tell about the values and norms that regulate people’s life choices and to what extent these choices are successful in pursuing their aspirations. Hence, the life story is often approached, for example, by applying Vladimir Propp’s theory on narrative functions or William Labov’s theory on narrative categories. By applying actor-network theory (ANT) to the analysis of autobiographical narratives on alcohol dependence, the paper shows how the methods that focus on the identification of cultural meaning structures have a tendency to detach action described in life stories from its material and bodily mediations and overemphasize the importance of psycho-social and cultural factors in action. ANT action is understood as an effect of network where both human and material elements can act by a set of links of relations. ANT offers tools to grasp how alcohol dependence, for example, is produced and mediated by a network of material, bodily, psychological, social, conceptual and cultural entities that transforms the action in an unforeseen way.

The paper uses empirical examples from the life stories on alcohol dependence to illustrate material elements such as physical spaces, material resources and bodily reactions, which allow for a better understanding of the elderly’s actions within a given institutional environment while the notions of organizational structures can be considered as mediators among other mediators, acting as part of complex actor networks that include also material elements.

Women’s Responsibilities, Freedoms, and Pleasures: An Analysis of Italian, Finnish and Swedish Women’s Magazines’ Alcohol-Related Advertisements from the 1960s to the 2000s

Since the 1960s, feminist movements have emphasized that men and women should be seen as equal in their roles as parents, breadwinners, and citizens. This conception is not confirmed by the images produced by advertising. The article presents an analysis of alcohol-related advertisements published in Finnish, Italian and Swedish women’s magazines from the 1960s to the 2000s. The advertisements are approached as representations of gendered performances in which gender is made visible “here and now” by placing women in particular subject positions that tell about the values and norms that regulate people’s life choices and to what extent these choices are successful in pursuing their aspirations. Hence, the life story is often approached, for example, by applying Vladimir Propp’s theory on narrative functions or William Labov’s theory on narrative categories. By applying actor-network theory (ANT) to the analysis of autobiographical narratives on alcohol dependence, the paper shows how the methods that focus on the identification of cultural meaning structures have a tendency to detach action described in life stories from its material and bodily mediations and overemphasize the importance of psycho-social and cultural factors in action. ANT action is understood as an effect of network where both human and material elements can act by a set of links of relations. ANT offers tools to grasp how alcohol dependence, for example, is produced and mediated by a network of material, bodily, psychological, social, conceptual and cultural entities that transforms the action in an unforeseen way.

The paper uses empirical examples from the life stories on alcohol dependence to illustrate material elements such as physical spaces, material resources and bodily reactions, which allow for a better understanding of the elderly’s actions within a given institutional environment while the notions of organizational structures can be considered as mediators among other mediators, acting as part of complex actor networks that include also material elements.
der norms. Rather, it seems that traditional gender norms continue to be reproduced in alcohol-related advertising.

**Industrial Food Pollution: A New Perspective on Food Safety Risks Beyond the Current Legal Definition**

This study proposes a new perspective on food safety risks, with reference to the 1968 Kanemi rice bran oil poisoning in Japan. This poisoning was brought on by Polychlorinated Biphenyls and dioxins, which are hormone-disrupting chemicals. As a result, the victims had chronic illnesses and passed on the poisoning to their children. Despite the victims' ongoing need for compensation and relief, no adequate policies as yet exist.

Similar to the Kanemi case, East Asian society has experienced many other food contamination cases, e.g., the 1955 Morinaga arsenic milk poisoning in Japan, the 1979 Taiwan rice bran oil disease, and the contamination of food with melamine in China and Korea in the 2000s. These cases show that salient issues regarding food in East Asia have changed from security to safety. Furthermore, they indicate that this study can be applied to other contamination cases.

In contrast to neglected those cases, environmental pollution incidents such as Minamata disease - caused by the methylmercury contamination of Minamata Bay in the 1950s - were officially recognized as 'public nuisance'. The victims of them therefore received public compensation in accordance with the law. However, the government denies that serious food poisonings are 'public nuisance', leaving victims without compensation.

From the sociological perspective, the social damage structure of the Kanemi case was not similar to typical cases of food poisoning. Rather, with regard to the victims' possibility of recovery, the negative effects on daily life and community, and the cause of the contamination, it was similar to 'public nuisance'.

In conclusion, I propose a new perspective of 'Industrial Food Pollution', beyond the Japanese legal definition of 'Food poisoning' and 'Environmental pollution as public nuisance'. Based on this perspective, I recommend the establishment of 'Relief Fund for Industrial Food Pollution', which institutionalize compensation systems for victims.

Rights and Responsibility - Investigation of the Emergence of Entitled Children and the Amendment of Juvenile Law in Japan from the 1990s into the Next Century

In Japan during the 1990s, concepts of childhood changed, both within the domestic and international contexts. The emerging notions of self-determination, freedom, and responsibility, being debated on several fronts, were applied to children. The application of these notions extended into the functionality of juvenile law. The questions to be raised are: Is the child considered as an object in need of protection and guidance? Should the child be viewed, similar to the adult, as an independent being who has an innate ability for self-determination? How has Japanese society perceived the child? These questions form the core for investigating social, political, and legal transitions within Japanese culture in regards to its entitled children who newly emerged in the 1990s and started emphasizing their rights as they thought were rightfully theirs. In this research, entitled children are defined as those who consider themselves as an independent adult holding the rights concerning the choice of their actions. This research aims at reconsidering and reconstructing Japanese society during this time concerning the topic of entitled children and their degree of self-determination as conceptually developed by their observers, such as educators, psychologists, sociologists, legal professionals, and others. This research also enables the production of interdisciplinary discussions between areas of law, sociology, cultural studies, media studies, and qualitative fieldwork. Investigating the developed observations of multiple disciplines is beneficial for formulating a broader context in order to analyze and comprehend the topic (235 words).

Power in Classical Sociology

Power in Classical Sociology
Lars Udehn, Stockholm University

This paper is an attempt to synthesize the various ideas of power that we find in classical sociology. By “classical” sociology is understood sociology from its emergence in the nineteenth century until the beginning of the 1960s. This means that it covers the writings, not only of Marx, Weber and Simmel, but also the structural-functionism of Parsons and the exchange theories of Emerson and Blau. The paper takes the form of answers, found in classical sociology, to a number of questions, including: “What is power?, What gives power?, and How is power exercised? In answer to the first question, a distinction is made between power in a broad sense, as a capacity to influence other people, and power, in a narrow sense, as an asymmetric relation of domination. The answer to the second question is that there are two sources of power; resources and rights – the first highlighted by Marx and the second by Weber - which are analytically distinct, but usually intertwined in reality. The answer to the third question is that power is exercised in various ways: (1) by the promise and/or use of rewards, or inducement, (2) by the threat and/or use of punishments, or coercion, (3) by trying to make people change their minds, or persuasion and (4) by an appeal to their duties, or in the words of Parsons, by an activation of commitments.

Online Disinhibition As a Predictor of Cyberbullying Among Adolescents

Bullying in schools is a serious problem that has commanded attention from scholars for the past few decades. However, with the ongoing changes and developments in technology a new dimension to the problem has emerged: cyberbullying. Research has shown that cyberbullying can lead to depression, suicidal thoughts, decreased self-esteem and academic problems among others. This presentation addresses the issue of cyberbullying based on the results from a sample of nine-hundred and ten high school students (mean age 16.31). Various theories and approaches have been used to explain cyberbullying. One possible factor that could lead to cyberbullying is online disinhibition. Up to now there have been no studies that specifically examined the link between online disinhibition and cyberbullying. The questionnaire included the Online Disinhibition Scale (ODS), a new instrument developed to assess online disinhibition levels. Results from logistic regression analyses revealed that those students who were more disinhibited in online environments were consequently more likely to have cyberbullied someone. Examination of individual items of the Online Disinhibition Scale showed varied results.

Back in the 1960s, Daniel Bell predicted the coming of the new class society based on the knowledge and information capitalism. Assuming that gender would not matter in the knowledge society, women expected that this society would change in a more gender-equal direction. In reality social change has promoted neo-liberal reforms that have resulted in a widening class gap and decreased social mobility, wherein gender matters a great deal. Women are cast into the labor market in the name of the “equal opportunity,” which handicaps by virtue of their care-burden. In addition, the rapidly ageing society added further burdens to the care-takers, mainly women. The result was extremely low fertility. Most OECD countries try to solve issues of care through public policy or markets, both of which depend heavily on migrant labor. In the absence of this solution, in Japan gender serves as the functional equivalent along with race and ethnicity. This explains why the women’s status in Japan as measured by the Gender Equity Index or Gender Gap Index is relatively as its ranking in the Gender Development Index and the Human Development Index.

The recent disaster of the Fukushima nuclear power plant following the giant tsunami has sent out a warning that we must change our over-competitive society that places such a high value on wealth and growth. Nevertheless, the Japanese nation does not want to learn the lesson of history, despite paying an enormous price. I will argue that there is much to be learnt, both positive and negative, from the Japanese experience.

How Japan Imports Social Problems from the West: Child Abuse from Early 20th Century to the Present

For more than a century, Japan’s approach to the child abuse problem has been stimulated and shaped by developments in western countries, particularly in the US. Early in the 20th century, a national discussion of child abuse was initiated by humanitarian Japanese who had been exposed to western philanthropy. In the 1970s, Japanese medical professionals raised awareness of battered child syndrome proposed by a leading American pediatrician. Starting in the 1990’s, a massive discourse on child abuse problem emerged from various professional groups who admired prevention and treatment measures from the US. Official data show that child abuse cases in Japan are most common for people of lower economic class. However, social policy on child abuse problem downplays the importance of economic stability and attributes the problem to individual families. Thus, government policy prioritizes identifying settings where there is a risk of child abuse and counseling parents instead of focusing on bringing families out of poverty. A child abuse risk assessment tool from the US is applied to every Japanese family in which there is an infant. The present study shows evidence of increased social panopticism and shows that risk technology morally penalizes mothers, leading to social exclusion.

Moral Identity in Friendships Between GLB and Straight College Students

People make moral claims about sympathizing with and providing support for stigmatized individuals, but past studies tended to focus on this type of moral identity construction within formal organizations. The present study seeks to extend the literature by identifying the process of moral identity construction in a personal setting—friendships between gay, lesbian, and bisexual (GLB) people and straight people. Analyzing data from in-depth interviews with college stu-

Gender equality and women’s empowerment are important indicators in development strategies that focus on poverty reduction and improved maternal health. Despite the well being of women and the nation, in this area is neglected. Besides the condition of women in relation to women empowerment, indicators have remained poor. The study used data from the latest national Demographic and Health Survey (nDHS, 2008) to examine the socio-economic condition of women in relation to their level of empowerment and as a correlate of maternal health outcomes in Cross River State. The study utilized data of a representative sample of 735 women of age 15-49. A majority of respondents reported Poor/low socio-economic status ranging from low educational status, unskilled occupation, low income per month, seasonal employment etc and this affected the level of empowerment in all the indicators. These are women’s participation in household decision making, their attitude towards wife beating and their attitude towards a wife's right to refuse sexual intercourse with her husband or partner. This condition is manifested in high maternal morbidity, mortality, inability to determine the number of children, spacing and antenatal care options available to them. This is in line with the prevalent scenario in the entire country. There is therefore an urgent need for improving and enhancing women socio-economic condition as it will improve their level of empowerment and will bring about better maternal health status.

Colonialism, Land Use Planning, and Indigenous Rights: Using Institutional Ethnography to Understand the Colonial Rationalities of Planning in 21st Century Chile

This paper shares some initial findings of a theoretical and methodological exploration, in which I use institutional ethnography (IE) to examine the role played by planning in the dispossession of Indigenous peoples in Chile. Over the past fifteen years, the planning literature started to recognize the complicity of the discipline with colonial domination and imperial aspirations of territorial expansion, in particular how land use planning has been one of the main mechanisms used by European settlers to appropriate Indigenous lands. Starting from the premise that planning processes are embedded in complex and broader institutional structures, I further argue that planning has contributed to the reproduction and perpetuation of colonial injustices until this day, in part through the existence of institutional, legal, and decision-making frameworks that are colonial legacies. Although IE has been widely used by planning scholars, I claim that to understand how colonial rationalities are reproduced through everyday planning practice it is critical to look at how written texts –especially plans, legal documents, regulations, and policies– shape planning action and help reveal colonial ruling relations. To answer this empirical question, I draw on in-depth interviews and document reviews, discussing how the daily actions of government planners in Chile bring to life colonial visions and understandings, although in subtler and more invisible ways than in the past. I use as an example the planning and implementation of the first Consultation on Indigenous Institutions, led by the Chilean Government in 2011, which was developed in the context of the recent endorsement of ILO Convention 169 and the UN Declaration on the Rights of Indigenous Peoples. This exploration shows how the recognition of Indigenous rights challenges Indigenous/State relations and simultaneously reinforces colonial notions of state sovereignty, Lockean ideas of land use and property rights, and liberal understandings of human rights.

Socio-Economic Background/Women Empowerment and Maternal Health In Cross River State, Nigeria: Using Data from the nDHS 2008

The Nigerian-Biafra war of 1967-70 tooka genocidal dimension in which the killing of people on the Biafran side of the war became a state industry. These demarcations took the features of a pogrom against the “Biafrans” which resulted in millions of people of that side of the country examined in the war.

This paper, therefore, analyses the causative factors of the war, the consequences of the war in terms of the massive human deaths, the refugees’ problems and the exacerbating economic and social aftermath of the war on the then citizens of Biafra and Nigeriers in general. The paper argues that even in the contemporary globalization world society, these problems still exist which cost- tituted victims of the secessionist war still suffers from unequal treatment in the present Nigerian socio-political context, being a hangover of the Nigerian-Biafra civil war of post-independence Nigeria.

The Social Meaning of Racial Humour Among the Police

This paper explores a controversial side of police culture: the use of ethnicized humour among the police. The empirical material consists of twenty-two interviews made in context of an assessment on the work environment for ethnic minority officers and civilians within a major Swedish police force. The qualitative analysis illustrates how officers and civilians with an ethnic minority background talk about the widespread use of racial humour within the police. On the one hand, they perceive their colleagues’ use of racist jokes as a way of reproducing ethnic stereotypes and tends to position minority officers as ‘outsiders’, but, on the other hand, they contribute to the reproduction of racial jokes and consider it to be an unavoidable, quite unproblematic, part of daily police jargon. Finally, the difficulties of walking the thin line between police jargon and ethnic bullying and the problems that racial humour implies for diversity work within the police are discussed.

China’s Involvement in Africa: New Approaches of Solidarity in Economic and Development Policies or Just South-South Rhetoric?

The increasing Chinese activities in African countries are often stated as different or competing against Western approaches of development aid and economic relations. Not only regarding quantity but also quality, the Chinese involvement seems to follow specific patterns of a development model, for example the principle of non-interference. This paper analyses Chinese conceptions of economic and development policies towards African states. By putting these policies and their implications in the context of historical structures and social relations of forces, the asymmetrical power relations, the counter-hegemonic potentials as well as the interests and strategies of the stakeholders involved within this “third sector” between (Post)Washington Consensus and South-South-Cooperation can be identified.

However, there has not been much research on African perspectives on characterization and patterns of Chinese involvement. Therefore, in its second part, the paper focuses on the perception of Chinese activities in Ghana and the impact on local developing role models. Being the “darling” of Western donors and simultaneously experiencing a rapidly increasing Chinese involvement on different levels of its society, Ghana presents a crucial case study with conflicting constellations of power. According to (neo-)hegemonic concepts of hegemony, a sustainable impact on the local development model, manifested in reciprocally combined elements of institutions, ideas and material capabilities, must include aspects of consent (considering the specific background of the Ghanaian society by including theoretrical perspectives of peripheral statehood and postcolonial approaches). Do Chinese stakeholders accomplish a broadly-based consent on their activities and therefore establish patterns of a “different” development model in Ghana? Does the Ghanaian civil society perceive them as an alternative to the dominant (Post)Washington Consensus? Following a qualitative mixed-methods design, combining expert interviews, media analysis, and secondary analysis, this paper explores the problems that racial humour implies for diversity work within the police.

An Ethnomethodological Explication of the Usage of Diagnostic Categories: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (2)

Through the lens of medicalization in sociology, the relations that people have with medical categories are considered subordinate to medical professions. Therefore, how individuals with autism spectrum disorder (ASD) come to terms with the category of “ASD” is considered a manifestation of that subordination (Conrad, 2007). However, this perspective prevents us from understanding actual situations in which those individuals come to terms with the diagnosis of ASD. Many studies have investigated the various relations people actually have with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these precedent studies, this presentation examines the sessions of tohjisha-kenkyu (which roughly translates as “sufficient first-person study”) and explains the interactions of the settings in which participants refer to their own diagnostic categories. The Japanese word tohjisha-kenkyu refers to a collaborative activity in which the indi-
viduals suffering from social isolation due to their impairments talk about their troubled experiences and study the structures of these experiences in their own words. Tohjisha-kenkyu began in a mental patients' group in the town of Hokkaido, Japan, and has since been utilized in many other groups of individuals with various impairments (Ayaya and Kumagaya, 2008; Ishihara, 2013). The sessions of tohjisha-kenkyu this presentation examined were for individuals with ASD and conducted by these individuals. Using ethnomethodology and analyzing audio recordings of the sessions, we focused on the following questions: (1) What is the significance and what are the roles of the participants' self-reference to diagnostic categories? (2) What relationships do these usages of diagnostic categories reveal? (3) What consequences do these usages give to the meanings of these diagnostic categories?

How Diagnostic Categories Influence the Self-Description of Person with a Diagnosis: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (1)

Previous studies have revealed that there is a mutual relationship between the self-description and social cognition/interaction (Spreng and Mar, 2012; Nelson and Fivush, 2004). These studies have found that to infer the intentions, feelings and beliefs of others from their behaviors requires the structured self-description which serves as a reference frame. On the other hand, self-description is structured through the social interaction.

The persons with Autism Spectrum Disorders (ASD), the medical definition of which is qualitative deficits of social cognition/interaction, are suggested to have difficulties in semantizing their own autobiographical memories through social interaction, which gives atypical structure of self-description (Crane et al., 2010; 2011; Bon et al., 2013; Lind et al., 2010; Williams et al., 2010; Uddin et al., 2011). However, performance of social cognition/interaction and self-description depends on ‘how’ to interact with whom, and may not be reduced to individual characteristics (Crane and Goddard, 2008; Bruck et al., 2007; Crane et al., 2012).

As a practice in which alternative self-description and social recognition/interaction are generated simultaneously, we focus on Tohjisha-kenkyu. 'Tojisha' means first-person in Japanese, and 'Kenkyu' means research. In a nutshell, Tohjisha-kenkyu is studying oneself through communication with others who share similar experiences. Tohjisha-kenkyu is a novel method of self-help and intellectual exploration born in Japan, which neither accepts without question nor rejects completely the experiences.

How Diagnostic Categories Influence the Self-Description of Person with a Diagnosis: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (1)

The intention is to unfold and underlie the mechanisms of production of a specific kind of participation and social control over public services, which is based on the logic of “care service to the consumer”. As a result, the strategies for a non-state organization, which presents itself as a nonprofit one, obtain profit arises. And, therefore, it can be said that there are private intentions supporting entrepreneurship in these supposed non-profit sectors.

Social Narratives For Noble Art Collecting (Spain, 1750-1850)

The main purpose of this paper is to study the role that collections of art works and other artifacts played in the definition and exhibition of social discourses of legitimacy and differentiation of the estates. Since noble collections embodied social theory and social legitimacy, old noble houses transformed their artistic policies in the transition between Early Modern and Modern and Contemporary Europe, as a response to the competition environment due to the new nobility and other groups climbing the social ladder. Also these old noble houses had to answer the coincidence with the institutionalization of the new artistic system represented by academies and museums. All these elements promoted the rearrangement of old collections and the display of new social narratives for their public interpretation.

The aim is intended to be pursued through the analysis of the ideological narratives on collecting deployed by Spanish ancient nobility, 1750-1850, focusing on the houses of Osuna, Alba and Medinaceli, among other families. These old noble houses had been displaying social narratives through collected objects since 16th century, Portraits, religious and historical paintings, a few masterpieces with acknowledged aesthetic value, weapons and many other different items had been collected, organized and narrated through the ideas of lineage and differentiation of social groups and estates. The analyses of the reorganization of these collections and their new discourses at the end of the Ancien Régime could offer valuable information about the social profile of these objects and their use as means of social structuration.

China’s role as an emerging donor and its conceptualization of social policy in Africa has generated polarized reactions in the West. Many argue its ‘productivist’ approach is driven less by notions of citizenship and social rights, and more in terms of accumulation functions. Social investment is justified for broader economic development goals in contrast to current safety-net or ‘wellfarist’ models of western donors. While some international organisations perceive the Chinese approach as antithetical to Western goals and practice, others welcome it as an opportunity to develop new ideas about social development.

This qualitative research explores to what extent and in which direction Chinese aid to Africa is influencing Western ideas about welfare policy in developing countries. The study comprises a systematic review of Sino-African and Western policy documents and semi-structured interviews with senior Chinese, Western and African stakeholders. It investigates how social policy is conceptualized by those involved in Chinese aid to Africa, to what extent this differs from traditional Western perspectives and what it means for Western social development policy. The implications for understanding the drivers of global policy development and links between the economic and social dimensions of welfare will be explored.

Why Skin Color Captures Inequality Better than Census Ethnoracial Identification in Latin America

Why Skin Color Captures Inequality Better than Census Ethnoracial Identification in Latin America
For the first time in modern history and with the region's turn to multiculturalism, most Latin American censuses now ask respondents to identify by race or ethnicity. These new data allow researchers to systematically examine ethnorracial inequalities, which have long been ignored or denied. However, reliance on census ethnorracial categories could be problematic because of classification ambiguity in the region and because the categories themselves may hide racial heterogeneity. To overcome this, we modeled the relation between skin color as well as census ethnorracial categories and educational inequality, using innovative data from the 2010 America's Barometer from the Latin American Public Opinion Project (LAPOP) and 2010 surveys from the Project on Ethnicity and Race in Latin America (PERLA). We found that skin color was strongly related to educational inequality in all examined nations (Bolivia, Brazil, Colombia, Dominican Republic, Ecuador, Guatemala, Mexico and Peru), even after controlling for parental occupation and other factors. On the other hand, ethnorracial identification was a weaker and less consistent predictor.

USMANOVA, LARISA* (Kazan Federal University, OUSMANOVA@GMAIL.COM)

Between Europe and Asia; Cross-National Marriages in JAPAN (RUSSIAN CASE)

The paper focuses on modern Russian diaspora in Japan and based on research conducted in 2012 in Kyoto (Japan). Although Russians in Japan have more than 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. There were only 322 Russian (Soviet) citizens in 1985, but in 2004 the Russian community in Japan has counted more then 7000 members. In account that Russian-speaking community can include the CIS’ citizens, it is understandable how many Russian-speaking foreigners in Japan now - about 10000.

All population of the Russian community in Japan could be divided into two groups: labor migrants and members of cross-national marriages. I pay attention to the second, larger group of the Russian community in Japan, because it is still studied a little. It is a marginal community, still not Diaspora in due its small and dispersed numbers. Having many problems of identification, they want to keep their transnational identity, influence on cultural environment of host country and to be a root between it and homeland, between two cultures - European and Asian.

This study (interview with Russian women married Japanese men) shows us an impact on Japan of many new ethnical communities and how Japan is becoming a multicultural state, but not homogenous one. To prevent depopulation, Japan has to accept 17 million immigrants enous one. To prevent depopulation, Japan has to accept 17 million immigrants.

Japanese Teenagers' Perception of Their Mothers' Employment and What They Do in after School

Japanese junior high school students and high school students (age 13 to 18) are rarely reported internationally regarding their behaviors after school and attitudes towards their mothers' employment. I interviewed approximately 40 these teenagers, 20 each from relatively wealthy area, Setagaya and the down town, Taito in Tokyo. The result showed that most of their mothers were working part-time or full-time. Probably due to Confucianism, many of Japanese teenagers seem to thank their parents' paid work, although some of them were suffering from neglect or somewhat of neglect by mothers particularly concerning supper. The difference was teenagers in Setagaya are more likely to complain.

In addition, comparison between this study and the result of Australian researcher, Barbara Pocock's in-depth interview of teenagers (2006) will be shown. The result was different from the Australian one and the largest gap is that almost no Japanese teenagers referred their parents’ joy gained from paid work, while Australian teenagers do. Probably due to Confucianism, many of Japanese teenagers seem to thank their parents’ paid work, although some of them were not provided supper. And this tendency is more obvious in down town. Neglect of these age groups is difficult to be recognized in the society, due to their own pretense as normal and their affection or sympathy towards their parents. There are no marks on their bodies and no yelling is heard from neighbours. Therefore, these teenagers' vulnerability remains invisible. I believe this study has significant meaning in youth studies, family studies and Japanese studies.

Whistleblowing and Intervention: A Role For The Clinical Sociologist

Worldwide there is a tendency to view the act of whistleblowing as making an important contribution in the fight against corporate misdeeds. However, a more ambivalent attitude is often displayed towards the whistleblowers. There are global debates about whether whistleblowers should be considered as heroes or traitors and what kind of protection they should have.

Whistleblowing takes place when a present or past member of an organization discloses suspicions about organizational wrongdoing to those they believe to be in a position to take action. Whistleblowing could occur internally when the whistleblower communicates the message inside the organization (using prescribed or non-prescribed channels) or externally when the whistleblower resorts to an external agency, which could include the media. Regardless of how the disclosure is done, organizing generally regard whistleblowing as illegitimate. The disclosure of information about organizational wrongdoing, especially if it is placed in the public domain, is regarded as a form of betrayal and often leads to retaliation by the organization. Acting as "loyal and caring" employees, whistleblowers generally do not expect the severe negative responses they receive as a result of disclosing irregularities in their places of work.

This paper discusses whistleblowing in the USA and South Africa and considers the role clinical sociologists could play in designing and/or implementing interventions that would ensure better outcomes for the whistleblower as well as the organization and clinical sociologists. Clinical sociologists attempt to improve people's quality of life by designing and/or implementing interventions based on an analysis of problem situations. In the case of whistleblowing their role could include advising the organization with regard to the implementation of confidential reporting systems that would pre-empt whistleblowing: developing support systems for whistleblowers before disclosure; and after the disclosure, developing support networks. The organization and the whistleblower and advocacy to improve legal protection for whistleblowers.

Public Religious Activities of Muslim Women in Turkey

This paper aims to analyze the effects of Sunni Muslim women's increasing public religious activities on their everyday lives and social status within their close relationship circles such as family and neighborhood. The analysis is an account of a two-year-long ethnographic field study in two state Quran courses and one informal Quran course in Ankara and twenty six interviews with the participant pious women. Muslim women's public visibility has been increasing in the world as well as in Turkey. This is firstly due to the increasing rates of public participation of women in Turkey (there is positive development in women's employment and education rates). Since working women spend most of their time outside their homes, pious women choose to fulfill their religious obligation of daily prayer (salat) in the mosques and mesjids which are public spaces. Secondly, more and more pious women claim their right to the public religious places such as mosques which have traditionally been male spaces and public religious activities such as Friday prayer which have been dominated by men as male religious activities. As a result, more women attend public religious activities at public religious places. This paper argues that pious women reorganize their everyday lives according to their public religious activities and that pious women's public visibility elevates their social status within their families and among their neighbors and friends. They are seen as the "people in charge" of the religious affairs by their families and by their friends.

Building “Ethnic Ghettos” or “Intercultural Bridges”? the Use of ICTs in Migrant Organizations in Spain

The use of the Information and Communication Technologies (ICTs) by migrant organizations is a relevant factor for the enhancement of social cohesion. Migrant associations develop in-group solidarity, associations in the diaspora, and this often generates organizational solidarity. There is a general consensus regarding the value of ICTs in maintaining both strong and weak ties, but there is not any consensus on whether ICTs are...
useful in forming new ties and whether those are strong or weak. This study aims at explaining the impact of ICTs use in the migrant associations’ social capital. Are migrant associations using ICTs to expand bridging social capital or to reinforce homogeneous networks? In depth interviews to the representatives of 25 immigrant associations in Spain, from five different origins, namely Romania, Morocco, Equator, Colombia and Bolivia, have shown that the use of ICTs is increasingly essential for their organizations. Furthermore, ICTs are used to access to information on both the origin and the host country. However, the organizations’ communications, both online and offline are mainly addressing their local communities. On the other hand, there can be no doubt that the associations that use more diverse ICT tools are those who are more oriented to social cohesion. The study shows that, indeed, bonding social capital is essential for migrant associations and that the use of ICTs helps maintaining strong ties, while fostering the creation of new weak ties and political participation of their communities in the host society. In sum, ICTs come up as an opportunity for migrant associations to improve their public image, collaborate with other public, private and non-profit organizations and thus to enhance social cohesion, in general. Therefore, an effort should be done from public and private initiatives to facilitate this digitalization. This paper is part of a larger research financed by the Spanish Ministry of Economy.

**UZZELL, DAVID*** (University of Surrey, d.uzzell@surrey.ac.uk)

*Workplaces In Tncs: Can Green Practices Be Transported Across The Home-Workplace Border?*

Just under 50% of the world’s GHG emissions in 2004 were attributable to energy supplies and industrial production (IPCC, 2007). The demand for manufactured goods is expected to rise by at least 100% by 2050 (from 2006 levels), with a consequence that industrial emissions, if unarrested will lead to a 90% increase in CO2 emissions by 2050 compared to 2007. Following new EU regulations, national governments have created policy instruments designed to reduce or compensate the level of emissions of specific organizations. However, these regulations have not proved to be effective, neither in terms of production nor consumption. The research project: Low Carbon at Work, attempts to understand the drivers for and barriers to environmentally sustainable practices at work and at home, and recognizes not only the crucial contribution of industrial production to GHG emissions, but also that consumption is an inseparable driver of production. Investigating two TNCs (vehicle production and oil industry) in Sweden and the UK, we have asked under what conditions workers and managers are encouraged to transfer “green practices” from work to home and/or vice versa. We have also investigated how relationships between managers, employees and trade unions might encourage or prevent the adoption of ‘greener’ production processes. Both case studies include informational and life-history interviews to understand changes at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw borders between those areas and under which conditions they become permeable and “green practices” are carried from home to work and vice versa. We have found how limited communication between hierarchical levels within companies as well as inflexible management practices discourage workers to suggest and implement environmentally valuable changes.

*Population Ageing and Distributional Concerns*

This presentation will look at the transformation of the welfare state from the perspective of increasing spending on various elderly and health care services. One of the main arguments of the presentation is that a new distributional paradigm put forward through demographic and structural changes is emerging. The presentation has two objectives: 1) It examines the distribution of elderly and health care spending across the Finnish population with register data on the use of services in 2011. 2) With macro-level data from the EU countries, it analyses policies and social spending targeted to different age groups in the society and discusses how their balance has changed in the past two decades.

The increasing spending on elderly care services raises distributional concerns as the welfare state paradigm shifts to new forms of spending and new types of beneficiaries. Countries already display considerable imbalances in the distribution of public spending for today’s young and old generations. If we spend more money on old age in-kind benefits, who benefits the most? Do all ageing citizens benefit equally and to what extent this development in spending patterns dig a gap between generations? Are there signs of proportionally more pro-elderly spending as the median voter’s age increases? The topic is politically more even relevant in the midst of the current economic crisis when social budgets are being cut, welfare state policies recalibrated and intergenerational justice is emerging as a significant political issue.

The preliminary analyses with the Finnish register data indicate that the distribution of old age in-kind benefits has a remarkably pro-poor pattern. The final article will investigate further if this is explained by the greater morbidity of the elderly in lower income classes or if the result is connected to other socioeconomic factors, such as living alone or older age.

VAIL, JOHN* (Newcastle University, john.vail@ncl.ac.uk)

Bearing Witness to Social Suffering: The Emotional and Social Complexity of Social Documentary Photography

There is a highly contested debate in the social sciences and the humanities about the artistic bearing of witness to social suffering. If we take the paradigmatic case of social documentary photography, does prolonged exposure of individuals to images of social suffering have de-politicizing effects, dulling empathy and leading to compassion fatigue or does it spark an empathetic imagination and ethical reflection, and thereby stimulate an active solidarity and sense of shared responsibility that constitutes a cultural pathway to an active citizenship. Although we sympathize with the latter judgment, we admit this is based more on wishful optimism than persuasive evidence because, in actual fact, there has been very little rigorous social science research investigating this debate. We substantially redress this oversight through an ongoing research project with the Side Gallery in Newcastle, UK. Over 35 years, the Side has hosted exhibitions of social documentary photography, many of which have been dedicated to exploring large scale social and political transformations with a special focus on social suffering and hidden injuries. For each exhibition, the gallery has kept a comments book and we have coded and analysed a sample of 25 exhibitions across three decades featuring diverse forms of social suffering and distinct subjects. We use these contemporaneous comments to trace how the images impacted on individual emotional states (what kind of emotions were triggered, whether particular images generated specific responses). We also explore whether these exhibitions acted as a force for social learning; increasing people’s understanding of social complexity and power; recovering people in the photos as proper subjects, worthy of dignity in their own right; and enhancing knowledge of possible alternatives. Finally, we are interested in whether we can observe how individuals employ distinct ethical, emotional and critical judgments when encountering these kinds of images.

Fatherhood and Doing Gender. How Challenging Can Institutional Changes be?

Transition to parenthood in Switzerland takes place in a particularly gendered welfare state. It is the only European country where men do not have access to any kind of statutory maternal or paternity leaves. Following a conceptualization of gender as social structure, we consider that parenthood is shaped by social mechanisms producing difference and inequality between fathers and mothers at the institutional, interactional and individual levels. This paper investigates empirically the extent to which institutional change - such as the introduction of a paternity leave - can challenge the construction of gendered fatherhoods. It is based on a case study conducted in a public sector organization which implemented in 2010 a one-month paid paternity leave. Sequence and cluster analyses are performed on register data about the patterns of employees’ leave uptake (N=95). Interpretative analysis of interviews with fathers who took paternity leave (n=22) and with mothers who did not (n=26) are conducted. Results indicate a limited challenge of the gender structure. At the interactional level, although paternity leave enables fathers to spend more family time, a gendered division of childcare tasks is observed: fathers still have a secondary role with the newborn child. The majority of interviewees adopt a modified breadwinner model, similar to the dominant norm in Switzerland. The majority of interviewees adopt a modified breadwinner model, similar to the dominant norm in Switzerland. The majority of interviewees adopt a modified breadwinner model, similar to the dominant norm in Switzerland. The majority of interviewees adopt a modified breadwinner model, similar to the dominant norm in Switzerland.

Highly Skilled Migration As a Structuration: What Is New?

This paper examines the role of interaction between social structure and human agency in the process of international migration of the highly skilled professional. The discussion draws from Giddens’s structuration theory and Bourdieu’s forms of capital. It revisits Giddens’s analysis of duality of structure and relocates it in a migration field. This presentation is devoted to explore second questions: Why do highly skilled professionals migrate even they are financially satisfied? Why others do not consider migration? What kinds of forces in migration decision process do participate? This paper is based on results from twenty in-depth open ended interviews with highly skilled professionals of Lithuania in the fields of natural and technological sciences. Migration and social status is seen as endless process constructed from set of events passed on micro, mezzo, and macro level.

In the view of structuration theory migration is seen as recursive process formed and transformed by active agents and itself shaping and structuring subsequent social behaviour of agents. Both structural determinants in the countries of emigration and immigration and acknowledgment of migration as efficient strategy for life betterment creates new cultural element in the social structure that influences migration-decision making of other peoples. International migration is a continuous interaction between migrants and economical, political, social, and cultural contexts on macro level in the sending and receiving countries. New insights shed light on deeper than just economic considerations layers involved in forming attitudes towards international migration. The structural anti-socio-cultural context where individual is acting, migration experience in parent family, seek for higher social status, personal freedom, and need for professional recognition are just several pieces of the puzzle, the outcome of which is decision to (not) migrate.

MEXICO: ELECTORAL GEOGRAPHY FROM THE STATES VIEW

Mexico: Democracy and Inequality in the States

In Mexico only electoral democracy has been developed. There is no growth, neither social nor political important presence from social and civic organizations that show developments on social democracy and that allow an effective control of the government by the society. The elections alternation in every aspect has been a proof of the presence of electoral democracy. Mexico’s ranked place 61st on the Human Development Index. Nevertheless, inequalities on the 32 national entities are quite evident.

This paper analyzes the evolution of the electoral democracy on the 32 Mexico’s states and relates it with inequality according to the HDI. The unit of analysis is the alternation on municipal governments during 10 years, identifying those entities with a greater percentage of municipalities with alternation in their governments and searching the relation with the evolution of the HDI and the evolution of income poverty.

México: Electoral Geography from the States View

Ever since year 2000, Mexico has had very competitive presidential elections. Two of these electoral processes, have been pinpointed as fraudulent, because of several irregularities that have happened.

The electoral geography has introduced the states behavior in the three elections to be studied (2000, 2006 and 2012), showing more or less territorial agglutination.

This paper introduces the electoral geography based on the electoral results from the capitals of the 31 states in the country, taking into consideration, that generally, the states capitals concentrate the higher amount of voters, and have the major political diversity from each state.

This paper also presents the political-governamental evolution from each entity, as a political and geographic context that supports the explanation.

All Mixed up: Defining Mixed-Income in Public Housing Redevelopment

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace trou-
bled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have moved into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to those that attempt to preserve a substantial majority of units for low-income households.

In addition, we develop a new way of identifying and categorizing mixed-income developments in terms of how income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together small proportions of low-income and high-income residents into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly low-income communities.

Domestic Violence As Eigenvalue in Contemporary Society: A Sociocultural Approach to the Construction of a Form of Gender Based Violence in Chile

Domestic violence, including several forms of gender based violence, does not exist independently from an observer, neither is this observer limited to a domestic realm. In contemporary society, domestic violence is constructed as such in a network of operations that encompasses both private and public realms. This network involves a diversity of human and non-human agents – questionnaires, measurement instruments, etc. – and coordinates public policy, legal, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Reinhard von Foerster), a referential correlate of this complex network of operations.

This paper, which is based on field observations made in Santiago, Chile, describes a section of this network: the section that goes from the moment a report is made to the moment it enters a courtroom transformed into a case of domestic violence. It is stated that three problems of reference (Niklas Luhmann) give meaning to the diverse operations that are involved in this network: a) the attribution of cases of violence to the environment of the system; b) their observation as forms against a medium; c) and the constitution of chains of transformations (Bruno Latour) through which references to the lived experiences of violence are mobilized and transformed into legal, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Reinhard von Foerster), a referential correlate of this complex network of operations.

Finally, two main consequences are explored. At the same time that the constructed reality of domestic violence becomes inscribed in the lives of victims and their relatives, shaping their experiences and descriptions of the world, it is shaped as a stream of facts that feed state mechanisms of population control.

The Circulation of Two Epistemic Objects That Carry Social Science Knowledge: Domestic Violence and Bullying

This presentation follows the circulation of two epistemic objects, namely domestic violence and bullying, in Chile, from their appearance in this country in the decades of 1990 and 2000, respectively. Social science knowledge plays a major role in the configuration of both epistemic objects. Also, both objects have important normative and emotional contents, making them relevant for the orientation of actors. In this manner, domestic violence and bullying are part of performative processes through which social science knowledge shapes reality.

The definitive positioning of domestic violence and bullying as part of everyday reality in Chile resulted largely from State-led processes of measurement, diffusion and regulation. Their arrival and diffusion was induced by several social processes. In the case of domestic violence, the feminist movement, with its claims during the 1980s, was a crucial lever. Bullying, instead, has a more diffuse arrival, being mass media, particularly television, its fundamental driver. Internationally organizations such as the World Health Organizations and UNESCO played a key role in the circulation of both constructs. They have provided conceptual and methodological tools, as well as facilitated and disseminated research and provided funding. Moreover, international organizations have incorporated in these constructions a decisive normative framing that is associated with developments in Human Rights.

Some repercussions of these processes are analyzed regarding the globalization or universalization of these realities or cognitive objects and to the respective effect of perceptual and normative shaping. The empirical study is based on interviews to relevant agents (state functionaries, policemen, educators, psychologists, physicians, etc.), ethnographic work regarding measurement and classification practices, and revision of documents related to processes of constitution of these constructs.

The Atmospheres of Chilean Copper Moralties

From ancient times copper mining has been a key element for the materialisation of the civilisation processes. From the weapons and ornaments of the Western Asian settlements 1,000 BC to the chips and wirings of contemporary hybrid cars, copper has had a privileged position advancing human capacities with its versatility. However, intensive pollution derived from copper mining has also been a prevalent issue that can be traced twenty five centuries back to the smelters of Roman Empire times, as some recent sediments analysis in Greenland have recently shown (Hong et al, 1996). Additionally, copper has been relevant in international disputes over natural resources, as can be seen in Chile during the Cold War, with a process that sought to recover national sovereignty over copper and ended up with the imposition of a dictatorship. Following an actor-network perspective, this presentation is focused on the role of copper shaping the institutional settings of Chile. The analysis is mainly based on the negotiation of anti-pollution standards and emissions caps that lasted for more than twelve years (between the late 1990’s until 2012), and explores the different copper ontologies related to health, pollution, energy, and globalisation among others, mobilised during that process. Reviewing the proceedings of the expert panels and public statements made by the bodies involved in these negotiations, the agencies of expert knowledge and visible projects are revealed as the key interfaces to Chil- enian institutions to the needs of the currently in place copper production schemes. This refers not just to the local schemes, but to its intimate connections with the global copper dynamics, which are currently dominated to a great extent by China. It is argued that a way out of this entanglement should be designed, cutting across the cause-effect relations that compose current Chilean copper moralties.

Contemporary Family and Human Development

Human development is the expansion of people's opportunities live long, healthy and creative lives; to advance other goals that are valuable for themselves and the entire society. Human development implies that people engage actively in expanding equity and respect for human rights.

Family is not only an institutional cell but also is a micro-social basis of human development and its reproduction. It is a family where the key elements of human development (health, education, well-being etc.) originate from. The potential of these elements predetermine perspectives of socio-economic, scientific and cultural development of the country and ultimately of the person himself.

Family is a place where a person should be brought up to respect fundamental principles of equity, recognize human rights, interests and needs of other family members and people around. Family is the only social institution providing for retranslation of values and norms to the following generations; ensuring succes- sion, stability and sustainability of human development.

At present in many countries the family institution experience crisis, which is intensified by disrepect and often negative demographic processes. These tendencies affected Russia as well. Along with decrease in birth rates, there have been negative changes in marriage and family structure; in the number of incom- plished families and illegitimacy. The most common gender of the russian families is poverty, which is deepen with every subsequent child.

Responding to contemporary challenges in marriage and family processes the governments of developed countries realize explicit family policies. In Russia family-oriented measures were always regarded as a part of social and demo- graphic policies. But nowadays National family policy, its statements, principles and priorities are being conceptualized. This is reflected in the work of experts' and scientists' communities; in broad public discussions of the draft project of the National Family Policy Concept.
The liberalization of economy and global economy formation have fundamentally changed the model of interaction between government, employers and employees; have greatly affected the employment structure, labor markets and socio-labor relations. Uncontrolled world capital markets, and as a consequence, risen instability, uncertainty and inequality in society have led to a weakened sense of common purpose of social partners in labor sphere.

The comparison of the mainstream and ethnic media narratives shows how the Mapuche hunger strike has been constructed in contradictory terms. A critical discourse analysis problematizes notions of power, legitimacy, ethnic and national identity, involved in those media narratives.

Contesting Stigma: Afro-Descendant Migrants in Santiago, Chile

The purpose of this exploratory study is to provide a qualitative empirical account of the experiences of Afro-descendants presently living in Santiago, Chile, and contribute to the debate on the migratory realities of people to Latin America from the perspective an understudied and often marginalized and excluded population. While this study can only provide a snapshot into the lives of some Afro-descendant immigrants presently living in Chile, preliminary findings suggest that this population is experiencing racism and xenophobia with which they must regularly contend. It seeks to understand the justification process by which this population is stigmatized, and how they disavow perspectives that suggest their identities have been devalued. Forty-eight semi-structured interviews were conducted with adult immigrants of visible of African-descent (27 female, 22 male), from 4 continents and 15 countries, between April and May 2013. They lasted between 10 and 25 minutes and were conducted in either Spanish or English. All but 11 were audio-recorded.

The Resistance of Bare Life: Media Narratives on Mapuche Hunger Strikes in Chile

The current Mapuche movement emerges in the context of processes of globalization and modernization affecting Latin America. Since the 1990s conflicts have arisen between Mapuche communities and private companies, due to the development of economic mega-projects in Mapuche territory. The government role has been contradictory: while they promote politics of recognition in education and culture; politics of repression are used to suffocate Mapuche protests regarding those mega-projects.

The mainstream media narratives have constructed a particular framing of the conflict. Due to the lack of plurality of Chilean mainstream media, a critical discourse analysis of media discourses is fundamental to deconstruct how a particular narrative is imposed as the unique regime of truth. An alternative discourse has been developed by the ethnic media, which emphasizes an historical and contextualized reading of these confrontations and its consequences for Mapuche communities.

The paper compares the discursive formations underlining ethnic and media narratives regarding the Mapuche hunger strikes of 2008 and 2010. The media coverage of those hunger strikes provided a space for contestation of notions of ethnic and national identity. The analysis of these narratives brings to the forefront the concept of bare life (Agamben, 1998). The management of the bare life of the Mapuche is at the core of the modern politics. The hunger strike becomes the only mechanism of resistance of those subjects reduced to the category of bare life. The application of the anti-terrorist legislation locates the Mapuche body outside the realm of law by creating this state of exception (Agamben, 2005) where bare life can be scrutinized and managed.

El acos sexual callejero comprende un conjunto de prácticas cotidianas como frases, gestos, silbidos, sonidos de besos, tocamientos, masturbación pública, exhibicionismo, seguimientos, entre otras, con un manifiesto carácter sexual. Estas prácticas revelan relaciones de poder entre géneros, pues son realizadas sobre todo por hombres y recaen fundamentalmente sobre mujeres, en la mayoría de casos desconocidas para ellos. Las realizan hombres solos o en grupo. No se trata de una relación consentida, sino de la imposición de los deseos de uno (s) por sobre los de la(s) otra(s). Se realizan en la vía pública o en (desde) el transporte público o privado, de manera rápida e intempestiva. Pese a tener impactos en la libertad sexual y el derecho al libre tránsito, estas prácticas han sido normalizadas y hasta justificadas en nuestra sociedad.

E-Justice in the Lowlands

It seems rather odd that in today’s network society, with its increasing penetration of information technology, online administration of justice and online dispute resolution (ODR) mechanisms appear to be fairly absent in Belgium and the Netherlands. Drawing on empirical exploration, the pervasiveness and forms of existence of so-called e-justice initiatives are mapped. Next, an attempt is made to explain the current situation. The contribution will be rounded off with an in-depth investigation into the opportunities and limits of e-justice in the context of contemporary Rule of Law regimes. More specifically, we ask ourselves to which degree such online initiatives could improve various aspects of access to justice, while at the same time safeguarding deeply rooted procedural and democratic principles such as due process and equality of parties. From this exploration of opportunities and limits flows a set of principles that might inform policy making in the cutting edge field of the online administration of justice and ODR.

Religion That Heals or Harms? an Examination of the Association Between Religion and Gender Differences in Depression

Gender differences exist in religious involvement and depression, with women reporting significantly higher levels in both. Most research finds that women benefit more from religion than men, as they are more involved than men in many facets of religion. Research has for example shown that prayer offsets the noxious effects of stress on well-being for women, but not men. Other research showed that women are more likely than men to make use of supportive religious networks through church attendance and other religious activities, and are therefore more likely to reap the instrumental and psychological benefits with those relationships. However, in contrast a small number of studies suggest that women may face unique challenges in the church that diminish or offset the benefits of religion to mental health. Compared to men, women are more often prescribed to traditional role patterns and a subordinate role in the worship service. In addition, in secular settings, women may be confronted with the “cost of caring” by trying to maintain both extensive church-related ties while also remaining active in more secular networks.

Unfortunately, the vast majority of current research is conducted in Anglo-Saxon and non-secular settings. In the current study, we aim to examine the association between religion and depression in denominating Religion from a cross-national comparative perspective. First results based on the European Social Survey (2006-2007) showed that religion, as measured by subjective religiosity and frequency of praying is associated with higher levels of depression, in both men and women, but more pronounced in women. These finding contradict the most frequent finding that religiosity is related to fewer depressive complaints, especially among women. We intend to further investigate our results by incorporating both individual indicators such as church attendance, as well as contextual moderators, such as religious context into our model.

Ces Rumeurs Qui Racontent Les Crises Politiques

SourceURLfile://localhost/Users/aure/Documents/PropositionISA2014.doc

L’avenir des nouvelles technologies de l’information et de la communication a contribué à la diffusion internationale et à l’accessibilité de discours informels divers, à l’éclatement et à la déhierarchisation des pôles d’enonciation et de productions de textes et au journalisme influencé par l’autopie de l’information en direct. Dans ce cadre, de nombreuses informations non vérifiées (rumeurs, hoaxes, râts et légendes urbaines) circulent, font place à l’interprétation de l’actualité et, plus particulièrement, des crises.

Depuis quelques années, le mot “crise” revient quotidiennement dans les médias pour désigner une situation économique, politique, sanitaire, socioculturelle ou organisationnelle. La crise intervient dans des situations d’incertitude et d’ambiguïté. Face à elle, les individus vont alors développer des techniques, des procédés pour la prévoir, l’aborder, la comprendre, lui donner un sens ou les aider à la traverser.

Les rumeurs et autres énoncés rumorains font partie de ces procédés qui permettent de rassurer et/ou de les évaluer collectivement. En tant que discours officieux, ce sont des informations non confirmées qui révèlent soit des informations véridiques mais non encore officialisées, soit des informations fausses, postulant une réalité non avérée ou une explication du monde alternatifs. Ils permettent aux individus d’évaluer leurs causes, leurs conséquences potentielles et les changements qu’elles amorceront.

The Social Transmission of Religiosity to Second Generation Migrants: An Interactive Model

In this paper, we examine the social transmission of religiosity to second generation migrants in cross-national perspective. We apply theories on cultural transmission and assess the influence of vertical interactions (i.e. through parents), horizontal interactions (i.e. through peers) and oblique interactions (i.e. through social institutions) and the religious context on the transmission of first generation religiosity to second generation co-ethnics. We use data from four waves (2-5; 2004-2010) of the European Social Survey (ESS) comprising 8,123 second generation migrants coming from 102 origin countries and living in 26 European destination countries. We apply cross-classified multilevel analyses to examine subjective religiosity and the frequency of praying. Results indicate that the social transmission of religiosity is successful when second generation migrants tend to be more religious than the religiosity among first generation co-ethnics. The transmission is more successful when interactions are favorable for this transmission process, however: when second generation migrants grew up in traditional families, are less socially integrated, have spent less time in educational institutions and in countries where religious is lower. Our research also shows important divergences between the transmission of subjective religiosity, which is more universal, and the frequency of praying, which is more susceptible to the influence of interactions. This could indicate a trend towards the privatization of religiosity among migrants in Europe in the long term.

Engendering Corporate Social Histories: Reflections of White, Afrikaans-Speaking Businesswomen in Gauteng, South Africa

Using a qualitative, gender-sensitive approach, this particular case study explores the narratives of a group of white, Afrikaans-speaking, women employed in the financial sector of Gauteng in South Africa. Based on semi-structured interviews this study has aimed to explore corporate women’s political and personal experiences and how this affects their career choices and ideas on how to ‘balance’ work and home life. The study shows how women attempt to challenge out-dated but ‘embedded’ patriarchal norms and values. The study also illustrates how working women try to manage spending the little free time they have with family and their children and how most of them still have to assume the bulk of the responsibilities of the household. This particular group’s position is fairly ambiguous within the contemporary South African society, since they have been known to have enjoyed certain privileges in the past relative to other groups, but they have also suffered and still suffer gender discrimination and gender inequality under patriarchy. Recently some have come to question whether white women should also benefit from Affirmative Action policies. This is not an easy question to answer since it has been widely acknowledged that women experienced discrimination and gender inequality during the apartheid era differently (Kongolo & Bojuwoye 2006: 364). Thus, it is important to understand their accounts of the past, as well as, the future.

Dilemmas of Combating Corruption: Afghan and Dutch Perspectives

Dutch troops in Afghanistan are confronted with situations in which the local population violates values and norms, that the soldiers themselves take for granted in a developed and/or deem essential. As a consequence they regularly have to decide whether or not to intervene and try to stop and change undesirable behavior. This is not only a matter of operational feasibility, but also and especially of cultural and moral desirability. In Afghanistan corruption is one such ingrained practice that brings with it difficult dilemmas for soldiers.

Corruption weakens the trust in an legitimacy of public offices and the government. Therefore, corruption has been identified as a major stumbling block to successful peace-building. As Afghanistan ranks among the most corrupt countries in the world, the abolition of its widespread corruption has grown into a main concern of the international community.
In principle ISAF is part and parcel of these efforts, but in practice it is not always self-evident how soldiers should act. Should fighting corruption be a priority to these “normal” Amsterdammers. Workplace innovation increases the quality of working life and the organizational performance (Oeij e.a., 2012; Kramer e.a., 2008). Moreover, the European Economic and Social Committee (2011) underlines that workplace innovation is essential for the future of Europe. The sociotechnical theory stresses that workplace innovation need to take place by an intervention in the technical system and in the social system (De Sitter e.a., 1997). In the social system, workplace characteristics (e.g. job complexity and job autonomy) influence the quality of working life and the organizational performance (Kramer e.a., 2008). Consequently, workplace innovation needs to stimulate an optimal balance between workplace characteristics. Smith e.a. (2008) show that European countries differ in workplace characteristics.

This research examines, inductively, the conditions which cause different workplace characteristics in European countries. In addition, country level conditions such as welfare regime, union density, participation rate and varieties of capitalism will be used in the analyses. The European Working and Condition Survey will outline the aggregated workplace characteristics in the different European countries.

stood, secondly, in its ‘singularity’ (Foucault 2000). It will be argued that it is not simply the re-emergence of Lombokro and Homo Criminalis because the question that should be asked is precisely how the new bio- and criminological approaches problematize crime, criminality and contemporary crime control in radical new ways. This singularity of the biocriminological program will be analyzed, thirdly, by a study of the strategic case of ‘neocriminality’ (Boersma 2013). This paper explores its claims, assumptions and how this involves a change in the governance of self, others and the state.

Who Benefits from Internet Usage? the Digital Divide of Mobilized Online Resources

Several studies have shown that the higher educated possess more or better Internet and computer related skills, such as the ability to find and process information. This implies that Internet usage should therefore also be more profitable for the higher educated, which is something that has not been studied often. We study this profitability of Internet usage in terms of the resources that people mobilize through their Internet usage, and we examine whether the higher educated mobilize online resources to a greater extent than the lower educated.

In order to learn more about these mobilized online resources we look at negative life events that are experienced by respondents and the way in which they dealt with those events. We analyze newly collected data from a questionnaire that was designed to test an inventory of online coping resources. This inventory consists of seven dimension of online coping (with 3 items each), such as emotional and instrumental support, active coping, and finding distraction.

We hypothesize that the higher educated mobilize online resources to a greater extent with regard to all seven dimensions. This challenges some of the insights of social capital research, which often finds the extent of emotional support to be unrelated to social status. Moreover, unlike what is normally found with regard to offline networks, the support comes from weak ties relatively often.

Humans, Animals, and Morality in a Nature-Inclusive Sociology

Disruption of natural systems and depletion of natural resources have become major concerns in society, both in their global reach and in their local impacts. Natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of the social world. Sociology has to embrace these insights in its analysis, but not by abandoning its hermeneutic method. Starting from these tenets, this paper sketches principles of a nature-inclusive sociology, building on studies of Moscovici and Foucault, and on earlier work of the author. In applying and elaborating these principles it explores the social implications of the commonalities of human and animal bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper then sets out to describe a social-practices approach to human-nature relationships that gives due attention to natural science findings and natural system dynamics while leaving intact the role of human agency and responsibility in protecting our natural world.

Child Benefit Reforms and Principles of Redistribution

Child benefits systems embody objectives of horizontal redistribution (i.e. from families without to families with children) as well as vertical redistribution (from higher to lower incomes). These changes are not limited to the characteristics of the child benefit system: is it universal or selective, or a combination of both? In this paper, we use these principles to position the current system of child benefits in Belgium in terms of horizontal and vertical redistributive outcomes. As an indication of vertical redistribution, we use the impact on income inequality and poverty, as well as how these benefits are distributed across income groups. We also present a measure for horizontal redistribution, trying to capture the fiscal flows from families without children to families with children, as well as between families of different sizes. Using the microsimulation tax-benefit model MEFISTO/EUROMOD, we can calculate vertical redistributive effects of the current system (baseline scenario) in terms of inequality and child poverty reduction. Our approach is innovative in that we take into account actual costs of childrearing based on a normative budget standard, and not only rely on the modified-OECD scale. Next, we calculate the effects of a set of alternative scenarios of three extreme positions: a fully universal system, a strongly income selective system and a strongly categorically selective system. What balance between horizontal and vertical redistribution is struck by these different scenarios, compared to the benchmark of the baseline? We conclude with the outcomes of a mixed system, and some generalizable recommendations for policy makers to combat child poverty.

The Doctor-Patient Relationship: Inequality in Pain Construct

The doctor-patient relationship refers to the quality of interaction process; also to the influence and control that role players have within the relationship. This signifies the notion of inequality of experience as well as the perceived and actual outcomes thereof. The objective of the research was to explore the assumption that there is a correlation between patient consultation and anticipated and actual levels of pain reported by males and females who were operated for knee and hip replacement in Libya. The research questioned the impact the doctor-patient relationship has on the ‘pain construct’ that allowed exploration of the ‘divide’ between the role players, amongst other variables the influence of gender and culture. Face-to-face in-depth interviews were conducted with medical doctors who undertook the surgery and with patients, while observations were carried out during doctor-patient consultation sessions. With reference to gender, more male than female patients experienced a higher level of organic pain than anticipated prior to surgery, and both male and female patients experienced higher organic pain levels who had not received ‘informing consultation’ prior to surgery. These findings indicate that ‘inequality’ of doctor-patient is still prevalent in some societies highlighting cultural factors at play, while it also poses the question to what extent congruence of ‘pain construct’ can be attained through a doctor-patient relationship that is characterised by actual and perceived narrowing of the divide traditionally defined by control and influence.

Epistemic Practices, Logics of Visualization: Migrants, Asylum-Seekers, and Deviant Subjects

In its study of ‘epistemic practices’ (Lynch 1993), the field of Science and Technology Studies has displayed a sensitivity towards the local articulation of objectivity and (scientific) truths, and the deployment of optical devices and inscriptions in these practices. In this presentation, we wish to take this sensitivity with the situated ‘fabrication’ of truths (Laturia 1999) into the study of three practices other than those of natural scientists: those of immigration officials deciding over the
The Multidimensional Spatiality of Citizenship: Understanding Tensions in a Mobile World

While theoretical discussions generally assume citizenship to be anchored in a particular geographic community, little attention has been devoted to how the geography of citizenship should be conceptualized. This paper argues that scholars disagree about the specific traits of citizenship that have over the years displaced the question of how to think citizenship spatially. The result of this is that political sociologists still silently draws on the outdated idea of citizenship as anchored in a national and homogeneous territory with clearly delineated borders. In an age of increasing cross-border mobility however, territory is no longer the only, or necessarily the most important, spatial form citizenship can take.

In this paper I will therefore firstly propose a typology for understanding the multidimensional spatiality of citizenship. The typology stems from an engagement with social geography, and distinguishes four spatial forms of citizenship: territory, scale, place and network. Secondly, I argue that the different dimensions of citizenship are not independent of each other, but are linked up with the spatial typology. 'Cone' received in statist terms as a legal status and rights entitlements, citizenship is structured in a territorial or scalar fashion. Understood as a practice of participation and belonging, citizenship is anchored in a place or a network. Thirdly, the paper ends by discussing the possible tensions derived from this multiple spatiality of citizenship. It does so by elaborating on the example of cross-border workers in the enlarged European Union. As a single space for free movement and labour, each European citizen can work wherever s/he wants on the territory. From the perspective of rights entitlements however, connections to the national level remain strong, leading to tensions between territorial mobility and scalar fixity. Simultaneously however, belonging and identification often remain grounded in a local place of origin, or become dispersed across space in networks of (ethnic) affiliation.

Obstacles to Housing Recovery for Socially Vulnerable Populations

Notions of resilience indicate that more resilient communities will experience less severe shocks to systems and will return to status more rapidly than less resilient communities. Concepts of social vulnerability suggest that different populations within communities have varying capacities to anticipate, resist, absorb, and recover from shocks. Consequently, different populations may be expected to manifest different recovery trajectories, both in terms of the magnitude of the shock as well as the rate of recovery. This paper will analyze the relations in recovery trajectories may lead to long-term redevelopment, displacement, and demographic change in the affected communities.

We analyze these variations using longitudinal household survey data, coupled with damage assessment and tax appraisal data from Galveston, Texas collected since Hurricane Ike, which struck in September 2008, causing one of the costliest disasters and most widespread power outage in U.S. history. Previous analyses indicate substantial differences in the severity of damage incurred by socially vulnerable populations immediately after the hurricane, as well as differences in the rate of recovery of housing values.

Here, we assess the relationship between the recovery of housing values and actions taken by occupants and owners. Panel models of housing recovery are enhanced with household survey data regarding occupant characteristics, financial resources, and repair behavior. These analyses build on our previous findings to better understand the obstacles to recovery for socially vulnerable populations. Understanding the vulnerability of a community to social and physical impacts from disasters helps local governments and planners, as well as the agencies that aid them, to support the development of resilient communities that are able to respond effectively to hazard events and recover quickly after impact.

Inequality in Tertiary Education: The Case of Hungry Students in South Africa

Education is seen by many people, especially in the global south, as the route out of poverty, towards development and social mobility in society. However it has become apparent that many students at South African universities do not have enough food to eat on a daily basis. Much research, mostly in North America and Europe, has focused on the role of nutrition in learning capability and learning behaviour, and it is generally acknowledged that a healthy diet contributes to successful learning and performance. On the other hand, little seems to be known about food consumption patterns and the extent of hunger among students in developing countries. Research has been conducted, within a quantitative and qualitative framework, on the phenomenon of “hungry students” at the University of Johannesburg over the past few years. Since becoming aware of the problem in 2010, the University management has launched interventions of various kinds to assist students in need, in having at least one balanced meal per day.

This paper will trace certain demographic and other characteristics of “hungry” students at the University of Johannesburg campus, as well as outline the institutional interventions undertaken to alleviate the problem. At a national level, the government, while cognisant of the problems experienced by tertiary students, particularly given South Africa’s apartheid history, has appointed a committee in 2010 to review the provision and conditions of student housing at South African universities. Their report included a section on a budget meal plan for students.

Global Vocabularies, National Outcomes: Latin American Youth Activist Strategies For Bringing Transnational Social Justice Rhetorics Home

This paper explores how youth in Latin America draw from global vocabularies of social justice to imagine and advocate for social change at home. The globalized circulation of media, interpersonal communication, and commodities has, we argue, shifted the cultural repertoires youth use to imagine citizenship. This is a heterogeneous phenomenon, but many examples point to a cosmopolitan sense of justice and ethics among youth. Youth draw on social media to engage with transnational publics to demand rights and new definitions of citizenship. They
denotes a presenting author. Abstracts are organized by first presenting author's last name.
hybridize non-Latin and Latin musical genres to argue for pro-indigenous equality and student rights. Finally, they obtain information from global sources to argue for policy changes on issues pertaining to the environment, same-sex rights, and Latin American sovereignty.

Amidst this turn to what can be seen as globalized ethics, we draw from Latin American studies to argue that the outcome of this transformation requires scholars to pose young people’s relationship to politics as a question in need of investigation rather than assuming a pre-defined relationship. As youth from Latin American imagine the future from global vocabularies, they seek to transform the meanings of the local, the personal and rather than localities serving as a barrier to cosmopolitan outlooks, Latin American literatures on youth political activism indicate that an awareness of an unequal world is embedded in transforming the immediate spaces in which they live.

Life Course Pathways to Later Life Wellbeing: A Comparative Study of the Role of Socio-Economic Position in England and the U.S.

A main paradox in comparative social epidemiology is that subjective wellbeing in the U.S. tends to be higher than in England in later life, although physical health is lower for all ages in England (Banks, Marmot, Oldfield, & Smith, 2007; Zivin et al., 2010). One proposed mechanism, the differential distribution of education and wealth in both countries, is at the core of this paper and will be extensively tested. Multiple measures of wellbeing, such as depressive symptoms (Radloff, 1977), satisfaction with life (Diener, 1984), and more eudemonic approaches to wellbeing such as CASP (Hyde, Wiggins, Higgs, & Blane, 2003) and psychological wellbeing (Ryff & Keyes, 1995), will be considered. Using a growth curve approach that investigates not only differences between people, but also within people over time, we will investigate to what extent life course approaches to socio-economic position, such as accumulation, social mobility or latent period, explain baseline differences and rates of change in wellbeing in later life. This analysis will be conducted using multiple waves (2002-2012) of two sister studies of ageing, the U.S. Health and Retirement Study (HRS) and the English Longitudinal Study of Ageing (ELSA). Both panel studies have a large, representative sample (N=20000 for HRS and N=10000 for ELSA) of the community residing population aged 50 or more, and contain comparable information on a wide array of life circumstances, among which gender, marital status, health, and both current and childhood socio-economic circumstances will be the most important for this analysis.

In Love with Place: Off-Grid Living and Place-Making

Why do residents of Western world live off the grid? This presentation provides answers derived from the perspective “off-the-grid,” referring to the living condition of a household or a community lying outside the electricity and natural gas infrastructure, but often also denotes disconnection from other infrastructures such as municipal water conduits, natural gas pipelines, road networks, garbage and waste collection, food supply chains, and telecommunications. Drawing from and contributing to the literatures on sense of place, rural studies, and voluntary simplicity we argue that while off-gridders embrace values typical of the voluntary simplicity philosophy, their biographical and geographical trajectories reveal that living off-grid is not a clear and free choice. The performance of the mundane complexities typical of the lifestyle renders off-grid living a uniquely radical, but also contradictory and even paradoxical, constellation of practices through which new marginal spatialities are constituted. Drawing from ethnographic fragments culled from a multi-sited ethnographic project unfolding across Canada we present a thickly descriptive look into the motives and lifestyles of off-gridders.

Controlling the Social Cost of Local School Markets?

Education policy is evidently in a state of change across industrialised coun-
tries. The fragmentation of mobility has manifested in a local government reforms, privatisation and agencification, whilst the core executive’s capacity to steer has eroded. In toto, a wide variety of endeavours to move away from the firm idea of state-funded, state-controlled and state-provided compulsory education have emerged. Along that trajectory the Finnish compulsory education system shifted during the 1990s from one of the most centralised to one of the most decentralised. Consequently, segregation between municipalities, residential ar-
eas and families has emerged also in Finland, and the variation between schools, measured by PISA scores, has recently increased.

Our aim is to elaborate the Finnish local spaces for school choice, and the ways in which the negative outcomes of school choice and overall diversification are governed by contrasting three distinctive local contexts. By analysing administrative statistical and documentary data, we aim to model how local authorities respond to novel, local inequalities, and the demands of freedom to choose and equality of opportunity, simultaneously.

Our analysis models three different sets of policies in the municipalities in Metro-
fication (Kempele, Hämeenlinna, Jyväskylä), First (the municipality of Espoo), the local institutional space for school choice is constructed in favour for choice, without any current policies for positive discrimination. Second (Vantaa), school choice is more restricted, the policy is to prevent segregation by emphasising the uniformity of schools. Third model is ‘very pro-choice’ (Helsinki), where the policies to prevent segregation have included actions in regional policy and direct positive discrimination to schools located in sub-standard socioeconomic status neighbourhoods. By revealing the diversified policies concerning positive discrimination and other forms of control of negative externalities, we discuss about the formations and estimations of social cost for school choice.

Assessment of Managerial Skills in a PSO: The Eufor Case and Its Capacity Building Role

The European Union (EU) launched a military operation in Bosnia and Herzegovina (BiH) in 2004 named “EUFOR - Operation Althea” to assist Bosnia by ensuring safe and secure environment and conducting capacity building and training tasks in support of the Armed Forces Bosnia and Herzegovina to facilitate their progress towards EU and Euro-Atlantic integration. In the meantime, militaries directly and indirectly are suffering from spending cuts and efficiency and effectiveness have been core issues of defense forces. Eventually this emphasizes a better assessment of training of military personnel in peace operations. The current attention is focused on how to train prospective military personnel for asymmetric warfare. Developing management skills may have better PSO experiences. The aim of this paper is to assess the managerial skills of EUFOR peacekeepers from participant perspective and to emphasize the individual capacity building role of PSO experiences in removing the training deficiencies of peacekeepers. The research will also try to discuss wide-ranging impacts of asymmetric warfare on the officer profession, military training and education. To assess different managerial skills such as decision making (problem solving, team working, motivation, and conflict management etc.), they prioritize their tasks as wives, mothers, sisters and daughters and 99% of them adhered to the retrograde practice of purdah system. All these activities were directly related to the level of education and income of the household. The study reaffirms the implication of possibility for enjoying leisure activity -as defined globally is directly proportionate to one's education and resources “instability and uncertainty that characterize the world today have their origin in the fact that an immense and vertiginous accumulation of wealth by a few has precipitated the dispossessions, impoverishment and exclusion of millions of human beings in all latitudes of our planet.”
Independent film production, characterized mainly by its low budgets and by the absence of a hierarchical division of labor, acquires increasing recognition by consecration instances of traditional Brazilian cinema. It is also notable a proliferation of specific instances – such as independent film festivals or distribution companies focused on independent production –, which may indicate the beginning of an autonomization process.

Here we bring empirical data to situate the contemporary independent production in the large Brazilian cinema field and especially to show how reputation and consecration here are constructed in opposition to the values/practices of industrial cinema. And it means not only the adoption of certain aesthetic positions, but also the adoption of some practices in terms of social organization of production. We also call attention to the fact that, among the independents, consecration sometimes brings the “reverse effect” of threatening the representation of independence – which is a subject of dispute.

How to understand independent agents, for which categories as dominant or dominated, established or newcomers, are all unsuitable in some extent? How to analyse the construction of consecration in a context where the many forms of institutionalization (including some kinds of recognition) may threaten the very condition of “independent”?

VARRIALE, ANDREA* (Bauhaus-University of Weimar, andreaduurvarriale@hotmail.it)
The Management of Public Spaces in Naples: An Essay in Urban Legal Geography

The main red thread crossing the debate about the disparity between Italy’s northern regions and their southern counterparts is the polarity between the categories of “modern” and “pre-modern”. This polarity has been used to portray the two regions as intrinsically different in their economies, politics and cultures. Although the use of this dichotomy has proved useful for emphasizing the gap between the two, this has been achieved, I argue, at the cost of exaggerating their differences: the South has been described with the categories of pre-modernity, community, informality. Symmetrically, the north has been associated to modernity, society and formality. The attributes of “developed” and “under-developed” have been assigned accordingly.

I argue that a study of formality and informality can be helpful to understand how these territorial imbalances are reproduced, provided that the former are understood as simultaneous, not mutually exclusive systems of rules. To do so, I analyse how three significant public spaces in Naples, southern Italy’s biggest city today and its capital in the past, are regulated via formal and informal rules. With personal observation and interviews with local authorities, planners, local activists and users, I seek to understand how the interaction of formality and informality produces these spaces. Both formal and informal regulation, it is posited, exist in the city, and neither is intrinsically desirable or conducive to development. Rather, well-functioning public spaces are posited to result from a distinct mix formality and informality, whereby the two are both present and complementing each other. An explorative case study will be carried out in January 2014. There, the two sets of indicators (measuring the relative and the absolute strength of formal and informal rules) will be tested.

At the RC21 conference I wish to present that case study and an assessment of the methodology adopted.

VASEY, HUW* (University of Manchester, huw.vasey@manchester.ac.uk)
Diversity and Inter-Ethnic Marriage – An Agent-Based Approach

Inter-ethnic marriage, both a cause and a consequence of immigrant integration, is generally used to imply that the social distance between groups is low and, by extension, that community cohesion is high. The decision to marry out-side (or even within) one’s group is often regarded as stemming from individual preferences and opportunities for contact. However, many anthropologists and sociologists have noted that culture-specific norms of kinship and reciprocity have a profound effect on who may be eligible partners (Ballard 2008; Gardner 2006), echoing segmented assimilation theory’s focus on the importance of community and family influences in shaping assimilation processes.

Using a descriptive agent-based modelling approach, we seek to investigate the processes of partner selection in diverse communities, focusing on individual preferences, opportunities for contact, and group norms to uncover how these may lead to differential rates of inter-ethnic marriage. Agent-based approaches provide an ability to study ‘global’ phenomena simultaneously with their causal ‘local’ processes (and vice-versa) in a dynamic setting. They allow us to investigate the development of population-level phenomena from a simulated ‘local’ social space of norms and values populated by acculturated agents familiar to sociologists, potentially providing insights into community cohesion and inter-ethnic marriage which would not be available from other sources. Whilst agent-based models of inter-ethnic marriage have been developed previously, they have overestimated rates of inter-ethnic marriage and largely ignored the group-level processes necessary for a global understanding of inter-ethnic marriage. Utilising research and evidence from quantitative and qualitative sources from across the social sciences, we thus seek to develop a complex model of emergent processes of differentiation and change in the marriage patterns and social cohesion of migrant communities.

VASILIEVA, LESSYA* (docent, lessya-vasilieva@ya.ru)
The Quality of Political Elite and the World Crisis

The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. The representatives of elite have such mental qualities as sophisticated cognitive intellect, diverse range of behavior and social attitudes and aims allowing them to bring maximum benefit to the society. The ersatz-elite have some common qualities with elite. But its representatives haven’t diverse range of behavior and their ideas of values are mainly targeted at satisfaction of personal interests not regarding public benefits.

The representatives of elite and ersatz-elite are presented on all levels of social hierarchical pyramid. The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. Ersatz-elite introduce or develop social mechanisms depriving people of any control over political machinery. It turns out that in political and economic spheres of society deficient motivation and deficient satisfaction of basic needs are displayed through political indifference, social and economic frustration.

The present crisis does not have only economical but mainly social roots and cultural effects. It needs to specify the term Social Rent with new scientific definition. An equivalent formulation may be given in terms of the social parasitizing when given such a status by government. Social rent is a form of unecomonic compulsion. It is necessary that such status must be admitted by productive, market and state forces. The power and economical monopolies are the social factors which are converted into settled rent factors. Institutionalization of social rental relationships destroys economic and social competition.

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

The paper problematizes the literary text that becomes a subject of the sociological analysis when representing social processes and phenomena as well as social practices of certain groups. The narrative analysis reveals a deep structure of the text reflecting values, norms and social attitudes used for describing social groups and social processes. The analysis correlates with structural hermeneutics of G. Alexander implying sociocultural research of semantic structures of the modern mass literature where social myths and archetypes are updated, serving as interpretive models to explain and organize (construct) the social world.

The paper aims to show the results of the empirical research while proposing an original method of the narrative analysis of 18 American female novels, top rated in the largest specialized websites. The method synthesizes various courses in narrative analysis (event-structure analysis by D. Heise and L. Griffin), structural approach (R. Barthes, V. Propp, T. van Dijk) and K.Yung's theory. It consists in constructing a causal sequence of narrative events interpreting it in the context of the social myth. The method's steps include:

- studying the life course of the heroines;
- selecting significant events (based on structural indicators);
- narrativization of the chosen events using the grammatical approach (verbs as action highlighters);
- forming causal sequence of the events;
- detecting the general narrative structure interpreted in the context of the social myth.

The resulting narrative schemes form 3 basic archetypical female role-models within the cosmonogist myth and can be considered as interpretive patterns for describing gender role transformation in modern American society. The results of this empirical research can be verified in the context of feminist and post-feminist theories.

Modernization of Values and Its Implications

This work is based on the understanding of culture following the lines laid out in the works of L. White, P. Bohannan, A. Montague etc. and defined, loosely, as a system of non-biological regulators of human behavior (such as values, norms, attitudes, etc.). Just a few generations ago the majority of Russian population was rural, lived in the countryside environment and was engaged in natural-subistence economy. Their culture corresponded to the low-level technological environment. The process of modernization has changed the environment in just a few dozen years, leaving the some cultural adaptors far behind. Some people experience conflict with impacts and challenges of modernization such as new women status, political democracy, market economy etc. We can see cultural differentiation on culture modernization continuation. Two poles of the continuation axes can be found. One of them is pole of modern culture acceptance, another one is pole of modern culture rejection. The both poles are Weberian ideal types. The Likert scale was used for culture modernization measurement in our survey. The scale was validated by R. Indelhart's index and S. Schwartz's scale.

Socio-cultural types often differ according to the condition of socialization also corresponding to the generational differences. More modernized type of culture is adapted to the more modernized type of social environment. New generation has an opportunity to enjoy a more modernized culture than the old one. In this work, we attempted to evaluate the cultural changes between generations and polar socio-cultural types quantitatively. This longitudinal study was mostly based on a survey response data among university students in the city of Perm (Russian Ural) since 1991 till 2013. All samples covered more than 500 students. We can compare values of modernization between last Soviet generation and first Post-Soviet generation. The study also discovers the implications of these value changes.

Integracism At Work. The Case Of Germany

This paper further explores the notion of integracism, which has been introduced by the author briefly in a previous paper. The notion of integracism refers to a specific interpretation of the notion of integration with implicitly racist assumptions. This racially biased and ethnocentric notion of integration frames the meanings of managing ethnic diversity in Germany. Integration policies and management measures are deployed to "aid the better integration" of ethnic minorities, who are widely seen as deficient and difficult to integrate, rather than adopting diversity management measures to foster equality, fairness and inclusion at work. In that frame, ethnic diversity is depicted as a source of potential problems. There is a surge in the use of the concept of integration in management of immigration, not only in Germany, but also in France and in the UK in recent years. The notion of integration is the dominant concept in the management of ethnic diversity in Germany. The aim of this paper is to examine the corrosion of the notion of integration with racial bias, which undermines the overdue proposal of equal opportunities at work. Arrangements of integration for immigrants include requirements of extensive documentation, training, point based calculations based on qualifications, economic wealth and experience, citizenship rituals. Most of these requirements are highly variable, based often on racial profiling. It could be argued that these politics and practices of managing ethnic minorities and immigrants are not as innocuous as they may seem at first sight. This paper shows how ethnocentrism and racial bias influence employment practices, leading to the exclusion of highly skilled ethnic minority workers.

The paper operationalises Bourdieu's key concepts, field, habitus and symbolic violence and draws on a large qualitative study based on more than 40 interviews, a case-study, focus group as well as visual material and a research diary.

Teaching Ourselves and Reviewers Institutional Ethnography in the Process of Publishing

Methods textbooks in the United States often introduce institutional ethnography (IE) as one of a number of qualitative methodologies used by researchers, rather than as a mode of inquiry whose aim is to provide an alternative sociology. Institutional ethnography, as proposed by Smith (1987), is a much more radical departure meant to challenge the objectified subject of knowledge including the discursive practices of established social science discourse. This presentation focuses on how the work of institutional ethnographers differs from qualitative researchers who are often sympathetic to IE, but fail to recognize these differences in practice. Drawing on our experience of publishing our research in standard sociology journals, we explore how reviewers' comments and questions turn subjects into objects of investigation and explanation, standpoint into a subject
position or category within society, everyday world into the object of study, and generalize forms of consciousness into generalizations about people. We discuss the ways we have responded to reviewers and how this process has taught us more about the distinctive features of institutional ethnography as an alternative sociology.

La Adopción De Un Modelo Organizacional Como Estrategia De Comunicación Para La Transferencia Del Conocimiento y Tecnología En Centros Públicos De Investigación
El presente trabajo se plantea la necesidad de contar con un modelo organizacional como estrategia de comunicación institucional para la transferencia del conocimiento y de la tecnología en centros públicos de investigación de la región del Bajío, a fin de identificar la forma de comunicación más efectiva en materia de difusión de los procesos de transferencia de conocimiento y tecnología de cada Centro. Se parte de la premisa de que el conocimiento se presenta como el activo principal para la transformación y el progreso de toda sociedad, particularmente en organizaciones que se han creado con la intención de contribuir al progreso de la sociedad a la que se debe, fortaleciendo la economía del conocimiento, a través de la transferencia del conocimiento, y de la tecnología. Se concibe a los Centros Públicos de Investigación como sistemas vivos, en permanente movimiento, cambio, adaptación y evolución. La estrategia metodológica con la que se ha realizado la investigación, es desde un enfoque cualitativo, siendo el estudio de caso uno de los instrumentos metodológicos. En este artículo se pretende mostrar formas para una adecuada comunicación institucional de los procesos de transferencia y tecnología en Centros Públicos de Investigación.

Alienation of Scientists in Post-Communist Europe
This paper focuses on the alienations’ problems of scientists: researchers in scientific institutes, centres and universities in Post-Communist Europe. This topic hasn’t yet received enough attention, especially in sociological researches of these countries. After the clash of the USSR it was seen decreasing of scientific study especially in funs it was a basis of science but also in humanitarian knowledge. This process was accompanied by cuts of wages of researchers, their social exclusion from decision-making process and growing alienation. From the other side many researchers went abroad from the countries of their residence and some of them begun to participate in different projects and programs of foreign countries. They didn’t identify results of their researches with former Homeland but linked their achievements with the place of present residence. This situation provoked appearance of the new forms of alienation. The paper analyzes manifestations and consequences of such alienation in scientific practices. I’ll try to give certain contribution to the discussion about alienation in Post-Communist Europe. Haw did dramatic social changes that had taken place in these countries stimulate growing alienation of scientific researchers in different Post-Communist countries? From the other side scientific cooperation contains reserved possibilities to help scientific researchers overcoming self-estrangement. Haw the changes of political life in their Homeland could influence their isolation? Thus the paper focuses attention on this background of people’s alienation. My analysis builds on media accounts, interviews with scientific researchers and data of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding sources of alienation in the scientific sphere of the Post-Communist European countries and for development of the general Alienation Theory.

Identities through Big Sportive Events
This paper focuses on the identities’ problems of participants of big sportive events: Olympic Games, international championships and competitions. This topic hasn’t yet received enough attention, especially in sociological researches. In real practices of last years it was seen increasing of athletes who participate in different competitions as representatives of foreign countries. From the other side many fans go to the games identifying their self with sportive clubs and fan-movements and with their states. Thus the new forms of identities appeared. The paper analyzes the sources and manifestations of such new forms of identities in real sportive practices. I’ll try to give certain contribution that looks into the role of national factors and local cross-national relations in the region of the residence of big sportive events in formation of different identities. Many local places of international championships are characterized by multinational population with very long and complex history (London, Sochi, Rio de Janeiro, Tokyo and so on). Haw big sportive events impact on local, regional and national identities in different countries? From the other side sport contains reserved possibilities of cooperation and solidarity not only on the local and regional but also on the global levels. Haw the Olympic spirit and changes of political life in the Region of the residence of big sportive events could influence the choice of identities? Thus the paper focuses attention on this background of people's identification. My analysis builds on media accounts, interviews with officials from the Organizing Commissions of big sportive events and data’s of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

VEENHOVEN, RUUT* (Erasmus University Rotterdam, veenhoven@ese.eur.nl)
Why Sociological Theory of Happiness Falls Short
Happiness in the sense of life satisfaction is a psychological phenomenon in the first place. Consequently most sociological explanations draw on psychological theory, often implicitly and with little view on its limitations. A dominant perspective in sociology is that happiness results from comparison between perceptions of life-as-it-is and standard of how-life-should-be, which view fits with the notion that happiness is a social construct and as such culturally variable. Explanations in terms of universal affective appraisals and needs are marginal in sociology, as well in biological sociology.

Though not suited for explaining happiness as such, sociological theory is apt for explaining conditions for happiness, societal conditions in particular. Empirical research shows that conditions for happiness are quite good in modern society, where its inhabitants live now longer and happier than ever in human history. Yet most sociological theorizing is about the miseries of modern society.

Some sociological explanations for this sociological short-sightedness are discussed.

Violencia, Armas De Fuego Y Mortalidad Juvenil EN Mexico
La violencia en México ha ocasionado un alto número de víctimas -sobre todo en los jóvenes-, muchas de ellas provocadas por el uso de armas de fuego. Objetivos: Analizar el comportamiento de la mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México en los últimos 20 años e identificar factores socioeconómicos asociados a sus variaciones interesetales en el trienio 2009-2011. Material y Métodos: Con la información oficial sobre defunciones y arma fuego se calcularon tasas de mortalidad por armas de fuego en estas regiones. Conclusiones: El aumento de la mortalidad por armas de fuego, especialmente entre los jóvenes, es un obstáculo para el incremento de la esperanza de vida en México. Este es un problema social y de salud pública que debe ser abordado de forma interdisciplinaria.
The Disadvantaged Position of Muslim Women in the UK Labour market and the Formation of Religious Identity

Among ethnic minority groups in the UK, Muslims are generally in a disadvantaged position, experiencing many social and economic inequalities. Muslim women suffer from high unemployment rates and low levels of educational attainment compared to their male counterparts and other ethnic minority women. This is despite policies to reduce the diversity gap in the UK labour market based on gender and religious affiliations. The disadvantaged position of Muslim women can be seen as Muslim penalty and failure of integration and social cohesion. Many of my young educated informants, belonging to second and third generations of immigrants, resonated "ontological insecurity" leading to the formation of Islamic identity. This can often be manifested by embracing visible Islamic dress, which is a conscious decision, despite the disproportionate discrimination and negative attitude towards veiled women as a result of displaying their faith in public.

Applying feminist theory and questioning Muslim women’s place as a marginalized group at the centre of social inquiry, this paper explores Muslim women’s experiences of religious and cultural norms and values. Questionnaire interviews with more than 60 Muslim women in the UK illustrate their attitude towards religion and work, particularly paid work outside the home environment. My findings indicate a feminist consciousness within the Islamic framework, whilst searching for principles free from religious cultural constraints. They promote their interests, rights and gender equality both in the family and wider society in multifaceted and sometimes contradictory ways.

The Occupational Challenges of Female Architects in Iran

The Occupational Challenges of Female Architects in Iran

In the recent decades, Iranian women's access to educational opportunities in professional fields such as architecture has been limited. In many countries, architecture is considered a male domain. When professional women enter these fields as engineers, they often face discrimination and have to work under men's authority within the male-dominated social structures. This paper builds on emerging literature around 'middling transnationals' (cf Ho 2011). Drawing on empirical research among Indian IT workers in Singapore, the paper advances two propositions. It argues that there has been insufficient consideration of skill migration in terms of national and racial hierarchies of opportunity, rights and conditions; and that so far, literature on skilled transnationals has been too receiving country-centric. It offers an interesting example of a highly transnational skilled occupation that has become associated with workers from India. It is argued that it has become associated with India in ways that naturalise precarious forms of employment and attracts less favourable conditions than occupational categories more associated with White professionalism. Using the example of Singapore, we argue that conditioning occurs via four intersecting factors. First, Singapore has a long-standing tradition of visa hierarchies which situate White, European transnational elites at the apex of the occupational hierarchy, and dark-skinned workers from the Indian sub-continent at the bottom. Although 'other' transnational workers have been assimilated among these social factors, but they are not viewed as their due and what they consider to be normal. Third, we suggest a more global circulation of colonial-era ideas of racial hierarchy continue to cast a long shadow even to the most modern of occupations like IT. Finally, IT as an industry has emerged as a quintessential post-industrial service industry characterised by highly precarious sub-contracting forms of transnational labour supply.

Hierarchies of Middling Transnationals: Indian It Workers in Singapore -- CANCELLED

This paper builds on emerging literature around 'middling transnationals' (cf Ho 2011). Drawing on empirical research among Indian IT workers in Singapore, the paper advances two propositions. It argues that there has been insufficient consideration of skill migration in terms of national and racial hierarchies of opportunity, rights and conditions; and that so far, literature on skilled transnationals has been too receiving country-centric. It offers an interesting example of a highly transnational skilled occupation that has become associated with workers from India. It is argued that it has become associated with India in ways that naturalise precarious forms of employment and attracts less favourable conditions than occupational categories more associated with White professionalism. Using the example of Singapore, we argue that conditioning occurs via four intersecting factors. First, Singapore has a long-standing tradition of visa hierarchies which situate White, European transnational elites at the apex of the occupational hierarchy, and dark-skinned workers from the Indian sub-continent at the bottom. Although 'other' transnational workers have been assimilated among these social factors, but they are not viewed as their due and what they consider to be normal. Third, we suggest a more global circulation of colonial-era ideas of racial hierarchy continue to cast a long shadow even to the most modern of occupations like IT. Finally, IT as an industry has emerged as a quintessential post-industrial service industry characterised by highly precarious sub-contracting forms of transnational labour supply.
The Politics of Social Policy Expansion in Latin America

Welfare systems in Latin American countries have been significantly expanded during the twenty-first century. After decades of a social policy based on social insurance programmes which tended to cover formal sector workers and their families, new social programmes have been introduced and coverage of existing ones has been extended to reach population groups previously excluded throughout the region. This expansion processes have been explained as an outcome of the consolidation of multi-party electoral systems, since parties in government now compete for the sympathy of the electorate by introducing policies that favour the majority, notably social policies. However, even if this perspective clearly demonstrates the effects of democracy on welfare policy, it falls short of explaining the variations in the expansion models adopted in different countries. This paper aims to contribute to the existing literature on Latin American social policy by attempting to explain such differences, combining institutionalist and interpretivist approaches. The chosen case studies are Argentina, Brazil and Mexico, the three largest countries in the region, where different expansion models have been adopted. The paper examines and compares the socio-political arrangements that enabled and triggered the changes in each country. Findings show that the variations can be explained in terms of the effects of democratic transitions and the party systems that emerged from them, the degree of social mobilisation around social policy issues and the capacity of social movements to break with the neoliberal hegemony established in the region during the last two decades of the last century. Social welfare expansion, as a consequence, contributed to temper gross inequalities as well as to displace and redefine the fault lines governing social conflict. The article concludes with an outline of the main features dominating post-liberal corporatist social policy hegemony in the region today.

Construcción De Una Secuencia Didáctica Universitaria En Modalidad Presencial Integrando Aplicaciones Para Ipad y Smartphones

La necesidad de innovar la práctica docente en el aula se hace cada vez más evidente ante la falta de interés de los jóvenes universitarios por el modelo tradicional de clase en donde predomina la presentación unidireccional de información. Con base a la reflexión de Díaz-Barriga (2013) sobre la importancia de construir secuencias didácticas diferentes que despierten en los alumnos el interés y la motivación de su aprendizaje, se presenta el resultado de analizar y construir secuencias didácticas innovadoras mediante el uso de aplicaciones y software para Ipad, Tabletas digitales y Smartphones de los alumnos. Esta investigación se inserta en el paradigma de la investigación-acción, para lo cual se ha conformado un grupo de profesores no especialistas en tecnologías de información y proveedores de diversas disciplinas que se enfocan en analizar y probar diversas alternativas tecnológicas para adaptarlas a las necesidades de educación y formación en el contexto de la Educación Superior en México. El resultado ha sido la selección y elaboración de una guía de uso de 3 herramientas de software diseñadas para el tipo de dispositivo señalado, que han permitido construir secuencias didácticas innovadoras presenciales enfatizando la interacción profesor-alumno y del alumno-alumno, permitiendo instrumentar una primera fase del Modelo Educativo de la Universidad de Guanajuato enfocado en el aprendizaje significativo y el desarrollo de las competencias deseadas del alumno.

Professional Interests, Organizational Goals and the Mobility of Football Players in Europe

The mobility of professionals has important repercussions for organizational performance and the subjective career success of the professionals involved. Within professional football, team quality is directly affected by the movements of players to and from the club. Transfers have a big impact on player careers as well, as footballers changing clubs increase their income or revitalize their career with a renewed chance on first team football. Whereas previous research examines these movements from the perspective of individual players, this study analyzes to what extent player transfers are shaped by the interaction between institutionally embedded organizational goals and the interests of footballers.

Using event history analysis to estimate the probability that a player moves to a different team, I argue that player transfers are a function of the location of an organization in the field and the position of a footballer in his team. In general, fringe players are more likely to move. This is especially so for high status teams, where such players move to pursue their interest of first team football. Moreover, players of underachieving high status teams are bound to be transferred, as the club lets go of the players it blames for its relatively low performance.

This contrasts with the transfer probabilities of players in low status teams. The key players of these teams have a higher probability to move, as they are looking to increase their career rewards by moving to a higher placed team. Moreover, key players in overachieving low status teams are particularly likely to be transferred, as such teams sell their best players to cash in on their hard earned success.

In sum, this study highlights how professional labor mobility is shaped by the interaction between institutionally defined interests of professionals and the goals of the organizations they work for.

Gender Asymmetry As the Barrier of Political Modernization in Russia

Considering activity of the women organization in the context of Russian political life we establish the fact of Gender Asymmetry in Russian politics. Representatives of women in Parliament (State Duma) vary from 10% to 14%.

The main features of social context determining gender asymmetry are the following: feminization of poverty, latent labor discrimination; Social and cultural inertia accompanied with gender stereotypes; Ignoring gender interests in political sphere. As the result one can see marginalization of women in the political and economic spheres.

We consider Globalization as the factor inspiring political activity of women in Russia and analyze role of more than 1500 thousands women organization and pay attention to the positive dynamic of their activity. Most of them act in social sphere (Maternity and childhood protection (39%), The help to socially deprived groups (29%), Providing of public services and amenities to city environment (29%), Healthcare (21%) and Education (22%), Protection of social interests (13%), Human rights (10%).

Main reasons of low representative of women in Politics can be described in different terms: Peculiarities of political socialization; structural factors (unequal distribution of resources owned by men and women; situational and biographical factors. For many years even the very consideration of the Law “On guarantees of equal rights and equal opportunities for men and women” was blocking. The Law about quotas for women in the party lists also was not adopted, despite the extensive discussion in the information and the public sphere. The trend of gradual increase in the proportion of women MPs in the federal and regional legislatures is very low still.

Hidden discrimination in the political sphere restricting activity of women leads to the different problems of social sphere.

Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis

Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis

During the last three decades the visibility of religion has increased in the public sphere of many European societies. This has not only to do with the arrival and settlement of large numbers of Muslims and other non-western immigrants in these countries, government policies for managing religious and ethnic diversity, but also with political agenda setting of powerful secular forces. Illustrative for this is the political debate on ritual slaughter in the Second Chamber and the Senate of Dutch parliament in 2011, initiated by the Party for the Animals. In this presentation, the argumentation used in this debate will be analysed from the perspective of contextual discourse analysis. The arguments will be related to features of the main participants in this debate as well as to the wider context of Dutch politics in the wake of “9/11” and ‘the Fortuyn revol’ in 2001. These events have contributed to a reframing of Dutch identity in cultural and secular terms. Within the new created frame religious discourses such as Jewish and Islamic ritual slaughter are defined in opposition to secular Dutch identity.

Criminalizing Inequality: The Narratives of Women Formerly on Death Row in the Philippines

This paper delves into the pathways to prison of women who once received the death penalty in the Philippines. Drawing upon extensive participant observation at the only two existing women's prisons in the country and in-depth interviews with 27 former death row inmates, I examine how the women framed the circumstances that brought them to death row, based on their understanding of their identities, relationships, and social worlds. I analyze the link between the women's histories of victimization, social and economic marginalization, and substance abuse problems and their crimes. I also consider how the experience of deception and betrayal in close relationships, compounded by corruption in the criminal justice system, constituted a pathway to death row for the majority of the respondents. I discuss the implications of their narratives for the discourse on women and crime.

The women in my study were largely in marginalized positions in their families and relationships, at work, and in society in general. Their crimes resulted from their efforts to survive on a day-to-day basis and cope with their circumstances. Their narratives reflect many facets and social realities of low-income and working-class culture in Philippine society. Their accounts of victimization, violence against specific men and even women and children, drug abuse and/or drug dealing in response to social and economic marginalization, cooperation with illegal activity as a result of relational responsibilities, corruption on the part of government and law enforcement agencies, and fatalism and fatalisation, illuminate the contours and dynamics of their conflict-ridden world. My paper exposes the challenges to the dominant discourse on women's crime, as illustrated by their narratives—as predominantly low-income women in a postcolonial, low-income nation enmeshed in poverty and institutional corruption.

Microblogging and Macro Weather: Climate Change Risk Discourse on Twitter

The social web represents a new arena for local, national and global conversations and will play an increasing role in the public understanding of science and the creation of risk discourses. This paper presents an analysis of climate change social representations on Twitter, analysing over 60,000 tweets collected using a random week method. The analysis includes a combination of web metrics, latent semantic analysis and semantic network analysis. Results indicate that most active users on climate change are distributed according to a power law distribution and that web metric indicators suggest a moderate conversation on the topic. In terms of content, there is a remarkable complex network of topics that hints to a rather multi-dimensional and complex risk discourse accounting for complex causal links between climate change and natural, social and economic consequences. Most of the tweets cluster around the domains of the effects of climate change, the measures that are proposed to adapt to it, the policy debate between policymakers and energy industry, and calls for action for offline events. Moreover, the media economy of the tweets, the web links shared in them, are from a wide set of sources with a major role played by traditional media but with a substantial presence also of scientific journals and NGOs websites.

Psychology and Learning Difficulties

In the context of a sociological thesis conducted in France in primary schools, the focus has been on the issue of the diagnostics and devices used to help children with learning difficulties. The purpose of this paper is to analyse the role of psychological approach in the management of academic difficulties. In the attempt to understand how the family, the mother figure in particular, are blamed for the learning difficulties of their children. It will be seen that the lifestyle and educational habits of families are analysed by teams of professionals, and that educational deficiencies of the parents. This would damage the mental form of the child and lead to difficulties in their learning. In schools where children are mainly or exclusively of modest background, it seems that these psychological approaches are nearly exclusively the methods being used. Thus, children going to these schools are more likely to be diagnosed with mental illness than in a school with students from the upper-class. This psychologising tendency to put the responsibility on the family or the child for his failure, while ignoring the issue of the gap between the culture of the school and the one of children from modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that the psychological approach used by teachers allow them to suggest reasons for the difficulties faced by children and to put in place solutions. Indeed from a psychological perspective, the parents are seen as 'actors' of the success or failure of their children. The challenge for schools is then to accompany parents to transform their habits and their way of parenting.

Changing Trends In Migration Flows From Mexico To The United States

Although some observers tend to view Mexican migrations to the United States as a common socio demographic phenomenon due to the vicinity of the two countries in the context of unequal economies, late drastic reduction in migration flows from Mexico to the United States pose several questions. In the views of some analysts this is mostly associated to the security measures practiced by the U.S. government on its southern border after September 11, however there are other indications that point out in a different direction suggesting that these changes might be associated with a set of several factors in which demographic variables along with economic, labor market and political ones are closely interconnected, or if not is the case they coexist and interact in the same political arena.

Other variations of Mexican migration flows have to do with the repatriation to Mexico of huge numbers of irregular or undocumented migrants most of whom were previously residing with their families in the U.S. On another dimension there have also been some changing characteristics in the flows of Central American migrants crossing Mexican territory on their way to the United States. This new trend has been offering a challenge to Mexican authorities with new implications to the legal Mexican political framework.

One objective of this presentation is to offer data and information related to the kind of changes that have taken place lately not only in terms of Mexican migrations to the U.S., but with respect to the different political actions in the U.S. as well as in Mexico with reference to Central American migrants crossing the country and staying in the country.

A second objective is to interpret these new modifications at the light of other general changes especially those concerning the “management” of migration flows by other governments.
Learning from Informality? A Case Study to Rethink the Misfit Between Formal Policy Strategies and Informal Tactics of Citizenship

Dutch disadvantaged city neighbourhoods face a wide variety of policy strategies to regenerate housing and public spaces, integrate migrants, support families, and make these urban areas safer and more attractive to the middle class. Residents of these areas have, however, little control over current tactics to regenerate the environment more equipped for their lives. They perform tacit and informal practices to deal with experiences of threat and develop community activities from the bottom-up. Informal practices – like everyday routines, tacit use of public spaces, and interventions at a square – tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the public sphere as governments hold on to formal repertoires. Recent needs for welfare cuts and a growing fear for violent escalations make local governments eager to rethink citizen’s involvement. How could sociologist but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in theuhanarchy, which is based on well-intended strategies and everyday tactics. Could local governments use tacit knowledge without ‘taking over’ or ‘disrupting’ the tacit fabric of the neighbourhood?

VERMA, DEEPAK KUMAR* (National Institute Social Sciences, dkvmhow@rediffmail.com)

Relative Deprivation, Affirmative Status Generalization and Social Identities

The paper is based on caste-based graded inequalities and social identities emerging from the perceived relative deprivation by the socio-economically and educationally backward castes and affirmative actions based on identification of backwardness by the State agencies in India. The emerging social identities are discussed under a new concept 'Affirmed Status', besides, Achieved and Ascribed, as explained by Ralph Lynton. The affirmed status characteristics generalization are empirically verified to reconstruct the social structure, in modern Indian context. The process of such generalization and thereby emerging identities are explained with the help of a theoretical assumption, 'Social Devolution'. Affirmed status is explained as the social identity of an individual or group(s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative advantage over others in terms of being a part of a political community. A social identity of an individual or group(s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative advantage over others in terms of being a part of a political community. The status of such individuals is not only to get quantitative data on the issue as understood by young girls but also get an insight into the manifold dimensions and meaning of abuse to the victims through case studies which is mostly anecdotal. It reflects on the excessive influence of normative standards of families also looks into the long term consequences of this in the lives of the victims.

CHILD Abuse in India : Navigating the ZONES of Silence

A growing body of text have begun to furnish information and data on the widespread pervasiveness of child abuse in India. The paradox is that the perpetrator or the offender are often someone known to the child and more often someone from the extended family. Though in some situations it is beyond their control, but many times the family fails to protect the child from sexual abuse given to the cultural tradition of ‘family being a private space’ where no interference of public into criticizing its members is implicit. Moreover social stigma makes it difficult to talk about child incest in public. However, there is still a lack of depth understanding and empirical evidence to support general observations because of the lack of the sensitivity to the issue and the failure to acknowledge it in the first place. This paper assess the perception of child abuse among young college students in the age group of 17-20. The focus of the paper is the in-depth case studies of 10 victims of child sexual abuse and incest. The purpose is not only to get quantitative data on the issue as understood by young girls but also get an insight into the manifold dimensions and meaning of abuse to the victims through case studies which is mostly anecdotal. It reflects on the excessive influence of normative standards of families also looks into the long term consequences of this in the lives of the victims.

YOUTH, Social MEDIA and Emerging Alternative Spaces for Socio-Political Movements : Analysis of ‘nirbhaya’ IMPACT

With the swelling proportion of youth population, India today is becoming one of the biggest Social Media market. The emergence of youth as new actors empowered with the technology - mobile, Facebook twitters and the life have resulted in organized demonstrations/protests developing an intercultural platform to build solidarity. This new ‘youth brigade’ by engaging in political conversations for collective action has not only ignited mass social movements but also challenged the academia to reposition itself on the role of youth and social media as active partners of social change. This paper analyzes the role of social media as perceived by the youth in the age group of 18-30 years in the city of Lucknow. The case in study is the December 2012 New Delhi Gang rape case- “NIRBHAYA” Movement. This paper attempts to gain a deep understanding of youth activism at the intersection of multidimensional identities and their unified perception towards transformative socio-political change through social media campaigns. It also focuses on how and why the youth organize in to online spaces, effortlessly and bring in a faceless movement for collective political action by actively engaging in dialogue and building public opinion thereof creating strong youth pressure. The paper examines how far such campaigns have been successful not only on focussing on punishment but challenge the cultural assumptions which creates space for violence against women.

Hospital Management and the Contribution of Non-Sector Expertise

A belief in the value and superiority of private sector management expertise has been central to NPM reforms (Ferlie et al., 1995; Hood, 1991; Pollitt & Bouckaert, 2000), leading to concerted efforts to re-structure public organisations and recruit senior managers from the commercial sector, including3 accountants (Clatworthy et al., 2000; Ferlie et al., 1995). It is assumed that such expertise will have a transformative impact on public organisations, moving them away from models of professionally dominated ‘custodial’ or ‘consensus administration’. Commercial managers will emphasise the importance of resources, the need to meet performance targets, and have the ability to implement changes. However, while these assumptions and expectations have not been realised, the heart of policy making worldwide, there is little research that has tested them directly. Some work has been done on the impact of senior leaders in local government (Boyne, 2005; Boyne et al., 2011) and school districts (Meier & O’Toole Jr., 2002; Mynihon & Pandey, 2005). As yet however, there continues to be a dearth of evidence supporting the assumption that diversifying the skill mix of senior managers in public organisations will lead to enhanced performance. To address this deficiency, we focus on the impact of this non-sector specific commercial expertise on the boards of acute hospital trusts in the English NHS. Drawing on the governance literature focusing on the human (and social) capital of board members (Haynes & Hillman, 2010; Reay & Hinings, 2005), we first investigate whether a more connected expertise on the boards makes a difference and if so, under what conditions. Given the dominance of clinical logics in the fields of health care, the study, then, looks at the nature of performance outcomes and whether other factors, such as tenure and autonomy, mediate the impact of commercial and accounting expertise.
contraintes économiques globales (finances, capitalistes, restructuration économique).
Nous nous interrogerons sur le rôle des interactions médiatiques pour véhiculer ou masquer ces deux mythologies de base. Il s'agit de conjuguer les effets de trois types de médias (local, national, global).

Multilevel Approach of Professional Fields: Differentiation of Professional Status inside Governance

Multilevel approach of professional groups set up a large differentiation of issues, practices and status inside the same professional groups. This approach will be developed for planners and secondary teachers in France. Local surveys frame the observation on a rich diversity of practices and capabilities. National surveys focus on the normative requirements of professional integration (certification, regulation). European survey focus on the governance models inside the convergence of professional standards (Swensson). The notion of profession can be framed inside three repertoires of issues. We recognize a differentiation of perceptions and of professional claims within the relations between qualification and autonomy for teacher, between status and recognition for knowledge workers (Larson, Abott).

The sociological question comes to specify the place of professional groups inside the networks of globalization. The convergence of expert knowledge standards at the global level do not mask the intense differentiation inside each professional group (Freidson), between the level of practices and the definition of professional responsibility, between meritocracy and salary. The professional fields frame a tensive reorganization between these different levels and different status.

Human Rights As a Social Institution

Human rights as a social institution

Contrary to legal-postpositivist approaches to human rights, sociologists often argue that human rights need not be restricted to legal norms. Rights have to be seen as more than legal norms discerned by judges trained in legal reasoning. For human rights to have social meaning, they must become institutionalised socially and become embedded in people’s minds as well as in the day-to-day workings of societal institutions such as the judiciary, the schooling system, healthcare and the family. The aim of this paper is to develop such a sociological-institutional approach to human rights, which provides an important contrast to standard legal-postpositivist approach of human rights. Based on the work of a.o. Meyer and Luhrmann I will argue that fundamental rights can be seen as a social institution playing a crucial role in the protection of individual agency in a modern, horizontal and heterogeneous society.

Real Fantasy

Real fantasy

As new format of the cultural industry, reality shows are usually approached from two opposite and irreconcilable views. Sometimes they are taken as a sham, ie, programs that falsify reality by pretending to reproduce it. Otherwise, they are considered the immediate exhibition of Real (in the Lacanian sense of the term) – in this case, these programs would be a kind of window that opens to the display of objects beyond the symbolic field, such as violence and intimacy. Either thinking of them as a fake, or approaching them as attractive or generator of perverse pulse – therefore, as an exceptional phenomenon –, both perspectives tend to isolate the show from the society that forged it. The purpose of this paper is to present a third perspective that takes into account the world that such format is fed and which returns as mirroring: the flexible accumulation capitalism. From this perspective, it is possible to think of reality shows as a reproduction, not of the Real, but the reality itself, understood as the fantasy that ties our daily practices. Our hypothesis is that such programs take the form of social structure to organize practices such as surveillance, selection or evaluation of performance, all central devices for labor control in contemporary capitalist enterprise. The shift in the television format approach allows us to understand, at the same time, the new organization of the cultural industry – also looking for flexibility – as well as a cultural production incapable of achieving any form of transcendence.

Adherence to Preventive Illness Control Among Filipino Women through an Autonomy Perspective

The focus of this study is the capacity of women to assert themselves within the household and how it may affect the sufficiency of their utilisation of antenatal care and which practitioner to visit. This behaviour regarding choice may vary between different individuals, and even between individuals at different times of life or within different groups, even within the same household. The findings indicate that women who receive antenatal care from qualified health care providers have a higher likelihood of adherence to the advice given. This is consistent with previous research that has found evidence of a significant relationship between the type of care provider and adherence to advice, with women who receive care from qualified health care providers having a higher likelihood of adherence to the advice given. The results of this study suggest that improving the quality of antenatal care and ensuring that women receive care from qualified health care providers can help to improve adherence to preventive illness control among Filipino women.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Results support the oft considered health gradient that access is based on the perception of finances. This becomes the main barrier for women to seek sufficient antenatal care and medically-trained personnel as well. Also, seemingly counter-intuitive findings had lead to having initial interviews with mothers in selected provinces in the country. What is supported by this approach is that traditional views on healthcare shape their views but perceptions of gradients that some types of care are only suitable for those who can afford them.

Food Security, Rural Livelihoods and Agricultural Change: Evidence from a Case Study of Potato Contract Farming in Maharashtra, India

Despite decades of sustained economic growth, food insecurity remains a seemingly intractable problem for many households in rural India. In recent years, food security has been elevated to pre-eminence in the political discourse of India with the passage of the much-debated National Food Security Bill (2013). At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al, 2013).

Concurrently, the majority of rural Indian households continue to rely on smallholder agriculture as their primary livelihood activity. The nature of agriculture, however, is changing in India, as liberalisation policies open up the sector to domestic and foreign capital. One such change has been the spread of contract-farming schemes. Where they operate, contract-farming schemes are changing the dynamics of smallholder agricultural production, as land-tening households are increasingly exposed to modern inputs, technology and markets. These schemes present new opportunities for some households, yet it is unclear how these changes will influence patterns of social differentiation at various scales.

This paper discusses the nexus between household livelihoods, food security and modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra. The paper argues that by understanding agricultural change through a rural livelihoods lens, we can reveal the nuances of how rural households negotiate change specific to time and place, and who is in a position to benefit from such change. If we understand food security as primarily a livelihoods issue, then understanding how modernising agriculture impacts such change specific to time and place, and different forms of capital are taken into consideration.

Subjective Functions of Participation in Sports or Games: A Comparison of Findings in Israel, Japan, South Korea, Taiwan and the Philippines

Using the 2007 International Social Survey Programme (ISSP) Surveys on Leisure Time and Sports, this research paper looks at sports, games and physical activities most frequently participated in by selected Asian countries. More importantly for this study, it examines the subjective functions that taking part in sports or games serves, i.e., as a means of social interaction, competition with others, or for the betterment of one’s personal well-being. On the topic of subjective functions of participation in sports or games, the study specifically compares the importance of 1) physical and mental health, 2) meeting other people, 3) competing against others and 4) looking good as reasons for taking part in sports. Cross-country comparison of the findings focus on Israel, Japan, South Korea, Taiwan and the Philippines, in particular.

Is Poverty a Key Aspect of Ageing?

The poverty in old age is one of the most persistent stereotypical images of ageing. Due to the significant differences between income before retirement and pension benefit, there is an objective drop in the income with the retirement. However, with the individualisation of pension provision and weakening the link between senior age and labour market exit, the connection is not so straightforward anymore and the image gets even more colourful when social class and different forms of capital are taken into consideration.

Using the secondary analysis of different surveys carried out in last decade among the Czech population aged 40 years and above, I will show the attitudinal data on the role of poverty and financial exclusion in old age definition. I will address issues such as expected (sources) of income after the retirement, marginalisation in consumption, indebtedness, age discrimination in financial services provision and subjective poverty. I will use the paradigm of the heterogeneity of older population to show how these differ in different age, gender, income-, and social capital-groups.

Sustainable Consumption Practices in Brazil’s “New Middle Class”

In recent years, Brazil and other emerging economies are showing a significant change in their socio-economic composition, which highlights the increasing income of the poorest sectors of the population. Some Brazilian authors claim that such economic improvement fosters the emergence of a “new middle class”, prompting a debate on such socioeconomic changes, and on the very concept of social class, as this concept is not consensual within the Brazilian social scientists.

Regardless of the classification which assigns to this stratum of the population, this represents a profound change in Brazilian society, with implications for the consumption patterns. This phenomenon occurs in a scenario where environmental issues gain public notoriety and the discourses that advocates the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. So, it sets up a paradox between the possibility of increased levels of consumption and access to material goods by this economically emerging stratum (labeled as the “new middle class”), and the diffusion of the discourse and the proposals that advocate sustainable consumption and the need to reduce the consumption patterns as a way of coping with environmental problems.

Given this paradox, the paper will present results of an ethnographic study that aims to map the debate about the economic rise of the phenomenon of the less affluent in Brazil and the trajectory of environmental thinking until the moment this research was conducted. This research was conducted in Brasilia in 2014 in a scenario where environmental issues gain public notoriety and the discourses that advocates the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. So, it sets up a paradox between the possibility of increased levels of consumption and access to material goods by this economically emerging stratum (labeled as the “new middle class”), and the diffusion of the discourse and the proposals that advocate sustainable consumption and the need to reduce the consumption patterns as a way of coping with environmental problems.

Mortalidad Juvenil En América Latina: Factores Associated y Desafíos Pendientes

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
En las últimas dos décadas América Latina presentó importantes resultados en la reducción de la pobreza, aumento de la esperanza de vida y reducción de la mortalidad infantil. Sin embargo, el incremento de la incidencia de muertes violentas, sobredotado, entre los jóvenes en este periodo sigue siendo un desafío pendiente. Así como ocurre con la mortalidad infantil o el embarazo adolescente, las tasas de homicidio inciden diferentemente sobre los individuos de acuerdo con su posición en la estructura social. Los estudios sociodemográficos evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/etnia y clase social. Írónicamente, las vidas ahorradas en los primeros años de vida en los países de más alto PIB pueden ser comprometidas dentro del marco de una cultura que aún sostiene fuertes rasgos machistas y una visión muy arraigada de valorización de la virilidad. Este trabajo discute las relaciones existentes entre las elevadas tasas de mortalidad violenta entre los jóvenes, especialmente los homicidios, e indicadores de condición de vida. Nuestra línea investigativa enfatiza el rol de la educación. Los avances cuantitativos alcanzados en la educación no son acompañados por elevación de los niveles de calidad. La baja calidad de la educación en América Latina que se observa por medio de los bajos rendimientos en las evaluaciones internacionales, a ejemplo del PISA, está muy correlacionada con una estructura de oportunidades restrictas que en su versión más perversa se refleja en altas tasas de mortalidad juvenil.

Trajectories of Risk and Uncertainty? Medical School Students and Their Vocational Choices

In Portugal, the imposition of a numeros clausus system at the HE entrance has contributed to the strengthening of a hierarchy of excellence in the school system. At the same time, it has introduced an increased uncertainty regarding the possibility to accomplish future projects and ambitions.

The access to a medical school implies some effort and sacrifices that not every young student is willing to take. Namely, because it implies a tension between the need to invest in studying on a highly competitive basis (thus focusing on future projects) and the desire to invest in youth sociability practices, under a high peer pressure (which are rooted on the present).

Obtaining and maintaining high grades along the secondary education is a long-term process (built during the three years of secondary education), but highly uncertain and risky: a single moment (an exam, an assessment) can ruin everything.

This presentation aims to analyze the processes involving Medical School entrance in Portugal. In particular, we intend to confront students’ investment on a highly competitive vocational pathway (Medicine) with their awareness of risks that may emerge along with their option.

The analysis is drawn upon data collected within the project “Failure and drop-out at the University of Lisbon: scenarios and trajectories”, a recently completed research project sponsored by the Portuguese Science and Technology Foundation (Project: 2014/205/2006). In particular, it will explore data from in-depth interviews conducted in the academic year 2009/2010 to the students that in the previous academic year had entered the 1st year of medical school at the University of Lisbon.

Did Someone Say Cosmopolitanism? A Critical Feminist View on Cosmopolitan Citizenship, Post-Nationalism and Trans-Nationalism in Europe

By Dr Ulrike M. Vieten (University of Sheffield, UK)

Since the early 1990s cosmopolitan visions evolved as an endeavour to transgress 20th century understanding of national citizenship. The post2001 intellec
tual climate of some kind of hegemonic ‘security and surveillance totalitarism’ demands a serious ‘reality check’.

Speaking from Europe, and witnessing a rise in nationalistic socio-economic interests and neo-fascist political orientations in various EU Member States it is difficult to uphold any ideal of post-national political communities, not even talking of cosmopolitanism.

Nonetheless, I will argue from a feminist perspective that transnational belonging and cultural hybridity are equally on the rise providing some futuristic space to envision social justice and equality encompassing a subaltern cosmopolitanism in the plural. It seems we also live in a very rebellious civic world society; also very much connected to structural changes of the social fabric as far as ethnicities, race and religion is concerned in metropolitan cities all over the world.

While critically analysing Habermas’ and Soysal’s take of the ‘post-national’ and turning to Young’s concept of the ‘social connection model’, the first part of the paper proposes an alternative reading of transnational and diasporic urban polit
cal spaces. It is argued that complex diversity and social contradictions nurture intensified and widening of trans-cultural cosmopolitan habits alongside a backlash of parochial opinions.

In a second part of the paper these emerging trans-national identity containers of multi-layered belonging will be tested while introducing some research results of a comparative study on new European citizenship and vernacular cosmopolitism with respect to different ethno-national minorities in Britain, Germany and the Netherlands.

VIGOUR, CÉCILE* (CNRS, c.vigour@sciencespobordeaux.fr)

Autonomy and Heterogeneity of Managerial Changes in European Judicial Systems

For a long time reluctant towards managerialism, Dutch, Belgian, French and to a lesser extent Italian judicial systems have undergone deep changes, since the Ministry of Justice implemented new management policies and tools. In terms of professionalism, accountability procedures, new norms (a more customer- and efficiency-driven approach), the valuation of other competences than legal ones, budget restrictions modified professional practices and identities of clerks and the magistracy. New models of what constitutes “a good magistrate / clerk” emerged.

The paper will focus on the part of autonomy and heterogeneity of professional groups and political actors who either decided, implemented or had to cope with those managerial changes. Ambivalence prevails regarding their promoters and innovators.

Managerialism was partly promoted by other national or international institutions (the Ministry of Finance, the Parliament...). But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain efficiency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession’s definition of relevant managerial criteria and procedures.

But this autonomy varies according to the professions and hierarchical positions. It has evolved gradually, building in, for example, in accountability (in priorities definition, budget allocation...). Yet, professional identities of ordinary magistrates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...).

Finally, we observe a hybridism between legal and managerial values reinforced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bureaucrats, lawyers and clerks.

VIGOUR, CÉCILE* (CNRS, c.vigour@sciencespobordeaux.fr)

Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the “modernization of the State” (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level on lean systems? How was it re-appropriated by the Ministry of Justice, where other tools (such as ISO standards) had just been experimented, so much so that lean management is about to be generalized in the civil judiciary system?

My hypothesis is that lean system was a means for transversal ministries such as the Ministry of Finance (to which the DGME reported) to reaffirm their power on specialized ministries and impulse reforms otherwise than by budget cuts.

Moreover lean production was implemented in the judiciary by emphasizing its “soft side” (considering a court ruling as a collective work) and by presenting the efficiency goal in a positive way (reducing the wastes of time to focus on the core business of clerks and lawyers). This selective transfer was facilitated by the fact that the DGME supported its cost and that there were no staff cutbacks in the Ministry of Justice.

The paper will show how the success of lean production relies on its adaptability (the selection of some characteristics), its capacity to be compatible with values of diverse professions (even though it may generate jurisdictional conflicts with consultants or between professions when the division of labor is modified), and on strategic uses made by professional groups and political actors.

Studying lean system in public services requires therefore to associate sociology of work and a political sociology perspective. This empirical study at national scale brings together a presentation and a discussion of some empirical results.
and local levels is based on observations and interviews with bureaucrats, lawyers and clerks.

and evaluate the empirical reality of organizations and the work to be done in and fragmentation that also characterises contemporary organization theory as a concept of ‘the primary task’, which share a number of family resemblances. I has been suggested that organizations are no longer relevant to understand as mentalist’ reduction of the creativity and multiplicity of an organization. Thus it mentions where tasks and purposes are multiple, ambiguous and in flux. Another for this decreased significance holds that it is no longer relevant to speak in terms only as one among many ‘aspects’ of organizational life. A widespread argument for this decreased significance holds that it is no longer relevant to speak in terms of organizational unity or core task. Without this, an organization could not function as laborers remain scarce (Jenness 1990; Kempadoo and Doezema 1998; Hardy 2010). What tensions emerge when a labor framework for sex work serves not only as an analytic, but also as a basis for collective action?

This presentation, a scholar-activist collaboration, examines the trajectory of the Karnataka Sex Workers’ Union (KSWU) in India, drawing on 8 focus group discussions, 50 in-depth interviews, and our experiences. KSWU organizes sex workers using a trade union model. Rejecting state practices that either criminalize or pathologize sex workers, especially after large-scale HIV prevention programs directed at sex workers in India, KSWU has attempted to articulate an alternative claim on the state, positioning sex workers as citizens and workers.

We argue that KSWU has provided a meaningful alternative to existing relations between sex workers and the state. It has built alliances with other informal laborers and feminist and Dalit rights groups, and developed an independent trade-union-like funding approach. However, traditional trade union models have not always been adequate in the face of stigma; dispersed spatial patterns of work; no fixed ‘employers’; fluid identities of those who move between sex work and other informal work; systematic violence; and differences among women, men and transgender sex workers in their relationships to sex work. Many sex workers in Karnataka prefer the safety of invisibility, but KSWU’s politics pull toward great-er public visibility. KSWU’s experiences highlight the inseparability of claims for recognition and redistribution, and suggest the need for strategies of organizing that respond specifically to intimate labor spheres—strategies that draw on the insights of Southern labor and feminist movements and develop creative, safe spaces for solidarity.

We argue that KSWU has provided a meaningful alternative to existing relations between sex workers and the state. On the Work Itself: Task and Organizational Reality

In classic organization theory, ‘purpose’ and ‘task’ were key concepts. In order to understand the situation of a particular organization and to assess the form and necessity of managerial action it was considered crucial to address the organization’s basic purpose or core task. Without this, an organization could not realistically assess the strengths and weaknesses of its inner arrangements and the threats and opportunities posed by its ‘environment’. In contemporary organization theory, however, there is no longer a natural point of departure and figures only as one among many ‘aspects’ of organizational life. A widespread argument for this decreased significance holds that it is no longer relevant to speak in terms of overarching purposes as organizations manoeuvre in rapidly changing environments where tasks and purposes are multiple, ambiguous and in flux. Another is that the definition of ‘tasks’ by management is ultimately a ‘political’ or ‘in-strumentalist’ reduction of the creativity and multiplicity of an organization. Thus it has been suggested that organizations are no longer relevant to understand as total entities, but only as ‘partial organizations’ (AhreN & Brunsson, 2011). In the paper, I revisit Barnard’s concept of ‘organizational purpose’, and Miller and Rice’s concept of ‘the primary task’, which share a number of family resemblances. I argue that the authors were aware of the challenges in sorting out the core tasks of an organization, but that they also explain and illustrate the problems of be-wildering fragmentation arising from neglecting the issue. A bewilderment and fragmentation that also characterizes contemporary organization theory as a discipline, I argue. Employing the notion of ‘reality device’ I conclude that understanding the core tasks of an organization is an indispensable means to register and evaluate the empirical reality of organizations and the work to be done in order to accomplish those tasks.

The Discussion about the Body Between University Teachers: A Case Study

The debate about the concepts of the body is justified by the fact that the novi-ciate is a key element for the formation of the body conception of undergraduate students, this is the first step to consolidate how to think and act in different fields. We aim to discuss the conception of body from teachers of a philanthropic University of Goiás. The research is a cross-sectional study of a sample size of 250.

Made sure a case study with a questionnaire developed and validated specifically for this study. Was distributed approximately 20 questionnaires and one teacher refused to answer. The study was approved by the Ethics Committee of the PUC Goiás under No. 1256/09.identifies the fact that 26.7% of teachers working with other informal work; 40% with the humanities, and 33.3% with the area of biology.

About the body conceptions that prevail among teachers, nine replied the question, 66.67% consider the body as a machine, or as an organism, comprising separately from other components. Was also questioned whether teachers read authors such as the issue, 88.93% responded. Was also asked if teachers talk about the body in their classes and again 88.93% said yes. The completion marks the fact that teachers’ conceptions of body can be considered traditional, since there was no overcoming the dualism of body and soul, or the condition of a body “thing” (machine or organism). This conception among university teachers can affect the thinking about the subject among academics, fact that is shown by other researches.

Mental Health in Public Universities: A Comparison Between Brazilian and Canadian Professors

Mental health, an important object of research in Psychology as well as Social Psychology, can be determined by the relationship between psychological well-being and psychological distress. In this context, we search to understand: How do compare mental health of professors working in public universities in an emerging country like Brazil with the one of professors working in a developed country like Canada? What are the main differences in the indicators of mental health in work domain? How Mental Health affects Work-Life Balance? To answer these questions, this paper assesses Mental Health and Work-Life Balance for professors working in these two countries and test for their differences. The sample consists of 354 Brazilian professors and 317 Canadian professors. Data were collected through an on-line questionnaire assessing the following Mental Health indicators: anxiety, depression, loss of control, general positive effectiveness and emotion ties. We compared the components of Psychological Distress and Psychological Well-Being with the indicator of Work-Life Balance to analyse their relations. Reliability analyses demonstrated that all tested components are consistent to evaluate Mental Health and Work-Life Balance. Correlation analyses showed the components of Psychological Distress are negatively related to Work-Life Balance, whereas the components of Psychological Well-Being are positively related to Work-Life Balance. There are some small mean differences between Brazilians and Canadians professors in all five components of Mental Health, but these differences are not statistically significant. Mean differences for Work-Life Balance, gender, age, and Bias of Conformity are statistically different, although the size effects are small. Linear regression analysis, step by step, controlled for Life Events, showed that General Positive Effectiveness, Anxiety and Emotion Ties predict 31.5% of the scores of Work-Life Balance. Additionally, we observed that Brazilian professors find more balance between professional and private life than do their Canadian colleagues.
to higher education in some selected countries, based on international statistics.

2. The second one is based on an empirical research undertaken in six universities in Mexico City, that are classified by academic characteristics, and by the implications that these have in the process of globalization of knowledge, and will examine the material and symbolic inequalities of the students that obtain their professional degrees.

3. The third one, will consist on a reflection that, based on empirical national data versus international data, allows the design of some elements of comparison regarding the inequities experienced by the young students that succeed in finishing their degrees, in some selected emergent countries.

VILLALON, ROBERTA* (St. John's University, villalor@stjohns.edu)

Argentina's Dirty War: Counter-Hegemonic Collective Memories & Frame Analysis

In this paper, I analyze the contentious and long-lasting collective process to document, understand and reach justice for victims of Argentina’s Dirty War, based on fundamental texts produced after the end of the last military dictatorship. By looking into the Nunca Mas (Never Again) report prepared by the National Commission on the Disappearance of People (CONADEP), which included hundreds of testimonies by survivors of torture and acquaintances, reading scholarly analyses on this matter, and finding testimonies published in other venues, I discuss how this report becomes a master narrative from which subsequent interpretations of the Dirty War emerged. I apply Goffman’s (1986) frame analysis theory to understand the complexities and nuances of processes of collective memory-making, and identify how hegemonic and counter-hegemonic frames were used to create meanings and organize experiences of the Dirty War. Then, I propose alternative frames (“intersectional frame” and an “emotions-conscious frame”) with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

Economic Crisis, Politics and The Menace To Battered Immigrants’ Rights

The anti-immigration measures and xenophobic sentiments that have spread since the eruption of the financial crisis in 2008 have been significantly detrimental for immigrant survivors of intimate partner violence in the United States. In common times, this group is particularly vulnerable to abuse because of the intersection of their members’ gender, sexuality, nationality, race, ethnicity, language, religion, immigration status, isolation, cross-national frames of cultural and legal reference, and socioeconomic standing. All of these factors influence the way in which aggression is inflicted and endured, and affect the availability of resources for immigrants to escape and overcome abusive relationships. The economic recession, anti-immigration policies and a rising xenophobic environment have created additional hurdles for battered immigrants given that employment opportunities have declined, exploitative work conditions have worsened, and immigration controls have increased. In this pressing context, immigrant survivors of intimate partner violence have been faced with empowered abusers whose threats of deportation became real; ambivalent law enforcement officers who instead of protecting battered immigrants may be forced to collaborate with immigration officers; and a widespread sense of fear with its paralyzing and isolating effects.

At the same time, most nonprofit organizations providing services for battered immigrants have met serious budget cuts that curtailed their ability to serve the increasing number of survivors approaching them. Based on interviews with service providers across the nation, participant observation of networks of battered immigrants’ advocates, and a close reading of debates around the re-authorization of the Violence Against Women Act (VAWA), I analyze how these dire circumstances have been critical for not only immigrant survivors of gender violence, but also the battered immigrants’ and battered women’s movements.

Excision and Migration: Between “Legality” and “Loyalty” in the Transmission of a Traditional Practice in Migratory Context

Female genital mutilation (FGM) is forbidden in many countries of the North (Europe, Nord-America) and of the South (Africa). However, this traditional practice is still transmitted from generation to generation by women. If medical and pathological consequences of FGM are well-known, the social and symbolic implications in the intergenerational process of transmission of the practice, and the anxiety context in the genital area are largely unknown. The social and symbolic universe of the countries where sexual mutilations persist, implies that women who are not excised are considered “dirty” or “obscene”. Non-excised women are stigmatized in their sexual identity and within African community. On the other side, young women living in a migratory context are confronted with other sexual models and may start feeling a sexual disability. Communication around the practice of excision is almost absent in the families where women and girls are nevertheless excised. The perpetuation of the practice is intrinsically connected to the gender system stakes and in particular to the unequal status between women and men in some of these societies (Zimmermann, on 2011). Introduction to sexuality can become one moment of distance between the parental and family standards and the social standards of the local society (Andro, Lesclingand, Poreutt, on 2010).

This qualitative survey involves both social sciences and biomedicine. To seize the conditions in which the survivors’ practices connected to sexuality and to health, a series of semi-directed detailed interviews have been conducted with ten African women living in Switzerland and have undergone FGM. On one hand, transmission of FGM on the second generation of immigrants in the migratory context, is the way for keeping memories and traditions alive. On the other hand, teenager’s sexual socialization becomes a ground of resistance against the western colonization, which takes place in the field of the sexuality.

« J’ai Peur Du ’Kongossa’ (commerçage) » : Stigmé Et Contrôle De L’information Sur Le VIH/Sida Auprès De Migrantes D’origine Subsaharienne Et Séropositives En Suisse

Trente ans après l’identification du virus du sida et l’apparition d’une nouvelle épidémie, la séropositivité reste stigmatisée et difficile à dire. Quel que soit leur statut, origine et contexte socioéconomique, les personnes concernées tendent à taire leur infection, craignant d’être discriminées (Hettler, et al., 2004). Cela est particulièrement vrai pour les migrants-e-s d’origine subsaharienne qui sont souvent réticent-e-s à révéler leur séropositivité en dehors du système de santé (Ander- son, Doyal, 2004 ; Calin et al. 2007 ; Dielemann, 2006).

Fondée sur une étude qualitative financée par le Fonds national suisse de la recherche scientifique portant sur 30 entretiens approfondis avec des femmes séropositives d’origine subsaharienne vivant en Suisse, cette communication montre comment le stigmate rattaché au VIH/sida place le contrôle de l’information au cœur de leur quotidien et oriente leur construction des liens sociaux.

Selon l’approche représentée par les sociétés africaines et religieuses, les femmes vivant avec le VIH/SIDA sont perçus comme des porteurs de maladies sociales (« maladie de putes », « punition de Dieu », « sorcellerie » ou autre), les femmes choisissent de taire ou révéler leur infection. Le cloisonnement des relations sociales découle de la peur que le secret ne soit dévoilé et que le stigmate, de perçu, devienne agi (Green, 1995). Les femmes se confient peu à leurs proches, craignant le rejet. Seuls quelques membres de la famille, partenaires ou ami-e-s, sont soigneusement sélectionné-e-s. Le VIH est gardé strictement secret dans les communautés Africaines et religieuses, pour peur de l’exclusion. En revanche, les hôpitaux et les associations de lutte contre le VIH/Sida sont perçus comme les lieux sécurisants pour parler de l’expérience de la maladie.

Finalement, le stigmate de séropositivité à des effets réels sur la santé et la vie sexuelle : la peur et la nécessité de se cacher augmentent la vulnérabilité des femmes subsahariennes en contexte migratoire.

La Cooperación Científica Entre Universidades De México y Francia: Qué Prácticas, Estrategias y Alcances Podemos Identificar

No cabe duda que vivimos una era en que el uso de las TIC permite mayor flujo de conocimiento, donde se multiplican los acuerdos de cooperación económica entre países que muchas veces incluyen el tema de la colaboración científica y tecnológica entre universidades y centros de investigación de los países involucrados. Los Programas Marco de la Unión Europea y particularmente el 7° abrieron nuevos horizontes para la cooperación científica y el flujo de conocimiento entre investigadores de Europa con los otros continentes. En este contexto, cabe preguntarse en qué medida las universidades y centros de investigación han lo-
grado construir estrategias de cooperación científica internacional como una vía de acceso al conocimiento y para reforzar sus capacidades científicas.

La cooperación científica ha sido estudiada desde el ángulo de las copublicaciones entre investigadores. Es un método que da cuenta de la construcción de redes de colaboración, de la emergencia de campos disciplinarios y de la densidad del flujo de conocimiento en el ámbito internacional. La movilidad estudiantil es otra forma con la que se ha analizado el flujo de conocimiento y entre países. Las copublicaciones y la movilidad de estudiantes reflejan decisiones y trayectorias de individuos, pero metodológicamente no dan cuenta de las estrategias institucionales que hay detrás, como tampoco del aprendizaje organizacional que llevan a cabo las universidades y centros de investigación.

La ponencia resume los resultados de una investigación sobre las prácticas y estrategias de cooperación científica y tecnológica entre universidades de México y Francia en los últimos 5 años. Mediante un cuestionario electrónico aplicado al personal de oficinas de relaciones internacionales en las instituciones académicas, hacemos una clasificación de los instrumentos, las prácticas y resultados disponibles. Analizamos en qué medida existen estrategias y políticas de cooperación internacional, cuáles son y qué alcances tienen.

VINCENT, FANNY* (université paris dauphine, fanny.vincent73@yahoo.fr)  

Dans nos sociétés prises dans ce que le philosophe allemand Hermut Rosa appelle l’« accélération sociale du temps », et face à la dégradation des conditions de travail et des conditions d’austérité, maitriser son temps de travail est un enjeu. Et ce d’autant plus dans le milieu hospitalier où temps de travail est souvent synonyme de don de soi personnelle.

Depuis une dizaine d’années une forme de travail atypique se développe, à la limite de la légalité, dans les équipes soignantes des hôpitaux français : le travail en 12 heures d’affilée. Présenté par les directions des hôpitaux comme une solution pour pourvoir les postes vacants, le travail en 12h permet aussi à court terme d’économiser des postes en supprimant les temps de chevauchement entre les équipes.

Mais pour les soignants eux-mêmes, ne travaillant « plus que » 12 jours sur 28, les 12h permettent d’avoir plus de temps pour sa vie privée. En effet, à la différence des plannings traditionnels en 8h, travailler en 12h permet d’obtenir un roulement fixe et de dégager mécaniquement du temps pour cumuler une deuxième activité face à au gel des salaires.

Notre exposé s’appuiera sur les premières conclusions d’une enquête ethnographique de plusieurs mois menée dans divers services d’hôpitaux parisiens, ainsi que d’entretiens avec les soignants, dans le cadre d’une thèse engagée depuis octobre 2012. Nous montrerons que ce qui apparaît comme un consensus inébranlable dans les équipes soignantes est souvent l’un des facteurs d’un meilleur équilibre entre travail et famille, est en fait un moyen pour les soignants de fuir un travail qui est sensé s’intensifier depuis que les politiques de restriction des dépenses et de maximisation de la productivité se sont imposées ces dernières années à l’hôpital : « au moins on ne revient pas travailler tous les jours ! ».

Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict

The principle of food security is an increasingly recognized issue in agricultural policy documents in Norway. This is due to increased international pressure and the need for more sustainable agricultural practices. The Norwegian government has implemented policies to promote food security, including the establishment of private lands for collective use. However, these policies have been met with resistance from farmers and landowners, leading to conflicts over land use.

This paper aims to analyze the factors that influence the framing of food security in private lands in Norway. The research will be based on a case study of a specific region, where conflicts over land use have arisen. The paper will present a qualitative analysis of interviews with farmers, landowners, and policymakers, as well as an analysis of policy documents and media reports. The findings will provide insights into the different perspectives on food security and the role of private lands in achieving this goal.

Multiple Imputation Of Squared Terms

We propose a new multiple imputation technique for imputing squares. Current methods yield either unbiased regression estimates, or preserve data re-lations. No method, however, seems to deliver both, which limits researchers in the implementation of regression analysis in the presence of missing data. Besides, current methods only work under a MCAR mechanism. Our method for imputing squares uses a polynomial combination. The proposed method yields both unbiased regression estimates, whilst at the same time preserving the quadratic relations in the data for both MAR and MCAR mechanisms.

VINKOV, SERGEY* (National Research University Higher School of Economics, svinkov@hse.ru)  
Russian Housing Care for Orphans: Equal Rights in Unequal Opportunities

A great number of decrees, regulating various aspects of social security for orphans (including housing), have been adopted by the Russian government in 2013, which put Russian Orphan Care among the paramount issues of social policy. This paper analyzes the housing care laws in relation to orphans in Russia, including federal laws, regional statutory documents and case law protecting the housing rights of orphans. At present, the Russian government has a duty to provide orphans with housing regardless of their age, which is made at the expense of both the federal budget and the resources of local authorities. At the same time, orphans are unequally allocated in regions with various levels of economy, which collides with the desire for the state to have equal housing needs for orphans, or at least for equal housing needs. For example, during the period of professional studies orphans are provided with a room in the university’s dormitory, thus their housing need is partly met by the funds of their educational establishment. However, after graduation orphans are required to have a permanent registration, i.e. living space of their own, in order to have a job and for other purposes. In general, the paper combines the case study methodology with legal analysis of effective housing rights for orphans and young care leavers who are in need of housing. The study leads to the following key point: equally guaranteed rights to housing care are hampered by the lack of (i) a unified mechanism for different regions of Russia and (ii) appropriate economic resources to implement the rights.

VIRCHOW, FABIAN* (Univ Applied Sciences Düsseldorf, fabian.virchow@fh-duesseldorf.de)  
From Right-Wing Violence to Racist Terror – Exploring Factors of Radicalisation

In November 2011 a racist terror group in Germany that claimed responsibility for the murder of nine migrants and one police-woman was discovered by chance. For more than thirteen years security forces had no real idea of the activities of the group, assuming that the killings were caused by criminal motives. After the existence and activities of the racist group has become known several high-ranking security and secret service officers resigned and the security apparatus is still under reconstruction.

The paper addresses the efforts by researchers to locate the factors why a terrorist group developed from a much broader racist violence-prone movement and tries to weigh up the role and actions (as well as non-actions) taken by state actors towards the extreme right in Germany in general and against the regional right-wing movement in Thuringia from which the terror cell emerged in particular. In doing so, the investigation tries to find out if in the first phase restraint right-wing violence while in a later phase adamant decisions by public prosecutors may have contributed to a radicalisation processes resulting in racist homicide.

The Identitarian’ Movement

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In autumn 2012, the Génération Identitaire, a French group, launched a video message on Youtube declaring war on multi-culturalism. In order to gain a maximum of public attention and as an example of how the movement's performance would look like the group occupied a mosque in Poitiers, chosen for the final victory of Karl Martell against the invading Moors in 732 AD.

While, in France, the group's roots date back into the early 2000s, the occupation of the mosque quickly inspired imitators in neighboring countries like Austria and Germany. Although presenting themselves as being non-racist its ethno-pluralist approach and public statements on several issues clearly indicate that the movement belongs to the spectrum of right-wing racist populism.

The paper will outline the emergence and the development of the 'Identitarian' Movement taking the variations in several countries into account. A focus will be given on the analysis of the movement's claim of not being racist on the one hand and the de facto involvement of known right-wing protagonists on the other hand. First, the public performance of the movement that is web-based to a large extent is investigated. In sum, the paper offers an analysis of a new political phenomenon and situates this into a broader understanding of more recent developments of right-wing populism as a whole.

Gendering Responsibility: Work Practices and Institutional Responses to Intimate Partner Violence in Finland and in Russia

This paper examines how the highly gendered phenomenon of intimate partner violence (IPV) is encountered in various institutional settings of social and health care services in Finland and in Russia. The empirical data comprise (1) 16 focus group interviews with staff members (n=73) in various social and health care units in Finland and (2) 74 interviews with staff members (n=56) and services users (n=14) in three public crisis departments and one NGO crisis center in Russia. Based on the analysis of this data corpus, it seems that one of the dominant institutional discourses is that of making the female victims responsible for dealing with the problem of IPV. According to the interviewed professionals, it is difficult or even impossible to address the topic of the responsibility of male perpetrators due to various reasons, e.g. inadequacy of existing work practices or insufficient legislation. This paper takes a closer look at the ways in which the above-mentioned discourse operates to organize work practices that result on “gendering responsibility” at the level of local activities. Following the ideas of institutional ethnography (Smith 2005), the basic assumption of this paper is that institutional discourses organize the ways of “seeing” and “knowing” the solutions to the problem of IPV in institutionally actionable ways. Of special interest here are the interconnections between the institutional processes carried out locally and those organized at state, national and even international level. In addition, this paper addresses some cultural differences between Russia and Finland in the ways in which the female victims are made responsible for dealing with the problem of IPV in the everyday work of the institutional settings under investigation.

Testing the Effectiveness of HRM Practices Among Expatriate Humanitarian Aid Workers

Abstract: Staff turnover has become a major concern for humanitarian organizations. On the one hand this can be seen as something humanitarian organizations have to live with, but on the other hand it has also been blamed for reducing effectiveness and efficiency due to discontinuity in staffing and loss of institutional memory. The general public is especially concerned about efficiency and accountability. Professionalization, and especially adopting for-profit management practices, for example regarding human resource management (HRM) was deemed to be key to achieve enhanced efficiency and accountability. In short, no sector is dependent on the employees and their loyalty and at the same time is experiencing a very high turnover rate. Therefore, this is the perfect setting to study the effectiveness of HRM practices. Yet, while much discussed, in-depth research on the consequences of human resources practices on attitudinal outcomes of employees, like trust in management, job satisfaction and leaving intentions in this sector has not been conducted. So far, most studies have been conducted in the for-profit sector and to a lesser extent in the public sector. While it is assumed that HRM practices should also be effective in humanitarian organizations empirical data was lacking in order to actually test this. To the knowledge of these authors, this is the first empirical attempt to study these issues among a sample of humanitarian aid workers (n=140) working for one of the largest agencies in the field: MSF. Preliminary results show that HRM practices are positively influencing individual attitudinal outcomes (job satisfaction and turnover intentions) and that trust in management is an important factor mediating this relation. HRM practices are conducive to building trust in management, which in turn is positively related to job satisfaction and intention to remain with the organization.

Les Droits Pédagogiques Chez Bernstein : La Normativité Sociologique En Questions

Cette communication visera à questionner ce qui apparaît comme le modèle normatif explicité dans la théorie de Basil Bernstein : le modèle des « droits pédagogiques » par lequel il introduit son dernier ouvrage et qui semble fonctionner comme une théorisation de la problématique. Il s’agit d’autant d’être confronté à cet aspect que je crois que l’articulation entre le pouvoir moral et le pouvoir réel est une condition nécessaire pour la construction de l’autorité. Cela implique un traitement approfondi et détaillé de l’idée de pouvoir réel et de pouvoir moral, en particulier dans le cas de l’éducation. Ces deux dimensions associées permettent de poser l’objet d’une normativité objective. En relation avec quelques hypothèses simples permettant de penser les conditions de possibilité d’une démocratie minimale, l’auteur en vient ainsi à poser la nécessité pour les dispositifs pédagogiques d’instituer trois droits reliés entre eux : le Droit à l’Amélioration (DA), le Droit à l’Intégration (DI) et le Droit à la Participation (DP). Il est cependant possible que ce modèle ne joue pas encore totalement le rôle qu’il est appelé à jouer, et que Bernstein entend lui faire jouer dès l’introduction de son ouvrage : un modèle auquel je pourrai comparer tout ce qui se passe dans divers systèmes éducatifs. Y compris dans les analyses de Bernstein lui-même, en témoigne d’ailleurs ce fait que les trois droits ne sont jamais par la suite mentionnés tout au long de l’ouvrage. Ils semblent peu repris explicitement aussi par la communauté actuelle des bernsteiniens.

How Courts Must Act To Provide Democratic Access To Justice On Civil Disputes? The Experience Of Brazilian Federal Court In Slams Of Rio De Janeiro

The aim of this communication is to discuss how could brazilian federal court act in marginal urban communities with peacekeeping police forces units (UPPs) to promote democratic access to justice in civil disputes. A federal court in Brazil has the competence to judge the conflicts involving the Brazilian federal state, as well as their federal organs, as the mail office, the social security institute, federal banks, the national regulatory agencies and others. The field of research is the implementation of programs and projects of the federal justice in underserved communities, implemented by the federal court of Rio de Janeiro. These programs began in 2010 and last until 2013. The implementation of such policies was extremely heterogeneous and plural. Initiative began with a realization of hearings, production of expert evidence and offering agreements by the social security institute approved at the same time by the Federal Judges (judgment), and then became (Bernstein, 2007) some of the most advanced and anticipative, among others, in criminal justice. I conclude that pedagogical access to justice, which means, legal education for citizenship can offer a third way to rethink the relationship between courts and communities for dispute resolution in civil conflicts.

Art Works and the Production of Knowledge on Cities

Artists work on the built environment mainly through the production of art works in the public realm. This implication has recently taken a new orientation where artists work, in some cases, on issues related to urban projects along with the project team. They contribute to the early stages of urban projects and take part in field studies. Besides the use of urban planners’ and architects’ know-how, they collect data in various forms -sounds, images, objects, words, impressions- that they transform into art works which are qualified as territorial. They produce through this work and their actions, knowledge on the city, the project site and the local community.
This paper presents the results of a research project based on five case studies where artists are invited by urban professionals to work and produce knowledge on cities and project sites in France. They are digital artists, sound artists, choreographers, visual artists, actors. They work mainly through intensive field work. Site immersion and (informal interviews are singled out as the key elements that are used. We will first discuss in which way and to what extent artists produce knowledge that is different from that produced and used by city professionals. What kind of knowledge do artists produce? In which aspects is this knowledge different? Are these differences due to artists’ specific skills? To their methods? To their unique gaze? To their capacity to represent the reality? Then we will discuss how can urban professionals use and work with this new kind of knowledge. How do they analyse it? What are the epistemological, methodological and analytical problems encountered in their understanding and their transposition in urban studies?

Young Graduates Self Entrepreneur: Searching for Job or Creating a Company?

Precariousness is a rising condition of high skilled and knowledge work. The implementation of new kind of work contracts is supporting this movement. In France, a new fiscal regime for self-entrepreneur had been created in 2009. This consists of lower tax rate and simplified administrative procedure for small companies (turnover under 33,000 euros).

This communication presents the results of a research on graduates (master or PhD in social sciences) who enter the labor market by creating this kind of self-entrepreneur. It appears that they didn’t choose this scheme of work: it had been required by employers to low their labor cost, flexibly the working relationship and externalise administrative procedures. While graduates are administratively independent, their conditions of work are mainly those of salaried: in the firm, with fixed schedule, prescription from the superior, etc.

In these situation that fuzzed and hybridised working regime and working conditions of independents and salaried, how are these graduates (as specific population of knowledge workers) adapted? Their working conditions, activities, projects and discourses reveal different feelings about that situation. This paper will explore these three idea-types of young self entrepreneur: subordinated, independent, or in inclusion. To what extend does this situation trained them to become entrepreneurial worker?

VIVEROS-VIGOYA, MARA* (Universidad Nacional de Colombia, marya.viveros@gmail.com)

Masculinities, Violence and Multiculturalism in Latin America

Male violence has occupied a foundational place in Latin American history. Latin America’s past has been marked by men’s violent acts, such as the Spanish Conquest and Colonization in which not only colonized “women” were powerless within their communities, but also colonized “men” were subordinately placed within a hierarchy of masculinities. This societal structure was based on mechanisms of racial inferiority and gender subordination, which established relations of domination and of complicity between the people and their colonizers. The postcolonialist period manifested the consequences of such brutality and its difficult to speak about Latin-American social history where violence hasn’t been present, not as a Latin-American cultural trait but as a social fact.

While I’ll reference the Latin-American context generally, I’ll particularly focus on the situation in Colombia, an area on which I have extensively worked. Due to the old and painful reality of the Colombian armed conflict, exceeded only by the Israeli-Palestinian and Indian-Pakistani conflicts, the need has become apparent to promote initiatives, which introduce discussion and action into the public and the decisions. This research focuses on the potential of fisheries cooperatives as solution to the problem of legislation and decision enforcement and, thus, as a promoter of self-regulation in the fish stock management sector. Through the examination of international case studies, the study gives suggestions for the promotion of self-regulation in the fish stock management sector.

VLACHOPOULOU, EIRINI IOANNA* (University of the Aegean, socd12054@soc.aegean.gr)

Fishing cooperatives: The solution to fisheries mismanagement?

As fisheries have a vital role in maintaining the social and economic cohesion in insular areas, where the majority of the population is employed within the fishing sector, regulation and control of the activity affect directly the fishing communities. Self-regulation has a significant impact on managing effectively the fisheries professions. Local control and regulation authorities. In Greece, 18.8% of the territory consists of insular areas, enhancing thus the significance of fisheries communities for social cohesion. However, the notion of participation in regulation and control is still not widely spread in the fishing communities as it is only practiced sporadically. Insufficient statutory control of illegal fishing heightens the need for promotion of self-regulation as a means to protect the marine resources, as well as promote local development, local employment and economic growth. Thus, creating incentives for fisheries professionals’ participation in regulation and control of the fisheries sector is vital for the promotion of self-regulation. However, providing the fishermen with incentives has its drawbacks, as they do not always guarantee the expected outcome, namely productivity coupled with sustainability. One of the most common issues with incentives is the enforcement of the legislation and the decisions. This research focuses on the potential of fisheries cooperatives as solution to the problem of legislation and decision enforcement and, as such, as promoters of self-regulation in the fish stock management sector. Through the examination of international case studies, the study gives suggestions for the promotion of fisheries cooperatives in the Greek national waters that greatly lack self-organisation and the after affect that the adoption of such a policy would have in the area under examination.

Counter-culture and New Masculinities: An Argentine Case Study

Living with the Sea: The Satoumi Concept

The importance of sustainable marine resource management through the ecosystem and the Participatory approaches is widely accepted and supported by contemporary science. Fisheries management based on the local knowledge of the local artisanal communities, which operate with traditional techniques and tools, is considered the key to the revitalisation of the marine and coastal ecosystems. In Japan, the participation of fishermen in the decision-making process as well as the enforcement and realisation of conservation plans is being researched and promoted widely. The most promising conservation framework, the satoumi, is based upon the interaction between traditional human activity in fishing communities and ecosystem management. These ecosystems
still maintain high productivity and biodiversity, coupled with human activity. The satoumi is based upon traditional resource management techniques which aim at the protection of the targeted ecosystem. As the depletion of fish stocks and the degradation of marine habitats expand around the globe, the provisioning, regulating and cultural services that the marine ecosystems provide for the fishing communities are disappearing. Through extensive literature review, this paper explores the capacity of the satoumi concept for the sustainable use of the marine resources. The most important aspect of the research is the exploration of the significance of the implementation of the satoumi for the survival of the communities that have adopted it. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

The Fukushima Daiichi nuclear disaster revealed the dangers of nuclear power and might have changed people’s attitudes towards this energy source. Therefore this paper examines whether a nuclear accident like the Fukushima accident has a long-term effect on attitudes towards nuclear energy. After we describe the overall impact and trend before and after the accident for different countries we test hypotheses about the structure of the effect. On the one hand, whether the effect is temporary or persistent; on the other, whether the average treatment effect depends on individual characteristics, like age, gender, education or nationality. According to availability heuristics (Tversky and Kahneman, 1974) we would assume a temporary effect (declining media coverage, memories fading away), classical rational choice theory (Coleman, 1990) might expect a long-term effect which is caused by an updated risk evaluation due to new information we got from the Fukushima accident (e.g. how tedious it is to stop nuclear chain-reaction or a lack of trust in authorities because of bad disaster management). Using data from the latest ISSP 2010/2011 environmental module III we design our study as a natural experiment as we have both people surveyed before and after the accident. Within the causal framework of a Regression Discontinuity Design (RDD) and a Difference-in-Difference Estimator (DiD) we assume heterogeneous treatment effects so that some individuals change their attitudes more drastically than others. Our results indicate that young people are more likely to be influenced by the accident while gender does not matter. Moreover we find different patterns between countries that need further research.

Perceptions of Rising Powers: Are Russia and China Still Brothers Forever?

Russia and China are brothers forever was a popular slogan in the Soviet Union time, that perfectly shows how important it is for political science to understand differences in perceptions. While in Russian culture a brotherhood can be relationships of the equal, in mind of Chinese people an hierarchy is always formed and one of the brothers has to be elder, has to be a leader. Even though China has defined a new political system and a new type of superpower, that relays more on soft power than on hard, it is struggling with the China Threat theory and problems of misinterpretations of the Harmony World concept. In order to predict the role of China in the future many specialists turn to its imperial past, the tribute system and roots of the strategic culture, so processes of a political paradigm develops into a starting point of social inequality rather than being its conclusion.

Unequal Social Participation in Later Life

The concept of active ageing comprises the maintenance of societal participation throughout the life span into old age. Good ageing in line with this activity paradigm develops into a starting point of social inequality rather than being its result. Based on the German Ageing Survey (DEAS) and on the German Survey on Volunteering (FWS) we investigate the access to volunteering and to educational activities depending on social and spatial aspects of inequality. The DEAS is a nationwide representative cross-sectional and longitudinal survey of the German population aged 40 and above, so far data was collected in four waves in the years 1996, 2002, 2008 and 2011. The FWS is a representative cross-sectional survey on voluntary work, honorary office and civic engagement of the population living in Germany aged 14 and older. Data is currently available for the years 1999, 2004 and 2009.

Societal participation is socially and spatially structured: Individuals from a lower social class are less often involved in educational activities or in volunteering. The results of our multi-level-analyses clearly support these inequalities in societal participation known from the literature among individuals in both, middle and later life. The findings indicate that individuals living in economically disadvantaged regions are less likely to participate than in economically strong regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate participation should be taken on the local level to enhance opportunities for volunteering and educational activities throughout the life course and especially in later life. This should help to increase the participation of individuals from lower social classes sustainably.

Creativity & Creative Class in the Transformation of Russian Society

Russia is a country of creative minds, rich in talents. Creativity - is a fundamentally new state of Russian society, associated with the formation of the creative class, the integrated group, which unites representatives of various professions on the basis of a demand of self-realization and service to the public good. Investigation of the conditions, the vector of development and activity of the creative class shows that, despite the spontaneity of social initiatives steady trend of actualization of potential creative class occurs, which gives us hope for a successful modernization of Russia, the qualitative renewal of all aspects of public life.

Today Russian society gets its second wind, gets rid of “post-reform fatigue syndromes and skepticism”. It requires the formation of the creative person, creative education, creative management of all aspects of Russian society. It is with the growth of creative trends and shaping the creative society, a society of social creativity the future of Russia is linked. What responsibility has society and what a social dialogue should be to implement a real historical breakthrough depends on the creative class.

Discourse of the Integration of Society in Latvian Sociology

If sociological theory considers social integration as a universal process which involves the whole society and all its types of diversity, the public consciousness in Latvia, as well as the scientific discourse, persistently relate this term to just one dimension – ethnic. The findings presented in the article demonstrate that the scientific research on the integration processes in Latvia has become more critical towards the methodological assumptions which appeared in the 1990s, but in the theory there is a reconsideration of the values of those ideological approaches to the understanding of society integration which first were formulated in T. Parsons' conception. At the same time, the ideas of J. Habermas who considered it necessary to recognize a collective identity of ethnic minorities in the multicultural society might become a significant ideological resource for the research on society integration in Latvia. The article presents some data from the sociological research carried out in the largest city of Eastern Latvia – Daugavpils, the city with an ethnically diverse population. The data obtained in the run of the research demonstrate the possibility to reconcile the liberal conception of society integration in Latvia with the recognition of the value of a collective identity of ethnic minorities.

The Formation Of Political Subjects

The Formation of Political Subjects. Tenant Protest in Berlin and New York

A crucial point in the development of urban social movements is their ability to form coalitions to overcome the deep entrenched structural and discursive fragmentation and particularization of neoliberal societies. The urban seems to be the context in which this can be achieved. In current tenant protest in Berlin and New York, though highly specific in their issues and demands, we can see such an abstraction from personal interests making affiliations of broader political positions possible. In the process of legitimizing their right to stay put some of the protest movements have had an impact on the legitimisation of SCT as development policy. Indeed, I find that three global discourses have played a role in the rise of social cash transfers: One on poverty, one on development and one on human rights. Since the late 1980s, each of these discourses has shifted in specific ways which have facilitated the legitimisation of SCT in development policy. Even though the shifts in the three discourses do not seem to be causally connected, they had a joint effect: I argue that the shifts in global discourses fundamentally changed the perception of the poor in development policy. While the poor were long regarded as passive beneficiaries of development, discursive shifts during the 1990s led to their perception as potential drivers of development due to untapped economic potential. This shift in the perceptions of global actors legitimised social cash transfers, because they were successfully portrayed as a direct investment into the poor which can help to fulfil their untapped potential.

Area Characteristics and Admission Rates of People with Schizophrenia and Affective Disorders in a German Rural Catchment Area

Background Research on environmental risk factors for mental illness in rural areas is sparse, although the same risk factors as identified in urban areas may be present. Especially municipality characteristics reflecting economic uncertainties may have an impact on mental health.

Methods From 174 rural municipalities in the catchment area of the state psychiatric hospital in Gündzburg (Bavaria – Germany), hospital admission rates from the years 2006 through 2009 were computed and combined with structural and socio-economic data. Relations between admission rates with municipality characteristics were analysed by means of negative binomial regression models.

Results Admission rates of patients with a diagnosis of schizophrenia and affective disorder combined decrease with increasing population growth, population density, average income and percentage of green areas, while admission rates are positively correlated with commuter balance, income inequality, unemployment rate and percentage of traffic areas. Admission rates for schizophrenia are negatively related to population growth, average income and percentage of agricultural area, but positively related to mobility index, income inequality and unemployment rate. Admission rates for affective disorders are negatively related to population growth, population density, average income and (percentage of green areas, while higher admission rates are correlated with commuter balance, high income inequality, unemployment rate and percentage of traffic-related areas.

Conclusions Previously reported effects of wealth and economic inequality on psychiatric admission rates form urban areas also seem to apply to rural areas. This study once more shows that lack of financial security is a major risk factor for the occurrence of mental disorders. In contrast to findings in urban areas, the present study suggests that population density may have an ameliorating effect on mental health.

Multiple Migrations: Who Moves On and Why? – Answers From a Biographical Informed Perspective

Even though multiple migrations have and continue to gain in importance due to contemporary internationalization processes, to date they have hardly been subject of systematical examinations in migration research. Not only are the dimension and significance of their repeated migratory movements in the society as a whole underestimated, but also bring them out a methodological challenge for social research, especially quantitative methods. The multiple transnational paths of those onward migrants usually don’t appear respectively go missing in survey statistics. Nevertheless, according to certain targeted quantitative studies a notable part of international migration can be characterized as repeat migration. Based on them limited data are available on their demographic characteristics

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
such as age, income, employment, educational background and country of origin. However, even less is known about their individual motivations, decision-makings and experiences. In order to contribute to an understanding of who is moving on and why, results of a qualitative, biographical oriented study on serial migrants from different national and social backgrounds are presented. Therein the underlying structures of new governance and patterns of orientation given their multiple migration movements are reconstructed and analyzed as constitutive elements of their transnational trajectories and social contexts.

Prostitution and The “Law-In-Action” – A Study Of Public Administration In Germany, Poland and Czech Republic

The talk presents the results of a qualitative-empirical research project on public administration of prostitution in Germany, Poland and Czech Republic. Therein administrative practices of both governmental institutions and civil society organizations (e.g. police force; public order, public health and tax authorities as well as social work) will be described and analysed. Using semi-structured expert interviews with organisational frontline-actors governance of prostitution is approached and investigated from a bottom-up perspective. Germany with the Regulation model on the one hand and Poland and Czech Republic with the Abolitionism type on the other hand follow different laws and policies regarding prostitution. However, concerning their “law-in-action” the role of social actors’ professional habits formations revealed to be highly significant. Moreover, it can be shown how executives’ patterns of perception, thoughts, actions and their crucial impact on legal changes and its implementation have given the circumstances the study took place after an explicit legal and political paradigm shift of governing prostitution in Germany. Based on case reconstructions and contrastive comparisons a theoretical model on prostitution governance has been developed. It enforces the conceptualization of administrative actors’ professional habits consisting of three general dimensions: their definition of subject, definition of self and definition of environment. Furthermore, empirically emerged challenges and ambiguities of governing prostitution in terms of an everyday practice attempt to explain the relevance of professional habits formations affecting “law-in-action”.

Challenging New Governance: Evaluating New Approaches To Employment Standards Enforcement In Common Law Contexts

A mounting crisis in employment standards enforcement is prompting experimentation in common law contexts with new instruments aiming to improve workplace regulation. This experimentation across all stages of the enforcement process indicates the increasing influence of ‘new governance’. Focusing on reforms in five jurisdictions, this paper raises serious concerns around new ‘governance’ styled enforcement mechanisms, demonstrating that, put into practice, enforcement models envisioned in the new governance literature fail to account for the power dynamics of the employment relationship. Furthermore, arguments about the inevitable collapse of state enforcement capacity are premature and can impede strategies for more effective ES regulation.

What’s the Best Way Forward for Immigrant Workers? the Dynamics & Efficacy of Building Unions and Building Social Movements

In 2006, the peak association of the U.S. labor movement, the AFL-CIO, reversed its longstanding opposition to the legalization of undocumented immigrants and committed itself to organizing immigrant workers. Only a handful of its 57 affiliated unions actually heeded the call, but those that did successfully unionized immigrant workers in some key cities and states.

Yet, the number of immigrant workers involved in these unionization drives pale in comparison to the millions of immigrant workers involved in a very different kind of action: the massive nation-wide rallies for immigrants rights that took place in the United States in the spring of 2006. Here, too, a couple of labor unions played a critical role, both in the immediate lead-up to the rallies and 3 years earlier in their struggle to help build a national movement for immigrant rights. Two unions (SEIU and UNITE HERE) sponsored the Immigrant Worker Freedom Rides (IWR). Bus rides of immigrant workers and activists were used to bring publicity to the plight of undocumented workers in the U.S. and also to foster relationships among local labor unions, community-based organizations, and religious, student and immigrant-rights groups in the cities and towns where the buses stopped. Recent research shows that the IWR laid much of the institutional foundations for the 2006 rallies, especially in new destination communities (Voss and Bloemraad 2011).

In this paper, I examine these very different types of campaigns—those focused on unionization and those focused on building alliances and a social movement—comparing their dynamics and effectiveness. This assessment is far from straightforward; as one has to take into account not only immediate impacts but also long-term effects, including the backlash against them that has occurred in some of the new-destination communities that had rallies in 2006. Moreover, this backlash continues to be conditioned on state and local political climates.

Contrasting Young People's Personal and Political Uses of Social Media

Recent debates have highlighted the increasingly blurred boundaries between everyday social media use and the involvement in formal political networks. This paper examines how young people conceptualise the relationship between their everyday social media use and their political activities. We analyse data from an online survey of 108 young people in Australia, the UK and the USA. In each country the groups were divided into four segments: high/low participation by high/low SES to ensure that the discussion groups themselves had high homophily.

Social Reproduction Strategies and Participation in Higher Education during the Economic Recession

The current economic crisis in many Southern European countries has inevitably affected the number of students (male and female) progressing to higher education. The way young individuals and their families make their choices for the future is connected to the new social realities that this crisis has created. New inequalities are expected to take shape; such inequalities for example seem to arise from the unequal horizons for choice making. Middle class students and their families engage in choice making in higher education with broader options while lower classes have restricted horizons often stemming from mechanisms of self-selection and self-exclusion. These eventually produce stratification in the educational system due to factors that are not always educationally related or connected to individual characteristics. The decision making process needs to be located in macro sociological factors that relate to the structure of available opportunities on offer.

VRYONIDES, MARIOS* (European University of Cyprus, m.vryonides@euc.ac.cy)

Experiencing Interethnic Relations in Cypriot Schools

The aim of this paper is to examine the way teenagers experience and report interethnic relations with emphasis on interethnic violence in the school environment in Cyprus. It will report findings from a qualitative investigation from an EU funded research project titled: “Children’s Voices: Exploring Intercultural Violence and Children’s Rights in the School Environment”. The qualitative investigation included semi-structured interviews with school teaching staff and counselors and with experts whose work was related with interethnic relations in schools. Additionally, eight focus groups with children (4 in primary and 4 in secondary schools) were conducted to explore teenagers’ perspectives. Findings indicate that in Cyprus there is an environment of growing concern about the presence of migrants. People coming mostly from Asia and Eastern Europe and people of Islamic faith appear to be more vulnerable to prejudice. Overall there are mixed perceptions about interethnic tolerance in schools ranging from negative to (politically correct) positive ones. While the prevalent discourse of multiculturalism in Cyprus uses the rhetoric of integration, what appears to be happening in the Cypriot educational system is assimilation practices focusing on language acquisition. Whenever the latter is successful potential tensions tend to minimize. These findings point to interesting directions for educational policy regarding the whole gamut of interethnic relations in Cyprus at a period in time when the current economic crisis appears to have largely negative effects on multi-ethnic coexistence and to the prospects of a resolution to the prolonged ethnic conflict between the two main communities of the country.

The Effects of School-to-Work Transition Pathways on Economic Outcomes through the Great Recession

Whereas the term “school-to-work transition” (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional and typically includes involvements in both school and work. Destandardization in the STW transition makes it difficult to assess the extent to which young people today “flounder” during this period. Using longitudinal data from the US Youth Development Study and hierarchical latent class analysis, this paper examines the interplay of educational and career attainment and its longer-term economic consequences. Four STW pathways were observed from age 18 to age 30: two groups that attain careers through postsecondary education (via Bachelor’s or Associate’s/Vocational degrees) and two floundering groups that do not (those with some college and those with no postsecondary experience).

Regression models demonstrate the negative effects of floundering pathways on economic outcomes and the heightened difficulties of those pursuing these pathways during a recession. While the High School Flounder groups were consistently the worst off, the Some College Flounderers (SCF) also experienced relatively poor economic outcomes. Both pre-recession (2005) and in 2009, respondents in the SCF pathway were less likely to have a savings account and own a home, and had more financial problems and lower job satisfaction than those who moved into the labor force with Bachelors’ degrees. Even starker were their circumstances in turbulent economic times, with the SCF pathway now more likely to be unemployed, receive financial help from parents, and to have recently lost a job. This study also confirms that most differences between Flounderer and Career group and the Bachelors into Career group were non-significant, despite their unequal educational attainments, suggests that the pathway from an Associates or Vocational degree to a career is a viable alternative. We discuss implications of these findings both for the U.S. context, as well as for transition dynamics in other countries.

Rural Upliftment and World’s Largest Welfare Scheme MGNREGA: A Sociological Learning of Southern Rajasthan in India

Despite the preeminent efforts during the different Indian plan periods, the state of affairs of rural masses do not change significantly and the primary goals such as an increase in productivity, employment, eradication of poverty and social-cultural transformation of society remained an illusion for several years. Therefore in order to achieve the twin goals of rural development and employment, the government of India was promulgated the world’s biggest welfare program entitled as Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) on December 7, 2005. It aims at enhancing livelihood and security of homes in rural areas of the country by providing 100 days’ guaranteed wages in each financial year. The NREGA became operational on 2nd February 2006 and initially covered 200 most backward districts. In the second stage this scheme was further expanded in 330 backward districts and finally it made available for all the districts of the country.

As far as the impact of MGNREGA in Rajasthan is concerned it has helped the poor and needy in the villages of Rajasthan in several ways. Aside from offering jobs to the rural needy, it has been assisted in the creation of durable rural assets like plantations over degraded forest land, pasture land development, cleansing of ponds, improving the water harvesting system creation of gravel roads etc. It has helped in deepening the grass roots participatory democracy by making the system more transparent and accountable at every step. The scheme has also assisted in controlling the migration of poor villagers towards cities and towns in search of employment.

In this context, the present paper is an attempt to assess the effectiveness of implementations of MGNREGA in southern Rajasthan comprising of Bhilwara, Chittaurgarh, Partapgarh, Udaipur, Dungarpur and Banswara districts. These districts of Rajasthan are most backward and extensively populated by scheduled tribes.

A Cross-National and Cross-Actor Comparative Analysis of Violent and Nonviolent Interactions Between State and Civil Society Actors

While civil violence is almost always countered by state violence, the opposite is not true. It is unclear, according to Christian Davenport, whether state violence triggers or contains civil violence. In fact, one of the most difficult issues in the study of contentious politics is to predict civil society actors' reactions to state violence. Will those who have witnessed state repression pick up a weapon in anger or quiet down in fear and despair?

This paper tackles this repression-dissent problem. The literature on collective violence emphasizes the importance of institutional and structural contexts—e.g., political regime characteristics, state capacity, ethnic, religious, and class cleavages, levels of socioeconomic development, etc.—to understand the repression-dissent dynamics. A major stumbling block in the effort to carry out such a research agenda is methodological. On one hand, small-N case studies, while good at revealing exact processes of state and civil society interactions, cannot measure adequately the effect of multiple contextual factors. On the other, typical quantitative analyses of annual event counts, while good at estimating the contextual effects, fail to detect interactive dynamics.

By conducting a cross-national comparison of contentious event sequences, this study attempts to examine both the contextual effects and the interactive dynamics at the same time. We use a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. This unique data set records event information at a daily—instead of yearly—basis and, thus, helps us detect interactive dynamics. Moreover, we distinguish the actors who are more likely to resort to violence after state repression from the actors who are more likely to give up any further attempts to make claims by using multilevel analysis of actor-target interactions. This paper presents an original analysis of national contexts, actor characteristics, and actor-target interactive dynamics.

The Interplay of Youth Culture, Social Media and Political Participation: New Reflections after the Arab Spring

The recent Arab youth’s rebellion offers a valuable insight into new forms of online participation, alongside the role of youth culture, for political participation. For communicating their unease, for organising protest and for mobilising themselves young people utilise social media such as Facebook, Twitter, and YouTube. Furthermore, youth culture, also communicated through social media, played in influencing the media geography: in the shift in recent years from public forums and well-connected networks of committed activists to a more fragmented network of individual social media profiles, a filter bubble effect which appears to have reduced the ability of activists to create coordinated alternative media for protest events and the clear adoption of social media by not only the public at large, but corporations and governments existing within clear power structures that present little opportunity for decisive political change. It may be that the opinions of these activists are a signal of a shift within activist networks away from corporate-controlled, mainstream social media towards more ideologically suitable Web services and virtual communities.

WAGNER, ELKE* (JGU Mainz, wagnere@uni-mainz.de)  
Communities, Networks, Swarms. Internet-Collectivities As Supplements for the Notion of Society?

Sociological observations of social formations emerging with the internet have seldom pictured their object as a society; instead, there are many references to community, network, or swarm. These different notions are in many ways loose and diverse. They change all the time and combine different forms of networks. Thus, concepts switched to theoretical tools found in network analysis.
porary sociological writings go back to the concept of swarms to describe internet collectivities. The notion of society does hardly appear within the sociology of the internet. Instead of simply taking that as a sociological blind spot, this paper argues for an empirical perspective. Discussing different supplements (Derrida) of the notion of society within internet culture it thus addresses internet practices as societal practice. Practices are social practices – and within modern society there has always been a typical figuration of proximity and distance, fluidity and diversity. But at the same time the different supplements for the notion of society could indicate that societal forms are changing (through the influence of new media practices), e.g. the figuration of proximity and distance or the figuration of privacy and publicity. For the special case of the internet, this might be an instance of “writing (society) into being” (boyd). The paper discusses the sociological discourse on internet collectivities from an empirical point of view. It emphasizes that internet practices take place within society. And it works out how the new supplements to/of the notion of society could be indicators for social transformations.

WAGNER, ELKE* (JGU Mainz, wagnere@uni-mainz.de)
Internet Communities As Intimate Publics

The culture of the internet has long been described as community culture (Rheingold, Wellman, Thiedeke). But what does community here actually mean? On the one hand there is a sort of community feeling and support in online social groups (Barnes, Knoke). On the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the FriendRequest-Practices don’t often mean true friendship but simply contacts between different addresses. Therefore Dahah Boyd (2006) has suggested to describe community-building on the internet as “writing community into being”: communities don’t exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community means here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list emerge. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. That is why indeterminate writing practices emerge.

RC05-102.5

WAHLBECK, Osten* (University of Helsinki, osten.wahlbeck@helsinki.fi)
True Finns and Non-True Finns: The Minority Rights Discourse of National Minorities in Finland

This paper analyses the minority rights discourse found in political statements of the populist party called the True Finns. The party won a historic electoral result in the Finnish Parliamentary Election in 2011, increasing its share of the votes from 4 to 19 per cent. A theoretical framework for this paper is provided by research about populism and political strategies. Internet and the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the FriendRequest-Practices don’t often mean true friendship but simply contacts between different addresses. Therefore Dahah Boyd (2006) has suggested to describe community-building on the internet as “writing community into being”: communities don’t exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community means here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list emerge. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. WAHLSTRÖM, MATTIAS* (University of Gothenburg, mattias.wahlstrom@gu.se)

In connection with the Fifteenth Conference of the Parties to the United Nations Framework Convention on Climate Change (COP-15) in Copenhagen 2009, many activists had (at least reasonably) high hopes about successfully pushing for a new international climate agreement. After the complete stalemate between different country positions in Copenhagen, many climate activists lost their faith in the possibilities of achieving substantially changed international climate policies through the COP meetings. Four years later, facing the COP-19 meeting in Warsaw 2013, the climate movement mobilizes protest in a political situation with ostensibly more limited political opportunities. How do participants’ motives for protest and sense of efficacy vary between two equivalent climate protests when political opportunities change over time? This paper also explores shifts between the two points in time regarding what political strategies the participants in transnational climate demonstrations claim to prioritize. This is analysed based on two surveys of protest participants, one collected at the largest demonstration during the COP-15 meeting in Copenhagen 2009, and the other one at the main climate demonstration during the COP-19 meeting in Warsaw 2013. The data collection is based on a strict standardized methodology established in the international research programme CCC (Caught in the act of protest, Contextualizing Contention) which ensures reliability as well as comparability across protest events. Inevitably, the research design not only involves comparison of cross-sections of climate protest participants over time, it is simultaneously a comparison of two national mobilizing contexts. However, these two aspects can be sufficiently disentangled by controlling for demonstrators’ country of origin in the highly transnational demonstrations. The study aims to contribute to current scientific discussions about protest mobilization, as well as to tap into the contemporary developments of the (European) climate movement, from the perspective of individual climate protestors.

Variations of Stressful Work and Effects on Health after Labour Market Exit. Results from Share and Elsa

Recent research has highlighted the importance of former life stages in explaining social inequalities in health at older age. In this paper, we describe working conditions during adulthood and analyse their influence on health after labour market exit. Analyses are based on two longitudinal studies with comparable information across 14 European countries: the English Longitudinal Study on Ageing (ELSA) and the Survey of Labour and Retirement in Europe (SHARE). We measure working conditions in terms of psychosocial stress at work (as defined by the demand-control and the effort-reward imbalance models), as well as working careers are regrouped using sequences analyses. Moreover - given cross-national dataset - we explore the relationship between specific indicators of social and labour market policies (e.g. expenditure on active labour market policy) and working conditions. Results show important variations of working conditions according to gender, socioeconomic position and countries. In addition, results illustrate the importance of work and employment for health among older adults, were effects of stressful work and unstable careers on later health were more consistent for men.

Disaster Preparedness Among Older People with Long-Term Care Needs and Family Caregivers: Who Is Vulnerable and What Do They Need for Preparedness in Communities?
Background: Hurricane Katrina in the U.S. highlighted the potentially fatal effects of a natural disaster on older individuals. This experience was reinforced by the Great East Japan Earthquake, where community-dwelling elderly were again at the greatest risk of mortality. Understanding the needs for and concerns of older persons with long-term care needs and their caregivers is vital to the development of public health programs for community-level disaster planning.

Purpose: The preparedness of community-dwelling older people with long-term care needs were examined to identify characteristics of care-recipients and caregivers that are associated with worse preparedness and greater concern.

Method: A self-administered survey among family caregivers of older Japanese with long-term care needs (n=952) were conducted in 2011. Logistic regression analysis was used to identify the predictors of disaster preparedness, including evacuation plans and caregiver’s concern about preparation. Data were analyzed in 2013.

Results: Most older people had no concrete evacuation plans, and those with dementia were 40% less likely to be prepared. Caregivers who were responsible for older persons with worse mobility, as well as those in worse health or poor financial situations, reported higher levels of anxiety about their disaster preparation. However, more experienced, wealthier, and better socially integrated caregivers in the community were more prepared.

Conclusions: Older people with long-term care needs are at heightened risk in disasters, and rely upon caregivers who may be ill-prepared to respond in emergencies. Education of caregivers and development of community support programs could provide important sources of assistance to this vulnerable group.

WALBY, SYLVIA* (Lancaster University, S.Walby@lancaster.ac.uk)

Equality is key to justice. Debates on gender relations have challenged simple concepts of equality. Going beyond the static notions of equality as either equal opportunities or as equal valuation of different contributions, emergent concepts of equality depend upon visions of transformed gender relations. The paper critically engages with the limitations of Fraser’s account of the cunning of history, to produce an analysis of the varieties of gender regimes, not only domestic but also public, not only neoliberal but also social democratic, not only in the economy, but also in violence, politics, and civil society. The paper goes beyond the limited teleological view of the production of the family, the public, and the family, and the engagement with the debates on democracy, in the tension between statist and horizontal conceptions, offering resolutions drawn from feminist politics. The paper offers a gender lens to develop debates on justice from Harvey and Wallerstein to Esping-Andersen and Sen.

RC02-56.1

WALBY, SYLVIA* (Lancaster University, S.Walby@lancaster.ac.uk)

Gendered Neoliberalism and the Crisis

Much historical materialist analysis of the crisis leaves gender out of focus; while much feminist analysis focuses on culture or experience, although there are exceptions. This paper offers a re-engagement of feminist theory and historical materialism; it genders neoliberalism and materialises gender. The inequalities that have been affecting family life in late modernity in these countries were developed in three pathways and characterized by distinct welfare regimes: Portugal, Lithuania and Sweden. Using Pearson’s chi-square tests examined differences between the three needs during leisure, and during work, by class. Results indicated that autonomy was significantly greater during leisure regardless of class; competence was significantly greater during work regardless of class; and belongingness did not differ by class. A second series of dependent t-tests examined differences between the three needs during leisure, and during work, by class. Results indicated that: (a) during leisure, autonomy was significantly greater than belonging except for working class Chinese, and belonging was greater than competence for creative professionals and sales and service workers; and (b) during work, belonging and competence were both greater than autonomy, regardless of class.

These results are noteworthy because they: (a) do not support Florida's (2012) contention that the super-creative class's leisure and work overlap; (b) suggest that while autonomy is the primary need satisfied during leisure, it is tatty to competence and belongingness satisfaction during work, regardless of class; and (c) are not always congruent with findings from a comparable study conducted in Canada (Walker, & Glover, 2013).

Behavioral Versus Questionnaire Measures of Influence

In this project we examine the relationship between attitudinal measures of expectations and influence and a behavioral measure in an experimental setting. The attitudinal measures are typical questionnaire items regarding a study participant’s views of themselves, a partner, and their task after interaction. The behavioral measure, Ps, is the standard dependent variable for the kinds of experiments from which the data comes. Ps reflects the participant’s resistance to influence from his/her partner and is thought to reflect underlying expectations for competence. In this study we regress Ps on the series of attitudinal questionnaire items regarding expectations, influence, and affect. Results indicate that there is a strong relationship between attitude and behavior. Further, attitudes about ability, particularly the partner’s ability, are more closely associated with behavioral influence than affective sentiment is.

Changing Meanings of Family in Personal Relationships: A Comparative Perspective

Personal relationships are today less dependent on marriage and blood ties, with commitments going far beyond the nuclear co-resident family to include kin, non-kin and ex-kin. The aim of this presentation is to examine the meanings of family ties by exploring the changing boundaries within kinship and a wider array of affinities, in three European countries with different historical and social pathways and characterized by distinct welfare regimes: Portugal, Lithuania and Sweden. A comparative survey including national representative samples of two cohorts from each country (individuals born in 1950-1955 and in 1970-1975), we begin by analysing the ties which individuals consider as “family” within their personal networks and describe the main types of family configurations. Then we examine the determinants of including non-kin as “family” and exclude them from the family network. We intend to grasp whether family configurations reveal different levels of kinship integration, as well as the degree of fluidity in the social construction of family ties, in particular through the inclusion of friendship ties in the family setting. Do the different social and economic backgrounds that have been affecting family life in late modernity in these countries shape the patterns of family configurations? To what extent do other factors, such as the life-stage, structural conditions (gender, education), family circumstances (partnership, parenthood) or relational characteristics of the ties (duration) moderate these cohort effects? Findings reveal the salience of kinship ties, as well as the role of the family as the main context of social support in the family in the context of friendship. However the degree of salience of kinship ties varies across the three countries. Structural, life stage and family variables are shaping factors, but relational effects (quality of the tie), are of particular importance.
Forgotten Estates: The Precarity of Neighbourhood Restructuring in Salford, UK

Since the 1980s, the Northern English city of Salford has undergone intense deindustrialisation and been subject to systematic waves of urban regeneration. A key aspect of these regeneration efforts has been to rebrand and reconstitute the city and its districts from ‘grimy’ and ‘old Salford’, to dynamic and cosmopolitan. Under the aegis of the ‘New Deal for Communities’ policy, one specific district in the mid 2000s was earmarked for a distinct process of redevelopment entailing the demolition of public housing stock and the construction of private housing developments within newly enclosed estates and along the profitable local riverside. Ten years on and amid a challenging fiscal climate, this redevelopment vision has largely stalled resulting in an amalgam of complex neighbourhood impacts and processes encompassing partially demolished public housing estates, threats of further eviction for housing tenants, the arrival of new private owners and a severely disinvested community infrastructure. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established resident experiences of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic of the city and the neighbourhood, chosen to reveal itself to us. The tensions between these various ways of seeing are present in film, and often emerge in the discussions that followed as we presented the films to different audiences. Of course all filmmaking always consists of making choices, but not all choices are always allowed. The city, then, becomes a protagonist and a storyteller. Jeppestown is one more collaborator in the team of filmmakers creating this imagined, and real, portrait. What can we learn by digging up these visible and invisible traces left in the film? What can we see about our own practice as image-makers through looking more closely at what remains?

Film Screening 2: St Henri

On August 26th, 2010, sixteen filmmakers followed multiple stories in the Montreal neighbourhood of St-Henri. The result is a touching, funny and fascinating day-in-the-life of this eclectic community. Doris travels the streets collecting bottles; Belinda is a dynamic hair stylist from Togo; Babyface, the 15 year old Canadian feather weight boxing champion prepares for a match; Robert and Edmée enjoy their golden years together; Danielle, an urban explorer scales abandoned buildings and descends into St-Henri’s sewers. These are just a few of the characters we follow in “St-Henri, the 26th of August”, a film that asks what community means today, and how we inhabit our neighbourhoods.

Inspired by the 1962 ONF film ‘À St-Henri le 5 septembre’, this unique collaborative film brings together some of the brightest talents in the contemporary Montreal documentary community to capture this story.

Film Screening 2: Jeppe on a Friday (2012) + Discussion:

JEPPE ON A FRIDAY (2012), DOCUMENTARY FILM (SOUTH AFRICA / CANADA), ENGLISH, ZULU
DIRECTED BY SHANNON WALSH & ARYA LALLOO
Film synopsis: A city can be seen in news reports, crime statistics or Hollywood blockbusters. It can be explored through guided tours, from behind car windows or through history. ‘Jeppe on a Friday’ explores a different city: the Johannesburg that exists through the men who occupy it.

Discussion: All visual meaning-making consists of choices: what we see and what we don’t see. In our documentary project on Johannesburg, ‘Jeppe on a Friday’, layers form upon layers of what is seen and what is hidden. Part of this were conscious choices made for the stories we wanted to tell and the images that would reflect the city we saw in front of us. But part of the layers and visibilities were also about the way in which the city, and the neighbourhood, chose to reveal itself to us. The tensions between these various ways of seeing are present in film, and often emerge in the discussions that followed as we presented the films to different audiences. Of course all filmmaking always consists of making choices, but not all choices are always allowed. The city, then, becomes a protagonist and a storyteller. Jeppestown is one more collaborator in the team of filmmakers creating this imagined, and real, portrait. What can we learn by digging up these visible and invisible traces left in the film? What can we see about our own practice as image-makers through looking more closely at what remains?

Explicating Individual Training Decisions Based on Instrumentality Theory

Participation of individuals in continuing vocational training (CVT) stagnated or even declined since the late 1990s in numerous countries. In light of the long-standing predictions of an increasing need for CVT, this development is puzzling.

Several theories exist to explain CVT participation. Nevertheless, most empirical studies use merely personal and occupational characteristics as the main predictors of CVT participation. Also, many studies scrutinize the decisions of either participants or non-participants relying on ex-post survey data. Respondents, however, most rationalize their past behavior and give distorted assessments of their ex-ante training motives. Hence, these works do not provide an integrated explanation of individual training decisions and give no answer as to why participation does not live up to scientific and political expectations.

We apply instrumentality theory to explicate individual training decisions. Based on novel individual data, we estimate the effect of subjective expected utility (SEU) from CVT, the effect of restrictions, and the effect of personal characteristics on the willingness-to-pay for CVT. To construct individual SEU-scores, we confronted interviewees with a specific training scenario and gathered information on:

- Importance-ratings of nine potential CVT-outcomes,
- the perceived probabilities of successful training would actually help achieve each outcome,
- the perceived probabilities of training success.

Outcomes for CVT are:

- SEU is a main driver of training decisions.
- Financial restrictions are most decisive for persons with higher training tendencies.
- Lack of time helps explain why some individuals are entirely unwilling to participate.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The regional infrastructure is a crucial training determinant. Age and vocational degree do not directly affect training decisions. Yet, persons in specific occupational settings do exhibit a lower training tendency. Also, training behavior of these persons appears to be more rigid and less likely to react to changes in their cognitive training attitudes.

Encountering the ‘Other’: Interpreting Student Experiences of a Multi-Sensory Museum Exhibition

The Immigration Museum in Melbourne, Australia launched the Identity: Yours, Mine, Ours (IIMO) exhibition in 2011. Aimed primarily at young adults and secondary school students, this major long-term installation seeks to foster reflection on identity and belonging as well as dialogue about racism through a reflexive, empathetic and interactive museum experience. Drawing on findings from three secondary schools, this paper reflects on a multi-method approach that included narrative interviews, video diaries and focus groups with Year 11-12 students as well as key informant interviews with principals and teachers.

While focus groups were a catalyst for dialogue about everyday experiences with cultural diversity and racism, the ‘identity’ lens privileged in these groups could not account for the complexity of embodied experiences of belonging that were, to at least some extent, captured in narrative interviews and video diaries. For example, the narrative interviews allowed students to talk about themselves in relation to aspects of the exhibition rather than directing and framing their experience a priori, thus capturing a complex understanding of the student IIMO experience through an entanglement of their life worlds, at home and school.

Overall, the combination of qualitative methods revealed the ways in which an interactive and immersive museum space can support students to encounter and engage with individual stories and faces, move beyond an abstract tolerance of cultural diversity, unsettle the Self and destabilise stereotyped and prejudiced interpretations of ‘the Other’. We conclude by discussing the potential of multi-method qualitative approaches to draw upon students’ meaning-making, including the narrative barriers experienced in multilingual contexts, in order to provide a rich emic perspective on multi-sensory exhibitions.

Internet Public Sphere Under Construction: A Grounded Theory Analysis to Sina Netizens’ Comments on “Toilets Standard”

The dilemma for China to construct its internet public sphere does not result from the lacking of the same physical foundation as the western world has. On the contrary, the structural constrains such as no clear boundaries between public and private, the inner-circle communication oriented caused by “Chau Guj”, as well as the non-stand against as the ‘weapons of the weak’ do matter, that finally prevent from the opinions transforming from personal to public. To break through the deduction circulation that whether the virtual or physical public spheres should make the first move, this paper try to get the answer from the induction from the Comments on “Toilets Standard” by Sina Netizens using the constructed grounded theory as a research method. It is easily to find out after a series of coding that, the public all agree that this standard has very bad operation.

Labor Migration Regime and Factory Dormitory in Taiwan

Taiwan adopts guestworker scheme to hire migrant workers from Southeast Asia. However, a series of nationalistic policies in the region, manifested in such incidents as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German social thinker Max Scheler, this paper provides a preliminary examination of what can be called “structures of feeling” in East Asia. Three dimensions of these structures are outlined for analysis: (1) grief/victimhood and the politics of memory; (2) resentment (or ressentiment in Scheler’s terms) and value systems; and (3) power relations and the multi-layered structures of ressentiment in East Asia. It is argued that the true reconciliation among different people in this region has to be reached before any ideal of Asianism or East Asian Community can be carried out. Towards the end of the paper, the implications for the reconciliation in the region will be further explored.

The (im)Possibility of the “East Asian Community”: Reflections on Nationalist Sentiments and the “Structures of Feeling” in East Asia

The recent development in East Asia has witnessed two contradicting trends: on the one hand, there have been reviving interests in Asianism (especially inspired by Takeuchi Yoshimi) and/or the so-called “East Asian Community” in both official and intellectual discourses; on the other hand, there has been an escalation of nationalistic politics in the region, manifested in such incidents as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German social thinker Max Scheler, this paper provides a preliminary examination of what can be called “structures of feeling” in East Asia. The Quest to “Overcome Modernity”: War, State-Building and Nationalism in Japan and China

Drawing on Japan and China as two illustrative cases, this paper intends to shed new light on our theoretical understanding of modernity by articulating the relations between war, state-building and nationalist discourse in the non-Western context. From its very burgeoning, the historical formation of modernity in East Asia has been intertwined with the experience of the defeat of war (or war threat) that, in turn, gives rise to nationalism. Moreover, understood as originating from the West, modernity to the East has been regarded as something to be achieved and overthrown at once. On the one hand, it is considered that the East has to catch up with the West in terms of material achievements (particularly economic performance and military power); on the other hand, it is also contended
that Western modernity has intrinsic contradictions that will eventually lead to self-destruction, of which the only redemption is through the alternative path provided by the East. Such a dichotomous view of modernity has been dominating nationalist discourses in many instances in East Asia. Thus, nationalist projects in East Asia often have a double task: to pursue modernization through state-building, on the one hand, and to “overcome (Western) modernity”, on the other. However, due to the legacies of war, which leads to a lack of reflection on state ideology and violence, such nationalist projects often fall into the trap of modernity itself without being able to become the genuine critique of the latter. This paper will use the attempt to “overcome modernity” in wartime Japan and the search for “anti-modern modernity” in contemporary China as two examples to examine such a paradoxical situation. It is concluded that, to better theorize (and critique) modernity, the intertwined relationships between war, state-building, nationalism and global inequality have to be taken into account.

Feeling Good about the Iron Rice Bowl: Economic Sectors and Happiness in Post-Reform Urban China
Situated in China’s market transition, this study examines the relationship between economic sectors and individuals’ happiness in post-reform urban China. Based on pooled data analysis of restricted urban samples from the China General Social Survey (CGSS) 2003, 2006 and 2008, the subjective premium enjoyed by workers in the state sector is noteworthy: individuals working in the state sector have significantly higher levels of happiness than their counterparts in the private sector, other things being equal. After controlling for selectivity in moving into the private sector, differences between those remaining in the state sector and those moving from the state to the private sector are highlighted: those remaining in the state sector are significantly happier than former state sector workers who moved into the private sector, whether the move was voluntary or involuntary. Possible underlying causes of these psychological costs are further explored: institutional segmentation in the allocation of social welfare benefits rather than psychological factors serves as the primary nexus linking state-to-private mobility and happiness. On the one hand, those who moved voluntarily experienced a trade-off: enjoying higher paid-offs while losing a sense of security. On the other hand, involuntary, downward mobility leaves long-term psychological scars to those who experienced layoff or unemployment after controlling for social welfare benefits. People who experienced sectoral mobility, whether voluntary or involuntary, suffer from loss of the iron rice bowl. Results from robustness checks indicate that neither observed nor unobserved confounding factors, if any, would bias our conclusions. This study emphasizes the role of social security as an important dimension in determining individuals’ happiness that should be explored in future research.

Re-Territorialization and Social Resistance in the Remaking of Dafen Village, Shenzhen, China
After exhibited in Shanghai EXPO2010, Dafen Oil Painting Village has been advocated as an innovative “best practice” of governing that has transformed urban villages with low-skilled laborers and chaotic landscape into a cultural cluster. Many scholars have noted that, in China, couples of famous cultural clusters have emerged and prospered in places with a near vacuum of governance, such as villages or remote suburbs, only to drastically change owing to the expansion of state governance. Nevertheless, there seems to be a marginalization of scholarly attention to the trade-painting community of Dafen Village, perhaps due to the common critiques on authenticity of trade-painting industry and thus, negligence of everyday life of trade-painting workers and their struggles.
What concerns us is the changing landscape of social relations when a particular area is demarcated as a special cluster subject to the state’s regulation in name of objectifying the imagined economy. Instead of debating the nature of trade-painting industry, we argue that the remaking of Dafen Village into a cultural cluster is a project of re-territorialization, driven by the state with a market mindset. The fabrication of the cultural cluster thesis into the settlement of the trade-painting community entitles the state to try new logic and new forms of inclusion and exclusion. More specifically, we are concerned about the differentiat-ed treatment given to different social groups through calculated policies and the corresponding social struggles of various social groups for their rights. Particular attention is given to two major calculated rules: spatial planning for land use regulation and differentiated welfare access rights. Through the study, we attempt to offer a critical yet nuanced perspective toward the heterogeneous society and changeable alignments or blurred boundaries between the state and society in the dialectic process of re-territorialization and counter-territorialization.

Gender Differences in Social Quality in Taiwan
This paper will try to explore the social quality through gender lances. Taiwan is undergoing a process of transition in terms of family dynamics and social progress. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in perception of social quality.
The data is derived from 2nd wave SQS survey done by National Taiwan University. This questionnaire has been originally designed by the Seoul National University and modified by ACSQ network and Taiwanese SQ team member. Here are about 1200 sample are collected and CATI system has been utilized during data collection. Stratified random sampling has been used for sample representation purpose.
The data will address that here is gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

Effects of Social Capital on the Psychosocial Development of Children in Middle Childhood in China
In this analysis, the effects of social capital (including family, school, peer and community social capital) on the psychosocial development of children from two-parent families in China have been investigated. And five dimensions of psychosocial development are analyzed, including social competence, emotional competence, self-esteem, resilience and pro-social behavior. In total, 140 children studying in grades 4 to 6 from two primary schools in Tianjin have involved. And all of the participants are selected randomly. The outcomes suggest different effects of social capital on the five dimensions of psychosocial development. The interaction effect between family and community social capital significantly affects children’s social competence, emotional competence and resilience at the same time. School social capital and peer social capital are interacted, and influence emotional competence. Meanwhile, competence impact on school and community social capital has significant effect on resilience. However, except for the direct effect of family social capital on social competence, no other direct significant effects of social capital have been found surprisingly. It is also surprising to find no significant effects of social capital on self-esteem or pro-social behavior, which is in conflict with the current literature from Western culture. The outcomes from empirical analysis suggest that, simple social capital can not promote the psychosocial development of children in middle childhood in Chinese context. To strengthen the relationship between family and school, school and community, and family and community, will be very important to improve children’s psychosocial development level. Furthermore, more potential predictors are supposed to function to promote self-esteem and pro-social behavior in Chinese context, such as cultural capital.

The Guanxi Hierarchy - Family Ties and Finance in China’s SMEs
In his seminal work, From the Soil, Xiao-tong Fei found that solidarity in social ties fades with distance from primary group relations. Thus the power of guanxi (i.e., connections or relationships) would differ according to its source. Most powerful would be guanxi based on kinship, with the power of such connections fading as one moved down the scale from kinship, to regional location, thirdly to school ties, and finally to business ties.
Fei’s early work has returned to prominence in analyses of group ties in private enterprise, following market reforms over the past four decades. For instance, Yu-sheng Peng (2004) highlighted the economic benefit of kinship networks in China’s rural industrialization programs. He found that kin solidarity played an important role in protecting the property rights of private entrepreneurs. In the absence of credible market institutions or a legal order protecting property rights, kinship networks reduce transaction costs during the early stages of market reform. Yan-jei Bian (2009) broadened the thesis, arguing that the emergence of private firms can be traced back to guanxi networks. However, He and Jia (2005) discovered a reverse hierarchy in the strength of guanxi ties. They found business-based guanxi gaining prominence more recently in the management and operation of domestic private firms.
I look then to the pattern of guanxi ties, and relevant hierarchy in the strength and significance of such ties among owners of private enterprise. Data were drawn from about a thousand SMEs between October 2008 and March 2009. I found that strong kinship network ties were correlated with positive effects on
of early trauma on adulthood life quality is moderated and buffered by religiosity determined by public religious attendance, private observance, and religious tech-
types of religiosity during adulthood, including level of childhood and teenage traumas tend to display higher level of various juncture views (as sorted into childhood traumas and teenage trau-
mas) . Furthermore, this research discusses whether the Taiwanese with higher 
journeys of adulthood life quality: happiness and self-reported health .

With the utilization of the data drawn from two nationwide representative samples: the 2009 Religion Module of the Taiwan Social Change Survey (TSCS) and the Survey of Religious Experience in Taiwan (REST), three sets of questions are investigated. The first sets of analyses enable this research to ascertain the impacts of diverse dimensions of early trauma on the life quality, including quantity views (as classified into number of early traumatic events), category views (as classified as parental-related, sibling-related, self-related, and economic early trauma), and juncture views (as sorted into childhood traumas and teenage traumas). Furthermore, this research discusses whether the Taiwanese with higher level of childhood and teenage traumas tend to display higher level of various types of religiosity during adulthood, including belonging aspect (as grouped into no-religion, diffused-religion, and institutional-religion), belief aspect (as measured by attitudes toward supreme god and spirituality), and behaviors aspect (as determined by public religious attendance, private observance, and religious techni-
iques). Last but not least, this research gauges whether the negative influence of early trauma on adulthood life quality is moderated and buffered by religiosity during adulthood.

Immigrant Wives As Volunteers in Taiwan: Their Characteristics and Experiences

The prevalence of transnational marriage can be witnessed in Taiwan in the late twentieth century where Chinese and Southeast Asian women, mainly from Vietnam, dominate numerically. Most of the women got married to Taiwanese men through the operation of profit-pursuing marriage agents who contract “commodified transnational marriage”, are labeled in Taiwan as “foreign brides”, a derogatory term that implies exclusion and discrimination. It has been recognized that immigrants can improve their economic, social and emotional well-being, civic participation and integration in the host society by undertaking volunteering activities. Nevertheless a variety of factors can prevent them from voluntary work. In other words, it is significant to disclose immigrant wives’ experiences of being volunteers in Taiwan. However, the studies to date on the issue of these women have largely concentrated on adaption; little atten-
tion is paid to their participation in volunteering. Thus this paper aims to learn about the characteristics and experiences of immigrant wives who participating in volunteering in Taiwan by conducting qualitative research. The major questions raised for this paper are: 1) What are their factors for volunteering? 2) What are reasons keeping them from volunteering? 3) What types of volunteering work do they do and why? 4) What does volunteering work mean for them? The research results can put forward recommendation to policy-makers and mainstream or-
izations with a hope of promoting volunteering participation of immigrant wives in order to improve their well-being in Taiwan.

Cooperative Marriage: Queer Politics of Chinese Lolas and Gay Men

Being a new and under-researched phenomenon since 2005, cooperative mar-
riage attracts attention and generates debate in and out of the mainland Chinese LGBT community. Cooperative marriage is a heterosexual marriage performed and negotiated by two non-heterosexual parties, a lola (lesbian, bisexuel and transgender woman) and a gay man.

Being a popular coping strategy of lolas and gay men in contemporary China, in facing the institution of family, marriage and heteronormativity, cooperative marriage offers great insights into Chinese families, tongzhi kinship and alternative forms of intimacy and queer alliances. Filial piety, compulsory heterosexual mar-
rriage and potential housing, legal and financial benefits in heterosexual marriages are major momentum for this type of highly ritualized marriage. In cooperative marriage, both parties are fully aware of the obligations and nature of the mar-
rriage, however many of them struggle to make a balance between the conjugal family, natal family and their same-sex desire.

Various strategies are developed in finding and sustaining the (superficial) harmony of such families: different family practices, new family arrangement, the performance of masculinity and femininity in their conjugal houses and rel-
evant public spaces. Friendship and even family bonds are thus developed and

Residents Against Heat Stress

Heat primarily affects the elderly’s energy balance. Most frequently, heat induces ailments. This group is also more likely to withdraw from the public for the duration of the hot periods. Those who don’t withdraw suffer from fewer heat-in-
duced ailments. Factors that increase the likeliness to stay at home are a disad-
vantaged neighborhood, dissatisfaction with and lack of neighborhood networks

The Embeddedness of Corruption in Contemporary China: The Bo Xilai and Lai Changxing Cases

Economic corruption cases are a window into networks linking state office holding with wealth accumulation. This paper draws on the concept of embed-
dness (Granovetter 1985) to examine two prominent cases in contemporary China. The cases are, I claim, ideal typical of agents and their networks coming from different social positions. One is “corruption from below”. Its agent is an entre-
preneur from a humble background, Lai Changxing, who forged networks with hundreds of officials in an immensely profitable smuggling operation that was exposed in Fujian Province in 1999. The other is “corruption from above”. Its agent was a high-level official born into the political elite, Bo Xilai, who accumulated great wealth through networks in his social circles that were revealed in 2013. This paper’s analysis centers on how the agents select, monitor, and sanction others in their networks. There are two key findings. One is that the networks are organ-
ized through third-parties (proxies). The other is that the networks’ institutional basis is constituted not only by trust, but also by coercion. The paper’s subse-
quent discussion considers some mirrored differences reflected in the humble and elite positions of the agents, and how their two kinds of networks can inter-
act. In the conclusion, I use the paper’s argument to stress the need to develop an economic sociology of corruption.

Cool Towns for the Elderly - Protecting the Health of Elderly Urban Residents Against Heat Stress

Background: The 2003 heat wave in Europe resulted in 70,000 deaths. Partic-
ularly vulnerable are older persons living in socially deprived urban areas.
The STOPHOT project explores how the elderly Viennese population perceives adjusts their behavior to heat. Of specific interest are the behavior patterns of older per-
sons with lower SES living in socially deprived urban areas.

Methods: Using a standardised questionnaire, a telephone survey was con-
ducted in summer 2011. 400 subjects (>65y) living in four different residential 
areas in Vienna were interviewed. In addition, face-to-face interviews with residents of retirement homes (n=200) and 15 in-depth interviews with stakehold-
ers were carried out.

Results: Heat primarily affects the elderly’s energy balance. Most frequently mentioned conditions are fatigue (58%) and sleeping problems (48%). Older people adjust their behavior during a heat wave mainly by wearing lighter clothes, increasing liquid intake and staying indoors during daytime. High-risk groups are persons with a lower socio-economic status and activity level as well as poor health condition. This group is also more likely to withdraw from the public for the duration of the hot periods. Those who don’t withdraw suffer from fewer heat-in-
duced ailments. Factors that increase the likeliness to stay at home are a disad-
vantaged neighborhood, dissatisfaction with and lack of neighborhood networks

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
and age discrimination in the residential area. Whether older socially deprived individuals go out during a heat wave period is not so much a result of available green spaces, but rather of existing socio-spatial conditions.

Conclusion: The elderly are particularly vulnerable towards heat stress. With urban populations ageing, and urban temperatures rising, design of urban areas must increasingly consider the interaction of social and climatic factors to increase age-friendliness. Vulnerability towards heat is not natural, but produced by socio-spatial conditions and can be counteracted by community-building initiatives.

Since resources are limited, it is a common dilemma for religious organisations how much of their resources should be allocated for these different purposes. This dilemma can be approached analytically by distinguishing between Gemeinschaft-oriented and Gesellschaft-oriented activities, drawing upon Ferdinand Tonnies’ classical ideal types of social relations. Both kinds of activities are important for achieving a sustainable religious organisation with a potential for long-term growth. The author’s studies of the Baha’is and of fund-raising in Danish churches abroad provide empirical material for developing this proposition into a generally applicable model of the internal dynamics of proselytising organisations in terms of Gemeinschaft and Gesellschaft. It will be argued that Gemeinschaft and Gesellschaft are complementary to each other and not opposing ideal types of social relations. On the one hand, the organisation must fulfill the members’ expectations of Gemeinschaft — otherwise, in the long run they will become passive or even resign. On the other hand, the functioning of the organisation must not be jeopardised by neglecting the need for administrative efficiency and proper management of resources, which by definition are Gesellschaft-oriented activities. If proselytising is a more permanent activity, it requires formal organisation, rational planning and money to be efficient. When resources are limited, investing in proselytising usually occurs, at least partly, at the expense of activities that strengthen Gemeinschaft. Eager proselytising can therefore easily lead to an organisational and human strain which is not sustainable.

**Older People in Public Space(s) — Engagement or Disengagement?**

**Background:** Public spaces are in transition, and it doesn't head towards age-friendly cities. Instead, spaces are turned into functions of mobility — lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

**Methods:** The main research question is how older people cope with the deprivation of public places and what role the specific localities play in their strategies. A comparative case study of contrasting residential areas in Vienna, Austria, will be presented. A mixed-methods design combining both quantitative and qualitative methods is deployed.

**Preliminary Results:** The quality of the residential area significantly correlates to older people's outdoor behavior. Factors that reduce the likeliness of spatial engagement are a disadvantaged neighborhood and age discrimination in the residential area. Who owns little resources is even more affected. However, older people also own specific resources that can contribute to the revitalization of public spaces, increasing not only their own quality of life but the quality of city life in general.

**Conclusion:** The intersectionality of old and new dimensions of inequality — like ageing intersecting with education and gender — poses new challenges for environmental justice discourse. Hence, environmental justice can be discussed under the keywords of age-friendliness. Without counteraction, environmental deprivation and the corresponding withdrawal of older people from public space will increase the inequality — both in regards to health and significance. Who withdraws from public space becomes invisible in society. However, older people are also a highly competent group that is yet hardly targeted by urban revitalization initiatives. Here lies potential for inclusive ‘gentrification’ of urban areas.

**Gender Equality Policy Revisited, the Case of Poland and Norway**

Gender equality is one of the most complex and contested concepts in recent decades in Europe and worldwide which has been developed by academics, practitioners as well as politicians. It is seen as a tool for economic growth and sustainable development. While some European countries have made significant progress as far as the gender equality is concerned, there are still evident examples of inequalities in the economic, social and political sphere. The aim of this presentation is to discuss the possibility to use the new framework of gender equality created by the MAGEQ project to analyse the equality policy in Poland and Norway. Comparing both models will allow to identify specific social contexts for development of GE policy in Europe and allow to answer the question if it is possible to integrate various approaches and measures to GE policy on the European level. In other words, the policy analysis in both countries will help to suggest the areas of potential improvement for gender equality policy and a new methodological framework for gender equality.

This paper will present the result of research project: Gender equality and quality of life — how gender equality can contribute to development in Europe. A study of Poland and Norway funded by Polish-Norwegian Research Programmes.

**Mission and Management of Meagre Resources in Religious Organisations**

Religious organisations must organise labour and raise money for diverse purposes, such as preparing and holding religious feasts and social events, communicating internally and externally, maintaining property, and in most cases also proselytising. It is resource-consuming, but in order to recruit new adherents and subsequently educate and socialise them into the religious and communal life.
New Approaches to Sociospatial Network Analysis: Understanding and Responding to Neighbourhood-Level Poverty and Disadvantage

While socio-economic-spatial divisions within cities and towns have long been evident, in post-1980s times they are generally considered to be growing sharper and differentiating at the scale of suburbs and neighbourhoods. This produces effects in which the poor and non-poor increasingly live apart from each other and is referred to as ‘sociospatial polarisation’. These socio-economic-spatial processes have significant implications for the ways in which poverty and socio-economic disadvantage is being reproduced through converging socio-economic and spatialised processes. Drawing on a series of studies conducted in Victoria, Australia, and exploring social network structures and experiences of community in disadvantaged and non-disadvantaged neighbourhoods, this paper explores the implications of converging socio-economic and spatialised processes with particular focus on settings of place-based neighbourhood disadvantage. Issues addressed are: 1) discussion of findings from network analyses that show contrasting patterning of social networks between residents of poor and non-poor neighbourhoods; 2) consideration of the implications of divergent network patterning experiences and potential of community in place-based settings for poverty reduction strategies. Network analyses use a range of methods to collect network data on residents’ networks including contact diaries, CATI surveys and ethnography and, more recently, mobile phone and Global Positioning System (GPS) technology. Evidence from these and other studies suggests that residents of socioeconomically disadvantaged neighbourhoods are likely to have more local networks and fewer extra-local networks, than residents living in other kinds of neighbourhoods. These findings have significant implications for poverty reduction strategies that assume neighbourhood ‘community’ to be potentially transformative mechanisms for driving socioeconomic change at local levels. Rather, efforts should focus on understanding macro processes that are contributing to socio-spatial disconnections among vulnerable populations and developing poverty alleviation strategies that include efforts to connect residents into extra-local and socioeconomically diverse networks.

Unpaid Domestic Work and the Economic Crisis: Reinforcing or Diluting Gender Inequalities in Britain?

The recession of 2008-9 and the prolonged economic downturn have brought to the fore fundamental questions about the ramifications of the crisis for the working lives of diverse social groups. In Britain, a marked absence in the plethora of research projects exploring the work and employment outcomes of the crisis is explicit attention to ‘housework’. Whilst campaigning women’s organizations have made multiple predictions about the impact of crisis on the gendering of work inside and not just outside the home, there has been little empirical attention paid to domestic work and the crisis. The evidence that does exist is patchy, often anecdotal, and hints at diverse ramifications of the crisis. This is a key gap in our current knowledge. It is significant because domestic work talks powerfully to the links between education and society. In particular, entrance examinations for higher education have a great impact on shaping compulsory education, and they reveal the types of abilities and attitudes that each society is attempting to nurture. Moreover, the immutable modes of entrance examinations inevitably reproduce indigenous education, its system, modes of knowledge and pedagogy, although the influence of globalization on education is apparent and educational reforms are continually introduced. Thus, entrance examinations function as a form of system maintenance, even when alien examination systems are drafted onto education. Since the modes of these examinations are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

This paper examines the various functions of examinations by comparing three countries: France, the United States, and Japan. Special attention is paid to the socialization patterns in each country. The Japanese National Center Test for University Admissions was modeled after the American SAT (Scholastic Aptitude Test), but what each test examines is quite different in terms of modes of knowledge and students’ faculties. Unlike the SAT and the National Center Test, the French Baccalaureat employs essay-type exams. The Baccalaureat is accepted as a rite of passage to becoming “French” through the acquisition of a dialectic for writing and talking that is based on an idea of a shared culture. With this analysis of three countries, France, the United States, and Japan, special attention is paid to the socialization patterns in each country. the tendency to have informal social interactions (e.g., discuss personal matters, share free time) with departmental colleagues who share parental status (parents or non-parents). We use social network data on about 380 faculty within the natural and social sciences at a large research-intensive Midwestern university. For the preliminary analyses, we ran OLS with permutation tests and did not find a significant gender difference in parent homophily, which was measured using the point bi-serial correlation (PBCS). The next step is to run Exponential Random Graph Models (ERGMs) and test the gender difference controlling for dyadic dependence.

Why Do Organizations Form Groups?: Complex Structure and Behavior of Japanese Groups from 1977 to 1998

Although it has been a well-known fact that Japanese business groups have consisted of two types of network, the structural difference between them has not been paid enough attention to by researchers. Applying the techniques of network analysis and regression analysis to data on a total of 2,972 large Japanese firms over a 22-year period, this paper demonstrates the correspondence between network structures and the three different goal-pursuing behaviors of firms.

Corporate Complexes (i.e., the largest six cross-industrial corporate networks with a circle pattern of bilateral equity ties) had a significantly positive effect on member firms' status-oriented behavior as well as on firms' technology-orientated behavior. However, the effect on firms' efficiency-oriented behavior was not confirmed with the same dataset. Meanwhile, Corporate Groups (i.e., the seven corporate networks in the automobile industry with a tree or star pattern of unilateral equity ties) had a positive effect on member firms' economic behavior as well as a negative effect on member firm's technological behavior. In the case of the economic effect, however, only superordinate firms benefited from corporate groups. The effect of corporate groups on member firms' social behavior was not confirmed. The patterns of group structures and member firms' behaviors did not change throughout the observation period despite the fluctuation of the macro economic environment.

From the analyses, these findings suggest that Corporate Complexes were a system of resource-acquiring by means of firms' high social status, while Corporate Groups were a system of making profits to sustain the costly system for superordinate firms. (For subordinate firms, corporate groups were the system for bare survival.) Both structures were thus complementary to each other. Shielding the member firms against environmental fluctuation and technological uncertainty, Japanese business groups, by virtue of their complex structure, simultaneously pursued multiple goals as a united body.

Worlds of Nurses in the Care at Home, a Comparison France-Japan

Most of the Japanese nurses in the care at home in the regions Fukushima and Nagano are married, having children, but they had an interruption in their careers, longer than the French nurses. So we observe it in difference between length of having D.E. (Diploma of State) and experiences as nurse in the care at home. In France, the nurses in the care at home stress the activity and more exactly on their condition of exercise, at the levels of motivation and difficulty, unlike the nurses in hospitals, who like working in team, emphasize the cooperation with other professionals. The French nurses mention practically never the relations with patients’ families. So, the professional world of the first ones focuses on the market convention, while that of the second on the industrial agreement. In Japan, the nurses in the care at home, quite as the hospitable, suggest the relations with patients in terms of motivation and difficulty; which one emphasizes the relations with the family of the patient. The professional world of the nurses in the care at home is characterized by the proximity or domestic convention. However, the nurses in the care at home in Fukushima differ from those in Nagano. The second criticize care managers in the point of view of cooperation. The first ones suffer from the difficult situation after the disasters to improve the quality of life of the patient, but they think of the role of the professional associations in terms of civic convention. This requirement of collective organization comes along with a bigger autonomy and, doubtless, with a grip of more important responsibility. This will have important and positive consequences on the image of the profession.

Communicating the Discrepancy: Operational Outcomes of the Activation Policy in the Field of Local Support Activities for Migrant Residents in Germany

This paper addresses the question of how migrant residents and local welfare organizations experience the recent political changes to the “activation” welfare policy in Germany.

Because of a radical transformation of the political landscape in the last decade in Germany, people with migrant backgrounds are subjected to activation politics in two ways. Since there are twice as many jobless migrants compared to Germans, the migrants are necessarily the addressees in the new job placement measures, which may be well compared to the workplace policies in the United Kingdom. Furthermore, migrants are involved in the activation scheme through the formation of an integration policy in Germany that strongly reflects the concept of activation by requiring total engagement, self-responsibility, and willingness to get involved in the life and norms of the host country.

To assess the practical outcomes of such a political arrangement in the direct surroundings of the involved actors, the author conducted narrative interviews with migrants and local actors who are either in charge of job placement measures in the job centers or operating local support programs in elementary schools in migrant-dense city areas in Munich. A wide range of administrative documents were also referred to.

On the basis of these sources, this paper demonstrates the cognitive discrepancies among the actors and discusses that one of the most significant outcomes of activation measures may be achieved by promoting a reflexive activation mindset among local institutions and migrant residents. The discussion is concluded by indicating that the operational interest of local welfare organizations is paid increasingly to enhance their communicational sensitivity so that they could deal with the highly complex demands of their individual clients; i.e., the sensitivity that relativizes the predominant distinction between Germans/non-Germans in the traditional welfare community.

The Death or the Reinventing of the Social?: A System-Theoretical Contribution to Changing the Semantics of Inclusion and Exclusion in Activation Welfare Strategies

This paper addresses the question of how the landscape of inclusion and exclusion can be recast in the light of Luhmann’s systems theory by referring to narrative interviews with local actors from migrant support organizations.

The ongoing discussions about social inclusion and exclusion, which are commonly conducted in socio-political studies on poverty and inequality, represent a normative understanding of “the social” that is reflected in the notion of solidarity, social policy, and welfare state. On the contrary, Luhmann’s systems theory concerns another tradition of “the social” i.e., the tradition of social action, interaction, and communication. In a particular way, according to his definition of inclusion/exclusion, neither membership in the legal rights nor a status in the central labor market is crucial; only communicational relevance matters. Taking this definition seriously, even a bankrupt or jobless person is economically “included” insofar as (s)he is communicatively relevant in the economic system, which finally leads us to the conclusion that there is no “social exclusion” in the “social systems.”

Applying the systems theoretical understanding of inclusion/exclusion, this paper assesses how the communicational form of migrant support organizations is changing because of a radical shift in the activation policy of the last decade in Germany. The range of political reforms is generally considered a symbolic move to a neo-liberal arrangement of the welfare state, which would be comparable to the diagnosis of “the death of the social” (N. Rose 1996).

This paper presents another scenario by highlighting that operational sensitivity is increasingly enhanced in local welfare organizations; this enhancement is meant to deal with the highly complex demands of individual clients and to ensure their cooperative engagement. Finally, it calls for “reinventing the social” (S. Lessenich 2008), particularly by aiming at a constructive contribution to link the very different assumptions of the social.

The Interactical Accomplishment of “Impairment and Disability” in a Sport : From Game Analysis in Wheelchair Basketball Games
How can the Impairment and Disability be accomplished in the sports games? Answering this question, I apply interaction analysis and game analysis to the Wheelchair Basketball games.

The social model of disability is very important in the way that “disability” is “the Social”. But this model is rarely used for the studies of the sports sociology. The social model is simply used as a factor to block personal sports participation. However, from a viewpoint of the Ethnomethodology, we can regard the severity of the impairments and the disability as the cooperative accomplishment in / by the interactions of people. The purpose of this study is to illustrate “the sociality of disabilities” from experiences in the sports practice. In this study, I classify games of wheelchair basketball, the top-level, middle-level, low-level and examined the play in each game. The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game “achieved” something.

In the wheelchair basketball, it is empirically-known that a competition power of the team is closely concerned with the skill of the low-point player (a player with severe impairments). In the team having high competition power, the implication of a player with severe impairments may be different from a low team. In the logic of the wheelchair basketball rules, “impairments” is indispensable. The game performance shows it. While, “impairments” is experienced as difficulty in the game when the low-point player does not function effectively by the team.

The negative “impairments” is achieved and maintained as a result of play interactions. “impairments” and “disability” are accomplished as a play interaction in a game.

WATSON, DENNIS* (Indiana University Richard M. Fairbanks School of Public Health, dpwatson@iu.edu)

Reducing Uncertainty and Improving Recovery through the Provision of Flexible Services

For many individuals living with mental health and substance abuse problems, it is difficult to obtain the safety and security that are necessary components of recovery. This is because they do not have access to resources such as food, housing, transportation, and employment that are needed to begin the process of stabilizing their lives. When these resources are available, they are often are attached to a variety of caveats that make it difficult to exercise personal agency, another important component of recovery. Recognizing this, new approaches to mental and behavioral health care have begun to emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them. This presentation will focus on this emerging paradigm and the effect it is having within the mental and behavioral health fields. Housing First (HF) and Access to Recovery (ATR) are two services approaches that will be highlighted as examples. HF is an intervention developed in the United States—and spreading internationally— that provides immediate housing with low service demands to chronically homeless individuals with co-occurring mental health and substance use disorders. ATR is a program funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) that engages individuals with substance use disorders to develop their own recovery goals. ATR also provides individuals with stipends that can be used to access a number of services that are not provided by traditional programs. Discussion of both service approaches will emphasize how these models assist individuals in their recovery processes by reducing uncertainties related to the lack of resources and by increasing personal agency.

Gender, Homelessness and Social Capital: Young Women’s Management of Disrupted Housing Transitions

Mainstream understandings of young people’s housing transitions inadequately reflect the diversity of experiences and social processes that shape the course to independent living. By only recognising normative pathways for young people leaving the family home significant experiences are either being misrepresented or lost. In Australia, a largely hidden aspect of youth housing transitions is the presence of homelessness. Many young people in need of accommodation are faced with a difficult housing market where there is a short supply of safe and affordable properties. For young people, to be without a home is not only to be homeless but also to be removed from all the subjective meanings a home carries. In addition, increasingly globalised economies and deindustrialisation have had serious implications for young people’s transitions to secure accommodation due to employment insecurity and financial instability. I argue that the complex relationship between disrupted housing transitions and youth homelessness needs to take into account structural factors relating to gender, race/ethnicity, class, location, sexuality and disability. Accordingly, the variety of young people experiencing homelessness in Australia demands new ways of conceptualising the phenomenon. The application of a gendered lens to homelessness research is one possible way to challenge dominant discourses of youth housing transitions. In this paper I explore young women’s experiences of homelessness and the utilisation of intimate relationships as a form of context-specific capital for accessing material support, particularly access to stable accommodation. To this end, I draw on theoretical perspectives of social capital developed by Pierre Bourdieu. These concepts are examined from a feminist standpoint to explain how Bourdieu’s work may be appropriated to advance knowledge of how gender impacts on both the management of homelessness as well as transitions to stable accommodation.

Housing Market Restructuring and Inequalities in London and the UK

This paper aims to do two main things. Firstly it provides an overview of UK housing market restructuring which has occurred as a result of longer-term shifts in tenurial patterns, and shorter-term impacts of the 2008 credit crunch aftermath and the Coalition Government’s welfare and housing policies. The impact of this restructuring is that the tenure boundary between social and private renting, in terms of rents and security, is becoming increasingly blurred, while homeownership is being transformed via shifts in mortgage finance availability. The result of these trends is the ‘end’ of both social renting and home ownership as we know it. Secondly, the paper focuses on London and it demonstrates how the national trends have been exaggerated in the capital, partly as a result of the central London housing market providing a ‘safe haven’ in relation to global capital flows, and partly as a consequence of urban regeneration schemes which have had the net effect of reducing the proportion of social housing throughout much of London. The paper uses Census and other data to examine the dramatic rise private renting in London since 2001, a rise which is predicated on the buoyancy of the buy-to-let mortgage markets, foreign capital inflows which generate build-to-let developments, and also the increasing outflows of ex-public housing into the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London is a marked heightening of housing-related inequalities including increased insecurity that parallels and arguably reinforces the labour-market based ‘precariat’ identified by Guy Standing (2011) and Loic Wacquant (2008).

WATT, PAUL* (University of London, p.watt@bbk.ac.uk)

Public Housing and State-Led Gentrification in London

This paper sets out a framework for understanding how state-led gentrification has occurred in London with reference to public (council) housing and urban regeneration policies. It argues that these policies, in particular the Right-to-Buy policy, have been facilitators of state-led gentrification by both creating a ‘state-induced rent gap’, whereby the actual stock has been inadequately maintained while land values have risen. Finally, the paper examines how the diminishing of public housing as a deliberate policy strategy to counter gentrification. However since the 1980s, this ‘buffer’ role has been diminished under neoliberalism, firstly by the Right-to-Buy policy, and more recently by public housing reduction policies, notably stock transfers to ‘not-for-profit’ housing associations, plus the direct sale of estates (or estate land) to the private sector. The paper understands the state-led gentrification of London’s council housing via developing the notion of a ‘state-induced rent gap’, whereby the actual stock has been inadequately maintained while land values have risen. Finally, the paper examines how the diminishing of public housing is negatively impacting on London’s low-income population and is thereby exacerbating social and spatial inequalities. In doing so, the paper draws upon a range of data sources, including official statistics, but also interviews with young people living in public housing accommodation for whom council housing represents an elusive ‘gold standard’ of housing that they aspire to, but a standard that is increasingly out of reach.

WAWRYNIAK, JOANNA* (FSU Jena, wowryniak@is.uw.edu.pl)

Are There Only Detours and Dead Ends? Durkheimian Routes to the Suburb of Europe

The paper aims at extrapolating several qualitative hypotheses concerning detours and dead ends in social science from a case study of three generations of Polish scholars influenced by a Durkheimian school in sociology. By this, it attempts to contribute to a larger and seemingly paradoxical question: whether a foreign reception of a school of thought might lead it into a dead end?

In the narrative of history of sociology, the origins of a Durkheimian approach in Poland are associated with Stefan Czarnowski (1879-1937), a student of Henri Hubert and Marcel Mauss, the author of Le culte des héros (1919) and the founder of the first chair in sociology in Warsaw in the 1930s. On the basis of the analysis of his unpublished letters to Mauss and Hubert (rediscovered by the author)
of the paper), the paper shows the initial organizational and cultural obstacles to the institutionalization of the discipline and to the transnational exchange of ideas. Then, it moves to the case of Czarnowski’s student Nina Assorobadaj-Kula (1908-1999), showing how she combined the Durkheimian thought with Marxism. Although the results of this unusual merge were interesting, the question arises whether they could be considered Durkheimian anymore. Finally, the works of a third generation (represented by Assorobadaj’s students) show what was still left from the Durkheimian core was more and more undermined by a reception of American sociology. Several tentative conclusions are drawn from this overview of 1. Although relatively influential in Poland, the Polish Durkheimians were internationally unknown, which already forms one of the dead ends of the school; 2. The way Durkheimian thought was interpreted, provokes the question whether it was still Durkheimian; 3. There has not been a conceptual innovation starting with the third generation. These observations can be extrapolated for the sake of future comparisons.

WAYACK PAMBÊ, MADELEINE* (University of Ouagadougou, wayack_madeleine@yahoo.fr)

Interrogating Female Household Headship from Women Heads of Household Perspective: Findings from a Qualitative Study in Ouagadougou

Background and Objective

Despite its extensive use, the notion of female headship is a matter of constant controversial debate among scholars. This study analyzes how women household heads in Ouagadougou perceive themselves, versus the ways in which female household headship is conceptualized by researchers. Studies on female headed households are scarce in Burkina Faso, and it is our expectation that this study will contribute to fill the gap.

Methods

Semi-structural in-depth interviews were conducted to explore women’s view of and experience on household headship, in relation with domestic power and decision-making. A sample of 20 female household heads was derived from a previous quantitative survey by using a purposive sampling method, in order to have women of different marital status and educational levels. Data were analyzed using a manual grid.

Findings

Findings show that all respondents acknowledged themselves as the current head of their respective households, even though all women mentioned the absence of a male partner as the reason why they defined themselves as the ‘head’. In terms of authority on family matters, the respondents made no spontaneous association between their being head and having domestic power nor making decisions in the household. It emerges from the responses that for female heads of households, the consistency of authority on household matters was mediated through women’s relationship with in-laws, mostly men. Conclusio

The study reveals that women’s experience of household headship differ significantly with the conceptualization of female household headship by researchers, in terms of control over family matters. While the husband/wife transition in the occupancy of household headship seems quite ‘natural’, the authority tied to this position seems to be when held by a woman. The study challenges key conceptual understanding of female headship and current debate around the dynamics of domestic power in their household.

RC20-345.3

WEAKLIEM, DAVID* (University of Connecticut, weakliem@uconn.edu)

Explaining the Rise in Top Incomes

Since the 1970s, the concentration of income at the top has grown in most advanced capitalist nations. The standard economic explanation is that the development of information technology has increased the productivity of managers and professionals and reduced the demand for blue-collar and white-collar workers. However, the extent of growth in top incomes varies widely among countries, suggesting that it is necessary to go beyond the common technological factor. This paper suggests three factors that seem to have the potential to explain the national differences. The first is changes in the power of labor and capital. A decline in the strength of labor may have led to a decline in the wages of ordinary workers and an increase in profits and the wages of top management. The second is a combination of deregulation, especially in financial markets, and the degree to which the political system facilitates “rent-seeking”. The third is changes in social norms. There has been a good deal of discussion of the influence of social norms on pay, but most of it has focused on lower-level workers. However, it seems possible that the same factors also influence top earnings. On the one hand, a concern for reputation might put some restraint on top earnings. On the other hand, social comparison might lead to a “race” for relative position among top earners. It is possible that the increase in top earnings reflects the degree to which the forces that produced stability were weakened or disrupted.

The paper will discuss the implications of these three hypotheses and offer a preliminary test using data for OECD nations.

Policy Actions for Securing Computers

Societies rely on information technology, be it for business operations, private life, or for national infrastructures. However, IT systems are not reliably protected against attacks on data integrity or confidentiality, as the debates around the Stuxnet worm and the NSA have shown. It is expected that powerful organizations, such as foreign competitors or secret services, will launch significant attacks on businesses or infrastructures in the future.

Industry cannot invest large sums to create highly secure systems, as users who did not yet suffer large damages will not be willing to pay for their development costs. Therefore, only a slow migration takes place towards, e.g., the use of virtualization to isolate sensitive or risky applications. Moreover, the paths to highly secure systems are not clear. One path would be to have careful specification, implementation and evaluation. This path is known to be expensive but would provide a level of protection so far unknown. However, even such implementations might be hacked. Therefore, a path towards provably secure systems might be preferable. Though significant progress has been made, the development of provably secure computing systems faces three challenges: first, a large open source software base needs to be created. Second, matching hardware needs to be designed and ultimately an entire secure system. Third, means need to be explored to make sure that actual implementations match the system design, without insiders planting Trojan horses, and without having any implementation errors.

In either case, a policy push is needed which must take place in at least some economically significant countries. It is needed (1) to make the problems and solutions better known, (2) to explore the costs and benefits of the paths, and (3) to make some path mandatory. The latter could be done in a gradual way, starting with some devices and applications.

Lessons Learned about Different Experimented Researcher Positions within Military Organization

This paper will focus on ethnographic methods used to analyze military organizations and groups, and, more precisely about immersion which has been – and still his – a privileged tool used during my research within military universe during the last twenty years.

Clear positions will be questioned. A first one, as member of the Army when I was drafted and when I realised my very first research in order to complete my master’s degree (study about incorporation and instruction of a draftee). A second one, one year later when I was a researcher completely outside the institution. A third one, as PhD student financially supported by the French MOD but also in a technical way to realise my immersions in the Army, in the Navy, in the Air Force and in The French Gendarmerie. At least, my current position as a researcher and a teacher on secondment from the French University within the French Military Academy of Saint-Cyr where I conducted a research on the socialisation processes of the French Army officers through a class of cadets. Each one of those positions presents its own advantages or disadvantages, inevitably associate to the intelligible dimension of each study produced. The presentation will consequently stick to consider aspects which appear to me as most important: those relating to the posture of the researcher and his statute; those of the delicate question of the researcher’s identity in a male dominant universe; etc. Those still of the significant stage of the writing with a possible self-censorship; those of the tricky question of the researcher’s identity in a male dominant universe; etc.

Elderly Suicide - A Question Of Social Standing?

The growing social inequality in Germany features a strong spatial component, which is why attention to the concentration of poverty in specific urban areas triggers so much attention, beyond just the social sciences. Subsequent we argue

is Suicide a Question Of Social Standing? Elderly Suicide Rates In Cosmopolitan Berlin

Although Germans have never been healthier, or had such high life expectancy, social inequality continues to rise. While the population as a whole is experiencing this positive social development, it runs counter to the findings that people who are on the periphery, those who are socially and economically disadvantaged, experience less of this good health and extended life. Often these people are clustered together geographically.

The identification of these zones or socially weak areas is based on the research of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They aim to describe and analyse the socio-structural transformation of parts of the city and different districts through a statistical indicator system. This precise development index for smaller spatial areas was correlated with the comprehensive coroner data we collected. Then, by ranking the districts with the highest suicide statistics and comparing them to the Berlin health report, we detected a strong correlation between social status and elderly suicide. This suggests that incorporating the legal and medical records from the coroner and altering the definition of a municipal district to capture this fine level of detail establishes a real and concerning trend.

Is Suicide a Question Of Social Standing? Elderly Suicide Rates In Cosmopolitan Berlin

Although Germans have never been healthier, or had such high life expectancy, social inequality continues to rise. While the population as a whole is experiencing this positive social development, it runs counter to the findings that people who are on the periphery, those who are socially and economically disadvantaged, experience less of this good health. International studies have shown that these people are often clustered together geographically.

We argue that the reported suicide statistics in the Berlin Health Report require a closer investigation of the age groups and zones used in reporting, as these are sensitive enough to provide a robust picture of the articulation of social status and suicide. For example, in 2009 the Berlin health report suggested that there was no relationship between elderly suicide and social status. We will introduce our comparative study which aims to test whether there is indeed no correlation between elderly suicide and districts when (a) more comprehensive data from smaller heterogeneous urban zones beneath the district level are being accounted for.

The identification of these zones or socially weak areas is based on the research of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They aim to describe and analyse the socio-structural transformation of parts of the city and different districts through a statistical indicator system. Their very precise development index for smaller spatial areas was correlated with the comprehensive coroner data we collected. The White Building: Integration or Commodification of East-London Culture?

A key aim of the London 2012 ‘Regeneration Games’ was the integration of deprived and marginal working-class areas of East London into the global city London. Urban regeneration in Hackney Wick, a neighbourhood directly adjacent to the Olympic Site, embodied this goal of direct intervention into everyday cultures.

The neighbourhood was re-defined as a ‘cultural quarter’ and is now experiencing a period of cultural-led urban regeneration as a solution for post-industrial decline. The Olympic Site, embodied this goal of direct intervention into everyday cultures.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of ‘place’ is reproduced through embodied relationships in a world that is never quite finished. They are performed on unstable stages as they are being reimagined. It becomes apparent that spaces are emergent and need to be considered alongside the sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of memories and narratives through the experiences of people engaged in embodied social practices. They are not only packaged for touristic consumption, but are also constantly redefined especially in terms of spatial identities located through everyday tourist practice. This paper focuses on the German Village on the island of Namhæ in South Korea, which was built over a decade ago as a tribute to the Korean workers who lived in Germany as Gastarbeiter. It explores the question of identity of the locals as portrayed in the film, ‘Endstation der Sehnsüchte’ by Cho Sunghyung and juxtaposes this alongside the huge influx of ‘tourists’ indulging in photographing experience on the film set of Korean TV drama ‘Couple or Trouble’.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of ‘place’ is reproduced through spatialities in which embodied performances and practices are facilitated within complex infrastructure, networks and mobilities. This paper incorporates reflexive and visual methodology to explore how identities are being configured through local narratives and practice, and questions how we identify the ‘tourist’ in this era of transformative change as exemplified by the German Village in Korea.

Las Tendencias De Polarización Social En El Conurbano Bonaerense De La República Argentina. Su Impacto En El Trabajo De Los Jóvenes

En la República Argentina desde fines del siglo XX han surgido nuevas formas de desigualdad social. Una de sus consecuencias es la polarización social y su relación con el trabajo. A pesar de que, en el año 2008, disminuyó la incidencia de trabajadores insertos en empleos precarios o indigentes en un 12.7%, el problema persiste e impacta preocupantemente en el trabajo de los jóvenes. En este trabajo presentamos un ejemplo paradigmático de la polarización social y su repercusión en el trabajo de la juventud. Del universo de jóvenes hemos seleccionado como objeto de estudio los jóvenes de zonas suburbanas que bordean la ciudad de Buenos Aires. Tomando en cuenta este universo se realizaron encuestas semi-estructurada sobre una muestra no aleatoria a individuos de entre 18 y 25 años del partido de Pilar y sus zonas aledañas (Campana, Exaltación de la Cruz, Luján, Gral Rodríguez, Moreno, José C. Paz, Malvinas Argentinas y Escobar) y del Partido de Lomas de Zamora (Barrio Santa Marta y El Ceibo). La brecha social que se observa dentro del mismo partido de Pilar se exacerbaba entre Pilar y las villas de emergencia de Lomas de Zamora. El resultado de las encuestas muestra claramente esta brecha social en el conurbano bonaerense de la República Argentina, así como su impacto en el trabajo de los jóvenes que sigue sin lograr una solución. La juventud precaria o con empleos precarios continua sufriendo las consecuencias de las políticas sociales de los años 90.

Frente a este contexto de desigualdades planteamos el debate en torno a la aplicabilidad del desarrollo de las capacidades en el sentido de la política social de Amartya Sen. Brevemente, se trata del desarrollo de las libertades positivas, voluntad política mediante.

Home Away at Home: Tourism Narratives of the German Village in South Korea

Where do you come from? is a question that haunts tourists. Here, places are conceived as fixed spaces in the same way destinations are considered an end in tourism. In the context of multi-strata mobilities, places are increasingly being reproduced through embodied relationships in a world that is never quite finished. They are performed on unstable stages as they are being reimagined. It becomes apparent that spaces are emergent and need to be considered alongside the sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of memories and narratives through the experiences of people engaged in embodied social practices. They are not only packaged for touristic consumption, but are also constantly redefined especially in terms of spatial identities located through everyday tourist practice. This paper focuses on the German Village on the island of Namhæ in South Korea, which was built over a decade ago as a tribute to the Korean workers who lived in Germany as Gastarbeiter. WEI, WEI* (East China Normal University, weiw1974@hotmail.com)

Literally meaning “to engage in homosexual conducts” and originally from Cantonese gaau-gey, gao-ji (doing gay stuff) is a derogatory term to refer to homosexual people in mainland China. Thanks to the rapid development of Internet and cyberculture in recent decades, the use the gao-ji as well as other derived terms such as ji-qing (gay romance) and ji-you (gay buddies) have been going mainstream, particularly among Chinese urban youth. Other than referring to homosexual behaviors and relationships, the use of the gao-ji discourse becomes increasingly popular to describe the homosocial bonds among heterosexual-identified young men. Focusing on this newly emerging sociolinguistic phenomenon, this research provides an alternative reading of homosexually-themed language that has been traditionally associated with homophobia at both institutional and interpersonal levels. Drawing on findings from mainstream media sources and ethnographic interviews with young people living in Shanghai, combined with a nuanced analysis informed by social constructionist theories on gender/sexual-ity and other empirical studies done by western counterparts, the paper reveals the construction and transformation of gao-ji discourse in today’s urban Chinese society. Although acknowledging the decline of homophobia, as shared by other countries, has largely contributed to the rise of gao-ji discourses in popular culture, I contextualize my discussion of this sociolinguistic practice in relation to 1) the continuing Chinese tradition of male homosociality; 2) the transformation of Chinese masculinity that gives more room to intimacy and expressiveness; and 3) the urban youth communities that are stratified along the lines of class, gender, and sexuality in contemporary Chinese society. I conclude my paper by discussing how the gao-ji discourse, as one manifestation of queering the mainstream, could affect the public views towards homosexuality as well as its implication to the LGBT politics in mainland China.

Children’s Unequal Entitlements to Social Assistance: A Rights-Based View on the National Social Cash Transfer Arrangements Across the Global South

In most countries of the global South, social cash transfer programmes have spread considerably since the early 2000s. Many of these public social assistance programmes in cash to people considered in need explicitly target children and families, respectively. What can we conclude from this increase of social protection programmes with respect to the children’s right to social security? I restrict the investigation to social cash transfers as a test case of social security: In what way are children entitled to a social cash transfer? Based on a huge and newly constructed database including all social cash transfer programmes throughout the global South (produced by the FLOOR research group, Bielefeld University, Germany; www.floorgroup.de), I analyse the institutional design of the programmes from a rights-based perspective. I mainly focus on two questions:

1. What categories of children are targeted and which restrictions are applied to their entitlements?
2. If a particular group of children is entitled to a social cash transfer benefit, to what degree is this entitlement “secure” and reliable?

Whereas the first question sheds light on the aspect under which conditions the children in a country are considered to be (particularly) deserving, the second question refers to the degree of institutionalization of the entitlements in terms of legal foundation, funding etc. According to preliminary analyses, I find that both regional and global patterns of children’s entitlements to social cash transfers exist, expressing different constructions of vulnerability and desert. However, there are huge differences both between countries and within countries. I maintain that the institutionalization of the children’s right to social security in form of social cash transfers varies according to the following items: firstly, the child’s characteristics such as age, disability, orphanhood, gender, ethnic origin, and secondly, his surroundings, such as the district of residence and the household composition.

Curricular Alienation: Multiculturalism, Tolerance, and Immigrants in Dutch Primary School History Textbooks
The stories found in a nation’s history textbooks are profound statements about the way the nation sees itself. Textbooks that exclude certain groups alienate these children and may lead to disengagement from education and lower levels of educational attainment. The Netherlands is known internationally for its tolerance and multiculturalism, particularly towards immigrants, and sees these elements as central to their national identity. However, historical and contemporary policies and social attitudes towards immigrants reveals levels of racism not unlike their European peers who, like The Netherlands, have experienced increased immigration and xenophobia in the last decades. In the educational domain, multicultural policies of the 1990s have shifted to those emphasizing assimilation, with immigrants often blamed for low educational attainment. This paper examines how immigrants, multiculturalism, and tolerance are represented in all Dutch primary school history textbooks published since 1980 to identify trends to determine whether or not they reflect larger political discourses and speculate as to the potential effects of these depictions on the children who read them. Preliminary analysis suggests that immigrant groups are depicted as culturally different outsiders from underdeveloped, poor, and violence nations who cause problems for the Dutch society that benevolently allows them entry. Textbooks fail to meaningfully address discrimination in The Netherlands suggesting that immigrants’ failure to integrate is due to cultural differences, which likely enhances social alienation among the many immigrant students encountering these texts. Findings are of relevance to multiple nations with large immigrant populations.

The Role of Preferences and Attitudes in Film Consumption

The sociological analysis of cultural consumption is usually situated in the field of social stratification research, identifying the way how cultural consumption is related to social characteristics or the weighing of aesthetic preferences and situational opportunities. This second perspective points to the importance of culturally and aesthetically shaped attitudes and dispositions guiding cultural consumption in a rather automatic way, given relevant situational cues. Since either of these perspectives brings about both theoretical and empirical problems, it seems reasonable to conceptualise cultural consumption as a joint process of conscious preference weighing and automatic attitude following. This in turn asks for a “dual-process”-model of action which is assumed here to offer a more accurate picture of the individual foundations of cultural consumption. Drawing on recent survey data from Switzerland (conducted in February 2013), the assumption will be tested in the domain of film consumption. This dataset includes measures of the frequency of attendance to various types of films, and measures of the respondent’s preferences for as well as attitudes towards these types of films. This allows for (1) comparisons between the effects of film preferences and situational opportunities on the relationship between film preferences and film consumption, (2) the identification of the interplay of film preferences and film attitudes in the process of film consumption.

From School to Work and Back – Inequality in Late Postsecondary Education As Part of the School to Work Transition in the US, Germany and Sweden

Varieties in the school-to-work-transition are often discussed against the background of different education systems and labor markets. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openness and institutional flexibility for non-traditional students of the postsecondary education system. Non-traditional patterns, such as late re-enrollment after an initial phase of work, vocational training or motherhood differ by country in their relevance for school to work transitions with particular focus on non-traditional education and labor market entry. The situation of graduates and college-goers never completing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance, the synthesized wage and occupational outcomes measured as Hauser and Warrens 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational path. For incomplete college, the timing matters more. While there are small penalties for interruptions in general, small bonuses can be gained if the time out of the education system was spent with full time work. This dataset analyzed is the US National Longitudinal Study of Youth 79 (NLSY79).

Third Culture Kids and Intergenerational Challenges in Migrant Communities: Korean Christians and Tamil Hindus in Germany

After several decades of coexistence, the research fields migration studies and the sociology of religion have built a strong theoretical and empirical exchange. The impetus was a sociological conceptualization of migration as a decisive factor of religious dynamics in modern societies. This idea, in turn, triggered interest in religious dynamics within migrant communities as they transmit religious knowledge to second generations and their way of adapting religion (doing religious culture). We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations. The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany focused on Korean Christians and Tamil Hindus. The parental generations of both communities were highly engaged with re-establishing a religious life in a foreign land. They created a “home away from home”, not least to transmit religious knowledge to their children in an authentic setting, linked to their own cultural and religious origin. However, the second generation, who will inevitably take over the community, was raised in two cultures. Do these youngsters still relate to their parents’ beliefs and practices? Which kind of inter-generational tensions challenge the transmission and reproduction of religious identities and thus institutionalized religion? We will discuss such questions in the paper. Special attention will be given to three areas of tension that affect religious continuities and discontinuities in the Korean and Tamil milieu: (1) religious practices now considered “obsolete,” (2) differing ideas of religion and gender and (3) critique of religious organizations.

WEIZS, EDUARDO* (Universidad de Buenos Aires, eduardoweisz@hotmail.com)

The Concept of Nation in Max Weber: Back to Gemeinschaft?

The Concept of Nation in Max Weber: Back to Gemeinschaft? The paper will be centered in Max Weber’s concept of Nation and, more specifically, it will try to focus on it through the categories posed by Tönnies and, in his own way, used by Weber: Gemeinschaft and Gesellschaft. The different uses of these concepts by Weber in both parts of Wirtschaft und Gesellschaft have been broadly and open access to the tertiary education, Germany is an ideal of a rigid, inflexible system. Analyses are carried out using longitudinal micro-data from Germany (German Life History Study), Sweden (Level of Living Survey) and the US (National Longitudinal Study of Youth, 1979). The findings indicate that in the two open and flexible systems social origin effects on the patterns of educational careers are indeed greater than in inflexible systems such as Germany. However, this is more than compensated by their overall smaller educational inequality.
situations. By reviewing diverse but mutually complimentary theories the paper of solving socio-material problems embedded in specific migration of professionals, transnational homologies in habitus, the formation in situations (e). The review secondly identifies a diversity of ways in which knowledge should be able to solve socio-material problems (d) embedded and explicit or as (b) comprising tacit and incorporated components. The first shows that their concepts of knowledge diverge: Knowledge is seen as (a)
transnationalism, field theory, cosmopolitanism and social studies of science) chotomies in globalization research the paper suggests a diversity of ways in which resources are put to use. In times of globalization we must assume that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

Social Layers in a World of Territorial Containers, Political Closure, and Socially Differentiated Functionings

The sociology of social stratification is caught in a dead-lock: Data and concepts remain bounded by the nation-state while recent theorizing as well as popular debate focus on the global level. Based on a theoretical book project, but illustrated by results from two inter- and transnationally comparative research projects on skilled migration, the paper suggests a novel approach to the challenge. Building on individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities I take a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons are involved in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

The Glocalization of Professional Knowledge and Practice

Current debates about migration and high skilled labor markets are characterized by an ambiguity: On the one hand, knowledge, especially in the natural and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is inhibited by many factors, including national systems of higher education and licensing as well as migration regulation claiming that the knowledge of migrant professionals may be “different” or “less reliable.” Put shortly: professional knowledge is viewed as basically globalized while professional practice is not.

In an attempt to overcome prevailing universal/local and theory/practice dichotomies in globalization research the paper suggests a diversity of ways in which professional knowledge and practice can universalize and/or remain bound to specific locations and in which the mobility of people and the spatial extension of bodies of knowledge co-constitute each other.

A review of newer theories in global studies (neo-institutionalism, migratory transnationalism, field theory, cosmopolitanism and social studies of science) firstly shows that their concepts of knowledge diverge: Knowledge is seen as (a) codified and explicit or as (b) comprised tacit and incorporated components. The latter perspective implies that knowledge (c) must be recognized in order to function. Also, knowledge should be able to solve socio-material problems (d) embedded in situations (e). The review secondly identifies a diversity of ways in which knowledge may globalize, namely: the setting and emulation of standards, the migration of professionals, transnational homologies in habitus, the formation of transnational communities, field specific struggle, and the “local universality” (Timmermans/Berg) of solving socio-material problems embedded in specific situations. By reviewing diverse but mutually complimentary theories the paper expands on Robertson’s notion that cultural forms can be part of universalizing and localizing processes simultaneously.

Disputed Ambivalence. Berlin Hauptschüler As Strangers

The multifaceted problem of the ambivalence of the stranger – how it is produced, how it can be researched and how it is lived – will be the focus of my paper, dealing specifically with “Hauptschüler” (secondary students, often migrants) in Berlin, Germany. These students are faced with a variety of exclusionary mechanisms – besides discrimination on the job-market also media stigmatization and the denial of full citizenship.

I will treat the morally loaded processes of constructing, reproducing and deconstructing contempt as a form of respect and contempt. Students are not only deprived something but that their human dignity is actively harmed. The most appropriate English translation of “Verachtung” is “contempt.” The social production of contempt defines forms of exclusion via processes of social ascertainment in which low socio-economic status is linked with disregard, in turn ‘producing’ a disrespectful or contemptuous treatment of others.

1) According to Honneth, people experience misrecognition as a deprivation of requirements for a positive development of the self. In Germany, Honneth refers to these deprivations as “Missachtung” (misrecognition), while I prefer the slightly different term Verachtung, which better captures the emotional dynamics of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actually harmed. The most appropriate English translation of “Verachtung” is “contempt.”

2) In an ethnographic study of “Hauptschüler” in Berlin, Germany, I have shown that the problem of misrecognition extends beyond discrimination on the job-market also media stigmatization and the denial of full citizenship.

The ambivalence of the “Hauptschüler” as a stranger appears in all three perspectives of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actively harmed. The most appropriate English translation of “Verachtung” is “contempt.” The social production of contempt defines forms of exclusion via processes of social ascertainment in which low socio-economic status is linked with disregard, in turn ‘producing’ a disrespectful or contemptuous treatment of others.

Illness has a major influence on people's lives. Studying healthcare-seeking is therefore of vital importance. Patients' decisions about healthcare fundamentally influence the performance of the overall healthcare system in terms of a population's health, the quality of healthcare services, and the level of expenditures. Even though illness behaviour has been an intensively studied research topic over the past five decades, previous work has largely overlooked the embeddedness of these decisions in social and institutional contexts. We will present first insights from a project that aims at theoretically, methodologically, and empirically enhancing previous research. It contributes to the development of an integrative theoretical framework of illness behaviour and provides an important test case for institutional theories and the theory of frame selection.

For analyzing healthcare decision-making a new survey is constructed to collect data on the basis of 2,000 face-to-face interviews in Germany that will provide a unique data source covering the healthcare needs and the way these needs are managed. At the conference, we will provide first results from the survey. We will analyze people's decision making when having a medical condition with a particular emphasis on the interpretation of symptoms and the utilization of healthcare, and generate information about the extent and variety of self-care strategies. Our paper covers how social networks and institutional features of the healthcare system influence the decision making of healthcare seeking.

Capital-Labour Relations in China's Car Industry - What Is "Chinese" about Them?

Facing shrinking profit margins, and driven by a quest for cost-efficiency and market access, manufacturing enterprises intensified their expansion into the global South since the 1970s. It was especially the automotive industry that was eager to venture into promising markets, first and foremost China. Though global car manufacturers have been present in China since the 1980s, research on their operations is still limited - especially when dealing with sensitive issues such as labour relations and unrest.

The presentation thus sets out to shed light on workers' reactive and pro-active agency in relation to enterprise strategies, trade union culture and developmental policies in a global car manufacturer operating in China. Based on intensive fieldwork in Mexico and China multiple factors determining the specific patterns of workers' agency in China's car industry shall be mapped out and questioned for whether they are rightly attributed to local "Chinese" specificities - or aspects that are better explained by reference to the qualities of the industrial sector and a capitalist global economy, respectively its current stage. On the one hand this will concern the enterprise orchestrating its established strategy with local conditions - of which labour issues are merely one factor amongst others - thus producing boundaries, potentials and vehicles for workers' political-economic agency on the shop floor. On the other, it will focus on workers' subjective concerns, rooting their agency in their more complex social conditions of existence. Relating these findings to a functional examination of certain political and institutional patterns in China, the uniqueness of Chinese capital-labour relations will be raised to question.

Comparison and Topicality of Three Classical European Concepts of Community

Without any doubt, community is one of the most central sociological terms and concepts - particularly in the German/European sociological tradition, where Ferdinand Tönnies might be seen as the forefather of this concept. Taking relevant sociological literature regarding this issue in consideration, one may come to the conclusion that there are two traditional main ideal types of community: in one tradition, community is theorized as a collective with specific relationships; in the other tradition, community is conceptualized as a collective with a shared consciousness of kind, a collective identity (this questions the section of the social reality, which is emphasized). Furthermore, there are two main types of the intended use of the concept: theoretical ideal types on the one hand and terms for the actual social research (this questions the interest, which is tight to the conceptualization of community).

Taking these basic categories, three classical concepts of community will be analyzed and compared: the ones of Ferdinand Tönnies, Emile Durkheim, and Max Weber. Afterwards the question of the topicality of their concepts of community will be dealt with. Especially the possible application of the classical terms of community to new forms of communautarisation, presented by the example of so called brand communities, will be discussed.
amines international tourism at the Cu Chi Tunnels in South Vietnam by focussing on the narration of the war by Vietnamese tour guides and its interpretation by young American, Australian, British and European tourists. While the oversight of tourism in Vietnam by the state sees tourists at Cu Chi presented with some strong anti-American rhetoric, this is offset by a strong dialogical narrative of the war presented by local guides. It is argued that guides are important reputational entrepreneurs who in order to account for post-Fordist tourists privilege the local while also drawing together different national traditions. For Western tourists this typically results in a greater recognition of Vietnamese suffering and a questioning of the anti-authoritarian and post-heroic narratives that have dominated Western projections of the war. However, the dialogical dimensions of the tour and their experience of everyday life in Vietnam also commonly provides tourists with greater agency to mourn the death of Western soldiers. It is argued that through media portrayals and word of mouth such ‘dark’ tourist experiences have a broader influence on understanding of history and in shaping debate within the cultural public sphere.

Social Networks and Subjective Wellbeing in Australia

Previous research into social networks and social wellbeing has tended to examine objective aspects of well-being such as employment and socioeconomic attainment, physical security, and political participation. Fewer studies have examined ways in which social networks and subjective wellbeing, and those that have tended to emphasise limited aspects of social connectedness, such as social support. This paper develops a comprehensive theory of the relationship between social networks and subjective well-being, with the latter concept defined in terms of cognitive (life satisfaction) and affective (happiness) evaluations of one's own life. The theoretical framework defines social networks specifically, specifies different mechanisms for positive and negative network effects and also attempts to account for selection processes whose omission some critics argue undermines much previous social networks research. We examine this theoretical model empirically using data from a new national Australian survey currently being undertaken that is specifically designed to investigate social networks and subjective well-being. In the paper we describe our theoretical framework and the cross-national comparative project we are undertaking on the relationship between social networks and subjective well-being in Australia, China and the United Kingdom. We then present early results from the Australian survey, including measurement models of key scales and constructs, and substantive models examining some of the central relationships posited by the theory.

Alternative Lifestyles in Growth-Critical Societies – Conceptual Reflections on Social Movements

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-) growth (e.g. Decroissance), concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the rejection of growth as the dominant social imaginary (Castoriadis 1990, Latouche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented:

(1) Social-theoretical focus: From the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies.

(2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandell 1995, Nussbaum 2010).

Higher Response Rates - at What Price? Effects of Different Strategies to Increase Participation By Motivating (Un)Motivated Participants

Different approaches — e.g. normative explanations, rational choice models or social exchange frameworks — have been used to explain motives on survey participation. This paper deals with one of them, the rational choice theory. However, both commitment (e.g. triggered by appeals to attend to social norms (Misra et al, 2011)) and consideration of benefit/cost ratio (e.g. positively influenced by incentives) are regarded as decisive for survey participation — at least for the initial items. These strategies may result in higher response rates but also in satisfying (“Instead of generating the most accurate answer, respondents settle for merely satisfactory ones”) (Krosnick, 1999). Consequently, the longer a survey takes to finish “No-Opinion-Responses” (ibid) but also “Non-Responses” are expected to be more likely and both may affect data quality.

The central issue of this paper is to examine the effect of different motivating strategies on refusal to answer. For this reason experimental arrangements were included in a survey dealing with student participation at university. The survey population was randomly divided into several groups. The information provided to each group differed concerning the presence and combination of the following “triggers”:

i) the possibility to make profits (incentives),
ii) appeals to social conscience (commitment) and
iii) information on duration and progress (related to effort/burden).

Additionally the answer categories of several questions varied with regard to including a “No-Opinion-Option” to control for satisfying. Finally, pros and cons of the presented “manipulations” in order to gain higher response rates will be discussed.

“I Haven’t Got a Clue!” Do Clueless Respondents Affect Data Quality through Response Behaviour?

Several papers are dealing with the effect of different numbers of response categories (e.g. Preston & Colman: 2000; Lai et al: 2010). However, irrespective
of the number of categories it can be assumed that respondents are facing diffic-
ulties in answering questions if they do not already have an opinion for the
topic. If a “don’t-know-option” is offered the participant might tend to choose it
even if it were possible for him or her to form an opinion. This is “making survey
researchers reluctant to offer this option unless absolutely necessary” (DeLouvray &
Coper: 2003). However, if the “DK-option” is missing, respondents may skip the question
and increase items missing. Offering a middle category in rating scales may even
enlarge biases if perceived as “neither-nor-option”. In this connection personal
characteristics and the type of question (e.g. opinion, attitude or behaviour) are
expected to influence corresponding ad hoc decisions.
According to these consideration, the paper
i) focuses on the effect of different numbers of categories in combination with “don’t-know-options” on missing values;
ii) takes several question types into account and
iii) considers effects of personal characteristics on scale quality.
The results are based on methodical experiments included in three online sur-
veys in Austria and Germany.

WHITE, THERESA* (California State University, Northridge, theresa.white@csun.edu)
The Racial Divide? African American College Students: Mitigating Digital Visual Culture

The most important development in terms of Internet users between 2000 and 2005 was the radical increase in the number of women, ethnic and racial minori-
ties online. In the early years of the Internet's massification, cyberculture scholars
discussed online with only marginal references to online media produced by Afri-
can Americans, Asians and Latinos, instead focusing on representations of racial
and ethnic minorities produced for consumption by white users and audiences (Nakamura, 2002).

Notably, social media, such as Facebook and Twitter, are platforms of web and
mobile-based technology that enable consumers to turn communication into in-
teractive conversation, much of which is widely consumed by college students
today. Demographic studies on Internet use emphasize African America’s po-
sition as consumers. But surveys of access, race and the “digital divide” that fail
to measure digital production in favor of measuring access or consumption, can-
not tell the whole story. This suggests that minorities are more or less successful consumers of a commodity, rather than producers or active audiences. But how
might African American college students use the Internet and mobile technology as sites of resistance?

This study will visually document the level of internet/social media usage, the
propensity and style of Internet user-created content, as well as its effect on cul-
tural and social capital for African American college students. The project will
gather visual data (videotaped interviews, focus groups and cyberspace photo-
logging) on students who are engaging in content creation (e.g., developing Web
sites, posting music, images and videos, managing and contributing to Listserves,
or adding content to other textual sites). The study will demonstrate how these
students are not only active consumers of the Internet, but also Internet content
producers and creators.

Australian Fathers’ Use of Leave for Parenting: Changing Patterns and Policy Implications

In the absence of policy measures widely-recognized as conducive to fathers’
parental leave-taking, such as well-remunerated and non-transferable leave ar-
rangements, a relatively low proportion of Australian fathers (around 30%) use
paid paternity or parental leave, although around half take some paid annual
leave in association with the birth of a child. These figures suggest persistent bar-
rriers to more gender egalitarian divisions of parenting and raise questions over
the pace of change in Australia. Using survey and interview data collected over the
past three years we examine fathers’ leave usage in detail, analyzing the factors
that influence leave uptake and duration and seeking evidence of changes in pat-
terns of use. Change might be expected in part as a reflection of evolving expec-
tations and behaviors associated with increases in the labour force engagement
of mothers and/or as a result of a greater awareness and legitimacy of parental
leave stimulated by recent policy initiatives. Our surveys suggest a complex pic-
ture in which the overall duration of leave taken by fathers increased somewhat
in recent years, although the duration of leave specifically designated as ‘paid
paternity leave’ decreased. We test these results for consistency when controlling
for sample differences. The data also illustrate different patterns of leave usage
among fathers, with a significant group taking leave for parenting purposes after
their child was six months old. We use interview data with mothers and fathers to
probe further into influences on fathers’ use of leave arrangements around the
birth of a child. Overall our analysis provides an assessment of changing patterns
of leave usage by Australian fathers over a period of policy innovation, as well as
a more nuanced picture of fathers’ leave usage to inform future policy development
in the interests of more gender egalitarian family outcomes.

Parenthood and Career Mobility: Implications of Transitions to Part-Time Work Among Australian Mothers

One of the main strategies adopted by Australian mothers to minimise work-
life interference is to work part-time hours. The prevalence of this working pat-
tern in Australia underlines contradictions between gender equality and care and
raises questions about the contrasting possibilities for career retention and ad-
vancement associated with the transition to part-time work, particularly in the
context of austerity pressures. In this study we examine the employment patterns
of Australian mothers and assess the career implications of transitions made
on return to work. Our analysis draws on data from the first two waves of a longitudi-
nal survey of Australian mothers who had given birth to a child in 2010 (Wave 1,
n=4,201; Wave 2, n=3,487).

Our analysis builds on research that highlights that the timing of career
progression is influenced by parental leave taken in the past three years we examine fathers’ leave usage in detail, analyzing the factors
that influence leave uptake and duration and seeking evidence of changes in pat-
terns of use. Change might be expected in part as a reflection of evolving expec-
tations and behaviors associated with increases in the labour force engagement

How should intergenerational inequality be explained? A common idea is that parents that raise their children and that parental investments influence their children’s attainments. Most studies have emphasized the effects of parental investments in education. It is easier for parents to directly influence their children’s attainment of education than their success in the labor market. Therefore early parental investments are considered to have the largest impact on their children’s life chances. This is not the case for wealth transfers between generations. Wealth may be easily transferred during the whole life course, and in many cases transferred quite late in life.

In this paper, we measure intergenerational inequality through the life course using sibling correlations. A sibling correlation provides an omnibus measure of family background and neighborhood influences, a measure that includes both observable and unobservable characteristics. There are no prior studies to our knowledge that assess life course changes in sibling correlations using wealth as measurement.

Following recent theoretical developments, we explore the consequences of different parental investment strategies. Put simply, one strategy is that parents make equal investments in their children, something that leads to the expectation that sibling correlations in wealth should decrease over the life course. If, however, the parents seek to compensate for initial differences in talents and attainments among siblings, by transferring most to the least successful sibling, we expect an opposite trend. We discuss how these patterns may be influenced by children’s labor market success and savings, and by variations in parental strategies in different socioeconomic layers.

We use register data from Norway for brothers and sisters born 1955-1960, tracked annually 1993-2010. Our measures include earnings and capital income, as well as two measures of wealth (net and gross wealth). We also take into account sibling differences in education.

Increasing immigration poses a serious challenge for many countries. Empirical studies from around the world indicate that immigration and increasing diversity increase in social cohesion and increases in social withdrawal, particularly in disadvantaged areas. Less understood, however, are the mechanisms that explain these relationships. We contend that these associations are at least in part due to two key factors: how residents perceive the neighborhood composition and how these perceptions influence residents’ own social identity. Further we suggest that these relationships will differ in cities with different immigration histories. In this paper we integrate census data and the Australian Community Capacity Study survey data from approximately 10,000 residents living across 298 neighborhoods in Melbourne and Brisbane, Australia. Using a multiple-levels social multiplier model, we first consider the cues that lead individuals to distort the presence of non-whites in neighborhoods. Here we focus on recent immigration increases, ancestry, language and religion as important cues of difference. We then employ multi-level models to test if these distortions influence residents’ subordinate or subordinate identities. Finally, we consider the independent effects of these distortions and social identity orientations on residents’ reports of social cohesion and interactions with fellow neighbors.

Children and young people’s civic engagement has occupied the attention of researchers and policy makers globally during recent decades, but there is a growing acknowledgement that young people’s political engagement can only be understood in the context of wider social cultures and practices. This paper explores the social dynamics of civic engagement, in the context of one community’s democratic practices and targeted activism, involving the ‘nannas’ as central players as well as mothers, children and young people.

In the Dandenong Mountains near Melbourne, Australia, a small community has taken up a prolonged battle with a multi-national fast food giant. The picket line, the on-line world, the legal system and mass media are the different fronts of the battle, providing multiple sites for experiences of political engagement, confronting ideas about political issues, power inequalities, social justice and the role of the state.

In facing an unequal word, one of the challenges for global sociology is about creating the conditions where the systemic drivers of injustice can be recognised. Analysing material from the campaign’s social media pages, this paper identifies critical moments where activist sensibilities are awakened and identified, within, despite and beyond the social realities and practice of fear and anger. Humour and hope can be heightened when elements of difference in power, class, gender and generation are named and mobilised as resources.
The Limits Of Multiculturalism

1. Multiculturalism and transnationalism are concepts that belong to the present historical era. They have been produced in western countries, and are used often, with a deep unconscious ethnocentrism. Aren't they part of the intellectual hegemony of the west, and in the same time, maybe, of its decline? 2. There is in some parts of the world at least a feeling that multiculturalism, if not a failure, is at least in a difficult situation, and there are important criticisms of the idea of transnationalism 3. The political concrete limits of multiculturalism are connected with the rising importance of globalization, including transnational phenomena. But globalization does not necessarily mean the decline or the crisis of the Nation and/or the State, which is the natural framework for multicultural policies and institutions. And the limits of transnationalism are given by States that still control borders, deliver passports, visas, etc. If societies are not entering in an era where multiculturalism and transnationalism are stronger and stronger, how will they deal with cultural differences, on the one hand, and with identities and practises that are not lied to one national state?

From Web Surveys to Online, Multi-Device Surveys

Unintended mobile survey completion rates have risen largely in the past couple of years, with around 7% of the online respondents attempting to access surveys using tablets and 2% using smartphones (LISS panel, June 2013). While these rates are expected to continue to grow, the question arises whether one can speak of traditional web panels as we know them anymore. Especially the tablet user group has become too large to ignore anymore.

While regular web surveys can be accessed via mobile browsers, this can be burdensome if the layout has not been adapted. To avoid coverage, nonresponse and measurement error, new strategies are needed for offering web surveys which can be properly accessed by the most common online devices. We present the strategy for the Dutch LISS panel to develop from a web panel towards a true, multi-platform compatibility to the different online respondent groups. We start with presenting the latest rates of unintended mobile survey completion and provide a profile of the mobile respondent. We discuss the advantages and disadvantages of different multi-platform approaches and report the latest experimental findings from the field.

Visual Narrative and the Internet: Ethical Approaches to Engaging Australian Aboriginal Participants on Their Experiences of Ageing

Aims: The wider accessibility of video equipment and the internet provides new possibilities of involving culturally diverse participants in research. We explore the benefits and challenges of using visual methods to engage remote-dwelling Aboriginal elders about their experiences of ageing in Australia.

Methods: We interviewed 50 people from throughout Australia, including three Aboriginal elders living on a remote island in the Northern Territory, using DIPex methods (Alexander & Zeibland, 2006). This involved narrative interviews recorded in a documentary style format on film, thematic analysis, and findings presented via video clips on the website. This was the first DIPex project to include the experiences of Australia’s first people in their own language.

Findings: Using these methods had benefits for individuals, communities, and the research project. On an individual level participants’ personal stories were documented, leaving a record for future generations. They could express their personal agendas and have their voices heard via a public internet platform. Video narratives recorded in the Indigenous language provided an ethnographic record in a rapidly changing culture, thus benefiting the community by making the narratives more widely accessible to other speakers of the language. These methods benefitted the research project as they provided more information about participants and their environment. Visual narratives are also a powerful educational tool for healthcare providers and students. Challenges of this approach included additional equipment and technical expertise; gaining community permission; interviewing and translating across languages; and negotiating cultural processes around the use of images after a participant dies. These were mitigated by working closely with Aboriginal researchers from the beginning, and building additional time and funding into the project budget.

Implications: Video and the internet are more engaging for a lay audience than academic writing and provide a more reciprocal way of involving traditionally marginalised people in qualitative research.

Which Form of Organizational Governance Supports Freedom of Teaching and Increases Their Perception of Relevance? Empirical Evidence from Two Types of Higher Education Institutions

New Public Management caused an ‘economic turn’ in universities to managerial governance. The leadership literature distinguishes two modes of governance, which can also be applied to the governance of universities: transactional and transformational modes of governance. Transformational governance encompasses all forms of managerial governance, which includes reorganising incentives and monitoring capacity. The theoretical underpinning of this mode can be found in Principal-Agent Theory which is the theoretical underpinning of New Public Management. Whereas transformational governance covers, on the one hand, the means of restructuring the roles of principals and agents and the interaction situation in the organization, on the other hand, it also addresses all the means of restructuring the relationship between perceived environment and motivation, as can be seen in Self-Determination Theory. Other elements of transformational governance are social norms such as those that inform the quality of research or approaches to teaching. As such, the main research question is: What has more impact on professors’ perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance were formulated. The research project is conducted with the help of two quantitative surveys, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

A Longitudinal Examination of the Intersections of Ethnicity and Sex and Their Influence on Perceived Racism Among Newcomer Youth in Canada

Perceptions of racism and discrimination are powerful forces influencing social cohesion of members of any society. Real or not, those holding a perception that they are victimized by discrimination feel marginalized and ostracized socially and may experience the instrumental forms of discrimination in various aspects of their lives: in their careers, access to education and health care and others. The consequences of the belief that racism affects lives of many people are that many people are unable to achieve their potential in employment, school, and health. This has a significant impact on their feeling of belonging. This paper uses data from a longitudinal national study of newcomer youth in Canada to examine the extent and factors influencing perceptions of discrimination. We follow nearly 4200 11 to 17 year old newcomer youth over 8 years on a variety of different topics. The data analysis technique involves a multivariate analysis of the changes in perceptions of discrimination and other factors influencing perceived discrimination. We find that factors such as sex and place of birth, findings indicate that female newcomer youth are significantly more likely to feel marginalized than their male counterparts regardless of their place of birth. Other factors influencing perceived discrimination include education, parents’ income, and whether a child is born in Canada. The presentation concludes with a discussion of policy and practical implications.
In this paper we explore the ways in which women are creating spaces for economic and political participation in South Africa. The post-apartheid South African Constitution has been hailed as one of the most progressive constitutions in the world with its entrenchment of socio-economic rights and recognition of equality among various cleavages such as gender, race, and sexual orientation. There are myriad policies and legislation entrenching women’s rights. Despite the conducive policy environment, the state has not created spaces for women’s political participation at local levels. Nevertheless, women are creating their own spaces of political and economic participation, linking up with the state when and where it is possible, and forging ahead when it is not possible to link with the state. In this paper, we look at a township north of Johannesburg and a rural area in the Eastern Cape to see the ways in which are creating and engaging economic production within their communities. Are these simply survivalist strategies or do they represent an emergent alternative that is rooted in economic equality and social justice? Are they practicing economic democracy? What role has the state played in this process?

**Rescaled Citizenships and Vernacular Cosmopolitanism in Sydney, Australia**

In the Australian context, notions of cosmopolitanism have had less airtime than the nationally sponsored program of multiculturalism. Cosmopolitanism has emerged in academic theories of living together with difference in Australian society, and are usually synonymous with notions of ‘everyday multiculturalism’ (Velayutham and Wise, 2009). However, these theories have been less explicit about how such everyday, intercultural exchange might be part of a rescaling of belonging for migrant residents, and how this might impact on the nation-state (Kay, 2000). In this regard, I suggest drawing on notions of urban citizenship (Holston and Appadurai, 1996) as a form of post-national or sub-national belonging to scale up the potential implicit in quotidian modes of cosmopolitanism. Urban citizenship – as a set of substantive rights relating to inhabitation in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The paper draws on qualitative research in two multi-ethnic neighbourhoods in Sydney, Australia to explore localized belonging amongst migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship as a form of post-nationalism can complement and augment the potential of everyday cosmopolitanism – which is easily appropriated by the state and commercial interests. Also, arguments about emergent urban citizenship should draw on ethnographic understanding of ordinary cosmopolitanism to better understand the multiple ways migrants negotiate identity and socio-spatial belonging in urban settings.

**Cosmopolitan Spaces in Non-Cosmopolitan Places**

Encounters are an important part of the texture and form of social life, in a global world where opportunities for people to foster positive cosmopolitan outcomes are increasingly visible and accessible. The concept of cosmopolitan encounters offers a grounded way to understand the everyday dimensions of cosmopolitanism through considering certain practices and performances that people draw upon to negotiate situations of diversity. Questions of the spatiality, configuration and locations of where encounters take place, in both likely and unlikely places, are also central to understanding how cosmopolitanism may emerge and flourish, or falter, fade and fail. But while places can serve as a vector of cosmopolitan possibility, the distinction between ‘place’ and ‘space’ is also important.

Drawing on empirical, qualitative research as part of a three-year project into cosmopolitan encounters, this paper argues that both cosmopolitan and ‘unlikely’, non-cosmopolitan spaces, have the potential for cosmopolitan outcomes. Our research sites include urban, regional and rural locations across Australia. Across these sites, our research employs observation and interviews with a broad range of
of Australians to shed light on various ‘spaces’ of cosmopolitanism that provide the opportunity for cosmopolitan encounters. Rather than revealing a linear pathway to a final, utopian cosmopolitan destination, we highlight various gradations of opportunities enabled by certain spaces, and in a range of places, that may or may not nurture the seeds of cosmopolitanism to their full potential or permanency. We conclude with recommendations for deeper understandings of the relationship between space, place and performance into what constitutes cosmopolitan encounters. We then propose particular research strategies for uncovering cosmopolitan encounters, and highlight unlikely contexts worthy of investigation in future research.

Fitness As Leisure - Exploring Physical Activity through Consumption and Lifestyle

Drawing on the discussion on the commercialization of the fitness culture, this study examines fitness as a leisure activity. Fitness is prominent both in media and consumer culture, and it plays an important role in individuals’ everyday life as everyone is surrounded by the social world of the fitness culture, its meanings and signals. Fitness activities are practiced in numerous ways and due to various reasons. Also the fundamental aims of the activities have changed; they have become commodities of the leisure industry. The core of leisure is in the production of value, and it can thus be associated either with freedom from work and responsibility, or as freedom for self-production. Fitness is understood in relation to both health and appearance, which have become central not only to the social order, but also to individuals’ occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body's physical capital.

This study takes a qualitative approach to examining how consumption and lifestyle are related to the motives for physical activity. The data is derived from The National Student Health Survey (n=4403) conducted in Finland in 2012. The results revealed three consumption styles/lifestyles: hedonistic, healthy and sustainable. Moreover, four main motives for physical activity were found: sociability, health, appearance and sport, all of which are closely related with the appropriation of well-being for various ends. Hedonistic lifestyle correlated with all fitness motives, the strongest relation being with the motive of appearance. Also healthy lifestyle was related to all fitness motives, emphasizing the motives of sociability and health the most. Sustainable lifestyle, on the contrary, had no correlation with any other fitness motive than health, even having a slightly negative correlation with the motive of appearance.

Glorious Mission: Social Media, Video Games, and Propaganda

Governments and social movements have long used information technology to promote their causes. In the past books, songs, radio, and television where used to persuade people that political and social actions were necessary. With the growth of information and communication technologies there are now new media resources that can be used for propaganda and persuasion. Technology such as Twitter, Facebook, and Video Games have emerged in the past decade as growing forces in protest movements and government propaganda.

This paper will discuss how new technologies have been used for purposes of propaganda around a number of political issues in Asia. Analysis is based on content review of Twitter archives, online newspapers, blogs, and Video Games associated with political issues in East Asia. The issues to be addressed will include territorial disputes such as the Dokdo/Takeshima islands, North and South Korea, and the 2008 SARS outbreak in China. Results suggest that governments in East Asia have been quick to recognize the propaganda power of new media and have quickly organized to provide a government perspective on ongoing disputes. Protest movements may have had an initial advantage in recognizing the power of new technologies and new media, but government quickly responded to remove or reduce the political advantage they had. Even though new information technologies have become common the issues of public discourse and propaganda remain fundamentally the same. Propaganda through Twitter and Video Games has the same motivation as in the past, but presented using current and emerging technology.

Managing Risk in a Complex Food System: The Importance of Inter-Personal, Professional and Organisational Trust

A challenge of managing food safety risk is the multi-sectoral nature of the complex system set out to do so, with responsible lying with expert actors from both food industry and food regulation. At this complexity, a unified message must be conveyed to consumers so that food risks are managed. This paper presents research conducted to navigate this complex system. We investigated the role of expert actors from the food regulatory and food industry settings in developing/breaking/repairing/maintaining trust with consumers about food. Qualitative interviews were undertaken in Australia (n=15) and New Zealand (n=5). Respondents identified that risk management, including increased consumer trust, could only be established if trust existed between and across the expert actors. As such the nature of the trust between actors became central to the research. Inter-personal, professional and organisational trust between these actors was observed. Interpersonal trust and relationships were developed between actors through transparency, good communication and regular phone and face to face informal meetings. Organisational trust was based on understanding and regular, formal meetings. Professional trust was particularly apparent between actors within the regulatory and industry systems who both had responsibilities for managing food risk. Some actors indicated that they did not understand the perspective of the other system, because of the different processes and systems in which they worked. Despite this, each system had a common goal (to avoid foodborne illness). When this common goal was recognised by industry and regulatory actors, stronger trust was formed which enabled a unified message to be communicated to consumers. Therefore one way to manage the complexity of the food regulatory system, and ultimately better manage food risks, is to develop inter-personal, professional and organisational trust between expert actors in the food system.

Does Newsworthiness Influence Construction of Food Risk? Views of Media Actors

In modern society, many risks are invisible and are brought to the attention of the public through the mass media. This is particularly relevant for food, where the widening gap between producers and consumers in the developed world has increased the need for consumer trust. Therefore the media play a crucial role in how food risk is constructed and presented to the public. It is pertinent to gain an understanding of the construction of food risk as this is likely to influence consumer trust in food. This paper presents empirical data from research investigating how the media construct food risk and ultimately affect consumer trust across three countries: Australia, the United Kingdom (UK) and New Zealand (NZ). Interviews were undertaken with media actors from each country including 20 from Australia, 10 from the UK and three from NZ. First, our findings identify that newsworthiness is important when constructing a story about food risk. This followed a hierarchy, with risks affecting children and babies perceived as the most newsworthy. Second, risk reporting follows a cycle with precedence given to the dissemination of any information about the risk, regardless of the severity of the risk to public health and safety. This is followed by tempering of the risk, coverage of new angles to keep the story going and seeking to uncover the ‘truth’ such as the source of contamination that led to the food incident. Third, working conditions of media actors, including limited time, limited space and short deadlines were found to diminish the ability to report a balanced story, hence adding to newsworthiness and augmenting construction of risk. Our findings indicate that the construction of food risk by the media is influenced by newsworthiness and this is likely to impact the ways in which consumers regard the food risk presented.

Trends in Wealth Inequality

This paper will present new estimates of inequality in household wealth in the Netherlands 1993-2011. Changes in this recent period will be connected with long-term trends in Dutch wealth inequality (from around 1900), which will be compared to trends in other Western countries. Preliminary findings are: there has been an overall tendency of partial collectivization (a shift from personal to collective wealth) and diminishing wealth inequality in the Netherlands and other Western countries during the greater part of the twentieth century, followed by a tendency of decollectivization and growing inequality since the 1980s. The latter trend will be explained by connecting it with processes of deindustrialization, globalization and politico-institutional change. The paper will give special attention to recent changes under the impact of the financial crisis, and discuss the question to what extent national government policy can be used to modify wealth inequality.

Legal Costs Insurance (LCI) – an Attempt at Comparative Analysis

Legal aid systems are best conceptualised as complex entities, comprising different institutional and non-institutional mechanisms enabling the individual to obtain legal advice. In this perspective, commercial, public-subsidized, pro bono or prepaid legal services are all one method of providing access to legal advice, just capitalising on different resources. The same can be said about private/informal mechanisms of dispute resolution, self-help, and unbundle legal services. Yet another widely-recognized mechanism for providing legal aid is legal costs insurance (LCI). Despite relative prevalence of this channel of access to legal advice in some countries (such as Germany, Netherlands or Austria), legal aid literature (with some notable exceptions) does not devote much attention to LCI. In particular, it by and large neglects the interactions between the LCI as a channel of access to legal aid and other types of provisioning such services. Not much is also known about the institutional and cultural conditions of establishment of LCI systems.

The paper aims to contribute to filling this gap. It undertakes an attempt to answer the question of the factors driving emergence, prevalence and stability of legal costs insurance and the interaction it enters with other channels of provisioning of legal aid. To this end, the paper does two things. First, it analyses the historical literature in the search for theoretical explanations of said phenomena. Second, it juxtaposes theoretical explanations with the outcomes of a comparative study of LCI in Europe, utilising existing data on LCI, legal systems, disputing behaviour as well as values and culture.

Why Do Procedures Have Unexpected Outcomes?

According to a famous statement by Adam Przeworski, the difference between democracy and dictatorship lies in the fact that in a democracy the content of a political decision cannot be known in advance: democracy, not dictatorship, institutionalizes uncertainty. Sociology has largely ignored the institutionalized uncertainty thesis that follows from this observation. In particular, one has to be careful not to confuse Przeworski's argument with that of Robert Merton, which in sociology and psychology of law, it is argued that procedures do not provide indicative of procedural law and democracy, it is argued that procedures are not necessarily outcome-neutral and that they do contribute to certain outcomes of political and legal processes. Against Merton's observations, but in accord with these of Przeworski, it is demonstrated that macro-sociological and indeed deeply insti- tutional factors exist, which contribute to the production of unintended consequences of individual actions. Finally, against theories of procedural justice in sociology and psychology of law, it is argued that procedures do not provide individuals with a sense of ontological security, but to the contrary, are but one form of "institutionalized uncertainty".

The paper has been published in Mica, Peisert, Winczorek (eds), Sociology and the Unintended. Robert Merton Revisited, Peter Lang 2012.

WINTER, BRONWYN* (The University of Sydney, bronwyn.winter@sydney.edu.au)

(In)Visible and (im)Mobile: Lesbians, Exile and Global LGBT and Womens’ Rights Movements

In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firm on the UN and many national agendas, le- sbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of po- litical asylum.
On one hand, social movements campaigning nationally, transnationally and internationally for both women’s and LGBT human rights have facilitated access to asylum, mostly in Western countries, for lesbians from the many countries where homosexuality remains illegal (76 countries), or where the state fails to protect homosexuals from abuse, despite decriminalisation (another 60-70 countries). The European Union, for example, now explicitly includes references to the specificities of LGBT experience and needs in its new standardised asylum procedure. On the other hand, continued cultural taboos and in some cases political backlash have, in many countries, maintained or even exacerbated the isolation of lesbians, depriving them of easy access to global LGBT rights networks (including the very important online networks that have proliferated over the last decade, but which frequently continue to privilege gay men). Moreover, the significantly lower levels of financial and cultural autonomy for women in many countries have meant that access to escape routes is much more limited than for men—a problem that lesbians share with heterosexual women but can be even worse in their case. Yet, access of lesbians to asylum presents as one of the world’s most urgent human rights issues, as almost without exception, lesbians seeking asylum have suffered multiple forms of physical and psychological torture.

The paper still discusses the above issues with reference to the importance of transnational social movement activism and support that specifically addresses the situation of lesbians, as well as to case studies from France in particular.

WISE, AMANDA* (Macquarie University, amanda.wise@mq.edu.au)
VELAYUTHAM, SELVARAJ (Macquarie University)
“My Boss Is like Family” – a Singaporean Case Study of Race Relations at Work – CANCELLED

A growing literature on race relations foregrounds cultural ‘contact’ in developing stronger intercultural understanding and forms of community that bridge difference (Amin 2002). The nature of this literature takes the actual site and social field of ‘contact’ as important in mediating difference. The workplace is a special kind of micro-public, where the rules and codes of contemporary working cultures play with collegial and hierarchical relationships, which in turn mediate inter-ethnic relationships. In addition media cultures and wider national structures and discourses on diversity are also often present in the workplace. Yet, the micro-cultural context is often of extreme importance in shaping the ‘intersubjective encounter’.

This paper focuses on a case study of low and ‘middling’ workers in a multinational firm based in Singapore. The case study is drawn from a larger comparative study of inter-ethnic relations in workplaces in Singapore and Sydney. Drawing on the work of Lamont & Akahova (2002) and others, the paper explores the discourses, scripts, rituals and practices (Noble 2009) workers engage to create or overcome boundaries of difference.

Employees in the case study multinational framed experiences of belonging and collegiality in familial terms, drawing on ideas of reciprocity, care, friendship and intimate discursive and expressive feelings between co-workers of same and different background. Race and cultural difference was described by most as having little salience in everyday working life. Yet we argue that the quality of collegial intercultural relations at work does not necessarily translate into shifts in racialised hierarchies nor views about cultural and racial ‘Others’ more generally. Indeed, the use of ideas of family and informal modes of recognition and care actually reinforces and legitimised certain forms of vulnerability and discrimination. This is so especially in a context like Singapore which is a highly racialised society with a variegated system of temporary work visas where opportunities, rights, and conditions differentially distributed according to national origin and race.

Alva Myrdal, Unesco, and Cold War International Social Science, 1951-1955

The paper is concerned with the international organizing of the social sciences during the early Cold War era. Empirically it is focused on UNESCO’s Social Science Department (SSD) during Alva Myrdal’s directorship, 1951-1955. The SSD was set up in 1946, as part of the wide family of intergovernmental organisations that emerged with the United Nations in the aftermath of the Second World War. When Alva Myrdal (1901-1986) became the Director of SSD, it has been suggested that she “set the department on its feet”. But what difference did she actually try to realise them? Which projects did she initiate during her time as director? When Alva Myrdal (1901-1986) became the Director of SSD, it has been suggested that she “set the department on its feet”. But what difference did she actually try to realise them? Which projects did she initiate during her time as director?

Beyond Generic Urban Theory? Grand Narratives, Assemblages, and Urban Critique
In the late 1970s, in his well-known proclamation, Lyotard announced the end of grand narratives. Nevertheless, thirty years later, urban studies research remains strongly structured by a selection of generic storylines. Developed in specific—mostly Anglo-Saxon—settings, these narratives are used to interpret and critique urban developments in cities around the world. This paper questions the implicit relationship between the narratives of urban theory and urban realities. It argues that narratives can play an important role as ‘sensitising devices’, but that they should be critically confronted in urban research. The paper underlines this argument with an analysis of the relevance of two grand narratives in two Asian cities: the ‘end of public space’ in Mumbai, and ‘splintering urbanism’ in Bangkok. The analysis shows that both storylines are relevant, but in ways other than the theory suggests. A direct translation of theory to specific urban settings will therefore lead to mistaken interpretations and inadequate critique. Unfortunately, urban studies research rarely incorporates such a critical confrontation of urban theory. From this observation, the paper draws conclusions on the practice of urban research, the value of urban theory, and the possibility of urban critique.

WITTROCK, CHRISTIAN* (Aarhus University, chr@wittrock.dk)
A Typology and Analysis of “World-Changing Management Concepts”: Beliefs, Unanticipated Consequences and Anomie
I develop criteria for and analyze consequences of what I call “world-changing management concepts” (WCMC), drawing on Lean, TQM, BPR, JIT and coaching. To qualify as a WCMC, the authors claim that the concept: 1) yields specific, predictable results if implemented correctly; 2) enables fundamental, groundbreaking changes leading to a superior competitive advantage for the organization, regardless of the context; 3) is a more humane form of management practice, making previous approaches obsolete, and 4) will change the world for the better. I.e. they are presented as grand theories. However, the knowledge content in these concepts is based on studies of distinct or disparate cases, industries, or cultures (the Automobile Industry in Japan), or they are based on ideas from other fields of practice (e.g. sports).

I draw on translation models (by Lilirank (1995) and Røvik (2007)) to show how treating management concepts as theories of the middle range, rather than grand theories (like WCMCs), is likely to greatly enhance the local translation of management concepts and reduce unanticipated consequences. I further show how the claims of WCMCs’ logically require changes to basic underlying assumptions in the organizational culture (Schein 2010). Such requirements create a situation where the culture is at odds with what employees are asked to do, potentially creating anomie (Merton 1968), and in a further sense creating a double bind for employees (Bateson et al. 1956).

Although theoretical in scope, the presentation builds on ethnography from management consultancy.

WITTROCK, CHRISTIAN* (Aarhus University, chr@wittrock.dk)
Lean between Practices and Ideology: the diffusion of a “World-Changing Management Concept”

In my international review of quantitative studies of lean diffusion, surveys indicate recurrent problems with the implementation of lean: managers report that a “lean culture” is difficult to attain. Furthermore, positive outcomes are scientifically unsubstantiated (Freygat & Arlbjørn 2011). Lean is an example of what I call a “World-Changing Management Concept,” characterized by holding ideological ambitions to create a better world, while claiming that practices work regardless of context. I use the seminal texts of Womack et al (2007 [1990]) and Womack & Jones (2003 [1996]) to show how lean is in part a theoretical construct, inspired by “Japanese management”, but ideologically aimed at creating a sustainable management practice in a global economy.

I draw attention to the distinction between the adoption of a management idea as a practice and as an ideology (Guillén 1994). I then use Guillén’s neo-institutional
al framework to show how lean draws heavily on practices and ideologies that do have a long standing in Japanese history, including ideologies of co-prosperity (Goto-Jones 2005). I show how institutional factors in the organization adopting lean will be decisive for whether lean will come across as Taylorism in disguise or something closer to the original ideological intentions. In keeping with my arguments, recent research on work environment issues in lean projects gives a mixed picture of consequences for employees (Edwards et al. 2010).

WOJCIC, STEPHANIE* (Université Paris Est Créteil (UPEC), stephanie.wojcic@u-pec.fr)
Information Et Participation Politiques En Ligne: Inégalités Ou Fracture ?

Dans les recherches interrogeant les rapports entre politique et numérique, l'une des thèses les plus discutées porte sur l'existence d'une "fracture civique" entre citoyens éduqués et difficilement atteignables à travers et organisation l'information pertinente, dans un contexte de diffusion, de flux informationnels démultipliés par les réseaux numériques. Autrement dit, les individus qui seraient déjà motivés et intéressés par les questions politiques bénéficieraient pleinement du web comme ressource d'information, mais ceux qui seraient peu motivés n'en tireraient pas réellement profit, ce gain informationnel serait donc marginal. Cette fracture civique reposait sur l'inégalité répartition des compétences d'individus disposant de manière variable de capitaux culturels et cognitifs. A cette fracture, viennent s'ajouter d'autres thèses sur la contribution des médias, de masse et numérique, à soutenir voire à accroître l'apathie civique. En effet, la multiplication de thématiques numériques ou câblées et la personnalisation des contenus permettraient aux individus qui préfèrent le divertissement de profiter d'opportunités encore plus nombreuses de ne pas être exposés à l'actualité politique. Les technologies de l'information et de la communication apparaissent dès lors comme les auxiliaires du désengagement civique d'individus auxquels ferait défaut un niveau même basique de connaissances politiques. Le caractère alarmiste de cette proposition a été récemment contrepbalancé par plusieurs récents travaux qui incitent notamment à appréhender de manière modulante l'intensité des effets de l'information en ligne sur les internautes certes en s'affaiblissant, mais aussi de leur prédilection à travers et organisation l'information.

The analysis demonstrates how not only those directly interested in micro data from official statistics but also survey researches benefit from the efforts of “Data without Boundaries” and the improved access to Eurostat's data.

RC33-579.5

WOLF, CHRISTOF* (Leibniz Institute for Social Sciences, christof.wolf@gesis.org)
Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case

“Data without Boundaries” – a project funded under the 7th European Framework Programme – aims at improving access to microdata from official statistics in Europe. This overarching goal is reached through several tasks, among them: compiling information on available data and access conditions, proposals for harmonization of access conditions, building a remote access network and offering web-based, structured and searchable codebooks for Eurostat data. Among the data sources that Eurostat produces and disseminates and that “Data without Boundaries” is creating a service for is the European Union Labour Force Survey, the largest household survey of the continent. EU-LFS is a continuous household survey currently carried out in 33 countries. In many of these countries EU-LFS is mandatory leading to very high response rates. Because of its size and the high quality of its sampling this survey is often used as benchmark to measure nonresponse bias in social surveys.

After introducing “Data without Boundaries” the presentation will demonstrate how EU-LFS can be exploited to assess nonresponse bias in surveys conducted in Europe. The empirical analysis focusses on the European Social Survey, the European Values Study and the European part of the International Social Survey Programme. Nonresponse bias will be assessed relative to the variables sex, age, education, employment status, household size and where available region or size of place.

The presentation will discuss the methodological problems with the standard approach to collecting egocentric network data. Several adjustments to the standard approach will be discussed and alternative methods to capture aspects of “social capital” will be presented. The presentation ends with a plea to use a combination of several independent measures of social embeddedness thereby over-come single ended focusses of the main approach of local autonomy and participatory democracy. However, within transnational networks these dual aspects of the cyber age, democracy and localism, are often in tension with one another.

In this paper, I use the indymedia movement as an exemplar of a transnational media network where the dynamics of global democracy and local autonomy come into tension, offering a more nuanced look at the intersection of the global and the local in global networked social movements. Founded during the WTO protests in 1999, indymedia is a globe-spanning media network, with over 200 active nodes on six continents, where news and journalism is produced in multiple media networks over 30 languages. In specific, in this chapter I look at the decision of the global indymedia network to reject a large grant from the Ford Foundation because of Ford's history in the Argentine dirty wars. The heated episode almost forced the young dynamic network to shut its doors, and brings to the fore the complex tensions of local autonomy and global sovereignty, highlighting the conservative and oft-times reactive nature of transnational communication networks. Moreover, this episode and indymedia in general, brings to light the inability of decentralized networks to build proactive power, highlighting the reorganizing and at times debilitating organizational logic of contemporary social movements.

WON, JAEYOUN* (Yonsei University, jywon@yonsei.ac.kr)
Democracy and Autonomy: The Contradictions of Global Social Movement Networks

Scholars of emergent global social movements and other transnational activist and new media networks have hailed the coming of horizontal, flat, democratic networks tied to new communication technologies. The shared claim is that these networked organizational forms, and accompanying cultural practices, are creating a new more egalitarian social world. At the foundation of this argument is the presumption of the leading role of local autonomy and participatory democracy. However, within transnational networks these dual aspects of the cyber age, democracy and localism, are often in tension with one another.

In this paper, I use the indymedia movement as an exemplar of a transnational media network where the dynamics of global democracy and local autonomy come into tension, offering a more nuanced look at the intersection of the global and the local in global networked social movements. Founded during the WTO protests in 1999, indymedia is a globe-spanning media network, with over 200 active nodes on six continents, where news and journalism is produced in multiple media networks over 30 languages. In specific, in this chapter I look at the decision of the global indymedia network to reject a large grant from the Ford Foundation because of Ford's history in the Argentine dirty wars. The heated episode almost forced the young dynamic network to shut its doors, and brings to the fore the complex tensions of local autonomy and global sovereignty, highlighting the conservative and oft-times reactive nature of transnational communication networks. Moreover, this episode and indymedia in general, brings to light the inability of decentralized networks to build proactive power, highlighting the disorganizing and at times debilitating organizational logic of contemporary social movements.
pline to teach the ideas of communism and social action, thus banned teaching sociology at universities in Korea. K. D. Har was not able to teach sociology, and eventually kicked out from the university. After liberation from Japan, he pursued the career in journalism, but his newspaper was not allowed to publish due to its critical report on post-Colonial South Korean government. Using K.D. Har as a case study, this paper discusses the potentials and limits of public sociology in (post) colonial context, and explores the challenges of global sociology in (post) colonial context.

Passing and Crossing: A Study of Transgender Embodiment in Hong Kong
Issues of transgender and transsexuality provide a new impetus and a practical need to problematize assumptions about bodies and identities and to rethink the categories of women and men. While transgender studies have exposed the artificiality and mutability of sex/gender/sexuality categories, a tension exists between the transgender/transsexual discourses which are oriented toward a search for a gendered home and the queer emphasis on creating trouble for the gender order through non-normative, unintelligible embodiments. This paper seeks to address the debate through an examination of the embodied practices of passing and crossing in the transgender community in Hong Kong. For many gays and lesbians, passing or acting straight is a strategy for coping with stigmatization in a hetero-normative society. For many transgender people, passing, that is, to blend into society both socially and visually in accordance with their preferred gender, is a goal rather than a means. They wish the society to see them in their desired gender. The emphasis on passing is reinforced by the ‘Real Life Test’, which requires trans to dress and live in their gender identity successfully for a period of time in order to be eligible for hormonal treatment or surgery. Questions will be raised as to whether a hierarchy based on the ability to pass has been created in Hong Kong's transgender community; to what extent the practices of passing entail compliance with dominant standards of dress and behavior which are grounded in the class privilege and compulsory heterosexuality. Similarly, questions will also be raised with regard to incoherent embodiment. Who can afford incoherent or unintelligible embodiment? Whose incoherence is strategic, and whose incoherence is necessary or unlivable? This paper argues for the importance to subvert dominant codes, yet without losing sight of the materiality, complexity and ambiguity of the lived experiences of transgender people.

Biographical Experience, Desires, and Interests: A Case Study of Individual Hong Kong Fans of Japanese Boy Love Comics
This paper is an ethnographic attempt to understand the relationship between individual Hong Kong fans of Japanese Boy Love (BL) comics and the general image of male characters in BL through the fans’ derivative creative process of BL. The key concept here is the desire. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, each of them tends to maintain a unique interest in it. We further argue that the unique interest in the general image of male characters in BL comics is closely related to the biographical experience of each individual Hong Kong fan. The biographical experience itself is a product of many social factors, among which family is the most important one. Following Sangren (2000), we argue that in order to understand how biographical experience shapes unique interest of each individual fan, we should understand how family as a social institution underlies the desire of individual fans toward BL comics in general and the general image of male character in BL comics in particular. The desires instituted by family in turn will be shown to motivate the unique behavior of individual fans toward BL comics. Through this ethnographic attempt, we shall try to transcend the classic dichotomy of individual and society, sociology and psychology, and culture and personality lingering in social sciences in general and sociology in particular.

A Spectral Existence: Living in a Chinese Ghost City
With more than half of the Chinese population now urbanized and 75% expected to be in the next two decades, the proliferation of new, ‘instant’ cities in China can be understood as the efforts of the Chinese government to house and provide employment for the fast expanding urban population, inducing them into ‘modern’ forms of production and consumption, thus fueling the wheels of global capital and China’s own rapid ascendance as an economic power house. However, of late, an emerging phenomenon that arises from this ceaseless urbanization is the sprouting of ghost cities and towns across the country. These are defined as cities and towns which lie largely under-populated and under-utilized, and where housing projects serve mostly as vehicles of real estate speculation rather than domestic accommodation. Ordos City (or Kangbashi) in Inner Mongolia appears as such a product of Chinese hyper-urbanization gone wrong. Contrary to the local government’s ambitions to build a global, modernized city in the midst of the desert, residents in this new city are living in the mirage of a future which is promised but has yet to arrive. With the collapse of the local coal industry and China’s own impending economic slowdown, this future of Ordos’s morphogenesis into a global city looks even more bleak. Discussing the ethnographic data collected from my fieldwork in Ordos City, I will attempt to show how residents manage this dissonance between the promised and the realities of life in a ghost city through their production and consumption activities—informal or otherwise; and how the interactions of class, gender, and status which have been simultaneously overcome or exacerbated in this rapid process of urbanization.

From ‘Reds’ to Riches: Contemporary Changes of Educational Assortative Mating in China from 1949 to 2000
Ever since the Chinese Communist Party took full control of the country in 1949, massive institutional transformations shattered and reshuffled traditional norms and structures, including individuals’ mate selection by depreciating the value of education, valorizing the importance of political loyalty (“red”), and thereby reducing the extent of educational homogamy and overall association. Between 1949 and 1979, political capital and class origins are paramount in determining individual’s position in the society. However, with the advent of economic and market reforms since the late 1970s, the tide has changed again. Under the new environment, de-collectivization, industrialization, and the rise of market economy all point to the rise of human capital and economic success as major determinants of one’s socioeconomic position. Through the use of 1982, 1990, and 2000 China Population Census and 2005 Chinese mini-census, our results indicate that (1) massive political upheavals between 1950s and 1970s generally decrease the strength of educational association (ρ) and increase the propensity of hypogamy; (2) the downward trend was abruptly halted since market reform and the strength of association has reversed its direction to sharply rising trend instead; and (3) assortative mating patterns in rural and urban areas are distinctively different from each other. To further investigate whether sent-down experiences may have differential impacts on mate selection, additional analyses based on the 1995 and 2002 Chinese Household Income Project are included. Indeed, we find that the impact of sent-down experiences varies by gender, educational levels, and couples joint experiences.

Gender-Oriented Statistical Discrimination Theory: Empirical Evidence from the Hong Kong Labor Market
This paper proposes a simple search model to shed light on the role of aggregate fertility as a form of statistical discrimination against young working women in the labor market. Our proposed theory assumes that workers generate identical production value that does not differ by gender. When matched with a firm, the worker and the firm bargain over the wage rates. Since permanent female workers receive wages during maternity leave and generate no production value, a matched pair with a female worker may generate lower expected profit to the firm. Rent-sharing ensures a male worker to be paid more than a female worker even with the absence of overt discrimination, thus resulting in statistical discrimination against females. Using the 5% random subsamples of census and by-census data in Hong Kong in 1996, 2001, and 2006, the study provides unequivocal evidence that age-specific fertility rates exert negative impact on female wages, after controlling for other observable characteristics. More importantly, the negative effects of fertility on women’s earnings are notably greater in female dominated occupations whereas similarly situated men are unaffected. Since fertility rates tend to be increasing with age during the early stage of women’s work career, our theory partially explains why the gender gap tends to rise with age. One important implication from our model is that employers would similarly expect to pay female workers to have lower fertility than their heterosexual counterparts and thereby resolves the puzzle of the existence of the lesbian earnings premium found in the economic literature.

Can the Industrial Relations in Japan be Reconstructed in the Long-Term Perspective?

More than ten years have already passed since it was first proposed that Japan’s corporate management and labor relations should be reformed to keep pace with globalization. After the financial crisis of 1997, especially, corporate governance changed, and management began to shift emphasis to short term rather than long term profits and shareholders’ rather than employees’ concerns. In addition to the general reduction in labor costs, replacement of regular employed with non-permanent employees rapidly proceeded. The wage system became more performance-based as well in accordance with emerging HR policies that sought the immediate competence of employees. However, some scholars argue that, in the long term, such changes in business strategy and HR policies have negatively affected Japanese industries’ productivity and quality. Moreover, Japanese institutional achievements have been affected as well. Labor disputes have failed to cope with problems such as wage reductions, growing numbers of non-regular workers, and the decrease of collective bargaining power. These problems exist against a backdrop of increasing wealth disparity. This paper aims to elucidate the possibility whether Japan’s industrial relations could be reconstructed or not in the long-term perspective, focusing on the mechanisms by which globalization and changes in corporate governance are influencing industrial relations at the micro level.

Welfare Support Attitudes in Korea, Taiwan, Germany, and Italy: Focusing on the Influence of Institutional and Political Factors

Previous studies have shown that welfare attitudes are determined by various demographic, economic, and social factors in Western countries. Class is found to be one of the most influential factors in explaining individual welfare attitudes in Western countries. On the contrary, no clear factors have been found to be significant in differentiating individual welfare attitudes in Asian countries, particularly in South Korea so far. To understand welfare attitudes in comparative perspective, we will analyze the “Life and Society” survey data collected from Korea, Taiwan, Germany, and Italy in 2012. Two Asian countries are small emerging welfare states, whereas Germany and Italy are already mature welfare states. However, these countries have some commonalities in that their welfare systems were constructed by the principle of Bismarckian insurance system. It would be very interesting to check changes in welfare attitudes in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The first purpose of this article is to explore whether there are different social cleavages in welfare attitudes in Western and Asian countries. The second purpose is the main part of this study. The study focuses on the issue addressed by institutionalists in the analysis of welfare attitudes. That is the importance of institutional and political factors. We expand the concept of “political trust” to measure the importance of institutional and political factors. We expand the concept of “political trust” to measure the importance of institutional and political factors. That is the importance of institutional and political factors. We expand the concept of “political trust” to measure the importance of institutional and political factors. That is the importance of institutional and political factors. ‘Presentism’ and Youth Research: Methodological and Historical Oversights

A key incentive for why many young researchers undertake research is the hope we have to ‘make a difference’ for the young people. No more so than in community participatory research when we are invited in to participate in ‘transformative’ change for marginalised young people in particular. However, while we know that social change takes time, we are constrained in such research by timeframes imposed by neoliberal institutes that compel quick research turn-arounds and rapid outputs. Moreover, such constraints also encourage a very presentist view of the young people at the focus of our research, thus overlooking historical legacies, continuities and discontinuities that are embedded in communities and how these shape their social worlds. In this paper I examine a participatory community youth research project that ‘failed’, forcing me to confront my own presentist and short-sited views, as well as those imbued in methodological choices. Drawing on Hannah Arendt’s (1986), I re-examine the ‘web of relations’ (p. 150) which these narratives of ‘failure’ are situated in, thus highlighting the complex and intertwined historical and contemporary factors at play when we conduct research. The paper critiques ‘presentist’ tendencies in youth research and raises questions about collective ethical responsibilities toward sustainable actions of change through youth research.

WOODCOCK, JAMIE* (Goldsmiths, jamie.woodcock@googlemail.com)

Precarious Labour In The UK: The Impact Of Neoliberalism and The Possibilities For Resistance and Organisation

This paper seeks to examine resistance to precarious employment in the UK. It has been the focus of recent debate in the UK, both in academia and in the labour movement. In academia there have been debates between Guy Standing (2011) and Kevin Doogan (2009) amongst others about the extent and implications of precarious employment. The use of statistical evidence is a particular point of contention; ranging from some arguments relying on very little of it to others claiming it negates the concept. However statistics alone provide only a partial picture, as the category of precarious employment is heterogeneous: it is not simply the result of being on a specific kind of temporary contract. The experience of precarity is an important component of work today, and an understanding that draws on Bourdieu’s (1998) notion of ‘précarité’ as a ‘mode of domination’ is useful for developing this further. The paper will attempt to historicise precarity in the UK as part of a longer and the rise of the crisis of 1970s and the growth of Neoliberalism. These processes were enforced with a series of defeats for the trade union movement, which have left low levels of membership concentrated mainly in the public sector and large sections of the private sector without traditional forms of working class organisation. There has been resistance to precarious employment. The examples of university teaching staff, call centre workers, and the campaigns against zero-hour contracts will be examined to understand how new forms of struggle can lay the basis for the renewal of workers’ organisation. The paper will argue how the historical examples of new unionisation in the 1880s and 1930s can inform contemporary debates on overcoming precarity.

WOODCOCK, JAMIE* (Goldsmiths, jamie.woodcock@googlemail.com)

Towards a Method For Activist-Scholar Research Collaborations: Taking Inspiration From The Tradition Of The Workers’ Inquiry

This paper will argue for a method for collaborative research projects involving academics and workers that takes inspiration from the tradition of workers’ inquiries. It draws on my own experience of conducting an inquiry in a UK call centre. In Marx’s (1938: p379) attempt at an inquiry he stated that workers ‘alone can describe with full knowledge the misfortunes from which they suffer,’ and crucially that ‘only they, and not saviors sent by Providence, can energetically apply the healing remedies for the socialills to which they are prey.’ The innovations of the Johnson-Forest Tendency in the USA, in examples like the American Worker, highlight how collaborations between workers and intellectuals can be used to develop an understanding of society. The Italian Operaismo in the 1960s developed the methodological component of inquiries as a form of ‘co-research.’ The aim was to simultaneously develop a form of knowledge production and new organisations. The debates in their journals discussed the difficulties in this approach, seeking to move from inquiries ‘from above’ to those that involved workers self-organisation – an inquiry ‘from below.’ Romano Alquati argued that in many ways this was not a ‘political’ militancy but always done concreta [co-research]. We would go in front of the factory and speak with workers: there cannot be organisation otherwise’ (quoted in Roggero, 2010: p3). This paper will argue that inspiration can be taken from previous attempts to develop workers’ inquiries. They represent particular approaches when academics sought to engage with the changing conditions in the world alongside groups of workers. Although the location of the factory gates has changed in many ways, the current context of austerity necessitates the engagement of researchers with workers’ struggle, both inside of universities and in different workplaces in society.

used a range of terms to capture the 'grey zone' that falls between worklessness on the one hand, and relatively secure full-time employment on the other. This 'grey zone' varies significantly in size across first world countries and is likely to expand under the current turbulent economic conditions. Although sociologists have both introduced and critiqued various terms used to represent insecure and fragmentary work to a limited extent to which there have been few attempts at a theoretically driven conceptualisation that ties the new conditions to broader processes of change in advanced capitalist societies and links structural change to new forms of consciousness. While the idea of a framing the experiences of fragmented and casualised work is the new economy as a new class, for example the precarious, has some attraction, there are also difficulties with the conceptualisation. One of the core problems relate to the fact that not all young people who are structurally located in the precariat by virtue of their employment in casual or insecure forms of employment represent a disadvantaged or marginalised group. For some the experience of precarious employment is alleviated by access to other resources, such as family support, and they escape some or all of these precarious work conditions as they get older. Drawing on evidence from a number of countries, and primary data from an ongoing mixed-methods study of youth in Australia, in this paper we describe some of the ways in which changes in the labour market are affecting young people, consider the adequacy of representations of precarious and fragmented positions as the basis of a new ‘class’ and propose an alternative way of conceptualising ‘individualised’ structured inequalities in the new economy.

WOODWARD, ALISON E.* (Vrije Universiteit Brussel, alison.woodward@vub.ac.be)
Balanced Advice? Appointments to Advisory Boards and Gender Quota’s in the European Union
Advisory councils and boards play an important role in countries with corporatist democratic systems. Appointments to these boards are often controlled by political actors but regulated in a bureaucratic framework. Feminist movements identified these decision-making bodies as both crucial gatekeepers and easily malleable venues for a quick fix of gender balance. Given that many of the bodies are appointed by the state, boards and public committees seemed to offer the opportunity to quickly change the gender balance in decision-making, even as electoral sectors were changing slowly. Countries such as Belgium and Norway adapted legal gender composition rules for appointed bodies by 2005. Later quota’s in electoral politics became more widespread. Today many European countries have also started proceedings to implement gender quota’s in advisory bodies and corporate business boards with state participation. To what extent has the increasing integration of Europe led to adaption of gender regulations of appointed boards in EU member states? How does this interact with political appointment processes? What are the results and how does the bureaucratic capacity of the state interact with implementation of gender-balance rules? This paper will report on comparative data and measures in the 27 European Union countries. Who has adopted quota for these bodies, and what are the arguments? How do gender equality considerations relate to debates about de-politicization of appointments? Further the paper will review available results on the composition of appointed bodies and present results from a survey confirming that the new ‘class’ and propose an alternative way of conceptualising ‘individualised’ structured inequalities in the new economy.

WOODWARD, ALISON E.* (Vrije Universiteit Brussel, alison.woodward@vub.ac.be)
Between Ambition and Reality: The Role of Gender Representation Rules in European Scientific Advisory Councils
Research Councils are crucial gatekeepers to academic power. Substantial research indicates that gender skewed scientific advisory and review boards play a role in the underrepresentation of women receiving scientific grants. Since the mid-nineties many European scientific advisory bodies have adapted guidelines about the gender composition of their panels, either compelled by national legislation and European directives or voluntarily. European Union scientific review boards are supposed to be composed at the 40%/60% level, for example. However the adaption of guidelines and the implementation and monitoring of guidelines are not always linked. Quite a few of the guidelines have generated controversy. However, the re-adjustment of the European Research Area may mean that ambitions of representation become lost thanks to neo-liberal arguments about an unambiguously and ambiguous concept of ‘excellence’. This paper documents the present state of affairs in terms of regulation, the resistance to quota regulations and the extent to which there is compliance with regulations by the composition of panels and management. The implications for research councils and gender equity in decision-making will be discussed. Contextual and structural factors of legislation, leadership, peer pressure, Europeanization, monitoring and bureaucratic capacity are identified as contributing to differing outcomes. Concretely, the paper treats the major European players in transnational funding and management: European Science Foundation, the nascent Science Europe, the European Research Council and the Commission of the European Union.

WOODWARD, IAN* (Griffith University, iwoodward@griffith.edu.au)
Rematerialising the Commodity in Social Theory: Performativity, Iconicity and Object Transitioning
The frontiers of social theory and cultural inquiry have been advanced by the affordances of object-oriented analyses and, more critically, a material ontology. Objects, things and materials are the stuff of new ecologies of meaning and practice, whereby social structures, global networks, cultural ideals, social values and cultural communities have been shown to be materialized and instantiated. Studies of object ecologies, material culture and things have challenged how we think about the nature of mundane experiences, modes of social communication and performance, and networks of social affiliation. In all of these fields, the material basis of social life has been uncovered and emphasised. As it has matured, material analysis has tended to bifurcate into interpretivist and materialist approaches, leaving approaches to materiality at something of a crossroads. On the one hand, strongly materialist approaches tend to fetishise material dimensions and relational, systemic patterns of exchange, while interpretivist approaches focus on the relational articulation of signification and meaning. Using the central sociological category of the commodity, this paper explores opportunities for integrating these approaches with special focus on the relatively new cultural sociological resources of performance theory and theories of iconicity.

WORTH, OWEN* (University of Limerick, owen.worth@ul.ie)
Neoliberalism on the Defensive: Austerity As a New Form of Common-Sense
Since the global financial crisis, the extensity of resistance to global forms of neoliberalism has been marked, with economists being at the forefront in demonstrating how austerity is unsustainable as a means of production. Both radicals and Keynesian economists, alongside a wide variety of political and social movements, which were already prevalence during the preceding decades since the end of the cold war became more prominent in their attacks and criticisms of neoliberalism. These have included social movements such as the Occupy campaign, regional political movements such as those in Latin America, reactionary nationalist groups and religious-based organisations, which have all been explicit in their attacks on the hegemony of neoliberalism. In response, the notion of austerity has flourished as a concept in order to keep such criticisms at bay. This paper will argue that the notion of austerity has developed into a defensive ideology, geared around the rejection of comprehensive alternatives to the crisis. Instead, it is geared upon the idea of presenting austerity as a compulsory painful measure, required in order to re-stimulate growth and confidence in the economy. It will also suggest that this narrative has been strengthened by the failure of its criticisms to adequately construct a viable hegemonic alternative that might replace the status-quo. As a result, austerity has assumed a character that can be understood as a form of ‘common-sense’ in the wider Gramscian tradition. It serves as providing a set of norms and conditions which are understood as both ‘natural’ and ‘universal’, in both social and geographical ways. This paper will conclude that it is through this articulation of common-sense that neoliberalism has (as least to date) managed to survive and to go on the offensive. Such a position that was not seen possible merely five years ago.

Gender Equality in Progressive Muslim Movements: Social Implications in the United States
The varied forms of progressive Islam all endeavour to realise social justice and equality through a critical engagement with Islamic sources and an inquiry into political economy and the role of economic crisis in re-shaping the Islamic landscape. An important feature of much progressive Islamic movements in North America is the focus on social equality and ultimately on gender parity. This paper seeks to investigate the ways in which social justice is achieved and enacted in target progressive Muslim communities and organisations. Subsequently the possibility of the instigation of social processes for ensuring human rights stemming from progressive ideologies will be examined. The research will be focused on two organisations: Muslims for Progressive Values and the New York Community of Progressive. Fieldwork will be carried out through online focus groups, observation and in-depth interviews in the United States to find out about the intention of Islamic organisations and movements in progressive Muslim movements and within other alternative Islamic practices and communities. The findings from this study will be used to evaluate the broader
concerns of social justice, human rights and pluralism in these two progressive Muslim movements.

Neoliberal metropolitanism and the remaking of welfare systems: The rise of professional projects in the government of the biopolitics of the metropolis

European research on the linkages between professionalization and political systems has focused either on the role of the state in professional projects or, more recently, on the relevance of transnational developments for a globalization of professions. This paper extends the analysis of political systems to a new scale, that of metropolitanism in ‘world cities’. It identifies the recent discourse on metropolitanism as ‘landscapes of power’ in global economy as a meta-level turn to ‘neoliberal metropolitanism’ in public policy. The paper further argues that the new discourse has helped to constitute metropolises also as important landscapes for professional projects. The analysis examines urban planning focusing on the Greater Helsinki region as a ‘world-class centre for business and innovation’, focusing on the professional projects that rise in the intersection of government and scientific expertise. I employ Patrick Carroll’s ideas about how the role of scientific expertise for ‘material design’ and conducted by political systems. Carroll highlights how the key boundary objects of land, people and built environment are transformed into ‘techno-territorality’, ‘bio-population’, and ‘infrastructural jurisdiction’. Employing Carroll’s framework to my analysis of role of expertise for the biopolitics of the metropolis, I argue that expert professionals are key agents of this transformation work, forging expert knowledge into institutional practice.

The findings show that the old liberal state that gave rise to new sciences such as public health the market-conscious metropolis also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four explicit professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

The 1970s saw both the emergence of child abuse as a recognised social
problem and the rise of public inquiries to investigate issues of major social concern,
including childhood maltreatment, in a number of Western countries. In the
United Kingdom there have been more than 80 inquiries into various aspects of
childhood abuse and neglect over the last four decades. In Ireland, 14 reports
published since the 1990s have examined abuse in schools and institutions. Sim-
ilarly, in Australia, growing concern about the welfare of children in out-of-home
care has prompted a number of official investigations, the most recent being the
current Royal Commission into Institutional Responses to Child Sexual Abuse. It is
one of the largest public inquiries in Australia’s history and like the Irish Ryan
Commission before it, is likely to be one of the most significant inquiries into his-
torical instances of child abuse internationally. Through examination of a number
of prominent inquiries, this paper first explores the role of official inquiries in
social and educational policy reform, and in shaping public understandings of
the problems of child abuse more broadly. It then considers the cathartic function
of inquiries for victims and for societies more broadly, through exploration of the
notion that inquiries reflect an open and transparent society in which ‘the voices
of the powerless are heard’ and the powerful are held accountable. Finally, the
paper analyses the fraught social justice issues at play in the investigation of past
instances of abuse, and the promise of social and institutional change aimed at
better protecting young people today.

WU, CHIA-LING* (National Taiwan University, clwu@ntu.edu.tw)

Choreographing Risk: Multiple Sociotechnical Networks of Multiple Pregnancy

This paper creates the concept of “choreographing risk” to explore the socio-
technological networks of multiple pregnancy, mostly caused by assisted reproductive
technology. I argue that during the processes of assisted conception and multiple
pregnancy, elements of technical, legal, financial, emotional, political and gender,
are coordinated around risk. Data includes in-depth interviews of women and medical professionals, and archival data. I find that in the stage of getting pregnant with assisted reproductive technology, doctors tend to use mul-
tiple embryo transfer and ovarian stimulation medication to increase the preg-
nancy rate. Both doctors and women perceive failure of conception as the major
risk, and tend to disregard the risk of multiple pregnancy. In the case of multifetal conception, fetal reduction becomes a technical model to reduce the risk of mul-
tiple pregnancy. However, some women and doctors refuse this technique for reasons other than health risk; network of fetal reduction often collapses. High
prevalence of multiple pregnancy in Taiwan exists. Pregnant women of twins and triplets take embodied responsibility to avoid risk of premature birth, including
diverse bodily work, and negotiation between productive and reproductive labor.
This paper shows that as women vis-à-vis medical professionals become more
more and the central choreographer in the multiple networks of multiple preg-
nancy. For policy implication, I suggest adjusting assisted conception methods,
such as reducing the number of multiple embryo transfer during in-vitro fertiliza-
tion, to relieve women from the hard labor of multiple risk choreography.

How Scenes Drive Housing Prices in Beijing

Wu (2011) proves that scenes heavily influence the urban residential choices in
China. In that paper, an analytical framework is constructed to study 375 counties of
25 large cities in China. The objective of this paper is to improve on the previous
analytical framework and delve into an examination of neighborhood level hous-
ing markets. Specifically, we focus on the city of Beijing in this paper and collect
a dataset which includes three-year housing prices data and 85 types of amenities
from 220 neighborhood areas in Beijing. In addition, we develop a novel tech-
nique to overcome the drawbacks of the original theory in spatial evaluations due
to strong spatial autocorrelations among housing prices. We also employ geo-
graphically weighted regression and Kriging mapping to support our analyses.
Our conclusions are the following: (1) the distribution of local culture and ameni-
ties is polarized in Beijing; (2) housing prices in Beijing are significantly influenced
by neighborhood level culture and amenities; (3) the distribution of housing pric-
es in Beijing has the shape of a comet, corresponding to the distribution of local
culture and amenities, and with tails spreading towards the northwest.

The Research of Cost Performance of Urban Housing in China: Base on the Theory of Scenes

In the last decade, the rising real estate price in Mainland China has become a
worldwide issue. All walks of life paid close attention to the urbanization process
stood by flourishing Real Estate Market in China. Moreover, some scholars have
more emphasis on crisis and bubble hidden by the fast-rising real estate price.
Recent research and analysis on commercial housing vacancy ratio, relationship with
housing price land value and Housing Price-to-Income Ratio have occupied the
mainstream. These researches either stressed the influence on housing price by
the cost of residential land from the perspective of supply or underlined the mis-
match of housing price and per capita income from the perspective of demand.
However, this paper argues that whether there exist bubbles in commodity res-
idential market is a dynamic equilibrium process, it is difficult to judge only by
one-side factors. Hence according the Theory of Equilibrium Price posed by New
Classical Economics, this paper re-examine the residential market bubble issue in
China from a totally new perspective- cost performance of commodity housing
based on Principle of Supply-demand equilibrium. Using ideological system of
the latest achievements of Scenes Theory from Chicago School, this paper selected
Panel data from 2001 to 2012 in 147 main cities in china, built urban residential
Scenario index to measure cost performance of commodity housing in different
regions in China and empirically proved the rationality and validity of the index.
Finally this paper points out that urban cost performance of commodity housing
ruled low in general, Second-tier cities had a low commodity residential market
bubble level rather than first- and third-tier cities had a high level and offers tar-
gested policy recommendations for macro-control of real estate market of the
government of China.

Micro and Macro Conditions for Happiness in Urban China

Despite the large literature on happiness research, sociological studies on the
social determinants of happiness in China remain rare. This study examines not
only micro conditions for happiness but also the potential interplay of micro and
macro conditions in urban China. Specifically, we focus on some wide-studied and
widely overlooked micro conditions, socioeconomic achievements (what you get)
and non-cognitive skills (who you are), respectively. However, the happiness effects
of micro conditions may well differ across macro contexts. We thus inves-
tigate how the happiness effects socioeconomic achievements and non-cognitive
skills depend on the level of economic development in urban China.

Our data are drawn from the urban sample of the 2011 Chinese General Social
Survey, a nationally representative social survey. Socioeconomic achievements
refer to years of education and annual total income. Non-cognitive skills refer
to conscientiousness, operationalized by indicators of consistency, dependabili-
 ty, and deferral of gratification in performing the student role. Macro condi-
tions refer to urban areas in the developed provinces, as indicated by provincial-level GDP per capita. We obtain three main findings: (1) Both adolescent conscientiousness and personal income, but not ed-
cuation, enhance personal happiness. (2) The happiness effects of education and
income are highly contingent on the level of development, with education having
a positive effect in less developed areas but a negative effect in more developed
areas. (3) The happiness benefit of conscientiousness is robust across urban ar-
eas of high and low economic development. The evidence thus suggests that the
micro conditions for happiness do depend on certain macro conditions in China.
There is a penalty on happiness for high achievers of education and income in the
most developed urban areas, but the happiness effect of adolescent conscien-
tiousness is uniform across development contexts.

Personality Traits, Socioeconomic Inequality and Subjective Well-
Being in Urban China

This paper brings together two literatures: a large literature of health inequality
that has long documented the robust health benefits of socioeconomic status
(SES) and a new human capital theory that emphasizes the health benefits of cer-
tificated skills and traits. We examine the potential dynamics between psychological
functioning (personality traits and competitive pressure) and socioeconomic in-
equality in the context of subjective well-being (SWB). Specifically, (1) does ado-
lescent conscientiousness (one of the “Big Five” personality traits) affect socioeco-
nomic status (measured by education and income) in the transitional economy of
urban China? (2) Does adolescent conscientiousness also modify (interact with) the SWB effect of SES? (3) Are the SWB effects of conscientiousness and SES contingent on the degree socioeconomic competition of an urban area?

Drawing on the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey, we measure SWB with multiple indicators of positive and negative affect and conscientiousness with consistency, dependability, and deferral of gratification in performing the student role. We obtain three main findings: (1) Adolescent conscientiousness enhances education and income. (2) There is no interaction between adolescent conscientiousness and SES in predicting SWB. Each has independent effect on SWB. (3) However, psychological functioning and structural inequality interplay in a more complex way. We use level of economic development as an indicator of the degree of socioeconomic competition. While the SWB benefit of conscientiousness on SWB is robust across urban areas of high and low economic development, the SWB effects of education and income are highly contingent on the level of development. The evidence suggests that there is a penalty on SWB for high achievers of education and income in the most developed urban areas. Thus psychological functioning does not only affect socioeconomic achievement, it also critically determines the SWB benefits of socioeconomic achievement.

Perceptions on Hurricane Information and Protective Action Decisions

Tropical storms and hurricanes have caused extensive casualties and damage in past decades. Population and economic growth in the vulnerable coastal areas have made hurricanes a serious problem and created the potential for a catastrophic loss of life. The existing research literature lacks a sufficient scientific understanding of dynamic protective action decision making during events in which additional information becomes available over time. Emergency managers and residents in the risk areas are most likely to make decisions on their protective actions based on National Hurricane Center's hurricane forecast advisories. This study uses the DynaSearch program to conduct a computer-based experiment that the understanding of hurricane strike probabilities and their choices of protective actions recommendations. This study simulates the approach of a hurricane by providing experiment participants a sequence of hurricane forecast advisories and examining their threat perceptions and implement protective actions over time. The results show that (1) people's hurricane strike probability judgments and protective action recommendations escalated as hurricanes approached to their counties; (2) people realized that hurricane could make turns and might not always follow the forecast track; (3) risk assessment variables are correlated with people's disaster responses; (4) hurricane experience has a significant effect on protective action recommendations; (5) participants failed to evacuate appropriate risk areas in timely manner; and (6) participants had difficulty interpreting strike probabilities. The results suggest that participants were able to utilize the available hurricane information to make reasonable judgments about each city's relative strike probability. However, their failure to take appropriate actions suggests a need for more comprehensive training on how to react on what actions to take in response to the hurricane information displays.

Claiming a Sub-Urban Citizenship: Migrants, Parenting and Reunited Households in Margins of Beijing, China

This paper explores the new realities and challenges facing skilled self-employed migrants who have worked in Beijing for almost two decades and who tend to settle in the far-off, intersecting area between the rural and urban spaces of the city (countryside-urban). Based on in-depth interviews with some of these veteran migrants, this paper asks these questions: how do veteran migrants define their living space and resist structural discrimination? The research shows that veteran migrants are able to unite with their left-behind children and take advantage of various resources and opportunities in the intersecting area, this paper argues that they make claims on what I call a "sub-urban citizenship." The paper joins a broader discussion on citizenship mutation in the global era and analyzes the concept of sub-urban citizenship and the way they understand the nuanced and everyday strategies peasants migrants actively assert to enfranchise themselves.

WU, QIAOBING* (The Chinese University of Hong Kong, qiaobing.wu@gmail.com)

Left-behind and/or Migrant Statuses, Social Capital, and the Mental Health of Children in Rural China

Children migrating to the urban cities with their parents and children left behind in the rural counties by their migrant parents are two vulnerable populations accompanying the rural-urban migration in mainland China. Some of these children even have dual experiences of being migrant and left-behind at various occasions due to their parents' return migration as a consequence of the economic downturn or other family decisions. Despite a growing body of literature on the mental health of either migrant children or left-behind children, no previous study had ever tried to distinguish the various experiences of being migrant or left-behind, or both, that might contribute to children's well-being. This study was aimed to investigate how the left-behind experiences of children living in the rural context of China influenced their mental health status, with their potential migration experiences being taken into account. Moreover, it investigated how the effects of left-behind experiences on mental health might be mediated by the stock of social capital in their family and neighborhood.

Data of this study came from a questionnaire survey with 701 children ages 11-18 living in the rural counties of Guizhou province, China. The structural equation modeling results suggested that, compared to those rural children who lived with both parents and never had any experience of being migrant or left-behind, children who were currently left-behind and had some previous experience of being a migrant appeared to exhibit higher levels of depression. Children who used to be left-behind but lived with both parents at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in the family. Implications of these research findings were further discussed.

Ethnic Autonomous Policy and Ethnic Inequality in China: An Evaluation

China's 55 ethnic minorities constitute about 9 percent of the national population, and most are concentrated in remote areas and disadvantaged in social and economic development compared to the Han majority. To promote ethnic inequality, Chinese government has instituted the ethnic autonomous jurisdictions at different levels: 5 autonomous regions, 30 autonomous prefectures and 120 autonomous counties/banners, covering 71 percent of ethnic minorities and 64 percent of the territory as of 2005. This paper aims to employ China’s census (from 1982 to 2010) and the mini-census data in 2005 to evaluate the effectiveness of such a policy on ethnic disparities in educational, occupational attainment and income. Specifically, we will employ the causal inference methods to investigate the existence of ethnic minority (relative to Han) living in their own autonomous jurisdiction and their counterparts otherwise. The findings will have important implications for China's policy towards ethnic minorities.

Trends in Intergenerational Social Mobility in China

This paper studies the intergenerational social mobility pattern in the People's Republic of China over half six decades, based on an analysis of 5 cohorts (born between 1932 and 1988) from a series of national representative surveys conducted in 1996, 2005, 2006, 2008, 2010, 2012, respectively. In the context of rapid economic industrialization since 1949, the absolute mobility rates in China increased over time, but the level is much lower than other countries. The relative mobility patterns were largely stable for both men and women except for the youngest cohort. Education played an important role in intergenerational social reproduction: the effect of origin on educational attainment does not change over time, and but the effect of education on destination does. The household registration (hukou) system that the Chinese government installed to curb the rural-urban migration in the course of socialist industrialization created a unique pattern of social mobility in China that deviates from core models of social mobility found in other countries. The market reform has altered the pattern of social mobility: the effect of origin on education increased and the market-oriented reform seems to enhance the inter-generational transmission.
About one hundred years ago, William Bagley put forward several controversial issues on different trends of education concepts. One of them concerns the debate between two opposite values in pedagogy: the individualism and the collectivism. If these two values represent and distinguish two different notions in diverse civilizations, especially during this transitional stage and the context of globalization, China’s Chinese youth is the first generation whom simultaneously contact with various cultures from the Western world and from their own tradition, thus directly confronting this dilemma during their socialization.

On one hand, Chinese social convention attaches importance to the strategies needed to maintain a collective life, in which individuals should adhere to the principles of the Mean in hopes of becoming invisible within the community; On the other hand, the competition advocated by market economy require individuals to show their uniqueness in order to stand out above others. Moreover, the Confucian family tradition is used to emphasize that an individual submits to the collective and abdicates his or her public responsibilities. However, civil society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today's Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships? How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still having an impact on those Chinese, the adolescent who hold traditional values. Fourth, the collectivist nature of Chinese cultures and the cultural tradition of this young generation facing the obligation of the familial collectivist tradition with that of the impacts of the individual civic innovation. 

Political trust matters as it reflects a regime's perceived legitimacy. Cross-national survey research shows that political trust in China is very high. This is puzzling because China is not only governed by an authoritarian regime but it also has serious corruption and large wealth inequality. The high trust exhibited within the Chinese context is therefore questionable.

In this study, we argue that there are at least four key points that need to be considered when using survey data to examine political trust in China. First, the Chinese notion of “kimen” commonly used in surveys such as the World Values Survey might be different from western concept of “trust”. Second, questions about political values are sensitive, especially in China, and therefore the distrust in interviewers and political fear may lead Chinese citizens to overstate their trust in the authoritarian government. Third, the political system and culture of imperial China could have affected those Chinese, who hold traditional values. Fourth, the collectivist nature of Chinese cultures and the cultural tradition of being modest may encourage Chinese people to hide their political values.

Using the Chinese General Social Survey (2005 & 2006), in this study we explore how traditional cultures and interview contexts impact the expression of trust behaviors. We use alternatives to the standard question asking directly how much confidence people have in government, as the measure of political trust. We conclude that traditional cultures and interview contexts impact the expression of trust behaviors. We use alternatives to the standard question asking directly how much confidence people have in government, as the measure of political trust. We conclude that these effects are significant and not trivial. Resource allocation and legislative impacts have serious consequences for children. Moreover, civil society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today's Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships? How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still having an impact on those Chinese, the adolescent who hold traditional values. **Food Security Part II. Politics of Food Security in Asia Pacific: Neoliberal Reforms, Contamination, and Social Movements**

Food Sovereignty Movements under Neoliberal and Frontier Capitalisms in Thailand and the Mekong

The concept of "food security" has been enshrined in official ASEAN including Thailand’s government documents. It is argued that there are increasing evidences of food insecurity. Food sovereignty and food security have been observed, from ethnic tribal highland rice farming, new organic and sustainable agriculture including traditional mixed ones, peasant-to-peasant seeds sharing, struggle to defend local produced food, be it marine and coasts against mega-energy, deep sea gas/oil drilling and industrial projects of either national or multinational enterprises. Despite somewhat shared concerns for food security, improving livelihoods livelihoods and sustainable agriculture between the farmers, the state and civil society groups, tensions are evident in power imbalances embedded in these, and affect relationships in the policy spheres.

This paper aims at substantiating the transformative potentials and significance of these movements in transcending the present productivist and growth-centric discourse.

**The Persistence of Gender Inequalities in Australia Workplaces: An Analysis of Two Generations**

Drawing on the two-decade Long Life Patterns longitudinal study that follows the lives of two generations of Australians (popularly known as Gen X and Gen Y), through their transitions from education into the workforce, this paper investigates the factors contributing to gender equality in workforce participation and in the labour market. Focusing on female participants in the Life Patterns study, we draw on qualitative and quantitative data to examine the micro and macro explanations that underpin this phenomenon. Firstly, we briefly analyse the impact of social and cultural values in the development of egalitarian approaches to the field of education that have contributed to the expansion of the participation of women in tertiary education and, subsequently, the workplace. Secondly, we focus on neoliberal sensibilities and values underpinned by the concept of choice to understand the egalitarian values that exist alongside persisting gender inequality. Finally, we argue that while institutional arrangements are needed to address persistent inequalities around women’s roles and participation at work, there is also a need to scrutinise social and cultural beliefs about work and gender to achieve greater equality.

**Discrimination Facing Immigrant Job Applicants in Poland - Results of a Field Experiment**

In the ‘global race for talent,’ many factors can affect the attractiveness of a particular country for migrants, including the likelihood of securing employment commensurate with their qualifications. Empirical data, however, show that immigrant status and/or ethnicity act as stratifying mechanisms, and can contribute to inequality in the chances of migrants’ securing adequate employment versus those of native workers. Whether this inequality is affected by factors related to the labor supply side (e.g., differences in skills) or by the labor demand side (e.g., discrimination by employers) often remains unclear. It is also an open question whether migrant status plays a similar role in homogenous nations where there are no established foreign-born ethnic or immigrant groups as it does in nations with a long history of immigration. In order to investigate whether and to what extent there is an ‘immigrant and ethnic hiring penalty’ in the primary labor market of one of these ‘new immigration’ countries – Poland – we conducted a natural experiment. Ostensibly on behalf of potential employees, we sent over 3,500 applications in response to job advertisements. The candidates were equivalent in their human capital, but differed in their ethnic and national backgrounds. The results show a statistically significant net discrimination against immigrants. However, contrary to our predictions, discrimination against white immigrants is stronger than that against ethnic immigrants. We also observed different levels of discrimination against immigrant men and women, depending on the type of the job and size of the company. Specifically, there is greater discrimination against immigrant females applying for typical female-type jobs, whereas the likelihood of discrimination is higher among immigrant males applying to large companies.

We discuss possible explanations of the observed effects, with particular focus on predictions from economic theories of statistical discrimination and from the status characteristics theory of double standards.

OLEKSIYENKO, OLENA* (Polish Academy of Sciences, olena.olekseyenko@gmail.com)
Multilingual Education of European Union – Backstage of Ideology

The image of state education, together with visions of its main functions, priorities and expected results are constantly being reshaped under the impact of various social, economic, political and cultural changes. Being a powerful tool of influence, education is often becoming the battlefield of different interests, the most powerful of which have their reflection in educational policies and practice. This paper concentrates on the case of Poland, which faced several important transformational processes during last decade, among most important of which is joining the European Union (2004). What impact on educational system and its actors did it have? This paper investigates how EU’s directives and recommendations influenced polish educational system, using the example of foreign language proficiency. In 1995 the European Commission published a White Paper on Education and Training, which states that each citizen of European Union must speak at least two foreign languages, which would enable mobility and competitiveness on the labor market. This is the starting point of the analysis of the paper, which will present the insight to EU recommendations concerning foreign languages and relate this data with the actual educational reforms in Poland in 2004-2013. Further on, the paper will concentrate on the analysis of the foreign language skills characteristics of Polish citizens in 2013, using the data gathered in Polish Panel Survey POLPAN and European Survey on Language Competences (2011). Interpreting the results, the paper confronts the dominating idea that Poland should ‘catch up’ in learning foreign languages (Poland National Summery ESLC, 2011) and opens the questions of whether foreign language proficiency is an unavoidable condition of modern world and to which extend the multilingual pressure creates the new marginalization, unequal relationships and uneven chances.

WYSS, ANNA* (University of Bern, anna.wyss@soz.unibe.ch)
Contested Control: Irregular Transit Migrants in Europe

This presentation is about young migrants’ journeys with low chances of receiving asylum or any other type of residence in Europe. These migrants exhibit a highly complex migration pattern. First, these migrants are frequently in durable “transit” across Europe, moving back and forth between different states. Second, transit migrants must exhibit a high degree of flexibility, as they have to respond to suddenly changing conditions, such as work opportunities, rejection of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty and psychological distress. The experience of these young adults shows a deep ambivalence between a sense of autonomy, on the one hand, and of profound hopelessness, on the other. This presentation explores the “fragmented journeys” of these migrants, by way of a multi-sited ethnographic approach and biographical interviews. It focuses on the lived experiences and the strategies of irregular migrants to find a way to reside in Europe in the context of an increasingly restrictive migration management.

XIA, BINGQING* (University of Leeds, csbx@leeds.ac.uk)
Worker Agency In Chinese Internet Companies

This paper examines the role that workers in Chinese internet companies play in relation to potential transformation of both online and offline China, by examining how workers in the organisations negotiate the gaze of the allegedly authoritarian state, and how they use the internet to create meaningful, expressive and resistive spaces. This paper outlines the complicated context of Chinese internet industries, in which Chinese state plays a significant role, and the difficulties that workers in internet companies face in their efforts to create alternatives online and in the society. The paper then discusses the various ways in which workers mobilise their agency, such as acts of negotiation and resistance, in order to respond to interference from the state. This paper also discusses how workers’ acts of negotiation and resistance in workplace, the internet companies in this research, contribute to creating a new online space which gives voice to diverse classes in contemporary Chinese society.

On the one hand, this paper contributes a valuable perspective to explore the shaping of the new and socio-cultural space of online China, by suggesting a focus on workers in internet companies. On the other hand, this paper also contributes to debates about workplace agency. I argue that the tradition of understanding worker agency as workplace resistance is limited. As an alternative, some forms of worker agency can be characterised as negotiation, which might open up possibilities for online China in different ways. Meanwhile, I also argue that the tradition of understanding worker agency in the context of workplace is limited; rather, it is necessary to discuss such worker agency in the socio-cultural context, such as the resistant space of offline China.

Who Becomes Registered Urban Resident during China's Massive Urbanization: Assessing the Roles of Human, Political and Social Capital

Background

Over the last half-century, registered urban residents persistently occupy an advantageous position over rural residents or rural-urban migrants in obtaining good jobs, health care, housing and even education for their children. Therefore, transforming one's household registration (hukou) status from rural to urban is a very effective path to upward social mobility. Prior research shows that education, Party membership and military service are the three most significant predictors of hukou conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion.

Question

We re-examine the roles of three types of predictors in hukou conversion: human, political and social capital.

Data and Analysis

We draw on the 2008 Chinese General Social Survey that provides crucial timing data for life events, including the timing of hukou conversion for both the respondents and their spouses, first marriage and joining in the Communist Party.

Empirical Findings

(1) Education is a far more powerful credential than expected, facilitating the use of not only educational channels, but also a wide range of state sponsored conversion channels, such as military, employment in state sector or cadre; (2) when reverse causation is thoroughly eliminated, we show that Party membership actually impedes, not facilitates, hukou conversion, and thus wholly contrary to the view of the prevailing literature. By controlling for the impact of unobserved heterogeneity, the results suggest that securing Party membership in one's home town appears to undermine the incentive for mobility to urban areas by enhancing the chance of one's local success; (3) marrying an urban husband is rural women's social capital for hukou conversion, almost completely offsetting the human capital advantages of rural men, resulting in no overall gender difference in becoming registered urban residents.

Field Fusion—the Experience of Engineering Education in New China's Early Stage

The academic and disciplization of higher engineering education leads to students' lower engineering ability, which becomes a national common engineering education problem. However, the problem roots in science ideology and social field highly differentiated and autonomy. This study takes Harbin Institute of Technology-Welding as an example, offering an early stage practice oriented engineering education experience. New China's higher education managed by government positively was responsible for the state-building needs. Under given ideology, engineering educational goal and behavior submits to the motto—education serves for politics and combines with production—called for by government, however, which fits the nature of the practice of engineering. Under the concept of objectivity of research and teaching for the needs of major national projects, China has created the interactive mode of "society-engineering-research-teaching". In a word, this unique phenomenon comes up under the condition that education highly mixed with political field, scientific field and economic field.

Income Inequality in Today's China: How High and Why So High?

In this paper, we first document a rapid increase in income inequality in China—recall our past, currently relying on newly available survey data collected by several Chinese university survey organizations. By now, China's income inequality not only not surpasses that of the US but also ranks among the highest in the world, especially in comparison to countries with comparable or higher standards of living. We argue that China's current high income inequality is mainly driven by structural factors that have been sustained by Chinese political system, the main structural determinants being the rural-urban divide and the regional variation in economic well-being. Analyzing 2005 and 2010 comparable survey data in China and US, we examine these structural determinants that may help explain China's high income inequality. Our results show that for both periods, once we factor in China's large structural inequality due to the rural-urban divide and the regional variation in economic wellbeing, China's remaining inequality closely resembles that of the U.S.
Future of upward socio-economic mobility and that enhance harmony between older people. Thus, policies that maintain or boost the perception (socio-economic status and quality of social connections) can impose more influence on their future socio-economic status. Results also suggested that enabling factors – people who have spouses accompanied, maintain good quality of relationship with family relatives and friends, have stronger need for recreational activities, – be the relatively more important one. For immigrant students from families with favourable conditions, the positive effect on migration intentions is more evident. We examine the conditions under which the initiative emerged, and the initiatives – albeit with certain specificities – only began to emerge recently (in the early 2000s). Research on citizen-led initiatives relating to energy are developing strongly in Anglo-Saxon countries and a growing body of research is examining the innovative potential of the projects and the capacity to use energy production as a social resource. This local initiative was innovative not only in terms of the scope of the implemented equipment, but also in terms of the social organisation behind the development of the projects and the capacity to use energy production as a social resource. Finally, the case study highlights the emergence of a new form of collective action and reflects on its possible diffusion in France.
Why so Weak?: The Social Conditions of Labor Insurgency in Malaysia

Many Asian countries have experienced rapid industrialization and developed manufacturing for the past several decades. Given that manufacturing was traditionally one of bases of labor activism in many countries, the growth of manufacturing can activate the labor movement. In fact, as a result, some newly industrialized countries including South Korea and China have also experienced labor upsurge in a large scale. However, in Malaysia, which has also been remarkably industrialized since the 1970s, there does not necessarily exist a strong labor movement.

This paper seeks to explore the reason why the labor movement in Malaysia is so weak even though manufacturing has clustered. Firstly, the brief history of Malaysian labor movement is reviewed and the labor movement in Malaysia used to be very active in the past. Secondly, taking into account various social factors such as class relations, organizations, institutions, networks, and the state, the cause of the weak labor movement in Malaysia is clarified.

Thirdly, examining the recent process of the enactment of minimum wage law in Malaysia, this paper clarifies that the labor movement did not necessarily affect the enforcement of minimum wage law but the government primarily took the initiative to decide its enactment. Lastly, this paper tries to examine the possibilities to support the labor movement through various measures for resource mobilization, and to analyze how the recent deterioration of economic inequality can affect workers and their movement in order to define the social conditions of labor insurgency in Malaysia.

Japanese Challenges Towards the Sustainable Society -- the Recovering Process from the Earthquake and Tsunami, and Establishing New Industrial Relations --

After the serious earthquakes and tsunami in 2011, Japanese society, mostly in Tohoku area, has been damaged horribly and the accidents of Fukushima nuclear power plant are still on-going. Japanese central government had established “Reconstruction Agency (http://www.reconstruction.go.jp/english/)” for reacting to them. The task is “leading and managing the reconstruction process”, and the role is “to accelerate structural reconstruction and revitalization in the affected areas.” by successfully implementing of government policies and managing co-ordination of reconstruction strategy and initiatives between various branches of government at a national level and with local municipalities”. However, the reconstruction process is not sufficient for the local communities.

Following this situation, at a municipality and a community level, we could consider two distinctive changes as hints for new Japanese working features. This presentation tries to examine whether these changes will shed their skin and become new industrial relations or conditions.

The first case would be an excellent collaboration between fishermen and NPOs in Iwate prefecture. Traditionally, the cleavage between fishermen and leisure divers was deep, because of their miscommunication. Currently, a NPO is proposing a cooperation aiming at recovering the sea both for fishery and divers. Through the collaborative works, fishermen have gradually presented their positive attitudes to divers and both of them have been able to understand each other. 

The second case would be a citizens’ participation toward local administrations. For the aim at reconstructing a community, most of all municipalities are requesting citizens’ participation to set their future plan. In this case, the working style of municipality’s staff had changed to deliberative and negotiating process. Under this pressure, the staffs of municipality office have been forced to think how they can work with citizens and how they can realize the policies through deliberations.

A n Attempt to Analyze the Narrative World of the Life-Stories of Doctors and Patients Involved in the HIV Tainted Blood Product Incident in Japan

InJapan, the so-called “Vocabulary of Motives” was used for worker’s suicide. Karo-jisatsu is a Japanese word that means working person kills himself after too much working or moral harassment in workplace. This word has been popular in our country since 1900’s, while “karo-shi” which means death from overwork has been known since 1970’s. Some lawyers and doctors who are engaged in labor problem or industrial hygiene have claimed that too much working and stress make worker exhausted, so he/she injures his/her mental health, in the worst case he/she kills him/herself. That is called “karо-jisatsu”.

But I point out there is a logical leap between overworking and committing suicide. I clarify how they have been connected in the discourse of “karо-jisatsu”. First, I analyze the co-occurrence of “karо-jisatsu” with “medicalization” (Conrad & Schnider, 1981) of suicide. My empirical analysis shows that suicide is regarded as one of the symptoms of depression today, while “harakiri”, “seppuku” and “kamikaze” have been traditionally regarded as heroic suicide in Japan. Medical terms constitute a major “vocabulary of motives” (Gersh & Mills, 1953) of worker’s suicide. So when bereaved families decide on the significance of their member’s suicide, they tend to use these types of vocabularies.

Decomposition of Inequality By an Extension of the Dinardo-Fortin-Lemieux Method: An Application to an Analysis of Gender Inequality in the Proportion of Managers in Japan

As a method for analyzing how inequality in one dimension is explained by inequalities in other dimensions, this paper introduces a method for the decomposition of a group difference in the outcome into several components, explained by differences in the covariate values among groups and a component unexplained by them. The method is an extension of the decomposition method introduced by DiNardo, Fortin and Lemieux (DFL) based on propensity-score weighting. An application of this method focuses on the amount by which gender inequality in the proportion of managers is explained by sex differences in human capital variables. The regression-based Blinder-Oaxaca method cannot be employed for a decomposition of the difference in proportion because the linear probability model cannot be specified as a regression model. Unlike the BO method, the DFL method can be applied to decompose a difference in proportion, but the latter does not permit a simple further decomposition of the explained component into elements explained by each covariate. The method introduced in this paper enables alternative sequential decompositions to assess the contribution of each variable to the explained component.

Suppose we denote by C, birth cohorts, by E, the educational attainment, and by D, the employment duration, and the causal order, C→E→D. The decomposition in gender inequality in the proportion of managers by the forward order of equating the conditional distributions of C, E, and D between sexes leads to a sequential application of the DFL method and identifies the effects of C, E, and D including each variable’s indirect effects through causally posterior variables. The decomposition in the backward order (of D, E, and C) assesses the unique contribution of each covariate’s effect on gender inequality requires an extension of the DFL method, however. This paper demonstrates the usefulness of this extension.

The Determinants of Gender Inequality in the Proportion of Managers in Japan

This paper analyzes linked data of employer and employee surveys from the International Comparatives Surveys on Work-Life Balance conducted by the Research Institute of Economy, Trade, and Industry to find the determinants of gender inequality in the proportion of managers among white-collar workers in Japan. The high job quit rate among women is a common reason given in employer surveys conducted by the Ministry of Health, Labor and Welfare for “having few or no male employees.” This cannot be the true cause underlying gender disparity. The proportion of managers among female college graduates is far below that among male high school graduates even when the female employees have worked the same number of years as the male employees at their current companies. The fundamental problem is the institutionalized managerial practices of Japanese firms through which sex is given greater weight than educational attainment in evaluation for managerial potential.

Using the decomposition method of DiNardo, Fortin and Lemieux, this article shows that the difference in human capital between men and women only explains 21% of the gender disparity in the proportion of managers. It also shows that in order to become a manager, long hours of work are required even more for women than for men and that the proportion of managers increases for men and decreases for women depending on the age of their last child in a way suggestive of the reinforcement of traditional gender roles by employers. The analysis also shows that women with 1000 or more regular employees and firms with centers dedicated to the promotion of work-life balance have smaller gender inequality, and that gender inequality in those firms decreases more rapidly than other firms as the quit rate of female employees decreases. Policy measures to eliminate gender inequality in attaining managerial positions are also discussed.

The Impact of the East Japan Great Earthquake on Community in a Small Village

This article explores the impact of the East Japan Great Earthquake on the sociocultural aspects of community based on 40 in-depth life history interviews and a survey administered to more than 1200 villagers in a small seaside village. The village, which is located in northern Japan and has a population of 4500, is characterized by close interpersonal ties, a traditional patriarchal system, and an ethic of mutual aid. During times of economic prosperity, many male villagers moved to the Tokyo metropolitan area to work as carpenters due to the lack of jobs in the village. When a 37-m-high tsunami hit this village, 37 people were killed and almost 30% of the houses were damaged. The tsunami caused not only material damage and life-threatening situations, but also changed the sociocultural character of the village. For instance, people were initially reluctant to accept support from outsiders, such as volunteers, and talking about the tsunami experience has become almost taboo among villagers. We explore the processes by which sociocultural changes occurred and discuss the goals of post-earthquake community reconstruction in the context of data from small village.

Lay Responses to Radiation Contamination of Food

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster of 3/11, the Japanese public has experienced an increasing diminishment of trust in the government’s ability to ensure the safety of the food supply. Consumers are not convinced that the “experts” (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find “individualistic approaches” to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared values of sympathy and empathy. This paper is going to argue that these phenomena – in which individuals seek and create “societal approaches” to deal with the contradictions created by the emergence of this new set of risks and the perceived failure of experts to fulfill their roles and ensure safety – is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.

Effects of the Natural Disaster Recovery Process on Multicultural Community in Japan

This presentation discusses the impact of natural disasters on foreign nationals in Japan and the process of recovery that they undergo. The data were collected through interviews. The Great Hanshin-Awaji earthquake of 1995 had a major impact on both newcomers as well as early immigrants in our society. Most of the affected people were family units who shared the same heritage, and aids were accordingly designed to support these families. In the area affected by the Great East Japan Earthquake, foreign brides of Asian origin in Japanese families posed a major problem. Although they belonged to a different culture, they expected to be treated like their Japanese counterparts as they believed they played an important role in passing down traditional Japanese family culture just as a Japanese family member would. However, circumstances have changed their lives after the disaster; they have started using their mother tongue, and find many ways of giving expression to their culture. The experience of the disaster and the recovery process has created a bond among these foreign brides – many of them have taken part in cultural training, enrolled in Japanese language programs, such as caregivers, and some of them have been employed as professionals in various organizations. Such empowerment programs have enhanced their self-esteem, which has changed their family lives and the local community. Participating in various social activities is crucial to being equal members in a society.

International Comparison of Protest Norms Between Japan, South Korea and Germany

In recent years, many protests draw many people's attention all over the world. However, protests in Japan are not yet as active as in other countries. Why don't Japanese people participate in protest? They have complaints about society and politics, and they also have opportunities to participate. In the previous survey in Japan, we found people who shy away from politics consider that social movements and arbitrary claims which bring about disruption in social order, although majority of people consider that social movements are legitimate political rights. In addition, the fear of social order disruption has a bad influence on permission to participate in protests.

Based on these findings, the important factors that affect Japanese non-participation are norms to participate in protests. Although people think a protest is legitimate, they also think a disruptive activity should not be done. Then, protest participation is affected by which norms people consider important.

However, are these arguments applicable to other countries? Do people in other countries have similar views toward social movement? Therefore, in this study, we try to grasp the norms to participate in protest by the international comparison survey: Japan, South Korea, and Germany.

Using this survey data, we examine similarities and dissimilarities of protest norms between three countries. Furthermore, we explore questions as follows. First, what factors affect such norm emergences in each country: political regime, civil society structure, political culture, and so on. Second, do protest norms affect real protest participations?

It is indicated that these countries have different characteristics about civil society: active advocacy in South Korea and calm advocacy in Japan. By comparing these two countries, we can expect to grasp norm emergences clearly. Furthermore, we can grasp a feature of the Asian protest norms by comparing norms in these Asian countries to norms in Germany.

Impact of Social Change and Restructuring of Urban Underclass Areas on Homeless People: The Case of Yokohama, Japan

This study aims to explain the impact of social change and restructuring of urban underclass areas on homeless people by examining a case in Yokohama, Japan.
The labor demand for day-laborers decreased since the early 1990s. As a result, the number of homeless in major Japanese cities increased. After the establishment of a new law to help homeless people become financially independent in 2002, many people who were homeless or considered unable to work because of age or disability received welfare and took up residence in urban underclass areas.

Kotobuki, Yokohama's urban underclass area, currently houses the highest rate of welfare recipients—approximately 80%—of underclass areas in Japan. The number of welfare recipients in the area has especially increased this decade. As a result, the area has become the center of the socially vulnerable.

In light of this social change, the local government, the social welfare council, and nursing care business offices developed a community welfare system in 2011. This system mostly focuses on officially recognized residents, not on those who are homeless. In 2006, Yokohama City reduced its special temporary welfare support for homeless residents, and then cut it entirely in 2012. This caused greater difficulties for the homeless in the neighborhood, creating a highly concentrated district of welfare recipients.

So far, urban underclass areas are important for the homeless with regard to providing access to social resources—for example through forging relations with supportive groups and getting free meals. As urban underclass areas have gradually changed into places of concentrated welfare recipients, those who do not receive welfare support and are homeless now face even greater pressure.

Displacement and Politics of "Transitory Space" for Resilience: A Case of the Great East Japan Earthquake

Forced displacement induced by disaster makes various types of "transitory spaces" in the process of reconstruction. The aim of this presentation is to discuss about functions and politics of "transitory spaces" for disaster assistance in the age of population-shrinking/aging society based on a case study of the Great East Japan Earthquake and Tsunami in Iwate Sanriku coast. The first point is to rethink about "temporary housing" system established in the 20th century. In the history of disaster in Japan conventional relief act defines "sufferers" by the standard whether they lost their own "houses" or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and communalism will more and more decrease having "house" do not necessarily mean that residents do not have "social vulnerability". Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi-scalar resources as a matter of voluntary and community on condition of sufferers according to the case. The second point. This presentation will focus on a temporary "base point" of assistance which was constructed by individual affiliate labor union in Tono area, one of the inland cities in Iwate prefecture. On the background of urban precarity and de-localization of the national city this "base point" emerged as a nodal space for re-organizing collective infrastructure of life. Considering such politics of "transitory spaces" will offer a valuable hint to invent future system of social resilience.

A Half-Open Door to Africa: Chinese and Japanese Migrants in the Twentieth Century South Africa

Over recent years, amid the increased presence of China and residents of Chinese descent in African countries, growing attention has been paid to experiences of Asian migrants in the interdisciplinary fields of studies in South Africa. What has been revealed by exploring their histories is that, despite their small numbers, the existence of Chinese and Japanese migrants had a considerable impact on ‘white’ South African racial policies. By focusing on those who migrated from East Asia at the beginning of the twentieth century, this paper seeks to examine how they confronted the technologies of exclusion that South Africa introduced in order to maintain the colour bar of the country. While several countries and colonies had restricted Asian migration associated with the Yellow Peril panic and a threat to the ‘white’ labour at that time, the British government welcomed Chinese labourers just after the Second South African War to compensate for the absence of labour in gold mines. Lake and Raynolds (2008) emphasizes that introduction of the Chinese strengthened ‘white’ labour unions and encouraged legislations which restricted skilled work to white men. As for the Japanese, they were listed as prohibited migrants under the 1913 Immigrant Regulation Act, and were later removed from the list because the Union government needed to allow Japanese business persons into the country in order to expand the wool exportation. This can be considered as a precedent for the ‘eminent visitors’ status under apartheid, or the privileged status granted to non-white inhabitants staying in the country for business or diplomatic purposes. The paper aims to contribute to wider discussions on South African history of immigration policies, some of which have not been adequately addressed due to Atlantic-centrism of academic research.

RC32-563.7

YAMAMOTO, MEYU* (Kyoto University, meyu.yamamoto@gmail.com)

In the end of and just after the Second World War, mass rape by Soviet troops against Japanese women took place in Manchuria and Korean Peninsula. Many venereal diseases were uncovered upon arrival of groups of repatriates to Japan, and hundreds of abortions were carried out inside or near the harbors between 1946 and 1947 as part of an official support. Parliamentary papers and related documents indicate that identification of unborn babies to Russian perpetrators encouraged the Japanese medical doctors and relying on the technology the abortion. Illustrating the experiences of Japanese women in the post-war period, this paper aims to examine how the ‘child of the Other’ or children born / unborn as a result of wartime sexual violence have been excluded from their peers, community, and the states. Previous studies on children born from wartime sexual violence have revealed that they frequently suffer discrimination from mother’s communities. One of the examples of this is that they are often attributed pejorative names. Regarding the case of rape committed by German soldiers against French women during the First World War, the children were called ‘child of the barbarian’. In other context such as East Timor, the children born to Timorese women were called ‘children of the enemy’, in Rwanda, ‘children of bad memories’ (Seto 2013). Close observation of the case studies above and the case of Japanese victims indicates that the children are unwelcomed due to identification not with their mothers but with their ‘enemy’ fathers. This paper suggests that investigation on children should be addressed from feminist and humanitarian perspectives as well.

Party Membership during Partisan Dealignment and Realignment Phases in Post-War Japan

This paper investigates whether an abrupt and drastic realignment trend (i.e. a revitalisation of political support) in Japan since 2000 has changed patterns of political membership, even though Japan had a quite similar political dealignment context to other advanced industrial democracies (i.e. a constant and substantial increase of independent electorates) to advanced industrial democracies in the West until 2000.

Political scientists have pointed out that party membership has constantly declined in contemporary Western democracies. This substantial downward trend has been caused by the widespread political detachment from conventional party politics throughout the post-war period. In Japan, scholars have rarely examined the association between dealignment and political membership, although a revitalisation of political support) in Japan since 2000 has changed patterns of political membership. This paper examines the association between dealignment and political membership, although a long-term dealignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the dealignment trend inverted into realignment since 2000.

The data analyses using Japanese data in the World Values Survey indicated that party membership witnessed an increase of inactive members from 1981 to 1995 and the percentage of these had remained throughout 1995 to 2005, while the ratio of active members remained stable from 1981 to 2005. In addition, logistic regression models suggested that political interest was a significant predictor of party membership throughout the post-war period. In Japan, scholars have rarely examined the association between dealignment and political membership, although a long-term dealignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the dealignment trend inverted into realignment since 2000.

3.11 Crisis and Okinawa's Demilitarization Movements

Okinawa has a long history of resistance against the U.S. imperialism and Japan's power over its islands and have been engaging in various forms of resistance to protect their ancestral lands, dignity and human rights. This paper looks at the demilitarization movement in Okinawa and examines the impact of Japan's post 3.11 crisis have brought to the movements and how Okinawans have responded to it. One of the common frameworks used to describe a connection between Okinawa and 3.11 survivors is that they both are "sacred" for the larger national agenda. Some of the anti-nuclear protesters and Japanese settlers in Okinawa suggest that it is a coalition opportunity between people of Okinawa and the survivors. However, some Okinawan activists criticize such framework because it overlooks complicated power struggles between Okinawa and the national government. Another common misconception is that Okinawa is a safer place to be. Various types of Japanese organizations have planned get-away programs for the survivors of 3.11 in Okinawa. Okinawa is marketed to be a "safer place" since it is the farthest location from the "affected region" in Japan. These programs upset some activists for its false and disrespectful claims.

Social Perceptions and Environmental Communication on the 'Benefits' and 'Risks' of Tidal Flat Restorations

This paper looks at how the 'risks' and 'benefits' of tidal flat restoration projects are communicated, perceived and negotiated by different stakeholders in case studies from Japan, the UK, Netherlands and Malaysia.

Various tidal flat restoration projects have been conducted in Japan and elsewhere in recent years in an attempt to revitalise fish stocks or preparing sea level rise. Coastal wetland restoration projects, such as coastal realignments or re-flooding farmland, still represent a new concept. Due to the need for long-term social support and investment in such schemes, it will become increasingly important to take into account the various perceptions that exist in the community from now on. Yet, at the moment it is often not clear 1) what kinds of environmental and social benefits tidal restoration projects can offer; 2) how these benefits can be measured, valued and communicated by project contractors and other stakeholders in the community; 2) in what way various stakeholders perceive the 'benefits' and 'risks' of their local restoration projects; 3) what the commonalities and differences among these discourses are, within and across different case studies, and 4) how the findings could make a contribution to future decision making and support for coastal wetland restorations in Japan and beyond.

This paper explores the above four points to examine the improvement conditions of participatory sustainability initiatives. This paper is based on data collected during a three-year government-funded research project (2011-2013) from stakeholder interviews and through document analysis of the environmental information provided to citizens and decision makers via various media.

Medicating the Male Obesity through Metabolic Syndrome – Some Social Aspects of the Japanese National Chronic Disease Prevention Program

The Japanese mandatory National Chronic Disease Prevention Program started in 2000. Although some experts in public health and medicine have questioned the efficacy and feasibility of the program, it cannot be denied that it spread the term “metabolic syndrome” among the public and contributed much to the medicalization of obesity in Japan.

We interviewed scientists, experts, doctors and public health nurses about the intention of the program and the difficulties in its implementation. Currently we found the following points: 1) In spite of the fact that the program designates the whole population aged 40 to 74 as its target, the real target of the program is middle-aged men, especially working for small companies or self-employed. In that sense the medicalization of obesity is gender-biased. 2) The program used the newly developed diagnostic concept, “metabolic syndrome,” as its key concept to prevent cardiovascular diseases and type 2 diabetes. The concept played the central role in medicalizing obesity in Japan, where men’s obesity has always been the focus of health professionals. 3) The program faced with serious difficulties and resistance in its implementation. Some of the difficulties are viewed as originating from motivation and organizational standings of one's health and its care. 4) There is also a marked contrast in the understanding of the program between public health nurses and general practitioners. Whether the reason for this lies in the professional interests of the two or in the gender biased concept of health for the two is not yet clear.

We like to place all these issues in the context of medicalization of men’s health in the post-industrial society where several traditional masculinity-related behaviors are viewed as problems and medicalized.

The Uneven Structure of Home Care Service Provision Between for-Profit and Non-Profit Organizations in a Quasi-Market System

The Japanese Long Term Care Insurance (LTCI) was implemented in 2000, aiming the promotion of user’s choice and the competition among different kinds of providers (i.e., such as for-profit, non-profit). It was expected that a quasi-market system would facilitate the effective competition among providers and improve the quality of care, though the price of each service was regulated as “legal price” by the government. However, it is not clear that such competitions can be realized, because different providers have different motivations in providing care services. Especially, non-profit organizations (NPOs) have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers’ motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs.

The findings are as follows: First, among the services of the LTCI, NPOs tend to undertake lower-priced domestic work, while for-profit providers take higher-priced physical care. Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCI rubric, whereas the income from the additional services is smaller than the services under the LTCI. Third, the altruistic motivation makes NPOs’ workers content with long working hours of additional services. NPOs have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCI rubric, even though the income from the additional services is smaller than the services under the LTCI. Third, the altruistic motivation makes NPOs’ workers content with long working hours of additional services.

NPOs have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers’ motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs.

The findings are as follows: First, among the services of the LTCI, NPOs tend to undertake lower-priced domestic work, while for-profit providers take higher-priced physical care. Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCI rubric, even though the income from the additional services is smaller than the services under the LTCI. Third, the altruistic motivation makes NPOs’ workers content with long working hours of additional services.

NPOs have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers’ motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs.

Double Responsibilities of Care: Emerging New Social Risks of Women Providing Both Elderly Care and Childcare in Japan

This paper is based on a both international and comparative research project exploring how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in East Asia. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their busy elderly relatives and young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions as facing with acute demographic and social changes. Through the comparative analysis of data from questionnaire surveys and semi-structured interviews, this paper investigate the new structure of social risk involved in the double responsibilities of care, work and generational relations with a specific focus on Japan. We will discuss both theoretical and practical implications of our research on double responsibilities of care, to wider social theory, care policy and practice.

Gender Difference in Older Parents' Coresidence with Their Adult Children: A Comparison Between Japan and Taiwan

The aim of this paper is to explore how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in selected East Asian societies - Hong Kong, Korea, Japan and Taiwan -. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their frail elderly relatives as well as young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions. More over double responsibility of care may possibly be more prevalent in East Asia than other European counterparts as facing with acute demographic changes and different family values embedded in the societies. Throughout the comparative analysis of data generated from mixed research methods in each society, this paper will investigate how these sandwich generations experience a double responsibility of care, by analysing resources available to them from local policy configurations and from their personal and kin networks. The research will highlight increasing new risks emerging in East Asian societies in relation to women's citizenship, care, work and generational relations.

Performing Cool Japan and Uncool Hybridity: Analysing 'luogo' (Lou Language)

‘Metrolinguism’ refers to young people’s use of new hybrid language or foreign languages/dialects, in popular culture or everyday interactions (Otsuji and Pennycook 2010). They are creative moves which challenge and loosen cultural, historical, and political boundaries, in-sync with the late-modern and globalised social reality that we apparently live in today.

As of Japan, Maher (2009) provocatively stated: ‘Cultural essentialism and ethnic orthodoxy are out. In Japan, metrotrench is in. Cool rules’. True, young people in Japan today are far more 'open' towards foreign cultures and languages: dimsum and Thai curry follow for dinner, followed by drinks at a British pub with the NBA games on TV screen. But are they really feeling ever so border-free in terms of language? And do many discursively engage in such border-lessenings behaviours? If not, why not?

Luogo (‘Lou language’) is a performative and comic idiolect of a TV personality, Lou Oshiba. Luogo is a deliberate mixture of English words into Japanese phonology and syntax. In his communication styles and stunts, he also reenacts the stereotypical culture shock between ‘Western’ and traditional Japanese non-verbal communication styles.

Using discourse analysis, I discuss how the intricate mixing of the two linguistic/cultural codes is interpreted as uncool, illegitimate, unprofessional, undesirable, idiotic, fancy, foolish, and fantastic, rather than cool, creative, liberating, desirable, ubiquitous, skillful, and down-to-earth.
Japanese Jewelry Market

Though jewelry market size in Japan in 1991 was three trillion yen (around thirty billion USD at current rate), its size is less than one trillion yen (around less than ten billion USD at current rate) in 2013. Jewelry market size in Japan grew up with bubble economy in Japan. After collapse of bubble economy in 1991, the market size continues to shrink up to the present date. Japan had not had western style of jewelry market because Japanese wore “kimono” and western style of jewelry does not fit with kimono. Japanese does not wear western style of jewelry. After restoration of Imperial power in 1868, western style of clothes was getting popular in Japan and western style of jewelries started to be manufactured and sold in Japan. Along with western style of clothes population, western style of jewelry market continued growth. It means western style of jewelry market in Japan has only one hundred and fifty years’ history. In addition to that, generally the value of jewelry is difficult to judge for consumers. This is true not only for Japanese but also western people. In the process of new market of western style of jewelry growing, I will investigate how the knowledge of western style of jewelry was implemented and diffused or Not implemented and diffused to Japanese. I also will analyze how western style of jewelry market was formed in Japan during these one hundred and several decades and how the relationship among seller, purchaser and institution was transformed and affected each other from view of institution of jewelry and its contribution. As researches on jewelry from sociology points of view is very rare in Japan, I would like to make contribution by stating historical background of Japanese jewelry market and relationship of players and institutions.

Reconstructing Biopower: From an Analysis of Television Programs about Conducting Surrogacy

How does performance affect the human body in terms of biopower? This research analyzes a process where discourse about reproductive technology leads to its implementation to change actual bodies. From an examination of television programs in Japan, I show how culture impacts the materialistic sphere, which is mediated by performance regarding “America,” an icon of modernization for the Japanese. The Japanese national public broad casting organization, NHK (Nippon Hoso Kyokai), has aired programs about reproductive technology since the emergence of In Vitro Fertilization. At the beginning of the 1990’s, the “family” as a realization of scientific progressivism, but regarded the ethical aspects as unrealistic. In the discourse, the image of Europe was that of an agent of intelligence; on the other hand, the image of the U.S. is that of savageness.

However, after a Japanese celebrity couple conducted surrogacy in the U.S., “America” changed to a modern family. Moreover, they constructed a solemn image of the children taken from the U.S. by utilizing imaginary which evolves memories of the imperial corporations. These images raised a positive public opinion toward surrogacy; which led the government to rush to legalize it. However, after foreign mass media revealed that a Japanese male had conducted surrogacy in India with a purchased egg (known as Manji’s case), NHK stopped discussing surrogacy and the Japanese government postponed the legalization of surrogacy. The Manji’s case showed the Japanese had already gone beyond the savage and modernized “America.” Therefore the Japanese lost their frame of reference.

The above examination indicates the decision to apply reproductive technology depends on culture.

YANG, ARUM* (Yonsei University, diddpql@gmail.com)
Cultural Consumption, Class Mismatch, and Gender As a Determinant Factor

Studies of cultural consumption have a distinctive academic tradition after Bourdieu's book “Distinction”(1984) where each class has their own cultural tastes and high class people are considered as high culture, giving them the authority of class distinction. A major question currently subject to debate is whether we can identify these hierarchy matches between class and culture. This paper examines this question, collecting and analyzing the results of cross-national empirical research. Research has shown there is considerable evidence contradicting the results of Bourdieu, even in France where Bourdieu conducted his own research (Lamont). This is due to the fact that existing class-based approaches put too much emphasis on the class, rather than focusing on diverse social groups and the meaning behind a person's preferences for certain culture.

A Study on Female Industrial Structure and Gender Segregation of China

[ABSTRACT] In the first decade of the 21st century, China achieved stable and rapid economic development and, made new progress in industrial restructuring: the modern service industry and emerging strategic industries have provided more employment opportunities for laborers including women. To analyze the female industrial structure and gender segregation in industrial structure, data retrieved from the Third Wave Survey on The Social Status of Women in China in 2010. It was found that if viewed from the perspective of gender structures in different industries, females are mostly concentrated in sectors with lower levels
of income and social security, where gender segregation and gender parity coexist. Compared with 10 years ago, the proportion of employed women in farming, forestry, animal husbandry, fishery and water conservation shows a substantial decline, while the increased ratio in wholesales and retail, and in public administration and social organizations are the two highest. The proportion of women in industries with higher degrees of monopoly is low, and the declining tendency reflects the intensified gender discrimination and gender differentiation in monopoly industries; the proportion of females in the modern service industry as well as the degree of gender parity in the industry have been increasing, making it possible for more and more women to obtain higher incomes.

From Green Energy Governance to Green Economy: A Case Study of a County in Southern Taiwan, 2009-2013

After a lot of negotiations, conducted by Ping-Tung Government in Southern Taiwan, among solar PV companies, Tai-power Company, Central Government and local farmers, 25MW solar farms were installed on the damaged lands of orchards and fish farms in Lin-Bian and Jia-Dong, two towns in central Ping-Tung, in which the government carried on post-disaster reconstruction in the wake of Typhoon Morakot on 8th August 2009. Meanwhile, under these highly ground-mounted solar panels, there were organic vegetable farming and ecological fish farming set up. Inspired by the example of agricultural/solar farms in Lin-Bian and Jia-Dong, companies of various green energies came to Ping-Tung in search of different technical experiments. Since April 2013, a hydrogen fuel cell company has allied itself with local B&Bs, gas stations and convenience stores, offering 80 hydrogen-powered scooters to promote a "low-carbon tour." Now, this company is preparing to get fuel cell scooters into mass production. Meanwhile, small-scale wind turbines are planned to be installed in central Ping-Tung, together with the existent solar farms and hydrogen fuel cell systems, to conduct a 'smart grid' experiment, which has been listed in the 'Smarter Cities Challenge, 2013' by IBM Company. Also, in northern Ping-Tung, there is another 'smart grid' plan to connect solar farms, wind farms, bio-gas powers from pig farms, and micro hydropower systems.

The author of this paper has investigated and analyzed the performance of green energy in Ping-Tung by means of participative-observations and in-depth interviews. More specifically, adopting the concepts of green energy governance, social innovation, green economy and STS, this paper describes and explains the socio-technical mechanisms and meanings of green energy in Ping-Tung, with a focus on a variety of human and non-human actors such as the green-energy team in Ping-Tung Government, green-energy companies, local entrepreneurs, NGOs, and local communities.

Gambling Behavior As a Masculinity and Violence Using Japanese General Social Survey 2000 and 2001

As gambling population is expanding, many studies have started to clarify the relationship between gambling behavior and masculinity. It is claimed that gambling behavior is closely related to violence, since gambling is thought to be a type of masculine behavior. However, few empirical studies have examined the relationships among gambling behavior, masculine attitudes and violence. In Japan, gambling industry such as casino is now planned to introduce by government. People might be anxious about the possible violent incidents. Examining whether gambling causes violence through masculine orientation is a very important research topic. The JGSS-2000/2001 integrated data are very suitable for us to explore such a research question, since the data include the following variables:

Firstly, gender, age, marital status, occupation and educational background are used as demographical variables. Secondly, a degree of reaction (4points-scale) to physical punishment by parent and teachers is used as a variable for masculinity. This variable particularly explains that as part of masculine culture, physical punishment influences children and students' gambling away and justifies their misdeeds. Lastly a series of frequencies (4points-scale) on different gambles (pachinko, horse-racing, lottery, soccer-toto, numbers or mini-lotto) are chosen as variables to the quantitative analysis.

Consequently, this empirical analysis could examine whether the relationship between gambling and masculine behavior as a form of force exist or not. If not, Japanese gambling would not generate friction in Japanese social life.

The Origins Of Conservative Democracy In South Korea: Nation-Building, Democratic Transition, and Middle-Class Politics

After more than twenty years since the democratic transition in 1987, South Korea witnessed an ironic political scene, in which a daughter of the former dictator Park Chung Hee, Park Geun Hye, was elected as the new president in the winter of 2012. This paper argues that the middle class largely shaped the post-democratization trajectory in Korea by resisting any significant social reforms and preventing furthering social equality and redistribution. While the middle class is believed to be a strong supporter of representative/electoral democracy to have led a democratic transition in Korea, the middle class has also been the one that resisted significant socioeconomic reforms implemented by the center-left governments including the Kim Dae Jung and Roh Mu Hyun administrations. This paper examines the origin of conservative democracy in Korea in which the middle class played a key role as a status-quo political actor. To do so, this paper traces the historical process of nation-building and economic development, through which the middle class was emerged by the support of the authoritarian state and became an exclusionary social group that advanced its own class interest against the less privileged. In addition, the current geopolitical situations that have confronted with North Korea for more than half a century also contribute to preventing any left-leaning policies from taking place and in turn to strengthening right-wing power. By looking at political dynamics of historical context, class alliances, and political discourse, this paper will broaden the understanding of the relationship between the middle class and democracy in transitional periods.

Contradiction Between Leisure Pursuits and Structures of Inequality

Applying the method of stratification research could be a more rational way of looking at matters, especially inspecting Leisure Pursuits from the perspective of structures of inequality. Leisure is not a simple individual behavior, and cannot be independent from social environment and the influence of time. Leisure pursuits is neither a matter in view of pure physical level nor a question of pure economics, but a resort of spirit and physical of human being which has close relationship with social political and economic structures. Essentially, structures of inequality or limited resources decide the inequality of leisure consumption. The contradiction between leisure pursuits and structures of inequality is objective existence. Idealists intend to stress the universality of leisure pursuits or the individual right of leisure, criticize and neglect the positive impacting of the existing structures of inequality on leisure pursuits. However, the existing of the inequality of leisure consumption is not only facilitating the reasonable distribution and portfolios of resources to a large extent but also playing an important role in maintaining structures of inequality as well as the vigorous vitality of the social organism actually.

It will be beneficial for us, if we treat positively the contradiction between leisure pursuits and structure of inequality, to treat the matter of leisure consumption correctly and help us deal with many confusion and difficulties in real life, particularly those related to a series of questions of imbalances, such as the imbalances between leisure and individual rights, leisure and social economics, leisure and wealth distribution as well as leisure and spiritual resort etc.

Athletic Sport or Health Promotion: Development Dilemma Confronted in Globalization of Chinese Traditional Martial Arts

This study is to clarify the relationship between the two different purposes of Chinese Traditional Martial Arts as a sport: athletic sport and health promotion, and propose the author's own view on the development direction of Chinese Traditional Martial Arts in the context of sport globalization.

This paper reviewed 75 related published articles and academic papers and summarized the views. The author held ten semi-conducted interviews with Chinese Traditional Martial Arts coaches, scholars, students and other Chinese Traditional Martial Arts enthusiasts.

Some hold that in the process of globalization we should focus on training elite players and develop athletic sport system for traditional martial arts, which will help traditional martial arts widely recognized by western cultures. This kind of thoughts results in an reality that Chinese Traditional Martial Arts practitioners prefers to practice athletic Martial Arts. In university, Chinese Traditional Martial Arts Majors choose to practice athletic Martial Arts and attend contest of all kinds,
because this is the only way they can get authorized eligibility as first or second class national sportsmanship.

Others argue that since its functions of attacking and defending have been in degradation as modern weapons developed, Chinese traditional martial arts still can attract many people of different countries, ages, and backgrounds, not because of its athletic features, but because it contribute immensely to one's physical fitness and self-moral-cultivation, and the cultivation of both physical and moral health is the power source of its sustainable development in the context of sport globalization.

The author think that as to the development of Chinese traditional martial arts, a regular authorized eligibility certification system as the athletic sport has will standardize its technical requirements, and focus the physical and moral health promotion will keep its diversified national features in its globalization in the world.

Asian Migration to the United States and within Asia in Comparative Perspective

More than one million Asians have migrated to America before 1965. Since 1965, Asia has been a major source of migration to the USA and more than 10 million Asians have arrived on U.S. soil. Most recently, Asia has surpassed Latin America as the largest source of immigration to the USA. Up to the middle 21st century, Asians mainly migrated to other Asian countries, and in contemporary time Asians have begun to migrate within Asian countries. With the trends in Asian migration to the USA and within Asia? How do sending countries of Asian migration to the USA and within Asia resemble and differ? Do the same or different types of Asians migrate to the USA and within Asia? What are the similarities and differences in causes of migration to the USA and within Asia? Are there similarities and differences in Asian immigrant transnationalism between the USA and Asian countries? How are Asian migrants to the USA and within Asia similar and different in patterns of adaptation to host societies? How do the impacts on host societies of Asian migration to the USA and in Asia resemble and differ? What is likely to happen to Asian migration to the USA and within Asia in the near future? Using a variety of data from the USA and international organizations and focusing on the post-1965 period, this paper seeks to answer these questions through comparison and to address the implications of the findings.

Mechanisms of Trust Formation Under Different Conditions of Political Identity

Individual political behavior is a manifestation of social behavior, and individual voting behavior indicated his/her political choices and political identity. After democratization in Taiwan, presidential elections show bipartisan polarization and reinforce general distrust of social phenomena. Therefore, this study intends to explore how people format their trust behavior when they interact with others of the same or different political identity groups. In stage 1, the computer randomly assigns trustors and trustees and does not show political identity of 2012 presidential candidates (Ma Ying-jeou and Tsai Ing-wen). In stage 2, the computer displays political identity logo by random arrangement. In stage 3, the subjects can choose their preferred objects of the same or different political identity logo by themselves. There are three mechanisms of trust behavior formation under different identity condition. (1) Win-win mechanism: Win-win strategy is that both trustor and trustee attempts to maximize their providence and return through exchanging with the targets of the same or different political identity groups from the beginning round. (2) Identity mechanism: Under the condition of political identity choice by subjects, identity effect becomes strongly significant at the beginning of the first round on the third stage of the experiment, especially for that of Ma-Ma group and Tsai-Tsai group. (3) Mutuality mechanism: Mutuality effect is very significant in all three stages of trust experiment, especially in the second and third rounds of each stage. When people exchange with the same political identity groups, it will produce the phenomenon of polarization. When the trustee return high proportion profits to the trustor in the first round, the trustor will feedback more in the second round. However, if the trustee return low proportion profits to the trustor, the trustor will feedback less and less, even lower than exchanging with different political identity groups.

Saemaul Undong and Beyond: Upgrading the Opportunities and Capabilities of Women in 1970s’ South Korea and Kenya Today

Capabilities and empowerment are no longer new concepts: they are well understood and widely seen as necessities for individual as well as community development. Practices in today's developing world, however, are not always successful. Nor have the successful practices of the past been much elaborated so as to provide practical lessons for today. This study attempts to fill this gap with the case of Saemaul Undong, a New Village Movement in South Korea in the 1970s, in combination with discussions of its applicability to Kenya, one of today’s developing countries.

Saemaul Undong has recently become an inspiring development model for many developing countries. It is known for its strong and committed leadership both at central and local levels, as well as the high rate of local participation. The rise of women as equally capable agents of change as men has been noted as one of its distinctive features. Indeed, Saemaul Undong is understood as a remarkable turning point for women in rural areas, which made them visible and active in formal activities beyond their own family and household. This newly explored social form has been known to have effectively served rural and national development during the high growth periods of Korea.

The objectives and the structure of this paper are as follows. First, it explains the mechanism and processes of Saemaul Undong, which made women's involvement, or empowerment, possible within a society that had a strong Confucian character at that time. Second, it elaborates the strengths and weaknesses of the Movement in terms of women's capabilities and empowerment. Finally, the paper discusses the applicability of the findings to today's developing world. Our selected case country is Kenya, but discussing the applicability of the case is expected to provide practical lessons the developing world in general.

A Tale of Two Suburbs: Earthquake Recovery and Civil Society in Christchurch, New Zealand

This study followed two similarly affected, but socio-economically disparate suburbs as residents recovered from the devastating 6.3 magnitude earthquake that struck Christchurch, New Zealand, on February 22, 2011. More specifically, it focuses on the role of local churches, community-based organisations (CBOs) and non-governmental organizations (NGOs), here referred to broadly as civil society, in meeting the immediate needs of local residents and assisting with the longer-term recovery of each neighbourhood. Analysis of sixteen qualitative interviews with residents as well as key informants from local civil society in each suburb found that despite considerable socioeconomic differences, civil society in both suburbs has been vital in addressing the needs of locals in the short and long terms following the earthquake. Institutions were able to utilise local knowledge of residents and damage in the area to a) provide a swifter local response than government or civil defence and then help direct the relief these agencies provided locally; b) set up central points for distribution of supplies and information where locals would naturally gather; c) take action on what were perceived to be unmet needs; and d) act as a way of bridging locals to a variety of valuable resources. However, the findings also support literature which indicates that other factors are also important in understanding neighbourhood recovery and the role of civil society, including: local leadership, a shared, place-based identity, the type and form of civil society, social capital, and neighbourhood- and household-level indicators of relative vulnerability and inequality. The intertwining of these various factors has influenced how these neighbourhoods have coped with and taken steps in recovering from this disaster. It is suggested that a model that takes a multi-factorial approach in understanding community vulnerability and capacity within the Christchurch context be designed to more effectively explore further research in this area.

Culture As “Agora”: Agonological Features of Weberian Sociology

Culture as Agora: Agonological Features of Weberian Sociology

Max Weber treated the Greek concept of “agora” with great interest, in the final parts of his treatise of the “City.” However, if we focus on his interest on “agones” in general, the social fields of competition and social selection, we should rather say that this interest can be considered as his premier Leitmotiv, which permeates his comparative study of cultures.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper explores the advantages and the limits of this methodology on the cultural comparison of ogones (that will be coined “agonology”). Starting from Weber’s concrete historical depiction of Asian competitions (especially, in his “Hinduism and Buddhism”), this paper moves in to the theoretical concerns. It argues that, it is much fruitful to point out the agonological features of Weberian methodology than just to stick the “cultural determinism”, “idealism”, “methodological individualism”, or “conflict theory”. Finally, briefly contrasting this Weberian agonological features with modern sociological theories of competition, such as Bourdieu’s theory of symbolic violence, etc., we will like to outline the future possibilities of this comparative agonological perspective.

International Political Support For Endangered Languages (The Uralic Languages of Russia as an example)

International political support for endangered languages (the Uralic languages of Russia as an example)[1]

According to the UNESCO Atlas of the World’s Languages in danger there are 131 such languages in Russia: 20 vulnerable ones, 49 definitely endangered, 29 severely endangered, 22 critically endangered and 15 extinct languages. Uralic languages are among them. Along with traditional measures the World Congress of Finno-Ugric peoples (the institutional form of the Finno-Ugrian language community) are forms to attract attention to the situation of these languages.

The beginnings of construction of the Finno-Ugrian community were laid in the eighteenth century. In 1989, a Russian sociologist Gabriel Porhan, professor of rhetoric who popularized the idea of Finno-Ugrian brotherhood in Finland and urged Finnish scholars to investigate the kindred Finno-Ugrian languages. Spheres of cooperation expanded in the 19th century. This trend culminated in the Finno-Ugrian cultural congresses organized by Finnish, Estonian, and Hungarian scholars, teachers, and students. The first was held in Helsinki in 1921.

The ideas of rebuilding began in the early 1990s. The Finno-Ugrian world was conceived as a broad cultural identity based on linguistic affinity, and attempt to integrate various Finno-Ugrian peoples in the social and cultural integrity. In 1992 the first World Congress of Finno-Ugrian Peoples was held in Syktyvkar where it was tasked to “achieve the status of non-governmental organization United Nations”, further in 1996 (Budapest), in 2000 (Helsinki), in 2004 (Tallinn) in 2008 (Khanty-Mansiysk) and in 2012 (Sofok).

Over the past two decades, World Congresses did not grow into a non-governmental organization or analogue of the International Organization of la Franquophonie. However, they have become forums where the problem of endangered languages is actualized. World Congresses are the guidelines for the implementation of language policies at the regional level.

Feasibility and Possible Fields for Application of Clinical Sociology in Iran

According to some Iranian sociologists, the absence of sociology, and sociologists themselves, in relation with the society in one of the most important negative aspects that have had a major impact on weakness of sociology in Iran.

There are so many social problems in Iran for which we need social solutions. But the absence of sociology, and sociologists themselves, in relation with the society in one of the most important negative aspects that have had a major impact on weakness of sociology in Iran.

Clinical sociology can play an important role in filling this gap as a mediator between sociology and society. This study, first of all, assesses the practicability, and possible obstacles, of utilizing this particular type of sociology and then determines and introduces the fields in which it can be applied and intervene more effectively to improve the quality of lives in Iranian society.

By making use of documentary method, any attempt, if exist, for applying clinical sociology is considered and by interviewing some sociologists and social activists, different fields, and also major obstacles, for application of clinical sociology in Iran are proposed.

YARMOHAMMADI, SAEID* (Independent Scholar, saeid_y@yahoo.com)

Social Justice, A Key Concept in the Social Movements of the Last Hundred Years in Iran

Social Justice is a very important and widely used concept in the political and social history of many nations. As well as many countries, it has had a significant role at least in mobilizing people for social movements and in protesting against the existing political system in Iran.

In analyzing the causes of many social and political processes and also the Constitutional and Islamic Revolutions in Iran, the realization of social justice is cited as one of the major and prominent indicators. It can be found in different kinds of resources and documents such as poems, speeches, political debates, rhetoric of social groups and so forth. Therefore a form of emphasis on the concept of social justice has existed in every single social movement in Iran based on its specific arrangements and aspects which were shaped socially and politically.

This study aims to narrate the history of social justice in the social movements of the last hundred years in Iran to provide a better understanding of it during this very important period of time and to theorize this concept and its changes over this timeframe.

By making use of documentary method and interviewing some sociologists and social activists, a classification of usages of this concept and their differences, in the history of social movements in Iran, is presented.

Modern State of a Home Education in Russia

Over the last 20 years, an education system in Russia has undergone significant changes. The changes led to the organization of new forms of training, for example, a home education, which at the same time has its own long enough history in Russian traditions.

Home education takes on special significance in a modern life, giving new opportunities of training and reflecting challenges in both Russian educational system and the society in whole.

For example such as:

- Dissatisfaction with: a quality of education at different levels; an established system of relations inside of pre- and comprehensive institutions;
- Difficulty with realization of constitutional right of choice of training form, because of imperfection of legislative base;
- Challenges of combination of family culture and religious principles with those of formal education and so on.

However, for all obvious advantages, a home education is not means of solving all the problems as gives rise to new questions. In Russia these are: efficacy and completeness of children and adolescents (who received a family education) socialization and adaptation in adulthood; compliance of the level of education of upperclassmen, graduated home education, to the requirements of the state educational standard; the lack of the system of diagnostic, methodical and consulting help assistance.

They begin to raise like questions at the legislative level today. Since September 1, 2013, a new Federal law «On education» entered into force, where they pay more attention to this form of training. Legislators reflected growing tendency to an increase in the number of families, who resort to the help of this form of education.

Under the circs the development of a home education in Russia and an increase in the number of families, practiced this method, become not only a private affair but also a social phenomenon, needed social analyze and comprehension.

The Occupational Stratification Process for the Rural Poor in Mexico

The influence of socioeconomic origins on occupational outcomes is an expression of inequality of opportunity in society. The reproduction of intergenerational inequalities has been widely studied within the field of social mobility and stratification. Education and labor market insertion have been identified as key ele-
ments in the stratification process. Mexico is a highly stratified and rigid society in which children born in poor households have a high probability of experimenting intergenerational transmission of poverty. Using path analysis models, this paper provides empirical evidence on some of the factors that shape occupational allocation of the rural youth that belong to poor households in Mexico. This contributes to the understanding of the process of intergenerational reproduction of inequality and poverty.

Recreational Hunting in Africa: “Meat” or “Poison” for Local Community

Recreational hunting is one of the oldest known tourism activities using wildlife. Leader-Williams (2009) defined recreational hunting as the hunting where the hunter or hunters pursue their quarry for recreation or pleasure. Same as in colonial period, hunters, mainly from Europe and U.S.A., range over hill and dale in developing country to obtain trophy of big game and their pleasure.

Some researchers have suggested that controlled recreational hunting can benefit the development of local communities, thereby promoting the protection of wildlife resources as well as both ecological and economic sustainability. However, important debates remain regarding the social impacts of conservation and tourism on local communities.

This presentation aimed to introduce a social impact of recreational hunting on local community in Cameroon. Approximately two years of fieldwork, mainly based on in-depth interviews and observations, showed that recreational hunting in North Province, Cameroon generated tax revenues of approximately 0.9 million US dollars in 2009/2010, that is, 200 times as large as than safari in National parks did in the same year. A part of economical benefits shared with local communities as profit sharing and employment opportunities. However, the local inhabitants were affected by regulations of their rights to use natural resources. Moreover, some villages experienced forced migration because of the beginning of hunting tourism in this area.

Recreational hunting brings to local community not only positive impacts such as profit sharing and employment opportunities, but also negative one as control of the livelihood of local people and forced migration. Even if recreational hunting can play an important role in community conservation and wildlife conservation with its great economic benefit, the independence of local people and their connection with wildlife should be considered to re-conceptualize “Sustainability”.

Ethnic Food As Tourism Resources

This paper aims to examine ethnic food as one of the tourism resources, based on field research conducted in ethnic town in Yokohama city. Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multicultural site for development of the region.

This paper reports on research undergone across three markets in the centre of Japan. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multicultural site for development of the region. Based on the field research conducted in ethnic town in Yokohama city. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. An Analysis of Recent Internationalization of Education in Japan: A Case Study of Nepalese Students

In this paper, we discuss the experiences of Japanese language school students from Nepal, as a case study, to understand the emerging trends and issues surrounding the internationalization of education system in Japan. In 2008, the Japanese government proposed the goal to recruit 300,000 international students by 2020. Due to the effort of the Japanese government and school systems, the number of international students has been increasing; however, the patterns of international students have been changing simultaneously. For example, Chinese and Korean students, who used to be the most popular group of international students, are now less likely to choose Japan as their destination country to pursue their education. Instead, the number of students from Nepal, Vietnam and Myanmar has been increasing in the last five years.

To explain the new trends, we discuss the push-pull factors for the changes. Also, the international students need to acquire Japanese language skills to be enrolled in the Japanese university system, the Japanese language school often serves as the first school for many international students. For this reason, we focus on the role of Japanese language schools to discuss students’ perspectives on life in Japan. Based on the case study of Nepalese students, we found that the most of them are “self-funding” students. Although they hope to pursue higher education and better career prospects, providing financial support to their families in Nepal has become the top priority. Nepalese students have to workdouble or even triple jobs to manage the heavy debt from study abroad, high living cost in Japan and support families in Nepal; consequently, many students face challenges to pursue their dreams. In addition, some of them expressed cultural differences and isolation from the society. Based on the analysis, we propose social implications of the emerging trend of international students.

A Systemic Approach to the Construction of Urban Places

This paper reports on research undertaken across three markets in the centre of London, England. The research adopts an ethnographic approach that focuses on the ongoing process construction. By using in-depth/iterative interviews the work hijacked both the changing narrative that people constructs ‘in the moment’ while also highlighting the role of researcher in place construction. This projects works on the premise that it is beneficial to understand places as complicated adaptive systems that are constituted by an array of heterogeneous parts. Places have physical locations and material forms but they are also in part, made up of the very people who experience the place. Understanding such complexity leads the researcher to focus on the ‘how’ of place, rather than the ‘what’, ‘where’, or ‘who’. Rather than attempting to understand place as unique, stable, concepts, this work builds on systems-theoretical approaches towards understanding of places that facilitates both change and permanency so important to architecture and community building theories.
The author will examine the following points. (1) East Asia in Civilizational Analysis from Durkheim, Mauss to S.N. Eisenstadt. (2) Asianism in the Japanese Civilization. (3) Is there any difference between (1) and (2). (3) New Civilization and value change. Finally the author will examine the present situation of East Asianism in East Asia.

Study Choice, Gender and Ethnicity

This study aims to explore ethnic differences in gender specific study choice patterns. The central research question is: to what extent do ethnic minorities present different gender-specific choice patterns in mathematics, science and technology (MST) and what are the reasons for such differences?

The study is based on the premise that pupils with non-western ethnic backgrounds differ in their evaluation of MST-studies from pupils with native ethnic backgrounds as a result of the difference in cultural values. To explore this premise, we first examined the effects of gender, ethnicity and grade averages on school profile choices of 265 pupils in higher secondary education in two schools in the Netherlands. This was followed by semi-structured interviews with 45 individual pupils about their choices.

In our sample 59% of male and 42% of female pupils have chosen a MST-profile, of which 39% of both male and female pupils have chosen this profile in combination with a Health-profile. Moreover, the combined grade average for mathematics, physics and chemistry is shown to have the strongest impact on a positive choice for a MST-profile. Gender also has a significant effect, even after controlling for the combined grade average. Ethnicity however does not.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils and in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.

Class Differences in Women's Work-Care Reconciliation in Contemporary Leeds

This paper focuses on women's working lives in Leeds, England, where some of the UK's most affluent and most deprived localities are found. The authors compare the work-care reconciliation practices and attitudes of lower and higher educated women, and consider how differences and similarities in these are shaped by local welfare state arrangements and conditions in the local labour market.

The analysis, conducted within the EU-funded FLOWS project, is based on data from a survey of local women and focus group interviews with women who combine paid work with raising young children or looking after old, disabled or sick family members.

While working-class women in the UK have 'always worked,' the second part of the 20th century brought middle-class women's mass entry into the labour force. In some other countries, this process was actively encouraged by state provision of publicly funded care services and other policies to support women's attachment to the labour force while raising young children and/or looking after older family members. In the UK's liberal welfare state, childcare and caring for older, sick or disabled adults have primarily been conceptualised as individual/familial responsibilities and care services are currently provided primarily by market actors, rather than directly by the state. The authors explore the relative importance of the national/local state, cultural preferences and market conditions on women's working lives, and consider how these shape social inequalities between women in different socio-economic circumstances.

Gender Disparities in How Older Workers Reconcile Work and Care in England

Carers in England and across the UK have been a focus of policy debate on work and care for several decades. In the 2000s, modest new employment rights (including the right to request flexible working) were introduced to support them to reconcile work and care, and municipalities received new funding from central government to help develop local services to address carers’ needs. In national population censuses in 2001 and 2011, the Office for National Statistics collected data about caring responsibilities and these permit examination of the relationship between the (unpaid) care individuals give to their older, sick or disabled family members, friends or neighbours and paid work, age, gender and health. Based on analysis of these data, and supported by insights from two surveys of carers (the 2009/10 Survey of Carers in Households and the Carers, Employment and Services survey undertaken in 2006-7 at the University of Leeds), this contribution examines data on the intensity of caring responsibilities (using hours of weekly care provided as a measure of intensity) and participation in the labour market for men and women aged 45-64. The paper highlights gender differences in patterns of care and paid work, with a particular focus on the extent to which men and women in this age group appear to use part-time work and early retirement as ways of combining work and caring responsibilities.

In interpreting these data, the authors also draw on qualitative and policy evaluation studies undertaken by the CIRCLE research group at the University of Leeds. These provide insights into older workers’ motivations, preferences and behaviour in relation to work and care, and indicate the complex cultural, moral and institutional contexts which shape patterns of caregiving in later life.

Forming Counter-Hegemonic Identity through Narration: Personal Stories, Historical Narrative, and the Transformation of National Identity in Taiwan

Over the past four decades, Taiwan has undergone a dramatic political transition from authoritarian rule to democracy. Accompanying this transition is a major change of the sense of national identification when hegemonic Chinese nationalism has increasingly given way to local Taiwanese consciousness. A series of survey data show that the percentage of people who identify themselves as being Taiwanese has risen from 17% in 1992 to 57.5% in 2013, while the percentage of people who identify themselves as being Chinese drops from 25.5% to 3.6% in this period. Yet few researches have been made on how common people formed a counter-hegemonic national identity on the personal level during the period.

To investigate this transformative dynamics, we draw on the theoretical perspective of “narrative identity” to analyze a large number of “letters to the editor” describing personal experiences of identity transformation which were published in two major Taiwanese newspapers during the period from 1994 to 2004, when the change accelerated sharply. We find that a special historical narrative which consisted of a distinctive historical outlook and story line and displayed unique values and emotions served as a common framework of reference for those who began to discredit Chinese nationalism to reassess their individual life history and make sense of their connections with the destiny of Taiwan. It was critical to the formation of the counter-hegemonic Taiwanese identity. We argue that counter-hegemonic identity is typically effectively created and sustained when an elite-derived historical narrative had popular resonance in the sense that it demonstrates a remarkable ability to explain the marginalized and suppressed life experience of ordinary people. Forming counter-hegemonic identity involved as a mechanism through which linking individual to society, the present to the past, the micro to the macro, and agency to structure.

Indigenous Mobility: Experiences and Narratives of Mobility and Immobility of Yami Indigenous Youth on Lanyu (Orchid Island), Taiwan

Travel, mobility and diaspora are facts of contemporary societies across the globe and their implications are profoundly important. This paper attempts to articulate the significant connections between travel, mobility and diaspora in contemporary indigenous societies. Engaging with multi-sited fieldwork between Taiwan and Orchid Island, with in-depth interviews with Yami youth, this paper explores the complexities of the forced ‘migration’ phenomena of indigenous young people and their experiences and narratives of travel and mobility. It addresses issues that arise when they are ‘on the move’ and feel a loss due to their emotional attachment to a place whether interpreted as home or homeland. Focusing on aspects of everyday life, this study illustrates the tensions and dynamics of travel, mobility and diaspora. It aims to open a dialogue among tourism studies, indigenous studies and mobility studies in which issues of diaspora and people being ‘on the move’ are investigated.
L’économie solidaire au Brésil regroupe des travailleurs (informels, chômeurs, personnes des périphéries urbaines, travailleurs ruraux) ainsi que des organismes communautaires, des mouvements de foi et des syndicats de la CUT (la Centrale unique des travailleurs, principale confédération syndicale au Brésil). Elle a impulsé des formes de développement local reposant sur la notion de circuits courts de production et de souveraineté alimentaire. Ces formes prennent appui sur l’organisation en coopératives autogérées d’agriculteurs familiaux et sur la mobilisation des Communautés traditionnelles (Quilombos, etc.) qui réinvestissent leur savoir faire en matière d’exploitation écologique des ressources naturelles. Elles associent les Catadores, personnes qui ramassent et trient les matériaux recyclables. L’économie solidaire consiste aussi dans des « chaînes de valeur » qui regroupent, par exemple, des coopératives assurant la production du coton écologique jusqu’à la fabrication des vêtements, et leur commercialisation selon une politique de prix accessibles aux familles à faible revenus.

Ces initiatives collectives montrent que la redistribution de richesses s’opère en aménageant lui-même leur production, dans les choix de filière d’activité en relation avec les communautés locales. Ces initiatives donnent aussi un contenu concret à ce que peut être la citoyenneté au travail, qui consiste à remettre en cause les divisions traditionnelles entre concepteur et exécutant / intellectuel et manuel, et aussi entre travail marchand et travail de reproduction sociale. Ces réalisations questionnent les divisions de sexes/mêles et de représentations collectives. L’étude de cas menée au Brésil auprès de syndicats et du Forum brésilien de recyclage indique que les initiatives se constituent comme des modèles alternatifs quand elles font appel à des formes participatives et délibératives de démocratie et non au processus habituel d’agrégation des intérêts par des syndicats, qui ont tendance à reproduire les pratiques dominantes.

*Reproduction Ou Transformation Des Organisations Du Travail Dans Les Coopératives De L’Économie Solidaire Au Brésil*

The trend of neoliberalization that is experienced in all spheres of life also has its impact on the academia in the forms of managerialization and entrepreneurization of universities, increasing workloads, increasing pressures on academics to generate funds, transformation of knowledge into a product that can be exchanged in the market, alienation of academic researchers from the knowledge they are producing, and an increasing degree of specialization and division of academic research labor in the developed and developing countries alike. Especially for the second group of countries, international organizations like the World Bank indeed have a major role in the development and spread of neoliberalization in academia. Limited resources for research lead the academics to look for external funding opportunities and international organizations like the World Bank emerge as important suppliers of funds for doing research in these circumstances. Doing research and producing knowledge for the World Bank create certain outcomes both in the short and long terms for these researchers themselves and also for academia in general. This paper demonstrates how the academics’ experience of producing knowledge for the World Bank fosters the neoliberalization of the university in Turkey. Depending on interviews with academics, the paper looks at the impacts of doing research for the World Bank. It concludes that although these academics are forced to act as entrepreneurial subjects, they haven’t necessarily internalized this neoliberal mentality.
Struggling to Climb the Organizational Ladder in Turkey

Depending on twenty in-depth interviews with men and women who graduated from top universities of Turkey and who have been working in corporate jobs for more than ten years, this paper reflects on the impact of gender on prestigious white-collar jobs. It aims to answer the questions of to what extent gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues related to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper will illustrate that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women’s responsibility. Women who have struggled to reach senior management positions give up, as they get exhausted because of the double shift of paid work and child care. Although these women have above average family incomes and can afford to hire domestic help, because of the traditional ideology that emphasizes the crucial role of mothers for socialization of kids, they give up their careers and shift to jobs that have regular work hours but no future prospects. Educated in the same way with their male colleagues to be successful and to have achievements, these women end up being unsatisfied with not only their jobs but also their lives.

Research on Public Attitude Towards Social Impact Assessment of Chang E Lunar Probe Program

For a long time, China evaluates engineering’s or project’s impacts mainly by assessing its economic contribution, always lack of social impacts. This study chooses Chinese Chang E Lunar Probe Program and conducts a survey by using questionnaires. About public’s attitude towards Chang E’s social impacts. The results suggest that public’s attitude towards high-tech and non-direct-interest engineering’s social impact consists of military impact factor, political and economic impact factor, psycho-social impact factor and educational impact factor. Furthermore, public’s attitude towards Chang E’s social impact is related to age, employment, gender, and education. Women who have a higher education is more likely to be satisfied with the mission of Chang E’s social impact. Women with a higher education is more likely to be satisfied with Chang E’s social impact. Women with a higher education degree look down upon it, it is not influenced by income at the same time.

The Business of Housing God: A Case of Singapore Megachurches

Religion and business are often seen as inhabiting separate social spheres but in this paper I explore how they are combined and reconciled in the activities of megachurches. Through two case studies of Singapore’s largest megachurches, I examine how they combine religion and business, focusing on how these churches strategize to pursue an agenda of marketing managerialism to manage growth and multiply financial rewards through church building projects. This explicit engagement in business practices not only raise the question of profits in ‘non-profit’ organisations but importantly, foreground the reconciliation of religion and business practices in the same discursive space. I demonstrate this reconciliation through the churches’ built environment-building projects which exemplify the decontextualisation of space that characterises not only the religious, investment and consumption practices of these megachurches, but also of the language and practice of business. This not only extends understanding of neo-liberal effects but demonstrates the forms and dynamics of marketing managerialism in a specific ‘non-business’ context. In doing so, they reflect the values of economic neo-liberalism which has been a driving force in global economies such as Singapore. Therefore this research is interested in questioning how neo-liberalism privileges business and the market to become the prime factor in shaping religious practices in contemporary churches such as the megachurch in the ‘intelligent island’ state of Singapore. Singapore is “famous for being run like a giant corporation”[1] and is an affluent country characterised as “neoliberal-developmental”[2]. This is reflected in the religious organisations operating within it, especially megachurches that have pressing space disputes in containing its burgeoning congregation in a highly urbanised and compact city.

Urban Transformation in a Transitional Economy: Is “Gentrification” an Analytically Useful Concept for Vietnam?

Despite the rapid transformation in the urban landscape of Vietnam, a simple and uncritical application of the “gentrification” concept cut out of the specific spatial and temporal context of the country is problematic. Not only does the phenomenon progress in a highly compressed temporal scale compared to similar processes in cities in the “global north”, it is also embedded within a paradigmatic shift of the entire socio-economic system. This paper attempts to explore the process of urban redevelopment in Vietnam and to critically examine whether this concept, with its origin from the “global north”, is capable of offering a conceptually robust lens through which the phenomena can be consistently analysed. This paper attempts to contribute to such discussion and explore the process of urban redevelopment in Vietnam and offer a critical examination on the applicability of the concept in cities of the global south, particularly within the context of a city in a transitional economy. To enhance coherence of the empirical data being compared, the city of Hanoi is used as the case study city. As the capital and a “political” city of Vietnam, Hanoi is undoubtedly commendable to the typical socio-political issues that are at work in the country. With case examples of redevelopment projects in Hanoi against the context of the specificity of the socio-economic and political transformation of the country, this paper will offer a conceptually robust lens through which the phenomena of gentrification can be critically analysed in the specific context of Vietnam.

Crowding in: Why and How Indian Civil Society Organizations Began Mobilizing on Climate Change

In this paper, we argue that a process of crowding in of civil society organizations (CSOs) into the field of climate change advocacy has occurred in India since around 2007. Both the number and the diversity of CSOs involved in this field of advocacy has greatly increased. Drawing on the Dynamics of Contention approach, We identify five mechanisms that explain why and how this process has unfolded: (1) The expansion of discursive opportunities in the global public sphere, (2) the event effect of Copenhagen COP 15 in 2009, (3) the network effects of expanding global civil society networks of climate change advocacy and the resulting flows of discourses and funding, (4) adoption and innovation of new action repertoires, and (5) the global political pressure effect leading to development of national climate policies and corresponding opportunities for CSOs to influence their formulation and implementation.

Nuclear Energy and Safety: International and National Isomorphic Pressures

Nuclear safety has often been an accident driven topic as the Three Mile Island, Chernobyl and Fukushima disasters show. In addition to accidents, severe economic and environmental challenges related to the construction of new nuclear power units and management of ageing plants and new technology, not to mention decommissioning of existing older units keep nuclear energy and safety among the relevant topics. Furthermore, the recent upgrading of safety requirements at the international level and harmonization attempts of nuclear safety regulation by the Western European Nuclear Regulators’ Association, raise questions about the cultural features of nuclear safety regulation.

The aim of the paper is to explore how nuclear safety (that is an important component of human and environmental health) has been dealt with in the international and national level in Finland and the UK after Fukushima and what kinds of factors constrain learning. The data consists of the International Atomic Energy Agency’s Safety Standards, Western European Nuclear Regulators’ Association’s reports and the OECD Nuclear Energy Agency’s reports, the national final reports of the Stress tests of Finland and the UK, national nuclear energy act and safety guides. The method of analysis is content analysis.

The conceptual frame draws on the isomorphic pressures, which refer to the phenomenon by which organisations become structurally or strategically homogeneous. Isomorphic pressures, stemming from national institutional patterns or professionalisation, may play a role in the nuclear sector, since they affect the what, how and who of safety-related action. Isomorphism is important to the extent that it may strengthen and spread effective understandings of; and approaches to, safety, but it may also engender inability to detect specific needs and requirements or it may lead to contrasting understandings and approaches among bodies involved in nuclear safety that are exposed to different isomorphic pressures.

How Social Class and Education Affect Youth Transition in Japan?: Youth Cohort Study of Japan

The purpose of this report is to clarify how social class and education influence youth transitions in Japan from Youth Cohort Study of Japan (YCSJ). In the late 90’s, the life course after secondary school graduation has significantly changed. The close connection between upper secondary schools and employers to smoothly transit the graduates into work in Japan had been once highly praised, but the system became less functional due to several factors (Mary C. Brinton, 2011, Lost in Transition). Many young people cannot get permanent and secure jobs, some of them become ‘freeters’ who only get temporal and insecure jobs to make a living. Many empirical studies have taken place to find who are the most disadvantaged among Japanese youth, trying to find what causes the dysfunctional transition between school and labor market in the 2000’s. However, most of these studies focused on the youth transition during only a certain period of time, and they are not sufficient to clarify the complexity of youth transition. YCSJ has conducted a panel survey of a group of youth for five years from their age of 20, so that YCSJ is able to capture the dynamic young people’s transition in consideration of various factors. Above all, we aim at unraveling how youth transition differentiated with social class and educational opportunities.

A New Attempt At Organizing Irregular Workers In Korea : Examining The Activities Of The Korean Women’s Trade Union

It is difficult to organize irregular workers, especially female irregular workers in Korea, as many of them are employed by small enterprises, change their jobs frequently and enter and leave the labor market according to economic fluctua-
tions. Therefore the Korean Women’s Trade Union (KWU) has tried to build a new model of a trade union and a new idea of a labor movement which are different from the enterprise unions for male regular workers in order to organize female irregular workers who have been entirely excluded from the protection of labor laws, the welfare system and the trade union. While the enterprise unions have concentrated on protecting employment and improving working conditions of the union members, each woman who joins the KWU has been an independent women’s trade union which any working woman can join by herself without distinction of industry, occupation or region, or whether she is unemployed or not beyond the enterprise, and performed various activities. In this presentation, we consider the activities of the KWU as well as its implications.
The Rise of ‘Reflexive University Governance’ in the Risk Societies: Japan, the United Kingdom and the United States

Socio-economic upheavals after the Lehman Shock, and in European countries, the introduction of austerity measures have financially overshadowed the university sectors cross-nationally. The purpose of the paper is to identify how uncertainty and insecurity in the post-2008 period have reshaped university governance relating to risk management. The study examines university governance at the system and institutional levels in Japan, the United Kingdom and the United States.

The paper is both theoretical and empirical driven. The study takes the theoretical approach by utilising two conceptions of ‘peer reflexivity’ and ‘risk’ in the context of university governance. The former refers to the ‘cycle of peer feedback, self-monitoring, self-analysis and action. Higher education institutions are treated as learning organizations’ (Clark 1998, Dill 1999). The latter explores Becks (1992) and Giddens’ (1990, 1999) risk society. The study then proposes, a new concept, ‘peer reflexive governance’, which is compared with Foucault’s neo-liberal ‘governmentality’ (1988, 1991) to capture the characteristics of ‘peer reflexive governance’.

Regarding empirical analysis, the study takes documentation for data collection in order to identify the extent to which the institutions in three country settings are autonomous (not in direct state control modes), making the peer reflexive mechanisms feasible. The collected document includes acts, government White Papers, circulars and other official documents.

The paper argues that ‘peer reflexive governance’ has become significant in the insecure and uncertain environment in the post-credit crunch period because the universities have become increasingly more self-aware, reflective, and reflexive than ever before. The universities have strengthened their self-monitoring mechanisms in order to respond to uncertainty and risks, shaping them into learning organisations. The practices of ‘peer reflexive governance’, however, differ between Japan, the United Kingdom and the United States.

The study is significant because few literatures so far connect the conception of ‘risks’ to university governance.

Change in Juvenile Delinquency in Japan

In Japan we witness four peaks of juvenile delinquency after the World War II. Immediately after the war the Japanese police system was democratized. However, the police did not have resources enough to carry out the activities for prevention of juvenile delinquency. With the recovery of economic conditions the police established the system to prevent juvenile delinquency. Since then the police have carried out the net-widening of their activities for the prevention of juvenile delinquency. I will explain how the net-widening has been carried out.

Japanese Language Education for Japan-Philippines Economic Partnership Agreement

This paper asks how Japanese language education for Filipino nurse candidates under JPEA can be located in the Philippine socio-cultural settings, in order to provide academic grounding toward more meaningful policy making for both governments.

Foreign nurses’ entry to Japan presents a unique pattern of migration from the point of view of language learning. It pertains to adults who learn a foreign language from the beginning, yet are required to reach a high level of proficiency. Historically speaking, adult migrants often meant either unskilled or skilled workers who are not required high level of language skills; or skilled workers who already know the language of the host country. In any cases, the movement often took place from a former colony to a former sovereignty. As for Japan and the Philippines, although Japan occupied the Philippines for a few years during World War II, linguistically speaking, there is no strong history of language dependency among the young generation of Filipinos today. Also, due to the eligibility constraints, it is unlikely possible to find an EPA candidate who has received higher education in Japan.

The paper illustrates the socio-cultural situation in language practice in the Philippines at large and points to the both governments’ weakness in systematic understanding and addressing it — a) multi-lingual-ness with ambivalent relation with English as both colonial and global language; b) prominence of orality over literacy; c) weaker establishment of Japanese language education than other Southeast Asian countries in quantity and quality; and d) class issue in gaps in motivation and needs of Japanese language learning.

University Governance and the Academic Profession in “Rising” East Asia

The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salim (2008) suggests that “world-class” universities and higher education systems require favorable governance with autonomy and academic freedom. Terms such as “entrepreneurial universities” (Clark, 1998) and “academic capitalism” (Slaughter and Leslie, 1999), however, imply that traditional “collegium” governance is at risk. Most East Asian higher education systems have been established through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these “Post-Confucian States” (Marginson, 2011) are now achieving “world-class” status without experiencing the strong “collegium” governance pattern of the past. Japan could be an exception, having developed strong academic autonomy and freedom led by the faculties since World War II. However, now, top Japanese universities are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?
tions for international discussion.

In Japan as a country facing a very serious aging problem, and outline the implications of these patterns in Japan and other East Asian countries.

Between 1970 and 2011, the share of agriculture in GDP dropped sharply from 25.4% to 2.3%. The collapse of agriculture has been accelerated by the global agri-food system and the government’s neo-liberal agricultural policies. As a result, food insecurity is one of the most important social issues in South Korea, today. Food insecurity can be understood not only as low grain self-sufficiency, 22.6% in South Korea; but also, as food safety problems. The Korean government, however, has prioritized overseas land exploitation and has recently strengthened neoliberal agricultural reforms such as the FTA. Under these circumstances, the food sovereignty movement, which was originally advocated by La Via Campesina, has been discussed among the South Korean civic and peasant movement sectors. In order to establish food sovereignty, the peasant movement sector is urging the South Korean government to secure stable production, while the civic movement is advocating a rights to food project. Considering the fact that consistent food insecurity has threatened not just the farmers’ livelihoods, but also the consumers’ dining tables, the concept and practical application of food sovereignty may bring many groups together. Building a consensus between civic groups and farmers’ movements seems to be more feasible in Korea, under these conditions. The aim of this paper is to analyze the various actors, and their dynamic interactions involved in food sovereignty, in South Korea. We investigate the mechanism of the politics of food insecurity and food sovereignty by examining two major cases in South Korea involving the full-tariff on rice, and the import ban on fisheries products from Japan, due to radioactive contamination.

The relationship between demographic change and investment in education is one of the topics that has attracted considerable attention from both policymakers and experts. Extended education increases the social and private costs of raising children, and has been considered a major factor in the decline of birth rates. At the same time, the growing knowledge societies are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Freedom in Asia (AFA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium governance? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?

The New ICTs and Gender Inequality in Korea

This presentation aims to explore the implications for gender inequality of the increased access to and usage of mobile ICTs, based on the data collected in Korea. Korea used to be no exception to the conventional digital divide in which women, compared to men, are disadvantaged in the use of ICTs. In recent years, however, there has been a remarkable increase in Korean women's access to internet and, specifically, mobile internet technology. Women have surpassed men in the number and proportion of 'smart' mobile phone users. Among young generations, in particular, girls, compared to boys, tend to have access to the mobile phone earlier and use it more frequently and longer in duration of time. In 2011, Korean children are reported to own their first mobile phone at the average age of 10.4 years (fifth grade at elementary school), and 80% of the third graders at elementary school owned it.

What would be consequences in terms of gender inequality of this earlier and increased exposure to mobile internet technology represented by the 'smart' phone? On the one hand, the user friendliness of the new technology has the potential of narrowing or eliminating the gender gap in its professional and financially lucrative utilization, and its mobility in time and space potentially brings the liberating effect for women both in employment and domestic labor. On the other hand, however, there are concerns that the easy availability and access to the mobile technology would lead to continued gender inequality, in which women remained mere consumers, and increased vulnerability to the new problems brought by the new technology, such as digital/mobile addiction. This presentation investigates the consequences of the new ICTs in gender inequality and their implications to cope with the gender inequality at present and in the future.

Cultivating Ethnic Solidarity in the Transnational Enclave: Co-Ethnic Relations Between South Korean “Newcomers” and Korean-Japanese/Korean-Chinese “Oldcomers” in the Korean Enclaves in Osaka and Beijing

Recently, scholars have noted that migrants exhibit distinct patterns of adaptation characterized by frequent movement to their countries of origin. This influx of transnational migration has in turn, altered the structure of historically established minority communities. My research investigates how changes in the ethnic community are brought on by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and survey data conducted in the Korean enclaves in Osaka and Osaka.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean-Chinese “Oldcomers”. As a result of the growing number of South Korean newcomers since the 1990s, the Korean enclaves in Beijing and Osaka today have become increasingly connected—both on the institutional and grassroots level—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has led to the growth of formidable barriers in constructing a collective ethnic consciousness within the Korean community. Damaged co-ethnic relations between the two waves of Korean migrants have significantly hindered their ability to mobilize the rich transnational resources in the enclave for upward mobility. This paper brings to light the structural barriers Korean migrants encounter in cultivating ethnic solidarity in the transnational enclave. In doing so, I offer suggestions for social welfare policies that may aid transnational migrants in more effectively cooperating together to mobilize the resources of the enclave to better their life chances.

Effects of Child Involvement in Housework on Future Gender Role Expectations

Housework allocation has been studied extensively, particularly in its relation to women’s employment. Despite the richness and abundance of literature on this subject, most research has focused on housework allocation between couples, and children’s participation in housework has been understudied. These few studies, however, indicate that children participate in household tasks to varying degrees. The present study utilizes writing assignments submitted by approximately 120 undergraduate students enrolled in family sociology courses at a Midwestern U.S. university, and qualitatively analyzes patterns of housework participation in students’ familial care, and care of origin, with special emphasis on the meanings of terms used to describe this participation. Preliminary data analysis shows that most college students expect to marry, and for both spouses to earn an income, even when students grew up in households with stay-at-home mothers. While this implies more gender-neutral expectations in provisions of childcare, the role of childhood experiences, expectations regarding domestic tasks varied more, and childhood experiences appear to have important impacts on perceptions and expectations with regard to housework. Students who “helped” their employed mothers with the second shift were more likely to perceive indoor household work as primarily wives’ work, and to expect husbands and/or children in their future households to be “helpers.” Other students stated that all family members “contributed” to domestic tasks in their childhood households. These students tended to view housework as the responsibility of the entire family, and to hold less gendered expectations. The types of housework done by children were often gendered (e.g., sons doing yard work and daughters helping with cooking), and this also shaped students’ perceptions and expectations. By analyzing childhood experiences, this study aims to fill a hole in the literature, shedding light on how parents include their children in negotiating housework allocation, and how childhood experiences shape gender role perceptions and future expectations.

Lessons Learned from Great East Japan Earthquake - Birth Outcomes in the Catastrophe of Highly Aged Country

The Great East Japan Earthquake and Tsunami occurred in 2011/3/11 and this disaster revealed health care issues that Japan already had. One is the lack of attention for maternal health care in the highly aged society and the other is decreasing OB/GYN providers in the Tohoku area. It was hard to see pregnant people and babies in the highly aged country like Japan, however, there were a few expecting mothers left in the cold, hungry and anxiety due to the other people. They were not prioritized as a vulnerable population. Continuing research of 11 hospitals and 37 clinics in one prefecture in the devastated area showed that most of pregnant mothers stayed more than 3 evacuation shelters to find a safer place to live and half of the pregnant patients could not find a way to get out from the tsunami area to have birth. With more than 200 patients who could succeed to transport to another prefecture, their average delivery time (weeks of gestation), weight of baby, preterm birth rate, low birth weight rate, amount of blood loss and another birth outcomes of this catastrophic area tells us the importance of the pre-hospital OB/GYN care team in disaster response and safety confirmation system for mothers and babies. We should strengthen the perinatal care in highly aged society where mothers are “minority”. There is a generation inequality in health care of highly aging society like Japan - perinatal health care is less concern than elder care. 10 obstetricians set up a project specialized for pre- and perinatal care, and carried out medical activities in these disaster-stricken areas by taking care of pregnant and postpartum patients from April 1st until September 3rd, 2011. With dispatched specialist after natural disaster and built the visiting system and control birth outcomes and neonatal health outcomes.

Who Takes Part in Anti-Nuclear Actions? a Case Study of the Organizations of Evacuated People from Fukushima Plant Area and Their Attitudes Concerning Nuclear Energy

It is often assumed that the people of Fukushima, especially those who lived near the nuclear plants, are increasingly aware of the impracticality of Japan’s nuclear energy policy as they have replaced their former or other evacuation zones.

In this paper, the author asks whether the assumption is valid in any case, and if it isn’t, what are the reasons for the cases that go against the assumptions. The author will examine some of the responses of the recently formed organizations based on the areas bordering the Fukushima prefecture and other prefectures in the more damage.

First it is shown that, as long as each organization represents the people who lived in the same municipality before the devastating event of March 2011, the extremes of both now passionate “anti” or “pro” opinions concerning the nuclear energy policy have been embraced by some of these organizations.

Second, it is demonstrated why these people have taken either “pro”- or “anti”- stances in the process of the disaster followed by the nuclear accident, and the author points out that these attitudes are affected not only by their experiences °

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
after the beginning of the disaster, but also by their life-styles before the disaster and their memories of these life-styles.

Third, the question of whether these organizations have simply endorsed or excluded some of these "anti-" attitudes or the "pro-" attitudes is discussed; rather, here we see the unexpected effect of the "anti-nuclear" discourse on the formation of these views and other doubts about the discourse; but even this adverse effect has not resulted in showing anti-"anti-nuclear" discourse.

Hence scholars may expect that time would ease the unfortunate misunderstanding about the anti-nuclear opinions; however, this could take a generation, which may be too long a time for some witnesses.

Cultural Manifold Analysis (CULMAN) for Cross-National Comparative Survey

The objective of this presentation is to show our paradigm called Cultural Manifold Analysis (CULMAN) for the comparability of cross-national surveys. This paradigm has been developed in the longitudinal and cross-national surveys on national character by the Institute of Statistical Mathematics (ISM) over the past six decades since 1953. First, I summarize our paradigm of cross-national and longitudinal surveys. Second, I summarize some Japanese social values and, among others, aspects of people's sense of interpersonal trust shown in our longitudinal survey of Japanese national character. (See http://www.ism.ac.jp/ism_info_e/ko-kai_e.html)

Third, I present cross-national comparisons of interpersonal and institutional trust as well as some basic social values based on our past surveys, including the Seven Country Survey (surveys of seven countries (Japan, USA and five European countries)), the East Asia Values Survey (EAVS) (2002-2005), the Pacific-Rim Values Survey (PRVS) (2004-2008) and the Asia-Pacific Values Survey (APVS) (2010-2014). (See http://www.jsps.go.jp/j-grantsinaiid/12_kiban/ichiran_22/e-data/e33_yoshino.pdf) The results show that East Asian countries have already departed from traditional Confucianism and that people share more common social values beyond the distinction of East and West. Fourthly, I present an overview of data on Japanese immigrants in Brazil, Hawaii and the U.S. West Coast in order to study the interaction between the environment and ethnicity. Finally, some comments are provided for our future research.

The Representation of Wedding News in Taiwan: Critical Thinking about Romantic Love, Capitalist Ideology and Gender Politics

This research explores the representation of weddings news in mass media in Taiwan. Focusing on the gender/sexual politics, the researcher examines how wedding events are reported on mass media. In terms of textual analysis, the researcher discusses the gap between the wedding news representation and the...
social reality. Additionally, the implied ideology is examined. Hopefully, the result could be transformed into teaching materials for the graduate course of sociology of gender.

Wedding as an event affects and is affected by a combination of external and internal constraints and expectations. In modern Taiwanese society, weddings are both big events that people want to get on the act. Thus it may be said that wedding consumption is related to emotion as well as interpersonal relations. The researcher is interested with how wedding is reported on mass media and how these representations will affect people's cognition and attitude.

Heterosexual relations and gender stereotype roles in the wedding events have been depicted in certain ways. These images also convey illusion of romantic love ideology. Popular culture plays a key role in naturalizing the capitalist as well as the gendered pattern. The present research attempts to analyzed the wedding news to explore the implied gender ideology. We are living in an age often portrayed as being dominated by consumer capitalism and the products of capitalist popular culture. It is important to acknowledge the influence of the mass media in shaping people's identities and daily lives.

Combining gender analysis with sociological inquiry, the researcher believes that the study on the representation of wedding news could provide some insights for the teaching practice of critical media literacy, gender equity education and relationship education in universities.

YOUNKHA, EVA* (University of Bonn, eva.youkhana@uni-bonn.de)

The Power of Religious Objects in Transnational Migration

Since the economic crisis in Spain hit most migrant households as the most vulnerable, religious institutions such as the Catholic Church, are becoming increasingly important. Their houses act as reference points by which the immigrant community is kept together. Tangible assistance is offered and transnational communication structures and family bonds are sustained. Being assisted by local Saints, the Catholic Church serves as a place of remembrance to produce and reproduce senses of belonging that date back to the early colonial era. Social relations of migrants are manifested in a social space that symbolizes the power and glory of the former Colonial regime.

Giving the example of the congregation of San Lorenzo in an immigration neighborhood in Madrid, it is shown, which role and agency religious artifacts play in re-producing collective identities and allocating social and financial resources. By focusing on the object itself (not necessarily its symbolic representation) the functions and cultural meanings of the figure in different historic contexts become apparent. The religious staging around the object of the Saint show spatially and chronologically comprehensive chains of interaction which reflect deep seated power relations between the immigrant and the host communities.

Economic Crisis: Toward the Erosion or Stability in Individual Welfare State Preferences?

Understanding voter preferences for the welfare state and how they are formed has become an important basis for making claims about either the erosion or continued stability of the welfare state. In the past decade evidence has mounted to point towards a relationship between individual measures of economic hardship/risk and support for the welfare state. However, most of the research has been constrained to limited time-series data that evaluates this relationship under relatively stable business cycles which seldom affects individuals belonging to more secure economic groups (high skill, high income). In light of the increasing global economic instability that places these individuals at greater risk, it becomes important to determine how they will respond differently and change the direction of aggregate support for the welfare state. This paper will examine in detail how different class groups respond to increasing risk, in particular more economically secure groups, and identify if recent findings of increased aggregate support as well as class convergence in Swedish hold or if they resemble a recent study that demonstrated a decline in welfare state support in the United States following the 2008 economic crisis.

The leverage of this study is based on the use of (1) exogenous properties of the 2008 economic crisis, (2) a Swedish survey that reflects respondents' welfare state preferences and socio-economic attributes that spans seven consecutive years sampling approximately 3000 respondents per round, and (3) a design which employs a difference-in-differences method to compare individuals across municipalities. Municipalities are sorted according to those that experienced an immediate substantive spike in unemployment and those that experienced little change, which resembles a treatment and control group respectively. This design reduces endogeneity to make stronger claims for causality, improves estimation of increased economic risk on more economically secure groups, and consequently overall changes in public preferences.

Racemaking in New Orleans: Racial Boundary Construction and the Prospects for Social Change

This paper explores how an ideologically diverse group of affluent, white American college students respond to and process evidence of white racism and racial and class inequity in their immediate environment. It is based on an ethnographic study of Tulane University students living in post-Katrina New Orleans. Although participants' responses to racial and class inequality within and without New Orleans suggest their racial attitudes and ideologies are anything but universally shared, students remain uninvolved in combating these inequities. Drawing on anthropological and sociological theories of racialization, we suggest that students' socio-political inactivity is linked to their continuous construction and reinforcement of racial boundaries between themselves and local African American residents of New Orleans. Importantly, although there are some differences in how boundaries are constructed by participants who subscribe to different racial ideologies (e.g. color-blind racism, racial progressivism), we find the outcomes to largely be the same. White Tulane students distance themselves socially from African Americans in the city, reinforcing social boundaries while deterring students from desiring to combat structural inequities. The findings offer valuable insight into racial boundary making processes and the socio-political implications of such boundary construction in the United States.
ipated in reporting the Wenchuan and Lushan earthquake, this article finds out the discrepancy in using the traditional media and new media. It also elaborates that a new form of inequality emerged due to the digital divide, while weibo is eliminating traditional inequality. (Weibo is a SNS like Twitter)

Is Religion an Alternative Source of Help for Immigrants to Maintain Their Mental Well-Being?

A number of studies have shown that religious participation is positively related to immigrants' mental well-being in the West, thus making religious venues "places of refuge" for immigrants and religion their "balm for the soul." A study in Canada in 2007 found that immigrant status is associated with lower rates of use of mental health services, which is likely caused by cultural and linguistic barriers to care. In this paper, I attempt to find if religion is an alternative source of help for immigrants when they suffer from psychological distress and whether religious participation is associated with lower rates of use of mental health facilities among immigrants. The goal of my research is to help policy makers better understand how immigrants adapt in their host countries when facing barriers to access to certain important resources, in this case, culturally and linguistically appropriate mental health services.

I will conduct my analysis within the Canadian context, where there is universal health insurance. My analysis will be based on data provided by the Canadian Community Health Survey: Mental Health and Well-being. The variable mental well-being is defined by the "psychological well-being manifestation scale" in the survey. Consisting of 25 questions ranging from "self-confidence" to "pace of living" on five scales, these measurements are combined into one continuous variable. Religious participation can be defined by the two questions on how religious respondents respond to such beliefs, and their frequency of attending religious activities. The survey also contains a section on health care utilization, thus making it possible for me to analyze the relationship between religious participation and the use of mental health services.

YU, YAN* (Grand Valley State University, yuy@gvsu.edu)  
Declining Marriage Rates Under Globalization: Homogeneity Or Heterogeneity?

Around the world, marriage is undergoing massive changes. The United States has called on "saving marriage" (Popeno, 1993; Furstenberg, 2005), the Middle East is experiencing a marriage crisis (Rashad, Osman, and Roudi-Fahimi, 2005), Latin America is seeing the rising substitution of cohabitation and single motherhood in place of marriage (Esteve, Garcia-Roman, and Lesthaeghe, 2012), and China is seeing more "sheng nu" meaning "leftover women", a group of single women who have high education and high income. A series of questions arise from these changing trends of marriage: Does globalization affect marriage the same way in the developing countries as it does in the developed countries? What causes declining marriage rates under globalization? Do these changing trends mean marriage as an institution is weakening or even disappearing? What does a marriage mean in different regions under globalization? Previous research focuses on either the declining marriage rates in the developed countries (Cherlin, 2004 and 2013; Trost, 2010) or the "flight from marriage" in the developing countries (Jones, 2005). What is missing in the current literature is a comparative perspective on this phenomenon, which can help us better understand marriage as an institution characterized by a heterogeneity (its complexities) not a homogeneity (an individually driven phenomenon). This paper explores the declining marriage trends occurring in different regions (i.e. the United States, Latin America, the Middle East, and the Southeast Asia), compare and contrast their similarities and differences, and analyze the implications for the significance of marriage as an institution. I argue that delayed marriages and declining marriage rates in the developing countries do not indicate marriage as a traditional institution is eroding, replaced by other modern alternative living arrangements. Instead, marriage is still viewed as a significant institution and its traditional characteristics are reinforced by family and economic contexts under globalization.

YUAN, RUI* (Chinese University of Hong Kong, ryanu@swk.cuhk.edu.hk)  
Effects of Social Capital on the Developmental Outcomes of College Adolescents: Evidence from Shanghai, China

It has been suggested that individuals are faced with more transitions and life-decisions in adolescence and young adulthood than at any other stage of life. Overseas studies have also suggested that during these time periods social ties might change. However, domestic research has spared disparate efforts in the investigation into college students’ psychosocial development undergirded by the deficit-based model. Drawing upon a sample of 1153 university students in Shanghai, China, this study investigated how family social capital, friendship qualities, associational social capital, linking social capital, and adolescents’ agentic personality influenced multiple developmental outcomes of college students in mainland China. The results of a structural equation modeling analysis provided a good fit for the sample as a whole. The overall findings support the hypothesis that higher levels of agentic personality were associated with better developmental outcomes of college students, including higher levels of resilience, self-efficacy, and self-esteem. Agentic personality also mediated the effects of family social capital, friendship qualities, associational social capital, and linking social capital on developmental outcomes.

The study advances the theory of social capital by incorporating its various dimensions into one conceptual framework; thus unraveling the mechanism of how family social capital, friendship qualities, associational social capital, and linking social capital influence the college students. It also advances the theory by testing it in a non-western socio-cultural context, thus potentially fortifying its universal applicability. Moreover, it is desirable that more programs for enhancement of agency building could be devised to foster emerging adults’ agentic personality. Family education, positive peers groups, associational participation, and linking mentoring are also anticipated to promote their optimal development.

YUASA, YOICHI* (Kanto-Gakuin University, yuasa@kanto-gakuin.ac.jp)  
A Sociological Analysis of Linking Renewable Energy with Rural Regeneration

A feed in tariff system that was introduced after Fukushima nuclear accident has let people think that there are big business chances in the renewable energy's market. Then, a lot of companies have tried to join to the market as electricity generator. In this presentation, we will examine the way of linking this market waking up with regenerations of rural economy from sociological perspectives.

Because electricity generators need to sizable land for a facility, they install it in rural area. Rural areas where suffer from economic recession welcome it. However, if installers are only big companies whose main offices are in big cities such as Tokyo, economic benefits for rural areas will be limited.

Our research group aims to link installs of renewable energy facility with spontaneous developments of rural areas. Based on this scheme, our group has researched and supported several projects that people living in rural area install renewable energy facilities.

In the research, we have found that small entrepreneurs encounter a lot of barriers to install renewable facilities. Typical one is the negative attitude of local banks to financing them.

Financing local companies by local banks is essential to the vitalization of regional economy. For promoting this finance, an analysis from sociological concepts such as social networks would be useful.

To date, with overcoming barriers, lots of projects are ongoing by local people in Fukushima and other parts in Japan. For example, in Minami-Soma where is partially polluted by radioactive substances, farmers have installed PV panels on their farmlands. This project is called the ‘solar-sharing’ and will bring profits to farmers. In this case, a social network has played an important role.

We will take some projects by local people and show the way in which people overcome financial and other barriers.

YUASA, YOICHI* (Kanto-Gakuin University, yuasa@kanto-gakuin.ac.jp)  
Disregards to Principles on the Distribution of Risk and Bads

Geological disposal is the primary option for most countries where have high-level radioactive waste. All countries except for Finland, however, have not (or are not planning) geological disposal facilities due to objections from the population. Japanese government is facing same problem. We must dispose nuclear wastes regardless of continuation/stop of nuclear electricity. How can or should we tackle this problem?

The essential sociological perspective is the distribution of risk/bads. This perspective was suggested by Ulrich Beck in his Risk Society (1986). He has insisted that the concept of class is not effective for understanding the logic of this distribution anymore. To his argument, lots of works have asked whether it is true or not. The logic of the distribution of risk/bads has been a focus of sociological studies.

In this presentation, we will show two disregarded principles on the distribution of high-level radioactive waste. These principles are deduced from an analysis of conflicts on general wastes in Japan. Based on these principles, we will analyze a site finding scheme and its result of geological disposal facilities in Japan.

Japanese government is looking for communities where spontaneously accept the facility now. For getting a spontaneous candidacy, the government established a governmental body called NUMO (Nuclear Waste Management Organization of
Japanese Wave of Sub Cultures

The aim of the paper is to use methodological viewpoint of the visual turn of sociology to understand the field of Japanese Animation and Manga and the phase of their 'globality.' The data that will be dealt with is the one from the extended survey research on Manga and Anime conducted by Association of Japan Sub-Culture Studies at Kobe University (headed by the author).

Comparing the research results that have already been conducted by Europe-an Manga Network in European countries a few years ago and that of conducted by the Association of Japan Sub-Cultures Studies in Asian countries in the last year, paper will describe a view as to the similarities and differences in the process and phase of 'accepting' (and rejecting) Manga and Anime as cultural production in those areas.

Empirical researches from which the data of the paper generated, have been conducted in the areas such as in Hangzhou (China), Hong Kong, Taipei and the survey research has been done using questionnaires as well as interviews with the participants / fans in the events of Manga / Anime festival in those cities / areas.

Observing those processes of acceptance/ rejections, and the ways of penetr-ating into people's daily life paper suggests the transformed nature of our con-temporary way of life in terms of the visual and the social are constructed simultane-ously in localized 'cosmopolitan' consciousness from below.

Reversing a Cost-and-Risks Transfer Chain for Workers' Rights

In many countries the labour law protections are an employment relation-ship that has been identified as a 'subordinate' relation to a single employer in individual corporations. However, the emerging pattern of precarious work is often done in relation to multiple 'users' beyond corporate boundaries. Among triangular employment relationship or dependent self-employment, for example, different type of dependence - frequently referred to 'economic dependence' or 'quasi subordination'- is more dominant.

In case that labour law protections have been extended to those precarious workers, the grounds and the effectiveness of labour protections are still ques-tioned. On one hand, the degree of similarity to employment relationship is not the elements for labour protections, as capital seeks to evade that type of relation. Therefore, the strategy for adjusting criteria of employment relationship (i.e. The ILO Employment Relationship Recommendation) is not enough. On the other hand, the need of social protections for precarious workers cannot fully explain why capital should take the burden of labour protections.

This paper explores an alternative basis and method of employment standards enforcement with cases of construction and personal care service industry in Korea. In both cases, trade unions have developed new strategy for organizing precarious workers and for closing the enforcement gap since 2000s. In particular, unions have focused on the liability of 'user-enterprises' in industries where other precarious work than employer-relationship becomes the norm.

Furthermore, this paper analyzes the nature of dependence of precarious work and suggests that it can be understood as 'externalized dependence' which comes from the cost-and-risks transfer from capital to labour and society. In con-clusion, this study shows reversing the cost-and-risks transfer chain is the better approach for expanding labour protections for all kinds of workers regardless of contract types.

Prevalence of Abortion in South Australia, 1970-2009

The main objective of this paper is to review the first 40 years’ experience of legalised abortion in South Australia and its demographic implications.

Data sources included the official abortion statistics and demographic data from the Australian Bureau of Statistics. Standard demographic and statistical techniques of analysis were used.

After an initial rise during the 1970s, abortion rates remained fairly constant for the next decade but have increased since 1990. The Pregnancy Advisory Centre was opened in 1992, to reduce waiting times and to cater for late abortions. Contraception availability has resulted in an increase in abortions earlier in pregnancy and also an increase in late abortions. With the adoption of vacuum aspiration techniques and improved services, abortion is now a day only procedure, performed by specially trained GP (general practitioner) doctors. Morbidity and mor- tality have thus been greatly reduced. Concurrent sterilisation rates have declined. The increase in abortion has affected all age groups, but particularly women under 30, including acts such as constant criticism, neglect, and distorted authorship credit in joint publications. Many universities now publicize measures against this type of harassment, and several quantitative surveys have shown that seri-ous sub-cultural damage is a possible result of harassment. However, such surveys have focused on the ultimate outcome of the harassment; few sociological analyses have explored the actual process of harassment.

This paper describes how students view this process and the variety of problems they experience in mentor-student relationships recognized to in- volve harassment. Interview data was obtained from 17 graduate students and young researchers collected between 2009 and 2012, and this paper focuses on the narratives of six key informants from different disciplines. First, the inter-active construction approach was applied to interpret narratives to reconstruct lit-toral relationships and the cross-case analysis of these life stories was then conducted.

The results revealed three commonalities in students' experiences of the rela-tionship, regardless of their gender, academic discipline, and type of harass-ment experienced: 1) non-sexual, yet uncomfortable, closeness or distance with their mentor; 2) recognizing exploitation in the relationship; and 3) viewing their mentor as lacking integrity as a researcher, not as an educator. By elaborating on the interplay among these points, this paper describes the issue of academic harassment as relational, not as the specific attack behaviors described in previ-ous works.

Prevalence of Academic Harassment in Graduate Students in Japan

This paper examines academic harassment of graduate students in Japan by their mentors. Using cross-case analysis of student narratives, this paper ex- pares how students view their relationships with their mentors. In Japan, a variety of non-sexual types of harassment distinct to high-er education, collectively known as academic harassment, has recently be-en drawn to public attention as a social problem. Academic harassment in- cludes acts such as constant criticism, neglect, and distorted authorship credit in joint publications. Many universities now publicize measures against this type of harassment, and several quantitative surveys have shown that seri-ous sub-cultural damage is a possible result of harassment. However, such surveys have focused on the ultimate outcome of the harassment; few sociological analyses have explored the actual process of harassment. This paper describes how students view this process and the variety of problems they experience in mentor-student relationships recognized to in-volve harassment. Interview data was obtained from 17 graduate students and young researchers collected between 2009 and 2012, and this paper focuses on the narratives of six key informants from different disciplines. The Chechen and Japanese Values in a Globalization Context: The Comparative Analysis

In the modern world the globalization process strengthens an interference of cultures and values, actualizes contradictions of secular and religious, traditions and the modernity, requirement of defining a vector of a society development.

Object of research - the Chechen and Japanese values in conditions of globalization.

Methods: cultural and action approaches, methods of the sociological, comparative analysis.

Results. In Caucasus, as well as in Asia, Japan in the hierarchy of values the key place take the values of family, collectivism, respect for seniors, mutual aid, solidarity, group unity. The Chechen values, despite religious and language distinctions in Caucasus, are considered as a part or a segment of the Caucasian and Russian values. During the post conflict period in the Chechen Republic, as well as during the post-war time in Japan, high interest to social and cultural values and norms is observed, responsibility for preservation and revival of traditions and customs is shown. In the Chechen and Japanese society there is a similarity and distinction in the ratio of collectivism and individualism, display of paternalism, reflections on globalization calls. Transformative changes in Russia cause social activity, among young and persons of middle age enterprise, initiative, requirement for a competition is more often observed. The internet, mobile communication, other information means make changes to functioning of traditional norms. In this context interesting is the aspiration in Japan to adapt traditions for new conditions.

Conclusion. Caucasus is on crossing of the European and Asian cultures. Japanese social practice of combination of traditions and the modernity serves as a model for others in carrying out transformations in social and cultural spheres of life. However in each region and country it is necessary to develop a strategy of modernization taking into account social and cultural specificity.

Work Values in a Modern Linguistic Space

In the modern world, in the conditions of globalization many languages and cultures undergo changes. Social factors make the mediated impact on languages that is shown in contexts of their use, new word meanings.

The purpose of our research is the study of work values in the English, German, Russian and Chechen idioms taking into account social and language contexts, the language situation in the Chechen republic.

Methods. The comparative, semantic, corpus, sociolinguistic analysis of idioms, poll of the Chechen language speakers is carried out.

Results. In the basis of work values there are the material values focused on income, profit; spiritual and psychological values - self-realization in work, pleasure from work, understanding and feeling of the meaning of life, spiritual growth through work, creativity, social and career values - education, status in society. In an internal form of idioms the cultural values describing work traditions, customs, and the historical events forming work cultures of different countries were also reflected. So, in the English and German languages the value of official regulated work was accentuated, in German the value of an official duty was also specified. In the Russian contexts very similar social experience is fixed. According to the poll of Chechen language speakers at the present stage important are the values of income and success that can be connected with a post-war situation of revival, construction of work culture. In the frame of a language situation in Chechnya the idioms with the opaque internal form which fixed the facts and subjects of culture not taking place in the modern reality are less familiar and seldom used.

Conclusion. Thus, the study of contexts is necessary for revealing the influence of social factors on idioms and evaluation of the language situation in society.

El concepto de individualización en la sociedad clásica y contemporánea y su aplicabilidad en México

Este trabajo expone el concepto de individualización en el contexto de la sociología clásica y contemporánea. Se argumenta que este concepto se desarrolló como una respuesta a la modernización y la industrialización, y se aplicó para entender el cambio de roles y relaciones sociales en diferentes contextos. La individualización se refiere a la tendencia hacia la separación y la singularización de los individuos en las sociedades modernas, en comparación con las sociedades tradicionales, donde las personas estaban más enraizadas en roles y estructuras sociales estables.

En México, la individualización se ha transformado en un tema importante debido a los cambios demográficos, económicos y políticos. Este trabajo analiza cómo la individualización afecta la forma en que las personas se relacionan y cómo interactúan en la sociedad mexicana. Se examinan diferentes aspectos de la individualización, como la participación en el mercado laboral, la formación de redes sociales y las nuevas formas de trabajo.

Se propone que la individualización ha sido uno de los cambios más significativos en la sociedad mexicana, y que ha tenido un impacto profundo en la forma en que se desempeñan los roles y se establecen relaciones sociales. El trabajo concluye con recomendaciones para futuros estudios que puedan explorar mejor esta temática en el contexto mexicano.
weakening of communal cohesion due to the recent economic crisis. In addressing these problems, Lefkadian “communal associations” employ different strategies to overcome their current predicament and counterbalance the “homogenizing” effects of globalization: Some, stressing the eternal qualities of traditional values, try to perform an almost religious “sanabatism” to old and unafflicted identities through the ritualistic re-enactment of village customs and practices that promote group spirit. While others, introducing a “glocal” approach, adopt novel means and try to institutionalize new communal practices in order to appeal to youth. Thus, seeking to (re)establish communal bonds through “invented traditions”, they renegotiate local identity and culture.

Private Provision, Public Care? Community Based Postnatal Care in Neoliberal Times

As with many other high-income welfare states, maternity care in Australia is available through a system of universal health coverage available to all citizens. However, Australia is distinctive in its parallel private health insurance sector which operates alongside and in competition with the public sector. The private health insurance sector has been heavily subsidised through a range of government policies, which have been criticised as costly and inequitable inssofar as they favour the most affluent segments of the Australian population and those in metropolitan regions. In addition, concerns about the impact of this stratified system of care on maternal outcomes have been increasing. For example, women birthing in the private sector are at substantially higher risk of instrumental delivery, caesarean birth, induction of labour, episiotomy and epidural anaesthesia; their stay in hospital following birth is, on average, twice as long as women birthing in public facilities (Australian Institute for Health and Welfare, 2011). What do these differences mean for how women experience post-birth care following discharge from hospital? In this paper, we report on analyses from two Queensland studies of women’s experiences of care in the community following childbirth, with a particular focus on the impact of public and private care provision. We report findings from a Queensland survey of new mothers (N = 6,433) in terms of their experiences of care in the community, and their confidence and satisfaction with their healthcare. In addition, we report the findings of qualitative interviews with 70 new mothers and 49 health care professionals providing post-birth care in public and private health care sectors in Queensland. Together, these analyses demonstrate inequities in health care provision resulting from the current stratification between public and private systems of maternity care.

Tempelhof: A Battle for the Green Heart of Berlin

Tempelhof Airport, an iconic building with rich history in the middle of Berlin, was closed for traffic in 2008 and the airfield turned into a huge park, much loved by inhabitants from the adjacent neighbourhoods as well as by Berliners from further afield. However, after the Berlin Senat, as a governing body of the metropolis, announced its much-trumpeted “Masterplan” to re-develop the airfield, a wave of activism emerged. What was in stake was not only a loss of a unique place of biodiversity, positively mitigating the urban climate, but also an irreversible transformation of a site with special atmosphere: green lungs of Berlin and one of the largest open green spaces within an urban landscape in the whole of Europe. Moreover, Tempelhof is a witness of 20th century history: Nazism, Berlin Airlift, Cold War and the 1989 Wende. Therefore, various kinds of creative activism appeared in order to save the park, consisting mostly of engaged volunteers and enthusiasts, yet of different educational and income backgrounds and age: from garden colony (established in the 1920s), fighting against the loss of social learning to public initiatives campaigning through education and rocketing rents. Thus, it is obvious that the perception of “urban renaissance” is dissimilar amongst different strata of society: it is not only the conflict of the power elites and citizens, but also of people who believe they belong to Tempelhof (and keep its memory) vs. those who do not.

This paper looks at how the topics of urban renaissance and public engagement are related to themes of memory and collective place-making activities (developed by Karen Till) and how their momentum reflects on Pierre Nora’s concept of lieux de mémoire. What is the role of collective cultural and social memory in public engagement? What could be learnt from the case of Tempelhof?

ZAGORSKI, KRZYSZTOF* (Kozminski University, zagorski@kozminski.edu.pl)

Kozminski University Index of Balanced Economic and Social Development (“IBESD”) for Poland

The paper presents a new Index of Balanced Economic and Social Development (“IBESD”), designed to evaluate Polish economy and society, with an emphasis on human conditions. “IBESD” is constructed in “beyond GDP” paradigm, on widely accepted assumption that traditional measures, such as GDP, are insufficient to evaluate socio-economic development. “IBESD” covers four domains: internal (national) economic, external (international) economic, internal (“macro” or subjective) social, and external (“macro” or objective) social. Each of them is measured as an aggregation of several simple indicators. All four medium level indexes of four domains show almost parallel changes, so they can be aggregated into a general “IBESD” index. All of them “IBESD” included, describe very well changes in Polish economy and society during 2000-2011. Their trends may be explained by general knowledge of economic cycles in Poland and they are surprisingly highly correlated with the ultimate measure of human conditions, operationalized as an aggregation of psychological well-being (state of mind and emotions) and suicide indicators. Economic and social components of “IBESD” show the same pattern of changes, with a slight delay and greater amplitude of social changes. That indicates “leading” role of economic aspects in relation to social ones and great sensitivity of social indicators to economic ones. As far as social aspects are concerned, the trend of subjective evaluations of current conditions repeats, with small delay, the “leading” trend of expectations for future social conditions. This delay does not appear, however, during the present economic crisis, when predictions and evaluations similarly react to dramatized economic news. “IBESD” was designed in a theoretical context of balanced development. Its application confirms the theory that rapid development is associated with diminishing balance between its different domains.

Discourse on Youth’ Sexual and Reproductive Health-Stigmatized in Lahore Pakistan

INTRODUCTION: Pakistan is facing various challenges to deal with issue of youth’ Sexual and Reproductive Health (SRH). Although youth represent large number of population, yet are deprived to seek proper education and treatment to cope with their SRH needs. Subject of human sexuality is associated with strong ideology, moral views and traditions. Being Muslim country where, to discuss the topic of SRH is a societal taboo, less research is done. Moreover, poor infrastructure coupled with non-co-operative behaviour of family/community and healthcare providers discourage youth’ practices to access particular services. Thus need for this study has arisen to understand youth development, enabling to provide appropriate information about sexuality and reproductive health to youth of Pakistan.

METHODS/APPROACH: Research on “Assessment of awareness of youth living in Lahore regarding Reproductive health” was conducted in 2009, funded by Small Scale Research Grant under Bill and Melinda Gates Foundation at John Hopkins University and organized by Population Council. Potential participants for study were youth (males and female of 15-24 years), parents, teachers, representatives of youth organizations, service-providers and Govt. officials/policy-makers. Qualitative research technique was adopted through 40 In-depth interviews and 12 Focus-Group Discussions alongwith combining two techniques (Dynamic Contextual-Analysis and Formative-Research).

RESULTS: Research provided a deep insight into lives and thinking of youth. Results show that youth are quite aware about subject although there are still some concerns about access and understanding of correct/authentic knowledge. It highlighted gaps in access to information from reliable sources and non-cooperative behaviour of family and community.

CONCLUSION: Research concluded that there is major difference of perceptions and awareness-level amongst females and males. Lack of reliable knowledge about sexuality/reproduction, unpreparedness for physical/emotional changes, over-exposure of information via internet, scarcity of youth-based interventions and ambiguity of key-stakeholders’ roles are major constraints.

ZAHID MALIK, MARIAM (Contech International)
HIV/AIDS Prevention Among Female Sex Workers, Lahore, Pakistan

Background: Although commercial sex is illegal in Pakistan, yet the number of FSWs is increasing. Pakistan is almost in the grip of an Asian epidemic, where HIV/AIDS is spreading like a silent killer. One of its main reasons is the high rate of transmission among sex workers and their clients, due to lack of awareness, limited access to healthcare and preventing services, socio-cultural barriers and taboos.

Description: FSW Service delivery project to respond spread of HIV/AIDS was launched in collaboration with Punjab AIDS Control Program and Contech International in Lahore during 2012-13. Comprehensive package of HIV services and provision of their needs were the key project interventions. DISH(2) Centers (including FSWs friendly-DICs(3)) established in highest concentration areas of FSWs, focusing their typology including home, street, kot-khana and hotel-based FSWs. Extensive trainings were imparted to peer educators and counselors of FSWs in order to create awareness and promotion of safe-sex practices. Moreover, law enforcement agencies, local GPs/CBOs, sex-workers network operators were also sensitized to create enabling environment.

Challenges: Major challenges e.g. community and service-providers stigma regarding sex-workers, substantial use and limited access to healthcare services, availability of prevention commodities, HIV-testing, illegality of sex-workers and non-cooperative attitude of law agencies were addressed.

Conclusion: A mix of multiple interventions involving key stakeholders is beneficial to bring change in knowledge and behavior of community and vulnerable populations. Offering both outreach and drop-in services proved the best way of involving sex-workers and the services would be more effective with this coordinated approach.

Dual Job Market for Universities’ Graduates – Comparing Educational Paths and Careers of Science and Humanities Graduates

During last twenty years huge expansion of tertiary education could be observed in Poland. Number of students has risen from less than half a million in the begging of the nineties to almost two millions in recent years (GUS, 2011). For most of the time in this period the number of students of humanities, especially social sciences, was rising at fastest pace. At the same time a shortage of technically skilled employees has occurred in the Polish economy. This led to number of polices aimed at increasing popularity of technical and scientific studies among secondary schools graduates and reversal of the aforementioned trend (MNIiw, 2013). These changes have yet to satisfy the demand for skilled labour force.

We will present results of multiple research projects conducted for the last five years among students and graduates of University of Warsaw – the biggest university in Poland. We combine results of statistical analyses of surveys and administrative registers with results of qualitative research (Jasinski et al., 2012). One of main conclusions is that there is a dual labour market for university graduates: one for highly demand graduates of sciences and the other for the graduates of humanities. Representatives of these two clusters prove to have different approach towards their studies and tend to develop different strategies for entering the labour market: students of sciences concentrate on getting knowledge and specific skills that will make them competitive whereas humanists tend to seek job experience during their studies to enhance their employability in the future. Careers possibilities of these groups differ substantially. Graduates of sciences seem to be more successful on the labour market.

Racialization of Labour Migrants in Russia - Taking Social Movements into Consideration

The anti-immigration movement is one of the most important actors in the Russian social movement network. The goal of this paper is to isolate the key elements of the movement’s frame, the ways in which it is applied in building the discourse around “illegal immigration”. It is shown that the social movement against immigration may be treated both as epiphenomena accompanying global processes of racialization but also as the producer and transformer of societal patterns, discourses and political constellations which has its own morphogenetic, structure-transforming potential. By revealing the relatively autonomous character of many of the key themes of racial discourse in Russia, I argue that although the processes of forming class, nations and ethnicity are intimately intertwined with the biologization of cultural differences, the latter cannot simply be reduced to the former. Racial discourse concerning labor migrants in Russia has been shaped by economics need and the realization of a nationhood project. Construction of the “migration issue” as a social problem in Russia is in many ways embedded in the tensions obtaining between the demands of the state for social cohesion and the demands of enterprises for socially disunited labor. My study has demonstrated that the operation of these factors results in the racializing of visually recognizable groups of labor migrants, the social relations in which they are involved, and, more recently, the category of “migrant” itself. Since groups and individuals develop strategies for negotiating their place in the racial order, they are also involved in the process of negotiating access to material and discursive resources. We thus need to identify and examine trends in the shifting logic underlying the construction of the racial other through the migration regime and also take a closer look at individual and group responses and negotiations in respect to this process.
childfree/childless than the more educated (studies on men and childlessness keep being less abundant, though). Moreover, research findings from European countries suggest low fertility may be correlated to unemployment risk and job insecurity. How are births being affected in Spain? Secondly, an inquiry on how older never-married women and men, regardless of their sexual behaviour or identity, are facing social justice issues in the welfare regime, never-married older individuals (and some childfree ones) build support networks in a slightly different fashion than do parents/married older adults. Such networks tend to be more diverse, but also more vulnerable to health-dependency-negativity events. Thirdly, a question on whether salient social justice issues are being dealt with or not when looking at the two previous points: is becoming a parent a choice increasingly being reserved for the more educated and privileged individuals? Are childfree/childless and never-married individuals suffering cumulative inequalities just for the still prevailing stigma of such conditions?

Childfree/Childless Individuals, Population Ageing and Sexual Identities

In many societies, either as a single person or as a couple, individuals who choose not to have children are increasing in number and as a share of the population. Also, many individuals and couples do not have children not because it is their choice, but because of other social and individual factors. Both situations confront normative sexualities, and question the normative links between sexuality and reproduction. In parallel, a large group of individuals have been denied social (and political) recognition concerning the access to parenthood: therefore, a great part of these individuals have remained childless/childfree, whether voluntarily or not. This is the case, for instance, of many lesbian, gay, bisexual, transgender, intersex, queer (LGBTIQ) individuals aged 60 and older, or even younger. Both LGBTIQ parents and non-parents confront and question, too, normative sexualities and the links with normative reproduction.

How are these social processes affecting demographic changes, such as population ageing? Have they been affecting such changes? Does the study of childless/childfree individuals in their fifties and sixties shed some light on how to address the challenges faced by societies in the future decades, when family structures will have changed so much and childlessness will become more visible? Will the increasing choice of a childless/childfree life blur the boundaries between certain features of the so called sexual identities? Can there be an identity based on childless/childfree choices? Will this affect sociological research perspectives on demographic changes? Is this relevant for policies addressing population ageing?

This paper analyses waves 1, 2 and 3 from the Survey of Health, Ageing and Retirement in Europe (SHARE). It compares parents and childless/childfree individuals in terms of health, social expectations, and other variables. The paper analyses, too, results from 10 in-depth interviews with LGB individuals aged 50 and older, most of them non-parents.

When Exclusion Replaces Exploitation: Structural Unemployment and the Retreat of Class Politics

The rise of mass unemployment in Europe in the late 70s and early 80s changed the conditions of the political struggle and debate in the west industrialized societies, producing a strong economic and political inequality within the working class. While the conflict between capital and labour had structured the analysis of the post-War years (with strong unions and labour parties), the 70s and 80s witnessed a shift of attention to the unemployment crisis and in particular its unequal effects (as evidenced by the centrality of debates around exclusion, urban marginality, and unorganized struggles). This simultaneously political, sociological, semantic and ideological turn is deeply rooted in the changes that have taken place within the capitalist societies in the last forty years. The increase in unemployment, which is itself increasingly concentrated on parts of the population (both socially and geographically) resulting in the emergence of a vast stratum of what Marx called “surplus population”, is a key element in understanding this evolution. This evolution also created the conditions of possibility for both the conservative political strategies aimed at limiting access to the Welfare State as well as the de-clined centrality of “the working class question” among authors and critics on the left like André Gorz or Herbert Marcuse. In this new ideological framework, this “exploited” is defined by its exclusion and its increasingly precarious relation to work. Making use of new statistical data on unemployment in Europe, our paper will explore how the political struggle and debate was progressively framed around the question of the “excluded” and the underclass in a way that

made less relevant the question of exploitation and changed the political agenda. This evolution is of fundamental importance – theoretically and practically – for the advancement of critical theory and for understanding inequality under neoliberalism.

Sociological Dilema of Iranian Sociology: Critic of Critics

Abstract: The purpose of this paper is to study the situation of sociology in Iran focusing especially on examining the lack of sociological theorizing. For thirty years the development of positivism and experimentalism has dominated, emphasizing quantitative methodology. The impact of this is that theorizing about Iranian society has been forgotten. To understand the reason for this we have performed a meta-analysis of discourses of social actors in social sciences. Findings indicate that this can be explained by social choices and not social chances, individualism, or a lack of cooperation or creativity. Findings also suggest that what is important is the manner in which they spoke, perhaps even more that what they actually said.

The Early Employment Inequalities of Disabled Postsecondary Graduates in Canada

Disabled youth have become an increasingly important at risk group for educators and policymakers in Canada. Youth with disabilities are more likely to drop out of high school and are significantly less likely to pursue higher education. Yet, many universities are now reporting that nearly 10 percent of their graduating students self-identify as having a disability, and educational achievement-based programs designed to accommodate students’ needs are growing across campuses. While accessibility within postsecondary education may be improving, existing studies suggest that youth with disabilities still face inaccessible workplaces and hiring discrimination. In fact, perceptions of disability by employers and colleagues have been shown to have stronger effects on workplace outcomes than lack of accommodations in the workplace. Drawing on Statistics Canada’s 2005 National Graduates Survey, we explore three major research questions. First, do students increase access to disabilities at the postsecondary level, how do disabled individuals with postsecondary credentials fair in the labour market relative to their non-disabled counterparts? Second, what types of credentials appear to moderate the effects of disability on workplace outcomes? That is, how do the transition outcomes of disadvantaged groups compare across fields, faculties, and types of programs? Do these relationships vary across levels of education (college, trades, undergraduate degrees, graduate degrees)? Finally, do disabled graduates experience similar inequalities across economic and non-economic transition outcomes (earnings, education-job match, job satisfaction, employment, full-time employment)?

The Communist Legacy As a Self-Transforming Social and Semiotic Structure

This paper will focus on the problem of the contested meanings of the legacy of communism in Central and Eastern Europe and the relationship between moral and political assessment of the communist past and the modes of its interpretation in academic debates. Post-communist societies are commonly perceived in terms of the legacy of the communist period, which is seen as a crucial factor defining both their general path of development and shaping their internal social hierarchies. At the same time, elements of the communist legacy are imbued with strong moral and emotional judgments. In the majority of cases, this legacy’s contribution is clearly negative and is used to color most of the past and current outcomes of the socio-economic development in countries of the region. Moreover, contemporary social actors, for a variety of reasons, are often viewed as being

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
tainted by the communist legacy; as products of the communist institutions and path-dependent effects. Analogically, diverse discourses that may be perceived as harmful are seen as direct outcomes and/or new forms of communist “new-speak”. This highly moral and political nature of the communist legacy, which is an important component of the reservoir of moral metaphors of public discourses in the countries of the region, makes debates on the nature and scope of the “real” or structural impacts of the communist past extremely difficult. The paper will demonstrate how constantly re-negotiated meanings of communism, and the boundary between “negative” and “positive” (if any) aspects of the communist legacy, impact the way in which the role of the past is interpreted in academic debates. Examples will be taken from discussions of regional inequalities and from sources that examine the roots of economic and social backwardness of Poland and other countries in the region.

Gender’s Crooked Path: Feminism Confronts Russian Patriarchy

This contribution discusses the uneasy development of gender studies in Russia as one example of public sociology, on the basis mainly of our own experience in the Gender Studies Program at the European University in St. Petersburg. It observes how the political and academic context of the 1990s created opportunities for academic innovations that ideologically challenged Soviet patriarchy and invoked gendered criticisms of post-Soviet changes. I discuss the effects of the rapid but segmented institutionalization of gender studies in the Russian academic context and how gender became the umbrella term for both feminist and anti-feminist standpoints. Since international support for the gender studies diminished in the 2000s, the fashion and economic benefit of doing gender studies has declined, with only a small group of researchers maintaining their commitment to the feminist approach to gender. I focus on the politicization of gender in the last decade of Putin’s Russia and the role of feminist researchers in the analysis of the new conservativism, expressed in gender ideology. The problems of combining the new conservatism and the role of feminist researchers in the analysis of the new conservativism, expressed in gender ideology. The problems of combining public expertise and academic work in the particular realm of gender politics are examined.

Gender Socialization Of Children Through Toys: Between Stereotypes From a Globalized Market In Expansion and Daily Interactions With Family and Peers

The globalization and expansion of toy market in the 1980s and 1990s caused development of gender stereotypes. In order to be exported to many countries and to address to children increasingly prescribing purchases within the family, the commercial communication of toys’ manufacturers and distributors is indeed highly segmented and leads to the hegemony of explicitly gendered categories “boys toys” and “girls toys”. This categorization, both written (name of sections, sales pitch) and visual (colors, photographs of children), is normative because it shows to children the “gender” of objects, activities and values depicted (like household toys that are in sections and departments called “girls” in catalogs and stores). The toy’s industry and trade appear more and more as an instance of children’s gender socialization, teaching them since their earliest childhood to distinguish masculinity and femininity. But children do not learn passively these gender categories: this initiation comes through interactions with other children (peer group, siblings) and adults (especially parents) that may strengthen as well as challenge stereotypes. In particular, families with a strong cultural capital used to develop strategies to thwart stereotypes and open their children’s field of possibilities. From an investigation which combines interviews with children, parents and sales teams, international catalogs’ sales pitches (with lexiconometry for the French ones) and participant observation in a toy store as a salesperson, we will analyze two successive phenomena. On the one hand, I will clear up the process by which the globalization of toy market and the development of marketing led to the circulation of gender stereotypes in the late twentieth century. On the other hand, I will show that interactions between children and adults produce contrasting effects depending on families’ possession of cultural capital, because standardization of commercial communication does not result in a uniform reception of gender stereotypes.

ZEGHICHE, SABRINA* (University of Ottawa, sabrina.zeghiche@gmail.com)

Apport De La Socio-Analyse à L’Etude Du Processus De Construction Identitaire

L’objectif de ma communication consiste à explorer le lien entre l’expérience de l’immigration et la construction de l’identité ethnique, à partir d’un cas concret (une famille d’origine nigérienne émigrée/immigrée au Canada). Les théories de l’ethnicté, qui ont connu un boom depuis les années 1970, ont certes rompu avec l’essentialisme des premières approches, mais perpétuent souvent (à leur insu) une perspective substantialisante des identités ethniques (Brubaker, 2000; Jenkins, 2010). On reconnaît volontiers ces dernières comme étant mouvantes et dynamiques, mais on s’attarde très rarement sur leurs incohérences, leurs ruptures, leurs contradictions (Bajoit, 2009; Collovery, 2007). Par ailleurs, l’ethnicté (comme l’identité) est souvent traitée sous l’angle soit de l’intégration (le fameux concept du ‘vivre ensemble’), soit du déracinement (‘crise d’identité’), soit encore du rapport intergénérationnel (crispation ou dissolution de l’ethnicté; ethnicté symbole). La socioanalyse (Sayad, 1991; Bajoit, 2009), en remettant l’individu au centre de la recherche et en privilégiant la méthode de la biographie reconstituée, permet de contester l’ethnicté ethnique (l’identité dans le discours dichotomisants) dans ses contradictions les plus profondes, ses ambivalences, ses évolutions (au cours d’une vie), ses mécanismes de dissimulation, etc.

Pour ce faire, il faut nécessairement saisir l’expérience de l’immigration dans toute sa complexité, autrement dit, dans les rapports qu’elle implique avec le pays d’origine : souvenirs, fantasmes, nostalgie, désillusion (du retour); avec la famille élargie : entre culpabilité et sentiment de devoir s’acquitter d’une dette; avec la société d’accueil : promesses (réelles ou d’excuses) d’une nouvelle vie ou de nouvelles possibilités, discriminations (raciales, sociales, économiques, etc.), sentiment de honte, d’isollement. Il est ainsi possible de mettre en relief la dimensions ‘moralement et politiquement’ de l’expérience d’immigration.

The Reverse Panopticon Metaphor: The Autocratic State’s Fear of Being Recorded

In the aftermath of the catastrophic earthquake that occurred in the Chinese province of Sichuan in 2008, the artist and activist Ai Weiwei launched an independent ‘citizen investigation’ movement that challenged the government’s failure to gather accurate data on the number of deaths, especially the deaths of schoolchildren who had fallen victim to shoddy school building construction. Through a case study of this movement and its suppression by the Chinese State, this paper aims to analyze how new media facilitate the power dynamics between the autocratic state and social movement actors.

To analyze this campaign, the paper uses David Whiteman’s coalition model, developed to evaluate the impact documentary film affect social movement actors, and redefines this model. First, activist documentary film that is disseminated via the internet and makes use of the internet at various stages of the creative process does not merely influence the dominant public sphere, but, rather, it creates new public spheres, including a local ‘grievance community’, as well as an activist community. It creates new internet spaces to discuss issues addressed in activist documentary film that are disseminated and thus become key processes of movement mobilization in this context. Third, various state agencies’ responses to social movement actors illustrate a pattern of the autocratic state’s fear of being recorded. The prison Panopticon metaphor is therefore reversed in the process: the governor who is monitoring all members of the autocratic society, becomes the subject of all-pervasive observation by its prisoners in the new public spaces created by new media technologies.

This study signifies discursive social movements in the digital century in a party-state with multiple strict controls and heavy censorship on expression and association.

Asian Values Revisited after 20 Years: Value Shift in China, Japan, South Korea, and Taiwan

1 Introduction

This paper focuses on the value shift occurring in four East Asian societies resulting from socioeconomic modernization and political democratization. Proposed in the first half of the 1990s, the notion of “Asian values” describes the socio-cultural characteristics of East Asia (i.e., conformity, hierarchy, harmony, and the priority of collective interests). In reexamining Asian values in China, Japan, South Korea, and Taiwan against the background of overwhelming social transformation in this region, this paper addresses two issues: (1) the differences of Asian values in the public and private spheres in four East Asian societies and (2) whether citizens in these four societies detach from the Asian traditional culture and thus Asian values.

2 Methods

The theoretical discussion includes an examination of the empirical evidence provided by the Asian Barometer Survey. Three waves of surveys administered over the past 10 years in four East Asian societies have offered an abundance of information to test the value shift in this region.

3 Results

Revisiting Asian values 20 years after its initial proposal has revealed two major findings. First, no remarkable gap exists between the Chinese and other East Asian societies’ citizens in terms of Asian values in the public sphere. Second, although citizens in Japan, South Korea, and Taiwan have abandoned authoritarian political values, this value shift has not been observed in China.

4 Conclusion

The value shift is more significant in the public/political sector in East Asia. Even though Asian values in the private sphere are popular in all four East Asian societies, modernization and political democratization have facilitated declining Asian values in the public sphere in Japan, South Korea, and Taiwan. Not only do the Chinese cherish traditional family and social values, as do the citizens in other East Asian societies, but they also uphold authoritarian political values.

An Evaluation of Poverty Prevalence in China: New Evidence from Four Recent Surveys

Knowledge of actual poverty prevalence is important for any society concerned with improving public welfare and reducing poverty. In this paper, we calculate and compare the poverty incidence rate in China using four nationally representative surveys: the China Family Panel Studies (CFPS) of 2010, the Chinese General Social Survey (CGSS) of 2010, the Chinese Household Finance Survey (CHFS) of 2011, and the Chinese Household Income Project (CHIP) of 2007. Using both international and official domestic poverty standards, we show that poverty prevalence at the national, rural, and urban levels based on CFPS, CGSS, and CHFS are much higher than the official estimation and those based on CHIP. The study highlights the importance of using independent datasets to validate official statistics of public and policy concern in contemporary China.
In the context of Chinese history, the concept of “city” in ancient society appeared quite early and was already considered one of the basic units of society. It not only signifies the division of urban and rural, but also a certain scale of economic production and distribution. In the context of economic geography, the term “city” mainly refers to the urbanized region, which is characterized by its agglomeration of industries, high density of population, and various economic activities. However, the Chinese concept of “city” has always been closely linked with the idea of “peace and prosperity”, which suggests a harmonious coexistence between humans and the environment. In this sense, the concept of “city” in Chinese history is more than just a physical place; it is a symbolic representation of human civilization and progress.

Furthermore, the concept of “city” has always been associated with the idea of “authority” and “control”. In ancient China, the emperor was considered the ultimate authority, and the concept of “city” was closely linked with the emperor’s power and control over the region. The city was not only a physical place, but also a symbol of the emperor’s power and authority. The concept of “city” in Chinese history was therefore not only about physical space, but also about social and political hierarchy.

In conclusion, the concept of “city” in Chinese history is a complex and multifaceted concept that encompasses various social, cultural, and political dimensions. It is not only about physical space, but also about human civilization, progress, and power. The Chinese concept of “city” has been a significant aspect of Chinese history and culture, and its impact continues to influence modern China today.
further help to think more clearly about the possible path of urbanization and guide more effectively the practice and exploration. This paper takes Mei county—a county located in the core zone of Zou-Qin culture, which is of thousands of years of history—as research object, by historically presenting its development to observe the developing stages, distinguishing characteristics and historical evolution of China's urbanization.

**A Study on the Method of Public Participation Based on Discourse-Power Model Among Different Stakeholders: A Case for Avoiding NIMBY Risks of Waste Transfer Stations in Nanjing, China**

Promoting sustainable development of the world is a common of different country. Because of sustainable development and public participation are inextricably linked, to promote sustainable development, it should to enhance the public participation.

The “NIMBY” phenomenon which means that not in my back yard is an increasing prominent urban problem in China to threat sustainable development. NIMBY risks are the kinds of negative external effects of urban facilities. However, in China, with its rapid urbanisation rate, city services still need to be optimised, and many public facilities must be established. Thus, the remission of avoiding NIMBY risks is an urgent problem which can help to improve social equality and justice.

NIMBY conflicts are a type of social conflicts among different stakeholders including governments, experts, planners, developers, media, residents from different locations, etc. To solve it, we need to coordinate the interests among different stakeholders in an orderly way with the aim of reducing NIMBY conflicts. This study constructs a method of public participation based on discourse-power model among different stakeholders for avoiding NIMBY risks and also the related approaches to realize them in Nanjing. Firstly, it classifies the different interests groups basing on the spatial zoning of different negative impact areas and the services area of waste transfer stations by using GIS-based spatial quantitative analysis approach. Secondly, it introduces the concept of discourse power, establishes a discourse-power model based on different interests groups, and analyses the game relationship among them. Thirdly, it builds a mechanism of distribution and implementation of discourse power, to clarify different discourse power among stakeholders. This study attempts to improve an ordered public participation on avoiding NIMBY risks to guarantee a scientific, participatory, and operational urban governance.

ZHANG, XIAONAN* (The University of Tokyo, blue2624zx@yahoo.co.jp)

**Data Envelopment Analysis on Assessing the Efficiency of Japanese Film Release Market from 1955 to 2011**

The film industry, as one crucial component of the leisure and entertainment industry, has received much attention in decades due to its great contribution to the economy and culture. Undoubtedly, with the presence of a big domestic market and excellent works, the Japanese film industry is playing a crucial role both to Japan and the world.

This study examines economic performance of Japanese film release market quantitatively from the perspective of input-output by applying the method of DEA based on the data from 1955 to 2011, and tries to interpret the change in light of historical development. The results demonstrate a wide range of efficiency among the individual units, and suggest a new perspective to recognize the performance of Japanese film industry for years.

Specifically, the models adopted in this study are Charnes, Cooper, and Rhodes model (CCR, 1978) and Banker, Charnes, and Cooper model (BCC, 1984), which are frequently used models of DEA. Technical efficiency (CCR efficiency) measures a DMU’s ability to convert inputs to outputs given the size of the DMU. On the other hand, by decomposition of CCR efficiency scores, BCC scores (Pure Technology Efficiency) and Scale Efficiency (SE) is calculated to examine whether the scale of the industry has any impact on its efficiency. The input includes number of screens, number of Japanese films released, number of imported films released, and average admission fee. On the other hand, the number of admission and box office receipts is output. The results also present the change of inefficiency slopes on basis of the model, which can explain the potential improvement room for input. Based on the above calculation, possible reasons for the changes of efficiencies and also some managerial implications and helpful insights are provided to competitors, investors and researchers.

ZHANG, XIAONAN* (Xi'an Jiaotong Liverpool University, xiaonan.zhang@xjtlu.edu.cn)

**Formalize the Informal? the “Pacification” of Favelas in Rio De Janeiro**

According to Chinese population projections, the paper analyzes future aging process of different historical periods. Findings indicate that unless the family planning policy reforms in future decades, the bottom of population pyramid will shrink dramatically, and growing life expectancy will progressively expand its top. By the year 2050, the aging population over 65 will account for 25% of the society. Considering the reduction of children population, the population in the labor force between 15-64 years will also decrease.

This population transition will bring some very serious problems in the near future: Firstly, China will face the shortage of labor force if automatic standards of production process can’t be improved, especially in the low-end industries. It means migrant workers’ income will keep increasing and the labor cost in the production process will be getting higher. It will produce some negative effect on China’s international competitiveness.

Whereas aging process will accelerate, the adult population will save money for their future aging, restricting the consumption rate. It will affect the domestic spending policy. On the one hand, the decreasing of children population will lower family’s expenditure rate, on the other hand, the lower level social security will prevent the people in the labor force from contributing more to savings in their productive years.

With the population transition and the changing Chinese family structure, the aging people will face the shortage of social support network, especially due to lack of family members’ support. The linkage between mother and children’s family will weaken because of population migration. Thus Chinese aging population will have to depend on their spouses for their care. If they lose their spouse, the aging people will have to be send to beadhouse to be cared for. But up to now, China has not prepared enough beadhouses for their aging population.
What is the boundary between formalization and informalization? Why does the state attempt to formalize the informal space and how does it do so? Will the effort of formalization produce new forms of social, spatial, and political order amid the expansion of informality in the Global South? This paper tackles these issues by examining the current effort of favela “pacification” in Rio de Janeiro. As one of the most visible manifestations of urban informality, favelas in Rio de Janeiro have gone through several regulatory and upgrading programs but none have succeeded. Starting in late 2008, Rio de Janeiro’s State Government has been placing a special public unit called Pacifying Police Unit (Unididades de Policia Pacificador, UPP) inside some favelas and providing public services to the residents in order to regain control over territories long lost to drug traffic and reintegrate the economically challenged communities into society. As of September 2013, thirty-three favelas were “pacified” in Rio. Despite the official discourse of crime control and public goods provision, the “pacification” program is highly controversial and only seeks a new way of work and archival research; this paper investigates the main characteristics and consequences of the “pacification” program. It shows that the purpose and approach of the formalization effort is largely shaped by the state’s agenda of global image building. As the city of Rio will host two major sporting events — the FIFA 2014 World Cup and the 2016 Olympic Games, an event-led planning and governing ethics is at work that caters the global audience whereas marginalizes the local demands, thereby is hard to have an impact which is both substantive in scale and lasting in impact. By neglecting the interest of local communities and denying the channels of public participation, the effort of formalization is symbolic and paradoxically creates new space for informality.

ZHANG, YUE* (University of Illinois at Chicago, yuezhang@uic.edu)
Where the Other Half Lives: Low-Income Housing Provision in France, China, and Brazil

As the urban income structure has become increasingly bifurcated with the rise of service economy, there is an increased demand for low-income housing in cities. How to meet the demand by the large population working at the lower tiers of the urban economy is a critical policy issue facing cities of both the developed and the developing countries. Failing to address this issue will not only hinder the long-term economic development but also undermine the political and social stability of cities. This paper tackles the issue of urban inequality by comparing the practices and consequences of low-income housing provision in France, China, and Brazil. Whereas France launched the low-income housing construction through a system called HLM (Habitation à Loyer Modéré, French for “housing at moderated rents”) in the 1950s, similar practice is at the early stage and lacks systematic operation in China and Brazil. In China, many low-income housing projects have produced a concentration of poverty where residents suffer from a long commute to work and the lack of public facilities. In Brazil, a growing number of social movements have intensified their claim to create alternatives for the inclusion of low-income housing in the city centers, some of them employing more drastic actions such as the squatting of empty buildings. The cross-national comparison reveals the intricate relations between the state, market, and civil society organizations in low-income housing provision. It shows that a state with internal social and political stability and institutionalized connections with private and civic actors is critical for the successful provision of low-income housing. Besides the method of financing, the design of the projects including the locations and densities of the low-income housing is important in shaping the economic and social wellbeing of the local communities and the entire cities.

ZHAO, FENG* (Chinese Academy of Social Sciences, zhaofeng@cass.org.cn)
Demokratia in Everyday Lifeworld

In this article, the author argues that there is a tendency to realize a high degree of demokratia in Western everyday lifeworld. Depending on one year ethnographic fieldwork in a Dutch village, the author uses the method of ethnography in order to provides a frame to observe the tendency. The article is divided into three parts. In the first part, the author explains that Everyday lifeworld is the horizon of social life, in which human being as ordinary practice lives its own meaningful life and realizes its own desires, wishes and hopes with emotions. The author identifies three principles, equality, togetherness and openness, as the principles of “Demokratia”. In the second part, the observing frame of the phenomena theorized as demokratia in everyday lifeworld will be provided. The frame includes the gestures in daily interaction, the dialogue in daily lifeworld, and the form of collective action in daily lifeworld. In the last part, the author argues that the nature of “Demokratia in everyday lifeworld” is the habitus of practical reason. Playing together could be the possibility of “Demokratia in everyday lifeworld” in the future. To disclose the ruling relationship in everyday lifeworld should be one of the main sociological issues.

Awards and Conservation of Intangible Heritage

In 1804, Napoleon Bonaparte rewarded for the French “Honneur et Patrie”, which became the first modern awards institution determining the unit of selection and pride. Then such awards systems spread throughout the modernizing world and fostered the formation of world’s fairs, such as modern Olympics and UNESCO, which almost accepts all countries as its membership. Specific to the awards systems of intangible heritage which promoted by UNESCO, on the one hand, it enhances people’s consensus to protect ICH, but on the other hand, for different countries and areas to implement the same awards way , could it really accomplish the protection aim? It is noteworthy that each country and area form the culture logic and mode in their-own history river, when the local culture rule meets the global culture awards, actually it’s difficult to reach the expected aim. Today UNESCO carries out a series of awards ways all of the world, including “Masterpiece”, “Nominations”, “Medals”, “Living National Treasures” and “Heritage Funds”, in fact, when China operated these awards ways specifically, which led to the “culture crash” will usually make the counter result that awards really wants.

As the Guizhou Miao ethnic group’s Yalu King Epic for a example , The paper will research the culture awards in the conservation of intangible heritage, emphasize the importance of the local culture logic and rule in intangible heritage awards, make sure the awards could really protect the intangible heritage.

Resource Capabilities of Children with Disabilities

The younger generation is an important resource of society. However, children with disabilities require significantly more material, physical and emotional inputs in the process of socialization in comparison with healthy peers in order to later become full-fledged subjects of social reproduction. Children with disabilities are clearly losing their peers, having a low level of health, education, opportunities for self-realization, traditionally seen as individuals with low human potential. As a result, young people with disabilities remain largely unclaimed in society and they cannot fully realize themselves and as a whole bring benefit to society.

In 2011 and 2013 years the author conducted a sociological study among children with disabilities in the aged from 12 to 18 years to identify the resource potential of the juvenile disabled. The respondents were interviewed through a formal interview. So, the juvenile disabled consider themselves talented people who realize their abilities in various social practices. Most of the studied types of students are active members of the society who have the relevant social norm of knowledge, skills, aspirations and values. Thus, in this connection, various the younger generation with disabilities can be considered the perspective intellectual, economic, social, political and cultural reserve of society and investing in them is the most important task of the state, influencing national security.

Going Beyond Passion and Dedication: The Struggle Towards Professionalization Among Grassroots Philanthropic Organizations in China

Grassroots philanthropic organizations (GPOs) have emerged in China in large numbers. Previous studies tend to focus on these organizations’ interaction with the government, particularly their experience with the unfriendly NGO regulation system in China, while leaving their daily operation, and their process of development out of the discussion. The current study looked at GPOs in China at a particularly important stage of their development: when they face increasing internal and external challenges and could no longer remain informal. Through studying southern China GPOs involved in rural education promotion (n=44), we show that rather than the unfriendly registration system harming the development of GPOs, organizations have been enjoying their informal way of operation, including lack of legal identity. They focus on their relationship with the rural students, the cohesiveness with the organization, and the feeling of being able to help. They often have little desire to register or formalize until various internal and external changes, such as the growth of members and the expansion of programs, challenge the sustainability of the organization. At this point, GPOs do not naturally formalize. They may all they can to maintain their usual way of operating, until the idea of professionalization is introduced to them by outsiders. Such a foreign idea may cause much confusion among the members, resulting in disagreements about

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain informal and wait for better opportunities; some will take a clear stand to resist future attempts of formalization; and some will dissolve or break into different organizations. Government policy only starts to influence GPOs once they decide to seek registration.

The Rise of Income Inequality in Urban China, 1996-2010: Increasing Returns to Education, State Sector Shrinkage, and Composition Effects

Income inequality in urban China has experienced a rapid growth over the past two decades. To account for the rise in income inequality, previous studies have provided three major explanations: widening regional gaps, increasing returns to education, and growing residual inequality. Since the mid-1990s, however, the composition of the urban labor force has been considerably reshaped by three large-scale structural changes: (1) the expansion of higher education, (2) the shrinkage of state sector employment, and (3) a surge in rural-to-urban migration. In this article, I discuss how the recent rise of income inequality can be driven by these institutional and demographic shifts. Based on data from two nationally representative surveys, I use variance function regressions to decompose the growth in income inequality from 1996 to 2010 into four components: changes in between-group income gaps, changes in within-group income variation, and two types of composition effects (distribution effect and transfer effect). The decomposition results indicate that changes in between-group income gaps explain around 40% of the rise in inequality, while more than half of the total growth can be attributed to composition effects. Using counterfactual analysis, I find that changes in between-group income gaps are almost entirely driven by increases in returns to education, while composition effects stem chiefly from changes in human capital distribution and the shrinkage of state sector employment.

Participation and Cooperation: An Approach to Productive Aging for Institutional Care Service in F Resident

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in F Social Welfare Institution, the “functioning” of the elderly was determined by the care-givers to buy their first houses in this period, i.e. the young generation bom in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues to be four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as marriage and work by owning a home or not and living in a metropolitan city or not. The main arguments are people without home ownership are in a relatively disadvantaged position in life quality and even the marriage and labor market, so in the metropolitan cities in China, home ownership has become an important index of socio-economic status or to measure social inequalities.

Contesting Imaginaries: New Urban Spaces of Xi’an

The development of heritage tourism in historical cities of China is regarded as a vital ingredient of urban regeneration by state and local governments. In Xi’an, the Imperial capital of thirteen dynasties of Chinese history, the construction of a modern landscape catapulted the city from an isolated entity to the globalized world system. Guided by a fifty-year governmental city plan, the densely populated inner city of Xi’an is currently being transformed into a functioning replica of the Tang-era Imperial City to reconstruct the glorious past of Chinese civilization.

The project plan, however, is not without its problems. As the older buildings were demolished and local residents were relocated to other districts of the city, the new urban monuments were transformed to cultural theme parks. Antique markets and high-end residential buildings were built to attract middle-class immigrants from other cities of China. This study will examine the multiplicity of imaginaries that are produced and negotiated by actors involved in urbanization, and the way these imaginaries shape new urban spaces of Xi’an. I will analyze the role of the main actors in this dynamic process: how the municipal government implements urban regeneration through their own narratives; how real estate investors, empowered by local administrations, utilize cultural resources and real estate property for commercialization and consumption; how immigrants inhabit newly created urban spaces to search for leisure lifestyles and cosmopolitan identities; and how the traditional residents negotiate, resist and manifest their identity through daily practices.

Moving beyond the macro-perspectives of political economy and economic geography, the research will engage with Xi’an as an important ground for testing urban transition of social and spatial landscape, and examining social inequality in the rapid development of modern China.

How the Internet Is Transforming Health Experiences: Reflections from a Decade of Qualitative Research on Experiences of Cancer, Chronic Illness, Infertility and Bereavement

This study explores how people talk about the internet and how attitudes and concerns about different types of websites have changed over the last decade, drawing on comparative qualitative analysis of narrative interview studies, conducted during the years 2002-2012. In the early 2000s patients’ narratives suggested that only particularly engaged, expert and activated patients sought health information online. By 2010 the web had become an almost unremarked, routine part of people’s experience (‘of course we all looked it up straight away’). The internet has transformed how people make sense of and respond to symptoms, decide whether to consult, make treatment choices, cope with the end of life and live through loss.

Increasingly doctors are aware of this and recommend useful sites to their patients yet, even in 2012, respondents express reluctance to talk to their doctors about what they find online, fearing that such revelations might damage the relationship. GPs have reported feeling threatened (having a ‘heartbeat moment’) when faced with a patient who uses the internet.

People want more than information online, they also want to find reflections, insights and practical advice from other patients. UK doctors may want more evidence about the health effects of using the internet but patients and the public are routinely online, even if they do not mention it in the consultation. In this paper we consider why it is not yet routine to discuss websites in primary care consultations and the consequences for inequalities in health.

Drawing a Picture of the Changing Global Elite after World War II

One of the primary methods of analysing elite cohesion is the analysis of corporate networks, focusing on interlocking directorates. However, there are some network qualities, especially the intersection between economy and politics, which cannot be adequately analysed this way. I propose that in order to do this it is necessary to take into account informal organisations, like the Bilderberg Group, in which influential people from both fields interact with each other.

Using previously unresearched archive material, which provides a list of all participants of Bilderberg meetings in the years 1954-1958, I draw the social network
of what can be labelled the „conservative” block of the Western elite. „Conserva-
tive” means that its primary interest is the conservation of the status quo: the rule
of a small elite through a democratic capitalist system. Attempting to achieve this
goal in a dynamic environment with major challenges (the spreading of the com-
munist ideology, the breaking up of the colonial system etc.), it needs to adapt
innovative methods, like the creation of supranational institutions.

In the descriptive part I focus on nationality, age, gender and occupation of
the participants. In the second, analytic part, I present the connections between
different sectors of the industry as well as positions of political power that the
participants held. In a further step I attempt to describe the shift in this network
between the 1950s and today. The official lists of current participants of the Bil-
derberg meetings allow researchers to draw an adequate picture of this network
in its current form. From previous research on the topic of the change in the elite
it can be expected that the major changes have occurred regarding the dominant
industries and little changes are to be expected regarding the nationality, the
gender and the age of the participants.

Between Voicelessness and Empowerment – A Biographical
Approach to Life Stories of Complex Traumatised Mothers

Regarding currency and scope of sexualised violence against children my re-
search takes a look at the long-term consequences for victim-survivors of these
human rights abuses. With this perspective the social positioning of highly men-
tally burdened survivors comes into consideration. This paper is based on a bi-
ographical-sociological approach of the life stories of women, who are all patients
of a trauma specific psychiatric hospital and who were abused in their childhood.
I would like to contribute first empirical results of my PhD project. Due to the fact
that all the women I interviewed have children my results point to the major dif-
ficulties of being diagnosed, treated and seeing oneself as mentally ill and at the
same time being a mother who is not supposed to be mentally tainted in any way.
In my presentation I would like to illustrate that there is a strong self devaluation
regarding the women’s motherhood that leads to a form of voicelessness of the
interviewee towards actors, e.g. in medicine or social work. Based on further empirical
results I will also take a closer look at ways of empowerment due to
traumapspecific approaches the women have appropriated to themselves. I would
like to discuss on the one hand to what extent a traumatapspecific approach might
overcome women’s voicelessness concerning issues of motherhood and on the
other hand to what extent these women are somehow limited to pathologising
labels of mental illness that detach their present mental symptoms from their
biographical background.

Capabilities, Critique and Sociology

This paper discusses the implications of the double dimension of capability, a
normative and descriptive concept, for sociology and its relationship to critique.
Using a capability approach means endorsing a critical stance. But the resulting
critical standpoint is as much a matter of concept, as of theoretical and method-
ological implementation. Therefore different ways of bringing together capabili-
ties, critique and social sciences are at hand.

The conceptualization of capabilities along freedom and power of achievement
offers a common normative background. Beyond equal distribution of resources,
it makes out of equal freedom to choose and achieve, i.e. to convert resources
into valuable realizations, a yardstick for assessing social inequalities.

Once settled this common background, conversion factors bring into play the
second dimension of capabilities, namely the descriptive one, which is diversely
taken up. Economists have worked a lot on measures and descriptions of capa-
bilities. Sociologists should contribute to this debate with their own means. The
paper argues that the sociological design of inquiry may offer an as important
source for critical social sciences. Along the lines opened by J. Dewey’s logic of
inquiry, it shows how the capability concept may fuel a critical pragmatism based
on the confrontation of different levels of analysis: institutional semantics (the
public policy level), which designs how things should be, its implementation (or-
ganizational level) and the outcomes it actually produces in people’s lives (the
biographical level).

Finally, the paper gives an insight into the analytical and critical perspectives
opened up by a capability approach focusing on the interactions between insti-
tutions, organizations, and individuals on issues such as freedom, responsibility,
empowerment and employability, core-concepts in the reforms of European Wel-
fare states.

Comparative Analysis of Changing Family Formation – Different
Life Course Regimes and Developmental Paths Identified
in European Countries

The paper contributes to the comparative analysis of life course dynamics and
cohort changes in Europe. Varying forms of data collection and preparation often
hinder quantitative comparative analyses; therefore, international survey pro-
lgrams like the Generations and Gender Survey (GGS) have been initiated. I added
data from the National Educational Panel Survey (NEPS, research methodology
very similar) for West Germany to compare developmental paths with regards
to family related life courses between four European countries (Germany (NEPS),
Italy, France and Norway (GGS)). I use sequence analysis to examine life course
patterns of nearly 40,000 respondents and identify life course regimes and chang-
es between them. The empirical patterns are finally related to classifications of
cohort changes and developmental paths as provided by concepts of welfare regimes
e.g. Esping-Andersen.

Findings show, that Northern and Western European countries follow a similar
sequence of regimes, starting from a traditional life course regime, marked by a
second dimension of cohabitation and marriage and subsequent fertility among
the majority of respondents. Afterwards, they pass through a ‘semi-traditional’
regime with unmarried cohabitation preceding traditional family formation. Fi-

Reducing or Re-Producing Inequalities? Grand Narrative
of Diversity and Its Influence on the Minority Learner

European societies increasingly implement diversity education as part of a civic
education curriculum in order to provide young people with competences in deal-
ing with different forms of diversity. The presentation analyzes policies and praxis
approaches pertaining to education for diversity at both the supranational level
of European Union and Council of Europe as well as at the level of member states
(Germany, Estonia, Russia, and Sweden). The presentation shows that in Europe
school education for diversity simultaneously pursues two separate goals: while
generating a grand narrative of celebrating European diversity those same mate-
rials and policies stipulate that issues of inequality are to be dealt with separately.

Based on the conceptualization of diversity with reference to heterogeneities
and inequalities, the presentation shows how inequalities tend to be covered
over in positively connoted conceptions of diversity. Comparing educational pol-
icies, school curricula, and teaching materials, the presentation reveals the ways
in which diversity and inequalities are decoupled in curriculum and educational
practice, and poses following questions: What happens if diversity is only treated
as a matter of celebration? Turning to the minority learners, experiencing exclu-
sion, the presentation demonstrates, how diversity celebration narrative disem-
powering minority learners, contributes to more uncertainty, social closure and
(self-)exclusion of those learners, who do not find themselves within diversity cel-

The Aesthetics of Banality

Be it Breton's fascination for an adorned wooden spoon or Valéry's ambiguous affection for a sea shell and not to mention the rapturing experience of cracking the crust of Crème Brûlée described by the movie character Amélie Poulain, all these seemingly ordinary objects are said to be surrounded by a sacred aura offering the possibility to sense the (assumed actual) mysterious depth hidden behind the surface of banality. Whilst the avantgardes at the beginning of the 20th century conjured the magic of the overlooked in terms of a countercultural model, we are positing that the epiphany of the unimposing has to be regarded as a prevalent model of popular culture symbolizing a nostalgic search for the utmost real.

According to sociological approaches referring to material culture and with respect to coeval cultural theorists we will first reconstruct the emergence and the changing cultural valuation of the discourse about the cultural significance of the insignificant, claiming that the contemporary search for the meaningfulness of banal artifacts serves as a prime example for the reenchanted conquest of the quotidian. In particular the new aesthetics continuously stress the fact that the aesthetics of the marginal are laying at the core of the condition postmoderne: on the one side with regard to the construction of the banal as a category of sensuality and on the other side with respect to diverse strategies of aestheticism creating the auratic effects of trivial things. Hereon we will secondly shed light on the consequences of this discourse on the study of material culture suggesting that we won't be able to expose the cultural significance of mundane objects properly, if we don't account for the factor that these "actual significatory structures" are themselves part of a prevalent model of the aesthetics of banality.

Multi-Level Governance in the Adaptation to Climate Change in Australia - the Latrobe Valley

The planning and political negotiation processes of sustainable energy production in Australia are complex and highly negotiated processes. A number of different players from Commonwealth, State Government and regional level got involved to transform the Latrobe Valley region that has the dirtiest coal fired power stations in Australia.

We examined the interwoven processes of strategic planning and governance, the set-up of the Latrobe Valley Transition Committee and the development of a Roadmap to transform the region as well as the funding of concrete projects to provide new jobs within the region. What has been seen by many as a smooth and successful process came to a halt when the political conditions changed.

At the same time it became clear that allegedly smooth process had some weaknesses collected in a process had been driven by funding promises of Commonwealth and State Government the region did not develop an independent vision of the transformation of the region. With the loss of funding it became obvious that there is a need to develop such a vision to further drive the process. However, good networks have been developed that might be strong enough to push forward where major funding resources are no longer available.

This paper will discuss the conditions of climate change adaptation and the advantages and challenges multi-level governance structures provide for regional planning and governance.

A Multiple Imputation Approach To Address The Problem Of Nonignorable Nonresponse and Misreporting Patterns In Income Data

When people are asked to report their monthly income they are likely to refuse to answer. If they answer, they tend to round their income to the nearest fifty, hundred or thousand, or they even completely misreport the value of income. It is well known that the propensity to misreport or to refuse to answer income questions depends on individual characteristics. For example, people with migration background are normally more likely to refuse to answer. Thus, commonly income data collected by personal interviews show nonignorable nonresponse and abnormal concentrations of reported values at certain "heaping points". Using such data to compute, e.g., distribution characteristics like sample quantiles or proportions usually causes severe bias. In order to allow to adequately modeling such kind of incomplete and heaped data, we introduce a general method that allows addressing both, the issue of incomplete data and the problem of rounding. To impute missing values, we suggest using the proven method of multiple imputation by chained equations. The method requires determining a univariate imputation model for each variable with missing values. We suggest specifying the imputation model for the income variable such that it describes the true distribution of the income variable simultaneously with the heaping pattern present in a data set. Monte Carlo simulations are used to validate the novel approach. To illustrate the capacity of the approach we conduct a case study using income data from the adult cohort of the German National Educational Panel Study.

Relationships Between Gender Role Attitudes, Role Division, and Perception of Equity Among Heterosexual, Gay and Lesbian Couples in Israel

Abstract

The purpose of the present study was to investigate the relationships between gender role attitudes, household tasks, and the perception of equity among heterosexual, gay and lesbian couples. One hundred and twenty-four participants (54 heterosexuals, 30 gay men and 40 lesbians) were tested. It was found that same-sex couples had more liberal attitudes toward gender roles than did heterosexual couples. In addition, significant differences were found between the spouses in their responses regarding role division in housekeeping in each group. The responses of heterosexual spouses correlate more closely with each other regarding the role of each of the spouses than was the case for same-sex couples. However, the role division among lesbian couples was more egalitarian than that of heterosexual couples. In addition, heterosexual women consider their married life less equitable than heterosexual men do. Similarly, one of the gay spouses considers the relationship less equitable than the other spouse does. The results are discussed in terms of their relevance to theories of social perception and cultural backgrounds.

ZOLLINGER, CHRISTINE* (University of Zurich, zollinger@ipz.uzh.ch)

Varieties of Policy Design in Swiss Family Policy Adaptation to New Social Demands: Bounded Possibilities of Childcare Services for Social- and Gender Equality

This paper deals with the question of who ends up with what in the process of welfare state adaptation to new social demands in post-industrial societies. To answer this question a new typology of childcare policies on the basis of the social outcomes of those policies in terms of redistribution and gender equality will be developed. The implications of childcare policies on these two dimensions of inequality are of particular interest, given that the internationally literature agrees since a long time that we need a new typology that helps to understand the trade-offs between distributive and socio-cultural goals. Empirically, I focus on the specific design of childcare policies that are institutionalised in ten Swiss municipalities since the 1990s. To this end, I first classify the different policy designs of childcare policies according to their degree of professionalization and the use of childcare services by parents. Second, I develop a new typology of childcare policies that allows to illustrate the potential implications of the design of such policies on gender equality and social redistribution. Whereas some municipalities have institutionalised public support for childcare services with low quality standards, which are provided by daily mothers, others have implemented highly professionalized crèches with rigorous quality standards. However, these offers are used differently by parents from different income classes. Whereas the low quality childcare services are used more frequently by parents from low income classes, the more professionalized offers are used more frequently by parents with middle and high income. This segregation in the use of services is notable, not only with regard to the criteria of social redistribution: It is even more striking in regard to the scientific social investment discourse, where it is stated that the reduction of poverty should be obtained by public investment in human capital, beginning with pre-school children.
and the social and economic consequences have been encountered. The 2010 Haitian earthquake occurred within a country with a history of poor child health indicators and outcomes. The indicators include child nutritional status, immunization status, and diarrhoeal disease treatment. Despite the low performance on many child health indicators, data from Demographic and Health Surveys (DHS) have shown national-level improvements in key child health indicators in the three surveys conducted prior to the earthquake. These improvements continued in the 2012 DHS despite the 2010 earthquake and cholera outbreak. The purpose of this study is to determine national and regional differences in child health indicators in the midst of the full-scale humanitarian disaster affecting Haitian health indicators. Simple extrapolation method was employed to calculate the estimates. The results show a difference between expected and observed values, with observed values indicating poor health outcomes for children compared what was predicted based on the previous three time points. Further, regional variations were apparent and linked to proximity to the earthquake area, county and family composition. The results provide evidence of the effects of the disaster on child health in Haiti.

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)
Is Georg Lukacs’ Critique Of Neo-Kantianism Justified?
A recurrent theme in the work of Georg Lukacs is a critique of the prevailing currents of sociological theory and method of his time. For Lukacs, Marxism provided a theory—a society that surpassed social theory modeled on the neo-Kantian distinction between facts and value. Several scholars have argued that Lukacs’ commitment to Marxism blinded him to the contributions made by other social scientific approaches. In effect, Lukacs is charged with dismissing all other social scientific approaches on the basis of his alleged dogmatic Marxism. Moreover, Lukacs is accused of identifying any non-Marxist approach to that science as reactionary. This paper revisits Lukacs’ critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs’ critique has been misinterpreted and warrants renewed consideration. Reexamining Lukacs’ critique of neo-Kantianism reopens debates over claims that Lukacs’ notion that prevailing currents of social theory overlook the problems of alienation and reification.

RC36-619.2
ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)
Reification and Racism
Both historians of social theory and practicing social theorists have drawn attention to the prevalence of racist thinking in nineteenth and early twentieth century social theory. They have been increasingly aware of the ways such thought has been embedded in social theory development and questioned the extent to which the vestiges of such thought still inform contemporary social theory. This paper examines an overlooked chapter in the critique of racist social theory. In particular, it focuses on the seldom-studied work of Georg Lukacs, The Destruction of Reason. In that work, Lukacs develops a critique of racism that is situated within the general social theory context, he argues that critique Lukacs develops can contribute to the examination of racism in social theory. Further, it argues that Lukacs’ critique should be reconnected to the concept of reification, which Lukacs developed earlier in his career. This allows intellectuals to interpret the experience of racial prejudice under capitalism as a form of reification. In this respect, this paper attempts to move toward developing a social theory that can employ the concept of reification in the understanding of racism.

ZUEV, DENNIS* (Independent Scholar, tungus66@gmail.com)
In and Beyond the Visual Gaze of the Tourists: Humanizing Antarctic Wilderness
The objective of this study was to unravel the Antarctic tourism imaginary and go beyond the oral-visual narratives of tourists in order to understand which other senses and how are activated when touring in Antarctica. What is the grand master plot at the core of the Antarctic tourism imaginary? To summarize, most of the visualization of Antarctica and Antarctic experience rotates around the theme of “humanized nature”: the penguins are seen as human-like creatures, the icebergs are spoken about as the perfect examples of abstract art and whalebones are static reminders of once prolific whale-hunting industry. Antarctica is the only land that has no myths of origin but compensates this with the heroic stories of its first explorers. In contrast to the “gaze” centered approach to tourism, Antarctic tourism presents an example of multisensuous, non-ocularcentric geography. Deepest affectual encounters of tourists come from engaging various senses: interviewees talked about the powerful sounds of calving glaciers and meditating brush ice, the awful smells of penguin and seal colonies, the caresses of Antarctic wind, of refreshing Polar plunge and thick morning mist, which concealed the land and upon seeing which people would start to cry.

RC50-814.1
ZUEV, DENNIS* (Independent Scholar, tungus66@gmail.com)
Self-Transformation Of Russian Youth Through Work and Travel Program In The USA
In this study I wish to examine the mechanisms of personal transformation among Russian youth through the contact with America as an imaginary and real-life entity in the course of the program “Work and Travel”. I delineate several families of transformation: relational transformations, physical transformation and attitudinal transformations. I argue that the transformations that occur with individuals during the contact with another culture or as a consequence of the trip are part of the (de)civilizing process of the individual. One of the practical questions behind the study is whether after being a guest in the other culture young people become positive towards others being guests in their home culture.

Some of the effects of the trip have civilizing effect in the sense that they touch the structures of habitus and modes of knowledge. Through lived-in experience young people transit to the stage or reevaluation of their distance with parents and intimate partners. One of the important configurational changes is the reevaluation of the relationship with parents who initially serve the primary instance in regulating the trip (through financial and emotional support).

The physical changes in perception of one’s body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gains refutation of American civilization, however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. One of the leading emotional changes concern the feeling of embarrassment for the behavior practiced or observed before the trip: accepting money from parents became embarrassing for some respondents and seeing people behaving rude towards them was also considered embarrassing.

ZUKIN, SHARON* (Brooklyn College, zukin@brooklyn.cuny.edu)
Globalizing the Local: Restaurants, Racial Identity, Gentrification, and Immigration
The globalization of cuisines takes place in sites ranging from the family dinner table to fast food franchises, with the integration of new products, new production techniques, and new taste criteria into traditional formulas. Located between the private, domestic space of the family and the public, mass-market space of McDonalds, neighborhood restaurants and modest takeout food shops provide a middle ground of individual action and collective provisioning where globalization reshapes local identities. Much of the globalization is carried out by demographic changes, with the entry of immigrant and “creative” entrepreneurs who both replace old restaurant owners but open new kinds of restaurants and food stores. But globalization is also encouraged by the entry of menus that define traditional cuisines in new ways, repositioning them, on the one hand, in a new global culinary order and, on the other hand, in changing local markets. Recent changes in restaurants in a majority-black neighborhood of Brooklyn, New York, suggest that the global migrations of cuisines help to create more complex social, racial, and local identities.

ZULUETA, JOHANNA* (Soka University, zulueta@soka.ac.jp)
Memory, Nostalgia and the Creation of “Home”: An Okinawan Woman’s Journey
This study looks at how elderly Okinawan women return migrants created and re-created perceptions of “home” upon their return to Okinawa through the life stories of an Okinawan woman presently living in Naha, Okinawa. Married to Filipino base workers during the American Occupation of Okinawa, these so-called “war brides” spent a considerable number of years in their husbands’ country, assimilating into Filipino culture as well as negotiating their identities as Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. As they aged, many of these women have been returning to Okinawa, creating a significant community – albeit small in number – of Okinawan women return migrants.

For this paper, I seek to explore how migration, memory, and nostalgia came to define these women’s identities as return migrants in an Okinawa that saw the end of the Japanese occupation in 1972 (i.e., the end of the occupation and its place vis-à-vis the Japanese mainland (i.e. the current base-related issues) by focusing primarily on one woman’s life history. Along with this interview that was carried out in October 2012 (as well as subsequent conversations with her), data culled from fieldwork, interviews with other Okinawan returnees, and interviews with family members of these women are to be utilized as well. The migration of Okinawans to the US as "war brides" is often described as a vital period in Okinawan memory, a time of significant changes and often difficult transitions. The experiences of these women provide valuable insights into the ways in which memory, nostalgia, and the construction of "home" are significant aspects of Okinawan identity and culture.
Okinawan and Beyond: Okinawan Women and The Re/Creation Of Diasporic Identities

Studies on Okinawan women migrating to the Philippines during the postwar years are scant and not accorded much attention by scholars looking at Japanese/Okinawan migration. Furthermore, the role of women in the maintenance and re/creation of diasporic identities have been significantly overlooked. These Okinawan women married Filipino men who worked on U.S. bases in Okinawa during the early years of the Occupation Period (1945-1972). Many of these women went with their husbands to the Philippines and settled there, raising families and living new lives. Upon migration, many of these women consciously assimilated into Philippine society. Despite this, they still acknowledge their Okinawan selves by passing on aspects of Okinawan culture to their offspring, creating in the process, a diasporic Okinawan identity that contains both Philippine and Okinawan characteristics.

I argue that these migrant women are active agents in the transmission of Okinawan culture, at the same time promoting the culture of their husbands and their adopted land, thus creating a distinct “Philippine Uchinanchu” identity. This particular identity is continuously being maintained and re/created not only within familial and contiguous boundaries, but also across space and time, through various activities these women engage in. I also argue that these women engage in this process of re/creating as they fashion out their sense of a “home” away from home. The creation and re/creation of an Okinawan diasporic identity also relates to a re-definition of Japanese identity, which tends to conflate nationality, ethnicity, and race, and continues to leave Okinawans in an ambivalent position vis-à-vis a Japanese identity.

This study analyzes data gathered from interviews with these women, as well as from participation in meetings/gatherings of the Philippine-Okinawan Society in Manila. Interview data from their children are also pertinent sources of information about their mothers and thus will be utilized in the analyses.

Anti Doping Code and Controls: Social Sorting For Fair Play?

Viewing doping controls in the lights of social sorting, puts a new perspective on the subject. Besides touching on issues such as data protection, citizens' rights of informational self-determination, privacy and the right to be let alone, those controls foster forms of social sorting, albeit ones that claims to sort out particular subjects in the name of fairness. As much as doping practices are a problem to a culture of fairness and good sportsmanship, so are the controls.

From existing research, it is apparent that the athletes' perspective is missing in this discussion. The athletes are the object of the public debate, rather than the subject. Athletes that are convicted (or even only suspected) of doping practices are blamed and condemned - often by the same people that were generating the pressure under which the decision to take illegal performance enhancing substances was made. Doping and its controls therefore operate in a twofold field of social sorting: one that sorts out the guilty - and one that sorts out the losers, which may turn to illegal measures to improve their situation.

From interviews with athletes, officials and doping controllers on doping control practices, I will highlight what forms of social sorting are generated through doping controls, how they are perceived and what discourses are being formed.

I want to draw the attention to other issues within the debate on doping, such as how sportsmen are not regarded in an attention and are not likely to, as athletes more and more are put under a general suspicion within the system that is generating a massive pressure and puts athletes at risk. Social sorting by no means an intended consequence, but a ‘collateral’ effect that does play a major role on how these controls are perceived and hence legitimised.
